Uncover Hidden Opportunities

Energy can be a significant part of the cost to run your business, but these costs can be managed if you work with a FlexTech Consultant to identify opportunities to reduce energy use.

Gain Confidence

Consultants provide objective, site-specific, and targeted studies and will work with you to determine the best approach based on your needs, so you can feel confident in the decisions you're making.

Eligible study areas can include:

- Energy master planning
- Comprehensive energy studies
- Targeted system or equipment upgrade evaluations
- Clean heating and cooling system feasibility studies
- Energy efficiency retro-commissioning

By working with a FlexTech Consultant, you can reduce your upfront capital commitment, and receive objective recommendations from experienced consultants.

Through the FlexTech Program you can learn:

- If a clean energy project is right for you
- How to reduce your energy bills
- The payback on potential energy-related building upgrades
- How to develop a capital plan that includes clean energy components

FlexTech Consultants are firms under contract with NYSERDA that have demonstrated clean energy experience and have at least one staff member that is a Licensed Professional Engineer (P.E.).
