

Thank you for the opportunity to submit this brief comment.

I think that it is very important for NYSERDA to understand the reasons for the very low results from the Multifamily Impact EM&V study, which are as low as any program results I have seen, comparable to a CFL giveaway program in which most of the bulbs sit in customers' closets. The 2015 Operating Plan Amendment does not describe any significant changes in the program, which I think it should. Another year that produces the same level of results does not seem to be the best use of RGGI funds.
