

Error in Figure 11 IA-Tech-Supplement-Annex-3 Health-Analyses-Supplemental-Data Spreadsheet

In the Figure 11 tab the Reduction in PM2.5 Annual Average Concentrations, Strategic Use of Low Carbon Fuels, 2050 is listed for each county in the state. There are two columns with listed reduction values: All fuels and Excluding the Benefits of Wood Combustion. The values in the spreadsheet table for the all fuels category are consistent with the map values in Figure 11 on page 34 of Section II of the Appendix G Integration Analysis Technical Supplement document. However, the values in the excluding benefits of wood combustion column are inconsistent with the map values in the corresponding figure in the document. The map scales are the same and consistent with the text description but the spreadsheet data are not consistent as the statistical summary below shows.

	All Fuels	Excluding the Benefits of Wood Combustion
Minimum	0.025	0.116
10%	0.029	0.147
20%	0.036	0.173
30%	0.040	0.177
40%	0.044	0.203
50%	0.049	0.215
60%	0.054	0.233
70%	0.069	0.273
80%	0.094	0.300
90%	0.195	0.359
95%	0.301	0.423
Maximum	0.361	0.473
