DEFINITIONS AND EXPLANATIONS

Energy bills are a function of the following primary factors:

- Tenure of household (owner/renter)
- Housing unit size (by tenure)
- Heating Degree Days (HDDs) and Cooling Degree Days (CDDs) (by county)
- Household size (by tenure)
- Heating fuel mix (by tenure)
- Energy use intensities (by fuel and end use)

Bills are estimated using the U.S. Department of Energy's "energy intensities" published in the most recent DOE Residential Energy Consumption Survey (RECS). The energy intensities used for each state are those published for the Census Division in which the state is located. State-specific demographic data is obtained from the most recent three-year estimate of the American Community Survey. Heating Degree-Days (HDDs) and Cooling Degree-Days (CDDs) are obtained from the National Weather Service's Climate Prediction Center on a county-by-county basis for the entire country. State price data for each end-use is obtained from the Energy Information Administration's (EIA) fuel-specific price reports (e.g., Natural Gas Monthly, Electric Power Monthly).

Affordable energy bills are estimated on a county-by-county basis using annual median income from the most recent three-year estimate of the American Community Survey and mean household size data from the U.S. Department of Housing and Urban Development (HUD).

The Home Energy Affordability Gap is a function of many variables. Increases in income, for example, result in decreases in the Gap while increases in energy prices result in an increase in the Gap. The Home Energy Affordability Gap Index allows the reader to determine the cumulative impact of these variables. Since the Gap is calculated assuming normal Heating Degree Days (HDDs) and Cooling Degree Days (CDDs), temperatures do not have an impact on the Affordability Gap or the Affordability Gap Index.

Price data for the various fuels underlying the calculation of the 2008 Home Energy Affordability Gap was used from the following time periods:

Heating prices	
Natural gas	February 2008
Fuel oil	February 2008
Liquefied petroleum gas (LPG)	February 2008
Electricity	February 2008
Cooling prices	August 2008
Non-heating prices	
Natural gas	May 2008
Fuel oil	May 2008
Liquefied petroleum gas (LPG)	May 2008
Electricity	May 2008

New York - Albany County

2008 Home Energy Affordability Gap
For Households at or below 80% of Annual Median Income
(published March, 2011)

Aggregate Gap: $75,918,929 | Per Household Gap: $1,469

Annual Median Income

Annual Median Income (AMI) is assessed on a county-by-county basis. The 2008 AMI for Albany County is:

$52,871

Per household Home Energy Affordability Gap

The average per household Home Energy Affordability Gap for those living in Albany County by selected Annual Median Income (AMI) level is:

<30% AMI: $2,342

30% - 50% AMI: $1,549

50% - 80% AMI: $756

Number of Low-Income Households

The number of low-income households in Albany County by selected Annual Median Income (AMI) level is:

<30% AMI: 16,490

30% - 50% AMI: 13,480

50% - 80% AMI: 21,720

Aggregate Home Energy Affordability Gap

The total Home Energy Affordability Gap for households in Albany County by selected Annual Median Income (AMI) level is:

<30% AMI: $38,619,883

30% - 50% AMI: $20,880,498

50% - 80% AMI: $16,418,548

Energy Burdens

The average energy burden (energy bill as percent of income) for households in Albany County by selected Annual Median Income (AMI) level is as follows:

<30% AMI: 35.5%

30% - 50% AMI: 13.3%

50% - 80% AMI: 8.2%
