2024 Renewable Energy Standard Solicitation:

26 large-scale renewable
energy projects

Over \$6 billion direct
investment projected

1,900+ jobs expected

reduced carbon emissions
—as if taking **more than
250,000** cars off the
road annually

New York is building the energy system for today and tomorrow

The 2024 Renewable Energy Standard Solicitation

NYSERDA executed contracts with 26 large-scale renewable energy projects that were awarded in the 2024 Renewable Energy Standard solicitation. The contracted projects are located throughout New York State.

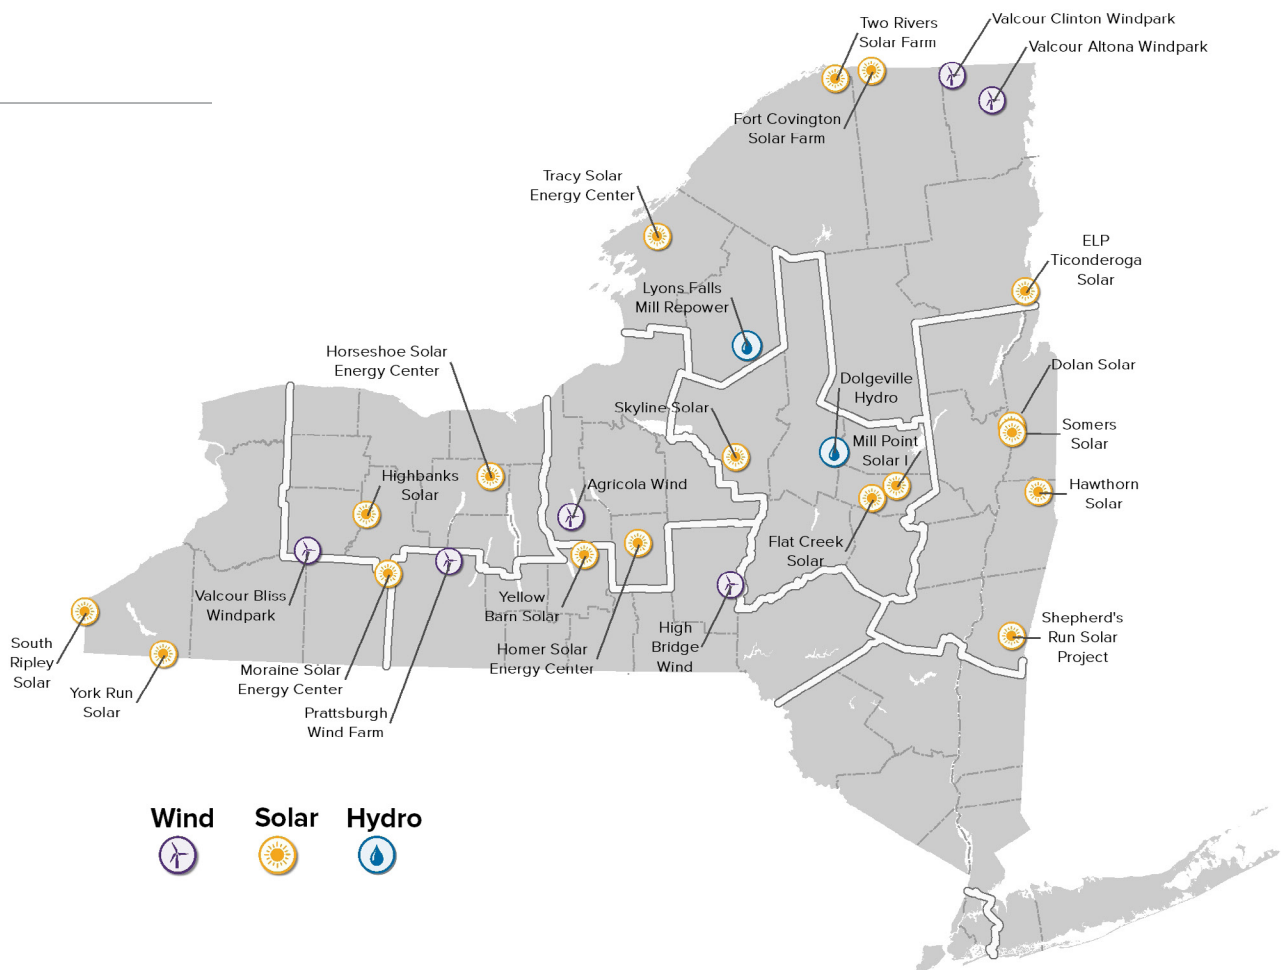

Planned to be operational by 2029, these projects are expected to spur over \$6 billion of direct investment and to create more than 1,900 short- and long-term jobs in development, construction, and operations and maintenance.

Payments under these contracts would not commence until projects have begun commercial operation, after having obtained all required permits and local approvals. Once operational, these projects would **add 2,566 megawatts of new renewable capacity** and are expected to generate **enough clean energy to power more than 670,000 homes each year** and **reduce carbon emissions by more than 1.7 million metric tons annually, the equivalent to taking over 250,000 cars off the road every year.**
