

Attachment B. Public Release of Bid Facility Information

Bid Facility Name:	
Proposer:	
Technology:	
Proposed Nameplate Capacity (Megawatts):	
Location (Town/City and County):	
NYISO Interconnection Queue Number (if applicable):	
Interconnecting Utility:	
NYS PSC Article 10/ORES Case Number (if applicable):	
Located in Agricultural District?	
Bid Facility Website (if applicable):	

General Description of Project (250 words or more):

The Moss Ridge Project (the Project) is a 60MWac ground-mounted solar photovoltaic facility being developed on private land off County Route 20 in the Town of Dekalb, St. Lawrence County, NY. The array will be enclosed in a fence for security. This location was selected for the Project based on capacity on the electric grid and minimal impact to the environment and surrounding area.

The Project is in the final stages of the interconnection process with the NYISO and National Grid, and expects the study results to be approved in September. The Project has been deemed fully deliverable by the utilities, and it has been determined that there is enough capacity on the lines to accommodate the Project. The Project will interconnect to the grid by tapping an existing transmission line that runs through the site.

New Leaf Energy has completed a variety of surveys and studies required by the Office of Renewable Energy Siting (ORES), including a wetlands delineation, archaeological assessments phase 1A and 1B, geotechnical survey, breeding bird survey, winter raptor survey, and more. New Leaf Energy is also proposing visual mitigation to minimize the impacts of the facility on the surrounding community. Please subscribe to the service list of case # 24-00104 on the ORES Permit Application Portal to receive email notifications with links to documents filed by the parties in the ORES application proceedings.

The Project hopes to benefit the local community by increasing tax revenue, providing utility bill credits, creating jobs, paying participating landowners to lease their land, and supporting New York State’s ambitious clean energy goals.
