END OF LIST

Revision Date: 09/30/2016

List notes: Pellet stoves will be added to this list as they become available as certified by the EPA, and are known to be in production and available for sale in New York State, at or below the program minimum gram per hour particulate matter output (Currently 2.0 g/h PM).
 This list was created as a subset of the full EPA Certified Wood Heater list (September 2016), based on web research on manufacturer's websites. For a pellet stove to be listed as "in production" on this list, they must be advertised as in production on the manufacturer's website, and available for new item purchase with EPA certification meeting the above minimums for the NYSERDA Program.
