DEFINITIONS AND EXPLANATIONS

Energy bills are a function of the following primary factors:

- Tenure of household (owner/renter)
- Housing unit size (by tenure)
- Heating Degree Days (HDDs) and Cooling Degree Days (CDDs) (by county)
- Household size (by tenure)
- Heating fuel mix (by tenure)
- Energy use intensities (by fuel and end use)

Bills are estimated using the U.S. Department of Energy's "energy intensities" published in the most recent DOE Residential Energy Consumption Survey (RECS). The energy intensities used for each state are those published for the Census Division in which the state is located. County-specific demographic data is obtained from the most recent three-year estimate of the American Community Survey. Heating Degree-Days (HDDs) and Cooling Degree-Days (CDDs) are obtained from the National Weather Service's Climate Prediction Center on a county-by-county basis for the entire country. State price data for each end-use is obtained from the Energy Information Administration's (EIA) fuel-specific price reports (e.g., Natural Gas Monthly, Electric Power Monthly).

Affordable energy bills are estimated on a county-by-county basis using the Federal Poverty Level and county-specific mean household sizes.

The Home Energy Affordability Gap is a function of many variables. Increases in income, for example, result in decreases in the Gap while increases in energy prices result in an increase in the Gap. The Home Energy Affordability Gap Index allows the reader to determine the cumulative impact of these variables. Since the Gap is calculated assuming normal Heating Degree Days (HDDs) and Cooling Degree Days (CDDs), temperatures do not have an impact on the Affordability Gap or the Affordability Gap Index.

Price data for the various fuels underlying the calculation of the 2008 Home Energy Affordability Gap was used from the following time periods:

Heating prices	
Natural gas	February 2008
Fuel oil	February 2008
Liquefied petroleum gas (LPG)	February 2008
Electricity	February 2008
Cooling prices	August 2008
Non-heating prices	
Natural gas	May 2008
Fuel oil	May 2008
Liquefied petroleum gas (LPG)	May 2008
Electricity	May 2008

New York - Albany County

2008 Home Energy Affordability Gap
For Households with Income < 500% Federal Poverty Level
(published March, 2011)

Aggregate Gap: $68,689,461 | Per Household Gap: $1,017

Aggregate Home Energy Affordability Gap

The total Home Energy Affordability Gap for households in Albany County by selected Federal Poverty Level is:

<50% FPL: $19,304,624

100% - 125% FPL: $6,449,401

150% - 185% FPL: $5,372,429

185% - 200% FPL: $2,235,251

200% - 300% FPL: $3,105,829

300% - 400% FPL: $9,743,823

Per household Home Energy Affordability Gap

The average per household Home Energy Affordability Gap for those living in Albany County by selected Federal Poverty Level is:

<50% FPL: $2,592

100% - 125% FPL: $1,800

150% - 185% FPL: $1,302

185% - 200% FPL: $1,189

200% - 300% FPL: $1,076

300% - 400% FPL: $556

Number of Households

The number of households in Albany County by selected Federal Poverty Level is:

<50% FPL: 7,449

100% - 125% FPL: 3,583

150% - 185% FPL: 4,125

185% - 200% FPL: 1,880

200% - 300% FPL: 2,886

300% - 400% FPL: 17,529

Energy Burdens

The average energy burden (energy bill as percent of income) for households in Albany County by selected Federal Poverty Level (FPL) is as follows:

<50% FPL: 74.7%

100% - 125% FPL: 16.6%

150% - 185% FPL: 11.2%

185% - 200% FPL: 10.4%

200% - 300% FPL: 9.7%

300% - 400% FPL: 7.5%

Total data for households is presented in the statewide data set for the following Poverty Level ranges:
(1) below 50% of FPL; (2) 50 – 75% of FPL; (3) 75% - 100% of FPL; (4) 100% - 125% of FPL; (5) 125% - 150% of FPL; (6) 150% - 185% of FPL; (7) 185% - 200% of FPL; (8) 200% - 300% of FPL; (9) 300% - 400% of FPL; and (10) 400% - 500% FPL.
