## 4 PROJECT DESCRIPTION AND SITE CONTROL

### 4.1 Project Site Property Rights

6.4.4 Identify the BOEM wind energy area where the proposed Offshore Wind Generation Facility will be located. Provide documentation that Proposer has a valid lease or irrevocable lease option to develop the leased area within this wind energy area over the entire Contract Tenor.

The Proposer has secured full and exclusive site control for its generation site for nearly the entire Contract Delivery Term of the OREC Agreement. Without BOEM granting an extension, all offshore wind leases expire 25 years after COP approval. Per Section 15.09 of the OREC Agreement, the Proposer will seek that extension for at least the balance of the Contract Delivery Term.

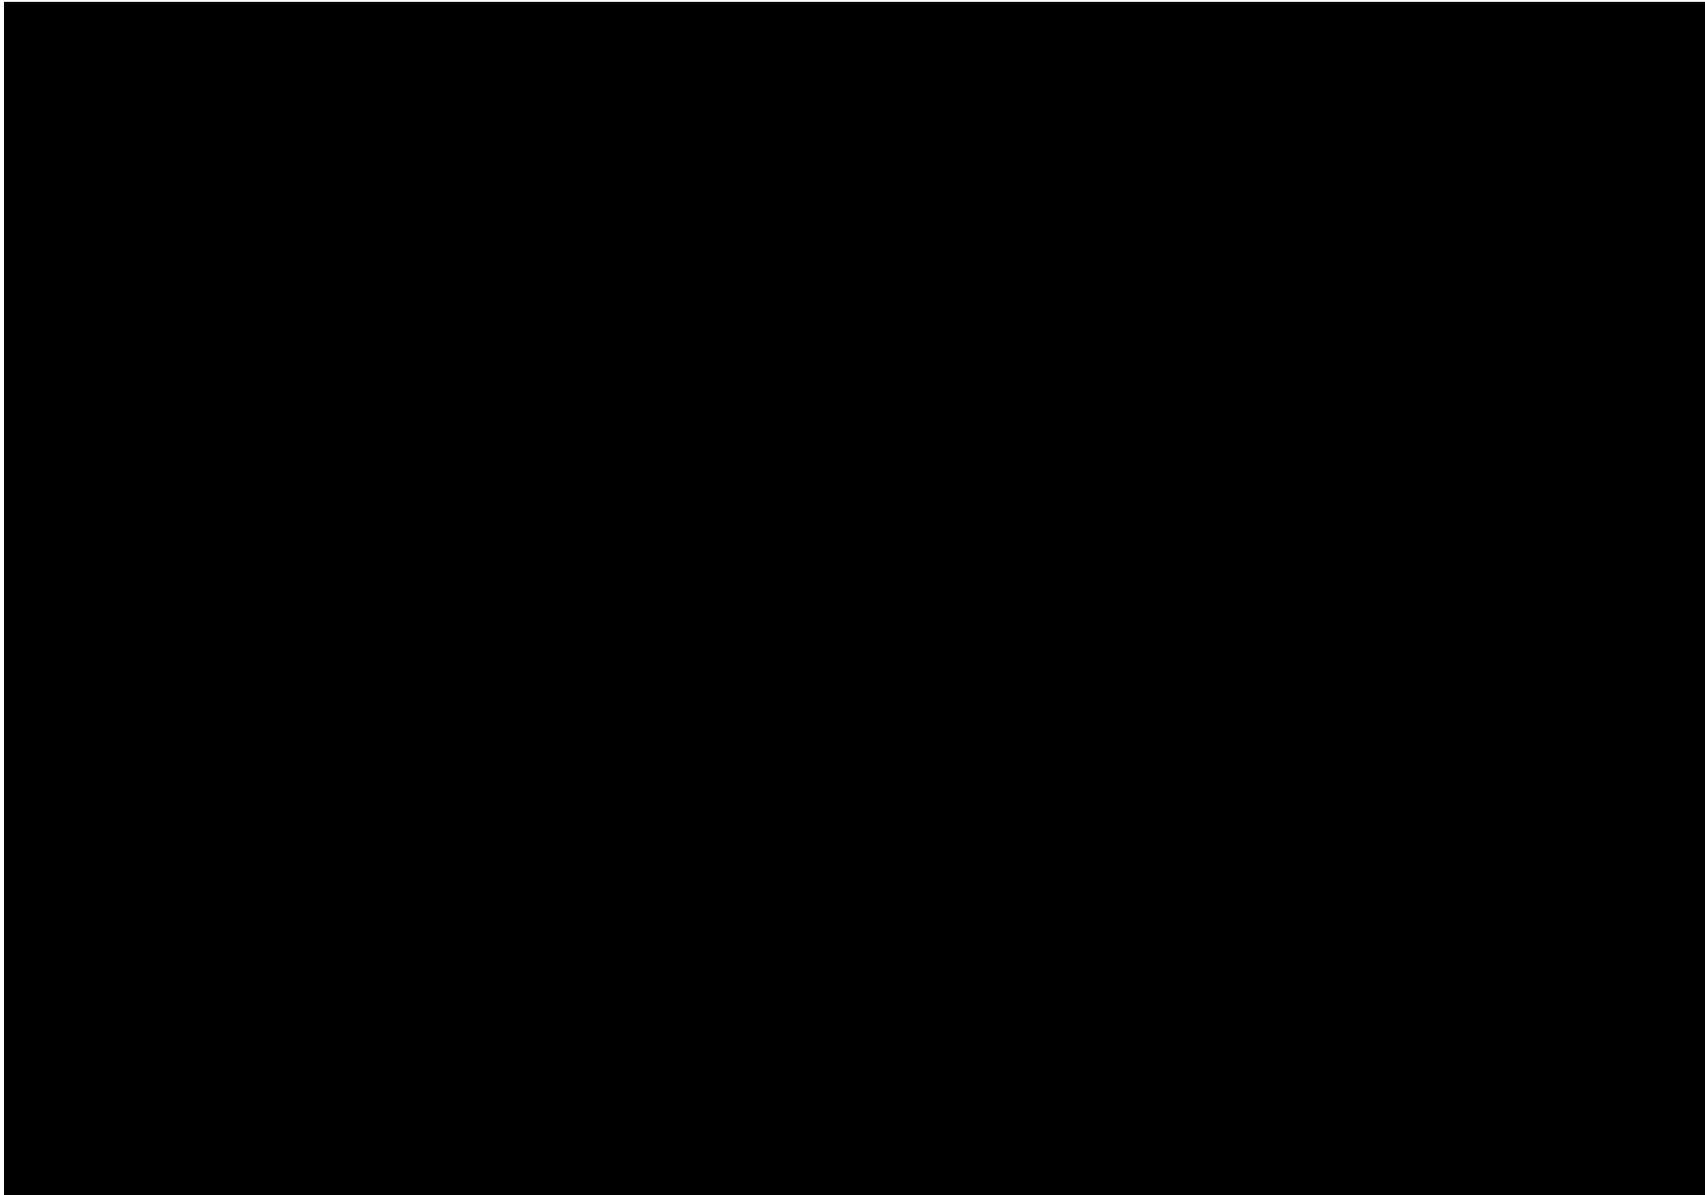

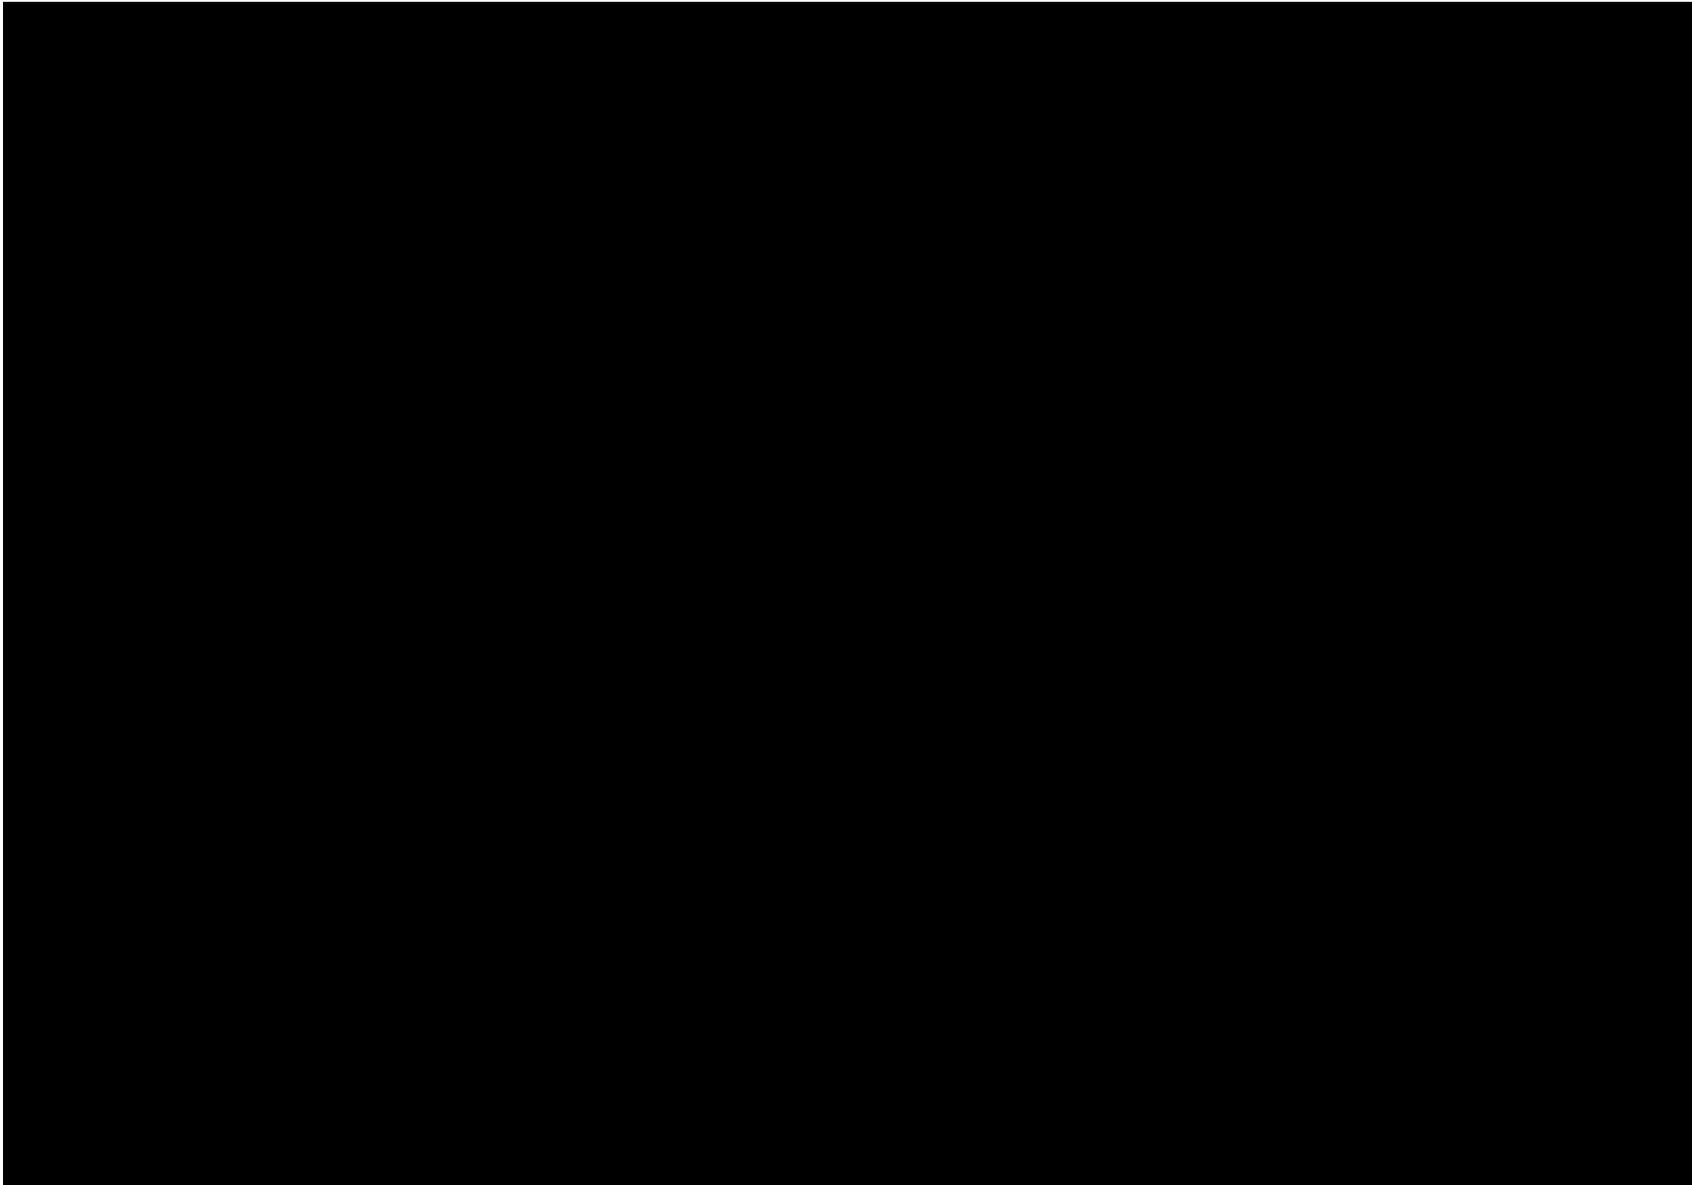

## 4.2 Site Plan

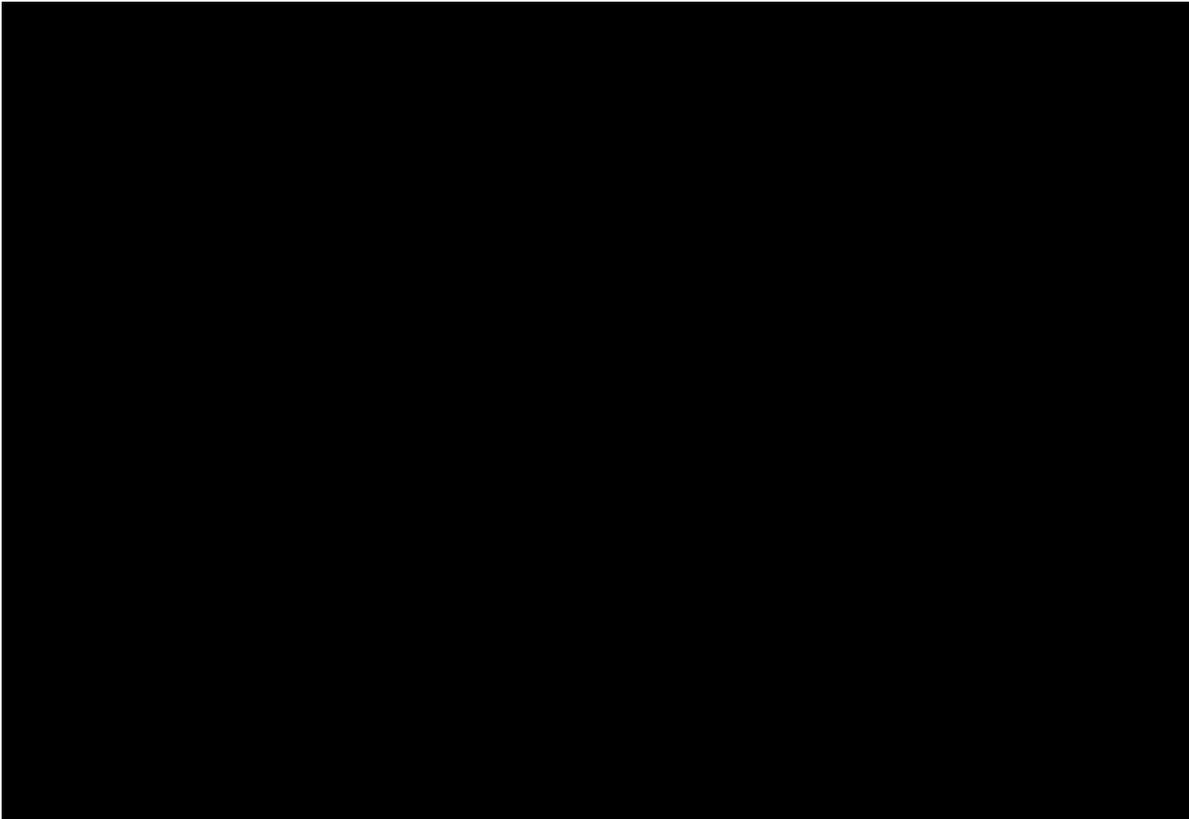

Provide a site plan (or plans) including a map (or maps) that clearly identifies the location of the proposed Offshore Wind Generation Facility, collection facilities, offshore and onshore route of the generator lead line to the interconnection point, converter station(s), and the assumed right-of-way width. Identify the anticipated interconnection point, support facilities, and the relationship of the interconnection point to other local infrastructure, including transmission facilities, roadways, and waterways.

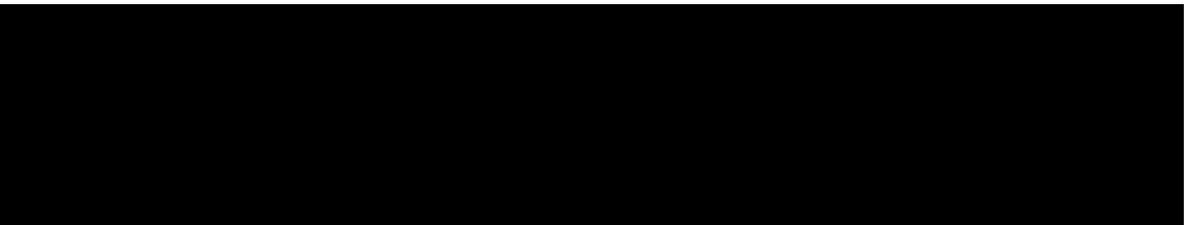

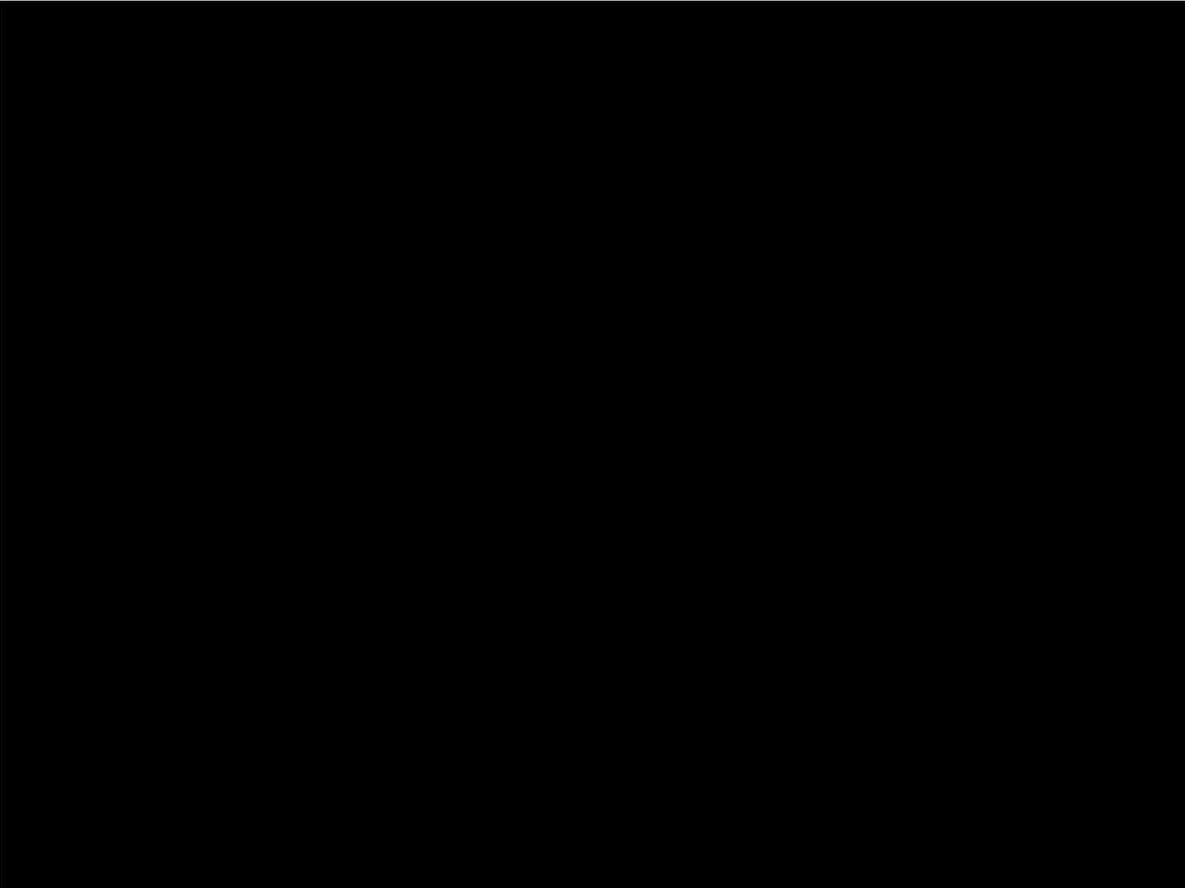

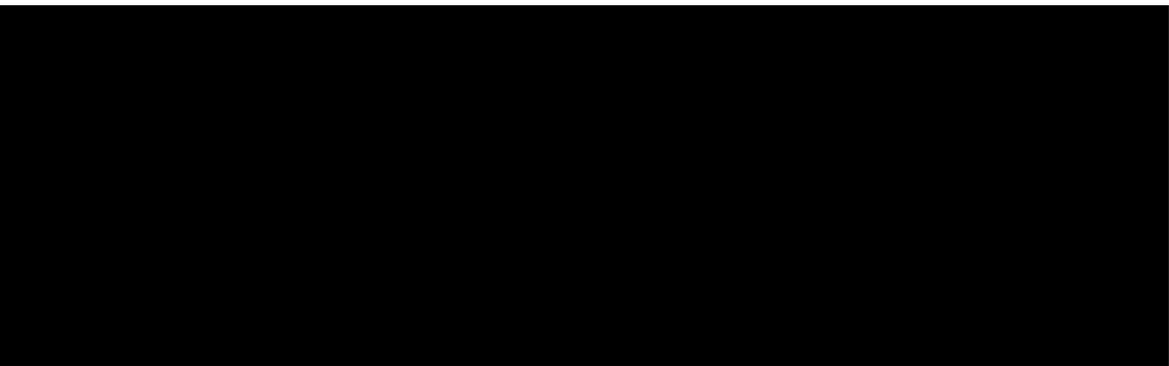

[Redacted]

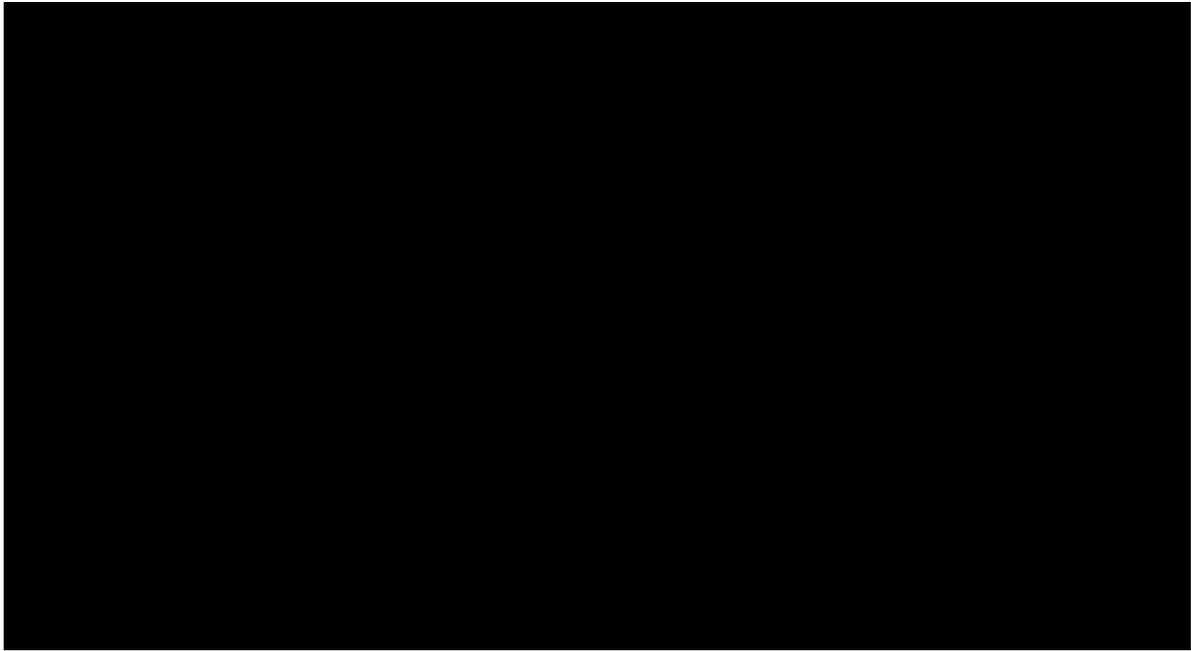

[Redacted]

The WTGs and array cable layouts are all confined within the Lease Area and have been developed to optimize production, maximize safety during operations, and minimize the environmental footprint [Redacted]

[REDACTED]

Please refer to Section 8 for technical details and additional information regarding how the interconnection at the POI will be completed, and for the status of the Proposer's Interconnection Request with NYISO.

### 4.3 Interconnection Route Property Rights

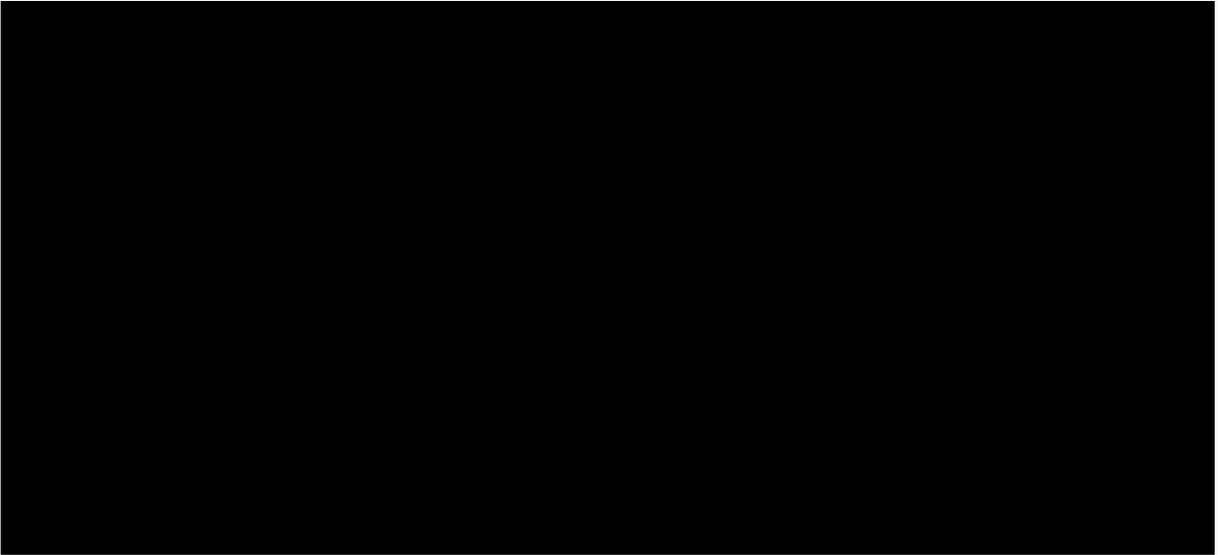

---

Identify any rights that Proposer or its development partner has at the interconnection point and for the generator lead line right of way. Provide a detailed plan and timeline for the acquisition of any additional rights necessary for interconnection and for the generator lead line right-of-way. Include these plans and the timeline in the overall Project schedule in Section 6.4.11.

---

#### 4.3.1

[REDACTED] BOEM will grant the rights for the location and operation of the export cable from the Lease Area to the boundary of federal and state waters. That grant will occur in the normal course of the regulatory process in which BOEM approves the Construction and Operations Plan (COP) for the Project and issues a Record of Decision (ROD) on the approval of the COP.

### 4.3.3 Timeline

Section 11 includes a timeline within the overall Project schedule for the acquisition of the additional rights needed for the export cable and interconnection facilities.

## 4.4 Site Layout Plan

---

In addition to providing the required map(s), provide a site layout plan that illustrates the location of all on-shore and offshore equipment and facilities and clearly delineates the perimeter of the area in which offshore wind turbines will be placed. Identify the distance in statute miles between the nearest shoreline point and the nearest Offshore Wind Generation Facility turbines.

---

A site layout plan that illustrates the location of all onshore and offshore equipment and facilities and clearly delineates the perimeter of the area in which offshore wind turbines will be placed is provided in [REDACTED]

# The Ørsted Way

## Let's create a world that runs entirely on green energy

Climate change is one of the biggest challenges for life on Earth. Today, the world mainly runs on fossil fuels. We need to transform the way we power the world; from black to green energy.

At Ørsted, our vision is a world that runs entirely on green energy. We want to revolutionise the way we power people by developing green, independent and economically viable energy systems. By doing so, we create value for the societies that we are a part of and for all our stakeholders.

The way we work is based on five guiding principles:

#### **Integrity**

We are open and trustworthy and uphold high ethical standards

#### **Passion**

We are passionate about what we do and proud of what we achieve

#### **Team**

We value diversity and collaborate in a non-hierarchical, respectful and trusting way

#### **Results**

We set the bar high, take ownership and get the right things done

#### **Safety**

We never compromise on health and safety standards

Integrity is our root. Passion is our energy. Team is our strength. Results give us freedom. The safe way or no way.

# Chairman's statement

The transformation of the energy supply to green energy is one of the biggest challenges facing the world. Today, more than 80% of the world's energy supply comes from the burning of fossil fuels, which leads to serious climate change and impacts people's living conditions all over the planet. If we are to slow down this development, we need to supply the world with energy in a sustainable manner.

Over a period of 11 years, Ørsted has been transformed from a Danish utility company based on coal, oil and gas to an international energy company based on green energy. In 2017, we decided to phase out our use of coal by 2023, and we divested our oil and gas business. We also guaranteed our Danish residential customers that the power they receive from us is generated by offshore wind farms.

With the decisions we made in 2017, we completed our strategic transformation from black to green energy. None of the other major energy companies in Europe have come this far in their transformation processes, and among this group, we are now the fastest-growing company. As a result, we are a completely different company today. That is why we decided to change our name to Ørsted, inspired by the world-renowned Danish scientist H.C. Ørsted.

Our vision is a world that runs entirely on green energy. We have strong competences within sustainable energy solutions in all parts of our

business. We want to build on these strengths and help the world's transformation to green energy systems.

Our commitment to sustainability is fundamental. We therefore run our business in a way that supports the United Nations Sustainable Development Goals (SDGs). In our Sustainability Report, you can read more about how we contribute to these goals.

The heading for our strategy is 'Green growth'. In the coming years, growth will primarily be driven by our build-out of offshore wind, where we have the largest investment programme in the sector. We are also looking into new growth opportunities within green energy generation,

intelligent customer solutions and solutions integrating generation and consumption.

In 2017, we continued our tireless work to improve safety for our employees and suppliers. We achieved a lost-time injury frequency of 1.6, the lowest level ever in the Group's history. On this basis, we are now switching to an even more fine-meshed measuring method comprising all accidents, whether they lead to absence or not.

Profit for the year from continuing operations amounted to DKK 13.3 billion, our best ever result. The Board of Directors recommends to the annual general meeting that dividend payments be increased from DKK 6 to DKK 9

per share, enabling us to retain an attractive level of dividend.

On behalf of the Board of Directors, I would like to thank the management and employees for having created one of the most successful energy companies in Europe, and one that is leading the way towards a world which runs entirely on green energy.

**Thomas Thune Andersen**  
Chairman

**With the decisions we made in 2017, we completed our strategic transformation from black to green energy. None of the other major energy companies in Europe have come this far in their transformation processes.**

# CEO's review

Ørsted's vision of creating a world that runs entirely on green energy was supported by a strong performance in 2017.

- Strong growth in the Group's operating profit (EBITDA) of 18%
- Wind Power's EBITDA increased by 74% to DKK 20.6 billion, of which the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2 accounted for almost half
- Good progress in the build-out of new offshore wind farms
- New offshore wind projects awarded in Germany and the UK
- Important milestones for our offshore wind projects in the USA and Taiwan
- Inauguration of the biomass conversion of Skærbæk Power Station and start-up of the Asnæs Power Station conversion
- Divestment of our oil and gas business
- Change of name to Ørsted.

## Results

In 2017, we achieved a strong operating profit (EBITDA), which more than lived up to our expectations at the beginning of the year.

Underlying growth in 2017 was 56%. The good results were driven by yet another strong year in Wind Power where EBITDA was up 74% and ended at DKK 20.6 billion, fuelled by the farm-downs of 50% of the Walney Extension and Borkum Riffgrund 2 offshore wind farms. In addition, there was an increase of 45% in earnings from our offshore wind farms in operation where the portfolio is continuously expanded.

The reported EBITDA for 2017 amounted to DKK 22.5 billion, corresponding to a growth of 18%. Our return on capital employed (ROCE) increased to 25% in 2017 from 17% in 2016, when adjusting for lump-sum payments related to gas purchase contracts amounting to DKK 4.3 billion in 2016.

The net profit for the continuing part of the Group increased by DKK 1.1 billion to DKK 13.3 billion. In addition, the result from the divested upstream oil and gas business contributed with DKK 6.9 billion.

In 2017, the green share of our heat and power generation increased by 14%-points to 64% as a result of the conversion of our CHP plants to sustainable biomass and increased generation from offshore wind farms. Our target is to

**// Our target is to increase the green share of power and heat generation to at least 95% in 2023.**

increase the green share of power and heat generation to at least 95% in 2023.

### Strategic development

Our vision is to create a world that runs entirely on green energy. We want to spearhead the green transformation. We do so by continuously investing in our competitiveness and core competences to create opportunities for long-term, profitable growth within renewable energy.

Our business activities consist of three areas: offshore wind, utility business, as well as a portfolio of new long-term growth options.

We have an ambitious plan for the build-out of offshore wind that will enable us to maintain and strengthen our global, market-leading position and continue to expand in both existing and new markets. We will also maintain our focus on reducing the costs of offshore wind and on further developing innovative technical solutions. Over the next many years, offshore wind will remain our primary driver of growth and investment priority and constitute most of our business. It is our strategic core and will remain our priority, should we face bottlenecks in our resource allocation. We expect that more than 85% of our gross investments will be within offshore wind, and yield an average return on capital employed of 13-15% in the years up to and including 2023.

In our utility business, we are in the process of completing our conversion from fossil fuels to sustainable biomass, ensuring that coal can be phased out completely by 2023. At the same time, we will continue our roll-out of smart meters, build a smart power distribution grid,

while also focusing on improving customer experience through digitisation and innovation of our products. Our utility business complements our wind power business, enabling us to develop vertically integrated, green energy solutions. In addition, it provides access to and insight into the market and contributes stable, regulated earnings.

There is strong global support for accelerating the green transformation. In the past few years, we have created significant value through our investments in green energy, and we want to gradually expand our access to the significant, long-term growth opportunities, not just within offshore wind and bioenergy, but potentially also other green technologies. We want to build on Ørsted's vision, culture and competences to pursue further profitable growth.

As much as possible, our long-term growth must be a diversified journey combined with the ability to change our focus and direction in step with market developments. We cannot predict what the future will bring.

Our strategy is based on the vision of an integrated green energy system, where renewable energy technologies can be combined with each other and with energy storage solutions, more flexible and intelligent patterns of consumption and electrification of the transport sector, heating systems and industry. We believe that the ability to think integrated solutions across different technologies and parts of the energy system may in itself become a competitive advantage.

## // We want to gradually expand our access to the significant, long-term growth opportunities, not just within offshore wind and bioenergy, but potentially also other green technologies.

Our portfolio of new long-term growth options includes, among other things, the Renaissance technology. We expect our first full-scale plant to be commissioned in H1 2018. Furthermore, we are seeking to mature our 'Energy-as-a-Service' concept as a way of meeting our industrial customers' needs for innovative and green energy solutions. We have also established a new unit focusing on energy storage and solar PV projects, and we also look into onshore wind. It is early days for these initiatives, and we are still working to establish a scalable commercial model for them. Thus, they are not expected to contribute significantly to the Group's financial development in the short term, but we are exploring them as long-term growth options.

Currently, our above-mentioned growth initiatives are all organic, but we will also consider making focused acquisitions should strategically relevant opportunities arise with the potential to create value – both within offshore wind and within new green growth areas where we can build on existing competences. Geographically we focus on North-western Europe, North America and selected Asian markets.

When it comes to storage, solar PV and onshore wind we first and foremost see value creation where we can take over projects from developers who do not have the scale, capabilities, and balance sheet to extract the full value from their projects. We have essentially built our leadership position in offshore wind

on the same business model. There are, of course, differences in technology and market dynamics across offshore wind, onshore wind, storage and solar PV. However, we also see many similarities where we can transfer this experience and learning from our existing business. Given the strength and growth of our offshore wind business, we are not under pressure to pursue new green avenues, but if attractive opportunities can be found within adjacent renewable technologies, a broader portfolio will further add to our strategic scale optionality, and long-term growth prospects.

In 2017, we changed our name to Ørsted – a name which better supports our position as a leading green energy company. The name is a tribute to the Danish scientist H.C. Ørsted, whose curiosity, dedication and skills, among other things, led to the discovery of electromagnetism, which today is a key component in the generation of power and thereby modern society. The name has generally been well received both internally in the company and among our external stakeholders. A few bearers of the Ørsted name have, however, chosen to file a subpoena with the Copenhagen Maritime and Commercial Court to prevent our use of the name. We are, of course, sorry about that as we have been keen to establish a friendly and respectful relationship with all bearers of the name. We still believe we are entitled to name our company after H.C. Ørsted.

### Capital allocation

From 2019, we expect our business activities to generate sufficient cash flows to finance our planned portfolio investments.

Most of our capital will go towards supporting our existing ambitious growth plan for offshore wind, where our ambition is to reach an installed capacity of 11-12GW by the end of 2025. In addition, we will finalise the above-mentioned conversion of our CHP plants to sustainable biomass and install one million smart meters.

We maintain our strong commitment to our credit rating target (BBB+/Baa1) and the, at any time, announced expected dividend payments. Our capital structure allows us to increase dividends from DKK 6 to DKK 9 per share, totalling DKK 3.8 billion for 2017. This is a significant increase compared to our announcement at the time of the IPO and attributable to strong and growing cash flows from our offshore wind farms in operation. For the period up until 2020, we still expect a year-on-year high single-digit percentage increase in dividends relative to our new baseline.

Even with our current ambitious investment plans, clear commitment to our credit rating target and payment of increasing dividends, we expect to build additional financial capacity within a couple of years. This means that in the future, after the expected farm-down of Hornsea 1, we will only use farm-downs if we can continue to attain an attractive value creation or in order to spread our market and project risk.

We will invest any further excess financial capacity in value-adding growth to complement our existing investment plan, if we see relevant opportunities in the market.

After that, excess capital will be returned to our shareholders in the form of dividends and/or share buybacks.

### Wind Power

In 2017, we reached several new milestones in our ambitious green strategy. Burbo Bank Extension in the UK and Gode Wind 1 and 2 in Germany were inaugurated in the early summer, contributing significantly to our continued growth in earnings from operating offshore wind farms. At the end of 2017, all turbines at Race Bank and at the first part of Walney Extension had been installed. Race Bank was fully commissioned in January 2018 and Walney Extension is expected to follow in H2 2018. In 2017, the build-out of our portfolio also included German Borkum Riffgrund 2, Dutch Borssele 1 and 2 and Hornsea 1 in the UK, which will be the world's largest offshore wind farm when commissioned.

We continued our partnership model in 2017, farming-down 50% of Walney Extension to the Danish pension funds PKA and PFA as well as 50% of Borkum Riffgrund 2 to Global Infrastructure Partners. The farm-downs testify to the continued considerable interest from investors in the green transformation and Ørsted's market-leading partnership model.

In April, we won the rights to build three offshore wind farms in the German part of the North Sea. Two of them were won with zero-subsidy bids. Commissioning of the projects is planned for 2024, provided that final investment decisions, as expected, are made in 2021.

In September, we were awarded a contract to construct Hornsea 2 in the UK. With a capacity of 1.4GW, it will overtake Hornsea 1 as the world's largest offshore wind farm when completed in 2022. The price of the contract for difference (CfD) was 50% lower than in the previous CfD round just two years ago. The decline illustrates the rapid cost reductions in the industry, which have made offshore wind power competitive relative to conventional power generation based on fossil fuels.

We are constantly observant to new opportunities for expanding our portfolio, creating more value and safeguarding our market position. This applies both in Europe, where the interest in offshore wind remains strong, and via business development in new markets, such as the USA and Taiwan. In the autumn, the UK and Dutch governments announced new ambitious targets for additional build-out of offshore wind in the 2020-2030 period.

In the USA, we bid at the first offshore wind auction in Massachusetts in December together with our partner Eversource Energy, participating with the Bay State Wind project. The preferred bidder or bidders are expected to be selected in April 2018 and will be invited to negotiate a fixed price contract with the three local power distribution companies. In addition, we entered into a partnership agreement with Dominion Energy about a development project off the coast of Virginia for further build-out of offshore wind in Virginia.

Since offshore wind is an important component in Taiwan's future energy supply, it is a potentially attractive market for us. At the end of 2017, the Taiwanese EIA evaluation panel

recommended approval of our environmental impact assessment of the four Greater Changhua projects with a total capacity of up to 2.4GW. Final approval is expected in Q1 2018. In addition, we have entered into cooperation with local Taiwanese companies on components for future projects. We expect the first of the potential projects in Taiwan to be commissioned in the early 2020's.

### Bioenergy & Thermal Power

In accordance with our overall strategy, we continue to convert our Danish CHP plants to sustainable biomass. The phasing-out of coal is gaining momentum, and from 2023 we will no longer use coal to generate heat and power. In October 2017, we inaugurated Skærbæk Power Station's new unit which can now run up to 100% on sustainable biomass. We also entered into an agreement to convert Asnæs Power Station to sustainable biomass from 2019. Now, only Esbjerg Power Station remains to be converted for us to achieve our objective of coal-free operations.

Our first commercial Renaissance plant in Northwich, UK, was constructed in 2017. Through enzymatic treatment, unsorted household waste is converted into biogas and recyclable materials. The work on testing and optimising the mechanical parts of the plant is still ongoing and has taken longer than expected. We expect to commission the plant in H1 2018. When fully operational, the plant is expected to be able to treat waste from approximately 110,000 British households.

### Distribution & Customer Solutions

At the beginning of the year, and as part of our green transformation, we decided that our

733,000 residential power customers in Denmark should have their total power consumption covered by green power generated by our offshore wind farms at no additional cost for them. Since 1 January 2017, we have therefore supplied green power to all our residential customers. We buy certificates from our own Danish offshore wind farms corresponding to the power consumed by our residential customers.

By the end of 2020, smart meters must be installed for all our Danish power customers. After a successful pilot project in late 2016 and early 2017, we initiated the large-scale roll-out in June. By the end of 2017, a total of 183,000 new meters were in use. In cooperation with Danish meter producer Kamstrup, our power distribution company Radius is tasked with replacing more than one million smart meters on Zealand.

### Employees

We have a very strong focus on safety and well-being. During the year, we maintained the positive development in the Group's lost-time injury frequency (LTIF) and saw no life-changing accidents. Moreover, the feedback from our employees in this year's employee survey was again positive. We believe that well-being, safety and positive results go hand in hand. Therefore, we are working continuously to maintain and increase employee satisfaction and safety.

Effective from 2018, we have introduced a new safety target – total recordable injury rate (TRIR). This measure is more extensive than LTIF, and includes, besides lost-time injuries, accidents which do not result in absence, but

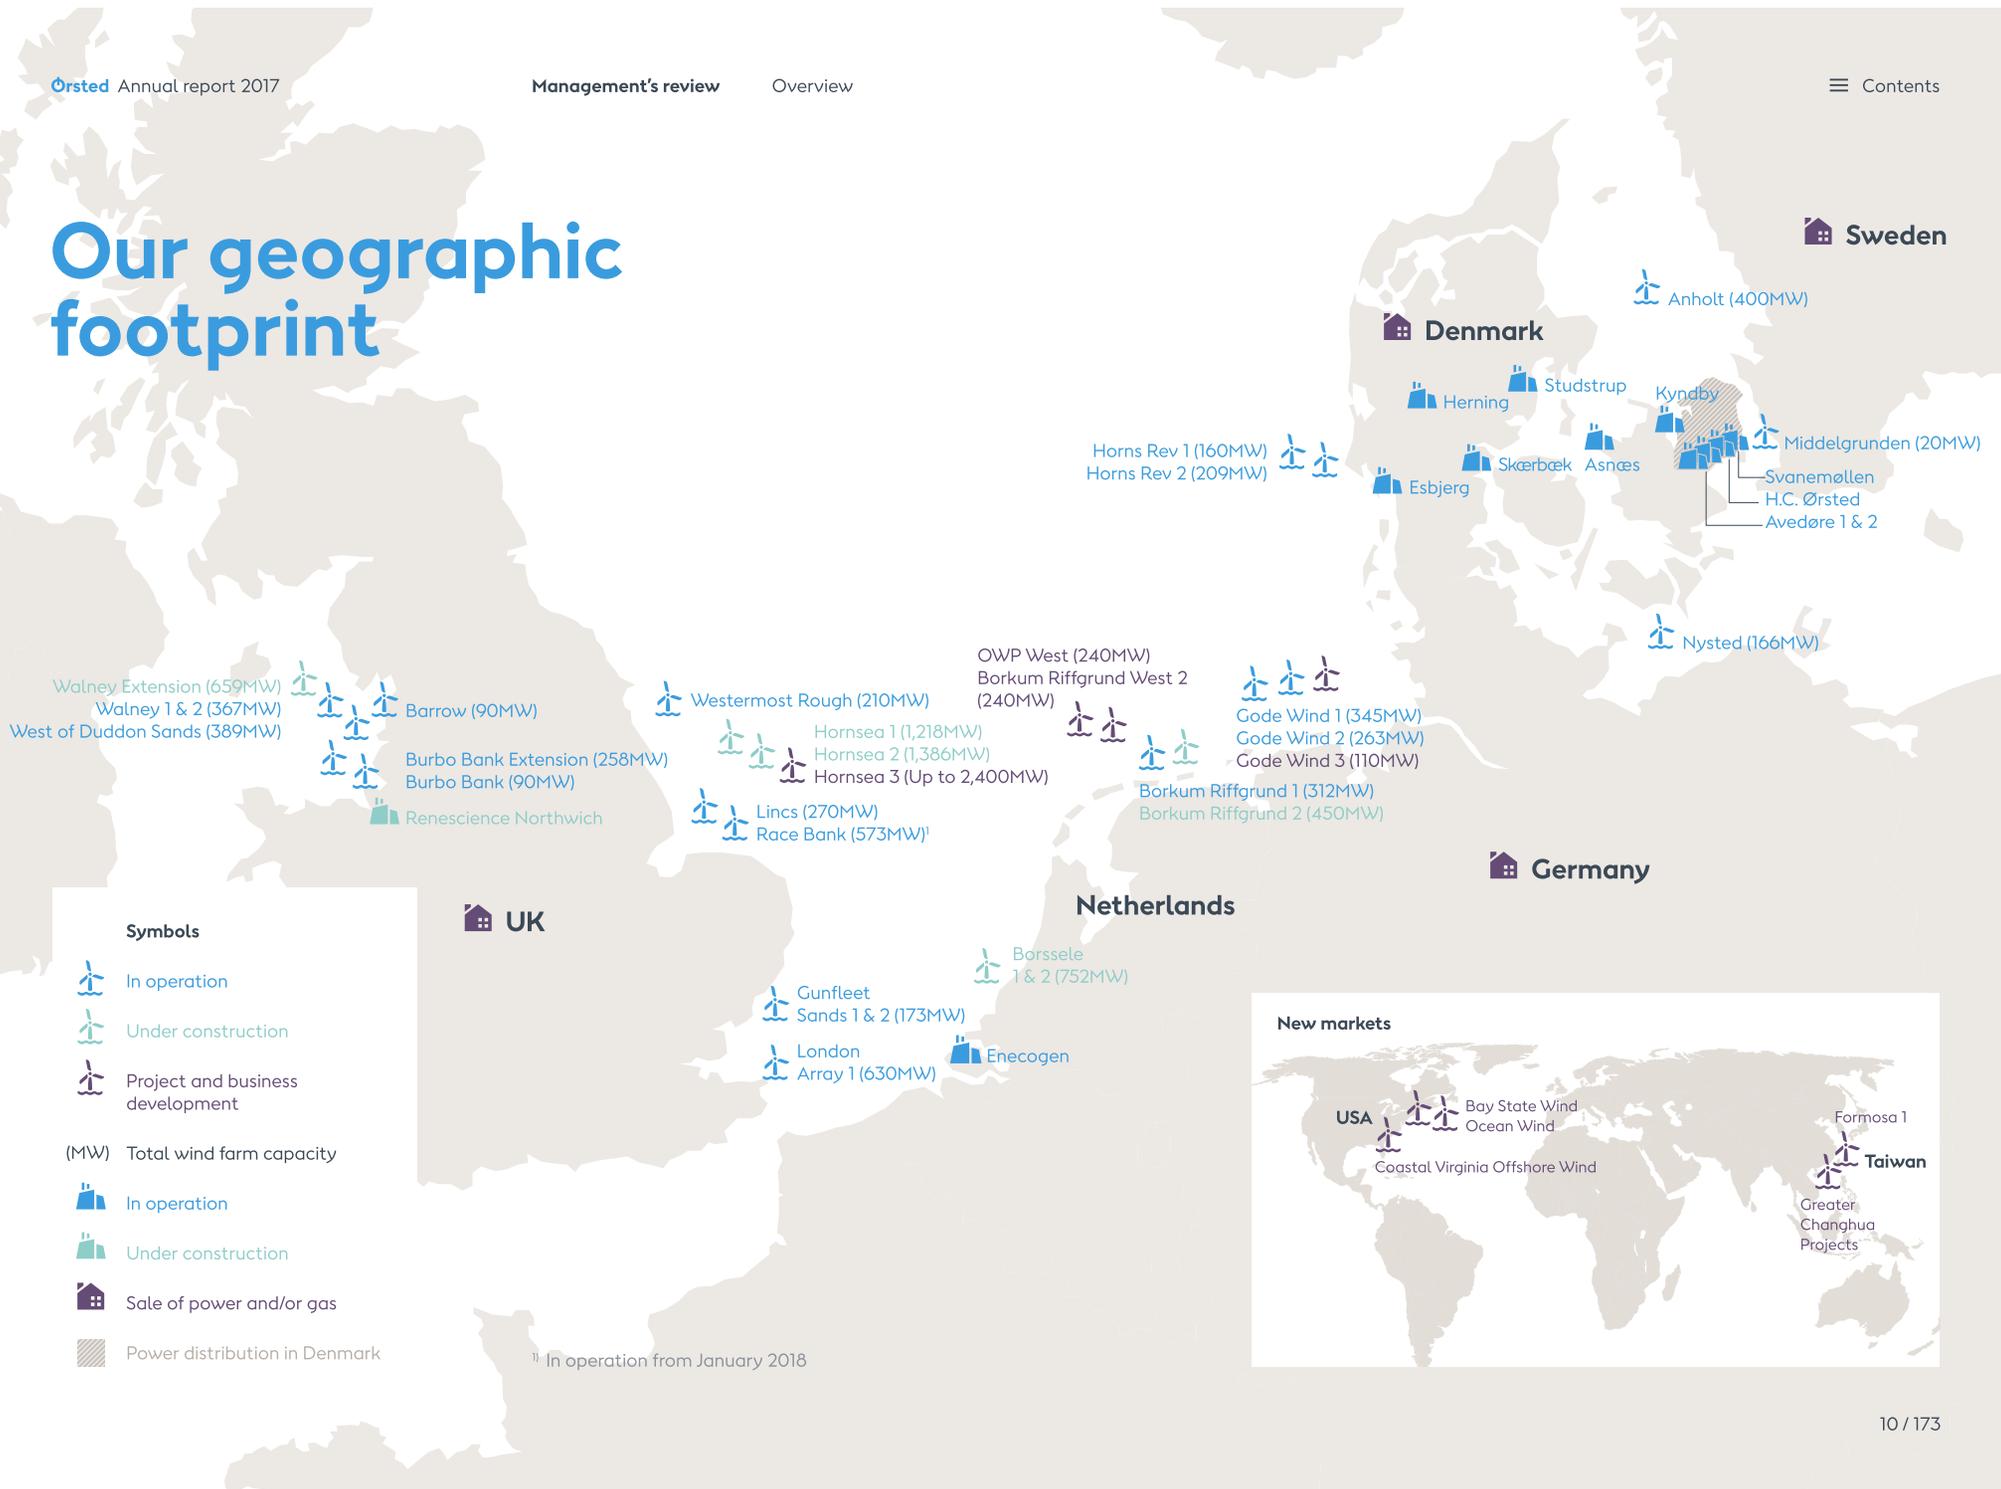

which make the employee unable to undertake normal work, or where medical treatment is required. It follows that there are more facets to TRIR compared to the previously used LTIF measure, and we believe that it reflects everyday life in Ørsted better and will help raise ambition levels for our safety efforts even further.

Our employees again deserve credit and acknowledgement for their dedicated performance all through 2017. Their strong competences, entrepreneurial spirit and passion for what Ørsted stands for and the work we do, are the very foundation of our company.

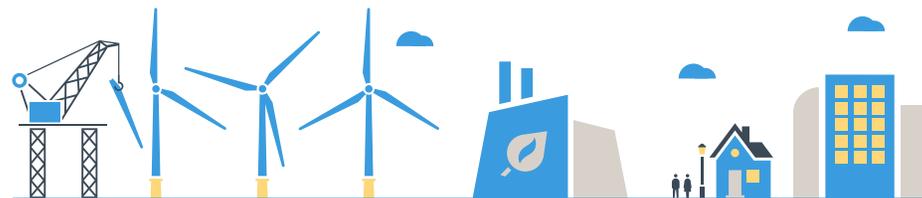

**Henrik Poulsen**  
CEO and President

How we create a world that runs entirely on green energy

- Financial capital**  
We finance our investments through cash flow from operations, debt and divestment of partnership interests
- Energy assets**  
We invest in scalable, innovative green technologies and solutions
- Natural resources**  
We rely on natural resources, such as biomass, as well as locations with attractive wind speeds and seabed conditions
- Human resources**  
We rely on a highly skilled workforce to operate our business
- Innovative culture**  
We continuously develop competitive energy solutions through innovation
- Stakeholder engagement**  
We depend on constructive relations with our key stakeholders to ensure supportive framework conditions for our business

	Develop and construct	Operate and maintain	Sell and optimise
<b>Wind Power</b>	Develop and build offshore wind farms. Five wind farms are under construction	Own 23 offshore wind farms of which we operate 19	Utilise our partnership model and crystallise value
<b>Bioenergy &amp; Thermal Power</b>	Convert our CHP plants from coal or gas to sustainable biomass	Own and operate ten plants in Denmark and one plant in the Netherlands	Enter into long-term contracts with our heat customers and sell power to the market
<b>Distribution &amp; Customer Solutions</b>	Modernise our power distribution grid in Denmark	Operate and maintain our grid infrastructure	Manage the Group's overall energy portfolio and provide gas, power and energy solutions for our customers

- We create value for our shareholders** in the form of competitive total returns
- We address profound societal challenges** by developing green, independent and economically viable energy systems that reduce greenhouse gas emissions
- We fulfil our customers' energy needs** through green, innovative and efficient energy solutions
- We are committed to a sustainable working life** and keep a constant focus on being **a great and safe place to work** with motivated and satisfied employees

# Strong progress in consolidated results

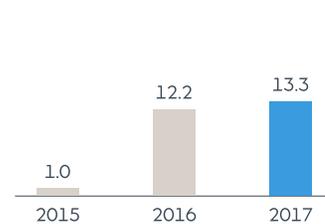

## Operating profit (EBITDA), DKK billion

The increase was due partly to 45% growth in earnings from our offshore wind farms in operation, partly to higher partnership income from the farm-down of Walney Extension and Borkum Riffgrund 2. The increase was partially offset by the fact that 2016 was positively affected by compensation of DKK 4.3 billion from the renegotiation of gas purchase contracts.

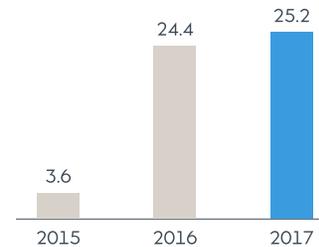

## Net profit (continuing operations), DKK billion

The increase was mainly due to higher EBITDA, partially offset by a gain on the divestment of the gas distribution network in 2016.

## Return on capital employed (ROCE), %

ROCE increased by 1%-point due to the higher EBITDA, which was partly offset by higher funds tied up in capital employed as a consequence of our continued high investment level. ROCE totalled 17% in 2016 adjusted for compensation from renegotiations.

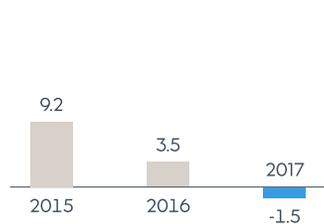

## Gross investments, DKK billion

Investments were particularly substantial in 2017 due to construction on several offshore wind farms including Walney Extension, Race Bank, Borkum Riffgrund 2 and Hornsea 1.

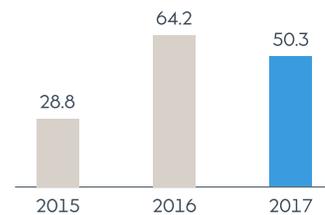

## Interest-bearing net debt, DKK billion

Net debt decreased by DKK 5.0 billion, due to the proceeds from the divestment of the Oil & Gas business and from its operation until the divestment. The continuing operation also achieved a positive free cash flow despite the high investments.

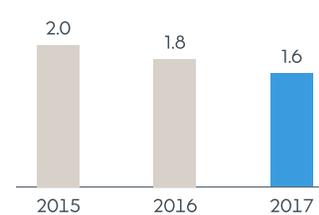

## Credit metric (FFO/adjusted net debt)<sup>1)</sup>, %

The decline in FFO/adjusted net debt was primarily due to lower FFO, as gains from the farm-downs of the offshore wind farms are not included in the calculation. Gains from the farm-downs were DKK 8 billion higher than in 2016, which on the other hand was positively affected by compensation from the renegotiations. However, debt was lower compared to 2016.

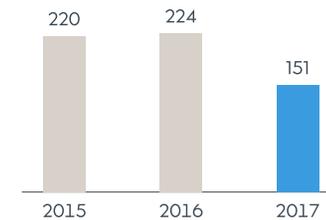

## Safety, LTIF

Our continued focus on safety resulted in a historically low lost-time injury frequency in 2017. Effective from 2018, we have introduced a new safety target – total recordable injury rate (TRIR).

## Carbon emissions, gCO<sub>2</sub>e/kWh

Carbon emissions were reduced following the biomass conversion of CHP plants as well as 42% higher generation from offshore wind farms.

<sup>1)</sup> Interest-bearing net debt including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligation less deferred tax.

# Outlook 2018

## New EBITDA guidance method

We have, in 2018, decided to change our guidance method. In the future, our guidance will only include the effect from existing offshore wind partnership agreements. Previously, our outlook included the effect from partnership agreements which we expected to conclude during the year. That made our outlook particularly sensitive to the timing of farm-downs in Wind Power as well as the distribution of income between the years. Earnings from the new partnerships concerning Borkum Riffgrund 2 and Walney Extension amounted to DKK 9.8 billion in 2017.

## EBITDA

EBITDA (business performance) excluding new partnership agreements is expected to be DKK 12-13 billion in 2018. The outlook is based on the expected development in the business units (compared to 2017), as described below.

### Wind Power (without new partnerships) – higher

- Earnings from offshore wind farms in operation are expected to increase as a result of the full commissioning of Race Bank in January 2018 and Walney Extension in H2 2018, as well as higher earnings from Burbo Bank Extension, which was completed in May 2017

- Earnings from existing partnership agreements are expected to decline relative to 2017, when earnings were positively affected particularly by Race Bank, but also by Burbo Bank Extension and Gode Wind 1 and 2. In 2018, earnings from existing partnerships will primarily come from Walney Extension and Borkum Riffgrund 2

- A more negative contribution than in 2017 is expected from other activities as a result of higher expensed project development costs.

### Bioenergy & Thermal Power – higher

- Total EBITDA from our heat and power generation activities is expected to increase, primarily as a result of the completed bioconversion of Skærbæk Power Station. Earnings from ancillary services are expected to be in line with 2017.

### Distribution & Customer Solutions – significantly lower

- Earnings from Distribution are expected to be in line with 2017
- In 2017, Markets achieved high earnings from our gas portfolio and trading activities. We expect lower earnings from these activities in 2018. The increasing gas prices during 2017 led to an increase in the accounting value of our gas inventories, especially towards the end of the year. All else being equal, this will lead to an offsetting negative effect in 2018 when we sell the gas

## Outlook 2018, DKKbn

	2018 Guidance	2017 Realised
EBITDA (without new partnerships)*	12-13	12.7
Wind Power (without new partnerships)*	Higher	10.8
Bioenergy & Thermal Power	Higher	0.2
Distribution & Customer Solutions	Significantly lower	2.1
Gross investments	16-18	17.7

\* EBITDA excluding new partnership agreements signed later than 1 January 2018 (respectively 2017).

Our EBITDA guidance for the Group is the prevailing guidance, whereas the directional earnings development per business unit serves as a means to support this. Higher/lower indicates the direction of the business unit's earnings relative to the results for 2017.

- In 2017, earnings from LNG were negatively impacted by a provision regarding our capacity in the Gate terminal in Rotterdam. Earnings are thus expected to improve in 2018.

### Hornsea 1

We still expect a 50% farm-down of Hornsea 1, either in H2 2018 or in 2019. Should the divestment materialise in 2018, EBITDA including new partnerships is expected to be higher than the DKK 22.5 billion achieved in 2017. With a capacity of 1.2GW, this wind farm is around 85% larger than Walney Extension.

### Gross investments

Gross investments for 2018 are expected to amount to DKK 16-18 billion. The outlook reflects a high level of activity in Wind Power (Walney Extension, Hornsea 1, Borkum Riffgrund 2, Borssele 1 and 2 and Hornsea 2), biomass conversion of Asnæs Power Station and installation of smart meters.

### Work in progress

In addition to gross investments, significant funds are temporarily tied up in connection with the construction of offshore transmission assets for offshore wind farms in the UK and offshore wind farms for our partners. These funds are a part of our operating cash flow.

At the end of 2017, funds tied up in work in progress totalled DKK 7.5 billion. We expect to divest the Burbo Bank Extension offshore transmission asset during H1 2018, but we still expect to see an increase in funds tied up in work in progress in 2018 as a result of the construction of transmission assets at Hornsea 1 and 2. The construction of Borkum Riffgrund 2 and Walney Extension is expected to be more or less operating cash flow-neutral, as we will be receiving milestone payments from our partners during the construction phase.

### Forward-looking statements

The annual report contains forward-looking statements, which include projections of financial performance and targets as well as our financial policies. These statements are not guarantees of future performance and involve certain risks. Many direct and indirect factors may affect future results and developments may therefore differ materially from what is forecast due to a variety of factors.

These factors include, but are not limited to, changes in temperature, wind conditions and precipitation levels, the development in inflation, currency, power, gas, coal, carbon, oil and interest rate markets, changes in legislation, regulation or standards, changes in the competitive environment in our markets, security of supply and cable break-downs or other disruptions. Reference is made to the 'Risk and risk management' chapter and to note 7.

### Uncertainties, prices and hedges

Our offshore wind farms are largely subject to publicly regulated prices, implying a high degree of certainty about the income. This means that we know the price per generated MWh for most wind farms in Denmark and Germany as well as the CfD wind farms in the UK. For our British ROC wind farms, we also know the subsidy per generated MWh which we will receive in addition to the market price. In 2018, the ROCs are expected to account for 60% of the total income from these wind farms. In 2018, the total publicly regulated prices and subsidies are expected to account for 78% of the income from our offshore wind farms in operation.

The part of our generation from offshore wind farms and power stations, which is exposed to market prices, has to a large extent been hedged for 2018. The same applies to our currency risks. The market value of financial hedging instruments relating to our operations and divestment of assets deferred for recognition in business performance EBITDA in 2018 amounted to DKK -0.2 billion at the end of 2017. This effect is included in the outlook for 2018 (see note 1.1).

The most significant uncertainty surrounding the operating profit from existing activities in 2018 relates to the size of our power generation, which depends on the wind conditions, the ramp-up of new wind farms and potential break-downs, and to a less extent our earnings from existing partnership agreements, heat and market trading activities.

# Financial targets and policies

## Financial targets

Our target is an average return on capital employed (ROCE) of 12-14% for the Group in the 2018-2023 period (previously 2017-2023), with Wind Power as the main contributor with a targeted ROCE of 13-15% over the same period. We have maintained our target, even though we are now excluding 2017, where we achieved an ROCE of 25% for the Group and 28% for Wind Power.

In Bioenergy & Thermal Power, the focus is on realising positive free cash flows (FCF). Based on the biomass conversion of our CHP plants and the build-out of new bioenergy solutions, we expect to realise positive free cash flows for Bioenergy & Thermal Power from 2018.

This year, we are introducing a new directional target for the operating profit from our offshore wind farms in operation, as they will account for the largest share of our total earnings within a few years. Therefore, we expect an average annual increase in EBITDA from offshore wind farms in operation (including O&M agreements and power purchase contracts) of 13%-14% in the period from 2017 to 2023, from a starting point of DKK 8.5 billion in 2017. The portfolio includes the current decided offshore wind farms through Hornsea 2, and does not account for farm-downs after Hornsea 1, which we expect to farm down in H2 2018 or 2019.

## Financial policies

The Board of Directors recommends to the annual general meeting that dividends of DKK 9 per share be paid for FY 2017, equating to an increase of 50% and a total of DKK 3.8 billion. This is a significantly higher increase than envisaged in our dividend policy, which was revised in connection with the IPO. The increase is driven by a strong and increasing cash flow from our offshore wind farms in operation. Our objective is still to increase dividends annually by a high single-digit rate compared to the dividends for the previous year up until 2020.

As described in the strategy section of this annual report, our dividend policy and other expected capital allocation are subject to our objective of maintaining a BBB+/Baa1 rating profile.

At the end of 2017, we adjusted our credit metrics to exclude the effect of gains on farm-downs of offshore wind farms. We have done this to align the metric to the credit rating agencies' method. Despite the alignment, our target is still a ratio of about 30%.

## Financial targets

	Target	Year
Return on capital employed (ROCE)		
Group	12%-14%	2018-2023
Wind Power	13%-15%	2018-2023
Distribution & Customer Solutions	9%-11%	2018-2023
Free cash flow (FCF)		
Bioenergy & Thermal Power	Positive	2018
Average yearly increase in EBITDA (CAGR)		
Offshore wind farms in operation	13%-14%	2017->2023

## Financial policies

Rating	Min. Baa1/BBB+/BBB+ (Moody's/S&P/Fitch)
Capital structure	~ 30% (FFO/adjusted net debt)

We have maintained our ROCE target, even though we are excluding 2017, where we achieved an ROCE of 25%.

We are introducing a new directional target for our offshore wind farms in operation.

Our current rating is in accordance with the policy.

# Market situation

## Transforming global energy systems to renewable energy

Global carbon concentrations are now at 145% of the pre-industrial level of the mid-1800s, and 2017 was the fourth year in a row with extraordinarily high temperatures. According to the World Meteorological Organization, changes in the atmosphere over the last 70 years have been more abrupt and severe than ever before.

The vast majority of the world's countries acknowledged the need to fight climate change by ratifying the Paris Agreement in 2016. Under the agreement, the countries commit to keeping the global temperature increase well below two degrees towards the year 2100. The G20 summit in Hamburg in July 2017 emphasised the significance of that goal, and the leaders of the G20 countries agreed that developing innovative energy systems is required for a sustainable future. Today, more than 75% of the world's power generation is based on fossil fuels and nuclear energy.

Public support to continuing the green transformation is crucial. To understand the public opinion on the green transition, Ørsted conducted the inaugural 'Green Energy Barometer' survey in 2017, interviewing more than 26,000 people across thirteen countries. 82% of the respondents believe it is important to create a world fully powered by renewable energy. The support comes from all age groups, educational backgrounds and political

beliefs. 85% would like their country to phase out the use of coal.

Europe is leading the world's energy transformation, having 39% of its total power generation provided by renewable energy sources. In Europe, the share of renewables is expected to increase significantly, reaching 55% by 2030. Besides the wish to decarbonise energy generation, the key drivers behind the transition to green energy are the need to replace aging generation capacity and safeguard the security of energy supply as well as a wish to create local jobs.

Outside Europe, the share of power generation from renewables is considerably lower. In 2017, 24% of the power generation outside Europe was based on renewables, including hydro. Towards 2030, this share is expected to increase to 35%, driven by cost improvements in renewable energy technologies, and growing regulatory support for ambitious renewable deployment targets. By 2020, China aims to reach 210GW of accumulated wind power capacity, capable of generating 451TWh of power, and 110GW of accumulated solar capacity (PV and concentrated solar power), capable of generating 188TWh.

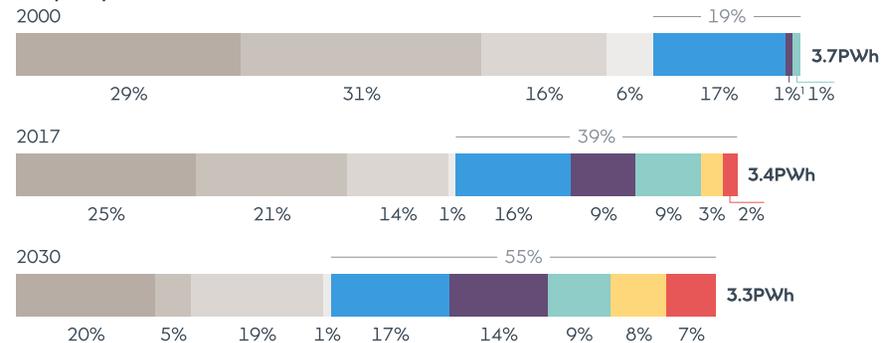

## Our market situation

Ørsted operates in various parts of the energy value chain: offshore wind, bioenergy, energy storage and consumption of energy.

## Share of power generation

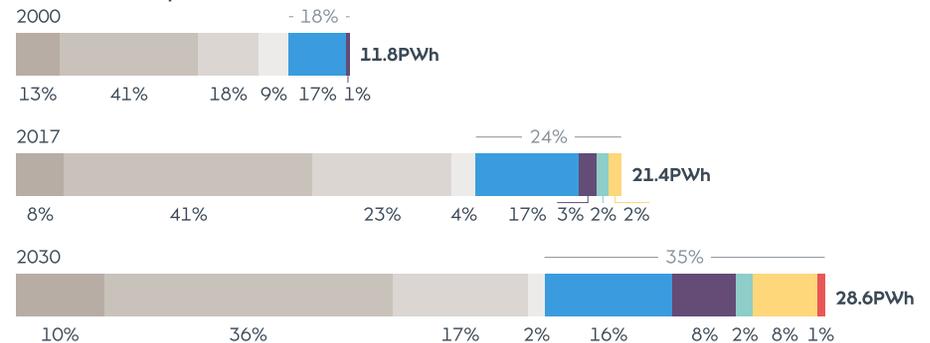

● Nuclear ● Coal ● Gas ● Oil ● Hydro ● Onshore wind ● Biomass ● Solar PV ● Offshore wind

### European power mix

<sup>1)</sup> Offshore and onshore wind combined

### Rest of the world power mix

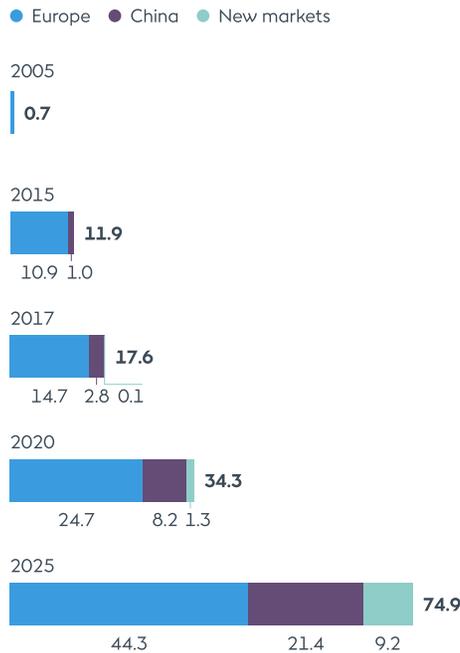

Source: International Energy Agency (IEA), World Energy Outlook 2017; Bloomberg New Energy Finance (BNEF), New Energy Outlook 2017.

### Offshore wind

2017 witnessed the largest annual build-out of global offshore wind capacity, with more than 4GW coming online. Cumulative installed capacity reached 18GW globally. The offshore wind market is expected to grow at an average of 19% in the coming years, and the global offshore wind capacity is therefore expected to quadruple towards 2025.

#### Installed offshore wind capacity, GW

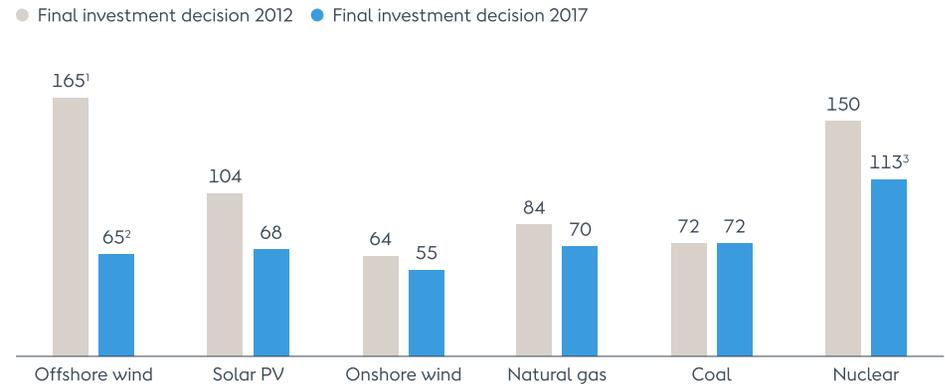

Source: Bloomberg New Energy Finance (BNEF), H2 2017 Offshore Wind Market Outlook

Today, offshore wind farms are primarily installed in Europe, but going forward, this segment of energy generation will become increasingly global. Towards 2020, the majority of capacity additions will take place in Europe, with 3.4GW being commissioned annually, while North America and Asia combined are expected to grow by 2.3GW annually. From 2020 to 2025, however, Europe is expected to add 3.7GW annually, while North America and Asia are expected to add 3.4GW annually. With an expected average annual growth rate of more than 150% from 2020 to 2025, the US market is among the fastest-growing markets.

A key driver of this capacity expansion is a significant reduction in costs. Over the past five years, the cost of offshore wind has been reduced by up to 60% in Northwestern Europe and there is still considerable potential for further cost reductions. Cost reductions are derived from economies of scale from building larger wind farms and installing larger wind turbines, supported by technological improvements in all parts of an offshore wind farm. Moreover, increased industrialisation, digitalisation, technological innovation and increased competition for the projects have contributed to cost reductions.

The most recent offshore wind farm auctions and tenders confirm the trend of rapidly falling costs. The German auction in April 2017 saw the first zero-subsidy bids for offshore wind projects to date. Two projects, OWP West and Borkum Riffgrund West 2, developed by Ørsted, will, if finally decided in 2021, be put in operation during 2024 without government subsidies. He Dreith, another subsidy-free project, which is developed by EnBW, is planned for commissioning in 2025.

#### Levelised cost of electricity for new generation capacity, Northwestern Europe, EUR/MWh (2016 prices)

Source: Bloomberg New Energy Finance (BNEF) and UK Department for Business, Energy and Industrial Strategy  
<sup>1</sup> Generic offshore wind, including transmission, Northwestern Europe, final investment decision (FID) 2012.  
<sup>2</sup> Hornsea 2, UK, including transmission. Calculated as levelised revenue (price) of power over the lifetime of the project. Market income based on BEIS (Department for Business, Energy & Industrial Strategy, UK) wholesale market price projections at the time of contracting.  
<sup>3</sup> Same approach as for Hornsea 2 with Hinkley Point strike price of GBP 92.5 per MWh in 2012 real prices. Lifetime of 60 years and 91% capacity factor.

Similarly, in the UK offshore wind auction in September 2017, the Hornsea 2 project (1.4GW developed by Ørsted) saw record-low costs, and was for the first time able to compete on cost with new-builds of conventional coal- and gas-fired power stations.

The allocation of offshore wind projects typically takes place through a public procurement process, organised as an auction or a tender.

In auctions, project developers compete with one or more of their own planned and

consented projects. The auction system is prevalent in countries such as the UK, the US, Germany (excluding part of the transmission grid) and to some extent Taiwan. Bid price is often the only award criterion.

In tenders, which is the method applied in Denmark and the Netherlands, the regulatory authority carries out preparations such as site investigations on wind, seabed and environmental conditions for preselected sites. For project developers who prequalify to bid, tender processes typically require lower

up-front investments than auction processes, and the risk for project owners of obtaining the necessary permissions is also lower. However, numerous project developers risk spending time and money on a project, for which only one is awarded a contract. In a tender process, the project is awarded to the bidder offering the lowest cost.

**Bioenergy**

For a long time, the generation of power by conventional fossil fuel-fired power stations in Europe has been under pressure from declining power prices. This pressure is also seen in Denmark, where Ørsted has the majority of its combined heat and power plants. The pressure on earnings from power generation has put an increased focus on the generation of district heating, which represents a stable

source of income due to the long-term heat contracts with large urban communities. In recent years, major heat customers have demanded that their deliveries to be covered by green sources, driving the conversions of conventional power stations to sustainable biomass. A bioenergy-based central heat and power plant provides flexible generation capacity to complement the fluctuating energy generation from wind and solar PV and provides large-scale green district heating.

On a European scale, between 0.5 and 1GW of new bioenergy generation capacity has been added annually since 2012, and by 2017, 30% of global bioenergy generation capacity was located in Europe. In Denmark, 13.4% of the total power generation came from biomass in 2016 against 7.5% for Europe in total.

Global waste volumes are growing rapidly at the moment and will continue to do so in the foreseeable future, and most of the waste is destined for landfills or dumped directly into natural habitats, creating large environmental problems, while missing the opportunity to capture the resources in the waste for recycling and energy production. New innovative and cost-effective solutions are needed to address this global challenge. Many countries are currently entering or undergoing major transformations of their waste systems, creating significant growth opportunities for competitive green waste treatment technologies.

**Energy storage**

Energy storage technologies are expected to play an important role in an energy system incorporating an increasing share of intermittent renewable sources. Storage solutions act

as enablers to balance supply and demand in the power markets, thus facilitating energy systems that are both green and secure. In recent years, mainly flexible rapid-response storage solutions have been deployed to provide ancillary services.

The deployment of storage solutions is expected to grow rapidly in the coming years. Today, the global market for storage capacity is 8GWh, but it is expected to increase to 121GWh by 2025, more than two thirds being large-scale utility facilities. In 2017, 80% of newly commissioned energy storage capacity was located in the Americas.

The costs of storage systems are expected to decrease significantly. Some analysts forecast a 20% cost reduction towards 2020 and 40% by 2025. As the volume of deployed storage solutions increases, additional cost reductions are expected, driven by economies of scale, technological innovation and increased competition.

**Energy consumption**

Energy customers are increasingly demanding green and more intelligent energy solutions to protect for the environment and save money. New technological solutions are key drivers in achieving this as they provide detailed overviews of consumption, can add flexibility and enable matching customers' consumption patterns to power generation based on intermittent renewable sources.

Currently, smart meters are being rolled out across Europe, providing customers with timely information about their consumption. By 2017, 128 million smart meters had been

installed in Europe, up from 96 million the year before, and this number is forecast to reach 266 million by 2021.

A growing portfolio of innovative solutions such as energy management systems allows consumers to better monitor and manage their power consumption. In 2016, EUR 8.3 billion were invested in smart energy solutions globally, primarily in digitalisation (49%) and energy efficiency solutions (30%).

Solutions to enable the green transformation are also deployed in the European heating sector. Electrification of heating with heat pumps is picking up, with approximately 1 million units sold in 2016 alone, totalling around 9.5 million units deployed across the EU. With some 244 million residential buildings across the EU, heat pumps cover approximately 4% of the building stock today.

Another sector that is becoming increasingly electrified is transportation. Towards 2030, the share of electric vehicles sold globally is expected to reach 24%. This will be driven by a sharp decline in battery costs, supportive regulation and a significant increase in available models with longer driving ranges, as car manufacturers are increasingly committed to lower greenhouse gas emissions.

Taiwan grid allocation, 3.5GW in Q2 2018

# Our strategy

## Transformation of the company

Over the past 11 years, Ørsted has undergone a significant transformation towards green energy. Ørsted (then DONG Energy) was among the most coal-intensive utilities in Europe in 2006, and only 13% of our heat and power generation was based on renewable energy sources. In 2017 this ratio was 64%, and already by 2020 more than 80% of our heat and power generation is expected to be based on renewable sources. By 2023, when coal has been phased out completely, more than 95% of our heat and power generation will come from renewable energy sources.

This green transformation has been driven primarily by a significant expansion of our offshore wind capacity. More than DKK 80 billion has been invested to expand our offshore wind capacity to currently 3.9GW, and with more than 5GW in the construction pipeline, Ørsted is currently the largest European renewables developer. Our scalable offshore wind build-out has been instrumental in reducing the offshore wind cost-of-electricity by 60% since 2012. A key component in our build-out has been the formation of 16 project partnerships with investors, enabling us to attract DKK 83 billion of capital, a key factor in financing our expansion.

In our conventional power generation, we have closed more than 40% of total capacity and converted five of seven combined heat and power plants (CHP) to biomass

to decarbonise our generation and ensure sustainable financials. The initiatives taken have been instrumental in lowering our carbon emissions by 67% compared to 2006. By 2023 our CHP operations will be completely coal-free, and we will have reduced our total carbon emissions per produced kWh by 96% compared to 2006.

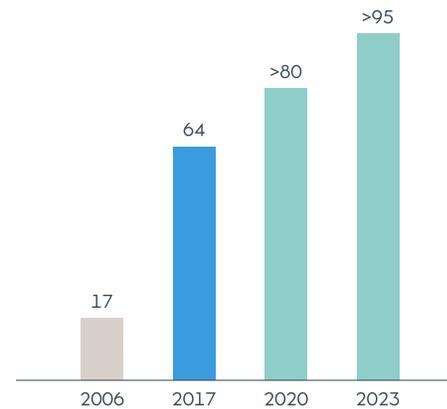

In our retail business, we have initiated a strategic shift from commodity sales to developing integrated green energy solutions for our private and business customers.

As part of Ørsted's green transformation, we announced in November 2016 the decision to divest our upstream oil and gas business to become a pure-play green energy company. A sale to INEOS was announced in May 2017 and closed in September. The divestment completed the strategic transformation of Ørsted.

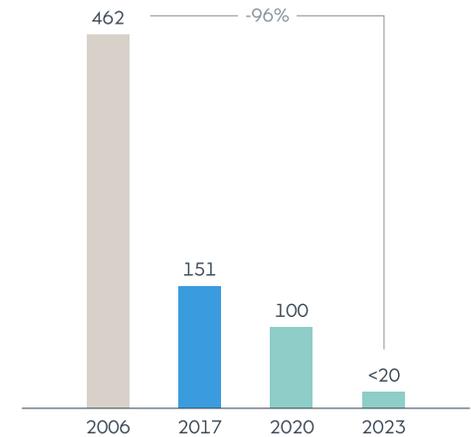

The transformation has made Ørsted one of the greenest and fastest-growing energy companies in Europe.

In financial terms, we have shifted our capital base profoundly from fossil fuels to renewables, which now account for 83% of capital employed, up from 21% in 2006. During the same span of years, we have more than doubled our operating profit (EBITDA) to DKK 22.5 billion, and more than quadrupled our return on capital employed, from 6% to 25%.

Green share of generation, %

Carbon emissions, g CO<sub>2</sub> e / kWh

To reflect our transformation, we decided to change our name from DONG Energy (Danish Oil and Natural Gas) to Ørsted in honour of the Danish 19th century scientist H.C. Ørsted, who discovered electromagnetism and thereby laid the foundation for modern generation of electricity. We also launched a new and bolder vision for the company: *Let's create a world that runs entirely on green energy.* We do not have all the answers to the climate problem, but we want to be part of the solution. And as the global leader within offshore wind, we are already an integral part of the solution.

↑  
We expect more than 95% of our heat and power generation in 2023 to be green.

### Strategic direction and priorities

We want to lead the transformation to green energy. We do that by investing in our competitiveness and core competences within offshore wind, flexible and sustainable CHP plants, intelligent grids and green customer solutions. At the same time, we are looking at further green growth initiatives that will enable us to gradually expand our strategic platform and flexibility. All of this with a view to creating long-term profitable growth.

Our business can be divided into three areas: offshore wind, our utility business and a portfolio of new growth initiatives. Across all three areas, our strategic focus is green growth.

### Offshore wind

- Maintain our market leadership in offshore wind
- Continue to pioneer new markets and develop a global business
- Keep innovating and reducing the cost of electricity from offshore wind
- Leverage market-leading partnership model for incremental value creation and risk diversification
- Realise the current build-out plan of 8.9GW towards 2022 and expand to 11-12GW by 2025
- Implement operational excellence and digitisation initiatives across EPC and O&M

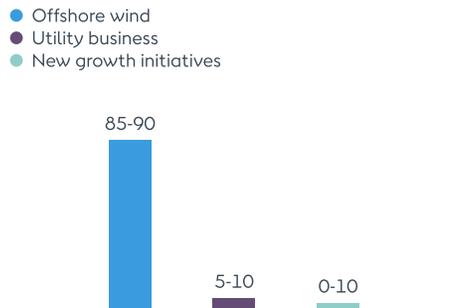

### Utility business

- Complete biomass conversions of Danish CHP plants and phase out the use of coal by 2023
- Roll out smart meters to build an intelligent power distribution grid
- Enhance customer experience through digitisation and product innovation
- Provide a competitive route-to-market for our own and our customers' generation portfolios
- Optimise natural gas activities as a transition fuel to a world that runs entirely on green energy
- Drive cost efficiency across the utility business to maintain competitiveness

### New growth initiatives

- Continue the commercial development of our innovative Renaissance technology for enzymatic waste treatment
- Mature the Energy-as-a-Service concept for our industrial and commercial customers
- Explore potential within other renewable energy technologies:
  - Energy storage
  - Solar PV
  - Onshore wind

Expected share of gross investment 2018-2023, %

Each of the three areas plays a particular role in our portfolio: Offshore wind is the main growth engine and adds scale to our green vision. Our utility business complements our offshore wind business by providing a route-to-market and enabling us to integrate large volumes of renewable generation into the energy system. Finally, our portfolio of new growth initiatives provides options for additional, profitable long-term growth that support an integrated, cost-efficient and green energy system. The growth initiatives are all in an early stage, and we are working on establishing a scalable, commercial model for them. As such, we do not expect them to make substantial financial contribution in the short term. They will contribute by diversifying our long-term growth journey and provide us with the strategic agility required to continually adapt to the market.

To support innovation, growth and long-term strategic renewal of our business platform, we invest significantly in four areas that enable our strategy: talent, digitalisation, operational excellence and innovation.

Our talent programmes focus on bringing people with the right competences into the business, and developing the leaders and specialists we need to drive growth and maintain a competitiveness in our business. We run our own internal Ørsted Academy, which supports talent at every level – from young talents to specialists to new and experienced leaders – to develop the professional and personal skills they need to perform, develop our business and create a good culture.

Our digital strategy is focused on bringing digital technologies, advanced analytics and automation to all parts of our business. We focus in particular on our O&M and EPC business in Wind Power, digitalising our heat and power plants through our 'Smart Plant Programme', as well as bringing more intelligence to our power grid and to our downstream customer solutions. To unleash the full potential of digitalisation, we work with new organisational models including digital labs based on agile methods.

In our core operating entities we implement excellence initiatives to drive efficiency, agility and quality into our processes and daily operations. These operational excellence programmes are implemented particularly within areas like grid operations, CHP plants, EPC, O&M, customer service and shared finance functions. Our cost efficiency and our ability to execute with speed, precision and according to high safety standards are, of course, critical to both near-term results and long-term competitiveness.

Within business innovation, we aim to stimulate the sourcing of new ideas, both from inside the company and from our external environment. We run cross-company Innovation Games, where internal teams collaborate and compete to generate new business or technology concepts to enhance our business. To increase our exposure to external innovation environments, we have established Ørsted Ventures. Located in Silicon Valley, California, Ørsted Ventures engages with venture funds, start-up companies, universities and think-tanks, to explore new technologies and business models.

### Capital allocation

From 2019, we expect the free cash flow generated by our business to be sufficient to finance our planned investment programme.

The majority of our free cash flow will support our growth plan for offshore wind with the ambition of an installed capacity of 11-12GW by 2025. In addition, we will complete the conversions of our Danish CHP plants to biomass and install 1 million smart meters at our grid customers by 2020. In the period 2018-2023, we expect to allocate around 85-90% of our gross investments to offshore wind, 5-10% to our utility business and 0-10% to new growth initiatives.

In our ongoing capital allocation, we reaffirm our strong commitment to maintaining a BBB+ / Baal rating and to the dividend payout expectations stated at any time.

Even in light of our current ambitious investment plans, the clear commitment to our credit rating target and higher dividends, we expect to have further financial capital – depending on our success in winning new offshore wind projects and the extent to which we farm-down future projects. This means that, beyond Hornsea 1, we will evaluate farm-downs on a case-by-case basis, based on clear value creation criteria and risk diversification considerations.

To the extent possible, we will deploy potential excess investment capacity into new, value-creating growth initiatives that support our green energy vision, reinforce our long-term competitiveness, and deliver value for our shareholders. If possible, we will, in particular,

pursue additional value-creating investment opportunities in offshore wind beyond our 11-12GW ambition by 2025. In addition, we will continue to work with and potentially scale up new growth initiatives within Renaissance, Energy-as-a-Service, energy storage, solar PV and onshore wind if they meet our investment criteria. Growth investments can include both CAPEX and OPEX for organic business building as well as acquisitions.

Over time, excess capital beyond such value-creating growth investments will be distributed to shareholders through increased annual dividends and/or share buy-backs.

### Corporate social responsibility reporting

Our sustainability strategy and results are reported on in our sustainability and ESG report, which constitutes our annual Communication on Progress to the UN Global Compact. The reports highlight areas in which our expertise can make a real difference when it comes to promoting the UN's global goals for sustainable development. With this report, we live up to the requirements for corporate social responsibility reporting set out in section 99a of the Danish Financial Statements Act as well as section 99b on the gender balance at management levels etc.

See and download the reports here:

# Strategic targets

We implement our strategy by pursuing eight strategic targets, divided into four themes:

-  **We create value for our shareholders** in the form of competitive total returns.
-  **We address profound societal challenges** by developing green, independent and economically viable energy systems that reduce greenhouse gas emissions.
-  **We fulfil our customers' energy needs** through green, innovative and efficient energy solutions.
-  We are committed to a sustainable work life and keep a constant focus on being **a great and safe place to work**, with motivated and satisfied employees.

## Create shareholder value

### 1. ROCE, %

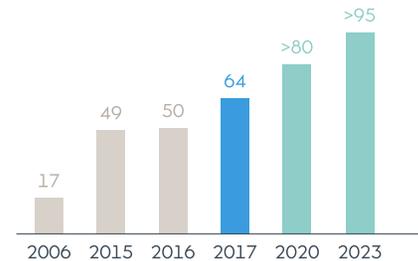

Our target is an average return on capital employed (ROCE) of 12-14% for the Group in the 2018-2023 period (formerly 2017-2023).

## Address profound societal challenges

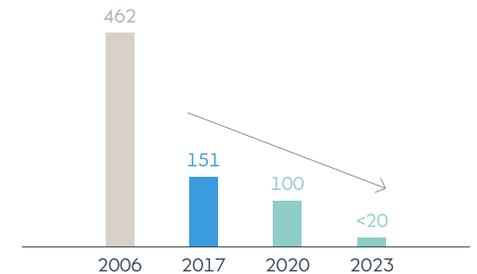

### 2. Green share of generation, %

In 2017, we decided to phase out our use of coal completely by 2023. Our objective is for more than 95% of our heat and power generation in 2023 to be green.

### 3. Carbon emissions, g CO<sub>2</sub>e / kWh

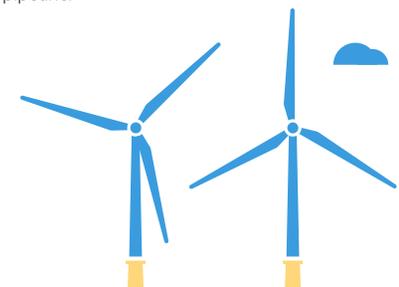

The conversion of our power stations to sustainable biomass has reduced our carbon emissions by 67% since 2006. Our target is to reduce emissions to no more than 20g CO<sub>2</sub>e per kWh in 2023.

### 4. Installed offshore wind capacity, GW

Our ambition is to install 11-12GW by the end of 2025. Those of our projects where a final investment decision has already been made will increase capacity to 8.9GW at the end of 2022. The rest will come from a significant pipeline.

2025	11-12
2017	3.9
2016	3.6
2015	3.0
2006	0.5

## Fulfil our customers' energy needs

### 5. Security of supply, power outage per customer

Our ambition is to offer a level of security of supply which is on a par with or higher than the Danish average, which is approximately 0.4 outages per customer per year.

● Radius ● DK average (excluding transmission grid)\*

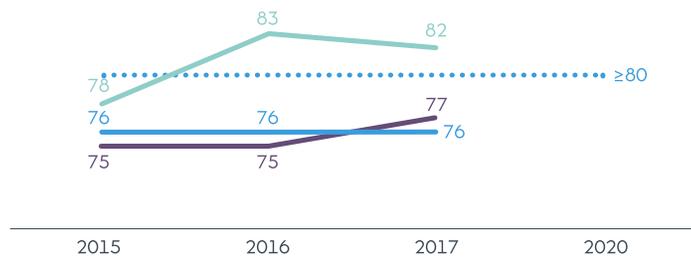

\* DK average is published in April

### 6. Customer satisfaction, scale 1-100

Our ambition is to deliver a market-leading customer experience, which we continuously strive to do. Our target of customer satisfaction is at least 80 from 2020.

— B2C — B2B — Distribution ●●● Target 2020

## Be a great and safe place to work

### 7. Employee satisfaction, scale 1-100

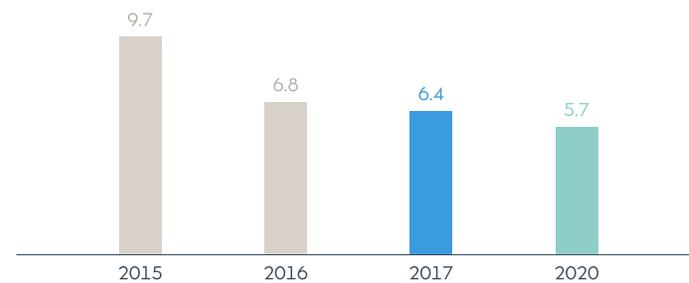

We believe that well-being and positive results go hand in hand. Therefore, we are working continuously to maintain and increase employee satisfaction. The employee satisfaction in Ørsted is above comparable companies.

— Ørsted — Ennova benchmark

### 8. Safety, TRIR

Effective from 2018, we have introduced a new safety target – total recordable injury rate (TRIR). There are more facets to TRIR compared to the previously used LTIF, and we believe that this reflects everyday life in Ørsted better.

# Results

## Follow-up on outlook announced for 2017

In the outlook announced in our annual report for 2016, we expected an EBITDA of DKK 15-17 billion and gross investments of DKK 18-20 billion for 2017.

With an EBITDA of DKK 22.5 billion, our expectations were exceeded. The main reasons were the farm-down of 50% of Borkum Riffgrund 2 in 2017 rather than at the beginning of 2018, as previously expected, and the fact that the farm-down of 50% of Walney Extension resulted in a different distribution of earnings between 2017 and 2018 than expected. In addition, earnings from our offshore wind farms in operation were higher than expected, especially towards the end of the year, as a result of stronger winds and faster ramp-up of

generation from new offshore wind farms as well as higher earnings from our gas portfolio and trading activities. Gross investments amounted to DKK 17.7 billion.

At the beginning of the year, we expected our interest-bearing net debt to increase in 2017. However, our net debt decreased by DKK 5.0 billion to DKK -1.5 billion at year-end. The decline was mainly due to higher proceeds in 2017 from the farm-downs described above. In addition, investments were at the low end of the announced range, and cash flows from operating activities were higher than expected. The latter was due partly to improved underlying earnings, and partly to lower than expected funds tied up in work in progress.

Follow-up on outlook for 2017, DKKbn	Guidance 2 Feb 2017	Guidance 7 Aug 2017	Guidance 1 Nov 2017	Guidance 11 Dec 2017	2017 Realised

Bioenergy & Thermal Power	Higher (>0.1)	Higher	Higher	Higher	0.2	✓
Distribution & Customer Solutions	Significantly lower (<7.1)	Significantly lower	Significantly lower	Significantly lower	2.1	✓
Gross investments	18-20	18-20	18-20	18-20	17.7	✓

## Business performance vs. IFRS

Ørsted uses business performance as an alternative to the results prepared in accordance with IFRS. Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. The difference between the two principles will be eliminated as the contracts expire. Apart from this, there is no difference between business performance and the IFRS results.

EBITDA calculated in accordance with IFRS amounted to DKK 22.6 billion in 2017 against DKK 16.9 billion in 2016. Calculated in accordance with the business performance principle, EBITDA was DKK 22.5 billion and DKK 19.1 billion, respectively. The difference between the two principles was thus DKK 0.1 billion in 2017 compared with DKK -2.2 billion in 2016, and is specified below.

In the presentation of the results according to IFRS, Ørsted does not apply the provisions on hedge accounting of commodities and related currency exposures. The market value adjustments of these are continuously recognised in the income statement, which means that the IFRS results for the individual years are not comparable. IFRS results do not reflect the commercial risk hedging, according to which the business units and the Group are managed and evaluated. In the management's review, comments are made on business performance only, unless otherwise is specified. Reference is also made to note 1.1.

Business performance vs. IFRS, DKKm	2017	2016
<b>EBITDA – business performance</b>	<b>22,519</b>	<b>19,109</b>
Market value adjustments for the year of financial and physical hedging contracts relating to a future period	(138)	(1,397)
Reversal of deferred gain (loss) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period	193	(773)
<b>EBITDA – IFRS</b>	<b>22,574</b>	<b>16,939</b>

### Continuing and discontinued operations

Until 29 September 2017, Oil & Gas was presented as assets held for sale and discontinued operations. The results from the oil and gas business are therefore presented in a separate line in the income statement and the statement of cash flows.

### Revenue

Power generation from offshore wind farms increased by 42% to 8.5TWh in 2017, as a result of newly constructed offshore wind farms in Germany and the UK and higher wind speeds in 2017. Thermal power generation declined by 2% to 8.2TWh. Heat generation also declined by 2% to 9.0TWh in 2017. Offshore wind power accounted for 51% of our total power generation, while the renewable energy share of our

total heat and power generation accounted for 64% in 2017 compared with 50% in 2016.

Revenue declined by 3% to DKK 59.5 billion in 2017 against DKK 61.2 billion in 2016. 2017 was primarily impacted by higher revenue from power generation from our offshore wind farms, an average increase in gas prices as well as increased power sales in the UK. 2016 was impacted by a high level of activity from our construction contracts.

### EBITDA

Operating profit (EBITDA) increased by 18%, amounting to DKK 22.5 billion in 2017 compared with DKK 19.1 billion in 2016. Earnings from Wind Power were up 74% compared to 2016, amounting to DKK 20.6

billion. The higher earnings were attributable to power generation from the newly constructed offshore wind farms as well as an almost doubling of earnings from partnership agreements, which totalled DKK 13.7 billion in 2017. This was primarily due to gains from the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2. EBITDA for 2016 was positively affected by one-off payments of DKK 4.7 billion from the renegotiation of gas purchase contracts and earnings from the now divested gas distribution activities. Adjusted for the above-mentioned non-recurring income, our underlying EBITDA increased by 56%.

### EBIT

EBIT increased by 17% to DKK 16.2 billion in 2017, primarily driven by the higher EBITDA.

Depreciation increased by DKK 0.5 billion to DKK 5.7 billion in 2017. The rise was due to a higher number of offshore wind farms in operation.

Impairment losses totalled DKK 0.5 billion and related to capitalised project development costs in Wind Power, due to uncertainty about the carrying through of the projects.

### Gain (loss) on divestment of enterprises

Gain (loss) on divestment of enterprises primarily concerned A2SEA in 2017 and the gas distribution network in 2016.

### Financial income and expenses

Net financial income and expenses amounted to DKK -1.0 billion and were DKK 0.3 billion higher than in 2016. Both years were affected by capital losses and costs relating to the

### EBITDA

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions

Financial results, DKKm	2017	2016	%
Revenue	59,504	61,201	(3%)
EBITDA	22,519	19,109	18%
Underlying EBITDA	22,519	14,442	56%
Depreciation	(5,739)	(5,232)	10%
Impairment losses	(545)	-	n.a.
EBIT	16,235	13,877	17%
Gain (loss) on divestment of enterprises	(139)	1,250	n.a.
Net financial income and expenses	(1,042)	(767)	36%
Tax	(1,765)	(2,191)	(19%)
Tax rate	12%	15%	(3%p)
Profit for the year from continuing operations	13,279	12,161	9%
Profit for the year from discontinued operations	6,920	1,052	558%
Profit (loss) for the period	20,199	13,213	53%

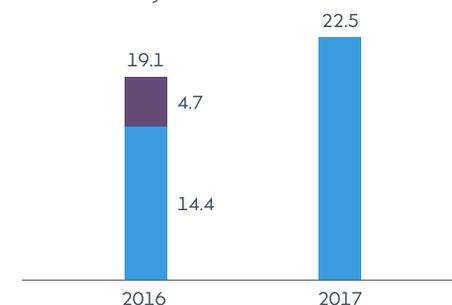

In 2017, regulated and quasi-regulated activities and contract- ed activities accounted for 34% and 65% of our EBITDA from continuing operations respective- ly, whereas market exposed activities accounted for 1%.

Read more about profit for the year from discontinued operations in note 3.6.

### Underlying EBITDA development, DKK bn.

- Underlying EBITDA
- Non-recurring items

The underlying operating profit excludes one-off payments related to renegotiations of gas purchase contracts and earnings from divested gas distribu- tion assets in 2016.

early repurchase of bonds and, in 2016, also early repayment of bank loans and interest rate swaps. In 2016, there was a positive impact from exchange rate adjustments of loans and deposits.

### Tax and tax rate

Tax on profit for the year amounted to DKK 1.8 billion, which was DKK 0.4 billion lower than in 2016. The effective tax rate was 3%-points lower than in 2016. In both periods, the tax rate was affected by non-taxable divestment gains. Gains on the farm-downs of Walney Extension and Borkum Riffgrund 2 as well as a deferred selling price for Race Bank impacted the tax rate in 2017, while gains on the farm-downs of Burbo Bank Extension and Race Bank as well as the divestment of our gas distribution activities impacted the tax rate in 2016.

### Profit for the year from continuing operations

Profit for the year from continuing operations increased by 9%, totalling DKK 13.3 billion in 2017. The increase of DKK 1.1 billion is explained by substantial differences in our operations between the two years. 2017 was positively impacted by the significant increase in EBITDA in Wind Power, while 2016 was characterised by one-off payments from the above-mentioned renegotiations of gas purchase contracts.

### Profit for the year from discontinued operations

Profit after tax from discontinued operations amounted to DKK 6.9 billion in 2017 against DKK 1.1 billion in 2016. The increase was due partly to a gain from the divestment of our

Oil & Gas business of DKK 2.4 billion, partly to higher EBIT and lower tax. The higher EBIT in 2017 relative to 2016 was due to the assets classified as held for sale at the end of 2016, not being depreciated in 2017. EBITDA was in line with 2016 despite one less quarter of production activities in 2017 compared with 2016 as a result of the divestment in September. The lower tax in 2017 relative to 2016 primarily reflected the reversal of the remaining tax assets, which contributed negatively in 2016.

### Cash flows from operating activities

Cash flows from operating activities totalled DKK 1.0 billion in 2017 compared with DKK 11.3 billion in 2016. The decrease of DKK 10.2 billion was due to the lower EBITDA (adjusted for gains from farm-downs, as they are not recognised in cash flows from operating activities), the settlement of ineffective price hedges in the oil and gas business totalling DKK 2.0 billion between the Group's continuing and discontinued operations in Q2 2017 (no effect on the Group's total net debt) as well as a change in funds tied up in working capital of DKK 7.9 billion in 2017 against DKK 1.5 billion in 2016.

In 2017, funds tied up in work in progress increased by DKK 3.7 billion due to the construction of transmission assets at Hornsea 1, Race Bank and Walney Extension as well as the construction of Race Bank for partners. This was partially offset by milestone payments received from partners in connection with the construction of Borkum Riffgrund 2 in 2017 as well as high trade payables relating to the construction of Walney Extension. Funds tied up in work in progress in 2016 were lower than in 2017 (DKK 2.4 billion) due to the divestment

Cash flow and net debt, DKKm	2017	2016	%
Cash flow from operating activities	1,023	11,272	(91%)
EBITDA	22,519	19,109	18%
Financial instruments	(528)	806	n.a.
Change in provisions	98	(366)	n.a.
Reversal of gain (loss) on sale of assets	(10,835)	(2,939)	269%
Other items	297	217	37%
Interest expenses, net	36	(861)	n.a.
Paid tax	(2,660)	(3,182)	(16%)
Change in work in progress	(3,674)	(2,393)	54%
Change in other working capital	(4,230)	881	n.a.
Gross investments	(17,744)	(14,960)	19%
Divestments	16,982	9,055	88%
Free cash flow	261	5,367	(95%)
Net debt at 1 January	3,461	9,193	(62%)
Free cash flow continuing operations	(261)	(5,367)	(95%)
Free cash flow from discontinued operations	(9,025)	(1,106)	n.a.
Interest bearing receivable re Oil & Gas divestment	(1,014)	-	n.a.
Dividends and hybrid coupon paid	3,523	1,016	247%
Exchange rate adjustments etc.	1,799	(275)	n.a.
Net debt at 31 December	(1,517)	3,461	n.a.

Gain/loss on sale of assets is part of EBITDA but is presented as part of the 'divestment' cash flow. The EBITDA effect is thus reversed in the specification of cash flow from operating activities.

Key ratios, DKKm, %	2017	2016	%
ROCE	25.2	24.4	0.8%p
Adjusted net debt	15,900	18,046	(12%)
FFO/adjusted net debt	50.3	64.2	(13.9%p)

ROCE and FFO/adjusted net debt is specified in notes 2 and 6.6.

of the Westernmost Rough transmission asset and the receipt of milestone payments from partners in connection with the construction of Gode Wind 1 and Burbo Bank Extension, among other factors.

The high level of funds tied up in other working capital was primarily due to lower prepayments from heat customers in connection with biomass conversions, lower VAT payables as well as an increase in trade receivables as a consequence of the high power generation in Wind Power at the end of 2017.

### Investments and divestments

Gross investments amounted to DKK 17.7 billion compared with DKK 15.0 billion in 2016. The most important investments in 2017 were as follows:

- offshore wind farms (DKK 15.7 billion), including Walney Extension, Race Bank and Hornsea 1 in the UK as well as Borkum Riffgrund 2 in Germany
- power stations (DKK 1.4 billion), including biomass conversions of the Skærbæk and Asnæs power stations and construction of a Renescence waste treatment plant in the UK.

# 25%

ROCE increased by 8%-point compared with 2016, when adjusting for lump-sums from renegotiations and amounted to 25% in 2017.

Divestment of activities and enterprises amounted to DKK 17.0 billion in 2017 and related primarily to the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2, receipt of a deferred payment concerning Race Bank as well as the divestment of A2SEA. Divestments in 2016 consisted of the farm-downs of 50% of Burbo Bank Extension and Race Bank, divestment of our gas distribution activities and receipt of a deferred payment related to the farm-down of 50% of Gode Wind 1 in 2015.

### Interest-bearing net debt

Interest-bearing net debt totalled DKK -1.5 billion at the end of 2017 against DKK 3.5 billion at the end of 2016. The decrease was mainly due to a free cash flow from discontinued operations of DKK 9.0 billion, of which DKK 5.5 billion concerned cash flows from operating activities, including DKK 2.0 billion from the intragroup settlement of hedging instruments in Q2 2017. In addition, the divestment of our Oil & Gas business contributed positively with DKK 4.6 billion (DKK 3.7 billion of free cash flow and DKK 1.0 billion of interest-bearing receivable). The continuing operations contributed a positive free cash flow of DKK 0.3 billion.

This was partially offset by the payment of dividends to shareholders of DKK 2.5 billion in March.

### Equity

Equity was DKK 71.8 billion at the end of December 2017 against DKK 57.5 billion at the end of 2016. The increase was primarily due to the positive results for the year less dividends paid.

### Capital employed

Capital employed was DKK 70.3 billion on 31 December 2017 against DKK 61.0 billion at the end of 2016. Wind Power's share of capital employed was 83% at the end of 2017.

### Return on capital employed (ROCE)

Return on capital employed (ROCE) was 25% in 2017 against 24% in 2016 (and 17% in 2016 adjusted for compensation received in connection with renegotiations). The increase was attributable to higher EBIT.

### Credit metric (FFO/adjusted net debt)

The credit metric 'funds from operations' (FFO) relative to adjusted net debt was 50% in 2017 compared with 64% in 2016. The decline was attributable to the lower FFO, as gains from the farm-downs of offshore wind farms are not included in the calculation. Gains on divestments were DKK 7.9 billion higher than in 2016, whereas 2016 was positively affected by compensation from renegotiations of DKK 4.3 billion. However, adjusted net debt was lower. Read more about the change of the credit metric on page 15.

### Non-financial results

#### Carbon emissions

In 2017, carbon emissions from our heat and power generation were 151 g CO<sub>2</sub>e/kWh against 224 g CO<sub>2</sub>e/kWh in 2016. Carbon emissions per kWh decreased due to the lower coal and gas consumption for thermal power generation as a result of the biomass conversions of the Avedøre, Studstrup and Skærbæk power stations. Moreover, generation from our offshore wind farms increased.

### Green share of heat and power generation

The green share of heat and power generation was 64%, up 14%-points relative to 2016. The increase was attributable to a larger share of biomass-based generation as a result of the conversions of the above-mentioned power stations as well as increased generation from offshore wind farms.

### Safety

In 2017, we registered 32 lost-time injuries, 25 of which involved employees working for our suppliers. Over the past 12 months, our lost-time injury frequency (LTIF) has declined from 1.8 in 2016 to 1.6 in 2017.

# Five-year summary

## Business performance vs. IFRS

Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. Apart from this, there is no difference between business performance and IFRS results. Read more in note 1.1.

ROCE is calculated for continuing operations.

<sup>1</sup> EBIT / average capital employed.

<sup>2</sup> Net debt including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax. The definition of FFO has been changed in 2017. Comparable figures have been restated.

<sup>3</sup> See definition on page 172 and in the ESG statements.

<sup>4</sup> The figures indicate values from the latest regulatory financial statements (updated in June).

# Fourth quarter

## Financial performance – Group

### Revenue

Revenue in Q4 2017 was in line with Q4 2016 and amounted to DKK 15.6 billion compared with DKK 15.7 billion in the prior-year period. 2017 was driven primarily by 77% growth in revenue from wind farms in operation as a result of increased power generation from new wind farms as well as higher wind speeds. Q4 2016 was impacted by high revenue from construction contracts.

### EBITDA

Operating profit (EBITDA) more than doubled to DKK 13.0 billion against DKK 6.3 billion in Q4 2016. The substantial increase was primarily due to high operating profit from our wind farms in operation as well as earnings from our partnership agreements, mainly gains from the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2. The operating profit for Bioenergy & Thermal Power also doubled in Q4 2017, amounting to DKK 0.2 billion, primarily driven by higher earnings from heat activities. The increase was partially offset by one-off payments from completed renegotiations of gas purchase contracts, which contributed positively in Q4 2016.

### Profit for the period from continuing operations

Profit for the period from continuing operations totalled DKK 9.4 billion compared with DKK 4.0 billion in Q4 2016. The increase was primarily driven by the higher EBITDA.

### Profit for the period from discontinued operations

Profit for the period from discontinued operations amounted to DKK 0.1 billion in Q4 2017 against DKK -0.5 billion in Q4 2016. The result in Q4 2017 related to an adjustment of the gains from the divestment of our oil and gas business.

### Cash flows from operating activities

Cash flows from operating activities totalled DKK 3.1 billion in Q4 2017 compared with DKK 1.8 billion in 2016. The increase was mainly due to a higher EBITDA (adjusted for divestment gains and adjustment of provisions) as well as prepayments and milestone payments from partners in connection with the farm-downs of 50% of Borkum Riffgrund 2 and Walney Extension. The increase was partially offset by receivables received from completed renegotiations of gas purchase contracts in Q4 2016.

### Gross investments and divestments

Gross investments amounted to DKK 5.8 billion in Q4 2017, with investments in Wind Power accounting for 86%. The main investments related to Walney Extension, Race Bank and Hornsea 1 in the UK and Borkum Riffgrund 2 in Germany.

Farm-downs totalled DKK 14.9 billion in Q4 2017 and related to Walney Extension and Borkum Riffgrund 2.

Financial performance, DKKm	Q4 2017	Q4 2016	%

## Financial performance – Business units

### Wind Power

Power generation was up 61% on Q4 2016 due to generation from the new offshore wind farms Gode Wind 1 and 2, Burbo Bank Extension, Race Bank and partially Walney Extension as well as high wind speeds in Q4 2017.

Revenue totalled DKK 5.6 billion in Q4 against DKK 4.4 billion in Q4 2016. The increase was driven by revenue from wind farms in operation, which was up 77% as a result of increased power generation. Revenue from construction contracts amounted to DKK 1.7 billion in Q4 2017 against DKK 2.2 billion in Q4 2016. The decline was due to a high level of activity from construction contracts in Q4 2016, relating primarily to the construction of Burbo Bank Extension for partners and transmission assets in the UK. The decrease was partially offset by activities in connection with contract work on Race Bank and Walney Extension as well as transmission assets in Q4 2017.

EBITDA was up 149%, totalling DKK 12.6 billion in Q4 2017 compared with DKK 5.1 billion in Q4 2016.

Earnings from offshore wind farms increased by 70% as a result of the commissioning of new offshore wind farms as well as high wind speeds in Q4 2017. Earnings from partnership agreements tripled and were primarily attributable to gains on the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2 as well as the above-mentioned activities in connection with contract work on Race Bank and Walney Extension. The increase was partially offset by a gain on the farm-down of 50% of Race Bank in Q4 2016 and a high level

of activity from the construction contract for Burbo Bank Extension in the same period.

EBITDA from other activities totalled DKK -0.7 billion in Q4 2017 against DKK -0.2 billion in 2016. The decrease was mainly due to higher project development costs.

Cash flows from operating activities totalled DKK 3.6 billion in Q4 2017 compared with DKK -1.9 billion in Q4 2016. The increase was primarily due to higher tax payments in Q4 2016. In addition, we received milestone payments from partners in connection with the farm-downs of Borkum Riffgrund 2 and Walney Extension in Q4 2017.

### Bioenergy & Thermal Power

Revenue was DKK 1.8 billion in Q4 2017 against DKK 2.0 billion in 2016. The decrease was due to revenue from sales of power and ancillary services which, due to lower generation, totalled DKK 0.9 billion in Q4 2017 against DKK 1.1 billion in the prior-year period. Revenue from heat sales remained unchanged in the two quarters in spite of lower generation. This is primarily attributable to Avedøre, Studstrup and Skærbæk power stations where heat generation was converted from coal to biomass at the first two power stations at the end of 2016. Skærbæk Power Station has generated heat using biomass from Q4 2017.

EBITDA doubled relative to Q4 2016 and amounted to DKK 0.2 billion in Q4 2017. The increase was primarily driven by higher earnings from heat activities on converted CHP plants. In addition, earnings from ancillary services and the power business were also higher.

### Wind Power's results, DKKm

	Q4 2017	Q4 2016	%
Revenue	5,558	4,415	26%
Sites, O&M and PPA <sup>1</sup>	3,848	2,173	77%

<sup>1)</sup> O&M: Operation and Maintenance Agreements  
PPA: Power Purchase Agreements.

### Distribution & Customer Solutions

Revenue was DKK 10.4 billion in Q4 2017 compared with 10.9 billion in Q4 2016.

EBITDA was DKK 0.2 billion compared with DKK 1.2 billion in Q4 2016.

EBITDA from Markets decreased by DKK 0.6 billion, primarily due to one-off payments from completed renegotiations of gas purchase contracts totalling DKK 0.4 billion, which made a positive contribution in Q4 2016. Hence, underlying EBITDA from Markets was in line with Q4 2016.

EBITDA from our LNG activities decreased by DKK 0.5 billion, mainly as a result of further provisions in Q4 2017 related to the onerous contract at the Gate terminal in Rotterdam as well as provisions regarding purchase contracts.

Cash flows from operating activities totalled DKK 0.2 billion in Q4 2017. The negative development relative to Q4 2016 was primarily due to the lower EBITDA as well as the positive impact in Q4 2016 from receivables received from completed renegotiations of gas purchase contracts in both Q3 and Q4 2016.

## Business performance vs. IFRS

Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. Apart from this, there is no difference between business performance and IFRS results. Read more in note 11.

ROCE is calculated for continuing operations.

<sup>1</sup> EBIT/average capital employed.

<sup>2</sup> Net debt including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax. The definition of FFO has been changed in 2017. Comparable figures have been restated.

<sup>3</sup> See definition on page 172 and in the ESG statements.

<sup>4</sup> The figures indicate values from the latest regulatory financial statements (updated in June).

<sup>5</sup> Last 12 months.

# Wind Power

## Highlights 2017

- Power generation from our wind farms in operation increased by 42%
- We were awarded the contract for the construction of Hornsea 2 in the UK, which increased our FID capacity by 1.4GW
- We divested 50% of Walney Extension in the UK and 50% of Borkum Riffgrund 2 in Germany and divested A2SEA
- We inaugurated the Burbo Bank Extension and Gode Wind 1 and 2 offshore wind farms
- All wind turbines on Race Bank, and the first part of Walney Extension were installed
- We were awarded three offshore wind farm projects in Germany, two of which were won with zero-subsidy bids
- We participated in the first offshore wind auction in Massachusetts, USA, together with our partner Eversource Energy
- We entered into a partnership agreement with US-based Dominion Energy on an offshore wind farm project in Virginia
- Our environmental impact assessments of the Greater Changhua projects in Taiwan were recommended for final approval in Q1 2018.

### Financial performance

Power generation increased 42% compared to 2016, driven by Gode Wind 1 and 2 and Burbo Bank Extension as well as the start-up of power generation from Race Bank and Walney Extension. In addition, wind speeds

were higher in 2017. We commissioned Gode Wind 1 and 2 in December 2016 and Burbo Bank Extension in May 2017. At Race Bank, we installed the last wind turbine in December 2017 and fully commissioned the wind farm in January 2018. Walney Extension is expected to be fully commissioned in H2 2018. Moreover, power generation in 2016 was negatively affected by a cable fault at Walney 2. Availability was 93% in 2017 against 92% in 2016.

Revenue from wind farms in operation was up 46%, driven by higher power generation and higher power prices, which were partially offset by lower contributions from price hedges. Walney 2 also contributed to the higher revenue due to the cable fault in 2016.

Revenue from construction contracts decreased by DKK 5.6 billion due to a high level of activity in 2016 with both Gode Wind

**Our company has constructed the most offshore wind farms globally. In addition to maintaining our position as global market leader, we'll continue to pave the way for offshore wind power in new markets and develop a global business.**

1 and 2 and Burbo Bank Extension under construction for partners. The decrease was also attributable to a higher level of activity regarding the construction of transmission assets in 2016 (Walney Extension, Race Bank and Burbo Bank Extension) than in 2017 (Hornsea 1, Race Bank and Walney Extension). The decrease was partially offset by activity at Walney Extension and Race Bank, which were under construction for partners in 2017.

EBITDA increased by 74% relative to 2016.

EBITDA from wind farms in operation increased by 45% to DKK 8.5 billion, driven by the factors described above.

EBITDA from partnership agreements almost doubled to DKK 13.7 billion in 2017. The year was positively affected by gains from the farm-down of 50% of Walney Extension (DKK 7.5 billion) and Borkum Riffgrund 2 (DKK 2.2 billion). 2017 was also positively impacted by the recognition of the deferred selling price and milestone income from Race Bank, as well as the construction of the wind farm for partners. 2016 was affected by a gain of DKK 2.5 billion from the divestment of Race Bank as well as a gain of DKK 0.6 billion from the farm-down of 50% of Burbo Bank Extension. In addition, 2016 was affected by high activity levels relating to the construction of Gode Wind 1 and 2 and Burbo Bank Extension for partners.

EBITDA from other activities totalled DKK -1.6 billion in 2017 against DKK -1.0 billion in 2016. The decrease was mainly due to higher project development costs.

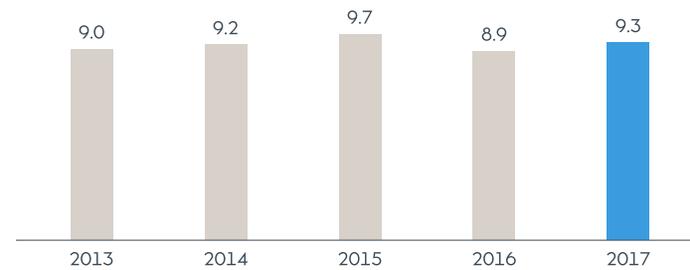

Depreciation increased by 14% due to the commissioning of new offshore wind farms in Germany and the UK.

Impairment losses totalled DKK 0.5 billion and related to capitalised project development costs in Wind Power, due to uncertainty about the carrying through of the projects.

Cash flows from operating activities totalled DKK 3.4 billion in 2017 compared with DKK 4.3 billion in 2016. The decrease was due to more funds tied up in offshore wind farm construction contracts in progress for partners and offshore transmission assets in the UK. In 2017, funds tied up in work in progress increased by DKK 3.7 billion due to the construction of transmission assets at Hornsea 1, Race Bank and Walney Extension as well as the construction of Race Bank for partners. This was partially offset by milestone payments received from partners in connection with the construction of Borkum Riffgrund 2 in 2017, as well as high trade payables relating to the construction of Walney Extension. Funds tied up in work in progress in 2016 were lower due to the divestment of the Westernmost Rough transmission asset and the receipt of milestone payments from partners during the construction of Gode Wind 1 and Burbo Bank Extension, among other factors. Funds tied up in work in progress totalled DKK 7.5 billion at the end of 2017.

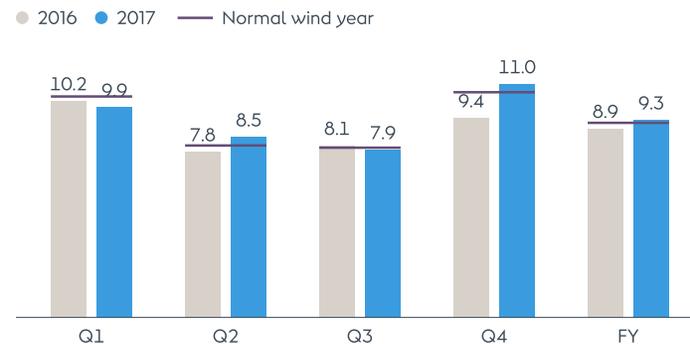

The high level of funds tied up in other working capital was primarily due to lower VAT payable as well as an increase in trade receivables following a high level of power generation at the end of 2017.

Yearly wind speed for our offshore wind farms, m/s

The wind speed indicates how many metres per second the wind has blown in the areas where we have offshore wind farms. The weighting is based on our generation capacity.

Quarterly wind speed for our offshore wind farms, m/s

The wind speed was higher than normal in Q4 2017.

Change from wind energy content (WEC) to wind speed

Wind speed and availability are the two most important parameters that can affect the volume of power generated by our offshore wind turbines in a given period. In the past, we have used wind energy content (WEC) as the residual for the power generation that cannot be explained by the availability of the offshore wind farms. However, this method means that generation constraints, with no negative impact on availability, are included in the calculation of wind energy content. This type of impact increased in 2017. For example, the German transmission system

operator curtailed our generation from Borkum Riffgrund 1 and Gode Wind 1 and 2 in periods of 2017 by reducing the available grid capacity.

In order to obtain a cleaner measure of the impact of wind on our generation, we now apply the measure of wind speed in metres per second. Wind speed is based on external data sources and is a transparent and easy-to-understand measure of how windy it has been at our offshore wind farms in a given period.

Gross investments amounted to DKK 15.5 billion in 2017. The largest investments related to the construction of Walney Extension and Race Bank, Hornsea 1 and Borkum Riffgrund 2.

Cash flows from divestments related to Walney Extension, Borkum Riffgrund 2, Race Bank and A2SEA. Divestments in 2016 related to the farm-down of 50% of Burbo Bank Extension, Race Bank as well as receipt of the deferred selling price from the farm-down of 50% of Gode Wind 1 in 2015.

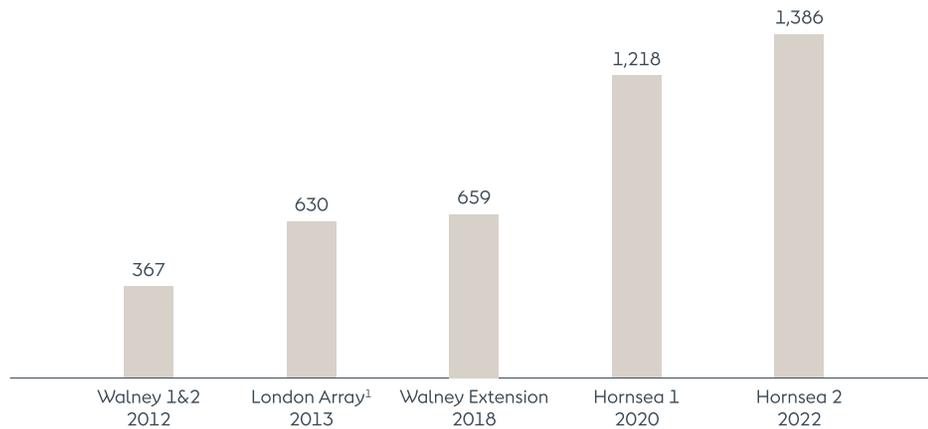

ROCE increased by 12%-points to 28%, particularly impacted by a gain on the farm-downs.

### Strategy follow-up

#### Wind Power's strategic focus is to:

- maintain our market leadership in offshore wind
- continue to pioneer new markets and develop a global business
- keep innovating and reducing the cost of electricity from offshore wind
- leverage market-leading partnership model for incremental value creation and risk diversification
- realise the current build-out plan of 8.9GW towards 2022 and expand to 11-12GW by 2025
- implement operational excellence and digitisation initiatives across EPC and O&M.

The world's largest offshore wind farms since 2012, MW installed (year indicates actual or expected commissioning)

<sup>1</sup> London Array was built in partnership with E.ON UK Renewables and Masdar

### Maintain our market leadership in offshore wind

Offshore wind plays an increasingly important role in the European conversion to green energy, and the potential is enormous. Worldwide, we are the company that has constructed most offshore wind farms. In fact, we have constructed close to a quarter of the total global capacity.

In 2017, we completed the Burbo Bank Extension offshore wind farm in the UK, the first offshore wind farm in the world to feature the MHI Vestas 8MW offshore wind turbine. Including Burbo Bank Extension, at the end of 2017 we had installed 3.9GW of offshore wind capacity since the beginning in 1991, where we constructed the world's first offshore wind farm off Vindeby in Denmark. After more than 25 years, the Vindeby offshore wind farm, as the first offshore wind farm in the world, was decommissioned in the autumn of 2017.

In September, we were awarded a contract for difference (CfD) for our Hornsea 2 project in the UK. With a total capacity of 1.4GW, it will be the world's largest offshore wind farm when completed in 2022. The project will thus be larger than our Hornsea 1 offshore wind farm with a capacity of 1.2GW, which is expected to be completed in 2020.

### Continue to pioneer new markets and develop a global business

2017 has been a year where we really fuelled our project development in two new strategic markets. Together with Eversource Energy, our partner on the US Bay State Wind project, we submitted a bid for capacity in the first offshore wind auction in Massachusetts in December

2017. The preferred bidder or bidders are expected to be selected in April 2018, followed by an invitation to negotiate a fixed-price agreement with the three local power distribution companies. In addition, we entered into an agreement to construct a demonstration project for Dominion Energy off the Virginia Beach coast. At the same time, we entered into a letter of intent, which gives us the exclusive right to negotiate a strategic partnership with Dominion Energy concerning their 2GW development project off the Virginia coast.

At the end of 2017, the Taiwanese EIA review panel recommended approval of our environmental impact assessments of the four Greater Changhua offshore wind sites in Taiwan with a total capacity of 2.4GW. We will now await the final approval by the EIA General Assembly, which is expected to convene in Q1 2018.

### Keep innovating and reducing the cost of electricity from offshore wind

2017 was a breakthrough year for the competitiveness of offshore wind. For example, we were granted the Hornsea 2 CfD contract at a price which is 50% lower than the price in the CfD auction round only two years ago, illustrating how fast costs are reduced. Costs have been reduced across the industry by means of increasing levels of industrialisation, economies of scale and innovation.

A good example of our approach to innovation is our work on developing a new design standard for foundations for offshore wind farms. Together with leading industry experts, we have developed and tested a new foundation design that enables us to use far less steel. This design is used in the most recent

projects which we have bid for in auctions, and it has contributed to significantly reducing the cost of electricity.

Overall, the declining prices are tangible proof of the global potential of offshore wind technology as a cornerstone in an economically sustainable transition towards green energy systems. As a result, we are making a dedicated effort to further reduce the cost of power from offshore wind farms.

**Leverage market-leading partnership model for incremental value creation and risk diversification**

Our partnership model yet again proved its worth through the 50% divestment of the offshore wind farms Borkum Riffgrund 2 and Walney Extension in 2017. Borkum Riffgrund 2 was divested to Global Infrastructure Partners, which also owns 50% of our German offshore

wind farm Gode Wind 1, while Walney Extension was divested to a consortium consisting of the Danish pension funds PFA and PKA. PKA now has ownership interests in four Ørsted offshore wind farms.

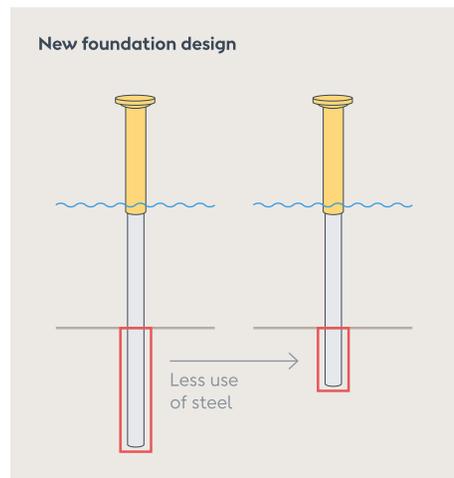

In addition to incremental value creation, the partnership model contributes to diversifying risk as well as releasing capital to invest in other offshore wind farms in strategic markets.

**Realise the current build-out plan of 8.9GW towards 2022 and expand to 11-12GW by 2025**

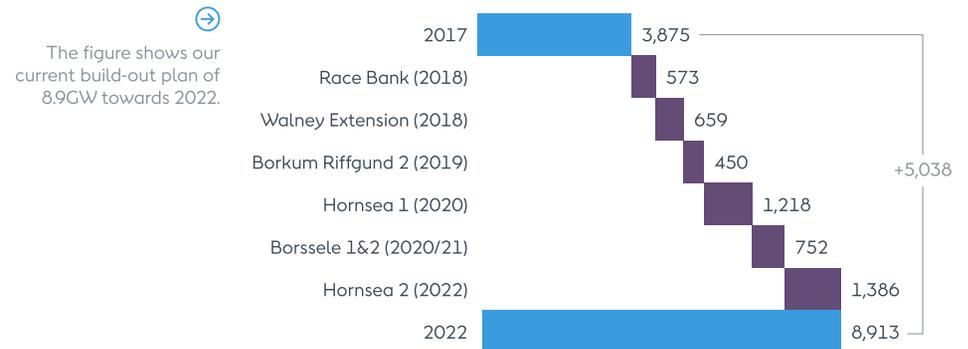

Race Bank was commissioned in January 2018 and consequently added 0.6GW to our installed capacity. Up until 2022, we will construct a further five offshore wind farms with a total capacity of 4.5GW. Out of these five wind farms, we have generated first power from the British offshore wind farm Walney Extension (40% of capacity commissioned), which is expected to be fully commissioned in H2 2018. The remaining four offshore wind farms under construction are all progressing according to plan, and when the last wind farm, Hornsea 2 in the UK, is commissioned, we will have 8.9GW installed by the end of 2022.

Up until 2025, we have a significant pipeline, and our ambition is to have 11-12GW installed by the end of 2025, provided that a healthy risk and return profile can be achieved.

In April, we were awarded the concessions for the three German offshore wind farms OWP West, Borkum Riffgrund West 2 and Gode Wind 3 in competition with other developers. Two of the wind farms have been awarded on zero-subsidy terms. Overall, this gives us

**Build-out plan, installed MW**

an option on 0.6GW capacity in Germany for commissioning in 2024, provided that the final investment decision is made in 2021.

The rest of the pipeline consists mainly of projects which we have the exclusive right to develop in preparation of an investment decision, which is typically conditional on the granting of subsidies via an auction process. A minor part of the pipeline consists of projects for which the authorities allocate capacity in a competitive process involving tendering of project rights. We are familiar with this process, e.g. from the tendering in recent years of offshore wind projects in Denmark and the Netherlands.

In addition to the opportunities in Taiwan and the USA, 2018 will see an auction for 1.6GW in Germany and a 700MW tender in the Netherlands. They will be followed by a CfD auction round in the UK in the spring of 2019 and another 700MW tender in the Netherlands in 2019.

**Implement operational excellence and digitisation initiatives across EPC and O&M**

The digital transformation is important in offshore wind. In Ørsted, we are exploring new and wider opportunities for leveraging technological advances. Using agile and advanced analytics in our business, we are starting to harvest the benefits of the digital transformation.

As an operational example, a higher temperature in the nacelle of the turbine puts the converter module at risk. Previously, a turbine would stop in case of high temperatures, which led to an availability loss until the turbine could be checked by a technician and restarted. Now, continuous temperature monitoring and predictive, in-house developed models identify the risk. A notification is then sent to the technician who proactively mitigates the risk by repairing the component before the turbine stops. This lowers lead time, limits the availability loss and creates value.

# Bioenergy & Thermal Power

## Highlights 2017

- We entered into an agreement to convert Asnæs Power Station to sustainable biomass from 2019
- We inaugurated Skærbæk Power Station's new plant following the conversion from gas to biomass. The plant can now run 100% on sustainable biomass
- In partnership with Bigadan, we decided to build a biogas plant in Kalundborg which will recycle and convert residues from the Novo Nordisk and Novozymes production facilities into biogas
- We completed our first commercial Renaissance plant in 2017. We expect to commission the plant in H1 2018.

## Financial performance

Revenue increased by 14% to DKK 5.9 billion in 2017.

Revenue from heat sales increased by 16% despite lower heat generation. This is attributable to Avedøre, Studstrup and Skærbæk power stations where heat generation is based on biomass. Revenue from power and ancillary services rose by 13% to DKK 3.3 billion despite lower generation. This is due to an increase in the power price.

EBITDA increased by 52% to DKK 0.2 billion in 2017. The increase was mainly due to heat generation activities, where the bio-conversions led to a 71% increase in earnings to DKK 0.7

billion in 2017. The increase was partially offset by a decline in the power business where lower generation as well as unfavourable market conditions (primarily negative spreads) resulted in earnings of DKK -0.9 billion against DKK -0.6 billion in 2016.

EBITDA from ancillary services was in line with 2016.

Cash flows from operating activities totalled DKK 0.6 billion compared with DKK 1.3 billion in 2016. The decrease was mainly due to higher prepayments from heat customers in connection with biomass conversions in 2016 than in 2017. The decrease was partially offset by a lower level of funds tied up in inventories (wood pellets and coal) in 2017.

Gross investments amounted to DKK 1.4 billion in 2017. The largest investments related to the biomass conversions of the Skærbæk and Asnæs power stations as well as the construction of the Renaissance plant in the UK.

**In 2017, we reached new milestones on our journey to convert all our CHP plants to sustainable biomass.**

**Thomas Dalsgaard**

CEO, Bioenergy & Thermal Power

Operating profit from the heat business increased as a result of biomass conversions.

## Strategy follow-up

### Bioenergy & Thermal Power's strategic focus is to:

- continue the conversion of Danish CHP plants to sustainable biomass and phase out coal by 2023
- continue to strengthen operational efficiency
- continue the commercial development of our Renaissance enzyme based waste technology
- explore business opportunities within energy storage solutions.

### Continue conversions to sustainable biomass and phase out coal by 2023

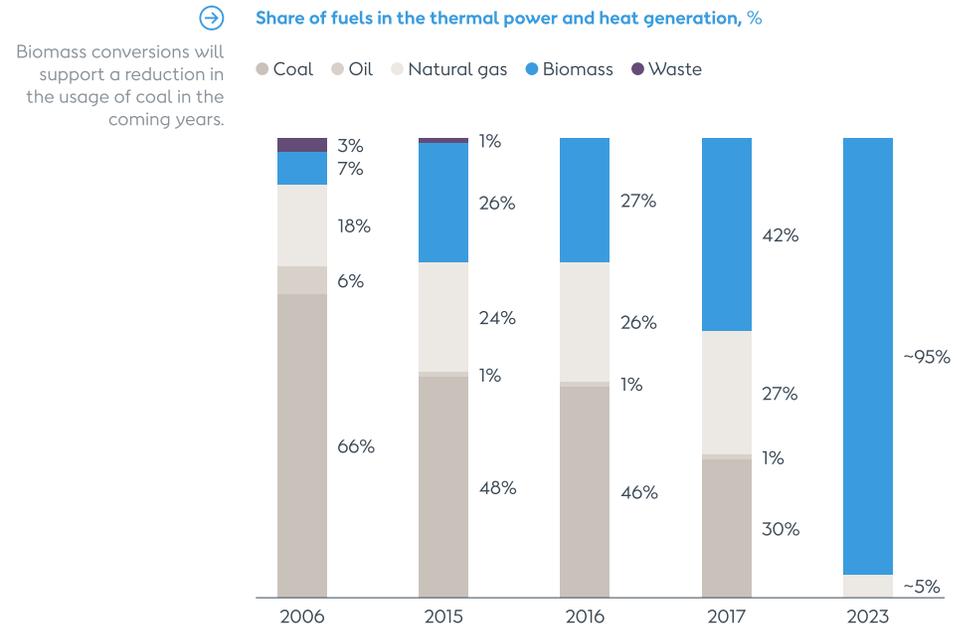

For several years, we have been committed to converting our power stations to use sustainable wood pellets and wood chips. And in 2017, we decided to phase out coal by 2023, as coal is the fuel with the greatest carbon impact per produced quantity of power and heat. Our ongoing work will reduce our annual carbon emissions in Denmark significantly towards 2023. In just over ten years, we will have gone from being one of the most coal-intensive utilities in Europe to having a completely coal-free generation by 2023.

In cooperation with our heat customers, we reached even more milestones in 2017 in the execution of our large-scale biomass conversion projects. The new biomass-fired CHP plant in Skærbæk was inaugurated in October by HRH Crown Princess Mary and now supplies green heat to district heating customers in the Danish Triangle Region and green power to the Danish grid. Later in October, we cut the first sod for our new biomass-fired CHP plant at

Asnæs near Kalundborg, Denmark. The plant is expected to be completed by the end of 2019 and will supply green district heating to district heating customers in and around Kalundborg, green steam to Novo Nordisk and Novozymes as well as green power to the Danish grid. In November, we decided to invest in flue gas condensation at the Herning Power Station, enabling us to increase the energy efficiency potential of the biomass used. At the same time, we extended our agreement with the heat customers in and around Herning until 2033. Finally, we are engaged in a constructive dialogue with our heat customers in and around Esbjerg on also supplying green solutions to them within a few years.

Our portfolio of seven central CHP plants in Denmark will thus be able to supply green district heating equivalent to the consumption of almost one million Danes in the near future. Our power stations will be some of the largest biomass-fired CHP plants in the world, making them key to the green transformation of the nearby towns, cities and municipalities – and of Denmark as a whole.

It is important to us that our customers can be confident that the biomass-based heat and power we supply is sustainable and makes a real and significant contribution to reducing their carbon footprint. Therefore, we fully support the Danish industry agreement on sustainable wooden biomass which commits not just Ørsted, but the entire Danish energy industry to documenting the sustainability of our use of biomass. Together with other European energy companies, we are also part of the Sustainable Biomass Programme (SBP) which has developed a robust and

independent scheme for the certification of sustainable biomass. The Danish industry agreement on sustainable wooden biomass entered into force in 2016 and is being phased in during the period up until 2019. In 2017, 72% of our purchased biomass came from certified partners, and our target is that 100% should come from certified partners in 2020.

### Continue to strengthen operational efficiency

For much of 2017, market conditions remained challenging for Danish CHP plants. Therefore, we have focused on maintaining our leading

position as an efficient and flexible operator and on continuing to reduce costs. In 2017, we initiated a comprehensive digitisation programme aimed at streamlining and automating production at our CHP plants. With this programme, we introduce new technology and improved analytical tools across our CHP plants in order to strengthen our operational efficiency. In addition, we have increased our focus on our plant control processes. A case in point is the development of systems that support the balance between cost, risk and performance at our plants. This provides for efficient prioritisation of our capital expenditures.

### Continue the commercial development of our innovative Rescience enzyme based waste technology

We are currently working to further develop and expand our bioenergy business – with special emphasis on the commercialisation of our Rescience technology. By means of enzymes, the technology efficiently converts household waste into biogas and recyclable materials (metal, plastic, etc.). In 2017, we established the first full-scale plant in Northwich in the UK. We are finalising the optimisation of the plant's mechanical operation, which has taken longer than expected. We expect to start full commercial operation in H1 2018. We expect the plant to process 120,000 tonnes of unsorted household waste per year, which corresponds to the waste from approximately 110,000 British households.

### Explore business opportunities within energy storage solutions

In 2017, we established a new business unit, Energy Storage Solutions. This unit will support initiatives across Ørsted and at the same time offer battery power storage solutions, potentially in combination with solar PV, for our customers. In 2017, Radius commissioned a battery solution for the power distribution grid in the Nordhavn area in Copenhagen, and we initiated the work to establish a storage solution at our Burbo Bank offshore wind farm in the UK.

# Distribution & Customer Solutions

## Highlights 2017

- At the end of 2017, the customers in our power distribution company Radius had taken 183,000 smart meters in use
- We decided that the power consumption of our 733,000 Danish residential power customers is to be covered by green power from offshore wind farms – without any surcharge
- We installed Denmark's first large-scale battery for balancing the grid in Nordhavn, together with ABB
- We entered into an agreement with the Good Energy trading company about the supply of green power to their customers from the Westermøst Rough offshore wind farm.

## Financial performance

Revenue increased by 6% to DKK 40.2 billion in 2017. The increase was driven primarily by a 24% average increase in gas prices relative to 2016 and higher power sales in the UK. The increase was offset by lower revenue from power distribution, given that duties and costs are no longer invoiced on behalf of the transmission asset owner, and from the distribution of gas following the divestment of activities to Energinet in September 2016.

EBITDA was DKK 2.1 billion compared with DKK 7.1 billion in 2016. The decrease was expected and was mainly ascribable to non-recurring items of DKK 4.7 billion in 2016 as well

as a provision of DKK 0.4 billion related to the onerous contract at the Gate terminal in Rotterdam.

EBITDA from the distribution business decreased by DKK 0.4 billion as a result of the divestment of our gas distribution activities in September 2016.

EBITDA from Markets decreased by DKK 4.3 billion, primarily due to one-off payments of DKK 4.3 billion from completed renegotiations of gas purchase contracts in 2016.

EBITDA from LNG declined by DKK 0.3 billion as a result of further provisions related to an onerous contract at the Gate terminal in Rotterdam as well as provisions regarding purchase contracts. This was partially offset by improved margins from renegotiated contracts, lower costs and short-term trades.

**Our ambition is to bridge the gap between supply and demand in the green transformation.**

**Morten Buchgreitz**

CEO, Distribution & Customer Solutions

	British pound	DKK/GBP	8.5	9.1 (7%)
	<b>Financial results</b>			
	Revenue	DKKm	40,195	38,009 6%
	EBITDA	DKKm	2,082	7,108 (71%)
	Distribution		1,199	1,602 (25%)
	Sales		32	(15) n.a.
	Markets		1,422	5,766 (75%)
	LNG		(571)	(245) 133%
	Depreciation	DKKm	(933)	(874) 7%
	EBIT	DKKm	1,149	6,234 (82%)
	Cash flow from operating activities	DKKm	(628)	4,302 n.a.
	Gross investments	DKKm	(857)	(569) 51%
	Divestments	DKKm	196	2,238 (91%)
	Free cash flow	DKKm	(1,289)	5,971 n.a.
	Capital employed	DKKm	9,780	7,797 25%
	ROCE	%	13.1	75.8 (62.7%p)

Cash flows from operating activities totalled DKK -0.6 billion in 2017. The decrease of DKK 4.9 billion was primarily due to lower EBITDA and the early settlement of Oil & Gas price hedges of DKK 1.6 billion in 2017. This was partially offset by a lower level of funds tied up in working capital, mainly higher trade payables relating to gas purchases.

Gross investments totalled DKK 0.9 billion in 2017, relating primarily to maintenance of the power distribution grid and installation of the new smart meters.

ROCE was 13% in 2017. This is a decrease of 63%-points relative to 2016, as that year was positively impacted by income in the form of one-off payments from renegotiations. ROCE adjusted for these one-off payments was 24% in 2016.

## Strategy follow-up

Distribution & Customer Solutions (DCS) comprises four core activities: Sales B2C, Sales B2B, Markets (including LNG) and Distribution, bridging the gap between supply and demand in the green transformation.

### Distribution & Customer Solutions' strategic focus within these four areas is to:

- **Sales B2C:** make it easier and financially possible for our customers to contribute to the green transformation
- **Sales B2B:** help business customers benefit from the green transformation
- **Distribution:** be industry-leading and maintain high levels of security of supply and customer satisfaction
- **Markets (including LNG):** manage Ørsted's energy portfolio and provide competitive access to the energy market for customers.

### Sales B2C: make it easier and financially possible for our customers to contribute to the green transformation

We will make it easier for our customers to play a part in the green transformation. In 2017, we therefore decided to cover all our residential customers' power consumption with green power from our own Danish offshore wind farms by purchasing green certificates – at no extra cost for our customers.

With 824,000 residential customers, our ambition is to deliver Denmark's best customer experience, which we continuously strive to do. In 2017, the customer satisfaction score among residential customers, who had been in touch with us, was unchanged at 76 on a scale of 1-100. We have seen an increase in customer

loyalty to 71 from 69. During the year, we have, among other things, worked to make our customer service more accessible and also implemented a successful online chat function and a new website in connection with the launch of our new name.

By the end of 2020, all power customers in Denmark will have the option of hourly settlement of consumption via remote-read power meters. This means that our power customers can take advantage of variable power prices during each 24-hour period – for example free power during certain hours of the night – as our most common subscription is based on the hourly market prices.

We continuously strive to reduce our costs and strengthen our competitiveness. Among other things, we are developing a new, simple and flexible digital platform. The new platform will provide a better customer experience and reduce our costs.

### Sales B2B: help business customers benefit from the green transformation

Across our geographical markets, we are working to establish and develop our partnerships with business customers beyond the classic role of a utility company. We are seeing growing demand for integrated, green energy solutions, and we would like to take the lead on this development.

Among other things, we offer our customers in Denmark climate partnerships comprising green power and advice on energy efficiency and procurement. For example, we are working with Novo Nordisk and Novozymes on a new biogas plant in Kalundborg that

will convert by-products from their factories to biogas.

We have also experienced strong growth in our flexibility solutions which contribute to balancing the energy system and ensuring lower costs. For example, we give our business customers the opportunity to move parts of their production to times when demand in the grid is lower. Our customer satisfaction score for business customers has increased to 77 out of 100.

### Distribution: be industry-leading and maintain high levels of security of supply and customer satisfaction

Ørsted's distribution activities are undertaken by the subsidiary Radius Elnet.

It is crucial that our customers experience a high level of security of supply. This means that their supply is rarely interrupted, and that we ensure rapid response and communication of correct information when this happens. In 2017, customers experienced the security of supply of 0.42 disconnections a year, excluding faults in the primary transmission grid owned by the Danish transmission system operator, Energinet.

As mentioned above, all Danish households must have a remote-read power meter installed by the end of 2020. We are thus working hard to replace one million power meters. At the end of 2017, 183,000 meters were in use. We focus on ensuring that the replacement is a positive customer experience, so we are pleased that we succeeded in maintaining a high customer satisfaction score of 82 in 2017. The remote-read power meters come with a number of advantages for our customers.

Among other things, they no longer have to read their power meters themselves, and they can monitor and control their electricity consumption during the day and the year. From 1 December, billing by the hour was introduced for our first customers to have the new meters installed. For the individual customer, this is a chance to reduce costs by keeping consumption low during peak hours in the grid. On the other hand, customers with a more inexpedient consumption pattern will pay more. The average consumer will not experience any price changes.

On 1 January 2018, a new financial regulation for grid companies came into force. During the year, the Danish Energy Regulatory Authority will define new revenue caps that will give us healthier incentives and a more stable framework. Initially, the financial consequences of this regulation are as expected.

**Markets (including LNG): manage Ørsted's energy portfolio and provide competitive access to the energy market for customers**

Markets manages and optimises Ørsted's energy portfolio as a whole, and hedges the Group's energy exposures as part of that. We sell the Group's power and gas as well as green certificates in the market and buy with a view to covering our customers' consumption. In this way, we make sure to continuously balance the supply of, and demand for, power and gas in our portfolio.

We offer external customers the same access to the market as we deliver for Ørsted's own power generation, green certificates, etc. In this way, we create synergies across the portfolio.

In 2017, we made significant progress in the management of power portfolios – particularly in relation to balancing products for external customers. As a consequence, we increased our number of external customers and our managed production capacity. The assets which we manage in portfolios include offshore wind farms, onshore wind, waste-fired power stations and small-scale gas-fired electric motors. In addition to our focus on the administration of renewable energy, we have signed agreements with small and flexible gas-fired power stations, supporting the objective of creating balance in the power grid.

In the transition to renewable energy, gas, as the least polluting and most flexible of the fossil energy sources, will continue to play an important role on the way towards a fossil-free energy system. Our gas portfolio consists partly of long-term purchase contracts, partly of contracts on capacity in gas storage facilities and an LNG terminal. At the end of 2017, a plan was announced for the full redevelopment of the Mærsk-owned Tyra gas field in the North Sea, which has increased the security of continued deliveries from the Danish Underground Consortium (DUC) to us. In addition, we have further reduced our exposure to oil prices in our gas purchase contracts through renegotiations with our counterparties.

Our LNG activities are loss-making. And even though we experience great interest and activity in LNG, the earnings from these activities are not enough to cover our fixed costs for the lease of the terminal.

Group Executive Management	60
Board of Directors	61

# Risk and risk management

In Ørsted, we regard risks as a natural and integral part of our business activities. Through risk management, risks are reduced to an acceptable level.

In addition to general operational and business risks, we are exposed – as part of our activities – to a number of different risks, including fluctuations in exchange rates, commodity prices and interest rates as well as credits and insurance. Managing these risks is an important focus area for us. The purpose of our risk management is to identify the various risks to which we are exposed, and then decide how to manage them. We assess the extent to which individual risks are acceptable or perhaps even desirable, as well as the extent to which these risks can be reduced to ensure an optimum balance between risk and return.

Following the divestment of our upstream oil and gas business in September 2017, our earnings are now to a large extent centred within offshore wind and green energy. When we invest in new assets and activities or divest other assets, the risk associated with our portfolio changes. We therefore assess the impact of a given decision on the portfolio in advance.

We work systematically with risks and follow a plan for the year according to which all business units and selected staff functions identify and prioritise their business risks. An assessment is made of the potential financial impact of individual risks and of whether they are of a short-term, long-term or recurring nature. The risks are consolidated and then prioritised at Group level. The ultimate responsibility for the individual risks rests with a member of the Group Executive Management. Similar processes are in place for identifying and prioritising risks related to sustainability, cybersecurity/IT and compliance/legal.

The most important business risks identified in connection with the process in the autumn of 2017 are shown on the right. They are also illustrated in the figure based on their potential impact (post-risk mitigation) on our value and credit metrics over the next few years. You can read more about these risks in the following pages.

The risks related to sustainability, cybersecurity/IT as well as compliance/legal are assessed using different parameters, which is why we are unable to show a consolidated picture of our combined risks. You can find a description of the most significant sustainability risks in our Sustainability Report and for each of the two other areas on page 50.

In addition, we are exposed to risks entailing a very small probability of having a

considerable impact on the Group's finances and/or reputation. These include, among other things:

- 1,000-year storm, which can lead to the loss of offshore wind farms
- Broken pipes at the Nybro gas treatment plant in Denmark, which can lead to personal injury and damage to the environment
- Breakdowns at power stations that can lead to personal injury and loss of assets.

For each of the identified risks, Group Executive Management has assessed whether the level of risk – after risk-reducing measures have been implemented – is appropriate or slightly or significantly higher than the desired level. If the risk is higher than the desired level, further risk-reducing measures are initiated to the extent possible.

## Development in risks in 2017

The risk outlook diminished in 2017 after the divestment of our upstream oil and gas business, as that industry is generally characterised by a high level of inherent risk.

Our five most important business risks are unchanged in relation to last year, however.

Market risks are still deemed to be the most material business risks for us. Following the

## Top 5 business risks Effect on our value and credit metric

- 1 (#1 2016) Market risks
- 2 (#2 2016) Development and construction of production assets
- 3 (#3 2016) Regulatory risks in Wind Power
- 4 (#4 2016) Operation of offshore wind farms
- 5 (#5 2016) Cost of electricity for offshore wind

① Quantification of risk is based on a scenario where the risk occurs with 10% probability (P90).

divestment of the oil and gas business, our exposure to oil and gas prices has been reduced. In contrast, our exposure to exchange rate fluctuations, primarily GBP, has increased, due to our large investments in offshore wind farms in the UK.

Development and construction of production assets is still ranked as the second-largest risk. However, there were no significant challenges in 2017.

Our risks associated with the operation of offshore wind farms (risk no. 3) and regulatory risks in Wind Power (risk no. 4) switched places in 2017. This is due to an increasing risk of faults on e.g. transmission cables, as more and more offshore wind farms become operational. In addition, we believe that the regulatory risks in the European markets have diminished, as the terms and regimes that apply to us are well-known and clarified.

Further reducing the cost of electricity from offshore wind (risk no. 5) remains an important factor for us. 2017 saw a breakthrough for the price of offshore wind power, and our market-leading role in reducing the costs was reaffirmed. In April, we were granted the right to build three offshore wind projects in the German part of the North Sea, and in September we were awarded the contract to construct Hornsea 2. Two of the German projects were awarded on zero-subsidy terms, and the settlement price for Hornsea 2 is 50% lower than in the most recent CfD allocation in the UK only two years ago.

## 1. Market risks

Our primary market risks relate to energy prices, exchange rates, interest rates and inflation.

### Risk management

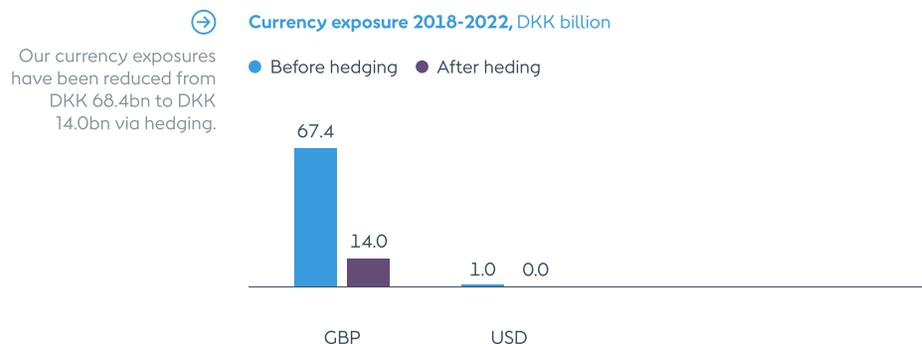

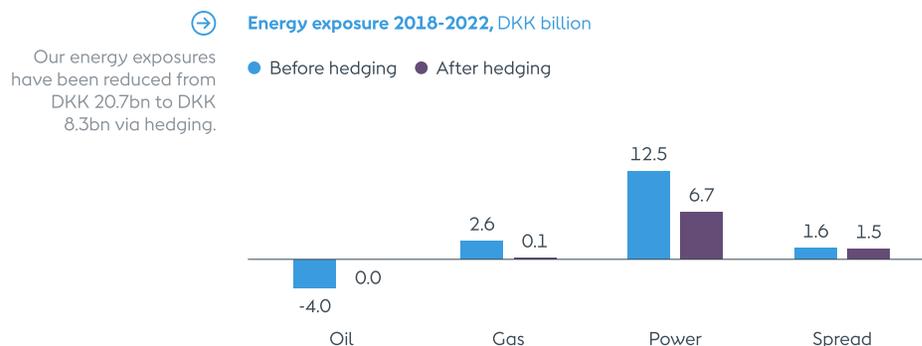

The management of market price risks aims to ensure stable and robust financial ratios that support our growth strategy.

We hedge prices for up to five years to reduce cash flow fluctuations. Prices are normally not hedged in the longer term. This means that our long-term market risks are determined by our strategic decisions on investments in new assets, the conclusion of long-term contracts, debt issuance as well as any divestments of assets.

### Energy prices

Our energy price risks can be divided into direct price risks, where the exposure depends on a specific price, and spread risks, where the exposure depends on the difference between two or more prices. Direct price risks are generally considered to be higher than spread risks as prices are often co-variant.

We hedge prices based on minimum hedging requirements, defined by the Board of Directors, for the three business units. See note 7.1 in the financial statements. In the first two years, a high degree of hedging is wanted to ensure stable cash flows after tax. The degree of hedging will be lower in the subsequent years. This is due to declining certainty about generated volumes and the increasing cost of hedging instruments due to declining liquidity of the instruments.

### Exchange rates

Our international activities entail financial exposure to exchange rate fluctuations. The most important risk relates to GBP due to the Group's substantial investments in offshore wind farms in the UK.

The main currency risk management principle is that currency risks are hedged when it is deemed relatively certain that the underlying cash flows in foreign currencies will materialise. Currency risks relating to energy prices are therefore hedged only when the energy price is hedged.

Similarly, currency risks relating to divestments and investments are hedged only when the divestment and investment prices are sufficiently certain.

Cash flows that relate to fixed tariffs and guaranteed minimum prices from offshore wind farms in the UK deviate from the main principle and are hedged after deduction of operating costs, with a decreasing degree of hedging over the five-year risk management horizon. See note 7.1 in the financial statements. Fluctuations in GBP therefore constitute a strategic risk for Ørsted.

Our EUR risk is subject to continuous assessment, but is generally not hedged as we believe that Denmark will maintain its fixed exchange rate policy.

### Interest rates and inflation

Our interest rate risks relate to interest-bearing loans and borrowings, interest-bearing assets and financial price hedges.

The management of interest rate risks is based on the composition of our assets and the interest rate sensitivity of the cash flows generated by these assets. We match assets and liabilities, aiming at fixed-interest financing of assets with fixed, interest-insensitive cash flows over the same periods. Conversely, more variable-interest financing is sought for assets with varying, interest-sensitive cash flows.

Our inflation risk primarily relates to fixed nominal earnings from offshore wind farms in Denmark, Germany and the Netherlands. We match the inflation risk by issuing debt with fixed nominal cash flows.

## 2. Development and construction of production assets

Our strategy includes the construction of large-scale investment projects, especially within offshore wind. Value creation from new projects heavily depends on choosing the right technical and commercial solutions, on the design and construction phase progressing as planned, including compliance with our agreements on the part of suppliers, on avoiding investment budget overruns and on the timely start-up of generation.

Most of our new investments are made in offshore assets, which naturally increases risks in the construction phase. The nature of the seabed, weather conditions and dependence on installation vessels are some of the risks associated with the construction of offshore assets.

In Wind Power and Bioenergy & Thermal Power, we have successfully completed several investment projects in recent years, including the construction of offshore wind farms in the UK and Germany as well as bioconversions of Danish CHP plants. Based on these experiences, we have been able to significantly reduce the risks associated with projects in progress due to the implementation of standard processes for the construction and estimation of project costs.

## 3. Operation of offshore wind farms

The risks associated with the operation of offshore wind farms relate to forecasts for availability and operating expenses as well as faults in transmission cables and substations.

Our forecasts for availability and operating expenses are based on a number of assumptions received from our suppliers, and on historical data. There is a risk that the assumptions do not hold, and that fault rates and costs are higher than expected. This may lead to deviations between actual generation and the forecasts.

In addition, we are exposed to faults in transmission cables and substations, which may result in breakdowns and loss of production from parts of or an entire offshore wind farm over an extended period of time. We are not compensated for loss of production in the UK. However, in Denmark we are fully compensated, and in Germany we are compensated for a large share of such operating losses. The German transmission system operator,

TenneT, is entitled to deduct up to 28 days for planned (10 days) and unplanned (18 days) maintenance of the transmission grid before we are entitled to financial compensation. The final form of the compensation rules is not yet clear in the new markets in the Netherlands, the USA and Taiwan, but we are monitoring the issue closely.

We have put in place various contingency plans to cater for unforeseeable events, including critical repair services to handle transmission cable faults. In addition, we are working continuously to reduce the risk of faults in the operation of offshore wind farms, among other things, by monitoring and analysing operational data collected and carrying out preventive remedial work of emerging damage.

## 4. Regulatory risks in Wind Power

The risk associated with regulatory regimes is twofold. It is associated with the possibilities for obtaining subsidies and with the possibilities for obtaining relevant approvals from the local authorities.

The EU targets are unchanged, and member states must still reduce carbon emissions by 40% and increase the share of generation from renewable energy sources (RES) to at least 27% of total generation – both targets to be achieved before 2030.

Under the reformed EU guidelines on state aid for environmental protection and energy, subsidies are generally granted in a competitive bidding process, with the price quoted by the bidder being the only or most important

criterion. This will increase the competition, which can affect the profitability of the projects and the number of projects we are allocated. Denmark, Germany and the Netherlands have tender-based funding schemes, while funding schemes are auction-based in the UK, the USA and Taiwan.

We do not expect changes to be made to the subsidy schemes, including tax incentive schemes, with retrospective effect for existing offshore wind projects in any of the countries where we have commissioned or planned offshore wind farms.

The greatest risks relating to project development are associated with the need to obtain relevant approvals from the local authorities and to be connected to the grid. Delays in both areas may lead to the total or partial loss of subsidies. This risk is significantly reduced for projects where subsidies and possibly project rights are granted in competitive bidding processes.

We mitigate the risks by monitoring political developments in all the relevant countries and by engaging in an active dialogue with relevant authorities about environmental approvals, regulatory milestones and the economic regimes.

To ensure an appropriate pipeline and the realisation of the desired level of build-out, we are working with a flexible portfolio of projects, the number of which actually exceeds our capacity. In this way, it is not critical if individual projects fail to materialise. Furthermore, we are continuously exploring new markets with a view to spreading the geographical risk.

## 5. Cost of electricity for offshore wind power

It is still imperative that the cost of electricity from offshore wind is reduced further. Especially if offshore wind is to be less dependent on subsidies and more competitive in relation to other technologies, such as onshore wind and solar PV. In addition, it is also important for us to maintain our market-leading position by continuing to win tenders and auctions in key markets.

We will continue our efforts to optimise both development and operations. We have created a streamlined organisation and initiated strategic cooperation with key suppliers to ensure continuous cost reductions. However, we are also very aware of the need to ensure financial sustainability in our industry to the benefit of all parties.

### Other risks

#### Cybersecurity/IT

In 2017, several major cyberattacks were launched against companies around the world, and according to the Danish Centre for Cybersecurity, the risk of cyberattacks aimed at Danish companies is high. Thus, we have a strong focus on IT security.

We are responsible for critical infrastructure, and we own various types of intellectual property rights. This means that we are a potential target for cyberattacks or industrial espionage. To ensure monitoring of system-related risks, we have implemented a global framework for safety risk management.

Our strategy also focuses on protecting us against cyberattacks and on ensuring that the necessary control systems are in place for monitoring and managing the operation of our activities.

#### Compliance and legal

Risks associated with compliance and legal are assessed on the basis of financial significance and probability. Our most important risks are described below.

#### Financial regulation

We are subject to a number of financial regimes, such as REMIT, MAR, EMIR, Dodd Frank, MiFID, SFRT and AML. The financial rules and related procedures are complex and constantly changing. In 2016, we established a new compliance structure to ensure a consistent level of compliance controlling and reporting on financial regulation throughout Ørsted.

#### General Data Protection Regulation

We are subject to a number of rules on processing of personal data. From May 2018, we will be subject to the new EU General Data Protection Regulation (GDPR). Like today, we will be obliged to implement appropriate technical and organisational initiatives and procedures to ensure the protection of the rights of data subjects in connection with the processing of personal data. In order to ensure that we process personal data in a confidential and secure way, we have in recent years implemented a number of initiatives and carried out various analyses of our personal data security.

#### Public procurement law

Most of our products and services are subject to EU public procurement law, which is generally complex and constantly changing. Last year, a new EU Directive came into force, which the various member states have interpreted differently. This is making it difficult to compete for contracts in different countries. To counter the risk, we have ensured that our procurement function is involved in the relevant activities.

# Corporate governance

Each year, we consider the recommendations from the Danish Committee on Corporate Governance, describe our corporate governance in the annual report and prepare a detailed report which you can find on our website.

Our governance model is illustrated in the figure to the right and explained below.

## 1. Shareholders

Our shareholders exercise their rights at the general meeting, which for example appoints the Board of Directors and the auditor.

## 2. General meeting

The general meeting adopts decisions in accordance with the standard rules set out in the Danish Companies Act. However, for the general meeting to be able to approve proposals to amend the Articles of Association or to dissolve the company, the Danish State as majority shareholder must participate in the general meeting and vote in favour of the proposal.

## 3. Nomination Committee Members and duties

The Nomination Committee has been appointed in accordance with the Articles of Association and consists of the Chairman and Deputy Chairman of the Board of Directors

and up to four members appointed by the largest shareholders every autumn. If one of the four largest shareholders does not want to sit on the committee, the right of appointment is transferred to the fifth largest shareholder and so on.

Current members of the committee are Thomas Thune Andersen, Lene Skole, Peder Lundquist (elected by the Danish Ministry of Finance), Jesper Hjulmand (elected by the Danish energy company SEAS-NVE), Claus Wiinblad (elected by the Danish pension fund ATP) and Anders Damgaard (elected by the Danish pension fund PFA Pension).

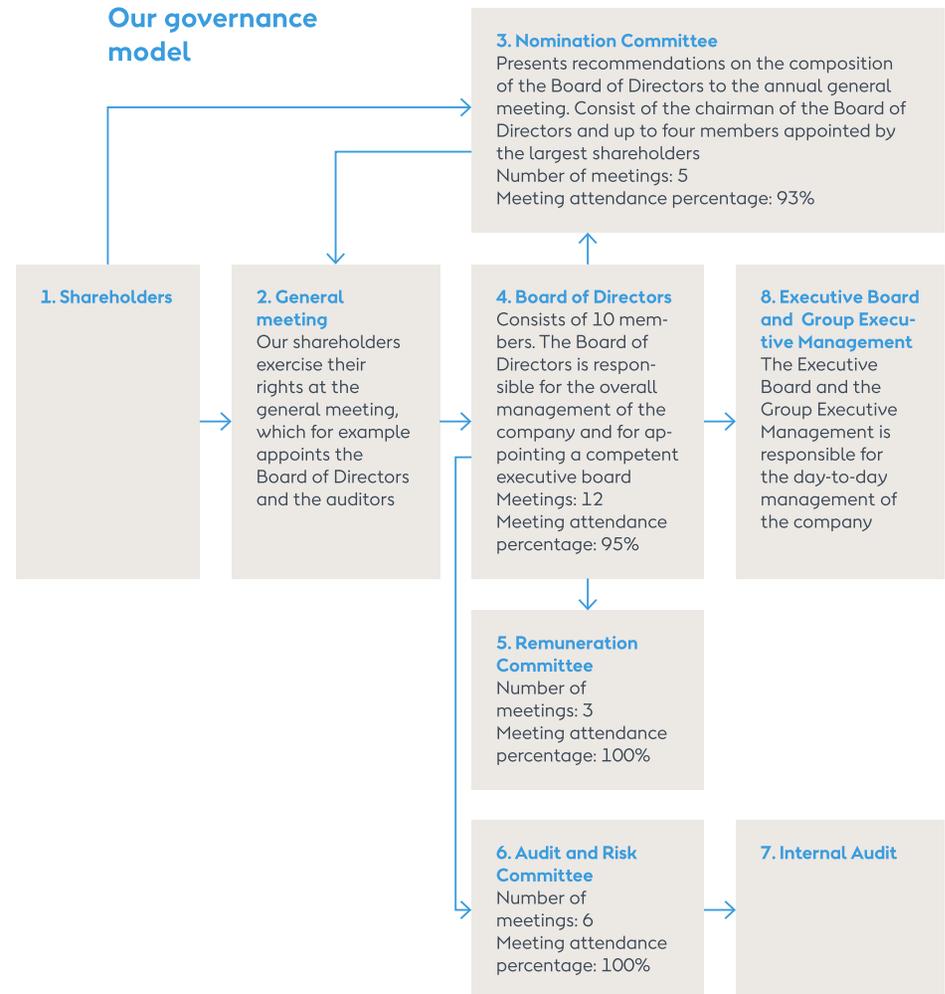

The committee's work results in recommendations for the re-election or new election of board members. We publish and submit the recommendations to the shareholders before the general meeting. The committee does not perform any other duties for the company.

The Nomination Committee's duties, meetings, etc., are described in its rules of procedure, which you can find at [orsted.com/en/About-us/Corporate-Governance](http://orsted.com/en/About-us/Corporate-Governance).

## Special tasks in 2017

Claus Wiinblad, Poul Arne Nielsen and Martin Hintze stepped down from the Board of Directors in connection with the annual general meeting in 2017.

## Our governance model

**Meeting attendance**

Member of the board	Board of Directors	Audit and Risk Committee	Remuneration Committee	Nomination Committee*
Thomas Thune Andersen	12/0		3/0	5/0
Lene Skole	12/0	6/0	2/0	4/1
Hanne Steen Andersen	12/0			
Lynda Armstrong	10/2			
Poul Dreyer	12/0			
Pia Gjellerup	12/0		3/0	
Benny Gøbel	12/0			
Benny D. Loft	11/1	6/0		
Jens Nybo Stilling Sørensen	10/2			
Peter Korsholm	10/1	5/0		
Martin Hintze	1/0		1/0	
Poul Arne Nielsen	1/0			
Claus Wiinblad	1/0	1/0		

\*The Nomination Committee is made up of four members in addition to the members from the Board of Directors.

The numbers indicate how many meetings the members have attended and not attended respectively.

In February 2017, the Nomination Committee recommended re-election of the other board members and election of Peter Korsholm as a new member of the Board. Peter Korsholm strengthens the Board of Directors' corporate finance competences.

After the annual general meeting in March 2017, the committee continued the process of finding a new board member with audit and accounting experience. In July 2017, the committee decided to recommend Dieter Wemmer as a new board member at the annual general meeting in March 2018.

In the autumn of 2017, the Nomination Committee decided to search for an additional board member with experience from Ørsted's primary business areas. In January 2018, the committee recommended Jørgen Kildahl as a new board member and reelection of the existing six members of the Board of Directors.

#### 4. Board of Directors Members and duties

The annual general meeting elects six to eight members each year, and the employees elect a number of members every four years, corresponding to half of the board members

elected by the general meeting. The Board of Directors currently has ten members. The general meeting has elected six members, and the employees have elected four members. An election of employee representatives for the Board of Directors will be held in 2018, where the employees will have the right to elect three members. The reduction is attributable to the number of external board members being six at the time the election commenced.

Information about the members of the Board of Directors, their other supervisory and executive positions, independence and special competences can be found on pages 61-62.

The Board of Directors is responsible for the overall management of the company. The Board of Directors lays down the company's strategy and makes decisions concerning major investments and divestments, the capital base, key policies, control and audit matters, risk management and significant operational issues. The Board of Directors appoints the Executive Board.

The Board of Directors has appointed two committees from among its members, an Audit and Risk Committee and a Remuneration Committee.

The rules of procedure of the Board of Directors describe the work and duties of the Board of Directors and the two committees. Each year, the Board of Directors assesses the need to update the rules of procedure. You can read the rules of procedure for the two committees at [orsted.com/en/About-us/Corporate-Governance](http://orsted.com/en/About-us/Corporate-Governance).

**Important tasks for the Board of Directors in 2017****Investments and divestments**

- Investment in the offshore wind power project Hornsea 2 in the UK
- Investment in Taiwan's first offshore wind power project, Formosa 1
- Investment in the biomass conversion of Asnæs Power Station in Denmark
- Divestment of the upstream oil and gas business
- Sale of ownership interests in A2SEA
- Farm-down of offshore wind farms Borkum Riffgrund 2 in Germany and Walney Extension in the UK

**Other tasks**

- Development of our offshore wind project portfolio after 2020, including the German authorities' grant of the right to construct three offshore wind projects in Germany, submission of bid on the Bay State Wind project in Massachusetts in the USA in cooperation with Eversource as well as development of the project portfolio in Taiwan
- Conclusion of the partnership agreement with Dominion Energy on a development project in the USA
- Settlement of the contract on the construction of the Hejre platform and repair of the Siri platform
- Decision on a new organisation to support green growth and to change name to Ørsted
- Completion of the annual strategy process
- Issuance of subordinated green hybrid bonds and green unsecured senior bonds as well as buy-back of senior bonds.

### Special tasks in 2017

Key tasks for the Board of Directors have been the divestment of our upstream oil and gas business, investment in the offshore wind farm project Hornsea 2, the build-out of our project portfolio in Germany, the USA, Taiwan and the Netherlands, farm-down of offshore wind farms in the UK and Germany as well as our name change.

The Board of Directors conducted its annual self-assessment in December 2017. All members responded to an anonymous questionnaire before the Board of Directors discussed the results. At the meeting, the Board of Directors also considered the follow-up items from last year's self-assessment.

### Remuneration

Each year, the general meeting approves the remuneration for the members of the Board of Directors for the coming year. In the section on remuneration on page 57, you can read more about the remuneration of the Board of Directors.

### 5. Remuneration Committee

#### Members and duties

Thomas Thune Andersen (Chairman), Lene Skole and Pia Gjellerup are the members of the Remuneration Committee.

The committee assists the Board of Directors in preparing and implementing the remuneration policy. The committee assesses and prepares recommendations on Group Executive Management's salary adjustments, bonuses, the application of retention schemes for key

employees, the use of one-off payments and introduction of new compensatory elements.

In 2017, the Remuneration Committee discussed, among other things, payment of retention bonuses granted in connection with the divestment of our upstream oil and gas business.

### 6. Audit and Risk Committee

#### Members and duties

Benny D. Loft (Chairman), Lene Skole and Peter Korsholm are the members of the Audit and Risk Committee.

The committee assists the Board of Directors in overseeing the financial and non-financial reporting process, the capital structure development, financial and business-related risks, compliance with statutory and other requirements from public authorities and the internal controls.

Moreover, the committee approves the framework for the work of the company's external and internal auditors, evaluates the external auditors' independence and qualifications as well as monitoring the company's whistleblower scheme.

#### Special tasks in 2017

In 2017, the Audit and Risk Committee focused especially on the divestment of our upstream oil and gas business, IT/cyber security and our preparations for the implementation of the new General Data Protection Regulation in May 2018.

### 7. Internal Audit

#### Employees and duties

Internal Audit reports to the Audit and Risk Committee and is therefore independent of our administrative management structures. Internal Audit evaluates and suggests ways of improving and streamlining our processes and control environment. Internal Audit is primarily involved in reviewing and advising on our central and critical processes, governance, risk management and IT security.

The chairman of the Audit and Risk Committee is responsible for our whistleblower scheme. The Internal Audit function receives and considers any reports submitted.

#### Special tasks in 2017

Internal Audit undertook special audit and consultancy tasks within the following areas: Prevention of the risk of cybercrime, ensuring adequate IT security in connection with investments in major new IT systems, tests of our crisis control setup at Group level, investment management, commodity and currency hedging, ensuring adequate compliance and continuous monitoring as well as screening our suppliers' compliance with relevant international standards.

#### Whistleblower scheme

Our employees and other associates may report serious offences, such as cases of bribery, fraud and other criminal offences, to our whistleblower scheme or through our management system. In 2017, the reports resulted in three substantiated cases. Two concerning violation of employment policies and one concerning conflict of interest. The cases had consequences for the individuals

### Important tasks for the Audit and Risk Committee in 2017

#### Audit and accounting

- Review of the recognition and presentation of the divestment of our upstream oil and gas business
- Supervision of the work involved in the early implementation of IFRS 9 as well as preparation for IFRS 15 implementation in 2018
- Review of expectations for market prices, exchange rates, discount rates and risk-free interest rates
- Review of significant provisions and warranties in the Group related to both continuing and discontinued operations
- Monitoring of capital structure development
- Monitoring of the voluntary limit for non-audit services as well as preliminary approval hereof

#### Risk

- Review of IT security in operational and administrative areas as well as cybersecurity
- Assessment of liquidity reserve and redemption of bonds as well as the basis for issuance of new green bonds and hybrid capital
- Review and assessment of our exposure to inflation
- Monitoring of currency and energy hedging mandates
- Supervision of the work involved in ensuring compliance with the requirements of the future General Data Protection Regulation.

involved. None of the cases reported were critical to our business, nor have they impacted on our financial results. We take such cases very seriously and do what we can to avoid that similar cases occur again.

## 8. Executive Board and Group Executive Management

### Members and duties

Henrik Poulsen (CEO) and Marianne Wiinholt (CFO) are the members of the Executive Board of Ørsted A/S.

The Executive Board undertakes the day-to-day management through the Group Executive Management, which from 1 February 2018 will consist of seven members. In addition to Henrik Poulsen and Marianne Wiinholt, the Group Executive Management comprises the Executive Vice Presidents of our three business units Martin Neubert (Wind Power), Thomas Dalsgaard (Bioenergy & Thermal Power) and Morten H. Buchgreitz (Distribution & Customer Solutions) together with Executive Vice President of Wind Power Engineering, Procurement & Construction (EPC) Anders Lindberg and Executive Vice President of Wind Power Partnerships, M&A and Asset Management Ole Kjems Sørensen.

The Board of Directors has laid down guidelines for the work of the Executive Board, including the division of work between the Board of Directors and the Executive Board and the Executive Board's powers to enter into agreements on behalf of the company. The Board of Directors regularly discusses the CEO's performance, for example by following up on developments seen in relation to our strategy and objectives.

The Chairman of the Board of Directors and the CEO also regularly discuss the cooperation between the Board of Directors and the Executive Board.

You can find information about the members of the Executive Board, including their previous employment and other executive functions, on page 60. We describe the remuneration of the Executive Board in the section on remuneration on page 55.

### How we relate to the Recommendations on Corporate Governance

We consider the Recommendations on Corporate Governance prepared by the Danish Committee on Corporate Governance on an annual basis. You can find the recommendations at [www.corporategovernance.dk](http://www.corporategovernance.dk).

We do not comply with or comply partially with three out of 47 recommendations.

Our shareholders have decided that our Nomination Committee should have other members and duties than what is assumed in the recommendations, and that our Articles of Association should not stipulate a retirement age for members of the Board of Directors. From 2018, a fixed retirement age will no longer be part of the recommendations. We also have a share programme for the Executive Board with a slightly shorter first vesting period (2½ years) than the recommended three years, as the programme was issued in continuation of our IPO. The vesting period of future allotments is three years in accordance with the recommendations.

In November 2017, revised recommendations for corporate governance were announced, which will apply from 2018. We will review these and we expect to adjust our policies and procedures during 2018, so we can report on these in the 2018 annual report. We will present a proposal to update our remuneration policy at the general meeting in March 2018, enabling it to comply with the revised recommendations.

Our statutory report on corporate governance can be found at <https://orsted.com/en/About-us/Corporate-Governance/Statutory-reports>, see section 107b of the Danish Financial Statements Act. The report describes in more detail whether and how we comply with or deviate from the 47 Recommendations on Corporate Governance.

# Remuneration report

## Remuneration report

The overall objective of our remuneration policy is to attract, motivate and retain qualified members of our Board of Directors and our Executive Board and to align the interests of our Board of Directors and our Executive Board with the interests of our shareholders.

In addition, the policy aims to strike the right balance between the Executive Board's fixed and incentive-based remuneration with the target of awarding the members in relation to their achieved results for the company and individually.

The remuneration policy is available at [orsted.com/en/About-us/Corporate-Governance](http://orsted.com/en/About-us/Corporate-Governance).

## Remuneration for the Executive Board Remuneration 2017

The remuneration paid to our CEO totalled DKK 15.9 million in 2017, representing an increase of 17% compared to 2016. His fixed salary increased by 6.4% to DKK 10.0 million (63% of the total remuneration in 2017). The cash bonus (STI) made up DKK 2.7 million, corresponding to 88% of the maximum bonus. The bonus percentage reflects a performance in excess of expectations as regards the Group's financial targets and our safety target. The score for the CEO's personal targets also exceeded expectations. The score was, among other things, affected by strong progress for our offshore wind farms under construction, auctions won, business development in new markets

## Remuneration structure and remuneration for the Executive Board

Element	Henrik Poulsen			Marianne Wiinholt			Objective	Remuneration level	Performance measure
	2017	2016	2015	2017	2016	2015			
Fixed salary	10,024	9,425	9,112	5,255	5,062	4,876	Attract and retain qualified managers.	Competitive but not market leading, compared to the level in similar major listed Danish companies with international activities.	n/a
Cash-based incentive schemes (STI)	2,656	2,135	1,815	1,348	1,239	1,186	Ensure shared ownership of the entire company's performance and a clear link between value creation and payment.	Target of 15% of the fixed annual salary. The maximum bonus amounts to 30% and will be paid in case of full achievement of all performance targets.	The performance reward agreement consists of three targets: — financial target (30%) — safety target (10%) — personal targets (60%).
IPO Executive Retention Bonus	1,848	616	-	964	321	-	Retain the Executive Board after the IPO. Phasing in to a long-term incentive scheme	20% of the fixed annual salary as per 1 July 2016.	Employment at 1 September 2018.
Share-based incentive scheme (LTI)	1,367	1,427	2,784	713	889	1,790	Reward long-term value creation and align the Executive Board's interests with those of the shareholders.	Target of 20% of the annual fixed salary at the date of grant. After three years, shares will be allocated at 0-200%, depending on Ørsted's return compared to peers	The final number of shares will be determined on the basis of Ørsted's total shareholder return benchmarked against ten peers.
Pension incl. social security	2	2	2	2	2	2	n/a	The members of the Executive Board are not entitled to pension contribution, only social security	n/a
Severance pay	-	-	-	-	-	-		If a member of the Executive Board is terminated by the company, the person is entitled to 24 months' salary, composed of salary during the notice period (12 months) and a severance pay.	n/a
<b>Total, DKK '000</b>	<b>15,897</b>	<b>13,605</b>	<b>13,713</b>	<b>8,282</b>	<b>7,513</b>	<b>7,854</b>			

#### Amount of PSUs and shares owned by the Executive Management

	Henrik Poulsen	Marianne Wiinholt
Maximum amount of PSUs per 31 December 2017	28,838	15,150
Number of Ørsted shares owned	130,500	83,916
<b>Owned shares in percentage of fixed salary</b>	<b>441%</b>	<b>541%</b>

#### Number of shares

The table shows that both members of the Executive Board meet the share capital requirement.

as well as farm-downs of offshore wind farms. Moreover, the score was positively affected by the divestment of our Oil & Gas business.

The remuneration paid to our CFO totalled DKK 8.3 million, representing an increase of 10% compared to 2016. The fixed salary increased by 3.8% to DKK 5.3 million (63% of the total remuneration in 2017). The cash bonus (STI) made up DKK 1.3 million, corresponding to 86% of the maximum bonus. The bonus percentage reflects the same general targets that apply to the CEO. The score for the CFO's personal targets was above expectations. Among other things, the score was affected by the divestment of our Oil & Gas business and the handling of derived consequences in relation to our insurance captive, funding structure and the internal reorganisation of Ørsted, especially of the finance organisation. Moreover, the score was positively affected by the work done to establish a digital strategy and make our IT organisation more supportive of our business.

In 2017, the remuneration under the share-based incentive programme consisted of the market value of the scheme at the time of granting, distributed over the vesting period.

Both members of the Executive Board are covered by the share programmes from September 2016 and April 2017. The IPO retention bonuses for 2017 and 2018 constitute the phase-in to the first share programme, the vesting period of which ends in spring 2019. The increases in the IPO retention bonuses are attributable to the fact that the scheme covered only four months of 2016.

#### Remuneration structure

In February, the Board of Directors decided to keep the remuneration structure unchanged for 2017. The remuneration structure and the remuneration for the Executive Board are shown in the table. The two incentive schemes are described in more detail below.

#### Cash-based incentive schemes (STI)

The cash-based incentive scheme is an annual bonus with a target of 15% of the fixed annual remuneration and may not exceed 30%. The agreement is based on three elements – two general targets, and one individual target. The general targets relate to the Group's financial performance (weighting of 30%) and safety record (weighting of 10%). The individual target consist of personal performance targets related to the strategy (weighting of 60%).

The Remuneration Committee sets bonus targets and assesses the performance of the CEO. The Chairman of the Board of Directors and the CEO set bonus targets and assess the performance of the CFO.

#### Share-based incentive scheme (LTI)

The Executive Board is covered by the leader share programme in Ørsted. It is a condition for being granted performance share units (PSUs) under the programme that the participant holds a number of Ørsted shares representing a value equal to a share of each participant's fixed annual remuneration. For the CEO, this share is 75% of his fixed salary, and for the CFO 50%.

If the participants fulfil the shareholding requirement at the time of granting, they will each year be granted a number of PSUs representing a value equal to 20% of their fixed annual remuneration on the date of granting.

The granted PSUs have a vesting period of three years, after which each PSU entitles the holder to receive a number of shares free of charge, corresponding to 0-200% of the number of granted PSUs. The final number of shares for each participant will be determined on the basis of the total shareholder return delivered by Ørsted, benchmarked against ten comparable European energy companies.

If a member of the Executive Board leaves Ørsted as a result of his or her own resignation or due to breach of his/her employment, the entitlement to shares is lost.

#### Remuneration for the Board of Directors

##### Remuneration 2017

In March, the general meeting decided to keep the Board of Directors' fixed annual fee of DKK 320 thousand for the coming year until the general meeting in 2018.

##### Remuneration structure

The members of the Board receive a fixed fee each year. The Chairmanship and the members of the committees also receive a multiple of the fixed fee for their extra work. None of the members receives separate fees for consultancy work for Ørsted. The members' travel costs are covered by the company.

The remuneration for the Board of Directors comprises a fixed fee only. However, employee-elected board members may, based on their employment, be covered by general incentive schemes applicable to the Group's employees. Members of the Board of Directors are not entitled to severance payments.

#### Remuneration multiple 2017, Board of Directors and committees

#### Remuneration for the Board of Directors

The table shows the remuneration paid to the members of the Board of Directors and committees. No remuneration is paid to the members of the Nomination Committee.

<sup>1</sup> Per 31 December 2017, the board members own the following number of shares in Ørsted A/S: Peter Korsholm 4,500, Hanne Steen Andersen 3,187 (2016: 837), Poul Dreyer 837 (2016: 837), Benny Gøbel 837 (2016: 837) and Jens Nybo Stilling Sørensen 837 (2016: 837). No other board members own shares in Ørsted A/S.

<sup>2</sup> Martin Hintze has waived his right to receive Directors' remuneration.

# Shareholder information

The Ørsted share yielded a total return of 29% in 2017, an increase in the share price of 27% and dividends of DKK 6 per share.

### Price development for the Ørsted share in 2017

The Ørsted share started the year at a price of DKK 268 and closed the year at DKK 339. Prices of comparable European utility companies increased by 9%, and the OMX C25 cap increased by 13% in 2017. The market value of Ørsted was DKK 142 billion at the end of the year. Since the IPO in June 2016, the Ørsted share has generated an aggregate return from the share price and dividends of 47%.

### Share price development in 2017

**Share information**

ISIN	DK 0060094928220
Share classes	1
Nominal value	DKK 10 per share
Average daily volume	723,784
Exchange	Nasdaq OMX Copenhagen
Ticker	ORSTED
Year high	DKK 388 (11 October)
Year low	DKK 246 (3 February)
Registered share	99.6%
Number of shares	420,381,080 shares
Number of treasury shares	225,904 shares

The year's highest traded price of DKK 388 was on 11 October. The year's lowest traded price of DKK 246 was on 3 February.

The average daily turnover on Nasdaq Copenhagen was 724,000 shares. The trading volume showed an increase of 44% compared to 2016. This was particularly due to several of the original shareholders opting to sell all or some of their shareholdings in 2017 at a total trading value of DKK 17 billion. This amount should be compared to the value of the shares sold at our IPO of just under DKK 20 billion. New Energy Investment s.a.r.l. (managed by Goldman Sachs) sold its entire shareholding of 13.3% distributed over four transactions. The Danish energy company Syd Energi sold its entire shareholding of 0.9% at the beginning of the year, while the Danish pension fund ATP reduced its holding in the course of the year.

**Share capital**

Ørsted's share capital is divided into 420 million shares enjoying the same voting and dividend rights. The company's share capital remained unchanged in 2017. At the end of 2017, the company held a total of 226 thousand treasury shares, which will be used to cover incentive schemes.

**Composition of shareholders**

At the end of the year, the number of shareholders had increased by 12% to 24,600. Although the geographical spread of the share capital was greater, most of it (68%) is still with Danish owners. The figure to the left shows the composition of our shareholders by country, specifying the three shareholders holding more than 5% of the share capital each. Around 1% of the share capital is owned by private investors.

**Annual general meeting and dividends**

The annual general meeting will be held on 8 March 2018 in Copenhagen. Dividends for the year are expected to amount to DKK 9 per share, corresponding to DKK 3.8 billion. In 2017, dividends of DKK 6 per share were paid for the 2016 financial year, corresponding to a return of 2.7% relative to a share price of DKK 338.7 per 31 December 2017.

**Investor Relations**

In order to achieve a fair pricing of our shares and corporate bonds, we seek to ensure a high level of openness and stability in our financial communication. In addition, our management and Investor Relations function engage in regular dialogue with investors and analysts. The dialogue takes the form of quarterly conference calls, road shows, conferences, capital market days and regular meetings with individual or groups of investors and analysts. The dialogue is subject to certain restrictions from three weeks prior to the publication of our financial reporting.

22 share analysts and 12 bond analysts cover the Group. Their recommendations and consensus estimates for Ørsted's future financial performance are available at [orsted.com/en/investors](http://orsted.com/en/investors). On the site, it is also possible to download our financial reports, investor presentations and a wide range of other data.

# Board of Directors

## Thomas Thune Andersen

Chairman since 2014.  
Born 1955.  
Not independent.<sup>1</sup>  
**Joined/re-elected:** 2014/2017.  
**Term of office expires:** 2018.

### Special competencies:

Knowledge and experience within Ørsted's principal business areas. General management, safety management, risk management and stakeholder management.

### Other management positions:

**Chairman:** Lloyds Register Group and Foundation  
**Deputy Chairman:** VKR Holding A/S  
Member: Arcon-Sunmark A/S, BW Offshore ltd.

## Lene Skole<sup>2</sup>

Deputy Chairman since 2015.  
Born 1959.  
Independent.  
**Joined/re-elected:** 2015/2017.  
**Term of office expires:** 2018.

### Special competencies:

General management, financial management, safety management, risk management, stakeholder management, human resources management and capital markets.

### Present posts:

Lundbeckfonden, CEO.

### Other management positions:

**Deputy Chairman:** ALK-Abello A/S, H. Lundbeck A/S, Falck A/S, TDC A/S.  
**Member:** Tryg A/S, Tryg Forsikring A/S, two subsidiaries of Lundbeckfonden.

## Hanne Sten Andersen

Employee representative.  
Born 1960.  
Not independent  
**Joined/re-elected:** 2007/2014.  
**Term of office expires:** 2018.

### Special competencies:

General management and human resources management.

### Present posts:

Ørsted, Lead HR Business Partner, Distribution & Customer Solutions.

## Lynda Armstrong

Born 1950.  
Independent.  
**Joined/re-elected:** 2015/2017.  
**Term of office expires:** 2018.

### Special competencies:

General management, safety management, risk management, stakeholder management and human resources management.

### Other management positions:

**Chairman:** ECITB  
**Member:** KAZ Minerals plc<sup>3</sup>, Central Europe Oil Company, SBM Offshore N.V.<sup>4</sup>

## Poul Dreyer

Employee representative.  
Born 1964.  
Not independent  
**Joined:** 2014.  
**Term of office expires:** 2018.

### Special competencies:

Knowledge and experience within Distribution & Customer Solutions.

### Present posts:

Ørsted, Technician, Distribution & Customer Solutions.

<sup>1</sup> Independence: Thomas Thune Andersen is considered independent of shareholder interests. Until December 2017, he was a member of the Board of Directors of Petrofac Limited which has had significant business relations with the oil and gas business now divested by Ørsted. Thus, he is not considered independent with respect to the 2017 reporting pursuant to the corporate governance recommendations.

<sup>2</sup> In addition to the positions mentioned above, Lene Skole also holds the following positions: member of the Audit and Election Committee at ALK, member of the Remuneration and Science Committee at Lundbeck, member of the Audit and Risk Committee at Tryg, member of the Remuneration and Election Committee at TDC, member of the Audit and Remuneration Committee at Falck A/S.

<sup>3</sup> As well as Chairman of the Remuneration Committee, member of the HSE Committee and member of the Project Assurance Committee.

<sup>4</sup> As well as member of the Technical and Commercial Committee and the Remuneration Committee.

### Pia Gjellerup

Born 1959.  
Independent.  
**Joined/re-elected:** 2012/2017.  
**Term of office expires:** 2018.

**Special competencies:**

General management, financial management, stakeholder management and human resources management.

**Present posts:**

Center for Public Innovation, Center Director.

**Other management positions:**

**Chairman:** Vanførefonden, Fondet Dansk-Norsk Samarbejde.

**Member:** Gefion Gymnasium

### Benny Gøbel

Employee representative.  
Born 1967.  
Not independent  
**Joined/re-elected:** 2011/2014.  
**Term of office expires:** 2018.

**Special competencies:**

Knowledge and experience within Bioenergy & Thermal Power.

**Present posts:**

Ørsted, Engineer, Bioenergy & Thermal Power.

### Peter Korsholm

Born 1971.  
Independent.  
**Joined:** 2017.  
**Term of office expires:** 2018.

**Special competencies:**

General management, financial management, risk management, stakeholder management, capital markets and M&A.

**Present posts:**

DSVM Invest A/S, CEO, DSV Miljø Group A/S, CEO, Togu ApS, CEO.

**Other management positions:<sup>1</sup>**

**Chairman:** Nymølle Stenindustrier A/S, GDL Transport Holding AB, Lion Danmark and two wholly owned subsidiaries in the Lomax group. **Member:** DSVM Invest A/S, Bone's Invest ApS, A/S United Shipping and Trading Company, Uni-tankers A/S and Bunker Holding A/S.

### Benny D. Loft

Born 1965.  
Independent.  
**Joined/re-elected:** 2012/2017.  
**Term of office expires:** 2018.

**Special competencies:**

General management, financial management, risk management, stakeholder management, human resource management, capital markets, IT and M&A.

**Other management positions:**

**Member and Chairman of the Finance and Audit Committee:** New Xellia Group A/S.

### Jens Nybo Stilling Sørensen

Employee representative.  
Born 1968.  
Not independent  
**Joined/re-elected:** 2007/2014.  
**Term of office expires:** 2018.

**Special competencies:**

Knowledge and experience within Bioenergy & Thermal Power.

**Present posts:**

Ørsted, Key Business Project Manager, Bioenergy & Thermal Power.

<sup>1</sup> In addition to the positions mentioned above, Peter Korsholm also holds the following positions: Chairman of the Investment Committee at Zoscales Partners, member of the Board of Directors in a subsidiary of Uni-tankers A/S, 5 wholly owned subsidiaries at DSVM Invest Group and 2 wholly owned subsidiaries of the Bones Group.

## Profit (loss) for the year from our continuing operations

In 2016, we decided to divest our Oil & Gas business. The divestment was approved and closed on 29 September 2017. The Oil & Gas business was therefore classified as discontinued operations in 2016 and 2017.

## Profit (loss) per share

Diluted profit (loss) per share corresponds to profit (loss) per share, as the dilutive effect of the share programme is less than 0.1% of the share capital.

## Accounting policies

### Business performance

The business performance principle was introduced by the Ørsted Group in 2011 as an alternative performance measure. According to IFRS, market value adjustments of energy contracts and related currency risks (including hedging) are recognised on an ongoing basis in the profit (loss) for the year, whereas under the business performance principle, they are deferred and recognised in the period in which the hedged exposure materialises. The difference between IFRS and business performance is specified in the 'Adjustments' column. Read more about the business performance principle in note 1.1.

Our supplementary statements of gross and net investments appear from note 3.3 and free cash flows (FCF) from note 2.1.

## Accounting policies

Cash flows from operating activities are determined using the indirect method as operating profit (loss) before depreciation, amortisation and impairment losses adjusted for changes in operating items without cash flow effect. Trade payables relating to purchases of intangible assets and property, plant and equipment are not recognised in change in net working capital.

Other items primarily comprise reversal of share of profit (loss) of and dividends in associates and joint ventures as well as changes in bad debt provisions.

Cash flows from investing activities comprise payments in connection with the purchase and sale of non-current assets and enterprises, and the purchase and sale of securities that are not recognised as cash and cash equivalents.

Cash flows from financing activities comprise changes in the size or composition of equity and loans. Proceeds from raising of short-term repo loans are presented net.

Cash flows in currencies other than the functional currency are translated at the average exchange rates for the month in question, unless these differ significantly from the rates at the transaction date.

# 1. Basis of reporting

Business performance	75
Definitions of performance highlights	78

# 1. Basis of reporting

This section provides an overview of our principal accounting policies, key accounting estimates and judgements as well as new and amended IFRS standards and interpretations.

The following sections provide an overall description of the accounting policies applied to the consolidated financial statements as a whole. We provide a more detailed description of the accounting policies and key estimates and judgements in the notes.

The descriptions of accounting policies in the statements and notes form part of the overall description of accounting policies.

In November 2016, the Board of Directors decided to initiate a process with the ultimate objective of divesting our Oil & Gas business. The divestment of our Oil & Gas business was

closed on 29 September 2017. Consequently, we have presented the external activities of Oil & Gas, including revenue and other income and expenses, as discontinued operations in the annual reports for 2016 and 2017.

## Accounting policies and key accounting estimates and judgements

The financial statements for the period 1 January - 31 December 2017 comprise the consolidated financial statements of Ørsted A/S and its subsidiaries (the Group) as well as separate financial statements for the parent company, Ørsted A/S. See page 158 for the parent company's accounting policies. The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS) as adopted by the EU and further requirements in the Danish Financial Statements Act (Årsregnskabsloven).

The financial statements are presented in million Danish kroner (DKK), unless otherwise stated.

All business units in the Ørsted Group apply the Group's accounting policies.

## Measurement basis

The consolidated financial statements have been prepared on the historical cost basis except for derivatives, financial instruments in trading portfolio, financial instruments classified as available for sale, and carbon emissions allowances in trading portfolio that are measured at market value.

The accounting policies have been applied consistently to the financial year and for the comparative figures except for the early adoption of 'IFRS 9 – Financial Instruments'.

## Key accounting estimates and judgements

When preparing the consolidated financial statements, we make a number of accounting estimates and judgements based on assumptions concerning future developments which affect our assets and liabilities as well as our income and costs. Actual amounts may differ from the amounts estimated and judgements made as more detailed information becomes available.

We regularly reassess these estimates and judgements, based among other things on historical experience, the current situation in the financial markets, the expected effects of Brexit and a number of other relevant factors.

Accounting estimates, judgements and assumptions which may entail a risk of material adjustments in subsequent years are described in the notes in the table below.

Note	Accounting policies	Key accounting estimates and judgements	Estimate/ judgement	Extent of accounting estimates and judgements
1.1	Consolidated financial statements	Assessment of classification of partnerships	Judgement	● ● ● ○
2.2	Revenue	Assessment of assumptions for recognition of revenue from the construction of offshore wind farms	Judgement	● ● ● ○

### Consolidated financial statements

The consolidated financial statements include the parent company Ørsted A/S and subsidiaries controlled by Ørsted A/S. See more in the company overview in note 8.5.

The consolidated financial statements have been prepared as a consolidation of the parent company's and the individual subsidiaries' financial statements prepared in accordance with the Group's accounting policies. Intra-group income and expenses, shareholdings, balances and dividends as well as realised and unrealised gains and losses arising from intra-group transactions are eliminated on consolidation.

Unrealised gains resulting from transactions with associates and joint ventures are eliminated to the extent of the Group's ownership interest. Unrealised losses are eliminated in the same way as unrealised gains to the extent that there has been no impairment.

The Group's share in joint operations is recognised in the consolidated balance sheet through recognition of the Group's own assets and liabilities and income and expenses. The Group's share of joint income and expenses and assets and liabilities is then recognised. The proportionate share of realised and unrealised gains and losses arising from intra-group transactions between fully consolidated enterprises and joint operations is eliminated.

Investments in associates and joint ventures are measured using the equity method.

If we hold or have the ability to exercise, directly or indirectly, 20%-50% of the voting

rights and do not exercise control, such enterprises are accounted for as associates. However, we carry out a specific assessment of our ability to exercise influence, including our ability to influence financial and operational decisions and thus our return.

Any such enterprises that satisfy the criteria for joint control are instead accounted for as investments in joint ventures.

We present the profit (loss) from investments in associates and joint ventures before EBITDA when deemed to pertain to our principal activity. The profit (loss) from investments in associates and joint ventures is presented after EBITDA when not deemed to pertain to the Group's principal activity.

Associates and joint ventures with negative net assets are measured at nil.

If we have a legal or constructive obligation to cover the negative equity of an associate or joint venture, the obligation is recognised as a liability.

Receivables from associates and joint ventures are measured at amortised cost. On initial recognition of our receivables, write-downs are made for bad debts.

The proportionate share of associates' and joint ventures' profit (loss) after tax and non-controlling interests is recognised in profit (loss) for the year. We eliminate the proportionate share of internal gains (losses) in the profit (loss) for the year.

On acquisition of investments in associates and joint ventures, the purchase method is applied.

Gains (losses) on the divestment of investments in associates and joint ventures are determined as the difference between the selling price and the carrying amount of net assets, including goodwill at the date of divestment and transaction costs.

Gains and losses are recognised in profit (loss) for the year as gain or loss on the divestment of enterprises. The profit (loss) for the year and total comprehensive income from associates and joint ventures are identical.

### Key accounting judgements

#### Assessment of classification of partnerships

On initial recognition of investments and in connection with any restructuring of joint ventures and joint operations, we assess whether an investment is a joint venture or a joint operation.

In assessing joint operations, we look at:

- the corporate form of the operation, and
- whether we are only entitled to the net profit or income and expenses resulting from the operation.

In addition, the fact that the parties buy all output, for example the power generated, will lead to the structure being considered to be a joint operation.

### Foreign currency translation

For each reporting enterprise in the Group, items are determined in the currency of the primary economic environment in which the individual reporting enterprise operates (functional currency). Transactions in currencies other than the functional currency of each enterprise are accounted for as transactions in foreign currencies and translated on initial recognition at the exchange rate at the transaction date. Exchange differences arising between the exchange rate at the transaction date and at the date of payment are recognised in profit (loss) for the year as financial income or expenses.

Receivables, payables and other monetary items in foreign currencies are translated at the exchange rates at the balance sheet date. The difference between the exchange rate at the balance sheet date and at the date at which the receivable or payable arose is recognised in profit (loss) for the year as financial income or expenses.

For foreign subsidiaries, joint operations, associates and joint ventures, the statements of comprehensive income are translated at monthly average exchange rates in so far as these do not deviate materially from the actual exchange rates at the transaction dates. Balance sheet items are translated at the exchange rates at the balance sheet date. All exchange differences are recognised in profit (loss) for the year, except for exchange differences arising on:

- translation of the opening equity of these entities at the exchange rates at the balance sheet date

- translation of the statements of comprehensive income of these enterprises from the exchange rates at the transaction date to the exchange rates at the balance sheet date
- translation of balances accounted for as part of the total net investment
- translation of the portion of loans and derivatives that has been entered into to hedge the net investment in these enterprises, and that provides an effective hedge against corresponding foreign exchange gains (losses) on the net investment in the enterprise.

The above types of exchange differences are recognised in other comprehensive income. Such exchange rate adjustments are divided between the equity of the parent company and the equity of the non-controlling interests. On full or partial divestment of the net investment, the accumulated exchange rate adjustments are recognised as follows:

- disposal results in loss of control: The accumulated exchange rate adjustments, including any associated hedges, are recognised in the profit (loss) for the year if a foreign exchange gain (loss) is realised by the selling enterprise. Any foreign exchange gain (loss) is transferred to the item in which the gain (loss) from the disposal is recognised. The part of the foreign currency translation reserve that relates to non-controlling interests is not transferred to profit (loss) for the year.
- disposal does not result in loss of control: A proportionate share of the foreign currency translation reserve is transferred from the parent company shareholders' share of equity to the minority shareholders' share of equity.

Repayment of balances that are considered part of the net investment does not constitute a partial disposal of the subsidiary.

### Implementation of new standards and interpretations

We regularly assess the effect of new IFRS accounting standards and interpretations and implement new accounting standards and interpretations from their mandatory effective dates at the latest.

On 1 January 2017, we early adopted a new accounting standard, IFRS 9 – Financial Instruments, to be able to use the new hedge accounting rules.

The most important changes resulting from IFRS 9 compared to IAS 39 are:

- Simplification of the requirements for hedge accounting. For instance, hedge accounting will be facilitated for proxy hedging strategies, which are often used to hedge risks in the energy markets.
- The number of categories of financial assets is reduced from four to three: amortised cost, fair value through income statement or fair value through other comprehensive income.
- A loss allowance for expected credit losses must be recognised at initial recognition of a receivables. Previously a loss allowance could only be recognised if there was objective evidence of impairment.

The adoption of IFRS 9 has not had any significant impact on recognition and measurement of financial instruments in our consolidated financial statements for 2017.

Comparative figures are not restated as the effect is immaterial.

Effective from 1 January 2017, we have implemented the following amendments to other accounting standards (IAS and IFRS) and interpretations:

- Amendment to IAS 7 – Statement of Cash Flows: The amendment entails additional disclosure requirements in respect of financing activities.
- Amendment to IAS 12 – Income Taxes: The amendment is a clarification of the accounting treatment of tax assets related to unrealised losses on debt instruments measured at fair value.
- Annual improvements to IFRS 2014-2016 concerning IFRS 12 – Disclosure of Interests in Other Entities: The amendment is a clarification of the disclosure requirements.

The implementation of other amended standards has not affected our consolidated financial statements for 2017.

### New standards and interpretations

IASB has issued a number of new or amended accounting standards and interpretations which have not yet entered into force, and which have consequently not been incorporated into the consolidated financial statements for 2017 (impact is expected).

On the next page, we have assessed how IFRS 15 – Revenue from Contracts with Customers and IFRS 16 – Leases will be implemented and the consequences thereof. The two standards are deemed to be the most relevant for the Ørsted Group.

Standard	Expected effect		Commencement	Transitional provision
IFRS 15 – Revenue from Contracts with Customers	<p>We have completed our review of contracts and the analysis of the cash flows in Ørsted. The analysis concluded that the implementation only affects the recognition of income from our transmission assets in connection with the construction of offshore wind farms.</p> <p>In the UK, we offer construction contracts for transmission assets, which are subsequently sold to a new owner. When construction of the assets is completed, they are sold to an Offshore Transmission Owner (OFTO) through a regulated sales process. The UK energy regulator 'Office of Gas and Electricity Markets' (Ofgem) manages the sales process, determines the final transfer value and appoints the buyer. Under the new standard, a customer relationship does not exist between Ørsted and a final buyer. As a result, no mutual legal rights and obligations exist between the parties when the construction of transmission assets commences.</p> <p>Following the implementation of IFRS 15, we will initially recognise revenue from transmission assets when we have entered into a contract with a customer which both parties (buyer and seller):</p> <ul style="list-style-type: none"> <li>– have approved and</li> <li>– intend to perform.</li> </ul> <p>Thus, the recognition of income does not begin until we sell a share of the transmission asset under construction to a partner, which takes place upon such partner joining the project.</p>	<p>We recognise the remaining part of the transmission asset when we find that control has passed to the OFTO.</p> <p>Transmission assets have so far been recognised in step with the construction based on the completion degree of the asset.</p> <p>The change has the consequence that revenue is recognised at a later point in time than was the case under the former practice. Similarly, the costs of construction do not affect operations until the sale is recognised as income.</p> <p>The change does not affect the Group's cash flows or results, but only the time when income and costs are recognised in the consolidated financial statements.</p> <p>Historically we have not had, and we do not expect a significant contribution margin in connection with the sale of transmission assets to partners and OFTOs, and the Group's EBITDA, balance sheet total and equity will therefore remain unchanged in all material respects as a consequence of the changed accounting policies.</p> <p>As the effect of the implementation of IFRS 15 on EBITDA, equity and the balance sheet total is immaterial, the expected disaggregated effect has not been disclosed.</p>	<p>IFRS 15 will be implemented on 1 January 2018.</p>	<p>We will implement the standard with retrospective effect as if its requirements have always been applied to our current contracts. We use the option under IFRS 15 of not restating comparative figures, and of reflecting the effect in equity. The requirements of the standard therefore only apply to agreements in progress at 1 January 2018 as well as subsequently concluded agreements.</p>
IFRS 16 – Leases	<p>We are still analysing the effect of IFRS 16 on the consolidated financial statements. The preliminary conclusion is that it will have a limited impact on both the balance sheet, the income statement and related credit key ratios except effects of classifications. The impact at 1 January 2019 will deviate from the present value of the future minimum lease payments stated in note 8.2 (DKK 6,095 million) for the following reasons:</p> <ul style="list-style-type: none"> <li>– The scope of leases is expected to change up until 1 January 2019, partly as a result of the conclusion of new leases, partly as a result of run-off on the existing leases.</li> </ul>	<ul style="list-style-type: none"> <li>– On recognition of lease obligations in the balance sheet at 1 January 2019, we will apply the implicit interest rates in the determination of the present value of the lease obligations. At 31 December 2017, the present value of our lease obligations was determined at an interest rate of 3.5%.</li> </ul> <p>As a general rule, IFRS 16 requires that service elements which are incorporated into leases, and which do not entitle us to use an underlying asset, must be dealt with separately and treated as a current operating expense. This will not have an immediate impact as our total obligation stated in note 8.2 does not include payments relating to service elements. We intend to continue this practice so that service elements are not included in the lease obligation and the right-of-use asset in accordance with IFRS 16.</p>	<p>IFRS 16 will be implemented on 1 January 2019.</p>	<p>We expect to implement the standard based on the simplified transition method, where comparative figures will not be restated. We expect to calculate and recognise the cumulative effect for all ongoing leases at 1 January 2019. Furthermore, we expect to use the other available reliefs to the widest possible extent, including the exclusion of leases with a term to maturity of less than 12 months and low-value assets.</p>

The new or amended standards and interpretations are not mandatory in connection with the financial reporting for 2017. We will implement the standards and interpretations from their mandatory effective dates at the latest.

# 1.1 Business performance

## Description of business performance

In 2011, we introduced an alternative performance measure, business performance, as a supplement to the financial statements prepared in accordance with IFRS. The business performance results reflect our internal risk management and show the results for the period under review. Under the business performance principle, the value of the hedging transaction is deferred and recognised for the period in which the hedged risk materialises. This is illustrated in the example overleaf.

Our reason for introducing the business performance principle in 2011 was:

- that we could not achieve the same timing of recognition of our commercial exposure and hedging contracts in accordance with the IFRS rules, for example with respect to option premiums and certain commercial fixed-price contracts, and
- a high risk of hedging contracts not being consistent with the IFRS hedge accounting rules, requiring us to recognise the hedging contracts at market value with value adjustment via the income statement, whereas our commercial exposure is accrued.

Our risk management is described in note 7.1.

## Business performance – background

We hedge market risks for up to five years with the aim of stabilising our cash flows and creating certainty about our finances. With a view to ensuring transparency, we

want the financial impact of the hedging transactions to be reflected in the financial reporting simultaneously with the hedged exposure (for example sales of power). We can normally achieve this by applying the IFRS rules on hedge accounting. For energy companies, it is, however, sometimes difficult to ensure simultaneity. This is due to the fact that hedging instruments are not always available which precisely match the exposure which must be hedged, or that no sufficiently liquid market is available. Consequently, some hedging takes place in alternative markets or subject to alternative time horizons. For example, power generation in Denmark is to some extent hedged by financial contracts for nearby trading areas such as EEX (Germany) and Nord Pool (Scandinavia). These areas normally develop relatively uniformly over time compared to Denmark.

This hedging method means that only some of the financial hedging transactions comply

with the IFRS rules on hedge accounting even though the financial risk has been reduced. In case of non-compliance, under IFRS the hedging transactions must be recognised in the income statement on a regular basis. This may give rise to considerable fluctuations in the income statement, as the effects of the hedging and for example the sale of power are not recognised in the same period.

Consequently, we have decided not to apply the IFRS rules on hedge accounting to transactions hedging energy prices and associated currency risks. Value adjustments of these hedges are therefore recognised in the income statement in accordance with IFRS.

## Recognition

In the income statement, the business performance results are shown alongside the IFRS results. In the income statement, the difference between the two performance measures is shown in a separate column, 'Adjustments'.

Two types of contracts are included in the business performance principle:

- hedging contracts concerning energy and related currencies
- commercial contracts concerning energy recognised at market value (typically fixed-price physical gas and power contracts).

When we use hedging instruments which do not fully correspond to the underlying risk, any difference between the hedging instruments and the underlying risk is recognised immediately in the income statement. See note 7.3.

The accounting treatment under business performance is otherwise identical to the accounting treatment under IFRS. Our balance sheet, cash flows and equity are consequently not affected. The accounting treatment of our hedging contracts according to IFRS and business performance is summarised in the table below.

Type of hedging	IFRS	Business performance
Hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts	Market value adjustment in the income statement	Market value adjustments are deferred and recognised in the period in which the exposure materialises
Hedging of: – proceeds from the divestment of newly constructed offshore wind farms – interest payments	Market value adjustments are deferred and recognised in the period in which the exposure materialises	Recognition the same as under IFRS
Hedging of currency risks associated with investments in foreign entities	Market value adjustments are recognised in other comprehensive income	Recognition the same as under IFRS
Trading portfolio	Market value adjustment in the income statement	Recognition the same as under IFRS

Only the recognition of the hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts differs under IFRS and the business performance principle.

### Expected impact on business performance EBITDA from energy and currency hedging

At 31 December 2017, a loss of DKK 812 million has been deferred (2016: DKK 126 million gain), which will affect business performance EBITDA in subsequent years. Of the total deferred loss, a loss of DKK 159 million is expected on business performance EBITDA in 2018 (2016: DKK 737 million gain in 2017).

The decrease in the deferred gain on currency hedging is primarily attributable to the transfer of gains to the income statement in 2017 as a consequence of the hedged transactions having occurred. Power prices rose in 2017, which means that the market value of the hedges has fallen as we are selling power.

### Expected impact on business performance EBITDA from energy and currency hedging, DKK million

	2018	2019	after 2019	Deferred for subsequent recognition at 31 December 2017	2017	2018	after 2018	Deferred for subsequent recognition at 31 December 2016
Oil	174	137	63	374	(46)	(48)	18	(76)
Gas	(262)	(266)	(97)	(625)	104	(314)	(418)	(628)
Power	(650)	(385)	(519)	(1,554)	(396)	(290)	(329)	(1,015)
Coal	34	6	1	41	32	4	-	36
Currency	545	139	268	952	1,043	489	277	1,809
<b>Total</b>	<b>(159)</b>	<b>(369)</b>	<b>(284)</b>	<b>(812)</b>	<b>737</b>	<b>(159)</b>	<b>(452)</b>	<b>126</b>

The table shows when the deferred value adjustments are expected to be recognised in the business performance EBITDA. The table covers both hedging classified as business performance and IFRS.

### Explanation of the business performance principle

In year 1, we enter into a contract hedging the price risk associated with Wind Power's generation of 1,000GWh in year 5 at GBP 52,000 per GWh. This ensures a total revenue of GBP 52 million. In year 5, the cost of power has decreased to GBP 45,000 per GWh, which means that the hedging contract has a positive market value of GBP 7 million (a hedged price of GBP 52,000 per GWh minus the spot price of GBP 45,000 per GWh). This means that we ensure that the total income, including the hedging transaction, is still GBP 52 million. The amount of GBP 52 million consists of a gain from the hedging contract of GBP 7 million and GBP 45 million from the sale of 1,000GWh at the spot price of

GBP 45,000 per GWh. The financial impact of the hedging transaction in years 1-5 is shown in the table. Under the business performance principle, the hedging transaction is recognised in the income statement in year 5, i.e. at the same time as the hedged contract with a positive market value of GBP 7 million. The value development is, however, recognised continuously in the income statement according to IFRS. Upon the expiry of the contract in year 5, the total effect on results over the period is the same under the IFRS and the business performance principle. Only the timing differs. The business performance principle ensures simultaneity of recognition of the underlying exposure and the hedging contract.

	Recognition in the income statement, GBP million		Recognised in the income statement as follows			Total financial impact	
	Power price (GBP '000 per GWh)	Sales of power, GBP million	Market value	Business performance	IFRS	Business performance	IFRS
Year 1	52	-	-	-	-	-	-

Year 3	55	-	(3)	-	(5)	-	(5)
Year 4	46	-	6	-	9	-	9
Year 5	45	45	7	7	1	52	46
<b>Total</b>		<b>45</b>		<b>7</b>	<b>7</b>	<b>52</b>	<b>52</b>

Example of recognition of the market value of a hedging contract according to the business performance and IFRS principles in the income statement.

#### Specification of the difference between EBITDA according to business performance and according to IFRS, DKK million

	2017	2016
EBITDA – business performance	22,519	19,109
Business performance adjustments in respect of revenue for the year	205	(3,808)
Business performance adjustments in respect of cost of sales for the year	(150)	1,638
<b>EBITDA – IFRS</b>	<b>22,574</b>	<b>16,939</b>
<b>Total business performance adjustments for the year comprise:</b>		
Value adjustments for the year of hedging contracts that relate to future periods	(138)	(1,397)
Reversal of gains (losses) relating to hedges deferred from prior periods where the hedged production or trading is recognised in business performance EBITDA for this period	193	(773)
<b>Total adjustments</b>	<b>55</b>	<b>(2,170)</b>

#### Value adjustments for the year of financial and physical hedging, DKK million

	2017	2016
Currency	150	1,156
Power (commercial and hedge)	(836)	(2,160)
Gas (commercial and hedge)	106	(735)
Oil	404	267
Coal	38	75
<b>Total value adjustments</b>	<b>(138)</b>	<b>(1,397)</b>

The table shows value adjustments by product. The value adjustments are recognised in IFRS EBITDA, but not in business performance EBITDA, as the value relates to future periods.

#### Reversal of deferred gains (losses) on hedges from previous periods, DKK million

	2017	2016
Currency	(12)	(615)
Power (commercial and hedge)	297	(424)
Gas (commercial and hedge)	(106)	(1,539)
Oil	46	1,654
Coal	(32)	151
<b>Total deferred gains (losses) from previous periods</b>	<b>193</b>	<b>(773)</b>

The table shows reversal of value adjustments by product. These gains (losses) are recognised in business performance EBITDA. The reversal of value adjustment was recognised in IFRS EBITDA in a previous period.

#### Difference between IFRS and business performance for the year

The value adjustment in respect of future periods totalled DKK -138 million (2016: DKK -1,397 million) and reversal of deferred gains (losses) recognised according to business performance in 2017 totalled DKK 193 million (2016: DKK -773 million).

#### Market value adjustments for the year of hedging contracts

2017 was mainly affected by losses on the hedging of power as a result of rising prices in 2017. This was partially offset by a gain on the hedging of oil as a consequence of the rising oil prices in 2017.

2016 was mainly affected by losses on the hedging of gas and power as a result of rising prices in 2016. This was partially offset by gains on currency hedging due to the weakened GBP in 2016.

#### Deferred gains (losses) from previous periods

In 2017, a loss of DKK 193 million was recognised in business performance EBITDA, but as the loss was recognised in IFRS EBITDA in a previous period, the gain was reversed in the 'Adjustments' column in the income statement. The loss was primarily attributable to the hedging of power.

In 2016, a gain of DKK 773 million was recognised in business performance EBITDA, but as the gain was recognised in IFRS EBITDA in a previous period, the gain was reversed in the 'Adjustments' column in the income statement. The gain, which was primarily attributable to the hedging of gas, power and currency, was offset by a loss on oil.

## 1.2 Definitions of performance highlights

Performance highlights are calculated in accordance with the business performance principle.

<b>Gross investments</b>	Cash flows from investing activities, excluding dividends received from associates, joint ventures and equity investments, purchase and sale of securities, loans to joint ventures and joint operations, and divestments of assets and enterprises.	<b>Proposed dividend per share (DPS) of DKK 10</b>	$\frac{\text{Total proposed dividend}}{\text{Number of shares year-end}}$
<b>Net investments</b>	Gross investments less divestments of assets and enterprises. To/from this is added/deducted acquired/transferred debt in connection with acquisitions and divestments of enterprises, and deducted non-controlling interests' share of investments in fully consolidated investment projects, and deducted the selling price of non-controlling interests.	<b>Dividend yield</b>	$\frac{\text{Dividend per share (proposed)}}{\text{Stock price the last trading day of the year}}$
<b>Funds from operations (FFO)</b>	Supplementary concept for cash flows from operating activities determined as business performance EBITDA less the effect of gains on the divestment of ownership interests in offshore wind farms, interest expenses (net) on interest-bearing net debt and hybrid capital (50%), interest element of decommissioning obligations and current tax. In addition, operating lease obligations have been recognised as if they were finance lease obligations, where operating lease payments have been reversed, and calculated interest expenses of the present value of lease payments have been deducted.	<b>Average number of shares</b>	$\frac{1}{\text{Number of days}} \times \text{Number of days} = X_i$ $\sum_{i=1}$
<b>Adjusted interest-bearing net debt</b>	Interest-bearing net debt plus 50% of the hybrid capital, cash and securities not available for use with the exception of repo transactions, present value of lease payments (operating lease obligations calculated as if they were finance lease obligations), and the present value of decommissioning obligations less deferred tax.	<b>Net working capital</b>	Inventories, trade receivables and other current operating assets less trade payables, deferred income (net) and other current operating liabilities.
<b>FFO to adjusted interest-bearing net debt</b>	$\frac{\text{FFO}}{\text{Adjusted interest-bearing net debt}}$	<b>Net working capital, excluding trade payables relating to capital expenditure</b>	Net working capital excluding trade payables relating to purchases of intangible assets and property, plant and equipment.
<b>Free cash flow (FCF)</b>	Cash flows from operating activities less gross investments and plus divestments.	<b>Profit (loss) per share</b>	$\frac{\text{Shareholders' share of the profit (loss) for the period}}{\text{Average number of shares}}$
<b>Capital employed</b>	Non-interest-bearing net assets corresponding to non-interest-bearing assets less non-interest-bearing liabilities.	<b>Diluted profit (loss) per share</b>	$\frac{\text{Shareholders' share of the profit (loss) for the period}}{\text{Average number of shares, including dilutive effect of free shares}}$
<b>Average capital employed</b>	$\frac{\text{Capital employed beginning of year} + \text{capital employed year-end}}{2}$		
<b>Return on capital employed (ROCE)</b>	$\frac{\text{EBIT}}{\text{Average capital employed}^1}$		

<sup>1</sup> ROCE (continuing operations) is based on average capital employed for the continuing operations. Non-interest-bearing net assets related to the oil and gas activities divested in September 2017 are not included.

# 2. Return on capital employed

<b>Segment information</b>	81
<b>Revenue</b>	84
<b>Cost of sales</b>	85
<b>Government grants</b>	86
<b>Other operating income and expenses</b>	87
<b>Employee costs</b>	88
<b>Share-based payment</b>	89

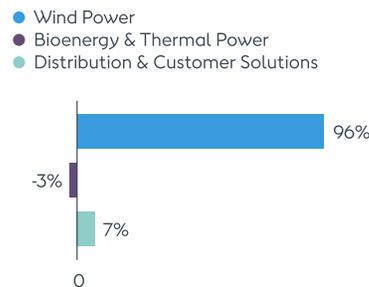

# 2. Return on capital employed

Return on capital employed is a key ratio that shows how profitable our business is. The strategic target is for ROCE to constitute an average of 12-14% in the period 2018-2023.

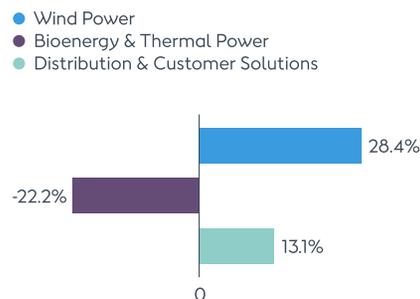

### Return on capital employed

Return on capital employed was 25.2% against 24.4% in 2016. The improved operating profit was partially offset by more funds tied up in invested capital. See more in note 2.1.

EBIT by segment, percentage of DKK 16,581 million in 2017

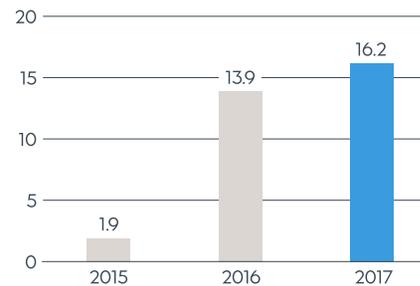

Return on capital employed (ROCE), % 2017

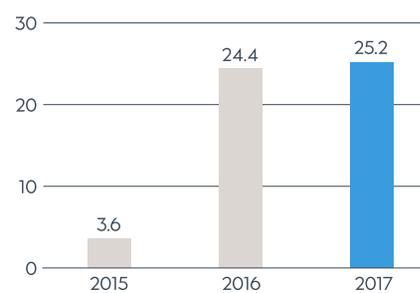

EBIT and return on capital employed stated according to the business performance principle. EBIT of DKK 16,581 million is calculated as EBIT for reportable segments.

EBIT, business performance, DKK million

Return on capital employed (ROCE), %

Return on capital employed (ROCE) was 25% against 24% in 2016 (and 17% in 2016 adjusted for compensation received in connection with renegotiations). The increase was attributable to higher EBIT.

# 22.5bn

EBITDA totalled DKK 22,519 million in 2017 against DKK 19,109 million in 2016.

# 16.2bn

Operating profit totalled DKK 16,235 million in 2017 against DKK 13,877 million in 2016.

# 25.2%

Return on capital employed (ROCE) totalled 25.2% in 2017 against 24.4% in 2016.

The distribution of power and sales of power and gas in the wholesale and retail markets in Denmark, Sweden, Germany and the UK as well as optimisation and hedging of the Group's total energy portfolio.

Revenue, intangible assets and property, plant and equipment are presented based on the locations of our customers and assets.

<sup>1</sup> Revenue determined according to the business performance principle.

### Accounting policies

Our operating segments are consistent with our internal reporting to our top decision-making body, Group Executive Management.

We apply the business performance principle, as described in note 1.1, in connection with our internal management.

## Geographical distribution of revenue as well as intangible assets and property, plant and equipment

Geographical revenue is broken down, as far as possible, by the customer's geographical location based on supply point.

A significant part of our sales takes place via power exchanges and gas hubs in Europe, the physical locations of which do not reflect the geographical locations of our customers. When breaking down these sales by geographical location we use the physical locations of the exchange or hub since we do not in all cases know the physical location of our customer.

No single customer accounts for more than 10% of our consolidated revenue.

Non-current assets are broken down geographically based on the physical locations of the assets.

The operating segments are managed primarily on the basis of EBITDA and investments. Financial income and expenses and tax are allocated to the operating segments, while we manage them at Group level.

Segment income and segment expenses are those items that, in the internal management reporting, are directly attributable to individual segments or can be indirectly allocated to individual segments on a reliable basis.

## 2.2 Revenue

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities/ eliminations	Total
<b>Revenue 2017, DKK million</b>					
Distribution and transmission	-	-	2,520	(32)	2,488
Sales of heat and steam	-	2,607	-	-	2,607
Sales of gas	-	-	19,197	(1,556)	17,641
Sales of power and power generation	10,052	3,097	17,743	(5,722)	25,170
Revenue from the construction of offshore wind farms	8,734	-	-	-	8,734
Other revenue	1,566	160	735	403	2,864
<b>Total, business performance</b>	<b>20,352</b>	<b>5,864</b>	<b>40,195</b>	<b>(6,907)</b>	<b>59,504</b>
Adjustments	(7)	95	(109)	226	205
<b>Total, IFRS</b>	<b>20,345</b>	<b>5,959</b>	<b>40,086</b>	<b>(6,681)</b>	<b>59,709</b>

Revenue for the year according to business performance fell from DKK 61,201 million in 2016 to DKK 59,504 million in 2017, down 2.8%. The fall was mainly due to lower activity from the construction of offshore wind farms in Wind Power. This was partially offset by higher gas prices as well as higher generation from offshore wind farms in operation.

Revenue for the year from the construction of offshore wind farms mainly related to transmission assets in the UK and the construction of the offshore wind farms Race Bank, Walney Extension, Gode Wind 1 and 2 as well as Burbo Bank Extension for partners.

In 2017, revenue totalled DKK 59,709 million according to IFRS, of which DKK 52,347 million was revenue from the sale of goods,

and DKK 7,362 million was revenue from the sale of services. In 2016, IFRS revenue totalled DKK 57,393 million, of which DKK 53,874 million was related to revenue from the sale of goods, while DKK 3,519 million was related to revenue from the sale of services.

### Accounting policies

We recognise revenue from the distribution and transmission of energy and the sale of heat and steam, oil, gas and power when:

- delivery and transfer of risk to the buyer have taken place,
- the income can be measured reliably and is expected to be received, and
- costs incurred or which will be incurred in connection with the sale can be measured reliably.

Revenue is measured at the market value of the agreed consideration excluding VAT and other indirect taxes collected on behalf of third parties.

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities/ eliminations	Total
<b>Revenue 2016, DKK million</b>					
Distribution and transmission	-	-	2,318	(16)	2,302
Sales of heat and steam	-	2,255	-	-	2,255
Sales of gas	-	-	18,111	(1,224)	16,887
Sales of power and power generation	6,700	2,717	17,309	(3,416)	23,310
Revenue from the construction of offshore wind farms	14,323	-	-	-	14,323
Other revenue	1,405	177	271	271	2,124
<b>Total, business performance</b>	<b>22,428</b>	<b>5,149</b>	<b>38,009</b>	<b>(4,385)</b>	<b>61,201</b>
Adjustments	45	(450)	(3,639)	236	(3,808)
<b>Total, IFRS</b>	<b>22,473</b>	<b>4,699</b>	<b>34,370</b>	<b>(4,149)</b>	<b>57,393</b>

All forms of discounts granted are recognised in revenue.

Revenue from offshore wind farms comprises sales of power at market prices and regulated prices (fixed tariffs and guaranteed minimum prices for green certificates).

Revenue from offshore wind farms is recognised at the time of generation.

We recognise construction contracts in revenue concurrently with the construction of the offshore wind farms and transmission assets. Revenue corresponds to the selling price of work performed during the year (percentage of completion method).

When the outcome of a construction contract cannot be estimated reliably, revenue is recognised to the extent of costs incurred. See also note 4.2.

Other revenue is income from the installation of offshore wind turbines using vessels in A2SEA, which was divested in August 2017. Trading activities,

financial hedging transactions, etc., are also included in other revenue.

Adjustments consist of the reversal of business performance adjustments. See more in note 1.1.

### Key accounting judgements

#### Assumptions for the ongoing recognition of revenue from the construction of offshore wind farms

We construct offshore wind farms in collaboration with partners, where we construct the partner's share. We assess each construction agreement at the time of conclusion of the agreement.

In our view, the transfer of control, risks and rewards takes place in step with the construction of offshore wind farms. This is supported by the regular approval of part deliveries and milestone payments from partners. Revenue is therefore recognised in step with the construction of the offshore wind farms.

## 2.3 Cost of sales

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities/eliminations	Total
<b>Cost of sales 2017, DKK million</b>					
Gas	-	976	16,237	(4,477)	12,736
Power	188	90	16,520	(5,510)	11,288
Biomass	-	2,091	-	-	2,091
Coal	-	829	-	-	829
Distribution and transmission costs	625	138	2,496	(102)	3,157
Costs for construction of offshore wind farms	5,720	-	14	17	5,751
Other cost of sales	32	276	965	3,419	4,692
<b>Total, business performance</b>	<b>6,565</b>	<b>4,400</b>	<b>36,232</b>	<b>(6,653)</b>	<b>40,544</b>
Adjustments	-	4	164	(18)	150
<b>Total, IFRS</b>	<b>6,565</b>	<b>4,404</b>	<b>36,396</b>	<b>(6,671)</b>	<b>40,694</b>

Cost of sales according to business performance increased from DKK 39,260 million in 2016 to DKK 40,544 million in 2017, up 3.3%. The increase was mainly due to higher gas prices and that 2016 was impacted by one-off payments from completed renegotiations that reduced cost of sales by DKK 4.3 billion. The increase was partly offset by lower cost in connection with construction of offshore wind farms.

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities/eliminations	Total
<b>Cost of sales 2016, DKK million</b>					
Gas	-	830	10,440	(5,601)	5,669
Power	-	57	15,303	(3,077)	12,283
Biomass	-	1,408	-	-	1,408
Coal	-	819	-	-	819
Distribution and transmission costs	603	123	2,632	(147)	3,211
Costs for construction of offshore wind farms	10,360	-	22	(22)	10,360
Other cost of sales	167	481	503	4,359	5,510
<b>Total, business performance</b>	<b>11,130</b>	<b>3,718</b>	<b>28,900</b>	<b>(4,488)</b>	<b>39,260</b>
Adjustments	-	(295)	(2,028)	685	(1,638)
<b>Total, IFRS</b>	<b>11,130</b>	<b>3,423</b>	<b>26,872</b>	<b>(3,803)</b>	<b>37,622</b>

 Cost of sales relate partly to trading in gas and power, partly to fuel used at CHP plants in connection with heat and power generation and partly to the construction of offshore wind farms.

## 2.4 Government grants

### Government grants, DKK million

	2017	2016
Government grants recognised in profit (loss) for the year under revenue	1,917	-
Government grants recognised in profit (loss) for the year under other operating income	4	5
Government grants recognised in the balance sheet	(4)	(5)
<b>Government grants recognised for the year</b>	<b>1,917</b>	<b>5</b>

In Denmark, the Danish transmission system operator Energinet administers subsidies for eco-friendly power generation, including for example offshore wind farms. Until 2017, the grant was paid by consumers as a tariff (public service obligation (PSO)) added to their electricity bill. In 2016, a political agreement was made to gradually phase out the PSO tariff. From 2017, the PSO costs will gradually be financed under the Danish Finance Act.

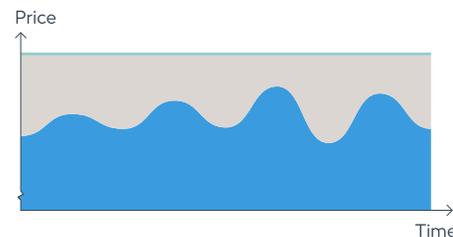

Following the changed legislation, which means that PSO funding will be provided under the Danish Finance Act, we regard the grant for eco-friendly power generation as a government grant as it is paid by the Danish State.

In 2013, the UK introduced a new CfD (Contracts-for-Difference) subsidy scheme as a replacement for the RO (Renewable Obligations) scheme for renewable energy projects. The Burbo Bank Extension and Walney Extension offshore wind farms are our first offshore wind farms under the

CfD-regime. 2017 is the first year where we have received this subsidy. We treat the payments from the CfD scheme as a government grant.

### Illustrative example of CfD

- Market price of power
- Government grants (difference between the market price of power and the power price fixed in the CfD contract)
- Power price fixed in the CfD contract

When participating in a CfD, we receive a feed-in premium in connection with the generation of power from an offshore wind turbine. The feed-in premium is the difference between the market price of power and the price fixed in the CfD (strike price).

### Accounting policies

Government grants comprise grants for eco-friendly power generation, grants for the funding of development projects as well as investment grants, etc.

Government grants are recognised when there is reasonable assurance that the grants will be received.

Grants for the acquisition of assets which we recognise in the balance sheet are recognised under deferred revenue and are transferred to other operating income in step with the depreciation of the assets to which the grants relate.

As grants for power generation are intended as a compensation for the price of power, we systematically recognise the grants under revenue in step with the power generation and thus the related revenue.

Government grants, which are recognised under revenue, are presented as the sale of power and power generation. See note 2.2.

## 2.5 Other operating income and expenses

Other operating income, DKK million	2017	2016
Gain on divestment of assets	11,142	3,356
Insurance compensation	-	137
Other compensation	369	877
Miscellaneous operating income	154	497
<b>Total other operating income</b>	<b>11,665</b>	<b>4,867</b>

Other operating expenses, DKK million	2017	2016
Loss on divestment of assets	307	416
Miscellaneous operating expenses	242	142
<b>Total other operating expenses</b>	<b>549</b>	<b>558</b>

### Other operating income

Gains on the divestment of assets in 2017 primarily concerned the farm-downs of 50% of our ownership interests in the offshore wind farms Walney Extension (UK) and Borkum Riffgrund 2 (Germany), contingent consideration relating to the divestment of Race Bank (UK) in 2016 (DKK 1,385 million), and to a lesser extent an adjustment in respect of the divestment of ownership interests in London Array.

In 2016, gains on the divestment of assets consisted primarily of the farm-downs of 50% of our ownership interests in the Burbo Bank Extension and Race Bank offshore wind farms.

Insurance compensation received in 2016 related to the settlement of insurance claims in Wind Power.

Compensation was mainly received from the transmission system operators (TSOs) and suppliers due to delayed deliveries for the construction of offshore wind farms in Wind Power.

### Other operating expenses

Losses on the divestment of assets in 2017 consisted, among other things, of the scrapping of components for a new type of foundation in an offshore wind farm under construction.

Losses on the divestment of assets in 2016 consisted, among other things, of the scrapping of a vessel for installation of offshore wind turbines.

### Accounting policies

Other operating income and other operating expenses comprise items of a secondary nature to the Group's primary activities.

In connection with the divestment of ownership interests in offshore wind farms before or during the construction phase, the gain is recognised on the divestment date under other operating income/other operating expenses in the income statement.

The gain for the future construction of the partner's share of the offshore wind farm is recognised on an ongoing basis in the income statement in step with the construction. See more in notes 2.2 and 4.2.

### Divestment of ownership interests in our offshore wind farms

When we divest an ownership interest in an offshore wind farm to a partner, we typically also enter into agreements on the future construction and operation of the offshore wind farm.

Contracts in connection with divestment are typically:

- Agreement on the sale of shares (divestment of assets)
- Agreement on the future construction of the offshore wind farm (construction contract)
- Agreement on the future operation of the offshore wind farm.

### Key accounting estimates

#### Assumptions for the accounting treatment of divestment gains

Our accounting recognition of the gain in the divestment contracts is based on the individual accounting selling prices of the relevant contracts.

Our accounting treatment of the gains in the contracts is therefore not necessarily identical with the prices negotiated in the individual contracts.

### Key accounting judgements

#### Assessment of classification of divestment

When we divest ownership interests in an offshore wind farm under development, we carry out an individual assessment of whether the divestment qualifies as a divestment of an enterprise or a divestment of assets. We have typically assessed that the offshore wind farms do not constitute an enterprise, as no employees are transferred, and processes are transferred to a limited extent only.

## 2.6 Employee costs

Employee costs, DKK million	Continuing operations		Discontinued operations	
	2017	2016	2017	2016
Wages, salaries and remuneration	3,650	3,692	365	692
Share-based payment	15	37	-	6
Pensions	310	311	27	51
Other social security costs	117	128	11	19
Other employee costs	61	29	5	10
<b>Employee costs before transfers to assets</b>	<b>4,153</b>	<b>4,197</b>	<b>408</b>	<b>778</b>
Transfers to assets	(956)	(1,109)	(126)	(325)
<b>Total employee costs</b>	<b>3,197</b>	<b>3,088</b>	<b>282</b>	<b>453</b>

### Employee costs

Employee costs before transfer to assets were on a par with 2016. Employee costs transferred to assets relate to investment projects, which are capitalised in the balance sheet.

### Pension plans and number of employees

Pension plans are defined-contribution plans that do not commit Ørsted beyond the amounts contributed.

In 2017, our average number of employees was 5,738 (2016: 5,894).

### Remuneration of Group Executive Management

The remuneration of the Executive Board is based on a fixed salary, including personal benefits, such as a company car, free telephone, etc., a variable salary, a retention bonus in connection with the IPO, and share-based payment. The other members of Group Executive Management<sup>1</sup> also receive a pension.

The members of the Board of Directors are paid fixed remuneration only for their work in Ørsted. In addition, Ørsted reimburses any travel expenses.

For further details about the remuneration of the Executive Board and the Board of Directors, reference is made to the remuneration report on page 55.

Salaries and remuneration for Group Executive Management and the Board of Directors, DKK '000	Executive Board		Other members of Group Executive Management <sup>1</sup>		Board of Directors		Total	
	2017	2016	2017	2016	2017	2016	2017	2016

Social security	4	4	9	9	-	-	13	13
<b>Total</b>	<b>24,179</b>	<b>21,118</b>	<b>36,163</b>	<b>31,772</b>	<b>4,934</b>	<b>5,024</b>	<b>65,276</b>	<b>57,914</b>

<sup>1</sup> Other members of Group Executive Management in 2017 are: Samuel Leupold (departing 28 February 2018), Thomas Dalsgaard, Morten Hultberg Buchgreitz and David Cook (departed 29 September 2017).

<sup>2</sup> The compensation relates primarily to the non-competition clause in connection with Samuel Leupold's notice of termination.

## 2.7 Share-based payment

Participants	Number of locked-up shares relative to fixed salary
CEO	75% of fixed salary
CFO and other members of Group Executive Management	50% of fixed salary
Senior Vice Presidents	25% of fixed salary
Vice Presidents and Senior Directors	15% of fixed salary

The figure shows the value of the Ørsted share in per cent of the participants' fixed salary which, at the time of granting, must be locked up for the duration of the share programme.

Key assumptions for valuation of PSUs	Time of granting 2017	Time of granting 2016
Share price	269	275
Average volatility, peers	24.9%	25.6%
Volatility, Ørsted	20.3%	24.1%
Risk-free interest rate	(0.3)%	(0.5)%
Expected term at time of granting	3 years	2.5 years

### Share programme

Group Executive Management and a number of other senior executives participate in our share programme. Today, approximately 90 senior executives participate in the programme. As a condition for the granting of performance share units (PSUs), the participant must own a number of shares in Ørsted corresponding to a portion of the individual participant's annual fixed salary. The portion depends on the employee category and, for our CEO, makes up 75% of the fixed salary; see the figure to the left for more information. The participants in the programme must invest in Ørsted shares prior to the first granting.

If the participants fulfil the shareholding requirement at the time of granting, they will be granted a number of PSUs each year, representing a value of 15%-20% of the annual fixed salary on the date of granting.

The granted PSUs have a vesting period of approximately three years, after which each PSU entitles the holder, without payment, to receive a number of shares corresponding to 0-200% of the number of PSUs granted. The final number of shares for each participant will be determined on the basis of the total shareholder return delivered by Ørsted, benchmarked against ten comparable European energy companies.

The highest rate will be triggered if Ørsted's results, measured as the total return to shareholders, outperform those of the comparable companies. For each lower ranking, the number of shares granted will fall by 20 percentage points. If, for example, Ørsted ranks third, the participants will be entitled to 160% of the target.

If Ørsted ranks 11 in the comparison, no shares will be granted to the participants. The right to shares is conditional upon continued employment.

### Accounting policies

The share programme is classified as an equity-based programme as the programme is settled in shares. The market value of the PSUs and the estimated number of PSUs granted are measured at the time of granting and recognised:

- in the income statement under employee costs over the vesting period and
- as a set-off in the balance sheet under equity over the vesting period.

The valuation of the PSUs and the estimate of the number of PSUs expected to be granted are carried out as a probability simulation based on Ørsted's expected total shareholder return relative to ten comparable European energy companies. The expectations are factored into the market value and are not adjusted subsequently.

## Maximum number of outstanding shares at the time of granting, '000

Time of granting	Executive Board	Other members of Group Executive Management	Senior executives	Total	% of share capital	Market value (at time of granting) DKK million	Years until expiry
1 September 2016	21	10	123	154	0.04%	24	1.2
1 April 2017	23	10	140	173	0.04%	28	2.2
<b>Maximum number of outstanding shares at 31 December 2017</b>	<b>44</b>	<b>20</b>	<b>263</b>	<b>327</b>	<b>0.08%</b>	<b>52</b>	

Development in maximum number of outstanding shares, '000	Executive Board	Other members of Group Executive Management	Senior executives	Total	% of share capital
Maximum number of outstanding shares at 1 January 2017	20	10	128	158	0.04%
Compensation for dividends paid (2016 programme)	1	0	2	3	0.00%
Granted (2017 programme)	23	10	146	179	0.04%
Cancelled (2016 programme)			(7)	(7)	0.00%
Cancelled (2017 programme)			(6)	(6)	0.00%
<b>Maximum number of outstanding shares at 31 December 2017</b>	<b>44</b>	<b>20</b>	<b>263</b>	<b>327</b>	<b>0.08%</b>
(DKK million)					
Market value of share programme at the time of granting	7	3	42	52	
Maximum market value of share programme at 31 December 2017	15	7	89	111	

The maximum market value of the share programme at 31 December 2017 is based on the assumption that the participants receive the maximum number of shares. This requires that Ørsted delivers the highest shareholder return benchmarked against the ten comparable companies.

# 3. Capital employed

Intangible assets and property, plant and equipment	93
Provisions and contingent assets and liabilities	96
Gross and net investments	98
Divestment of enterprises	98
Assets classified as held for sale	99
Discontinued operations	100
Non-controlling interests	103

# 3. Capital employed

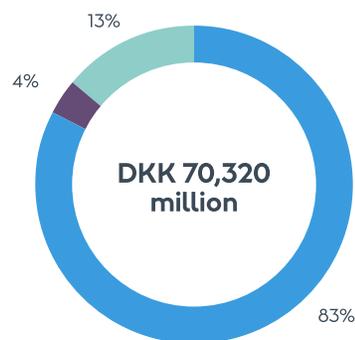

Our capital employed primarily relates to production assets, some of which are under construction. We monitor investment projects closely, as a large part of the Group's value is created in the development and construction phases.

### Investments and divestments in 2017

We made total investments of DKK 17,744 million in offshore wind farms, biomass conversions and power infrastructure in 2017 and divestments of DKK 16,982 million. The most significant assets under construction at the end of 2017 consisted of our offshore wind farms in the UK and Germany. See note 3.1.

### Capital employed by segment, % 2017

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions

### Capital employed, DKK million

	2017	2016

of which continuing operations	70,556	58,192

83% of the capital employed is tied up in Wind Power. Capital employed by segment is based on capital employed for reportable segments DKK 71,986.

# 70.3bn

Capital employed totalled DKK 70,320 million at 31 December 2017 against DKK 60,961 million in 2016.

# 17.7bn

Gross investments amounted to DKK 17,744 million in 2017 against DKK 14,960 million in 2016.

# 16.9bn

Cash flows from divestments, exclusive of Oil & Gas, totalled DKK 16,921 million in 2017 against DKK 9,055 million in 2016.

In 2016, the internal working capital and financial instruments of Oil & Gas were included in the principal items, while the rest of the capital employed was included in the item 'Assets classified as held for sale'. Following the divestment of the oil and gas business on 29 September 2017, capital employed from discontinued operations includes our receivables and liabilities from the transaction.

# 3.1 Intangible assets and property, plant and equipment

<sup>1</sup> An accounting change in the classification of our share of the Lincs offshore wind farm from an equity investment to a joint operation in 2017 resulted in additions of DKK 2,024 million under cost and DKK -385 million under depreciation and amortisation.

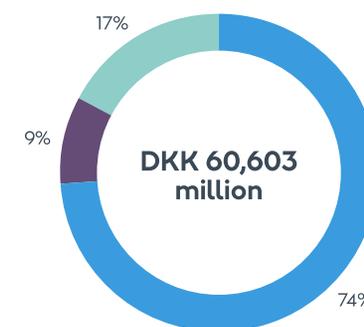

## Intangible assets

Intangible assets comprise goodwill of DKK 125 million (2016: DKK 125 million), carbon emissions allowances of DKK 180 million (2016: DKK 247 million), other rights

of DKK 33 million (2016: DKK 190 million), completed projects of DKK 321 million (2016: DKK 317 million) and development projects in progress of DKK 30 million (2016: DKK 76 million).

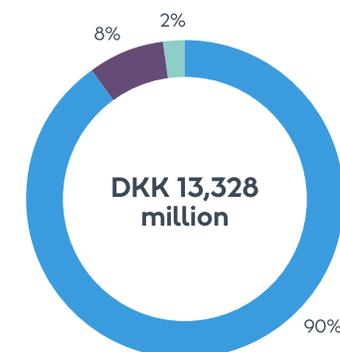

## Production assets by segment, % 2017

● Wind Power ● Bioenergy & Thermal Power ● Distribution & Customer Solutions

## Property, plant and equipment under construction by segment, % 2017

● Wind Power ● Bioenergy & Thermal Power ● Distribution & Customer Solutions

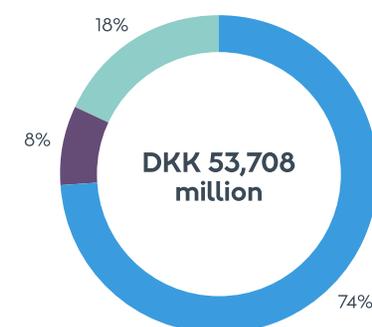

90% of property, plant and equipment under construction is ongoing construction of offshore wind farms in Wind Power.

<b>Intangible assets and property, plant and equipment, DKK million</b>	Intangible assets	Land and buildings	Production assets	Exploration assets	Fixtures and fittings, tools and equipment	Property, plant and equipment under construction	Property, plant and equipment

<sup>1</sup> Impairment losses on property, plant and equipment under construction concerned the construction of the Hejre field (Oil & Gas). Provisions had been made for this in 2015, and the impairment loss thus had no effect on the profit for 2016.

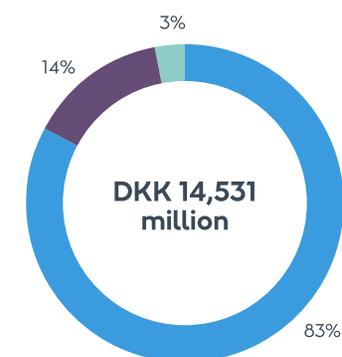

#### Production assets by segment, % 2016

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions

#### Property, plant and equipment under construction by segment, % 2016

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions

### CGUs in Wind Power

The CGUs are made up of individual offshore wind farms, each of which generates cash flows for the segment independently of each other.

Most significant offshore wind farms: Anholt – Borkum Riffgrund 1 – Borkum Riffgrund 2 – Burbo Bank Extension – Gode Wind 1 – Gode Wind 2 – Gunfleet Sands – Hornsea 1 – London Array – Race Bank – Westermost Rough – Walney – Walney Extension – West of Duddon Sands

### CGUs in Bioenergy & Thermal Power

The Danish power stations constitute a single CGU as overall production planning is for the entire Danish portfolio of CHP plants. The Dutch power station Enecogen is deemed to constitute a single CGU, just as the not yet commissioned waste power station Renaissance Northwich is deemed to constitute an independent CGU.

– Central CHP plants (including goodwill)  
– Renaissance Northwich  
– Enecogen

### CGUs in Distribution & Customer Solutions

The CGUs are constituted primarily by distribution assets, each of which generates cash flows for the segment independently of each other.

– Power distribution – Oil pipelines – Offshore gas pipelines – Street lighting

## Impairment losses

### Impairment losses relating to goodwill

We have not impaired goodwill or other intangible assets in 2017.

### Impairment losses relating to property, plant and equipment

In 2017, impairment losses of DKK 545 million were recognised on projects in progress in Wind Power due to uncertainty about the carrying through of the project.

## Useful lives

Buildings	20-50 years
Offshore wind farms	20-24 years
Production assets, power (thermal) and district heating	20-25 years
Gas transportation system (marine pipelines)	20-40 years
Oil transportation system (marine pipeline)	15 years
Distribution grids, power	20-40 years
Fixtures and fittings, tools and equipment	3-10 years

## Accounting policies

### Intangible assets

Rights are measured at cost less accumulated amortisation and impairment losses. Rights are amortised on a straight-line basis over their estimated future useful lives, which are 5-20 years.

### Property, plant and equipment

Property, plant and equipment is measured at cost less accumulated depreciation and impairment losses. Cost of property, plant and equipment is depreciated on a straight-line basis, using the diminishing-balance method or the reducing-fraction method. The diminishing-balance method and the reducing-fraction method result in decreasing depreciation over the useful life of the offshore wind farm.

Cost comprises purchase price and any costs directly attributable to the acquisition until the date the asset is available for use. The cost of self-constructed assets comprises direct and indirect costs of materials, components, sub-suppliers and labour. Borrowing costs relating to both specific and general borrowing directly attributable to assets under construction with a lengthy construction period are recognised in cost during the construction period. Cost is increased by the present value of the estimated obligations for demolition and decommissioning of assets to the extent that they are recognised as a provision.

Subsequent costs, for example in connection with replacement of parts of an item of property, plant and equipment, are recognised in the carrying amount of the asset in question when it is probable that future economic benefits will flow to the Group from the expenses incurred. Other repair and maintenance expenses are recognised in profit (loss) for the year as incurred.

### Assumptions for impairment test

Production assets are tested for impairment if there is any indication of impairment. For production assets with a limited lifetime, such as offshore wind farms and CHP plants, cash flows are calculated based on forecasts for the entire lifetime of the asset. For power distribution, cash flows are based on 25-year forecasts with the addition of a terminal value. The determination of the recoverable amount of production assets is based on a number of assumptions where estimates are made for the determination. These assumptions include future market conditions, market prices of power, biofuel, gas, coal, carbon, weighted average cost of capital (WACC), exchange rates, etc. The market prices applied are based on available forward prices for a period of up to five years and our best estimate of long-term prices for the remainder of the period.

When calculating the recoverable amount of property, plant and equipment under construction, the expected completion costs and the commissioning dates are also assumptions which are based on estimates.

## 3.2 Provisions and contingent assets and liabilities

### Provisions

Decommissioning obligations mainly comprise estimated expenses relating to demolition and disposal of our offshore wind farms, restoration of seabeds and the demolition of our CHP plants.

As developers of offshore wind farms, we are obliged to decommission offshore wind farms and restore the surroundings at our own expense. When we construct offshore wind farms in cooperation with partners, they are liable for their share of the decommissioning costs. Therefore, we have included only the decommissioning obligations associated with our ownership interest in the offshore wind farms.

Decommissioning obligations increased by DKK 1,102 million from 2016 to 2017, due primarily to a change in the discount rate applied and to an adjustment of other assumptions applied in the determination of our decommissioning obligations.

Onerous contracts comprise the following:

- contract for booked LNG terminal capacity in the Netherlands, DKK 1,329 million. (2016: DKK 1,033 million)
- contract for the lease of gas storage capacity in Germany, DKK 1,075 million (2016: DKK 1,179 million)
- contract for the lease of gas storage capacity in Denmark, DKK 290 million (2016: DKK 384 million).

Provisions, DKK million	2017				2016			
	Decommissioning obligations	Onerous contracts	Other liabilities	Total	Decommissioning obligations	Onerous contracts	Other liabilities	Total

<b>Total provisions</b>	<b>4,751</b>	<b>2,711</b>	<b>4,058</b>	<b>11,520</b>	<b>3,649</b>	<b>2,596</b>	<b>2,794</b>	<b>9,039</b>
<b>Falling due as follows:</b>								
0-1 year	23	335	322	680	49	327	326	702
1-5 years	43	1,025	3,080	4,148	73	1,089	2,016	3,178
After 5 years	4,685	1,351	656	6,692	3,527	1,180	452	5,159

Other provisions comprise primarily:

- warranty obligations for offshore wind farms
- possible repayments to electricity consumers in respect of previous years
- obligations in connection with divestments, primarily in relation to the divestment of our Oil & Gas business
- obligations in respect of our own carbon emissions
- other contractual obligations.

### Contingent liabilities

This note primarily concerns our continuing operations – see also note 3.6 regarding our discontinued operations.

### Liability to pay compensation

In case of any environmental accidents or other types of damage caused by our oil and gas transport, the companies Ørsted Salg & Service A/S and Danish Oil Pipe A/S are liable

to pay compensation according to legislation. This also applies if there is no proof of negligence (strict liability). We have taken out insurance to cover any such claims.

↑  
Provisions mainly consisted of decommissioning obligations and onerous contracts.

## Litigation

We are party to actions relating to the Danish competition authorities' claim that Elsam A/S and Elsam Kraft A/S charged excessive prices in the Danish wholesale power market in some periods. Following a merger in 2008, Elsam Kraft A/S is part of Ørsted Bioenergy & Thermal Power A/S.

The Danish Competition Appeals Tribunal has concluded that Elsam A/S and Elsam Kraft A/S abused their dominant position in the wholesale power market in Western Denmark to some extent in the periods 1 July 2003 to 31 December 2004 and 1 January 2005 to 30 June 2006 by charging excessive prices. We dispute the rulings, and appeals have been lodged with the Copenhagen Maritime and Commercial Court. In 2016, the Copenhagen Maritime and Commercial Court found the former Elsam guilty of violating the Danish Competition Act in 2005 and the first half of 2006 without, however, providing clear grounds for its decision. We have appealed the case to the High Court of Western Denmark, where the case is pending.

In connection with the above-mentioned cases, some energy companies, some of their customers and others have raised claims for damages. One group has chosen to commence legal proceedings before the Copenhagen Maritime and Commercial Court with a claim for damages of approximately DKK 4.4 billion with addition of interest, while suspension agreements have been concluded with others, meaning that the limitation period for these alleged claims has been suspended. In response to the claims for damages, we have made a provision of DKK 298 million plus interest. The provision has been calculated on the basis of the Danish Competition Council's determination of consumer losses.

In addition, we are party to a number of court cases and legal disputes. In our assessment, none of these will significantly impact the company's financial position, neither individually nor collectively.

## Change of control

Some of our activities are subject to consents, permits and licences granted by public

authorities. We may be faced with a claim for acceptance of any transfer, possibly with additional terms and conditions, if the Danish State holds less than 50% of the share capital or voting rights in Ørsted A/S. Read more in note 6.1

## Accounting policies

Provisions are recognised when the following criteria are fulfilled:

- we have a legal or constructive obligation as a result of an earlier event
- the settlement of the obligation is expected to result in an outflow of resources
- the obligation can be measured reliably.

For onerous contracts, a provision is made when the expected income to be derived from a contract is lower than the unavoidable cost of meeting our obligations under the contract.

Provisions concerning carbon emissions are recognised when our actual emissions exceed our holding of carbon emissions allowances.

Decommissioning obligations are measured at the present value of the future liability in respect of demolition and decommissioning as expected at the balance sheet date. The present value of the provision is recognised as part of the cost of property, plant and equipment and depreciated together with the associated asset. The addition of interest on provisions is recognised in the income statement under financial expenses.

## Key accounting estimates

Timing, probabilities, amounts, etc. which have a bearing on our provisions estimates are updated quarterly based on our expectations.

## Assumptions for decommissioning obligations

Estimates of decommissioning obligations are based on our expectations of, for example:

- timing and scope
- future cost level
- adopted laws and regulations on remediation.

The timing of our decommissioning obligations depends on the expected useful lives of the assets. The expected useful life of our offshore wind farms is 24 years.

We expect that our CHP plants in Denmark must be removed within 12 years of decommissioning at the latest.

In measuring provisions, the costs required to meet the obligations are discounted. In determining decommissioning obligations at 31 December 2017, a discount rate of 3.5% is applied. The rate has been reduced from 4.5% in 2016 due to the continued low interest rate environment. The rate has been estimated on the basis of expectations concerning the future, long-term interest rate level, based on historical interest rate levels.

Timing as well as special demolition and decommissioning requirements are assessed based on current legislation and standards in this area. Future cost levels are based, among other things, on expectations with regard to:

- general price development or development in market prices
- demand
- development of existing technologies.

## Estimates of onerous contracts

We have entered into a number of contracts with fixed terms. Depending on market developments, etc., and uncertainty about obligations incurred under the contracts made, these contracts may become onerous. Our estimates concerning these complex contracts and their future effects are subject to significant uncertainties.

## Estimates of litigation outcomes

When exercising a judgement about a potential liability in connection with litigation, we assess the following factors:

- the nature of the litigation, claim or statement
- the development of the case
- the judgements and recommendations of legal or other advisers
- experience from similar cases
- management's decision on how we are going to react to the litigation, claim or statement.

Decommissioning obligations by segment, DKK million				Total
	Wind Power	Bioenergy & Thermal Power	Distribution & Customer Solutions	
0-5 years	60	4	2	66
5-10 years	350	119	-	469
10-20 years	2,261	190	-	2,451
After 20 years	874	420	471	1,765
<b>2017</b>	<b>3,545</b>	<b>733</b>	<b>473</b>	<b>4,751</b>
<b>2016</b>	<b>2,785</b>	<b>668</b>	<b>196</b>	<b>3,649</b>

The table shows decommissioning obligations by segment as well as a maturity analysis.

## 3.3 Gross and net investments

Gross and net investments, DKK million	2017	2016
Cash flows from investing activities	(10,054)	(1,060)
Dividends received and capital reduction, reversed	(13)	(22)
Purchase and sale of securities, reversed	9,197	(4,564)
Loans to associates and joint ventures, reversed	47	(210)
Sale of non-current assets, reversed	(16,921)	(9,104)
<b>Total gross investments</b>	<b>(17,744)</b>	<b>(14,960)</b>
Transactions with non-controlling interests in connection with divestments	61	(49)
Sale of non-current assets	16,921	9,104
<b>Total cash flows from divestments</b>	<b>16,982</b>	<b>9,055</b>
<b>Total net investments</b>	<b>(762)</b>	<b>(5,905)</b>

In 2017, gross investments totalled DKK 17,744 million (2016: DKK 14,960 million).

Gross investments in Wind Power primarily consisted in the build-out of offshore wind farms (DKK 15,462 million), including the UK offshore wind farms Race Bank, Walney Extension and Hornsea 1 as well as the German offshore wind farm Borkum Riffgrund 2.

In 2017, cash flows from the divestment of assets and enterprises totalled DKK 16,982 million (2016: DKK 9,055 million).

In 2017, Wind Power farmed down 50% of Walney Extension to the Danish pension funds PKA and PFA, 50% of Borkum Riffgrund 2 to Global Infrastructure Partners as well as divesting all ownership interests in A2SEA.

Wind Power also received contingent consideration regarding the divestment of UK Race Bank in 2016.

In 2016, Wind Power divested 50% of Burbo Bank Extension to the Danish pension fund PKA and the Danish investment company KIRKBI as well as 50% of Race Bank to Macquarie.

Distribution & Customer Solutions divested Gas Distribution to the Danish transmission asset owner Energinet in 2016.

For more information, see the management's review on page 28.

## 3.4 Divestment of enterprises

Selling price, DKK million	2017	2016
Payment	605	2,348
Addition/reduction for receivables/payables transferred	-	(113)
Working capital adjustment	(1)	(117)
<b>Selling price on divestment of enterprises</b>	<b>604</b>	<b>2,118</b>
Transaction costs	(20)	(38)
Of which selling price receivable	4	(81)
<b>Cash selling price on divestment of enterprises</b>	<b>588</b>	<b>1,999</b>

Gain (loss) on divestment of enterprises, DKK million	2017	2016
Selling price on divestment of enterprises	604	2,118
Net assets sold	(725)	(844)
Provisions as a result of the transaction	2	14
Transaction costs	(20)	(38)
<b>Gain (loss) on divestment of enterprises</b>	<b>(139)</b>	<b>1,250</b>

Gains on the divestment of enterprises in 2017 primarily concerned A2SEA. Transferred cash and cash equivalents totalled DKK 278 million.

In 2016, gains on the divestment of enterprises consisted primarily of a gain on the divestment of Gas Distribution to Energinet (Distribution & Customer Solutions). Transferred net cash and cash equivalents in the form of bank deposits and drawn bank overdrafts totalled DKK -242 million.

### Accounting policies

We recognise income from divested enterprises in the income statement up until the date of divestment.

The date of divestment is the date on which we relinquish control of the divested enterprise.

Gains or losses on the divestment or discontinuation of subsidiaries and associates are determined as the difference between the selling price and the carrying amount of the net assets divested.

Moreover, the fees of advisers, etc., in connection with the divestment or discontinuation of the enterprise are deducted.

## 3.5 Assets classified as held for sale

At 31 December 2017, assets classified as held for sale comprised only our oil pipe system in Denmark which is to be sold to the Danish transmission asset owner Energinet.

At 31 December 2016, assets classified as held for sale comprised our Oil & Gas business and our oil pipe system.

On 29 September 2017, we divested our Oil & Gas business to INEOS. Until the divestment,

we presented our Oil & Gas business as assets classified as held for sale and as discontinued operations. Read more in note 3.6.

The sales process for our oil pipeline is expected to be completed within 12 months. Consequently, these activities have been classified as assets held for sale.

Assets classified as held for sale, DKK million	2017	2016
Intangible assets	20	5
Property, plant and equipment	2,119	12,719
Inventories	16	7
Trade receivables	73	192
Other receivables	368	1,139
Income tax	46	586
Cash	-	725
<b>Total assets classified as held for sale</b>	<b>2,642</b>	<b>15,373</b>
Deferred tax	99	1,057
Provisions	359	8,356
Trade payables	80	825
Other payables	92	1,479
Income tax	-	1,787
<b>Total liabilities relating to assets classified as held for sale</b>	<b>630</b>	<b>13,504</b>
<b>Net assets classified as held for sale</b>	<b>2,012</b>	<b>1,869</b>

### Accounting policies

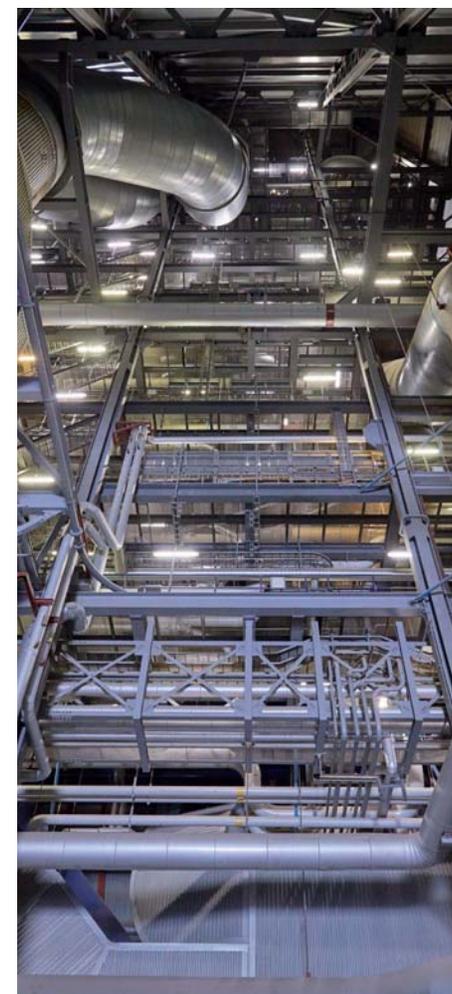

Assets classified as held for sale comprise assets and liabilities, the value of which is highly probable to be recovered through a sale within 12 months rather than through continued use.

Assets and liabilities classified as held for sale are measured at the carrying amount at the time of classification as 'held for sale' or at market value less selling costs, whichever is lower. The carrying amount is measured in accordance with the Group's accounting policies.

No depreciation or amortisation is effected on property, plant and equipment and intangible assets from the time of classification as 'held for sale'.

The table shows assets and liabilities which have been put up for sale, and which are therefore not expected to contribute to our earnings in future.

## 3.6 Discontinued operations

In November 2016, the Board of Directors decided to initiate a process with the ultimate objective of divesting Oil & Gas.

As a result of this decision, we have presented our oil and gas business as assets classified as held for sale and as discontinued operations from the end of 2016. The classification means that assets and liabilities are presented separately from other assets and liabilities. Discontinued operations are also shown separately in the income statement and the statement of cash flows.

The divestment of Oil & Gas to INEOS was closed on 29 September 2017.

### Financial performance

The key figures for discontinued operations in 2017 comprise only results for the first nine months of the year up until the divestment. In addition to the results from the first nine months of 2017, net profit from discontinued operations, cash flows from operating activities and cash flows from divestments include adjustments after the closing of the transaction. See more below.

EBITDA totalled DKK 6.4 billion, which is unchanged relative to the first nine months of 2017 and on a par with all of 2016. EBITDA rose as a result of the recognition of inefficient price hedges totalling DKK 1.4 billion as well as a provision (without impact at EBIT level) which contributed negatively in 2016. This was

offset by one less quarter of operations in 2017 compared with 2016.

Net profit from discontinued operations amounted to DKK 6.9 billion in 2017 against DKK 1.1 billion in 2016. The increase of DKK 5.8 billion was due partly to a gain on the divestment of DKK 2.4 billion, partly to higher EBIT and lower tax. The higher EBIT in 2017 relative to 2016 was due to non-depreciation of the Oil & Gas assets since the business was classified as assets held for sale at the end of 2016. The lower tax in 2017 relative to 2016 primarily reflected the impairment of the remaining tax assets, which contributed negatively in 2016.

Cash flows from operating activities totalled DKK 5.5 billion in 2017 against DKK 4.1 billion in 2016. The increase was due primarily to the recognition of price hedges mentioned above. The increase was offset by one less quarter of operations in 2017 than in 2016. Cash flows from operating activities totalled DKK 0.3 billion in Q4 2017 and were due to a tax receivable received relating to net losses on hedging instruments in 2016 and 2017.

Cash flows from divestments totalled DKK 0.2 billion in 2017 compared with DKK 0.4 billion in 2016. In both periods, they were impacted by payments received concerning the Glenlivet field. Moreover, the Norwegian fields Trym, Ula, Tambar and Oselvar were divested in 2016. There were no significant changes in cash flows from divestments in Q4 2017.

Key figures	2017	2016
<b>Business drivers</b> (million boe)		
Oil and gas production	21.4	36.6
<b>Financial performance</b> (DKK million)		
Revenue	7,999	10,530
EBITDA	6,436	6,507
EBIT	7,149	5,082
Profit from discontinued operations	4,488	1,052
Gain (loss) on disposal of discontinued operations	2,432	-
Net profit from discontinued operations	6,920	1,052
Cash flows from operating activities	5,545	4,138
Gross investments	(430)	(3,436)
Divestments	233	404
Payment from the divestment of Oil & Gas	3,677	-
Free cash flow	9,025	1,106

Cash flows from discontinued operations, DKK million	2017	2016
Cash flows from operating activities	5,545	4,138
Cash flows from investing activities	3,480	(3,032)
Cash flows from financing activities	-	360
<b>Total cash flows from discontinued operations</b>	<b>9,025</b>	<b>1,466</b>

Capital employed, discontinued operations, DKK million	2017	2016
Property, plant and equipment and intangible assets	-	11,914
Equity investments and non-current receivables	691	2
Net working capital, other items	-	1,121
Derivatives, net	-	1,356
Decommissioning obligations	-	(6,971)
Other provisions	(935)	(2,415)
Tax, net	(3)	(2,238)
Other receivables and other payables, net	11	-
<b>Total net assets</b>	<b>(236)</b>	<b>2,769</b>

The remaining net assets under discontinued operations consist of the selling price receivable and provisions as a result of the divestment of Oil & Gas.

### Divestment of Oil & Gas

The payment from the divestment of Oil & Gas consisted of:

- an unconditional payment of USD 1,050 million on a cash and debt-free basis
- a conditional payment of USD 150 million, which relates to the stabilisation plant in Fredericia, and
- a payment of up to USD 100 million, which is conditional upon the development of the Rosebank field.

'Payment' in the table includes the unconditional payment and the fair value of the conditional payment in respect of the Rosebank field.

Under the agreement with INEOS, all cash flows from 1 July to 29 September 2017 accrued to the buyer. As control of Oil & Gas remained with us until 29 September, we have consolidated results and cash flows for accounting purposes in this period. The obtained net debt reduction of DKK 707 million from the consolidation in this period has therefore been deducted from the selling price for discontinued operations. In addition, the selling price from INEOS was reduced by the outstanding tax payable and creditors regarding assets at 30 June 2017. These payables concern activities from before the financial exposure and risks passed to INEOS.

Thus, the accounting selling price from the transaction amounted to DKK 5,456 million, of which DKK 3,652 million was received and recognised in our free cash flow from discontinued operations in Q3 2017. All in all, the transaction reduced the Group's net debt by DKK 4,588 million, as USD 150 million of the outstanding selling price is interest-bearing.

The gain on the divestment was recognised at DKK 2,179 million in net profit from discontinued operations in Q3 2017. In Q4 2017, we reversed a proportion of the provision for indemnification of INEOS concerning tax matters prior to 30 June 2017 as well as other minor adjustments. This resulted in an increase in the gain of DKK 253 million and is a consequence of the adoption of the bill concerning extended right to deduct payroll costs within a group. The profit statement includes provisions of DKK 935 million which primarily concern two factors:

- indemnification of INEOS concerning tax matters prior to 30 June 2017
- difference between INEOS' conditional payment to Ørsted A/S concerning the stabilisation plant and our expected payment.

The payments from INEOS for the stabilisation plant are expected to be settled over a 10-year period beginning in 2019-2021. The remaining non-interest-bearing net assets (capital employed) in our balance sheet relating to Oil & Gas amounted to DKK -236 million at 31 December 2017. In addition to the above-mentioned provision, this includes the non-interest-bearing part of the outstanding payment. The net assets will be recognised in cash flows from discontinued operations as they fall due.

### Secondary liability

As part of the divestment of Oil & Gas, we have assumed a secondary liability regarding the decommissioning of offshore installations. We consider the payment of the liability to be very unlikely. The matter is described in further detail in the interim financial report for the first nine months of 2017.

### Main elements of the divestment on 29 September 2017

Selling price, DKK million	2017	←
Payment	7,209	The table shows the items included in the determination of the selling price from the divestment of Oil & Gas.
Reduction for outstanding tax payable and creditors concerning non-current assets at 30 June 2017	(1,198)

<b>Transactions with non-controlling interests</b>		
Dividends paid to non-controlling interests	(376)	(404)
Divestment of equity investments to non-controlling interests	(108)	(100)
Other capital transactions with non-controlling interests	53	(23)
<b>Total transactions, see statement of cash flows</b>	<b>(431)</b>	<b>(527)</b>
<b>Divestment of equity investments to non-controlling interests</b>		
Selling price	8	19
Of which changes in receivables relating to the acquisition and divestment of non-controlling interests	(116)	(119)
<b>Cash selling price, total</b>	<b>(108)</b>	<b>(100)</b>

### Accounting policies

Transactions with non-controlling interests are accounted for as transactions with the shareholder base.

Gains and losses on the divestment of equity investments to non-controlling interests are recognised in equity when the divestment does not result in a loss of control.

Net assets acquired are not revalued on the acquisition of non-controlling interests. Any difference between the carrying amount and the acquisition or selling price is recognised in equity.

Construction contracts	107
Trade receivables	108
Other receivables	108
Other payables	109
Change in net working capital	109

# 4. Working capital

## Working capital

Our key working capital items consist of inventories, construction contracts, trade receivables, trade payables and other payables, including prepayments from heat customers and connection charges from power customers.

Working capital items vary across the year in line with the seasonal variations in our production and sales activities. Our construction contracts in Wind Power, which are the construction of offshore wind farms for partners

and the construction of transmission assets in the UK, also vary over the year and from year to year. This is due to the fact that payments are received in the form of milestone payments from partners and upon divestment of the transmission assets after construction.

Trade payables relating to capital investments are not included in this section as they are presented as part of the cash flows from investing activities.

### Working capital, DKK million

	2017	2016
Inventories	3,853	3,451
Construction contracts, net	9,500	6,282
Trade receivables	9,170	7,286
Other receivables	2,082	1,402
Trade payables, excluding trade payables relating to capital expenditure	(8,460)	(7,304)
Other payables	(11,200)	(12,121)
<b>Net working capital, excluding trade payables relating to capital expenditure at 31 December</b>	<b>4,945</b>	<b>(1,004)</b>
Of which work in progress and related trade payables	7,526	3,944
Of which other working capital	(2,581)	(4,948)

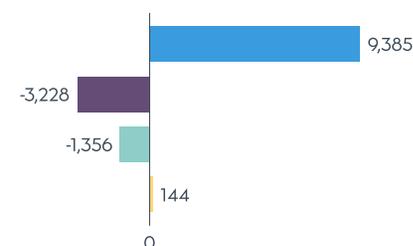

Our net working capital has changed substantially relative to 2016. The primary cause is the development in construction contracts, net and trade receivables.

Work in progress consists of construction contracts and service level agreements in connection with the construction of transmission assets and offshore wind farms for partners as well as related trade payables.

- Distribution & Customer Solutions
- Other

Wind Power primarily has funds tied up in construction contracts and trade receivables, while Bioenergy & Thermal Power and Distribution & Customer Solutions have a negative working capital as a result of prepayments from heat and power customers.

# 4.9bn

Our net working capital excluding trade payables relating to capital expenditure in 2017 against -1.0bn in 2016.

# 5.9bn

We have an additional amount of DKK 5,949 million tied up in working capital relative to 2016, of which DKK 3,581 million pertained to work in progress and related trade payables in Wind Power.

# 4.1 Inventories

Inventories, DKK million	2017	2016
Biomass	258	244
Gas	1,526	1,286
Coal	396	395
Oil	124	111
Green certificates	1,441	1,282
Carbon emissions allowances	52	80
Other inventories	56	53
<b>Total inventories</b>	<b>3,853</b>	<b>3,451</b>

## Accounting policies

The cost of gas is determined as a weighted average of the previous month's acquisition prices, including transportation costs.

Purchased carbon emissions allowances are measured at market value.

Green certificates, which we earn by generating power using renewable energy sources, are recognised in inventories in step with our generation. We measure green certificates (earned and bought) at cost using the FIFO principle.

Other inventories are measured at cost using the FIFO principle or net realisable value.

Inventories are written down to the lower of net realisable value and cost price.

The net realisable value is the sum (discounted) which the inventories are expected to generate through a normal sale.

We use biomass, gas, coal and, to a limited extent, oil as fuel at our CHP plants. Green certificates are primarily renewables obligation certificates (ROCs) which are issued to generators of power sourcing from renewable energy sources under the Renewables Obligation support mechanism in the UK.

## 4.2 Construction contracts

Construction contracts, DKK million	2017	2016
Selling price of construction contracts	11,679	18,279
Invoicing on account	(2,179)	(11,997)
<b>Construction contracts, total</b>	<b>9,500</b>	<b>6,282</b>
Construction contracts (assets)	10,817	6,453
Construction contracts (liabilities)	(1,317)	(171)
<b>Construction contracts, total</b>	<b>9,500</b>	<b>6,282</b>

The table shows the selling price less invoicing on account as well as the way in which construction contracts are presented in the balance sheet under assets and liabilities.

### Construction contracts

We construct offshore wind farms in co-operation with partners, with each party usually owning 50% of the offshore wind farm. Construction contracts comprise our partners' shares of the offshore wind farms and our construction of offshore transmission assets for Ofgem in the UK. The contracts are negotiated individually in terms of their design, construction and technology.

At the end of 2017, construction contracts included our partners' share of the Walney Extension and Borkum Riffgrund 2 offshore wind farms. The offshore wind farms are under

construction, and we expect them to be finished in 2018. Construction contracts also included the construction of the transmission assets for the Burbo Bank Extension, Race Bank, Walney Extension and Hornsea 1 offshore wind farms in the UK. They are expected to be finished in 2018-2020.

At the end of 2016, construction contracts included our partners' shares of the offshore wind farms Burbo Bank Extension and Gode Wind 1 and 2. Construction contracts also included the construction of four transmission assets in the UK.

### Accounting policies

The construction contracts are recognised in revenue when the outcome of the contracts can be estimated reliably.

The construction contracts are measured at the selling price of the work which we have performed on the offshore wind farms less invoicing on account. Our calculation of the selling price is based on the total expected income from the individual contracts and the completion degree of the offshore wind farm or offshore transmission asset at the balance sheet date.

We estimate the degree of completion on the basis of an assessment of the work performed, normally calculated as the ratio between the costs incurred and the total expected costs incidental to the contract in question.

An expected loss is recognised when it is deemed probable that the total construction costs will exceed the total revenue from individual contracts.

We recognise construction contracts as receivables when the selling price of the work which we have performed exceeds invoicing on account and expected losses.

Construction contracts are recognised as liabilities when invoicing on account and expected losses exceed the selling price of the work which we have performed. Prepayments from our investors are recognised as liabilities.

### Key accounting estimates

#### Assumptions for the determination of the expected selling price and expected costs

We make estimates when determining the expected selling price of individual construction contracts.

These estimates are influenced by our assessment of:

- the completion degree of the individual offshore wind farms and offshore transmission assets
- total expected costs for the individual contract
- the value of incentive agreements under which we may be paid a bonus for early delivery or have to pay compensation for late delivery
- guarantee commitments undertaken
- share of total costs associated with transmission assets which are expected to be covered upon handover etc.

Our determination of profit on payment received on account and the recognition of receivables are therefore subject to significant uncertainty. We believe that our estimates are the most likely outcomes of future events.

## 4.3 Trade receivables

Trade receivables, DKK million	2017	2016
Trade receivables, not due	8,644	6,661
Trade receivables, 1-30 days overdue	303	568
Trade receivables, more than 30 days overdue	305	171
Trade receivables, write-down	(82)	(114)
<b>Total trade receivables</b>	<b>9,170</b>	<b>7,286</b>

The table shows the due dates of our trade receivables.

### Trade receivables

Our trade receivables primarily concern residential customers in Distribution & Customer Solutions where the general terms of payment vary according to customer type and product type down to payment terms of 10 days.

In 2017, the supply of services in the form of construction management of the construction of our partner's share of Race Bank resulted in a receivable of DKK 1,344 million.

We perform credit ratings as described in note 7.5. For customers with a general credit risk, a write-down of 0-1% is carried out on initial recognition. In 2017, write-downs of receivables amounted to DKK 6 million (2016: DKK 59 million). Losses for the year totalled DKK 25 million (2016: DKK 43 million).

### Accounting policies

#### Receivables

We keep our receivables until maturity, and they are therefore measured at amortised cost.

Write-down is carried out from initial recognition of our receivables in accordance with IFRS 9. The write-down is calculated as the difference between the carrying amount of the receivable and the net present value of expected future cash flows from the receivable. The discount rate used is the effective interest rate for the individual receivable or the individual portfolio.

We apply the simplified approach to the write-down of trade receivables, which permits calculating the write-down as the full loss during the entire term of the receivable.

## 4.4 Other receivables

Other receivables, DKK million	2017	2016
Receivables from the divestment of equity investments to non-controlling interests	648	544
Receivables from the divestment of assets and investments	2,680	202
VAT and other indirect taxes receivable	572	367
Collateral provided	775	400
Prepayments	304	207
Other accounts receivables	495	505
<b>Other receivables</b>	<b>5,474</b>	<b>2,225</b>
Of which working capital	2,082	1,402
Of which other capital employed	1,622	545
Of which interest-bearing net debt	1,770	278

The table shows our other receivables broken down into working capital, interest-bearing net debt and other capital employed.

### Other receivables

Receivables from the divestment of equity investments to non-controlling interests in 2017 and 2016 related primarily to the divestment of our ownership interests in the Gunfleet Sands and Walney offshore wind farms.

In 2017, receivables from the divestment of assets and investments primarily included receivables related to the divestment of our Oil & Gas business as well as the divestment of 50% of our ownership interests in the Walney Extension offshore wind farm.

The collateral provided by the Group is receivables from banks in connection with trading on energy exchanges.

The short-term portion of other receivables amounted to DKK 3,519 million (2016: DKK 1,710 million).

Other non-current receivables consist primarily of receivables from the divestment of the Oil & Gas business, where it is assessed that there is no material credit risk.

## 4.5 Other payables

Other payables, DKK million	2017	2016
Payables to associates and joint ventures	-	136
Prepaid VAT on exports	1,500	1,749
Carbon rights	42	72
VAT and other indirect taxes payable	1,312	1,460
Salary-related items payable	762	736
Accrued interest	882	629
Virtual gas storage	83	69
Advance payments from heat customers	3,286	2,890
Grid connection charges	1,893	1,775
Other deferred income	1,114	1,320
Collateral received	119	1,096
Other payables	1,089	967
<b>Total other payables</b>	<b>12,082</b>	<b>12,899</b>
Of which working capital	11,200	12,121
Of which other capital employed	882	629
Of which interest-bearing net debt	-	149

### Other payables

In 2017, the short-term portion of other payables amounted to DKK 6,369 million (2016: DKK 6,277 million).

Export VAT was repaid in January 2018.

The table shows our other payables broken down into working capital, interest-bearing net debt and other capital employed.

## 4.6 Changes in net working capital

Change in net working capital, DKK million	2017	2016
Change in inventories	(423)	32
Change in construction contracts	(3,318)	(3,232)
Change in trade receivables	(3,705)	616
Change in other receivables	(563)	(322)
Change in trade payables	1,188	874
Change in other payables	(1,083)	520
<b>Total change in net working capital</b>	<b>(7,904)</b>	<b>(1,512)</b>
Of which changes relating to work in progress and related trade payables	(3,674)	(2,393)
Of which changes relating to other working capital	(4,230)	881

Work in progress consists of construction contracts and service agreements in connection with the construction of transmission assets and offshore wind farms for partners as well as related trade payables.

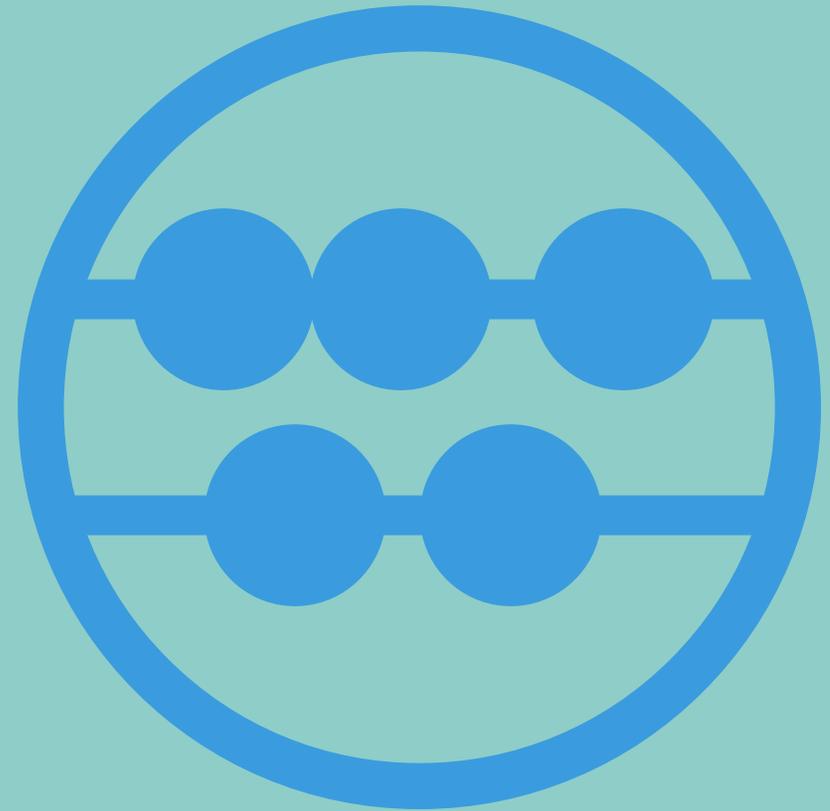

### Change in net working capital

Our funds tied up in work in progress and related trade payables increased due to high activity in 2017 related to construction contracts for the construction of transmission assets as well as from higher receivables from the sale of services in the form of construction management of the construction of the offshore wind farm Race Bank. The increase was partly offset by receipt of milestone payments in 2017 regarding construction contracts for the construction of offshore wind farms for partners.

Our funds tied up in other net working capital increased due to higher trade receivables as a consequence of high power generation at the end of 2017 in Wind Power, lower prepayments from heat customers in connection with bioconversions in Bioenergy & Thermal Power as well as more funds tied up in inventories (mainly gas) at the end of 2017.

# 5. Tax

Tax policy and tax regimes	112
Tax on profit (loss) for the year	113
Taxes paid	115
Deferred tax	116

# 5. Tax

## Tax on profit (loss) for the year

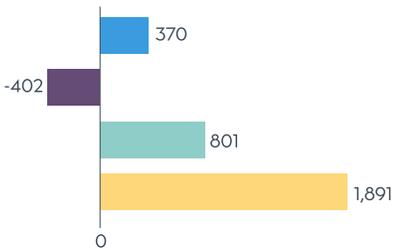

The effective tax rate was 12% for the continuing operations. The effective tax rate was particularly affected by a tax-exempt gain on the farm-downs of 50% of the Walney Extension and Borkum Riffgrund 2 offshore wind farms and the remaining portion of the tax-exempt gain on Race Bank, which was divested in 2016.

## Taxes paid

We have paid DKK 2,660 million in taxes for 2017, of which DKK 689 million related to residual tax for 2016. The tax paid reflects our activities and that we expect to exit the international joint taxation scheme. We expect to have a residual tax of DKK 570 million regarding 2017 as earnings in the last part of the year were higher than expected.

## Income tax paid by segment, DKK million 2017

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions
- Ørsted A/S and other activities

## Development in current and deferred tax asset and liabilities (tax, net), DKK million 2017

- Tax, net liability
- Tax on profit (loss) for the year
- Tax on other comprehensive income and hybrid capital
- Retaxation, paid
- Other paid corporate taxes
- Other effects

2017, DKK million	Business performance		
	Profit (loss) before tax	Tax	Tax in %
Gain (loss) on divestments	10,965	(714)	7%
Rest of the Group	4,079	(1,051)	26%
<b>Effective tax for the year</b>	<b>15,044</b>	<b>(1,765)</b>	<b>12%</b>

Tax on gain (loss) on divestments related to taxable gains. See more in note 2.5. The tax rate for 'Rest of the Group' is higher than the weighted average tax rate in the countries in which we generate income as a result of adjustments relating to previous years as well as non-deductible expenses and non-taxable income.

# 2.7bn

Income tax paid by the Group in 2017 totalled DKK 2,660 million against DKK 3,182 million in 2016.

# 2.7bn

Current tax in 2017 totalled DKK 2,698 million against DKK 3,541 million in 2016.

## 5.1 Tax policy and tax regimes

### Our tax policy

We acknowledge that tax plays a key role for society. We also believe that a responsible approach to tax is essential to the long-term sustainability of our business in the countries in which we operate.

We are subject to a number of different rules on direct and indirect taxes as well as taxes collected on behalf of the public authorities. Also, many transactions involve different segments across national borders and between different tax systems. This complexity demands a strong focus on the management of our tax affairs.

Read more about our tax policy at <https://orsted.com/taxpolicy>

### We comply with tax rules

We regularly assess our internal processes and controls to ensure that we comply with all local and international tax rules.

We only use structures that have commercial substance and meet the spirit of the relevant local or international tax law.

We use the incentives and tax reliefs applying where we have commercial activities, and where this is the legislator's intention.

As a proactive approach to handling any uncertainties about the interpretation of tax rules,

we have an open dialogue with the national tax authorities in Denmark and abroad.

At the end of 2017, our major activities were in Denmark, the UK and Germany.

### International joint taxation

In 2005, we chose Danish international joint taxation. Under international joint taxation, subsidiaries are included in joint taxation from the date they are consolidated in the consolidated financial statements and up to the date on which they are no longer consolidated. International joint taxation means that profit earned abroad is taxed in Denmark, and that depreciation and amortisation for tax purposes and expenses incurred abroad can be deducted in the Danish statement of taxable income.

The rules concerning Danish international joint taxation merely result in changes to the timing of the tax payments in Denmark. Thus, it leads to increased Danish tax payments at a later point in time, corresponding to the tax savings realised in previous years.

We have continuously assessed when it will be the most appropriate time to exit from the international joint taxation scheme, and we currently expect that this will be for the income year 2017, which is reflected in the annual report. We will make the final decision in 2018 when preparing the tax returns for 2017.

Therefore, the retaxation liability has been transferred to tax payable in 2017.

In 2016, deferred tax payments were recognised as a retaxation liability and amounted to DKK 1,730 million. See note 5.4.

### Local taxes

In terms of taxation, we were affected by completed construction contracts in connection with the construction of offshore wind farms in Denmark in 2017.

We have made significant investments in offshore wind farms in the UK and Germany, resulting in the accumulation of large tax assets in recent years. Accordingly, we have not paid taxes in the UK and Germany. Going forward, this will change as the offshore wind farms are commissioned and generate positive results.

We expect to start paying tax in the UK in 2018, and in 2019 in Germany.

## 5.2 Tax on profit (loss) for the year

	2017				2016			
	Business performance		IFRS		Business performance		IFRS	
	DKK million	%	DKK million	%	DKK million	%	DKK million	%
<b>Effective tax rate, DKK million/%</b>								
<b>Tax on profit (loss) for the year can be explained as follows:</b>								
Calculated 22% tax on profit (loss) before tax (2016: 22%)	(3,310)	22	(3,323)	22	(3,157)	22	(2,681)	22
Adjustments of calculated tax in foreign subsidiaries in relation to 22% (2016: 22%)	86	-	86	-	229	(2)	229	(2)
<b>Tax effect of:</b>								
Non-taxable income and non-deductible costs, net	1,323	(9)	1,323	(9)	709	(5)	709	(6)
Unrecognised tax assets and capitalisation of tax assets not previously capitalised	(184)	1	(184)	1	(28)	-	(28)	-
Share of profit (loss) in associates and joint ventures	(12)	-	(12)	-	4	-	4	-
Adjustment of tax concerning previous years	332	(2)	332	(2)	11	-	11	-
Effect of change in tax rate	-	-	-	-	41	-	41	-
<b>Effective tax for the year</b>	<b>(1,765)</b>	<b>12</b>	<b>(1,778)</b>	<b>12</b>	<b>(2,191)</b>	<b>15</b>	<b>(1,715)</b>	<b>14</b>

### Income tax

Tax on the business performance profit (loss) was DKK 1,765 million in 2017 against DKK 2,191 million in 2016. The effective tax rate was 12% in 2017 against 15% in 2016.

The effective tax rate in 2017 was particularly affected by a tax-exempt gain on the farm-down of 50% of our Walney Extension and Borkum Riffgrund 2 offshore wind farms.

In addition, our effective tax rate was affected by the remaining portion of the tax-exempt gain on Race Bank, which was divested in 2017, and adjustments to prior years.

The effective tax rate in 2016 was particularly affected by a tax-exempt gain on the divestment of Gas Distribution and 50% of the Burbo Bank Extension and Race Bank offshore wind farms.

### Accounting policies

Tax for the year consists of current tax, changes in deferred tax and adjustment in respect of previous years. Tax on profit (loss) for the year is recognised in the income statement. Tax relating to other items is recognised in other comprehensive income.

Adjustments of calculated tax in foreign subsidiaries were due to the differences in tax rates between Denmark and primarily the UK and Germany.

Non-taxable income and non-deductible expenses primarily concern the tax-exempt gain on divestments. See more in note 2.5.

	2017		2016	
	Business performance	IFRS	Business performance	IFRS
<b>Income tax, DKK million</b>				
Tax on profit (loss) for the year	(1,765)	(1,778)	(2,191)	(1,715)
Tax on other comprehensive income	238	251	345	(131)
Tax on hybrid capital	141	141	141	141
<b>Total tax for the year</b>	<b>(1,386)</b>	<b>(1,386)</b>	<b>(1,705)</b>	<b>(1,705)</b>
Tax on profit (loss) for the year can be broken down as follows:				
Current tax	(2,698)	(2,698)	(3,541)	(3,541)
Deferred tax	586	573	1,385	1,861
Tax relating to assets classified as held for sale	15	15	(87)	(87)
Adjustment of tax concerning previous years	332	332	52	52
<b>Tax on profit (loss) for the year</b>	<b>(1,765)</b>	<b>(1,778)</b>	<b>(2,191)</b>	<b>(1,715)</b>
Tax on other comprehensive income can be broken down as follows:				
Current tax	255	255	(138)	(138)
Deferred tax	(17)	(4)	483	7
<b>Tax on other comprehensive income</b>	<b>238</b>	<b>251</b>	<b>345</b>	<b>(131)</b>

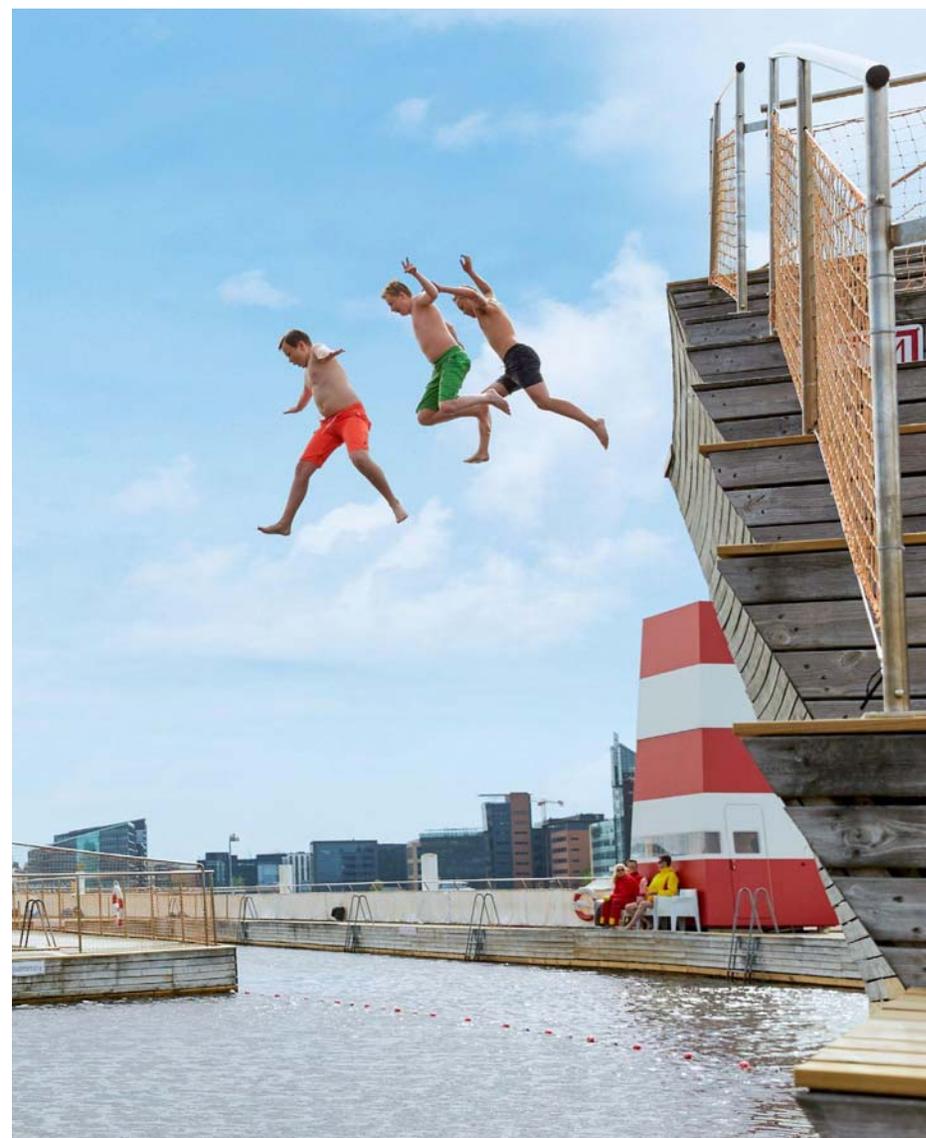

### Tax on profit (loss) for the year and other comprehensive income

In 2017, tax on the IFRS profit (loss) for the year amounted to DKK 1,778 million, consisting of current tax of DKK 2,698 million, changes in deferred tax of DKK 573 million, tax on assets classified as held for sale of DKK 15 million, and an adjustment of tax in respect of previous years of DKK 332 million.

In 2016, tax on the IFRS profit (loss) for the year amounted to DKK 1,715 million, consisting of current tax of DKK 3,541 million, changes in deferred tax of DKK 1,861 million, tax on assets classified as held for sale of DKK 87 million, and an adjustment of tax in respect of previous years of DKK 52 million.

Income tax for the year is calculated on the basis of the profit (loss) before tax from continuing operations.

# 5.3 Taxes paid

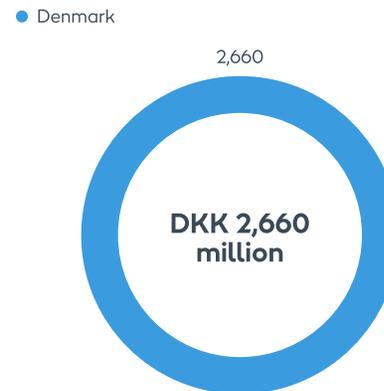

In 2017, we paid DKK 2,660 million in taxes. The tax paid mainly related to ordinary operations and retaxation in connection with the expected exit from the Danish international joint taxation scheme.

We paid most of our Danish taxes in November. Accordingly, the income tax paid for the year was based on estimates and preliminary tax positions. As our earnings towards the end of the year were higher than

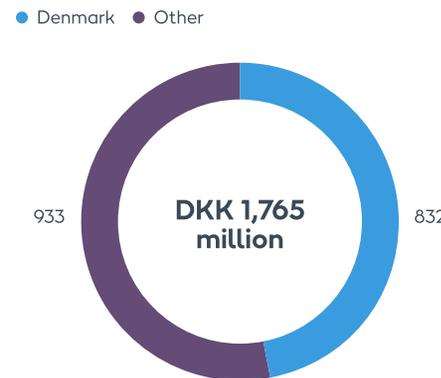

expected, we expect to have a residual tax of DKK 570 million regarding 2017, which has been recognised as a payable tax.

The tax payment included residual tax for 2016 of DKK 689 million in total for continuing operations. DKK 236 million related to the utilisation of losses for the Group's Danish companies in the oil and gas business for the period during which they were included in the joint taxation.

Taxes paid for the year, 2017, DKK million

Tax on profit (loss) for the year, 2017, DKK million

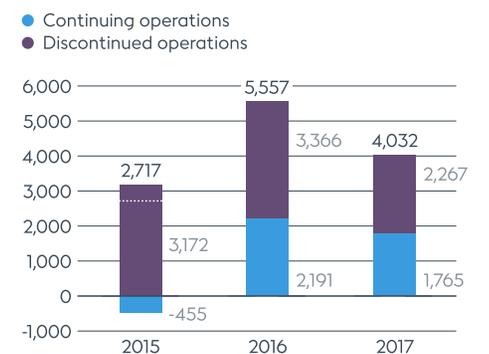

The figures only shows our continuing operations.

Taxes paid, DKK million

Tax on profit (loss) for the year, DKK million

The figures show the relationship between the tax on profit (loss) for the year for accounting purposes and the taxes paid for the year.

\* Relates to internal transfers between continuing and discontinued operations.

## 5.4 Deferred tax

### Development in deferred tax

In 2017, deferred tax from continuing operations decreased as a result of deferred tax liabilities materialising as tax payable. This includes differences in the tax and accounting treatment of profit received on account on works in progress, differences in the tax and accounting recognition of financial instruments, retaxation due to the expected exit from the international joint taxation scheme and adjustments to prior years.

The adjustment concerning previous years mainly comprised adjustments of work in progress and recognition of tax assets relating to offshore wind farms in Germany.

The most significant changes in 2016 concerned the taxation of profit received on account, affecting deferred tax on property, plant and equipment, and a reduction of the retaxation balance relating to the farm-downs of 50% of the Burbo Bank Extension and Race Bank offshore wind farms in the UK.

### Deferred tax by segment

Deferred tax (liabilities) in our segments primarily concerned the following:

- Wind Power: recognised profit received on account and property, plant and equipment, in respect of which depreciation for tax purposes exceeds depreciation for accounting purposes

- Bioenergy & Thermal Power: property, plant and equipment for which impairment was made in previous years
- Distribution & Customer Solutions: financial instruments.

Other activities/eliminations comprised intra-group eliminations in the joint taxation across segments.

### Accounting policies

Deferred tax is recognised in respect of all temporary differences arising between the tax bases of assets and liabilities and their carrying amounts.

However, deferred tax is not recognised in respect of temporary differences relating to:

- The acquisition of joint operations, including licence interests
- Other items, where differences arise at the time of acquisition affecting neither the profit (loss) for the year nor the taxable income. However, this does not include differences arising in connection with company acquisitions.

Deferred tax is measured depending on how we plan to use the assets and settle the liabilities. We set off tax assets and liabilities when the tax assets can be offset against tax liabilities in the year in which the deferred tax assets are expected to be used.

Deferred tax assets are recognised at the value at which they are expected to be used. They may be offset against future earnings or against deferred tax. This is done within a joint taxation scheme. Intra-group gains and losses are eliminated.

Deferred tax is measured based on the tax rules and rates applying when the deferred tax becomes current tax. Changes in deferred tax as a result of changes in tax rates are recognised in profit (loss) for the year.

Liabilities in respect of uncertain tax positions are measured as follows:

- the most-likely-outcome method is applied in cases where there are only two possible outcomes
- the weighted-average method is used in cases with more than two possible outcomes.

The liability is recognised under income tax payable or deferred tax, depending on how the realisation of the tax position will affect the financial statements.

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities/eliminations	Deferred tax at 31 December
<b>Deferred tax 2017, DKK million</b>					
Deferred tax, assets	1,407	444	972	42	2,865
Deferred tax, liabilities	1,227	352	617	(68)	2,128
Unrecognised tax assets	123	-	61	-	184
<b>Deferred tax 2016, DKK million</b>					
Deferred tax, assets	548	420	25	(905)	88
Deferred tax, liabilities	1,065	231	584	305	2,185
Unrecognised tax assets	209	11	308	-	528

The table shows the reconciliation of deferred tax to the balance sheet by segment.

<b>Development in deferred tax assets and liabilities 2017, DKK million</b>	Balance sheet 1 January	Transferred to assets and liabilities clas- sified as assets held for sale	Exchange rate adjustments	Additions, individual assets and activities, net	Recognised in profit (loss) for the year	Recognised in other comprehensive income	Adjustments to prior years, etc.	Balance sheet 31 December

<b>Financial income and expenses</b>	127
<b>Funds from operations (FFO)/ adjusted interest-bearing net debt</b>	128

# 6. Capital structure

During the year, we issued new senior bonds of EUR 750 million, corresponding to DKK 5,584 million. We also redeemed bonds with a notional amount of DKK 1,480 million early.

Also, in 2017, we issued a new hybrid bond of EUR 500 million, corresponding to DKK 3,723 million. In addition, it was decided to redeem the hybrid bond issued in 2013 with a notional amount of EUR 500 million at the first redemption date in 2018.

## Capital structure

To ensure the financial strength to operate in the international energy and capital markets and secure financing on attractive terms, we

have defined credit rating and capital structure targets. The overarching capital structure targets are a credit rating of Baa1/BBB+ and an FFO/adjusted net debt credit metric of around 30%.

## Financing policy

The aim of our financing policy is to ensure the best possible loan arrangements, while also minimising financing costs, liquidity and refinancing risks.

The borrowing activities are diversified among various funding sources and maturities. In addition, we have robust financial resources.

Our borrowing activities are consolidated in the parent company, where cash resources are available to the Group's companies via an internal bank.

## Cash management

We have decided to maintain robust financial resources to limit the company's sensitivity to unrest in the financial markets.

The financial resources consist of bank deposits and securities, as well as non-cancellable credit facilities from a group of robust Nordic and international banks. The financial resources totalled DKK 39,158 million at 31 December 2017 (2016: DKK 31,511 million).

# 50.3%

Funds from operations (FFO) relative to adjusted interest-bearing net debt amounted to 50.3% at 31 December 2017 against 64.2% at 31 December 2016.

# -1.5bn

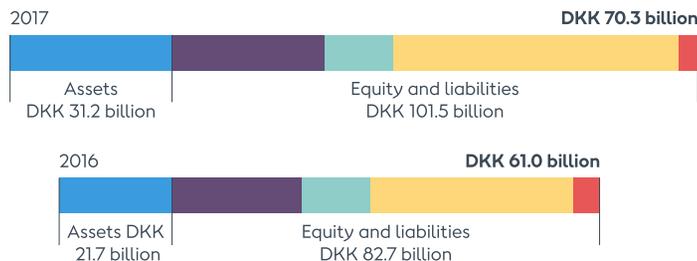

Our interest-bearing net debt totalled DKK -1.517 billion at 31 December 2017 against DKK 3,461 million at 31 December 2016.

# 39,2bn

Our cash reserve totalled DKK 39,158 million at 31 December 2017 against DKK 31,511 million at 31 December 2016.

Foreign exchange adjustments and amortisation	(368)	(1,774)
<b>Bond and bank debt 31 December</b>	<b>29,636</b>	<b>24,183</b>

## Interest-bearing net debt

Interest-bearing net debt totalled DKK -1,517 million at the end of 2017, down DKK 4,978 million relative to 2016. The decline was due to an increase in interest-bearing assets of DKK 9,478 million, partially offset by an increase in interest-bearing debt of DKK 4,500 million.

In November 2017, we issued a new bond of EUR 750 million, corresponding to DKK 5,584 million. We also redeemed bonds with a notional amount of DKK 1,480 million early. At the same time, it was decided to redeem the hybrid bond issued in 2013 with a notional amount of EUR 500 million at the first

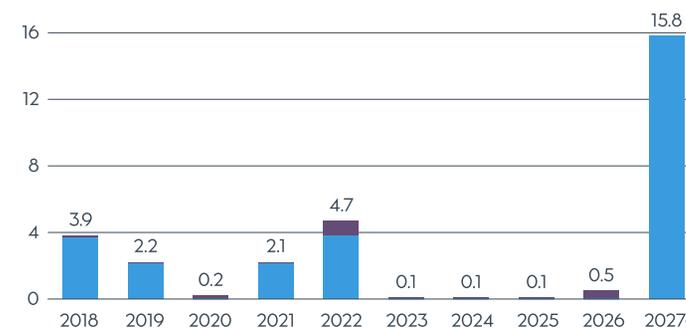

redemption date in 2018. As a consequence of this, we have reclassified the hybrid bond from equity to interest-bearing debt with a carrying amount of DKK 3,810 million at 31 December 2017.

## Market value of bond and bank debt

The market value of our bond and bank debt amounted to DKK 32,959 million and DKK 2,108 million, respectively, at 31 December 2017 (2016: DKK 26,010 million and DKK 4,110 million, respectively). The market value of our bond and bank debt exceeds the carrying amount due to the drop in interest levels since the arrangement of the debt.

## Maturity profile, DKK billion

● Bond debt ● Bank debt

The tabel shows the changes in bond and bank debt.

The graph shows the maturity profile for our bank loans and bond debt.

### Loan arrangements

At 31 December 2017, we had loan obligations totalling DKK 2,069 million (2016: DKK 4,064 million), primarily to the European Investment Bank and the Nordic Investment Bank. The loans are recognised in the balance sheet under bank debt. The loans offered by these multilateral financial institutions include loans to co-fund infrastructure and energy projects on favourable terms and with maturities exceeding those normally available in the commercial banking market. In connection with these loans, the Group may be met with demands for repayment or collateral in the event of the Danish State holding less than 50% of the share capital or voting rights in Ørsted A/S (change of control), or repayment in the event of Moody's or Standard & Poor's downgrading our rating to Baa3 or BBB- or less, respectively.

Furthermore, at 31 December 2017, we had non-cancellable credit facilities of DKK 10,424 million (2016: DKK 13,000 million) with a number of Scandinavian and international banks.

In connection with these credit facilities, we may be met with demands for cancellation and repayment of any used share in the event of players other than a group consisting of the Danish State and Danish power distribution companies acquiring more than 50% of the share capital or voting rights in Ørsted A/S, or in the event of the Danish State ceasing to hold at least 20% of the share capital. Our financing agreements are not subject to any other unusual terms or conditions.

### Interest rate risk

Our interest rate risks relate to interest-bearing debt, interest-bearing assets and financial price hedges. We manage the interest rate risk through the composition of assets and the variability of the cash flows generated by the assets. Fixed-interest financing over a longer term is sought for assets with fixed, interest-insensitive cash flows over a longer term. Conversely, more variable-interest financing is sought for assets with more varying, interest-sensitive cash flows.

We have fixed the interest rate on most of our debt by issuing fixed-rate debt. At the end of 2017, 95% (2016: 89%) of the Group's debt was fixed-rate debt. In addition, forward exchange contracts have been concluded to hedge the currency risk associated with interest payments on loans in GBP over the next five years at an average price of 9.3. See note 7.2 for further information.

At 31 December 2017, the loan portfolio had an average time to maturity of 9.8 years (2016: 8.5 years). Interest-bearing assets consist primarily of short-term bonds with limited risk.

### Accounting policies

Bond debt, bank debt and other payables are recognised at inception at market value (typically proceeds received) net of transaction costs incurred. In subsequent periods, the liabilities are measured at amortised cost so that the difference between the cost (proceeds) and the nominal value is recognised in profit (loss) for the year as interest expenses over the term of the loan, using the effective interest rate method.

Financial liabilities are classified as current unless the Group has an unconditional right to defer settlement of the liability to at least one year after the balance sheet date.

The market value of issued bonds has been determined as the market value at 31 December (Level 1 – quoted prices).

The market value of bank loans has been determined as the present value of expected future instalments and interest payments using the Group's current interest rate on loans as the discount rate (Level 2 – observable inputs).

### Bond issues at 31 December 2017

Currency	Outstanding amount (million)	Coupon (%)	Time of issue	Maturing	Quoted in
<b>Senior bonds</b>					
EUR	280	6.500	6 May 2009	7 May 2019	London
EUR	272	4.875	16 Dec 2009	16 Dec 2021	London
EUR	517	2.625	19 Sep 2012	19 Sep 2022	London
EUR	750	1.500	24 Nov 2017	26 Nov 2029	London
GBP	750	4.875	12 Jan 2012	12 Jan 2032	London
GBP	500	5.750	9 Apr 2010	9 Apr 2040	London

In addition to senior bonds, we have also issued a number of hybrid bonds; see note 6.3.

<b>Total profit (loss) per share</b>	<b>46.4</b>	<b>44.5</b>	<b>30.6</b>	<b>18.1</b>

### Development in share capital (DKK million)

	2017	2016
Share capital at 1 January	4,204	4,177
Capital injection	-	27
<b>Share capital at 31 December</b>	<b>4,204</b>	<b>4,204</b>

### Share capital

Ørsted's share capital is DKK 4,203,810,800, divided into shares of DKK 10 (2016: DKK 4,204 million). No shares are subject to special rights or restrictions on voting rights. The shares are fully paid up.

### Treasury shares

To secure our share programme, we acquired a portfolio of treasury shares consisting of 225,904 shares at 31 December 2017 (2016: 225,904), corresponding to 0.1% of the share capital.

The table shows earnings per share distributed on continuing and discontinued operations. Diluted profit (loss) per share corresponds to profit (loss) per share, as the dilutive effect of the share programme is less than 0.1% of the share capital (2016: 0.3% of the share capital).

The table shows a change in the share capital, which is due to the issuance of bonus shares in connection with the expiry of the 2014 share programme.

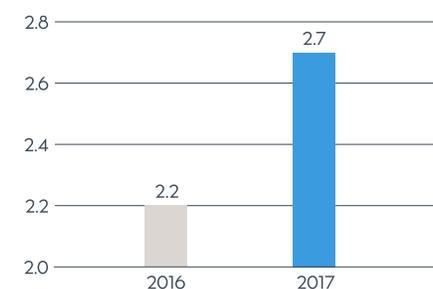

### Dividends

The Board of Directors recommends that dividends of DKK 3,783 million (2016: DKK 2,522 million) be paid for the financial year, corresponding to DKK 9 per share (2016: DKK 6 per share). The proposed dividends correspond to a dividend yield of 2.7% (2016: 2.2%) calculated on the basis of the closing price for an Ørsted share on the last trading day of the year.

### Owners in Ørsted

The Danish State is the principal shareholder with an ownership interest of 50.1%. In addition, SEAS-NVE and The Capital Group also have significant ownership interests. See also note 16 in the parent company's financial statements.

### Dividend yield, %

The graph shows the proposed dividends in relation to the closing price for an Ørsted share on the last trading day of the year.

**Accounting policies****Foreign currency translation reserve**

The foreign currency translation reserve comprises:

- exchange rate adjustments arising on translation of the financial statements of foreign entities with a currency that is not the Group's functional currency
- exchange rate adjustments relating to loans that form part of our net investment in such entities
- exchange rate adjustments relating to hedging transactions on our net investment in such entities.

On realisation or partial realisation of the net investment, the exchange rate adjustments are recognised in profit (loss) for the year if a foreign exchange gain (loss) is realised by the divested entity. The foreign exchange gain (loss) is transferred to the item in which the gain (loss) is recognised.

**Hedging of net investments**

Hedging of net investments comprises:

- exchange rate adjustments relating to hedging transactions on our net investment in such entities.

**Hedging reserve**

The hedging reserve covers:

- the cash flow hedging of interest payments
- the currency risk associated with the construction of offshore wind farms.

**Deferred costs of hedging**

Changes in the basic spread on currency swaps and time value of options are included in deferred costs of hedging.

**Share premium reserve**

Retained earnings include the share premium reserve of DKK 21,279 million, representing the excess of the amount of subscribed-for share capital over the nominal value of these shares in connection with capital injections.

## 6.3 Hybrid capital

Hybrid bonds	Due in 3013	Due in 3013	Due in 3015	Due in 3017
Type	Subordinate to other creditors	Subordinate to other creditors	Subordinate to other creditors	Subordinate to other creditors
Carrying amount	DKK 5,148 million	DKK 3,810 million	DKK 4,423 million	DKK 3,668 million

Notional amount	EUR 700 million (DKK 5,212 million)	EUR 500 million (DKK 3,723 million)	EUR 600 million (DKK 4,467 million)	EUR 500 (DKK 3,723 million)
Issued	June 2013	July 2013	May 2015	November 2017
Maturing	June 3013	July 3013	November 3015	November 3017
First redemption date at par	26 June 2023	8 July 2018	6 November 2020	24 November 2024
Interest	For the first ten years, the coupon is fixed at 6.25% p.a., after which it is adjusted every five years with the 5-year euro swap + 4.75 percentage points from 2023-2043 and + 5.5 percentage points after 2043.	Coupon for the first five years is fixed at 4.875% p.a., after which it is adjusted every five years with the 5-year euro swap + 3.8 percentage points from 2018, 4.05 percentage points from 2023, and 4.80 percentage points from 2038.	Coupon for the first 5.5 years is fixed at 3.0% p.a., after which it is adjusted every five years with the 5-year euro swap + 2.819 percentage points from 2020, 3.069 percentage points from 2025, and 3.819 percentage points from 2040.	Coupon for the first seven years is fixed at 2.25% p.a., after which it is adjusted every five years with the five-year euro swap + 1.899 percentage points from 2024, 2.149 percentage points from 2029 and 2.899 percentage points from 2044.
Deferral of interest payment	Optional	Optional	Optional	Optional

We have issued hybrid capital which is subordinate to our other creditors. The purpose of issuing hybrid capital is to strengthen our capital base and fund our investments. In the European capital markets, we have issued EUR hybrid bonds with a total nominal value of DKK 17,125 million (EUR 2,300 million).

In 2017, we issued a further hybrid bond at a nominal value of EUR 500 million which is classified as equity. In addition, in 2017, we decided to redeem the hybrid bond maturing in July 3013 at par at the first redemption date on 8 July 2018. This hybrid bond is therefore reclassified to loans and borrowings.

For hybrid bonds, we may defer coupon payments to bond holders and ultimately decide

not to pay them. Deferred coupon payments become payable, however, if we decide to pay dividends to our shareholders or pay coupon payments on another hybrid bond.

As a consequence of the special terms attaching to the hybrid bonds, these are classified as equity, and coupon payments are therefore recognised in equity.

### Accounting policies

Hybrid capital comprises issued bonds that qualify for treatment in accordance with the rules on compound financial instruments due to the special characteristics of the loan. The notional amount, which constitutes a liability, is recognised at present value, and equity has been increased by

the difference between the net proceeds received and the present value of the discounted liability. Accordingly, any coupon payments are accounted for as dividends, which are recognised directly in equity at the time the payment obligation arises. This is because coupon is discretionary, and any deferred coupon therefore lapses upon maturity of the hybrid capital. Coupon payments consequently do not have any effect on profit (loss) for the year.

The part of the hybrid capital that is accounted for as a liability is measured at amortised cost. However, as the carrying amount of this component amounted to nil on initial recognition, and because of the 1,000-year term of the hybrid capital, amortisation charges will only impact on profit (loss) for the year towards the end of the 1,000-year term of the hybrid capital. Coupon payments are recognised in the statement of cash flows in the same way as dividend payments within financing activities.

On redemption of the hybrid capital, the payment will be distributed between the liability and equity applying the same principles as used when the hybrid capital was issued. This means that the difference between the payment on redemption and the net proceeds received on issue is recognised directly in equity as the debt portion of the existing hybrid issues will be nil during the first part of the life of the hybrid capital.

On the date on which the Board of Directors decides to exercise an option to redeem the hybrid capital, the part of the hybrid capital that will be redeemed will be reclassified to loans and borrowings. The reclassification will be made at the market value of the hybrid capital at the date the decision is made. Coupon payments and exchange rate adjustments following the reclassification to loans and borrowings will be recognised in profit (loss) for the year as financial income or expenses.

## 6.4 Financial resources

Our liquidity and financing risks are managed centrally in accordance with the principles and delegated authorities laid down by the Board of Directors.

One of the most significant financial management tasks is to secure sufficient and flexible financial resources in relation to our day-to-day operations, investment programme and debt maturity profile.

We therefore define minimum financial resources for the coming calendar year.

### Cash and cash equivalents and securities

Cash not available for use which is not part of the financial resources primarily comprises:

- cash and cash equivalents pledged as collateral for insurance-related provisions and
- cash and cash equivalents pledged as collateral for trading in derivatives.

Securities are a key element in our financial resources, for which reason investments are primarily made in liquid AAA-rated Danish mortgage bonds and to a lesser extent in other bonds. Most of the securities qualify for repo transactions in the Danish central bank, 'Danmarks Nationalbank'.

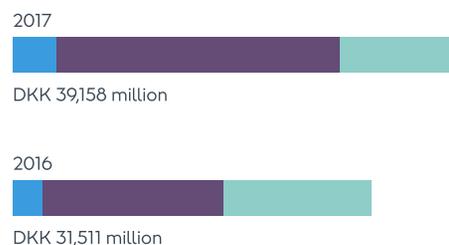

Securities not available for use comprise:

- Securities pledged as collateral for insurance-related provisions. These amounted to DKK 397 million at 31 December 2017 (2016: DKK 394 million)
- Securities pledged as collateral for trading in financial instruments. These amounted to DKK 40 million at 31 December 2017 (2016: DKK 276 million).

At 31 December 2017, we had received collateral in the amount of DKK 787 million (2016: DKK 773 million) concerning the positive market value of derivatives.

#### Maturity analysis of loans and borrowings

The Group's cash needs in respect of its financial loans and borrowings are shown in the table on the left. The maturity analysis was determined on 31 December 2017.

The maturity analysis is based on undiscounted cash flows, including estimated interest payments. Interest payments are based on market conditions and interest-rate hedging entered into on 31 December 2017.

The maturity analysis does not include hybrid capital classified as equity. At 31 December 2017, we had issued hybrid capital with a notional amount totalling DKK 13,402 million due in 3013 (DKK 5,212 million), 3015 (DKK 4,467 million) and 3017 (DKK 3,723 million), respectively.

#### Accounting policies

Securities comprise bonds that are monitored, measured and reported at market value on an on-going basis in conformity with the Group's investment policy. Changes in market value are recognised in profit (loss) for the year as financial income and expenses. Purchase and sale of securities are recognised at the settlement date.

For listed securities, market value equals the market price, and for unlisted securities, market value is estimated based on generally accepted valuation methods and market data.

Divested securities where a repurchase agreement (repo transactions) has been made at the time of sale are recognised in the balance sheet at the settlement date as if the securities were still held. The amount received is recognised as a liability, and the difference between the selling price and the purchase price is recognised in profit (loss) for the year over the term as interest. The return on the securities is recognised in profit (loss) for the year.

## 6.5 Financial income and expenses

### Net financial income and expenses, DKK million

	2017	2016
Interest expenses, net	(629)	(402)
Interest element of provisions, etc.	(451)	(392)
Capital losses on early repayment of loans and interest rate swaps	(230)	(892)

### Accounting policies

Market value adjustments of interest rate and currency derivatives that have not been entered into for hedging purposes are presented as financial income or expenses.

The table shows net financial income and expenses, corresponding to our internal control. Exchange rate adjustments and hedging contracts entered into to hedge currency risks are presented net under the item 'Exchange rate adjustments, net'.

Exchange rate adjustments of currency hedging are recognised in revenue and cost of sales with a gain of DKK 190 million (2016: a gain of DKK 1,257 million).

Borrowing costs transferred to property, plant and equipment under construction are calculated at the weighted average effective interest rate for general borrowing. This amounted to 5.3% in 2017 (2016: 4.4%).

## 6.6 Funds from operations (FFO)/ adjusted interest-bearing net debt

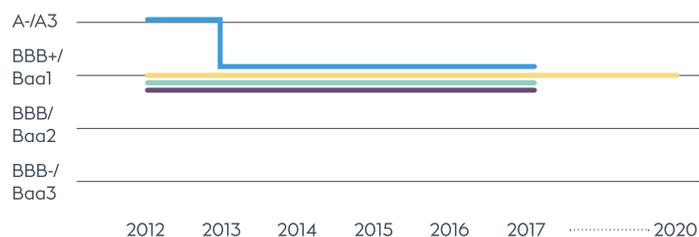

Our long-term target is for funds from operations (FFO) to be around 30% of adjusted interest-bearing net debt.

In 2017, the calculation of FFO has been updated to exclude gain (loss) on divestment

of assets. This brings our calculation of FFO more in alignment with the principles used by the rating agencies. Comparative figures have been restated.

### Rating, category

● S&P ● Moody's ● Fitch ● Financial objective

The figure shows the development in our credit rating since 2012 compared to our objective.

### Credit rating

# 7. Risk management

<b>Market risks</b>	131
<b>Hedge accounting and economic hedging</b>	134
<b>Trading portfolio</b>	136
<b>Sensitivity analysis of financial instruments</b>	137
<b>Credit risks</b>	138
<b>Categories of financial instruments</b>	139
<b>Fair value measurement</b>	139

# 7. Risk management

Market and credit risks are a natural part of our business activities and a precondition for being able to create value. Through risk management, risks are reduced to an acceptable level.

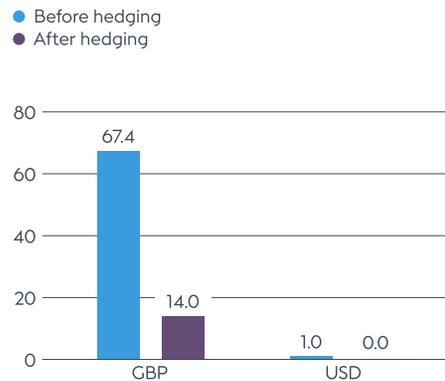

## Energy and currency exposures

At the end of 2017, our forward looking energy and currency exposures from production, sales, investments and divestments had been reduced from DKK 89.1 billion to DKK 22.3 billion via hedging.

## Trading portfolio

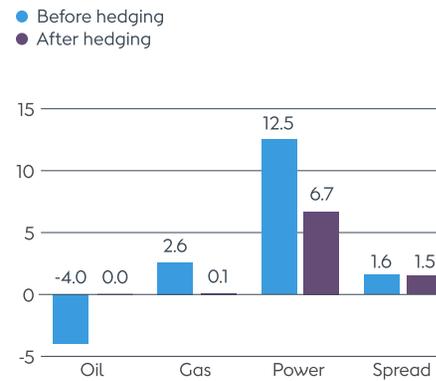

We have a limited trading portfolio, the main purpose of which is to optimise the execution of hedging contracts and gain from short-term energy price fluctuations. The trading activities comply with the mandates approved by the Board of Directors. Read more in note 7.3.

Currency exposure 2018-2022, DKK billion

Our currency exposure totalled DKK 68.4 billion before hedging and DKK 14.0 billion after hedging at the end of 2017. We do not deem EUR to constitute a risk, as we expect that Denmark will maintain its fixed-exchange-rate policy.

Energy exposure 2018-2022, DKK billion

Our energy exposures totalled DKK 20.7 billion before hedging and DKK 8.3 billion after hedging at the end of 2017.

# 5 years

We hedge prices for up to five years to reduce cash flow fluctuations.

# +1.7bn

In 2017, business performance EBITDA was positively impacted by DKK 1,665 million from hedging instruments against DKK 1,459 million in 2016.

# -0.8bn

The value of our energy and currency hedging instruments at 31 December 2017 was negative at DKK 812 million, which will reduce business performance EBITDA for a future period against DKK +737 million at 31 December 2016.

# 7.1 Market risks

## Market risks and market risk management

Our most significant market risks relate to:

- energy prices
- foreign exchange rates
- inflation rates and
- interest rates (see note 6.1).

The management of market risks is to ensure stable and robust financial ratios that support our growth strategy.

We hedge prices for up to five years to reduce cash flow fluctuations. Prices are not hedged in the long term, and our long-term market risks are therefore determined by our strategic decisions on investments in new assets, the conclusion of long-term contracts as well as any divestment of assets.

The Board of Directors determines the minimum hedging levels in the five-year period. In the first two years, a high degree of hedging is wanted to ensure stable cash flows after tax. The degree of hedging is lower in subsequent years. This is due to:

- reduced certainty about long-term production volumes and
- rising hedging costs in the medium to long term.

### Energy price risks

Our risks after hedging for the years 2018-2022 can be summarised as shown in the table.

Risk after hedging, DKK billion	Effect of price change	
	+10%	-10%
Oil: 0.0 purchase position	+0.0	-0.0
Gas: 0.1 sales position	+0.0	-0.0
Power: 6.7 sales position	+0.7	-0.7
Spread: 1.5 sales position	+0.1	-0.1

A 10% increase in the power price in 2018-2022 will therefore result in a gain of DKK 0.7 billion in the period, all else remaining unchanged.

### Currency risks

Our risks after hedging for the years 2018-2022 can be summarised as shown in the table.

Risk after hedging, DKK billion	Effect of price change	
	+10%	-10%
GBP: 14.0 sales position	+1.4	-1.4
USD: 0.0 sales position	+0.0	-0.0

Our largest currency risk relates to GBP due to our investments in offshore wind farms in the UK.

The exchange rate related to proceeds in foreign currency from divestments is hedged when we have a high degree of certainty about the price and structure of the transaction. The proceeds are estimated to be the cost price of the divested asset added an estimated markup that is increased as we gain certainty of the markup. The expected cash flows from divestments reflect the cash flows

we would otherwise have obtained from the operation of the offshore wind farms had we kept the share divested. As the payments are concentrated on a few years, they represent a relatively large share of our GBP exposure the next two years. Any subsequent divestments are not included, as we do not have high certainty about the price and structure of the transaction. Investments in GBP are set off against the expected proceeds from divestments before hedging.

The exchange rate related to energy prices in foreign currency is not hedged until the energy price is hedged. This means that the GBP exchange rate associated with power generation in the UK is not hedged until the GBP power price is hedged.

Cash flows that relate to fixed tariffs and guaranteed minimum prices from offshore wind farms in the UK deviate from the main principle. Hedging of these, less operating expenses, is based on a declining level of hedging over the five-year risk management horizon. The target is to hedge 100% of the risk in year 1, declining by 20 percentage points each year, to 20% in year 5.

Our GBP exposure amounted to DKK 14.0 billion after hedging for the years 2018-2022. Of these, unhedged prices of green certificates amounted to DKK 14.3 billion, while other unhedged prices represent a value of DKK -0.3 billion.

### GBP exposures, DKK billion

- Before hedging
- After hedging

The graph shows our GBP exposure from:  
 - divestment and investment  
 - green certificates  
 - hedged energy  
 before and after hedges.

The GBP exchange rate for hedges impacting EBITDA is in 2018 and 2019 hedged at an average exchange rate of DKK/GBP 9.0 and 8.5. The average exchange rates are calculated excluding options that only account for a smaller part of our GBP hedges.

Our EUR risk is subject to continuous assessment, but is generally not hedged as we believe that Denmark will maintain its fixed-exchange-rate policy.

Our USD exposure after hedging amounts to DKK 0.0 billion for the 2018-2022 period. Our USD exposure relates to the purchase of gas, LNG and coal.

**Wind Power**

Earnings from our generation of power from offshore wind farms mainly comprise:

- fixed tariffs (Denmark, Germany, the Netherlands and the UK) and
- guaranteed minimum prices for green certificates (the UK).

At the end of 2017, such fixed tariffs and guaranteed minimum prices cover 82% of the expected income from offshore wind farms over the next five years. The remaining price exposure concerns sales of power at market price in the UK and Denmark. See the graph 'Distribution of revenue from Wind Power's power generation' for further information.

The annual adjustment of the fixed tariffs varies from country to country:

- In the UK, the tariff is adjusted with inflation
- In Denmark, Germany and the Netherlands, the tariff is not adjusted.

This results in an inflation risk for earnings from tariff-based wind farms in Denmark, Germany and the Netherlands. The share of our debt which is fixed in nominal terms partially offsets this inflation risk.

**Bioenergy & Thermal Power**

Our CHP plant portfolio consists of biomass and coal-fired plants in Denmark and a gas-fired power station in the Netherlands. The plants in Denmark generate both heat and power.

Concurrently with the biomass conversion of our CHP plants, a larger share of our earnings will be coming from our heat generation. Heat generation does not give rise to price risk as the associated costs are borne by the heat customers. However, heat generation often entails a price risk for power, as heat and power are generated simultaneously.

The profitability of power generation is determined by the difference between the selling price of power and the purchase price of fuel and carbon emissions allowances. For our coal-based power generation, we secure profitability by selling power and buying fuel and carbon emissions allowances, while for biomass-based power generation, we secure profitability by buying biomass at fixed prices and hedging the associated power generation.

The risk management horizon is three years due to low liquidity in the hedging markets.

At the end of 2017, 42% of the power generation expected in 2018 from our power stations was hedged. The total net risk associated

with the power stations' power generation for the 2018-2022 period is DKK 1.5 billion after hedging.

**Distribution & Customer Solutions**

Our price risk in Distribution & Customer Solutions arises from the purchase and sale of power and gas. The price risks associated with the purchase and sale of gas result from differences in the indexing of sales and purchase prices. Our largest gas purchase contracts include the option of renegotiating the contract price if it no longer reflects market conditions. We have completed most of these renegotiations in recent years; as a result, the contract prices have largely been indexed to pure gas prices and not to oil prices, as was previously the case. We are therefore less sensitive to differences in the oil and gas price development than before. Going forward, our oil price risk

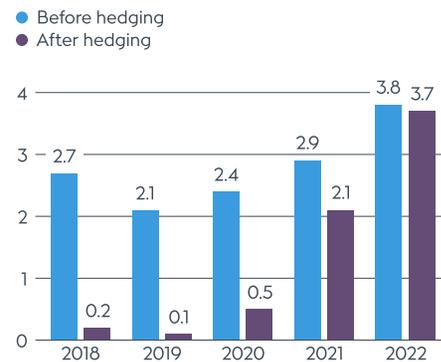

may rise again, however, as we conclude more and more LNG purchase agreements which are typically oil-indexed.

The price risks associated with power purchases and sales are constituted by the difference between the purchase and sales prices. The price risk relates primarily to timing differences between purchases and sales and is therefore considered to be limited.

**Principles for estimating exposures**

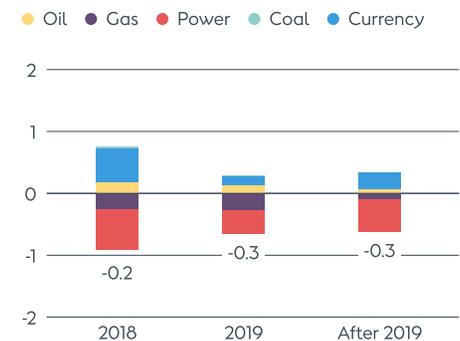

Exposure is calculated as the expected production (or net purchase/sale) times the forward price for the respective years. In addition, the exposure is determined on the basis of the expected exposure after renegotiations of oil-indexed gas purchase contracts.

**Wind Power's power price exposure, DKK billion**

The table shows the split of income from Wind Power's generation of power divided into market prices and other fixed elements.

**Expected value for recognition in business performance EBITDA, DKK billion**

The table shows the time of the transfer of the value of hedging contracts in business performance EBITDA for both business performance and IFRS hedges.

The table shows the Group's derivatives and commercial contracts according to the type of accounting treatment and the affected items. The accounting treatment and classification of hedging contracts depend on the purpose of the hedging:

- Economic hedging comprises hedging of energy-related risks and related currency risks. These hedging contracts are treated as hedge accounting in accordance with the business performance principle (see note 1.1 for a detailed description), whereby the value adjustment (loss/gain) is deferred and only recognised during the period in which the hedged transaction materialises. Under IFRS, the value adjustment of this type of hedging is recognised directly in the income statement.
- Hedging of cash flows concerning interest rates and currencies comprises hedging of future interest payments and currency risks on future income. When hedging cash flows, the effective portion of the market value is temporarily recognised in equity until the hedged transaction materialises.
- Hedging of the market value of securities or currency comprises hedging of recognised assets or liabilities. By hedging the market value, the effective portion of the market value is recognised in profit (loss) for the year together with changes in the market value of the hedged asset or the hedged liability.
- Hedging of net investments comprises hedging of the currency risk associated with investments in assets located in foreign countries. By hedging of net investments, the effective portion of the market value is recognised in equity until the hedged net investment is divested.
- The trading portfolio and other interest and currency derivatives are recognised at market value in the income statement.

Note 1.1 provides further details on economic hedging, including information about the underlying products traded.

## 7.2 Hedge accounting and economic hedging

### Accounting policies

We primarily use hedge accounting for currency and interest where it is possible to use hedging instruments which hedge the desired risk one-to-one. The GBP exposure, for example, is hedged using GBP forward exchange contracts, GBP swaps or GBP loans. There are thus no significant sources of ineffectiveness. For currency swaps, the basic spread is accounted for according to the cost of the hedging model.

To the extent that a risk needs to be hedged, and if there is no fully effective instrument available in the market, analyses are performed of the expected effectiveness of the hedging instrument before the hedging transaction is concluded. In this case, the ratio between the hedged risk and the hedging instrument may deviate from the one-to-one principle and will be determined as the ratio which most effectively hedges the desired risk.

Hedge accounting 2016, DKK million	Contractual principal amount	Maturity analysis			Market value		Recognised in comprehen- sive income	Expected transfers to income statement		
		2017	2018	After 2018	Asset	Liability		2017	2018	After 2018
<b>Hedging of cash flows</b>										
Divestments (GBP)	15,532	12,238	3,294	-	1,514	38	1,309	1,032	277	-
Interest payments (fixed)	677	-	-	677	78	-	(247)	(84)	(35)	(128)
Interest payments (GBP)	2,846	569	569	1,708	-	(391)	(391)	(93)	(90)	(208)
<b>Hedging of fair value</b>										
EUR	7,439	1,784	1,198	4,457	-	(21)				
GBP	10,895	-	-	10,895	-	(377)				
<b>Hedging of net investment</b>										
EUR	5,656	-	1,199	4,457	16	(4)				
GBP	18,765	(2,817)	8,327	13,255	2,136	(1,895)				

### Cash flow hedging

Forward exchange contracts have been concluded for the purpose of hedging the currency risk associated with the construction of offshore wind farms which are expected to be divested.

Ineffectiveness of currency hedging totalled DKK 0 million (2016: DKK 0 million). Forward exchange contracts have also been concluded for the purpose of hedging the currency risk associated with interest payments on loans in GBP.

All hedges take place using an instrument with the same price risk as the exposure. The GBP exposure, for example, is hedged using GBP derivatives or GBP loans. Therefore, the hedging ratio for all IFRS hedges is one-to-one.

When we conclude a hedging transaction, and each time we present financial statements thereafter, we assess whether the hedged exposure and the hedging instrument are still financially correlated. If the hedged cash flows are no longer expected to be realised, the accumulated value change is transferred to profit (loss) for the year.

Changes in the market value of derivatives that are classified as hedges of the fair value of a recognised asset or liability are recognised in profit (loss) for the year together with changes in the value of the hedged asset or liability to the extent of the hedged risk.

### Economic hedging and commercial contracts

The purpose of economic hedging is to reduce our risk from generation and sale of energy. Fluctuations in value are expected to be offset by the underlying exposure.

When the market value of contracts classified as economic hedging, commercial contracts and partly cash flow hedging (currency) is recognised in the income statement, we present them in the hedging item which is included in EBITDA.

We have entered into a number of commercial contracts under which physical delivery is made, and which are managed together with the financial contracts, for which reason they are recognised at market value in accordance with IFRS.

Under the business performance principle, the market value adjustment of contracts concluded for the purpose of economic hedging and commercial contracts is deferred to the period during which the hedged transaction affects results. See note 1.1.

Our hedging of energy prices and commercial contracts recognised at market value is specified in the table below.

The table shows an effect on EBITDA from agreements with a contractual principal amount of DKK 46,699 million (2016: DKK 42,265 million).

### Hedging of net investments in foreign subsidiaries

Our foreign activities entail currency risk. We hedge this currency risk by raising loans in foreign currencies, entering into forward exchange contracts and investing in currency swaps and options.

Economic hedging and commercial contracts, DKK million	2017		2016	
	Contractual principal amount	Market value	Contractual principal amount	Market value
<b>Energy</b>				
Oil swaps	3,595	374	3,985	(76)
Gas swaps	6,939	(626)	7,522	(629)
Power swaps	7,745	(1,009)	8,014	(641)
Power options	2,941	280	1,497	242
Coal	176	41	301	36
<b>Currency</b>				
Forward exchange contracts	25,303	592	20,946	512
<b>Total</b>	<b>46,699</b>	<b>(348)</b>	<b>42,265</b>	<b>(556)</b>

Under the business performance principle, economic hedging is accounted for as effective hedging. The resulting market value adjustment is consequently deferred to the period in which the hedged transaction affects results.

The contractual principal amount has been determined as the net position per derivative type.

At 31 December 2017, the accumulated exchange rate adjustments totalled DKK -1,606 million divided between the exchange rate adjustment of the net investment of DKK -2,189 million and the hedging thereof of DKK 583 million.

EUR	15,220	-	(5,656)	9,564	(38)
Other	3,349	-	-	3,349	(363)
<b>Total</b>	<b>54,247</b>	<b>(4,291)</b>	<b>(24,421)</b>	<b>25,535</b>	<b>(1,710)</b>

At 31 December 2017, net investments hedged by a derivative were hedged at an average price of 8.61 for GBP and 7.43 for EUR.

### Accounting policies

#### Economic hedging and commercial contracts

Market value adjustments of financial contracts offered to customers with a view to price hedging and financial instruments that have been entered into to hedge the Group's principal operating activities are recognised as revenue or cost of sales.

Under the business performance principle, economic hedging is accounted for as effective hedging. The resulting market value adjustment is consequently deferred to the period in which the hedged transaction affects results. See note 1.1 for further information.

Ineffectiveness relating to hedging of net investments in foreign subsidiaries totalled DKK 0 million (2016: DKK 1 million) and is recognised in financial income and expenses.

The table shows our hedging of investments in foreign subsidiaries. The table also shows the exchange rate adjustment of the investment as well as the associated hedging value.

The net position expresses the accounting exposure. If, for example, the GBP/DKK exchange rate had gone up by 10% on 31 December 2017, equity would have increased by DKK 835 million, corresponding to 10% of DKK 8,346 million.

The contractual principal amount has been determined as net position per derivative type.

#### Hedging of net investments in foreign subsidiaries

Changes in the market value of derivatives and loans that are used to hedge net investments in foreign subsidiaries or associates are recognised in the consolidated financial statements directly in equity within a separate foreign currency translation reserve.

# 7.3 Trading portfolio

## Trading portfolio

The purpose of our trading portfolio is to:

- optimise hedging contracts
- contribute to increased market insight and
- profit from short-term fluctuations in energy prices.

The trading portfolio consists primarily of positions in oil, gas and power.

The trading portfolio constitutes a smaller part of our total portfolio of derivatives, and the associated risk is limited. Also, earnings from the trading portfolio constitute a limited share of our total earnings.

When a hedging instrument does not fully correspond to the hedged risk, any difference between the hedging contract entered into and the hedged exposure is recognised in the income statement as part of the gain (loss) from the trading portfolio.

## Accounting policies

Market value adjustments of physical and financial contracts relating to energy that are concluded with a view to generating gains from short-term price changes are recognised as revenue.

Overview of the Group's trading portfolio, DKK million	2017		2016	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Oil swaps	287	(361)	848	(810)
Gas swaps and options	2,772	170	2,199	440
Power swaps and options	5,566	363	1,647	3
Carbon emissions allowances	44	(14)	69	(18)
Coal	51	(40)	20	10
<b>Total</b>	<b>8,720</b>	<b>118</b>	<b>4,783</b>	<b>(375)</b>

## Market trading mandates

VaR max. in 2017: DKK 70 million

VaR indicates the largest loss in one trading day to a probability of 95%. VaR is based on data for the past 60 trading days with the heaviest weighting being assigned to the most recent trading days.

Stress max. in 2017: DKK 400 million

Stress indicates the largest daily loss we risk sustaining with the given portfolio. Stress is based on data from 1 January 2006 to the present day.

Maximum open positions in trading portfolio

- Max. 15TWh of gas
- Max. 4 million boe of oil
- Max. 8TWh of power
- Max. 3 million tonnes of CO<sub>2</sub>
- Max. 2 million tonnes of coal

The contractual principal amount has been determined as the net position per derivative type. The table shows the market value of our derivatives which are included in the trading portfolio at 31 December 2017.

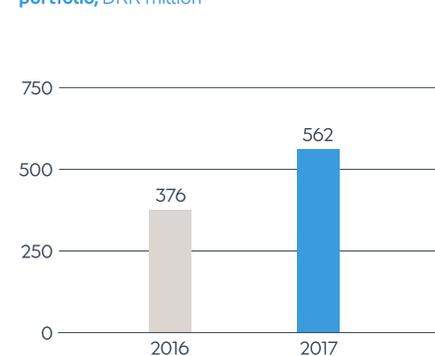

Trading activities are carried out within mandates approved by the Board of Directors. The mandates comprise a value-at-risk (VaR) mandate and a stress mandate as well as a limit for the maximum positions measured in energy units per product (oil, gas, etc.).

Daily position in the trading portfolio, market trading mandates, DKK million

Annual contribution margin from the trading portfolio, DKK million

## 7.4 Sensitivity analysis of financial instruments

The sensitivity analysis in the table shows the effect of market value changes assuming a relative price change at 31 December 2017.

Effect on profit (loss) before tax comprises financial instruments that remained open at the balance sheet date, and which have an effect on profit (loss) in the current financial year. The effect is broken down by:

- trading portfolio; these contracts will affect profit
- Other financial instruments include economic hedging and commercial contracts; the market value changes of contracts allocated as economic hedges will be offset, in full or in part, by a change in the hedged risk.

Effect on equity before tax comprises financial instruments that remained open at the balance sheet date, and which are value-adjusted directly in equity.

Financial instruments include derivatives as well as receivables and payables in foreign currencies.

The illustrated sensitivities only comprise our financial instruments and therefore omit the effect from contracts concluded under which physical delivery of the underlying assets is made, as these are not recognised as financial instruments in accordance with IFRS 9.

### Sensitivity analysis of financial instruments, DKK million

Risk	Price change	31 December 2017			31 December 2016		
		Effect on profit (loss) before tax		Effect on equity before tax	Effect on profit (loss) before tax		Effect on equity before tax
		Trading portfolio	Other financial instruments <sup>1</sup>		Trading portfolio	Economic hedging <sup>1</sup>	
Oil	10%	10	134	-	10	(86)	-
	-10%	(10)	(134)	-	(10)	86	-
Gas	10%	(81)	(607)	-	(107)	(2,773)	-
	-10%	75	607	-	107	2,773	-
Power	10%	86	(952)	-	126	(885)	-
	-10%	(81)	959	-	(135)	894	-
Coal	10%	(6)	(43)	-	(1)	(43)	-
	-10%	6	43	-	1	43	-
USD	10%	91	131	(132)	38	(243)	-
	-10%	(91)	(131)	132	(38)	243	-
GBP	10%	31	(2,312)	(1,534)	(57)	(2,112)	(1,165)
	-10%	(31)	2,312	1,942	57	2,112	1,285
EUR	10%	419	(1,304)	522	175	(468)	-
	-10%	(419)	1,304	(522)	(175)	468	-
Interest	100 basis points	-	-	-	(255)	-	(4)

If the hedged exposure had been included in the sensitivity analysis, the effect of a price change would have been reduced or offset entirely.

Net investments and associated hedging of net investments in foreign subsidiaries are not included in the table, as the effect of the

sum of the investment and the hedging is considered to be neutral to price changes.

A 10% increase in the currencies hedged in connection with net investments would reduce equity by DKK -2,969 million (2016: DKK -2,442 million) arising from the hedging instruments. All other conditions being equal, a decrease in

the exchange rate would have had a corresponding opposite effect.

<sup>1</sup> Other financial instruments include derivatives classified as economic hedging comprises derivatives entered into to hedge future financial risks. The market value changes of these contracts will be offset, in full or in part, by a change in the hedged risk. Also included are commercial contracts recognised at market value.

## 7.5 Credit risks

We are exposed to credit risks from our trading partners and customers. A large part of our counterparty risks concerns major international energy companies and banks. Such trading is regulated under standard agreements, such as EFET and ISDA agreements, which feature, for instance, credit rating and netting provisions. Our credit exposure is mainly concentrated on counterparties in Denmark, the UK, Germany and Sweden.

We limit our credit risks by:

- systematically rating significant counterparties
- granting credit limits or
- demanding that collateral be furnished or credit insurance.

### Credit quality of the Group's counterparties, DKK million

	2017	2016
AAA/Aaa	23,329	14,047
AA/Aa	5,197	3,687
A/A	4,969	7,382
BBB/Baa	1,712	2,558
Non-rated	11,072	9,849
<b>Total credit exposure</b>	<b>46,279</b>	<b>37,523</b>

The table shows the credit quality of our counterparties distributed by category. In addition, we have receivables and construction contracts related to the construction of offshore wind farms amounting to DKK 13.349 million where we have collateral in the offshore wind farm under construction.

The counterparties and credit limits granted are monitored on an ongoing basis. The monitoring is based on the framework established by our Board of Directors and Executive Board. For the most significant counterparties, an internal credit rating is required to determine the internal rating and the granting of credit limits. The rating is based on information from external credit rating agencies, publicly available information and own analyses.

We suffered no losses from any single major counterparty in 2017 or 2016.

The credit risk from our financial assets primarily concerns derivatives, cash and bond portfolios as well as receivables. The assessment is based on the individual counterparty's ratings with Standard & Poor's, Moody's and Fitch. The figures do not reflect our actual credit exposure as the positions are calculated before offsetting our debt to such counterparties.

The AAA/Aaa category covers our position in Danish AAA-rated government and mortgage bonds. The non-rated category primarily consists of trade receivables from customers, such as end-users and PSO customers.

### Accounting policies

We only offset positive and negative values if we are entitled to and intend to settle several financial instruments net.

### Offsetting of financial assets, DKK million

	Derivatives	Trade receivables	2017	Derivatives	Trade receivables	2016
Financial assets	9,743	33,270	43,013	21,734	30,349	52,083
Financial liabilities, offset	(5,000)	(29,480)	(34,480)	(14,065)	(28,061)	(42,126)
<b>Financial assets in the balance sheet</b>	<b>4,743</b>	<b>3,790</b>	<b>8,533</b>	<b>7,669</b>	<b>2,288</b>	<b>9,957</b>
Amounts not offset in the balance sheet:						
Liabilities with right of set-off	(1,611)	-	(1,611)	(1,697)	-	(1,697)
Collateral received in the form of bonds	(787)	-	(787)	(773)	-	(773)
<b>Net</b>	<b>2,345</b>	<b>3,790</b>	<b>6,135</b>	<b>5,199</b>	<b>2,288</b>	<b>7,487</b>

### Offsetting of financial liabilities, DKK million

	Derivatives	Trade payables	2017	Derivatives	Trade payables	2016
Financial liabilities	8,700	32,327	41,027	19,683	30,330	50,013
Financial assets, offset	(5,000)	(29,480)	(34,480)	(14,065)	(28,061)	(42,126)
<b>Financial liabilities in the balance sheet</b>	<b>3,700</b>	<b>2,847</b>	<b>6,547</b>	<b>5,618</b>	<b>2,269</b>	<b>7,887</b>
Amounts not offset in the balance sheet:						
Assets with right of set-off	(1,611)	-	(1,611)	(1,697)	-	(1,697)
Collateral provided in the form of bonds	(40)	-	(40)	(276)	-	(276)
<b>Net</b>	<b>2,049</b>	<b>2,847</b>	<b>4,896</b>	<b>3,645</b>	<b>2,269</b>	<b>5,914</b>

The table shows our financial assets and liabilities where a share is offset and is therefore presented net. We have a number of counterparties in respect of which we are both buyer and seller of financial contracts, etc. Consequently, our gross financial assets and liabilities can be significant before offsetting. Offsetting is typically limited within specific products.

The decrease in the amount offset regarding derivatives is mainly attributable to the decrease in the market value of oil derivatives.

## 7.6 Categories of financial instruments

### Categories of financial instruments

Financial instruments are used for various purposes. The purpose determines the category, and whether the value adjustment of the instrument should be recognised in the profit (loss) for the year or as part of the hedging reserve in equity.

#### Categories of financial instruments, DKK million

	2017	2016
Energy and currency derivatives	2,589	4,945
Securities	25,280	16,533
<b>Financial assets measured at fair value via income statement</b>	<b>27,869</b>	<b>21,478</b>
Interest derivatives	-	78
Currency derivatives	2,281	3,666
<b>Derivatives (assets) used as hedging instrument</b>	<b>2,281</b>	<b>3,744</b>
Trade receivables	9,170	7,286
Other accounts receivable	8,812	5,204
<b>Financial assets measured at amortised cost</b>	<b>17,982</b>	<b>12,490</b>
Energy and currency derivatives	2,214	4,201
<b>Financial liabilities measured at fair value via income statement</b>	<b>2,214</b>	<b>4,201</b>
Interest derivatives	-	3
Currency derivatives	2,160	2,726
<b>Derivatives (liabilities) used as hedging instrument</b>	<b>2,160</b>	<b>2,729</b>
Bank loans and issued bonds	29,636	24,183
Trade payables	11,499	10,024
Other accounts payable	2,767	4,032
<b>Financial liabilities measured at amortised cost</b>	<b>43,902</b>	<b>38,239</b>

The fair value of financial instruments measured at amortised cost is identical to the carrying amount with the exception of bank loans and issued bonds where the market value is stated in note 6.1.

The table shows our financial instruments divided into categories. The category indicates how the financial instrument is recognised in the financial statements.

## 7.7 Fair value measurement

### Fair value hierarchy, DKK million

	Assets			Equity and liabilities
	Securities	Derivatives	Other receivables	Derivatives
<b>2017</b>				
Level 1	22,490	444	-	667
Level 2	2,790	3,478	-	2,602
Level 3	-	948	105	1,105
<b>Total 2017</b>	<b>25,280</b>	<b>4,870</b>	<b>105</b>	<b>4,374</b>
<b>2016</b>				
Level 1	13,428	2,461	-	1,467
Level 2	3,105	5,959	-	5,037
Level 3	-	269	-	426
<b>Total 2016</b>	<b>16,533</b>	<b>8,689</b>	<b>-</b>	<b>6,930</b>

### Valuation principles and key assumptions

In order to minimise the use of subjective estimates or modifications of parameters and calculation models, it is our policy to determine fair values based on external information that most accurately reflects the fair values.

Fair values are determined continuously by our Risk Management function, which reports to the CFO.

### Accounting policies

Level 1 comprises quoted securities and derivatives that are traded in active markets.

Level 2 comprises derivatives, where valuation models with observable inputs are used to measure fair value.

Level 3 comprises primarily long-term contracts on the purchase/sale of, in particular, power and gas.

The fair values are based on assumptions concerning the long-term prices of, in particular, power, gas, coal, USD, EUR, volatilities as well as risk premiums in respect of liquidity and market risks. Since there are no active markets for the long-term prices of power, oil and gas, the fair value has been determined through an estimate of the future prices. The most important parameter resulting in commodity contracts being classified as level 3 is the power price. Normally, the price can be observed for a maximum of five years in the power market, after which an active market no longer exists. Beyond the five-year horizon, the energy price is thus projected on the basis of the observable forward price for years one to five. As the forward price of power develops stably during the five-year period, the projection over a small number of years is not deemed to be associated with any material risk.

In connection with the divestment of our Oil & Gas business, we will receive USD 100 million if the Rosebank field is developed. This payment is recognised at fair value under other receivables.

All assets and liabilities measured at fair value are measured on a recurring basis.

# 8. Other notes

<b>Related-party transactions</b>	141
<b>Operating lease obligations</b>	142
<b>Auditor's fees</b>	143
<b>Contractual obligations</b>	143
<b>Company overview</b>	144

## 8.1 Related-party transactions

Related parties that have control over the Group comprise the Danish State, represented by the Danish Ministry of Finance.

Related parties with a significant influence included Goldman Sachs until 2 March 2017, when Martin Hintze from Goldman Sachs stepped down from Ørsted A/S's Board of Directors.

Other related parties are the Group's associates and joint ventures, members of the Board of Directors and the Executive Board as well as other senior executives.

See note 8.5 for an overview of our joint ventures and associates.

Related-party transactions are made on arm's length terms. Intra-group transactions have been eliminated in the consolidated financial statements.

The remuneration and share programme for Group Executive Management and the Board of Directors is described in notes 2.6 and 2.7.

Board member Peter Korsholm has, through a company indirectly owned by him, had ordinary transactions with Danish Oil Pipe A/S, a wholly-owned subsidiary in the Ørsted Group.

In 2016, we divested Gas Distribution A/S to the Danish transmission system operator Energinet, which is owned by the Danish State. The cash selling price was DKK 2,325 million.

We use the exemption set out in IAS 24.25 concerning entities in which the Danish State is a related party, and transactions with government-related companies are therefore not disclosed. Transactions with owners consist solely of transactions with Goldman Sachs until 2 March 2017.

There were no other related-party transactions during the period.

<b>Joint ventures, DKK million</b>	2017	2016

## 8.2 Operating lease obligations

Our total operating lease obligations increased by DKK 3,106 million relative to last year. The increase in the obligations is primarily due to the fact that we have launched the Hornsea 1 project and in this connection entered into leases amounting to just over DKK 2 billion.

Wind Power's assets held under operating leases comprise mainly seabeds relating to the offshore wind farms in the UK, service vessels and a harbour area in Belfast, Northern Ireland.

Bioenergy & Thermal Power's most significant leased assets are two plots of land. In the Netherlands, we lease the land on which the Encogen Power Station is located, and in the UK, we lease land in Northwich which will be the site of our first Renaissance plant.

Distribution & Customer Solutions mainly lease gas storage facilities in Germany.

Leased assets recognised under 'Other activities' mainly comprise our two office premises in Gentofte and London. The premises are used by employees in most of our segments.

Seabed leases include variable lease payments which depend on the number of MWh generated. However, we have typically agreed on minimum lease payments for the seabeds.

Lease payments recognised in profit (loss) for the year amounted to DKK 885 million (2016: DKK 746 million).

For the purpose of calculating the FFO/adjusted interest-bearing net debt credit metric, the present value and interest expenses of the lease obligations are calculated. The results and the discount rate are shown in the table with supplementary information for operating lease obligations. We reduced the discount rate in 2017 due to the continued low interest rate environment.

### Accounting policies

We recognise operating lease payments in profit (loss) for the year over the term of the lease on a straight-line basis. When using assets held under operating leases in respect of construction of offshore wind farms or other assets, we recognise lease payments in the cost of the asset in step with the construction of the asset.

### Operating lease obligations by segment 2017, DKK million

	Wind Power	Bioenergy & Thermal Power	Distribution & Customer Solutions	Other activities	Total
0-1 year	462	11	145	171	789

### Operating lease obligations by segment 2016, DKK million

0-1 year	166	9	146	182	503
1-2 years	133	6	159	196	494
2-3 years	100	7	79	202	388
3-4 years	99	7	80	199	385
4-5 years	100	7	80	199	386
After 5 years	1,661	145	101	1,538	3,445
<b>Total</b>	<b>2,259</b>	<b>181</b>	<b>645</b>	<b>2,516</b>	<b>5,601</b>
<b>Present value</b>	<b>1,449</b>	<b>108</b>	<b>563</b>	<b>1,866</b>	<b>3,986</b>

### Supplementary information to operating lease obligations, continuing operations, DKK million

	2017	2016
Present value of lease payments	6,095	3,986
Lease payments recognised in profit (loss) for the year	885	746
Calculated interest expenses on lease obligations	234	194
Discount rate applied	3.5%	4.5%

The present value is calculated by discounting the individual obligations each year using our internal discount rate of 3.5% (2016: 4.5%).

## 8.3 Auditor's fees

PwC is Ørsted's auditors appointed by the annual general meeting. PwC audits the consolidated financial statements of Ørsted and our subsidiaries' financial statements in all the countries where we are represented.

Other assurance engagements primarily included reviews of the internal interim balance sheet for Oil & Gas, reviews of non-financial data and of regulatory financial statements.

Tax and VAT advice primarily included advice in connection with the divestment of assets and enterprises and advice in connection with the preparation of tax returns and the calculation of the income subject to international joint taxation.

Other services include other consultancy services from PwC, including advice in connection with due diligence and the divestment of assets and enterprises.

Fees for services other than statutory audit supplied by PwC Denmark to Ørsted amounted to DKK 8 million and consisted of accounting and tax advice in connection with the divestment of assets and enterprises, review of non-financial data and other general accounting and tax advice.

In 2016, PwC provided consultancy services in connection with the IPO. The fee for this totalled DKK 18 million.

Auditor's fees, DKK million	2017	2016
Statutory audit	11	9
Other assurance engagements	2	14
Tax and VAT advice	4	11
Other services	7	9
<b>Total fees to PwC</b>	<b>24</b>	<b>43</b>

In 2017, PwC provided advisory services totalling DKK 1.8 million concerning acquisition and divestment activities, which are not included in our limit for the use of PwC for non-audit services.

## 8.4 Contractual obligations

At 31 December 2017, contractual obligations in Wind Power mainly related to offshore wind turbines, foundations and cables, etc., for the construction of offshore wind farms. The obligations of Bioenergy & Thermal Power mainly related to the biomass conversion of

Asnæs Power Station, while the obligations of Distribution & Customer Solutions related to the roll-out of smart meters.

Contractual obligations by segment, DKK million	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities	Total
	0-1 year	14,363	605	590	-

Basis of reporting	154

# Introduction

## Consolidated ESG statements

In the consolidated ESG statements, we give an account of our results, objectives and accounting policies in accordance with our strategic targets, business drivers and selected environmental, social and governance data.

## Consolidation

Unless otherwise stated, ESG data are consolidated according to the same principles as the financial statements.

Data for accident statistics are calculated according to operational scope, which means that data are included for operations where Ørsted is responsible for safety, including the safety of external suppliers.

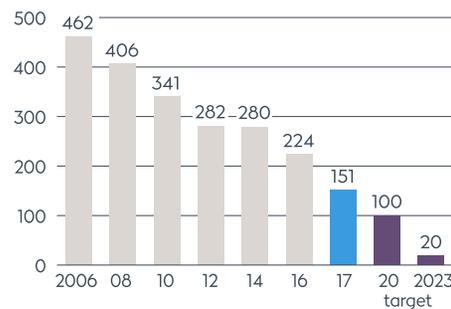

## For further ESG data

Our full ESG data set can be seen in the independent publication 'ESG performance report 2017', which includes:

- a description of Ørsted's work for greater gender diversity at management level in accordance with section 99b of the Danish Financial Statements Act
- the distribution of selected ESG indicators by business unit and country.

In addition, we report on our sustainability efforts in the publication 'Sustainability report 2017'.

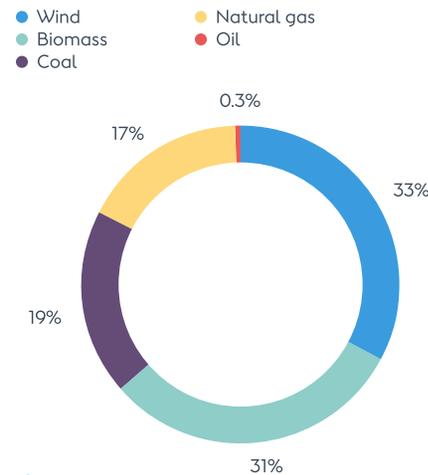

Greenhouse gas intensity, CO<sub>2</sub>e/kWh

In 2017, our CO<sub>2</sub>e/kWh target was approved as a science-based target. Through this target, we are contributing to keeping the temperature increase below 2°C, which is the objective of the Paris Agreement from 2015.

Our goal is to reduce greenhouse gas emissions from heat and power generation by 96% by 2023 relative to 2006.

Total power and heat generation 2017 by energy source

The green share of the generation increased from 50% in 2016 to 64% in 2017.

The increase was due to higher generation from off-shore wind combined with increased use of biomass and reduced use of coal for thermal generation.

# TRIR of 6.4

Total Recordable Injury Rate (TRIR) has been reduced from 6.8 in 2016 to 6.4 in 2017. The target is a TRIR of 5.7 or less by the end of 2020.

# LTIF of 1.6

The Lost-Time Injury Frequency (LTIF) has been reduced from 1.8 in 2016 to 1.6 in 2017.

# 0 fatal accidents

Our last fatal accident was in 2012.

# Environment

Decided offshore wind capacity rose by 1.5GW from 2016 to 2017. The increase was mainly due to the investment decision on Hornsea 2, which contributed 1.4GW.

Installed offshore wind capacity increased by 0.3GW to a total of 3.9GW after the opening of Burbo Bank Extension in 2017. Our 2025 ambition is to construct 11-12GW of offshore wind capacity.

The generation capacity of offshore wind increased by 0.5GW from 2016 to 2017. The increase can be attributed to Burbo Bank Extension as well as generation from the first offshore wind turbines at Race Bank and Walney Extension.

The combination of higher offshore wind capacity and better wind conditions contributed to 42% higher wind-based generation in 2017 than in 2016.

In 2017, thermal heat and power generation was 2% lower than in 2016. In 2017, we inaugurated the converted Skærbæk Power Station, which can now use biomass instead of natural gas. We will continue the transition from fossil fuels to biomass, and we will stop the use of coal by 2023.

As a result of the above, the green share of our generation increased from 50% in 2016 to 64% in 2017.

At the same time, we reduced our greenhouse gas intensity (mainly CO<sub>2</sub>) by 33% from 2016 to 2017.

## Accounting policies

### Decided (FID) capacity, offshore wind

Decided (FID) capacity is the cumulative installed offshore wind capacity, including capacity for offshore wind farms where a final investment decision (FID) has been made.

### Installed capacity, offshore wind

Installed offshore wind capacity is calculated as the cumulative offshore wind capacity installed by Ørsted. The capacity is calculated as installed gross capacity before divestments.

### Generation capacity, offshore wind

Generation capacity is calculated as the power generation capacity which Ørsted produces and reports. The same scope and consolidation as for power generation are used.

Generation capacity is calculated and included from the time when individual offshore wind turbines pass the 240-hour test. Generation capacity, offshore wind has been calculated at 31 December. The Gunfleet Sands and Walney 1 and 2 offshore wind farms have been consolidated according to ownership interest. The other wind farms are financially consolidated.

### Availability, load factor, wind speed and wind energy content for offshore wind

Availability, load factor, wind speed and wind energy content are calculated only for offshore wind farms. The time-based availability factor (availability) is calculated as the ratio of the number of hours the offshore wind farms are available for power generation to the total number of hours in a given period. Total availability is determined by weighting the individual offshore wind farms' availability by the capacity of the offshore wind farm. Availability is commercially adjusted.

The load factor is calculated as the ratio between actual generation over a period relative to potential generation which is possible by continuously exploiting the maximum capacity over the same period. The load factor is commercially adjusted.

Commercially adjusted means that, for Danish and German offshore wind farms, availability and load factor, respectively, are adjusted if the offshore

wind farm has been financially compensated by the transmission system operators in situations where the offshore wind farm is available for generation, but the output cannot be supplied to the grid due to maintenance or grid interruptions. Offshore wind farms in the UK are not compensated for non-access to the grid.

New offshore wind turbines are included in the calculation of availability and load factor once they have passed the 240-hour test.

Wind speed shows the wind speeds of Ørsted's offshore wind farms. The wind speed is delivered for a number of areas where the individual offshore wind farms are located. Wind speed measurements are weighted on the basis of the capacity of the individual offshore wind farms and consolidated into an Ørsted total in the same way as generation. The wind speed of the period can be compared to a historical average. The wind speed measurements are provided by an external supplier.

Wind energy content is calculated as the ratio between actual gross generation in a given period and generation in a 'normal wind year'. Actual generation is calculated as actual net generation adjusted for availability. The wind energy content for new offshore wind farms is included from the beginning of the first calendar year in which the entire offshore wind farm is in operation.

### Generation

Power generation from wind is calculated as sold generation. The Gunfleet Sands and Walney 1 and 2 offshore wind farms have been consolidated according to ownership interest. The other wind farms are financially consolidated.

Thermal power generation is determined as net generation sold based on settlements from the official Danish production database. Data for generation from foreign facilities are provided by the operators.

Thermal heat and steam generation is measured as net output sold to heat customers.

Degree days are a measure of how cold it has been and thus indicate the amount of energy needed to heat a building. The number of degree days helps to compare the heat demand for a given year with

a normal year. A degree day is an expression of a difference of 1°C between the inside daily mean temperature of 17°C and the outside daily mean temperature over a period of 24 hours. The number of degree days in a day is therefore calculated as the difference between 17°C and the outside daily mean temperature. The source of degree days is the Danish Technological Institute, Energy and Climate.

### Coal share of fuels used for thermal heat and power generation

The fuel consumption for heat and power generation at the individual power plants is stated in GJ. The coal share is calculated as the coal consumption in GJ relative to the total fuel volume in GJ.

### Biomass share of thermal heat and power generation

This is calculated as the green share of heat and power generation, but is only shown for thermal generation, i.e. for the business unit Bioenergy & Thermal Power.

### Sourcing of certified biomass

Certified biomass is defined as wood-based biomass; wood pellets and wood chips.

Certified biomass must be certified within at least one of the categories defined in the Danish industry agreement on sustainable biomass.

Certified biomass is calculated as the share of sourced certified wooden biomass out of the total sourcing of wooden biomass delivered to the CHP plants.

The reporting of certified biomass began in August 2016 on the start date of the Danish industry agreement on certification and reporting of certified biomass.

### Greenhouse gas emissions

Greenhouse gas intensity is defined as the greenhouse gas emissions divided by the total heat, power and steam generation.

Greenhouse gases comprise greenhouse gas emissions in accordance with the GHG Protocol from the combustion of fuels in thermal heat and power generation. Greenhouse gases thus comprise CO<sub>2</sub> (carbon dioxide), N<sub>2</sub>O (dinitrogen oxide) and CH<sub>4</sub> (methane).

In practice, waste is considered a partially carbon-neutral fuel, as it consists of both fossil fuels and biomass-based fuels. We use a conversion factor to calculate the carbon emissions from the incineration of waste. The conversion factor (37kg CO<sub>2</sub>/GJ waste) has been used by the Danish Centre for Environment and Energy since 1990 and until today.

### Green share of heat and power generation

The green (renewable energy) share of our heat and power generation and the distribution of the generation on the individual energy sources and fuels are calculated on the basis of the generation from the plants.

Wind-based generation is calculated as a total, as there is only one source of power.

For the CHP plants which can use several different fuels the calculation is as follows: For the individual CHP plant unit in the given period, the share of the specific fired fuel (e.g. biomass) is calculated relative to the total fired fuel quantity. The fired fuel share is then multiplied by the total heat and power generation (including steam) for the specific unit in the specific period.

This results in the fuel-based generation for the individual unit – for example the biomass-based generation of heat and power in the CHP plant unit.

All the calculated fuel-based generation and the wind power generation are then added up to a total, which tallies with the total generation.

The percentage share of the individual energy sources is calculated by dividing the generation from the individual energy source by the total generation.

In practice, waste consists of a mixture of biomass and fossil fuel-based parts. When calculating the renewable energy share, waste fuel is therefore divided into a biodegradable and a non-biodegradable part. Key figures from the Danish Centre for Environment and Energy are used for this purpose.

The following energy sources and fuels are considered renewable energy: wind, biomass, waste (biodegradable). The following energy sources are considered fossil energy sources: coal, natural gas, oil and waste (non-biodegradable).

# Social

Strategic target	Business driver	Title	Unit	Target	2017	2016
		<b>Employees</b>				
		Total number of employees at 31 December	Number of FTEs		5,638	5,775
		Average number of employees for the year	Number of FTEs		5,738	5,894
		Loyalty	Scale 0-100		84	83
●		Employee satisfaction	Scale 0-100	≥ 77 (2020)	76	76
		<b>Safety</b>				
		Fatal accidents	Number	0	0	0
		LTIF (lost-time injury frequency)	Per million working hours		1.6	1.8
●		TRIR (total recordable injury rate)	Per million working hours	≤ 5,7 (2020)	6.4	6.8
		<b>Sales and distribution</b>				
	●	Gas sales	TWh		129.0	143.4
	●	Power sales	TWh		37.5	36.5
	●	Power distribution	TWh		8.4	8.5
		<b>Reliability of supply</b>				
●		Reliability of supply (power cuts per customer, SAIFI)	Number	≤ DK average	0.42	0.39
		<b>Customer satisfaction</b>				
●		Customer satisfaction, B2C in Denmark	Scale 1-100	≥ 80 (2020)	76	76
●		Customer satisfaction, B2B	Scale 1-100	≥ 80 (2020)	77	75
●		Customer satisfaction, distribution customers in Denmark	Scale 1-100	≥ 80 (2020)	82	83

The number of employees fell by 2% from 2016 to 2017. The decrease was due to the divestment of the company A2SEA and staff reductions in the business units Bioenergy & Thermal Power and Distribution & Customer Solutions. On the other hand, the number of employees increased in Wind Power.

Loyalty and satisfaction are both high. With an employee satisfaction score of 76 in this year's employee satisfaction survey, we are close to achieving our target of 77 in 2020.

Safety KPIs showed good progress again in 2017.

In 2017, we introduced a new safety target, TRIR. TRIR decreased from 6.8 in 2016 to 6.4 in 2017. The aim is for a TRIR of less than 5.7 in 2020.

LTIF decreased from 1.8 in 2016 to 1.6 in 2017.

There were no fatal accidents in 2017.

We have increased our satisfaction target for business customers (B2B) to at least 80 in 2020 (previously 75).

## Accounting policies

### Employees

The reporting covers contractually employed employees in Danish and foreign Ørsted companies in which Ørsted holds an ownership interest of more than 50%. Employees in associates are not included.

Employee data are recognised based on records from the Group's ordinary registration systems. The number of employees is determined as the number of employees at the end of each month converted to full-time equivalents (FTEs).

Employees who have been made redundant are recognised until the expiry of their notice period, regardless of whether they have been released from all or some of their duties during their notice period.

### Employee satisfaction and loyalty

Ørsted conducts a comprehensive employee satisfaction survey once a year. All Ørsted employees are invited to participate in the survey. In the survey, a number of questions are asked, for example, about employee satisfaction and loyalty. The answers are given on a scale from 1 to 10 and are subsequently converted to index figures on a scale from 0 to 100.

### Safety

Occupational injuries are calculated according to operational scope. Data from companies wholly or partly owned by Ørsted and where Ørsted is responsible for safety are included. Occupational injuries and lost-time injuries are calculated for both our own employees and suppliers. Data from Danish and foreign locations are recognised.

The lost-time injury frequency (LTIF) is calculated as the number of lost-time injuries per one million hours worked. The number of hours worked is based on 1,667 working hours annually per full-time employee and monthly records of the number of employees converted into full-time employees. For suppliers, the actual number of hours worked is recognised on the basis of data provided by the supplier, access control systems at locations or estimates.

LTIF includes lost-time injuries defined as injuries that result in incapacity for work for one or more calendar days in addition to the day of the incident.

In addition to lost-time injuries, TRIR also includes injuries where the injured person is able to perform restricted work the day after the accident as well as accidents where the injured person has received medical treatment.

### Power and gas sales

Sales of power and natural gas are calculated as physical sales to retail and wholesale customers and exchanges. Sales of power and gas are based on readings from Ørsted's trading systems. Internal sales to Bioenergy & Thermal Power are not included in the statement.

### Power distribution

Power distribution is determined on the basis of data from the official system in Denmark, which measures and calculates total area consumption.

### Reliability of supply

The frequency of announced and unannounced power cuts for customers is expressed in terms of SAIFI (system average interruption frequency index), which is calculated as the average number of power cuts per customer per year.

In 2017, we adjusted SAIFI to only include the distribution networks for which Radius is responsible. This means that SAIFI is shown exclusive of transmission grids. Comparative figures are adjusted accordingly. In the ESG performance report 2017, SAIFI is shown both with and without transmission grids.

### Customer satisfaction

Customer satisfaction for residential customers (B2C) in Denmark is measured according to interaction between the customer and Ørsted. The score is therefore not an expression of customers' overall satisfaction with Ørsted, but is rather related to a given situation. The score is calculated as a weighted score based on a number of different types of touch points. The current touch points are customer service for gas and power, outbound sales and web. An external supplier conducts interviews.

Customer satisfaction for business customers (B2B) is determined on the basis of customer satisfaction surveys among Ørsted's business customers in Denmark, the UK and Sweden. Customer satisfaction is determined on the basis of interviews about customers' satisfaction with Ørsted as a whole. The survey only comprises active customers with whom Ørsted has been in touch in connection with contracts for the supply of power or gas in the previous or next month. So-called sleeping customers are therefore not included in the statement. The method follows the ACSI model based on the EPSI scale. External agencies conduct the interviews and report absolute and weighted results. As of 2017, B2B customer satisfaction is extended from comprising Danish customers only to also include customers from other markets.

Customer satisfaction for distribution customers in Denmark is determined on the basis of different types of interactions with distribution customers: Disruption of supply, replacement of meters as well as customer and market support. Customer satisfaction is measured as the customer's satisfaction in a specific context. Respondents are randomly selected, and the survey is carried out by an external supplier.

Customer satisfaction for residential and distribution customers thus relates to a specific situation, whereas customer satisfaction for business customers is an expression of customers' satisfaction with Ørsted as a whole. We have a number of very large business customers. In respect of these, it is important for us to assess the customer relationship in general and not just the experience of a specific situation.

# Governance

Strategic target	Business driver	Title	Unit	Target	2017	2016
<b>Board members</b>						
		Women on the Board of Directors of Ørsted A/S	%		50	38
<b>Good business conduct</b>						
		Substantiated whistleblower cases	Number		3	3
		– Cases transferred to the police	Number		0	0

In 2017, there was equal gender representation on the Board of Directors, as the share of women was 50%.

In 2017, three substantiated cases of inappropriate or unlawful behaviour were reported through our whistleblower scheme. Two cases concerned violation of employment policies, and one case concerned a conflict of interest.

The cases have had consequences for the employees involved.

None of the cases reported were critical to the business or affected Ørsted's financial results.

We take all cases seriously and do what we can to prevent recurrences.

## Accounting policies

### Women on the Board of Directors of Ørsted A/S

The employee representatives on the Board of Directors are not included in the data and the targets for women on the Board of Directors.

### Substantiated whistleblower cases

Ørsted's whistleblower hotline is available to both internal and external business partners so that they can report suspected or actual cases of inappropriate or illegal business conduct.

Whistleblower cases are received and handled by Internal Audit, which also receives similar reports through the management system and from compliance officers.

All cases are handled in accordance with the guidelines for the handling of whistleblower reports approved by the Audit and Risk Committee which is ultimately responsible for the whistleblower scheme.

Only cases which are closed during the financial year, and which have been reported to the Audit and Risk Committee as fully or partially substantiated, are included.

### Cases transferred to the police

Cases transferred to the police are the number of whistleblower cases reported in accordance with the accounting policies mentioned above which are transferred to the police.

# Basis of reporting

## Accounting policies

This section describes the accounting policies applied to the ESG statements for the Group as a whole, while the specific accounting policies for the individual items are described in the previous sections.

## Requirements, standards and guidelines

Pursuant to section 99a of the Danish Financial Statements Act, Ørsted is obliged to account for the company's CSR activities and report on business strategies and activities with regard to human rights, labour rights, anti-corruption as well as the environment and the climate.

Ørsted is a signatory to the UN Global Compact. The UN Global Compact provides enterprises with a strategic framework for incorporating ten principles on human rights, labour rights, anti-corruption measures as well as the environment and the climate into their strategy and business processes. The ten principles form the basis of Ørsted's sustainability efforts. Ørsted is consistently working to promote the principles.

Companies which are signatories to the UN Global Compact are under an obligation to submit and publish their annual communication on progress (COP) report, in which they must detail the progress made in implementing the ten UN Global Compact principles.

By publishing its COP report, Ørsted complies with section 99a of the Danish Financial Statements Act, provided that the annual report includes a reference to where the information is publicly available.

Ørsted's Sustainability Report (Orsted.com/baeredygtighed2017) is the Group's COP report and is available on the Global Compact website at <https://www.unglobalcompact.org/what-is-gc/participants/2968#cop>.

Under section 99b of the Danish Financial Statements Act, Ørsted must account for the company's objectives and policies which over time will ensure greater diversity in relation to gender representation at management level. This account can be found in our report 'ESG performance report 2017', but information about gender distribution is also included in Ørsted's COP report and consolidated ESG statements.

## Consolidation of ESG data

Unless otherwise stated, ESG data are consolidated according to the same principles as the financial statements – financial scope.

Thus, the consolidated ESG statements include the parent company Ørsted A/S and subsidiaries controlled by Ørsted A/S. Data from associates and joint ventures are not included in the consolidated ESG statements.

Data for accident statistics are calculated according to operational scope, which means that data are included for operations where Ørsted is responsible for safety, including the safety of external suppliers.

In 2017, we divested our Oil & Gas business unit. Data for Oil & Gas are therefore not included in the consolidated ESG statements, neither for 2017 nor for previous years, as it is a discontinued activity.

## Materiality assessment

In 2017, we focused the contents of the ESG statements on areas which are strategic focus areas for Group Executive Management. These are areas which are either included in the Group's strategic targets, or which are categorised as business drivers. We also include the other ESG data described in the Group's annual report.

In 2017, this has resulted in a number of – primarily supplementary sustainability indicators – being omitted from the consolidated ESG statements compared to 2016.

## In 2017, the following indicators are not included compared to 2016

- Biomass share of Danish CHP generation capacity
- EU ETS carbon emissions
- Gas distribution
- Customer complaints
- Reputation
- Employee turnover rate
- Gender diversity in management (organisational levels)
- Lost-time injuries (number)
- Environmental accidents
- Share of employees who have completed a course in good business conduct
- Business partner screenings

## In 2017, the following indicators were added compared to 2016

- Wind speed
- TRIR

Share capital composition and dividends are disclosed in note 6.2 to the consolidated financial statements. You can also find information on treasury shares.

# 1. Basis of reporting

## Accounting policies

The parent company financial statements have been prepared in accordance with the provisions of the Danish Financial Statements Act (reporting class D).

The accounting policies remain unchanged from the previous year.

Unless otherwise stated, the financial statements are presented in Danish kroner (DKK) rounded to the nearest million.

The parent company accounting policies are consistent with the accounting policies described for the consolidated financial statements, with the following exceptions:

## Foreign currency translation

We recognise exchange rate adjustments of receivables from and payables to subsidiaries as financial income and expenses in the income statement when the balances are accounted for as part of the total net investment in foreign enterprises. Likewise, we recognise foreign exchange gains and losses on loans and derivatives in the income statement as financial income and expenses when they have been entered into to hedge the net investment in the foreign enterprises.

## Revenue

Rental income comprises income from commercial leases and is recognised over the term of the lease. Income from services is recognised when delivery has taken place.

## Dividends from investments

Dividends from subsidiaries and associates are recognised in the income statement for the financial year in which the dividends are approved at the annual general meeting. If the dividends exceed the total income after the time of takeover, the dividends are recognised as a reduction of the cost of the investment under assets.

## Investments

We measure our investments in subsidiaries and associates at cost. If there is any indication that the value of a company is lower than our future earnings in the company, impairment testing of the company is carried out as described in the consolidated financial statements. The carrying amount is written down to the recoverable amount whenever the carrying amount exceeds the future earnings in the company (recoverable amount).

If we have a legal or constructive obligation to cover a deficit in subsidiaries and associates, we recognise a provision for this.

## Tax

In 2005, we chose Danish international joint taxation. We have continuously assessed when it will be the most appropriate time to withdraw from the international joint taxation scheme, and we currently expect that this will be for the 2017 income year, which is reflected in the annual report. We will make the final decision in 2018 when preparing the tax returns for 2017. Therefore, the retaxation liability has been transferred to tax payable in 2017.

Ørsted A/S is taxed jointly with its Danish subsidiaries. The jointly taxed companies are part of joint taxation with the parent company as the management company.

Subsidiaries are included in the joint taxation from the date they are consolidated in the consolidated financial statements and up to the date on which they are no longer consolidated.

Current tax for 2017 is recognised by the individual jointly taxed companies.

## Statement of cash flows

We do not prepare a separate statement of cash flows for the parent company. Reference is made to the consolidated statement of cash flows on page 68.

## Key accounting estimates

In connection with the preparation of the financial statements, a number of accounting estimates have been made that affect the profit (loss) and balance sheet. Estimates are regularly reassessed by management on the basis of historical experience and other relevant factors.

### Impairment test

If there is any indication that the carrying amount is lower than our future earnings in a company, we test for impairment as described in the consolidated financial statements. The future earnings of the company (recoverable amount) are calculated based on assumptions concerning significant estimates.

## 2. Employee costs

Employee costs, DKK million	2017	2016
Wages and salaries	24	20
Share-based payment	2	3
Remuneration for the Board of Directors	5	5
<b>Total employee costs</b>	<b>31</b>	<b>28</b>

Remuneration for the Executive Board, DKK '000	Henrik Poulsen		Marianne Wiinholt		Executive Board, total	
	2017	2016	2017	2016	2017	2016
Fixed salary	10,024	9,425	5,255	5,062	15,279	14,487
Variable salary	4,504	2,751	2,312	1,560	6,816	4,311
Share-based payment	1,367	1,427	713	889	2,080	2,316
Social security	2	2	2	2	4	4
<b>Total</b>	<b>15,897</b>	<b>13,605</b>	<b>8,282</b>	<b>7,513</b>	<b>24,179</b>	<b>21,118</b>

The remuneration report in the management's review and notes 2.6 and 2.7 to the consolidated financial statements describe the remuneration of the Executive Board and the Board of Directors, share-based payment, termination and bonus scheme for the Executive Board and details on the remuneration of the Board of Directors.

The parent company had an average of five employees in 2017 (2016: five employees).

## 3. Financial income and expenses

Financial income and expenses, DKK million	2017	2016
Interest income from cash, etc.	14	18
Interest income from subsidiaries	1,432	1,842
Interest income from securities at market value	211	417
Capital gains on securities at market value	55	141
Foreign exchange gains	664	1,715
Value adjustments of derivatives	8,751	14,363
Dividends received	2,513	1,630
Other financial income	27	95
<b>Total financial income</b>	<b>13,667</b>	<b>20,221</b>
Interest expenses relating to loans and borrowings	(1,584)	(1,685)
Interest expenses to subsidiaries	(9)	(50)
Capital losses on securities at market value	(217)	(252)
Foreign exchange losses	(1,549)	(4,282)
Value adjustments of derivatives	(7,106)	(15,349)
Other financial expenses	(21)	(27)
<b>Total financial expenses</b>	<b>(10,486)</b>	<b>(21,645)</b>
<b>Net financial income and expenses</b>	<b>3,181</b>	<b>(1,424)</b>

## 4. Tax on profit (loss) for the year and deferred tax

Income tax, DKK million	2017	2016
Tax on profit (loss) for the year	(76)	623
Tax on changes in equity	132	169
<b>Total tax for the year</b>	<b>56</b>	<b>792</b>
<b>Tax on profit (loss) for the year can be broken down as follows:</b>		
Current tax	(1,379)	(231)
Adjustments to deferred tax	1,298	803
Adjustments to current tax in respect of prior years	(360)	670
Adjustments to deferred tax in respect of prior years	365	(619)
<b>Tax on profit (loss) for the year</b>	<b>(76)</b>	<b>623</b>

Development in deferred tax, DKK million	2017	2016
Deferred tax at 1 January	1,744	1,928
Adjustment for the year recognised in profit (loss) for the year	(1,298)	(803)
Adjustments to deferred tax in respect of prior years	(365)	619
<b>Deferred tax at 31 December</b>	<b>81</b>	<b>1,744</b>

Specification of deferred tax, DKK million	2017	2016
Non-current liabilities	81	(3)
Current liabilities	-	17
Retaxation	-	1,730
<b>Deferred tax</b>	<b>81</b>	<b>1,744</b>

## 5. Distribution of net profit

Distribution of net profit, DKK million	2017	2016
<b>Profit (loss) for the year is attributable to:</b>		
Shareholders of Ørsted A/S, proposed dividends for the financial year	3,783	2,522
Shareholders of Ørsted A/S, retained earnings	(5,718)	(2,546)
Coupon and bond discount after tax, hybrid capital owners of Ørsted A/S	716	499
<b>Profit (loss) for the year</b>	<b>(1,219)</b>	<b>475</b>

## 6. Investments in subsidiaries

### Investments in subsidiaries, DKK million

	2017	2016
Cost at 1 January	70,436	54,291
Additions	2,333	16,500
Disposals	(31,007)	(355)
<b>Cost at 31 December</b>	<b>41,762</b>	<b>70,436</b>
Value adjustments at 1 January	(15,681)	(12,175)
Impairment losses	-	(3,506)
Disposals	15,681	-
<b>Value adjustments at 31 December</b>	<b>-</b>	<b>(15,681)</b>
<b>Carrying amount at 31 December</b>	<b>41,762</b>	<b>54,755</b>

Note 8.5 of the consolidated financial statements contains a complete overview of subsidiaries, etc.

We have tested investments in subsidiaries for impairment by comparing the expected future income from the individual subsidiaries with their carrying amounts.

Disposal for the year concern primarily the divestment of our Oil & Gas business, which was closed on 29 September 2017. The divestment resulted in a loss of DKK 4,179 million in the parent company financial statements. See also the description in note 3.6 to the consolidated financial statements.

The sale resulted in a gain of DKK 2,179 million in the consolidated financial statements. The difference occur due to different accounting policies.

Our impairment test in 2017 did not give rise to any impairment of investments in subsidiaries.

In 2016, we impaired the carrying amount of our subsidiaries by DKK 3,506 million. At the same time, a write-down of receivables from subsidiaries from 2015 of DKK 3,506 million was reversed.

## 7. Receivables from subsidiaries

### Non-current receivables from subsidiaries, DKK million

	2017	2016
Cost at 1 January	50,402	64,435
Additions	18,552	21,667
Disposals	(20,248)	(35,700)
<b>Cost at 31 December</b>	<b>48,706</b>	<b>50,402</b>

## 8. Derivatives

Ørsted A/S has assumed the subsidiaries' currency risks via forward exchange contracts, which have subsequently been hedged in the market. Furthermore, hedging contracts have been concluded to hedge the currency risk associated with investments in subsidiaries in foreign currencies.

We have also entered into a number of interest rate swaps to manage our interest rate risk.

The company has fair value hedged loans in GBP and EUR. The value of the fair value hedge offset in the income statement amounted to DKK 289 million (2016: DKK 1,793 million).

Derivatives at the end of December 2017 mature as follows: 2018: DKK -24 million, 2019: DKK -76 million, after 2019: DKK -324 million (2016: 2017: DKK 1,344 million, 2018: DKK -379 million, after 2018: DKK -156 million).

Overview of derivative positions, DKK million	2017		2016	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Oil derivatives	-	-	6,016	1,300
Gas derivatives	-	-	4,834	257
Interest derivatives	550	-	2,022	50
Currency derivatives	4,817	(424)	26,364	(798)
<b>Total</b>	<b>5,367</b>	<b>(424)</b>	<b>39,236</b>	<b>809</b>
<b>Assets</b>		<b>3,596</b>		<b>19,980</b>
<b>Equity and liabilities</b>		<b>(4,020)</b>		<b>(19,171)</b>

See note 7.1 to the consolidated financial statements and the management's review on pages 47-50 for more details on risk and risk management.

## 9. Securities

Securities are primarily liquid AAA-rated Danish mortgage bonds that qualify for repo transactions in the Danish central bank 'Danmarks Nationalbank'. Repo transactions

are transactions where securities are provided as collateral for a loan.

Securities, DKK million	2017	2016
Securities, available	24,766	15,864
Securities, not available for use	40	197
<b>Total securities</b>	<b>24,806</b>	<b>16,061</b>

Securities not available for use are used as collateral for repo loans and trading in financial instruments.

## 10. Loans and borrowings

At 31 December 2017, we had issued hybrid capital with a total notional amount of DKK 17,125 million (2016: DKK 13,371 million). In 2018, one hybrid bond with a notional amount of DKK 3,723 million is expected to be redeemed early and is therefore included in current liabilities. The other hybrid bonds have a 1,000-year term and expire as follows: DKK 5,212 million in 3013, DKK 4,467 million in 3015 and DKK 3,723 million in 3017, respectively.

The long-term portion of bank loans and issued bonds amounted to DKK 25,715 million at 31 December 2017 (2016: DKK 22,164 million), of which DKK 16,528 million (2016: DKK 16,901 million) falls due in more than five years.

The long-term portion of other payables amounted to DKK 27 million at 31 December 2017 (2016: DKK 1,516 million) and falls due in 1-5 years.

## 11. Other provisions

We have made provisions for non-current liabilities totalling DKK 775 million of which DKK 0 million falls due in more than five years. The liabilities concern the divestment of our Oil & Gas business, which was closed on 29 September 2017.

## 12. Contingent liabilities

### Contingent liabilities

#### Guarantees

Ørsted A/S has provided guarantees in connection with participation by subsidiaries and subsidiaries' joint operations and joint ventures in the construction and operation of offshore wind farms and natural gas installations, and has provided guarantees in respect of leases, decommissioning obligations, and purchase, sale and supply agreements, etc.

Ørsted A/S also acts as guarantor with primary liability for bank balances in certain subsidiaries.

#### Indemnities

Ørsted is a member of the reinsurance company Oil Insurance Ltd. In the event of exit, an exit premium will be payable, which has been calculated at USD 6.8 million at 31 December 2017 (2016: USD 19.8 million).

Ørsted A/S is taxed jointly with other companies in the Ørsted Group. As management company, the company has unlimited and joint and several liability together with the other jointly taxed companies for Danish income taxes and withholding taxes on dividends, interest and royalties within the jointly taxed companies.

#### Litigation

Ørsted A/S is not a party to any litigation proceedings or legal disputes that could have an effect on the company's financial position, either individually or collectively.

## 13. Related-party transactions

Related parties are the Board of Directors, the Executive Board, Ørsted A/S's subsidiaries and the Danish State.

Remuneration of the Board of Directors and the Executive Board is disclosed in notes 2.6 and 2.7 and the remuneration report in the review in the consolidated financial statements.

Our related-party transactions are made on arm's length terms.

## 14. Operating lease obligations

We have entered into leases for office premises, primarily in Gentofte (expiring in 2028), Virum (expiring in 2027) and Esbjerg (expiring in 2035). In 2017, an amount of DKK 153 million was recognised (2016: DKK 173 million) in profit (loss) for the year in respect of operating lease payments.

We have entered into leases with subsidiaries for subleasing of office premises.

In 2017, an amount of DKK 123 million was recognised (2016: DKK 146 million) in profit (loss) for the year in respect of rental income.

We have minimum payments of DKK 1,816 million (2016: DKK 2,196 million), most of which concerns subleasing via subleasing agreements.

## 15. Auditor's fees

Auditor's fees, DKK million	2017	2016
Statutory audit	2	1
Other assurance engagements	1	12
Tax and VAT advice	-	8
Other services	1	7
<b>Total fees to PwC</b>	<b>4</b>	<b>28</b>

## 16. Ownership information

Ownership information	Registered office	Ownership interests	Voting share

# Statement by the Executive Board and the Board of Directors

The Board of Directors and the Executive Board have today considered and approved the annual report of Ørsted A/S for the financial year 1 January - 31 December 2017.

The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards as adopted by the EU and additional requirements in the Danish Financial Statements Act. The financial statements of the parent company, Ørsted A/S, have been prepared in accordance with the provisions of the Danish Financial Statements Act.

In our opinion, the consolidated financial statements and the parent company financial statements provide a fair presentation of the Group's and the parent company's assets, liabilities and financial position at 31 December 2017 and of the results of the Group's and the parent company's operations and the Group's cash flows for the financial year 1 January - 31 December 2017.

In our opinion, the management's review provides a fair presentation of the development in the Group's and the parent company's operations and financial circumstances, of the results for the year and of the overall financial position of the Group and the parent company as well as a description of the most significant

risks and elements of uncertainty facing the Group and the parent company.

In our opinion, the consolidated ESG statements (Additional information) represent a reasonable, fair and balanced representation of the Group's social responsibility and sustainability performance and are presented in accordance with the stated accounting policies.

We recommend that the annual report be adopted at the annual general meeting.

# Independent Auditors' Report

## To the shareholders of Ørsted A/S

### Our opinion

In our opinion, the Consolidated Financial Statements give a true and fair view of the Group's financial position at 31 December 2017 and of the results of the Group's operations and cash flows for the financial year 1 January to 31 December 2017 in accordance with International Financial Reporting Standards as adopted by the EU ('IFRS') and further requirements in the Danish Financial Statements Act.

Moreover, in our opinion, the Parent Company Financial Statements give a true and fair view of the Parent Company's financial position at 31 December 2017 and of the results of the Parent Company's operations for the financial year 1 January to 31 December 2017 in accordance with the Danish Financial Statements Act.

Our opinion is consistent with our Auditor's Long-form Report to the Audit and Risk Committee and the Board of Directors.

### What we have audited

The Consolidated Financial Statements of Ørsted A/S for the financial year 1 January to 31 December 2017, pp 63-146 and 166, comprise the consolidated income statement, the consolidated statement of comprehensive income, the consolidated balance sheet, the consolidated statement of changes in equity, the consolidated cash flow statement

and the notes to the consolidated financial statements, including summary of significant accounting policies.

The Parent Company Financial Statements of Ørsted A/S for the financial year 1 January to 31 December 2017, pp 155-166, comprise the income statement, the balance sheet, the statement of changes in equity and the notes to the parent company financial statements, including summary of significant accounting policies.

Collectively referred to as the "Financial Statements".

### Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs) and the additional requirements applicable in Denmark. Our responsibilities under those standards and requirements are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

### Independence

We are independent of the Group in accordance with the International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants (IESBA Code) and

the additional ethical requirements applicable in Denmark. We have also fulfilled our other ethical responsibilities in accordance with the IESBA Code.

To the best of our knowledge and belief, prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014 were not provided.

### Appointment

We were first appointed auditors of Ørsted A/S on 19 April 2010 for the financial year 2010. We have been reappointed annually

### Key Audit Matter

#### Divestment of the Oil & Gas-business

In 2016, the Board of Directors initiated a process with the aim of ultimately exiting from the Group's Oil & gas-business. The divestment was completed On 29 September 2017.

We focused on this area because the divestment is considered a non-routine transaction, with estimates and judgements in respect of the identification and measurement of guarantees, indemnities etc. given to the purchaser.

Refer to note 3.6 in the Consolidated Financial Statements and note 11 in the Parent Company Financial Statements.

by shareholder resolution for a total period of uninterrupted engagement of 8 years including the financial year 2017.

### Key audit matters

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the Financial Statements for 2017. These matters were addressed in the context of our audit of the Financial Statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

### How our audit addressed the Key Audit Matter

We evaluated whether Management had appropriately determined the divestment gain by for example:

- Reading the share purchase agreement.
- Testing the gain statement including the provisions recognised to cover guarantees, indemnities etc. in the share purchase agreement.
- Consider whether the disclosures of the discontinued Oil & gas-business and divestment thereof was in compliance with IFRS.

### Key Audit Matter

#### Divestments of partnership interests

In connection with divestments of partnership interests (often 50%) in offshore wind farms under construction, estimates and judgement are required in respect of the sales price for accounting purpose for the divestment and the subsequent construction contract, respectively, and in calculating the divestment gain. Furthermore, judgement is required in respect of classifying the divested interest as either divestment of assets (gain recognised as part of Other income) or divestment of an enterprise (gain recognised as part of Gain/loss from divestment of enterprises). Finally, judgement is required in respect of whether the Group's retained share in the partnership is a joint operation or a joint venture.

We focused on this area because the calculation of the divestment gain is dependent on complex and subjective judgements by Management and because the presentation in the Income statement is dependent on judgement about the partnership interest disposed and whether the partnership interest retained is a joint operation or a joint venture.

Refer to note 2.5 in the Consolidated Financial Statements.

#### Construction contracts

The accuracy of the revenue recognition related to work in progress of large construction contracts and its presentation in the consolidated income statement is dependent on complex estimation methodologies, including estimates such as the forecasted costs related to the constructions and the degree of completion for construction contracts.

We focused on this area because the revenue recognised with reference to degree of completion both requires complex and subjective judgements by Management.

Refer to note 2.2 and 4.2 in the Consolidated Financial Statements.

### How our audit addressed the Key Audit Matter

We evaluated whether Management had appropriately determined the divestment gain, the presentation hereof and the subsequent treatment of the partnership interest by for example:

- Reading the share purchase agreements.
- Reading the shareholders agreements.
- Reading the construction and other related agreements.
- Consider the sales price for accounting purpose for the divestment and the construction contract, respectively.
- Testing the gain statement on the divestment of the partnership interest including the provisions recognised to cover guarantees, indemnities etc. in the share purchase agreement.
- Consider whether the disclosures of the divestment gain and the subsequent recognition and presentation of the partnership was in compliance with IFRS.

On a sample basis, we tested whether revenue is accurately recorded and challenged the forecasted costs related to the constructions, including the assumptions used, and by evaluating the outturn of previous estimates by agreeing the actual costs incurred post-year end to the forecasted costs for the period.

We also assessed how the project managers determined that the degree of completion was correctly determined through obtaining their calculations and agreeing the inputs to documentary evidence or our independently formed expectation as appropriate.

### Key Audit Matter

#### Transactions with energy financial derivative contracts

The Group enters into a number of energy contracts. Certain of these arrangements are accounted for as derivative financial instruments and are recorded at fair value.

Judgement is required in valuing these derivative contracts, particularly where the life of the contract is beyond the liquid market period.

In addition, Ørsted uses business performance as an alternative to profit (loss) for the year stated in accordance with IFRS. Business performance represents the underlying financial performance of the Group in the reporting period adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods.

We focused on this area because the valuation of financial instruments are dependent on complex and subjective judgements by Management and because the business performance reporting is dependent on consistent use and documentation of hedging rules.

Refer to note 1.1 and 7.2 in the Consolidated Financial Statements.

### How our audit addressed the Key Audit Matter

We assessed the overall trading process for energy contracts, including internal risk management procedures and the system and controls around origination and maintenance of complete and accurate information relating to derivative contracts.

We tested the valuation of derivative contracts at the year-end date. Our audit procedures focused on the integrity of these valuation models and the incorporation of the contract terms and the key assumptions, including future price assumptions and discount rates.

We tested the prices in the models and recalculated valuations for a sample of derivatives, as well as performing sensitivity analyses for level 3 energy derivatives.

We considered Management's use of business performance and tested the adjustments between IFRS and business performance. In this connection, we assessed the hedging rules applied under the business performance accounting policies and whether these are used consistently from period to period.

### Key Audit Matter

#### Onerous contracts and other contractual claims and obligations

The Group's operations include exposures to the risk of litigation, contractual claims from and against third parties and contracts being onerous, particularly in relation to long-term contracts.

We focused on this area because of the range of potential outcomes and the considerable uncertainty around (a) the resolution of various litigations, claims and contractual disputes, and (b) the determination of the amount, if any, to be recognised in the financial statements as a provision, and the related disclosures are inherently subjective.

Refer to note 3.2 in the Consolidated Financial Statements.

### How our audit addressed the Key Audit Matter

We considered the provisions recognised to cover contractual obligations and claims raised against the Group by third parties, inspected relevant legal advice received by the Group in connection with such claims and obtained formal confirmations from the Group's lawyers on the status and potential outcomes of any legal claims with which the Group is dealing. Moreover, we considered the assets related to claims raised by the Group against third parties.

We challenged the valuation of the onerous contract provisions by evaluating whether appropriate judgements and assumptions had been applied in determining the unavoidable costs of meeting the obligation and the estimate of the expected benefits to be received under the contract.

Finally, we also considered the Group's disclosures relating to provisions and/or contingent liabilities and assets for legal and other contractual obligations and claims.

### Statement on Management's Review

Management is responsible for the Management's Review, pp 4-62.

Our opinion on the Financial Statements does not cover Management's Review, and we do not express any form of assurance conclusion thereon.

In connection with our audit of the Financial Statements, our responsibility is to read Management's Review and, in doing so, consider whether Management's Review is materially inconsistent with the Financial Statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

Moreover, we considered whether Management's Review includes the disclosures required by the Danish Financial Statements Act.

Based on the work we have performed, in our view, Management's Review is in accordance with the Consolidated Financial Statements and the Parent Company Financial Statements and has been prepared in accordance with the requirements of the Danish Financial Statement Act. We did not identify any material misstatement in Management's Review.

### Management's responsibilities for the Financial Statements

Management is responsible for the preparation of consolidated financial statements that give a true and fair view in accordance with International Financial Reporting Standards as adopted by the EU and further requirements in the Danish Financial Statements Act

and for the preparation of parent company financial statements that give a true and fair view in accordance with the Danish Financial Statements Act, and for such internal control as Management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the Financial Statements, Management is responsible for assessing the Group's and the Parent Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless Management either intends to liquidate the Group or the Parent Company or to cease operations, or has no realistic alternative but to do so.

### Auditor's responsibilities for the audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the Financial Statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs and the additional requirements applicable in Denmark will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these Financial Statements.

As part of an audit in accordance with ISAs and additional requirements applicable in Denmark, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the Financial Statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's and the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management.

- Conclude on the appropriateness of Management's use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's and the Parent Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the Financial Statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group or the Parent Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the Financial Statements, including the disclosures, and whether the Financial Statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the Consolidated Financial Statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the Financial Statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

# Limited assurance report of the independent auditor

## To the Stakeholders of Ørsted A/S

Ørsted A/S engaged us to provide limited assurance on the data described below and set out in the Environment, Social and Governance (ESG) Statement of the Annual Report of Ørsted A/S for the year ended 31 December 2017.

## Our conclusion

Based on the procedures we have performed and the evidence we have obtained, nothing has come to our attention that causes us to believe that data in the 2017 ESG Statement on pages 147-154 of the Annual Report for the year ended 31 December 2017 has not been prepared, in all material respects, in accordance with the accounting policies.

This conclusion is to be read in the context of what we say in the remainder of our report.

## What we are assuring

The scope of our work was limited to assurance over data in the ESG Statement on pages 147-154 of the Ørsted A/S Annual Report for the year ended 31 December 2017.

## Professional standards applied and level of assurance

We performed a limited assurance engagement in accordance with International Standard on Assurance Engagements 3000 (Revised) 'Assurance Engagements other than Audits and Reviews of Historical Financial Information'. A limited assurance engagement is substantially less in scope than a reasonable assurance engagement in relation to both the risk assessment procedures, including an understanding of

internal control, and the procedures performed in response to the assessed risks; consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

## Our independence and quality control

We have complied with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which includes independence and other ethical requirements founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour. The firm applies International Standard on Quality Control 1 and accordingly maintains a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements. Our work was carried out by an independent multidisciplinary team with experience in sustainability reporting and assurance.

## Understanding reporting and measurement methodologies

Data and information need to be read and understood together with the accounting principles (pages 147-154 of the 2017 Ørsted A/S Annual Report), which Management are solely responsible for selecting and applying. The absence of a significant body of established practice on which to draw to evaluate and measure non-financial information allows for different,

but acceptable, measurement techniques and can affect comparability between entities and over time.

## Work performed

We are required to plan and perform our work in order to consider the risk of material misstatement of the data. In doing so and based on our professional judgement, we:

- Conducted interviews with Group functions to assess consolidation processes, use of company-wide systems and controls performed at Group level;
- Performed an assessment of materiality and the selection of topics for the 2017 Ørsted A/S ESG Statement;
- Conducted analytical review of the data and trend explanations submitted by all business units for consolidation at Group level;
- Evaluated internal and external documentation to determine whether information in the 2017 Ørsted A/S ESG Statement is supported by sufficient evidence.

## Management's responsibilities

Management of Ørsted A/S is responsible for:

- Designing, implementing and maintaining internal control over information relevant to the preparation of data in the 2017 ESG Statement on pages 147-154 in the Annual Report that are free from material misstatement, whether due to fraud or error;
- Establishing objective accounting principles for preparing data;
- Measuring and reporting data in the 2017 ESG Statement based on the accounting principles; and

- The content of the 2017 ESG Statement.

## Our responsibility

We are responsible for:

- Planning and performing the engagement to obtain limited assurance about whether data in the 2017 Ørsted A/S ESG Statement on pages 147-154 of the 2017 Annual Report are free from material misstatement, whether due to fraud or error;
- Forming an independent conclusion, based on the procedures we have performed and the evidence we have obtained; and
- Reporting our conclusion to the Stakeholders of Ørsted A/S.

# Glossary

**Availability:** Time-based availability is the ratio of the number of hours in a given period the offshore wind farms are available for power generation to the total number of hours in the same period. Total availability is weighted on the basis of the size of the individual wind farms. Availability is adjusted for breakdowns if compensation is received from the transmission owner.

**Biomass conversion:** When a CHP plant is converted from using fossil fuels to using biomass such as wood pellets, wood chips and straw. After the conversion, the CHP plant will typically be able to use biomass along with the original fuel types.

**Carbon emissions allowances:** Carbon dioxide emissions allowances subject to the European Union Emissions Trading Scheme (EU ETS).

**CfD:** A Contract for Difference is a subsidy that guarantees the difference between the market reference price and the exercise price won.

**CHP plant:** A Combined Heat and Power (CHP) plant generates both heat and power in the same process.

**Commissioning/COD:** When our assets are in operation, and the legal liability has been transferred from the supplier to us.

**Cost of electricity:** Average cost measured as present value per megawatt hour (MWh) generated from offshore wind power covering costs for development and construction as well as subsequent operation and maintenance of the offshore wind farm.

**Decided (FID) capacity:** Installed offshore wind capacity plus capacity for wind farms where a final investment decision has been made.

**Degree days:** Number of degrees in absolute figures in difference between the average temperature and the official Danish indoor temperature of 17 degrees Celsius.

**EEX:** European Energy Exchange, German power exchange.

**EPC:** Engineering, Procurement and Construction. The part of our business which handles the construction and installation of our offshore wind farms.

**FTE:** Employees (Full-Time Equivalent). The number of full-time employees during a fixed time period.

**Generation capacity:** Ørsted's ownership of the wind turbines. The wind turbines are included when each wind turbine has passed the 240-hour test.

**Green certificates:** Certificate awarded to producers of environment-friendly power as a supplement to the market price of power in the given price area.

**Green dark spread (GDS):** Green dark spread represents the contribution margin per MWh of power generated at a coal-fired CHP plant of a given efficiency. It is determined as the difference between the market price of power and the cost of the coal (including associated freight costs) and carbon emissions allowances used to generate the power.

**Green spark spread (GSS):** Green spark spread represents the contribution margin per MWh generated at a gas-fired power station of a given efficiency. It is determined as the difference between the market price of power and the costs of the gas and carbon emissions allowances used to generate the power.

**Hedging instruments:** Financial and physical instruments that can be used to guarantee a specific price for the purchase or sale of, for example, commodities and currency.

**Installed capacity:** Installed capacity where the offshore wind farm has been completed and has passed the 200-hour test.

**LNG:** Liquefied Natural Gas. Gas that has been liquefied by cooling to minus 161 degrees Celsius. LNG takes up 600 times less space than conventional gas.

**Load factor:** The ratio between the actual power generation in a given period relative to the potential generation which is possible by continuously exploiting the maximum capacity over the same period.

**LTIF:** Lost-Time Injury Frequency. Ørsted defines lost-time injuries as occupational injuries resulting in at least one day's absence from work in addition to the day of the injury.

**NBP:** National Balancing Points, UK gas hub.

**Nord Pool:** The Norwegian-based Nordic power exchange, which facilitates power trading in Norway, Sweden, Finland and Denmark.

**Offshore transmission assets:** Offshore transmission assets connect offshore generation to the onshore grid, and typically include the offshore power transmission infrastructure, an onshore substation and the electrical equipment relating to the operation of the substation.

**O&M:** Operation and Maintenance. The part of our business that operates and maintains our offshore wind farms after installation.

**Partnership income:** Income originating from our partners' purchase of ownership interests in the offshore wind farms. Includes both the gain in connection with the farm-down and the subsequent construction of the wind farm.

**Power station:** A power station generates power only.

**PSO:** Indirect taxes regarding the public service obligation (PSO) which are used to finance research and green energy and are charged to power customers along with other tariff elements.

**Public obligation:** A company with a public obligation is bound by law to deliver power or natural gas to a certain geographic area at prices approved by the Danish Energy Regulatory Authority.

**QHSE:** Quality, Health, Safety and Environment.

**Ramp-up:** Generation until an offshore wind farm has been completed and commissioned.

**ROCs:** Renewable Obligation Certificates issued by Ofgem in the UK to operators of accredited generating stations for the eligible renewable energy they generate. Operators can trade ROCs with other parties.

**Stress:** Method of measuring the market trading risk of loss on a portfolio from day to day, calculated on a fair-value basis.

**Thermal generation:** Power and heat generated through the combustion of fossil fuels, biomass or waste.

**TRIR:** In addition to lost-time injuries, TRIR also includes injuries where the injured person is able to perform restricted work the day after the accident as well as accidents where the injured person has received medical treatment.

**TTF:** Title Transfer Facility, Dutch gas hub.

**TWh:** Terawatt hour. The amount of energy generated in one hour with the effect of 1TW. 1TWh is equivalent to 1,000GWh or 1,000,000MWh.

**Value at Risk (VaR):** A financial term used for measuring the loss that may occur in connection with a risk position, assuming a certain volatility and that the position is held for a certain period of time

**Wind energy content:** The ratio between the actual reported generation in a given period, adjusted for availability losses, and the generation in a 'normal wind year', based on historical wind data for the individual areas where the offshore wind farms are located.

**Wind speed:** Shows the wind speed for Ørsted's offshore wind farms. The wind measurements are weighted on the basis of our generation capacity and can be compared to a normal wind period, based on 20 years' historical wind observations.

# Chairman's statement

## Green light ahead

The UN's 2030 Agenda for Sustainable Development calls for making significant progress on some of the world's greatest challenges. Global climate change caused by man-made carbon emissions is one of the key threats to human societies and the planet, and urgent action is needed. Human activity has already caused an increase of approx 1.1°C above pre-industrial levels. If emissions continue at the current rate, global warming is likely to reach 1.5°C above pre-industrial levels at the earliest in 2030, crossing a key threshold set by climate science to avoid irreversible climate change.

The challenge of global warming requires a profound transformation of our global energy systems – from black to green energy. At Ørsted, our vision is a world that runs entirely on green energy. As one of the global leaders

in green energy, we are committed to providing tangible and scalable solutions to transform global energy systems from black to green.

In 2018, we continued our successful deployment of green energy, reaching 8.3GW of renewable energy capacity built by Ørsted. Over the past decade, Ørsted and our partners have invested approx DKK 165 billion in deploying green energy. For the next seven years, we plan to further accelerate our build-out. By 2025, more than 99% of our energy generation will come from renewable sources, and by 2030, our ambition is to reach more than 30GW of green energy deployed, allowing more than 50 million people to be powered by green energy built by Ørsted. The ambitious decarbonisation of our power and heat generation puts the carbon reduction from our own operations 27 years ahead of the decarbonisation trajectory for the energy industry

that is recommended by climate scientists to stay below the 2°C-threshold defined in the Paris Agreement. We further commit ourselves to reduce our carbon emissions in line with the recent scientific recommendation to limit global temperature increases to no more than 1.5°C above pre-industrial levels.

In 2018, we took important steps in shaping our portfolio towards becoming one of the world's leading renewable energy companies. We announced our intention to exit our power distribution and residential customer businesses, which will allow us to focus entirely on renewable energy generation and market access. We also announced the acquisition of Lincoln Clean Energy, which will serve as our platform for creating a leading North American onshore renewables business, spanning onshore wind, solar energy and storage. Finally, we announced the acquisition of Deepwater Wind, creating a leading offshore wind platform in the US together with our existing US organisation.

Our commitment to people remain strong. Particularly, safety is a focus area for us, and in 2018, we once again improved workplace safety with a total recordable injury rate per million working hours (TRIR) at a record low level of 4.7. Furthermore, we reaffirmed our commitment to being an inclusive workplace for all employees regardless of personal characteristics by joining the UN LGBTI Standards of Conduct for Business. To further support gender diversity

in management, we implemented the 'Female Spotlight' programme that prepares talented women for senior leadership positions.

Profit for the year amounted to DKK 19.5 billion, Ørsted's best result ever. The Board of Directors recommends paying a dividend of DKK 9.75 per share.

On behalf of the Board of Directors, I would like to thank the employees and management of Ørsted for their spirited commitment to turning the vision of green energy into reality, and for bringing green solutions to existing and new markets that share our vision of a world that runs entirely on green energy.

**Thomas Thune Andersen**  
Chairman

“  
**As one of the global leaders in green energy, we are committed to providing tangible and scalable solutions to transform global energy systems from black to green.**

# CEO's review

Strong operational and financial results and strategic acquisitions have strengthened our position as a world leader in green energy:

- Operating profit (EBITDA) increased by 33% and totalled DKK 30.0 billion.
- Operating profit from offshore wind farms in operation increased by 29% to DKK 11.0 billion.
- Farm-down of 50% of Hornsea 1 was one of the largest renewable energy M&A transactions ever and contributed DKK 15.1 billion to EBITDA.
- Green share of generation increased from 64% to 75%.
- Strong progress in the construction of our new wind projects.
- New offshore wind projects awarded in the US, Germany and Taiwan.
- Acquisition of the US-based onshore wind developer Lincoln Clean Energy.
- Acquisition of the leading US-based offshore wind developer Deepwater Wind.
- Decision to exit our Danish power distribution and residential customer businesses.
- New ambitious targets for the Group's long-term strategic and financial development.

## Financial results

In 2018, we achieved a strong operating profit (EBITDA) which significantly exceeded our expectations at the beginning of the year.

EBITDA (excluding new partnerships) increased by 18% to DKK 15.0 billion. The good results were driven by an increase in generation from our offshore wind farms in operation, which led to an increase of 29% in EBITDA from these activities. Including new partnerships, EBITDA increased by 33% to DKK 30.0 billion, of which DKK 15.1 billion came from the 50% farm-down of Hornsea 1.

Return on capital employed (ROCE) was 32% compared to 25% in 2017.

Net profit amounted to DKK 19.5 billion, which was DKK 6.2 billion higher than last year.

Following the bioconversions of our CHP plants and the continued ramp-up of our offshore wind capacity, the green share of our heat and power generation increased from 64% to 75% in 2018.

## Strategic development

Our vision is to create a world that runs entirely on green energy. We expect the global market for renewable energy to more than triple towards 2030. As one of the leading companies within renewable energy, Ørsted has a strong platform to take part in this build-out. In November, we launched new, ambitious targets for our long-term strategic and financial development.

**Towards 2030, it is our strategic ambition to reach an installed capacity of more than 30GW renewable energy, provided that the build-out creates value for our shareholders.**

By the end of 2018, our portfolio consisted of 12GW of offshore and onshore wind farms and biomass-fired combined heat and power plants that are either in production, under construction or have obtained final investment decision (FID). We also have projects with a capacity of 4.8GW for which we have been awarded the construction concessions or entered into offtake agreements, but are yet to make FID. In addition, we have a strong pipeline of projects under development. Towards 2030, it is our strategic ambition to reach an installed capacity of more than 30GW renewable energy, provided that the build-out creates value for our shareholders. Contributing to this ambition, we raised our 2025 ambition for offshore wind from 11-12GW to 15GW.

Our strategic ambition will be supported by an extensive investment programme. From 2019 to 2025, we currently expect total gross investments of approx DKK 200 billion. Investments in offshore wind farms are expected to constitute 75-85% of this programme. Onshore investments are expected to constitute 15-20%, while our investments in Bioenergy and Customer Solutions combined are expected to constitute 0-5%. The allocation reflects the changes we made to our asset portfolio in 2018, including the two acquisitions in the US and the decision to exit our power distribution and residential customer businesses.

The strategic plan is subject to our four capital allocation priorities. Firstly, we maintain our strong commitment to our credit rating target (BBB+/Baa1). Secondly, we intend to increase our annual dividends by a high single-digit percentage. The horizon of this dividend commitment is extended from 2020 to 2025. Thirdly, we will invest in value-creating growth. Finally, potential excess capital will be returned to our shareholders in the form of additional dividends and/or share buy-backs.

### Offshore

In 2018, we reached significant milestones in our ambitious green strategy. In the UK, we commissioned Race Bank in January and Walney Extension, the world's largest wind farm, in May, and in Germany, we commissioned Borkum Riffgrund 2 in December. All were

commissioned ahead of schedule, underpinning our experience and efficiency within the construction of offshore wind farms. Together with the rest of the portfolio, the three commissioned offshore wind farms contributed to the continued growth in earnings.

In addition, our current offshore wind construction projects continue to progress according to plan. We have installed most of the foundations at Hornsea 1 in the UK, which will be the world's largest wind farm when completed, expectedly in the second half of this year.

The build-out of our portfolio also includes Borssele 1 & 2 in the Netherlands and Hornsea 2 in the UK. In February, we selected Siemens Gamesa Renewable Energy's 8MW wind turbines with a 167-metre rotor for Hornsea 2.

We continued our partnership model in 2018 with the 50% farm-down of Hornsea 1 to Global Infrastructure Partners. As part of the agreement, we will provide long-term operations and maintenance services (O&M) as well as a route to market for the power generated through our Customer Solutions business. The farm-down was one of the largest renewable energy M&A transactions ever and included the largest single-project renewable energy financing scheme to date. The valuation underpins the attractiveness of our offshore wind assets.

In April, we were awarded 900MW capacity in the first Taiwanese grid allocation as Greater Changhua 1 & 2a were awarded 605MW and 295MW, respectively. In the price auction in June, we were awarded an additional 920MW. With a total capacity of 1,820MW, we are as such able to fully utilise our Greater Changhua 1, 2 and 4 sites.

On 30 January 2019, the 2019 feed-in tariff was announced. We take note of the 6% tariff reduction compared to the 2018 tariff as well as the introduction of a cap on annual full-load hours, and we will now collaborate closely with the supply chain to mitigate the adverse impact of these PPA changes with the objective of making the projects investable.

Greater Changhua 1 & 2a are facing extraordinarily high costs related to creating a local supply chain at scale, reinforcing the onshore grid infrastructure and building, operating and maintaining offshore wind farms in challenging site and weather conditions.

We continue to work with the Taiwanese authorities and local stakeholders to reach

key outstanding project milestones, such as obtaining the establishment permit, completing the supply chain plan and signing the power purchase agreement.

Once we have clarity on the outcome of supply contract renegotiations and have achieved all key project milestones, Ørsted's Board of Directors will review and decide on the final investment case.

In Germany, we were awarded the right to build Borkum Riffgrund West 1 and Gode Wind 4 with a capacity of 420MW and 132MW, respectively. Combined with the awards from the auction in 2017, we have secured the full capacity of 900MW in the Borkum Riffgrund cluster (Cluster 1) without subsidies. In addition, we have secured a total capacity of 242MW for Gode Wind 3 and 4 at a weighted average feed-in tariff of EUR 81 per MWh. Subject to FID, the wind farms are expected to be operational in 2024/25, respectively.

In October, The Crown Estate in the UK confirmed that we have satisfied the application criteria for the development of our Race Bank Extension offshore wind farm, which expectedly will now be subject to a plan-level Habitats Regulations Assessment (HRA). Subject to all necessary consents being granted, Race Bank Extension will be able to participate in future auctions under the contracts for difference (CfD) scheme.

Early October, we entered into an agreement to acquire Deepwater Wind. The acquisition was completed in November at an enterprise value of DKK 4.7 billion. Deepwater Wind is the leading US-based offshore wind developer

### Portfolio changes support focus on renewable generation

Entering Ørsted portfolio →		Ørsted	→ Exiting Ørsted portfolio
<p><b>Lincoln Clean Energy</b></p> <p>– Transaction closed</p>	<p><b>Deepwater Wind</b></p> <p>– Transaction closed</p>	<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;">  <p>Offshore</p> </div> <div style="text-align: center;">  <p>Onshore</p> </div> </div> <div style="display: flex; justify-content: space-around; margin-top: 20px;"> <div style="text-align: center;">  <p>Bioenergy</p> </div> <div style="text-align: center;">  <p>Customer Solutions</p> </div> </div>	<p><b>Power distribution, residential customer (B2C) and city light businesses</b></p> <p>– Expected in 2019</p>

with an attractive and geographically diverse portfolio of projects along the US East Coast.

In the US, we were awarded an additional 104MW in December in the clean energy auction in Connecticut. Our Revolution Wind project has now secured a total capacity of 704MW connecting into New England, including previously awarded capacity in Rhode Island and Connecticut, which we will construct as one joint project, and thus unlock significant procurement, construction and operational synergies.

By end 2018, the Deepwater Wind portfolio totals a capacity of approx 2.6GW, consisting of 30MW in operation, 954MW of development projects with long-term revenue contracts in place or under negotiation and approx 1.6GW which potentially may be developed in three awarded lease areas.

In October, we bid into Rhode Island's auction for up to 400MW of renewable energy. Further, in December 2018, we bid into the 1,100MW New Jersey auction with our Ocean Wind project, and we expect to bid into the announced 800MW auction in New York in February 2019.

In January 2019, we furthermore announced that we have signed a memorandum of understanding to work jointly with Tokyo Electric Power Company (TEPCO) on the Choshi offshore wind project near Tokyo, and towards a broader strategic partnership.

We look forward to expanding our footprint in both Europe, the US and Asia-Pacific and working together with our new partners.

### Onshore

In August, we entered into an agreement to acquire Lincoln Clean Energy (LCE), a US-based developer, owner and operator of onshore wind farms. The acquisition was completed on 1 October 2018 at an enterprise value of DKK 5.6 billion. Through LCE, our onshore business will be a growth platform and provide strategic diversification to Ørsted's portfolio.

Our aim is to create a leading North American company within renewable energy, including onshore wind, solar energy and energy storage.

Lincoln Clean Energy has an operating portfolio of 813MW and a near-term portfolio of 714MW of onshore capacity in advanced stages of development.

In December, we commissioned the 300MW onshore wind farm Tahoka in Texas. Furthermore, we took FID on the onshore wind farm Lockett. The wind farm is under construction and is expected to be commissioned in Q3 2019.

In addition, we announced a 500MW wind and solar power purchase agreement (PPA) with ExxonMobil, distributed evenly between the Sage Draw onshore wind farm and the Permian solar PV project.

From our Capital Markets Day in Gentofte on 28 November.

## // 2018 was a year with many changes, and with the acquisitions of Lincoln Clean Energy and Deepwater Wind, we welcome more highly skilled employees to our company.

### Utility business

In June, we announced our plans to divest our Danish power distribution, residential customer and city light businesses. The process came to a stop in January when our majority shareholder, the Danish State, informed us that there was no longer the necessary political support. It is still the Board of Directors assessment that Ørsted is not the best long-term owner of these businesses. Consequently, we have classified the businesses as assets held for sale and continue to investigate the different options for exiting them. We expect an exit from all of these businesses during 2019.

In June, we divested our 50% ownership share in the gas-fired power plant Enecogen in the Netherlands. The divestment reinforces our focus on green energy.

In June, we commissioned our new biogas plant in Kalundborg, Denmark, together with our partner Bigadan. The plant will recycle

waste from the local production facilities of our corporate customers Novozymes and Novo Nordisk and convert it into biogas. We are looking to expand our portfolio of biogas plants in the future.

The development of our first Renaissance plant in the UK is still in progress. By means of enzymes, the technology efficiently converts household waste into biogas and recyclable materials. While the enzymatic process is working satisfactory, we have experienced mechanical challenges in the sorting process and have had to undertake a programme to enhance flexibility and redundancy in the sorting hall. We are currently finalising this optimisation. Final commissioning is expected during the first half of this year.

In May, the High Court of Western Denmark ruled that Elsam, one of the six companies that merged into DONG Energy, now Ørsted, back in 2006, had not abused its dominant

market position in 2005 and the first half of 2006. In October, the Danish Appeals Permission Board ruled in favour of Ørsted and decided that the Danish competition authorities would not be given permission to try the ruling before the Supreme Court. Consequently, the ruling of the High Court stands. We are pleased that we can put this court case behind us and move forward. However, we are still awaiting the development in the Elsam competition case for the period 2003 to 2004 and the related compensation case.

At the end of December, 679,000 smart meters installed by Radius and Kamstrup had been taken into use by our power distribution customers. This is a significant milestone, marking that we are well on our way to replacing meters for all our 1 million customers by the end of this year.

Finally, our Customer Solutions business has signed a 15-year agreement with Innogy to balance the power generation from their 860MW offshore wind farm Triton Knoll in the UK. Under the agreement, Ørsted will sell the expected generation from the wind farm on the power market on a day-ahead basis, thus handling deviations from the expected generation the following day.

### Employees

We have a strong focus on the safety and well-being of our employees. In 2018, we achieved a positive development in the total recordable injury rate (TRIR) and saw yet another year with no life-changing accidents. The 2018 employee survey showed a continued high score on satisfaction and motivation – in line with the 2017 results. It positions

Ørsted in the top 10% compared to external benchmarks in all major markets.

Once again, 2018 was a year with many changes, and with the acquisitions of Lincoln Clean Energy and Deepwater Wind, we welcome more highly skilled employees to our company. The integration of the organisations is already well under way. All our employees deserve credit and acknowledgement for their dedicated performance during the past year. Their strong competences and entrepreneurial spirit – fuelled by the passion for what Ørsted stands for and the work we do – constitute the very foundation of our company.

**Henrik Poulsen**  
CEO and President

# Performance highlights

## Profits and returns

**Operating profit (EBITDA)**  
DKKbn

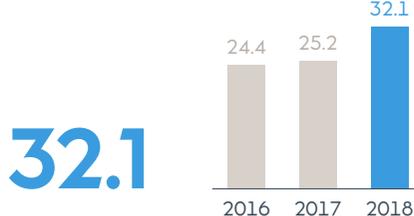

In 2018, we achieved a strong EBITDA which significantly exceeded our expectations at the beginning of the year. It was the highest to date and was driven by an increase in generation from our offshore wind farms and profit from the 50% farm-down of Hornsea 1. The amount above the dotted lines represent profits from new partnerships.

**Net profit (continuing operations)**  
DKKbn

Profit for the year amounted to DKK 19.5 billion, Ørsted's best result ever driven by the strong operating profit.

**Return on capital employed (ROCE)**  
%

ROCE was also significantly impacted by the Hornsea 1 farm-down gain in 2018. Our target is an average ROCE of around 10% for the Group in the 2019-2025 period.

## Sustainability

**Green share of generation**  
%

The green share of heat and power generation continued to increase to a new high of 75%, following continued ramp-up of our offshore wind capacity, and full-year effect from our most recent biomass-converted CHP plants.

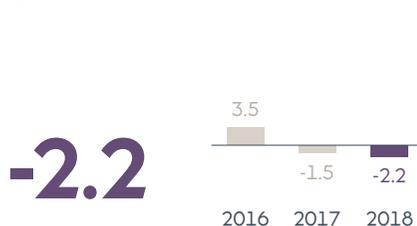

## Cash flow and balance sheet

**Gross investments**  
DKKbn

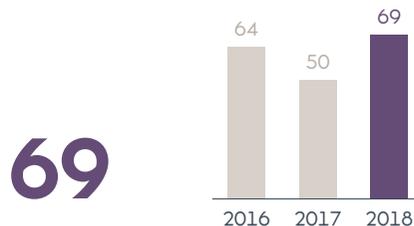

The gross investment level was high in 2018 due to the acquisitions of Deepwater Wind (DKK 4.0 billion) and Lincoln Clean Energy (DKK 5.6 billion) in addition to high construction activity in our project portfolio.

**Interest-bearing net debt**  
DKKbn

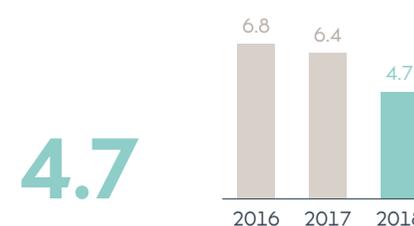

We had a net cash position of DKK 2.2 billion at the end of 2018.

**Credit metric (FFO/adjusted net debt<sup>1)</sup>**  
%

The credit metric 'funds from operations' (FFO) relative to adjusted net debt amounted to 69% in 2018, positively affected by our strong operating profit and low adjusted net debt.

**Safety TRIR**

We have a strong focus on the safety and well-being of our employees. In 2018, we achieved a record-low total recordable injury rate (TRIR).

<sup>1)</sup> Interest-bearing net debt, including 50% of hybrid capital and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax.

## Follow-up on outlook announced for 2018

In the outlook announced in our annual report for 2017, we expected EBITDA without new partnerships of DKK 12-13 billion and gross investments of DKK 16-18 billion for 2018.

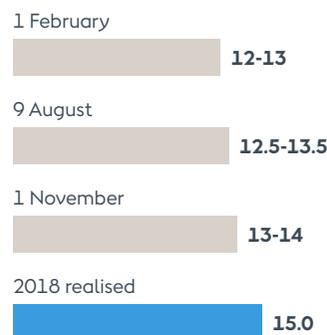

With EBITDA, excluding new partnerships, of DKK 15.0 billion, our expectations were exceeded. The main reasons were good progress on the construction of our new offshore wind farms Walney Extension and Borkum Riffgrund 2 during the year, including higher earnings from construction agreements, as well as faster ramp-up than expected. Furthermore, we had a positive outcome of an arbitration related to a gas purchase contract, positive effect in our gas portfolio business from increasing gas prices in 2018 (which all other things equal will have a reverting negative effect in 2019) and better than expected performance in our LNG business from strong market fundamentals.

EBITDA, including the profit from the Hornsea 1 partnership, amounted to DKK 30.0 billion, which was significantly higher than the 2017 EBITDA level of DKK 22.5 billion, in line with our guidance.

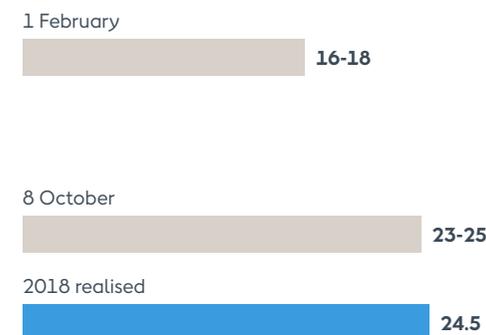

Gross investments amounted to DKK 24.5 billion. The main reasons for the increase were the acquisitions of Lincoln Clean Energy and Deepwater Wind and early investments in the US offshore and onshore portfolio in Q4 2018 to qualify for future tax credits. In addition, gross investments related to construction of offshore wind farms were lower than expected due to shifts in spending across years and the Race Bank and Walney Extension construction projects being finalised at a lower capex spend than expected.

In Bioenergy, the focus has been on realising positive free cash flows from 2018. The free cash flows was positive and amounted to DKK 518 million of which the divestment of Enecogen contributed with DKK 383 million.

EBITDA excl. new partnerships, realised vs guidance DKKbn

Investments, realised vs guidance, DKKbn

# Outlook 2019

## EBITDA guidance method

As in 2018, our guidance is based on our existing activities and thus only include the effect of existing partnership agreements. Earnings from new partnerships in 2018 concerned Hornsea 1 and amounted to DKK 15.1 billion. We do not expect new partnerships in 2019.

## EBITDA

EBITDA (business performance), excluding new partnership agreements, is expected to be DKK 15.5-16.5 billion in 2019, corresponding to an increase of 4-10%. The outlook is based on the expected development in the business units (compared to 2018), as described below.

### Offshore – higher

- Earnings from offshore wind farms in operation are expected to increase as a result of the full commissioning of Hornsea 1 in H2 2019 as well as higher earnings from Borkum Riffgrund 2 and Walney Extension, which were fully commissioned during 2018.
- Earnings from existing partnership agreements, which amounted to DKK 3.7 billion in 2018, are expected to decline. In 2019, earnings from existing partnerships will primarily come from the remaining part of the Hornsea 1 farm-down (approx 15%).
- Expensed project development costs are expected to increase as a result of efforts

to drive global expansions. Other, including project development costs, are expected to make up approx DKK 2.4 billion.

### Onshore – significantly higher

- As we acquired Lincoln Clean Energy on 1 October 2018, 2019 will be the first full year of operation from this business unit.
- Earnings from onshore wind farms in operation are expected to increase as a result of ramp-up from our new wind farms. In December 2018, we commissioned Tahoka, and we expect to commission Lockett in Q3 2019.

### Bioenergy – higher

- Total EBITDA from our heat and power generation activities is expected to increase, primarily as a result of expected increased generation on biomass and expected increase in Danish wood pellet spreads and green dark spreads.
- Earnings from our ancillary services were high in 2018, driven by higher demand during the summer and increased demand from Germany (DK/DE connection). We expect 2019 earnings from our ancillary services to be in line with 2017.

### Customer Solutions – significantly lower

- We expect a significant decline in Markets due to gains from increasing gas prices in 2018 reverting with negative impact in 2019.

Outlook 2019, DKKbn	2018 realised	2019 guidance
EBITDA (without new partnerships)	15.0	15.5-16.5
Offshore (without new partnerships)	12.7	Higher
Onshore	0.0	Significantly higher
Bioenergy	0.4	Higher
Customer Solutions	2.0	Significantly lower
Gross investments	24.5	21-23

Our EBITDA guidance for the Group is the prevailing guidance, whereas the directional earnings development per business unit serve as a means to support this. Higher/lower indicates the direction of the business unit's earnings relative to the results for 2018.

- Earnings from the gas portfolio were further positively affected by a positive outcome of an arbitration case in 2018, which is not expected to be repeated in 2019.
- In 2018, earnings from our LNG business was positively affected by strong market fundamentals. We expect lower earnings from these activities in 2019.
- We plan to exit our Danish power distribution and residential customer businesses during 2019, but have included them throughout the year in our outlook. We do not expect any significant changes in earnings from these compared to 2018.

### IFRS 16 impact

EBITDA in 2019 is expected to be positively affected by DKK 0.6 billion from the

implementation of IFRS 16, compared to a continued expensing of operational lease costs. The majority of the impact is in Offshore.

### Gross investments

Gross investments for 2019 are expected to amount to DKK 21-23 billion. The outlook reflects a high level of activity in Offshore (Hornsea 1, Borssele 1 & 2, Hornsea 2 and Greater Changhua 1 & 2a (assuming FID)), Onshore (Lockett, Sage Draw and Plum Creek), biomass conversion of Asnæs Power Station and installation of smart meters.

In addition to gross investments, significant funds are temporarily tied up in connection with the construction of transmission assets for offshore wind farms in the UK and for our partners. These funds are a part of our operating cash flows.

At the end of 2018, funds tied up in work in progress totalled DKK 9.7 billion. During 2019, we expect to divest the Walney Extension and Race Bank offshore transmission assets, but we still expect to see high level of funds tied up in work in progress in 2019 as a result of the construction of transmission assets at Hornsea 1 and 2. The construction of Hornsea 1 for partners is expected to be operating cash flow neutral, as we will receive milestone payments continuously from our partner during the construction phase.

#### Uncertainties, prices and hedges

Our offshore wind farms are largely subject to publicly regulated prices, implying a high degree of certainty about the income. This means that we know the price per generated MWh for most wind farms in Denmark and Germany as well as the CfD wind farms in the UK. For our British ROC wind farms, we also know the subsidy per generated MWh which we will receive in addition to the market price. In 2019, the ROCs are expected to account for 62% of the total income from these wind farms. In 2019, the total publicly regulated prices and subsidies are expected to account for 78% of the income from our offshore wind farms in operation.

The part of our generation from offshore wind farms and power stations which is exposed to market prices has to a large extent been hedged for 2019. The same applies to our currency risks. The market value of financial hedging instruments and US power purchase agreements relating to our operations and divestment of assets deferred for recognition in business performance EBITDA in 2019 amounted to DKK -1.5 billion at the end of

2018. This effect is included in the outlook for 2019 (see note 1.6).

The most significant uncertainty surrounding the operating profit from existing activities in 2019 relates to the size of our power generation, which depends on wind conditions, the ramp-up of new wind farms and potential break-downs, and to a lesser extent our earnings from existing partnership agreements, timing in value adjustments related to gas at storages, heat and market trading activities. In addition, we are subject to litigation cases that potentially are concluded in 2019.

If a financially viable way forward is not found for our Greater Changhua projects, and we consequently decide not to progress with the projects during 2019, we have made certain commitments, which we will need to provide for.

#### Forward-looking statements

The annual report contains forward-looking statements which include projections of our short and long-term financial performance and targets as well as our financial policies. These statements are by nature uncertain and associated with risk. Many factors may cause the actual development to differ materially from our expectations.

These factors include, but are not limited to, changes in temperature, wind conditions and precipitation levels, the development in power, coal, carbon, gas, oil, currency and interest rate markets, changes in legislation, regulation or standards, the renegotiation of contracts, changes in the competitive environment in our markets and reliability of supply. Read more about the risks in the chapter 'Risk and risk management' and in note 7.

# Financial estimates and policies

## Financial estimates

In connection with our Capital Markets Day in November 2018, we introduced new strategic estimates towards 2025.

From 2019-2025, we expect total gross investments of approx DKK 200 billion. Investments in offshore wind farms are expected to constitute 75-85% of the investment programme. Onshore investments are expected to constitute 15-20%, while our combined investments in Bioenergy and Customer Solutions are expected to constitute 0-5%.

Towards 2023, we expect an average increase in operating profit (EBITDA) from offshore and onshore wind farms in operation (including O&M agreements and power purchase contracts) of 20% a year, reaching an estimated level of DKK 25-26 billion in 2023.

The largest share of Ørsted's operating profit (EBITDA) will still be generated by contract-based or regulated activities. We expect an average of around 90% of EBITDA in 2019-2025 to come from contract-based or regulated activities.

Our target is an average return on capital employed (ROCE) of around 10% for the Group in the 2019-2025 period. The reduction compared to our earlier target of 12-14% for 2018-2023 is a result of earnings from the partial divestment of Hornsea 1 in 2018 being outside the new period and the acquisitions of Lincoln

Clean Energy and Deepwater Wind, which will increase the capital expenditure in these years, but contribute to earnings with some delay.

## Financial policies

The Board of Directors recommends to the annual general meeting that dividends of DKK 9.75 per share be paid for 2018, equating an increase of 8% and a total of DKK 4.1 billion.

Supported by the expected increased cash flows from future offshore and onshore wind farms, we still intend to increase annual dividends by a high single-digit percentage compared to the previous year's dividends. This policy has been extended to cover the period until 2025 (previously 2020).

Our dividend policy and other expected capital allocations are subject to our commitment to our BBB+/Baa1 rating profile.

Financial estimates	Target	Year
Total CAPEX spend	DKK 200bn	2019-2025
Average return on capital employed (ROCE)	~10%	2019-2025
Average share of EBITDA from regulated and contracted activities	~90%	2019-2025
Average yearly increase in EBITDA from offshore and onshore wind farms in operation	~20%	2017-2023

Financial policies	
Rating	Min. Baa1/BBB+/BBB+ (Moody's/S&P/Fitch)
Capital structure	~30% (FFO/adjusted net debt)
Dividend policy	Ambition to increase the dividend paid by a high single-digit rate compared to the dividends for the previous year up until 2025

We have a ROCE target of 10% on average for the period 2019-2025. Read more about our key metrics, financial targets and policies in the presentation from our Capital Markets Day in November 2018 on [orsted.com/en/capital-markets-day](http://orsted.com/en/capital-markets-day)

Our current rating is in accordance with the policy.

# Our business

<b>The green transformation</b>	<b>16</b>
<b>Our strategic playing field</b>	<b>18</b>
<b>Our markets</b>	<b>19</b>
<b>Our strategy and capital allocation</b>	<b>22</b>
<b>Our business model</b>	<b>25</b>
<b>Strategic targets</b>	<b>26</b>
<b>Our geographic footprints</b>	<b>28</b>

# The green transformation

One third of all global carbon emissions come from the production of energy. To avoid an irreversible change in the global climate and ensure a habitable planet for future generations, we need to transform the world's energy systems from black to green.

The Sustainable Development Goals (SDGs) were adopted by all United Nations' member states in 2015. The goals cover the world's greatest challenges that must be addressed towards 2030 to improve conditions for people and the planet. The defining challenge of our generation, impacting all other SDGs, is to decelerate climate change – addressed in SDG 13.

The latest report by the UN's IPCC confirms that human activity has already caused temperatures on our planet to increase by approx 1.1°C above pre-industrial levels. Staying below 1.5°C warming necessitates a 45% reduction of emissions by 2030 (from 2010-levels) and 'net-zero' emissions by 2050. This requires an almost completely decarbonised power sector.

Carbon emissions originate from a range of sectors that all need to be decarbonised to effectively avoid severe climate change: electricity and heat generation (25%), other energy generation (10%), industry (21%), transportation (14%), land use (24%) and buildings (6%).

So far, global decarbonisation has mainly taken place in power generation, driven by the deployment of renewable energy at scale, reducing cost to a level which is now competitive to fossil fuels and nuclear power in many markets. This is good news for the continued decarbonisation of global energy production and for other sectors benefitting from increased electrification.

The continued deployment of renewable energy systems will create significant business opportunities for green energy solutions. From 2018 to 2030, Bloomberg New Energy Finance (BNEF) expects global investments in renewable energy to amount to approx USD 3.5 trillion.

## Living up to the Paris Agreement

The Paris Agreement, signed by 195 countries in 2016, is the most ambitious and comprehensive global political framework advancing SDG 13 on climate action. The agreement demonstrates the global commitment among a vast majority of the world's countries to combat climate change. According to the Paris Agreement, the countries commit to keeping the global temperature increase well below 2°C and to pursue efforts to limit the temperature increase even further to 1.5°C.

However, actions and decisions taken so far by the countries under the Paris Agreement currently put the world on a path towards

a global warming of more than 3°C. Hence, there is a need for more ambitious national action plans to channel investments towards a greener and more climate-resilient economy.

## Climate-related financial disclosures

Capital allocation decisions are one of the key levers for decarbonising the global economy. In 2017, the industry-led Task Force on Climate-Related Financial Disclosures (TCFD) launched its recommendations on how to improve the way climate-related risks and opportunities are factored into investment decisions. The initiative was launched by the G20 and illustrates how political and private sector leaders can unite in facilitating progress towards the climate-related SDGs.

The TCFD recommendations aim to improve understanding and disclosure of companies' climate-related risks and opportunities. These include physical factors, such as the sea level rising or storms that can affect assets, and transitional factors, such as carbon prices or technology shifts that can affect business strategies. By adopting the recommendations, companies signal that they are considering and acting on the impacts of climate change on their business. Ultimately, this will help fight climate change and drive the transition towards a sustainable, low-carbon economy.

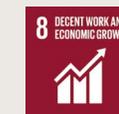

## Top three SDGs that we help promote

Adopted by all United Nations member states in 2015, the 17 Sustainable Development Goals (SDGs) constitute the most pressing economic, social and environmental challenges that the world needs to solve. In Ørsted, we focus particularly on advancing two of the SDGs, namely 7 (clean and affordable energy) and 13 (fighting climate change), and by consequence we also contribute significantly to SDG 8 (economic growth).

SDG 7 aims to ensure access to clean and affordable energy for all. Today, 81% of global energy consumption is based on fossil fuels. To achieve the goal, societies need to accelerate the transformation of our energy systems from black to green.

SDG 8 aims to promote sustainable economic growth and decent work for all. Converting the world's energy systems from black to green requires significant investments that create economic growth and employment.

SDG 13 calls for urgent action to fight climate change and its impacts. Approx 75% of global carbon emissions come from the use of fossil-based energy. This energy is used for power, heat, industrial processes and for transportation. The remaining 25% of global emissions come from agriculture, forestry and other land use. Creating a world on green energy will be necessary to limit climate change.

### Ørsted's response to the global climate challenge

Society's need to phase out fossil fuels and deploy renewable energy at scale has been the key driver in Ørsted's decade-long strategic transformation from black to green energy. From being one of the most coal-intensive utilities in Europe a decade ago, we are today among the global leaders in renewable energy, driven by a vision of creating a world that runs entirely on green energy.

We are keenly committed to being among the leading companies that help make societies progress towards the SDGs.

We contribute to the achievement of SDG 7 by deploying renewable energy at scale. Our strategic target is to increase the green energy share of our heat and power generation to 99% by 2025. By 2025, our installed offshore wind capacity alone will be able to power more than 30 million people.

Through our green energy investments, we also contribute to SDG 8. We have invested DKK 120 billion in deploying green energy in the past 10 years. Including our partners' share of Ørsted-led offshore wind build-outs, investments amount to DKK 165 billion in this period. In a lifecycle perspective, our and our partners' investments in deploying green offshore energy have created approx 180,000 jobs from the installed capacity and FID projects. Towards 2025, we plan to invest DKK 200 billion within renewables, adding significantly to further local economic growth and job creation, not least in our new markets.

The decarbonisation of our heat and power generation also helps contribute significantly to SDG 13. So far, we have reduced our carbon intensity by 72% from 462g CO<sub>2</sub>e/kWh in 2006 to 131g CO<sub>2</sub>e/kWh in 2018. In absolute terms, we have reduced our carbon emissions from 18 million tonnes in 2006 to 3.4 million tonnes in 2018. This has been realised by reducing our coal consumption by 81%, replacing it with sustainable biomass. Adding to this, we have contributed to avoiding more than 31 million tonnes of carbon emissions by deploying offshore wind farms.

As we deploy green energy and plan to phase out coal entirely by 2023, our carbon intensity will be reduced by 96% in 2023 compared to 2006. Our target puts us 27 years ahead of the 2°C trajectory projected by the International Energy Agency. This places our strategy well ahead of the Paris Agreement.

By pursuing our green vision and strategy, we are aligned with the TCFD recommendations to a large extent, and we decided to endorse the recommendations in 2018. The Board of Directors is directly or indirectly addressing climate-related risks and opportunities when assessing and deciding on new investments in assets or activities or on discontinuation of activities. In addition, climate-related risks are assessed as an integral part of our risk management processes. Still, however, the TCFD recommendations help us improve our understanding of climate-related financial risks and opportunities and disclose it in a useful way to our investors and other stakeholders. Our vision is aligned with investors who

are still more observant of climate-related risks as well as business opportunities offered to companies positioned to benefit from the important transformation from black to green.

Ørsted's response to the global climate challenge and our full range of sustainability programmes and SDG contributions are documented in our sustainability report.

### Corporate social responsibility reporting

Our sustainability strategy and results are reported on in our sustainability and ESG performance reports which constitute our annual Communication on Progress to the UN Global Compact. The reports highlight areas in which our expertise can make a real difference when it comes to promoting the UN's global goals for sustainable development. With these reports, we live up to the requirements for corporate social responsibility reporting set out in section 99a of the Danish Financial Statements Act as well as section 99b on the gender balance at management levels, etc.

See and download the reports here:

[orsted.com/ESGperformance2018](https://orsted.com/ESGperformance2018)

# Our strategic playing field

The renewable energy value chain is made up of various components. These range from generation of green power, through storage, transmission and distribution to the consumption side. Within this energy system, we have taken the following strategic positions.

Offshore wind is our core focus and has been since we decided to transform Ørsted to a green energy company. It is a rapidly growing market in the global energy system with attractive value-creating opportunities. We have been successful in leveraging our capabilities to become the leading global player in the offshore wind market, representing a 30% share of the total capacity in operation or under construction.

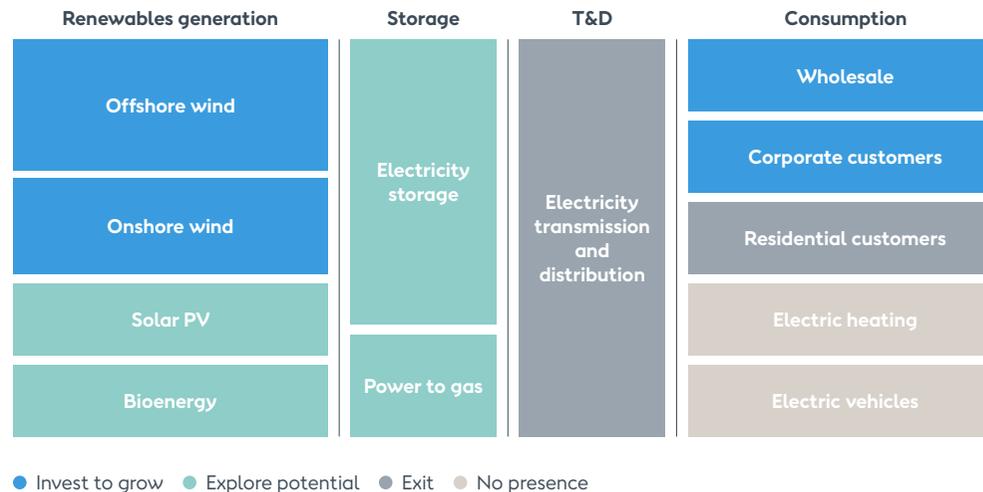

Onshore wind is our second growth platform where we now have a strong regional position, with the acquisition of Lincoln Clean Energy in the US. The US onshore market offers attractive value-creating opportunities and has significant long-term growth potential. The transaction provides technology and market diversification and enables us to serve the future energy demand through a multi-technology business platform. In addition, the US market will add to our scale and critical mass.

To secure market access, our strategic focus is on wholesale and corporate customers which account for the largest share of energy consumption. This position enables a route to market for our green energy generation.

Besides existing market positions, we explore the strategic and financial potential of additional green growth opportunities. Both solar PV, bioenergy and storage offer significant growth opportunities on the back of significant cost reductions.

Considering our rapidly growing global portfolio of renewable energy assets, we decided to initiate a structured divestment process of our Danish power distribution, residential customer and city light businesses in June 2018. Although the political support for continuing this structured process ceased on 13 January this year, we are continuing to investigate different options for exiting the businesses during 2019. In addition, following the political agreement in support of our IPO, we are conducting a structured divestment process of our offshore gas pipeline (including the Nybro Gas Treatment Plant) and oil pipeline (including the Frederica stabilisation plant). The transactions are expected to be signed in 2019.

Although we acknowledge electric heating and electric vehicles as key components in the renewable energy value chain, we have no actual plans to enter these markets.

# Our markets

## The market share of renewables is increasing

The renewable energy share of global power generation is increasing. Excluding hydro, it grew from less than 2% in 2000 to 12% in 2018. This share is expected to continue to grow and to reach 26% by 2030. With renewable energy representing 27% of Europe's total power generation in 2018 (excl. hydro), Europe is leading the transformation. By 2030, renewable energy is expected to account for more than half of the European power generation (55%).

The global installed capacity of renewables (excluding Middle East, Africa and hydro) was 1,153GW in 2018 and is forecast to more than triple by 2030, reaching 3,678GW according to Bloomberg New Energy Finance (BNEF).

In 2018, China and Europe were the regions with most renewable capacity installed, each accounting for approx 30%. The global installed capacity is expected to continue to grow 10% annually, with China and Europe remaining the major regions followed by North America.

The technologies that constituted the largest share of installed renewable capacity in the world in 2018 were onshore wind and solar photovoltaics (PV). Onshore wind accounted for almost half of the renewable capacity, 46%, while solar PV accounted for 41%. Both technologies will remain the primary sources, accounting for 88% of the total renewable

capacity. However, offshore wind is expected to grow the fastest towards 2030 at an annual rate of 16%.

A key driver behind the growth in renewable energy is the rapidly declining costs. Onshore wind has become the most cost-competitive energy technology due to its rapidly expanding global capacity, which has contributed to economies of scale, higher learning effects and more technological innovation. On the other hand, conventional non-renewable technologies, such as coal, are facing increased costs due to reduced capacity factors, as they face increasing competition from renewable technologies.

## Offshore wind

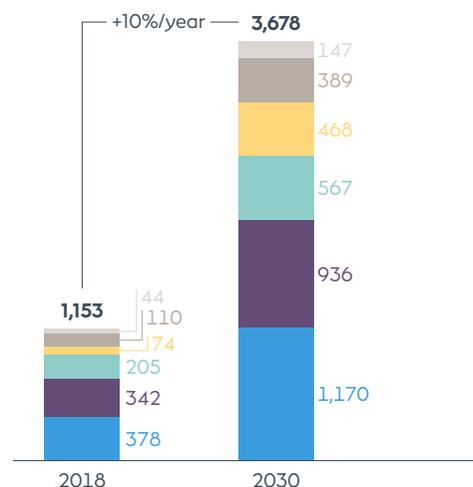

Installed global offshore wind capacity reached 21GW in 2018. In just three years, it has almost doubled, with an annual growth rate of 22%. According to BNEF, the offshore wind market is expected to continue this strong growth trajectory.

With an annual addition of more than 6GW, the capacity is expected to reach 34GW by 2020. Thereafter, it is expected to grow by 15% on average, bringing the global installed capacity to 132GW in 2030.

Currently, most offshore wind farms are located in Europe, which makes up approx 80%

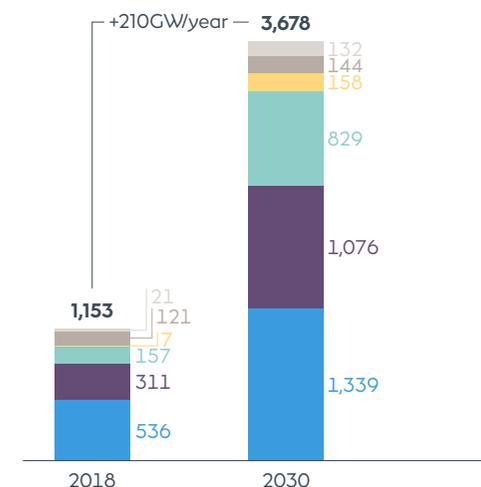

Global<sup>1</sup> renewable capacity by geography, GW installed

Source: Bloomberg New Energy Finance (BNEF), H1 2018 offshore wind market outlook. US includes the latest BNEF US offshore wind forecast from September 2018 (3GW higher than H1 2018 offshore wind market outlook from July 2018).

<sup>1</sup> Excludes Middle East and North Africa

<sup>2</sup> Excludes 'Other' (solar, thermal and geothermal), accounting for less than 2%

of the total market. Europe is expected to continue growing at strong double-digit rates towards 2030, thus upholding the position as the largest offshore wind market in the world with an expected share of the global installed capacity of 50% in 2030.

**Installed offshore wind capacity, GW**

Source: Bloomberg New Energy Finance (BNEF), 1H 2018 offshore wind market outlook. US includes the latest BNEF US offshore wind forecast from September 2018 (3GW higher than the H1 2018 offshore wind market outlook from July 2018)

<sup>1)</sup> Global CAGR

However, new markets in Asia Pacific (APAC) and North America are expected to follow with booming growth. Asia Pacific, excluding China, is expected to grow at an average annual growth rate of 58% towards 2030. North America is also expected to grow significantly after 2020, with installed capacity expected to increase from 30MW in 2018 to 10GW by 2030 according to BNEF. This expectation does not fully take the recent 9GW by 2035 ambition from the New York Governor into account.

The strong growth in offshore wind can be attributed to the significant reduction in costs. In 2018, the levelised cost of electricity for newly commissioned generation capacity in North-western Europe was reduced by approx 45% compared to the level four years earlier, and it is expected to decrease further.

Newly built offshore wind has become more competitive than conventional generation technologies using gas and coal. The continuous reductions in offshore wind costs are evident in recent auctions in Germany and the Netherlands where some developers bid for zero subsidy projects.

**Onshore renewables**

**Onshore wind**

The global onshore wind market, excluding Middle East and Africa, shows strong growth as the installed capacity reached 536GW in 2018, up from 395GW in 2015, growing at 11% annually. The global market is forecasted to almost triple by 2030.

Among key markets, Asia Pacific represents 43% of the global onshore capacity, driven by China. Europe reached 164GW installed capacity in 2018, representing 31% of the market. Another key market is North America with 121GW, representing 23% of the global capacity.

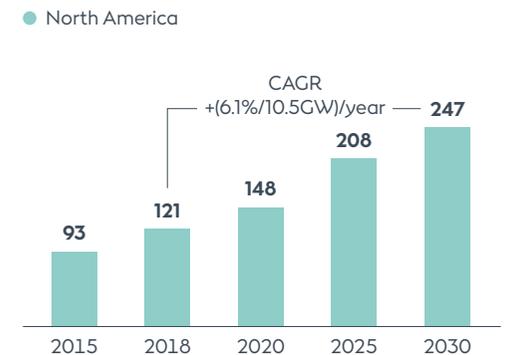

Onshore wind is the most cost-competitive renewable energy resource, with the lowest levelised cost of electricity in the US in 2018. North America is expected to continue installing onshore wind with an annual average growth rate of 11% towards 2020 and to double its capacity by 2030. In the short term, the market will continue to be driven by projects that have secured production tax credits (PTCs), but once all PTC-backed projects have been built in 2024, the low cost of onshore wind will be the main driver for further capacity build-outs.

**Solar photovoltaic (PV)**

Among the new renewable technologies, solar PV witnessed the fastest growth, as the global capacity grew by 31% from 2015 to 2018. The global capacity, excluding Middle East and Africa, reached 468GW in 2018. This strong growth is expected to continue towards 2030, reaching 1,905GW installed capacity at an annual growth rate of 12%. Large-scale PV, with a power capacity greater than 1MW, represented 66% of the total capacity in 2018, while small-scale PV, typically for residential use with a 5kW power capacity, is expected to catch up towards 2030, reaching a share of 43% of cumulative solar PV installations.

North America reached 65GW in 2018 and was one of the fastest growing regions. It is expected to continue this growth trajectory with an

**Installed onshore wind capacity, GW**

Source: Bloomberg New Energy Finance (BNEF), New Energy outlook 2018

annual growth rate of 23% towards 2020 and is to quadruple its installed capacity, reaching 261GW by 2030.

Towards 2023, the levelised cost of electricity for solar PV is expected to be cheapest in North America, barely overtaking onshore wind. Key drivers supporting cost reductions are scale, material savings due to less waste, and more incentives for technological innovations.

**Energy storage**

As the share of intermittent renewable sources is increasing in the global energy mix, the need for more dynamic dispatchable units to store energy and support rapid load-shifting

is also growing. Battery storage solutions can balance electricity supply and demand and may also provide ancillary services.

Global energy storage, excluding Middle East and Africa, is expected to rise significantly over the next decade. In 2018, it had grown by 58% from 2015, reaching 6GW, and it is expected to continue this strong growth path to reach 158GW by 2030.

Today, most of the capacity (73%) is developed for large-scale and only 27% for small-scale storage. Large-scale storage systems (+1MW) primarily provide services directly to the grid, while small-scale storage systems typically provide end-customer services.

A key driver for the strong outlook is the decreasing cost of lithium-ion battery packs. Between 2010 and 2017, prices fell by 80% and going forward, BNEF forecasts further cost reductions, supported by economies of scale from increasing battery manufacturing capacity.

## Bioenergy

Global waste volumes are rapidly increasing. In 2004, the municipal solid waste (MSW) generated globally amounted to 680 million tonnes per year. By 2016, volume had tripled to 2.0 billion tonnes per year, and it is expected to continue growing. In 2016, only 17% of MSW was recycled, while the majority was sent to landfilling, which can potentially have significant negative effects on the environment. Regulation is attempting to boost the recycling share. The EU has set targets to

increase the recycling share of MSW to 65% by 2030 and reduce landfilling to less than 10%.

Alternatives to landfilling, such as incineration and full-source separation, contribute to high carbon emission levels and only marginally to recycling. Hence, it is increasingly important to find alternative solutions.

In addition to MSW, industries produce waste from their production activities, e.g. organic residues and by-products, that need to be handled. In 2014, bio-based waste from industrial processes and agriculture, forestry, fishing and water treatment in the EU accounted for 157 million tonnes per year. For companies that depend on natural gas and are looking for greener processes, the conversion of organic waste into bio-methane is an appealing solution.

## Customer Solutions

In 2018, the downstream electricity market size in Europe was 3.3PWh. Of this, the business segment accounted for the largest share with 60-70%, while residential customers accounted for 30-40%.

In 2018, 42% of the European power demand was met by renewable energy (incl. hydro), and the share is forecasted to reach 69% by 2030. Considering the growth in renewables, the consequent increase in intermittent power generation will lead to continuous discrepancies between forecasted and actual production. There is value in efficiently managing this gap for wholesale customers by providing balancing services.

With subsidies for renewable power generation trending lower and eventually reaching zero, it becomes increasingly important to find ways to manage the increasing merchant power price exposure. This entails development of new products and solutions for the wholesale and retail markets.

In the business segment, many corporate customers demand greener and more innovative energy solutions that are also sustainable and cost efficient. To address this demand, the market for corporate power purchase agreements (cPPA) has experienced considerable growth. Despite remaining a smaller share of the total downstream power market, the global market size for cPPAs is expected to reach 28GW in 2018, up from only 9GW in 2015. As customers pursue sustainable and greener solutions, 74% of the cPPAs are sourced from wind and 24% from solar energy.

# Our strategy and capital allocation

## Strategic direction and growth

Our strategic shift from black to green energy is reflected in our capital base. In 2007, only 16% of our total capital employed was invested in renewables. In 2018, the share of renewables had increased to 87%.

In addition, our strategic transformation to become a green energy company has positioned Ørsted as one of the largest commercial renewable energy companies in the world, measured by the capacity of renewable energy that is installed and under construction. By the end of 2018, we had 12GW of renewable energy capacity installed, under construction, or where a FID has been taken, with the vast majority being in offshore wind. In addition, we have been awarded or contracted projects with a capacity of 4.8GW where investment decisions are yet to be taken. Furthermore, we have a strong pipeline of projects under development.

Towards 2030, we expect that the global market for renewable energy will more than triple to 3,600GW. As one of the leading companies in renewable energy, Ørsted is strongly positioned to take part in this growth.

We have increased our ambition for offshore wind from a capacity of 11-12GW to a capacity of 15GW by 2025. By 2030, our strategic ambition is to achieve an installed renewable capacity of more than 30GW, provided that the development creates value for our shareholders.

## Strategic growth platform

	Europe	Americas	Asia
<b>Offshore</b> — Wind — Transmission — Storage	<b>Global leader in offshore wind</b> — Strategic core — Growth and value creation — Scale — Keep pioneering and innovating		
<b>Onshore</b> — Wind — Solar PV — Storage		<b>Leading US renewable company</b> — Strategic diversification — Scale — Technology integration — New value-creating growth platform	
<b>Bioenergy</b> — Biomass — Renescience — Biogas	— Explore growth and value creation potential of Bioenergy		
<b>Customer Solutions</b>	— Route to market for Ørsted's product portfolio — Risk management — Incremental value creation		

We have a strong growth platform to support our strategic ambition, comprising our four business units: Offshore, Onshore, Bioenergy and Customer Solutions.

Our Offshore business unit includes offshore wind, transmission and storage. We strive to maintain our global market leadership in offshore wind and will continue to expand

in Europe, North America, and Asia. We will keep pioneering and innovating the industry. Offshore wind will remain the strategic core of our company.

The second growth avenue is our Onshore business unit, where the aim is to create a leading North American company within renewable energy, with a main emphasis on

onshore wind, but also including solar energy and energy storage.

Bioenergy includes our biomass-converted combined heat and power plants in Denmark and our waste-to-energy and biogas technologies. We will continue to explore the growth and value creation potential within bioenergy.

Customer Solutions provides route-to-market services for our product portfolio as it brings our power, gas and green certificates to market, while also managing the risk profile of our portfolio.

Our key milestones for 2019 are shown in the figure to the right.

Towards 2025, we plan to invest substantially in green energy, thereby contributing to the conversion of the global energy system and creating value for our shareholders and the communities within our footprint.

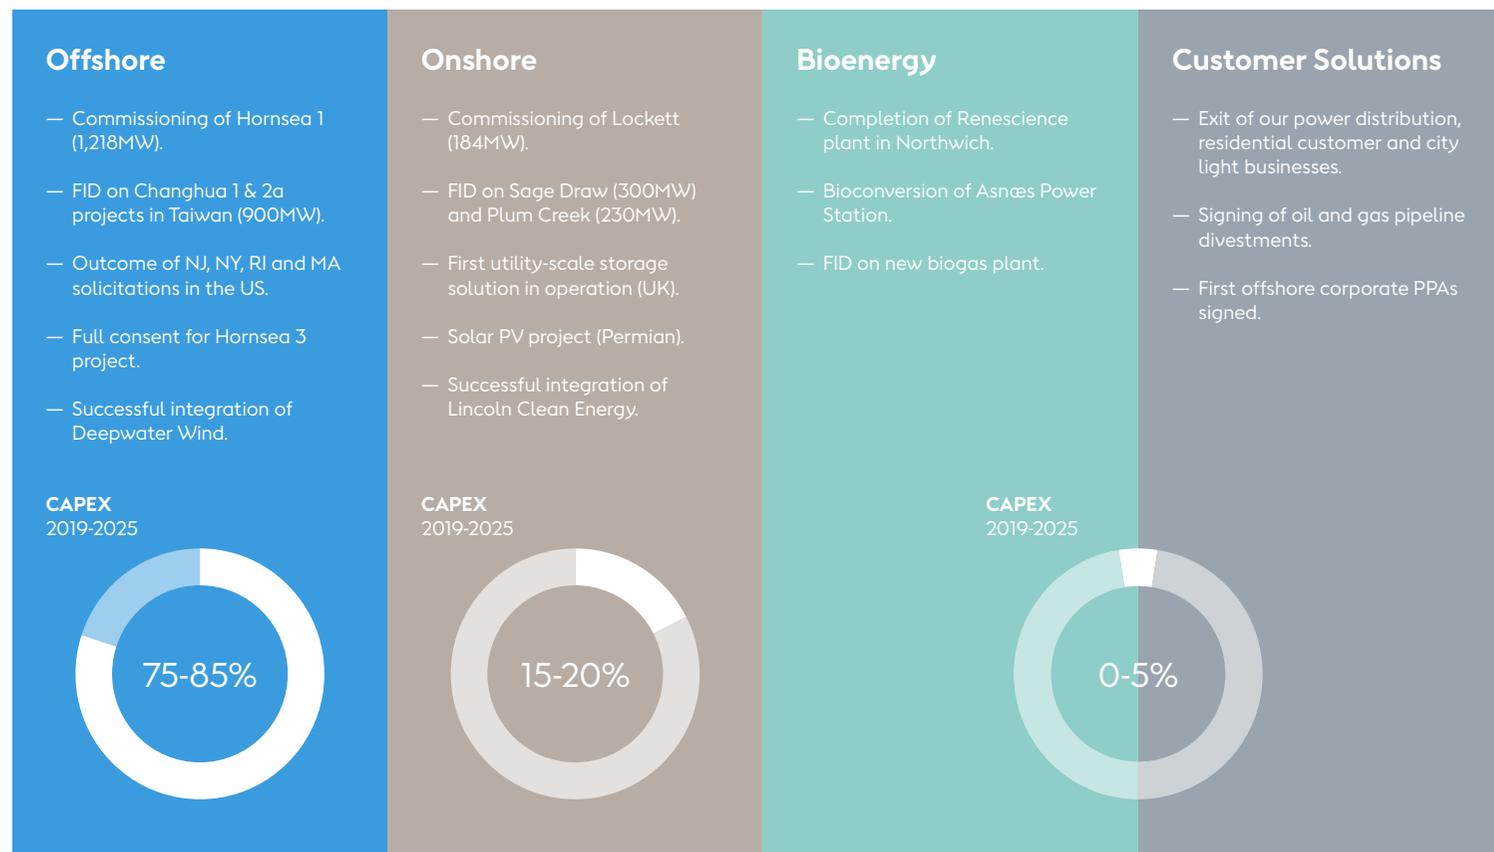

**Capital allocation**

Subject to continued value creation, we expect to invest DKK 200 billion in the period 2019-2025 to continue our growth towards an installed renewables capacity of +30GW by 2030. Our capital will be allocated to the best risk-return project opportunities in our portfolio. We have already committed gross investments of DKK 40-45 billion in the period, assuming no further partial divestments of offshore wind farms in Europe after the recent Hornsea 1 farm-down. Additional investments will primarily be allocated to our awarded 3.9GW offshore wind projects, our offshore pipeline as well as our contracted 0.9GW onshore wind and solar projects and our onshore pipeline.

In the period discussed, we expect to allocate 75-85% of our gross investments to Offshore, 15-20% to Onshore, and 0-5% to Bioenergy and Customer Solutions together.

Based on the above anticipated build-out of offshore and onshore wind, including the

**Key milestones for 2019 for our four business units**

acquisitions of Lincoln Clean Energy and Deepwater Wind, we expect our current financial headroom, relative to our rating commitment, to be deployed within a few years. Thus, our leverage, based on market value, is expected to increase from 8% at the end of 2018 to 25% in the early 2020's.

We expect our average return on capital employed (ROCE) for the years 2019-2025 to be around 10%.

In addition to our ambitious investment plan, we aim at maintaining a high single-digit annual growth in dividends until 2025.

**Enablers of the strategy**

To support our ambitious strategy and enable our businesses to perform effectively and profitably, we continue to invest significantly in talent, digitalisation, operational excellence and innovation.

## Talent

As one of the global leaders in renewable energy, Ørsted offers a strong environment for professional growth and career development. With our global growth ambition, we will need gifted, ambitious and world-class talent to drive our business forward. Our aim is to hire the best people and to offer unparalleled opportunities for professional development through attractive learning opportunities for all employees and through dynamic and mobile careers. To support our ambition, we are strengthening our employer branding and talent acquisition efforts, our people development and performance management approaches and our talent development activities. As we expand our global business, we will also increase workforce diversity to create a truly international culture. To drive more structured talent acquisition, development and deployment of high potentials, we are establishing cross-business 'talent pipeline forums' led by senior business executives.

## Digitalisation

Our digital strategy focuses on keeping us at the forefront of our industry. The key focus areas lie within offshore wind power operations, customer solutions, market trading and risk management, combined heat and power plant operations and shared services. Across these areas, we have defined financial targets and established rigorous processes for delivering and tracking value. The key drivers for increased digital value creation are increasing deployment of advanced analytics and artificial intelligence, strengthening interfaces and mobility by augmenting our employees' or customers' experiences through human-machine interfaces, as well as a raised

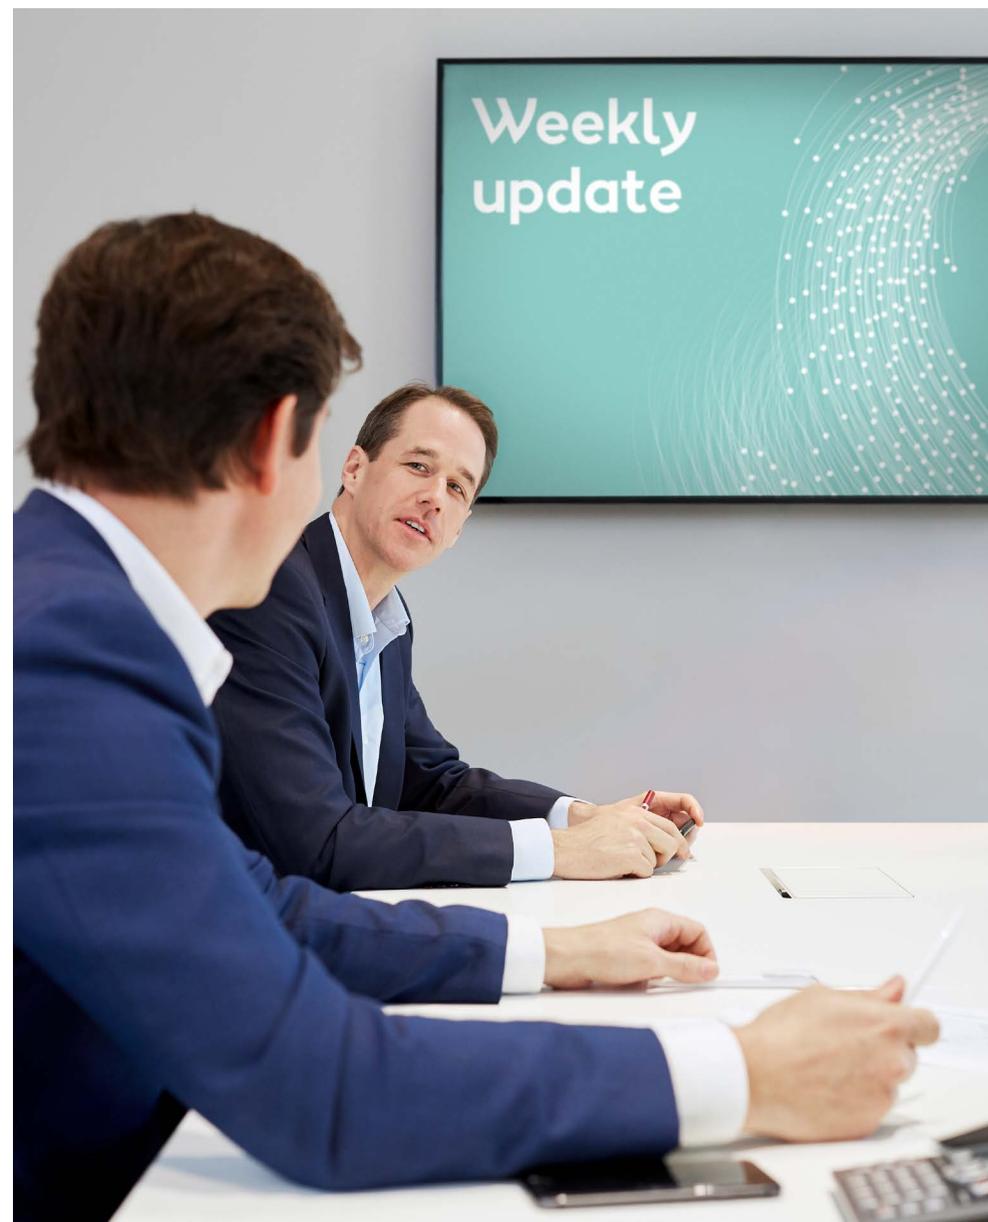

level of automation. In 2018, we significantly scaled up our digitalisation efforts, increasing external recruitment and further leveraging our in-house capabilities.

## Operational effectiveness

We continuously drive asset productivity, cost efficiency and quality across all major operational areas. In particular, we run operational excellence programmes within O&M and EPC in offshore wind, our CHP plants, shared services and our sales operations. Across our businesses, all operational excellence programmes are driven rigorously, based on clear target setting, well-defined initiatives and clear follow-up processes for delivering and tracking value creation.

## Innovation

To maintain our competitive edge and stay at the forefront of a rapidly evolving renewable energy industry, innovation is a key priority. Across our business units, we invest significantly in innovating and strengthening our existing product offerings and in bringing new solutions into our portfolio. To reinforce our strategic radar for emerging technologies and business models, we established Ørsted Ventures in Silicon Valley, California, in 2017. In 2018, we expanded our venture engagements to also include our European markets. To nurture internal innovation, we run cross-organisational Innovation Games, where internal teams from across the company present innovative business ideas aimed at promoting growth and strengthening our competitive edge.

# Our business model

## Key resources

## Core activities

## Value created

### Financial capital

We finance our investments through cash flows from operations, debt and divestment of ownership interests.

### Energy assets

We invest in scalable, innovative green technologies and solutions.

### Natural resources

We rely on natural resources, such as construction materials, biomass, as well as locations with attractive wind speeds and seabed conditions.

### Human resources

We rely on a highly skilled workforce to operate our business.

### Innovative culture

We continuously innovate our energy solutions to drive competitiveness.

### Stakeholder engagement

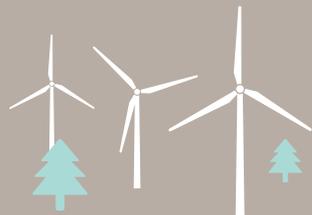

We depend on constructive relations with our key stakeholders to ensure supportive framework conditions for our business.

Capital employed 79%

### Offshore

- Develop, build, own and operate offshore wind farms (three wind farms are under construction).
- Own 26 offshore wind farms of which we operate 22.
- Development projects in progress in the UK, Germany, Taiwan and the US.
- Additional new markets being developed in Asia and Europe.

Capital employed 6%

### Onshore

- Develop, build, own and operate onshore wind farms.
- Three wind farms are in operation, one wind farm is under construction, and two wind farms are under development.
- Explore opportunities within solar PV and storage.

Capital employed 2%

### Bioenergy

- Convert our CHP plants to biomass.
- Own and operate ten CHP plants in Denmark.
- Enter into long-term contracts with our heat customers and sell power to the market.
- Explore opportunities within biogas and waste recycling.

### Customer Solutions

- Route-to-market services for our own and partners' power, gas and certificates.
- Manage the Group's energy portfolio risks.

Capital employed 13% of which assets we plan to exit 10%

### Society

We address profound societal challenges by developing green, independent and economically viable energy systems that reduce greenhouse gas emissions and stimulate local growth and job creation.

### Customers

We fulfil our customers' energy needs through green, innovative and efficient energy solutions.

### Employees

We are committed to a sustainable working life and keep a constant focus on being a great and safe place to work with motivated and satisfied employees.

### Shareholder return

We create value for our shareholders in the form of competitive total returns.

# Strategic targets

## 1. EBITDA from operating wind farms, %

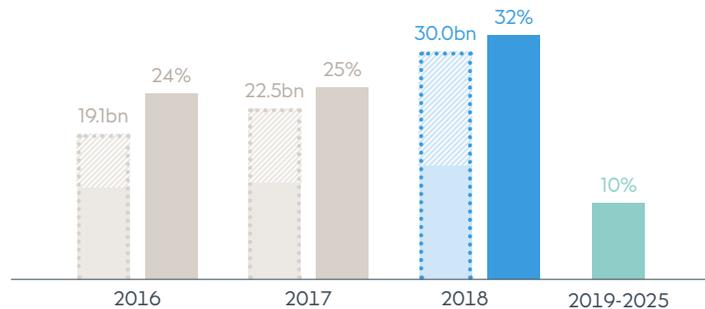

EBITDA from our wind farms in operation is on average expected to increase by 20% per year from 2017 to 2023.

## 2. ROCE, %

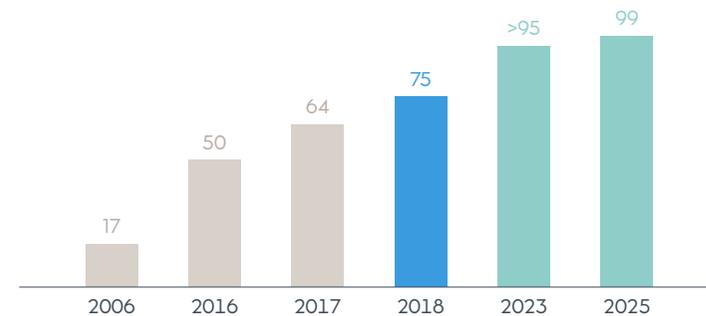

Our target is an average return on capital employed (ROCE) of around 10% for the Group in the 2019-2025 period. EBITDA in 2016-2018 has been positively impacted by significant profits from new partnership agreements, particularly divestment gains, which are not expected to be repeated going forward.

● ROCE ● EBITDA ▨ of which EBITDA from new partnerships

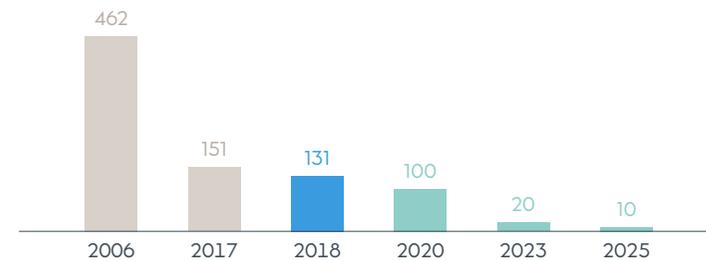

## 3. Green share of generation, %

In 2018, we increased the green share of generation by 11%-points compared to the previous year. We are on track to meet our objective of exceeding 95% by 2023 and reaching 99% by 2025.

## 4. Carbon emissions, g CO<sub>2</sub>e/kWh

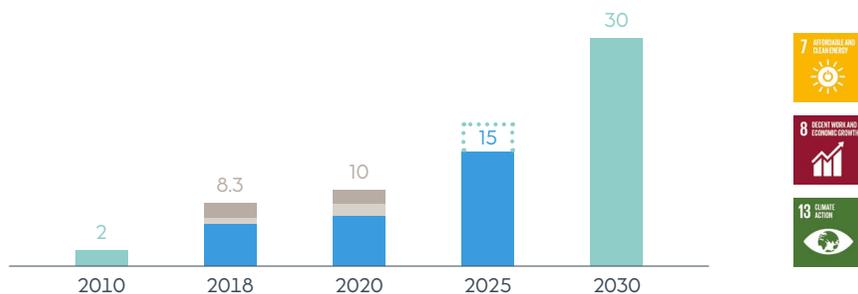

The conversion of our heat and power stations to sustainable biomass, together with our build-out of offshore wind, has reduced our carbon emissions intensity by 72% since 2006. We are well on track to meet our target of an emission intensity of no more than 20g CO<sub>2</sub>e per kWh in 2023 and 10g CO<sub>2</sub>e in 2025.

## 5. Installed renewable capacity, GW

In 2018, we defined an ambition of installing more than 30GW of green capacity by 2030 through offshore wind, onshore wind, bioenergy and solar PV technologies. In addition, our ambition is to have installed 15GW of offshore wind by 2025, up from our previous target of 11-12GW. The upward revision is based on strong progress since we set the ambition in 2016, with 5.6GW installed by 2018, 3.4GW under construction towards 2022 and 3.9GW of capacity awarded.

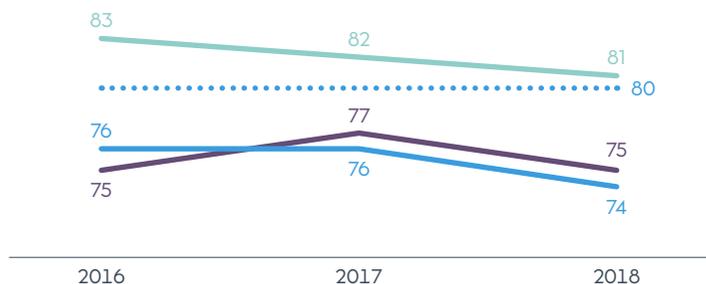

● Offshore wind ● Onshore wind ● Bioenergy ● Other renewables ● Total renewables

## 6. Customer satisfaction, scale 1-100

Our ambition is to deliver a market-leading customer experience for our corporate customers, which we continuously strive to do. Our target is a customer satisfaction of at least 80 by 2020.

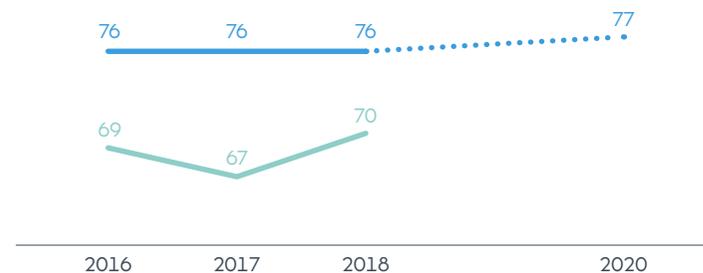

— B2C — B2B — Distribution ●●● Target 2020

## 7. Employee satisfaction, scale 1-100

We believe that well-being and positive results go hand in hand. Therefore, we are continuously working to maintain and increase employee satisfaction. The employee satisfaction in Ørsted is above comparable companies.

— Ørsted — Ennova benchmark

## 8. Safety, TRIR

From 2018, we introduced a new safety target – total recordable injury rate (TRIR). In 2018, TRIR significantly improved and outperformed the target of 5.7 we had set for 2020. We have therefore raised our ambition and set a target of reducing TRIR to 3.3 by 2025. In 2019, we expect a TRIR of 5.2. The increase compared to 2018 is due to future activities in new markets with immature offshore wind supply chains.

# Our global footprint

## USA

-  Amazon (253MW)  
Tahoka (300MW)  
Willow Springs (250MW)

# Results

## Assets held for sale

We have classified our power distribution, residential customer and city light businesses as assets held for sale at the end of 2018, as we expect to exit these activities within the next 12 months. Contrary to the classification of our upstream oil and gas activities as assets held for sale in 2016, these activities are not presented as discontinued operations due to their more limited relative size for the Group. This means that the results and cash flows are still presented together with the rest of the Group. EBITDA from the power distribution, residential customer and city light businesses amounted to DKK 1.1 billion in 2018 (4% of total EBITDA), while capital employed amounted to DKK 8.3 billion (10% of total capital employed).

## Financial results

### Revenue

Power generation from offshore wind farms increased by 18% to 10.0TWh in 2018 due to the ramp-up of generation from Race Bank, Walney Extension and Borkum Riffgrund 2. Power generation from onshore wind farms amounted to 0.6TWh in 2018. Thermal power generation was 18% lower than in 2017, driven by the divestment of our Dutch power plant in June, and amounted to 6.7TWh. Power generation from our Danish CHP plants increased by 4%, while heat generation decreased by 2% to 8.8TWh in 2018. Offshore and onshore wind farms accounted for 62% of our total power generation, an increase of 11 percentage points compared to last year. The renewable energy share of our total heat and power generation accounted for 75% of total generation in 2018 compared with 64% in 2017.

Revenue amounted to DKK 76.9 billion. The increase of 29% relative to 2017 was primarily due to higher revenue from construction agreements due to high activity on construction of offshore wind farms for partners and divestment of transmission assets, higher revenue from wind farms in operation and higher gas and power prices in 2018.

### EBITDA

Operating profit (EBITDA) totalled DKK 30.0 billion compared with DKK 22.5 billion in 2017. Earnings from Offshore increased by 35% to

## Business performance vs. IFRS

Ørsted uses business performance as an alternative to the results prepared in accordance with IFRS. Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. The difference between the two principles will be eliminated as the contracts expire. Apart from this, there is no difference between business performance and the IFRS results.

EBITDA calculated in accordance with IFRS amounted to DKK 28.5 billion in 2018 against DKK 22.6 billion in 2017. Calculated in accordance with the business performance principle, EBITDA was DKK 30.0 billion and DKK 22.5 billion, respectively. The difference between the two principles was thus DKK 1.5 billion in 2018 compared with DKK 0.1 billion in 2017 and is specified below.

In the presentation of the results according to IFRS, Ørsted does not apply the provisions on hedge accounting of commodities and related currency exposures. The market value adjustments of these are continuously recognised in the income statement, which means that the IFRS results for the individual years are not comparable. IFRS results do not reflect the commercial risk hedging, according to which the business units and the Group are managed and evaluated. In the management's review, comments are based on the business performance principles only, unless otherwise specified. Reference is also made to note 1.6.

Business performance vs. IFRS, DKKm	2018	2017
<b>EBITDA – business performance</b>	<b>30,029</b>	<b>22,519</b>
Market value adjustments for the year of financial and physical hedging contracts relating to a future period	(1,734)	(138)
Reversal of deferred gains (losses) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period	196	193
<b>EBITDA – IFRS</b>	<b>28,491</b>	<b>22,574</b>

DKK 27.8 billion, of which the farm-down of Hornsea 1 represented more than half (DKK 15.1 billion). Higher power generation due to ramp-up and commissioning of new offshore wind farms contributed to a 29% increase in earnings from offshore wind farms in operation.

Earnings from Onshore contributed marginally, while Bioenergy earnings more than doubled and amounted to DKK 0.4 billion due to higher spreads as well as full-year impact from the bioconversion of Skærbæk Power Station, which was inaugurated in Q4 2017.

Earnings from Customer Solutions were almost flat year-on-year and amounted to DKK 2.0 billion.

**EBIT**

EBIT increased by DKK 8.4 billion to DKK 24.7 billion in 2018, primarily as a result of the higher EBITDA.

Depreciation increased by DKK 0.2 billion to DKK 6.0 billion in 2018. The increase was due to a higher number of wind farms in operation.

In connection with the classification of the power distribution activities as assets held for sale, we have reversed a previous impairment loss of DKK 0.6 billion.

**Gain (loss) on divestment of enterprises**

Gain (loss) on divestment of enterprises primarily concerned the divestment of our 50% share of the Dutch gas-fired power plant Enecogen in 2018.

**Financial income and expenses**

Net financial income and expenses amounted to DKK -1.3 billion and were DKK 0.2 billion higher than last year. The increase was mainly due to a lower level of capitalised interests, mainly related to Walney Extension and Race Bank, due to the progress of the projects.

**Tax and tax rate**

Tax on profit for the year amounted to DKK 4.0 billion, which was DKK 2.3 billion higher than in 2017. The effective tax rate was 17% against 12% in 2017. In both years, the tax rate was affected by non-taxable divestment gains. Gain on the 50% farm-down of Hornsea 1 impacted the effective tax rate in 2018, while gains on the farm-downs of Walney Extension, Borkum Riffgrund 2 and Race Bank impacted the tax rate in 2017.

**Profit for the year from continuing operations**

Profit for the year from continuing operations totalled DKK 19.5 billion, DKK 6.2 billion higher than in 2017. The increase was primarily due to the higher EBIT, partly offset by higher net finance costs and higher taxes.

**EBITDA**

- Offshore
- Onshore
- Bioenergy
- Customer Solutions

**EBITDA, DKKbn**

- EBITDA, excl. new partnerships
- EBITDA, new partnerships

EBITDA, excluding new partnerships increased by 18%.

Financial results, DKKm	2018	2017	%
Revenue	76,946	59,504	29%
EBITDA	30,029	22,519	33%
Depreciation	(5,978)	(5,739)	4%
Impairment reversals (losses)	603	(545)	n.a.
Operating profit (loss) (EBIT)	24,654	16,235	52%
Gain (loss) on divestment of enterprises	127	(139)	n.a.
Profit (loss) from associates and JVs	1	(10)	n.a.
Net financial income and expenses	(1,278)	(1,042)	23%
Tax	(4,018)	(1,765)	128%
Tax rate	17%	12%	5%p
Profit for the year from continuing operations	19,486	13,279	47%
Profit for the year from discontinued operations	10	6,920	(100%)
Profit (loss) for the year	19,496	20,199	(3%)

In 2018, regulated and quasi-regulated activities and contracted activities accounted for 31% and 64% of our EBITDA, respectively, whereas market exposed activities accounted for 5%.

Read more about profit for the year from discontinued operations in note 3.7.

## Cash flows and net debt

### Cash flows from operating activities

Cash flows from operating activities totalled DKK 10.3 billion in 2018 compared with DKK 1.0 billion in 2017. The increase of DKK 9.3 billion was due to the higher EBITDA (excluding gains from divestments which are not recognised in cash flows from operating activities), settlement of intra-group hedges related to the now divested oil and gas business having a negative effect in 2017, a lower increase of funds tied up in work in progress and other working capital as well as a positive contribution from tax equity partners related to the Tahoka onshore wind farm.

This was partly offset by higher net interest, etc., due to a lower level of capitalised interests, lower accrued interest and exchange rate losses as well as higher paid taxes.

In 2018, funds tied up in work in progress increased by DKK 2.3 billion and primarily related to the construction of Borkum Riffgrund 2 and Walney Extension as well as offshore transmission assets at Hornsea 1 and Hornsea 2 in the UK. This was partly offset by milestone payments from partners related to the construction of Race Bank, Borkum Riffgrund 2, Walney Extension and Hornsea 1 as well as the divestment of the Burbo Bank Extension transmission assets.

Less funds were tied up in other working capital due to funds being tied up in clearing accounts in 2017 and less funds tied up in receivables in 2018. This was partly offset by the repayment of a VAT export credit loan to the Danish tax authorities in 2018.

### Investments and divestments

Gross investments amounted to DKK 24.5 billion against DKK 17.7 billion in 2017. The main investments in 2018 were:

- offshore wind farms (DKK 11.1 billion), including Hornsea 1 and Walney Extension in the UK, Borkum Riffgrund 2 in Germany, Borssele 1 & 2 in the Netherlands and early investments in the US to qualify for future tax credits
- onshore wind farms (DKK 1.1 billion), including Lockett and Tahoka in the US
- the acquisitions of Deepwater Wind (DKK 4.0 billion) and Lincoln Clean Energy (DKK 5.6 billion)
- power stations (DKK 1.4 billion), mainly the bioconversion of Asnæs Power Station.

Cash flow from divestments in 2018 related to the 50% farm-down of Hornsea 1, receipt of deferred proceeds from the farm-down of 50% of Walney Extension in 2017 and proceeds from the divestment of our 50% ownership share in Enecogen.

### Interest-bearing net debt

Interest-bearing net debt totalled DKK -2.2 billion (net cash position) at the end of 2018. The free cash flow of DKK 5.8 billion more than offset the payment of dividends to shareholders (DKK 3.8 billion) and non-controlling interests (DKK 0.4 billion) and interests on hybrid capital (DKK 0.5 billion).

Cash flows and net debt, DKKm	2018	2017	%
Cash flows from operating activities	10,343	1,023	911%
EBITDA	30,029	22,519	33%
Financial instruments	369	(528)	n.a.
Change in provisions	(278)	98	n.a.
Reversal of gain (loss) on sale of assets	(14,995)	(10,835)	38%
Other items	203	297	(32%)
Interest paid and similar items, net	(700)	36	n.a.
Paid tax	(3,367)	(2,660)	27%
Change in work in progress	(2,326)	(3,674)	(37%)
Change in tax equity liabilities	1,835	-	n.a.
Change in other working capital	(427)	(4,230)	(90%)
Gross investments	(24,481)	(17,744)	38%
Divestments	19,950	16,982	17%
Free cash flow	5,812	261	n.a.
Net debt at 1 January	(1,517)	3,461	n.a.
Free cash flow from continuing operations	(5,812)	(261)	n.a.
Free cash flow from discontinued operations	(209)	(9,025)	(98%)
Interest-bearing receivables re Oil & Gas divestment	292	(1,014)	n.a.
Dividends and hybrid coupons paid	4,700	3,523	33%
Exchange rate adjustments, etc.	327	1,799	(82%)
Net debt at 31 December	(2,219)	(1,517)	46%
<b>Key ratios, DKKm, %</b>	<b>2018</b>	<b>2017</b>	<b>%</b>
ROCE	32.1%	25.2%	6.9%p
Adjusted net debt	15,516	15,900	(2%)
FFO/adjusted net debt	69.0%	50.3%	18.7%p

Gain (loss) on sale of assets is part of EBITDA, but is presented as part of the 'divestment' cash flow. The EBITDA effect is thus reversed in the specification of cash flows from operating activities.

ROCE and FFO/adjusted net debt is specified in notes 2.1 and 6.6.

## Equity and capital employed

### Equity

Equity was DKK 85.1 billion at the end of 2018 against DKK 71.8 billion at the end of 2017. The increase was primarily due to the positive result for the year less dividends paid.

### Capital employed

Capital employed was DKK 82.9 billion at the end of 2018 against DKK 70.3 billion at the end of 2017. Offshore's share of capital employed was 79% at the end of 2018.

## Financial ratios

### Return on capital employed (ROCE)

Return on capital employed was 32% in 2018, up 7 percentage points compared to 2017. The increase was mainly attributable to the higher EBIT. Both years were significantly positively impacted by farm-downs – Hornsea 1 in 2018 and Walney Extension and Borkum Riffgrund 2 in 2017.

### Credit metric (FFO/adjusted net debt)

The credit metric 'funds from operations' (FFO) relative to adjusted net debt was 69% in 2018 relative to 50% in 2017. The increase was due to a higher FFO together with lower adjusted net debt in 2018.

## Non-financial results

### Green share of heat and power generation

The green share of our heat and power generation amounted to 75% in 2018, up 11 percentage points relative to 2017. The increase was due to higher generation from offshore wind farms, a larger share of biomass-based generation as a result of the bioconversion of Skærbæk Power Station as well as a decrease in the use of gas following the divestment of the Enecogen power plant.

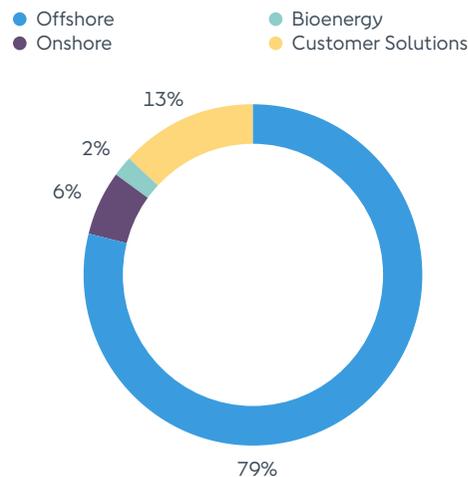

### Carbon emissions

Carbon emissions from our heat and power generation decreased by 13% to 131g CO<sub>2</sub>e/kWh in 2018 against 151g CO<sub>2</sub>e/kWh in 2017. Carbon emissions per kWh decreased for the same reasons as mentioned above.

### Safety

In 2018, we registered 98 total recordable injuries (TRIs), 61 of which involved employees working for our suppliers. Over the past 12 months, our total recordable injury rate (TRIR) has declined from 6.4 in 2017 to 4.7 in 2018.

### Capital employed, %

## Business performance vs. IFRS

Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. Apart from this, there is no difference between business performance and IFRS results. Read more in note 1.6.

ROCE is calculated for continuing operations.

<sup>1)</sup> EBIT/average capital employed.

<sup>2)</sup> Net debt, including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax.

<sup>3)</sup> See definition on page 192 and in the ESG statements.

<sup>4)</sup> The figures indicate values from the latest regulatory financial statements (updated in June).

# Fourth quarter

## Financial performance – Group

### Revenue

Revenue in Q4 2018 increased by 51% relative to Q4 2017 and amounted to DKK 23.5 billion. The increase was mainly driven by construction agreements where revenue increased by DKK 4.6 billion to DKK 6.3 billion due to the partial divestment of the Hornsea 1 transmission assets as part of the 50% farm-down of Hornsea 1. In addition, revenue increased due to higher gas and UK power prices and higher generation from offshore wind farms.

### EBITDA

Operating profit (EBITDA) totalled DKK 19.2 billion in Q4 2018 compared with DKK 13.0 billion in Q4 2017. The 47% increase was mainly due to the 50% farm-down of Hornsea 1 in Q4 2018, which was only partly offset by the 50% farm down gains from Walney Extension and Borkum Riffgrund 2 in Q4 2017. Earnings from offshore wind farms in operation increased by 26% as a result of ramp-up at Walney Extension, Race Bank and Borkum Riffgrund 2.

Earnings from our Bioenergy and Customer Solutions businesses were in line with Q4 2017. Earnings from Onshore had a limited impact.

### Profit from continuing operations

Profit for the period from continuing operations increased by DKK 5.8 billion to DKK 15.2 billion. The increase was mainly due to the higher EBITDA.

### Cash flows from operating activities

Cash flows from operating activities totalled DKK 7.6 billion in Q4 2018 compared with DKK 3.1 billion in Q4 2017.

The increase of DKK 4.5 billion was due to lower paid Danish taxes (taxes were paid on account in March in 2018 and in November in 2017), a tax equity contribution received from our partner at the Tahoka onshore wind farm and lower receivables.

This was partly offset by a lower release of funds tied up in work in progress, mainly due to prepayments and milestone payments received from partners in Q4 2017 at Walney Extension and Borkum Riffgrund 2 and high construction activity at Hornsea 1 in Q4 2018.

### Gross investments and divestments

Gross investments amounted to DKK 14.9 billion in Q4 2018, of which DKK 9.6 billion related to the acquisitions of Deepwater Wind and Lincoln Clean Energy. The other main investments related to Hornsea 1, Borssele 1 & 2, Lockett and early investments in the US to qualify for future tax credits.

Divestments amounted to DKK 18.7 billion in Q4 2018 and related mainly to the 50% farm-down of Hornsea 1.

### Financial performance, DKKm

## Financial performance – business units

### Offshore

Power generation was up 14% in Q4 2017 due to ramp-up of generation at Walney Extension and Borkum Riffgrund 2.

Revenue totalled DKK 10.7 billion in Q4 2018 against DKK 5.6 billion in Q4 2017. The increase was driven by revenue from wind farms in operation, which was up 15% as a result of increased power generation, and an increase in revenue from construction agreements due to the partial divestment of the Hornsea 1 transmission assets.

EBITDA was up 49%, totalling DKK 18.8 billion in Q4 2018 compared with DKK 12.6 billion in Q4 2017.

Earnings from offshore wind farms in operation increased by 26% as a result of the commissioning of new offshore wind farms. Earnings from partnership agreements increased by DKK 5.4 billion and related primarily to the farm-down of Hornsea 1 in Q4 2018 compared to the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2 in Q4 2017.

EBITDA from other activities totalled DKK -0.7 billion in Q4 2018, which was in line with the same period last year, and related primarily to project development costs.

Cash flows from operating activities totalled DKK 3.6 billion in Q4 2018 in line with Q4 2017. Release of funds tied up in work in progress contributed more positively in Q4 2017, where prepayments and milestone payments were received from partners at Walney Extension and Borkum Riffgrund 2. This was partially offset by lower paid taxes in Q4 2018.

### Onshore

For Onshore, the quarterly and full-year results are identical. See page 46.

### Bioenergy

Revenue was DKK 1.9 billion in Q4 2018 against DKK 1.8 billion in Q4 2017. The increase was due to higher power prices which led to higher income despite lower power generation in Q4 2018. Revenue from heat generation remained unchanged.

EBITDA was at the same level as the year before and amounted to DKK 0.2 billion.

### Customer Solutions

Revenue amounted to DKK 12.9 billion in Q4 2018 compared with 10.4 billion in Q4 2017. The increase was mainly due to higher gas and UK power prices.

EBITDA was at the same level as Q4 2017 and amounted to DKK 0.2 billion.

EBITDA from Markets decreased by DKK 0.5 billion, primarily due to an increase in the value of gas at storages in Q4 2017 compared to a loss in Q4 2018, where the gas prices decreased during December.

EBITDA from our LNG activities increased by DKK 0.5 billion, mainly as a result of provisions in Q4 2017 related to the onerous contract at the Gate terminal in Rotterdam as well as provisions regarding purchase contracts.

Cash flows from operating activities totalled DKK 0.7 billion in Q4 2018, DKK 0.5 billion higher than in Q4 2017. The positive effect was mainly due to lower receivables in Q4 2018 and lower paid taxes.

## Business performance vs. IFRS

Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. Apart from this, there is no difference between business performance and IFRS results. Read more in note 1.6.

ROCE is calculated for continuing operations.

<sup>1)</sup> EBIT/average capital employed.

<sup>2)</sup> Net debt, including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax.

<sup>3)</sup> See definition on page 192 and in the ESG statements.

<sup>4)</sup> The figures indicate values from the latest regulatory financial statements (updated in June).

<sup>5)</sup> Last 12 months.

# Offshore

## Highlights 2018

- We inaugurated the Race Bank and Walney Extension offshore wind farms.
- Borkum Riffgrund 2 was commissioned by the end of 2018, ahead of schedule.
- We divested 50% of the 1,218MW Hornsea 1 offshore wind farm in the UK to Global Infrastructure Partners.
- We were awarded two offshore wind farm projects in Germany with a total capacity of 552MW, one of which was won with a zero-subsidy bid.
- We were awarded 900MW grid capacity in Taiwan's first offshore wind grid allocation process and an additional 920MW in the country's first offshore wind auction, resulting in a total build-out pipeline in Changhua of 1,820MW.
- We acquired Deepwater Wind and created a leading US offshore wind platform.
- In the US, we were awarded an additional 104MW in December in the clean energy auction in Connecticut.
- Application criteria were fulfilled for further development of the Race Bank Extension offshore wind farm.

## Financial performance

Power generation increased by 20% relative to 2017, primarily due to the ramp-up of generation from Race Bank, Walney Extension and Borkum Riffgrund 2. We commissioned Race Bank in January, Walney Extension in May and Borkum Riffgrund 2 in December 2018.

Wind speeds were 2% lower than in 2017 and amounted to a portfolio average of 9.1m/s, which was in line with a normal wind year. The availability of 93% was at the same level as the year before.

Revenue increased by 50% to DKK 30.6 billion. Revenue from offshore wind farms in operation increased by 23% due to the above-mentioned ramp-up from new offshore wind farms. Revenue from construction agreements increased by DKK 7.8 billion due to high activity on construction of the Borkum Riffgrund 2 and Walney Extension offshore wind farms for partners as well as the divestment of the Burbo Bank Extension transmission asset and a partial divestment of the Hornsea 1 transmission assets as part of the 50% farm-down of Hornsea 1. Following the implementation of IFRS 15, revenue from construction of transmission assets are recognised at the time of divestment.

EBITDA increased by 35%.

EBITDA increased by 35% relative to 2017.

EBITDA from sites, O&Ms and PPAs amounted to DKK 11.0 billion, up DKK 2.5 billion compared to 2017. The increase was driven by the factors mentioned above.

EBITDA from construction agreements was DKK 5.1 billion higher than in 2017, amounting to DKK 18.8 billion in 2018. The total gain from the farm-down of Hornsea 1 (DKK 15.1 billion) as well as a high level of activity related to the construction of Walney Extension and Borkum Riffgrund 2 for partners contributed positively in 2018. In 2017, EBITDA was positively affected

by the farm-down of Walney Extension (DKK 7.5 billion) and Borkum Riffgrund 2 (DKK 2.2 billion), construction progress on Race Bank and completion of Burbo Bank Extension and Gode Wind 1 & 2 as well as the recognition of a deferred farm-down gain on Race Bank.

EBITDA from other activities amounted to DKK -2.0 billion against DKK -1.6 billion in 2017. The decrease of DKK 0.4 billion was mainly due to higher project development costs.

Depreciation increased by 9% due to the commissioning of new offshore wind farms in the UK and Germany.

Cash flows from operating activities amounted to DKK 5.8 billion in 2018 compared to DKK 3.4 billion in 2017. The increase was due to the higher EBITDA (adjusted for farm-down gains), a lower increase in funds tied up in construction of offshore wind farms for partners and a VAT refund. This was partly offset by higher paid taxes. Paid taxes in 2018 were significantly higher than in 2017, mainly due to taxation of construction agreement gains in the year of commissioning (Race Bank, Walney Extension and Borkum Riffgrund 2 in 2018 compared to Burbo Bank Extension in 2017) as well as higher earnings from offshore wind farms in operation.

In 2018, funds tied up in work in progress increased by DKK 2.3 billion and primarily related to the construction of Borkum Riffgrund 2 and Walney Extension as well as the offshore transmission assets at Hornsea 1 and Hornsea 2. This was partly offset by milestone payments from partners related to the construction of Race Bank, Walney Extension, Borkum Riffgrund 2 and Hornsea 1 and the divestment of the Burbo Bank Extension transmission asset.

### Introduction to Offshore

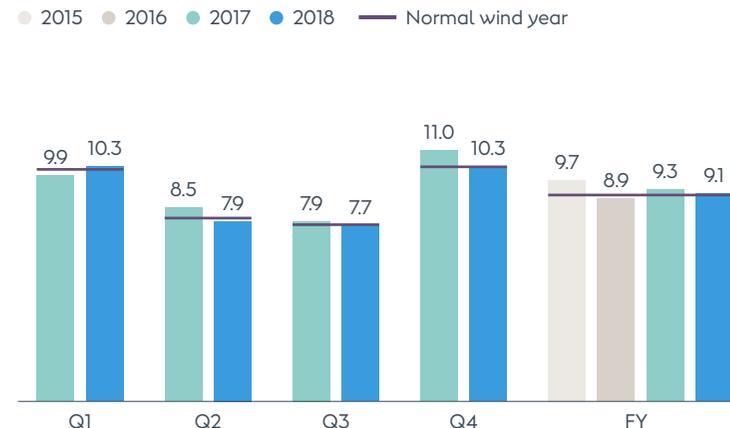

- We are active in all parts of the value chain and develop, construct, own and operate offshore wind farms in Denmark, the UK, Germany, the Netherlands, the US and Taiwan.
- We have been pioneers in the industry since we built the world's first offshore wind farm in 1991, and we have established ourselves as the market leader within global offshore wind power generation with 25+ years of experience, 26 offshore wind farms in operation and presently three offshore wind farms under construction.
- Worldwide, we are the company that has constructed most offshore wind farms with a total installed capacity of 5.6GW, which has provided us with an unparalleled experience. Our integrated EPC organisation has a strong

- track record of delivering projects on time and on budget and can construct multiple large-scale wind farms in parallel across regions.
- With 3.4GW currently under construction, we have the largest market share with approx 30% of the total global capacity.
- Our total installed capacity of 5.6GW covers more than 12 million people's annual power consumption with carbon-free electricity.
- By 2020, we will have expanded our installed offshore wind capacity to 7.6GW, and we aim for a capacity of 15GW in 2025.

Quarterly and annual wind speed for our offshore wind farms, m/s

The wind speed indicates how many metres per second the wind has blown in the areas where we have offshore wind farms. The weighting is based on our generation capacity.

Gross investments amounted to DKK 15.1 billion in 2018, of which the acquisition of Deepwater Wind amounted to DKK 4.0 billion (including acquired debt and excluding DKK 0.7 to be paid in 2019). The largest investments related to the construction of Hornsea 1, Borkum Riffgrund 2, Borssele 1 & 2, Walney Extension and early investments in the US to qualify for future tax credits.

Cash flows from divestments in 2018 related to the 50% farm-down of Hornsea 1 and receipt of deferred proceeds from the farm-down of 50% of Walney Extension in 2017.

ROCE increased by 9 percentage points to 37% and was in both periods impacted by gains from farm-downs – Hornsea 1 in 2018 and Walney Extension and Borkum Riffgrund 2 in 2017.

## Strategy follow-up

Offshore wind is our core business, and we will continue pioneering and innovating the industry. It is a rapidly growing market in the global energy system with attractive value creation opportunities, and we will maintain our global market leadership in offshore wind and continue the expansion in Europe, North America and Asia Pacific.

### Offshore's strategic focus is to:

- maintain our market leadership in offshore wind with a targeted capacity of 15GW in 2025
- continue to pioneer new markets and develop a global business
- continue to reduce the cost of electricity
- implement operational excellence and innovation and digitalisation initiatives across the business
- leverage our market-leading partnership model.

### Maintain our market leadership in offshore wind with a targeted capacity of 15GW in 2025

In 2018, we commissioned Race Bank and Walney Extension in the UK and Borkum Riffgrund 2 in Germany. Walney Extension is currently the world's largest offshore wind farm and was delivered well ahead of schedule and below budget before summer. Together, the three wind farms added approx 1.7GW to our installed capacity, and we have now installed 5.6GW of offshore wind capacity.

All of our current construction projects are progressing according to plan. In January 2018, offshore construction began at Hornsea 1, and

we expect commissioning in late 2019. At Borssele 1 & 2, the procurement phase is completed with main contracts well within budget, and construction work for the O&M building started in December 2018. For the Hornsea 2 project, we have selected Siemens Gamesa Renewable Energy as exclusive supplier of wind turbines, and recently we passed the first 12-month milestone delivery requirement under the contracts for difference (CfD) scheme. When Hornsea 2 is commissioned in 2022, we will have 9.0GW of capacity installed.

In addition to these three wind farms, we are also constructing the 12MW Coastal Virginia demonstration project in the US on behalf of our partner Dominion Energy. Further, a final investment decision has been taken on phase 2 of the Formosa 1 project in Taiwan, in which we have a 35% ownership share. After receiving the construction permit in September, manufacturing and preparation for the construction phase of the 120MW wind farm have commenced.

In April, the results of the second German transitional auction for offshore wind were announced, and we were awarded the right to build Borkum Riffgrund West 1 and Gode Wind 4 in the German North Sea. Borkum Riffgrund West 1 was won with a zero-subsidy bid, while Gode Wind 4 was won at a price of EUR 98.3 per MWh. The two offshore wind farms have a total capacity of 552MW, which, together with the three projects awarded in April 2017, gives us an option of 1,142MW new offshore wind capacity in Germany for commissioning in 2024/2025, subject to us taking final investment decision, expectedly in 2021.

Also in April, following a thorough and comprehensive grid allocation process, Taiwan's Ministry of Economic Affairs awarded us 900MW grid capacity for our Greater Changhua offshore wind farms. In June, following Taiwan's first and highly competitive auction process, we were awarded an additional 920MW of grid capacity for our Greater Changhua projects. Overall, we now have a total offshore wind pipeline in Changhua of 1,820MW.

On 30 January 2019, the 2019 feed-in tariff was announced. We take note of the 6% tariff reduction compared to the 2018 tariff as well as the introduction of a cap on annual full-load hours, and we will now collaborate closely with the supply chain to mitigate the adverse impact of these PPA changes with the objective of making the projects investable.

Greater Changhua 1 & 2a are facing extraordinarily high costs related to creating a local supply chain at scale, reinforcing the onshore grid infrastructure and building, operating and maintaining offshore wind farms in challenging site and weather conditions.

We continue to work with the Taiwanese authorities and local stakeholders to reach key outstanding project milestones, such as obtaining the establishment permit, completing the supply chain plan and signing the power purchase agreement.

Once we have clarity on the outcome of supply contract renegotiations and have achieved all key project milestones, Ørsted's Board of Directors will review and decide on the final investment case.

In 2018, we continued to establish ourselves in the US market. The merger of our existing US organisation with Deepwater Wind at the end of 2018 added an attractive and geographically diverse US East Coast portfolio of projects at varying degrees of development with significant synergy potential, both in terms of geography and project timing. As part of the Deepwater Wind portfolio, we have secured offshore wind development projects with a combined capacity of 954MW with long-term revenue contracts in place or under negotiation with expected completion of the projects in 2022/2023, subject to final investment decisions in the early 2020s. Of the awarded 954MW capacity, 104MW was won in Connecticut's clean energy auction in December.

Our ambition, as set out in 2016, was to drive profitable growth and have 11-12GW installed offshore wind capacity worldwide by 2025. With the awarded capacity in Germany and Taiwan and the addition of Deepwater Wind's 954MW secured capacity in the US, our total secured capacity has increased to 12.9GW. Having reached our 2025 ambition well ahead of time, we have increased our ambition to approx 15GW by 2025.

**Continue to pioneer new markets and develop a global business**

The US is a key market to us. With favourable wind and seabed conditions off the East Coast, and the federal states' growing interest in developing clean energy, we continue to see the US as a significant, long-term growth opportunity. With New York Governor Cuomo's recent commitment to 9GW offshore wind by 2035, the states along the US East Coast have

set out accumulated targets of close to 20GW of offshore wind capacity towards 2035. With the integration of Deepwater Wind, we now have the largest project pipeline in the US with a gross capacity of 7.5GW to bid in future auctions in the North East and Mid-Atlantic regions.

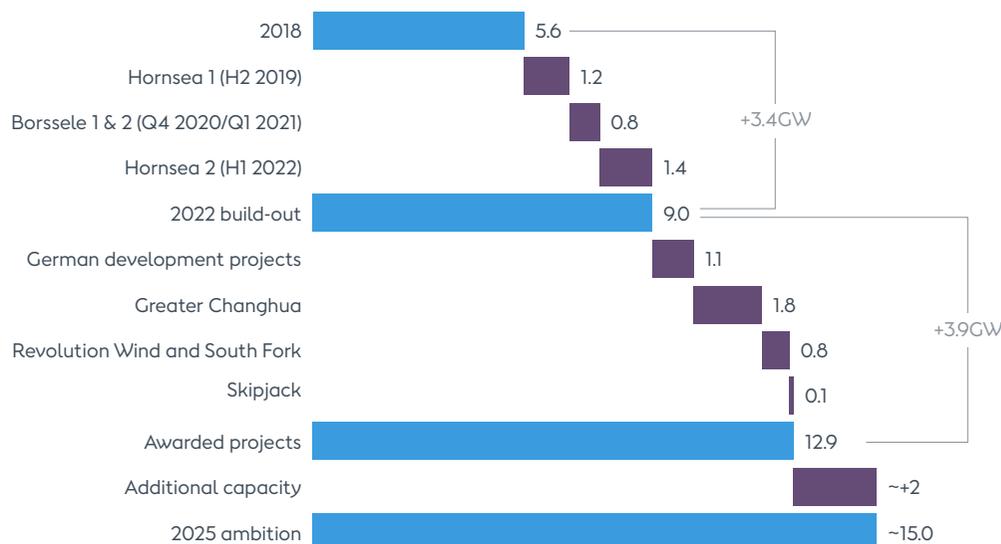

In October 2018, we bid in Rhode Island's auction for up to 400MW of renewable energy. Further, in December 2018, we bid in the New Jersey Board of Public Utilities' auction to build our Ocean Wind project. Outcomes of both auctions are expected in Q2 2019.

In the UK, The Crown Estate has confirmed that we have satisfied the application criteria for the development of our Race Bank Extension offshore wind farm with a capacity of 573MW. Together with Hornsea 3's 2,400MW capacity and Hornsea 4's 1,200MW capacity, we have a total pipeline of opportunities of up to 4.2GW, which underlines our continued commitment to the UK's energy transition. Subject to all necessary consents being granted, the three projects will be able to participate in future auctions under the contracts for difference (CfD) scheme.

Further, we announced that we have signed a memorandum of understanding to work jointly with Tokyo Electric Power Company (TEPCO) on the Choshi offshore wind project near Tokyo and towards a strategic partnership for broader collaborations in Japan. In addition, we see potential in selected next-horizon markets for offshore wind in the APAC region, such as South Korea.

In addition to the opportunities in the US, the UK and Japan, 2019 will see two 760MW tenders in the Netherlands. They will be followed

Build-out towards 2025, installed GW

The figure shows our current build-out plan towards 2025.

by additional 760MW tenders in 2020 and 2021, respectively. In 2020-2021, we will see the first of three 800MW tenders in Denmark, and in 2021, we expect a tender of approx 700MW in Belgium and the first central tender in Germany.

#### Continue to reduce the cost of electricity

Levelised cost of electricity (LCoE) has decreased substantially since the first large-scale wind farms were constructed, and costs are continuously being reduced across the industry by means of increasing levels of industrialisation, economies of scale and innovation. At Ørsted, we strive to deliver continuous reductions in LCoE through a systematic, institutionalised approach.

#### Implement operational excellence and innovation and digitalisation initiatives across the business

Since its infancy, we have played a key role in developing offshore wind energy into a fully matured industry and globally, we are the company that has constructed most offshore wind farms. Our integrated EPC organisation possesses a complete set of strong inhouse engineering, procurement and construction capabilities which set us apart from our peers. An example of our approach to innovation is how we continue to work with turbine suppliers to be first movers in bringing new technology to the offshore wind market. Another example is foundations, where we continue to optimise steel design and design tools. At Borkum Riffgrund 2 and Hornsea 1, grouted connections between the monopile and the transition piece were replaced by bolted connections, leading to large cost reductions on supply and the possibility for all-year installation.

We are the largest offshore wind operator globally with approx 1,100 wind turbines in operation. Our operational portfolio is growing which provides substantial scale benefits, but at the same time fleet complexity remains low, currently with five different turbine platforms from two original equipment manufacturers only, which allows for deep technical insights.

The share of turbines we operate ourselves is increasing, improving our ability to drive standardisation and performance improvements as well as implement digital solutions, reduce service hours and increase power generation from turbines. An example of our approach to innovation and digitalisation is how we utilise the vast amounts of data captured from each turbine we have in operation. Through state-of-the-art data analytics, we are able to continuously improve processes leading to an uplift in power generation and reduced lifetime maintenance costs.

In terms of operational excellence, we have implemented regional hub structures across the portfolio to reap full-scale and synergy benefits from clusters. Today, we operate two hubs in the UK and one hub in Germany, each with a capacity of 1-2GW. An example of hub benefits includes having a regional support organisation, allowing for standardisation of processes and activities leading to performance optimisation across a region instead of a single-site focus.

Also, a growing cluster capacity allows for investment in better logistics, e.g. in the form of joint facilities and vessel operations.

#### Leverage our market-leading partnership model

In 2018, our market-leading partnership model yet again proved its value through the 50% farm-down of the 1,218MW offshore wind farm Hornsea 1 to Global Infrastructure Partners (GIP). This is our third partnership with GIP, which also owns 50% of our German offshore wind farms Gode Wind 1 and Borkum Riffgrund 2. Hornsea 1 is under construction and will by far be the world's largest offshore wind farm when commissioned by the end of 2019.

In the Taiwanese market, which is still new to the offshore wind industry, we see an advantage in establishing partnerships, particularly with local investor involvement, to combine our international experience with local expertise. Subject to a FID, we will look into the possibility of farming down a 50% interest in the 605MW Greater Changhua 1 project to local and international partners.

In the US, we will also consider diversifying risks by either partnering with domestic utilities or potentially farming down on projects to reduce single-asset exposure.

# Onshore

## Highlights 2018

- We acquired Lincoln Clean Energy (LCE) in October.
- We commissioned the 300MW Tahoka wind farm in Texas in December.
- We took FID on the 184MW Lockett wind farm.
- We secured PPAs for our near-term onshore portfolio projects Sage Draw (250MW) and Plum Creek (additional 104MW) and our first large-scale solar PV project Permian Solar (250MW).
- Our first 20MW battery storage project, Carnegie Road, in the UK is now in operation.

## Introduction to Onshore

- The acquisition of Lincoln Clean Energy has provided a strong onshore renewables growth platform in the US, which is one of our strategic growth markets.
- We are active in the value chain as a developer, owner and operator, with a lean execution and asset management business model.
- We are able to deliver wind, solar PV and battery solutions and thereby shape the generation profile to customer demand.
- Our total installed capacity of 813MW comprises three operating wind farms in Texas and a small solar project in New Jersey. In addition, our near-term portfolio includes three onshore wind farms with a total capacity of 714MW to be constructed by 2020.
- It is our ambition to realise an additional 1GW through 2022 in the US onshore renewable market. We are pursuing a portfolio of regionally diversified projects across the ERCOT, SPP and MISO markets.

## Financial performance

This sections covers Q4 2018, as we acquired LCE and established the Onshore business unit on 1 October.

Power generation amounted to 552GWh in 2018, of which our Amazon and Willow Springs wind farms accounted for most of the generation. Power generation from newly commissioned Tahoka had a limited impact in 2018. Wind speed averaged 7.3m/s, which was slightly lower than in a normal wind year in Texas.

Revenue from wind farms in operation amounted to DKK 80 million, of which the majority came from Amazon and Willow Springs.

There are no comparable figures as the Onshore business unit was established in 2018.

## Performance highlights

2018

### Business drivers

Decided (FID) and installed capacity	MW	997
Installed capacity	MW	813
Wind speed	m/s	7.3
Load factor	%	41
Availability	%	92
Power generation	GWh	552
Net realised price	USD/MWh	17.4
US dollars	DKK/USD	6.5

### Financial performance

Revenue	DKKm	80
EBITDA	DKKm	44
Sites		40
Production tax credits and tax attributes		85
Other, including project development		(81)
Depreciation	DKKm	(51)
EBIT	DKKm	(7)
Cash flows from operating activities	DKKm	1,868
Gross investments	DKKm	(1,143)
Acquisitions	DKKm	(5,636)
Divestments	DKKm	1
Free cash flow	DKKm	(4,910)
Capital employed	DKKm	4,779
ROCE	%	(0.3)

EBITDA from onshore wind farms in operation amounted to DKK 40 million, and production tax credits (PTCs) contributed with DKK 85 million.

Project development and other costs amounted to DKK -81 million.

Cash flows from operating activities amounted to DKK 1.9 billion, which primarily comprised a tax equity contribution from our partner at the Tahoka wind farm in Texas in December.

Gross investments amounted to DKK 6.8 billion, of which DKK 5.6 billion was the acquisition price paid for Lincoln Clean Energy (including acquired debt). The largest investments related to the Tahoka and Lockett wind farms.

### Strategy follow-up

By acquiring Lincoln Clean Energy (LCE) in October 2018, we established a strong and scalable platform for the US onshore market, which is expected to grow significantly in the coming years. Our aim is to create a leading North American company within renewable energy, including onshore wind, solar energy, and energy storage. Onshore wind is expected to be the key growth platform and provide strategic diversification to Ørsted's portfolio.

As Onshore is a new business unit, an overall introduction is provided in the following sections:

- onshore wind farms, from development to owning and operating
- operational and near-term portfolio
- pipeline, ambition and strategy
- tax credits and tax equity partnerships.

#### Onshore wind farms, from development to owning and operating

Large-scale onshore wind projects have certain similarities with the offshore wind development business, especially within EPC (e.g. turbine supply agreements and park layout) and O&M (e.g. performance analytics and predictive maintenance), however, the project risk profile is different. The development of an onshore wind farm takes two to three years and construction another 9 to 12 months compared to offshore wind projects which typically have significantly longer development and construction cycles.

We are present in the value chain as a developer, owner and operator. As the US onshore

market has matured, industry standardisation has developed. We act as facilitator between project functions and select experienced industry partners with proven track records to perform construction activities. This model provides the ability to scale quickly and efficiently.

Typical development activities include preliminary site selection, assessment of wind resources and environmental impact, securing real estate, transmission and congestion analyses, securing interconnection rights as well as local, state and federal permissions, offtake, etc.

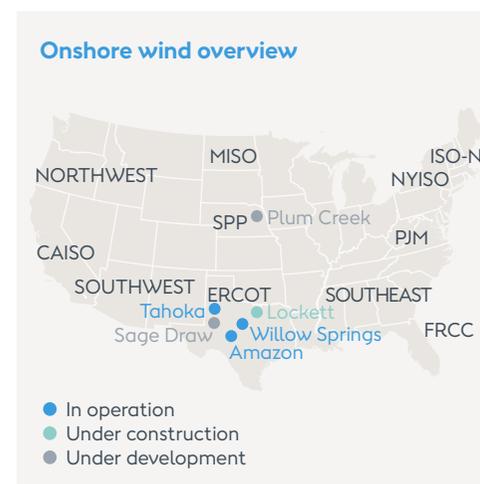

Turbine selection is based on project-specific levelised cost of electricity (LCoE) analysis, taking into account installation cost, power generation and long-term O&M costs.

We seek to capitalise on continued technological advancement and increasing size of swept wind area.

#### Operational and near-term portfolio

The geographic focus has been Texas, where all of our onshore wind farms in operation are situated. A small operational solar project is located in New Jersey.

Our current portfolio comprises three operating wind farms, Willow Springs (250MW), Amazon (253MW) and Tahoka (300MW) as well as a solar PV asset (Oak, 10MW) with a total capacity of 813MW. The operational wind portfolio is recently commissioned, supported by power offtake agreements for more than 650MW through long-term contracts with solid corporate and blue-chip partners.

Our near-term pipeline (2020 projects) includes three onshore wind farms (Lockett, Sage Draw and Plum Creek) with a total capacity of 714MW. We made final investment decision (FID) on Lockett in late 2018, and we expect it to reach commercial operation date (COD) in Q3 2019. At Plum Creek, we have secured more than 70% offtake and expect COD in 2020.

In November, we announced 500MW of wind and solar PPAs with ExxonMobil, equally divided between Sage Draw and the solar PV project Permian Solar, with expected COD dates of 2020 and 2021, respectively.

**Pipeline, ambition and strategy**

We expect to build on our solid operational and near-term portfolio and add up to 1GW of additional capacity by 2022, taking our total US capacity to 2.5GW. We are pursuing a portfolio of regionally diversified projects across the ERCOT, SPP and MISO markets, including:

- Greenfield onshore wind projects with an average size of 250-300MW and eligible for at least 60% PTC
- Greenfield solar PV opportunities (including Permian Solar), where opportunities arise via corporate and utility PPA partnerships.

Beyond the production tax credit (PTC) era, we are in a favourable position to meet demands for onshore wind power in the US by leveraging our value chain experience. Our growth will thus be driven by our ability to remain a significant market developer, providing competitive LCoE levels. Our onshore development activities are focused on areas where large-scale opportunities with a high likelihood of success have been available, and where onshore wind LCoE is competitive with the alternatives on a pure LCoE basis.

**Tax credits and tax equity partnerships**

Federal support for renewable energy is provided in the form of tax incentives, of which production tax credits (PTCs) dominate within onshore wind. PTCs are inflation-adjusted per kilowatt-hour (kWh) tax credits for power generated by eligible energy resources for the first ten years of operation. Projects eligible for 100% PTCs must have started construction by the end of 2016 and must be completed before the end of 2020, four years from qualifying.

Federal tax attributes constitute a significant component of overall project economics and have led to projects being able to offer long-term offtake prices to customers (e.g. PPAs with utilities or C&I customers) at a discount to merchant power price projections.

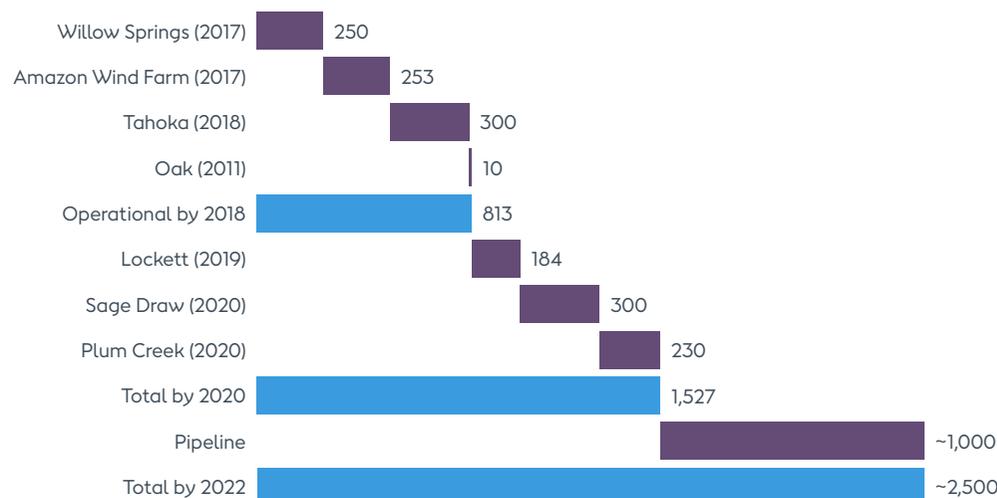

PTCs are currently being phased out with a linear decline by 20% per year until 2019, after which it expires. However, competitive LCoE projections of new built onshore wind and consumer demand drive significant growth expectations from the mid-2020s onward.

Our three operational wind farms and three near-term development projects are all eligible for 100% PTCs, and they are expected to be commissioned before the end of 2019 and 2020, respectively. In addition, our pipeline of 1GW by 2022 is eligible for 60% PTCs.

Solar investment tax credits (ITCs) provide a direct credit based on a percentage of the eligible capital expenditures. Projects starting construction in 2019 receive the full ITC of 30%. During the next few years, the ITC percentage will gradually decline and end at 10% from 2021.

The tax attributes can only be utilised by a tax-paying entity. Since we are currently not in a tax-paying position in the US due to significant investments, we partner with investors who contribute capital to efficiently monetise the tax attributes. Upon achievement of commercial operations, these tax equity investors contribute a substantial portion of the total project investment.

**Build-out plan, installed MW**

# Bioenergy

## Highlights 2018

- The High Court of Western Denmark and the Danish Appeals Permission Board ruled in favour of Ørsted in the case concerning the former Elsam.
- We commissioned the green gas facility 'Kalundborg Bioenergi', which transforms the organic waste of long-time corporate customers Novo Nordisk and Novozymes into green gas that is utilised in Novo Nordisk's production.
- We divested our 50% ownership share in the Dutch gas-fired power plant Enecogen.

## Introduction to Bioenergy

Bioenergy consists of our combined heat and power generation business (CHP) in Denmark and our growth platform within green biogas and waste, Green Waste Solutions (GWS).

- Our CHP business is a leading generator of district heating in Denmark through our large combined heat and power plants and dedicated heat plants. We provide around one quarter of Denmark's district heating and around one third of Denmark's thermal power.
- GWS offers innovative green waste solutions in Denmark and the UK through our patented enzyme technology, Renescience, and our biogas production and upgrading facilities.

## Financial performance

Revenue increased by DKK 0.5 billion to DKK 6.4 billion in 2018.

Power generation was 18% lower than in 2017, driven by the divestment of our Dutch power plant, and amounted to 6.7TWh. Power generation from our Danish plants increased by 4% driven by higher spreads, while heat generation decreased slightly by 2% to 8.8TWh in 2018 due to warmer weather.

Revenue from heat sales increased by 11% despite a decrease in heat generation. This was due to the bioconversion of the Skærbæk Power Station as well as higher revenue from the Avedøre Power Station due to ramp-up in Q1 2017 following the bioconversion in December 2016. Revenue from power and ancillary services increased by 6% to DKK 3.5 billion, driven by an increase of 45% in power prices compared to last year. This more than offset the 18% decrease in generation due to the divestment of the Enecogen power plant.

EBITDA increased by DKK 0.2 billion and amounted to DKK 0.4 billion in 2018. The increase was due to higher spreads in 2018 as well as the bioconversion of Skærbæk Power Station, partly offset by higher project development costs related to new activities.

		2018	2017	%
<b>Performance highlights</b>				
<b>Business drivers</b>				
Degree days	number	2,526	2,705	(7%)

Divestments	DKKkm	383	2	n.a.
Free cash flow	DKKkm	518	(796)	n.a.
Capital employed	DKKkm	1,943	2,554	(24%)
ROCE	%	(12.9)	(22.2)	9.3%p

EBITDA from ancillary services was DKK 0.1 billion higher than in 2017 driven by higher demand during the summer and increased demand from Germany (DK1/DE connection).

Cash flows from operating activities amounted to DKK 1.5 billion and was thus DKK 0.9 billion higher than in 2017. The increase was due to the higher EBITDA, prepayments related to the bioconversion of Asnæs Power Station, and lower receivables.

Gross investments amounted to DKK 1.4 billion in 2018. The largest investments related to the bioconversion of Asnæs Power Station.

Bioenergy achieved positive free cash flows of DKK 0.5 billion, of which the divestment of Enecogen contributed with DKK 0.4 billion.

### Strategy follow-up

In Bioenergy, we are completing the conversions of our Danish combined heat and power (CHP) plants to sustainable biomass, and we continue to explore the potential for growth and value creation within waste-to-energy and biogas technologies.

#### Bioenergy's strategic focus is to:

- complete the conversion of our Danish CHP plants to sustainable biomass and phase out coal by 2023
- operate our plants smartly and safely and prepare for a transition towards a more electrified green district heating system
- establish a leading growth platform within biogas and waste recycling.

#### Complete the conversion to sustainable biomass and phase out coal by 2023

For several years, we have been committed to converting our heat and power plants to using sustainable wood pellets and wood chips instead of fossil fuels. We will phase out coal entirely towards 2023, thereby reducing our annual carbon emissions in Denmark significantly. In just over ten years, we will have gone from being one of the most coal-intensive utilities in Europe to having a completely coal-free generation by 2023.

Along with other European energy companies, we remain committed to the Sustainable Biomass Programme (SBP) which promotes a robust and independent system for the certification of sustainable biomass. In 2018, all our biomass came from sustainable sources, mostly in the form of residues from timber production such as sawdust, branches

and thinnings, and 83% was certified by third parties. We expect that 100% of our biomass will be third party certified by 2020.

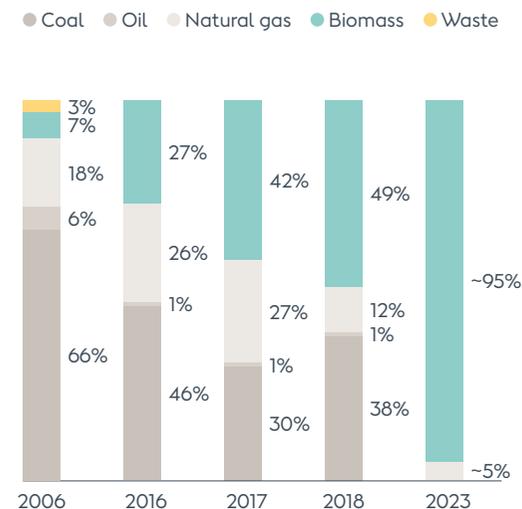

In 2018, we experienced an increase in the use of coal, reflecting improved power market conditions and a demand for our power stations to supplement the intermittent generation from wind and solar PV, also at times when no heat generation was required.

In collaboration with our heat customers, we have reached important milestones in 2018. Our conversion of the Asnæs Power Station is progressing on schedule, implying that we will be supplying green district heating to the general Kalundborg area from 2020 onwards, while providing green steam to Novo Nordisk's and Novozymes' production facilities. We are also progressing our flue gas condensation project in Herning, enabling us to substantially increase the heat and power output of the biomass used from mid-2019 onwards.

The Esbjerg Power Station is our last remaining unconverted CHP plant. The heat customers in the Esbjerg and Varde areas have been granted an exemption from the regulatory requirement to apply CHP solutions for providing district heating. This means that there is no longer a viable business case for Ørsted for a new CHP plant. We have consequently informed the heat customers that we will cease providing districting heat to the area by the end of 2022.

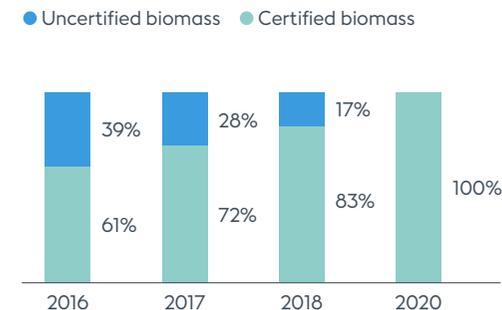

As part of our green transition, we divested our 50% share in Enecogen, a gas-fired power plant in the Netherlands, to Castleton Commodities International LLC in July 2018.

#### Share of fuels in the thermal heat and power generation, %

Biomass conversions will support a continued reduction in the usage of coal in the coming years.

#### Certified biomass, %

Further, we have entered into a conditional agreement to transfer our Svanemølle Power Station to CPH City & Port Development by 2023. The transfer is made to allow for an extensive assessment of the feasibility of transforming the iconic buildings into a state-of-the-art Science & Technology Museum. The power station currently provides district heating during peak hours to two utility companies in Copenhagen.

#### **Operate our plants smartly and safely and prepare for a transition towards a more electrified green district heating system**

Our portfolio of large bio-converted CHP plants in Denmark will continue to be a key component in the green transition of the heat and power sector in Denmark, while also supporting the power grid during times of low wind and solar generation.

To operate them efficiently, we are rolling out a comprehensive digitalisation programme at our power stations, allowing us to further optimise generation and reduce costs. In parallel, we are taking initial steps to investigate opportunities in electrified district heating, for instance in the form of large-scale heat pumps and heat storage.

#### **Establishing a leading growth platform within biogas and waste recycling**

During 2018, we continued to test and improve our Renescence facility in Northwich in the UK. The Renescence technology efficiently converts household waste into biogas and recyclable materials through enzymes and mechanical sorting technologies. The Northwich plant has confirmed that the core enzymatic sorting process works as expected,

also when applied in large scale. We are currently finalising the optimisation of the plant's mechanical operations, which has been more challenging and taken longer than expected. Final commissioning is expected during the first half of 2019.

In April 2018, we commissioned our first industrial Danish biogas plant together with Bigadan – Kalundborg Bioenergi. The facility transforms 300,000 tonnes of organic waste from Novo Nordisk and Novozymes in Kalundborg into biogas for approx 5,000 Danish homes and utilises the remaining products as fertiliser for farmland. In addition, we finalised the construction of the extension of the Danish Linkogas biogas-upgrading facility in December. We are now operating four major biogas-upgrading facilities in Denmark. We are investigating similar opportunities in collaboration with industrial partners, collectively promoting conversion of organic industrial waste into green energy.

# Customer Solutions

## Highlights 2018

- We signed a 15-year route-to-market agreement for the 860MW UK wind farm Triton Knoll.
- We decided to exit the Danish power distribution, residential customer, and city light businesses.
- At the end of December, the customers in our power distribution company, Radius, had taken 679,000 smart meters in use.

## Financial performance

Revenue was up 19% at DKK 48.0 billion in 2018, driven primarily by an average increase in gas and UK power prices of 32% and 26%, respectively, relative to 2017. This was only partly offset by a 1% decline in gas and a 6% decline in power volumes sold.

EBITDA amounted to DKK 2.0 billion compared to DKK 2.1 billion in 2017.

EBITDA from Distribution amounted to DKK 1.2 billion, which was in line with 2017.

EBITDA from Sales decreased compared to 2017 and amounted to DKK -0.1 billion. The decrease was primarily due to higher business development costs in the B2B energy solutions business and implementation of a new billing system in our residential customer (B2C) business.

EBITDA from Markets decreased by DKK 0.5 billion and amounted to DKK 0.9 billion. The decrease was mainly due to high earnings related to trading of our financial energy exposures in 2017, and a negative impact from changes in the value of our gas at storages due to a decline in gas prices in December 2018 (versus a positive effect in 2017). This was partially offset by a one-off compensation awarded following the completion of an arbitration relating to a gas purchase contract in 2018.

EBITDA from LNG increased by DKK 0.5 billion to a marginal loss. The increase was mainly due to provisions in 2017 related to an onerous contract for the Gate terminal in Rotterdam and purchase contracts. Furthermore, 2018 was positively affected by increased gas prices and utilisation of location spreads between Asia and Europe, and optimisation of physical positions.

Previous impairment losses of DKK 0.6 billion regarding the power distribution grid were reversed in connection with the classification as assets held for sale at the end of the year.

Cash flows from operating activities amounted to DKK 2.3 billion in 2018. The increase of DKK 2.9 billion was primarily due to settlement of intra-group hedges related to the negative effect in 2017 of the now divested oil and gas business, less funds tied up in clearing accounts toward trading partners, and less

		2018	2017	%

funds tied up in receivables due to lower gas sales at the end of 2018 compared to 2017. This was partly offset by more funds tied up in ROC inventories due to higher offshore wind power generation.

Gross investments totalled DKK 1.2 billion in 2018, relating mainly to maintenance of the power distribution grid and the installation of new smart meters.

ROCE increased by 5 percentage points to 18%, mainly due to the higher EBIT.

## Strategy follow-up

Customer Solutions has assumed a more integrated role in Ørsted as the front-end of the value chain, providing efficient route-to-market services. To develop market access to wholesale, corporate and traded markets, we increasingly focus on developing customer relationships to go beyond commodities and revolve around renewable power generation, waste to energy, and energy efficiency.

We will investigate different options for exiting our power distribution, residential customer and city light businesses.

### Customer Solutions' strategic focus is to:

- add further scale to our green power and gas and green certificates business
- mitigate merchant risk through trading and green energy corporate PPAs
- optimise our portfolio of legacy gas-sourcing contracts and LNG positions.

### Add further scale to our green power and gas and green certificates business

During 2018, the power portfolio grew by 1.4GW to more than 4.5GW, as we added long-term route-to-market contracts for the newly commissioned Walney Extension and Borkum Riffgrund 2 offshore wind farms and extended contracts for existing offshore wind farms. Furthermore, we entered into a contract to balance the British offshore wind farm Triton Knoll (860MW) for a 15-year period, starting from the planned commissioning in 2021. These additions add to the diversification and flexibility of our portfolio of power and green certificates.

Ørsted was granted approx 13% of all renewable obligation certificates (ROCs) presented to the UK's Office of Gas and Electricity Markets (Ofgem) for the April 2017-March 2018 ROC period. When selling power to UK corporate customers, we present the required number of ROCs to Ofgem. However, our offshore wind generation in the UK significantly outweighs our UK power sales, and once a year, we therefore auction out parts of our excess ROCs from the latest and the three upcoming ROC periods to UK utilities with ROC imbalances. This ROC

regime will continue until 2037, when the 20-year ROC subsidies will expire for the last renewable assets that were entitled to ROCs.

### Mitigate merchant risk through trading and green energy corporate PPAs

In 2018, we increased our focus on offering corporate power purchase agreements (cPPAs) with fixed power prices and long tenures to our wholesale and corporate customers. The aim of this is twofold. Our customers achieve certainty about their power price for a long period of time and add to their green profile. For Ørsted, these cPPAs reduce the exposure to merchant risk by limiting the power volumes that we will have to sell at prevailing market prices. Today, we have merchant power exposure from our UK wind farms under the ROC regime. Going forward, merchant risk mitigation will also be needed for existing wind farms as subsidies expire and for potential new wind farms without subsidies.

Within our market trading activities, we benefited from proactive trading e.g. by reducing our exposure to the event risk from the UK Government's changes in the carbon price support scheme, and by successfully managing the price volatility during the cold spell in early spring.

In 2018, our energy efficiency advisory services helped our Danish corporate customers achieve aggregated energy savings of approx 133GWh.

Customer satisfaction among our corporate customers remained high at 75, although down from 77 in 2017 (on a scale from 1-100).

## Introduction to Customer Solutions

Customer Solutions provides the Group with access to wholesale, corporate and traded markets.

- We create incremental value by providing route-to-market services for the Group and our partners by selling power, gas and green certificates to the market. In doing so, we own and operate portfolios of contracts within gas and power, which we optimise by leveraging our origination and trading capabilities and utilising the size of the portfolios.
- We generate access to wholesale and corporate customers to whom we seek to develop strong partnerships beyond conventional commodity supply, including offering corporate power purchase agreements (cPPAs), green waste solutions as well as energy efficiency and energy portfolio risk management services.
- We proactively manage the merchant risks arising from our generation assets and

contracts by trading commodities, and we mitigate risks and create value through time-to-market decisions, proxy hedging and netting.

We plan to exit our power distribution, residential customer and city light businesses which comprise:

- Radius, which owns and operates Denmark's largest power distribution grid measured by number of connection points with approx one million customers.
- Our residential customer business with sale of power to approx 725,000 customers and gas to approx 102,000 customers.
- Our city light business which is the largest Danish street light operator, covering 17 municipalities across Zealand.

### Optimise our portfolio of legacy gas-sourcing contracts and LNG positions

During 2018, we settled additional price reviews of our long-term gas-sourcing contracts, with an outcome that ensures profitability of our portfolio of conventional gas contracts.

However, we expect our LNG activities to continue to be loss-making going forward, although losses in 2018 were limited by our increased global trading activities.

### Key focus areas within the businesses held for sale (power distribution, B2C and city light)

During 2018, our power distribution customers experienced a decrease in the security of supply as on average they had 0.65 disconnections, excluding faults in the primary transmission grid owned by the Danish transmission system owner, Energinet. This was an increase of 0.23 disconnections compared to 2017 and worse than our target of 0.50. The increase was influenced by a combination of two unintentional incidents on the 50kV grid in early 2018 as well as damage to the 30kV grid during third-party construction works, which led to repeated disconnections of a large number of customers in Central Copenhagen. The roll-out of smart meters to all customers by 2020 is progressing according to plan and reached a significant milestone in September, where the project was half-way through instalment. By the end of 2018, 679,000 smart meters had been taken into use.

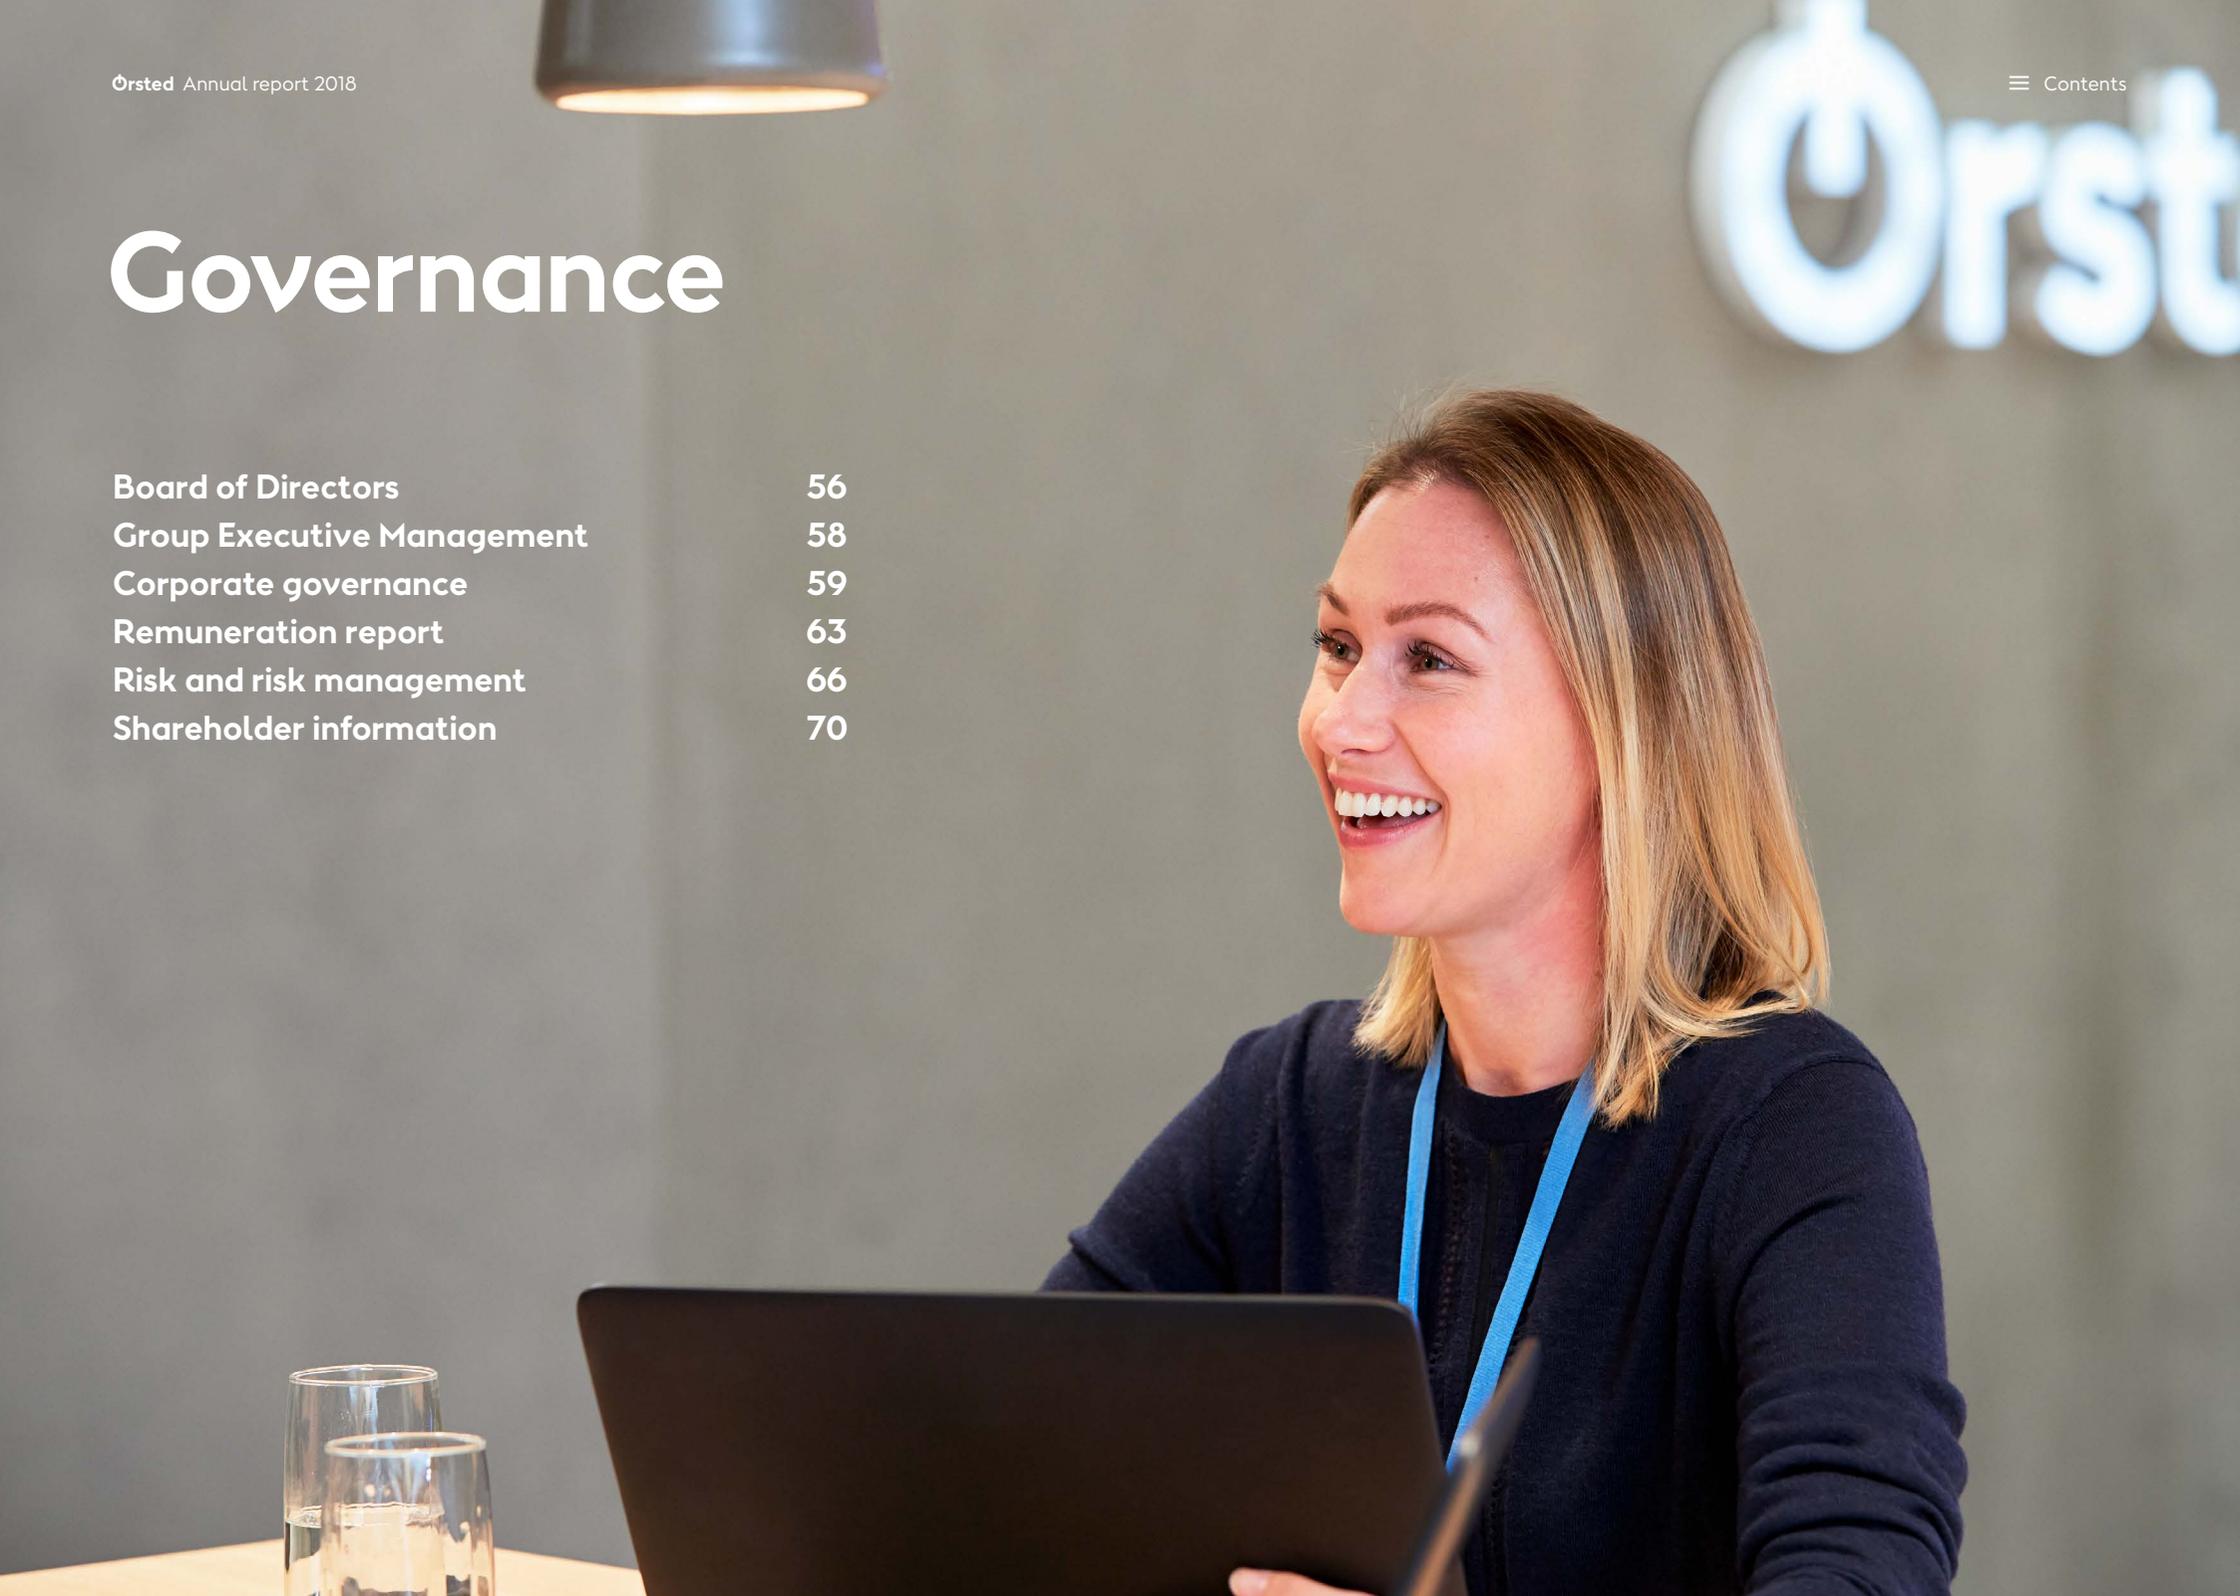

Radius' customer satisfaction remained high at 81, down from 82 in 2017 (on a scale from 1-100) despite the increase in grid disconnections and the replacement of smart meters.

Our residential customer business is pioneering the transition to time-of-day based power prices which have been offered where possible since late 2017. By the end of 2018, 94% of our customers with this option had transitioned. Customer satisfaction among residential customers who had been in contact with us was 74 in 2018, down from 76 in 2017 (on a scale from 1-100). Contrary to this decrease, our loyalty increased to 72 from 71 and our net promoter score turned 0 (on a scale from -100 to +100), following negative scores ranging from -22 to -2 from 2013 to 2017.

# Board of Directors

**Thomas Thune Andersen**

Chairman since 2014.  
Born 1955.  
Independent.  
Joined/re-elected: 2014/2018.  
Term of office expires: 2019.

Extensive Danish managerial experience from leading positions in A.P. Møller-Mærsk and global managerial experience from non-executive directorships in listed and privately held companies within the energy and other sectors.

**Other positions<sup>1</sup>:**

Chairman: Lloyds Register Group and Foundation  
Deputy Chairman: VKR Holding A/S  
Member: Arcon-Sunmark A/S, BW Offshore Ltd, IMI plc., the Danish Committee on Corporate Governance.

**Lene Skole**

Deputy Chairman since 2015.  
Born 1959.  
Independent.  
Joined/re-elected: 2015/2018.  
Term of office expires: 2019.

Highly experienced with managing listed companies from her previous position as CFO of Coloplast and current position as CEO of Lundbeckfonden where she serves as a non-executive director of the portfolio companies of Lundbeckfonden.

**Other positions<sup>2</sup>:**

CEO: Lundbeckfonden, Lundbeckfond Invest A/S  
Chairman: LFI Equity A/S  
Deputy Chairman: ALK-Abelló A/S, H. Lundbeck A/S, Falck A/S.  
Member: Tryg A/S, Tryg Forsikring A/S.

**Hanne Sten Andersen**

Employee representative.  
Born 1960.  
Not independent.  
Joined/re-elected: 2007/2018.  
Term of office expires: 2022.

Hanne Sten Andersen has worked in Ørsted as an HR partner in Customer Solutions since 2003.

**Position:**

Lead HR Business Partner, Customer Solutions.

**Lynda Armstrong**

Born 1950.  
Independent.  
Joined/re-elected: 2015/2018.  
Term of office expires: 2019.

Strong global managerial experience from more than 30 years in leading positions in Shell, including as VP in Shell International, and from non-executive directorships in international companies and large organisations.

**Other positions<sup>3</sup>:**

Chairman: The Engineering Construction Industry Training Board (ECITB)  
Member: KAZ Minerals plc, Central Europe Oil Company.

**Poul Dreyer**

Employee representative.  
Born 1964.  
Not independent.  
Joined/re-elected: 2014/2018.  
Term of office expires: 2022.

Poul Dreyer has worked in Ørsted as a technician in Customer Solutions since 1987.

**Position:**

Technician, Customer Solutions.

**Pia Gjellerup**

Born 1959.  
Independent.  
Joined/re-elected: 2012/2018.  
Term of office expires: 2019.

Extensive experience from a comprehensive political career in Denmark, including as Minister of Finance, Minister of Trade and Industry and Minister of Justice.

**Other positions:**

Centerdirector: National Centre for Public Innovation.  
Chairman: Vanførefonden, Fondet Dansk-Norsk Samarbejde.

<sup>1</sup> Board Committees: Remuneration Committee of Lloyds Register Group, Nomination Committee of Lloyds Register Foundation, Nomination Committee and Remuneration Committee of IMI plc, Audit Committee of BW Offshore Ltd., Nomination Committee of VKR Holding A/S.

<sup>2</sup> Member of the Audit, Nomination and Scientific Committee of ALK-Abelló A/S, member of the Remuneration and Scientific Committee of H. Lundbeck A/S, member of the Audit and Risk Committee of Tryg A/S, member of the Remuneration Committee of Falck A/S.

<sup>3</sup> Chairman of the Remuneration Committee, member of the HSE Committee and member of the Project Assurance Committee of KAZ Minerals plc. Resigned as non-executive director of Central Europe Oil Company as of 31 December 2018.

# Board of Directors

**Benny Gøbel**

Employee representative.  
Born 1967.  
Not independent.  
Joined/re-elected: 2011/2018.  
Term of office expires: 2022.

Benny Gøbel has worked in Ørsted as an engineer in Bioenergy since 2005.

**Position:**  
Engineer, Bioenergy.

**Jørgen Kildahl**

Born 1963.  
Independent.  
Joined: 2018.  
Term of office expires: 2019.

Strong international background in renewable energy and a profound knowledge of how the energy ecosystems work from positions as Executive Vice President of Statkraft and member of the board of management of E.ON.

**Other positions<sup>1</sup>:**  
Chairman: eSmart Systems, Nysäter Wind AB.  
Deputy Chairman: Telenor ASA.  
Member: Hoegh LNG Holding Ltd<sup>1</sup>.  
Other: Senior advisor, Credit Suisse Energy Infrastructure Partners

**Peter Korsholm**

Born 1971.  
Independent.  
Joined/re-elected: 2017/2018.  
Term of office expires: 2019.

Extensive M&A experience from his time as Partner and Head of EQT Partners Denmark and from private investments. Also experience with financial reporting, risk management and capital markets from CFO position at AAK AB.

**Other positions<sup>2</sup>:**  
CEO: DSVM Invest A/S, DSV Miljø Group A/S, Day et Invest ApS, Togu ApS.  
Chairman: ForwardTopCo A/S (FitnessWorld), Nymølle Stenindustri A/S, GDL Transport Holding AB, Lion Danmark I ApS.  
Member: DSVM Invest A/S, A/S United Shipping and Trading Company, DANX Holding I ApS, Day et A/S.

**Benny D. Loft**

Born 1965.  
Independent.  
Joined/re-elected: 2012/2018.  
Term of office expires: 2019.

Highly experienced within financial reporting, risk management and capital markets from more than 20 years of operational experience with listed companies, including as CFO and Executive Vice President of Novozymes.

**Other positions<sup>3</sup>:**  
Chairman: EFD Investment A/S and its subsidiaries European Freeze Dry ApS and European Freeze Dry Ltd.  
Member: New Xellia Group A/S.

**Dieter Wemmer**

Born 1957.  
Independent.  
Joined: 2018.  
Term of office expires: 2019.

Highly experienced within capital markets, investments and risk management from leading positions within the finance sector. Before focusing solely on non-executive directorships, he was the CFO of Allianz.

**Other positions<sup>4</sup>:**  
Member: UBS Group AG, UBS AG.

<sup>1</sup> Member of the Audit Committee and the Sustainability and Compliance Committee of Telenor ASA, member of Audit Committee of Hoegh LNG Holding Ltd.

<sup>2</sup> Chairman of the Investment Committee of Zoscales Partners, Chairman of the Board of Directors of two wholly-owned subsidiaries of Lion Danmark I ApS (Lomax Group). He is also a member of the Board of Directors of three wholly-owned subsidiaries of A/S United Shipping and Trading Company, three wholly-owned subsidiaries of DANX Holding I ApS, and four wholly-owned subsidiaries of DSVM Invest A/S.

<sup>3</sup> CEO of Poelhoei Holding ApS, Chairman of the Finance and Audit Committee of New Xellia Group A/S.

<sup>4</sup> Member of the Audit and Risk Committee of UBS Group AG.

# Group Executive Management

Group Executive Management consists of seven members.

From the left (bottom): **Morten Hultberg Buchgreitz** (Customer Solutions), **Marianne Wiinholt** (CFO), **Anders Lindberg** (Offshore) and **Thomas Dalsgaard** (Bioenergy)

From the left (top): **Ole Kjems Sørensen** (Onshore), **Henrik Poulsen** (CEO and President) and **Martin Neubert** (Offshore)

## Henrik Poulsen

Registered as CEO  
Chief Executive Officer (CEO) and President since August 2012  
Education: MSc in Finance and Accounting, Aarhus School of Business 1994

Born 1967  
Remuneration: DKK 17,344 thousand

Norsk Hydro ASA: Member of the Board of Directors and Audit Committee

# Corporate governance

Our governance model has its offspring in our Scandinavian roots and our listing on the Nasdaq Copenhagen Stock Exchange.

The overall and strategic management of the company is anchored in a board of non-executive directors appointed by the shareholders. The Board of Directors has appointed an Executive Board for handling the day-to-day management. None of the members of the Executive Board are members of the Board of Directors.

Our governance model is illustrated in the figure to the right and explained below.

## Shareholders and general meeting

Our shareholders exercise their rights at the general meeting. The general meeting adopts decisions, such as the appointment of the Board of Directors and the auditor, in accordance with the standard Danish rules. However, the approval of a proposal to amend the Articles of Association or dissolve the company requires that the Danish State as majority shareholder participate in the general meeting and vote in favour of the proposal.

## Board of Directors

### Members and duties

Each year at the annual general meeting, the shareholders elect six to eight board members. In addition, our employees may elect members corresponding to half of the board members elected by the general meeting pursuant to Danish mandatory rules. Employee elections are typically held every four years.

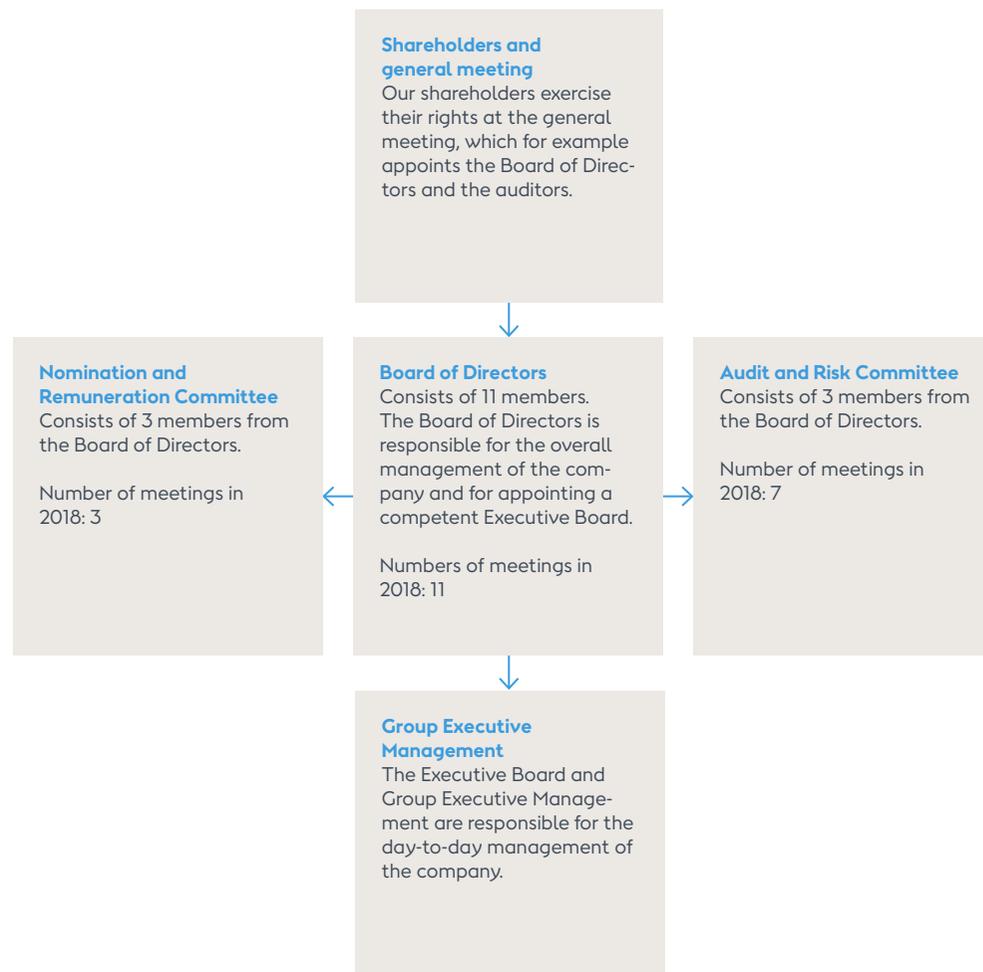

Our Board of Directors currently comprises eleven members, eight members elected by the general meeting and three members elected by the employees.

In 2018, Dieter Wemmer and Jørgen Kildahl joined the Board of Directors as new members elected by the general meeting.

The Board of Directors has prepared an overview of the competences required on the board. The list of required competences can be found on [orsted.com/competences-overview](http://orsted.com/competences-overview). In the table on the next page, we have illustrated how the current board members compare against the required competences.

The Board of Directors is responsible for the overall management of the company and appoints the Executive Board. The Board of Directors lays down the company's strategy

## Our governance model

and makes decisions concerning major investments and divestments, the capital base, key policies, control and audit matters, risk management and significant operational issues.

The Board of Directors has appointed two committees from among its members: an Audit and Risk Committee and a Nomination and Remuneration Committee.

The rules of procedure of the Board of Directors describe the work and duties of the Board of Directors. Terms of reference are also in place for the two committees.

Information about the members of the Board of Directors, their other supervisory and executive positions and independence can be found on pages 56-57.

**The green transformation is on the board agenda**

Since climate change is fundamental to Ørsted's business strategy and all our investments, climate-related issues are directly or indirectly an agenda item at all board meetings. As such, climate-related issues are integrated in reviewing and guiding our strategy, in setting performance objectives, and in overseeing major

investments, acquisitions and divestments. The Board of Directors monitors and oversees progress related to Ørsted's strategic ambitions and targets for addressing climate-related issues.

**Special tasks in 2018**

Key tasks for the Board of Directors have been the build-out of our offshore wind project portfolio after 2020, the establishment of a new onshore wind platform in the US through the acquisition of Lincoln Clean Energy, the acquisition of the US wind developer Deepwater Wind, the farm-down of Hornsea 1 in the UK and the initiation of a structured divestment

The numbers indicate how many meetings in 2018 the members have attended and not attended, respectively, during the year.

process for our Danish power distribution, residential customer and city light businesses.

The Board of Directors conducted its annual board effectiveness assessment in December 2018. The assessment was conducted with assistance from an external adviser, who conducted a survey and interviewed all board members. The input from the survey and interviews was processed and analysed with international benchmarking. The external adviser also acted as an observer during a board meeting.

## Important tasks for the Board of Directors in 2018

### Investments, acquisitions and divestments

- Acquisition of the US onshore wind developer Lincoln Clean Energy.
- Acquisition of the US offshore wind developer Deepwater Wind.
- Farm-down of the offshore wind farm Hornsea 1 in the UK.
- Initiation of divestment of our Danish power distribution and residential customer and city light businesses.

### Other tasks

- Preparation of new ambitious targets for our long-term strategic and financial development with an ambition to lead the green transformation.
- Appointment of new CEO for Offshore.
- Establishment and appointment of CEO for Onshore.
- Development of our offshore wind project portfolio in the UK, Germany, the Netherlands, Taiwan and the US.
- Development of our onshore wind project portfolio in the US.
- Review of overall IT security.
- Preparation of a Global Diversity & Inclusion Policy.

The external adviser concluded that the Board of Directors has evolved in many dimensions and was in good shape for the challenges ahead. The Board of Directors has a strong and relevant composition with a breadth of skills, competences and perspectives and solid financial knowledge. Although many board members are relatively new, the Board of Directors is well aligned in relation to strategic priorities and its modus operandi, which is steered effectively by the Chairmanship.

### Remuneration

Each year, the general meeting approves the remuneration for the members of the Board of Directors for the coming year. In the section on remuneration on page 65, you can read more about the remuneration of the Board of Directors.

## Nomination and Remuneration Committee

### Members and duties

Thomas Thune Andersen (Chairman), Lene Skole and Pia Gjellerup are the members of the Nomination and Remuneration Committee.

The committee assists the Board of Directors in matters regarding the composition, remuneration and performance of the Board of Directors and Group Executive Management.

You can read more about the Nomination and Remuneration Committee and the terms of reference for the committee at [orsted.com/nomination-remuneration-committee](https://orsted.com/nomination-remuneration-committee).

### Special tasks in 2018

In 2018, the committee discussed, among other matters, payment of retention bonuses granted in connection with the planned divestment of our Danish power distribution, residential customer and city light businesses as well as retention bonuses to individual business-critical employees in companies acquired during the year.

Additionally, the committee discussed a share-based retention tool which was introduced in 2018 and targeted at a limited number of employees responsible for critical long-term projects.

The committee also reviewed an update of the compensation model and governance for our top 100 employees.

## Audit and Risk Committee

### Members and duties

Benny D. Loft (Chairman), Dieter Wemmer and Peter Korsholm are the members of the Audit and Risk Committee.

The committee assists the Board of Directors in overseeing the financial and ESG reporting process, the capital structure development, financial and business-related risks, compliance with statutory and other requirements from public authorities as well as the internal controls.

Moreover, the committee approves the framework for the work of the company's external and internal auditors, evaluates the external auditors' independence and qualifications as

well as monitors the company's whistleblower scheme.

Our Internal Audit function reports to the Audit and Risk Committee and is independent of our administrative management structures. Internal Audit enhances and protects the organisational value by providing risk-based and objective assurance, advice and insight. Further, Internal Audit is primarily involved in auditing and advising on our core processes, governance, risk management, control processes and IT security.

The Chairman of the Audit and Risk Committee is responsible for managing our whistleblower scheme. Internal Audit receives and handles reports submitted. Our employees and other associates may report serious offences, such as cases of bribery, fraud and other inappropriate or illegal conduct, to our whistleblower scheme or through our management system. In 2018, two substantiated cases of inappropriate or unlawful behaviour were reported through our whistleblower scheme. One case concerned violation of procure-to-pay policies, and one case concerned misappropriation of assets. The cases had consequences for the individuals involved. None of the reported cases were critical to our business or impacted our financial results. Whistleblower cases are taken very seriously, and an awareness campaign was conducted to avoid similar cases.

You can read more about the Audit and Risk Committee and the terms of reference for the committee at [orsted.com/audit-risk-committee](https://orsted.com/audit-risk-committee).

### Important tasks for the Audit and Risk Committee in 2018

#### Audit and accounting

- Review of the accounting policy applied for US subsidies and tax attributes.
- Review of the principles and disclosures related to the two acquisitions (business combinations) and divestments.
- Review of the implementation of IFRS 15 as well as supervising the preparation for IFRS 16 implementation in 2019.
- Review of expectations for market prices, exchange rates, discount rates and risk-free interest rates.
- Review of significant provisions and warranties in the Group.
- Monitoring of capital structure development.
- Monitoring of the voluntary limit for non-audit services as well as preliminary approval thereof.

#### Risk

- Monitoring of business and emerging risks.
- Review and assessment of the principles applied for the adopted inflation exposure management policy.
- Review of IT security in operational and administrative areas as well as cybersecurity.
- Assessment of liquidity reserve and capital structure.
- Monitoring of currency and energy hedging mandates.
- Supervision of the work involved in ensuring compliance with the requirements of the General Data Protection Regulation.

### Special tasks in 2018

In 2018, the Audit and Risk Committee focused on the two acquisitions of Lincoln Clean Energy and Deepwater Wind in the US, IT/ cybersecurity together with the implementation of the new General Data Protection Regulation (GDPR) and the inflation exposure management policy adopted in 2018.

Internal Audit undertook special audit and consultancy tasks within the following areas: prevention of cybercrime, GDPR, compliance, internationalisation, asset management, commodity and currency hedging, compliance monitoring and business conduct.

### Executive Board and Group Executive Management

#### Members and duties

Henrik Poulsen (CEO) and Marianne Wiinholt (CFO) are members of the Executive Board of Ørsted A/S.

The Executive Board undertakes the day-to-day management through Group Executive Management, which consists of seven members. In addition to Henrik Poulsen and Marianne Wiinholt, Group Executive Management comprises the executive vice presidents of our four business units: Martin Neubert (Offshore), Ole Kjems Sørensen (Onshore), Thomas Dalsgaard (Bioenergy) and Morten H. Buchgreitz (Customer Solutions) together with Anders Lindberg, Executive Vice President of Offshore EPC and QHSE.

The Board of Directors has laid down guidelines for the work of the Executive Board, including the division of work between the Board of Directors and the Executive Board and the Executive Board's powers to enter into agreements on behalf of the company. The Board of Directors regularly discusses the CEO's performance, for example by following up on developments seen in relation to our strategy and objectives.

The Chairman of the Board of Directors and the CEO also regularly discuss the cooperation between the Board of Directors and the Executive Board.

You can find information about the members of the Executive Board, including their previous employment and other executive functions, on page 58. We describe the remuneration of the Executive Board in the section on remuneration on pages 63-65.

### Our corporate governance positions

We comply or partly comply with all 47 recommendations prepared by the Danish Committee on Corporate Governance as last updated in November 2017 (please see [corporategovernance.dk](http://corporategovernance.dk)).

Our only deviation is that the first grant under the share programme for the Executive Board has a slightly shorter vesting period than the recommended three years. Upon vesting of the first grant in May 2019, we will comply with all 47 recommendations.

Our statutory report on corporate governance can be found at [orsted.com/statutory-reports](http://orsted.com/statutory-reports). The report describes in more detail whether and how we comply with or deviate from the recommendations.

# Remuneration report

## Remuneration policy

The overall objective of our remuneration policy is to attract, motivate and retain qualified members of our Board of Directors and our Executive Board.

In addition, the policy aims to strike the right balance between the Executive Board's fixed and incentive-based remuneration with the target of remunerating the members in relation to the results achieved at company and individual levels. This ensures a tightly aligned interest between the Executive Board and the shareholders.

The remuneration policy is available at [orsted.com/Remuneration-policy-2018](http://orsted.com/Remuneration-policy-2018).

## Remuneration of the Executive Board

### Remuneration structure

In February 2018, the Board of Directors decided to keep the remuneration structure unchanged for 2018 compared to 2017. The remuneration structure and the remuneration for the Executive Board are shown in the table to the right. The two incentive schemes are described in more detail below.

### Cash-based incentive schemes (STI)

The cash-based incentive scheme is an annual bonus with a target of 15% of the fixed salary and may not exceed 30%. The Nomination and Remuneration Committee sets the targets

### Remuneration structure and remuneration for the Executive Board

Element	Henrik Poulsen			Marianne Wiinholt			Objective	Remuneration level	Performance measure
	2018	2017	2016	2018	2017	2016			
Fixed salary	10,500	9,700	9,238	5,900	5,061	4,820	Attract and retain qualified managers.	Competitive, but not market leading, compared to the level in similar major listed Danish companies with international activities.	
Cash-based incentive schemes (STI)	2,993	2,656	2,135	1,637	1,348	1,239	Ensure shared ownership of the entire company's performance and a clear link between value creation and pay-out.	Target of 15% of the fixed salary. The maximum bonus amounts to 30% and will be paid-out in case of full achievement of all performance targets.	The performance reward agreement consists of three targets: <ul style="list-style-type: none"> <li>– specific individual business targets and leadership (60%)</li> <li>– financial target (30%)</li> <li>– safety target (10%).</li> </ul>
Share-based incentive scheme (LTI)	2,306	1,367	1,427	1,231	713	889	Reward long-term value creation and align the Executive Board's interests with those of the shareholders.	Target of 20% of the annual fixed salary at the date of grant. After three years, shares will be allocated at 0-200% of the number of PSUs granted, depending on Ørsted's total shareholder return compared to peers.	The final number of shares will be determined on the basis of Ørsted's total shareholder return benchmarked against ten peers.
IPO Executive Retention Bonus	1,232	1,848	616	643	964	321	Retain the Executive Board after the IPO. Phasing into a share based long-term incentive scheme.	20% of the fixed annual salary at 1 July 2016.	Employment at 1 September 2017 and 1 September 2018, respectively.
Pension, incl. social security and benefits	313	326	187	242	196	244		The members of the Executive Board are not entitled to pension contributions, only social security.	
Severance pay								If a member of the Executive Board is terminated by the company, the person is entitled to 24 months' salary, composed of full remuneration during the 12 month notice period and 12 months of severance pay (fixed salary only).	
<b>Total, DKK '000</b>	<b>17,344</b>	<b>15,897</b>	<b>13,605</b>	<b>9,653</b>	<b>8,282</b>	<b>7,513</b>			
<b>STI in % of maximum bonus</b>	<b>95%</b>	<b>91%</b>	<b>91%</b>	<b>93%</b>	<b>88%</b>	<b>94%</b>			

for and assesses the performance of the CEO. The Chairman of the Board of Directors and the CEO set the targets for and assess the performance of the CFO.

The Executive Board's specific individual business targets are tied directly to Ørsted's green growth strategy to build out renewable energy. The specific individual business targets comprise a number of items which are defined at the beginning of the year and updated during the year if new targets become relevant to ensure continuous alignment with shareholder interests. See table to the right for a more detailed description of the targets.

**Share-based incentive scheme (LTI)**

The Executive Board is covered by a share programme. It is a condition for being granted performance share units (PSUs) that the participant holds a number of Ørsted shares, representing a value equal to a share of each participant's fixed salary. For the CEO, this share is 75% of the fixed salary, and for the CFO it is 50%.

If the participants fulfil the shareholding requirement at the time of the annual grant, they will receive a number of PSUs, representing a value equal to 20% of their fixed salary on the date of granting.

The PSUs granted have a vesting period of three years, after which each PSU entitles the holder to receive a number of shares free of charge, corresponding to 0-200% of the number of PSUs granted. Assuming no share price development since the grant, this would correspond to 0-40% of the fixed salary on the date of grant. The final number of shares

for each participant will be determined on the basis of the total shareholder return delivered by Ørsted, benchmarked against ten comparable European energy companies, i.e. 200% if Ørsted ranks first, 100% if sixth, and no shares if we rank last. At the end of 2018, Ørsted ranked first, second and fourth, respectively, in the three outstanding share-programmes against the ten peers.

If a member of the Executive Board leaves Ørsted as a result of his or her own resignation or due to breach of his or her employment, the entitlement to shares vesting after the notice period is lost.

The IPO Executive Retention Programme, which purpose was to phase into a long-term share based incentive scheme, expired in 2018, as the LTI programme will start to vest from 2019.

The table is a non-exhaustive summary of the individual business targets for our CEO and CFO as well as shared Group targets. They must deliver fully on all their individual targets in order to achieve the maximum cash bonus (STI).

The other members of the Group Executive Management have their own individual business targets and are remunerated according to the same model as described to the right.

**Number of PSUs and shares owned by the Executive Board**

	Henrik Poulsen	Marianne Wiinholt
<b>Share-programme</b>		
Maximum number of PSUs at 31 December 2018	41,368	22,062
Maximum fair value of PSUs at 31 December 2018	DKK 18 million	DKK 10 million
<b>Current holding of Ørsted shares</b>		
Number of Ørsted shares owned	130,500	83,916
<b>Fair value of Ørsted shares at 31 December 2018 in percentage of fixed salary for 2018</b>	<b>542%</b>	<b>620%</b>

The table shows that both members of the Executive Board meet the share capital requirement.

**Overview of targets and performance in the cash bonus (STI)**

Objectives and performance 2018	Henrik Poulsen		Marianne Wiinholt	
	Objectives	Score	Objectives	Score
Safety target (10%)	– TRIR compared to target	100%	– TRIR compared to target	100%
Financial target (30%)	– EBITDA compared to guidance	100%	– EBITDA compared to guidance	100%
Specific individual business targets and leadership (60%)	– First-class safety culture and standards – ROCE in line with plan – Deliver major construction projects on budget and time – Winning auctions and/or securing key access rights/permits in Offshore's existing and new strategic markets, e.g. the US and Taiwan, with a sustained focus on value creation – Investigate and pursue additional value-creating growth opportunities within renewable energy, incl. potential acquisitions – Continue to reduce the cost of electricity in offshore wind – Farm-down of Hornsea 1 – Develop potential new markets for offshore wind	92%	– First-class safety culture and standards – ROCE in line with plan – Manage capital structure within current rating commitments – Support green growth by providing high-quality decision input related to financial analysis, tax, risk management, funding, etc. – Proactively manage risks related to currencies, interest rates and inflation – Increase quality and cost effectiveness in IT and exploit digital opportunities – Develop plan and implement initiatives to raise IT security level – Lead the implementation of the GDPR project – Update the tax strategy	88%

### Clawback clause

The Executive Board's incentive schemes are subject to a clawback clause whereby any paid-out bonus must be repaid if:

- the circumstances and data that the bonus was based on are erroneous
- the Executive Board member knew or should have known about this circumstance.

The Executive Board member must repay any amount of the incentive pay received in excess of the incentive pay calculated, applying the correct data.

### Remuneration 2018

The remuneration paid to our CEO totalled DKK 17.3 million in 2018, representing an increase of 9.1% compared to 2017. The cash bonus (STI) made up DKK 3.0 million, corresponding to 92% of the maximum bonus. The bonus percentage reflects a performance exceeding the targets for the Group's financial and safety results. The score for the CEO's specific individual business targets and leadership is also at the high end of the range. See table on page 64 for an overview of the specific individual business targets.

The remuneration paid to our CFO totalled DKK 9.7 million, representing an increase of 16.6% compared to 2017. The cash bonus (STI) made up DKK 1.6 million, corresponding to 88% of the maximum bonus. The bonus percentage reflects a performance exceeding the targets for the Group's financial and safety results. The score for the CFO's specific individual business targets and leadership is also at the high end of the range.

In 2018, the remuneration under the share-based incentive programme consisted of the market value of the scheme at the time of granting, distributed over the vesting period. Both members of the Executive Board are covered by the share programmes from September 2016, April 2017 and April 2018. The IPO retention bonuses for 2017 and 2018 constitute the phase-in to the vesting of the first share programme in May 2019. The decreases in the IPO retention bonuses in 2018 are attributable to the fact that the scheme covered only eight months of 2018 after which it expired.

### Comparison to development in the Group's average salary

In 2018, the fixed salary for the CEO and CFO increased by 8.2% and 16.6%, respectively, which was more than the average salary increase in the Group of 2.9%<sup>1</sup> (2.8% in Denmark). The higher increases for the CEO and CFO were given to narrow the gap in total remuneration compared to the market median levels for similar roles in large Danish peer companies.

## Remuneration of the Board of Directors

### Remuneration structure

The members of the Board of Directors receive a fixed fee each year. The Chairmanship and the members of the committees also receive a multiple of the fixed fee for their extra work. None of the members receive separate fees for consultancy work for Ørsted. The members' travel costs are covered by the company. The members are not entitled to severance payments.

### Remuneration multiple 2018, Board of Directors and committees

	Board of Directors	Audit and Risk Committee	Nomination and Remuneration Committee
Chairman	3.0	0.6	0.4
Deputy Chairman	2.0	n.a.	n.a.
Member	1.0	0.3	0.25

The remuneration multiples are unchanged from 2017.

### Remuneration of the Board of Directors

DKK '000	Annual fee	Audit and Risk Committee	Nomination and Remuneration Committee	2018	2017
Thomas Thune Andersen <sup>1</sup>	960	-	128	1,088	1,088
Lene Skole <sup>1</sup>	640	24	80	744	803
Hanne Steen Andersen <sup>1</sup>	320	-	-	320	320
Lynda Armstrong	320	-	-	320	320
Poul Dreyer <sup>1</sup>	320	-	-	320	320
Pia Gjellerup	320	-	80	400	400
Benny Gøbel <sup>1</sup>	320	-	-	320	320
Benny D. Loft	320	192	-	512	512
Peter Korsholm (joined in March 2017) <sup>1</sup>	320	96	-	416	347
Dieter Wemmer (joined in March 2018)	267	80	-	347	-
Jørgen Kildahl (joined in March 2018)	267	-	-	267	-
Jens Nybo Stilling Sørensen (resigned in March 2018)	80	-	-	80	320
Poul Arne Nielsen (resigned in March 2017)	-	-	-	-	80
Claus Wiinblad (resigned in March 2017)	-	-	-	-	104
<b>Total</b>	<b>4,454</b>	<b>392</b>	<b>288</b>	<b>5,134</b>	<b>4,934</b>

The table shows the remuneration paid to the members of the Board of Directors and committees. The remuneration of the Board of Directors comprises a fixed fee only, and the fee remains unchanged at DKK 320,000 as last year.

<sup>1)</sup> At 31 December 2018, the board members own the following number of shares in Ørsted A/S: Thomas Thune Andersen 550 (2017: 0), Lene Skole 1,160 (2017: 0), Peter Korsholm 4,500 (2017: 4,500), Hanne Steen Andersen 2,394 (2017: 3,187), Poul Dreyer 837 (2017: 837), Benny Gøbel 1,087 (2017: 837). No other board members own shares in Ørsted A/S.

<sup>1)</sup> Calculated based on the salary after the yearly salary adjustment for all employees who remained employed at the time of the yearly salary adjustment.

# Risk and risk management

Risks are a natural and integral part of our business activities. Our aim is to mitigate our risks and reduce them to an acceptable level through risk management.

We are exposed to several risks. In addition to operational, business and environmental risks, we are exposed to fluctuations in exchange rates, interest rates, inflation and commodity prices, as well as credit and insurance risks. The purpose of our risk management is to identify all risks we are exposed to and decide how best to manage and mitigate them. We assess the extent to which individual risks are acceptable or perhaps even desirable, as well as the extent to which these risks can be reduced to ensure an optimum balance between risk and return.

To a large extent, our earnings are centred within offshore wind and other green energy technologies. Although, Denmark and the UK are key contributors to our current earnings, our future earnings will increasingly be spread across different geographical regions and technologies. Therefore, political and other macroeconomic factors play an important role in our risk management. When we invest in new assets and activities or divest assets, the risk associated with our portfolio changes. We therefore assess the impact of a given decision on the portfolio in advance.

We work systematically with risks and follow a plan for the year according to which all business units and selected staff functions identify and prioritise business risks. An assessment is made of the potential financial impact of individual risks, and whether they are of a short-term (0-2 years), medium-term (2-5 years), long-term (5+ years) or recurring nature. All of our risks are then consolidated and evaluated at Group level. The ultimate responsibility for all the individual risks rests with a member of the Group Executive Committee. As for business risks, similar processes are in place for identifying and prioritising risks related to sustainability, cybersecurity and legal compliance.

The top five business risks identified during 2018 are shown to the right, where they are illustrated based on their potential impact (post-risk mitigation) on our value and credit metrics over the next years. You can read more about these risks on the following pages.

Brexit is not in itself part of our top five business risks, as the UK's decision to leave the EU will not, in our opinion, result in fundamental changes in the UK's energy policy. Recent announcements by the UK Government show that the UK is committed to a clean, green energy future, and offshore wind can be the backbone of this green vision. We have analysed a number of Brexit scenarios and believe that even if a deal is not reached between the UK and the EU, and there is a disruption to the

flow of goods between the UK and the EU, trade and customs facilities will still function in the medium term. Our most significant risk related to Brexit is assessed to be a long-term depreciation of the GBP, which is a part of our top 1 business risks.

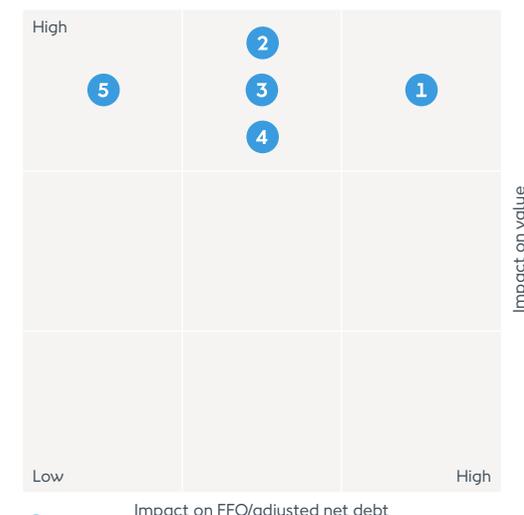

The risks related to sustainability, cybersecurity and legal compliance are assessed using different parameters, which is why we are unable to show a consolidated picture of our combined risks. A description of the most significant sustainability risks can be found in our sustainability report and for each of the other two areas on page 69.

We are also exposed to risks which have a very small probability of occurring, but which could potentially impact our finances and/or reputation substantially. These risks include, but are not limited to:

- 1,000-year storms, hurricanes, typhoons or earthquakes, which may lead to the loss of offshore and onshore wind farms
- broken pipes at the Nybro Gas Treatment Plant in Denmark, which may lead to personal injury and damage to the environment
- breakdowns at power stations that may lead to personal injury and loss of assets.

After risk-reducing measures are implemented, the Group Executive Management assesses whether the level of each risk is appropriate or

**Top 5 business risks**  
Effect on our value and credit metric

Quantification of risks is based on a scenario where the risk occurs with 10% probability (P90). Our Internal Audit function has examined the process for identifying and measuring the accompanying portfolio risks.

- 1** (#1 2017)  
Currency, inflation and interest rates
- 2** (#1 2017)  
Commodity prices
- 3** (#2 2017)  
Development and construction of production assets
- 4** (#3 2017)  
Operation of offshore wind farms
- 5** (#4 2017)  
Regulatory risks within offshore wind

Impact on value

slightly or significantly higher than the desired level. If the risk level is still too high, further risk-reducing measures are initiated to the extent possible.

### Climate-related risks

We address climate-related risks and opportunities as an integral part of our daily business, as these are directly linked to our green vision and strategy. We seek to exploit climate-related opportunities through our development and construction of renewable heat and power generation capacity and adjacent sustainable activities. At the same time, we seek to reduce both our transitional and physical climate-related risks in the short, medium and long term. We do that by, among other things:

- influencing regulators and other public authorities toward ambitious targets for the build-out of renewable capacity and regulatory frameworks that support this
- continuously working to improve the future competitiveness of green technologies, i.e. lowering the levelised cost of electricity
- assessing acute and chronic weather development; in particular wind speeds and patterns, but also the temperature and precipitation levels in general
- taking extreme weather conditions and other relevant factors into account when we design and construct our assets.

In that way, we seek to avoid ending up with stranded assets or assets and activities with a significantly lower value than originally expected, which we potentially need to write down or provide for.

When we prepare business cases for investments in new assets or activities, we take

climate-related risks and opportunities into account by assessing the expected changes in the technology mix that will be delivering heat and power in the future. On this basis, we assess the expected derived impact on input and output prices of energy, including the price development of components and services to be used for the construction of these assets as part of our LCoE analysis.

Our planning scenario until 2040 for the power systems in North Western Europe is in accordance with a carbon emission reduction trajectory for these countries leading to a 2-degree temperature increase.

We track the impact of undertaking these new investments on our carbon footprint to enable us to disclose our own direct greenhouse gas emissions from heat and power generation and the derived avoided emissions from displacing fossil-based generation. We have also recently started to track and assess the total impact on greenhouse gas emissions across our entire business portfolio as well as across the full value chain from our procurement through to the final consumption at our end-users.

### Development in risks in 2018

The acquisitions of US-based Deepwater Wind and Lincoln Clean Energy in 2018 have significantly increased our exposure to the US market, and the allocation of grid capacity in Taiwan will significantly increase our exposure to this market if we continue with our projects. These developments have had an impact on the ranking of our top five business risks.

Due to our increased international activities, we have divided our market risks into currency, inflation and interest rate risks, and commodity price risks. Our exposure to exchange rate fluctuations, primarily GBP, USD and potentially New Taiwan dollar (NTD), has increased due to significant investments in offshore wind in these areas. Currency and interest rate risks are deemed to be our most significant business risk, whereas commodity prices are rated our second largest risk.

Our third largest risk now includes the development and construction of production assets in new markets, where there are higher risks associated with construction, among other things, due to the need for developing the value chain in these immature markets.

Risks associated with the operation of offshore wind farms is our fourth largest risk.

Regulatory risks within offshore wind is our fifth largest risk and has renewed focus due to the expansion into new markets.

A continued reduction of the levelised cost of electricity (LCoE) remains a key focus area, but has moved out of our top five risks.

## 1 Currency, inflation and interest rates

### Description

Our main currency exposure relates to GBP due to our substantial investments in offshore wind farms in the UK. However, our recent expansion has increased our USD exposure and will increase our NTD exposure if we continue with the projects.

To a large extent, our medium- to long-term earnings can be expected to follow the development in consumer and market prices, thereby protecting the real value of our assets and equity. Fixed nominal subsidies from wind assets in Denmark, Germany and the Netherlands, fixed-price power purchase agreements (PPAs) from assets in the US and potentially Taiwan, as well as fixed nominal cash flows related to debt are exceptions. We are exposed to inflation risk in these markets, where an increase in inflation will adversely impact the expected real value of the revenue.

### Potential impact

Fluctuations in exchange rates, interest rates and inflation may adversely impact our earnings.

### Mitigation initiatives

Currency risks are generally hedged for up to five years when cash flows in foreign currency are deemed relatively certain. However, for cash flows related to fixed tariffs and guaranteed minimum prices from offshore wind farms in the UK, we apply a decreasing degree of hedging over the risk management horizon.

Consequently, we are well protected against exchange rate fluctuations in the short-term, but only partly hedged in the medium-term. Our inflation and interest rate exposure is managed by matching assets and liabilities in the same currency and with similar payment structure. Hence, our European fixed nominal subsidies are offset by EUR-denominated fixed-rate debt. The close relationship between inflation and interest rates also protects the equity value of Ørsted against changes in interest rates to some extent.

## 2 Commodity prices

### Description

We are primarily exposed to power price risks from the sale of our wind-based power generation. In addition, we typically enter into agreements to buy our partners' share of the power from our jointly owned offshore wind farms. These investor power purchase agreements (iPPAs) entail further exposure as they include floors and caps related to a pre-determined power price level.

To a lesser extent, we are exposed to oil and gas price risks related to sourcing contracts for gas and LNG on oil-indexed prices as well as the sale of gas at fixed prices. Finally, power generation from our CHP plants entails a spread exposure between the difference in the power price and the fuel price (i.e. biomass, coal, gas and carbon quotas).

### Potential impact

Fluctuations in commodity prices may adversely impact our earnings.

### Mitigation initiatives

We hedge commodity prices for up to five years, and in some cases longer, to reduce cash flow fluctuations. We hedge based on minimum hedging requirements for each of the business units, with a high hedge level in the first two years. The degree of hedging is lower in the subsequent years. This is due to declining certainty about generated volumes and increasing costs due to the declining liquidity of the hedge instruments.

As an alternative to hedging, we seek to enter into long-term corporate power purchase agreements (cPPAs), under which we sell power from our renewable assets. Corporate PPAs or hedges with a duration of 12-15 years are often a prerequisite for obtaining tax equity partnerships in the US. In addition, cPPAs will be a means to reducing business case uncertainty for offshore wind farms to be built without subsidies.

## 3 Development and construction of production assets

### Description

Our strategy includes the construction of large-scale investment projects. Value creation from new projects heavily depends on choosing the right technical and commercial solutions, on the design and construction phase progressing as planned, on our suppliers living up to their obligations, on maturing the value chain in new markets, on avoiding investment budget overruns and on timely start-up of generation.

The majority of our new investments are made in offshore assets, which naturally increases the risks in the construction phase. Some of these are the nature of sea beds, weather conditions and dependence on installation and transit vessels.

Our entry into the US and potentially Taiwan entails some further risks due to the immaturity of offshore wind in these markets. These risks include, local legislation, such as the Jones Act in the US, and the inability to fulfil local content requirements without unappropriated costs and delays due to limited experience among local manufacturers.

### Potential impact

If we fail to take any of the conditions mentioned above into account, we may experience delays and budget overruns. Delays can lead to failure to meet deadlines and possibly partial loss of subsidies, grid connection and/or project rights.

### Mitigation initiatives

We are continuously working on standardising processes based on our vast experience from previous complex investment projects. This has led to, and will continue to lead to, industrialisation of the installation activities. In recent years, this has led to successful completion of several large investment projects, many of which have been completed ahead of schedule and below budget.

## 4 Operation of offshore wind farms

### Description

The risks associated with the operation of offshore wind farms relate to forecasts for availability and operating expenses as well as faults in transmission cables and substations. Faults like this may result in breakdowns and loss of generation from parts of or an entire offshore wind farm over an extended period of time. Such losses are not compensated in the UK, whereas they are fully compensated in Denmark and partly compensated in Germany and Holland.

### Potential impact

Our forecasts for availability and operating expenses are based on several assumptions received from suppliers and on historical data. There is a risk that these assumptions do not hold, and that fault rates and costs are higher than expected. This may lead to deviations between actual generation and forecasts. Faults in transmission assets and substations may have a negative effect on our earnings in case of a lack of compensation thereof.

### Mitigation initiatives

We are implementing an operational excellence programme on all wind farms with the aim of increasing the availability and power generation and reducing operational costs. We have put in place various contingency plans to cater for unforeseeable events, including critical repair services to handle cable faults, monitoring signs of damage and initiating repair campaigns where deemed necessary. In addition, we are working continuously to reduce the risk of faults in the operation of offshore wind farms, e.g. by monitoring and applying advanced analytics to operational data collected and by carrying out preventive remedial work on emerging damage.

## 5 Regulatory risks within offshore wind

### Description

The risk associated with regulatory regimes is twofold. First, it is associated with the possibilities for obtaining subsidies or in other ways support for offshore build-out. Secondly, it is associated with the possibilities for obtaining the needed consents, grid connections and relevant approvals from local authorities, including permits or other agreements needed to secure a viable project.

Although the EU countries have increased their 2030 renewable energy targets, the implementation rests with the member states, which means that some uncertainty still prevails. In the US, several East Coast states have committed themselves to offshore build-out, and Taiwan is also expected to continue the build-out of offshore wind towards 2030.

Most markets have tender or auction-based subsidy regimes, where the only or most important factor is the bid price. However, in some countries, a certain level of local content is required.

### Potential impact

We do not expect changes to be made to the subsidy schemes with retrospective effect for existing offshore wind projects. The greatest risks are associated with the need to obtain relevant consents and approvals from local authorities and to be connected to the grid. Delays in these areas may lead to total or partial loss of subsidies. This risk is significantly reduced for projects where subsidies and possibly project rights are granted in competitive bidding processes.

### Mitigation initiatives

We mitigate the risk by monitoring political and regulatory developments in all relevant countries and by engaging in an active dialogue with relevant authorities about environmental approvals, regulatory milestones and the economic regimes. We also engage in the development of local capabilities to increase local content in the projects.

## Cybersecurity

### Description

In recent years, several major cyberattacks have been launched against companies around the world, and according to the Danish Centre for Cybersecurity, the risk of cyberattacks aimed at Danish companies is high. Thus, we have a strong focus on IT security.

We are responsible for critical infrastructure, and we own various types of intellectual property rights. This means that we are a potential target for cyberattacks or industrial espionage.

### Potential impact

Minor digital risk events like viruses and attempted break-ins are everyday risks without significant impact. However, major cyberattacks or events may impact all or part of our shared infrastructure for administrative systems or industrial control systems. For the latter, the impact could range from a single asset to potentially all assets and activities in the company. Cyberattacks of a certain size can be costly if it forces us to shut down operations for a period of time.

### Mitigation initiatives

We have launched a significant resourced programme with the aim to improve resilience against cyberattacks and other threats across Ørsted. In addition, we are running cyber risk awareness campaigns throughout the organisation in order to decrease threats from phishing campaigns, etc.

Furthermore, we are participating in relevant forums across the energy sector to harvest and contribute with information and experience. One example is the Systems & Cyber Resilience working group organised by the World Economic Forum. We are also part of the Danish Network Security Service under the Danish Ministry of Defence to enhance resilience.

## Legal compliance

### Description

Risks associated with legal compliance are assessed based on financial and reputational significance and probability. Our most significant risks are financial regulation, the EU General Data Protection Regulation (GDPR) and tender law.

We are subject to several financial regulations, such as REMIT, MAR, EMIR, Dodd Frank, MiFID, SFTR and AML. The financial regulations are relevant for a large part of our activities. In relation to GDPR, we are primarily processing personal data regarding our Danish residential customers and our employees. Most of our contracts for goods, services and works are subject to EU and local tender law rules.

### Potential impact

Failure to comply with the above-mentioned rules and regulations may result in severe legal sanctions, such as imprisonment, fines and damage claims.

### Mitigation initiatives

We have implemented comprehensive policies, procedures, training and controls for relevant parts of our business to ensure compliance with financial regulations.

To ensure that we process personal data in compliance with GDPR, we have mapped and analysed our personal data processing and developed a Group-wide compliance programme. The compliance programme includes various organisational and technical measures and mandatory training of employees in risk-exposed positions.

To counter the tender law risk, our procurement department is involved in almost all procurement activities, and our legal department carries out courses on tender law and review of documents for larger tenders.

# Shareholder information

The Ørsted share yielded a total return of 32% in 2018, an increase in the share price of 29%, and dividends of DKK 9 per share.

## Price development for the Ørsted share in 2018

The Ørsted share started the year at a price of DKK 339 and closed the year at DKK 436. Prices of comparable European utility companies decreased by 1%, and the OMX C25 cap decreased by 13% in 2018. The market value

of Ørsted was DKK 183 billion at the end of the year. Since the IPO in June 2016, the Ørsted share has generated an aggregate return from share price appreciation and dividends of 92%.

The year's highest traded price of 474 was on 28 November. The year's lowest traded price of 332 was on 3 January.

The average daily turnover on Nasdaq Copenhagen was 447,000 shares. The trading volume showed a decrease of 38% compared to 2017. This was particularly due to several of

the original shareholders opting to sell all or some of their shareholdings in 2017 at a total trading value of DKK 17 billion.

## Share capital

Ørsted's share capital is divided into 420 million shares, enjoying the same voting and dividend rights. The company's share capital remained unchanged in 2018. At the end of 2018, the company held a total of 335 thousand treasury shares, which will be used to cover incentive schemes.

## Composition of shareholders

At the end of the year, the number of shareholders had increased by 5,175 to 29,727. Although the geographical spread of the share capital was greater, most of it (66%) is still with Danish owners. The figure on the next page shows the composition of our shareholders by country, specifying the three shareholders each holding more than 5% of the share capital. Around 1% of the share capital is owned by private investors.

## Annual general meeting and dividends

The annual general meeting will be held on 5 March 2019 in Copenhagen. Dividends for the year are expected to amount to DKK 9.75 per share, corresponding to DKK 4.1 billion. In 2018, dividends of DKK 9.00 per share were paid for the 2017 financial year, corresponding to a return of 2.2% relative to a share price of DKK 436 at 31 December 2018.

## Selected company announcements in 2018

- 27 Apr. Ørsted wins 552MW in German offshore wind auction
- 30 Apr. Taiwan awards Ørsted 900MW grid capacity for offshore wind
- 24 May The High Court of Western Denmark rules in favour of Ørsted in case concerning the former Elsam
- 22 June Ørsted wins 920MW offshore wind projects in Taiwan
- 26 June Ørsted initiates a structured divestment process for its Danish power distribution and residential customer businesses
- 9 Aug. Ørsted agrees to acquire Lincoln Clean Energy, a US onshore wind developer
- 18 Sep. Ørsted agrees to divest 50% of Hornsea 1 Offshore Wind Farm
- 8 Oct. Ørsted agrees to acquire Deepwater Wind and creates leading US offshore wind platform
- 2 Jan. 2019 Establishment permit and power purchase agreement delayed on Taiwanese offshore wind projects

## Share price development in 2018

Ørsted share price compared to peers.

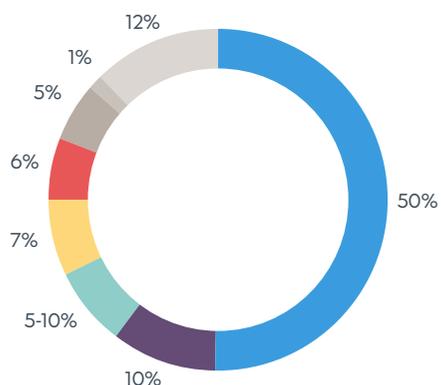

## Financial calendar 2019

- 31 Jan. Annual report 2018
- 5 Mar. Annual general meeting
- 1 May Interim report for the first quarter of 2019
- 8 Aug. Interim report for the first half-year of 2019
- 30 Oct. Interim report for the first nine months of 2019

**Investor Relations**

In order to achieve a fair pricing of our shares and corporate bonds, we seek to ensure a high level of openness and stability in our financial communication. In addition, our management and Investor Relations function engage in regular dialogue with investors and analysts. The dialogue takes the form of quarterly conference calls, roadshows, conferences, capital markets days and regular meetings with individual or groups of investors and analysts. The dialogue is subject to certain restrictions from three weeks prior to the publication of our financial reporting.

On 28 November 2018, Ørsted hosted a Capital Markets Day in Gentofte with more than 150 participants, mainly equity and institutional investors. CEO Henrik Poulsen presented Ørsted's new ambitious targets for the Group's long-term strategy and financial development, followed by breakout sessions hosted by the management team. The full Capital Market Day material is available at [orsted.com/en/capital-markets-day](http://orsted.com/en/capital-markets-day).

The Group is covered by 22 equity analysts and 12 bond analysts. Their recommendations and consensus estimates for Ørsted's future financial performance are available at [orsted.com/en/investors](http://orsted.com/en/investors). On this site, you can also download our financial reports, investor presentations and a wide range of other data.

## Profit (loss) for the year from our continuing operations

Our former Oil & Gas business, which was divested on 29 September 2017, is presented as discontinued operations.

## Profit (loss) per share

Diluted profit (loss) per share corresponds to profit (loss) per share, as the dilutive effect of the share incentive programme is less than 0.1% of the share capital.

## Accounting policies

### Business performance

The business performance principle is our alternative performance measure. According to IFRS, market value adjustments of energy contracts and related currency risks (including hedging) are recognised on an ongoing basis in the profit (loss) for the year, whereas under the business performance principle, they are deferred and recognised in the period in which the hedged exposure materialises. The difference between IFRS and business performance is specified in the 'Adjustments' column. Read more about the business performance principle in note 1.6 'Business performance'.

## Statement of comprehensive income

All items in other comprehensive income may be recycled to the income statement.

Value adjustments for the year for cash flow hedging according to IFRS of DKK -1,107 million mainly consist of losses related to the divestments of Hornsea 1. The loss is transferred to the income statement.

Value adjustments for the year for cash flow hedging according to the adjustment column of DKK 1,734 million mainly consist of losses on power hedges that are recognised in the income statement under IFRS, but under business performance, the losses are deferred to the period where the hedged exposure relates.

Foreign exchange losses relating to net investments in foreign enterprises of DKK 417 million were in 2018 primarily attributable to a drop of 1% in the GBP exchange rate. 2017, foreign exchange losses relating to net investments in foreign enterprises amounted to DKK 1,513 million and were primarily attributable to a drop of 4% in the GBP exchange rate.

## Contract assets and contract liabilities

The adoption of IFRS 15 has changed our presentation, as we have introduced contract assets and contract liabilities. As we have implemented IFRS 15 after the modified retrospective method, we have not restated comparative figures. The comparative figures we have shown for 'Contract assets' and 'Contract liabilities' were presented as 'Construction contracts' in the 2017 annual report.

The effects of change in accounting policy are identical for business performance profit (loss). Read more about the impact in note 1.4 'Implementation of new or changed accounting standards and interpretations'.

## Accounting policies

Cash flows from operating activities are determined using the indirect method as operating profit (loss) before depreciation, amortisation and impairment losses adjusted for changes in operating items without cash flow effect. Trade payables relating to purchases of intangible assets and property, plant and equipment are not recognised in change in net working capital.

Change in work in progress consists of elements in contract assets, contract liabilities, construction management agreements related to construction of offshore wind farms, construction of offshore transmission assets (inventory) and related trade payables.

Change in tax equity partner liabilities relates to cash contributions from tax equity partners and distributions of PTCs and other tax attributes to tax equity partners. See also note 4.5 'Tax equity liabilities'.

Other items primarily comprise reversal of share of profit (loss) of and dividends in associates and joint ventures as well as changes in bad debt provisions.

Cash flows from investing activities comprise payments in connection with the purchase and sale of non-current assets and enterprises as well as the purchase and sale of securities that are not recognised as cash and cash equivalents.

Cash flows from financing activities comprise changes in the size or composition of equity and loans, including net proceeds from and to tax equity partners. Proceeds from raising of short-term repo loans are presented net.

Cash flows in currencies other than the functional currency are translated at the average exchange rates for the month in question, unless these differ significantly from the rates at the transaction date.

Note	DKKm	2018	2017

# 1. Basis of reporting

Significant changes in the current reporting period	80
Basis of preparation	81
Key accounting estimates and judgements	83
Implementation of new or changed accounting standards and interpretations	84
Alternative performance measures	87
Business performance	88

# 1.1 Significant changes in the current reporting period

The financial position and performance of the Ørsted Group was particularly affected by the following events and transactions during 2018.

For a detailed discussion about the Ørsted Group's performance and financial position, please refer to our management's review on pages 4 to 54.

## Acquisitions

### Lincoln Clean Energy

In October 2018, we acquired Lincoln Clean Energy, which forms the basis of our new Onshore business unit, see note 3.3 'Acquisition of enterprises'. The transaction has been recognised using the acquisition method whereby all identifiable assets and liabilities have been measured at fair value. The acquisition introduced new accounting concepts, such as tax equity liability, see note 4.5 'Tax equity liabilities', and power purchase agreements (PPAs) (derivatives), classified as financial products with significant elements of non-observable data, see note 7.7 'Fair value measurement'.

With the acquisition, we established a strong and scalable platform for the US onshore market, which will be a key growth platform and provide strategic diversification to our portfolio.

### Deepwater Wind

In November 2018, we acquired Deepwater Wind, which will be part of our existing Offshore business unit, see note 3.3 'Acquisition of enterprises'. The transaction has been recognised using the acquisition method whereby all identifiable assets and liabilities have been measured at fair value. Similar to Lincoln Clean Energy, the acquisition includes a tax equity liability, see note 4.5 'Tax equity liabilities'.

With this acquisition, we created a leading US offshore wind platform with a geographically diverse US East Coast portfolio of projects at varying degrees of development and with significant synergy potential both in terms of geography and project timing.

## Divestments/ assets held for sale

### Hornsea 1 offshore wind farm

In November 2018, we farmed-down 50% of Hornsea 1. The transaction is classified as a divestment of assets, see note 2.5 'Other operating income and expenses' and 3.1 'Intangible assets and property, plant and equipment'.

### Danish power distribution, residential customer and city light businesses

We plan to exit our Danish power distribution, residential customers and city light businesses during 2019 and have therefore classified them as assets held for sale, see note 3.6 'Assets classified as held for sale'.

### Enecogen gas-fired power plant

In July 2018, we divested our 50% ownership share in the Dutch gas-fired power plant Enecogen. The transaction is classified as a divestment of enterprises, see note 3.4 'Divestment of enterprises'.

IFRS

2018

## Accounting policy

### Adoption of IFRS 15

We have adopted the new IFRS standard on revenue from contracts with customers. The standard has an insignificant impact on profit (loss) for the year and diluted profit (loss) per share. The equity and the consolidated statement of cash flows are not affected. The impact on our consolidated financial statements is described in note 1.4 'Implementation of new or changed accounting standards and interpretations'. The disclosure requirements in IFRS 15 is included in note 2.2 'Revenue'.

### New operating segment

The Onshore business unit was established in connection with the acquisition of Lincoln Clean Energy, see note 2.1 'Segment information' and management's review on pages 46 to 48.

## 1.2 Basis of preparation

This section provides an overall description of the accounting policies applied in our consolidated financial statements. We provide a more detailed description of the accounting policies applied in the specific notes. Key estimates and judgements and new and amended IFRS standards and interpretations are discussed in detail in note 1.3 'Key accounting estimates and judgements' and 1.4 'Implementation of new or changed accounting standards and interpretations', respectively.

### Basis of preparation

The financial statements for the period 1 January - 31 December 2018 comprise the consolidated financial statements of Ørsted A/S and its subsidiaries (the Group) as well as separate financial statements for the parent company, Ørsted A/S. See page 178 for the parent company's accounting policies.

The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards (IFRS) as adopted by the EU and further requirements in the Danish Financial Statements Act (Årsregnskabsloven).

The financial statements are presented in million Danish kroner (DKK), unless otherwise stated.

All business units in the Ørsted Group apply the Group's accounting policies.

### Measurement basis

The consolidated financial statements have been prepared on the historical cost basis except for derivatives, financial instruments in trading portfolio, and carbon emissions allowances in trading portfolio that are measured at market value.

The accounting policies have been applied consistently to the financial year and for the comparative figures except for:

- the adoption of 'IFRS 15 – Revenue from Contracts with Customers'
- the adoption of IAS 20 'Accounting for Government Grants and Disclosure of Government Assistance' with respect to subsidies received under the Renewable Obligation scheme in the UK and feed-in tariffs in Germany
- the adoption of IFRIC 22 'Foreign Currency Transactions and Advance Consideration'
- the adoption of IFRIC 23 'Uncertainty over Income Tax Treatments' (early adoption).

### Principles for consolidation

The consolidated financial statements include the parent company Ørsted A/S and subsidiaries controlled by Ørsted A/S. See more in note 8.5 'Company overview'.

The consolidated financial statements have been prepared as a consolidation of the parent company's and the individual subsidiaries' financial statements which have been prepared in accordance with the Group's

accounting policies. Intra-group income and expenses, shareholdings, balances and dividends as well as realised and unrealised gains and losses arising from intra-group transactions are eliminated on consolidation.

Unrealised gains resulting from transactions with associates and joint ventures are eliminated to the extent of the Group's ownership interest. Unrealised losses are eliminated in the same way as unrealised gains to the extent that there has been no impairment.

The Group's share in joint operations is recognised in the consolidated balance sheet through recognition of the Group's own assets, liabilities, income and expenses. The Group's share of joint income, expense, assets and liabilities is recognised afterwards. The proportionate share of realised and unrealised gains and losses arising from intra-group transactions between fully consolidated enterprises and joint operations is eliminated.

Investments in associates and joint ventures are measured using the equity method.

If we hold or have the ability to exercise, directly or indirectly, 20%-50% of the voting rights and do not exercise control, such enterprises are accounted for as associates. However, we carry out a specific assessment of our ability to exercise influence, including our ability to influence financial and operational decisions and thus our return. Enterprises

that satisfy the criteria for joint control are accounted for as investments in joint ventures.

We present the profit (loss) from investments in associates and joint ventures before EBITDA when deemed to pertain to our principal activities. The profit (loss) from investments in associates and joint ventures is presented after EBITDA when not deemed to pertain to the Group's principal activities.

Associates and joint ventures with negative net assets are measured at nil.

If we have a legal or constructive obligation to cover the negative equity of an associate or joint venture, the obligation is recognised as a liability.

Receivables from associates and joint ventures are measured at amortised cost. On initial recognition of our receivables, write-downs are made for bad debts.

The proportionate share of associates' and joint ventures' profit (loss) after tax and non-controlling interests is recognised in profit (loss) for the year. We eliminate the proportionate share of internal gains (losses) in the profit (loss) for the year.

On acquisition of investments in associates and joint ventures, the purchase method is applied.

Gains (losses) on the divestment of investments in associates and joint ventures are determined as the difference between the selling price and the carrying amount of net assets, including goodwill at the date of divestment and transaction costs.

Gains and losses are recognised in profit (loss) for the year as gain or loss on the divestment of enterprises. The profit (loss) for the year and total comprehensive income from associates and joint ventures are identical.

#### Key accounting judgements

##### Assessment of classification of partnerships

On initial recognition of investments and in connection with any restructuring of joint ventures and joint operations, we assess whether an investment is a joint venture or a joint operation.

In assessing joint operations, we look at:

- the corporate form of the operation
- whether we are only entitled to the net profit or income and expenses resulting from the operation.

In addition, the fact that the parties buy or are assigned all output, for example the power generated, will lead to the structure being considered a joint operation.

#### Foreign currency translation

For each reporting enterprise in the Group, items are determined in the currency of the primary economic environment in which the individual reporting enterprise operates (functional currency). Transactions in currencies other than the functional currency of each enterprise are accounted for as transactions in foreign currencies and translated on initial recognition at the exchange rate on the transaction date. Exchange differences arising between the exchange rate on the transaction date and on the date of payment are recognised in profit (loss) for the year as financial income or expenses.

Receivables, payables and other monetary items in foreign currencies are translated at the exchange rates on the balance sheet date. The difference between the exchange rate on the balance sheet date and on the date at which the receivable or payable arose is recognised in profit (loss) for the year as financial income or expenses.

For foreign subsidiaries, joint operations, associates and joint ventures, the statements of comprehensive income are translated at monthly average exchange rates in so far as these do not deviate materially from the actual exchange rates at the transaction dates. Balance sheet items are translated at the exchange rates on the balance sheet date.

All exchange differences are recognised in profit (loss) for the year, except for exchange differences arising on:

- translation of the opening equity of these entities at the exchange rates on the balance sheet date
- translation of the statements of comprehensive income of these enterprises from the exchange rates at the transaction date to the exchange rates on the balance sheet date
- translation of balances accounted for as part of the total net investment
- translation of the portion of loans and derivatives that has been entered into to hedge the net investment in these enterprises, and that provides an effective hedge against corresponding foreign exchange gains (losses) on the net investment in the enterprise.

The above types of exchange differences are recognised in other comprehensive income. Such exchange rate adjustments are divided between the equity of the parent company and the equity of the non-controlling interests. On full or partial divestment of the net investment, the accumulated exchange rate adjustments are recognised as follows:

- Disposal results in loss of control: The accumulated exchange rate adjustments, including any associated hedges, are recognised in the profit (loss) for the year if

a foreign exchange gain (loss) is realised by the selling enterprise. Any foreign exchange gain (loss) is transferred to the item in which the gain (loss) from the disposal is recognised. The part of the foreign currency translation reserve that relates to non-controlling interests is not transferred to profit (loss) for the year.

- Disposal does not result in loss of control: A proportionate share of the foreign currency translation reserve is transferred from the parent company shareholders' share of equity to the minority shareholders' share of equity.

Repayment of balances that are considered part of the net investment does not constitute a partial disposal of the subsidiary.

# 1.3 Key accounting estimates and judgements

The use of reasonable estimates and judgements is an essential part of the preparation of the consolidated financial statements.

Given the uncertainties inherent in our business activities, we make a number of estimates regarding valuation and judgements. The estimates and judgements are based on assumptions concerning future developments which affect our application of accounting policies

and reported amounts of our assets, liabilities, sales, costs, cash flows and related disclosures. Actual amounts may differ from the amounts estimated and judgements made as more detailed information becomes available.

We regularly reassess these estimates and judgements, based among other things on historical experience, the current situation in the financial markets and a number of

other relevant factors, ie. the expected effects of Brexit.

Accounting estimates, judgements and assumptions which may entail a risk of material adjustments in subsequent years are listed in the table below.

In addition, we make judgements when we apply the accounting policies.

Reference is made to the specific notes for further information on the key accounting estimates and judgements as well as the assumptions applied.

Note		Key accounting estimates and judgements	Estimate/ judgement	Extent of accounting estimates and judgements
1.2	Basis of preparation	Assessment of classification of partnerships	Judgement	● ● ● ○
2.2	Revenue	Assessment of assumptions for recognition of revenue from the construction of offshore wind farms over time Assumptions for the determination of the expected selling price and expected costs	Judgement Estimate	● ● ● ○ ● ● ● ○
2.5	Other operating income	Assessment of classification of divestment Assumptions for the accounting treatment of divestment gains related to the share purchase agreements and construction agreements	Judgement Estimate	● ● ● ○ ● ● ● ○
3.2	Provisions and contingent assets and liabilities	Assumptions for decommissioning obligations Estimate of onerous contracts Estimate of litigation outcomes	Estimate Estimate Estimate	● ● ○ ○ ● ● ○ ○ ● ● ○ ○
3.3	Acquisition of enterprises	Purchase price allocation in business combinations	Estimate	● ● ● ○
4.5	Tax equity liabilities	Assesment of recognition of tax equity partners	Judgement	● ● ● ○
5.2	Tax on profit (loss) for the year	Estimate regarding the recognition of income tax assets and provisions for uncertain tax positions	Estimate	● ● ○ ○

Extent of accounting estimates and judgements relates to objectivity and business practice.

- ○ ○ ○ Very objective/market-conforming
- ● ○ ○ Objective/partially conforming
- ● ● ○ Partially subjective/partially distinctive
- ● ● ● Subjective/distinctive for Ørsted

# 1.4 Implementation of new or changed accounting standards and interpretations

We regularly assess the impact of new IFRS standards and interpretations. We implement new IFRS standards and interpretations from their mandatory effective dates at the latest.

Effective from 1 January 2018, we have implemented the following new or changed standards (IAS and IFRS) and interpretations:

- IFRS 15 'Revenue from Contracts with Customers' including amendments and clarifications. See separate section below.
- IFRIC 22 'Foreign Currency Transactions and Advance Consideration'.
- IFRIC 23 'Uncertainty over Income Tax Treatments' (early adoption).

Besides the impact from IFRS 15, the adoption of the new and changed standards has not impacted the consolidated financial statements for 2018.

In the following section, you can read more about the impact on recognition and measurement from IFRS 15 'Revenue from Contracts with Customers'. The standard has an insignificant impact on profit (loss) for the year and diluted profit (loss) per share. The equity and the consolidated statement of cash flows are not affected.

## Implementation of IFRS 15

On 1 January 2018, we implemented IFRS 15, 'Revenue from Contracts with Customers', which replaces IAS 11, IAS 18 and associated interpretations.

We have implemented IFRS 15 with retrospective effect. However, we use the relief from restating comparative figures (modified retrospective method).

The most important changes resulting from our implementation can be summarised as follows:

- The model for recognition of revenue is changed from having been based on the transfer of the risks and rewards of ownership of a product or service to being based on the transfer of control of the goods or services transferred to the customer.
- More detailed guidelines for how elements in a contract of sale are identified, and how the individual components will be recognised and measured.
- More detailed guidance for recognition of revenue over time.

## Changes in our accounting policies resulting from IFRS 15

In the UK, we offer construction agreements for offshore transmission assets. When construction of the offshore transmission assets is completed, they are sold to an offshore transmission owner (OFTO) through a regulated sales process. The UK energy regulator 'Office of Gas and Electricity Markets' (Ofgem) manages the sales process, determines the final transfer value and appoints the buyer. Under IFRS 15, a customer relationship does not exist between Ørsted and the final buyer when the construction of the offshore transmission assets commences. Therefore, we have deferred revenue recognition on offshore transmission assets from commencement of construction to the date of entering into a contract with a customer.

In other words, the recognition of revenue begins when we sell a share of the offshore transmission asset under construction to a partner and takes place upon such partner joining the project. We recognise the remaining part of the offshore transmission asset when we find that control has passed to the OFTO.

## Impact on our consolidated financial statements from IFRS 15

In previous reporting periods, offshore transmission assets were recognised in step with the construction based on the completion degree of the asset (over time). Under IFRS 15, revenue from offshore transmission assets are recognised at a later point in time.

The change in policy does not affect the Group's cash flows or results, but only the timing of when income and costs are recognised in the consolidated financial statements.

Historically, we have not had, and we do not expect to have, a significant contribution margin relating to the sale of offshore transmission assets to partners and OFTOs. The Group's EBITDA, balance sheet total and equity will therefore remain unchanged in all material respects as a consequence of the changed accounting policies.

The implementation of the terminology in IFRS 15 had the following effects on the presentation of the construction contracts, receivables and other payables in the balance sheet:

	1 January 2018			31 December 2018

<sup>1</sup> Effect of change to timing of revenue recognition from transmission assets in profit (loss).

<sup>2</sup> Effect of changed presentation of certain amounts in the balance sheet to reflect the terminology of IFRS 15.

- Construction of offshore transmission assets is classified as inventory.
- Construction agreements other than offshore transmission assets are presented as contract assets and liabilities.
- Construction agreements related to offshore transmission assets are presented as contract assets and liabilities.
- Receivables related to ongoing services or in other ways where the receivables are not unconditional are presented as contract assets.
- Other payables related to prepayments from heat customers are presented as contract liabilities.
- Other payables related to prepayments and deferred revenue as such are presented as contract liabilities.

In summary, the adjustments made to the amounts recognised in the balance sheet on the date of initial application (1 January 2018) are illustrated in the table to the left.

Comparatives for the 2017 financial year are not restated as we have applied the modified retrospective method. The effects of change in accounting policy are identical for business performance profit (loss).

**Change in accounting policy**

On 1 January 2018, we changed our accounting policy with respect to subsidies received under the Renewable Obligation Scheme in the UK, known as green certificates or renewable obligation certificates (ROCs), and feed-in tariffs in Germany under the German Renewable Energy Sources Act (EEG2014).

We apply IAS 20 'Accounting for Government Grants and Disclosure of Government Assistance', under which subsidies are recognised when there is a reasonable assurance that the grant will be received.

Prior to this change in policy, we applied IAS 18 'Revenue' to ROCs and feed-in tariffs in Germany, while we applied IAS 20 to feed-in tariffs in Denmark and contracts for difference (CfDs) in the UK.

We believe the new policy is preferable as it provides more relevant information about the received subsidies, aligns our accounting of all subsidies received for our renewable power generation and allows comparability between years.

This voluntary change in accounting policy did not result in any impact on the current year or any years included within these consolidated financial statements. The recognition, measurement, timing and presentation of ROCs and feed-in tariffs are unchanged.

The change in accounting policy only impacts the presentation of ROCs and feed-in tariffs in Germany.

Profit (loss), equity and the consolidated statement of cash flows are therefore not affected by the change in accounting policy.

**New standards and interpretations**

IASB has issued a number of new or amended standards and interpretations which have not yet entered into force, and which have consequently not been incorporated into the consolidated financial statements for 2018.

In the tabel below, we have assessed how IFRS 16 'Leases' will be implemented and the consequences thereof. IFRS 16 is deemed to be the most relevant of the new or amended standards and interpretations for Ørsted.

**Standard Expected effect**

IFRS 16 'Leases' We have completed our analysis of the impact of implementing IFRS 16 in Ørsted. The conclusion is that the implementation will have limited effect on our balance sheet, income statement and key credit ratios.

When applying IFRS 16, our lease obligations amount to DKK 5,224 million on 1 January 2019, which is slightly higher than our operating lease obligations on 31 December 2018. This amounts to DKK 4,819 million at net present value. The difference between the obligations are primarily due to the fact that the weighed average incremental borrowing rates applied under IFRS 16 are lower than the 3.5%, which we apply for calculation of the net current value of our operating lease obligations in accordance with our present accounting policy for key credit metrics.

IFRS 16 requires that service elements which are incorporated into leases, and which do not entitle us to use an underlying asset, are dealt with separately and treated as current operating expenses. This requirement does not have an effect on our lease obligations as our current accounting policy is to separate the service elements in the leases from the leasing elements. In Ørsted, this matter is partially relevant to leases of office premises.

**Commencement**

IFRS 16 will be implemented on 1 January 2019.

**Transitional provision**

The standard will be implemented with retrospective effect, and the comparative figures will not be restated. The requirements of the standard therefore only apply to ongoing and/or leases commencing on 1 January 2019.

For all leases, we will measure the lease asset at the same amount as the lease debt, adjusted by the amount of prepayments and accrued lease payments on 1 January 2019.

We apply the practical expedient regarding reassessment of whether a contract is, or contains, a lease on 1 January 2019. This means that we do not reassess whether a contract is, or contains, a lease when applying IFRS 16.

We do also make use of the possibility to apply a single rate to a portfolio of leases with reasonable similar characteristics. In accordance with this, we apply incremental borrowing rates per class of underlying asset (nature) in similar economic environments (currency) and remaining lease term.

# 1.5 Alternative performance measures

Performance measures are calculated in accordance with the business performance principle.

<b>Business performance</b>	Business performance is a supplement to our financial statements prepared in accordance with IFRS. Under the business performance principle, the value of the hedging transaction is deferred and recognised for the period in which the hedged risk materialises. Reference is made to note 1.6 'Business performance'.
<b>Gross investments</b>	Gross investments reflect our total investments in assets and enterprises. It comprises cash flows from investing activities, excluding dividends received from associates, joint ventures and equity investments, purchase and sale of securities, loans to joint ventures and joint operations, and divestments of assets and enterprises. To this is added acquired debt and restricted cash in connection with acquisitions.
<b>Net investments</b>	Gross investments less divestments of assets and enterprises, the selling price for non-controlling interests and subsequent capital injections from non-controlling interests. Furthermore, interest-bearing debt transferred in connection with a divestment is deducted.
<b>Funds from operations (FFO)</b>	Supplementary statement for cash flows from operating activities determined as business performance EBITDA less the effect of gains on the divestments of ownership interests in offshore wind farms, interest expenses (net) on interest-bearing net debt and hybrid capital (50%), interest element of decommissioning obligations and current tax. In addition, operating lease obligations have been recognised as if they were finance lease obligations, where operating lease payments have been reversed, and calculated interest expenses of the present value of lease payments have been deducted.
<b>Adjusted interest-bearing net debt</b>	Interest-bearing net debt plus 50% of the hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease payments (operating lease obligations calculated as if they were finance lease obligations), and the present value of decommissioning obligations less deferred tax.

<b>FFO to adjusted interest-bearing net debt</b>	$\frac{\text{FFO}}{\text{Adjusted interest-bearing net debt}}$
<b>Free cash flow (FCF)</b>	Cash flows from operating activities less gross investments and plus divestments.
<b>Capital employed</b>	All assets and liabilities except for equity and interest-bearing net debt.
<b>Average capital employed</b>	$\frac{\text{Capital employed beginning of year} + \text{capital employed year-end}}{2}$
<b>Return on capital employed (ROCE)</b>	$\frac{\text{EBIT}}{\text{Average capital employed}^1}$
<b>Proposed dividend per share (DPS) of DKK 10</b>	$\frac{\text{Total proposed dividend}}{\text{Number of shares year-end}}$
<b>Dividend yield</b>	$\frac{\text{Dividend per share (proposed)}}{\text{Share price on the last trading day of the year}}$
<b>Average number of shares</b>	$\frac{1}{\text{Number of days}} \times \sum_{i=1}^{\text{Number of days}} = X_i$
<b>Net working capital</b>	Inventories, trade receivables and other current operating assets less trade payables, deferred income (net), other current operating liabilities and working capital element of tax equity balances.
<b>Net working capital, excluding trade payables relating to capital expenditure</b>	Net working capital, excluding trade payables relating to purchases of intangible assets and property, plant and equipment.
<b>Profit (loss) per share</b>	$\frac{\text{Shareholders' share of the profit (loss) for the period}}{\text{Average number of shares}}$
<b>Diluted profit (loss) per share</b>	$\frac{\text{Shareholders' share of the profit (loss) for the period}}{\text{Average number of shares, including dilutive effect of free shares}}$

<sup>1</sup> ROCE (continuing operations) is based on average capital employed for the continuing operations. Capital employed related to the oil and gas activities divested on 29 September 2017 are not included.

# 1.6 Business performance

## Description of business performance

In 2011, we introduced an alternative performance measure, business performance, as a supplement to the financial statements prepared in accordance with IFRS. The business performance results reflect our internal risk management and show the results for the period under review. Under the business performance principle, the value of the hedging transaction is deferred and recognised for the period in which the hedged risk materialises. This is illustrated in the example overleaf.

Our reason for introducing the business performance principle in 2011 was:

- that we could not achieve the same timing of recognition of our commercial exposure and hedging contracts in accordance with the IFRS rules, for example with respect to option premiums and certain commercial fixed-price contracts, and
- that there was a high risk that the hedging contracts were not consistent with the IFRS hedge accounting rules, requiring us to recognise the hedging contracts at market value with value adjustments via the income statement, whereas our commercial exposure is accrued.

Our risk management is described in note 7.1 'Market risks'.

## Business performance – background

We hedge market risks for up to five years with the aim of stabilising our cash flows and

create certainty about our finances. With a view to ensuring transparency, we want the financial impact of the hedging transactions to be reflected in the financial reporting simultaneously with the hedged exposure (for example sales of power). We can normally achieve this by applying the IFRS rules on hedge accounting. For energy companies, it is, however, sometimes difficult to ensure simultaneity. This is due to the fact that hedging instruments are not always available which precisely match the exposure which must be hedged, or that there is no sufficiently liquid market available. Consequently, some hedging takes place in alternative markets or subject to alternative time horizons. For example, power generation in Denmark is to some extent hedged by financial contracts for nearby trading areas, such as the European Energy Exchange (EEX) in Germany and Nord Pool in Scandinavia. These areas normally develop relatively uniformly over time compared to Denmark.

This hedging method means that only some of the financial hedging transactions comply with the IFRS rules on hedge accounting even though the financial risk has been reduced. In case of non-compliance, under IFRS the hedging transactions must be recognised in the income statement on a regular basis. This may give rise to considerable fluctuations in the income statement, as the effects of the hedging and for example the sale of power are not recognised in the same period.

Consequently, we have decided not to apply the IFRS rules on hedge accounting to transactions hedging energy prices and associated currency risks. Value adjustments of these hedges are therefore recognised in the income statement in accordance with IFRS.

## Recognition

In the income statement, the business performance results are shown alongside the IFRS results. In the income statement, the difference

between the two performance measures is shown in a separate column, 'Adjustments'.

Two types of contracts are included in the business performance principle:

- hedging contracts concerning energy and related currencies
- commercial contracts concerning energy recognised at market value (typically fixed-price physical gas and power contracts).

When we use hedging instruments which do not fully correspond to the underlying risk, any difference between the hedging instruments and the underlying risk is recognised immediately in the income statement. See note 7.3 'Energy trading portfolio'. The accounting treatment under business performance is otherwise identical to the accounting treatment under IFRS. Our balance sheet, cash flows and equity are consequently not affected. The accounting treatment of our hedging contracts according to IFRS and business performance is summarised in the table below.

Type of hedging	IFRS	Business performance
Hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts	Market value adjustment in the income statement	Market value adjustments are deferred and recognised in the period in which the exposure materialises
Hedging of: – proceeds from the divestment of newly constructed offshore wind farms – interest payments	Market value adjustments are deferred and recognised in the period in which the exposure materialises	Recognition is the same as under IFRS
Hedging of currency risks associated with investments in foreign entities	Market value adjustments are recognised in other comprehensive income	Recognition is the same as under IFRS
Trading portfolio	Market value adjustments in the income statement	Recognition is the same as under IFRS

Only the recognition of the hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts differs under IFRS and the business performance principle.

### Expected impact on business performance EBITDA from energy and currency hedging

At 31 December 2018, a loss of DKK 1,849 million has been deferred (2017: loss of DKK 812 million), which will affect business performance EBITDA in subsequent years. Of the total deferred loss, a loss of DKK 1,470 million is expected on business performance EBITDA in 2019 (2017: DKK 159 million loss in 2018).

Power prices rose in 2018, which means that the market value of the hedges has fallen as we are selling power. The decrease in the deferred gain on currency hedging is primarily attributable to the transfer of gains to the income statement in 2018 as a consequence of the hedged transactions having occurred.

### Expected impact on business performance EBITDA from energy and currency hedging, DKKm

	Deferred for subsequent recognition at 31 December 2018				Deferred for subsequent recognition at 31 December 2017			
	2019	2020	After 2020	Total	2018	2019	After 2019	Total

<b>Total hedges</b>	<b>(1,679)</b>	<b>(1,134)</b>	<b>(219)</b>	<b>(3,032)</b>	<b>(159)</b>	<b>(369)</b>	<b>(284)</b>	<b>(812)</b>
Deferred revenue from US power purchase agreements	209	183	791	1,183	-	-	-	-
<b>Total</b>	<b>(1,470)</b>	<b>(951)</b>	<b>572</b>	<b>(1,849)</b>	<b>(159)</b>	<b>(369)</b>	<b>(284)</b>	<b>(812)</b>

The table shows when the deferred value adjustments are expected to be recognised in the business performance EBITDA. The table covers both hedging classified as business performance and IFRS. Gains are shown as '+' and losses are shown as '-'. Deferred revenue from US power purchase agreements is explained in more detail in note 7.7 'Fair value measurement'.

### Explanation of the business performance principle

In year 1, we enter into a contract hedging the price risk associated with Offshore's generation of 1,000GWh in year 5 at GBP 52,000 per GWh. This ensures a total revenue of GBP 52 million. In year 5, the cost of power has decreased to GBP 45,000 per GWh, which means that the hedging contract has a positive market value of GBP 7 million (a hedged price of GBP 52,000 per GWh minus the spot price of GBP 45,000 per GWh). This means that we ensure that the total income, including the hedging transaction, is still GBP 52 million. The income of GBP 52 million consists of a gain from the hedging contract of GBP 7 million and GBP 45 million from the sale of 1,000GWh at a spot price of

GBP 45,000 per GWh. The financial impact of the hedging transaction in years 1-5 is shown in the table. Under the business performance principle, the hedging transaction is recognised in the income statement in year 5, i.e. at the same time as the hedged contract with a positive market value of GBP 7 million. The value development is, however, recognised continuously in the income statement according to IFRS. Upon the expiry of the contract in year 5, the total effect on results over the period is the same under the IFRS and the business performance principle. Only the timing differs. The business performance principle ensures simultaneity of recognition of the underlying exposure and the hedging contract.

	Recognition in the income statement, GBP million		Recognised in the income statement as follows			Total financial impact

#### Specification of the difference between EBITDA according to business performance and according to IFRS, DKKm

	2018	2017
EBITDA – business performance	30,029	22,519
Business performance adjustments in respect of revenue for the year	(1,426)	205
Business performance adjustments in respect of cost of sales for the year	(112)	(150)
<b>EBITDA – IFRS</b>	<b>28,491</b>	<b>22,574</b>
<b>Total business performance adjustments for the year comprise:</b>		
Market value adjustments for the year of financial and physical hedging contracts relating to a future period	(1,734)	(138)
Reversal of deferred gains (losses) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period	196	193
<b>Total adjustments</b>	<b>(1,538)</b>	<b>55</b>

#### Market value adjustments for the year of financial and physical hedging contracts relating to a future period, DKKm

	2018	2017
Currency	313	150
Power (commercial and hedge)	(1,617)	(836)
Gas (commercial and hedge)	(48)	106
Oil	(382)	404
Coal	-	38
<b>Total value adjustments</b>	<b>(1,734)</b>	<b>(138)</b>

#### Reversal of deferred gains (losses) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period, DKKm

	2018	2017
Currency	(165)	(12)
Power (commercial and hedge)	307	297
Gas (commercial and hedge)	262	(106)
Oil	(174)	46
Coal	(34)	(32)
<b>Total deferred gains (losses) from previous periods</b>	<b>196</b>	<b>193</b>

#### Difference between IFRS and business performance for the year

The value adjustment in respect of future periods totalled DKK -1,734 million (2017: DKK -138 million) and reversal of deferred gains (losses) recognised according to business performance in 2018 totalled DKK 196 million (2017: DKK 193 million).

#### Market value adjustments for the year of hedging contracts

2018 was mainly affected by losses on the hedging of power as a result of rising prices, due to a selling position and hedging of oil as a result of lower prices due to a purchase position.

The table shows value adjustments by product. The value adjustments are recognised in IFRS EBITDA, but not in business performance EBITDA, as the value relates to future periods.

#### Deferred gains (losses) from previous periods

In 2018, a loss of DKK 196 million was recognised in business performance EBITDA, but as the loss was recognised in IFRS EBITDA in a previous period, the gain was reversed in the 'Adjustments' column in the income statement. The loss was primarily attributable to the hedging of power and gas, partly reduced by gains on hedging of oil and currency.

The table shows reversal of value adjustments by product. These gains (losses) are recognised in business performance EBITDA. The reversal of value adjustment was recognised in IFRS EBITDA in a previous period.

## 2. Return on capital employed

Return on capital employed	92
Segment information	93
Revenue	96
Cost of sales	99
Government grants	100
Other operating income and expenses	101
Employee costs	102
Share-based payment	103

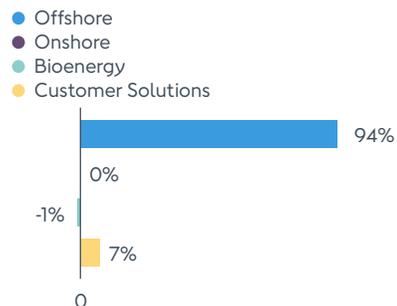

# 2. Return on capital employed

Return on capital employed is a key ratio showing how profitable our business activities are. Our target is an average ROCE of around 10% for the Group for the 2019-2025 period.

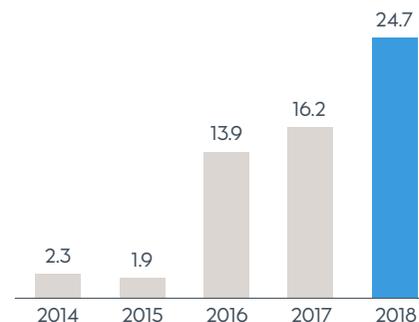

## Return on capital employed

Return on capital employed was 32.1% in 2018 compared to 25.2% in 2017. The increase was mainly due to higher EBIT, which in both years was significantly positively affected by farm-down gains. Reference is made to note 2.1 'Segment information'.

EBIT by segment, percentage of DKK 24,856 million in 2018

EBIT, business performance DKKm

# 30.0bn

EBITDA totalled DKK 30,029 million in 2018 against DKK 22,519 million in 2017.

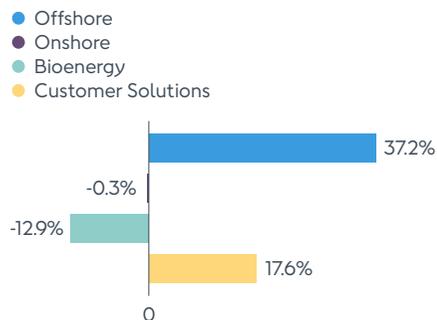

# 24.7bn

Operating profit totalled DKK 24,654 million in 2018 against DKK 16,235 million in 2017.

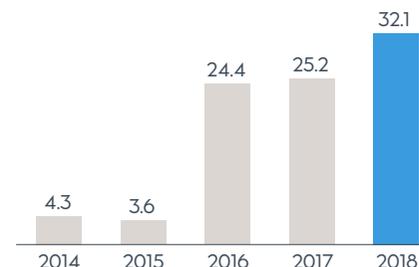

# 32.1%

Return on capital employed (ROCE) totalled 32.1% in 2018 against 25.2% in 2017.

Return on capital employed (ROCE) % 2018

Return on capital employed (ROCE) %

EBIT and return on capital employed are stated according to the business performance principle. EBIT of DKK 24,856 million is calculated as EBIT for reportable segments.

Return on capital employed (ROCE) was 32.1% against 25.2% in 2017. The increase was attributable to a higher EBIT.

# 2.1 Segment information

## Offshore, DKKm

Revenue	30,566
EBITDA	27,809
Gross investments	15,081
Number of employees	2,431

### Primary activity

Development, construction, ownership and operation of offshore wind farms in the UK, Germany, Denmark, the Netherlands, the US and Taiwan.

## Onshore, DKKm

Revenue	80
EBITDA	44
Gross investments	6,779
Number of employees	40

### Primary activity

Development, ownership and operation of onshore wind and solar farms in the US and a minor storage solution in the UK.

## Bioenergy, DKKm

Revenue	6,353
EBITDA	367
Gross investments	1,356
Number of employees	731

### Primary activity

Generation of heat and power from CHP plants in Denmark, operation of a Renaissance plant in the UK, a few biogas upgrade facilities, and a biogas plant.

## Customer Solutions, DKKm

Revenue	47,999
EBITDA	1,970
Gross investments	1,166
Number of employees	1,254

### Primary activity

Distribution of power and sales of power and gas in the wholesale and retail markets in Denmark, Sweden, Germany and the UK as well as optimisation and hedging of the Group's total energy portfolio.

## Geographical distribution of revenue as well as intangible assets and property, plant and equipment

Geographical revenue is broken down, as far as possible, by the customer's geographical location based on supply point.

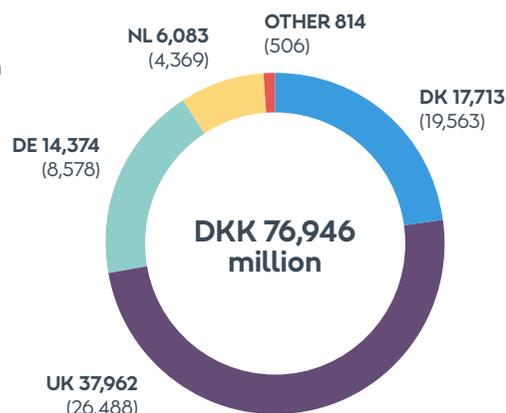

A significant part of our sales takes place via power exchanges and gas hubs in Europe, the physical locations of which do not reflect the geographical locations of our customers. When breaking down these sales by geographical location, we use the physical locations of the exchange or hub since we do not know the physical location of our customers in all cases.

No single customer accounts for more than 10% of our consolidated revenue.

Non-current assets are broken down geographically based on the physical locations of the assets.

## Accounting policies

Our operating segments are consistent with our internal reporting to our top decision-making body, Group Executive Management.

We apply the business performance principle, as described in note 1.6 'Business performance', in connection with our internal management.

The operating segments are managed primarily on the basis of EBITDA and investments. Financial income and expenses as well as tax are allocated to the operating segments, while we manage them at Group level.

Segment income and segment expenses are those items that, in our internal management reporting, are directly attributable to individual segments or can be indirectly allocated to individual segments on a reliable basis.

Revenue, intangible assets as well as property, plant and equipment are presented based on the locations of our customers and assets.

Up until the divestment on 29 September 2017, the Oil & Gas business was included in assets classified as held for sale and in discontinued operations. Reference is made to note 3.7 'Discontinued operations'.

Our new reportable segment 'Onshore' is not included in 2017 figures as Lincoln Clean Energy was acquired in October 2018.

We have implemented IFRS 15 after the modified retrospective method. See note 1.4 'Implementation of new or changed accounting standards and interpretations' and note 2.2 'Revenue'.

<sup>1</sup> Including the elimination of other activities, the total elimination of intra-group revenue amounts to DKK -8,887 million.

## 2.2 Revenue

					Other activities/ eliminations	Total
<b>Revenue 2018, DKKm</b>	Offshore	Onshore	Bioenergy	Customer Solutions	Other activities/ eliminations	Total
Sale of gas	-	-	48	23,300	(904)	22,444
Generation and sale of power	4,969	64	3,113	20,743	(7,010)	21,879

<b>Total revenue, business performance</b>	<b>30,566</b>	<b>80</b>	<b>6,353</b>	<b>47,999</b>	<b>(8,052)</b>	<b>76,946</b>
<b>Timing of revenue recognition from customers, IFRS</b>						
At a point in time	6,282	64	3,216	30,201	(452)	39,311
Over time	16,776	-	3,057	17,203	(7,428)	29,608
<b>Total revenue from customers, IFRS</b>	<b>23,058</b>	<b>64</b>	<b>6,273</b>	<b>47,404</b>	<b>(7,880)</b>	<b>68,919</b>

<sup>1</sup> The elimination column includes elimination of the internal sale of ROCs between Offshore (included as government grants, see note 2.4 'Government grants') and Customer Solutions. The ROCs are recognised as inventory in Customer Solutions before being sold to external customers, which creates a mismatch in the timing of the internal purchase and the external sale of the ROCs in Customer Solutions. The amount to be eliminated may exceed the amount of ROCs recognised in Offshore for the period.

The timing of transfer of goods or services to customers is categorised as follows:  
 'At a point in time' mainly comprises:  
 – sale of gas or power in the market, e.g. North Pool, TTF, NBP  
 – transmission assets for offshore wind farms.

'Over time' mainly comprises:  
 – construction agreements of offshore wind farms and transmission assets  
 – long-term contracts with customers to deliver gas, power or heat.

				Other activities/ eliminations	Total
<b>Revenue 2017, DKKm</b>	Offshore	Bioenergy	Customer Solutions	Other activities/ eliminations	Total
Sale of gas	-	-	19,540	(1,556)	17,984
Generation and sale of power	10,052	3,223	17,492	(5,722)	25,045
Revenue from construction of offshore wind farms	8,773	-	-	-	8,773
Generation and sale of heat and steam	-	2,607	-	-	2,607
Distribution and transmission	-	-	2,520	(32)	2,488
Other revenue	1,520	129	534	629	2,812
<b>Total revenue, IFRS</b>	<b>20,345</b>	<b>5,959</b>	<b>40,086</b>	<b>(6,681)</b>	<b>59,709</b>
Adjustments	7	(95)	109	(226)	(205)
<b>Total revenue, business performance</b>	<b>20,352</b>	<b>5,864</b>	<b>40,195</b>	<b>(6,907)</b>	<b>59,504</b>

We have implemented IFRS 15 after the modified retrospective method. Therefore, we have not restated comparative figures.

In 2017, we presented revenue from green certificates, mainly ROCs, as generation and sale of power. In 2018, revenue from green certificates is presented as government grants.

Revenue for the year (business performance) increased by 29% to DKK 76,946 million in 2018. The increase was mainly due to a high activity on construction of offshore wind farms for partners, higher revenue from wind farms in operation as well as higher gas and power prices.

implementation of IFRS 15, revenue from construction of transmission assets are recognised at the time of divestment.

Revenue for the year from the construction of offshore wind farms mainly related to the construction of the offshore wind farms Walney Extension, Borkum Riffgrund 2 and Hornsea 1 as well as the divestment of the Burbo Bank transmission asset and a partial divestment of the Hornsea 1 transmission asset as part of the 50% farm-down of Hornsea 1. Following the

In 2018, revenue totalled DKK 75,520 million according to IFRS, of which DKK 70,736 million was revenue from the sale of goods, and DKK 4,784 million was revenue from the sale of services.

In 2017, revenue totalled DKK 59,709 million according to IFRS, of which DKK 52,347 million was revenue from the sale of goods, and DKK 7,362 million was revenue from the sale of services.

### Unsatisfied long-term contracts

Our remaining performance obligations expected to be recognised in more than one year relate to the construction of wind farms and offshore transmission assets. The constructions are expected to be finalised within two years.

### Key accounting estimates

#### Assumptions for the determination of the expected selling price and expected costs

We make estimates when determining the expected selling price of individual construction agreements. These estimates are influenced by our assessment of:

- the completion degree of the individual offshore wind farms and offshore transmission assets
- total expected costs for the individual contract
- the value of incentive agreements under which we may be paid a bonus for early delivery or have to pay compensation for late delivery
- guarantee commitments undertaken
- share of total costs associated with transmission assets which are expected to be covered upon handover, etc.

Therefore, our determination of profit and the recognition of revenue and related contract assets are subject to significant uncertainty. We believe that our estimates are the most likely outcomes of future events.

### Key accounting judgements

#### Assumptions for the recognition of revenue from the construction of offshore wind farms over time

We construct offshore wind farms with partners, where we construct our partner's share of the wind farm. We assess each construction agreement at the time of conclusion of the agreement.

#### Unsatisfied long-term contracts with customers, DKKm

	31 December 2018	Expected to be recognised in		
		2019	2020	2020+
Aggregate amount of the transaction price allocated to long-term contracts	11,473	91%	9%	0%

In our view, our partner assumes control of the offshore wind farm in step with the construction. This is supported by:

- the regular approval of part deliveries
- approval or rejection of significant variations to the construction
- the partner's take-over of work from subcontractors, both concerning risk and legal title to the wind farm on an on-going basis
- milestone payments from the partner.

Revenue is therefore recognised over time during the construction of the offshore wind farms.

#### Accounting policies

Revenue is measured based on the consideration specified in a contract with a customer (transaction price) and excludes amounts collected on behalf of third parties, i.e. VAT. We recognise revenue when we transfer control over a product or service to a customer.

If a part of the transaction price is variable, i.e. bonus payments, incentive payments for unmissed deadlines, etc., the variable consideration is recognised in revenue when it is highly probable that the revenue will not be reversed in subsequent periods.

We adjust the transaction price for the time value of money if the payments exceed twelve months.

Sales agreements are divided into individually identifiable performance obligations. If a sales agreement includes several performance obligations, the sales agreement's transaction price is allocated to each performance obligation's stand-alone selling price.

In the comparative period, revenue was measured at the fair value of the consideration received or receivable. Revenue from the sale of goods was recognised when the significant risks and rewards of ownership had been transferred to the customer; recovery of the consideration was probable, the associated costs and possible return of goods could be estimated reliably, there was no continuing management involvement with the goods, and the amount of revenue could be measured reliably. Revenue from rendering of services was recognised in proportion to the stage of completion of the work performed at the reporting date.

#### Sale of gas

##### Timing of satisfaction of delivery obligations and significant estimates

Revenue is recognised when control of the gas is transferred to the buyer. Transfer of control occurs either when the gas is injected into the distribution system or physically delivered to the customer.

##### Significant terms of payment and associated estimates and judgements

Sales contracts for a fixed amount of gas at a variable price, or where we are exclusive suppliers to the customer at a variable price, are considered one

The transaction price allocated to the remaining performance obligation (unsatisfied or partially satisfied) as at 31 December 2018.

In accordance with IFRS 15, the overview does not include revenue from contracts with customers to deliver power, gas and heat or our operation and maintenance agreements. For these types of goods and services, we recognise the revenue that correspond directly to the value transferred to the customer.

performance obligation with multiple deliveries to be satisfied over time. For such contracts, we recognise revenue in the amount up to which we have a right to invoice.

Some long-term gas sales contracts include clauses which give the right to renegotiate the fixed sales prices. Expectations for the outcomes of renegotiations are not included in revenue before we know the outcome of the individual renegotiations.

In most cases, the consideration for the gas is due when the gas is injected into the distribution system or delivered to the customer. The delivery of gas is invoiced on a monthly basis, and the payment is due within 10-30 days.

#### Generation and sale of power

##### Types of goods and services

Revenue from generation and sale of power includes the sale of power produced at own wind farms and power plants, the sale of power sourced from other producers, and the sale of ancillary services.

##### Timing of satisfaction of delivery obligations, and significant estimates

Revenue is recognised when control of the goods is transferred to the buyer. Transfer of control occurs when the actual power is delivered to the customer, which for power generated by us occurs when it is produced.

### Significant terms of payment and associated estimates and assessments

Revenue from ancillary services consist of fees for having power plants on standby in periods with a demand for power generation. Ancillary services are considered one performance obligation which is fulfilled over time when the power plants are on standby.

Sales contracts for a fixed amount of power at a variable price, or where we are exclusive suppliers to the customer at a variable price, are considered one performance obligation with multiple deliveries to be satisfied over time. For such contracts and for long-term agreements on selling power at a fixed price, we recognise revenue in the amount up to which we have a right to invoice.

In most cases, the consideration for the power is due when the actual power is delivered to the customer. The delivery of power is invoiced on a monthly basis, and the payment is due within 10-30 days.

Ancillary services are invoiced on a monthly basis, and consideration is payable when invoiced.

### Revenue from construction of offshore wind farms

#### Types of goods and services

Revenue from construction of offshore wind farms includes development and construction.

The construction agreements cover the construction from design to delivery of an operational asset. The agreement consists of two performance obligations:

- Offshore wind farms.
- Offshore transmission assets, if applicable.

The construction agreements cover our partners' shares of the construction of the wind farm and offshore transmission asset, if applicable.

If the contracts include multiple performance obligations, the transaction price will be allocated to each performance obligation based on the stand-alone selling prices. Where these are not directly observable, they are estimated based on the expected cost-plus margin.

#### Timing of satisfaction of delivery obligations, and significant estimates

We recognise revenue from the construction agreements over time, using an input method to measure progress towards complete satisfaction of

the performance obligation because the customer gains control of the offshore wind farm during the construction process. The input method reflects our ongoing transfer of control to the customer.

When the outcome of the performance obligation in the contract can be measured reasonably, the construction agreement is measured at the transaction price of the work performed less progress billings, based on the percentage of completion of the contract at balance sheet date and the total expected revenues from the individual contracts.

We estimate the degree of completion on the basis of an assessment of the work performed, normally calculated as the ratio between the costs incurred and the total costs expected related to the contract in question.

The transaction price is based on the total expected income from individual contracts. Estimates of revenues are based on the transaction price and the completion degree of the offshore wind farm or offshore transmission asset at the balance sheet date.

Estimates of revenues, costs and percentage of completion are revised if circumstances change. Any resulting increases or decreases in estimated revenue or costs are reflected in profit or loss in the period in which the circumstances that give rise to the revision come to our knowledge.

An expected loss is recognised when it is deemed probable that the total construction costs will exceed the total revenue from the individual contracts.

#### Significant terms of payment and associated estimates and assessments

The consideration for the construction of an offshore wind farm consists of a fixed fee and a relatively minor variable fee, depending on when the wind farm can be put into operation.

The consideration for an offshore transmission asset is a fixed fee.

After signing of the construction agreement, we carry out an assessment determining when the wind farm is expected to be completed and calculate the size of the variable payment on this basis. We only recognise the variable fee when it is highly probable that a subsequent reversal will not take place.

At each balance sheet date, an assessment is made of the size of the variable payment which can be included in the transaction price. Revenue is adjusted accordingly.

The customer pays the fixed consideration based on a payment schedule. The payment schedule is determined and based on the expected progress of the construction and transfer of control to the customer.

If the work which we have performed exceeds invoicing on account, a contract asset is recognised. If the payments exceed the work we have performed, a contract liability is recognised.

#### Generation and sale of heat

##### Timing of satisfaction of delivery obligations and significant estimates

Heat is sold under long-term heat contracts.

Revenue is recognised when control is transferred to the customer. Transfer of control occurs when the heat is physically delivered to the customer.

In connection with a biomass conversion of a CHP plant, the heat customer makes a prepayment to finance the majority of our CAPEX associated with the conversion. The prepayment is recognised as a contract liability. The contract liability is recognised as revenue in step with the transfer of heat to the customer.

#### Significant terms of payment and associated estimates and assessments

Payment for the sale of heat consists of fixed costs associated with operation and maintenance of a CHP plant plus fuel costs for the generation of heat and a financial return.

The delivery of heat is invoiced on a monthly basis, and the payment is due within 10-30 days.

#### Distribution and transmission

##### Timing of satisfaction of delivery obligations, and significant estimates

Revenue from the distribution and transmission of gas and power is recognised when the gas or power is delivered to the buyer, or when the capacity is made available.

### Significant terms of payment and associated estimates and assessments

Revenue is calculated as the amount we are entitled to when the service is delivered to the customer and invoiced on a monthly basis, and consideration is payable when invoiced.

#### Other revenue

##### Types of goods and services

Other revenue primarily includes operations and maintenance agreements and other services.

##### Timing of satisfaction of delivery obligations and significant estimates

Revenue from providing services is recognised in the accounting period in which the services are rendered.

For fixed-priced contracts, revenue is recognised based on the actual service rendered at the end of the reporting period as a proportion of the total services to be rendered because the customer receives and uses the benefits simultaneously. This is determined based on the actual labour hours spent relative to the total labour hours expected.

#### Significant terms of payment and associated estimates and assessments

The consideration for operations and maintenance agreements consists of a fixed fee and a minor variable fee, e.g. bonuses or compensation for wind farm availability.

Availability bonuses will be recognised on an ongoing basis when it is highly probable that a subsequent reversal will not take place.

Fixed-price contracts are invoiced on a monthly basis, and consideration is payable when invoiced. Variable fee services are generally due after the services are rendered.

#### Warranty obligations

We typically have a five-year responsibility to remedy defects that exists at the relevant taking-over date when we construct offshore wind farms. These types of warranties are accounted for under IAS 37 'Provisions, Contingent Liabilities and Contingent Assets'. Reference is made to the accounting policy on warranty provisions in note 3.2 'Provisions and contingent assets and liabilities'.

## 2.3 Cost of sales

Cost of sales, DKKm					Other activities/ eliminations	2018 total				Other activities/ eliminations	2017 total
	Offshore	Onshore	Bioenergy	Customer Solutions			Offshore	Bioenergy	Customer Solutions		
Gas	-	-	529	20,428	(558)	20,399	-	976	16,391	(4,477)	12,890
Power	27	-	76	19,580	(7,159)	12,524	188	90	16,520	(5,510)	11,288
Biomass	-	-	2,468	-	-	2,468	-	2,091	-	-	2,091
Coal	-	-	960	2	-	962	-	829	-	-	829
Distribution and transmission costs	754	-	191	2,711	(88)	3,568	625	138	2,496	(102)	3,157
Costs for construction of offshore wind farms	12,590	-	-	38	-	12,628	5,720	-	14	17	5,751
Other cost of sales	(1)	-	334	1,013	123	1,469	32	280	975	3,401	4,688
<b>Total, IFRS</b>	<b>13,370</b>	<b>-</b>	<b>4,558</b>	<b>43,772</b>	<b>(7,682)</b>	<b>54,018</b>	<b>6,565</b>	<b>4,404</b>	<b>36,396</b>	<b>(6,671)</b>	<b>40,694</b>
Adjustments	-	-	(31)	87	(168)	(112)	-	(4)	(164)	18	(150)
<b>Total, business performance</b>	<b>13,370</b>	<b>-</b>	<b>4,527</b>	<b>43,859</b>	<b>(7,850)</b>	<b>53,906</b>	<b>6,565</b>	<b>4,400</b>	<b>36,232</b>	<b>(6,653)</b>	<b>40,544</b>

Cost of sales according to business performance increased from DKK 40,544 million in 2017 to DKK 53,906 million in 2018, up 33%.

The increase was mainly due to higher gas prices, higher sale of ROCs due to higher power generation from offshore wind farms and higher costs in connection with construction of offshore wind farms, including the

divestment of the Burbo Bank transmission asset and a partial divestment of the Hornsea 1 transmission asset as part of the 50% farm-down of the Hornsea 1.

Following the implementation of IFRS 15, cost of sales from construction of transmission assets are recognised at the time of divestment.

 Cost of sales relate partly to trading in gas and power, partly to fuel used at CHP plants in connection with heat and power generation and partly to the construction of offshore wind farms and offshore transmission assets.

## 2.4 Government grants

In Denmark, the Danish transmission system operator, Energinet, administers subsidies for environmentally sustainable power generation, including offshore wind farms. We regard the grant for environmentally sustainable power generation as a government grant as it is paid by the Danish State.

In 2013, the UK introduced a new contracts for difference (CfD) subsidy scheme as a replacement for the Renewable Obligations scheme for renewable energy projects. The Burbo Bank Extension and Walney Extension offshore wind farms were our first offshore wind farms under the CfD regime. In 2017, we received this subsidy for the first time. We treat the payments from the CfD scheme as a government grant.

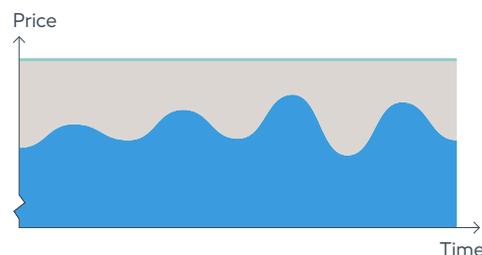

On 1 January 2018, we changed our accounting policy with respect to subsidies under the Renewable Obligation scheme in the UK, known as green certificates or ROCs, and feed-in tariffs in Germany under the German Renewable Energy Sources Act (EEG2014). Consequently, we treat the payments from ROCs and feed-in tariffs as government grants. Reference is made to note 1.4 'Implementation of new or changed accounting standards and interpretations'.

Government grants, DKKm	2018	2017
Government grants recognised in profit (loss) for the year under revenue	8,461	4,527
Government grants recognised in profit (loss) for the year under other operating income	4	4
Government grants recognised in the balance sheet	(4)	(4)
<b>Government grants recognised for the year</b>	<b>8,461</b>	<b>4,527</b>

← Following the changed accounting policy with respect to subsidies, ROCs and feed-in tariffs, we have restated comparatives for the 2017 financial year.

### Illustrative example of CfD

- Market price of power
- Government grants (difference between the market price of power and the power price fixed in the CfD contracts)
- Power price fixed in the CfD contract

When participating in a CfD, we receive a feed-in premium in connection with the generation of power from an offshore wind turbine. The feed-in premium is the difference between the market price of power and the price fixed in the CfD (strike price).

### Accounting policies

Government grants comprise grants for environmentally sustainable power generation, grants for the funding of development projects as well as investment grants, etc.

Government grants are recognised when there is reasonable assurance that the grants will be received.

Grants for the purchase of assets which we recognise in the balance sheet are recognised under deferred revenue and are transferred to other operating income in step with the depreciation of the assets to which the grants relate.

As grants for power generation are intended as a compensation for the price of power, we systematically recognise the grants under revenue in step with the power generation and thus the related revenue.

## 2.5 Other operating income and expenses

Other operating income, DKKm	2018	2017
Gain on divestment of assets	15,086	11,142
Other compensation	594	369
US tax credits and tax equity income	85	-
Miscellaneous operating income	510	154
<b>Total other operating income</b>	<b>16,275</b>	<b>11,665</b>

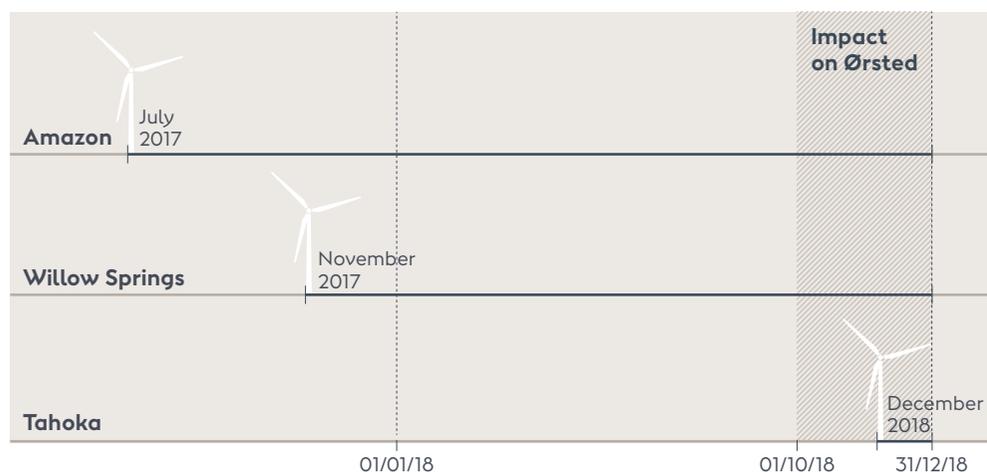

Other operating expenses, DKKm	2018	2017
Loss on divestment of assets	91	307
Miscellaneous operating expenses	198	242
<b>Total other operating expenses</b>	<b>289</b>	<b>549</b>

2018 is the first year of recognising US tax credits and tax equity income originating from our acquisitions and entry in the US market.

US tax credit and tax equity income are earned from the time of commissioning and only in Ørsted's ownership period.

### Other operating income

In 2018, other operating income amounted to DKK 16,275 million, which was 40% higher than in 2017. In 2018, gain on divestment of assets related to the divestment of 50% of the Hornsea 1 offshore wind farm, whereas the 50% farm down of Walney Extension and Borkum Riffgrund 2 and a contingent consideration relating to the divestment of Race Bank in 2016 contributed positively in 2017.

US tax credits and tax equity income originate from our acquisition of Lincoln Clean Energy in October 2018 and correspond to the tax credits and other tax attributes provided to tax equity partners for three months of generated power, as well as our own share.

### Accounting policies

In connection with the divestment of ownership interests in offshore wind farms before or during the construction phase, the gain is recognised on the divestment date under other operating income/ expenses in the income statement.

The gain for the future construction of the partner's share of the offshore wind farm is recognised over time in the income statement in step with the construction. See notes 2.2 'Revenue' and 4.2 'Contract assets and liabilities'.

The accounting policies for US tax credits and tax equity income is described in note 4.5 'Tax equity liabilities'.

### Divestment of ownership interests in our offshore wind farms

When we divest an ownership interest in an offshore wind farm to a partner, we typically also enter into agreements on the future construction and operation of the offshore wind farm.

Contracts in connection with divestment are typically:

- Agreements on the sale of shares (divestment of assets) (SPA).
- Agreements on the future construction of the offshore wind farm (construction agreements).
- Agreements on the future operation of the offshore wind farm (O&M agreements).

### Key accounting judgements

#### Assessment of classification of divestment

When we divest ownership interests in an offshore wind farm under development, we carry out an individual assessment of whether the divestment qualifies as a divestment of an enterprise or a divestment of assets. We have typically assessed that the offshore wind farms do not constitute an enterprise, as no employees are transferred, and processes are transferred to a limited extent only.

### Key accounting estimates

#### Assumptions for the accounting treatment of divestment gains related to share purchase agreements and construction agreements

Our accounting recognition of the gains in the divestment contracts is based on the individual accounting transaction prices of the relevant contracts.

Our accounting treatment of the gains in the contracts is therefore not necessarily identical with the prices negotiated in the individual contracts.

## 2.6 Employee costs

Employee costs, DKKm	2018	2017
Wages, salaries and remuneration	3,768	3,650
Share-based payment	24	15
Pensions	317	310
Other social security costs	124	117
Other employee costs	24	61
<b>Employee costs before transfers to assets</b>	<b>4,257</b>	<b>4,153</b>
Transfers to assets	(1,131)	(956)
<b>Total employee costs</b>	<b>3,126</b>	<b>3,197</b>

### Employee costs

Employee costs before transfer to assets were 2.5% higher in 2018 compared with 2017, mainly reflecting salary increases and a higher average number of employees. Employee costs transferred to assets relate to investment projects, which are capitalised in the balance sheet.

### Pension plans and number of employees

Pension plans are defined-contribution plans that do not commit Ørsted beyond the amounts contributed.

In 2018, our average number of employees was 5,796 (2017: 5,738).

### Remuneration of Group Executive Management

The remuneration of the Executive Board is based on a fixed salary, including personal benefits, such as a company car, free telephone, etc., a variable salary, a retention bonus in connection with the IPO, and share-based payment. The other members of Group Executive Management<sup>1</sup> also receive a pension. The Group Executive Management was expanded by one member in 2018.

The members of the Board of Directors are paid fixed remuneration only for their work in Ørsted. In addition, Ørsted reimburses any travel expenses.

For further details about the remuneration of the Executive Board and the Board of Directors, reference is made to the remuneration report on page 63.

Salaries and remuneration for Group Executive Management and the Board of Directors, DKK '000	Executive Board		Other members of Group Executive Management <sup>1</sup>		Board of Directors		Total	
	2018	2017	2018	2017	2018	2017	2018	2017
Fixed salary	16,400	14,761	19,611	16,509	5,133	4,934	41,144	36,204
Cash-based incentive scheme	4,630	4,004	5,329	3,917	-	-	9,959	7,921
Retention bonus etc.	1,875	2,812	2,860	6,535	-	-	4,735	9,347
Share-based payment	3,537	2,080	3,142	949	-	-	6,679	3,029
Pension incl. social security and benefits	555	522	5,060	2,923	-	-	5,615	3,445
Termination payment	-	-	-	5,330 <sup>2</sup>	-	-	-	5,330
<b>Total</b>	<b>26,997</b>	<b>24,179</b>	<b>36,002</b>	<b>36,163</b>	<b>5,133</b>	<b>4,934</b>	<b>68,132</b>	<b>65,276</b>

<sup>1</sup> Other members of Group Executive Management in 2018 are: Thomas Dalsgaard, Morten Hultberg Buchgreitz, Martin Neubert, Ole Kjems Sørensen and Anders Lindberg.

<sup>2</sup> The compensation relates primarily to the non-competition clause in connection with Samuel Leupold's notice of termination.

## 2.7 Share-based payment

### Required number of locked-up shares relative to fixed salary

CEO	75% of fixed salary
CFO and other members of Group Executive Management	50% of fixed salary
Senior vice presidents	25% of fixed salary
Vice presidents and senior directors	15% of fixed salary

The figure shows the value of the Ørsted share in percent of the participants' fixed salary which, at the time of granting, must be locked up for the duration of the executive share programme.

Key assumptions in executive share programme for valuation of PSUs	Time of granting 2018	Time of granting 2017	Time of granting 2016
Share price	392	269	275
Average volatility, peers	24.5%	24.9%	25.6%
Volatility, Ørsted	19.7%	20.3%	24.1%
Risk-free interest rate	(0.3)%	(0.3)%	(0.5)%
Expected term at time of granting	3 years	3 years	2.5 years

### Executive share programme

Group Executive Management and a number of other senior executives participate in our share programme. 94 senior executives participate in the programme. As a condition for the granting of performance share units (PSUs), the participant must own a number of shares in Ørsted corresponding to a portion of the individual participant's annual fixed salary. The portion depends on the employee category and, for our CEO, makes up 75% of the fixed salary; see the figure above for more information. The participants in the programme must invest in Ørsted shares prior to the first granting.

If the participants fulfil the shareholding requirement at the time of granting, they will be granted a number of PSUs each year, representing a value of 15%-20% of the annual fixed salary on the date of granting.

The granted PSUs have a vesting period of approximately three years, after which each PSU entitles the holder, without payment, to receive a number of shares corresponding to 0-200% of the number of PSUs granted. Assuming no share price development since the grant, this would correspond to 0-40% of the fixed salary on the date of grant. The final number of shares for each participant

will be determined on the basis of the total shareholder return delivered by Ørsted, benchmarked against ten comparable European energy companies.

The highest rate will be triggered if Ørsted's results, measured as the total return to shareholders, outperform those of the comparable companies. For each lower ranking, the number of shares granted will fall by 20 percentage points. If, for example, Ørsted ranks third, the participants will be entitled to 160% of the target.

If Ørsted ranks 11 in the comparison, no shares will be granted to the participants. The right to shares is conditional upon continued employment.

### Retention share programme

In 2018 we introduced share-based retention agreements as a replacement for cash-based settlement by using restricted share units (RSUs) when granting new retention agreements.

The target group for the share-based retention agreements will typically be employees responsible for vital, long-term projects. The use of these share-based retention agreements will be limited to 25 concurrent agreements with an individual time frame of up to five years. Members of the Executive Board (CEO and CFO) cannot be granted such retention agreements.

The number of RSUs to be granted will be determined on the basis of the price of Ørsted's shares at the time of the grant and will be limited to an amount corresponding to a maximum of six months' base pay for the employee in question. At vesting, each RSU will entitle the employee to one Ørsted share free of charge. However, the total value of the shares to be received at vesting will be capped at a maximum of twelve months' base pay for the employee in question.

### Accounting policies

The share programme is classified as an equity-based programme as the programme is settled in shares. The market value of the PSUs/RSUs and the estimated number of PSUs granted are measured at the time of granting and recognised:

- in the income statement under employee costs over the vesting period and
- as a set-off in the balance sheet under equity over the vesting period.

The valuation of the PSUs/RSUs and the estimate of the number of PSUs/RSUs expected to be granted are carried out as a probability simulation based on Ørsted's expected total shareholder return relative to ten comparable European energy companies. The expectations are factored into the market value and are not adjusted subsequently. The participants are compensated for any dividend payments by receiving additional PSUs.

## Maximum number of outstanding shares at the time of granting, '000

Time of granting	Executive Board	Other members of Group Executive Management	Senior executives	Other employees	Total	% of share capital	Market value (at time of granting) DKK million	Years until expiry
1 September 2016	21	17	113	-	151	0.04%	24	0.3
1 April 2017	24	18	131	-	173	0.04%	28	1.3
1 April 2018	19	22	83	-	124	0.03%	29	2.3
Share retention programme	-	-	-	18	18	0.00%	4	-
<b>Maximum number of outstanding shares at 31 December 2018</b>	<b>64</b>	<b>57</b>	<b>327</b>	<b>18</b>	<b>466</b>	<b>0.11%</b>	<b>85</b>	

Development in maximum number of outstanding shares, '000	Executive Board	Other members of Group Executive Management	Senior executives	Other employees	2018	2017	2018 in % of share capital
Maximum number of outstanding shares at 1 January	44	34	249	-	327	158	0.08%
Compensation for dividends paid (2016 and 2017 programme)	1	1	5	-	7	3	0.00%
Granted (2018 programme)	19	22	83	-	124	-	0.03%
Granted (2017 programme)	-	-	-	-	-	179	
Cancelled (2017 programme)	-	-	(4)	-	(4)	(6)	0.00%
Cancelled (2016 programme)	-	-	(6)	-	(6)	(7)	0.00%
Share retention program	-	-	-	18	18	-	0.00%
<b>Maximum number of outstanding shares at 31 December</b>	<b>64</b>	<b>57</b>	<b>327</b>	<b>18</b>	<b>466</b>	<b>327</b>	<b>0.11%</b>
(DKKm)							
Market value of share programme at the time of granting	12	11	58	4	85	52	
Maximum market value of share programme on 31 December	28	25	142	8	203	111	

The maximum market value of the share programme at 31 December is based on the assumption that the participants receive the maximum number of shares. This requires that Ørsted delivers the highest shareholder return benchmarked against the ten comparable companies.

# 3. Capital employed

# 3. Capital employed

**Our capital employed primarily relates to production assets, including assets under construction. We monitor investment projects closely, as a large part of our value is created in the development and construction phases.**

## Investments and divestments in 2018

Our gross investments amounted to DKK 24.5 billion in 2018, of which Offshore accounted for 62%. In addition to offshore wind farms, our gross investments were related to the acquisitions of the onshore wind company Lincoln Clean Energy and the offshore wind company Deepwater Wind in the US, bioconversion of Asnæs Power Station and the replacement of smart meters at our residential power customers in Radius.

Divestments amounted to DKK 20.0 billion and was primarily related to the 50% farm-down of Hornsea 1, receipt of deferred proceeds from the farm-down of 50% of Walney Extension in 2017 and proceeds from the divestment of our 50% ownership share of Enecogen.

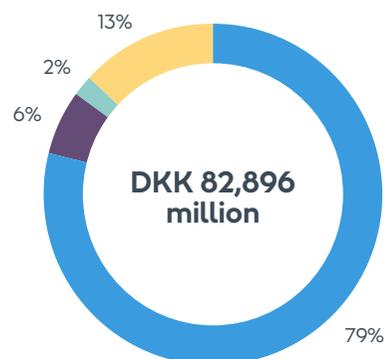

The most significant asset under construction at the end of 2018 was the offshore wind farm Hornsea 1 in the UK.

## Capital employed by segment, % 2018

- Offshore
- Onshore
- Bioenergy
- Customer Solutions

Following the divestment of the oil and gas business on 29 September 2017, capital employed from discontinued operations includes our receivables and liabilities from the transaction.

79% of the capital employed is tied up in Offshore.

Capital employed by segment is based on capital employed for reportable segments of DKK 83,267 million.

# 82.9bn

Capital employed totalled DKK 82,896 million on 31 December 2018 against DKK 70,320 million in 2017.

# 24.5bn

Gross investments amounted to DKK 24,481 million in 2018 against DKK 17,744 million in 2017.

# 20.0bn

Cash flows from divestments totalled DKK 19,950 million in 2018 against DKK 16,982 million in 2017.

<sup>1</sup> An accounting change in the classification of our share of the Lincs offshore wind farm from an equity investment to a joint operation in 2017 resulted in additions of DKK 2,024 million under costs and DKK -385 million under depreciation and amortisation.

Production assets by segment, % 2017

Property, plant and equipment under construction by segment, % 2017

### CGUs in Offshore

The CGUs are made up of individual offshore wind farms, each of which generates cash flows for the segment independently of each other.

Most significant offshore wind farms:  
Anholt – Borkum Riffgrund 1 – Borkum Riffgrund 2 – Borssele 1&2 – Burbo Bank Extension – Gode Wind 1 – Gode Wind 2 – Gunfleet Sands – Hornsea 1 – London Array – Race Bank – Westernmost Rough – Walney – Walney Extension – West of Duddon Sands

### CGUs in Onshore

The CGUs are made up of individual onshore wind farms, each of which generates cash flows for the segment independently of each other.

– Amazon – Lockett – Tahoka – Willow Springs

### CGUs in Bioenergy

The Danish power stations constitute a single CGU as overall production planning is for the entire Danish portfolio of CHP plants. The not yet commissioned waste-to-energy plant Rescience in Northwich in the UK is deemed to constitute an independent CGU.

– Central CHP plants (including goodwill)  
– Rescience Northwich

### CGUs in Customer Solutions

The CGUs are constituted primarily by distribution assets, each of which generates cash flows for the segment independently of each other.

– Power distribution – Oil pipelines – Offshore gas pipelines – City light

## Impairment losses

### Impairment losses relating to goodwill

We have not impaired goodwill or other intangible assets in 2018.

### Impairment losses relating to property, plant and equipment

We have not impaired any property, plant and equipment in 2018.

In connection with reclassification of our power distribution business to assets classified as held for sale, we have reversed an impairment loss from previous years of DKK 603 million as we expect to recover a higher amount than the carrying amounts of the assets after reversal of the impairment loss in previous years.

Certain development projects, which were impaired in previous years, were disposed of in 2018.

In 2017, impairment losses of DKK 545 million were recognised on projects in progress in Offshore.

## Useful lives

Buildings	20-50 years
Offshore wind farms	20-24 years
Onshore wind farms	24-30 years
Production assets, power (thermal) and district heating	20-25 years
Gas transportation system (marine pipelines)	20-40 years
Oil transportation system (marine pipeline)	15 years
Distribution grids, power	20-40 years
Fixtures and fittings, tools and equipment	3-10 years

## Accounting policies

### Intangible assets

Rights are measured at cost less accumulated amortisation and impairment losses. Rights are amortised on a straight-line basis over their estimated future useful lives, which are 5-20 years.

### Property, plant and equipment

Property, plant and equipment is measured at cost less accumulated depreciation and impairment losses. Cost of property, plant and equipment is depreciated on a straight-line basis, using the diminishing-balance method or the reducing-fraction method. The diminishing-balance method and the reducing-fraction method result in decreasing depreciation over the useful life of the offshore wind farm. Cost comprises purchase price and any costs directly attributable to the acquisition until the date the asset is available for use. The cost of self-constructed assets comprises direct and indirect costs of materials, components, sub-suppliers and labour. Borrowing costs relating to both specific and general borrowing directly attributable to assets under construction with a lengthy construction period are recognised in cost during the construction period. Cost is increased by the present value of the estimated obligations for demolition and decommissioning of assets to the extent that the obligations are recognised as a provision.

Subsequent costs, for example in connection with replacement of parts of an item of property, plant and equipment, are recognised in the carrying amount of the asset in question when it is probable that future economic benefits will flow to the Group from the expenses incurred. Other repair and maintenance expenses are recognised in profit (loss) for the year as incurred.

### Assumptions for impairment test

Production assets are tested for impairment if there is any indication of impairment. For production assets with a limited lifetime, such as offshore wind farms and CHP plants, cash flows are calculated based on forecasts for the entire lifetime of the asset. For power distribution, cash flows are based on 25-year forecasts with the addition of a terminal value. The determination of the recoverable amount of production assets is based on a number of assumptions where estimates are made for the determination. These assumptions include future market conditions, market prices of power, biofuel, coal, carbon, weighted average cost of capital (WACC), exchange rates, etc. The market prices applied are based on available forward prices for a period of up to five years and our best estimate of long-term prices for the remainder of the period.

When calculating the recoverable amount of property, plant and equipment under construction, the expected completion costs and the commissioning dates are also assumptions which are based on estimates.

## 3.2 Provisions and contingent assets and liabilities

### Provisions

Decommissioning obligations mainly comprise estimated expenses relating to decommissioning and disposal of our offshore and onshore wind farms, restoration of seabeds and the decommissioning of our CHP plants.

As developers of offshore wind farms, we are obliged to decommission offshore wind farms and restore the surroundings at our own expense. When we construct offshore wind farms in cooperation with partners, they are liable for their share of the decommissioning costs. Therefore, we have included only the decommissioning obligations associated with our ownership interest in the offshore wind farms.

Decommissioning obligations increased by DKK 721 million from 2017 to 2018, primarily due to the construction of new offshore wind farms and the acquisition of Lincoln Clean Energy. The increase in other provisions compared to 2017 primarily relates to Hornsea 1.

Onerous contracts comprise:

- a contract for booked liquified natural gas (LNG) terminal capacity in the Netherlands amounting to DKK 1,235 million (2017: DKK 1,329 million)
- a contract for the lease of gas storage capacity in Germany amounting to DKK 949 million (2017: DKK 1,075 million)
- a contract for the lease of gas storage capacity in Denmark amounting to DKK 229 million (2017: DKK 290 million).

Provisions, DKKm	2018				2017			
	Decommissioning obligations	Onerous contracts	Other provisions	Total	Decommissioning obligations	Onerous contracts	Other provisions	Total

<b>Total provisions</b>	<b>5,472</b>	<b>2,418</b>	<b>5,564</b>	<b>13,454</b>	<b>4,751</b>	<b>2,711</b>	<b>4,058</b>	<b>11,520</b>
<b>Falling due as follows:</b>								
0-1 year	-	271	409	680	23	335	322	680
1-5 years	193	967	4,508	5,668	43	1,025	3,080	4,148
After 5 years	5,279	1,180	647	7,106	4,685	1,351	656	6,692

Other provisions comprise primarily:

- warranty obligations for offshore wind farms
- possible repayments to power consumers in respect of previous years
- obligations in connection with divestments, primarily in relation to the divestment of our Oil & Gas business and wind farms
- obligations in respect of our own carbon emissions
- other contractual obligations.

<b>2017</b>	<b>3,545</b>	<b>-</b>	<b>733</b>	<b>473</b>	<b>4,751</b>

## Contingent liabilities

This note primarily concerns our continuing operations – see also note 3.7 'Discontinued operations'.

### Liability to pay compensation

In case of any environmental accidents or other types of damage caused by our oil and gas transport, the companies Ørsted Salg & Service A/S and Danish Oil Pipe A/S are liable to pay compensation according to legislation. This also applies if there is no proof of negligence (strict liability). We have taken out insurance to cover any such claims.

### Litigation

We are party to actions relating to the Danish competition authorities' claim that the former Elsam A/S and Elsam Kraft A/S ('Elsam'), now part of Ørsted, charged excessive prices in the Danish wholesale power market in some periods.

In 2006 and 2008, respectively, the Danish Competition Appeals Tribunal concluded that Elsam abused its dominant position in the wholesale power market in Western Denmark to some extent in the periods 1 July 2003 to 31 December 2004 and 1 January 2005 to 30 June 2006 by charging excessive prices. We disputed the rulings and appealed both rulings to the Copenhagen Maritime and Commercial Court, where the parties agreed to stay the case concerning the period 1 July 2003 to 31 December 2004 on the outcome of the case concerning the period 1 January 2005 to 30 June 2006. In the latter case, the Copenhagen Maritime and Commercial Court found Elsam guilty of violating the Danish Competition Act in 2016. Following an appeal,

this judgement was, however, overturned by the High Court of Western Denmark in 2018, and after an unsuccessful attempt from the Danish competition authorities to get permission to appeal the judgement, it also became final in 2018.

In connection with the above-mentioned cases, some energy companies, some of their customers and others have raised claims for damages. In 2007, one group chose to commence legal proceedings before the Copenhagen Maritime and Commercial Court with a claim for damages of approx. DKK 4.4 billion with addition of interest, while suspension agreements have been concluded with others, meaning that the limitation period for these alleged claims has been suspended. In response to the claims for damages, we have made a provision of DKK 298 million plus interest. The provision has been calculated on the basis of the Danish Competition Council's determination of consumer losses.

In addition, we are party to a number of court cases and legal disputes. In our assessment, none of these will significantly impact the company's financial position, neither individually nor collectively.

### Change of control

Some of our activities are subject to consents, permits and licences granted by public authorities. We may be faced with a claim for acceptance of any transfer, possibly with additional terms and conditions, if the Danish State holds less than 50% of the share capital or voting rights in Ørsted A/S. Read more in note 6.1 'Interest-bearing debt'.

## Accounting policies

Provisions are recognised when the following criteria are fulfilled:

- We have a legal or constructive obligation as a result of an earlier event.
- The settlement of the obligation is expected to result in an outflow of resources.
- The obligation can be measured reliably.

For onerous contracts, a provision is made when the expected income to be derived from a contract is lower than the unavoidable cost of meeting our obligations under the contract.

Provisions concerning carbon emissions are recognised when our actual emissions exceed our holding of carbon emissions allowances.

Decommissioning obligations are measured at the present value of the future liability in respect of decommissioning as expected at the balance sheet date. The present value of the provision is recognised as part of the cost of property, plant and equipment and depreciated together with the associated asset. The addition of interest on provisions is recognised in the income statement under financial expenses.

### Key accounting estimates

Timing, probabilities, amounts, etc. which have a bearing on our provisions estimates are updated quarterly based on our expectations.

### Assumptions for decommissioning obligations

Estimates of decommissioning obligations are based on our expectations of, for example:

- timing and scope
- future cost level
- adopted laws and regulations on remediation.

The timing of our decommissioning obligations depends on the expected useful lives of the assets.

We expect that our CHP plants in Denmark must be removed within 12 years of decommissioning at the latest.

In measuring provisions, the costs required to meet the obligations are discounted. In determining decommissioning obligations at 31 December 2018, a discount rate of 3.5% is applied. The rate has been estimated on the basis of expectations concerning the future, long-term interest rate level, based on historical interest rate levels.

Timing as well as decommissioning requirements are assessed based on current legislation and standards in this area. Future cost levels are based, among other things, on expectations with regard to:

- general price developments or developments in market prices
- demand
- development of existing technologies.

### Estimates of onerous contracts

We have entered into a number of contracts with fixed terms. Depending on market developments and uncertainty about obligations incurred under the contracts made, these contracts may become onerous. Our estimates concerning these complex contracts and their future effects are subject to significant uncertainties.

### Estimates of litigation outcomes

When exercising a judgement about a potential liability in connection with litigation, we assess:

- the nature of the litigation, claim or statement
- the development of the case
- the judgements and recommendations of legal or other advisers
- experience from similar cases
- our decision on how we are going to react to the litigation, claim or statement.

## 3.3 Acquisition of enterprises

Cash flows used for acquisitions in 2018, DKKm	Lincoln Clean Energy	Deepwater Wind	Total
<b>Fair value at time of acquisition:</b>			
Property, plant and equipment	9,707	5,781	15,488
Other assets	28	158	186
Cash	77	363	440
Interest-bearing debt	(2,337)	(1,702)	(4,039)
Tax equity liabilities	(2,126)	(90)	(2,216)
Provisions	(384)	(43)	(427)
Derivatives	(1,185)	57	(1,128)
Deferred tax, net	(486)	(1,239)	(1,725)
Other liabilities	(198)	(57)	(255)
<b>Net assets acquired</b>	<b>3,096</b>	<b>3,228</b>	<b>6,324</b>
Goodwill	-	-	-
<b>Purchase price</b>	<b>3,096</b>	<b>3,228</b>	<b>6,324</b>
Cash, available acquired	(28)	(37)	(65)
Contingent consideration	-	(657)	(657)
<b>Cash flow used for acquisition of enterprises</b>	<b>3,068</b>	<b>2,534</b>	<b>5,602</b>
Purchase price	3,096	3,228	6,324
Adjustments for cash	(77)	(363)	(440)
Adjustments for interest-bearing tax equity liability	280	90	370
Adjustments for interest-bearing debt	2,337	1,702	4,039
<b>Enterprise value</b>	<b>5,636</b>	<b>4,657</b>	<b>10,293</b>

In 2018, we have completed acquisitions of enterprises as detailed above. We made no acquisitions in 2017.

On 1 October 2018, we acquired all of the membership interests in Lincoln Clean Energy LLC, effectively gaining control of the company. The acquisition represents the first step into our new business area, Onshore.

On 8 November 2018, we acquired all of the membership interests in Deepwater Wind LLC, effectively gaining control of the company,

which will be incorporated in our offshore business unit.

Part of the purchase price of Deepwater Wind is a contingent consideration of DKK 657 million that we will pay upon the relevant regulator's approval of two specific power purchase agreements. The maximum payable consideration is DKK 657 million.

Since the date of the acquisition, Lincoln Clean Energy has contributed with a revenue according to business performance

principles of DKK 80 million and loss before tax of DKK 14 million. This revenue and profit corresponds to three months of operations for Lincoln Clean Energy and is scalable for what an estimated full-year effect would have been if the acquisition had been made on 1 January 2018. Since the date of the acquisition, Deepwater Wind has contributed with a revenue of DKK 38 million and a loss before tax of DKK 120 million. If the acquisition had been made on 1 January 2018, the full year revenue would have been DKK 187 million, and loss before tax would have been DKK 250 million. The loss was due to project development costs.

As part of the acquisition processes, we have incurred costs amounting to DKK 63 million which have been expensed in our income statement.

The fair values of the assets and liabilities acquired are not considered final until 12 months after acquisition.

### Accounting policies

Acquisition of enterprises are recognised using the acquisition method whereby assets and liabilities as well as contingent liabilities of the acquired enterprise are measured at fair value on the date of acquisition.

The fair value of production assets and assets under construction are normally determined using an income approach where they are valued at present value based on the expected cash flows they can generate, including any non-separable power purchase agreements, as well as income, such as production tax credits.

The fair value of derivatives is determined using our normal approach for such items, based on market prices or expectations for prices over the term of the derivatives, as described in note 7.7 'Fair value measurement'.

The fair values of other assets and liabilities are valued using the approach we find most relevant for the individual item, which can be either a market approach, an income approach or a cost approach.

An acquired enterprise is included in the consolidated financial statements from the date of acquisition, which is the date when we obtain control of the acquired enterprise.

When an acquired enterprise has entered into a power purchase agreement classified as a derivative, the fair value of the agreement will be included in the opening balance. Post-acquisition, this fair value is recognised as an adjustment to revenue over the duration of the contract, based on the fair value calculation at the time of the acquisition.

### Key accounting estimates

**Purchase price allocations in business combinations**  
When we apply the acquisition method for business combinations, by nature this involves judgement in assessing the fair value of identifiable assets and liabilities.

#### Property, plant and equipment

Our assessment of fair value is based on a number of estimates regarding WACC and expected cash flows, which both have a large impact on the fair value.

#### Derivatives

Our assessment of fair value is dependent on expected future prices. See note 7.7 'Fair value measurement' for our valuation principles.

#### Deferred tax

Our expectation to the timing of repayment of tax equity liabilities, and thereby the expected 'flip' of the tax equity structure, impacts the fair value of deferred tax on the assets and liabilities that are part of wind farms with tax equity partners. The expected tax rate also significantly impacts deferred tax.

## 3.4 Divestment of enterprises

Selling price, DKKm	2018	2017
Payment	497	605
Working capital adjustment	(68)	(1)
<b>Selling price on divestment of enterprises</b>	<b>429</b>	<b>604</b>
Transaction costs	(66)	(20)
Of which selling price receivable	-	4
<b>Cash selling price on divestment of enterprises</b>	<b>363</b>	<b>588</b>

Gain (loss) on divestment of enterprises DKKm	2018	2017
Selling price on divestment of enterprises	429	604
Net assets sold	(240)	(725)
Provisions as a result of the transaction	4	2
Transaction costs	(66)	(20)
<b>Gain (loss) on divestment of enterprises</b>	<b>127</b>	<b>(139)</b>

Gain on divestment of enterprises amounted to DKK 127 million compared to DKK -139 million in 2017. In 2018, gain on divestment of enterprises related to the sale of our 50% ownership interest in Enecogen (Bioenergy). Transferred cash and cash equivalents totalled DKK 6 million. In 2017, gain on divestment of enterprises related to the sale of A2SEA. Transferred cash and cash equivalents totalled DKK 278 million.

### Accounting policies

We recognise income from divested enterprises in the income statement up until the date of divestment.

The date of divestment is the date on which we relinquish control of the divested enterprise.

Gains or losses on the divestment or discontinuation of subsidiaries and associates are determined as the difference between the selling price and the carrying amount of the net assets divested.

Moreover, we deduct the fees of advisers, etc., in connection with the divestment, or discontinuation of the enterprise.

The divestment of our Oil & Gas business in 2017 is not included in the figures as it is presented as discontinued activities. See note 3.7 'Discontinued operations'.

## 3.5 Gross and net investments

Gross and net investments, DKKm	2018	2017
Cash flows from investing activities	(1,026)	(10,054)
Dividends received and capital reduction, reversed	(25)	(13)
Purchase and sale of securities, reversed	595	9,197
Loans to associates and joint ventures, reversed	12	47
Sale of non-current assets, reversed	(20,002)	(16,921)
Interest-bearing debt in acquired enterprises	(4,409)	-
Restricted cash in acquired enterprises	374	-
<b>Total gross investments</b>	<b>(24,481)</b>	<b>(17,744)</b>
Transactions with non-controlling interests in connection with divestments	(52)	61
Sale of non-current assets	20,002	16,921
<b>Total cash flows from divestments</b>	<b>19,950</b>	<b>16,982</b>
<b>Total net investments</b>	<b>(4,531)</b>	<b>(762)</b>

Gross investments amounted to DKK 24,481 million in 2018, which was 38% higher than in 2017.

Gross investments in Offshore amounted to DKK 15,081 million and was related to the construction of Hornsea 1 and Walney Extension in the UK, Borkum Riffgrund 2 in Germany, Borssele 1 & 2 in the Netherlands, early investments in the US to qualify for future tax credits as well as the acquisition of Deepwater Wind in the US. In 2017, gross investments primarily related to the construction of Walney Extension, Borkum Riffgrund 2 and Race Bank.

In Onshore, gross investments amounted to DKK 6,779 million and related to the acquisition of Lincoln Clean Energy and construction of the Tahoka and Lockett onshore wind farms in the US.

Divestments amounted to DKK 19,950 million in 2018 and related to the 50% farm-down of Hornsea 1, receipt of deferred proceeds from the farm-down of 50% of Walney Extension in 2017 and proceeds related to the divestment of our 50% ownership share in Enecogen.

In 2017, divestments amounted to DKK 16,982 million and were primarily related to the 50% farm-downs of the offshore wind farms Walney Extension and Borkum Riffgrund 2.

## 3.6 Assets classified as held for sale

At 31 December 2018, assets classified as held for sale comprised our Danish power distribution, residential customer and city light businesses as well as our oil pipe system in Denmark.

We are currently investigating the different options for exiting our Danish power distribution, residential customer and city light businesses. The oil pipe system is to be sold to the Danish transmission system operator, Energinet.

At 31 December 2017, assets classified as held for sale only comprised our oil pipe system in Denmark.

### Accounting policies

Assets classified as held for sale comprise assets and liabilities, the values of which are highly probable to be recovered through a sale within 12 months rather than through continued use.

Assets and liabilities classified as held for sale are measured at the carrying amount at the time of classification as 'held for sale' or at market value less selling costs, whichever is lower. The carrying amount is measured in accordance with the Group's accounting policies.

No depreciation or amortisation is effected on intangible assets and property, plant and equipment from the time of classification as 'held for sale'.

Assets classified as held for sale, DKKm	2018	2017
Intangible assets	80	20
Property, plant and equipment	13,951	2,119
Inventories	16	16
Trade receivables	701	73
Other receivables	430	368
Income tax	45	46
<b>Total assets classified as held for sale</b>	<b>15,223</b>	<b>2,642</b>
Deferred tax	823	99
Provisions	372	359
Contract liabilities	2,737	-
Trade payables	92	80
Other payables	826	92
Income tax	1	-
<b>Total liabilities relating to assets classified as held for sale</b>	<b>4,851</b>	<b>630</b>
<b>Net assets classified as held for sale</b>	<b>10,372</b>	<b>2,012</b>

The table shows assets and liabilities which have been put up for sale, and which are therefore not expected to contribute to our future earnings.

## 3.7 Discontinued operations

Discontinued operations comprise our Oil & Gas business, which was sold to INEOS on 29 September 2017.

### Financial results

Profit (loss) in 2018 amounted to DKK 10 million (2017: DKK 6,920 million, including gain (loss) on disposal of discontinued operations).

Total cash flows in 2018 amounted to DKK 209 million (2017: DKK 9,025 million), of which DKK -53 million was from operating activities and mainly concerned the payment of fees for existing Oil & Gas insurance activities. The insurance fee was provided for at the time of the divestment in 2017. Cash flows from investing activities amounted to DKK 262 million and concerned primarily the receipt of a selling price receivable of USD 50 million. The receivable was interest-bearing and therefore had no impact on our interest-bearing net debt.

### Capital employed

Our capital employed in discontinued operations at 31 December 2018 mainly consisted of provisions relating to the sale (tax indemnifications and payments related to the Fredericia stabilisation plant) as well as a conditional payment (receivable selling price) which does not carry interest.

In addition, we have interest-bearing receivables of USD 100 million (not part of capital employed), which we expect to receive in the period 2019-2020.

### Divestment of Oil & Gas in 2017

The selling price from the transaction amounted to DKK 5,456 million, of which DKK 3,652 million was received and recognised in our free cash flow from discontinued operations in Q3 2017.

All in all, the transaction reduced the Group's net debt by DKK 4,588 million, as USD 150 million of the outstanding selling price was interest-bearing.

### Secondary liability

As part of the divestment of Oil & Gas, we have assumed a secondary liability regarding the decommissioning of offshore installations. We consider the payment of the liability to be very unlikely. The matter is described in further detail in the interim financial report for the first nine months of 2017.

Employee costs, DKKm	2018	2017
Wages, salaries and remuneration	-	365
Pensions	-	27

Subsidiaries with significant non-controlling interests	Non-controlling interest	Registered office
Gunfleet Sands Holding Ltd.	49.9%	London, UK
Walney (UK) Offshore Windfarms Ltd.	49.9%	London, UK

In the table, we provide financial information for subsidiaries with significant non-controlling interests. The amounts stated are the consolidated accounting figures of the individual enterprises/groups, determined according to our accounting policies. Amounts are stated before intra-group eliminations.

### Accounting policies

Transactions with non-controlling interests are accounted for as transactions with the shareholder base.

Gains and losses on the divestment of equity investments to non-controlling interests are recognised in equity when the divestment does not result in a loss of control.

Net assets acquired are not revalued on the acquisition of non-controlling interests. Any difference between the carrying amount and the acquisition or selling price is recognised in equity.

# 4. Working capital

Working capital	119
Inventories	120
Contract assets and liabilities	121
Trade receivables	122
Other receivables	122
Tax equity liabilities	123
Other payables	124
Changes in net working capital	124

## 4. Working capital

Our key working capital items consist of inventories, net contract assets, trade receivables and payables, tax equity liabilities and other payables, including prepayments from heat customers. Connection charges in our power distribution business has been classified as assets held for sale at 31 December 2018.

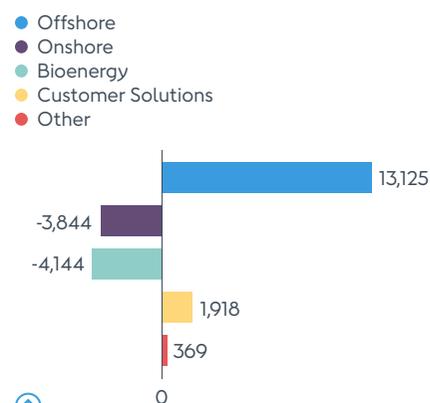

Working capital items vary with the seasonal variations in our generation and sales activities during the year. Our net contract assets relate primarily to construction of offshore wind farms for partners and vary within and across years, depending on the portfolio of offshore construction assets. They also depend on when we reach certain milestones and trigger payments from our partners.

Contract assets, net also include prepayment from heat customers in connection with our bioconversions and therefore vary depending on the progress of these projects. Construction of offshore transmission assets in the UK, which are recognised as inventories, will continue to tie up cash until they are divested. Tax equity liabilities also vary within and across years. This is due to the fact that we receive cash contributions from tax equity partners at the point in time when a US onshore wind farm enters into operation.

Trade payables relating to capital investments are not included in this section as they are presented as part of the cash flows from investing activities.

Working capital, DKKm	2018	2017
Inventories	13,943	3,853
Contract assets, net	(3,115)	9,500
Trade receivables	10,741	9,170
Other receivables	2,968	2,082
Trade payables, excluding trade payables relating to capital expenditure	(10,099)	(8,460)
Tax equity liabilities	(3,719)	-
Other payables	(3,295)	(11,200)
<b>Net working capital, excluding trade payables relating to capital expenditure at 31 December</b>	<b>7,424</b>	<b>4,945</b>
Of which work in progress and related trade payables	9,654	7,526
Of which tax equity partner liabilities and other working capital	(2,230)	(2,581)

### Working capital, DKKm 2018

Offshore primarily has funds tied up in inventories, construction agreements and trade receivables. The most significant working capital item in Onshore consists of liabilities regarding tax equity contributions from our partners. Bioenergy has a negative working capital, mainly as a result of prepayments from heat customers. Customer Solutions has funds tied up mainly in inventories, receivables and clearing counterparties in connection with exchange trading.

The composition of our net working capital has changed relative to last year. In 2017, we recognised offshore transmission assets as construction agreements. Following the implementation of IFRS 15, we recognise offshore transmission assets as inventory. Furthermore, the introduction of tax equity elements in our Onshore business has impacted our working capital. Work in progress consists of inventories related to transmission assets, construction agreements and construction management agreements in connection with the construction of transmission assets and offshore wind farms for partners as well as related trade payables.

# 7.4bn

Our net working capital, excluding trade payables relating to capital expenditure amounted to DKK 7,424 million in 2018 against DKK 4,945 million in 2017.

# 2.5bn

We had an additional amount of DKK 2,479 million tied up in working capital relative to 2017, of which DKK 2,128 million pertained to work in progress and related trade payables in Offshore.

# 4.1 Inventories

Inventories, DKKm	2018	2017
Offshore transmission assets	9,885	-
Biomass	253	258
Gas	1,620	1,526
Coal	261	396
Oil	119	124
Green certificates	1,555	1,441
Carbon emissions allowances	172	52
Other inventories	78	56
<b>Total inventories</b>	<b>13,943</b>	<b>3,853</b>
Inventories recognised as an expense in 'Cost of sales' during the year	25,262	13,180

Following the implementation of IFRS 15, we recognise offshore transmission assets as inventory. In 2017, we recognised offshore transmission assets as construction contracts.

We use biomass, coal, gas and, to a limited extent, oil as fuel at our CHP plants. In 2019, the use of gas will

## Accounting policies

Offshore transmission assets are measured at cost. The cost comprises costs of materials used in construction, site labour costs, costs of renting equipment as well as indirect production costs, such as employee costs.

The cost of gas is determined as a weighted average of the previous month's purchase prices, including transportation costs.

Purchased carbon emissions allowances are measured at market value.

be very limited as a result of the biomass conversion of the Skærbæk Power Station in Denmark and the divestment of the Enecogen Power Station in the Netherlands. Green certificates are primarily renewable obligation certificates (ROCs) which are issued to power generators sourcing from renewable energy sources in the UK.

Green certificates, which we earn by generating power using renewable energy sources, are recognised in inventories in step with our generation. We measure green certificates (earned and bought) at cost using the first in, first out (FIFO) principle.

Other inventories are measured at cost determined on a first in, first out basis or a net realisable value, where this is lower.

Inventories are written down to the lower of net realisable value and cost price.

The net realisable value is the sum (discounted) which the inventories are expected to generate through a normal sale.

## 4.2 Contract assets and liabilities

<b>Contract balances, DKKm</b>	2018	1 January 2018
<b>Contract assets</b>		
Current contract assets	1,451	1,693
<b>Total contract assets</b>	<b>1,451</b>	<b>1,693</b>
<b>Contract liabilities</b>		
Non-current contract liabilities	3,642	5,327
Current contract liabilities	924	1,455
<b>Total contract liabilities</b>	<b>4,566</b>	<b>6,782</b>

As we have implemented IFRS 15 in accordance with the modified retrospective method, we have not restated comparative figures. Read more about the adoption of IFRS 15 and the effect on the changed presentation in note 1.4 'Implementation of new or changed accounting standards and interpretations'.

<b>Revenue from contracts with customers DKKm</b>	2018
Revenue recognised included in contract liabilities at the beginning of the year	228
Revenue recognised from performance obligations satisfied in previous years	95

The tabel shows how much of our revenue recognised in 2018 that relates to contract liabilities carried forward (as prepayments and deferred revenue), and how much that relates to performance obligations satisfied in a prior year (e.g. renegotiations or constraints on variable considerations that are not recognised until they are highly probable).

Contract asset and contract liabilities are primarily related to:

- the construction of offshore wind farms with partners, with each party usually owning 50% of the offshore wind farm
- prepayments from heat customers.

At the end of 2018, contracts assets and liabilities included our construction of our partners' share of the Hornsea 1, Walney Extension and Borkum Riffgrund 2 offshore wind farms.

Non-current contract liabilities amounted to DKK 3,642 million compared to DKK 5,327 million as of 1 January 2018. The decrease was primarily related to a reclassification of grid connection charges and prepayments in our Danish power distribution, residential customer and city light businesses to assets held for sale at the end of 2018. Reference is made to note 3.6 'Assets classified as held for sale'.

### Accounting policies

We recognise a contract asset when we perform a service or transfer goods in advance of receiving consideration, and the consideration is conditional.

When the consideration is unconditional, and the goods or services are delivered, we recognise a receivable. A right to consideration is unconditional if only the passage of time is required before the payment is due.

Contract assets are measured at the transaction price of the good or services which we have performed less invoicing on account.

We recognise a contract liability when the invoicing on account and expected losses exceed the transaction price of the goods or services transferred to our customer.

## 4.3 Trade receivables

Trade receivables, DKKm	2018	2017
Trade receivables, not due	10,186	8,644
Trade receivables, 1-30 days overdue	293	303
Trade receivables, more than 30 days overdue	326	305
Trade receivables, write-down	(64)	(82)
<b>Total trade receivables</b>	<b>10,741</b>	<b>9,170</b>

Trade receivables primarily relates to customers in Customer Solutions. The general terms of payment vary according to customer type and product.

We continuously perform credit ratings of our customers, as described in note 7.5 'Credit risks'. For customers with a general credit risk, a write-down of 0-1% is carried out on initial recognition. In 2018, write-downs of receivables amounted to DKK 35 million (2017: DKK 6 million). Losses for the year totalled DKK 36 million (2017: DKK 25 million).

### Accounting policies

We keep our receivables until maturity, and they are therefore measured at amortised cost.

Write-down is carried out from initial recognition of our receivables. The write-down is calculated as the difference between the carrying amount of the receivable and the net present value of expected future cash flows from the receivable. The discount rate used is the effective interest rate for the individual receivable or the individual portfolio.

We apply the simplified approach to the write-down of trade receivables, which permits calculating the write-down as the full loss during the entire term of the receivable.

## 4.4 Other receivables

Other receivables, DKKm	2018	2017
Receivables from the divestment of assets and investments	3,218	2,680
Receivables from the divestment of equity investments to non-controlling interests	634	648
VAT and other indirect taxes receivable	427	572
Collateral provided	710	775
Prepayments	330	304
Other account receivables	1,741	495
<b>Other receivables</b>	<b>7,060</b>	<b>5,474</b>
Of which working capital	2,968	2,082
Of which other capital employed	2,628	1,770
Of which interest-bearing net debt	1,464	1,622

The table shows our other receivables broken down into working capital, interest-bearing net debt and other capital employed.

In 2018, receivables from the divestment of assets and investments primarily relate to receivables in connection with the divestment of 50% of our ownership interests in the Hornsea 1 wind farm and receivables related to the divestment of our Oil & Gas business. In 2017, receivables from divestment of assets and investments related to the divestment of our Oil & Gas business as well as the divestment of 50% of our ownership interests in the Walney Extension wind farm.

Receivables from the divestment of equity investments to non-controlling interests primarily relate to the divestment in 2011 of our ownership interests in Gunfleet Sands.

The collateral provided by the Group is receivables from banks in connection with trading on energy exchanges.

The short-term portion of other receivables amounted to DKK 4,390 million (2017: DKK 3,519 million).

Other accounts receivables consist primarily of receivables from adjustments in connection with prior year divestments, including the Oil & Gas business, where it is assessed that there is no material credit risk.

## 4.5 Tax equity liabilities

Tax equity liabilities, DKKm	2018	2017
Balance at 1 January	-	-
Contribution received from tax equity partner	1,995	-
Tax equity balances from business acquisitions	2,216	-
Tax attributes and PTCs recognised in other operating income	(79)	-
Cash paid to tax equity partner	(3)	-
Tax equity partners' contractual return	44	-
<b>Balance at 31 December</b>	<b>4,173</b>	<b>-</b>
Of which working capital	3,719	-
Of which interest-bearing debt	454	-

2018 is the first year of recognising US tax liabilities originating from our acquisitions and entry into the US market.

We have entered into several tax equity partner agreements in the US. These agreements are characterised by a tax equity partner who contributes an upfront payment of a part of the initial project investment. The partner does not have an operational role in the project. The partner receives a contractually agreed return on the contribution. The initial contribution and the return is 'repaid' by receiving almost all of the production tax credits (PTCs) the project generates as well as the majority of other tax attributes (accelerated tax depreciation and other taxable results) from the project in the first part of the project's lifetime as well as some cash payments. Once the contribution has been repaid, the agreement 'flips', and the partner is typically

entitled to a minor part of the cash distributions from the project unless we purchase this right from them, which is highly likely.

We have three onshore wind farms with tax equity partners. The first two are Amazon (253MW) and Willow Springs (250MW), which were operational at the time of the acquisition of Lincoln Clean Energy. The third is Tahoka (300MW) where we signed a tax equity agreement in Q4 2018, and which was commissioned in December 2018. In addition we have one offshore wind farm with a tax equity partner. This is Block Island (30MW), which was operational at the time of the acquisition of Deepwater Wind.

### Accounting policies

When a tax equity partner contributes to a US company, we evaluate our right to variable returns as well as our ability to exercise influence, including our ability to influence financial and operational decisions influencing these returns, to determine if the company should be fully consolidated. Due to the operational and financial nature of the projects, and the influence normally given to tax equity partners in such agreements, it is normally possible for us to have the influence to fully consolidate companies that have tax equity partners.

The terms of the tax equity partner's contribution are evaluated to determine the accounting treatment. As the initial contribution of the tax equity partner is repaid, including an agreed return, and as they do not share in the risks of the project in the same way as a shareholder, the contribution has the characteristics of a liability, is accounted for as such and is measured at amortised cost. The liability is based on the expected method of repayment and is divided into:

- a net working-capital element to be repaid through PTCs and other tax attributes
- an interest-bearing debt element expected to be repaid through cash distributions.

The partner's agreed return is expensed as a financial expense and is recognised as an increase of the tax equity liability. PTCs and other tax attributes transferred to the tax equity partner are recognised as other operating income. Tax attributes allocated to the tax equity partner are deferred and recognised on a straight-line basis over the estimated contractual length of the partner structure, while PTCs are recognised in the periods earned, similar to recognition of our own PTCs.

In addition to the above, we recognise a liability for the expected purchase price for the partners post-flip rights to return. This is recognised at fair value and adjustments are expensed as a financial item.

This recognition reflects the intention and high likelihood that we will purchase the right, and that this is part of the financial cost of the arrangement.

If we choose not to buy the partner's right to post-flip returns, the tax equity partner will be entitled to part of the company returns in the post-flip period, and they will share in the risks and rewards in the company as a shareholder. This interest will be considered a non-controlling interest.

### Key accounting judgements

#### Assessment of recognition of tax equity partner

On recognition of a tax equity partner, we assess the appropriate recognition of their contribution as well as the method of recognition for the elements used to repay the partner, such as PTCs and tax attributes.

In assessing recognition of tax equity partners, we look at:

- the expected flows of PTCs, tax attributes and cash payments expected to the partner
- the rights and obligations of both us and the tax equity partner.

The deferral of the income related to tax attributes and the recognition of the contribution as working capital or interest-bearing debt, are affected by our expectation to the size, method and timing of repayments.

## 4.6 Other payables

Other payables, DKKm	2018	2017
Prepaid VAT on exports	-	1,500
Carbon rights	62	42
VAT and other indirect taxes payable	780	1,312
Salary-related items payable	809	762
Accrued interest	687	882
Virtual gas storage	107	83
Prepayments from heat customers	-	3,286
Grid connection charges	-	1,893
Other deferred income	84	1,114
Collateral received	34	119
Purchase price, acquisition of enterprises	653	-
Other	1,986	1,089
<b>Total other payables</b>	<b>5,202</b>	<b>12,082</b>
Of which working capital	3,295	11,200
Of which other capital employed	1,337	882
Of which interest-bearing net debt	570	-

The table shows our other payables broken down into working capital, interest-bearing net debt and other capital employed.

In 2018, other payables were reduced by DKK 6,880 million. Prepayments from heat customers and the majority of deferred income have been classified as contract liabilities from 2018 due to the implementation of IFRS 15. Grid connection charges in the power distribution business have been classified as

'Assets classified as held for sale', due to the expected exit during 2019. In addition, the export VAT was repaid in January 2018.

In 2018, the short-term portion of other payables amounted to DKK 4,793 million (2017: DKK 6,368 million).

## 4.7 Changes in net working capital

Change in net working capital, DKKm	2018	2017
Change in inventories	243	(423)
Change in contract assets and liabilities	(1,478)	(3,318)
Change in trade receivables	(2,261)	(3,705)
Change in other receivables	(31)	(563)
Change in trade payables	1,601	1,188
Change in tax equity liabilities	1,835	-
Change in other payables	(827)	(1,083)
<b>Total change in net working capital</b>	<b>(918)</b>	<b>(7,904)</b>
Of which changes relating to work in progress	(2,326)	(3,674)
Of which changes relating to tax equity liabilities and other working capital	1,408	(4,230)

Work in progress consists of elements in contract assets and liabilities, construction agreements related to construction of offshore wind farms, construction of offshore transmission assets (inventory) and related trade payables.

The change in funds tied up in work in progress and related trade payables was DKK 2,326 million in 2018 due to high activity related to the construction of offshore wind farms for partners (Walney Extension and Borkum Riffgrund 2) as well as offshore transmission assets in the UK (Hornsea 1 and Hornsea 2), partly offset by receipt of milestone payments from partners and the divestment of the Burbo Bank Extension transmission asset.

In 2017, the change in funds tied up in work in progress and related trade payables was

DKK 3,674 million due to the construction of offshore wind farms for partners (mainly Race Bank) as well as offshore transmission assets in the UK (mainly Hornsea 1), partly offset by receipt of milestone payments from partners.

The change in funds tied up in other working capital was a cash inflow of DKK 1,408 million in 2018 and primarily concerned the tax equity contribution from the partner on Tahoka.

# 5. Tax

Tax	126
Tax policy and tax regimes	127
Tax on profit (loss) for the year	128
Taxes paid	130
Deferred tax	131
Total tax contribution	133

# 5. Tax

## Tax on profit (loss) for the year

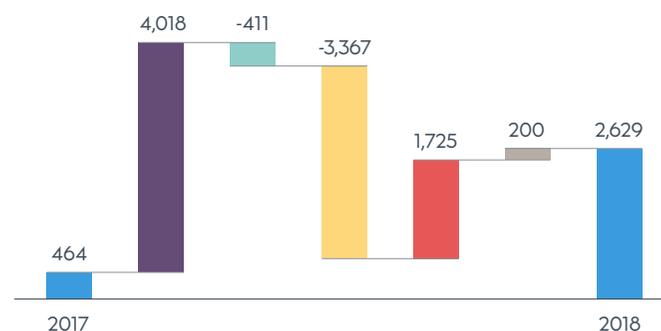

The effective tax rate was 17% for the continuing operations. The effective tax rate was primarily affected by the tax-exempt gain on the farm-down of 50% of Hornsea 1.

## Corporate income taxes paid

We have paid DKK 3,367 million in taxes in 2018, of which DKK 711 million related to residual tax for 2017. We expect to have a residual receivable tax of DKK 245 million regarding 2018 as a higher portion of income related to non-taxable income in 2018 than we expected at the time we paid taxes on account.

## Development in current and deferred tax asset and liabilities (tax, net), 2018 DKKm

- Tax, net liability
- Tax on profit (loss) for the year
- Tax on other comprehensive income and hybrid capital
- Corporate taxes paid
- Addition US investment
- Other effects

The net tax is highly impacted by the US investments.

# 3.4bn

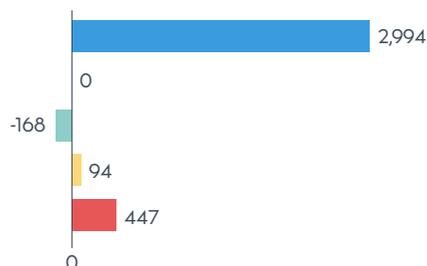

Corporate income tax paid by the Group in 2018 totalled DKK 3,367 million against DKK 2,660 million in 2017.

# 3.2bn

Current corporate income tax in 2018 totalled DKK 3,161 million against DKK 2,698 million in 2017.

## Corporate income tax paid by segment, 2018 DKKm

- Offshore
- Onshore
- Bioenergy
- Customer Solutions
- Ørsted A/S and other activities

2018, DKKm	Business performance		
	Profit (loss) before tax	Tax	Tax in %
Gain (loss) on divestments	14,886	(1,155)	8%
Tax equity, deferred tax liability, Tahoka	-	(444)	n.a.
Rest of the Group	8,618	(2,419)	28%
<b>Effective tax for the year</b>	<b>23,504</b>	<b>(4,018)</b>	<b>17%</b>

Tax on gain (loss) on divestments related to taxable gains. See more in note 2.5 'Other operating income and expenses'. The tax rate for 'Rest of the Group' is higher than the weighted average tax rate in the countries in which we generate income as a result of adjustments relating to previous years as well as non-deductible expenses and non-taxable income.

# 5.1 Tax policy and tax regimes

## Our tax policy

We recognise the key role that tax plays in society and the development of the countries where we operate. We also believe that a responsible approach to tax is essential to the long-term sustainability of the societies where we have activities and of our business across the globe.

The world's governments have defined the greatest challenges for our societies towards 2030 through the UN Sustainable Development Goals (SDGs). At Ørsted, we are committed to running our business in a way that contributes to the SDGs. Tax payments contribute both directly and indirectly to most of the SDGs, in particular target #16.6 on the development of effective, accountable and transparent institutions.

Tax is a core part of our corporate responsibility and governance and is overseen by the Board of Directors. The Board of Directors is accountable for the tax policy, and the responsibility for tax risk management lies with the CFO and overseen by the Audit and Risk Committee.

## Compliance

Our ambition is to apply best practices at all times and act in accordance with applicable legislation on tax computation and

tax reporting to ensure that we pay the right amount of tax at the right time in the countries where we operate. We continuously evaluate our processes and controls to ensure that we are compliant with local and international standards relevant to our business.

## Our attitude to tax planning

We only use business structures that are driven by commercial considerations, aligned with business activity and which have genuine substance.

We make use of incentives and tax reliefs where they apply in areas where we have commercial substance.

We seek, wherever possible, to develop cooperative relationships with tax authorities, based on mutual respect, transparency and trust.

## Transparency

In line with our belief in transparency, we provide regular information to our stakeholders – including investors, policy makers, employees, civil society and the general public – about our approach to tax and taxes paid.

Read more about our tax policy at <https://orsted.com/taxpolicy>

## Tax regimes

At the end of 2018, our major activities were in Denmark, the UK, Germany, the Netherlands and the US.

## US tax equity partnerships

We have entered into several tax equity partnership agreements in the US. For more information on our tax equity partnership structure, see note 4.5 'Tax equity liabilities'. The expected value of the deferred tax liability related to property, plant and equipment at the 'flip date' in the tax equity partnership agreement is included in our accounts when the tax equity partnership is established.

## International joint taxation

For the income year 2017 and going forward, we opted to exit the international joint taxation scheme. The retaxation liability was transferred to tax payable and has been settled.

## Local taxes paid

In terms of taxation, we were affected in Denmark by completed construction agreements in connection with the construction of offshore wind farms in the UK and Germany in 2018.

We have made significant investments in offshore wind farms in the UK, Germany and the Netherlands, resulting in the accumulation of large tax assets in recent years. Accordingly, we have not paid significant taxes in these countries. Going forward, this will change as the offshore wind farms are commissioned and will be generating positive results.

We expect to start paying more significant corporate tax in the UK in 2019, in Germany in 2019 and in the Netherlands in 2021.

We are currently making significant investments in the US, and we do therefore not expect to pay any material corporate income tax in the foreseeable future.

## 5.2 Tax on profit (loss) for the year

Effective tax rate, DKKm/%	2018				2017			
	Business performance		IFRS		Business performance		IFRS	
	DKK million	%	DKK million	%	DKK million	%	DKK million	%
<b>Tax on profit (loss) for the year can be explained as follows:</b>								
Calculated 22% tax on profit (loss) before tax (2017: 22%)	(5,172)	22	(4,834)	22	(3,310)	22	(3,323)	22
Adjustments of calculated tax in foreign subsidiaries in relation to 22% (2017: 22%)	94	-	74	-	86	-	86	-
<b>Tax effect of:</b>								
Non-taxable income and non-deductible costs, etc., net	1,912	(8)	1,912	(9)	1,323	(9)	1,323	(9)
Unrecognised tax assets and capitalisation of tax assets not previously capitalised	(50)	-	(50)	-	(184)	1	(184)	1
Share of profit (loss) in associates and joint ventures	-	-	-	-	(12)	-	(12)	-
Adjustment of tax concerning previous years	(802)	3	(802)	4	332	(2)	332	(2)
<b>Effective tax for the year</b>	<b>(4,018)</b>	<b>17</b>	<b>(3,700)</b>	<b>17</b>	<b>(1,765)</b>	<b>12</b>	<b>(1,778)</b>	<b>12</b>

Non-taxable income and non-deductible expenses primarily concern the tax-exempt gain on divestments and US investment matters. See more in note 2.5 'Other operating income and expenses'.

### Income tax

Tax on business performance profit (loss) was DKK 4,018 million in 2018 against DKK 1,765 million in 2017. The effective tax rate was 17% in 2018 against 12% in 2017.

The effective tax rate in 2018 was particularly affected by a tax-exempt gain on the farm-down of 50% of Hornsea 1. In addition, the effective tax rate was affected by the recognition of a deferred tax liability related to a tax equity partner (see more in notes 4.5 'Tax equity liabilities' and 5.4 'Deferred tax'). The deferred tax liability will be reduced gradually once we have repaid the contribution to the tax equity partners.

The difference in tax rates from 22% to the statutory tax rates across our jurisdiction impacts the effective tax rate.

The effective tax rate in 2017 was primarily affected by tax-exempt gains on the farm-downs of 50% of the Walney Extension and Borkum Riffgrund 2 offshore wind farms. In addition, our effective tax rate was affected by the remaining portion of the tax-exempt gain on Race Bank, which was divested in 2017, and adjustments to prior years.

### Accounting policies

Tax for the year consists of current tax, changes in deferred tax and adjustments in respect of previous years. Tax on profit (loss) for the year is recognised in the income statement. Tax relating to other items is recognised in other comprehensive income.

### Key accounting judgements

#### Estimates regarding recognition of income tax assets and provisions for uncertain tax positions

Ørsted is subject to income taxes in all the countries where we operate. Significant judgement and estimates are required in determining the worldwide accrual for income taxes, income tax assets and liabilities and provisions for uncertain tax positions.

In the course of conducting business around the world, tax and transfer pricing disputes with tax authorities may occur. Judgement is applied to assess the possible outcome of such disputes. We apply the methods prescribed in IFRIC 23 'Uncertainty over Income Tax Treatments' when making provisions for uncertain tax positions, and we consider the provisions made to be adequate. However, the actual obligation may deviate and depends on the result of litigations and settlements with the relevant tax authorities.

Ongoing tax disputes, primarily related to transfer pricing cases, are included as part of 'Tax payables', 'Tax receivables' and 'Deferred tax'.

**Tax on profit (loss) for the year and other comprehensive income**

In 2018, tax on IFRS profit (loss) for the year amounted to DKK 3,700 million, consisting of current tax of DKK 3,161 million, changes in deferred tax of DKK 266 million, tax on assets classified as held for sale of DKK 3 million, and an adjustment of tax in respect of previous years of DKK 802 million. The adjustment primarily relates to amendments of asset values in UK and Germany and reclassification of Danish liabilities.

**Current tax**

Current tax is the tax incurred in Ørsted which is payable within the same year as the profit.

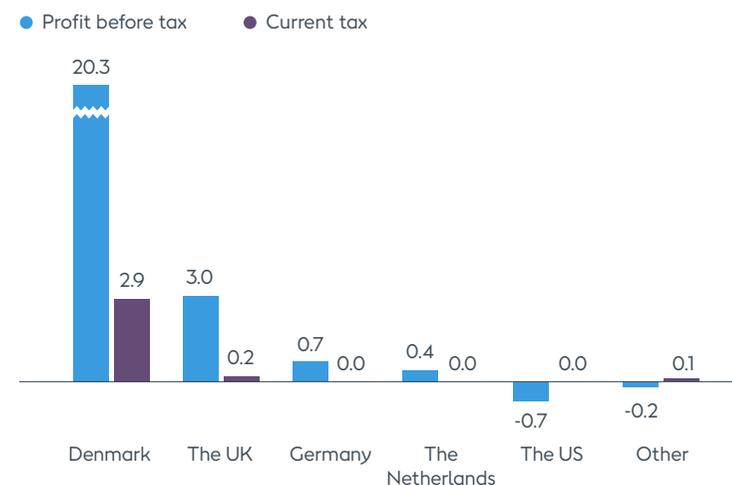

This deviates from taxes paid as a result of payments regarding prior years and residual payments regarding the current year.

Included in the current tax for 2018 is DKK 2,135 million which relate to gains from construction agreements regarding Walney Extension and Borkum Riffgrund 2 and the construction management agreement regarding Race Bank.

Due to the high level of investments and the subsequent deferrals of payable tax as a consequence of tax depreciation, our current tax is generally lower than the statutory corporate tax rates during construction and the initial years after first power.

	2018		2017	
	Business performance	IFRS	Business performance	IFRS
<b>Income tax, DKKm</b>				
Tax on profit (loss) for the year	(4,018)	(3,700)	(1,765)	(1,778)
Tax on other comprehensive income	411	93	238	251

**Current tax (business performance), 2018, DKKbn**

The figure shows the relationship between profit before tax and current tax in the main countries where we do business.

**Current tax rate (business performance), 2018, %**

The figure shows the tax rates based on business performance in the main countries where we do business.

Income tax for the year is calculated on the basis of the profit (loss) before tax from continuing operations.

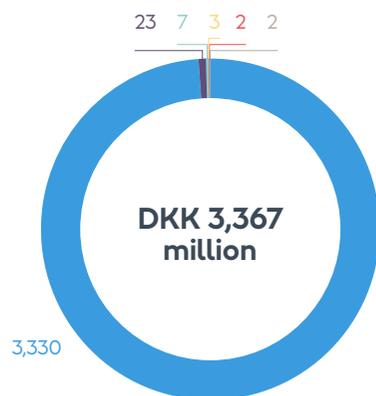

# 5.3 Taxes paid

In 2018, we paid DKK 3,367 million in taxes. The tax payment included residual tax for 2017, amounting to DKK 711 million in total for continuing operations for Denmark.

We paid most of our Danish taxes in March. Accordingly, the income tax paid for the year was based on estimates and preliminary tax positions. As our non-taxable income was higher than expected when we paid our Danish taxes on account, we expect to have a receivable tax of DKK 245 million in Denmark regarding 2018.

\* Relates to internal transfers between continuing and discontinued operations.

## 5.4 Deferred tax

### Development in deferred tax

In 2018, deferred tax from continuing operations decreased due to the completion of the construction of Borkum Riffgrund 2 and Walney Extension as these taxes were paid and increased due to the ongoing construction of Hornsea 1. Also, our tax equity partner agreements in the US (see note 4.5 'Tax equity liabilities') have resulted in the recognition of the expected deferred tax liability that we will take over once the contribution from the tax equity partner has been repaid.

The adjustment regarding previous years comprised recognition of tax assets relating to offshore wind farms.

In 2017, deferred tax from continuing operations decreased as a result of deferred tax liabilities materialising as tax payable. This included differences in the tax and accounting treatment of profit received on account on work in progress, differences in the tax and accounting recognition of financial instruments, retaxation due to the expected exit from the international joint taxation scheme and adjustments to prior years.

### Deferred tax by segment

Deferred tax (liabilities) in our segments primarily concerned the following:

- Offshore: recognised profit received on account and property, plant and equipment, in respect of which depreciation for tax purposes exceeds depreciation for accounting purposes.
- Onshore: recognised deferred tax liability regarding wind farm assets in tax equity structures.
- Bioenergy: property, plant and equipment in respect of which depreciation for tax purposes exceeds depreciation for accounting purposes.
- Customer Solutions: financial instruments.
- Other activities/eliminations comprised intra-group eliminations in the joint taxation across segments.

### Accounting policies

Deferred tax is recognised in respect of all temporary differences arising between the tax bases of assets and liabilities and their carrying amounts.

However, deferred tax is not recognised in respect of temporary differences relating to:

- the acquisition of joint operations, including licence interests
- other items, where differences arise at the time of acquisition affecting neither the profit (loss) for the year nor the taxable income. However, this does not include differences arising in connection with company acquisitions.

Deferred tax is measured depending on how we plan to use the assets and settle the liabilities. We set off tax assets and liabilities when the tax assets can be offset against tax liabilities in the year in which the deferred tax assets are expected to be used.

Deferred tax assets are recognised at the value at which they are expected to be used. They may be offset against future earnings or against probable tax losses carried forward. This is done within a joint

taxation scheme. Intra-group gains and losses are eliminated.

Deferred tax is measured based on the tax rules and rates applying when the deferred tax becomes current tax. Changes in deferred tax as a result of changes in tax rates are recognised in profit (loss) for the year.

Deferred tax (net liability) related to the tax equity structures is recognised as tax income in the income statement when we take over the agreements. The liability recognised is the amount that we expect to take over once the contribution from the equity partner is repaid, and the tax equity structure 'flips.'

Liabilities in respect of uncertain tax positions are measured as follows:

- The most-likely-outcome method is applied in cases where there are only two possible outcomes.
- The weighted-average method is used in cases where there are more than two possible outcomes.

The liability is recognised under income tax payable or deferred tax, depending on how the realisation of the tax position will affect the financial statement.

					Other activities/eliminations	Deferred tax at 31 December

Of which recognised in the balance sheet under assets	88							2,865
Of which recognised in the balance sheet under equity and liabilities	2,185							2,128

The amounts transferred to assets and liabilities classified as assets held for sale concern our Danish power distribution, residential customer and city light businesses.

Addition of enterprises includes the deferred tax liability recognised in relation to our US investments.

Adjustments to prior years primarily relate to movements between deferred tax and tax payable. Also, asset value reassessment in Germany and the UK.

The increase of tax losses carried forward during 2018 is primarily a result of the accelerated depreciation on fixed assets for tax purposes. The tax loss carryforwards will be set off against realisation of either deferred tax liabilities on the same wind farm or jurisdiction or set off against future profits on that wind farm or jurisdiction.

# 5.5 Total tax contribution

According to the OECD classification, tax is a compulsory unrequited payment to general government. This means a payment by Ørsted paid to the government, including amounts paid through an agent. Tax does not result in a return of value to Ørsted for a right or asset used in the business.

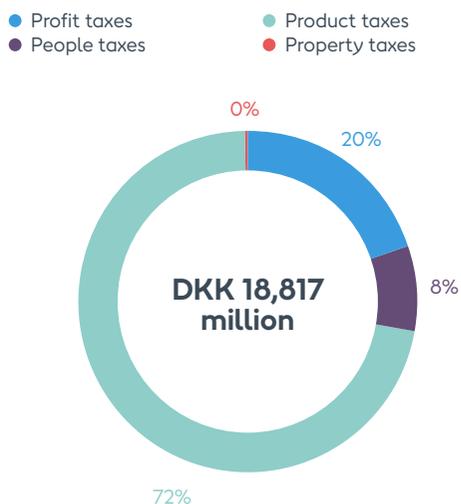

Taxes collected are those which are generated by Ørsted' operations, but not a tax liability for Ørsted. Ørsted generates the commercial activity that gives rise to the taxes and then collects and administers them on behalf of the tax authorities in the countries in which we operate.

Taxes borne by Ørsted are those that represent a direct cost and are reflected in the financial result. Tax borne is charged to the profit and loss account or capitalised as part of an asset's cost.

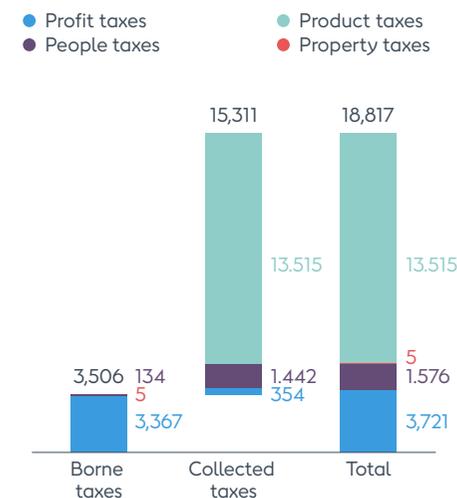

### Total global taxes that we paid in 2018

● Profit taxes	These include taxes on company profits that are borne (such as corporate income tax) and collected (such as withholding tax on payments to third parties). In 2018, Ørsted paid DKK 3,367 million in borne profit taxes and DKK 354 million in collected profit taxes. The collected profit taxes relate to withholding tax on dividends paid to Ørsted's shareholders.
● People taxes	Taxes on employment, both borne and collected (including income tax and social security tax payments). In 2018, Ørsted paid DKK 134 million in borne people taxes and DKK 1,442 million in collected people taxes.
● Product taxes	Indirect taxes on the production and consumption of goods and services, including VAT and sales tax, custom duties and insurance premium tax. In 2018, Ørsted paid DKK 13,515 million in collected product taxes. Borne product taxes were insignificant in 2018 for this summary.
● Property taxes	Taxes on the ownership, sale, transfer or occupancy of property. In 2018, Ørsted paid DKK 5 million in borne property taxes. Collected property taxes were insignificant in 2018 for this summary.

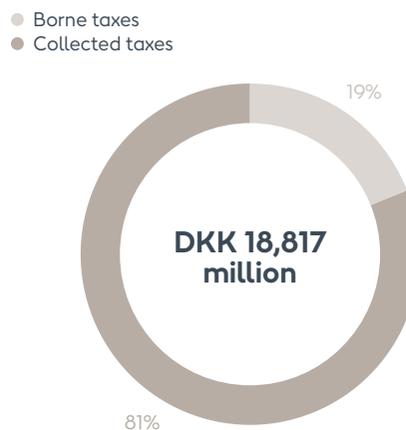

Total tax contribution, 2018, %

Total tax contribution, 2018, DKKm

Total tax contribution, 2018, %

Total tax contribution is highly impacted by collection of VAT, sales tax, duties as well as profit taxes.

The chart shows the distribution between borne and collected taxes in 2018.

# 6. Capital structure

Capital structure	135
Interest-bearing debt	136
Equity	138
Hybrid capital	140
Financial resources	141
Financial income and expenses	143
Funds from operations (FFO)/ adjusted interest-bearing net debt	144

# 6. Capital structure

**In 2018, we acquired Lincoln Clean Energy and Deepwater Wind in the US and thereby entered into tax equity partnerships with associated liabilities. The interest-bearing part of our tax equity liability amounts to DKK 454 million as of 31 December 2018.**

**We have not issued new bonds or raised new loans in 2018. However, we have taken over bank loans in the amount of DKK 4,039 million in connection with the two acquisitions.**

## Capital structure

To ensure the financial strength to operate in the international energy and capital markets and secure financing on attractive terms, we

have defined credit rating and capital structure targets. The overarching capital structure targets are a credit rating of Baa1/BBB+ and an FFO/adjusted net debt credit metric of around 30%.

## Financing policy

The aim of our financing policy is to ensure the best possible loan arrangements, while also minimising financing costs, liquidity and refinancing risks.

The borrowing activities are diversified among various funding sources and maturities. In addition, we have robust financial resources.

Our borrowing activities are consolidated in the parent company, where cash resources are available to the Group's companies via an internal bank.

## Cash management

We have decided to maintain robust financial resources to limit the company's sensitivity to unrest in the financial markets.

The financial resources consist of bank deposits and securities as well as non-cancellable credit facilities from a group of robust Nordic and international banks. The financial resources totalled DKK 37,879 million at 31 December 2018 (2017: DKK 39,158 million).

# 69.0%

Funds from operations (FFO) relative to adjusted interest-bearing net debt amounted to 69% at 31 December 2018 against 50.3% at 31 December 2017.

# -2.2bn

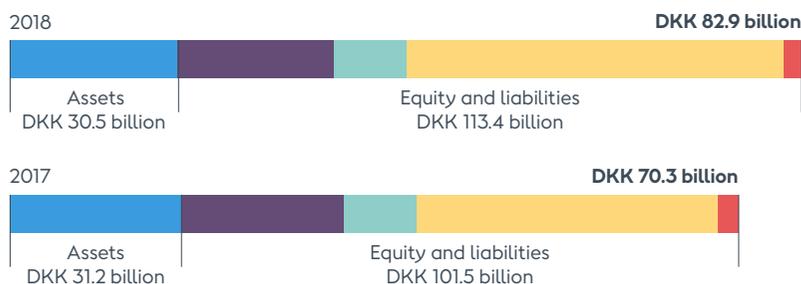

Our interest-bearing net debt totalled DKK -2,219 million at 31 December 2018 against DKK -1,517 million at 31 December 2017.

# 37.9bn

Our financial resources totalled DKK 37,879 million at 31 December 2018 against DKK 39,158 million at 31 December 2017.

## Equity and interest-bearing net debt, DKKbn

Instalments on loans according to the statement of cash flows	(6,429)	(4,069)
Proceeds from raising of loans according to the statement of cash flows	-	5,468
Debt from acquisition of enterprises	4,409	-
Change in other interest-bearing debt	570	-
Reclassification to bond and bank debt	-	4,192
Capital losses on early repayment of debt	-	230
Foreign exchange adjustments and amortisation	134	(368)
<b>Interest-bearing debt 31 December</b>	<b>28,320</b>	<b>29,636</b>

The tabel shows the changes in interest-bearing debt.

## Interest-bearing net debt

Interest-bearing net debt totalled DKK -2,219 million at the end of 2018, up DKK 702 million relative to 2017. The increase in the net cash position comprise of a decrease in interest-bearing assets of DKK 614 million and a decrease in interest-bearing debt of DKK 1,316 million.

In 2018, we have entered the US market where we have entered into tax equity liabilities. The part of the tax equity liability we expect to repay with tax credits (PTCs) and other tax attributes is not considered part of interest-bearing debt. This amounts to DKK 3,719 million (2017: DKK 0 million). The part of the tax equity liability we expect to repay with cash is included in interest-bearing debt.

This amounts to DKK 454 million (2017: DKK 0 million). For more information, see note 4.5 'Tax equity liabilities'.

In July 2018, we redeemed a hybrid bond classified as debt with a notional amount of EUR 500 million, corresponding to DKK 4,208 million.

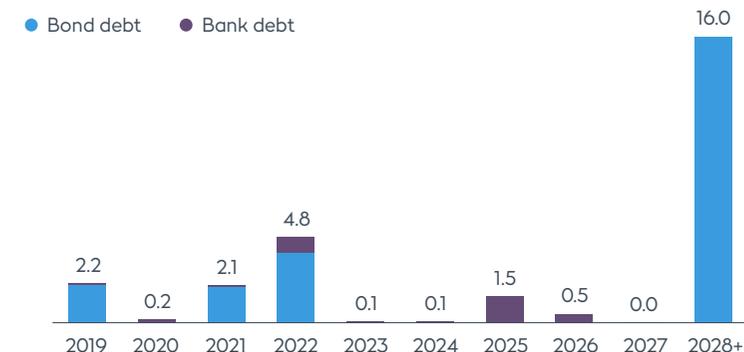

In October and November 2018, we acquired Lincoln Clean Energy and Deepwater Wind. We took over a bank debt of DKK 4,039 million and interest-bearing tax equity liabilities of DKK 370 million in connection with the transactions.

In October and December, bank debt in Lincoln Clean Energy of DKK 2,406 million was repaid.

## Maturity profile, DKKbn

The graph shows the maturity profile for our bank loans and bond debt.

### Market value of bond and bank debt

The market value of our bond and bank debt amounted to DKK 28,048 million and DKK 3,622 million, respectively, at 31 December 2018 (2017: DKK 32,959 million and DKK 2,108 million, respectively). The market value of our bond and bank debt exceeds the carrying amount due to the drop in interest levels since the establishment of the debt.

### Loan arrangements

At 31 December 2018, we had loan obligations totalling DKK 1,964 million (2017: DKK 2,069 million) to the European Investment Bank and the Nordic Investment Bank. The loans are recognised in the balance sheet under bank debt. The loans offered by these multilateral financial institutions include loans to co-fund infrastructure and energy projects on favourable terms and with maturities exceeding those normally available in the commercial banking market. In connection with these loans, the Group may be met with demands

for repayment or collateral in the event of the Danish State holding less than 50% of the share capital or voting rights in Ørsted A/S (change of control), or for repayment in the event of Moody's or Standard & Poor's downgrading our rating to Baa3 or BBB- or below, respectively.

Furthermore, we had non-cancellable credit facilities of DKK 10,447 million at 31 December 2018 (2017: DKK 10,424 million) with a number of Scandinavian and international banks. In connection with these credit facilities, we may be met with demands for cancellation and repayment of any used share in the event of players other than a group consisting of the Danish State and Danish power distribution companies acquiring more than 50% of the share capital or voting rights in Ørsted A/S, or in the event of the Danish State ceasing to hold at least 20% of the share capital. Our financing agreements are not subject to any other unusual terms or conditions.

### Interest rate risk

We have fixed the interest rate on most of our debt by issuing fixed-rate debt. At the end of 2018, 95% (2017: 95%) of the Group's debt was fixed-rate debt. Interest payments on loans in GBP have been covered with forward exchange contracts over the next five years at an average exchange rate of 8.9. See note 7.2 'Hedge accounting and economic hedging' for further information.

At 31 December 2018, the loan portfolio had an average time to maturity of 9.9 years (2017: 9.8 years). Interest-bearing assets consist primarily of short-term bonds with limited risk.

Our interest rate risk is described further in note 7.1 'Market risks'.

### Accounting policies

Bond debt, bank debt and other payables are recognised at inception at market value (typically proceeds received) net of transaction costs incurred. In subsequent periods, the liabilities are measured at amortised cost, so that the difference between the cost (proceeds) and the nominal value is recognised in profit (loss) for the year as interest expenses over the term of the loan, using the effective interest rate method.

Financial liabilities are classified as current, unless the Group has an unconditional right to defer settlement of the liability to at least one year after the balance sheet date.

The market value of issued bonds has been determined as the market value at 31 December (level 1 – quoted prices).

The market value of bank loans has been determined as the present value of expected future instalments and interest payments using the Group's current interest rate on loans as the discount rate (level 2 – observable inputs).

### Senior bond issued at 31 December 2018

Million	Outstanding amount		Coupon (%)	Time of issue	Maturing	Quoted in
	Currency	EUR /GBP				
EUR	280	2,091	6.500	6 May 2009	7 May 2019	London
EUR	272	2,033	4.875	16 Dec. 2009	16 Dec. 2021	London
EUR	517	3,860	2.625	19 Sep. 2012	19 Sep. 2022	London
EUR	750	5,597	1.500	24 Nov. 2017	26 Nov. 2029	London
GBP	750	6,235	4.875	12 Jan. 2012	12 Jan. 2032	London
GBP	500	4,157	5.750	9 Apr. 2010	9 Apr. 2040	London

In addition to senior bonds, we have issued a number of hybrid bonds; see note 6.3 'Hybrid capital'.

## 6.2 Equity

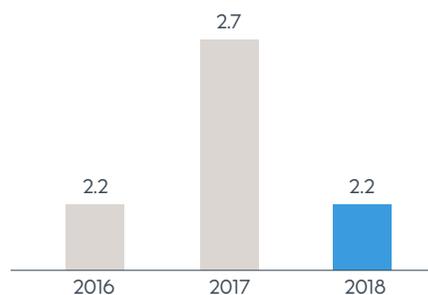

### Share capital

Ørsted's share capital is DKK 4,203,810,800, divided into shares of DKK 10. The share capital is unchanged from last year. No shares are subject to special rights or restrictions on voting rights. The shares are fully paid up.

### Treasury shares

To secure our share programme, we acquired additional treasury shares in November 2018. The total portfolio of treasury shares consist of 335,904 shares at 31 December 2018 (2017: 225,904), corresponding to 0.1% of the share capital.

### Dividend yield, %

The graph shows the proposed dividends in relation to the closing price for an Ørsted share on the last trading day of the year.

### Dividends

The Board of Directors recommends that dividends of DKK 4,099 million (2017: DKK 3,783 million) be paid for the financial year, corresponding to DKK 9.75 per share (2017: DKK 9 per share). The proposed dividends correspond to a dividend yield of 2.2% (2017: 2.7%) calculated on the basis of the closing price for an Ørsted share on the last trading day of the year.

### Owners in Ørsted

The Danish State is the principal shareholder with an ownership interest of 50.1%. In addition, SEAS-NVE and The Capital Group also have significant ownership interests. See note 16 'Ownership information' in the parent company's financial statements.

The table shows earnings per share distributed on continuing and discontinued operations. Diluted profit (loss) per share corresponds to profit (loss) per share, as the dilutive effect of the share programme is 0.1% of the share capital (2017: 0.1% of the share capital).

#### Accounting policies

##### Foreign currency translation reserve

The foreign currency translation reserve comprises:

- exchange rate adjustments arising on translation of the financial statements of foreign entities with a currency that is not the Group's functional currency
- exchange rate adjustments relating to loans that form part of our net investment in such entities
- exchange rate adjustments relating to hedging transactions on our net investment in such entities.

On realisation or partial realisation of the net investment, the exchange rate adjustments are recognised in profit (loss) for the year if a foreign exchange gain (loss) is realised by the divested entity. The foreign exchange gain (loss) is transferred to the item in which the gain (loss) is recognised.

##### Hedging reserve

The hedging reserve covers:

- hedging of net investments in foreign operations
- cash-flow hedging of currency risks and inflation risks associated with revenue
- cash-flow hedging of the currency risk associated with the construction of offshore wind farms and interest expenses.

##### Deferred costs of hedging

Changes in the basic spread on currency swaps and time value of options are included in deferred costs of hedging.

##### Share premium reserve

Retained earnings include the share premium reserve of DKK 21,279 million, representing the excess of the amount of subscribed-for share capital over the nominal value of these shares in connection with capital injections.

## 6.3 Hybrid capital

### Hybrid bonds

Type	Due in 3013
Carrying amount	Subordinate to other creditors
Financial classification	DKK 5,148 million
Notional amount	Equity
Issued	EUR 700 million (DKK 5,224 million)
Maturing	June 2013
First redemption date at par	June 3013
Interest	26 June 2023
Deferral of interest payment	For the first ten years, the coupon is fixed at 6.25% p.a., after which it is adjusted every five years with the five-year euro swap + 4.75 percentage points from 2023-2043 and + 5.5 percentage points after 2043
	Optional

We have issued hybrid capital which is subordinate to our other creditors. The purpose of issuing hybrid capital is to strengthen our capital base and fund our investments. In the European capital markets, we have issued EUR hybrid bonds with a total nominal value of DKK 13,432 million (EUR 1,800 million).

On 8 July 2018, we redeemed the hybrid bond maturing in July 3013 at par at the first redemption date.

For hybrid bonds, we may defer coupon payments to bond holders and ultimately decide not to pay them. Deferred coupon payments become payable, however, if we decide to pay dividends to our shareholders or pay coupon payments on other hybrid bonds.

As a consequence of the special terms regarding the hybrid bonds, these are classified as equity, and coupon payments are therefore recognised in equity.

Type	Due in 3015
Carrying amount	Subordinate to other creditors
Financial classification	DKK 4,423 million
Notional amount	Equity
Issued	EUR 600 million (DKK 4,477 million)
Maturing	May 2015
First redemption date at par	November 3015
Interest	6 November 2020
Deferral of interest payment	Coupon for the first 5.5 years is fixed at 3.0% p.a., after which it is adjusted every five years with the five-year euro swap + 2.819 percentage points from 2020, + 3.069 percentage points from 2025, and + 3.819 percentage points from 2040
	Optional

### Accounting policies

Hybrid capital comprises issued bonds that qualify for treatment in accordance with the rules on compound financial instruments due to the special characteristics of the bonds. The notional amount, which constitutes a liability, is recognised at present value, and equity has been increased by the difference between the net proceeds received and the present value of the discounted liability. Accordingly, any coupon payments are accounted for as dividends, which are recognised directly in equity at the time the payment obligation arises. This is because the coupon is discretionary, and any deferred coupon therefore lapses upon maturity of the hybrid capital. Coupon payments consequently do not have any effect on profit (loss) for the year.

The part of the hybrid capital that is accounted for as a liability is measured at amortised cost. However, as the carrying amount of this component amounted to nil on initial recognition and due to the 1,000-year term of the hybrid capital, amortisation charges will only have an impact on profit (loss) for the year towards the end of the 1,000-year term of the hybrid

Type	Due in 3017
Carrying amount	Subordinate to other creditors
Financial classification	DKK 3,668 million
Notional amount	Equity
Issued	EUR 500 (DKK 3,731 million)
Maturing	November 2017
First redemption date at par	November 3017
Interest	24 November 2024
Deferral of interest payment	Coupon for the first seven years is fixed at 2.25% p.a., after which it is adjusted every five years with the five-year euro swap + 1.899 percentage points from 2024, + 2.149 percentage points from 2029 and + 2.899 percentage points from 2044
	Optional

capital. Coupon payments are recognised in the statement of cash flows in the same way as dividend payments within financing activities.

On redemption of the hybrid capital, the payment will be distributed between liability and equity, applying the same principles as used when the hybrid capital was issued. This means that the difference between the payment on redemption and the net proceeds received on issue is recognised directly in equity as the debt portion of the existing hybrid issues will be nil during the first part of the life of the hybrid capital.

On the date on which the Board of Directors decides to exercise an option to redeem the hybrid capital, the part of the hybrid capital that will be redeemed will be reclassified to loans and borrowings. The reclassification will be made at the market value of the hybrid capital at the date the decision is made. Coupon payments and exchange rate adjustments following the reclassification to loans and borrowings will be recognised in profit (loss) for the year as financial income or expenses.

## 6.4 Financial resources

Our liquidity and financing risks are managed centrally in accordance with the principles and delegated authorities laid down by the Board of Directors.

One of the most significant financial management tasks is to secure sufficient and flexible financial resources in relation to our day-to-day operations, investment programme and debt maturity profile.

We therefore define minimum financial resources for the coming calendar year.

### Cash, cash equivalents and securities

Securities are a key element in our financial resources, for which reason investments are primarily made in liquid AAA-rated Danish mortgage bonds and to a lesser extent in other bonds. Most of the securities qualify for repo transactions in the Danish central bank, 'Danmarks Nationalbank'.

Securities not available for use comprise securities pledged as collateral for:

- insurance-related provisions; DKK 399 million at 31 December 2018 (2017: DKK 397 million)
- trading in financial instruments; DKK 333 million at 31 December 2018 (2017: DKK 40 million).

At 31 December 2018, we had received collateral in the amount of DKK 852 million (2017: DKK 787 million) concerning the positive market value of derivatives.

Cash not available for use comprise:

- collateral for insurance-related provisions; DKK 264 million (2017: DKK 312 million)
- collateral for US power purchase agreements; DKK 246 million (2017: DKK 0 million)
- collateral for other transactions; DKK 342 million (2017: DKK 0 million).

### Financial resources, DKK million

\* The amount primarily relates to reclassified hybrid capital. See more in note 6.3 'Hybrid capital'.

#### Maturity analysis of loans and borrowings

The Group's cash needs in respect of its financial loans and borrowings are shown in the table on the left. The maturity analysis was determined on 31 December.

The maturity analysis is based on undiscounted cash flows, including estimated interest payments. Interest payments are based on market conditions and interest-rate hedging entered into on 31 December.

The maturity analysis does not include hybrid capital classified as equity. At 31 December 2018, we had issued hybrid capital with a notional amount totalling DKK 13,432 million due in 3013 (DKK 5,224 million), 3015 (DKK 4,477 million) and 3017 (DKK 3,731 million), respectively.

#### Accounting policies

Securities comprise bonds that are monitored, measured and reported at market value on an on-going basis in conformity with the Group's investment policy. Changes in market value are recognised in profit (loss) for the year as financial income and expenses. Purchase and sale of securities are recognised at the settlement date.

For listed securities, market value equals the market price, and for unlisted securities, market value is estimated based on generally accepted valuation methods and market data.

Divested securities where repurchase agreements (repo transactions) has been made at the time of sale are recognised in the balance sheet at the settlement date as if the securities were still held. The amount received is recognised as a liability, and the difference between the selling price and the purchase price is recognised in profit (loss) for the year over the term as interest. The return on the securities is recognised in profit (loss) for the year.

## 6.5 Financial income and expenses

### Net financial income and expenses, DKKm

	2018	2017
Interest expenses, net	(877)	(629)
Interest element of provisions, etc.	(408)	(451)
Tax equity partner's contractual return	(44)	-
Capital losses on early repayment of loans and interest rate swaps	-	(230)
Value adjustments of derivatives, net	(64)	(67)
Exchange rate adjustments, net	285	391
Value adjustments of securities, net	(176)	(150)
Other financial income and expenses	6	94
<b>Net financial income and expenses</b>	<b>(1,278)</b>	<b>(1,042)</b>

The table shows net financial income and expenses, corresponding to our internal control.

Exchange rate adjustments and hedging contracts entered into to hedge currency risks are presented net under the item 'Exchange rate adjustments, net'.

### Accounting policies

Market value adjustments of interest rate and currency derivatives that have not been entered into for hedging purposes are presented as financial income or expenses.

The accounting policy for the tax equity partner's contractual return is described in note 4.5 'Tax equity liabilities'.

### Financial income and expenses, DKKm

	2018	2017
Interest income from cash, etc.	62	71
Interest income from securities at market value	264	216
Capital gains on securities at market value	119	250
Foreign exchange gains	2,033	1,523
Value adjustments of derivatives	670	2,043
Other financial income	31	150
<b>Total financial income</b>	<b>3,179</b>	<b>4,253</b>
Interest expenses relating to loans and borrowings, etc.	(1,710)	(1,670)
Interest expenses transferred to assets	506	754
Interest element of provisions	(280)	(303)
Tax equity partner's contractual return	(44)	-
Capital losses on securities at market value	(304)	(419)
Foreign exchange losses	(1,978)	(1,568)
Value adjustments of derivatives	(466)	(1,887)
Other financial expenses	(181)	(202)
<b>Total financial expenses</b>	<b>(4,457)</b>	<b>(5,295)</b>
<b>Net financial income and expenses</b>	<b>(1,278)</b>	<b>(1,042)</b>

Exchange rate adjustments of currency hedging are recognised in revenue and cost of sales with a gain of DKK 268 million (2017: a gain of DKK 190 million).

Borrowing costs transferred to property, plant and equipment under construction are calculated at the weighted average effective interest rate for general borrowing. This amounted to 4.1% in 2018 (2017: 5.3%).

## 6.6 Funds from operations (FFO)/ adjusted interest-bearing net debt

Funds from operations (FFO), DKKm	2018	2017
<b>EBITDA – business performance</b>	<b>30,029</b>	<b>22,519</b>
Interest expenses, net	(877)	(629)
Reversal of interest expenses transferred to assets	(506)	(754)
Interest element of decommissioning obligations	(192)	(194)
50% of coupon payments on hybrid capital	(272)	(320)
Calculated interest paid on operating lease obligations	(196)	(234)
<b>Adjusted interest expenses, net</b>	<b>(2,043)</b>	<b>(2,131)</b>
Reversal of gain (loss) on divestment of assets	(14,995)	(10,835)
Reversal of recognised operating lease payment in profit (loss) for the year	778	885
Total current tax	(3,068)	(2,447)
<b>Funds from operations (FFO)</b>	<b>10,701</b>	<b>7,991</b>

The table shows which items are included in FFO. FFO is calculated for the continuing operations.

Adjusted interest-bearing net debt, DKKm	2018	2017
<b>Total interest-bearing net debt</b>	<b>(2,219)</b>	<b>(1,517)</b>
50% of hybrid capital	6,619	6,619
Cash and securities not available for distribution, excluding repo loans	1,583	749
Present value of operating lease payments	4,819	6,095
Decommissioning obligations	5,471	4,751
Deferred tax on decommissioning obligations	(757)	(797)
<b>Total adjusted interest-bearing net debt</b>	<b>15,516</b>	<b>15,900</b>

The table shows which items are included in the adjusted interest-bearing debt as well as FFO relative to adjusted interest-bearing debt.

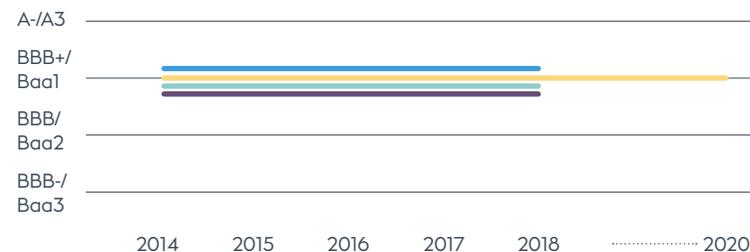

Funds from operations (FFO)/ adjusted interest-bearing net debt, %	2018	2017
<b>Funds from operations (FFO)/ adjusted interest-bearing net debt</b>	<b>69.0%</b>	<b>50.3%</b>

Our long-term target is for funds from operations (FFO) to be around 30% of adjusted interest-bearing net debt.

FFO/adjusted interest-bearing net debt was 69% in 2018, exceeding the target.

### Rating, category

● S&P ● Moody's ● Fitch ● Financial objective

The figure shows the development in our credit rating since 2014 compared to our objective.

# 7. Risk management

Risk management	146
Market risks	147
Hedge accounting and economic hedging	150
Energy trading portfolio	152
Sensitivity analysis of financial instruments	153
Credit risks	154
Categories of financial instruments	155
Fair value measurement	156

# 7. Risk management

Market and credit risks are a natural part of our business activities and a precondition for being able to create value. Through risk management, risks are reduced to an acceptable level.

## Aquisitions in 2018

We have acquired Lincoln Clean Energy in October 2018 and Deepwater Wind in November 2018. The two acquisitions have increased our power and USD exposure.

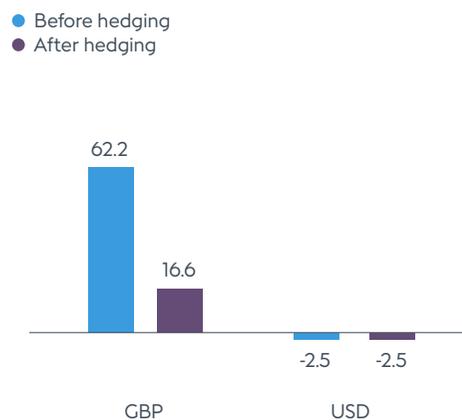

## Currency and energy exposures

At the end of 2018, our forward-looking energy and currency exposures from production, sales, investments and divestments for 2019-2023 had been reduced from DKK 24.0 billion and DKK 64.7 billion to DKK 9.1 billion and DKK 19.1 billion respectively via hedging.

## Trading portfolio

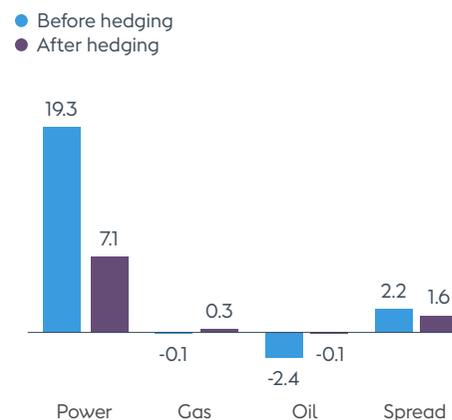

We have a limited trading portfolio, the main purpose of which is to optimise the execution of hedging contracts and gain from short-term energy price fluctuations. The trading activities comply with the mandates approved by the Board of Directors. Read more in note 7.3 'Energy Trading portfolio'.

Currency exposure 2019-2023, DKKbn

Our currency exposure for 2019-2023 totalled DKK 64.7 billion before hedging and DKK 19.1 billion after hedging at the end of 2018. We do not deem EUR to constitute a risk, as we expect that Denmark will maintain its fixed exchange-rate policy.

Energy exposure 2019-2023, DKKbn

Our energy exposures for 2019-2023 totalled DKK 24.0 billion before hedging and DKK 9.1 billion after hedging at the end of 2018.

# 5 years

We hedge prices for up to five years to reduce cash flow fluctuations.

# +0.4bn

In 2018, business performance EBITDA was positively impacted by DKK 368 million from hedging instruments against a positive impact by DKK 1,665 million in 2017.

# -3.0bn

The value of our energy and currency hedging instruments at 31 December 2018 was negative at DKK 3,032 million, which will reduce business performance EBITDA in a future period, against DKK -812 million at 31 December 2017.

# 7.1 Market risks

## Market risks and market risk management

Our most significant market risks relate to:

- energy prices
- foreign exchange rates
- inflation rates and
- interest rates.

We manage market risks to protect Ørsted against market price volatility and ensure stable and robust financial ratios that support our growth strategy.

In the first five years, we primarily hedge future prices using derivatives to reduce cash flow fluctuations. We are almost fully hedged in the first two years. At longer durations, we also manage our market risks; our power exposure is partly mitigated through long term power purchasing agreements (PPA), and debt is used to manage currency, interest rate and inflation risk. Our long-term risk picture is determined by our strategic asset portfolio.

Minimum hedging levels are determined by the Board of Directors. In the first two years, a high degree of hedging is wanted to ensure stable cash flows after tax. The degree of hedging is declining in subsequent years.

This is due to:

- reduced certainty about long-term production volumes and
- increasing hedging costs in the medium to long term; both spread costs and cost of collateral.

## Energy price risks

Our consolidated energy exposure after hedging for the years 2019-2023 can be summarised as shown in the table.

Risk after hedging DKKbn	Effect of price change	
	+10%	-10%
Power: 7.1 sales position	+0.7	-0.7
Gas: 0.1 sales position	+0.0	-0.0
Oil: 0.1 purchase position	-0.0	+0.0
Spread: 1.6 sales position	+0.2	-0.2

A 10% increase in the power price in 2019-2023 will therefore result in a gain of DKK 0.7 billion in the period, all else remaining unchanged.

## Currency risks

Our consolidated currency exposure after hedging for the years 2019-2023 can be summarised as shown in the table.

Risk after hedging DKKbn	Effect of price change	
	+10%	-10%
GBP: 16.6 sales position	+1.7	-1.7
USD: 2.5 purchase position	-0.3	+0.3

Our largest currency exposure relates to GBP due to our investments in offshore wind farms in the UK. During 2018, we have experienced a substantial increase in long-term USD exposure, due to acquisition of both onshore and offshore companies in the US. Our exposure towards New Taiwan Dollar will increase if we

take final investment decision for the awarded offshore capacity in Taiwan.

In general, highly certain cash flows in foreign currencies are hedged within the first five years.

This means that exchange rates related to energy prices in foreign currency are not hedged until the energy price is hedged. Hence, GBP exchange rates associated with power generation in the UK is not hedged until the GBP power price is hedged.

Cash flows that relate to fixed tariffs and guaranteed minimum prices from offshore wind farms in the UK deviate from the main principle. Hedging of these, less operating expenses, is based on a declining level of

hedging over the five-year risk management horizon. The target is to hedge 100% of the risk in year 1, declining by 20 percentage points each year, to 20% in year 5.

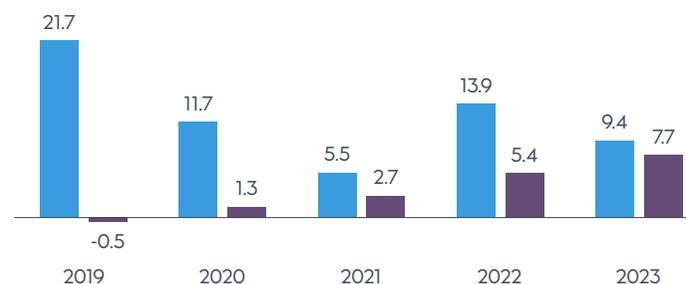

Our GBP exposure amounted to DKK 16.6 billion after hedging for the years 2019-2023. This unhedged GBP exposure stems from subsidised GBP income less operational expenditures.

The GBP exchange rate for hedges impacting EBITDA in 2019 and 2020 is hedged at an average exchange rate of DKK/GBP 8.4 and 8.4.

Our EUR risk is subject to continuous assessment, but is generally not hedged as we believe that Denmark will maintain its fixed exchange-rate policy.

## GBP exposures, DKKbn

- Before hedging
- After hedging

The graph shows our GBP exposure before and after hedges from:

- divestment and investment
- green certificates
- hedged energy.

### Interest rate and inflation risk

We manage interest rate and inflation risk by matching the sensitivity of our assets with the sensitivity of our debt.

The majority of our inflation risk relates to revenue from offshore wind farms. Subsidy regimes for offshore wind varies from country to country:

- In the UK, the fixed tariff is adjusted with inflation
- In Denmark, Germany and the Netherlands, the fixed tariff is not adjusted.

This results in an inflation risk for earnings from tariff-based wind farms in Denmark, Germany and the Netherlands. The share of our debt which is fixed in nominal terms partially offsets this inflation risk. We have fixed the inflation for part of the future revenue from our UK offshore wind farms at an average of 3.5% for the period 2024-2037 to create a better match with our fixed rate UK debt.

Fixed tariffs for future projects in the US and potentially Taiwan will also not be adjusted with inflation.

### Offshore

Earnings from offshore wind farms mainly comprise:

- fixed tariffs in Denmark, Germany, the Netherlands, UK (CfD farms) and in the future also US and Taiwan
- guaranteed minimum prices for green certificates in the UK (ROC farms)
- sale of power at market prices from our out-of-subsidy farms or ROC farms in the UK.

At the end of 2018, such fixed tariffs and guaranteed minimum prices cover 81% of the

expected income from offshore wind farms over the next five years. The remaining price exposure concerns sales of power at market price in the UK and Denmark.

### Onshore

Earnings from the generation of power from our onshore wind farms in the US comprise tax incentives, such as PTCs or ITCs and power. The tax incentives have a fixed value. But there is a price risk associated with the power which is reduced by entering into PPAs. The current PPAs cover approx. 78% of the expected generation, spanning 12-15 years from the commissioning of the wind farm. The PPAs are entered into with large corporates or financial institutions.

### Bioenergy

Our CHP plant portfolio consists of biomass- and coal-fired plants in Denmark and a Renaissance plant in the UK. The CHP plants generate both heat and power.

Concurrently with the biomass conversion of our CHP plants, a larger share of our earnings will be coming from our heat generation. Heat generation does not give rise to price risk as the associated costs are covered by the heat customers. However, heat generation often entails a price risk for power, as heat and power to a large extend are generated simultaneously.

The profitability of power generation is determined by the difference between the selling price of power and the purchase price of fuel and carbon emissions allowances. For our coal-based power generation, we secure profitability by selling power and buying fuel and carbon emissions allowances, while for biomass-based power generation, we secure profitability by

buying biomass at fixed prices and hedging the associated power generation. At the end of 2018, 52% of the power generation expected in 2019 from our power stations was hedged. The total net risk associated with the power stations' power generation for the 2019-2023 period is DKK 1.6 billion after hedging.

### Customer Solutions

Our price risk in Customer Solutions arises from the purchase and sale of power and gas. The price risks associated with the purchase and sale of gas result from differences in the indexing of sales and purchase prices. Our largest gas purchase contracts include the option of renegotiating the contract price if it no longer reflects market conditions. We have completed most of these renegotiations in recent years; as a result, the contract prices have largely been indexed to pure gas prices and not to oil prices, as was previously the case. We are therefore less sensitive to differences in the oil and gas price development than before. Going forward, our oil price risk may rise again, as we conclude new LNG purchase agreements, which are typically oil-indexed. The price risks associated with power purchases and sales are given by the difference between the purchase and sales prices. The price risk relates primarily to timing differences between purchases and sales and the related hedges and is therefore considered to be limited.

### Principles for estimating exposures

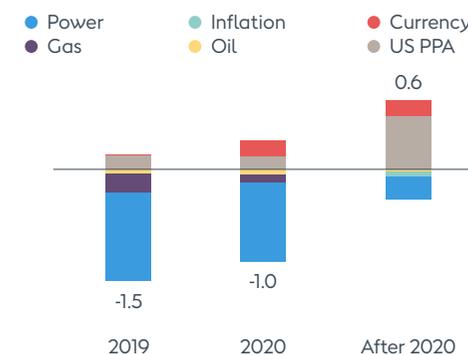

Exposure is calculated as the expected production (or net purchase/sale) times the forward price for the respective years. In addition, the exposure is determined on the basis of the expected exposure after renegotiations of oil-indexed gas purchase contracts.

### Offshore's power price exposure, DKKbn

The table shows the exposure from Offshore's generation of power before and after hedges.

### Expected value for recognition in business performance EBITDA, DKKbn

The table shows the time of the transfer of the value of hedging contracts in business performance EBITDA for both business performance and IFRS hedges together with deferred revenue from US power purchase agreements; see note 1.6 'Business performance'.

The table shows the Group's derivatives and commercial contracts according to the type of accounting treatment and the items affected. The accounting treatment and classification of hedging contracts depend on the purpose of the hedging:

- Economic hedging comprises hedging of energy-related risks and related currency risks. These hedging contracts are treated as hedge accounting in accordance with the business performance principle (see note 1.6 'Business performance' for a detailed description), whereby the value adjustment (loss/gain) is deferred and only recognised during the period in which the hedged transaction materialises. Under IFRS, the value adjustment of this type of hedging is recognised directly in the income statement.
- Hedging of cash flows concerning interest rates, inflation and currencies comprises hedging of future interest payments and currency risks on future income. When hedging cash flows, the effective portion of the market value is temporarily recognised in equity until the hedged transaction materialises.
- Hedging of the market value of securities or currencies comprises hedging of recognised assets or liabilities. By hedging the market value, the effective portion of the market value is recognised in profit (loss) for the year together with changes in the market value of the hedged asset or the hedged liability.
- Hedging of net investments comprises hedging of the currency risk associated with investments in assets located in foreign countries. By hedging net investments, the effective portion of the market value is recognised in equity until the hedged net investment is divested.
- The trading portfolio and other interest and currency derivatives are recognised at market value in the income statement.

Note 1.1 'Significant changes in the current reporting period' provides further details on economic hedging, including information about the underlying products traded.

## 7.2 Hedge accounting and economic hedging

Hedge accounting 2018, DKKm	Contractual principal amount	Maturity analysis			Market value		Recognised in compre- hensive income	Expected transfers to income statement

### Accounting policies

We primarily use hedge accounting for currency and interest where it is possible to use hedging instruments which hedge the desired risk one-to-one. The GBP exposure, for example, is hedged using GBP forward exchange contracts, GBP swaps or GBP loans. There are thus no significant sources of ineffectiveness. For currency swaps, the basic spread is accounted for according to the cost of the hedging model.

To the extent that a risk needs to be hedged, and if there is no fully effective instrument available in the market, analyses are performed of the expected effectiveness of the hedging instrument before the hedging transaction is concluded. In this case, the ratio between the hedged risk and the hedging instrument may deviate from the one-to-one principle and will be determined as the ratio which most effectively hedges the desired risk.

We recognise changes to the market value of hedging instruments that qualify for recognition as a hedge of future cash flows in other comprehensive income in the hedging reserve. On realisation of the hedged cash flow, the resulting gains or losses are transferred from equity and recognised in the same item as the hedged item. However, on hedging of proceeds from future loans, the resulting gain or loss is transferred from equity over the term of the loan.

When we conclude a hedging transaction, and each time we present financial statements thereafter, we assess whether the hedged exposure and the hedging instrument are still financially correlated. If the hedged cash flows are no longer expected to be realised, the accumulated value change is transferred to profit (loss) for the year.

### Cash flow hedging

We have entered into forward exchange contracts for the purpose of hedging the currency risk associated with the construction of offshore wind farms which are expected to be divested.

Ineffectiveness of currency hedging totalled DKK 0 million (2017: DKK 0 million). Forward exchange contracts have also been concluded for the purpose of hedging the currency risk associated with interest payments on loans in GBP.

All hedges take place using an instrument with the same price risk as the exposure. The GBP exposure, for example, is hedged using GBP derivatives or GBP loans. Therefore, the hedging ratio for all IFRS hedges is one-to-one.

Changes in the market value of derivatives that are classified as hedges of the fair value of a recognised asset or liability are recognised in profit (loss) for the year together with changes in the value of the hedged asset or liability to the extent of the hedged risk.

### Economic hedging and commercial contracts

The purpose of economic hedging is to reduce our risk from generation and sale of energy. Fluctuations in value are expected to be offset by the underlying exposure.

When the market value of contracts classified as economic hedging, commercial contracts and partly cash flow hedging (currency) is recognised in the income statement, we present them in the hedging item which is included in EBITDA.

We have entered into a number of commercial contracts under which physical delivery is made, and which are managed together with the financial contracts, for which reason they are recognised at market value in accordance with IFRS.

Under the business performance principle, the market value adjustment of contracts concluded for the purpose of economic hedging and commercial contracts is deferred to the period during which the hedged transaction affects results. See note 1.6 'Business performance'.

Our hedging of energy prices and commercial contracts recognised at market value is specified in the table below.

### Hedging of net investments in foreign subsidiaries

Our foreign activities entail currency risk. We hedge this currency risk by raising loans in foreign currencies, entering into forward exchange contracts and investing in currency swaps and options.

	2018		2017	
	Contractual principal amount	Market value	Contractual principal amount	Market value
<b>Economic hedging and commercial contracts, DKKm</b>				
<b>Energy</b>				
Oil swaps	2,442	(182)	3,595	374
Gas swaps	5,717	(412)	6,939	(626)
Power swaps	16,543	(3,267)	7,745	(1,009)
Power options	2,900	48	2,941	280
Coal	325	7	176	41
<b>Currency</b>				
Forward exchange contracts	29,684	712	25,303	592
<b>Total</b>	<b>57,611</b>	<b>(3,094)</b>	<b>46,699</b>	<b>(348)</b>

Under the business performance principle, economic hedging is accounted for as effective hedging. The resulting market value adjustment is consequently deferred to the period in which the hedged transaction affects results.

The contractual principal amount has been determined as the net position per derivative type.

On 31 December 2018, the accumulated exchange rate adjustments totalled DKK -1,660 million divided between the exchange rate adjustment of the net investment of DKK -2,329 million and the hedging thereof of DKK 669 million.

### Accounting policies

#### Economic hedging and commercial contracts

Market value adjustments of financial contracts offered to customers with a view to price hedging and financial instruments that have been entered into to hedge the Group's principal operating activities are recognised as revenue or cost of sales.

Under the business performance principle, economic hedging is accounted for as effective hedging. The resulting market value adjustment is consequently deferred to the period in which the hedged

ineffectiveness relating to hedging of net investments in foreign subsidiaries totalled DKK 0 million (2017: DKK 0 million).

transaction affects results. See note 1.6 'Business performance' for further information.

The contractual principal amount has been determined as net position per derivative type.

#### Hedging of net investments in foreign subsidiaries

Changes in the market value of derivatives and loans that are used to hedge net investments in foreign subsidiaries or associates are recognised in the consolidated financial statements directly in equity within a separate foreign currency translation reserve.

### Hedging of net investments in foreign subsidiaries, DKKm

2018	Net investment <sup>1</sup>	Of which non-controlling interests	Hedged amount in currency	Net position	Accumulated exchange rate adjustment in equity
<b>Currency</b>					
GBP	46,468	(3,377)	(23,281)	19,810	(1,583)
EUR	23,871	-	(4,477)	19,394	14
USD	9,060	-	(81)	8,979	(48)
Other	237	-	-	237	(43)
<b>Total</b>	<b>79,636</b>	<b>(3,377)</b>	<b>(27,839)</b>	<b>48,420</b>	<b>(1,660)</b>
2017					
<b>Currency</b>					
GBP	35,991	(3,777)	(23,868)	8,346	(1,527)
EUR	13,784	-	(5,668)	8,116	(15)
USD	152	-	(150)	2	(18)
Other	134	-	-	134	(46)
<b>Total</b>	<b>50,061</b>	<b>(3,777)</b>	<b>(29,686)</b>	<b>16,598</b>	<b>(1,606)</b>

The table shows our hedging of investments in foreign subsidiaries. The table also shows the exchange rate adjustment of the investment as well as the associated hedging value.

The net position expresses the accounting exposure. If, for example, the GBP/DKK exchange rate increased with 10% on 31 December 2018, equity would have increased by DKK 1,981 million, corresponding to 10% of DKK 19,810 million.

# 7.3 Energy trading portfolio

## Trading portfolio

The purpose of our trading portfolio is to:

- optimise hedging contracts
- contribute to increased market insight and
- profit from short-term fluctuations in energy prices.

The trading portfolio consists primarily of positions in power and gas.

The trading portfolio constitutes a smaller part of our total portfolio of derivatives, and the associated risk is limited. Also, earnings from the trading portfolio constitute a limited share of our total earnings.

When an economic hedging instrument (business performance hedge) does not fully correspond to the hedged risk, any difference between the hedging contract entered into and the hedged exposure is recognised in the income statement as part of the gain (loss) from the trading portfolio.

Overview of the Group's trading portfolio, DKKm	2018		2017	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Oil swaps	184	182	287	(361)
Gas swaps and options	1,126	308	2,772	170
Power swaps and options	5,142	(127)	5,566	363
Carbon emissions allowances	7	(43)	44	(14)
Coal	50	(7)	51	(40)
<b>Total</b>	<b>6,509</b>	<b>313</b>	<b>8,720</b>	<b>118</b>

The contractual principal amount has been determined as the net position per derivative type. The table shows the market value of our derivatives which are included in the trading portfolio at 31 December.

## Market trading mandates

VaR limit in 2018: DKK 70 million	Stress limit in 2018: DKK 400 million	Maximum open positions in trading portfolio
VaR indicates the largest loss in one trading day to a probability of 95%. VaR is based on data for the past 60 trading days with the heaviest weighting being assigned to the most recent trading days.	Stress indicates the largest daily loss we risk sustaining with the given portfolio. Stress is based on data from 1 January 2006 to the present day.	<ul style="list-style-type: none"> <li>– Max. 15TWh of, gas</li> <li>– Max. 4 million boe of oil</li> <li>– Max. 8TWh of power</li> <li>– Max. 3 million tonnes of CO<sub>2</sub></li> <li>– Max. 2 million tonnes of coal</li> </ul>

Trading activities are carried out within mandates approved by the Board of Directors. The mandates comprise a value-at-risk (VaR) mandate and a stress mandate as well as a limit for the maximum positions measured in energy units per product (oil, gas, etc.).

## Daily position in the trading portfolio, market trading mandates, DKKm

## Accounting policies

Market value adjustments of physical and financial contracts relating to energy that are entered into with the purpose of generating gains from short-term price changes are recognised as revenue.

The graph shows the daily value at risk position for the period 2017-2018. The mandates from the Board of Directors and Group Executive Management have not been breached during the period.

## 7.4 Sensitivity analysis of financial instruments

The sensitivity analysis in the table shows the effect of market value changes assuming a relative price change at 31 December 2018.

The effect on profit (loss) before tax comprises financial instruments that remained open at the balance sheet date, and which have an effect on profit (loss) in the current financial year. The effect is broken down by:

- trading portfolio; these contracts will affect profit
- other financial instruments, including economic hedging and commercial contracts; the market value changes of contracts allocated as economic hedges will be offset, in full or in part, by a change in the hedged risk.

Effect on equity before tax comprises financial instruments that remained open at the balance sheet date, and which are value-adjusted directly in equity.

Financial instruments include derivatives as well as receivables and payables in foreign currencies.

The illustrated sensitivities only comprise our financial instruments and therefore omit the effect from contracts concluded under which physical delivery of the underlying assets is made, as these are not recognised as financial instruments.

### Sensitivity analysis of financial instruments DKKm

Risk	Price change	31 December 2018			31 December 2017		
		Effect on profit (loss) before tax		Effect on equity before tax	Effect on profit (loss) before tax		Effect on equity before tax
		Trading portfolio	Other financial instruments <sup>1</sup>		Trading portfolio	Other financial instruments <sup>1</sup>	
Oil	10%	(220)	230	-	10	134	-
	-10%	220	(230)	-	(10)	(134)	-
Gas	10%	12	(511)	-	(81)	(607)	-
	-10%	(12)	511	-	75	607	-
Power	10%	73	(2,385)	-	86	(952)	-
	-10%	(53)	2,365	-	(81)	959	-
Coal	10%	(33)	(5)	-	(6)	(43)	-
	-10%	33	5	-	6	43	-
USD	10%	(16)	(301)	(115)	91	131	(132)
	-10%	16	301	115	(91)	(131)	132
GBP	10%	51	(2,905)	(856)	31	(2,312)	(1,534)
	-10%	(51)	2,905	856	(31)	2,312	1,942
EUR	10%	(228)	(1,353)	420	419	(1,304)	522
	-10%	228	1,353	(420)	(419)	1,304	(522)
Interest	100 basis points	(454)	-	161	(565)	-	-
Inflation	100 basis points	-	-	(1,770)	-	-	-

<sup>1</sup> Other financial instruments, including derivatives classified as economic hedging, comprise derivatives entered into to hedge future financial risks. The market value changes of these contracts will be offset, in full or in part, by a change in the hedged risk. Also included are commercial contracts recognised at market value.

If the hedged exposure had been included in the sensitivity analysis, the effect of a price change would have been reduced or offset entirely.

Net investments and associated hedging of net investments in foreign subsidiaries are

not included in the table, as the effect of the sum of the investment and the hedging are considered to be neutral to price changes.

A 10% increase in the currencies hedged in connection with net investments would reduce equity by DKK -2,784 million (2017: DKK -2,969

million), arising from the hedging instruments. All other conditions being equal, a decrease in the exchange rate would have had a corresponding opposite effect.

## 7.5 Credit risks

We are exposed to credit risks from our trading partners and customers. A large part of our counterparty risks concerns major international energy companies and banks. Such trading is regulated under standard agreements, such as EFET and ISDA agreements, which feature, for instance, credit rating and netting provisions. Our credit exposure is mainly concentrated on counterparties in Denmark, the UK, Germany and Sweden.

We limit our credit risks by:

- systematically rating significant counterparties
- granting credit limits or
- demanding that collateral be furnished or credit insurance put in place.

### Credit quality of the Group's counterparties, DKKm

	2018	2017
AAA/Aaa	20,949	23,329
AA/Aa	3,078	5,197
A/A	6,428	4,969
BBB/Baa	3,817	1,712
Non-rated	11,638	11,072
<b>Total credit exposure</b>	<b>45,910</b>	<b>46,279</b>

The table shows the credit quality of our counterparties, distributed by category. In addition, we have receivables and construction agreements related to the construction of offshore wind farms amounting to DKK 6,951 million (2017: DKK 13,349 million) where we have collateral in the offshore wind farm under construction.

<b>Offsetting of financial assets, DKKm</b>	Derivatives	Trade receivables	2018	Derivatives	Trade receivables	2017
Financial assets	12,173	23,173	35,346	9,743	33,270	43,013
Financial liabilities, offset	(7,435)	(20,060)	(27,495)	(5,000)	(29,480)	(34,480)
<b>Financial assets in the balance sheet</b>	<b>4,738</b>	<b>3,113</b>	<b>7,851</b>	<b>4,743</b>	<b>3,790</b>	<b>8,533</b>
Amounts not offset in the balance sheet:						
Liabilities with set-off rights	(1,485)	-	(1,485)	(1,611)	-	(1,611)
Collateral received in the form of bonds	(614)	-	(614)	(787)	-	(787)
<b>Net</b>	<b>2,639</b>	<b>3,113</b>	<b>5,752</b>	<b>2,345</b>	<b>3,790</b>	<b>6,135</b>

The table shows our financial assets and liabilities where a share is offset and is therefore presented net. Offsetting is typically limited within specific products.

<b>Offsetting of financial liabilities, DKKm</b>	Derivatives	Trade payables	2018	Derivatives	Trade payables	2017
Financial liabilities	13,410	23,085	36,495	8,700	32,327	41,027
Financial assets, offset	(7,435)	(20,060)	(27,495)	(5,000)	(29,480)	(34,480)
<b>Financial liabilities in the balance sheet</b>	<b>5,975</b>	<b>3,025</b>	<b>9,000</b>	<b>3,700</b>	<b>2,847</b>	<b>6,547</b>
Amounts not offset in the balance sheet:						
Assets with set-off rights	(1,485)	-	(1,485)	(1,611)	-	(1,611)
Collateral provided in the form of bonds	(713)	-	(713)	(40)	-	(40)
<b>Net</b>	<b>3,777</b>	<b>3,025</b>	<b>6,802</b>	<b>2,049</b>	<b>2,847</b>	<b>4,896</b>

The counterparties and credit limits granted are monitored on an ongoing basis. The monitoring is based on the framework established by our Board of Directors and Group Executive Management. For the most significant counterparties, an internal credit rating is required to determine the internal rating and the granting of credit limits. The rating is based on information from external credit rating agencies, publicly available information and own analyses.

We suffered no losses from any single major counterparty in 2018 or 2017.

The credit risk from our financial assets primarily concerns derivatives, cash and bond portfolios as well as receivables. The assessment is based on the individual counterparty's ratings with Standard & Poor's, Moody's and Fitch. The figures do not reflect our actual credit exposure as the positions are calculated before offsetting our debt to such counterparties.

The AAA/Aaa category covers our position in Danish AAA-rated government and mortgage bonds. The non-rated category primarily consists of trade receivables from customers, such as end-users.

### Accounting policies

We only offset positive and negative values if we are entitled to and intend to settle several financial instruments net.

## 7.6 Categories of financial instruments

Financial instruments are used for various purposes. The purpose determines the category, and whether the value adjustment of the instrument should be recognised in the profit (loss) for the year or as part of the hedging reserve in equity.

The fair value of financial instruments measured at amortised cost is identical to the carrying amount with the exception of bank loans and issued bonds where the market value is stated in note 6.1 'Interest-bearing debt'.

Categories of financial instruments, DKKm	2018	2017
Energy and currency derivatives	4,096	2,589
Securities	25,501	25,280
<b>Financial assets measured at fair value via the income statement</b>	<b>29,597</b>	<b>27,869</b>
Interest and inflation derivatives	90	-
Currency derivatives	1,282	2,281
<b>Derivatives (assets) used as hedging instruments</b>	<b>1,372</b>	<b>2,281</b>
Trade receivables	10,741	9,170
Other accounts receivable	8,896	8,812
<b>Financial assets measured at amortised cost</b>	<b>19,637</b>	<b>17,982</b>
Energy and currency derivatives	6,480	2,214
<b>Financial liabilities measured at fair value via the income statement</b>	<b>6,480</b>	<b>2,214</b>
Interest and inflation derivatives	103	-
Currency derivatives	1,511	2,160
<b>Derivatives (liabilities) used as hedging instruments</b>	<b>1,614</b>	<b>2,160</b>
Bank loans and issued bonds	27,296	29,636
Trade payables	13,082	11,499
Other accounts payable	3,207	2,767
<b>Financial liabilities measured at amortised cost</b>	<b>43,585</b>	<b>43,902</b>

The table shows our financial instruments divided into categories. The categories indicate how the financial instruments are recognised in the financial statement.

## 7.7 Fair value measurement

During 2018 we have entered into a number of power purchase agreements (PPAs) in the US accounted for at fair value. The duration of these PPAs are 13-15 year. Since power prices are only available in five to sixth years we have classified these agreements as based on non-observable input.

### Valuation principles and key assumptions

In order to minimise the use of subjective estimates or modifications of parameters and calculation models, it is our policy to determine fair values based on the external information that most accurately reflects the market values. We use pricing services and benchmark services to increase the data

quality. Market values are determined by the Treasury & Risk Management function, which reports to the CFO. The development in market values is monitored on a continuing basis and reported to the Group Executive Management.

### Deferred revenue from US power purchase agreements

The deferred revenue from US PPAs consist of losses not recognised at initial recognition since the market value is based on non-observable inputs. The US PPAs were taken over as part of the purchase of Lincoln Clean Energy in the US. The PPAs lock in the power price of the expected power generation over

a period of 13 to 15 years. These contracts are accounted for at fair value. Due to the long duration of these PPAs, power prices are not observable for a large part of the duration, whereby the estimated fair value is categorised as based on non-observable input.

The deferred revenue is recognised in profit or loss in the future period where the market value relate. In 2018, we have recognised an income of DKK 12 million related to the deferred fair value of PPAs not recognised in profit or loss at initial recognition. The total amount of deferred revenue as of 31 December 2018 amounts to DKK 1,183 million (2017: DKK 0 million).

### Significant non-observable inputs

Market values based on non-observable input comprise primarily long-term contracts on the purchase/sale of, in particular power and to a less extent gas, coal, USD, EUR. Since there are no active markets for the long-term prices of power and gas, the market values have been determined through an estimate of the future prices. Normally, the price can be observed for a maximum of four to sixth years in the power market, after which an active market no longer exists. When market prices are no longer available, the price is projected by extending the observable forward curve, only adjusted for the expected development in inflation.

Part of the purchase price of Deepwater Wind is a contingent consideration of DKK 657 million that we will pay upon Deepwater Wind successfully entering into two specific PPAs. The maximum payable consideration is DKK 657 million which we have also estimated to be the fair value, due to our strong expectation of successfully signing the agreements. In connection with the divestment of our Oil & Gas business, we will receive USD 100 million if the Rosebank field is developed. This payment is recognised at market value under other receivables.

Fair value hierarchy DKKm	Assets			Liabilities	
	Securities	Derivatives	Other receivables	Derivatives	Other payables
<b>2018</b>

Market value at 1 January		(157)
Net changes in market value		-
<b>Market value at 31 December</b>		<b>(157)</b>

The table shows the movements during the year in the total market value (assets and liabilities) of derivatives valued on the basis of non-observable inputs.

Non-observable inputs, US power prices

● SPP North RT ● Ercot North RT ● Ercot West DA ● Ercot West RT ● Ercot North DA

Non-observable inputs per commodity price input, DKKm		
	2018	2017
US power prices	(2,533)	-
Other power prices	(52)	(157)
Gas prices	127	-
<b>Total</b>	<b>(2,458)</b>	<b>(157)</b>

US power prices are the most significant non-observable input. The non-observable US power prices used as basis for the market values as of 31 December 2018 are illustrated in the graph below.

Sensitivity of non-observable inputs, DKKm

Non-observable inputs	Market value	Sensitivity	
		+10%	-10%
ERCOT North real time, 2024-2033	(194)	(105)	105
ERCOT North day ahead, 2024-2033	(388)	(275)	275
ERCOT West day ahead, 2023-2033	(90)	(33)	33
ERCOT West real time, 2025-2033	(132)	(34)	34
SPP North real time, 2023-2033	(288)	(68)	68
<b>Total</b>	<b>(1,092)</b>	<b>(515)</b>	<b>515</b>

The table shows the market value related to the non-observable input for the stated period and sensitivity per power price index. The sensitivity illustrates the impact on the market value as of 31 December 2018 if the non-observable price increases/decreases by 10%. The most critical non-observable input is US power prices in the period 2023-2033. If power prices as of 31 December 2018 increased/decreased by 10%, the market value would decrease/increase by DKK 515 million. The sensitivity analysis is presented on the different US power price areas in the table above.

Accounting policies

Market values based on quoted prices comprise quoted securities and derivatives that are traded in active markets. The market value of derivatives traded in an active market are often settled on a daily basis, thereby minimising the market value presented on the balance sheet.

Market values based on observable inputs comprise derivatives where valuation models with observable inputs are used to measure fair value.

All assets and liabilities measured at market value are measured on a recurring basis.

In business combinations, gain (loss) at initial recognition on derivatives whose values are based on non-observable inputs are deferred and recognised in the period to which the value relate.

The graph shows the US power prices in the period where prices are not observable, and which we have used as basis for calculating market value as of 31 December 2018.

Auditor's fees	161
Contractual obligations	161
Company overview	162

# 8.1 Related-party transactions

Related parties that have control over the Group comprise the Danish State, represented by the Danish Ministry of Finance.

Related parties with a significant influence included Goldman Sachs until 2 March 2017, when Martin Hintze from Goldman Sachs stepped down from the Ørsted A/S Board of Directors.

Other related parties are the Group's associates and joint ventures, members of the Board of Directors and the Executive Board as well as other senior executives.

See note 8.5 'Company overview' for an overview of our joint ventures and associates.

Related-party transactions are made on arm's length terms. Intra-group transactions have been eliminated in the consolidated financial statements.

The remuneration and share programme for Group Executive Management and the Board of Directors are described in notes 2.6 'Employee costs' and 2.7 'Share-based payment'.

Through a directly owned company, Peter Korsholm, board member, has had ordinary transactions with Danish Oil Pipe A/S, a wholly owned subsidiary in the Ørsted Group.

We use the exemption set out in IAS 24.25 concerning entities in which the Danish State is a related party, and transactions with government-related companies are therefore not disclosed.

Transactions with owners consist solely of transactions with Goldman Sachs until 2 March 2017.

There were no other related-party transactions during the period.

<b>Joint ventures, DKKm</b>	2018	2017

## 8.2 Operating lease obligations

Our total operating lease obligations decreased by DKK 1,300 million relative to last year. The decrease in the obligations is primarily due to the farm-down of the Hornsea 1 and run-off of existing leases. The acquisition of Lincoln Clean Energy (Onshore) and Deepwater Wind (Offshore) added DKK 635 million to the obligations (per 31 December 2018), which partly off-sets the first mentioned effects on the operating lease obligations.

Offshore's assets held under operating leases mainly comprise seabeds relating to the offshore wind farms in the UK and service vessels.

Onshore's leases comprise plots of land relating to onshore wind farms.

Customer Solutions mainly lease gas storage facilities in Germany.

Leased assets recognised under 'Other activities' mainly comprise our two office premises in Gentofte and London. The premises are used by employees in most of our segments.

Seabed leases include variable lease payments which depend on the number of megawatt hours generated. However, we have typically agreed on minimum lease payments for the seabeds.

Lease payments recognised in profit (loss) for the year amounted to DKK 778 million (2017: DKK 885 million).

For the purpose of calculating the FFO/adjusted interest-bearing net debt credit metric, the present value and interest expenses of the lease obligations are calculated. The results and the discount rate are shown in the table with supplementary information for operating lease obligations.

We reduced the discount rate in 2017 due to the continued low interest rate environment.

### Accounting policies

We recognise operating lease payments in profit (loss) for the year over the term of the lease on a straight-line basis. When using assets held under operating leases in respect of construction of offshore wind farms or other assets, we recognise lease payments in the cost of the asset in step with the construction of the asset.

We will implement the new lease accounting rules in IFRS 16 'Leases' on 1 January 2019. See note 1.4 'Implementation of new or changed accounting standards and interpretations'.

### Supplementary information to operating lease obligations, continuing operations, DKKm

	2018	2017
Present value of lease payments	4,819	6,095
Lease payments recognised in profit (loss) for the year	778	885
Calculated interest expenses on lease obligations	196	234
Discount rate applied	3.5%	3.5%

The present value is calculated by discounting the individual obligations each year using our internal discount rate of 3.5% (2017: 3.5%).

## 8.3 Auditor's fees

PwC is Ørsted's auditor appointed by the annual general meeting. PwC audits the consolidated financial statements of Ørsted and our subsidiaries' financial statements in all the countries where we are represented.

It is our policy that the annual fee for non-audit services provided by our statutory auditor cannot exceed the annual fee for statutory audit services measured at Group level. The cap may be exceeded subject to approval by the Audit and Risk Committee.

Other assurance engagements primarily included reviews of ESG data and reviews of regulatory financial statements.

Tax and VAT advice primarily included advice in connection with the divestment of assets and enterprises and advice in connection with the preparation of tax returns and the calculation of the income subject to Danish joint taxation.

Other services include other consultancy services from PwC, including advice in connection with due diligence and the divestment of assets and enterprises.

Fees for services other than statutory audit supplied by PwC Denmark to Ørsted amounted to DKK 9 million (2017: DKK 8 million) and consisted of accounting and tax advice in connection with both acquisition and divestment of assets and enterprises, review of ESG data and other general accounting and tax advice.

Auditor's fees, DKKm	2018	2017
<b>Audit and audit-related fees</b>		
Statutory audit	11	11
Other assurance engagements	2	2
<b>Non-audit services</b>		
Tax and VAT advice	3	4
Other services	7	7
<b>Total fees to PwC</b>	<b>23</b>	<b>24</b>
<b>Fee for non-audit services in percent of statutory audit fee</b>	<b>94%</b>	<b>100%</b>

In 2017, PwC provided advisory services totalling DKK 1.8 million concerning acquisition and divestment activities, which are not included in our limit for the use of PwC for non-audit services.

## 8.4 Contractual obligations

At 31 December 2018, contractual obligations in Offshore mainly related to offshore wind turbines, foundations and cables, etc., for the construction of offshore wind farms. The obligations in Onshore mainly related to purchases of onshore wind

turbines. In Bioenergy, the obligations mainly related to the biomass conversion of Asnæs Power Station, while the obligations of Customer Solutions related to the roll-out of smart meters.

Contractual obligations by segment, DKKm					Total
	Offshore	Onshore	Bioenergy	Customer Solutions

Governance	172

# Basis of reporting

## Consolidated environmental, social and governance (ESG) statements

In the consolidated ESG statements, we give an account of our results, objectives and accounting policies for the ESG data included in the management's review in this report.

Our full ESG data set can be seen in the independent publication '[ESG performance report 2018](#)'. The ESG performance report also includes additional information, such as selected ESG indicators by country and all ESG accounting policies, including a list of references for conversion factors used in calculations.

## Scope and consolidation

Unless otherwise stated, ESG data is reported on the basis of the same principles as the financial statements. Thus, the consolidated ESG statements include consolidated data from the parent company, Ørsted A/S, and subsidiaries controlled by Ørsted A/S. Data from associates and joint ventures are not included.

The consolidation of safety data deviates from the above described principles. Safety data is collected using an operational scope. This means that we, irrespective of our ownership share, include 100% of injuries and hours worked etc., from all operations where Ørsted is responsible for safety, including safety for external suppliers.

Data from acquisitions and divestments are included/excluded from the date of acquisition/divestment.

## Danish Financial Statements Act, sections 99a and 99b

Pursuant to section 99a of the Danish Financial Statements Act, Ørsted is obliged to account for the company's CSR activities and report on business strategies and activities with regard to human rights, labour rights, anti-corruption, the environment and the climate. By publishing our sustainability report ([orsted.com/sustainability2018](#)), Ørsted complies with section 99a of the Danish Financial Statements Act.

Ørsted's work for greater gender diversity at management level is reported in accordance with section 99b of the Danish Financial Statements Act. The reporting of gender diversity can be seen in our ESG performance report 2018.

## Business changes in 2018 affecting ESG data

Acquisition of:

- Lincoln Clean Energy (onshore wind power)
- Deepwater Wind (offshore wind power).

Divestment of:

- 50% of Hornsea 1 (offshore wind farm)
- Encogen (thermal power plant, fossil).

Commissioning of:

- Race Bank (offshore wind farm)
- Walney Extension (offshore wind farm)
- Borkum Riffgrund 2 (offshore wind farm)
- Tahoka (onshore wind farm).

## New ESG indicators in 2018

- Installed renewable capacity.
- Awarded and contracted capacity.
- Onshore wind generation indicators.
- Solar power generation.
- Avoided carbon emissions (was reported in the 2017 ESG performance report).
- Job creation from offshore wind.
- People powered from offshore wind.
- Additional Board of Directors and Group Executive Management information.

## Discontinued ESG indicators

- Wind energy content (replaced by wind speed).
- Employee loyalty (refer to the ESG performance report 2018).

Our full ESG data set can be seen in the ESG performance report 2018. ([orsted.com/ESGperformance2018](#))

# 8.3GW

Our installed renewable capacity increased by 44% from 2017 to 2018. We have a target of 30GW installed renewable capacity in 2030.

# 75%

The green share of our heat and power generation increased from 64% in 2017 to 75% in 2018. We have a target of 99% in 2025.

# 131g

Our greenhouse gas intensity was reduced by 13% to 131g CO<sub>2</sub>/kWh in 2018. Our target is to reach 10g CO<sub>2</sub>/kWh in 2025.

# 4.7

Total recordable injury rate (TRIR) has been reduced from 6.4 in 2017 to 4.7 in 2018. Our target is to reach 3.3 or below in 2025.

# Environment

●		<b>Sum of installed, FID, awarded and contracted renewable capacity</b>	<b>MW</b>		<b>16,764</b>	<b>11,531</b>

<sup>1</sup> additional target is >95% (2023)

<sup>2</sup> additional target is ≤ 100 (2020) and ≤ 20 (2023)

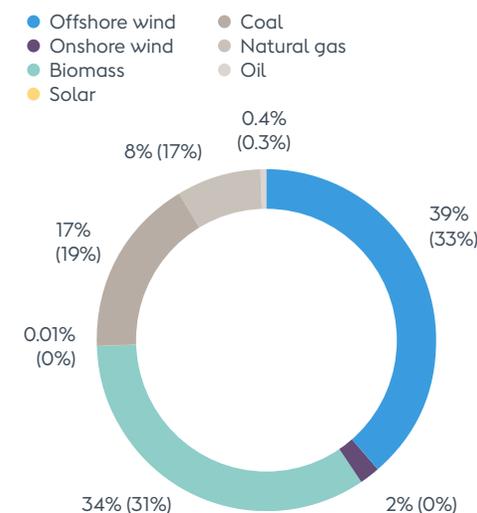

In 2018, we defined an ambition of installing more than 30GW of green capacity by 2030 across offshore wind, onshore wind, bioenergy and solar PV technologies. In addition, our ambition is to have installed 15GW of offshore wind capacity by 2025, up from our previous target of 11-12GW.

The installed renewable capacity increased by 44% in 2018 due to the new offshore wind farms Race Bank, Walney Extension and Borkum Riffgrund 2. In addition, we acquired a small offshore wind farm Block Island, two onshore wind farms Williw Springs and Amazon and commissioned Tahoka.

Our greenhouse gas intensity was reduced by 13% for the same reasons as for the renewable energy share (described to the right). We are well on track to meet our target of a greenhouse gas emission intensity of no more than 20g CO<sub>2</sub>e/ kWh in 2023 and 10g CO<sub>2</sub>e/ kWh in 2025.

**Total heat and power generation 2018 (2017) by energy source**

The green (renewable) share of our heat and power generation amounted to 75% in 2018, up 11 percentage points relative to 2017. The increase was due to higher generation from offshore wind farms, new onshore wind farms, a larger share of biomass-based generation as a result of the conversion of Skærbæk Power Station as well as lower use of gas following the divestment of the Enecogen power plant.

Our target is 99% green energy generation in 2025.

Strategic target	Business driver	Indicator	Unit	Target	2018	2017	
		<b>Generation, power and heat total</b>	<b>TWh</b>		<b>26.0</b>	<b>25.7</b>	
	●	Power generation	TWh		17.2	16.7	
	●	– Offshore wind	TWh		10.0	8.5	↶ Offshore generation capacity increased by 20% to 3.0GW in 2018 following commissioning of Race Bank, Walney Extension and Borkum Riffgrund 2 and acquisition of Deepwater Wind.
	●	– Onshore wind	TWh		0.5	-	The acquisition of Lincoln Clean Energy added 0.8GW onshore capacity in 2018.
	●	– Solar	TWh		0.003	-	
	●	– Thermal	TWh		6.7	8.2	The higher wind capacity contributed to a 24% increase in wind-based generation in 2018.
	●	Heat generation, thermal	TWh		8.8	9.0	
		<b>Offshore wind indicators</b>					
	●	Generation capacity	GW		3.0	2.5	Thermal power generation decreased by 18% in 2018, mainly due to the divestment of the Dutch power plant Enecogen. Power generation from Danish power plants increased by 4%, while thermal heat generation decreased by 2%.
	●	Wind speed	m/s		9.1	9.3	
	●	Load factor	%		42	44	
	●	Availability	%		93	93	The coal share of fuels increased in 2018 as we experienced a higher demand for power in periods where we were not generating heat. In these periods, fossil fuels are normally used. This was offset by a reduction in the use of natural gas and an increase in the use of biomass, resulting in an 11 percentage points higher biomass share of our thermal energy generation.
		<b>Onshore wind indicators</b>					
		Generation capacity	GW		0.8	-	
	●	Wind speed	m/s		7.3	-	
	●	Load factor	%		41	-	
	●	Availability	%		92	-	
		<b>Thermal heat and power generation indicators</b>					
		Power generation capacity	GW		2.8	3.4	The certified share of renewable woody biomass increased from 72% in 2017 to 83% in 2018. The suppliers are still in the process of introducing certifications in their production and supply chains, and only a few suppliers have certified their entire production. We expect the suppliers to continually increase their share of certification. Our target is to source all woody forest-based biomass as certified sustainable biomass by 2020.
		Heat generation capacity	GW		3.4	3.4	
	●	Degree days, Denmark	Number		2,526	2,705	
		Coal share of fuels	%	0 (2023)	38	30	
		Sourcing of certified biomass	%	100% (2020)	83	72

		Average number of employees for the year	Number of FTEs		5,796	5,738
●		Employee satisfaction	Scale 0-100	≥ 77 (2020)	76	76
		<b>Safety</b>				
		Fatalities	Number	0	0	0
		LTIF (lost-time injury frequency)	Per million working hours		1.5	1.6
●		TRIR (total recordable injury rate)	Per million working hours	≤ 3.3 (2025)	4.7	6.4
		<b>Sales and distribution</b>				
	●	Gas sales	TWh		131.1	129.0
	●	Power sales	TWh		35.2	37.5
	●	Power distribution	TWh		8.4	8.4
		<b>Reliability of supply</b>				
		Reliability of supply (power cuts per customer, SAIFI)	Number		0.65	0.42
		<b>Customer satisfaction</b>				
●		Customer satisfaction, B2B	Scale 1-100	≥ 80 (2020)	75	77
●		Customer satisfaction, B2C in Denmark	Scale 1-100	≥ 80 (2020)	74	76
●		Customer satisfaction, distribution customers in Denmark	Scale 1-100	≥ 80 (2020)	81	82
		<b>Job year creation from offshore wind power value chain</b>				
		Total job years over asset lifespans (based on installed and FID capacity)	1,000 FTE years		179	179
		– Based on installed capacity	1,000 FTE years		112	78
		– Based on decided capacity (FID), not yet installed	1,000 FTE years		67	101
		<b>People powered from offshore wind farms</b>				
		Based on installed capacity	Million people		12.5	8.6

The number of employees increased by 8% from 2017 to 2018.

Employee satisfaction continued to be high. With an employee satisfaction score of 76 in this year's employee satisfaction survey, we are close to achieving our target of 77 in 2020.

Safety KPIs showed good progress again in 2018. Our total recordable injury rate (TRIR) declined from 6.4 in 2017 to 4.7 in 2018. We registered 98 total recordable injuries (TRIs), 61 of which involved employees working for our suppliers. LTIF decreased from 1.6 in 2017 to 1.5 in 2018. There were no fatal accidents in 2018. We have set a new ambitious target for TRIR of 3.3 or lower by 2025.

The increase in power cuts per customer (SAIFI) was a result of more interruptions from cable cuts from excavation activities and a higher fault rate on our high voltage grids.

In a lifecycle perspective, our and our partners' investments in deploying green offshore energy have created 179,000 job years.

Our 2025 target of 15GW offshore wind capacity corresponds to more than 30 million people powered. Our 2030 target of 30GW renewable energy corresponds to more than 50 million people powered.

# Governance

Strategic target	Business driver	Indicator	Unit	Target	2018	2017
		<b>Board of Directors, Ørsted A/S</b>

The Board of Directors is responsible for the overall management of the company and appoints the Executive Board. The Board of Directors lays down the company's strategy and makes decisions concerning major investments and divestments, the capital base, key policies, controls and audit matters, risk management and significant operational issues.

Since climate change is fundamental to Ørsted's business strategy and all our investments, climate-related issues are directly or indirectly an agenda item at all board meetings. As such, climate-related issues are integrated in reviewing and guiding strategy, performance and in all aspects of decision-making.

The Board of Directors monitors progress against Ørsted's strategic goals and targets for addressing climate-related issues.

Our employees and other associates may report serious offences, such as cases of bribery, fraud and other criminal offences, through our whistleblower scheme or through our management system. In 2018, two substantiated cases of inappropriate or unlawful behavior were reported through our whistleblower scheme. One case concerned violation of procure-to-pay policies, and one case concerned misappropriation of assets. The cases had consequences for the individuals involved. None of the reported cases were critical to our business or impacted our financial results.

Whistleblower cases are taken very seriously, and we conducted an awareness campaign to avoid similar cases.

## Accounting policies – Environment

### Green share of heat and power generation

The green (renewable energy) share of our heat and power generation and the distribution of the generation on the individual energy sources and fuels are calculated on the basis of the energy sources used and the energy generated at the different energy plants.

Wind and solar-based generation is computed as the input from the individual plant (wind and solar), as there is only one source of power for each plant.

For CHP plants, the share of the specific fuel (e.g. biomass) is calculated relative to the total fuel consumption for a given plant/unit within a given time period. The specific fuel share is then multiplied with the total heat and power generation for the specific plant/unit in the specific period. The result is the fuel-based generation for the individual unit – for example the biomass-based generation of heat and power in the CHP plant unit within a given time period.

Energy generation based on fuel, wind and solar is added up to a total which tallies with total generation. The percentage share of the individual energy sources is calculated by dividing generation from individual energy source with the total generation.

The following energy sources and fuels are considered renewable energy: wind, solar and biomass. The following energy sources are considered fossil energy sources: coal, natural gas and oil.

### Greenhouse gas intensity

Greenhouse gas intensity is defined as the greenhouse gas emissions from the CHP plants divided by the total heat and power generation.

Greenhouse gases comprise greenhouse gas emissions in accordance with the GHG Protocol from the combustion of fuels in thermal heat and power generation. Greenhouse gases thus comprise carbon dioxide (CO<sub>2</sub>), nitrous oxide (N<sub>2</sub>O) and methane (CH<sub>4</sub>).

### Installed renewable energy capacity

The installed renewable energy capacity is calculated as the cumulative renewable gross capacity installed by Ørsted before divestments.

For installed renewable thermal capacity, we use the heat capacity, as heat is the primary thermal energy generation, and as bioconversions of the thermal power stations are driven by heat contracts.

### Decided (FID) capacity

Decided (FID) capacity is the renewable capacity for which a final investment decision (FID) has been made.

### Awarded and contracted renewable capacity

The awarded renewable capacity is based on the capacities which have been awarded to Ørsted in auctions and tenders. The contracted capacity is the capacity for which Ørsted has signed a contract or power purchase agreement (PPA) concerning a new renewable energy plant. Typically, offshore wind farms are awarded, whereas onshore wind farms are contracted. We include the full capacity if more than 50% of PPAs/offtake is secured.

### Generation

Power generation from wind is calculated as sold generation. The Gunfleet Sands and Walney 1 and 2 offshore wind farms have been consolidated according to ownership interest. The other wind farms are financially consolidated.

Thermal power generation is determined as net generation sold based on settlements from the official Danish production database. Data for generation from foreign facilities are provided by the operators.

Thermal heat (including steam) generation is measured as net output sold to heat customers.

### Heat and power generation capacity

Power generation capacity from wind farms is calculated and included from the time when the individual wind turbine has passed a 240-hour test.

The Gunfleet Sands and Walney 1 and 2 offshore wind farms have been consolidated according to ownership interest. Other wind farms and CHP plants are financially consolidated.

The thermal heat and power generation capacity is a measure of the maximum capability to generate heat and power. The capacity can change over time with plant modifications. For each power station, the

capacity is given for generation with the primary fuel mix. Overload is not included.

### Availability and load factor

The time-based availability factor (availability) is calculated as the ratio of the number of hours the wind farms are available for power generation to the total number of hours in a given period. Total availability is determined by weighting the individual wind farm's availability against the capacity of the offshore wind farm. Availability is commercially adjusted.

The load factor is calculated as the ratio between actual generation over a period relative to potential generation which is possible by continuously exploiting the maximum capacity over the same period. The load factor is commercially adjusted.

Commercially adjusted means that, for Danish and German offshore wind farms, availability and load factor, respectively, are adjusted if the offshore wind farm has been financially compensated by the transmission system operators in situations where the offshore wind farm is available for generation, but the output cannot be supplied to the grid due to maintenance or grid interruptions. Wind farms in other countries are not compensated for non-access to the grid. New wind turbines are included in the calculation of availability and load factor once they have passed a 240-hour test.

### Wind speed

Offshore wind speed shows the wind speeds of the areas for Ørsted's offshore wind farms. The wind speeds where the individual offshore wind farms are located are provided to Ørsted by an external supplier. Wind speeds are weighted on the basis of the capacity of the individual offshore wind farms and consolidated to an Ørsted total.

Onshore wind speed is based on wind speed measurements from anemometers on the wind turbines.

### Degree days

Degree days are a measure of how cold it has been and thus indicate the amount of energy needed to heat a building. The number of degree days helps to compare the heat demand for a given year with a

normal year. The number of degree days expresses the difference between an average indoor temperature of 17°C and the outside mean temperature for a given period. The need for heat increases with the number of degree days.

### Coal share of fuels used for thermal heat and power generation

The coal share is calculated as the coal consumption in GJ relative to the total fuel volume in GJ.

### Sourcing of certified biomass

Certified biomass is defined as forest-based woody biomass, i.e. wood pellets and wood chips. Biomass is measured as sourced woody biomass delivered to the individual combined heat and power plants within the reporting period.

Certified sustainable woody biomass sourced must be certified within at least one of the claim categories accepted by the Danish industry agreement on certified biomass. Accepted claim categories are: FSC 100%, FSC Mix, PEFC 100%, SBP compliant.

Certified biomass is calculated as the amount of sourced woody biomass compared to the total amount of sourced woody biomass delivered to individual power stations within the reporting period.

### Biomass share of thermal heat and power generation

This is calculated as the green share of heat and power generation, but is only shown for thermal generation, i.e. for the business unit Bioenergy.

### Avoided carbon emissions

The avoided carbon emissions due to generation from offshore and onshore wind farms are calculated assuming that the generation from wind farms replace an equal quantity of electricity generated using fossil fuels.

The avoided carbon emission due to conversion of combined heat and power plants and subsequent switch of fuel from fossil to biomass (i.e. biomass from dedicated plantations or biomass residues) is calculated from the energy content of the fuel used at power plants. It is assumed that the use of 1GJ of biomass fuel avoids the use of 1GJ of fossil fuels. The upstream emissions from biomass fuel production and transportation are included.

## Accounting policies – Social

### Employees

Our reporting covers contractually employed employees in all Ørsted companies in which Ørsted holds an ownership interest of more than 50%. Employees in associates are not included.

Employee data are recognised based on records from the Group's ordinary registration systems. The number of employees is determined as the number of employees at the end of each month converted to full-time equivalents (FTEs).

Employees who have been made redundant are recognised until the expiry of their notice period, regardless of whether they have been released from all or some of their duties during their notice period.

### Employee satisfaction

Ørsted conducts a comprehensive employee satisfaction survey once a year. All Ørsted employees with a few exceptions are invited to participate in the survey.

The following employees are not invited to participate: Employees who joined the company shortly before the employee satisfaction survey, employees who resigned shortly after the employee satisfaction survey, interns, consultants/advisers and external temporary workers who do not have an employment contract with Ørsted.

In the survey, a number of questions are asked. The answers are given on a scale from 1 to 10 and are subsequently converted to index figures on a scale from 0 to 100.

### Safety

Occupational injuries are calculated according to operational scope. Data from companies wholly or partly owned by Ørsted, and where Ørsted is responsible for safety, is included. Occupational injuries and lost-time injuries are calculated for both our own employees and suppliers. Data from all Ørsted locations is recognised.

The lost-time injury frequency (LTIF) is calculated as the number of lost-time injuries per one million hours worked. The number of hours worked is based on 1,667 working hours annually per full-time employee

and monthly records of the number of employees converted into full-time employees. For suppliers, the actual number of hours worked is recognised on the basis of data provided by the supplier, access control systems at locations or estimates.

LTIF includes lost-time injuries defined as injuries that result in incapacity to work for one or more calendar days in addition to the day of the incident.

In addition to lost-time injuries, TRIR also includes injuries where the injured person is able to perform restricted work the day after the accident as well as accidents where the injured person has received medical treatment.

Fatalities are the number of employees who lost their lives as a result of a work-related incident.

### Sales and distribution

Sales of power and natural gas are calculated as physical sales to retail and wholesale customers and exchanges. Sales of power and gas are based on readings from Ørsted's trading systems. Internal sales to Bioenergy are not included in the statement.

Power distribution is determined on the basis of data from the official system in Denmark, which measures and calculates total area consumption.

### Reliability of supply

System average interruption frequency index (SAIFI) covers the frequency of announced and unannounced power outages for the customer. SAIFI is calculated as the average number of power outages per customer per year. SAIFI is presented here without the transmission grids, as these grids are operated by Energinet and therefore do not lie within the responsibility of Radius.

### Customer satisfaction

Customer satisfaction for residential customers (B2C) in Denmark is measured according to interaction between the customer and Ørsted. The score is therefore not an expression of customers' overall satisfaction with Ørsted, but is rather related to a given situation. The score is calculated as a weighted score based on a number of different types of touch points. The current touch points are customer service for gas and power, outbound sales and web. An external supplier conducts interviews.

Customer satisfaction for business customers (B2B) is determined on the basis of customer satisfaction surveys among Ørsted's business customers in the countries where we have B2B customers. Customer satisfaction is determined on the basis of interviews about customers' satisfaction with Ørsted as a whole. The survey only comprises active customers with whom Ørsted has been in touch in connection with contracts for the supply of power or gas in the previous month. So-called sleeping customers are therefore not included in the statement. The method follows the ACSI model based on the European customer satisfaction index (EPSI) scale. External agencies conduct the interviews and report absolute and weighted results.

Customer satisfaction for distribution customers in Denmark is determined on the basis of different types of interactions with distribution customers: disruption of supply, replacement of meters as well as customer and market support. Customer satisfaction is measured as the customer's satisfaction in a specific context. Respondents are randomly selected, and the survey is carried out by an external supplier.

Customer satisfaction for residential and distribution customers thus relates to a specific situation, whereas customer satisfaction for business customers is an expression of the customer satisfaction with Ørsted as a whole. We have a number of very large business customers. In respect of these, it is important for us to assess the customer relationship in general and not just the experience of a specific situation.

### Job creation

The number of job years is calculated based on a factor for job years per MW installed from the International Renewable Energy Agency, IRENA. The job year creation factor is based on a 500MW offshore wind farm. The factor is not adjusted for other details, such as when the wind farm was constructed (wind turbine size and other parameters), wind farm size-specific parameters beyond a simple scaling of capacity size, geographical position (i.e. water depths and distance to shore).

The number of job years created relates only to the value chain from procurement and manufacturing, over installation, operation and maintenance, to decommissioning.

This means that job years related to for example mining and manufacturing of steel and concrete as well as local jobs, such as hotels and dining for people working on local sites, are not included. A lifetime of 25 years for all wind farms is used.

The number of job years relates to the installed capacity and not Ørsted's ownership share of the wind farm. The number of job years varies during the lifespan, and most of the jobs are created in the beginning during construction and installation.

### People powered

The number of people powered is calculated on the basis of capacity, a fixed industrial load factor for offshore wind farms and country-specific power consumption per person. The indicator is calculated based on the full capacities of the wind farms and not Ørsted's ownership share.

## Accounting policies – Governance

### Board of Directors of Ørsted A/S

The employee representatives on the Board of Directors are not included in the data for the Board of Directors.

### Substantiated whistleblower cases

Ørsted's whistleblower hotline is available for internal and external reporting of suspected cases of inappropriate or illegal behaviour. Whistleblower cases are received and handled by the Internal Audit function, which also receives similar reports through the management system and from compliance officers.

All reports are managed in accordance with the guidelines for the handling of whistleblower reports approved by the Audit and Risk Committee, which is ultimately responsible for the whistleblower scheme.

Only cases, which are closed during the financial year, and which have been reported to the Audit and Risk Committee as fully or partially substantiated, are reported in the ESG statement.

### Cases transferred to the police

Cases transferred to the police are defined as the number of cases reported in accordance with the above which are transferred to the police.

Share capital composition and dividends are disclosed in note 6.2 to the consolidated financial statements. You can also find information on treasury shares.

# 1. Basis of reporting

## Accounting policies

The parent company financial statements have been prepared in accordance with the provisions of the Danish Financial Statements Act (reporting class D).

The accounting policies remain unchanged from the previous year.

Unless otherwise stated, the financial statements are presented in Danish kroner (DKK) rounded to the nearest million.

The parent company accounting policies are consistent with the accounting policies described for the consolidated financial statements, with the following exceptions.

## Foreign currency translation

We recognise exchange rate adjustments of receivables from and payables to subsidiaries as financial income and expenses in the income statement when the balances are accounted for as part of the total net investment in foreign enterprises. Likewise, we recognise foreign exchange gains and losses on loans and derivatives in the income statement as financial income and expenses when they have been entered into to hedge the net investment in the foreign enterprises.

## Revenue

Rental income comprises income from commercial leases and is recognised over the term of the lease. Income from services is recognised when delivery has taken place.

## Dividends from investments

Dividends from subsidiaries and associates are recognised in the income statement for the financial year in which the dividends are approved at the annual general meeting. If the dividends exceed the total income after the time of takeover, the dividends are recognised as a reduction of the cost of the investment under assets.

## Investments

We measure our investments in subsidiaries and associates at cost. If there is any indication that the value of a company is lower than our future earnings in the company, impairment testing of the company is carried out as described in the consolidated financial statements. The carrying amount is written down to the recoverable amount whenever the carrying amount exceeds the future earnings in the company (recoverable amount).

If we have a legal or constructive obligation to cover a deficit in subsidiaries and associates, we recognise a provision for this.

## Tax

Ørsted A/S is taxed jointly with its Danish subsidiaries. The jointly taxed companies are part of joint taxation with the parent company as the management company.

Subsidiaries are included in the joint taxation from the date they are consolidated in the consolidated financial statements and up to the date on which they are no longer consolidated.

Current tax for 2018 is recognised by the individual jointly taxed companies.

## Statement of cash flows

We do not prepare a separate statement of cash flows for the parent company. Reference is made to the consolidated statement of cash flows on page 77.

## New legislation

The Danish Financial Statements Act has been changed, and it is now possible to use certain IFRS standards to interpret the act. For Ørsted A/S, it will be relevant to use IFRS 16 'Leases', and we expect to implement it from 1 January 2019.

## Key accounting estimates

In connection with the preparation of the financial statements, a number of accounting estimates have been made that affect the profit (loss) and balance sheet. Estimates are regularly reassessed by management on the basis of historical experience and other relevant factors.

## Impairment test

If there is any indication that the carrying amount is lower than our future earnings in a company, we test for impairment as described in the consolidated financial statements. The future earnings of the company (recoverable amount) are calculated based on assumptions concerning significant estimates.

## 2. Employee costs

Employee costs, DKKm	2018	2017
Wages and salaries	24	24
Share-based payment	4	2
Remuneration for the Board of Directors	5	5
<b>Total employee costs</b>	<b>33</b>	<b>31</b>

<b>Total financial expenses</b>	<b>(6,732)</b>	<b>(10,486)</b>
<b>Net financial income and expenses</b>	<b>3,282</b>	<b>3,181</b>

## 4. Tax on profit (loss) for the year and deferred tax

Income tax, DKKm	2018	2017
Tax on profit (loss) for the year	(69)	(76)
Tax on changes in equity	(86)	132
<b>Total tax for the year</b>	<b>(155)</b>	<b>56</b>
<b>Tax on profit (loss) for the year can be broken down as follows:</b>		
Current tax	(88)	(1,379)
Adjustments to deferred tax	(18)	1,298
Adjustments to current tax in respect of prior years	35	(360)
Adjustments to deferred tax in respect of prior years	2	365
<b>Tax on profit (loss) for the year</b>	<b>(69)</b>	<b>(76)</b>

Development in deferred tax, DKKm	2018	2017
Deferred tax at 1 January	81	1,744
Adjustment for the year recognised in profit (loss) for the year	18	(1,298)
Adjustments to deferred tax in respect of prior years	(2)	(365)
<b>Deferred tax at 31 December</b>	<b>97</b>	<b>81</b>

Specification of deferred tax, DKKm	2018	2017
Non-current liabilities	97	81
<b>Deferred tax</b>	<b>97</b>	<b>81</b>

## 5. Distribution of net profit

Distribution of net profit, DKKm	2018	2017
<b>Profit (loss) for the year is attributable to:</b>		
Shareholders of Ørsted A/S, proposed dividends for the financial year	4,099	3,783
Shareholders of Ørsted A/S, retained earnings	(1,512)	(5,718)
Coupon and bond discount after tax, hybrid capital owners of Ørsted A/S	425	716
<b>Profit (loss) for the year</b>	<b>3,012</b>	<b>(1,219)</b>

## 6. Investments in subsidiaries

Investments in subsidiaries, DKKm	2018	2017
Cost at 1 January	41,762	70,436
Additions	63	2,333
Disposals	-	(31,007)
<b>Cost at 31 December</b>	<b>41,825</b>	<b>41,762</b>
Value adjustments at 1 January	-	(15,681)
Impairment losses	(1,400)	-
Disposals	-	15,681
<b>Value adjustments at 31 December</b>	<b>(1,400)</b>	<b>-</b>
<b>Carrying amount at 31 December</b>	<b>40,425</b>	<b>41,762</b>

Note 8.5 of the consolidated financial statements contains a complete overview of subsidiaries, etc.

We have tested investments in subsidiaries for impairment by comparing the expected future income from the individual subsidiaries with their carrying amounts.

The impairment test in 2018 gave rise to an impairment of DKK 1,400 million which is mainly attributable to the shortening of the green power subsidy time period in Denmark announced in 2018. Also, we no longer see a viable business case for a new CHP plant in the Esbjerg and Varde areas when the current district heating agreement ends in 2022. Both elements relate to our Bioenergy business.

The 2017 disposal for the year primarily concern the divestment of our Oil & Gas business, which was closed on 29 September 2017. The divestment resulted in a loss of DKK 4,179 million in the parent company financial statements. The sale resulted in a gain of DKK 2,179 million in the consolidated financial statements. The difference occurs due to different accounting policies.

## 7. Receivables from subsidiaries

Non-current receivables from subsidiaries, DKKm	2018	2017
Cost at 1 January	48,706	50,402
Additions	17,641	18,552
Disposals	(11,216)	(20,248)
<b>Cost at 31 December</b>	<b>55,131</b>	<b>48,706</b>

## 8. Derivatives

Ørsted A/S has assumed the subsidiaries' currency risks via forward exchange contracts, which have subsequently been hedged in the market. Furthermore, hedging contracts have been concluded to hedge the currency risk associated with investments in subsidiaries in foreign currencies.

We have also entered into a number of interest rate swaps to manage our interest rate risk.

The company has fair value hedged loans and receivables in GBP, USD and EUR. The value of the fair value hedge offset in the income statement amounted to DKK 263 million (2017: DKK 289 million).

Derivatives at the end of December 2018 mature as follows: 2019: DKK -99 million, 2020: DKK -268 million, after 2020: DKK 147 million (2017: 2018: DKK -24 million, 2019: DKK -76 million, after 2019: DKK -324 million).

Overview of derivative positions, DKKm	2018		2017	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Interest derivatives	6,588	(39)	550	-
Currency derivatives	17,623	(181)	36,665	(424)
<b>Total</b>	<b>24,211</b>	<b>(220)</b>	<b>37,215</b>	<b>(424)</b>
<b>Assets</b>		<b>3,102</b>		<b>3,596</b>
<b>Equity and liabilities</b>		<b>(3,322)</b>		<b>(4,020)</b>

See note 7.1 to the consolidated financial statements and the management's review on pages 66-69 for more details on risk and risk management.

## 9. Securities

Securities are primarily liquid AAA-rated Danish mortgage bonds that qualify for repo transactions in the Danish central bank,

'Danmarks Nationalbank'. Repo transactions are transactions where securities are provided as collateral for a loan.

Securities, DKKm	2018	2017
Securities, available	24,407	24,766
Securities, not available for use	333	40
<b>Total securities</b>	<b>24,740</b>	<b>24,806</b>

Securities not available for use are used as collateral for repo loans and trading in financial instruments.

## 10. Loans and borrowings

At 31 December 2018, we had issued hybrid capital with a total notional amount of DKK 13,432 million (2017: DKK 17,125 million). The hybrid bonds have a 1,000-year term and expires as follows: DKK 5,224 million in 3013, DKK 4,477 million in 3015 and DKK 3,731 million in 3017, respectively.

The long-term portion of bank loans and issued bonds amounted to DKK 23,482 million at 31 December 2018 (2017: DKK 25,715 million), of which DKK 16,376 million (2017: DKK 16,528 million) fall due in more than five years.

The long-term portion of other payables amounted to DKK 0 million at 31 December 2018 (2017: DKK 27 million) falls due in 1-5 years.

# 11. Other provisions

We have made provisions for non-current liabilities totalling DKK 794 million (2017: DKK 775) which fall due in 1-5 years. The liabilities concern the divestment of our Oil & Gas business, which was closed in 2017.

# 12. Contingent liabilities

## Contingent liabilities

### Guarantees

Ørsted A/S has provided guarantees in connection with participation by subsidiaries and subsidiaries' joint operations and joint ventures in the construction and operation of offshore wind farms and natural gas installations as well as guarantees in respect of leases, decommissioning obligations and purchase, sale and supply agreements, etc.

Ørsted A/S also acts as guarantor with primary liability for bank balances in certain subsidiaries.

### Indemnities

Ørsted is a member of the reinsurance company Oil Insurance Ltd. In the event of an exit, an exit premium will be payable, which has been calculated at USD 10.3 million at 31 December 2018 (2017: USD 6.8 million).

Ørsted A/S is taxed jointly with other companies in the Ørsted Group. As management company, the company has unlimited as well as joint and several liability together with the other jointly taxed companies for Danish income taxes and withholding taxes on dividends, interest and royalties related to the jointly taxed companies.

### Litigation

Ørsted A/S is not a party to any litigation proceedings or legal disputes that could have an effect on the company's financial position, either individually or collectively.

## 13. Related-party transactions

Related parties are the Board of Directors, the Executive Board, Ørsted A/S's subsidiaries and the Danish State.

Remuneration of the Board of Directors and the Executive Board is disclosed in notes 2.6 'Employee costs' and 2.7 'Share-based

payment' and the remuneration report in the management's review in the consolidated financial statements.

Our related-party transactions are made on arm's length terms.

## 14. Operating lease obligations

We have entered into leases for office premises, primarily in Gentofte (expiring in 2028) and Virum (expiring in 2027). In 2018, an amount of DKK 148 million was recognised (2017: DKK 153 million) in profit (loss) for the year in respect of operating lease payments.

We have entered into leases with subsidiaries for subleasing of office premises.

In 2018, an amount of DKK 97 million was recognised (2017: DKK 123 million) in profit (loss) for the year in respect of rental income.

We have minimum payments of DKK 1,688 million (2017: DKK 1,816 million), most of which concerns subleasing via subleasing agreements.

## 15. Auditor's fees

# Statement by the Executive Board and the Board of Directors

The Board of Directors and the Executive Board have today considered and approved the annual report of Ørsted A/S for the financial year 1 January - 31 December 2018.

The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards as adopted by the EU and additional requirements in the Danish Financial Statements Act. The financial statements of the parent company, Ørsted A/S, have been prepared in accordance with the provisions of the Danish Financial Statements Act.

In our opinion, the consolidated financial statements and the parent company financial statements provide a fair presentation of the Group's and the parent company's assets, liabilities and financial position at 31 December 2018 and of the results of the Group's and the parent company's operations and the Group's cash flows for the financial year 1 January - 31 December 2018.

In our opinion, the management's review provides a fair presentation of the development in the Group's and the parent company's operations and financial circumstances, of the results for the year and of the overall financial position of the Group and the parent company as well as a description of the most significant

risks and elements of uncertainty facing the Group and the parent company.

In our opinion, the consolidated ESG statements ('Additional information') represent a reasonable, fair and balanced representation of the Group's social responsibility and sustainability performance and are presented in accordance with the stated accounting policies.

We recommend that the annual report be adopted at the annual general meeting.

Skærbæk, 31 January 2019

# Independent auditors' report

## To the shareholders of Ørsted A/S

### Our opinion

In our opinion, the consolidated financial statements give a true and fair view of the Group's financial position at 31 December 2018 and of the results of the Group's operations and cash flows for the financial year 1 January to 31 December 2018 in accordance with International Financial Reporting Standards as adopted by the EU ('IFRS') and further requirements in the Danish Financial Statements Act.

Moreover, in our opinion, the parent company financial statements give a true and fair view of the parent company's financial position at 31 December 2018 and of the results of the parent company's operations for the financial year 1 January to 31 December 2018 in accordance with the Danish Financial Statements Act.

Our opinion is consistent with our auditor's long-form report to the Audit and Risk Committee and the Board of Directors.

### What we have audited

The Consolidated Financial Statements of Ørsted A/S for the financial year 1 January to 31 December 2018, pp. 72-166 and 186, comprise the consolidated income statement, the consolidated statement of comprehensive

income, the consolidated balance sheet, the consolidated statement of changes in equity, the consolidated cash flow statement and the notes to the consolidated financial statements, including summary of significant accounting policies.

The parent company financial statements of Ørsted A/S for the financial year 1 January to 31 December 2018, pp. 175-184, comprise the income statement, the balance sheet, the statement of changes in equity and the notes to the parent financial statements, including summary of significant accounting policies.

Collectively referred to as the 'Financial Statements'.

### Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs) and the additional requirements applicable in Denmark. Our responsibilities under those standards and requirements are further described in the auditor's responsibilities for the audit of the financial statements section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

### Independence

We are independent of the Group in accordance with the International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants (IESBA Code) and the additional ethical requirements applicable in Denmark. We have also fulfilled our other ethical responsibilities in accordance with the IESBA Code.

To the best of our knowledge and belief, prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No. 537/2014 were not provided.

### Appointment

We were first appointed auditors of Ørsted A/S on 19 April 2010 for the financial year 2010. We have been reappointed annually by shareholder resolution for a total period of uninterrupted engagement of 9 years, including the financial year 2018.

### Key audit matters

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the financial statements for 2018. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

### Key audit matter

#### Divestments of partnership interests

In connection with divestments of partnership interests (often 50%) in offshore wind farms under construction, estimates and judgement are required in respect of the sales price for accounting purpose for the divestment and the subsequent construction agreement, respectively, and in calculating the divestment gain, including any provisions recognised to cover guarantees, indemnities, etc. Furthermore, judgement is required in respect of classifying the divested interest as either divestment of assets (gain recognised as part of Other income) or divestment of an enterprise (gain recognised as part of gain/loss from divestment of enterprises). Finally, judgement is required in respect of whether the Group's retained share in the partnership is a joint operation or a joint venture.

We focused on this area because the calculation of the divestment gain is dependent on complex and subjective judgements and estimates by management and because the presentation in the income statement is dependent on judgement about the partnership interest disposed, and whether the partnership interest retained is a joint operation or a joint venture.

Refer to note 2.5 in the consolidated financial statements.

### How our audit addressed the key audit matter

We evaluated whether management had appropriately determined the divestment gain, the presentation hereof and the subsequent treatment of the partnership interest by for example:

- Reading the share purchase agreements.
- Reading the shareholders agreements.
- Reading the construction and other related agreements.
- Consider the sales price for accounting purpose for the divestment and the construction agreement, respectively.
- Testing the gain statement on the divestment of the partnership interest, including the provisions recognised to cover guarantees, indemnities, etc., in the share purchase agreement.
- Consider whether the disclosures of the divestment gain and the subsequent recognition and presentation of the partnership were in compliance with IFRS.

### Key audit matter

#### Construction contracts

The Group has adopted the accounting standard IFRS 15 'Revenue from Contracts with Customers' from 1 January 2018, using the modified retrospective method. The adoption has affected the timing of when income and costs are recognised in respect of offshore transmission assets and the presentation of construction agreements in the balance sheet.

The accuracy of the revenue recognition related to work in progress of large construction agreements and its presentation in the consolidated income statement is dependent on complex estimation methodologies, including estimates, such as the forecasted costs related to the constructions and the degree of completion for construction agreements.

We focused on this area because the revenue recognised with reference to the degree of completion both requires complex and subjective judgements and estimates by management.

Refer to notes 1.4, 2.2 and 4.2 in the consolidated financial statements.

### How our audit addressed the key audit matter

On a sample basis, we tested whether revenue is accurately recorded and challenged the forecasted costs related to the constructions, including the assumptions used, and by evaluating the outcome of previous estimates by agreeing the actual costs incurred post-year end to the forecasted costs for the period.

We also assessed how the project managers determined that the degree of completion was correctly determined through obtaining their calculations and agreeing the inputs to documentary evidence or our independently formed expectation, as appropriate.

We evaluated management's assessment of the transition from IAS 11 and IAS 18 to IFRS 15 applying the modified retrospective method, including the impact on the on-going construction of the offshore transmission assets as well as the changed presentation made by management in respect of the transition.

## Key audit matter

### Business combinations

When acquiring businesses, the Group performed a purchase price allocation ('PPA') exercise for each acquisition separately, resulting in various assets and liabilities being separately valued. The Group used projected financial information in the PPA exercise.

Management uses their best knowledge to make estimates when utilising the Group's valuation methodologies. In order to determine the fair value of the separately identified assets and liabilities in a business combination, the valuation methodologies require input based on assumptions about the future and use discounted cash flow forecasts. The significant judgements and estimates involved in the PPA exercise mainly relate to assessing the fair value of production assets, assets under construction, tax equity partner balances and derivatives.

We focused on this area because the PPA exercises, which involves the identification of the acquired assets and liabilities and their respective fair values, require complex and subjective judgements and estimates by management.

Refer to note 3.3 in the consolidated financial statements.

## How our audit addressed the key audit matter

We assessed whether the acquisitions during the period met the criteria of a business combination.

We verified the assets and liabilities recorded in the opening balance, by performing procedures, including, amongst others, obtaining statements of cash and bank balances acquired, agreeing the opening balance to the trial balance and the tax equity liabilities to underlying contracts and specifications.

We involved our internal specialists in assessing the valuation methodologies used by management and the fair valuation of the acquired assets and liabilities. We challenged the key assumptions used to determine the fair value of production assets, assets under construction, tax equity partner balances, derivatives, etc.

Finally, we assessed the adequacy of disclosures relating to the business combinations.

## Statement on management's review

Management is responsible for the management's review, pp. 4-71.

Our opinion on the financial statements does not cover management's review, and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read management's review and, in doing so, consider whether management's review is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

Moreover, we considered whether management's review includes the disclosures required by the Danish Financial Statements Act.

Based on the work we have performed, in our view, management's review is in accordance with the consolidated financial statements and the parent company financial statements and has been prepared in accordance with the requirements of the Danish Financial Statement Act. We did not identify any material misstatement in management's review.

## Management's responsibilities for the financial statements

Management is responsible for the preparation of consolidated financial statements that give a true and fair view in accordance with International Financial Reporting Standards as adopted by the EU and further requirements in the Danish Financial Statements Act and for the preparation of parent company

financial statements that give a true and fair view in accordance with the Danish Financial Statements Act, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Group's and the parent company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Group or the parent company or to cease operations, or has no realistic alternative but to do so.

## Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial Statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs and the additional requirements applicable in Denmark will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with ISAs and additional requirements applicable in

Denmark, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's and the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management.
- Conclude on the appropriateness of management's use of the going concern basis of

accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's and the parent company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group or the parent company to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit

and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

# Limited assurance report of the independent auditor

## To the stakeholders of Ørsted A/S

Ørsted A/S engaged us to provide limited assurance on the data described below and set out in the consolidated environment, social and governance (ESG) statements of the Ørsted A/S annual report for the year ended 31 December 2018.

## Our conclusion

Based on the procedures we have performed and the evidence we have obtained, nothing has come to our attention that causes us not to believe that data in the 2018 Consolidated ESG Statements on pages 167-174 of the Annual Report for the year ended 31 December 2018 are free of material misstatements and has been prepared, in all material respects, in accordance with the accounting policies as stated on pages 167-174 of the 2018 Ørsted A/S Annual Report.

This conclusion is to be read in the context of what we say in the remainder of our report.

## What we are assuring

The scope of our work was limited to assurance over data in the Consolidated ESG Statements on pages 167-174 of the Ørsted A/S Annual Report for the year ended 31 December 2018.

## Professional standards applied and level of assurance

We performed a limited assurance engagement in accordance with International Standard on Assurance Engagements 3000 (Revised) 'Assurance Engagements other than Audits and Reviews of Historical Financial Information'. A limited assurance engagement is substantially less in scope than a reasonable assurance

engagement in relation to both the risk assessment procedures, including an understanding of internal control, and the procedures performed in response to the assessed risks; consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

## Our independence and quality control

We have complied with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which includes independence and other ethical requirements founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour. The firm applies International Standard on Quality Control 1 and accordingly maintains a comprehensive system of quality control, including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements. Our work was carried out by an independent multidisciplinary team with experience in sustainability reporting and assurance.

## Understanding reporting and measurement methodologies

Data and information need to be read and understood together with the accounting policies (pages 167-174 of the 2018 Ørsted A/S Annual Report), which management are solely responsible for selecting and applying. The absence of a significant body of established practice on which to draw to evaluate and measure

non-financial information allows for different, but acceptable, measurement techniques and can affect comparability between entities and over time.

## Work performed

We are required to plan and perform our work in order to consider the risk of material misstatement of the data. In doing so and based on our professional judgement, we:

- Conducted interviews with Group functions to assess consolidation processes, use of company-wide systems and controls performed at Group level;
- Performed an assessment of materiality and the selection of topics for the 2018 Ørsted A/S consolidated ESG statements;
- Conducted analytical review of the data and trend explanations submitted by all business units for consolidation at Group level;
- Evaluated internal and external documentation to determine whether information in the 2018 Ørsted A/S consolidated ESG statements is supported by sufficient evidence.

## Management's responsibilities

Management of Ørsted A/S is responsible for:

- Designing, implementing and maintaining internal control over information relevant to the preparation of data in the 2018 consolidated ESG statements on pages 167-174 in the annual report that are free from material misstatement, whether due to fraud or error;
- Establishing objective accounting policies for preparing data;
- Measuring and reporting data in the 2018 consolidated ESG statements based on the accounting policies; and

- The content of the 2018 consolidated ESG statements.

## Our responsibility

We are responsible for:

- Planning and performing the engagement to obtain limited assurance about whether data in the 2018 Ørsted A/S consolidated ESG statements on pages 167-174 of the 2018 Annual Report are free of material misstatements and has been prepared, in all material respects, in accordance with the accounting policies;
- Forming an independent conclusion, based on the procedures we have performed and the evidence we have obtained; and
- Reporting our conclusion to the stakeholders of Ørsted A/S.

# Glossary

**Availability:** Time-based availability is the ratio of the number of hours in a given period the offshore wind farms are available for power generation to the total number of hours in the same period. Total availability is weighted on the basis of the size of the individual wind farms. Availability is adjusted for breakdowns if compensation is received from the transmission owner.

**Awarded capacity:** Offshore capacity that we have been awarded in auctions and tenders, but where we need to sign a PPA and take final investment decision.

**Biomass conversion:** When a CHP plant is converted from using fossil fuels to using biomass, such as wood pellets, wood chips and straw. After the conversion, the CHP plant will typically be able to use biomass along with the original fuel types.

**Carbon emissions allowances:** Carbon emissions allowances subject to the European Union Emissions Trading Scheme (EU ETS).

**CfD:** A contract for difference is a subsidy that guarantees the difference between the market reference price and the exercise price won.

**CHP plant:** A combined heat and power (CHP) plant generates both heat and power in the same process.

**Commissioning/COD:** When our assets are in operation, and the legal liability has been transferred from the supplier to us.

**Contracted capacity:** Onshore capacity where we have signed a PPA, but where we need to take final investment decision.

**Cost of electricity:** Average cost measured as present value per megawatt hour (MWh) generated from offshore wind power, covering costs for development and construction as well as subsequent operation and maintenance of the offshore wind farm.

**Decided (FID) and installed capacity:** Installed offshore wind capacity plus capacity for wind farms where a final investment decision has been made.

**Degree days:** Number of degrees in absolute figures in difference between the average temperature and the official Danish indoor temperature of 17 degrees Celsius.

**EEX:** European Energy Exchange, German power exchange.

**EPC:** Engineering, procurement and construction. The part of our business which handles the construction and installation of our offshore wind farms.

**FTE:** Employees (full-time equivalent). The number of full-time employees during a fixed time period.

**Generation capacity:** Ørsted's ownership of the wind turbines. The wind turbines are included when each wind turbine has passed the 240-hour test.

**Green certificates:** Certificate awarded to producers of environment-friendly power as a supplement to the market price of power in the given price area.

**Green dark spread (GDS):** Green dark spread represents the contribution margin per MWh of power generated at a coal-fired CHP plant of a given efficiency. It is determined as the difference between the market price of power and the cost of the coal (including associated freight costs) and carbon emissions allowances used to generate the power.

**Green spark spread (GSS):** Green spark spread represents the contribution margin per MWh generated at a gas-fired power station of a given efficiency. It is determined as the difference between the market price of power and the costs of the gas and carbon emissions allowances used to generate the power.

**Hedging instruments:** Financial and physical instruments that can be used to guarantee a specific price for the purchase or sale of, for example, commodities and currency.

**Installed capacity:** Installed capacity where the offshore wind farm has been completed and has passed the 200-hour test.

**Investment tax credits (ITCs):** Federal tax credit based on qualifying renewable investment costs.

**LNG:** Liquefied natural gas. Gas that has been liquefied by cooling to minus 161 degrees Celsius. LNG takes up 600 times less space than conventional gas.

**Load factor:** The ratio between the actual power generation in a given period relative to the potential generation which is possible by continuously exploiting the maximum capacity over the same period.

**NBP:** National Balancing Points, UK gas hub.

**Nord Pool:** The Norwegian-based Nordic power exchange, which facilitates power trading in Norway, Sweden, Finland and Denmark.

**Offshore transmission assets:** Offshore transmission assets connect offshore generation to the onshore grid and typically include the offshore power transmission infrastructure, an onshore substation and the electrical equipment relating to the operation of the substation.

**O&M:** Operation and maintenance. The part of our business that operates and maintains our offshore wind farms after installation.

**Partnership income:** Income originating from our partners' purchase of ownership interests in the offshore wind farms. Includes both the gain in connection with the farm-down and the subsequent construction of the wind farm.

**Production tax credit (PTC):** Federal tax credit based on eligible power generation in the US.

**PSO:** Indirect taxes regarding the public service obligation (PSO) which are used to finance research and green energy and are charged to power customers along with other tariff elements.

**Public obligation:** A company with a public obligation is bound by law to deliver power or natural gas to a certain geographic area at prices approved by the Danish Energy Regulatory Authority.

**QHSE:** Quality, health, safety and environment.

**Ramp-up:** Generation until an offshore wind farm has been completed and commissioned.

**ROCs:** Renewable obligation certificates issued by Ofgem in the UK to operators of accredited generating stations for the eligible renewable energy they generate. Operators can trade ROCs with other parties.

**Stress:** Method of measuring the market trading risk of loss on a portfolio from day to day, calculated on a fair-value basis.

**Tax equity:** An arrangement where an investor obtains rights to federal tax credits and other tax attributes in exchange for a cash contribution.

**Thermal generation:** Power and heat generated through the combustion of fossil fuels, biomass or waste.

**TRIR:** In addition to lost-time injuries, total recordable injury rate (TRIR) also includes injuries where the injured person is able to perform restricted work the day after the accident as well as accidents where the injured person has received medical treatment.

**TTF:** Title Transfer Facility, Dutch gas hub.

**TWh:** Terawatt hour. The amount of energy generated in one hour with the effect of ITWh. ITWh is equivalent to 1,000GWh or 1,000,000MWh.

**Value at risk (VaR):** A financial term used for measuring the loss that may occur in connection with a risk position, assuming a certain volatility, and that the position is held for a certain period of time.

**Wind speed:** Shows the wind speed for Ørsted's offshore wind farms. The wind measurements are weighted on the basis of our generation capacity and can be compared to a normal wind period, based on 20 years' historical wind observations.

# Overview

- 5 Chairman's statement
- 6 CEO's review
- 10 Performance highlights

Burbo Bank Extension is the first project in the world to use MHI-Vestas V164 8.0MW wind turbines. The number of wind turbines have been more than doubled compared to the original offshore wind farm Burbo Bank, but the power output has nearly quadrupled, now powering over 230,000 UK homes with sustainable energy each year.

# Chairman's statement

## Leading the green transformation

Climate change is the defining challenge of our century. By 2030, global greenhouse gas emissions need to be halved compared to current levels if we are to stay below a global temperature increase of 1.5°C above pre-industrial levels. This is the threshold set by science to limit the risk of irreversible tipping points in our global ecosystems. As energy accounts for 73% of global greenhouse gas emissions, we clearly need to change the way we power the world – and shift from fossil fuel-based to renewable energy.

At Ørsted, our vision is a world that runs entirely on green energy. Just a decade ago, our core business was based on fossil fuels, but we decided to change, and we have changed to green energy faster than any other energy company. In January 2020, we

were named the most sustainable company in the world. We are proud of this recognition, and it encourages us to further intensify our efforts to deploy green energy at scale and to contribute to the profound transformation of the energy system required to keep the planet habitable. In continuation of this, we have decided to become carbon neutral in our own operations by 2025 and in our total carbon footprint by 2040.

In 2019, we achieved a global breakthrough outside Europe by initiating construction of our first large-scale offshore wind project in Taiwan, by winning two large scale projects and expanding our portfolio in the US, and by taking the decision to fully integrate Lincoln Clean Energy into Ørsted. Our deployment of renewable energy now spans markets on three continents. We bring more than 25 years of experience in renewable energy and on-time and on-budget delivery of

large infrastructure projects as well as new approaches and innovative solutions that can help decarbonise societies. Recently, we have set up a hydrogen team to explore how to transform renewable power from offshore wind into hydrogen and other green fuels to be used in the chemicals industry and as green fuels in hard-to-abate sectors, such as heavy transport and logistics.

We also further strengthened our strategic profile as an upstream renewable energy company by signing an agreement to divest our power distribution, residential customer and city light businesses. Long-term, Ørsted is not the best owner of these businesses. The capital released from the divestment will be deployed in our global renewable energy build-out plan. Deep and heartfelt thanks go to all of our skilled colleagues in these businesses who have provided a good service to our customers over the years and ensured one of the highest levels of reliability of supply in the world.

Our talented people are the most important assets in Ørsted, and we will need a lot of talent world-wide, as we continue to grow our business in the years to come.

Safety is equally important for us, and we take every measure to ensure that Ørsted is a safe workplace. In May, an employee of one of our contractors died after a serious accident at the Avedøre Power Station. We have been – and still are – deeply affected by this accident.

EBITDA for the year amounted to DKK 17.5 billion and thereby exceeded our expectations and resulted in a ROCE of 10.6%. Profit for the year amounted to DKK 6.1 billion. The Board of Directors recommends paying a dividend of DKK 10.5 per share, corresponding to DKK 4.4 billion.

On behalf of the Board of Directors, I would like to thank the employees and management of Ørsted for leading the way towards a world that runs entirely on green energy. We are more committed than ever to demonstrating to all stakeholders that the urgently required energy transformation is in fact possible, and that we have the cost-effective solutions to power the world in a sustainable way.

**Thomas Thune Andersen**  
Chairman

//

**In January 2020, we were named the most sustainable company in the world. We are proud of this recognition, and it encourages us to further intensify our efforts to deploy green energy at scale.**

# CEO's review

Strong year with continued strategic progress, global expansion and very satisfactory financials.

## Highlights 2019

- Operating profit (EBITDA), excluding new partnerships, increased by 17% to DKK 17.5 billion.
- EBITDA from offshore and onshore wind farms in operation increased by 30% to DKK 14.8 billion.
- ROCE was 10.6% in line with our target.
- Green share of heat and power generation increased from 75% to 86%.
- Award of the 1.1GW Ocean Wind project in New Jersey.
- Award of the 880MW offshore Sunrise Wind (JV) project in New York.
- Decision to construct our first large-scale Taiwanese offshore wind project Greater Changhua 1 & 2a.
- Hornsea 1, the world's largest offshore wind farm, was commissioned.
- Signing of a non-binding term sheet with Polska Grupa Energetyczna (PGE) regarding two large-scale offshore projects in the Baltic Sea.
- Exclusive negotiations entered into with the Public Service Enterprise Group (PSEG) regarding a joint venture agreement to acquire 25% of Ocean Wind.
- Divestment of 50% of selected offshore activities in New England to our partner Eversource Energy.
- Decision to construct the onshore wind farms Sage Draw in Texas and Plum Creek in Nebraska as well as the combined solar and storage project Permian Energy Center in Texas and acquisition of the construction-ready wind project Willow Creek in South Dakota.
- Lockett Onshore Wind Farm commissioned, ahead of schedule.
- The newly bioconverted Asnæs Power Station reached 100% green heat and power generation in December 2019.
- Agreement signed to divest our power distribution, B2C and city light businesses to the Danish energy company SEAS-NVE.
- Agreement signed to divest our LNG activities.
- Elsam competition case against the competition authorities closed in favour of Ørsted.
- Record-high satisfaction and motivation score of 77 recorded in our employee satisfaction survey, People Matter.

## Financial results

In 2019, we achieved a strong operating profit (EBITDA) which exceeded our expectations at the beginning of the year.

EBITDA (excluding new partnerships) increased by 17% to DKK 17.5 billion.

Earnings from our offshore wind farms in operation increased by 22%, driven by ramp-up of green power generation from Borkum Riffgrund 2, Walney Extension and Hornsea 1. Curtailments and various operational issues had a larger than normal adverse impact on our offshore generation in 2019.

The inclusion of our onshore wind business and high earnings from our trading activities also contributed positively to our performance.

These positive effects were partly offset by higher project development costs in Offshore, an increase in provisions related to our LNG activities and a temporarily negative effect from gas at storage due to the substantial drop in gas prices during 2019. Further, in 2018, we had a positive outcome of a gas sourcing arbitration case, which was not repeated in 2019.

Return on capital employed (ROCE) was 10.6% for 2019.

## Offshore

In 2019, we commissioned Hornsea 1, with the last turbines being installed in early October. The entire wind farm is now operational. Hornsea 1 is the world's largest offshore wind farm with a capacity of 1,218MW and will supply more than 1.1 million British homes with green energy. In November, we passed another milestone when we inaugurated the second phase of Taiwan's first-ever offshore wind farm Formosa 1.

In April, we took final investment decision on our 900MW Taiwanese Greater Changhua 1 & 2a project after obtaining establishment permit, approval of the supply chain plan and signing of the power purchase agreement with Taipower.

Our three offshore wind farms under construction are all progressing according to plan. Borssele 1 & 2 (752MW) in the Netherlands is expected to be completed end Q4 2020. In 2022, we expect to complete Hornsea 2 (1,386MW) in the UK and Greater Changhua 1 & 2a in Taiwan. Furthermore, the Virginia Offshore Wind project, which we will construct for Dominion Energy as an EPC contractor, is proceeding as planned.

In February, we further strengthened our strategic partnership with Eversource Energy, the leading utility in New England, when they became a 50% partner in selected activities acquired through Deepwater Wind.

These included the Revolution Wind (704MW) and South Fork (130MW) development projects and two undeveloped lease areas off the coast of New England.

In June, the New Jersey Board of Public Utilities selected Ørsted's Ocean Wind project to negotiate a 20-year offshore wind renewable energy certificate (OREC) for an offshore wind farm with a capacity of 1.1GW. The contract was subsequently signed in December. The project was developed with support from the Public Service Enterprise Group (PSEG), which also has an option to become an equity investor in the project. In October, we entered into exclusive negotiations regarding a joint venture agreement with PSEG to acquire 25% of Ocean Wind. Subject to

our final investment decision, the wind farm is expected to be completed by 2024.

In July, the New York State Energy Research & Development Authority (NYSERDA) selected the Sunrise Wind project to negotiate a 25-year OREC for an offshore wind farm with a capacity of 880MW. The contract was subsequently signed in October. Sunrise Wind is a 50-50 partnership between Ørsted and Eversource, and subject to a final investment decision, the wind farm is expected to be completed by 2024.

With these awards, we have secured a US offshore wind portfolio with a total capacity of 2.9GW to be completed towards 2024. In addition, we have up to 5GW of lease

rights which can be developed for future offshore wind projects in the US.

We have signed contracts with Siemens Gamesa to supply wind turbines for our offshore wind projects in Taiwan (Greater Changhua 1 & 2a) and the North-East cluster in the US (Sunrise Wind, Revolution Wind and South Fork). In addition, we have selected GE as the preferred wind turbine supplier for our US Mid-Atlantic cluster (Ocean Wind and Skipjack). These projects will pioneer the deployment of GE's Haliade-X 12MW wind turbine, continuing our track record as a first mover on new technology.

In Poland, we signed a non-binding term sheet agreement with Polska Grupa Energetyczna

(PGE) regarding their sale of a 50% stake in two offshore wind projects in the Baltic Sea with a total capacity of up to 2.5GW. The projects are expected to commence construction by 2026 and 2030, respectively.

In December, we signed the world's largest offshore wind CPPA with Covestro. Earlier in the year, we signed an agreement with Northumbrian Water to procure power from Race Bank, the first of its kind in the UK. These long-term fixed price agreements represent an important step in building long-term green partnerships with corporate customers and at the same time help shape a solid risk-return profile for projects with merchant risk.

## Events in 2019

## Onshore

Our Onshore business had a strong year with high yields from our operating assets, high peak power prices during summer in Texas, and steady progress of our construction projects.

We commissioned the onshore wind farm Lockett in Texas well ahead of schedule. The 184MW wind farm has performed as expected since commissioning.

In April, we took final investment decision on the 338MW onshore wind farm Sage Draw in Texas which is expected to go into commercial operation in Q1 2020.

In June, we acquired the 103MW construction-ready wind project Willow Creek in South Dakota. The wind farm is expected to be commissioned by Q4 2020, and it will expand our operations into the Southwest Power Pool (SPP) market, covering the central US.

In August, we took final investment decision on the 230MW wind farm Plum Creek in Nebraska, and we expect the farm to be completed by Q4 2020. Once operational, Sage Draw, Willow Creek and Plum Creek will supply up to 180,000 American homes with green energy.

In November, we took final investment decision on the Permian Energy Center in Texas. The construction of our first combined solar (420MW) and storage (40MW) project has commenced and is expected to be commissioned by mid-2021.

In addition to the decided investments, we further strengthened our Onshore business in May through the acquisition of a subsidiary of US-based Coronal Energy. The subsidiary is a nationwide solar and storage developer with a significant pipeline of projects, expanding our capability platform and exposure to new, regional markets.

Our total installed and decided onshore capacity now stands at 2GW. Our ambition is to have installed 5GW of capacity by 2025.

Finally, we decided to fully integrate Lincoln Clean Energy into Ørsted and appoint Declan Flanagan new CEO of our Onshore business and member of Ørsted's Group Executive Management. The integration was marked with a full name change to Ørsted in December.

## Markets & Bioenergy

In June, we decided to consolidate our Customer Solutions and Bioenergy business units into one business unit, Markets & Bioenergy. The decision was taken as a natural consequence of the reduced size of the two former business units due to, among other things, the below-mentioned divestments.

In September, we signed an agreement to divest our Danish power distribution (Radius), residential customer and city light businesses to SEAS-NVE, Denmark's second largest cooperatively-owned energy company. With our global expansion in renewable energy, Ørsted is no longer the best owner of these businesses. We expect the transaction to be closed in the first half of 2020. We consider the transaction to be attractive to our share-

# // During summer, we won two auctions in the US. With these awards, we have secured a US offshore wind portfolio with a total capacity of 2.9GW to be completed towards 2024.

holders and to provide a good future home for the customers and our highly skilled employees. The proceeds from the divestment will be used to continue our global investments in green energy.

To further focus our activities, we entered into an agreement to divest our LNG activities to Glencore. Furthermore, we decided to initiate a process to divest our B2B sales businesses, except for gas sales to our larger B2B customers in Denmark and Sweden which serve as an outlet for our legacy gas position.

As we run our business based on an end-to-end value chain thinking, we have decided that all activities and earnings related to Offshore and Onshore, should be reported in these segments, even if the daily activities are performed on behalf of the Group in another business unit. Thus, earnings from trading related to hedging of our power exposures and power portfolio optimisation activities,

previously presented in Markets, are now included in Offshore and Onshore earnings.

From mid-December 2019, all heat and power from Asnæs Power Station have been generated from the new unit, which run up to 100% on sustainable biomass. We have now fully converted six of our seven CHP plants to run on sustainable biomass. For our last remaining coal-fired CHP plant, Esbjerg Power Station, we have not been able to find a joint solution with the heat customer for a bioconversion project. Consequently, we plan to close down operations of this plant by the end of Q1 2023.

Due to recent upgrades to our Renescence facility in Northwich in the UK, we were not able to commission the plant in 2019 as planned. However, it has been confirmed that the core enzymatic sorting process works as expected.

## // Our aim will be for Ørsted to reach carbon neutrality by 2025.

Radius finalised the installation of more than 1 million smart meters in 2019, an achievement completed in just three years. The smart meters allow remote reading of the power meters and give households in the area the opportunity to consume power in the most cost-efficient periods of the day.

In 2018, the Danish Western High Court acquitted Elsam (now Ørsted) from the competition authorities' claim that Elsam had abused a dominant position on the market for wholesale of physical electricity in Western Denmark from 1 January 2005 to 30 June 2006. In light of this judgement, the parties agreed in September on dismissing the competition authorities' similar claim for the period from the second half of 2003 and the whole of 2004. Consequently, the cases between Elsam and the competition authorities reached a final conclusion in favour of Ørsted. Despite this status, the

claimants maintain their claims for damages and continue their legal action.

### Fatal accident

In May, an employee of one of our contractors died after a serious accident at the Avedøre Power Station. We are very saddened by this. Safety is of utmost importance to us, and we have initiated several improvement tracks to ensure that an accident like this will never happen again.

### Employees

The well-being of our employees is of high importance to us. The 2019 employee satisfaction survey, People Matter, showed a record high satisfaction and motivation score of 77. This global 'best-in-class' score places Ørsted in the top 10% of external benchmarks.

Thanks to Ørsted's passionate and skilled employees, we once again managed to reach

many significant milestones during the year. They deserve tremendous credit for their tenacity and ability to get things done.

### Concluding remarks

We are very pleased with our strategic progress and results in 2019. Ørsted maintains a leading position in the global high growth market for green energy. We are well on track to deliver on our financial targets of 20% average growth in profits from operating renewable assets for the period 2017-2023 and an average Group ROCE of 10% for the period 2019-2025.

We remain as committed as ever before to our vision of a world running entirely on green energy. We will continue to work hard to help limit global warming and its impact on biodiversity and global living conditions for current and future generations. Our aim will be for Ørsted to reach carbon neutrality by 2025.

**Henrik Poulsen**  
CEO and President

# Performance highlights

## Profits and returns

### Operating profit (EBITDA) DKKbn

In 2019, we achieved a strong underlying EBITDA which exceeded our expectations at the beginning of the year. It was driven by an increase in generation from our off-shore and onshore wind farms and high earnings from our trading activities. The decline in total EBITDA was due to the profit from the 50% farm-down of Hornsea 1 in 2018.

### Net profit (continuing operations) DKKbn

Profit for the year stood strong at DKK 6.1 billion. Net profit in 2018 and 2017 was significantly impacted by farm-down gains from new partnerships.

### Return on capital employed (ROCE) %

ROCE was 10.6% for the year, which was around our target of an average ROCE of approx 10% for the Group in the period 2019-2025. In 2018 and 2017, ROCE was significantly impacted by farm-downs.

## Cash flow and balance sheet

### Gross investments DKKbn

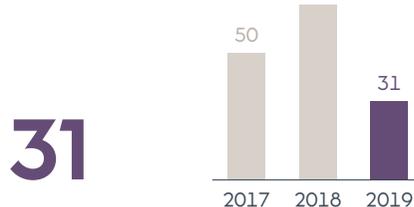

The gross investment level was high in 2019 due to a high construction activity in our project portfolio.

### Interest-bearing net debt DKKbn

We had a net debt of DKK 17.2 billion at the end of 2019. Our debt primarily increased due to the high investment level, the addition of lease debt and the payment of dividends.

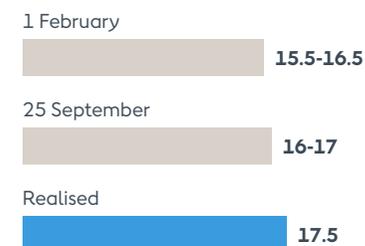

### Credit metric (FFO/adjusted net debt<sup>1</sup>) %

The credit metric 'funds from operations' (FFO) relative to adjusted net debt amounted to 31% in 2019, in line with our target of around 30%.

## Follow-up on outlook announced for 2019

### EBITDA, excl. new partnerships, realised vs guidance DKKbn

### Investments, realised vs guidance DKKbn

In the outlook announced in our annual report for 2018, we expected EBITDA without new partnerships of DKK 15.5-16.5 billion and gross investments of DKK 21-23 billion for 2019.

With EBITDA, excluding new partnerships, of DKK 17.5 billion, our expectations were exceeded.

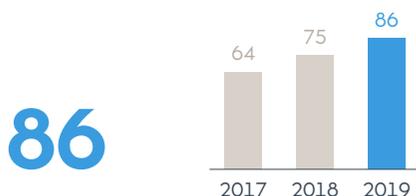

Gross investments amounted to DKK 23.3 billion.

<sup>1</sup> Interest-bearing net debt, including 50% of hybrid capital and securities not available for use (with the exception of repo transactions), present value of lease obligations (up until 2018), and decommissioning obligations less deferred tax.

# Performance highlights

## Environment

**Green share of generation**  
%

The green share of our heat and power generation continued to increase to a new high of 86%, following continued ramp-up of our offshore wind capacity, new onshore capacity and lower heat and power generation based on coal and gas.

**Installed renewable capacity**  
GW

Installed green capacity increased by 19% to 9.9GW in 2019 due to the commissioning of the offshore wind farm Hornsea 1 and the onshore wind farm Lockett as well as the bioconversion of Asnæs Power Station.

**Avoided emissions from green capacity**  
Million tonnes, CO<sub>2e</sub>

Avoided emissions from our green heat and power generation relative to fossil-fueled generation increased by 39%, mainly due to increased wind-based power generation.

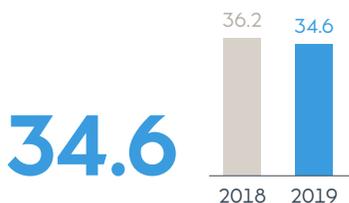

**Greenhouse gas emissions, scope 1 and 2**  
Million tonnes, CO<sub>2e</sub>

The scope 1 and 2 greenhouse gas emissions were reduced by 48% in 2019, mainly driven by a larger share of heat and power generation based on sustainable biomass instead of coal and gas.

## Social

**Greenhouse gas emissions, scope 3**  
Million tonnes, CO<sub>2e</sub>

Our scope 3 greenhouse gas emissions were reduced by 4%, mainly due to reduced sales of natural gas.

**Safety**  
Total recordable injury rate (TRIR)

We continue to have a strong focus on the safety and well-being of our employees. However, TRIR increased slightly, driven by an unsatisfactory high number of injuries in Markets & Bioenergy.

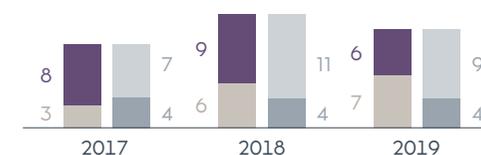

**Employee satisfaction**  
Scale 1-100

The 2019 employee satisfaction survey, People Matter, showed a record high satisfaction and motivation score of 77.

## Governance

**Board of Directors and Group Executive Management**  
Nationality and gender diversity

We have focus on increasing diversity at all management levels.

● Danish ● International ● Female ● Male

# Financial outlook

**13** Financial outlook 2020

**15** Financial estimates and policies

This is Jason Kao. Jason is currently managing the development of our Greater Changhua offshore wind farms in Taiwan. With over 10 years' experience in the industry, he has a deep knowledge of the region and an open dialogue with local authorities and fishermen. Jason plays a key role in developing the Greater Changhua portfolio which will soon deliver green power to over 2.8 million Taiwanese households.

# Financial outlook 2020

## Group EBITDA guidance

As in previous years, our guidance only includes existing Offshore partnership agreements. We had no new partnership agreements in 2019, but EBITDA from existing partnerships amounted to DKK 3.8 billion.

In 2020, EBITDA from existing partnerships is expected to be very limited.

In 2019, we signed an agreement to divest our Danish power distribution, residential customer and city light businesses. We expect the transaction to close in first half of 2020, and our EBITDA guidance includes operational earnings for the first half of 2020.

EBITDA (business performance), excluding earnings from new partnership agreements, is expected to be DKK 15-16 billion in 2020. The outlook is based on the expected development in the business units compared to 2019, as described below.

## Offshore (excluding new partnership agreements) – lower

— Earnings from offshore wind farms in operation are expected to increase from ramp-up of generation at Hornsea 1 and Borssele 1 & 2 and as another 400MW of Hornsea 1 will receive the CfD price from 31 March. Due to the extraordinarily high earnings in 2019, we expect lower earnings from trading related to hedging of our power exposure.

- As mentioned, earnings from existing partnerships is expected to go from DKK 3.8 in 2019 to a very limited amount in 2020.
- We expect lower expensed project development costs than in 2019.

## Onshore – higher

- Earnings from onshore wind farms in operation are expected to increase as a result of new wind farms coming online, including Sage Draw, Plum Creek and Willow Creek, and a full year of operation from Lockett.

## Markets & Bioenergy – lower

- Underlying earnings from our CHP plants (including ancillary services) are expected to be at level with 2019. The DKK 0.3 billion provision reversal from the Elsam competition case will not be repeated.
- Earnings in 'Gas Markets & Infrastructure' are expected to show a net decrease, due to a temporary shut-down from late 2019 until 2022 of the Tyra gas field owned by the Danish Underground Consortium (DUC), which will lower our earnings from both the gas portfolio and offshore gas pipelines. However, in contrast, we do not expect a repetition in 2020 of the negative effects from revaluating our gas at storage caused by the declining gas prices in 2019.
- Earnings in 'LNG' are expected to break-even in 2020. In 2019, we provided for the expected loss from the divestment to

## Outlook 2020, DKKbn

	2019 realised	2020 guidance
EBITDA (without new partnerships)	17.5	15-16
Offshore (without new partnerships)	15.2	Lower
Onshore	0.8	Higher
Markets & Bioenergy	1.5	Lower
Gross investments	23.3	30-32

Our EBITDA guidance for the Group is the prevailing guidance, whereas the directional earnings development per business unit serve as a means to support this. Higher/lower indicates the direction of the business unit's earnings relative to the results for 2019.

- be concluded in 2020 and the expected operating loss in the period until closing.
- Earnings from power distribution, residential customer and city light businesses are only included for half a year.

## Gross investments

Gross investments for 2020 are expected to amount to DKK 30-32 billion. The outlook reflects a high level of activity in Offshore (Borssele 1 & 2, Hornsea 2, Greater Changhua 1 & 2a and our US activities) and Onshore (Permian Energy Center, Plum Creek, Willow Creek and Sage Draw).

In addition to gross investments, significant funds are temporarily tied up in the construction of transmission assets for offshore wind farms in the UK and offshore wind

farms for our partners. These funds are a part of our operating cash flow.

At the end of 2019, funds tied up in work in progress totalled DKK 8.8 billion. During 2020, we expect to divest the Walney Extension offshore transmission asset, but we still expect to see a high level of funds tied up in work in progress in 2020 as a result of the continued construction of the transmission asset at Hornsea 2. We expect to divest the Hornsea 1 and Hornsea 2 offshore transmission assets around year-end 2020 and 2023, respectively.

## Uncertainties, prices and hedges

Our offshore wind farms are largely subject to regulated prices, implying a high degree of revenue certainty. This means that we know the price per generated MWh for most wind

Hornsea 1 is now commissioned and ramp-up generation will contribute to our earnings in 2020.

## // Our offshore wind farms are largely subject to regulated prices, implying a high degree of revenue certainty.

farms in Denmark and Germany as well as the CfD wind farms in the UK. For our British ROC wind farms, we also know the subsidy per generated MWh which we will receive in addition to the market price.

The part of our generation from offshore wind farms and power plants which is exposed to market prices has to a large extent been hedged for 2020. The same applies to our currency risks. The market value of financial hedging instruments relating to our operations and divestments of assets deferred for recognition in business performance EBITDA in 2020 amounted to DKK 0.7 billion at the end of 2019. This effect is included in the outlook for 2020 (see note 1.5).

The most significant uncertainty about the operating profit from existing activities in 2020 relates to the size of our power generation, which depends on the wind conditions, the ramp-up of new wind farms and asset availability.

### Forward-looking statements

The annual report contains forward-looking statements, which include projections of our short- and long-term financial performance and targets as well as our financial policies. These statements are by nature uncertain and associated with risk. Many factors may cause the actual development to differ materially from our expectations.

These factors include, but are not limited to, changes in temperature, wind conditions, wake and blockage effects, precipitation levels, the development in power, coal, carbon, gas, oil, currency and interest rate markets, changes in legislation, regulation or standards, the renegotiation of contracts, changes in the competitive environment in our markets and reliability of supply. Read more about the risks in the chapter 'Risk and risk management' and in note 7.

# Financial estimates and policies

## Financial estimates

In October, we presented an update of our long-term financial targets following a comprehensive project upgrading the models and processes we use to forecast the energy production from our offshore wind farms. The project leveraged our access to extensive production data from our asset portfolio. It led us to adjust two of our long-term financial targets: unlevered life cycle IRR and lifetime load factor, both for a specific group of projects. The long-term financial targets and estimates based on the entire portfolio, rather than a group of assets, remain unchanged, including ROCE and profit growth from operating assets. See further details in our company announcement: ['Ørsted presents update on its long-term financial targets'](#).

For the period 2019-2025, we expect total gross investments of approx DKK 200 billion, of which DKK 23.3 billion was spent in 2019. Investments in offshore wind farms are expected to constitute 75-85% of the investment programme. Onshore investments are expected to constitute 15-20%, while our investments in Markets & Bioenergy are expected to constitute 0-5% of the investment programme.

From 2017 to 2023, we expect an average increase in operating profit (EBITDA) from offshore and onshore wind and solar farms in operation (including O&M agreements and

power purchase agreements) of 20% annually, reaching a level of DKK 25-26 billion in 2023.

The largest share of Ørsted's operating profit (EBITDA) will still be generated by long-term contract-based or regulated activities. We expect an average of around 90% of EBITDA in the period 2019-2025 to stem from long-term contract-based or regulated activities.

Our target is an average return on capital employed (ROCE) of approx 10% for the Group in the 2019-2025 period.

## Financial policies

The Board of Directors recommends to the annual general meeting that a dividend of DKK 10.5 per share be paid for 2019, equating an increase of 8% and a total of DKK 4.4 billion.

Supported by the expected increase in cash flows from future offshore and onshore wind farms, we still intend to increase annual dividends by a high single-digit percentage compared to the previous years' dividends, covering the period up until 2025.

Our dividend policy and other expected capital allocations are subject to our commitment to our BBB+/Baa1 rating profile.

Financial estimates	Target	Year
Total CAPEX spend	DKK 200bn	2019-2025
Average return on capital employed (ROCE)	~10%	2019-2025
Average share of EBITDA from long-term regulated and contracted activities	~90%	2019-2025
Average yearly increase in EBITDA from offshore and onshore wind farms and solar farms in operation	~20%	2017-2023

## Financial policies

Rating	Min. Baa1/BBB+/BBB+ (Moody's/S&P/Fitch)
Capital structure	~30% (FFO/adjusted net debt)
Dividend policy	Ambition to increase the dividend paid by a high single-digit rate compared to the dividends for the previous year up until 2025

Read more about our key metrics, financial targets and policies in the presentation from our Capital Markets Day in November 2018 at [orsted.com/en/capital-markets-day](http://orsted.com/en/capital-markets-day) and our update in October 2019 on our long-term targets.

Our current rating is in accordance with the policy.

Formosa 1 is Taiwan's first commercial scale offshore wind project.

# Our business

- 17 The green transformation
- 19 Our strategic aspiration and growth platform
- 20 Our markets and strategy
- 24 Our capital allocation and funding
- 25 Our strategic enablers
- 26 Our business model
- 27 Our strategic targets
- 29 Our global footprint

2019 saw us significantly expand our geographic footprint in the US. Amazon Onshore Wind Farm in Texas was the largest onshore wind farm in the portfolio when we acquired LCE in 2018 – a project supporting hundreds of jobs and adding more than 1,000,000MWh of clean energy to the grid each year.

# The green transformation

The world is facing a climate emergency. Climate change is happening fast and is threatening to destabilise our global ecosystems.

With the 17 UN Sustainable Development Goals (SDGs), the world's countries have agreed on the most pressing economic, social and environmental challenges that we face globally towards 2030. Climate action is a central goal, as it affects the realisation of many other SDGs where overall progress has proven to be slow or even reversed.

Science has clearly demonstrated the need to limit global warming to 1.5°C to avoid uncontrollable effects of climate change, including more floods, wildfires and droughts, decrease in biodiversity, and many other severe consequences. With the Paris Agreement, a vast majority of the world's countries agree to take global action to keep the increase in global average temperature well below 2°C and to pursue efforts to limit the increase to 1.5°C compared to pre-industrial levels. Meanwhile, the global average temperature has already increased by more than 1.1°C and is still on the rise. With current policies, temperatures are expected to reach a 1.5°C increase as soon as 2030 and 3-4°C by 2100. To turn the current development around and keep the world below a 1.5°C temperature increase, global

emissions need to be halved in just ten years and reach net-zero by 2050.

Modern society was built on fossil fuels. The burning of coal, oil and gas still account for more than 80% of global energy consumption. Decoupling economic growth and carbon emissions require expanding the green energy transformation significantly and at a global scale.

However, the share of renewables meeting global energy demand has only increased around 0.25 percentage points annually over the past decade and is expected to reach just 12% in 2023. This development falls substantially short of being in line with the 1.5°C trajectory which necessitates profound near-term decarbonisation of the energy supply. The world's countries must rapidly transform global energy systems away from fossil fuels to becoming entirely based on renewable energy. It is an enormous endeavour which is necessary and, fortunately, also possible.

Through industrialisation, economies of scale and innovation across the value chain, the cost of renewable energy has dropped significantly over the past decade. Thus, the cost of offshore wind has dropped by more than 60% since 2014, and it is now cheaper to build offshore wind farms than coal- or gas-fired power plants. The same applies to solar photovoltaic (PV) and onshore wind that have followed similar developments. Renewables becoming

the economic choice has been a breakthrough for the green transformation. It demonstrates that ambitious government targets to deploy green technologies help to effectively bring down the cost of green energy.

## Ørsted wants to contribute to a 1.5°C future

At Ørsted, our vision is a world that runs entirely on green energy. We have become the global leader in deploying offshore wind and have activities within onshore wind, solar, storage and bioenergy. Our solutions tackle the climate challenge and help speed up the global transition from fossil-based energy to renewables, which represents our largest societal impact and contribution to the SDGs.

Over the past decade, we have undergone a major transformation. From being a traditional fossil-based energy company ten years ago, we are today ranked #1 in Corporate Knights' 2020 Global 100 most sustainable corporations in the world. We have demonstrated that a rapid transformation from fossil to renewable energy is both possible and profitable. From a green energy share of 17% in 2006, we are today at 86% and will reach 99% by 2025. Through this transformation, we have reduced our carbon intensity by 86% compared to 2006. We will continue to drive out fossil-based energy generation by phasing out coal by 2023 and expanding our renewable energy capacity across the world. We have installed 7.8GW offshore and onshore wind – enough to power more than 15 million

## Our contribution to the SDGs

The 17 Sustainable Development Goals (SDGs) address the key economic, social and environmental challenges that the world faces towards 2030 as a global framework for how to achieve a more sustainable future. The goals are interconnected, and the climate challenge influences almost all the other goals.

The core business of Ørsted contributes most directly to SDG 7 on 'Clean and affordable energy' and SDG 13 on 'Climate action'. Besides these, we contribute indirectly to several other SDGs. We seek to strengthen the positive impacts and mitigate and avoid potential negative impacts that derive from our core business and a global green transition.

See the full overview of our SDG contributions and impacts in our sustainability report [orsted.com/sustainability2019](https://orsted.com/sustainability2019) and ESG performance report [orsted.com/ESGperformance2019](https://orsted.com/ESGperformance2019).

people – and our ambition is to install more than 30GW of renewable capacity by 2030, which will be enough to power more than 55 million people.

For our energy generation and operations (scope 1 and 2 emissions), our target is to become carbon neutral by 2025. To achieve this, we will reduce our carbon intensity to less than 10g CO<sub>2</sub>e/kWh, which represents at least a 98% reduction compared to 2006. This target includes both generating green energy and sourcing green energy for our own energy use. We continuously work to reduce the remaining 2% of our carbon emissions and will offset any residual emissions from 2025.

As we embark on the next phase in our decarbonisation journey, we have also set a target to reach net-zero emissions in our total carbon footprint (scope 1-3) by 2040, a decade faster than required by science. To help achieve this, we target a 50% reduction of the

emissions in our energy trading and supply chain (scope 3) by 2032, compared to 2018. We will reach this target by engaging with our suppliers to reduce emissions in our supply chain and by gradually phasing out gas sales.

We have defined our carbon-reduction targets to align our full carbon footprint with what science requires from the energy sector to limit global warming to 1.5°C. The non-profit Science Based Targets initiative (SBTi) has preliminarily concluded that our new targets align with what the 1.5°C pathway requires from energy companies. The SBTi organisation will officially announce this target classification during 2020, once it has released the 1.5°C reduction pathway for energy companies. A visual showing all greenhouse gas emissions

### Carbon neutral by 2025

Energy generation and operations (scope 1-2)

g CO<sub>2</sub>e/kWh

By 2025, we want to be carbon neutral. This target covers all direct emissions from our activities and indirect emissions from our energy consumption (scope 1-2).

● We will eliminate the remaining emissions beyond a 98% reduction (g CO<sub>2</sub>e/kWh) which could include offset by investing in certified carbon-removal projects.

— Ørsted scope 1 and 2 emissions

in our company and value chain, along with our complete action plan on how to address them, is available in our sustainability report at [orsted.com/sustainability2019](https://orsted.com/sustainability2019).

Ørsted has set the course for a carbon neutral future. Just like we have transformed, we want to help transform the world's energy systems away from fossil fuels towards green energy to limit average global temperature rise to 1.5°C. Reaching such a future requires a bold vision and decisive action by individuals, corporations and governments.

### Climate-related financial disclosures

Companies and investors also need to look at how the climate may impact their business. This includes physical factors, such as sea level rising or storms that can affect assets, and transitional factors, such as carbon prices or technology shifts that can affect business strategies. To address such risks and opportunities, it is key to adopt a science-based carbon reduction target and analyse the business' financial risks and opportunities related to climate change as recommended by the Task Force on Climate-related Financial Disclosures (TCFD).

At Ørsted, we are aware of the actual and potential impacts of climate change on the resilience of our business. By endorsing and aligning our practices and reporting with the TCFD recommendations over the past two years, we have further crystallised our understanding and disclosure of climate-related risks and opportunities. This includes improved reporting on the integration of climate-related issues into our governance mechanisms, such as the Board of Directors' competences and

executive remuneration. We also conducted a climate scenario analysis in 2019, and its overall results are disclosed in the risk section of this report.

### Our sustainability reporting

Read more about our decarbonisation strategy as well as our full range of sustainability programmes in our sustainability report [orsted.com/sustainability2019](https://orsted.com/sustainability2019). The report constitutes our annual Communication on Progress to the UN Global Compact and highlights our positive and negative impacts on the Sustainable Development Goals (SDGs).

A full ESG data overview with accounting policies is available in our ESG performance report [orsted.com/ESGperformance2019](https://orsted.com/ESGperformance2019).

With the Sustainability and the ESG reports, we comply with the requirements for corporate social responsibility reporting set out in section 99a of the Danish Financial Statements Act as well as section 99b on the gender distribution at management levels, respectively.

See and download the reports here: <https://orsted.com/en/Sustainability/Our-reporting#0>

### Greenhouse gas emissions

Greenhouse gas emissions related to a company is typically divided into three categories according to the Greenhouse Gas (GHG) Protocol:

- Direct emissions (scope 1), which cover all direct emissions from the company's operations, e.g. from the burning of coal and gas at heat and power plants.
- Indirect emissions (scope 2), which include the emissions from the generation of electricity, heat and steam purchased and consumed by a company, e.g. for heating of buildings.
- Indirect emissions (scope 3), which include the upstream emissions in the company's supply chain from production and transportation of the goods and services purchased as well as from downstream emissions in relation to the end-user's consumption of the company's products or services.

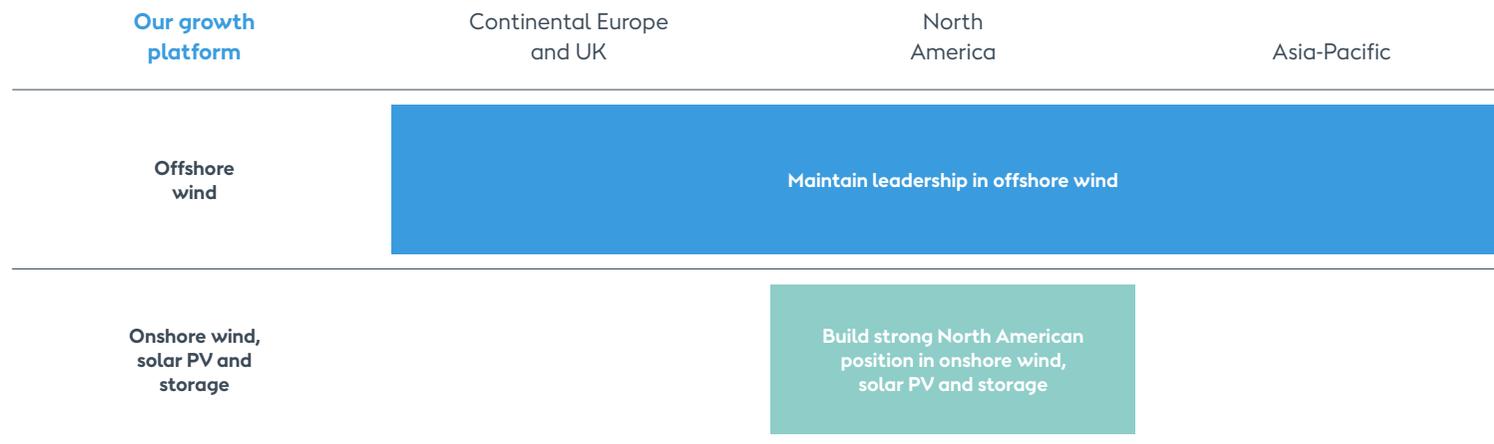

# Our strategic aspiration and growth platform

The need to transform the world's energy systems from fossil fuel-based to renewable energy and our leadership position in offshore wind give us a strong platform to realise our aspiration of becoming a global, green energy major in a rapidly expanding global renewable energy market.

By 2030, global installed renewable capacity is expected to be four times higher than it is today, fuelled by the cost competitiveness of green technologies and by increasingly ambitious government plans to decarbonise energy systems in the fight against climate change.

Ørsted's renewable energy portfolio includes offshore wind, onshore wind, solar PV and storage. In offshore wind, we are the market leader, both globally and across our four regional markets: UK, Continental Europe, North America and Asia-Pacific. In onshore renewables, i.e. onshore wind, solar PV and storage, a market we entered in 2018, we have a growing position in North America that will soon span seven US states.

Our global leadership position in offshore wind and growing regional position in onshore renewables create a strong foundation for reaching our strategic ambition of more than 30GW of installed renewable capacity by 2030.

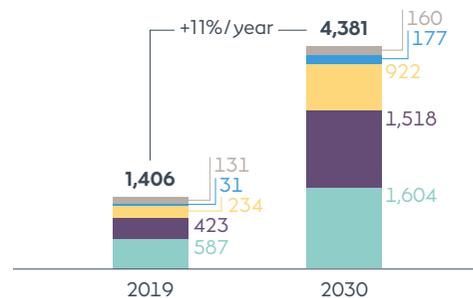

However, volume is not an objective in itself. We only invest in projects that provide returns above our cost of capital.

Markets & Bioenergy plays an important role in supporting our growth platform by providing services that help offtake the Group's energy generation and manage our risk exposure. The business unit is also responsible for our portfolio of combined heat and power (CHP) plants which provide green heat, power and ancillary services to Denmark's energy system, making a significant contribution to the decarbonisation agenda. To sharpen the focus of Markets & Bioenergy, we initiated several divestment processes for non-core activities over the past year, and we have already concluded some of these.

Global renewable energy capacity by technology<sup>1</sup> GW installed

- CAGR**
- 17% Offshore wind
  - 13% Small-scale PV
  - 12% Large-scale PV
  - 10% Onshore wind
  - 2% Biomass

# Our markets and strategy

## Offshore wind

### The global offshore wind market

In 2019, global installed offshore wind capacity excluding mainland China totalled 23GW. Bloomberg New Energy Finance estimates that the global offshore wind market will see the installation of approx 7GW per year between 2020 and 2025, and that annual additions will double to an average of 14GW per year by the mid to late 2020s. This represents a significant increase in comparison to the 3GW annual build-out rate in recent years. In the long term, the International Energy Agency predicts that offshore wind will become a mainstay of the world's power supply, with the technical potential to cover 1.5

### Offshore wind capacity excl. mainland China GW installed

times the world's current electricity demand, according to a report published in 2019.

Europe including the UK is by far the largest and most mature market for offshore wind. We expect to see significant growth in this region in the years to come, not least due to the ambition of the European Union to reach net-zero carbon emissions by 2050. The UK is currently the world's largest market for offshore wind. In 2019, the conservative government pledged to build 40GW by 2030, and the Crown Estate launched its first major auction for new offshore lease areas with a combined potential of up to 7GW of capacity. In mainland Europe, there has also been an increase in government build-out targets driven by the falling cost of offshore wind, decreasing availability of sites for onshore projects and an increasing sense of urgency about the decarbonisation of Europe's energy system. In 2019, France, Belgium and Poland raised their targets, while Ireland introduced a target for offshore wind for the first time, promising a strong line-up of tenders over the coming years.

North America and Asia-Pacific are new and relatively immature offshore markets in comparison to Europe. However, strong government commitments are propelling growth in these regions. In North America, the driving force of offshore wind expansion is state-level policies, which have been effective in establishing a rapid and significant build-

### Selected offshore wind targets

Region	Target	Current capacity (GW)†
<b>Continental Europe and UK<sup>1</sup></b>		
The UK	40GW by 2030	20.2
Germany	20GW by 2030	10.8

† Total capacity includes installed, under construction and awarded capacity end of 2019.

projects, and we now see Japan and South Korea following suit as next-in-line markets.

The growing volume of offshore wind projects and the expected long-term market growth have attracted new players and increased competition in the industry. Most notably, oil majors have entered the market with ambitious build-out targets, which has made auctions and tenders more competitive, putting pressure on margins.

### Our offshore ambition

Ørsted is the world leader in offshore wind, with approx 30% of the global offshore wind capacity installed and under construction outside mainland China. We have played a key role in maturing the industry, and we have built more offshore wind farms worldwide than any other company. By the end of 2019, we had 6.8GW of installed capacity,

out potential across the Eastern seaboard. In Asia-Pacific, Taiwan has been the first mover in encouraging the development of offshore wind

3.0GW under construction and a further 5.0GW awarded.

Ørsted's strategic ambition within offshore wind is to maintain our market leadership position and to reach 15GW of installed capacity by 2025. With our US East Coast awards of 2.9GW in 2019, we are already very close to reaching this goal, provided we take FID on all awarded projects.

Exponential growth and increasing competition in the underlying market in combination with our focus on financial discipline imply a lower win rate in competitive auctions and tenders going forward in comparison to our historical win rate of one third. Recent processes in the US (Massachusetts and Connecticut), the Netherlands and France illustrate this, where we were not awarded any capacity. However, given the rapidly expanding market, we expect to reach our build-out ambition with a lower win rate.

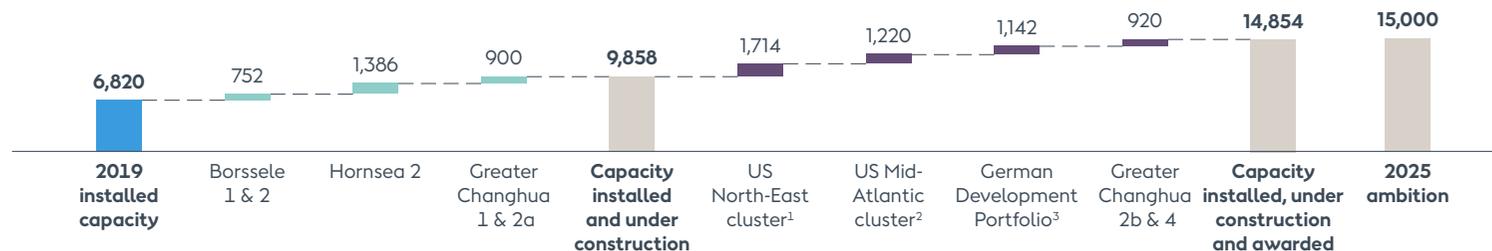

**Our offshore strategic priorities**

Several overall strategic priorities guide our offshore activities across regions. To deliver on our growth ambition, we will:

- drive operational excellence to secure best-in-class availability on operating assets, continue to deliver construction projects on time and on budget, and ensure value-creating FIDs on our awarded portfolio
- maintain leading market positions and expand our presence in the UK, Continental Europe, North America and Asia-Pacific
- continue to push for LCoE reductions through new technology adoption, supply chain development and systematic cost-out

**Offshore capacity build-out towards 2025**  
MW

- Awarded capacity
- Capacity under construction
- Capacity installed

<sup>1</sup> South Fork (130MW), Revolution Wind (704MW) and Sunrise Wind (880MW).  
<sup>2</sup> Skipjack (120MW) and Ocean Wind (1,100MW).  
<sup>3</sup> Gode Wind 3 (242MW) and Borkum Riffgrund 3 (900MW).

- closely monitor market for new complementary technologies and identify attractive opportunities for bundling offshore wind with storage and electro fuels
- maintain agility and reduce overhead through digitalisation and simplification of operations to free up funding for investment in market development initiatives.

**Our offshore regions**

Our offshore wind business is organised in four regions: the UK, Continental Europe, North America and Asia-Pacific. As our footprint expands, we recognise the need for a differentiated approach to our markets. Therefore, in addition to our overall strategic priorities, we have strategic focus areas in each region.

**UK**

We have been active in the UK since 2004, when we became a joint owner of the Barrow offshore wind farm. Today, the UK is our largest market, and we have 15 offshore wind farms in operation in British waters with a total capacity of 4.6GW, of which we own 2.3GW. In addition, we are constructing Hornsea 2, the world's largest wind farm at 1.4GW, and we have 4-5GW of seabed leases under development for the remaining part of the Hornsea zone (Hornsea projects 3 and 4).

We continue to see the UK as a key market for Ørsted, with opportunities to secure value-creating wins in auctions. Given the maturity of the market players and our operations in this region, our strategic focus is to continue to drive innovation and to leverage our market-leading EPC and O&M platforms.

**Continental Europe**

We have been present in Continental Europe since 1991, when we constructed the world's first offshore wind farm in Danish waters. Today, we have nine wind farms in operation and a total installed capacity of 2.4GW across Germany and Denmark. In addition, we have 0.8GW under construction in the Netherlands, and we have 1.1GW of awarded capacity in Germany.

Continental Europe is another very important market for Ørsted. We are focused on maturing our German development portfolio for FID, and we are exploring new markets, such as Poland, France and Belgium. We are also expanding our offtake platform through corporate power purchase agreements (CPPAs) to reduce merchant risk exposure and strengthen the risk-return profile of projects. Lastly, we are investigating

opportunities in adjacent technologies, such as renewable hydrogen, which have the potential to decarbonise hard-to-abate sectors, such as heavy industry and transportation.

### North America

We established a foothold in North America in 2016 when we secured the right to develop the Bay State Wind site off the coast of Massachusetts. In 2018, we acquired Deep-water Wind, creating the largest US offshore wind developer in terms of project pipeline. We currently operate the US' only offshore wind farm, the 30MW Block Island Wind Farm off the Rhode Island coast. We are also EPC responsible for the pilot Coastal Virginia Offshore Wind project, the first fully permitted offshore wind project in federal waters. In 2019, we won two major US auctions in New Jersey and New York. Our strong performance in recent US solicitations has resulted in a total awarded capacity of 2.9GW, and we have up to 4.5GW of seabed leases under development which we can utilise for auctions and tenders in 8 different states.

In the US, our success was enabled by an early and strong commitment to the market, a willingness to invest in local communities and the ability to deliver competitive projects in partnership with knowledgeable and experienced local players. Thus, our strategic focus is to continue building the market, while strengthening our local capabilities. We are developing our North-East and Mid-Atlantic projects with emphasis on harvesting cluster synergies, delivering projects on time and on budget, meeting local content commitments, and expanding local partnerships.

### Asia-Pacific

We entered the Taiwanese market in 2017, marking our first operations in Asia-Pacific. We are the co-owner of Taiwan's first commercial-scale offshore wind farm, Formosa 1, whose second phase was inaugurated in November 2019. We have obtained site exclusivity for four offshore wind sites off the coast of Changhua County. Of these four sites, 900MW is under construction, 920MW has been awarded, with approx 600MW remaining for possible future auction rounds.

We have a strong foothold in Asia-Pacific, and our strategic focus in this region is to continue to build our organisation and capabilities to ramp up project development and execution. We will continue to work on strengthening local partnerships and supporting the build-out of local supply chains in Taiwan. We are also expanding our footprint into new markets. In Japan, we are firming up our partnership with TEPCO with a focus on the Choshi zone off the coast of Tokyo, and, we are exploring the potential for value-creating projects in South Korea.

## Onshore renewables

### The onshore renewables market

The global renewable energy mix is dominated by onshore wind and large-scale solar PV, which accounted for over 72% of installed capacity worldwide in 2019. The same is true in North America, which is the third-largest market in the world for onshore wind with approx one fifth of global installed capacity in 2019. Installed large-scale solar PV capacity in North America reached 51GW in 2019 and is forecast to grow by 10% per year towards 2030. New build-out ahead of

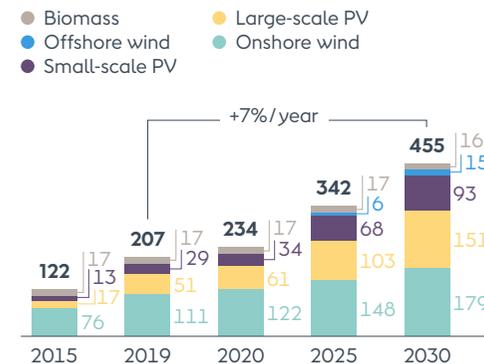

the upcoming phase-out of tax credits and an increase in state-level clean energy targets are the main causes of an increase in expected capacity towards 2025.

### Our onshore ambition

Through the acquisition of Lincoln Clean Energy (LCE) in 2018 and subsequent expansions, we have established a significant presence in North American onshore renewables, including onshore wind, large-scale solar PV and energy storage. In 2019, we completed the integration of LCE and changed the LCE name to Ørsted, thereby applying the Ørsted brand to the full spectrum of onshore and offshore renewable technologies. Our combined installed and under construction capacity makes us approx the 20th largest onshore wind and solar PV company in the US.

Our strategic ambition in North America is to build a leadership position in onshore

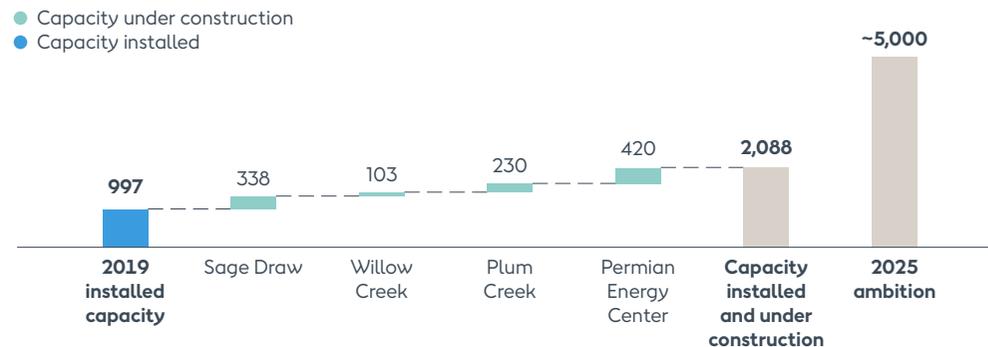

### North American renewable capacity by technology<sup>1</sup> GW installed

<sup>1</sup> Excludes solar thermal, geothermal, marine, tidal and others, which combined account for less than 1% of capacity.

Source: Bloomberg New Energy Finance (BNEF) New Energy Outlook 2019 for all technologies except offshore wind. Offshore wind figures from BNEF H1 2019 Offshore Wind Market Outlook.

### Onshore capacity build-out towards 2025 MW

renewables. In 2019, we had 2.1GW of onshore renewables installed and under construction in North America – 1.7GW of onshore wind, 430MW of solar PV and 40MWac of storage capacity. Since entering the US onshore market, we have doubled our operating portfolio, and it will more than double again by 2021. We have set a target of 5GW of installed capacity by 2025. While our portfolio will remain largely onshore wind dominated, we look to grow our solar PV operational capacity to approx 20-30%, enabling us to broaden our growth platform and capture the benefits of diversification.

**Our onshore strategic priorities**

The strategic priorities which guide our onshore activities are operational excellence, reducing LCoE and maintaining a pioneering spirit and growth mindset. We took FID on four projects in 2019 and currently have over 1GW under construction across the electricity markets ERCOT and SPP. We will continue to focus on securing attractive long-term PPAs that facilitate solid economics after the phase-out of the production tax credit and the investment tax credit for wind and solar PV projects, respectively.

**Markets & Bioenergy**

Our Markets & Bioenergy business has five core functions. Firstly, it provides an efficient route-to-market for Ørsted and third-parties by offering services such as power balancing and green certificates trading. Its second function is to manage market risk for our energy portfolio through commodity trading and other risk management activities. Markets & Bioenergy also manages the operations of our CHP plants. Fourthly, it is responsible for optimising

our natural gas portfolio. Finally, Markets & Bioenergy is responsible for our waste recycling technology, Renescience.

As the share of renewable energy in the grid increases, there is an increasing need to balance forecasted and actual generation. Markets & Bioenergy continues to provide an efficient route-to-market for Ørsted's and third-parties' power generation through power origination, physical balancing and portfolio optimisation services.

Intensifying competition and new regulatory models in some markets mean that a larger share of project revenues will be exposed to market risk going forward. Markets & Bioenergy will continue to manage our exposure to merchant power prices through market trading and risk management.

Our portfolio of bioconverted CHP plants remains a key component in the green transition of the heat and power sector in Denmark and supports the power grid during times of low renewable generation. We continue to optimise the performance of our CHP plants, and in 2019, we completed the last planned bioconversion of our CHP plants. From mid-December, all heat and power generated at Asnæs Power Station were produced from sustainable biomass, leaving Esbjerg Power Station our last coal-fired plant, which we plan to close in early 2023.

Gas is a fossil fuel that should eventually be phased out of the energy system. However, during the transition period leading up to a 100% green energy system, gas ensures reliability of supply. We focus on optimising

the value of our legacy natural gas portfolio through trading, portfolio optimisation and contract negotiations.

Our Amazon Wind Farm comprises 110 wind turbines, each over 90 meters tall, and has a capacity of 253MW.

# Our capital allocation and funding

To realise our strategic aspiration, substantial investments and funding are required.

We incurred capital expenditures of DKK 23.3 billion in 2019, primarily driven by construction activities in Offshore (DKK 15.1 billion). Our plan is to invest an estimated DKK 200 billion in the period from 2019 through 2025, with more than 95% earmarked for offshore wind and onshore renewables and 0-5% dedicated to reinvestment in our Markets & Bioenergy activities. Our capital will be allocated to projects with the best risk-return profile, and we will only invest in projects which generate returns above our cost of capital.

The strategic plan is subject to our four capital allocation priorities. Firstly, we maintain our strong commitment to our credit ratings (BBB+/Baa1). Secondly, we intend to increase our annual dividends by a high single-digit percentage. Thirdly, we will invest in value-creating growth. Finally, potential excess capital will be returned to our shareholders in the form of additional dividends and/or share buy-backs.

Going forward, our investments will be fully funded by green capital, either through operating cash flow from our renewable energy projects or through new debt issued in accordance with our green finance framework. This framework was developed in 2019 in alignment with ICMA's Green Bond Principles

2018 and LMA/APLMA/LSTA's Green Loan Principles 2018 and replaces our previous Green Bonds Framework from 2017. In the 2019 framework, we have broadened our green financing instruments to include green bonds, green loans and other debt instruments to finance eligible green projects.

2019 saw several funding highlights. In May, we issued GBP 900 million (DKK ~7.8 billion) of green senior bonds in one inflation-linked (CPI) tranche and two nominal tranches, making Ørsted the first corporate issuer of CPI-linked green bonds in the UK. In June, we established a five-year NTD 25 billion (DKK ~5.5 billion) green revolving credit facility in partnership with a group of 15 banks, the majority of which were local Taiwanese banks. In November, Ørsted was the first foreign corporate entity to issue NTD denominated green bonds in Taiwan, with the issuance of NTD 12 billion (DKK ~2.7 billion). In December, we issued green hybrid capital securities of EUR 600 million (DKK ~4.5 billion) and redeemed EUR 524 million (DKK ~3.9 billion) of existing hybrid capital securities callable in 2020.

With this year's transactions, our total outstanding debt, excluding hybrids, amounted to DKK 37.2 billion, with more than 50% of this issued in a green format.

Oak solar farm in New Jersey, US is comprised of 53,200 fixed solar panels and has a capacity of 10MW.

# Our strategic enablers

Achieving our ambition of becoming a global green energy major requires continuously strengthening our organisation across several dimensions. Therefore, we continue to evolve our global operating model and invest in digitalisation, talent and innovation.

## Global operating model

Effective from 2020, we introduced a new global operating model in Offshore to support our international growth ambitions. The aim of the new model is to balance global scale advantages and local market proximity as well as to create a more transparent and scalable platform for our global expansion plans.

## Digitalisation

Ørsted's digitalisation strategy is focused on the deployment of advanced analytics and artificial intelligence, as these capabilities represent the greatest value creation potential. We currently have six agile release trains (ART) running across the organisation.

The ART in Offshore Operations is our most advanced and is focused on maintenance optimisation and yield uplift of older wind turbines. The ART in Markets & Bioenergy and Risk facilitated the development and deployment of our US trading unit and focuses on developing automated and algorithmic trading capabilities. The ART in Offshore EPC was ramped up in late spring to help optimise

the CAPEX baseline in bid processes. The remaining three ARTs are running in Offshore EPC, Markets & Bioenergy and Ørsted Group Support and focus on the automation and optimisation of business processes.

## Talent

To reach our ambition of becoming a global green energy major, we have strengthened our talent strategy to address all stages of the employee life cycle and to meet the needs of our local markets. We are investing in our employer brand and are strengthening our talent acquisition efforts in all markets. Improved onboarding programmes aim at ensuring new colleagues develop faster and more effectively. We provide our employees with a healthy working environment to enhance well-being and performance and to differentiate us as an employer.

As our global footprint expands, our workforce also becomes more diverse. We are building an inclusive culture to leverage diversity and strengthen our company. We are also increasing our efforts to promote career development and internal mobility. A new simplified

career model will make career opportunities more visible and accessible to support the development and retention of talent at Ørsted.

## Innovation

A strong entrepreneurial drive and willingness to challenge industry notions of what is possible has been at the heart of Ørsted's successful transformation. Innovation is in our DNA, and we will continue to push frontiers to remain a leader in a dynamic and unpredictable market. This includes exploring new technologies and solutions. For example, we are investigating the potential of renewable hydrogen for direct application and conversion to renewable fuels. We have established a separate hydrogen team, anchored in our Offshore business unit, which has established a project pipeline and kicked off initial phases of several pilot projects.

We continue to be innovative in deploying our market trading capabilities to manage risk better and more economically. Furthermore, we continue to develop our corporate PPA (CPPA) business, which we expect will play a key role in addressing merchant risk.

As a frontrunner in the global green energy transition, we're investing heavily in digitalisation and innovation.

# Our business model

- Inhouse activities
- Partly outsourced activities

## Key Resources

### Financial capital

We finance our investments through cash flows from operations, debt and divestment of ownership interests.

### Energy assets

We invest in scalable, innovative green technologies and solutions.

### Natural resources

We rely on natural resources, such as construction materials, biomass, as well as locations with attractive wind speeds and seabed and land conditions.

### Human resources

We rely on a highly skilled workforce to operate our business.

### Innovative culture

We continuously innovate our energy solutions to drive competitiveness.

### Stakeholder engagement

We depend on constructive relations with our key stakeholders to ensure supportive framework conditions for our business.

Core activities	Develop	Build	Operate	Own	Market
 <b>Offshore</b> Capital employed 74%	Develop offshore wind farms	Construct offshore wind farms	Operate and maintain offshore wind farms	Raise capital through partnerships and farm-downs	Activities related to offtaking our power generation and hedging our risk exposure are performed by Markets & Bioenergy, but earnings from these activities are allocated to the business unit they impact  Examples include route-to-market services and trading activities
	Projects under development in the UK, US, Germany and Taiwan	3 offshore wind farms under construction	Operator of 24 offshore wind farms	Manage profitability over asset lifetime	
Exploring opportunities in Japan, Poland and South Korea			Full owner or partly owner of 29 offshore wind farms		
 <b>Onshore</b> Capital employed 11%	Develop onshore wind, solar PV and storage projects and ensure tax equity	Select best-in-class contractors to construct our onshore assets	Management of extended service agreements to operate and maintain our onshore assets	Raise capital through tax equity partnerships	↑
	Onshore wind, solar PV and storage projects under development in the ERCOT, MISO, PJM and SPP electricity markets	3 onshore wind farms, 1 solar PV farm and 1 storage facility under construction	Operator of 4 onshore wind farms, 1 solar PV farm and 1 storage facility	Manage profitability over asset lifetime	
Owner of 7 onshore wind farms, 2 solar PV farms and 2 storage facilities					
 <b>Markets &amp; Bioenergy</b> Capital employed 15%		Operate and maintain CHP plants	Manage profitability over asset lifetime	Provide route-to-market services for our own and third-parties' electricity, power certificates and gas	
		Operator of 6 bio-converted CHP plants, 3 heat and ancillary service plants and 1 coal-fired CHP plant	Owner of 6 bio-converted CHP plants, 3 heat and ancillary service plants and 1 coal-fired CHP plant	Manage Ørsted's energy portfolio risks	

## Value created

### Society

We address profound societal challenges by developing green, independent and economically viable energy systems that reduce greenhouse gas emissions and stimulate local growth and job creation.

### Customers

We fulfil our customers' energy needs through green, innovative and efficient energy solutions.

### Employees

We are committed to a sustainable working life and keep a constant focus on being a great and safe place to work with motivated and satisfied employees.

### Shareholder return

We create value for our shareholders in the form of competitive total returns.

# Our strategic targets

--- ● Target

## 1. EBITDA from operating offshore and onshore sites, %

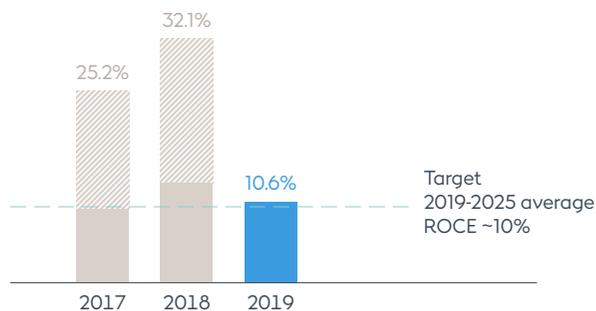

We have set a target to increase EBITDA from our wind and solar farms in operation by an average of 20% per year from 2017 to 2023. From 2017 to 2019, we averaged an annual growth rate of 32% in line with our objective.

## 2. ROCE, %

We target an average return on capital employed (ROCE) of approx 10% from 2019 to 2025. In 2017 and 2018, ROCE was positively impacted by substantial profits from new partnership agreements, particularly divestment gains.

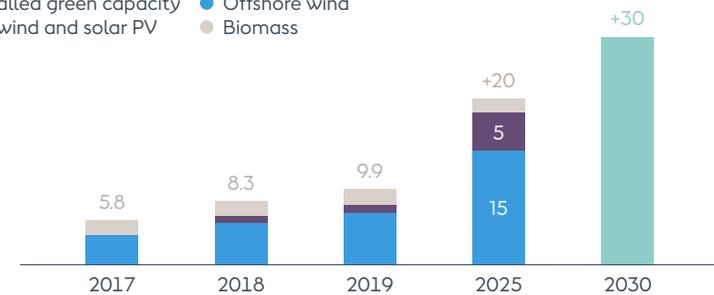

● Approximate ROCE excl. earnings from new partnership agreements

## 3. Installed green capacity, GW

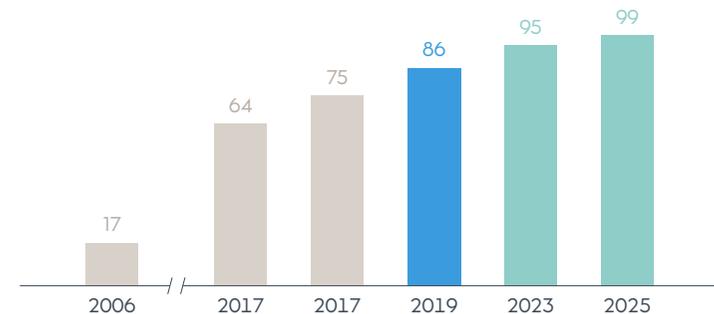

In 2018, we set an ambition to have installed more than 30GW of green capacity by 2030. In addition, our ambition is to have installed 15GW of offshore wind and 5GW of onshore wind and solar PV capacity by 2025. We are making good progress on our ambitions with 9.9GW of green capacity installed, 4.1GW under construction and 5.0GW awarded at the end of 2019.

● Total installed green capacity ● Offshore wind ● Onshore wind and solar PV ● Biomass

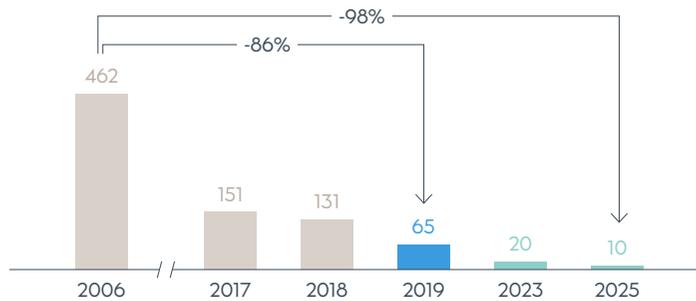

## 4. Green share of generation, %

In 2019, we increased the green share of generation to 86%, up 11 percentage points compared to last year. We are on track to meet our objective of exceeding 95% by 2023 and reaching 99% by 2025.

## 5. Greenhouse gas emission intensity (scope 1 and 2), g CO<sub>2</sub>e/kWh

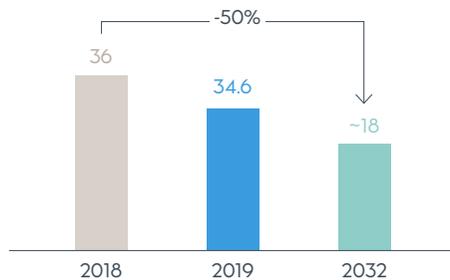

We are well on track to meet our scope 1 and 2 greenhouse gas (GHG) emission intensity target of less than 10g CO<sub>2</sub>e/kWh in 2025<sup>1</sup>. Scope 1 refers to the direct GHG emissions from our energy generation and operations, and scope 2 refers to the indirect GHG emissions from the energy we source for our operations. Lower generation based on coal and gas together with our continued build-out of renewables contributed to a reduction in our GHG intensity to 65g CO<sub>2</sub>e/kWh in 2019.

<sup>1</sup> In addition to the emission reduction targets, we have set a new target of being carbon neutral in 2025. We will neutralise the last 0-10 gCO<sub>2</sub>/kWh with carbon offsets.

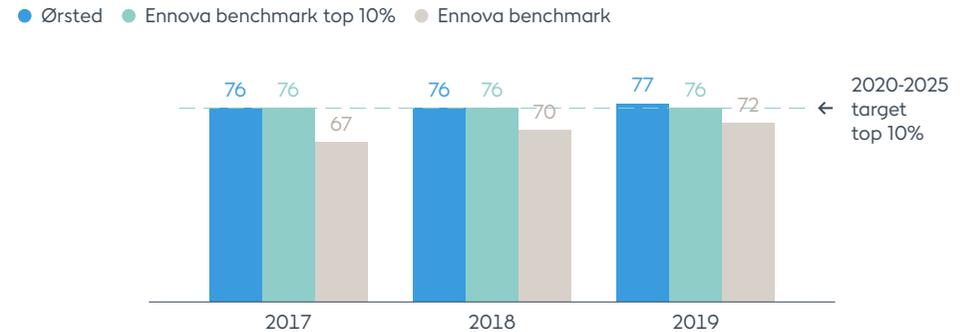

## 6. Greenhouse gas emissions (scope 3), million tonnes CO<sub>2</sub>e

In 2019, we introduced a target for our scope 3 GHG emissions. We aim to reduce our scope 3 emissions by 50% between 2018 and 2032. The primary sources of our scope 3 emissions are indirect emissions related to the trading of natural gas and fossil-based power in our Markets business as well as to the goods and services we source for the construction of our wind and solar farms.

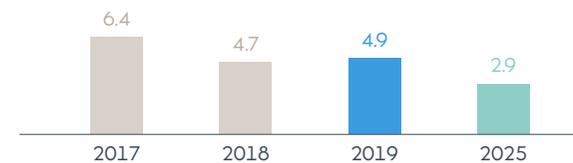

## 7. Employee satisfaction, scale 1-100

We believe that employee satisfaction and positive results go hand in hand. Therefore, we are continuously working to improve the well-being of our employees. In 2019, we reached a record high score and met our 2020 target for employee satisfaction. This score places Ørsted among the top 10% of our external benchmark group, similar to 2017 and 2018. We are proud of this and aim to stay in the top 10%.

## 8. Safety, TRIR

Safety is high on our agenda, and we do our utmost to prevent accidents and injuries. Our target is to reduce the total recordable injury rate (TRIR) to 2.9 by 2025, which is a sharpening of our previous target of 3.3. In 2020, we target a TRIR of 4.2 or lower.

Julie's home is powered by green energy from one of Ørsted's five Danish offshore wind farms. In 2019, 47% of Danish power came from renewable energy solutions. She made the switch to green energy this year to help protect the future of our planet for her children and the generations to come.

# Results

## Reporting

In June, we decided to consolidate the business units Customer Solutions and Bioenergy into a new business unit, named Markets & Bioenergy. In addition, as we run the business on an end-to-end value chain thinking, we decided that all activities and earnings that relate to Offshore and Onshore, will be reported in these segments, even if the daily activities are performed on behalf of the group in Markets & Bioenergy. Therefore, earnings from trading related to hedging of our power exposures and power portfolio optimisation activities in relation to Offshore and Onshore are now presented in these business units. In 2019, EBITDA of DKK 725 million and DKK -18 million were transferred to Offshore and Onshore, respectively, and DKK 237 million was transferred to Offshore in 2018.

## Financial results

### Revenue

Power generation from offshore and onshore wind increased by 46% and totalled 15.5TWh in 2019, mainly due to the ramp-up of generation from Hornsea 1, Borkum Riffgrund 2 and Walney Extension and the addition of our Onshore business unit, which we acquired in Q4 2018. Curtailments and various operational issues had a larger than normal adverse impact on our offshore generation in 2019.

Thermal power generation amounted to 4.6TWh, and heat generation amounted to

8.3TWh, down 31% and 6%, respectively, compared to 2018. The decreases were mainly due to warmer weather than in 2018 and less favourable market conditions for power generation. We also generated heat without combined power generation at Asnæs Power Station most of the year. Offshore and onshore wind accounted for 77% of our total power generation, while the renewable energy share of our total heat and power generation accounted for 86% in 2019 compared to 75% in 2018.

Revenue amounted to DKK 67.8 billion. The decrease of 12% relative to 2018 was primarily due to significantly lower gas prices, lower revenue from construction of transmission assets, lower gas sales and lower thermal heat and power generation as mentioned above.

### EBITDA

Operating profit (EBITDA) totalled DKK 17.5 billion compared to DKK 30.0 billion in 2018. The decrease was mainly due to the 50% farm-down of Hornsea 1 in 2018 which contributed positively with DKK 15.1 billion. Adjusted for new partnerships, EBITDA increased by 17%. This was driven by a 30% increase in earnings from offshore and onshore wind farms in operation, which was due to a full year with Onshore and ramp-up at Hornsea 1, Borkum Riffgrund 2 and Walney Extension as well as good performance from trading related to hedging of our UK

## Business performance vs. IFRS

Ørsted uses business performance as an alternative to the results prepared in accordance with IFRS. Business performance represents the underlying financial performance of the Group in the reporting period, as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. The difference between the two principles will be eliminated as the contracts expire. Apart from this, there is no difference between business performance and the IFRS results.

EBITDA calculated in accordance with IFRS amounted to DKK 19.0 billion in 2019 against DKK 28.5 billion in 2018. Calculated in accordance with the business performance principle, EBITDA was DKK 17.5 billion and DKK 30.0 billion, respectively. The difference between the two principles was DKK 1.5 billion both years, but with opposite signs.

In the presentation of the results according to IFRS, Ørsted does not apply the provisions on hedge accounting of commodities and related currency exposures. The market value adjustments of these are continuously recognised in the income statement, which means that the IFRS results for the individual years are not comparable. IFRS results do not reflect the commercial risk hedging, according to which the business units and the Group are managed and evaluated.

In the management's review, comments are based on the business performance principles only, unless otherwise specified. Reference is also made to note 1.5.

Business performance vs. IFRS, DKKm	2019	2018
<b>EBITDA – business performance</b>	<b>17,484</b>	<b>30,029</b>
Market value adjustments for the year of financial and physical hedging contracts relating to a future period	141	(1,734)
Reversal of deferred gains (losses) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period	1,395	196
<b>EBITDA – IFRS</b>	<b>19,020</b>	<b>28,491</b>

energy exposures. The reversal of a provision related to the Elsam competition case also contributed positively to the higher earnings.

Earnings from our gas activities were negatively affected by the steep decline in gas prices which had a temporary adverse effect on our earnings in 2019 due to a decrease in the accounting value of our gas inventories, whereas we saw an opposite effect in 2018 due to increasing gas prices. In addition, we had a positive outcome of an arbitration case in 2018 which was not repeated in 2019. Furthermore, the agreement to divest our LNG activities had a net negative impact of DKK 0.8 billion on earnings in 2019 as the agreement entails a larger payment to the buyer than what we had provided for.

Earnings from construction agreements for partners were at a level with 2018 (excluding new partnerships). The construction agreements in 2019 primarily concerned high construction activity at Hornsea 1, whereas 2018 had high construction activity at Walney Extension and Borkum Riffgrund 2.

EBITDA in 2019 was positively affected by DKK 0.6 billion from the implementation of the new IFRS 16 accounting standard regarding leasing, compared to a continued expensing of operational lease costs. Roughly half of the impact was in Offshore.

Please see note 1.3 for further information on the implementation of IFRS 16 'Leases' and the impact on our consolidated financial statements.

Financial results, DKKm	2019	2018	%
Revenue	67,842	76,946	(12%)
EBITDA	17,484	30,029	(42%)
Depreciation	(6,864)	(5,978)	15%
Impairment reversals (losses)	(568)	603	n.a.
Operating profit (loss) (EBIT)	10,052	24,654	(59%)
Gain (loss) on divestment of enterprises	(63)	127	n.a.
Profit (loss) from associates and JVs	2	1	100%
Net financial income and expenses	(1,135)	(1,278)	(11%)
Tax	(2,756)	(4,018)	(31%)
Tax rate	31%	17%	14%p
Profit for the year from continuing operations	6,100	19,486	(69%)
Profit for the year from discontinued operations	(56)	10	n.a.
Profit (loss) for the year	6,044	19,496	(69%)

In 2019, regulated and quasi-regulated activities and contracted activities accounted for 66% and 31% of our EBITDA, respectively, whereas market exposed activities accounted for 3%.

Read more about profit for the year from discontinued operations in note 3.7.

## EBIT

EBIT decreased by DKK 14.6 billion to DKK 10.1 billion in 2019, primarily as a result of the lower EBITDA and higher depreciation and impairment losses.

The increase in depreciation was driven by more wind farms in operation as well as the implementation of IFRS 16. In accordance with IFRS 16, our operating leases have been recognised in the balance sheet as of 1 January 2019 and are now depreciated instead of being expensed.

The increase in depreciation was partially offset by our Danish power distribution and residential customer businesses being classified as assets held for sale by the end of 2018 and thus not depreciated in 2019.

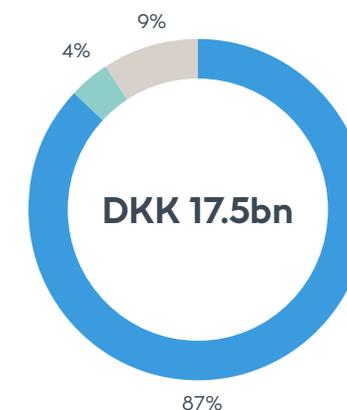

Impairment losses amounted to DKK 0.6 billion and related to a write-down of our 20MW battery storage Carnegie Road in the UK, mainly due to changed pricing and cost estimates, and of our Renaissance plant in the UK, mainly due to delayed commissioning, increased CAPEX and changed cost and price estimates. The reversal of an impairment in 2018 related to our power distribution activities.

## Financial income and expenses

Net financial income and expenses amounted to DKK 1.1 billion compared to DKK 1.3 billion in 2018. The decrease in net expenses was mainly due to positive effects from exchange rate adjustments. This was partly offset by interests related to tax and an increase in contractual returns to tax equity partners in

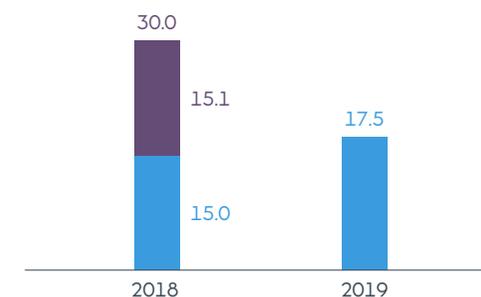

## EBITDA

- Offshore
- Onshore
- Markets & Bioenergy

## EBITDA, DKKbn

- EBITDA, excl. new partnerships
- EBITDA, new partnerships

EBITDA, excluding new partnerships increased by 17%.

Onshore, due to a full year of consolidation and new wind farms.

### Tax and tax rate

Tax on profit for the period amounted to DKK 2.8 billion, which was DKK 1.3 billion lower than in 2018. The effective tax rate was 31% and was among other things affected by the recognition of deferred taxes related to tax equity at Lockett and tax expenses related to the partial farm-down in Deepwater Wind.

### Profit for the year from continuing operations

Profit for the year from continuing operations totalled DKK 6.1 billion, DKK 13.4 billion lower than in 2018. The decrease was primarily due to the lower EBIT. Profit for the year increased by DKK 0.5 billion, adjusted for the divestment of Hornsea 1 in 2018.

## Cash flows and net debt

### Cash flows from operating activities

Cash flows from operating activities totalled DKK 13.1 billion in 2019 compared to DKK 10.3 billion in 2018. The increase of DKK 2.7 billion was mainly due to a higher release of funds tied up in work in progress on construction agreements and higher EBITDA (excluding gains from divestments which are not recognised in cash flows from operating activities).

This was partly offset by higher paid tax in 2019 and lower contribution from tax equity funding of our onshore wind farms than in 2018. In 2019, we had a net cash inflow from work in progress of DKK 1.4 billion, mainly due to the receipt of milestone payments related

to Hornsea 1 and the divestment of the Race Bank transmission assets. This was partly offset by funds tied up related to the construction of Hornsea 1 for partners and the offshore transmission assets at Hornsea 1 and 2.

### Investments and divestments

Gross investments amounted to DKK 23.3 billion against DKK 24.5 billion in 2018.

The main investments in 2019 were:

- offshore wind farms (DKK 15.1 billion), including Hornsea 1 and Hornsea 2 in the UK, Greater Changhua 1 & 2a in Taiwan and Borssele 1 & 2 in the Netherlands
- onshore wind and solar farms (DKK 6.2 billion), including Sage Draw, Plum Creek, Lockett, Willow Creek and Permian Energy Center in the US
- Markets & Bioenergy (DKK 1.9 billion), mainly the biomass conversion of Asnæs Power Station and the installation of smart meters in Radius.

Cash flow from divestments in 2019 primarily related to the receipt of deferred proceeds from the farm-down of 50% of Hornsea 1 in 2018 (DKK 1.7 billion) and to the strengthening of our strategic partnership with Eversource as they became a 50% partner in our activities in the New England area in the US in February (DKK 1.4 billion).

### Interest-bearing net debt

Interest-bearing net debt totalled DKK 17.2 billion at the end of 2019 against net cash of DKK 2.2 billion at the end of 2018. The DKK 19.4 billion increase was mainly due to negative free cash flow of DKK 6.9 billion, total dividend payments and interests on hybrid capital of DKK 5.0 billion, and inclusion of operational

Cash flows and net debt, DKKm	2019	2018	%
Cash flows from operating activities	13,079	10,343	26%
EBITDA	17,484	30,029	(42%)

Other items	86	203	(58%)
Interest paid and similar items, net	(1,049)	(700)	50%
Paid tax	(4,800)	(3,367)	43%
Change in work in progress	1,417	(2,326)	n.a.
Change in tax equity liabilities	630	1,835	(66%)
Change in other working capital	(477)	(427)	12%
Gross investments	(23,305)	(24,481)	(5%)
Divestments	3,329	19,950	(83%)
Free cash flow	(6,897)	5,812	n.a.
Net debt at 1 January	(2,219)	(1,517)	46%
Free cash flow from continuing operations	6,897	(5,812)	n.a.
Free cash flow from discontinued operations	(174)	(209)	(17%)
Interest-bearing receivables re Oil & Gas divestment	340	292	16%
Dividends and hybrid coupons paid	5,016	4,700	7%
Addition of leasing obligations	5,873	-	n.a.
Exchange rate adjustments, etc.	1,497	327	358%
Net debt at 31 December	17,230	(2,219)	n.a.

Key ratios, DKKm, %	2019	2018	%
ROCE	10.6%	32.1%	(22%p)
Adjusted net debt	30,575	15,516	97%
FFO/adjusted net debt	31.0%	69.0%	(38%p)

Gain (loss) on sale of assets is part of EBITDA, but is presented as part of the 'divestment' cash flow. The EBITDA effect is thus reversed in the specification of cash flows from operating activities.

ROCE and FFO/adjusted net debt is specified in notes 2.1 and 6.1.

lease obligations of DKK 5.9 billion in accordance with IFRS 16.

## Equity and capital employed

### Equity

Equity was DKK 89.6 billion at the end of the year against DKK 85.1 billion at the end of 2018.

### Capital employed

Capital employed was DKK 106.8 billion at 31 December 2019 against DKK 82.9 billion at the end of 2018. The increase was mainly due to investments and the addition of operational lease assets. Approximately half of the capital employed in Markets & Bioenergy (DKK 8.2bn) relates to assets and liabilities to be divested.

## Financial ratios

### Return on capital employed (ROCE)

Return on capital employed was 10.6% in 2019. The decrease compared to 2018 was mainly attributable to the lower EBIT, which was significantly impacted by the farm-down of Hornsea 1 in 2018.

### Credit metric (FFO/adjusted net debt)

The funds from operations (FFO)/adjusted net debt credit metric was 31% at the end of 2019 against 69% in 2018.

## Non-financial results

### Green share of heat and power generation

The green share of heat and power generation amounted to 86% in 2019, up 11 percentage points year on year. The increase was due to the addition of generation from onshore wind farms, higher generation from offshore wind

farms and lower heat and power generation based on coal and gas. The latter was due to the warmer weather, generation of heat without combined power generation at Asnæs Power Station most of the year, and the divestment of the Dutch Enecogen power plant in 2018.

### Greenhouse gas emissions

Greenhouse gas emissions (primarily carbon emissions) from our heat and power generation and other operating activities covered by scope 1 and 2 emissions in the Greenhouse Gas Protocol, decreased to 65g CO<sub>2</sub>e/kWh in 2019 against 131g CO<sub>2</sub>e/kWh in 2018. The emissions per kWh decreased for the same reasons as mentioned above.

Greenhouse gas emissions from our supply chain (scope 3) decreased by 4% to 34.6 million tonnes in 2019, driven by a 5% reduction in gas sales.

### Safety

In 2019, we have had 106 total recordable injuries (TRIs), divided between 71 contractor injuries and 35 own employee injuries. This was an increase of 8 injuries in total compared to 2018 and led to an increase in the total recordable injury rate (TRIR) from 4.7 in 2018 to 4.9 in 2019.

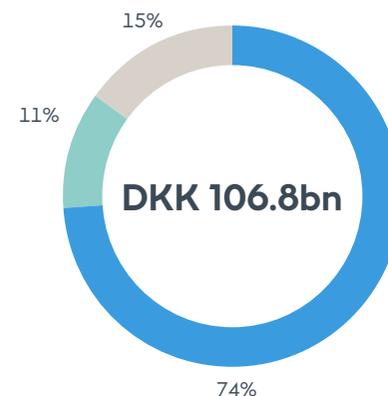

### Fatalities

An employee of one of our contractors tragically died after a serious accident at Avedøre Power Station in May.

Capital employed, %

- Offshore
- Onshore
- Markets & Bioenergy

Since mid-December 100% of Asnæs Power Station's heat and power has been generated from sustainable biomass.

# Five-year summary

Income statement (business performance), DKKm	2019	2018	2017	2016	2015

## Business performance vs. IFRS

Business performance represents the underlying financial performance of the Group in the reporting period, as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. Apart from this, there is no difference between business performance and IFRS results. Read more in note 1.5.

The EBITDA split between business units in the comparative years 2015-2017 has not been updated to reflect that earnings from trading related to hedging of our power exposures and power portfolio optimisation activities in relation to Offshore are presented in this business unit from 2018 (previously Markets & Bioenergy).

However, the power sales volumes presented under Markets & Bioenergy have been restated to exclude internally sourced volumes from Offshore.

- <sup>1</sup> EBIT/average capital employed.
- <sup>2</sup> Net debt, including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations (2015-2018), and decommissioning obligations less deferred tax.
- <sup>3</sup> See definition on page 182 and in the ESG statements.
- <sup>4</sup> The figures indicate values from the latest regulatory financial statements (updated in June).

# Fourth quarter

## Financial performance – Group

### Revenue

Revenue in Q4 2019 decreased by 21% relative to Q4 2018 and amounted to DKK 18.7 billion. The lower revenue was mainly driven by construction agreements, which decreased by DKK 3.1 billion due to the partial divestment of the Hornsea 1 transmission assets as part of the 50% farm-down of Hornsea 1 in Q4 2018. In addition, revenue decreased due to lower gas and power prices. This was only partly offset by higher generation from offshore wind farms.

### EBITDA

Operating profit (EBITDA) totalled DKK 4.6 billion compared to DKK 19.2 billion in Q4 2018. The decrease was driven by the 50% farm-down of Hornsea 1 in Q4 2018, which contributed DKK 15.1 billion to EBITDA. Adjusted for earnings from the new Hornsea 1 partnership in 2018, EBITDA was DKK 0.5 billion higher than in Q4 2018. The increase was driven by the above-mentioned higher generation from offshore wind farms and a positive effect from the accounting value of our gas at storages opposite to the effect for the full year, due to increasing prices in Q4 2019, whereas we saw a decrease in the accounting value of our storages due to declining prices in Q4 2018.

This was partly offset by a net negative impact of DKK 0.8 billion related to the agreement to divest our LNG activities.

### Profit from continuing operations

Profit from continuing operations decreased by DKK 14.2 billion to DKK 0.9 billion. The decrease was mainly due to the lower EBITDA. Adjusted for the new partnership earnings in 2018 related to Hornsea 1, net profit was DKK 0.4 billion lower than in Q4 2018.

### Cash flows from operating activities

Cash flows from operating activities totalled DKK 4.8 billion in Q4 2019 compared to DKK 7.6 billion in Q4 2018. The decrease of DKK 2.8 billion was mainly due to receipt of tax equity contributions related to Tahoka in Q4 2018 and more funds tied up in other working capital due to higher receivables at the end of 2019 as compared to 2018.

### Gross investments

Gross investments amounted to DKK 8.8 billion in Q4 2019, of which 94% related to investments in Offshore and Onshore. The main investments related to Hornsea 2, Greater Changhua 1 & 2a, Borssele 1 & 2, Sage Draw, Plum Creek and Permian Energy Center.

Financial performance, DKKm	Q4 2019	Q4 2018	%

Net debt, end of period	17,230	(2,219)	n.a.

## Financial performance – business units

### Offshore

Power generation increased by 21% relative to Q4 2018. The increase was primarily due to ramp-up of generation from Hornsea 1 and Borkum Riffgrund 2 (in total 0.6TWh).

Revenue from offshore wind farms in operation increased by 23% due to the above-mentioned ramp-up from new offshore wind farms. Revenue from power sales decreased by 23% due to lower power prices.

Revenue from construction agreements decreased by DKK 4.3 billion, mainly due to the partial divestment of the Hornsea 1 transmission assets as part of the 50% farm-down of Hornsea 1 in Q4 2018. In Q4 2019, revenue from construction agreements primarily related to the divestment of the transmission assets at Race Bank.

EBITDA decreased by DKK 14.8 billion to DKK 4.0 billion in Q4 2019, mainly due to the 50% farm-down of Hornsea 1 in Q4 2018.

EBITDA from sites, O&M and PPAs amounted to DKK 4.6 billion, up DKK 0.5 billion compared to Q4 2018. Higher generation and good performance from trading related to hedging of our UK energy exposures contributed positively to the higher earnings.

### Onshore

Power generation increased by 81% relative to Q4 2018. The increase was primarily due to new wind farms (Tahoka and Lockett) in operation.

Revenue from wind farms in operation increased by 54% due to the above-mentioned factors.

EBITDA increased by DKK 0.1 billion and amounted to DKK 0.2 billion. The increase was primarily due to more wind farms in operation.

### Markets & Bioenergy

Revenue was down 6% and amounted to DKK 9.6 billion in Q4 2019. The decrease was driven by a decrease in gas prices relative to Q4 2018, partly offset by higher sold gas volumes.

EBITDA totalled DKK 0.5 billion in Q4 2019, which was DKK 0.2 billion higher than in Q4 2018.

EBITDA from CHP plants was in line with last year and amounted to DKK 0.4 billion.

EBITDA from Gas Markets & Infrastructure increased by DKK 0.7 billion and amounted to DKK 0.6 billion. The higher earnings were related to an increase in the accounting value of our gas storages in Q4 2019 (increasing gas prices in Q4 2019), whereas there was a decrease in the accounting value of our gas storages in Q4 2018 (decreasing gas prices in Q4 2018). In addition, good performance from trading of our financial gas exposures contributed positively to the result.

EBITDA from LNG was lower due to the before-mentioned impact of DKK -0.8 billion related to the divestment of our LNG activities. This was partly offset by good performance related to optimisation of LNG deliveries and reversal of negative timing effects from previous periods.

EBITDA from our distribution, B2C and city light businesses was at the same level as Q4 2018.

For more details on quarterly figures for our business units, please go to [orsted.com/financial-reports](https://orsted.com/financial-reports)

# Offshore

## Highlights 2019

- We took FID on the offshore wind farm Greater Changhua 1 & 2a in Taiwan – our first large-scale offshore wind investment outside Europe.
- We were awarded the 1,100MW Ocean Wind project in New Jersey.
- We were awarded the 880MW Sunrise Wind project in New York together with our partner Eversource Energy.
- We divested 50% of the South Fork and Revolution Wind projects and two New England offshore wind lease areas to our partner Eversource Energy.
- We signed a non-binding term sheet with Polska Grupa Energetyczna (PGE) regarding two large-scale projects.
- Exclusive negotiations entered into with the Public Service Enterprise Group (PSEG) regarding a joint venture agreement to acquire 25% of Ocean Wind.
- We commissioned Hornsea 1.
- We commissioned phase 2 of Formosa 1.
- We divested the transmission assets of our offshore wind farm Race Bank.
- We selected GE Renewable Energy as the preferred wind turbine supplier for our Mid-Atlantic cluster in the US and secured a wind turbine volume of 1.7GW from Siemens Gamesa for our North-East cluster.
- We entered into one long-term CPPA in the UK and one CPPA in Germany.
- We introduced a new operating model to support our international growth ambitions.

## Financial performance

Power generation increased by 20% relative to 2018, primarily due to ramp-up of generation from Hornsea 1, Borkum Riffgrund 2 and Walney Extension (in total 1.8TWh). Curtailments and various operational issues had a larger adverse impact on generation than in a normal year.

Wind speeds were slightly above last year and amounted to a portfolio average of 9.2m/s, which was in line with a normal wind year. Availability ended at 93%, which was in line with 2018.

Revenue decreased by 7% to DKK 40.2 billion. Revenue from offshore wind farms in operation increased by 19% to DKK 16.6 billion due to the above-mentioned ramp-up of Hornsea 1, Borkum Riffgrund 2 and Walney Extension. Revenue from power sales decreased by DKK 1.5 billion, primarily due to lower power prices.

Revenue from construction agreements decreased by DKK 4.2 billion, primarily due to the partial divestment of the Hornsea 1 transmission assets and the Burbo Bank Extension transmission assets in 2018. In 2019, revenue from construction agreements primarily related to Hornsea 1 and the divestment of the Race Bank transmission assets.

EBITDA decreased by 46% relative to 2018 and amounted to DKK 15.2 billion. Adjusted for

Adjusted for partnerships, EBITDA increased by 17%.

new partnerships in 2018 (Hornsea 1), EBITDA increased by 17% compared to last year.

EBITDA from Sites, O&M and PPAs amounted to DKK 13.8 billion in 2019, of which approx DKK 0.3 billion was due to the implementation of IFRS 16. The 22% increase was primarily due to the factors mentioned above. In addition, good performance from trading related to hedging of our UK energy exposures contributed positively to the increase. Excluding earnings previously reported as part of Markets & Bioenergy, EBITDA from Sites, O&M and PPAs increased by 18%.

EBITDA from partnerships decreased by DKK 15.0 billion and amounted to DKK 3.8 billion. The decrease was mainly due to the gain and subsequent construction work related to the farm-down of Hornsea 1 in 2018 (DKK 15.1 billion). In 2019, construction

agreements primarily concerned Hornsea 1 and positive effects from the ongoing divestments of offshore transmission assets at Walney Extension and Race Bank.

EBITDA from other activities, including project development, amounted to DKK -2.4 billion. The increased spend relative to 2018 was mainly due to higher project development activities in the US.

Depreciation increased 23% and amounted to DKK 5.5 billion. The increase was mainly due to commissioning of new offshore wind farms in the UK and Germany as well as the implementation of IFRS 16.

Cash flow from operating activities amounted to DKK 9.3 billion, which was DKK 2.6 billion higher than in 2018. The increase was primarily due to higher EBITDA (excluding gains from

divestments which are not recognised in cash flows from operating activities), less capital being tied up in work in progress due to received partner milestone payments and lower receivables. This was partly offset by higher tax payments in 2019.

Gross investments amounted to DKK 15.1 billion and mainly related to the construction of Hornsea 1 and 2, Greater Changhua 1 & 2a and Borssele 1 & 2.

Cash flow from divestments in 2019 related to the receipt of deferred proceeds from the 50% farm-down of Hornsea 1 in 2018 (DKK 1.7 billion) and to the strengthening of our strategic partnership with Eversource as they became a 50% partner in our activities in the New England area in February (DKK 1.4 billion).

↑ Borkum Riffgrund 2, the North Sea, Germany, during construction in 2018.

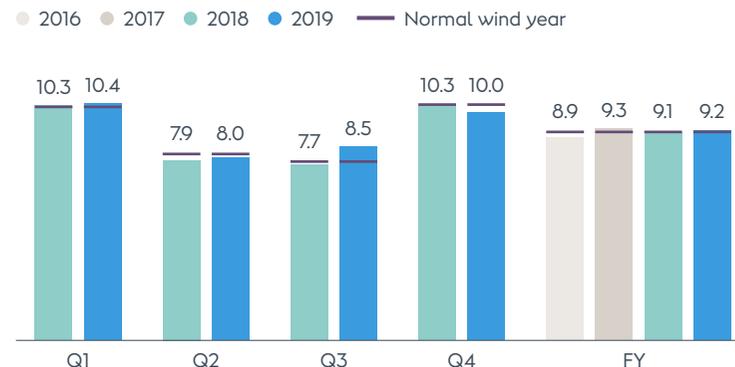

### Introduction to Offshore

- We are active in all parts of the value chain and develop, construct, own and operate offshore wind farms in the UK, Germany, Denmark, the Netherlands, the US and Taiwan.
- We have been pioneers in the industry since we built the world's first offshore wind farm in 1991, and we are the market leader within global offshore wind power generation with 25+ years of experience and 24 offshore wind farms in operation.
- Worldwide, we have constructed more offshore wind farms than any other company, with a capacity of 6.8GW. They supply carbon-free power to more than 14 million people annually.
- Our integrated EPC organisation has a strong track record of delivering projects on time and on budget and manages multiple large-scale offshore construction projects in parallel across the globe.

### Quarterly and annual wind speed for our offshore wind farms, m/s

The wind speed indicates how many metres per second the wind has blown in the areas where we have offshore wind farms. The weighting is based on our generation capacity.

## Strategic and operational performance

2019 was an eventful year with two major awards in the US, FID on Greater Changhua 1 & 2a in Taiwan and commissioning of Hornsea 1 in the UK.

### UK

In 2019, we commissioned the offshore wind farm Hornsea 1 in the UK on time and within budget. Hornsea 1 is currently the world's largest offshore wind farm and contributes 1.2GW to our installed capacity.

In addition to our operational offshore wind farms, construction of the offshore wind farm Hornsea 2 is progressing according to plan. We are currently installing export cables along the onshore route, and we expect commissioning in the first half of 2022.

The application for Hornsea 3 is currently being processed, with a consent decision expected in the first half of 2020.

In February, we entered into a long-term CPPA with Northumbrian Water for our offshore wind farm Race Bank which was the first of its kind in the UK.

In October, we completed the divestment of the Race Bank transmission assets to Diamond Transmission Partners. The transmission assets were sold for GBP 472.5 million (DKK 4.2 billion) on a 100% basis and include the onshore substation, the export cables and the offshore substation. In 2020, we expect to divest the transmission assets related to Walney Extension and potentially Hornsea 1.

### Continental Europe

In Continental Europe, we are currently constructing the wind farm Borssele 1 & 2 in the Netherlands, which is moving forward as planned. We are currently installing foundations and array cables, and we expect commissioning end Q4 2020.

In October, we announced that we had commenced discussions with Polska Grupa Energetyczna S.A. regarding the purchase of a 50% ownership share in two projects in the Baltic Sea with a total capacity of up to 2.5GW. The projects are expected to commence construction by 2026 and 2030, respectively.

In early December 2019, we signed a 10-year fixed price CPPA with Covestro to offtake output from 100MW of our offshore wind farm Borkum Riffgrund 3 in Germany – the largest offshore CPPA in the world to date. This agreement, in combination with the deal signed with Northumbrian Water in the UK, represents an important step in building long-term green partnerships with corporate customers that can support the risk-return profile of merchant offshore wind projects.

### North America

The post-merger integration of Deepwater Wind was successfully completed in the second half of 2019. Deepwater Wind has added an attractive and geographically diverse set of projects to our portfolio.

In February, we divested 50% of the South Fork and Revolution Wind projects as well as two New England offshore wind lease areas to Eversource Energy. The divestment extended our strategic partnership with Eversource

in the north-east and will enable the joint venture to harvest synergies across the different New England projects.

In February, we received approval from Rhode Island's regulators for the 400MW long-term PPA for Revolution Wind.

In June, the results of the first offshore wind auction in New Jersey were announced, and we were awarded the right to build the 1,100MW Ocean Wind offshore wind project at a price of USD 86.4 per MWh (2017 levelised) for a 20-year period. Following the award, we have entered into exclusive negotiations with Public Service Enterprise Group (PSEG) to potentially become an equity investor in the project and acquire 25% of Ocean Wind. Subject to FID, the Ocean Wind project is expected to be commissioned in 2024.

In July, the results of the first offshore wind auction in New York were announced, and together with our joint venture partner Eversource Energy, we were awarded the right to build the 880MW Sunrise Wind project. In October, Sunrise Wind signed a 25-year PPA with the New York State Energy Research & Development Authority at a price of USD 79.6 per MWh (2017 levelised). Subject to FID, the Sunrise Wind project is expected to be commissioned in 2024.

We have secured a wind turbine volume of 1.7GW from Siemens Gamesa for Sunrise Wind, Revolution Wind and South Fork, which constitute our north-east cluster. The agreement is the largest US offshore wind turbine contract to date and will allow the projects to realise economies of scale.

In September, we selected GE Renewable Energy as the preferred wind turbine supplier for our Skipjack and Ocean Wind offshore wind farms, which constitute our Mid-Atlantic cluster, marking the world's first commercial deployment of GE's Haliade-X 12MW offshore wind turbine.

In December, we entered into an export cable framework agreement with Nexans to procure up to 1,000km for our US portfolio.

In the US, we are constructing the 12MW Coastal Virginia demonstration project on behalf of our partner Dominion Energy. All components are being fabricated, and the project remains on track to begin construction in Q2 2020.

### Asia-Pacific

In January 2019, our Greater Changhua 1 & 2a project obtained its establishment permit, and we signed a power purchase agreement with Taipower for a tiered feed-in tariff of NTD 6,279.5 (approx EUR 187) per MWh for the first 10 years and TWD 4,142.2 (approx EUR 123) per MWh for the subsequent 10 years. In April, Taiwan's Ministry of Economic Affairs approved our local supply chain plan, and we took FID soon after. All key supply and installation contracts have been signed, and we are on track to deliver a 2022 COD. We also initiated a structured farm-down process for 50% of the Greater Changhua 1 site, which is progressing according to plan.

In November, we commissioned phase 2 of the Formosa 1 project in Taiwan according to plan and within budget. Formosa 1 has a capacity of 128MW, of which we own 35%, and is the

first commercial-scale offshore wind farm in Taiwan.

**Cross-regional events**

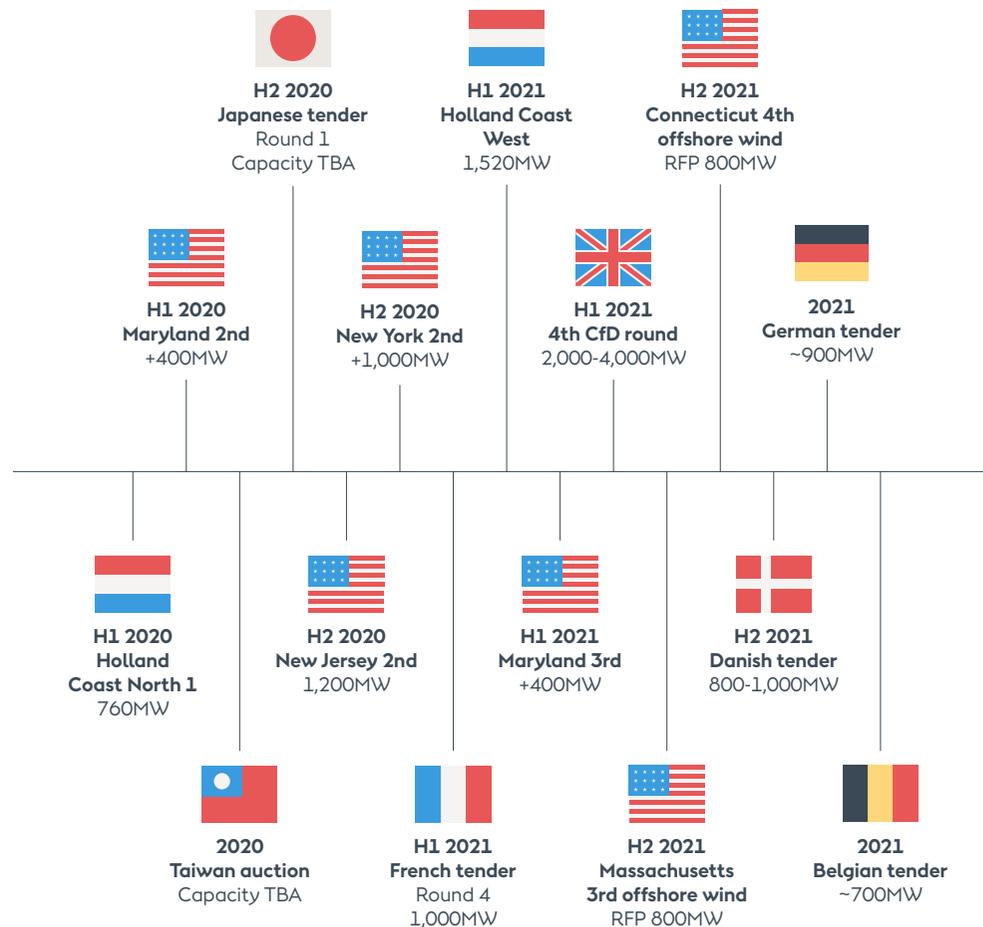

In October, we reduced production forecasts across our offshore wind portfolio as a result of new findings demonstrating the negative impact of blockage and wake effects on power generation at our offshore wind farms. New wind simulation models suggest that we have historically underestimated the impact of blockage effects. Furthermore, a newly-developed tool that benchmarks production models against actual wind turbine operating data shows that previous assumptions underestimate wake effect losses. As global offshore wind build-out accelerates, the whole industry will see higher wake effects between neighbouring wind farms.

Effective from 2020, we launched a new global operating model to support our international growth ambitions in Offshore. The new model organises our business into four regions: UK, Continental Europe, North America and Asia-Pacific. The aim of the new model is to optimise the balance between global scale advantages and local market proximity as well as to create a more transparent and scalable platform for our global expansion.

We have a strong focus on safety and are continuously working on lowering our total recordable injury rate. An example of our

approach to improve safety during offshore wind operations and maintenance is the innovative 'Get Up Safe' system. This is a motion-compensated hoist solution that enables technicians to move safely between moving vessels and offshore wind turbines. Technicians will no longer have to step from a moving boat onto a ladder and then climb to reach the base of the wind turbine.

**Expected offshore wind auctions and tenders in 2020 and 2021<sup>1</sup>**

<sup>1</sup> Excludes offshore lease auctions. There are two confirmed lease auctions in 2020, ScotWind and UK Lease Round 4. The Bureau of Ocean Energy Management (BOEM) New York lease auction, originally scheduled for 2020, has been delayed with no new timeframe set.

# Onshore

## Highlights 2019

- We commissioned the onshore wind farm Lockett (184MW) within budget and ahead of schedule.
- We took FID on the Sage Draw (338MW), Willow Creek (103MW) and Plum Creek (230MW) wind farms as well as on the Permian Energy Center (420/40MW) combined solar and storage project.
- We secured tax equity funding for Lockett and tax equity commitments for Sage Draw, Plum Creek and Willow Creek.
- We acquired Coronal Energy's solar and storage development platform.
- In December, Lincoln Clean energy was rebranded as Ørsted.

## Financial performance

As we acquired Lincoln Clean Energy and established the Onshore business unit on 1 October 2018, comparison figures for 2018 only include Q4.

Power generation amounted to 3.5TWh in 2019. Approximately half of the 2.9TWh increase was due to consolidation of a full year of generation from Amazon and Willow Springs. The other half was ramp-up of generation from Tahoka and Lockett that came online in December 2018 and August 2019, respectively.

Revenue amounted to DKK 0.7 billion and related to the generation from our operating wind farms.

As we established the Onshore business unit on 1 October 2018, comparison figures for 2018 only include Q4.

## Introduction to Onshore

- We entered into the North American onshore renewables market in 2018 with the acquisition of Lincoln Clean Energy (LCE) and currently own and operate four wind farms in Texas with a capacity of 1.0GW as well as a small solar farm in New Jersey.
- We develop onshore wind, solar PV and storage projects, through an established execution model, managing key interfaces with top tier suppliers and contractors.
- We develop projects across four North American electricity markets, ERCOT, MISO, SPP and PJM, and deliver wind, solar PV and storage solutions, which ensures flexibility, to meet the dynamic needs of the diverse North American customer base.

EBITDA amounted to DKK 0.8 billion in total. EBITDA from sites were DKK 0.5 billion, and production tax credits (PTCs) contributed with an additional DKK 0.6 billion. Project development and other costs amounted to DKK -0.3 billion.

Impairment losses amounted to DKK 0.1 billion and related to a write-down of our 20MW battery storage project Carnegie Road in the UK, mainly due to changed price and OPEX estimates.

Cash flows from operating activities amounted to DKK 1.0 billion, which primarily comprised tax equity contribution from our partner at Lockett less funds tied up in net working capital. In 2018, it primarily comprised a tax equity contribution related to Tahoka.

Gross investments amounted to DKK 6.2 billion in 2019 and related to the construction of Sage Draw, Plum Creek, Lockett, Willow Creek, Permian Energy Center and minor acquisitions. The majority of investments in 2018 was the purchase price for the acquisition of Lincoln Clean Energy.

Divestments primarily comprised a sale and lease-back arrangement for land related to Permian Energy Center.

### Strategic and operational performance

We have made significant progress over the past year, building our position as a multi-state developer with a strong portfolio of projects in operation, under construction and under

development. The commissioning of the Lockett onshore wind farm in July brought our operating portfolio to a total of 1GW. Furthermore, we took FID on four projects during the year, resulting in 1.1GW of wind and solar capacity currently under construction.

Over the past year, areas of the business have been systematically integrated into Ørsted to ensure an effective operating model, capitalising on the capabilities of both companies. We rebranded LCE as Ørsted in December, further strengthening our platform in North America.

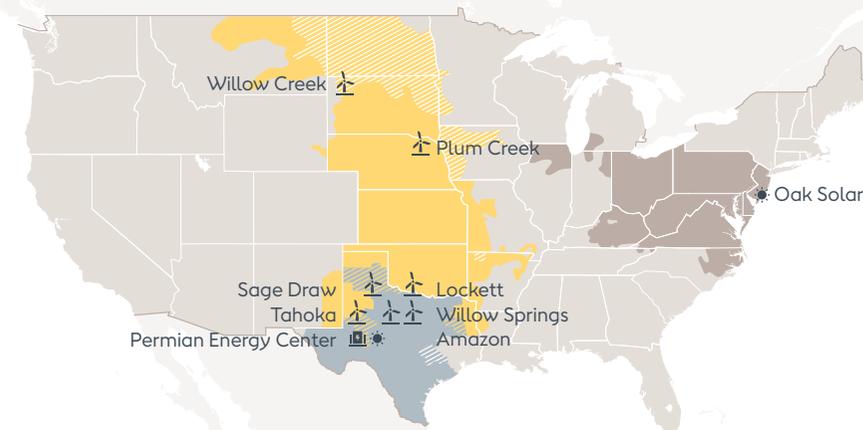

In onshore wind, we increased our presence in the ERCOT electricity market in April by taking FID on the Sage Draw wind farm. We also expanded into the SPP electricity market through the acquisition and FID of the construction-ready wind farm Willow Creek in South Dakota in June and the FID on the wind farm Plum Creek in Nebraska in August. All three wind farms are expected to be commissioned in 2020 and are thus expected to be eligible for the full value of the production tax credits (PTCs).

In addition, we secured tax equity financing commitments for Sage Draw, Plum Creek and Willow Creek from leading tax equity investors.

During 2019, we made a strategic investment in solar PV through the acquisition of Coronal Energy's solar and storage development platform and pipeline, thereby deepening our presence in the solar market and expanding our solar and storage asset portfolio.

In November, we took FID on our inaugural large-scale solar PV and storage project,

### Selected US power markets

- Southwest Power Pool (SPP)
- Electric Reliability Council of Texas (ERCOT)
- PJM Interconnection

Permian Energy Center in West Texas, which we expect to commission in 2021. This adds 420MW of solar PV and 40MWac storage capacity to our portfolio and supports Ørsted's strategy of delivering clean and competitive energy solutions to the dynamic US energy market.

We currently have a strong pipeline of over 1.1GW of onshore wind and solar projects in development, which we are maturing in 2020. We have a target of 5GW of installed capacity by 2025.

The overall US power market is complex and fragmented. Approximately two thirds of the nation's load is supplied by one of seven wholesale power markets, managed by either independent system operators (ISOs) or a regional transmission organisations (RTOs). The remaining load is supplied via traditional vertically integrated utility systems. These are mainly located in the south-east and west (excluding California) of the country.

# Markets & Bioenergy

## Highlights 2019

- We reached 100% green heat and power generation at the newly bio-converted Asnæs Power Station in mid-December 2019.
- We signed an agreement to divest our Danish power distribution (Radius), residential customer and city light businesses to SEAS-NVE.
- We generated 68% of our total heat and power from sustainable biomass. 96% of the wooden biomass we sourced was certified sustainable. By 2020, it will be 100%.
- We established a commodity trading unit in the US.
- We concluded a 15-year agreement with the Dutch power grid company Alliander to purchase green certificates from the offshore wind farm Borssele 1.
- We commissioned the new flue gas condensation unit at Herning Power Station. The unit uses the residual heat in the flue, reducing the fuel consumption by 20%.
- We sold our stakes in the Kalundborg Bioenergi plant and two upgrading plants in Fredericia and Horsens.
- Radius finalised the installation of more than 1 million smart meters in 2019.
- We signed an agreement to divest the Stignæs Transit Harbour.
- We entered into an agreement to divest our liquified natural gas (LNG) activities.
- We reached a settlement in the Elsam competition case.

## Financial performance

Revenue decreased by 18% compared to 2018 and amounted to DKK 32.8 billion. The decrease was mainly driven by an average decrease of 41% in gas prices relative to 2018. In addition, lower gas and power sales, heat and power generation and power prices contributed to the lower revenue.

Power generation was 31% lower than in 2018, driven by warmer weather and less favourable market conditions for power generation, and generation of heat without combined power generation at Asnæs Power Station most of the year. Heat generation decreased by 6% in 2019 due to warmer weather.

EBITDA amounted to DKK 1.5 billion compared to DKK 2.1 billion in 2018.

EBITDA from CHP plants increased by DKK 0.4 billion and totalled DKK 1.2 billion in 2019. The increase was primarily due to a reversal of a provision of DKK 0.3 billion following the acquittal in the Elsam competition case.

EBITDA from Gas Markets & Infrastructure decreased by 45% and amounted to DKK 0.4 billion. The decrease mainly related to our gas contracts where we received a one-off compensation following the completion of an arbitration case relating to a gas purchase contract in Q1 2018. In addition, earnings were negatively affected by the substantial drop

Performance highlights		2019	2018	%
<b>Business drivers</b>

EBITDA	DKKm	1,495	2,100	(29%)
CHP plants		1,152	715	61%
Gas Markets & Infrastructure		390	705	(45%)
LNG		(957)	(43)	n.a.
Distribution, B2C and city light		1,280	1,135	13%
Other, incl. project development		(370)	(412)	(10%)
Depreciation	DKKm	(798)	(1,430)	(44%)
Impairment losses	DKKm	(500)	603	n.a.
EBIT	DKKm	197	1,273	(85%)
Cash flows from operating activities	DKKm	1,218	2,874	(58%)
Gross investments	DKKm	(1,898)	(2,522)	(25%)
Divestments	DKKm	25	320	(92%)
Free cash flow	DKKm	(655)	672	n.a.
Capital employed	DKKm	15,789	13,014	21%

in gas prices during the year, which led to a decrease in the accounting value of our gas inventories, whereas increasing gas prices led to a temporary positive effect in 2018. The negative effect in 2019 will be partly offset if the gas prices increase again, or when we sell the gas, expectedly in 2020.

EBITDA from LNG decreased by DKK 0.9 billion to DKK -1.0 billion in 2019. The agreement to divest our LNG activities had a net negative impact of DKK 0.8 billion on EBITDA in 2019, as the agreement entails a larger payment than what we had provided for. In addition, earnings in 2019 were adversely impacted by time-lag on oil-indexed LNG purchase agreements.

EBITDA from Distribution, B2C and city light increased by DKK 0.1 billion to DKK 1.3 billion. The increase was mainly due to lower costs.

Depreciation decreased by 44% and amounted to DKK 0.8 billion. The decrease was mainly due to the distribution, B2C and city light businesses not being depreciated in 2019, as they are classified as assets held for sale.

Impairment losses amounted to DKK 0.5 billion in 2019 and related to a write-down of our Renaissance plant in the UK, mainly due to delayed commissioning, increased CAPEX and changed cost and price estimates. In 2018, previous impairment losses of DKK 0.6 billion

regarding the power distribution grid were reversed in connection with the classification as assets held for sale at the end of the year. Cash flow from operating activities amounted to DKK 1.2 billion in 2019. The decrease of DKK 1.7 billion was mainly due to higher paid tax and higher receivables at the end of 2019 compared to 2018.

Gross investments amounted to DKK 1.9 billion in 2019 and mainly related to the instalment of new smart meters, the bioconversion of Asnæs Power Station and maintenance of the power distribution grid.

## Strategic and operational performance

2019 was a year of change where we initiated and concluded a number of divestments and merged two business units. However, we also made good progress within our core activities.

### Provide route-to-market for our energy generation

During 2019, our power portfolio under management grew by 1.2GW to more than 5.5GW, as we added a long-term contract for the Hornsea 1 Offshore Wind Farm.

We also concluded a 15-year agreement with the Dutch power grid company, Alliander, who will purchase green certificates from the Borssele 1 Offshore Wind Farm in order to reduce its carbon emissions.

Furthermore, we started optimising the dispatch of Ørsted's first stand-alone, large-scale battery (20MW) in the UK ancillary services

market, further diversifying and adding flexibility to our power portfolio.

### Manage market risks

Within our market trading activities, we benefitted from trading of our energy exposures. In particular, we benefitted from hedging a part of our North-Western European longer-dated power exposure by rolling shorter-dated power-hedges (time spread), as well as by hedging part of our UK power exposure in the long end of the curve with gas hedges instead of power hedges (spark spread). Both of these trading strategies are commonly used to hedge our exposures due to higher liquidity and lower costs. However, in 2019, we experienced an unusual long period where the price development in the short and long end of the power curve and between the gas and power curves developed in our favour.

In October, we established a commodity trading unit in the US to reduce risk and improve the prices we receive for our power generation as well as to gain deeper insights into the market, which can be used when developing new wind and solar projects.

### Operate and optimise our CHP plants

The focus of our CHP business is to operate and optimise our heat and power stations in a way that is green, safe and efficient.

In 2019, all of our biomass came from sustainable sources, mostly in the form of residues from timber production, such as sawdust, branches and thinnings, with 96% certified by third parties. We expect that 100% of our wooden biomass will be third-party certified in 2020.

## Introduction to Markets & Bioenergy

- We serve as an efficient route-to-market for both Ørsted and external partners, by providing balancing services for renewable generation portfolios and by selling green certificates to the market. In doing so, we manage large volumes of power contracts that we optimise by leveraging the size of our combined portfolio and our origination and trading capabilities.
- We actively manage merchant risk arising from our generation assets and contracts by trading commodities.
- We provide around one quarter of Denmark's district heating and around one third of Denmark's thermal power through our CHP plants, making our CHP business a leading provider of heat, power and ancillary services in Denmark.
- We ensure efficient operations and maximise the commercial value of our legacy gas portfolio.
- We are developing proof-of-concept for innovative waste recycling solutions through Renaissance, our patented enzyme technology.
- Until completion of the signed and planned divestments, we operate Denmark's largest power distribution grid and power and gas customer business.

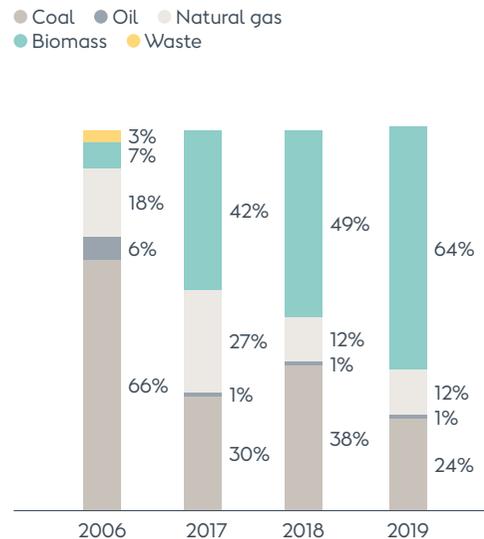

We have converted six of our seven core CHP plants, and we continue to reduce the carbon emissions from these. From 2018 to 2019, we increased the share of biomass from 49% to 64% and reduced our carbon emissions by 47%. Since mid-December, 100% of Asnæs Power Station's heat and power have been generated from sustainable biomass, completing our CHP bioconversion project. Asnæs will provide green process steam to Novo Nordisk's and Novozymes' production facilities as well as green heat to the city of Kalundborg and green power to the electricity grid.

For our last remaining coal-fired plant, Esbjerg Power Station, we have not been able to agree on a joint solution for a bioconversion project with our heat customers. Thus, we plan to close down operations of this plant in early 2023, to completely phase out coal by 2023.

To operate our green CHP plants even more efficiently, we are rolling out a comprehensive digitalisation programme at our power stations, allowing us to further optimise generation and reduce costs.

In May 2019, an employee of one of our contractors died after a serious accident at Avedøre Power Station. We are deeply affected by this incident and have been in close contact with the contractor, our employees and the relatives of the deceased to offer support and assistance. Several improvement tracks have been initiated to ensure that an accident like this will never happen again. For example, we have strengthened the permit-to-work system and tools for conducting risk assessments. Furthermore, we have expanded the dialogue between contractors and Ørsted

**Share of fuels in the thermal heat and power generation, %**

The biomass conversion of Asnæs Power Station will support a continued reduction in the usage of coal in 2020.

staff to ensure alignment on procedures and improve safety measures.

**Optimise our gas portfolio**

In 2019, we benefitted from larger wholesale activity in the Danish and Swedish markets, successful management of flexible gas contracts and increased origination activity.

In September, the production facility on the Tyra platforms in the North Sea owned by the Danish Underground Consortium (DUC) was closed as part of a redevelopment project of

Tyra. For Ørsted, this entailed a shutdown and depressurisation of our Tyra-Nybro gas pipeline. The platform and pipeline are expected to be recommissioned in July 2022. In the meantime, the Danish and Swedish gas markets will rely on imports from Germany.

The past year saw increased utilisation of our capacity at the Dutch LNG Gate terminal on the back of larger LNG volumes arriving in Europe. This was the result of active management and trading of LNG cargoes globally. Furthermore, we concluded a long-term sourcing contract, thereby securing future supply for the LNG terminal capacity. In December, we entered into an agreement to divest our LNG activities.

**Commercialise Renaissance**

Due to recent upgrades to our Renaissance facility in Northwich in the UK, we were not able to commission the plant in 2019 as planned. However, it has been confirmed that the core enzymatic sorting process works as expected. In addition, the mechanical sorting components have been improved and redundancy added to resolve the challenges arising from the sorting of non-organic solid fractions.

**Divest non-core assets and activities**

To sharpen our focus on our renewable growth platform, we initiated and concluded agreements on several divestments in 2019. In May, we entered into an agreement to divest the Stignæs Transit Harbour. Since the power station was closed in 2012, the site has primarily been used as a coal terminal. In June, we sold our stakes in the Kalundborg Bioenergi plant and two upgrading plants in Fredericia and Horsens. In September, we entered into an

agreement to divest Radius, our Danish power distribution business, and our residential customer and city light businesses to SEAS-NVE. Finally, we entered into an agreement in December to divest our LNG activities to Glencore as a step to reduce our long-term engagement within the gas supply chain, and because further financial improvements would require additional contractual commitments.

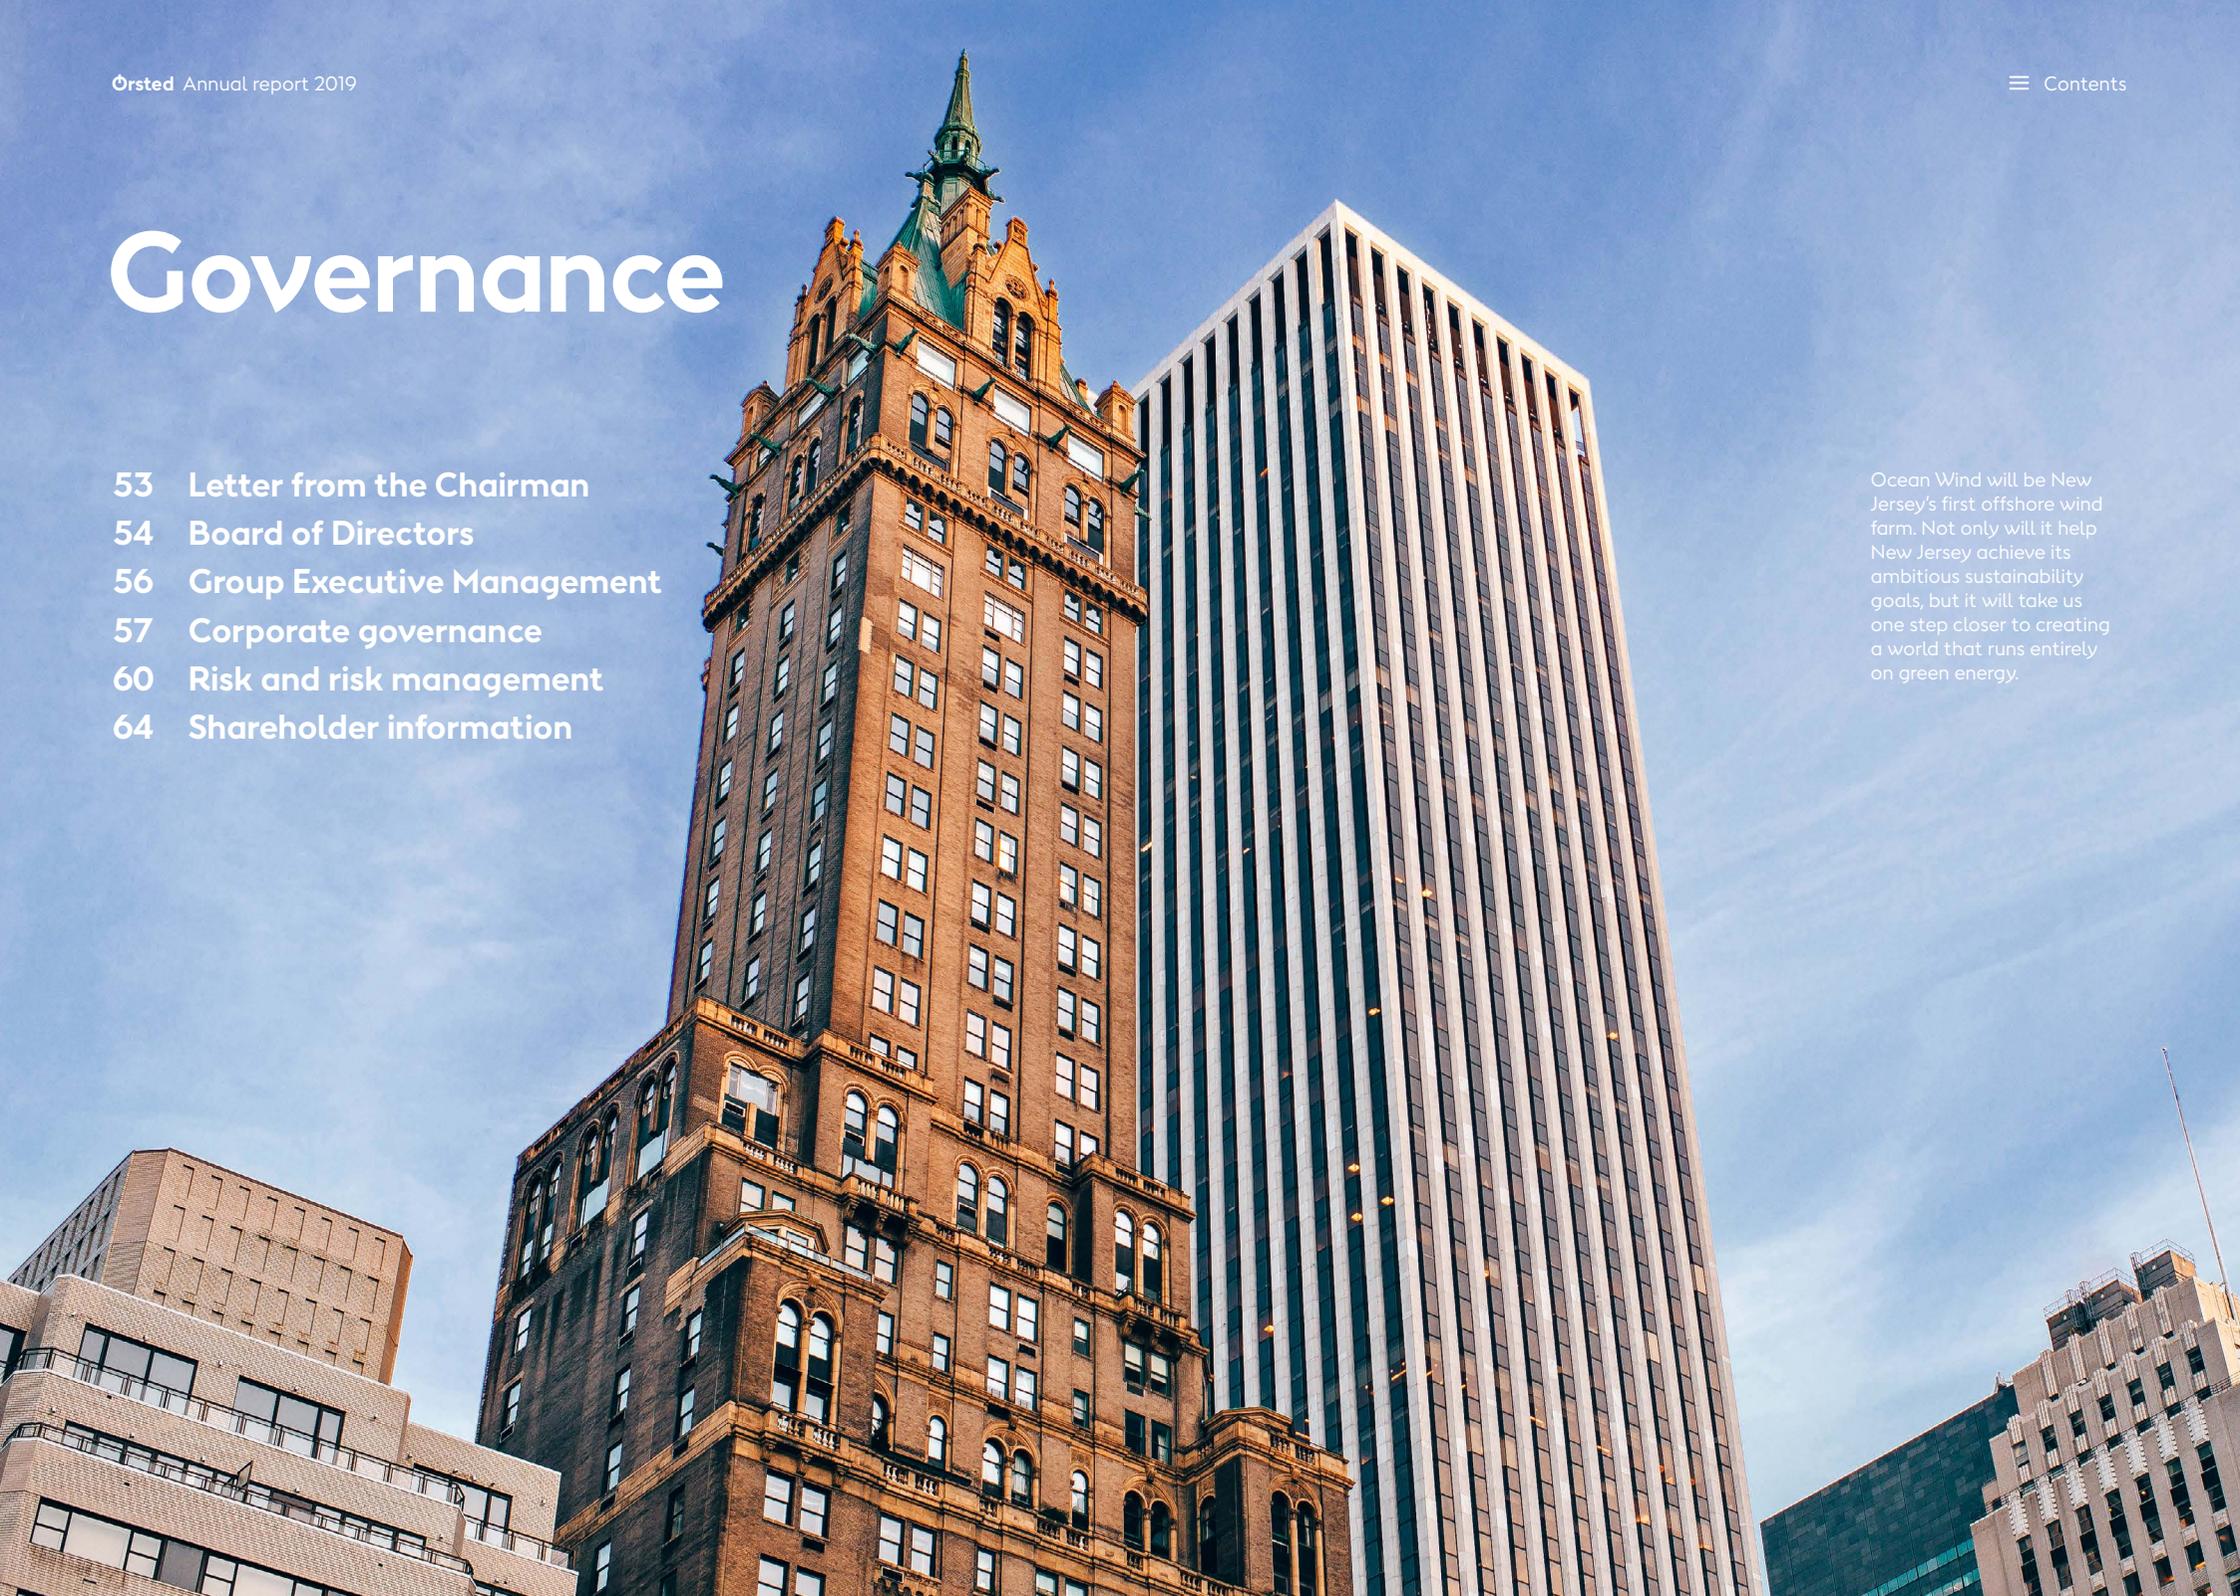

In addition to the concluded agreements, we initiated a divestment process for our energy consulting business, our small and medium-sized enterprise (SME) business, and part of our enterprise customer portfolio. We will continue offering gas commodity contracts for our larger customers in Denmark and Sweden as an outlet for our legacy gas position, as well as external portfolio management (EPM) services for selected customers in the UK, Denmark, Sweden and Germany.

We are proud to hand over a portfolio of healthy businesses to the new Radius owners at SEAS-NVE. Together with Kamstrup, Radius finalised the installation of more than one million smart meters in 2019. The smart meters give the households in our distribution areas an overview of their power consumption and allow them to plan their electricity usage around the most cost-efficient periods of the day. Furthermore, we are pleased that the customers had a good reliability of supply with only 0.42 power outages on average in 2019.

# Governance

- 53 Letter from the Chairman
- 54 Board of Directors
- 56 Group Executive Management
- 57 Corporate governance
- 60 Risk and risk management
- 64 Shareholder information

Ocean Wind will be New Jersey's first offshore wind farm. Not only will it help New Jersey achieve its ambitious sustainability goals, but it will take us one step closer to creating a world that runs entirely on green energy.

# Letter from the Chairman

The Board believes that good corporate governance is fundamental in meeting Ørsted's strategic objectives and maintaining the highest standards of integrity.

Our corporate governance model has its offspring in our Danish roots, which builds on a strong tradition for integrity and transparency. As a consequence, we have incorporated and follow all the recommendations prepared by the Danish Committee on Corporate Governance. You can find our statutory corporate governance report on [orsted.com/statutory-reports](https://orsted.com/statutory-reports).

Climate change is fundamental to our business strategy, and climate-related issues are an integral part of our board agendas. In the Board, we monitor and oversee progress related to Ørsted's strategic ambitions, including our ambitious targets for addressing climate-related issues. We seek to integrate considerations for climate protection when setting our strategic direction, reviewing sustainability risks, setting performance objectives, deciding on our capital allocation, and when approving and overseeing major investments, acquisitions and divestments.

In 2019, the Board of Directors discussed and took a number of key business decisions to take further action against climate change

and to strengthen our ambition of becoming a global green energy major. The decisions covered, among other things, investments in new offshore and onshore wind and solar projects and an agreement to divest our Danish power distribution, residential customer and city light businesses as well as our LNG business.

The Board decided to update our targets for greenhouse gas emission reductions from our energy generation and other in-house operational activities (scope 1 and 2 emissions) and decided to set an ambitious target for reducing the emissions related to our value chain (scope 3 emissions). Both of these decisions will help us in becoming carbon neutral.

Furthermore, we decided to merge two of our business units, made an adjustment to our long-term financial targets and have prepared an updated remuneration policy and report according to the Shareholder Rights Directive II, which we will present at the annual general meeting in March this year. Finally, we conducted an audit tender, leading to a proposal at the general meeting to re-elect PwC as auditor from 2020.

To facilitate a more dynamic and focused dialogue at our board meetings, we have reduced the number of members from twelve to nine over the past couple of years. In 2019, we updated the split of responsibilities between the Board of Directors and the Executive Board to reflect the company's transformation in recent years and ensure that we spend our time on the right things in the Board. This included, among other things, an increase in the monetary thresholds, stating when to seek Board approval of, for example, investments and M&A projects.

In the Board, we appreciate the opportunity to meet the company's employees and key stakeholders. During the year, we visited Siemens Gamesa Renewable Energy's Danish blade and nacelle factories and the Østerild test centre for large wind turbines. We held board meetings at our offices in Gentofte, Skærbæk and Boston and also met with some of our key stakeholders during the trip to the US.

I look forward to continuing serving the Board in the coming year.

A handwritten signature in black ink, appearing to read 'T. Thune Andersen'.

**Thomas Thune Andersen**  
Chairman

# Board of Directors

## Thomas Thune Andersen

Chairman since 2014.  
Born 1955.  
Independent.  
Joined/re-elected: 2014/2019.  
Term of office expires: 2020.

Extensive global managerial experience from leading positions in A.P. Møller-Mærsk and non-executive directorships in listed and privately held companies within the energy and other sectors.

### Other positions<sup>1</sup>

Chairman: Lloyds Register Group and Foundation  
Deputy chairman: VKR Holding A/S  
Member: Arcon-Sunmark A/S, BW Group Ltd, IMI plc., the Danish Committee on Corporate Governance.

## Lene Skole

Deputy Chairman since 2015.  
Born 1959.  
Independent.  
Joined/re-elected: 2015/2019.  
Term of office expires: 2020.

Highly experienced in managing listed companies from her previous position as CFO of Coloplast and current position as CEO of Lundbeckfonden where she serves as a non-executive director of the portfolio companies of Lundbeckfonden.

### Other positions<sup>2</sup>

CEO: Lundbeckfonden, Lundbeckfond Invest A/S  
Chairman: LFI Equity A/S  
Deputy chairman: ALK-Abelló A/S, H. Lundbeck A/S, Falck A/S.  
Member: Tryg A/S, Tryg Forsikring A/S.

## Hanne Sten Andersen

Employee representative.  
Born 1960.  
Not independent.  
Joined/re-elected: 2007/2018.  
Term of office expires: 2022.

Hanne Sten Andersen has worked in Ørsted as an HR partner in Markets & Bioenergy since 2003.

### Position

Lead HR Business Partner, Markets & Bioenergy.

## Lynda Armstrong

Born 1950.  
Independent.  
Joined/re-elected: 2015/2019.  
Term of office expires: 2020.

Strong global managerial experience from more than 30 years in leading positions in Shell, including as Vice President in Shell International, and from non-executive directorships in international companies and large organisations.

### Other positions<sup>3</sup>

Chairman: The Engineering Construction Industry Training Board (ECITB)  
Non-Executive Director: KAZ Minerals plc.

## Poul Dreyer

Employee representative.  
Born 1964.  
Not independent.  
Joined/re-elected: 2014/2018.  
Term of office expires: 2022.

Poul Dreyer has worked in Ørsted as a technician in Markets & Bioenergy since 1987.

### Position

Technician, Markets & Bioenergy.

<sup>1</sup> Board committees: Remuneration Committee of Lloyds Register Group, Nomination Committee of Lloyds Register Foundation, Nomination Committee and Remuneration Committee of IMI plc, Nomination Committee of VKR Holding A/S.

<sup>2</sup> Member of the Audit, Nomination & Scientific Committee of ALK-Abelló A/S, member of the Remuneration & Scientific Committee of H. Lundbeck A/S, member of the Audit & Risk Committee of Tryg A/S, member of the Remuneration Committee of Falck A/S.

<sup>3</sup> Chairman of the Remuneration Committee, member of the HSE Committee and member of the Project Assurance Committee of KAZ Minerals plc.

# Board of Directors

## Benny Gøbel

Employee representative.  
Born 1967.  
Not independent.  
Joined/re-elected: 2011/2018.  
Term of office expires: 2022.

Benny Gøbel has worked in Ørsted as an engineer in Markets & Bioenergy since 2005.

**Position**  
Engineer, Markets & Bioenergy.

## Jørgen Kildahl

Born 1963.  
Independent.  
Joined/re-elected: 2018/2019.  
Term of office expires: 2020.

Strong international background in renewable energy and a profound knowledge of how the energy ecosystems work from positions as Executive Vice President of Statkraft and member of the board of management of E.ON.

**Other positions<sup>1</sup>**  
Chairman: Nysäter Wind AB.  
Deputy chairman: Telenor ASA.  
Member: Høegh LNG Holdings Ltd and Alpiq AG.  
Other: Senior Advisor, Credit Suisse Energy Infrastructure Partners.

## Peter Korsholm

Born 1971.  
Independent.  
Joined/re-elected: 2017/2019.  
Term of office expires: 2020.

Extensive M&A experience from his time as Partner and Head of EQT Partners Denmark and from private investments. Also experience with financial reporting, risk management and capital markets from CFO position at AAK AB.

**Other positions<sup>2</sup>**  
CEO: DSVM Invest A/S, DSV Miljø Group A/S, Day et Invest ApS, Togu ApS, Totalleveranser Sverige AB and Ejendomsselskabet Nordre Fasanvej ApS.  
Chairman: Nymølle Stenindustrier A/S, GDL Transport Holding AB, Lion Danmark I ApS and Totalleveranser Sverige AB.  
Member: DSVM Invest A/S, A/S United Shipping and Trading Company, DANX Holding I ApS.

## Dieter Wemmer

Born 1957.  
Independent.  
Joined/re-elected: 2018/2019.  
Term of office expires: 2020.

Highly experienced in capital markets, investments and risk management from leading positions within the finance sector. Before focusing solely on non-executive directorships, he was the CFO of Allianz.

**Other positions<sup>3</sup>**  
Member: UBS Group AG, UBS AG.

<sup>1</sup> Member of the Audit & Risk Committee, and the Sustainability & Compliance Committee of Telenor ASA and member of the Audit Committee of Høegh LNG Holdings Ltd.  
<sup>2</sup> Chairman of the Investment Committee of Zoscales Partners and Chairman of the Board of Directors of four wholly-owned subsidiaries of Lion Danmark I ApS (Lomax Group). He is also a member of the Board of Directors of three wholly-owned subsidiaries of A/S United Shipping and Trading Company, three wholly-owned subsidiaries of DANX Holding I ApS, and four wholly-owned subsidiaries of DSVM Invest A/S.  
<sup>3</sup> Member of the Audit Committee and the Compensation Committee of UBS Group AG.

# Group Executive Management

## Henrik Poulsen

Registered as CEO.  
Chief Executive Officer (CEO) and President since August 2012.  
Education: MSc in Finance and Accounting, Aarhus School of Business 1994.

Born 1967.

### Career

2012-2008-2012 Ørsted A/S, CEO and President.  
TDC A/S, CEO and President.  
2006-2008 Capstone/KKR, Operating Executive.  
1999-2006 LEGO, EVP, Markets & Products (2005-2006), Regional Managing Director Europe and Asia (2004-2005), SVP, Global Innovation and Marketing (2002-2003), SVP, Global Segment 8+ (2000-2002) and VP, Business Development (1999-2000).  
1996-1999 McKinsey & Co., Senior Engagement Manager.  
1995-1996 Aarsø Nielsen & Partners, Senior Consultant.  
1994-1995 Novo Nordisk A/S, Controller.

### Other positions:

Kinnevik AB: Deputy Chairman and member of the Audit Committee.  
ISS A/S: Member of the Board of Directors and Chairman of the Audit Committee.  
EQT Partners: Senior Advisor.

## Marianne Wiinholt

Registered as CFO.  
Chief Financial Officer (CFO) since October 2013  
Education: MSc in Business Administration & Auditing, Copenhagen Business School 1990, State-Authorised Public Accountant 1992.

Born 1965.

### Career

2004-Ørsted A/S, EVP, Chief Financial Officer (CFO) 2013-, SVP, CFO Customers & Markets (2013), SVP, Group Finance (2005-2013), and VP, Group Finance and Accounting & Tax (2004-2005).  
1997-2003 Borealis A/S, Head of Group Finance & Auditing (2001-2003), Head of Group Accounting & Tax (1997-2001).  
1987-1997 Arthur Andersen, Auditor.

### Other positions:

Hempel A/S: Member of the Board of Directors and Chairman of the Audit Committee.  
Norsk Hydro ASA: Member of the Board of Directors and Audit Committee.

Group Executive Management consists of seven members.

Anders Lindberg (Offshore), Marianne Wiinholt (CFO), Henrik Poulsen (CEO and President), Morten Hultberg Buchgreitz (Markets & Bioenergy), Martin Neubert (Offshore), Henriette Fenger Ellekrog (CHRO) and Declan Flanagan (Onshore).

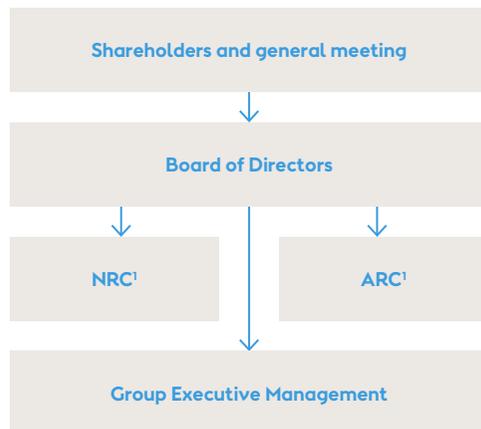

# Corporate governance

Our overall and strategic management of the company is anchored in a board of non-executive directors appointed by the shareholders.

The Board of Directors has appointed an Executive Board to handle the day-to-day management. None of our executives are members of the Board of Directors.

Our governance model is illustrated in the figure and explained below.

## Our governance model

<sup>1</sup> NRC stands for Nomintion & Remuneration Committee and ARC stands for Audit & Risk Committee.

## Shareholders and general meeting

Our shareholders exercise their rights at the general meeting. The general meeting adopts decisions, such as the appointment of the Board of Directors and the auditor, in accordance with the standard Danish rules. Due to our majority ownership by the Danish state, we have a bespoke quorum requirement, as proposals to amend the Articles of Association or dissolve the company require that the Danish state participates in the general meeting and supports the proposals.

## Board of Directors

Each year at the annual general meeting, the shareholders elect six to eight board members. In addition, our employees may elect members corresponding to half of the board members elected by the general meeting pursuant to Danish mandatory rules. Employee elections are held every four years.

For the time being, our Board of Directors comprises nine members, six members elected by the general meeting and three members elected by the employees.

The Board of Directors conducted its annual board evaluation in November 2019. The basis for the evaluation was a questionnaire that the individual members of the Board of Directors and Group Executive Management had been asked to complete. The evaluation

## Important tasks managed by the Board of Directors in 2019

### Investments, acquisitions and divestments

- Build out our offshore wind project portfolio after 2020, including taking final investment decision on the Greater Changhua 1 & 2a offshore wind project in Taiwan, bids into auctions and tenders and entry into revenue contracts related to the awarded Ocean Wind and Sunrise Wind offshore projects in the US.
- Select GE as new wind turbine supplier for certain offshore wind projects.
- Divest 50% of certain US offshore wind projects to Eversource and take first steps to potentially divest 25% of Ocean Wind to PSEG.
- Build out our onshore wind portfolio, including final investment decisions on the Sage Draw, Willow Creek and Plum Creek projects.
- Take final investment decision on Permian Energy Center, our inaugural large-scale solar and storage project in the US, and acquire the solar and storage developer unit of Coronal Energy.
- Enter into agreement to divest our Danish power distribution, residential customer and city light businesses to SEAS-NVE.
- Enter into agreement to divest our LNG activities.
- Divest our biogas activities and enter into agreement to divest Stignsnes Power Station and Harbour.
- Decide to divest majority of B2B activities.

### Other tasks

- Update our long-term financial targets based on a downwards adjustment of our offshore wind production forecasts and certain key positive and negative developments since the Capital Markets Day in 2018.
- Update our decarbonisation strategy, including a revised target for scope 1 and 2 carbon emissions, setting a new target for reducing our supply chain emissions (scope 3) and to become carbon neutral.
- Issue green senior bonds in Europe and Taiwan to finance our green growth ambition towards 2025 and refinance hybrid capital securities.
- Start up trading activities in the US.
- Merge Bioenergy and Customer Solutions following downscaling of activities in each of the business units.
- Oversee investigation and actions taken following the fatal accident at Avedøre Power Station and in general enforce focus on HSE activities.
- Update our internal authorisation rules to reflect the company's transformation in recent years.
- Prepare the remuneration policy and report according to the Shareholder Rights Directive II.
- Oversee the court case concerning the usage of the Ørsted name.
- Perform an audit tender and re-elect PwC as auditor from 2020.

was a follow-up on the assessment carried out in 2018 with external assistance which focused on board structure, board governance and team and people dynamics in the board. The evaluation showed a high degree of satisfaction among the members of the Board of Directors and Group Executive Management. During 2020, the Board of Directors will, among other things, continue its focus on organisational development, succession and diversity.

The Board of Directors has prepared an overview of the competences required on the board. In 2019, we added environmental, social and governance (ESG), to

the list of required competences. The list of required competences can be found at [orsted.com/competences-overview](https://orsted.com/competences-overview).

A description of the individual board members, including their other executive positions and independence, can be found on page 54-55. Above, you can see how the individual board members contribute to the required competences and their meeting attendance during 2019.

The Board of Directors is responsible for the overall management of the company. The Board of Directors lays down the company's strategy and makes decisions concerning

major investments and divestments, the capital base, key policies, control and audit matters, risk management and significant operational issues. You can see the most important tasks in 2019 on the previous page.

The Board of Directors has appointed two committees from among its members: an Audit & Risk Committee and a Nomination & Remuneration Committee, which assist the Board of Directors within selected areas.

Each year, the general meeting approves the remuneration for the members of the Board of Directors for the coming year. In the separate remuneration report available on

[orsted.com/remuneration2019](https://orsted.com/remuneration2019), you can read more about the remuneration of the Board of Directors.

## Audit & Risk Committee

Dieter Wemmer (Chairman), Jørgen Kildahl and Peter Korsholm are the members of the Audit & Risk Committee.

The committee assists the Board of Directors in overseeing the financial and ESG reporting process (including key accounting estimates and judgements), the liquidity and capital structure development, financial and business-related risks, compliance with statutory and other requirements from public authorities,

internal controls as well as IT security in operational and administrative areas as well as cybersecurity.

Moreover, the committee approves the framework for the work of the company's external and internal auditors (including voluntary limits for non-audit services), evaluates the external auditors' independence and qualifications as well as monitors the company's whistleblower scheme.

In 2019, the committee performed an audit tender and presented its proposal to re-elect PwC as auditor from 2020 to the Board, which approved it and will present it at the general meeting in March. It also reviewed the implementation of IFRS 16 'Leases', the new reporting on scope 3 greenhouse gas emissions, changes to the reportable segments and discussed the risk framework and the implementation of a US trading floor. Furthermore, it reviewed the progress within IT security and met with the Danish Business Authority in connection with the ordinary supervision of compliance in Danish audit committees.

Our Internal Audit function reports to the Audit & Risk Committee and is independent of our administrative management structures. Internal Audit enhances and protects the organisational value by providing risk-based and objective assurance, advice and insight. The main focus for Internal Audit is auditing and advising on our core processes, governance, risk management, control processes and IT security.

The Chairman of the Audit & Risk Committee is responsible for managing our whistleblower

scheme. Internal Audit receives and handles reports submitted. Our employees and other associates may report serious offences, such as cases of bribery, fraud and other inappropriate or illegal conduct, to our whistleblower scheme or through our management system. In 2019, three substantiated cases of inappropriate or unlawful behaviour were reported through our whistleblower scheme. Two cases concerned violation of good business conduct policies, and one case concerned conflict of interest between a third-party representative and Ørsted. The cases had consequences for the individuals involved. None of the reported cases were critical to our business or impacted our financial results. Whistleblower cases are taken very seriously, and we continuously enhance the awareness of good business conduct, e.g. through education as well as awareness campaigns, to minimise future similar cases.

You can read more about the Audit & Risk Committee and the terms of reference for the committee at [orsted.com/audit-risk-committee](https://orsted.com/audit-risk-committee).

### Nomination & Remuneration Committee

Thomas Thune Andersen (Chairman), Lene Skole and Lynda Armstrong are the members of the Nomination & Remuneration Committee.

The committee assists the Board of Directors in matters regarding the composition, remuneration and performance of the Board of Directors and Group Executive Management.

In 2019, the committee discussed, among other matters, the implementation of the EU Shareholder Rights Directive II into Danish

legislation. In this context, the remuneration policy for the Board of Directors and the Executive Board was reviewed together with the remuneration report and the terms of reference for the committee. The committee decided to pre-implement the requirement to publish the remuneration report separately from the annual report already for the 2019 report.

Additionally, the committee discussed gender pay gap reporting which is disclosed in the ESG performance report based on countries with more than 250 employees.

Finally, the committee discussed the appointment of Declan Flanagan as Executive Vice President (EVP) for Onshore (previously CEO of the subsidiary Lincoln Clean Energy) and the appointment of Morten H. Buchgreitz as EVP for the merged business unit, Markets & Bioenergy (previously EVP for Customer Solutions).

You can read more about the Nomination & Remuneration Committee and the terms of reference for the committee at [orsted.com/nomination-remuneration-committee](https://orsted.com/nomination-remuneration-committee).

### Executive Board and Group Executive Management

Henrik Poulsen (CEO) and Marianne Wiinholt (CFO) are members of the Executive Board of Ørsted A/S.

The Executive Board undertakes the day-to-day management through the Group Executive Management, which consists of seven members. In addition to Henrik Poulsen and Marianne Wiinholt, Group Executive Management comprises the EVPs of our three business units:

Martin Neubert (Offshore), Declan Flanagan (Onshore), Morten H. Buchgreitz (Markets & Bioenergy) together with the EVPs Henriette Fenger Ellekrog (Chief Human Resources Officer (CHRO)) and Anders Lindberg (Offshore EPC and QHSE).

The Board of Directors has laid down guidelines for the work of the Executive Board, including the division of work between the Board of Directors and the Executive Board and the Executive Board's powers to enter into agreements on behalf of the company.

The Board of Directors regularly discusses the CEO's performance, for example by following up on developments seen in relation to our strategy and objectives.

The Chairman of the Board of Directors and the CEO also regularly discuss the cooperation between the Board of Directors and the Executive Board.

We describe the remuneration of the Executive Board in the separate remuneration report available at [orsted.com/remuneration2019](https://orsted.com/remuneration2019). You can also find information about the members of the Executive Board on page 56.

# Risk and risk management

Risks are a natural and integral part of our business activities, and risk diversification is an important part of Ørsted's strategy. Our risk profile changes continuously. Our aim is to mitigate our risks and reduce them to an acceptable level through risk management.

We are exposed to several risks in connection with our business activities. In addition to operational, business and environmental risks, we are exposed to fluctuations in exchange rates, interest rates, inflation and commodity prices, as well as credit and insurance risks. The purpose of our risk management is to identify and quantify our risks and decide how best to manage and mitigate them. We assess the extent to which individual risks are acceptable or perhaps even desirable, as well as the extent to which these risks can be reduced to ensure an optimum balance between risk and return.

A large part of our earnings is generated from offshore wind, with Denmark and the UK being the key contributors. However, our future earnings will be spread across more geographical regions and technologies. Therefore, political and other macroeconomic factors play an important role in our risk management. When we invest in new assets and activities or divest assets, the consolidated risks associated with our portfolio changes.

Therefore, we assess the impact of a given decision on the portfolio upfront.

We work systematically with risks. All business units and selected staff functions identify and prioritise business risks. An assessment is made of the potential financial impact of individual risks, and whether they are of a short-term (0-2 years), medium-term (2-5 years), long-term (5+ years) or of recurring nature. All our risks are then consolidated and evaluated at Group level. The ultimate responsibility for all the individual risks rests with a member of the Group Executive Management. As for business risks, similar processes are in place for identifying and prioritising risks related to sustainability, cybersecurity and legal compliance.

The top five business risks identified during 2019 are shown to the right where they are illustrated based on their potential impact (post-risk mitigation) on our value and credit metrics over the next years. You can read more about these risks on the following pages.

Brexit is not in itself part of our top five business risks, but is embedded in several of our risks. We do not believe the decision in the UK to leave the EU on 31 January will result in fundamental changes to the UK's energy policy. Announcements by the UK government show that the UK is committed to a clean, green energy future, and offshore wind is the backbone of this green vision. Trade and customs facilities will still function during the transition period

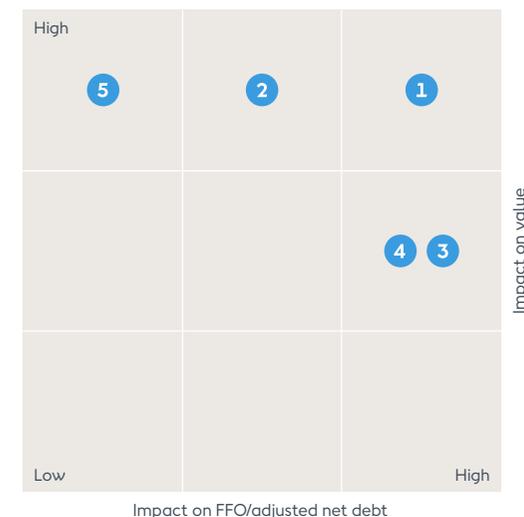

which runs until the end of 2020, so our most significant risk regarding Brexit is a situation where no agreements are made, and the transition period is not extended. Such a scenario could result in a depreciation of the GBP on a short- to medium-term horizon and potentially long-term. This is part of the first risk in our top 5 business risks. Furthermore, such a scenario could result in lower UK power prices than currently observed, but the government-introduced carbon price floor (CPF) will prevent a dramatic decline. This is addressed in our second risk in the top 5 business risks.

The risks related to sustainability, cybersecurity and legal compliance are assessed using different parameters. Hence, we do not show a consolidated picture of our combined risks.

A description of the most significant sustainability risks can be found in our sustainability report. This year, we also concluded a climate scenario analysis where we assessed the resilience of our offshore business in two potential scenarios of climate change. Read more about this in the info box on page 63. Risks related to cybersecurity and legal compliance can be found on the same page.

We are also exposed to risks which have a very small probability of occurring, but which could potentially impact our finances and/or reputation substantially. These risks include, but are not limited to:

**Top 5 business risks**  
Effect on our value and credit metric

Quantification of risks is based on a scenario where the risk occurs with 10% probability (P90). Our Internal Audit function has examined the process for identifying and measuring the accompanying portfolio risks.

- 1 (#1 2018) Currencies, inflation and interest rates
- 2 (#2 2018) Commodity prices
- 3 (part of #3 in 2018) US Offshore portfolio
- 4 (part of #3 in 2018) Construction risks
- 5 (New in top 5) Future competitiveness in Offshore

- 1,000-year storms, hurricanes, typhoons or earthquakes in especially Taiwan, which may lead to the loss of offshore and onshore wind farms
- broken pipes at the Nybro Gas Treatment Plant in Denmark, which may lead to personal injury and damage to the environment
- breakdowns at power stations that may lead to personal injury and loss of assets.

After risk-reducing measures are implemented, Group Executive Management assess whether the level of each risk is appropriate or slightly or significantly higher than the desired level. If the risk level is still too high, further risk-reducing measures are initiated to the extent possible.

**Climate-related risks**

We address climate-related risks and opportunities as an integral part of our daily business, and we report as recommended by the Task Force on Climate-related Financial Disclosures (TCFD). These risks and opportunities are directly linked to our green vision and strategy. We seek to exploit climate-related opportunities through our development and construction of renewable generation capacity and adjacent sustainable activities. At the same time, we seek to reduce both our transitional and physical climate-related risks in the short, medium and long term. We do that by, among other things:

- influencing regulators and other public authorities towards ambitious targets for the build-out of renewable capacity and regulatory frameworks which support this
- continuously working to improve the future competitiveness of green technologies,

- i.e. lowering the levelised cost of electricity (LCoE)
- assessing acute and chronic weather development; especially wind speeds and patterns, but also the temperature and precipitation levels in general
- taking extreme weather conditions and other relevant factors into account when we design and construct our assets.

In that way, we seek to avoid ending up with stranded assets or assets and activities with a significantly lower value than originally expected.

When we prepare business cases for investments in new assets or activities, we take climate-related risks and opportunities into account by assessing the expected changes in the green technology mix. On this basis, we assess the expected derived impact on input and output prices of energy, including the price development of components and services to be used for the construction of these assets as part of our LCoE analysis.

At this year's UN Climate Action Summit, Ørsted and 86 other major global companies (incl. Iberdrola, Acciona, Enel, IKEA, HPE and Novo Nordisk) committed to setting ambitious carbon emission reduction targets to limit global warming to 1.5°C.

**Development in risks in 2019**

Our increased activities in North America, including our success in two key US offshore wind auctions in 2019, significantly increase our exposure to the US market. Similarly, the final investment decision to construct the Changhua 1 & 2a Offshore Wind Farm has

Safety is an integral part of our daily operations, including daily briefings at each site.

increased our exposure to the Taiwanese market. These developments, together with an observed fierce competition in several auctions and tenders during the year, have had an impact on the ranking of our top five business risks.

Our exposure to exchange rate fluctuations, primarily GBP, USD and New Taiwan dollar (NTD), has increased in 2019 due to significant investments in offshore and onshore wind in these areas. Currency and interest rate risks are deemed to be our most significant business risk, whereas commodity prices are rated our second-largest risk.

Due to our increasing pipeline of US projects, we have carved out the development and construction of our US portfolio as a new risk in 2019 – our third-largest risk. The immature

market leads to higher development risks, such as regulatory risks and increased construction risks due to supply chain immaturity and local content requirements.

The risk associated with construction of our offshore (excl. US) and onshore wind farms is our fourth-largest risk.

The risk associated with the future competitiveness in Offshore has increased during the year and is now our fifth-largest risk.

A significant part of 'Regulatory risks within offshore wind' has been absorbed in our third-largest risk and has no longer a separate risk ranking. Risks associated with the operation of offshore wind farms remain a key focus area, but has moved out of our top five risks.

## 1 Currencies, inflation and interest rates

### Description

Our main currency exposure relates to GBP due to our substantial investments in offshore wind farms in the UK. However, our recent international expansion has increased our USD and NTD exposure.

To a large extent, our medium- to long-term earnings can be expected to follow the development in consumer and market prices, thereby protecting the real value of our assets and equity. However, fixed nominal subsidies from wind assets in Denmark, Germany and the Netherlands and fixed-price power purchase agreements (PPAs) from assets in the US and Taiwan are exceptions to this, as is fixed nominal cash flows related to debt. We are exposed to inflation risk in these markets where an increase in inflation will adversely impact the expected real value of the revenue.

### Potential impact

Fluctuations in exchange rates, interest rates and inflation may adversely impact our earnings.

### Mitigating actions

Our general strategy is to hedge more of the risk in the first years and less in the latter years. In the medium- to long-term horizon, the risk is managed by matching income and liabilities in the same currencies. For our USD and NTD exposures from new markets, we do not have an existing portfolio to net construction payments against. Therefore, we seek to hedge the price risk in the near term, while simultaneously hedging a similar, but opposite, exposure in the longer term.

Our inflation and interest rate exposures are managed by matching assets and liabilities in the same currency and with similar payment structures. Hence, our European fixed nominal subsidies are offset by EUR-denominated fixed-rate debt. The risks that arise from Taiwan and US onshore and offshore projects can be reduced by obtaining matching-duration fixed-rate debt denominated in the same currency as the revenue.

## 2 Commodity prices

### Description

We are primarily exposed to power price risks from the sale of our wind-based power generation in the US, the UK and Denmark. In addition, we are exposed to risks caused by differences in local node prices and market hub prices in our onshore business, which impact the realised revenue generation.

To a lesser extent, we are exposed to oil and gas price risks related to sourcing contracts for gas on oil-indexed prices as well as the sale of gas at fixed prices. Finally, power generation from our CHP plants entails an exposure to power prices and fuel prices. As the green transformation in Ørsted advances, the main fuel we use at the CHP plants is biomass. The market for biomass has less liquidity than e.g. gas and coal, adding a risk to which we are exposed.

### Potential impact

Fluctuations in commodity prices may adversely impact our earnings.

### Mitigating actions

We hedge commodity prices for up to five years, and in some cases longer, to reduce cash flow fluctuations. The general strategy is to hedge more of the commodity price risk in the first years and less in the later years. This is due to decreasing market liquidity and increasing uncertainty about generated volumes.

As an alternative to hedging, we seek to enter into long-term corporate power purchase agreements (CPPAs), under which we sell power from our renewable assets. CPPAs or hedges with a duration of 12-15 years are often a prerequisite for obtaining tax equity partnerships in the US. In addition, CPPAs will be a means to mitigate merchant risk for offshore wind farms to be built without subsidies. Our offshore wind farms situated off the US East Coast are guaranteed a fixed price for a period of approx 20 years and thus do not introduce any additional merchant risk.

## 3 US offshore portfolio

### Description

Our expanding pipeline of US offshore projects entails risks in the development and construction phases caused by the relatively immature US offshore wind market, including the federal permitting framework. In the US, contrary to the EU markets, it is possible to participate in auctions and be awarded projects where consent and/or grid connections are not yet secured. Thus, following an award, project development entails regulatory risks in obtaining key consents as well as securing grid connection(s).

In addition, the US tax incentive schemes imply that we must take on major financial commitments early on to qualify for tax credits. On the other hand, this also de-risks the projects. Furthermore, local content requirements and the immature US offshore wind market also lead to increased construction risks in the US, such as the availability of locally manufactured components and harbour facilities.

### Potential impact

To maintain project schedules, permits, consents and approvals from federal, state-level and local authorities must be obtained in due time. Securing sufficient grid connection capacity on time is also key. Delays within these areas can lead to project delays and/or cost overruns which may erode the value of the projects.

### Mitigating actions

We mitigate the risks by having sufficient float in our project timelines and by proactively engaging with all stakeholders. Furthermore, we secure grid connection capacity through a strategy of having multiple points of interconnections available to us in due time relative to wind turbine commissioning. We fulfil part of the local content obligations by investing in harbour infrastructure, thereby also securing critical harbour capacity for staging and load-out of wind turbines.

## 4 Construction risks

### Description

Our main investments include several major offshore and onshore construction projects. Value creation from new projects heavily depends on choosing the right technical and commercial solutions, on the construction phase progressing as planned, on our suppliers living up to their obligations, on maturing the value chain in new markets, on avoiding investment budget overruns and on timely start-up of generation. A large part of our new investments are made in offshore assets, which naturally increases the risks in the construction phase. Some of these relate to site and seabed conditions, weather conditions and dependence on installation and transit vessels. Projects won in competitive auctions and tenders often include less contingency in order to stay competitive. This increases the risk in a scenario where the deadlines are not met.

### Potential impact

If we fail to take any of the conditions mentioned above into account, we may experience delays and budget overruns. Delays can lead to failure to meet deadlines and possibly partial loss of subsidies, grid connection and/or project rights.

### Mitigating actions

We are continuously working on standardising processes based on our vast experience from previous complex investment projects. This has led to, and will continue to lead to, industrialisation of the installation activities. In recent years, this has led to successful completion of several large investment projects, many of which have been completed ahead of schedule and below budget.

## 5 Future competitiveness in Offshore

### Description

As the offshore industry has become a more mature and established industry, competition has increased with new market players entering. The industry is becoming more global, and diversification of developers is increasing. We expect a diversified competitive landscape going forward, including oil majors, utilities, institutional investors and regional developers. Governments soliciting offshore wind have introduced auction/tender mechanisms designed to increase competition and thereby lowering costs for consumers. In some markets, we now see zero-bid tenders with projects being awarded on qualitative assessment criteria, such as procurement and supply chain capabilities. In new markets, such as the US and Taiwan, local content requirements are important assessment criteria. Further, we expect innovation and system integration (e.g. storage and renewable hydrogen) to play an increasingly important role in auctions and tenders.

### Potential impact

There is a risk that we do not win capacity in the auctions and tenders we participate in, or that our value creation from the projects we win ends up being below our cost of capital.

### Mitigating actions

We will remain disciplined in our bidding approach and focus on opportunities where we can create meaningful value. With this year's US awards, we have seen that strong local knowledge and deep market insights, provided partly through our acquisition of Deepwater Wind and partly through our various US partners, can give us a deeper understanding of what the 'customers' require, enabling us to optimise our bid proposition. Furthermore, we utilise portfolio scale advantages and knowhow gained from previously executed projects to develop supply chain solutions and reduce costs and risks in order to win future projects.

## Legal compliance

### Description

Risks associated with legal compliance are assessed based on financial and reputational significance and probability. Our most significant risks are tax law, financial regulation and the EU General Data Protection Regulation (GDPR). We operate in tax regimes with different tax rules and rates, and our tax affairs span over corporate tax compliance, transfer pricing and indirect taxes. We are subject to several financial regulations, such as REMIT, MAR, EMIR, Dodd Frank, MiFID, SFTR and AML1. The financial regulations are relevant for a large part of our activities. In relation to GDPR, we are primarily processing personal data about our Danish residential customers and our employees.

### Potential impact

Failure to comply with the above-mentioned rules and regulations may result in severe legal sanctions, such as imprisonment, fines and damage claims.

### Mitigating initiatives

A comprehensive tax control framework is being designed, and mandatory compliance, including transfer pricing documentation in line with OECD recommendations and local requirements, is being prepared to mitigate our tax risks. We have implemented comprehensive policies, procedures, training and controls for relevant parts of our business to ensure compliance with financial regulations. To ensure that we process personal data in compliance with GDPR, we have mapped and analysed our personal data processing and developed a Group-wide compliance programme. The compliance programme includes various organisational and technical measures as well as mandatory training of employees in risk-exposed positions.

## Cybersecurity

### Description

In recent years, several major cyberattacks have been launched against companies around the world, and according to the Danish Centre for Cybersecurity, the risk of cyberattacks aimed at the energy sector is high. Thus, we have a strong focus on IT security. We are responsible for critical infrastructure, and we own various types of intellectual property rights. This means that we are a potential target for cyberattacks or industrial espionage.

### Potential impact

Minor digital risk events, such as viruses and attempted break-ins, are everyday risks without significant impact. However, major cyberattacks or events may impact all or part of our shared infrastructure for administrative systems or industrial control systems. For the latter, the impact could range from a single asset to potentially all assets and activities in the company. Cyberattacks of a certain size can be costly if it forces us to shut down operations for a period of time.

### Mitigating initiatives

We have launched a significantly resourced programme with the aim to improve resilience against cyberattacks and other threats across Ørsted. Workshops have been held across business units to assess the cyber risks. In addition, we are running cyber risk awareness campaigns throughout the organisation in order to decrease threats from phishing campaigns, etc. Furthermore, we are participating in relevant forums across the energy sector to harvest and contribute with information and experience.

## Climate scenario analysis

In 2019, we assessed the resilience of our Offshore business to climate change in two scenarios: a 1.5-2°C and 3-4°C temperature rise by 2100, respectively.

Through research, interviews and a workshop, we analysed potential climate change impacts on direct operations in Offshore, which accounted for 87% of our EBITDA in 2019. Impacts were qualitatively assessed, and supply chain and other business units were not included in the assessment.

Focus was on the degree to which climate change can potentially add to existing climate-related risks summarised on page 61. Please refer to our CDP Climate Change disclosure for detailed descriptions [here](#).

We concluded that our offshore business is well positioned to manage potential climate-related transitional and physical impacts in both scenarios.

Transitional impacts related to climate change in terms of markets, regulation, technology and reputation are primarily linked to opportunities in both scenarios, especially in scenario 1. A growing share of offshore wind is projected in both scenarios, and Offshore has strong assets, processes and stakeholder engagement in place to identify and meet growing market demand.

Physical impacts from climate change presented no material risk to Offshore. Scenario projections for wind patterns were inconclusive, as the best available science shows no clear positive or negative trend and lacks locational precision. Due to engineering safety factors integrated into wind farm design, the assets are resilient to physical climate change impacts, such as sea level rise and more extreme weather. Finally, considering the lifetime of a wind farm and the pace of technological development, any gradual climate change will be factored into the design and each business case in a timely manner.

# Shareholder information

The Ørsted share yielded a total return of 61% in 2019, an increase in the share price of 58%, and dividends of DKK 9.75 per share.

## Price development for the Ørsted share

The Ørsted share started the year at a price of DKK 436 and closed the year at DKK 689. Prices of comparable European utility companies increased by 32%, and the OMX C25 cap increased by 26% in 2019. The market value of Ørsted was DKK 290 billion at the end of the year. Since the IPO in June 2016, the Ørsted share has generated an aggregate return from share price appreciation and dividends of 204%.

## Share price development in 2019

Ørsted share price compared to peers

The year's highest traded price of DKK 691 was on 27 December. The year's lowest traded price of DKK 428 was on 2 January.

The average daily turnover on Nasdaq Copenhagen was 447,657 shares. The trading volume increased by 0.1% compared to 2018.

In connection with SEAS-NVE's acquisition of our Danish power distribution, residential customer and city light businesses, SEAS-NVE stated an intention to reduce its shareholding from 9.54% to a shareholding of approx 5% over the coming 12 months. In both November 2019 and January 2020, SEAS-NVE sold shares equivalent to 2.27% of the shares in Ørsted, bringing their shareholding to 5.01%.

## Share capital

Ørsted's share capital is divided into 420 million shares, enjoying the same voting and dividend rights. The company's share capital remained unchanged in 2019. At the end of 2019, the company held a total of 396 thousand treasury shares, which will be used to cover incentive schemes.

## Composition of shareholders

At the end of the year, the number of shareholders had increased by 45% to 42,911 and the majority (65%) lies with Danish owners. The figure on the next page shows the composition of our shareholders by country, specifying the three shareholders each holding more than 5% of the share capital. Approximately 2% of the share capital is owned by retail investors.

## Annual general meeting and dividends

The annual general meeting will be held on 2 March 2020 in Copenhagen. Dividends for the year are expected to amount to DKK 10.5 per share, corresponding to DKK 4.4 billion and a yield of 1.5% compared to the share price of DKK 689 at the end of 2019.

In 2019, dividends of DKK 9.75 per share were paid for the 2018 financial year, corresponding to a dividend yield of 2.2%.

## Selected company announcements in 2019

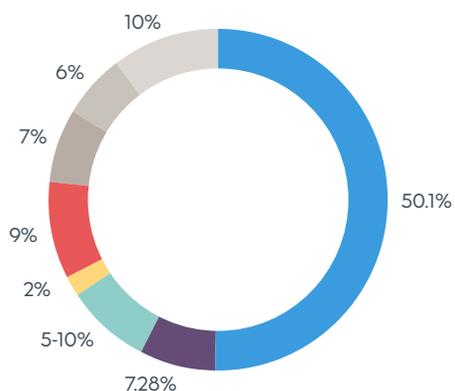

- 30 Jan. Taiwan announces 2019 feed-in tariff.
- 8 Feb. Ørsted divests 50% of South Fork, Revolution Wind and two New England offshore wind lease areas to Eversource.
- 30 Apr. Ørsted takes final investment decision on Changhua 1 & 2a Offshore Wind Farm.
- 9 May Ørsted successfully issues green bonds in UK.
- 21 June Ørsted selected as preferred bidder for New Jersey's first offshore wind farm.
- 18 July Ørsted selected as preferred bidder for New York offshore wind farm.
- 18 Sep. Ørsted enters into an agreement to divest its Danish power distribution, residential customer and city light businesses to SEAS-NVE.
- 25 Sep. Elsam is again acquitted of the competition authorities' claim of abuse. The provision is reversed.
- 29 Oct. Ørsted to negotiate divestment of 25% of Ocean Wind to Public Service Enterprise Group (PSEG).
- 29 Oct. Ørsted presents update on its long-term financial targets.
- 5 Nov. Ørsted issues green bonds in Taiwan.
- 18 Dec. Ørsted enters into an agreement to divest its LNG business.

## Financial calendar 2020

- 30 Jan. Annual report 2019
- 2 Mar. Annual general meeting
- 29 Apr. Interim report for the first quarter of 2020
- 12 Aug. Interim report for the first half-year of 2020
- 28 Oct. Interim report for the first nine months of 2020

**Shareholders at 31 December 2019,**

**Investor relations**

In order to achieve a fair pricing of our shares and corporate bonds, we seek to ensure a high level of openness and stability in our financial communication. In addition, our management and our Investor Relations function engage in regular dialogues with investors and analysts. The dialogues take the form of quarterly conference calls, roadshows, conferences, capital markets days and regular meetings with individual or groups of investors and analysts. The dialogues are subject to certain restrictions prior to the publication of our financial reporting.

The Group is covered by 23 equity analysts and 12 bond analysts. Their recommendations and consensus estimates for Ørsted's future financial performance are available at [orsted.com/en/investors](https://orsted.com/en/investors). On this site, you can also download our financial reports, our remuneration report, our ESG and our sustainability reports as well as investor presentations and a wide range of other data.

We constantly work to achieve a fair pricing of our shares and corporate bonds.

## Profit (loss) per share

Diluted profit (loss) per share corresponds to profit (loss) per share, as the dilutive effect of the share incentive programme is less than 0.1% of the share capital.

## Accounting policies

### Business performance

The business performance principle is our alternative performance measure. Under business performance, the market value adjustment of our energy hedges, where we do not apply IFRS hedge accounting, are deferred and recognised in the profit (loss) in the year in which the hedged exposure materialises. Energy hedges comprise hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts. According to IFRS, the market value of energy hedges, where we do not apply IFRS hedge accounting, are recognised on an ongoing basis in the profit (loss) for the year. The difference between IFRS and business performance is specified in the 'Adjustments' column. Read more about the business performance principle in note 1.5 'Business performance'.

	<b>Total comprehensive income</b>			<b>9,652</b>			<b>17,916</b>

## Statement of comprehensive income

All items in 'Other comprehensive income' may be recycled to the income statement.

### Cash flow hedging:

Value adjustments for the year for cash flow hedging according to IFRS of DKK 1,457 million mainly consist of gains related to hedging of US power and UK inflation. The loss of DKK 356 million transferred to the income statement mainly consist of foreign exchange losses related to the construction of Hornsea 1.

Value adjustments transferred to the income statement according to the adjustment column of DKK -1,395 million, mainly consist of gains on power hedges that are recognised in the income statement under business performance, but where the gains under IFRS was recognised in previous periods, as the gains/losses under business performance are deferred to the period to which the hedged exposure relates.

### Exchange rate adjustments:

Foreign exchange gains relating to net investments in foreign enterprises of DKK 2,722 million were in 2019 primarily attributable to an increase of 6% in the GBP exchange rate. A large part of the net investments were hedged.

## Leases

On 1 January 2019, we implemented IFRS 16 'Leases'. We have not restated comparative figures for the 2018 financial year, as we have implemented IFRS 16 with the modified retrospective method.

In accordance with IFRS 16, we recognise our leases, except for short-term leases, in the balance sheet. Lease obligations are recognised as 'Lease liabilities',

and lease assets are recognised alongside our owned assets of similar type under 'Property, plant and equipment'.

Read more about the impact in note 1.3 'Implementation of new or changed accounting standards and interpretations'.

# 1. Basis of reporting

- 74 Basis of preparation
- 76 Key accounting estimates and judgements
- 77 Implementation of new or changed accounting standards and interpretations
- 79 Alternative performance measures
- 80 Business performance

# 1.1 Basis of preparation

This section provides an overall description of the accounting policies applied in our consolidated financial statements. We provide a more detailed description of the accounting policies applied in the specific notes. Key estimates and judgements and new and amended IFRS standards and interpretations are discussed in detail in notes 1.2 'Key accounting estimates and judgements' and 1.3 'Implementation of new or changed accounting standards and interpretations', respectively.

## Basis of preparation

The financial statements for the period 1 January - 31 December 2019 comprise the consolidated financial statements of Ørsted A/S and its subsidiaries (the Group) as well as separate financial statements for the parent company, Ørsted A/S. See page 166 for the parent company's accounting policies.

The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards (IFRS) as adopted by the EU and further requirements in the Danish Financial Statements Act (Årsregnskabsloven).

The financial statements are presented in million Danish kroner (DKK), unless otherwise stated.

## Measurement basis

The consolidated financial statements have been prepared on the historical cost basis, except for derivatives, financial instruments in the trading portfolio, and carbon emission allowances in the trading portfolio, which are measured at market value.

The accounting policies have been applied consistently in the financial year and for the comparative figures except for the adoption of IFRS 16 'Leases'.

We have also changed our reportable segments and have therefore restated comparative figures. See note 2.1 'Segment information'.

## Principles for consolidation

The consolidated financial statements comprise the financial statements of Ørsted A/S (the parent company) and subsidiaries controlled by Ørsted A/S. See more in note 8.5 'Company overview'.

The consolidated financial statements have been prepared as a consolidation of the parent company's and the individual subsidiaries' financial statements which have been prepared in accordance with the Group's accounting policies. Intra-group income and expenses, shareholdings, balances and dividends as well as realised and unrealised gains

and losses arising from intra-group transactions are eliminated on consolidation.

Unrealised gains resulting from transactions with associates and joint ventures are eliminated to the extent of our ownership interest. Unrealised losses are eliminated in the same way as unrealised gains to the extent that there has been no impairment.

Enterprises are accounted for as associates if we hold or have the ability to exercise, directly or indirectly, 20%-50% of the voting rights and do not exercise control. However, we carry out a specific assessment of our ability to exercise influence, including our ability to influence financial and operational decisions and thus our return. Enterprises that satisfy the criteria for joint control are accounted for as investments in joint ventures, unless the nature of the joint arrangement is considered a joint operation, see 'Consolidation method for partnerships' in the next column.

Our shares in joint operations are recognised in the consolidated balance sheet through recognition of the Group's own assets, liabilities, income and expenses. The proportionate share of realised and unrealised gains and losses arising from intra-group transactions between fully consolidated enterprises and joint operations is eliminated.

## Key accounting judgements

### Consolidation method for partnerships

On establishment of partnerships and in connection with any restructuring of existing partnerships, we assess whether the structure is a joint arrangement under shared control. For joint arrangements, we subsequently assess whether they are joint ventures or joint operations.

In assessing joint operations, we look at:

- the corporate form of the operation
- whether we are only entitled to the net profit (loss) or income and expenses resulting from the operation.

In addition, the fact that the parties buy or are assigned all output, for example the power generated, will lead to the structure being considered a joint operation if we have joint control.

### Foreign currency translation

For each reporting enterprise in the Group, items are determined in the currency of the primary economic environment in which the individual reporting enterprise operates (functional currency). Transactions in currencies other than the functional currency of each enterprise are accounted for as transactions in foreign currencies and translated on initial recognition at the exchange rate on the transaction date. Exchange differences arising between the exchange rate on the transaction date and on the date of payment are recognised in profit (loss) for the year as financial income or expenses.

Receivables, payables and other monetary items in foreign currencies are translated at the exchange rates on the balance sheet date. The difference between the exchange rate on the balance sheet date and on the date at which the receivable or payable arose, is recognised in profit (loss) for the year as financial income or expenses.

For foreign subsidiaries, joint operations, associates and joint ventures, the statements of comprehensive income are translated at monthly average exchange rates in so far as these do not deviate materially from the actual exchange rates at the transaction dates. Balance sheet items are translated at the exchange rates on the balance sheet date.

All exchange differences are recognised in profit (loss) for the year, except for exchange differences arising on:

- translation of the opening equity of these entities at the exchange rates on the balance sheet date
- translation of the statements of comprehensive income of these enterprises from the average for the month exchange rates to the exchange rates on the balance sheet date
- translation of balances accounted for as part of the total net investment
- translation of the portion of loans and derivatives that has been entered into to hedge the net investment in these enterprises, and that provides an effective hedge against corresponding foreign exchange gains (losses) on the net investment in the enterprise.

The above types of exchange differences are recognised in other comprehensive income. Such exchange rate adjustments are divided between the equity of the parent company and the equity of the non-controlling interests. On full or partial divestment of the net investment, the accumulated exchange rate adjustments are recognised as follows:

- Disposal resulting in loss of control:
  - The accumulated exchange rate adjustments, including any associated hedges, are recognised in the profit (loss) for the year if a foreign exchange gain (loss) is realised by the selling enterprise. Any foreign exchange gain (loss) is transferred to the item in which the gain (loss) from the disposal is recognised. The part of the foreign currency translation reserve that relates to non-controlling interests is not transferred to profit (loss) for the year.

- Disposal not resulting in loss of control:
  - A proportionate share of the foreign currency translation reserve is transferred from the parent company shareholders' share of equity to the minority shareholders' share of equity.

Repayment of balances that are considered part of the net investment does not constitute a partial disposal of the subsidiary.

Block Island wind farm, Rhode Island, US.

## 1.2 Key accounting estimates and judgements

The use of reasonable estimates and judgements is an essential part of the preparation of the consolidated financial statements.

Given the uncertainties inherent in our business activities, we make a number of estimates and judgements. The estimates and judgements are based on assumptions concerning future developments which affect our application of accounting policies and the reported

amounts of our assets, liabilities, sales, costs, cash flows and related disclosures. Actual amounts may differ from the amounts estimated and judgements made, as more detailed information becomes available.

We regularly reassess these estimates and judgements, based among other things on historical experience, the current situation in the financial markets and a number of

other relevant factors, ie. the update in the annual estimated production.

Accounting estimates, judgements and assumptions which may entail a risk of material adjustments in subsequent years are listed in the table below.

In addition, we make judgements when we apply the accounting policies.

Reference is made to the specific notes for further information on the key accounting estimates and judgements as well as the assumptions applied.

Note		Key accounting estimates and judgements	Estimate/ judgement	Impact of accounting estimates and judgements
1.1	Basis of preparation	Consolidation method for partnerships	Judgement	● ● ● ○
2.2	Revenue	Assessment of assumptions for recognition of revenue from the construction of offshore wind farms over time Assumptions for the determination of the expected selling price and expected costs	Judgement Estimate	● ● ○ ○ ● ● ● ○

Impact of accounting estimates and judgements relates to objectivity and business practice.

- ○ ○ ○ Very objective/market-conforming
- ● ○ ○ Objective/partially conforming
- ● ● ○ Partially subjective/partially distinctive
- ● ● ● Subjective/distinctive for Ørsted

# 1.3 Implementation of new or changed accounting standards and interpretations

We regularly assess the impact of new IFRS standards and interpretations. We implement new IFRS standards and interpretations from their mandatory effective dates at the latest.

Effective from 1 January 2019, we have implemented the following new or changed standards (IAS and IFRS) and interpretations:

- IFRS 16 'Leases'. See separate section below.
- Annual improvements to IFRSs 2015-2017.

Besides the impact from IFRS 16, the adoption of the new and amended standards has not impacted our consolidated financial statements for 2019.

In the following section, you can read more about the impact on recognition, measurement and presentation from IFRS 16 'Leases'. The standard has a significant impact on our EBITDA, but an insignificant impact on profit (loss) for the year, profit (loss) per share and diluted profit (loss) per share. Besides classification, equity and the consolidated statement of cash flows are not affected.

## Implementation of IFRS 16

On 1 January 2019, we implemented IFRS 16, 'Leases', which replaced IAS 17 and IFRIC 4.

We have implemented IFRS 16 with retrospective effect. However, we have used the relief

from restating comparative figures (modified retrospective method). Therefore, the comparative figures are prepared and presented in accordance with IAS 17 and IFRIC 4.

The most important changes resulting from IFRS 16 compared to IAS 17 can be summarised as follows:

- The dual model in IAS 17 with operating and finance leases has been ceased. Under IFRS 16, all leases, except for short-term leases and 'low-value' leases, shall be recognised in the balance sheet.
- Fixed lease payments are recognised as lease liabilities and lease assets. Lease assets are depreciated and interests on lease liabilities are recognised as financial expenses (both below EBITDA). Under IAS 17, fixed lease expenses were recognised as other external expenses (above EBITDA).
- Lease debt repayments are classified as cash flows from financing activities, and payments of interest are classified as cash flows from operating activities in the statement of cash flows. Under IAS 17, all lease payments were classified as cash flows from operating activities.

As permitted when applying IFRS 16 for the first time, we have used the following practical expedients and:

- elected not to reassess whether a contract is, or contains, a lease on 1 January 2019
- applied a single discount rate to a portfolio of leases with reasonable similar characteristics (asset type, currency, and remaining lease term)
- relied on previous assessments concluding whether leases are onerous and offset a provision for an onerous lease in the lease asset
- elected to account for leases with a remaining lease term of less than 12 months as at 1 January 2019 as short-term leases.

We do not apply the recognition exemption regarding low value leases.

Our new accounting policies for leases are described in note 8.2 'Leases'.

## Impact on our consolidated financial statements

On 1 January 2019, we recognised lease assets amounting to DKK 5,065 million and lease obligations amounting to DKK 5,224 million.

The value of the lease assets was lower due to accrued lease payments and a provision for an onerous contract totalling DKK 159 million at 1 January 2019, which was offset against the value of the lease assets.

The most affected class of property, plant and equipment is land and buildings. This category mainly comprises our office premises in Gentofte and London as well as seabeds and plots of land relating to offshore and onshore wind farms, respectively. Lease assets classified as fixtures and fittings, tools and equipment primarily include vessels used for operations in Offshore.

Under IAS 17, our operating lease obligations at 31 December 2018 amounted to DKK 4,819 million (net present value). Compared to our recognised lease obligations at 1 January 2019 under IFRS 16, the operating lease obligations were DKK 405 million lower. The main difference is related to the average weighted incremental borrowing rate. Under IFRS 16, our average weighted rate applied is 3.0%, which is 0.5% lower than the rate applied for calculating the net present value of our operating lease obligations at 31 December 2018 in accordance with our accounting policy for key credit metrics.

Upon transition to IFRS 16, we did not have any material finance leases.

In summary, the adjustments made to the amounts recognised in the balance sheet at 1 January 2019 are illustrated in the table.

Our EBITDA for 2019 increased by DKK 634 million due to the implementation of IFRS 16, compared to a continued expensing of operational lease costs under the previous accounting policy. Depreciation of lease assets amounted to DKK 599 million, and interests on lease debt amounted to DKK 171 million for 2019 under IFRS 16. Our total cash flows for the year were not impacted

by IFRS 16, but repayments of lease liabilities (DKK 664 million) are classified as cash flows from financing activities under IFRS 16 where all lease related cash flows under the previous accounting policy were classified as cash flows from operating activities.

### New standards and interpretations

IASB has issued a number of amended standards which have not yet entered into force, and which have consequently not been incorporated into the consolidated financial statements for 2019.

Amazon wind farm, Texas, US.

Extract Impact of adoption, DKKm	1 January 2019		
	Previous accounting policy	Effect of change in accounting policy	New accounting policy
<b>Assets</b>			
<b>Property, plant and equipment</b>			
Land and buildings	969	4,165	5,134
Production assets	66,310	440	66,750

Lease liabilities	-	574	574
<b>Equity and liabilities</b>	<b>174,575</b>	<b>5,065</b>	<b>179,640</b>

Comparatives for the 2018 financial year are not restated, as we have applied the modified retrospective method. The effects of change in accounting policy are identical for IFRS and business performance profit (loss).

# 1.4 Alternative performance measures

Performance measures are calculated in accordance with the business performance principle.

<b>Business performance</b>	Business performance is a supplement to our financial statements prepared in accordance with IFRS. Under the business performance principle, the value of the hedging transaction is deferred and recognised for the period in which the hedged risk materialises. Reference is made to note 1.5 'Business performance'.
<b>Gross investments</b>	Gross investments reflect our total investments in assets and enterprises. It comprises cash flows from investing activities, excluding dividends received from associates, joint ventures and equity investments, purchase and sale of securities, loans to joint ventures and joint operations, and divestments of assets and enterprises. To this is added acquired debt and restricted cash in connection with acquisitions.
<b>Net investments</b>	Net investments are gross investments less divestments of assets and enterprises, the selling price for non-controlling interests and subsequent capital injections from non-controlling interests. Furthermore, interest-bearing debt transferred in connection with a divestment is deducted.
<b>Funds from operations (FFO)</b>	Funds from operations are a supplementary statement for cash flows from operating activities determined as business performance EBITDA less the effect of gains on the divestments of ownership interests in offshore wind farms, interest expenses (net) on interest-bearing net debt and hybrid capital (50%) as well as interest elements of decommissioning obligations and current tax.
<b>Adjusted interest-bearing net debt<sup>1</sup></b>	Adjusted interest-bearing net debt is interest-bearing net debt plus 50% of the hybrid capital, cash and securities not available for use (except for repo transactions), and the present value of decommissioning obligations less deferred tax.
<b>FFO to adjusted interest-bearing net debt</b>	$\frac{\text{FFO}}{\text{Adjusted interest-bearing net debt}}$
<b>Free cash flow (FCF)</b>	Free cash flows are cash flows from operating activities less gross investments and plus divestments.
<b>Capital employed</b>	Capital employed are all assets and liabilities except for equity and interest-bearing net debt.

<sup>1</sup> In 2018, lease obligations were not recognised in the balance sheet and therefore not included in interest-bearing debt. The present value of lease payments (operating lease obligations calculated as if they were finance lease obligations) were, however, included in the alternative performance measure as specified in note 6.1. The change is due to implementation of IFRS 16 'Leases'. See also note 1.3.

<b>Average capital employed</b>	$\frac{\text{Capital employed beginning of year} + \text{capital employed year-end}}{2}$
<b>Return on capital employed (ROCE)</b>	$\frac{\text{EBIT}}{\text{Average capital employed}}$
<b>Proposed dividend per share (DPS)</b>	$\frac{\text{Total proposed dividend}}{\text{Number of shares year-end}}$
<b>Dividend yield</b>	$\frac{\text{Dividend per share (proposed)}}{\text{Share price on the last trading day of the year}}$
<b>Average number of shares</b>	$\frac{1}{\text{Number of days}} \times \sum_{i=1}^{\text{Number of days}} \text{days} = X_1$
<b>Net working capital</b>	Net working capital is inventories, contract assets (net), trade receivables and other current operating assets less trade payables, other current operating liabilities and working capital elements of tax equity balances.
<b>Net working capital, excluding trade payables relating to capital expenditure</b>	Net working capital, excluding trade payables relating to purchases of intangible assets and property, plant and equipment.
<b>Other definitions</b>

# 1.5 Business performance

## Description of business performance

In 2011, we introduced an alternative performance measure, business performance, as a supplement to the financial statements prepared in accordance with IFRS. The business performance results reflect our internal risk management and show the results for the period under review. Under the business performance principle, the value of the hedging transaction is deferred and recognised for the period in which the hedged risk materialises. This is illustrated in the example overleaf.

Our reason for introducing the business performance principle was that:

- we could not achieve the same timing of recognition of our commercial exposure and hedging contracts in accordance with the IFRS rules, for example with respect to option premiums and certain commercial fixed-price contracts, and
- there was a high risk that the hedging contracts were not consistent with the IFRS hedge accounting rules, requiring us to recognise the hedging contracts at market value with value adjustments via the income statement, whereas our commercial exposure is accrued.

Our risk management is described in note 7.1 'Market risks'.

## Business performance – background

We mainly hedge market risks for up to five years (some for a longer period) with the

aim of stabilising our cash flows and create certainty about our finances. With a view to ensuring transparency, we want the financial impact of the hedging transactions to be reflected in the financial reporting simultaneously with the hedged exposure (for example sales of power). We can normally achieve this by applying the IFRS rules on hedge accounting. For energy companies, it is, however, sometimes difficult to ensure simultaneity. The reason for this is that hedging instruments are not always available which precisely match the exposure which must be hedged, or that there is no sufficiently liquid market available. Consequently, some hedging takes place in alternative markets or subject to alternative time horizons. For example, power generation in Denmark is to some extent hedged by financial contracts for nearby trading areas, such as the European Energy Exchange (EEX) in Germany and Nord Pool in Scandinavia. These areas normally develop relatively uniformly over time compared to Denmark.

This hedging method means that only some of the financial hedging transactions comply with the IFRS rules on hedge accounting even though the financial risk has been reduced. In case of non-compliance, the hedging transactions must be recognised in the income statement on a regular basis under IFRS. This may give rise to considerable fluctuations in the income statement, as the effects of the hedging and, for example, the sale of power are not recognised in the same period.

Consequently, we have decided not to apply the IFRS rules on hedge accounting to transactions hedging energy prices and associated currency risks. Therefore, value adjustments of these hedges are recognised in the income statement in accordance with IFRS.

## Recognition

In the income statement, the business performance results are shown alongside the IFRS results. The difference between the two

performance measures is shown in a separate column, 'Adjustments'. Two types of contracts are included in the business performance principle:

- Hedging contracts concerning energy and related currencies.
- Commercial contracts concerning energy recognised at market value (typically fixed-price physical gas and power contracts).

When we use hedging instruments which do not fully correspond to the underlying risk, any difference between the hedging instruments and the underlying risk is recognised immediately in the income statement. See note 7.3 'Energy trading portfolio'. The accounting treatment under business performance is otherwise identical to the accounting treatment under IFRS. Our assets, liabilities, cash flows and equity are consequently not affected. The accounting treatment of our hedging contracts according to IFRS and business performance is summarised in the table below.

Type of hedging	IFRS	Business performance
Hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts	Market value adjustments of power hedges related to Onshore are recognised in other comprehensive income. Other market value adjustment are recognised in the income statement	Market value adjustments are deferred and recognised in the period in which the exposure materialises
Hedging of: – proceeds from the divestment of newly constructed offshore wind farms – interest and inflation risk	Market value adjustments are deferred and recognised in the period in which the exposure materialises	Recognition is the same as under IFRS
Hedging of currency risks associated with investments in foreign entities	Market value adjustments are recognised in other comprehensive income	Recognition is the same as under IFRS
Trading portfolio	Market value adjustments are recognised in the income statement	Recognition is the same as under IFRS

Only the recognition of the hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts differs under IFRS and the business performance principle.

### Expected impact on business performance EBITDA from energy and currency hedging

At 31 December 2019, a gain of DKK 1,434 million has been deferred (2018: loss of DKK 1,849 million), which will affect business performance EBITDA in subsequent years. Of the total deferred gain, a gain of DKK 687 million is expected in business performance EBITDA in 2020 (2018: DKK 1,470 million loss in 2019).

Power prices decreased in 2019, which means that the market value of the hedges has increased as we are selling power. The decrease in the deferred gain on currency hedging is primarily attributable to an increase in the GBP/DKK rate causing a loss as we are selling GBP.

### Expected impact on business performance EBITDA from energy and currency hedging, DKKm

	Deferred for subsequent recognition at 31 December 2019				Deferred for subsequent recognition at 31 December 2018			
	2020	2021	After 2021	Total	2019	2020	After 2020	Total

Deferred revenue from US power purchase agreements	187	157	649	993	209	183	791	1,183
<b>Total</b>	<b>687</b>	<b>(494)</b>	<b>1,241</b>	<b>1,434</b>	<b>(1,470)</b>	<b>(951)</b>	<b>572</b>	<b>(1,849)</b>

The table shows when the deferred value adjustments are expected to be recognised in the business performance EBITDA. The table covers both hedging classified as business performance and IFRS. Gains are shown as '+' and losses are shown as '-'. Deferred revenue from US power purchase agreements is explained in more detail in note 7.7 'Fair value measurement'.

### Explanation of the business performance principle

In year 1, we enter into a contract hedging the price risk associated with Offshore's generation of 1,000GWh in year 5 at GBP 52,000 per GWh. This ensures a total revenue of GBP 52 million. In year 5, the cost of power has decreased to GBP 45,000 per GWh, which means that the hedging contract has a positive market value of GBP 7 million (a hedged price of GBP 52,000 per GWh minus the spot price of GBP 45,000 per GWh). This means that we ensure that the total income, including the hedging transaction, is still GBP 52 million. The income of GBP 52 million consists of a gain from the hedging contract of GBP 7 million and GBP 45 million from the sale of 1,000GWh at a spot price of

GBP 45,000 per GWh. The financial impact of the hedging transaction in years 1-5 is shown in the table. Under the business performance principle, the hedging transaction is recognised in the income statement in year 5, i.e. at the same time as the hedged contract with a positive market value of GBP 7 million. The value development is, however, recognised continuously in the income statement according to IFRS. Upon the expiry of the contract in year 5, the total effect on results over the period is the same under the IFRS and the business performance principle. Only the timing differs. The business performance principle ensures simultaneity of recognition of the underlying exposure and the hedging contract.

	Power price and sale of power, GBP million		Recognised in the income statement as follows			Total financial impact

#### Specification of the difference between EBITDA according to business performance and according to IFRS, DKKm

	2019	2018
EBITDA – business performance	17,484	30,029
Business performance adjustments in respect of revenue for the year	2,556	(1,426)
Business performance adjustments in respect of cost of sales for the year	(1,020)	(112)
<b>EBITDA – IFRS</b>	<b>19,020</b>	<b>28,491</b>
<b>Total business performance adjustments for the year comprise:</b>		
Market value adjustments for the year of financial and physical hedging contracts relating to a future period	141	(1,734)
Reversal of deferred gains (losses) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period	1,395	196
<b>Total adjustments</b>	<b>1,536</b>	<b>(1,538)</b>

#### Market value adjustments for the year of financial and physical hedging contracts relating to a future period, DKKm

	2019	2018
Currency	(1,916)	313
Power (commercial and hedge)	1,144	(1,617)
Gas (commercial and hedge)	857	(48)
Oil	94	(382)
Coal	(38)	-
<b>Total value adjustments</b>	<b>141</b>	<b>(1,734)</b>

#### Reversal of deferred gains (losses) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period, DKKm

	2019	2018
Currency	(320)	(165)
Power (commercial and hedge)	1,249	307
Gas (commercial and hedge)	327	262
Oil	144	(174)
Coal	(5)	(34)
<b>Total deferred gains (losses) from previous periods</b>	<b>1,395</b>	<b>196</b>

#### Difference between IFRS and business performance for the year

The value adjustment in respect of future periods totalled a gain of DKK 141 million (2018: DKK -1,734 million), and reversal of deferred gains (losses) recognised according to business performance in 2019 totalled DKK 1,395 million (2018: DKK 196 million).

#### Market value adjustments for the year related to hedging contracts

2019 was mainly affected by gains on the hedging of power and gas as a result of a

drop in prices combined with a selling position. This was partly countered by losses on currency hedges, mainly related to an increase in the GBP/DKK rate as a result of a selling position.

#### Deferred gains (losses) from previous periods

In 2019, a loss of DKK 1,395 million was recognised in business performance EBITDA, but as the loss was recognised in IFRS EBITDA in a previous period, the loss was reversed in the 'Adjustments' column in the income statement. The loss was primarily attributable to the hedging of power.

The table shows value adjustments by product. The value adjustments are recognised in IFRS EBITDA, but not in business performance EBITDA, as the value relates to future periods.

Asnæs power plant, Kalundborg, Denmark.

The table shows reversal of value adjustments by product. These gains (losses) are recognised in business performance EBITDA. The reversal of value adjustment was recognised in IFRS EBITDA in a previous period.

- 93 Other operating income and expenses
- 94 Employee costs
- 95 Share-based payment

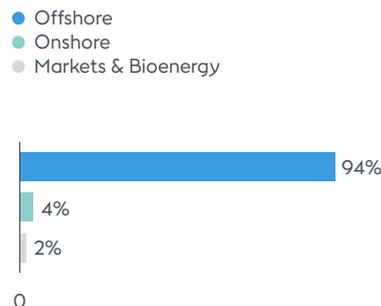

# 2. Return on capital employed

Return on capital employed (ROCE) is a key ratio showing how profitable our business activities are. Our target is an average ROCE of around 10% for the Group for the 2019-2025 period.

### Return on capital employed

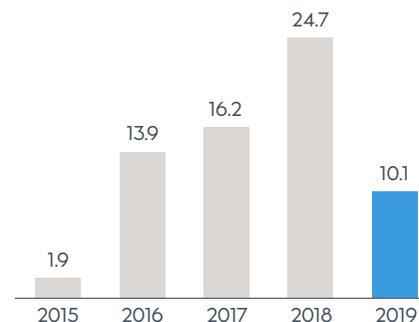

Return on capital employed was 10.6% in 2019 compared to 32.1% in 2018. The decrease was mainly due to lower EBIT in 2019 compared to 2018. EBIT in 2018 was significantly positively affected by the Hornsea 1 farm-down gain. Reference is made to note 2.1 'Segment information'.

EBIT by segment, percentage of DKK 10,231 million in 2019

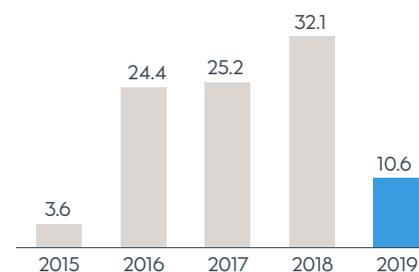

EBIT is stated according to the business performance principle. EBIT of DKK 10,231 million is calculated as EBIT for reportable segments.

EBIT, business performance DKKbn

Return on capital employed (ROCE) %

# 17.5bn

EBITDA totalled DKK 17,484 million in 2019 against DKK 30,029 million in 2018.

# 10.1bn

Operating profit (EBIT) totalled DKK 10,052 million in 2019 against DKK 24,654 million in 2018.

# 10.6%

Return on capital employed totalled 10.6% in 2019 against 32.1% in 2018.

# 2.1 Segment information

## Offshore, DKKm

Revenue	40,216
EBITDA	15,161
Gross investments	15,121
Number of employees	2,777

### Primary activity

Development, construction, ownership and operation of offshore wind farms in the UK, Germany, Denmark, the Netherlands, the US and Taiwan.

## Onshore, DKKm

Revenue	670
EBITDA	786
Gross investments	6,158
Number of employees	95

### Primary activity

Development, ownership and operation of onshore wind and solar farms in the US and a minor storage solution in the UK.

## Markets & Bioenergy, DKKm

Revenue	32,816
EBITDA	1,495
Gross investments	1,898
Number of employees	1,828

### Primary activity

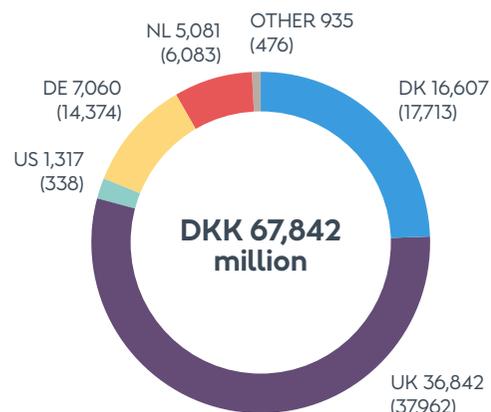

Generation of heat and power at CHP plants in Denmark, sale of power and gas in wholesale and retail markets, distribution of power in Denmark, as well as optimisation and hedging of Ørsted's entire energy portfolio.

### New segment structure

In June, we decided to consolidate the business units Customer Solutions and Bioenergy into a new business unit, named Markets & Bioenergy. In addition, as we run the business on an end-to-end value chain thinking, we decided that all activities and earnings that relate to Offshore and Onshore will be reported in these segments, even if the daily activities are performed on behalf of the Group in Markets & Bioenergy. Therefore, earnings from trading related to hedging of our power exposures and power portfolio optimisation activities in relation to Offshore and Onshore are now presented in these business units. In 2019, EBITDA of DKK 725 million (2018: DKK 237 million) and DKK -18 million

### Revenue DKKm 2019<sup>1</sup> (2018)

- Germany (DE)
- The UK
- The Netherlands (NL)
- The US
- Other

(2018: DKK 0 million) were transferred to Offshore and Onshore, respectively. We have restated comparative figures for 2018.

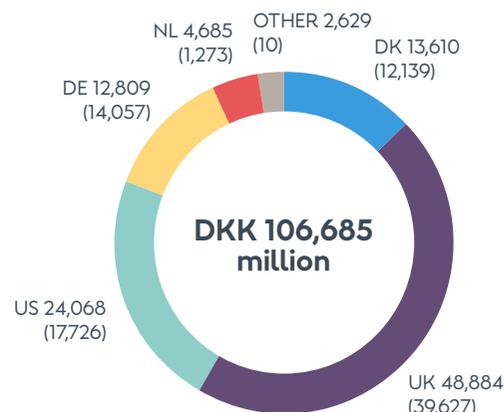

### Geographical distribution of revenue as well as intangible assets and property, plant and equipment

Geographical revenue is broken down, as far as possible, by the customer's geographical location based on supply point.

A significant part of our sales takes place via power exchanges and gas hubs in Europe, whose physical locations do not reflect the geographical locations of our customers. When breaking down these sales by geographical

### Intangible assets and property, plant and equipment, DKKm 2019 (2018)

- Denmark (DK)
- Germany (DE)
- The UK
- The Netherlands (NL)
- The US
- Other

location, we use the physical locations of the exchange or hub since we do not know the physical location of our customers in all cases.

In 2019, one customer in Offshore had a revenue of DKK 10,339 million, accounting for more than 10% of our consolidated revenue. No single customer accounted for more than 10% of our consolidated revenue in 2018.

Non-current assets are broken down geographically based on the physical locations of the assets.

### Accounting policies

Our operating segments are consistent with our internal reporting to our chief operating decision maker, Group Executive Management.

We apply the business performance principle, as described in note 1.5 'Business performance', in connection with our internal management.

The operating segments are managed primarily on the basis of EBITDA and investments. Financial income, expenses, depreciation and amortisations as well as tax are allocated to the operating segments, while we manage them at Group level.

Segment income and segment expenses are those items that, in our internal management reporting, are directly attributable to individual segments or can be indirectly allocated to individual segments on a reliable basis.

Revenue, intangible assets as well as property, plant and equipment are presented based on the locations of our customers and assets.

<b>Total revenue from customers, IFRS</b>	<b>29,495</b>	<b>427</b>	<b>31,422</b>	<b>(5,890)</b>	<b>55,454</b>	<b>35,528</b>	<b>64</b>	<b>39,356</b>	<b>(6,029)</b>	<b>68,919</b>

We have changed our reportable segments and have therefore restated comparative figures. See note 2.1.

The timing of transfer of goods or services to customers is categorised as follows:

'At a point in time' mainly comprises:

- sale of gas or power in the market, e.g. North Pool, TTF, NBP
- transmission assets for offshore wind farms.

'Over time' mainly comprises:

- construction agreements for offshore wind farms and transmission assets
- long-term contracts with customers to deliver gas, power or heat.

Revenue for the year (business performance) decreased by 12% to DKK 67,842 million in 2019. The decrease was mainly due to the significant drop in gas prices during the year, lower revenue from construction of offshore wind farms for partners, lower gas volumes, lower revenue from power sales as well as lower thermal heat and power generation. This was partly offset by higher revenue from wind farms in operation.

Revenue for the year from construction of offshore wind farms mainly related to the construction of the offshore wind farm Hornsea 1 and the divestment of the Race Bank transmission asset.

Other revenue in Offshore primarily related to operation and maintenance agreements, which increased due to ramp-ups of offshore wind farms in 2019.

In 2019, revenue was DKK 70,398 million (2018: DKK 75,520 million) according to IFRS, of which DKK 65,914 million (2018: DKK 70,736 million) was revenue from the sale of goods, and DKK 4,484 million (2018: DKK 4,784 million) was revenue from the sale of services.

Unsatisfied long-term contracts with customers, DKKm	Expected to be recognised		
	31 December	within one year	in more than one year
2019	1,345	100%	0%
2018	11,473	91%	9%

### Unsatisfied long-term contracts

Our remaining performance obligations expected to be recognised in more than one year relate to the construction of wind farms and offshore transmission assets.

The transaction price allocated to the remaining performance obligation (unsatisfied or partially satisfied).

In accordance with IFRS 15, the overview does not include revenue from contracts with customers to deliver power, gas and heat or our operation and maintenance agreements. For these types of goods and services, we recognise the revenue that corresponds directly to the value transferred to the customer.

### Key accounting estimates

#### Assumptions for the determination of the expected selling price and expected costs

We make estimates when determining the expected selling price of individual construction agreements. These estimates are influenced by our assessment of:

- the degree of completion of the individual offshore wind farms and offshore transmission assets
- total expected costs for the individual contract
- the value of incentive agreements under which we may be paid a bonus for early delivery or have to pay compensation for late delivery
- the guarantee commitments undertaken
- the share of total costs associated with transmission assets which are expected to be covered upon handover, etc.

Therefore, our determination of profit and the recognition of revenue and related contract assets are subject to significant uncertainty. We believe that our estimates are the most likely outcomes of future events.

### Key accounting judgements

#### Assumptions for the recognition of revenue from the construction of offshore wind farms over time

We construct offshore wind farms with partners, where we construct our partner's share of the wind farm. We assess each construction agreement at the time of conclusion of the agreement. In our view, our partner assumes control of the offshore wind farm in step with the construction. This is supported by:

- the regular approval of part deliveries
- the approval or rejection of significant variations to the construction
- the partner's take-over of work from subcontractors, both concerning risk and legal title to the wind farm on an on-going basis
- the milestone payments from the partner.

Therefore, revenue is recognised over time during the construction of the offshore wind farms.

### Accounting policies

Revenue is measured based on the consideration specified in a contract with a customer (transaction price) and excludes amounts collected on behalf of third parties, i.e. VAT. We recognise revenue when we transfer control over a product or service to a customer.

If a part of the transaction price is variable, i.e. bonus payments, incentive payments for unmissed deadlines, etc., the variable consideration is recognised in revenue when it is highly probable that the revenue will not be reversed in subsequent periods.

We adjust the transaction price for the time value of money if the payments exceed twelve months.

Sales agreements are divided into individually identifiable performance obligations. If a sales agreement includes several performance obligations, the sales agreement's transaction price is allocated to each performance obligation's stand-alone selling price.

#### Sale of gas

##### Timing of satisfaction of delivery obligations and significant estimates

Revenue is recognised when control of the gas is transferred to the buyer. Transfer of control occurs either when the gas is injected into the distribution system or physically delivered to the customer.

##### Significant terms of payment and associated estimates and judgements

Sales contracts for a fixed amount of gas at a variable price, or where we are exclusive suppliers to the customer at a variable price, are considered one performance obligation with multiple deliveries to be satisfied over time. For such contracts, we recognise revenue in the amount up to which we have a right to invoice.

Some long-term gas sales contracts include clauses which give the right to renegotiate the fixed sales prices. Expectations for the outcomes of renegotiations are not included in revenue before we know the outcome of the individual renegotiations.

In most cases, the consideration for the gas is due when the gas is injected into the distribution system

or delivered to the customer. The delivery of gas is invoiced on a monthly basis, and the payment is due within 10-30 days.

#### Sale of power

##### Types of goods and services

Revenue from the sale of power includes the sale of power sourced from other producers.

##### Timing of satisfaction of delivery obligations and significant estimates

Revenue is recognised when control of the goods is transferred to the buyer. Transfer of control occurs when the actual power is delivered to the customer.

##### Significant terms of payment and associated estimates and assessments

Sales contracts for a fixed amount of power at a variable price, or where we are exclusive suppliers to the customer at a variable price, are considered one performance obligation with multiple deliveries to be satisfied over time. For such contracts and for long-term agreements on selling power at a fixed price, we recognise revenue in the amount up to which we have a right to invoice.

In most cases, the consideration for the power is due when the actual power is delivered to the customer. The delivery of power is invoiced on a monthly basis, and the payment is due within 10-30 days.

#### Generation of power

##### Types of goods and services

Revenue from generation of power is our sale of power produced at our own wind farms and power stations, and the sale of ancillary services.

##### Timing of satisfaction of delivery obligations, and significant estimates

Revenue is recognised when control of the goods is transferred to the buyer. Transfer of control occurs when the actual power is delivered to the customer, which for power generated by us occurs when it is produced.

##### Significant terms of payment and associated estimates and assessments

Revenue from ancillary services consists of fees for having power stations on standby in periods with a demand for power generation. Ancillary services

are considered one performance obligation which is fulfilled over time when the power stations are on standby.

Sales contracts for a fixed amount of power at a variable price, or where we are exclusive suppliers to the customer at a variable price, are considered one performance obligation with multiple deliveries to be satisfied over time. For such contracts and for long-term agreements on selling power at a fixed price, we recognise revenue in the amount up to which we have a right to invoice.

In most cases, the consideration for the power is due when the actual power is delivered to the customer.

Ancillary services are invoiced on a monthly basis, and consideration is payable when invoiced.

#### Revenue from construction of offshore wind farms Types of goods and services

Revenue from construction of offshore wind farms includes development and construction.

The construction agreements cover the construction phase from design to delivery of an operational asset. The agreement consists of two performance obligations:

- Offshore wind farms.
- Offshore transmission assets, if applicable.

The construction agreements cover our partners' shares of the construction of the wind farm and offshore transmission asset, if applicable.

If the contracts include multiple performance obligations, the transaction price will be allocated to each performance obligation based on the stand-alone selling prices. Where these are not directly observable, they are estimated based on the expected cost-plus margin.

#### Timing of satisfaction of delivery obligations, and significant estimates

We recognise revenue from the construction agreements over time, using an input method to measure progress towards complete satisfaction of the performance obligation because the customer gains control of the offshore wind farm during the construction process. The input method reflects our ongoing transfer of control to the customer.

When the outcome of the performance obligation in the contract can be measured reasonably, the construction agreement is measured at the transaction price of the work performed less progress billings, based on the percentage of completion of the contract at balance sheet date and the total expected revenues from the individual contracts.

We estimate the degree of completion on the basis of an assessment of the work performed, normally calculated as the ratio between the costs incurred and the total costs expected related to the contract in question.

The transaction price is based on the total expected income from individual contracts. Estimates of revenues are based on the transaction price and the completion degree of the offshore wind farm or offshore transmission asset at the balance sheet date.

Estimates of revenues, costs and percentage of completion are revised if circumstances change. Any resulting increases or decreases in estimated revenue or costs are reflected in profit or loss in the period in which the circumstances that give rise to the revision come to our knowledge.

An expected loss is recognised when it is deemed probable that the total construction costs will exceed the total revenue from the individual contracts.

#### Significant terms of payment and associated estimates and assessments

The consideration for the construction of an offshore wind farm consists of a fixed fee and a relatively minor variable fee, depending on when the wind farm can be put into operation.

The consideration for an offshore transmission asset is a fixed fee.

After signing the construction agreement, we carry out an assessment determining when the wind farm is expected to be completed, and calculate the size of the variable payment on this basis. We only recognise the variable fee when it is highly probable that a subsequent reversal will not take place.

At each balance sheet date, an assessment is made of the size of the variable payment which can be included in the transaction price. Revenue is adjusted accordingly.

The customer pays the fixed consideration based on a payment schedule. The payment schedule is determined and based on the expected progress of the construction and transfer of control to the customer.

If the work we have performed exceeds invoicing on account, a contract asset is recognised. If the payments exceed the work we have performed, a contract liability is recognised.

#### Generation and sale of heat Timing of satisfaction of delivery obligations and significant estimates

Heat is sold under long-term heat contracts.

Revenue is recognised when control is transferred to the customer. Transfer of control occurs when the heat is physically delivered to the customer.

In connection with a biomass conversion of a CHP plant, the heat customer makes a prepayment to finance the majority of our CAPEX associated with the conversion. The prepayment is recognised as a contract liability. The contract liability is recognised as revenue in step with the transfer of heat to the customer.

#### Significant terms of payment and associated estimates and assessments

Payment for the sale of heat consists of fixed costs associated with operation and maintenance of a CHP plant plus fuel costs for the generation of heat and a financial return.

The delivery of heat is invoiced on a monthly basis, and the payment is due within 10-30 days.

#### Distribution and transmission Timing of satisfaction of delivery obligations, and significant estimates

Revenue from the distribution and transmission of gas and power is recognised when the gas or power is delivered to the buyer, or when the capacity is made available.

#### Significant terms of payment and associated estimates and assessments

Revenue is calculated as the amount to which we are entitled when the service is delivered to the customer and invoiced on a monthly basis, and consideration is payable when invoiced.

#### Other revenue

##### Types of goods and services

Other revenue primarily includes operations and maintenance agreements and other services.

##### Timing of satisfaction of delivery obligations and significant estimates

Revenue from providing services is recognised in the accounting period in which the services are rendered.

For fixed-priced contracts, revenue is recognised based on the actual service rendered at the end of the reporting period as a proportion of the total services to be rendered because the customer receives and uses the benefits simultaneously. This is determined based on the actual labour hours spent relative to the total labour hours expected.

##### Significant terms of payment and associated estimates and assessments

The consideration for operations and maintenance agreements consists of a fixed fee and a minor variable fee, e.g. bonuses or compensation for wind farm availability.

Availability bonuses will be recognised on an ongoing basis when it is highly probable that a subsequent reversal will not take place.

Fixed-price contracts are invoiced on a monthly basis, and consideration is payable when invoiced. Variable fee services are generally due after the services are rendered.

##### Warranty obligations

We typically have a five-year responsibility to remedy defects that exists at the relevant taking-over date when we construct offshore wind farms. These types of warranties are accounted for under IAS 37 'Provisions, Contingent Liabilities and Contingent Assets'. Reference is made to the accounting policy on warranty provisions in note 3.2 'Provisions and contingent assets and liabilities'.

## 2.3 Cost of sales

Cost of sales, DKKm				Other activities/ eliminations	2019 total				Other activities/ eliminations	2018 total
	Offshore	Onshore	Markets & Bioenergy			Offshore	Onshore	Markets & Bioenergy		
Gas	-	-	15,342	-	15,342	-	-	20,399	-	20,399
Power	10,086	-	5,760	(5,828)	10,018	12,096	-	6,296	(5,868)	12,524
Biomass	-	-	2,519	-	2,519	-	-	2,468	-	2,468
Coal	-	-	520	-	520	-	-	941	-	941
Distribution and transmission costs	921	-	3,956	(24)	4,853	871	-	2,710	(13)	3,568
Costs for construction of offshore wind farms and transmission assets	7,957	-	-	-	7,957	12,590	-	-	-	12,590
Other cost of sales	17	6	2,024	(420)	1,627	(6)	-	1,371	163	1,528
<b>Total, IFRS</b>	<b>18,981</b>	<b>6</b>	<b>30,121</b>	<b>(6,272)</b>	<b>42,836</b>	<b>25,551</b>	<b>-</b>	<b>34,185</b>	<b>(5,718)</b>	<b>54,018</b>
Adjustments	-	-	(1,628)	608	(1,020)	-	-	56	(168)	(112)
<b>Total, business performance</b>	<b>18,981</b>	<b>6</b>	<b>28,493</b>	<b>(5,664)</b>	<b>41,816</b>	<b>25,551</b>	<b>-</b>	<b>34,241</b>	<b>(5,886)</b>	<b>53,906</b>

We have changed our reportable segments and have therefore restated comparative figures. See note 2.1 'Segment information'.

Cost of sales according to business performance decreased from DKK 53,906 million in 2018 to DKK 41,816 million in 2019.

The decrease was mainly due to lower gas and power prices. Also, costs from the construction of offshore wind farms and transmission assets were lower, primarily due to high activity in 2018 related to the construction of the Borkum Riffgrund 2 and Walney Extension

offshore wind farms for partners as well as divestment of the Burbo Bank Extension transmission assets and the partial divestment of the Hornsea 1 transmission assets as part of the 50% farm-down of Hornsea 1.

In 2019, costs from construction of offshore wind farms and transmission assets primarily related to Hornsea 1 and Race Bank.

Hornsea 1, Yorkshire coast, UK.

## 2.4 Government grants

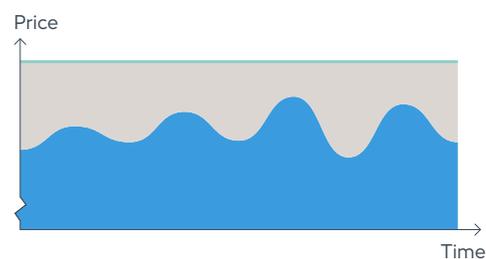

Energinet, the transmission system operator in Denmark, administers subsidies for environmentally sustainable power generation, including biomass and offshore wind farms. We regard the grant for environmentally sustainable power generation as a government grant, as it is paid by the Danish state.

In the UK, we receive subsidies under the schemes: contracts for difference (CfD) and the Renewable Obligations scheme (ROCs) for renewable energy projects. The Burbo Bank Extension, Walney Extension and Hornsea 1 offshore wind farms are under the CfD regime, while our other UK offshore wind farms are under the ROC regime. We treat the payments from the ROC and CfD scheme as government grants.

Feed-in tariffs in Germany under the German Renewable Energy Sources Act (EEG2014) are also recognised as government grants.

### Illustrative example of CfD

- Market price of power
- Government grants (difference between the market price of power and the power price fixed in the CfD contracts)
- Power price fixed in the CfD contract

When participating in a CfD, we receive a feed-in premium in connection with the generation of power from an offshore wind turbine. The feed-in premium is the difference between the market price of power and the price fixed in the CfD (strike price).

### Accounting policies

Government grants comprise grants for environmentally sustainable power generation, grants for the funding of development projects as well as investment grants, etc.

Government grants are recognised when there is reasonable assurance that the grants will be received.

Grants for the purchase of assets which we recognise in the balance sheet are recognised under deferred revenue and are transferred to other operating income in step with the depreciation of the assets to which the grants relate.

As grants for power generation are intended as a compensation for the price of power, we systematically recognise the grants under revenue in step with the power generation and thus the related revenue.

Government grants, DKKm	2019	2018
Government grants recognised in profit (loss) for the year under revenue	10,468	8,461
Government grants recognised in profit (loss) for the year under other operating income	4	4
Government grants recognised in the balance sheet	(4)	(4)
<b>Government grants recognised for the year</b>	<b>10,468</b>	<b>8,461</b>

## 2.5 Other operating income and expenses

Other operating income, DKKm	2019	2018
Gain on divestment of assets	-	15,086
Other compensation	478	594
US tax credits and tax equity income	629	85
Miscellaneous operating income	674	510
<b>Total other operating income</b>	<b>1,781</b>	<b>16,275</b>

Other operating expenses, DKKm	2019	2018
Loss on divestment of assets	101	91
Miscellaneous operating expenses	159	198
<b>Total other operating expenses</b>	<b>260</b>	<b>289</b>

### Other operating income

In 2019, other operating income was DKK 1,781 million, which was 89% lower than in 2018. In 2019, we had no gains on divestment of assets, whereas we had gains related to the divestment of 50% of the Hornsea 1 offshore wind farm in 2018.

US tax credits and tax equity income originate from our acquisition of Lincoln Clean Energy in October 2018 and correspond to the tax credits and other tax attributes provided to tax equity partners as well as our own share. The increase was mainly due to a full year of operation in 2019, whereas we only had three months of operation in 2018.

Burbo Bank Extension,  
Bay of Liverpool, UK.

### Accounting policies

In connection with the divestment of ownership interests in offshore wind farms before or during the construction phase, the gain is recognised on the divestment date under other operating income/ expenses in the income statement.

The gain for the future construction of the partner's share of the offshore wind farm is recognised over time in the income statement in step with the construction. See notes 2.2 'Revenue' and 4.2 'Contract assets and liabilities'.

The accounting policies for US tax credits and tax equity income is described in note 4.5 'Tax equity liabilities'.

### Divestment of ownership interests in our offshore wind farms

When we divest an ownership interest in an offshore wind farm to a partner, we typically also enter into agreements on the future construction and operation of the offshore wind farm.

Contracts in connection with a divestment are typically:

- Agreements on the sale of shares (divestment of assets) (SPA).
- Agreements on the future construction of the offshore wind farm (construction agreements).
- Agreements on the future operation of the offshore wind farm (O&M agreements).

### Key accounting judgements

#### Assessment of classification of divestment

When we divest ownership interests in an offshore wind farm under development, we carry out an individual assessment determining whether the divestment qualifies as a divestment of an enterprise or a divestment of assets. We have typically assessed that the offshore wind farms do not constitute an enterprise, as no employees are transferred, and processes are transferred to a limited extent only.

### Key accounting estimates

#### Assumptions about the accounting treatment of divestment gains related to share purchase agreements and construction agreements

Our accounting recognition of the gains related to the divestment contracts is based on the individual accounting transaction prices of the relevant contracts.

Therefore, our accounting treatment of the gains related to the contracts is not necessarily identical with the prices negotiated in the individual contracts.

## 2.6 Employee costs

Employee costs, DKKm	2019	2018
Wages, salaries and remuneration	4,376	3,768
Share-based payment	57	24
Pensions	362	317
Other social security costs	146	124
Other employee costs	103	24
<b>Employee costs before transfer to assets</b>	<b>5,044</b>	<b>4,257</b>
Transfer to assets	(1,092)	(1,131)
<b>Total employee costs</b>	<b>3,952</b>	<b>3,126</b>

### Employee costs

Employee costs before transfer to assets were 18% higher in 2019 compared to 2018, mainly reflecting a higher average number of employees. Employee costs transferred to assets relate to investment projects, which are capitalised in the balance sheet.

### Pension plans and number of employees

Pension plans are defined-contribution plans that do not commit Ørsted beyond the amounts contributed.

In 2019, our average number of employees was 6,329 (2018: 5,796).

### Remuneration of Group Executive Management

The remuneration of the Executive Board is based on a fixed salary, including personal benefits, such as a company car, free telephone, etc., a variable salary, a retention bonus in connection with the IPO (ceased in 2018), and share-based payment. The other members of Group Executive Management<sup>1</sup> also receive a pension.

The members of the Board of Directors are paid fixed remuneration only for their work in Ørsted. In addition, Ørsted reimburses any travel expenses.

Salaries and remuneration for Group Executive Management and the Board of Directors, DKK '000	Executive Board		Other members of Group Executive Management <sup>1</sup>		Board of Directors		Total	
	2019	2018	2019	2018	2019	2018	2019	2018

Cash-based incentive scheme	4,561	4,630	5,419	5,329	-	-	9,980	9,959
Retention bonus, etc.	-	1,875	180	2,860	-	-	180	4,735
Share-based payment	4,046	3,537	2,626	3,142	-	-	6,672	6,679
Pension, incl. social security and benefits	564	555	5,333	5,060	-	-	5,897	5,615
Retention-dependent purchase price related to the acquisition of Lincoln Clean Energy	-	-	840	-	-	-	840	-
Salary in notice period	-	-	11,560 <sup>2</sup>	-	-	-	11,560	-
Termination payment	-	-	4,489 <sup>2</sup>	-	-	-	4,489	-
<b>Total</b>	<b>25,981</b>	<b>26,997</b>	<b>51,380</b>	<b>36,002</b>	<b>4,779</b>	<b>5,133</b>	<b>82,140</b>	<b>68,132</b>

<sup>1</sup> Other members of Group Executive Management in 2019 are: Morten Hultberg Buchgreitz, Thomas Dalsgaard (resigned 1 July 2019), Henriette Fenger Ellekrog (joined 1 June 2019), Declan Flanagan (joined 1 December 2019), Anders Lindberg, Martin Neubert and Ole Kjems Sørensen (resigned 1 December 2019).

<sup>2</sup> Relates to Thomas Dalsgaard and Ole Kjems Sørensen

## 2.7 Share-based payment

### Required number of locked-up shares relative to fixed salary

CEO	75% of fixed salary
CFO and other members of Group Executive Management	50% of fixed salary
Senior vice presidents	25% of fixed salary
Vice presidents and senior directors	15% of fixed salary

The figure shows the value of Ørsted shares in percent of the participants' fixed salary which, at the time of granting, must be locked up for the duration of the executive share programme.

Fair value of PSUs and key assumptions for valuation in executive share programme	Time of granting 2019	Time of granting 2018	Time of granting 2017
Fair value of 1 PSU	598	461	320
Key assumptions:			
Share price	504	392	269
Average volatility, peers	22.3%	24.5%	24.9%
Volatility, Ørsted	20.9%	19.7%	20.3%
Risk-free interest rate	-0.4%	-0.3%	-0.3%
Expected term at time of granting	3 years	3 years	3 years

### Executive share programme

Group Executive Management and a number of other senior executives participate in the share programme (99 in total). As a condition for the granting of performance share units (PSUs), the participant must own a number of shares in Ørsted corresponding to a portion of the individual participant's annual fixed salary. The portion depends on the employee category and, for our CEO, makes up 75% of the fixed salary; see the figure above for more information. The participants in the programme must invest in Ørsted shares prior to the first granting.

If the participants fulfil the shareholding requirement at the time of granting, they will be granted a number of PSUs each year, representing a value of 15%-20% of the annual fixed salary on the date of granting.

The granted PSUs have a vesting period of approximately three years, after which each PSU entitles the holder, without payment, to receive a number of shares corresponding to 0-200% of the number of PSUs granted. Assuming no share price development since the grant, this would correspond to 0-30%

or 0-40% of the fixed salary on the date of grant. The final number of shares for each participant will be determined on the basis of the total shareholder return delivered by Ørsted, benchmarked against ten comparable European energy companies.

The highest rate (200%) will be triggered if Ørsted's results, measured as the total return to shareholders, outperform those of the comparable companies. For each lower ranking, the number of shares granted will fall by 20 percentage points. If, for example, Ørsted ranks third, the participants will be entitled to 160% of the target.

If Ørsted ranks 11 in the comparison, no shares will be granted to the participants. The right to shares is conditional upon continued employment.

### Retention share programme

In 2018, we introduced a share-based retention agreements as a replacement for cash-based settlement by using restricted share units (RSUs) when granting new retention agreements.

The target group for the share-based retention agreements will typically be employees responsible for vital, long-term projects. The use of these share-based retention agreements will be limited to 25 concurrent agreements with an individual time frame of up to five years. Members of the Executive Board (CEO and CFO) cannot be granted such retention agreements.

The number of RSUs to be granted will be determined on the basis of the price of Ørsted's shares at the time of the grant and will be limited to an amount corresponding to a maximum of six months' base pay for the employee in question. At vesting, each RSU will entitle the employee to one Ørsted share free of charge. However, the total value of the shares to be received at vesting will be capped at a maximum of twelve months' base pay for the employee in question.

### Accounting policies

The share programme is classified as an equity-based programme as the programme is settled in shares. The market value of the PSUs/RSUs and the estimated number of PSUs granted are measured at the time of granting and recognised:

- in the income statement under employee costs over the vesting period
- as an offset in the balance sheet under equity over the vesting period.

The valuation of the PSUs/RSUs and the estimate of the number of PSUs/RSUs expected to be granted are carried out as a probability simulation based on Ørsted's expected total shareholder return relative to ten comparable European energy companies. The expectations are factored into the market value and are not adjusted subsequently. The participants are compensated for any dividend payments by receiving additional PSUs/RSUs.

## Maximum number of outstanding shares at the time of granting, '000

Time of granting	Executive Board	Other members of Group Executive Management	Senior executives	Other employees	Total	% of share capital	Market value (at time of granting) DKK million	Years until expiry
1 April 2017	24	16	129		169	0.04%	27	0.3
1 April 2018	19	17	81		117	0.03%	27	1.3
1 April 2019	14	16	71		101	0.02%	30	2.3
Share retention programme	-	-	-	21	21	0.00%	5	-
<b>Maximum number of outstanding shares at 31 December 2019</b>	<b>57</b>	<b>49</b>	<b>281</b>	<b>21</b>	<b>408</b>	<b>0.09%</b>	<b>89</b>	

Development in maximum number of outstanding shares, '000	Executive Board	Other members of Group Executive Management	Senior executives	Other employees	2019	2018	2019 in % of share capital
Maximum number of outstanding shares at 1 January	64	57	327	18	466	327	0.11%
Compensation for dividends paid (2017 and 2018 programme)	1	1	7	0	9	7	0.00%
Exercised (2016 programme)	(22)	(15) <sup>1</sup>	(115)	-	(152)	-	(0.04)%
Granted (2019 programme)	14	16	75	-	105	-	0.03%
Granted (2018 programme)	-	-	-	-	-	124	-
Cancelled (2019 programme)	-	(4)	-	-	(4)	-	0.00%
Cancelled (2018 programme)	-	(4)	(7)	-	(11)	(6)	0.00%
Cancelled (2017 programme)	-	(2)	(6)	-	(8)	(4)	0.00%
Share retention program	-	-	-	3	3	18	0.00%
<b>Maximum number of outstanding shares at 31 December</b>	<b>57</b>	<b>49</b>	<b>281</b>	<b>21</b>	<b>408</b>	<b>466</b>	<b>0.10%</b>
(DKKm)							
Market value of share programme at the time of granting	12	11	61	5	89	85	
Maximum market value of share programme on 31 December	39	34	193	14	280	203	

The maximum market value of the share programme at 31 December is based on the assumption that the participants receive the maximum number of shares (i.e. 200% of the granted PSUs/RSUs). This requires that Ørsted delivers the highest shareholder return benchmarked against the ten comparable companies.

<sup>1</sup> Of which DKK 2.6 million was paid out in cash.

# 3. Capital employed

98	Capital employed
99	Intangible assets and property, plant and equipment
102	Provisions and contingent assets and liabilities

105	Divestment of enterprises
105	Gross and net investments
106	Assets classified as held for sale
107	Discontinued operations
108	Non-controlling interests

# 3. Capital employed

Our capital employed primarily relates to production assets, including assets under construction. We monitor investment projects closely, as a large part of our value is created in the development and construction phases.

## Investments and divestments in 2019

Our gross investments amounted to DKK 23.3 billion in 2019, of which Offshore accounted for 65%.

Investments were primarily related to:

- offshore wind farms (DKK 15.1 billion), mainly Hornsea 1 and 2 in the UK, Borssele 1 & 2 in the Netherlands and Greater Changhua 1 & 2a in Taiwan
- onshore wind and solar farms (DKK 6.2 billion), including Sage Draw, Plum Creek, Lockett, Willow Creek and Permian Energy Center in the US
- Markets & Bioenergy (DKK 1.9 billion), mainly the biomass conversion of Asnæs Power Station and the replacement of smart meters at our residential power customers in Radius.

Divestments amounted to DKK 3.3 billion and were primarily related to the receipt of deferred proceeds from our farm-down of 50% of Hornsea 1 in 2018 (DKK 1.7 billion) and to the strengthening of our strategic partnership with Eversource as they became a 50% partner in our activities in the New England area in the US in February (DKK 1.4 billion).

The adaption of IFRS 16 'Leases' increased our capital employed at 1 January 2019 through the addition of lease assets (property, plant and equipment) of DKK 5,065 million.

The most significant assets under construction at the end of 2019, were the offshore wind farms Hornsea 2, Borssele 1 & 2 and Greater Changhua 1 & 2a and the onshore wind and solar farms Sage Draw, Plum Creek and Permian Energy Center.

## Capital employed by segment, % 2019

Production assets by segment, % 2018

Property, plant and equipment under construction by segment, % 2018

### CGUs in Offshore

The cash generating units (CGUs) are made up of individual offshore wind farms, each of which generates cash flows for the segment independently of each other.

Significant CGUs:

Anholt, Borkum Riffgrund 1, Borkum Riffgrund 2, Borssele 1 & 2, Burbo Bank Extension, Gode Wind 1, Gode Wind 2, Greater Changhua 1 & 2a, Horns Rev 2, Hornsea 1, London Array, Race Bank, Revolution Wind, Skip Jack, South Fork, Westermost Rough, Walney, Walney Extension, and West of Duddon Sands.

### CGUs in Onshore

The CGUs are made up of individual onshore wind farms, each of which generates cash flows for the segment independently of each other.

Significant CGUs:

Amazon, Lockett, Tahoka, Willow Springs, Sage Draw, Plum Creek, and Permian Energy Center.

### CGUs in Markets & Bioenergy

The Danish power stations constitute a single CGU, as overall production planning is for the entire Danish portfolio of CHP plants. The not-yet-commissioned waste-to-energy plant Renescience in Northwich in the UK is deemed to constitute an independent CGU.

The distribution assets, each of which generates cash flows for the segment independently of each other, also constitute CGUs.

Significant CGUs:

Central CHP plants (including goodwill), Renescience Northwich, power distribution business, the offshore gas pipelines and the city light business.

## Impairment losses

### Impairment losses relating to goodwill

We have not impaired goodwill or other intangible assets in 2019.

### Impairment losses relating to property, plant and equipment

In 2019, property, plant and equipment under construction related to the Renescience facility was impaired by DKK 500 million. Renescience is part of our Markets & Bioenergy segment.

The impairment losses related to Renescience are primarily due to delays in commissioning, increases in capex, as we are optimising the waste conversion technology, and changes in cost and price estimates.

The recoverable amount of Renescience is measured on the basis of its value in use and based on internal budgets and forecasts. Significant assumptions in the forecasts include the facility capacity, the waste conversion ratios, and potential revenue streams from increased recycling. The estimated cash flows are discounted with a pre-tax rate of 7.5%.

In 2019, production assets related to the battery storage project, Carnegie Road, were fully impaired by DKK 68 million. Carnegie Road is part of our Onshore segment. The recoverable amount is measured on the basis of its value in use. The impairment losses related to Carnegie Road were primarily due to a decrease in prices of the firm frequency response market in the UK.

In connection with the reclassification of our power distribution business to assets classified as held for sale, we reversed an impairment loss from previous years of DKK 603 million during

2018. This reversal occurred, as we expected to recover a higher amount than the carrying amounts of the assets after reversal of the impairment loss in previous years.

### Useful lives

Buildings	20-50 years
Offshore wind farms	20-30 years
Onshore wind farms	24-30 years
Production assets, power (thermal) and district heating	20-25 years
Gas transportation system (marine pipelines)	20-40 years
Distribution grids, power	20-40 years
Fixtures and fittings, tools and equipment	3-10 years

### Key accounting estimates

#### Key assumptions for value in use

CGUs are tested for impairment if there is any indication of impairment. In performing an impairment test, we assess whether the CGU to which the net book value relates exceeds the recoverable amount. When performing value in use tests, we see if the CGU will be able to generate positive net cash flows sufficient to support the net book values.

Value in use calculations are based on expected future cash flows from financial budgets and forecasts and include a number of assumptions and estimates. These assumptions include future market conditions, market prices of power and biofuel, estimated discount rates, estimated useful lives of the projects, etc. The market prices applied are based on available forward prices for a period of up to five years and our best estimate of long-term prices for the remainder of the period.

When calculating the recoverable amount of property, plant and equipment under construction, other material assumptions include the expected completion costs and the commissioning dates.

## Accounting policies

### Intangible assets

Rights are measured at cost less accumulated amortisation and impairment losses. Rights are amortised on a straight-line basis over their estimated future useful lives, which are 5-20 years.

### Property, plant and equipment

Property, plant and equipment which is not a lease is measured at cost less accumulated depreciation and impairment losses. Cost of property, plant and equipment is depreciated by using the straight-line method, the diminishing-balance method or the reducing-fraction method. The diminishing-balance method and the reducing-fraction method result in decreasing depreciation over the useful life. These methods are used for some of the offshore wind farms.

Cost comprises purchase price and any costs directly attributable to the acquisition until the date the asset is available for use. The cost of self-constructed assets comprises direct and indirect costs of materials, components, sub-suppliers and labour. Borrowing costs relating to both specific and general borrowing directly attributable to assets under construction with a lengthy construction period are recognised in cost during the construction period. Cost is increased by the present value of the estimated obligations for demolition and decommissioning of assets to the extent that the obligations are recognised as a provision.

Subsequent costs, for example in connection with replacement of parts of an item of property, plant and equipment, are recognised in the carrying amount of the asset in question when it is probable that future economic benefits will flow to the Group from the expenses incurred. Other repair and maintenance expenses are recognised in profit (loss) for the year as incurred.

In 2019, we implemented IFRS 16, which resulted in the recognition of lease assets of DKK 5,066 million as of the implementation date (1 January 2019). Please see notes 1 and 8 for further information on the implementation of IFRS 16.

## 3.2 Provisions and contingent assets and liabilities

### Decommissioning obligations

Decommissioning obligations mainly comprise estimated expenses relating to decommissioning and disposal of our offshore and onshore wind farms, restoration of seabeds and the decommissioning of our CHP plants.

As developers of offshore and onshore wind farms, we are obliged to decommission our wind farms and restore the surroundings at our own expense. When we construct offshore wind farms in cooperation with partners, they are liable for their share of the decommissioning costs. Therefore, we have included only the decommissioning obligations associated with our ownership interest in the offshore wind farms.

Decommissioning obligations increased by DKK 686 million from 2018 to 2019, primarily due to the construction of new wind farms.

### Onerous contracts

The provision for onerous contracts related to the LNG terminal capacity increased by DKK 1,165 million following our agreement to divest the activities, and has subsequently been transferred to assets and liabilities held for sale.

Onerous contracts hereafter comprise:

- two contracts for gas storage capacity in Germany amounting to DKK 814 million (2018: DKK 949 million)
- a contract for gas storage capacity in Denmark amounting to DKK 164 million (2018: DKK 229 million).

After 5 years	5,945	257	833	7,035	5,279	1,180	647	7,106

### Other provisions

Provisions made during the year primarily relate to partly divested offshore wind farms. Provisions reversed primarily relate to the Elsam competition case (DKK 564 million).

Other provisions comprise primarily:

- offshore partnership provisions, including warranty obligations and wake effect compensations
- obligations in relation to the divestment of our Oil & Gas business in 2017

- obligations in respect of our own carbon emissions
- other contractual obligations.

## Contingent liabilities

### Liability to pay compensation

In case of any environmental accidents or other types of damage caused by our oil and gas transport, the companies Ørsted Salg & Service A/S and Danish Oil Pipe A/S are liable to pay compensation according to legislation. This also applies if there is no proof of negligence (strict liability). We have taken out insurance to cover any such claims.

### Secondary liability

As part of the divestment of our Oil & Gas business, we assumed a secondary liability regarding the decommissioning of offshore installations.

### Litigation

We are party to a number of court cases and legal disputes. In our assessment, none of these will significantly impact Ørsted's financial position, neither individually nor collectively.

We have been party to actions relating to the Danish competition authorities' claim that the former Elsam A/S and Elsam Kraft A/S ('Elsam'), now part of Ørsted, charged excessive prices in the Danish wholesale power market in the period 1 July 2003 to 31 December 2006.

In May 2018, the High Court of Western Denmark found that it had not been proved that Elsam charged excessive prices in the period from 1 January 2005 to 30 June 2006. The ruling led to a subsequent settlement with the competition authorities with the same conclusion for another part of the period. From this time, there are no outstanding cases with the competition authorities claiming Elsam infringed competition law.

In connection with the cases against the competition authorities, some energy trading companies, some of their customers and others have filed claims for damages. The biggest

claim was filed in 2007 before the Copenhagen Maritime & Commercial Court, amounting to approx DKK 4.4 billion with addition of litigation interest. Despite the outcome of the actions with the competition authorities, the plaintiffs continue to pursue their claim.

In 2010, Ørsted made a provision of DKK 298 million plus litigation interest. As the competition authorities' claims against Elsam have been dismissed, we reversed the provision in 2019.

### Change of control

Some of our activities are subject to consents, permits and licences granted by public authorities. We may be faced with a claim for acceptance of any transfer, possibly with additional terms and conditions, if the Danish State holds less than 50% of the share capital or voting rights in Ørsted A/S. Read more in note 6.1 'Interest-bearing debt'.

## Key accounting estimates

### Assumptions for provisions

We continually assess our provisions recognised to cover contractual obligations and claims raised against Ørsted. Timing, probabilities, amounts, etc., which have a bearing on our provisions' estimates are updated quarterly based on our expectations.

Estimates of provisions are based on our expectations of, for example:

- timing and scope of obligation
- future cost level
- legal assessment.

The outcome of our contractual obligations and claims may depend on future events which, by nature, are uncertain.

### Accounting policies

Provisions are recognised when the following criteria are fulfilled:

- We have a legal or constructive obligation as a result of an earlier event.
- The settlement of the obligation is expected to result in an outflow of resources.
- The obligation can be measured reliably.

Decommissioning obligations are measured at the present value of the future liability in respect of decommissioning as expected at the balance sheet date. The present value of the provision and changes in estimate are recognised as part of the cost of property, plant and equipment and depreciated together with the associated asset. The addition of interest on provisions is recognised in the income statement under financial expenses.

For onerous contracts, a provision is made when the expected income to be derived from a contract is lower than the unavoidable cost of meeting our obligations under the contract.

Provisions concerning carbon emissions are recognised when our actual emissions exceed our holding of carbon emission allowances.

Decommissioning obligations by segment DKKm				Total
	Offshore	Onshore	Markets & Bioenergy	
0-5 years	204	-	9	213
5-10 years	490	-	95	585

<b>2019</b>	<b>4,562</b>	<b>306</b>	<b>1,290</b>	<b>6,158</b>
<b>2018</b>	<b>4,010</b>	<b>217</b>	<b>1,245</b>	<b>5,472</b>

## 3.3 Acquisition of enterprises

In 2019, we have paid contingent considerations of DKK 616 million in total, related to the acquisition of Deepwater Wind in 2018. The contingent payments were depending upon the regulator's approval of two power purchase agreements for our Revolution Wind project (Offshore). The contingent considerations were fully covered by provisions and therefore, profit (loss) for the year was not affected.

In 2019, we also paid DKK 148 million for the acquisition of Coronal Energy's development business (Onshore) and recognised a contingent payment of DKK 50 million.

On 1 October 2018, we acquired all of the membership interests in Lincoln Clean Energy LLC, effectively gaining control of the company. The acquisition represented the first step into our new business unit, Onshore.

On 8 November 2018, we acquired all of the membership interests in Deepwater Wind LLC, effectively gaining control of the company, which was incorporated into our Offshore business unit.

The opening balances for Lincoln Clean Energy and Deepwater Wind have been finalised in 2019 without any adjustments to the provisional opening balances.

### Key accounting estimates

**Purchase price allocations in business combinations**  
By nature, the application of the acquisition method for business combinations involves judgement in assessing the fair value of identifiable assets and liabilities.

### Property, plant and equipment

Our assessment of fair value is based on a number of estimates regarding WACC and expected cash flows which both have a large impact on the fair value.

### Derivatives

Our assessment of fair value is dependent on expected future prices. See note 7.7 'Fair value measurement' for our valuation principles.

### Deferred tax

Our expectation of the timing of repayment of tax equity liabilities, and thereby the expected 'flip' of the tax equity structure, impacts the fair value of deferred tax on the assets and liabilities that are part of wind farms with tax equity partners. The expected tax rate also significantly impacts deferred tax.

### Accounting policies

Acquisition of enterprises are recognised using the acquisition method, whereby assets and liabilities as well as contingent liabilities of the acquired enterprise are measured at fair value on the date of acquisition.

The fair value of production assets and assets under construction are normally determined using an income approach where they are valued at present value based on the expected cash flows they can generate, including any non-separable power purchase agreements, as well as income, such as production tax credits.

The fair value of derivatives is determined using our normal approach for such items, based on market prices or expectations for prices over the term of the derivatives, as described in note 7.7 'Fair value measurement'.

The fair values of other assets and liabilities are valued using the approach we find most relevant for the individual item, which can be either a market approach, an income approach or a cost approach.

An acquired enterprise is included in the consolidated financial statements from the date of acquisition, which is the date when we obtain control of the acquired enterprise.

When an acquired enterprise has entered into a power purchase agreement classified as a derivative, the fair value of the agreement will be included in the opening balance. Post-acquisition, this fair value is recognised as an adjustment to revenue over the duration of the contract, based on the fair value calculation at the time of the acquisition.

## 3.4 Divestment of enterprises

Selling price, DKKm	2019	2018
Payment	-	497
Working capital adjustment	-	(68)
<b>Selling price on divestment of enterprises</b>	<b>-</b>	<b>429</b>
Transaction costs	(63)	(66)
Of which, selling price receivable	-	-
<b>Cash selling price on divestment of enterprises</b>	<b>(63)</b>	<b>363</b>
Payments related to provisions of divestments in previous years	(26)	-
<b>Total cash flows from divestment of enterprises</b>	<b>(89)</b>	<b>363</b>

Gain (loss) on divestment of enterprises, DKKm	2019	2018
Selling price on divestment of enterprises	-	429
Net assets sold	-	(240)
Provisions as a result of the transaction	-	4
Transaction costs	(63)	(66)
<b>Gain (loss) on divestment of enterprises</b>	<b>(63)</b>	<b>127</b>

We have not divested any enterprises in 2019.

Cash flows related to divestment of enterprises totalled DKK -89 million in 2019 (2018: DKK 363 million) and consisted of transaction costs and payments on a provision of a divestment in a previous year.

In 2018, divestment of enterprises related to the sale of our 50% ownership interest in Enecogen (Markets & Bioenergy). Transferred cash and cash equivalents totalled DKK 6 million.

### Accounting policies

We recognise income from divested enterprises in the income statement up until the date of divestment.

The date of divestment is the date on which we relinquish control of the divested enterprise.

Gains or losses on the divestment or discontinuation of subsidiaries and associates are determined as the difference between the selling price and the carrying amount of the net assets divested.

Moreover, we deduct the fees of advisers, etc., in connection with the divestment or discontinuation of the enterprise.

## 3.5 Gross and net investments

Gross and net investments, DKKm	2019	2018
Cash flows from investing activities	(10,997)	(1,026)
Dividends received and capital reductions reversed	(21)	(25)
Purchase and sale of securities, reversed	(8,949)	595
Loans to associates and joint ventures, reversed	(3)	12
Sale of non-current assets, reversed	(3,335)	(20,002)
Interest-bearing debt in acquired enterprises	-	(4,409)
Restricted cash in acquired enterprises	-	374
<b>Total gross investments</b>	<b>(23,305)</b>	<b>(24,481)</b>
Transactions with non-controlling interests in connection with divestments	(6)	(52)
Sale of non-current assets	3,335	20,002
<b>Total cash flows from divestments</b>	<b>3,329</b>	<b>19,950</b>
<b>Total net investments</b>	<b>(19,976)</b>	<b>(4,531)</b>

Gross investments totalled DKK 23,305 million in 2019, which was 5% lower than in 2018.

Gross investments in Offshore was DKK 15,121 million and was primarily related to the construction of Hornsea 1 and 2 in the UK, Borssele 1 & 2 in the Netherlands and Greater Changhua 1 & 2a in Taiwan.

In Onshore, gross investments was DKK 6,158 million and was primarily related to the construction of Sage Draw, Plum Creek, Lockett, Willow Creek and Permian Energy Center in the US.

In 2018, gross investments of DKK 15,081 million in Offshore related to the construction of Hornsea 1, Walney Extension, Borkum Riffgrund 2, Borssele 1 & 2, early investments

in the US to qualify for future tax credits as well as the acquisition of Deepwater Wind in the US. Gross investments of DKK 6,779 million in Onshore related to the acquisition of Lincoln Clean Energy in US and the construction of the Tahoka and Lockett wind farms.

Divestments totalled DKK 3,329 in 2019 and primarily related to the divestment of 50% of certain Deepwater Wind assets and the receipt of deferred proceeds from the 50% farm-down of Hornsea 1 in 2018.

In 2018, divestments related to the 50% farm-down of Hornsea 1 and the receipt of deferred proceeds from the 50% farm-down of Walney Extension in 2017 and proceeds related to the divestment of our 50% ownership share in Enecogen.

## 3.6 Assets classified as held for sale

At 31 December 2019, assets and related liabilities held for sale comprised our Danish power distribution, residential customer and city light businesses, our oil pipe system in Denmark and our LNG business. All activities are part of Markets & Bioenergy.

In September 2019, we signed an agreement to divest our Danish power distribution (Radius), residential customer and city light businesses to SEAS-NVE. We expect that the transaction will close in the first half of 2020. In December 2019, we signed an agreement to divest our LNG business, and we expect that the transaction will close during the summer of 2020.

Due to a new payment agreement with the Hejre partners on the stabilisation plant (part of the oil pipe system), we have impaired property, plant and equipment related to the stabilisation plant and recognised a receivable compensation of approx the same amount. At 31 December 2019, the compensation receivable was DKK 1.9 billion.

Assets classified as held for sale at 31 December 2018 comprised the same activities as per 31 December 2019, except for the LNG business.

### Assets classified as held for sale, DKKm

	2019	2018
Intangible assets	226	80
Property, plant and equipment	13,243	13,951
Deferred tax	589	-
Inventories	43	16
Trade receivables	736	701
Other receivables	2,113	430
Income tax	2	45
<b>Total assets classified as held for sale</b>	<b>16,952</b>	<b>15,223</b>
Deferred tax	1,315	823
Provisions	2,662	372
Contract liabilities	3,107	2,737
Trade payables	333	92
Other payables	970	826
Income tax	445	1
<b>Total liabilities relating to assets classified as held for sale</b>	<b>8,832</b>	<b>4,851</b>
<b>Net assets classified as held for sale</b>	<b>8,120</b>	<b>10,372</b>

The table shows assets and liabilities which have been put up for sale, and which are therefore not expected to contribute to our future earnings.

### Accounting policies

Assets classified as held for sale comprise assets and liabilities, the values of which are highly probable to be recovered through a sale within 12 months rather than through continued use.

Assets and liabilities classified as held for sale are measured at the carrying amount at the time of classification as 'held for sale' or at market value less selling costs, whichever is lower. The carrying amount is measured in accordance with the Group's accounting policies.

No depreciation or amortisation is effected on intangible assets and property, plant and equipment from the time of classification as 'held for sale'.

East Coast Hub,  
Grimsby, UK.

## 3.7 Discontinued operations

Discontinued operations comprise assets and liabilities related to our divested Oil & Gas business, which was sold to INEOS on 29 September 2017.

### Financial results

Profit (loss) in 2019 amounted to DKK -56 million (2018: DKK 10 million) and primarily concerned adjustments related to currency and the fair value of a receivable.

Total cash flows in 2019 amounted to DKK 174 million (2018: DKK 209 million), of which DKK -211 million was from operating activities and primarily concerned payments related to the Fredericia stabilisation plant and payment of fees for existing Oil & Gas insurance activities. The insurance fee was provided for at the time of the divestment in 2017. Cash flows from investing activities amounted to DKK 385 million and primarily concerned the receipt of a selling price receivable. The receivable was interest-bearing and therefore had no impact on our interest-bearing net debt.

### Capital employed

Our capital employed in discontinued operations at 31 December 2019 mainly consisted of provisions relating to the divestment of the Oil & Gas business (tax indemnifications and payments related to the Fredericia stabilisation plant) as well as a receivable selling price which does not carry interest. We expect to receive the outstanding selling price in 2020 and therefore, it was reclassified from non-current to current receivables at 31 December 2019.

In addition, we have an interest-bearing receivable of DKK 333 million (not part of capital employed), which we also expect to receive in 2020.

The remaining net assets under discontinued operations consist of the selling price receivable and provisions as a result of the divestment of Oil & Gas.

<b>Profit from discontinued operations, DKKm</b>	2019	2018

Subsidiaries with significant non-controlling interests	Non-controlling interest	Registered office
Gunfleet Sands Holding Ltd.	49.9%	London, UK
Walney (UK) Offshore Windfarms Ltd.	49.9%	London, UK

In the table, we provide financial information for subsidiaries with significant non-controlling interests. The amounts stated are the consolidated accounting figures of the individual enterprises/groups, determined according to our accounting policies. Amounts are stated before intra-group eliminations.

### Accounting policies

Transactions with non-controlling interests are accounted for as transactions with the shareholder base.

Gains and losses on the divestment of equity investments to non-controlling interests are recognised in equity when the divestment does not result in a loss of control.

Net assets acquired are not revalued on the acquisition of non-controlling interests. Any difference between the carrying amount and the acquisition or selling price is recognised in equity.

# 4. Working capital

110	Working capital
111	Inventories
111	Contract assets and liabilities
112	Trade receivables
112	Other receivables
113	Tax equity liabilities
114	Other payables
114	Changes in net working capital

## 4. Working capital

**Our key working capital items consist of inventories, net contract assets, trade receivables and payables, tax equity liabilities and other payables.**

Working capital items vary with the seasonal variations in our generation and sales activities during the year.

Our net contract assets relate primarily to prepayments from heat customers in connection with bioconversions and construction of offshore wind farms for partners.

The net contract assets vary within and across years, depending on the portfolio of offshore construction assets, and when we reach certain milestones and trigger payments from our partners.

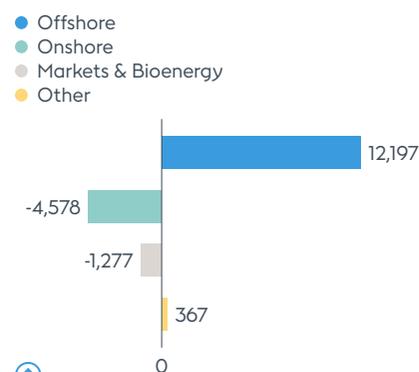

Construction of offshore transmission assets in the UK, which are recognised as inventories, will continue to tie up cash until they are divested.

Tax equity liabilities also vary within and across years. This is due to the fact that we receive cash contributions from tax equity partners at the point in time when a US wind farm enters into operation.

Trade payables relating to capital investments are not included in this section, as they are presented as part of the cash flows from investing activities.

Working capital, DKKm	2019	2018
Inventories	14,031	13,943
Contract assets, net	(3,807)	(3,115)
Trade receivables	8,140	10,741
Other receivables	3,253	2,968
Trade payables, excluding trade payables relating to capital expenditure	(7,529)	(10,099)
Tax equity liabilities	(4,587)	(3,719)
Other payables	(2,793)	(3,295)
<b>Net working capital, excluding trade payables relating to capital expenditure at 31 December</b>	<b>6,709</b>	<b>7,424</b>
Of which, work in progress and related trade payables	8,756	9,654
Of which, tax equity partner liabilities and other working capital	(2,047)	(2,230)

Working capital, DKKm 2019

Offshore primarily has funds tied up in inventories, construction agreements and trade receivables. The most significant working capital item in Onshore consists of liabilities regarding tax equity contributions from our partners. Markets & Bioenergy also has a net negative working capital due to prepayments from heat customers which are only partly countered by inventories and receivables.

Work in progress consists of inventories related to transmission assets, construction agreements and construction management agreements in connection with the construction of transmission assets and offshore wind farms for partners as well as related trade payables.

# 6.7bn

Our net working capital, excluding trade payables relating to capital expenditure, amounted to DKK 6,709 million in 2019 against DKK 7,424 million in 2018.

# -0.7bn

We reduced funds tied up in working capital by DKK 715 million relative to 2018, of which DKK 898 million pertained to work in progress and related trade payables in Offshore.

## 4.1 Inventories

Inventories, DKKm	2019	2018
Offshore transmission assets	10,114	9,885
Biomass	445	253
Gas	1,057	1,620
Coal	242	261
Oil	106	119
Green certificates	1,717	1,555
Carbon emission allowances (purchased)	345	172
Other inventories	5	78
<b>Total inventories</b>	<b>14,031</b>	<b>13,943</b>
Inventories recognised as an expense in 'Cost of sales' during the year	16,871	25,262

Inventories measured at fair value in the table above are disclosed in note 7.7 'Fair value measurement'.

We use biomass, coal, gas and, to a limited extent, oil as fuel at our CHP plants. From 2019, the use of gas is very limited as a result of the biomass conversion of the Skærbæk Power Station in Denmark and the divestment of the Enecogen Power Station in the Netherlands. Green certificates are primarily renewable obligation certificates (ROCs) which are issued to power generators sourcing from renewable energy sources in the UK.

Gas at storage primarily relates to our gas trade activities.

### Accounting policies

Offshore transmission assets are measured at cost. The costs comprises costs of materials used in construction, site labour costs, costs of renting equipment as well as indirect production costs, such as employee costs.

Gas storage in non-Danish facilities are managed on a fair value basis, and therefore the gas in these storage facilities is recognised at fair value less costs to sell. Changes in the fair value less costs to sell are recognised in cost of sales in the period of the change.

Gas in Danish storage facilities are recognised at cost determined as a weighted average of the previous months purchase price, including transportation costs.

Purchased carbon emission allowances are measured at market value.

Green certificates, which we earn by generating power using renewable energy sources, are recognised in inventories in step with our generation. We measure green certificates (earned and bought) at cost using the first in, first out (FIFO) principle.

Other inventories are measured at cost determined on a first in, first out basis or a net realisable value, where this is lower.

Inventories are written down to the lower of net realisable value and cost price. For the offshore transmission assets, it is the expected final transfer value announced by Ofgem.

The net realisable value is the sum (discounted) which the inventories are expected to generate through a normal sale.

## 4.2 Contract assets and liabilities

Revenue from contracts with customers DKKm	2019	2018
Revenue recognised included in contract liabilities at the beginning of the year	771	228
Revenue recognised from performance obligations satisfied in previous years	128	95

Contract balances, DKKm	2019	2018
<b>Contract assets</b>		
Current contract assets	739	1,451
<b>Total contract assets</b>	<b>739</b>	<b>1,451</b>
<b>Contract liabilities</b>		
Non-current contract liabilities	3,762	3,642
Current contract liabilities	784	924
<b>Total contract liabilities</b>	<b>4,546</b>	<b>4,566</b>

Contract asset and contract liabilities are primarily related to:

- the construction of offshore wind farms with partners, with each party usually owning 50% of the offshore wind farm
- prepayments from heat customers.

At the end of 2019, contract assets and liabilities regarding construction agreements relates to our partners' share of the offshore wind farm Hornsea 1 and the Coastal Virginia demonstration project in the US.

At the end of 2018, contract assets and liabilities included the construction of our partners' shares of the Hornsea 1, Walney Extension and Borkum Riffgrund 2 offshore wind farms.

The table shows how much of our revenue that relates to contract liabilities carried forward (as prepayments and deferred revenue), and how much that relates to performance obligations satisfied in a prior year (e.g. re-negotiations or constraints on variable considerations that are not recognised until they are highly probable).

### Accounting policies

We recognise a contract asset when we perform a service or transfer goods in advance of receiving consideration, and the consideration is conditional. When the consideration is unconditional, and the goods or services are delivered, we recognise a receivable. A right to consideration is unconditional if only the passage of time is required before the payment is due. Contract assets are measured at the transaction price of the good or services which we have performed less invoicing on account. We recognise a contract liability when the invoicing on account and expected losses exceed the transaction price of the goods or services transferred to our customer.

## 4.3 Trade receivables

Trade receivables, DKKm	2019	2018
Trade receivables, not due	7,353	10,186
Trade receivables, 1-30 days overdue	445	293
Trade receivables, more than 30 days overdue	416	326
Trade receivables, write-down	(74)	(64)
<b>Total trade receivables</b>	<b>8,140</b>	<b>10,741</b>

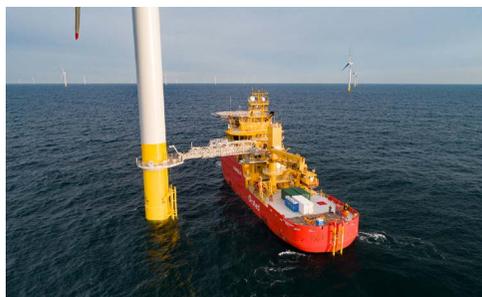

We continuously perform credit ratings of our customers, as described in note 7.5 'Credit risks'. For customers with a general credit risk, a write-down of 0-1% is carried out on initial recognition. In 2019, write-downs of receivables were DKK 33 million (2018: DKK 35 million). Losses for the year totalled DKK 0 million (2018: DKK 36 million).

### Accounting policies

We keep our receivables until maturity, and therefore, they are measured at amortised cost.

Write-downs are carried out from initial recognition of our receivables. The write-down is calculated as the difference between the carrying amount of the receivable and the net present value of expected future cash flows from the receivable. The discount rate used is the effective interest rate for the individual receivable or the individual portfolio.

We apply the simplified approach to the write-down of trade receivables, which permits calculating the write-down as the full loss during the entire term of the receivable.

Walney Extension,  
Irish Sea, UK.

## 4.4 Other receivables

Other receivables, DKKm	2019	2018
Receivables from the divestment of assets and enterprises	1,456	3,218
Receivables from the divestment of equity investments to non-controlling interests	717	634
VAT and other indirect tax receivables	574	427
Collateral provided	1,940	710
Deposits	411	240
Prepayments	556	330
Other accounts receivables	1,312	1,501
<b>Other receivables</b>	<b>6,966</b>	<b>7,060</b>
Of which, working capital	3,253	2,968
Of which, other capital employed	1,216	2,628
Of which, interest-bearing net debt	2,497	1,464

The table shows our other receivables broken down into working capital, interest-bearing net debt and other capital employed.

In 2019, receivables from the divestment of assets and enterprises primarily related to the divestment of our Oil & Gas business.

In 2018, receivables from the divestment of assets and enterprises primarily related to receivables in connection with the divestment of 50% of our ownership interests in the offshore wind farm Hornsea 1 and receivables related to the divestment of our Oil & Gas business.

Receivables from the divestment of equity investments to non-controlling interests

primarily relate to the divestment in 2011 of our ownership interests in Gunfleet Sands.

The collateral provided by the Group is receivables from banks in connection with trading of derivatives.

The short-term portion of other receivables amounted to DKK 5,253 million (2018: DKK 4,390 million).

## 4.5 Tax equity liabilities

Tax equity liabilities, DKKm	2019	2018
Balance at 1 January	4,173	-
Contribution received from tax equity partners	1,306	1,995
Tax equity balances from business acquisitions	-	2,216
Tax attributes and PTCs recognised in other operating income	(622)	(79)
Cash paid to tax equity partners	(73)	(3)
Tax equity partners' contractual return	327	44
Exchange rate adjustments	84	-
<b>Balance at 31 December</b>	<b>5,195</b>	<b>4,173</b>
Of which, working capital	4,587	3,719
Of which, interest-bearing debt	608	454

2018 was the first year we recognised US tax liabilities originating from our acquisitions and entry into the US market.

In the US, we have several wind farms with tax equity partners. During 2019, we commissioned one onshore wind farm, Lockett (184MW), with a tax equity partner.

We have four additional wind farms, three onshore and one offshore, with tax equity partners. These wind farms were commissioned during 2018 or prior to our acquisitions of Lincoln Clean Energy and Deepwater Wind.

### Description of tax equity partnerships

Tax equity partnerships are characterised by a tax equity partner who contributes an upfront payment as part of the initial project investment and does not have an operational role in the project. The partner receives a contractually agreed return on the contribution. In

order to 'repay' the initial contribution and the return, a disproportionate share of the production tax credits (PTCs) and other tax attributes (accelerated tax depreciation and other taxable results) are allocated to the partner during the first part of the project's lifetime. The partner also receives some cash payment-based percentages specified in the partnership agreements. Once the partner receives the agreed return, the agreement 'flips', and the partner is typically entitled to a minor part of the cash distributions from the project, unless we repurchase this right from them, which is highly likely.

### Accounting policies

When a tax equity partnership is formed, we evaluate if the company should still be fully consolidated based on our right to variable returns as well as our ability to exercise influence on financial and operational decisions impacting those returns. Due to the operational and financial nature of the projects, and the influence normally given to tax equity partners in such agreements, we normally have the influence to fully consolidate companies that have tax equity partners.

The terms of the tax equity partner's contribution are evaluated to determine the accounting treatment. The contribution generally has the characteristics of a liability as the initial contribution is repaid, including an agreed return, and the partner does not share in the risks of the project in the same way as a shareholder. As such, the contribution is accounted for as a liability and measured at amortised cost. The liability is based on the expected method of repayment and is divided into:

- a net working-capital element to be repaid through PTCs and other tax attributes
- an interest-bearing debt element expected to be repaid through cash distributions.

The partner's agreed return is expensed as a financial expense and is recognised as an increase of the tax equity liability. PTCs and other tax attributes transferred to the tax equity partner are recognised as other operating income. Tax attributes allocated to the tax equity partner are deferred and recognised on a straight-line basis over the estimated contractual length of the partnership structure, while PTCs are recognised in the periods earned, similar to recognition of our own PTCs.

In addition to the above, we recognise a liability for the expected purchase price for the partner's post-flip rights to cash distributions. This liability is recognised at fair value, and adjustments are expensed as a financial item. This recognition reflects the intention and high likelihood that we will purchase

the partner's post-flip rights, and they are part of the financial costs of the arrangement.

If we choose not to buy the partner's right to post-flip rights, the tax equity partner will be entitled to part of the company's returns in the post-flip period. At that point, the partner will share in the risks and rewards in the company as a shareholder and will be considered a non-controlling interest.

### Key accounting judgements

#### Assessment of recognition of tax equity partner

On formation of a tax equity partnership, we assess the appropriate recognition of the partner's contribution as well as the method of recognition for the elements used to repay the partner, such as PTCs and tax attributes.

In assessing the recognition of the partner's contribution, we look at:

- the expected flows of PTCs, tax attributes and cash payments to the partner
- the rights and obligations of both us and the tax equity partner.

The deferral of the income related to tax attributes and the recognition of the contribution as working capital or interest-bearing debt, are affected by our expectation to the size, method and timing of repayments.

## 4.6 Other payables

Other payables, DKKm	2019	2018
Carbon rights	90	62
VAT and other indirect taxes payable	686	780
Salary-related items payable	793	809
Accrued interest	1,239	687
Virtual gas storage	-	107
Other deferred income	-	84
Collateral received	205	34
Purchase price, acquisition of enterprises	116	653
Other	1,587	1,986
<b>Total other payables</b>	<b>4,716</b>	<b>5,202</b>
Of which, working capital	2,793	3,295
Of which, other capital employed	1,367	1,337
Of which, interest-bearing net debt	556	570

In 2019, the short-term portion of other payables amounted to DKK 4,247 million (2018: DKK 4,793 million).

The table shows our other payables broken down into working capital, interest-bearing net debt and other capital employed.

## 4.7 Changes in net working capital

Change in net working capital, DKKm	2019	2018
Change in inventories	529	243
Change in contract assets and liabilities	612	(1,478)
Change in trade receivables	2,846	(2,261)
Change in other receivables	(250)	(31)
Change in trade payables	(2,371)	1,601
Change in tax equity liabilities	630	1,835
Change in other payables	(427)	(827)
<b>Total change in net working capital</b>	<b>1,569</b>	<b>(918)</b>
Of which, changes relating to work in progress	1,416	(2,326)
Of which, changes relating to tax equity liabilities and other working capital	153	1,408

Work in progress consists of elements in contract assets and liabilities, construction management agreements related to construction of offshore wind farms, construction of offshore transmission assets (inventory) and related trade payables.

The change in funds tied up in work in progress and related trade payables was DKK 1,416 million in 2019 due to high activity related to the construction of offshore wind farms for partners (Hornsea 1) as well as offshore transmission assets in the UK (mainly Hornsea 2), partly offset by the receipt of milestone payments from partners and the divestment of the Race Bank transmission asset.

In 2018, the change in funds tied up in work in progress and related trade payables was DKK -2,326 million due to the construction of offshore wind farms for partners (Walney

Extension and Borkum Riffgrund 2) as well as offshore transmission assets in the UK (Hornsea 1 and Hornsea 2), partly offset by the receipt of milestone payments from partners and the divestment of the Burbo Bank Extension transmission asset.

The change in funds tied up in other working capital was a cash inflow of DKK 153 million in 2019.

# 5. Tax

116	Tax
117	Tax policy and tax regimes
118	Tax on profit (loss) for the year
120	Taxes paid
121	Deferred tax
124	Total tax contribution

# 5. Tax

## Tax on profit (loss) for the year

The effective tax rate was 31% for the continuing operations. The effective tax rate was primarily affected by the sale of assets in certain wind farm projects to a partner in the US as well as recognition of a tax liability in connection with the tax equity partnership related to the Lockett Onshore Wind Farm.

## Corporate income taxes paid

We have paid DKK 4,800 million in taxes in 2019, of which DKK 17 million related to residual tax for 2017, and DKK 81 million related to receivable residual tax regarding 2018. We expect to have a residual tax of DKK 595 million regarding 2019, as we had a higher portion of income related to financial

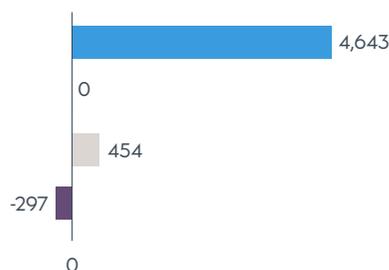

instruments in 2019 than we expected at the time we paid taxes on account.

# 4.8bn

Corporate income tax paid by the Group in 2019 totalled DKK 4,800 million against DKK 3,367 million in 2018.

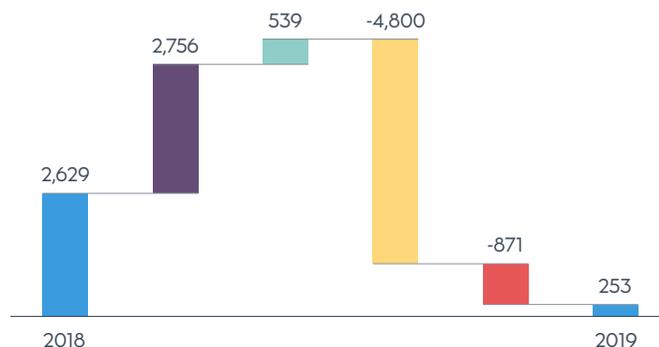

## Corporate income tax paid by segment, 2019, DKKm

- Offshore
- Onshore
- Markets & Bioenergy
- Ørsted A/S and other activities

## Development in current and deferred tax asset and liabilities (tax, net), 2019, DKKm

- Tax, net liability
- Tax on profit (loss) for the year
- Tax on other comprehensive income and hybrid capital
- Corporate taxes paid
- Other effects

2019, DKKm	Business performance		
	Profit (loss) before tax	Tax	Tax in %
Tax equity, deferred tax liability, Lockett	-	(118)	n.a.
Rest of the Group	8,856	(2,638)	30%
<b>Effective tax for the year</b>	<b>8,856</b>	<b>(2,756)</b>	<b>31%</b>

# 5.6bn

Current corporate income tax in 2019 totalled DKK 5,605 million against DKK 3,161 million in 2018.

The tax rate for 'Rest of the Group' is higher than the weighted average tax rate in the countries in which we generate income as a result of adjustments relating to previous years as well as net non-deductible expenses.

# 5.1 Tax policy and tax regimes

## Our tax policy

We recognise the key role that tax plays in society and in the development of the countries where we operate. We also believe that a responsible approach to tax is essential to the long-term sustainability of the societies where we have activities and of our business across the globe.

The world's governments have defined the greatest challenges for our societies towards 2030 through the UN Sustainable Development Goals (SDGs). At Ørsted, we are committed to running our business in a way that contributes to the SDGs. Tax payments contribute both directly and indirectly to most of the SDGs, in particular target #16.6 on the development of effective, accountable and transparent institutions.

Tax is a core part of our corporate responsibility and governance and is overseen by the Board of Directors. The Board of Directors is accountable for the tax policy, and the responsibility for tax risk management lies with the CFO and is overseen by the Audit & Risk Committee.

## Compliance

Our ambition is to apply best practices at all times and act in accordance with applicable legislation on tax computation and tax reporting to ensure that we pay the right amount of tax at the right time in the countries where we operate. We continuously evaluate our

processes and controls to ensure that we are compliant with local and international standards relevant to our business.

## Our attitude to tax planning

We only use business structures that are driven by commercial considerations, aligned with business activity, and which have genuine substance.

We make use of incentives and tax reliefs where they apply in areas where we have commercial substance.

We seek, wherever possible, to develop cooperative relationships with tax authorities, based on mutual respect, transparency and trust.

## Transparency

In line with our belief in transparency, we provide regular information to our stakeholders – including investors, policy makers, employees, civil society and the general public – about our approach to tax and taxes paid.

Read more about our tax policy at <https://orsted.com/taxpolicy>

## Tax regimes

At the end of 2019, our major activities were in Denmark, the UK, Germany, the Netherlands, the US and Taiwan.

## US tax equity partnerships

We have entered into several tax equity partnership agreements in the US. For more information on our tax equity partnership structure, see note 4.5 'Tax equity liabilities'.

The expected value of the deferred tax liability related to property, plant and equipment at the 'flip date' in the tax equity partnership agreement is included in our accounts when the tax equity partnership is established.

## Local taxes paid

Our taxes paid in Denmark for 2019 were affected by the completed construction agreement related to the Hornsea 1 Offshore Wind Farm in the UK.

We have made significant investments in offshore wind farms in the UK, Germany and the Netherlands, resulting in the accumulation of large tax assets in recent years. Accordingly, we have not paid significant taxes in these countries prior to 2019. This is changing, as the offshore wind farms are commissioned and are generating positive tax results, resulting in paid taxes in the UK and in Germany. We expect to start paying corporate tax in the Netherlands in 2021.

We are currently making significant investments in the US, and we do therefore not expect to pay any material corporate income tax in the foreseeable future.

We are also making material investments in Taiwan, and we expect to start paying corporate tax in 2022/2023. We expect to start paying withholding taxes on dividends in Taiwan in 2020.

## Danish CFC taxation

Denmark has proposed to introduce the CFC rules in the EU Anti Tax Avoidance Directive with the most likely entry into force being on 1 July 2020. The overarching purpose of the CFC rules is to prevent companies undermine the domestic tax base by moving mobile income to low tax jurisdictions. In such a case, the CFC rules will ensure that the income will still be subject to domestic taxation.

A foreign subsidiary shall be considered to be a CFC company if 1/3 or more of its income stems from CFC income, which now also includes 'other income from intangible property'. There is very little guidance on what is included in other income from intangible property.

The EU directive contains an exception for companies which have real commercial activity, or which are not situated in a low tax jurisdiction. However, Denmark has chosen not to make use of any of these exceptions. This means that operational foreign subsidiaries which are located in countries with the same or a higher tax rate than Denmark, and which have been established for commercial purposes, can be considered to be CFC companies. We see this as a risk.

## 5.2 Tax on profit (loss) for the year

	2019				2018			
	Business performance		IFRS		Business performance		IFRS	
	DKK million	%	DKK million	%	DKK million	%	DKK million	%
<b>Effective tax rate, DKKm/%</b>								
<b>Tax on profit (loss) for the year can be explained as follows:</b>								
Calculated 22% tax on profit (loss) before tax (2018: 22%)	(1,948)	22	(2,286)	22	(5,172)	22	(4,834)	22
Adjustments of calculated tax in foreign subsidiaries in relation to 22% (2018: 22%)	25	-	18	-	94	-	74	-
<b>Tax effect of:</b>								
Non-taxable income and non-deductible costs, etc., net	(540)	6	(540)	5	1,912	(8)	1,912	(9)
Unrecognised tax assets and capitalisation of tax assets not previously capitalised	(32)	-	(32)	-	(50)	-	(50)	-
Adjustment of tax concerning previous years	(261)	3	(261)	3	(802)	3	(802)	4
<b>Effective tax for the year</b>	<b>(2,756)</b>	<b>31</b>	<b>(3,101)</b>	<b>30</b>	<b>(4,018)</b>	<b>17</b>	<b>(3,700)</b>	<b>17</b>

Non-taxable income and non-deductible expenses primarily concern the tax-exempt loss on a divestment of assets and other US investment matters. See more in note 2.5 'Other operating income and expenses'.

### Income tax

Tax on business performance profit (loss) was DKK 2,756 million in 2019 against DKK 4,018 million in 2018. The effective tax rate was 31% in 2019 against 17% in 2018.

The effective tax rate in 2019 was primarily affected by the sale of assets in certain wind farm projects to a partner in the US as well as recognition of a tax liability in connection with the tax equity partnership related to the Lockett Onshore Wind Farm (see more regarding tax equity partnerships in notes 4.5 'Tax equity liabilities' and 5.4 'Deferred tax'). The deferred tax liability from existing tax equity partnerships will be reduced gradually as the assets are depreciated.

The difference in tax rates from 22% to the statutory tax rates across our jurisdiction had limited impact on the effective tax rate.

The effective tax rate in 2018 was particularly affected by a tax-exempt gain on the 50% farm-down of Hornsea 1. In addition, the effective tax rate was affected by the recognition of a deferred tax liability related to the tax equity partner for Tahoka.

### Accounting policies

Tax for the year consists of current tax, changes in deferred tax and adjustments in respect of previous years. Tax on profit (loss) for the year is recognised in the income statement. Tax relating to other items is recognised in other comprehensive income.

### Key accounting estimate

#### Estimates regarding recognition of income taxes

Ørsted is subject to income taxes in all the countries where we operate. Significant judgement and estimates are required in determining the worldwide income taxes, income tax assets and liabilities and provisions for uncertain tax positions.

In the course of conducting business around the world, tax and transfer pricing disputes with tax authorities may occur due to the complex nature of the tax rules related to the business. Judgement

is applied to assess the possible outcome of such disputes. We apply the methods prescribed in IFRIC 23 'Uncertainty over Income Tax Treatments' when making provisions for uncertain tax positions, and we consider the provisions made to be adequate. However, the actual obligation may deviate and might lead to additional tax in excess of provisions included as uncertain tax provisions depending on the result of litigations and settlements with the relevant tax authorities.

Ongoing tax disputes, primarily related to transfer pricing cases, are included as part of 'Tax payables', 'Tax receivables' and 'Deferred tax'.

### Tax on profit (loss) for the year and other comprehensive income

In 2019, tax on IFRS profit (loss) for the year amounted to DKK 3,101 million, consisting of current tax expenses of DKK 5,605 million, changes in deferred tax of DKK 2,765 million, and tax expenses concerning previous years of DKK 261 million. The adjustment primarily relates to updates of asset values in the UK and Germany.

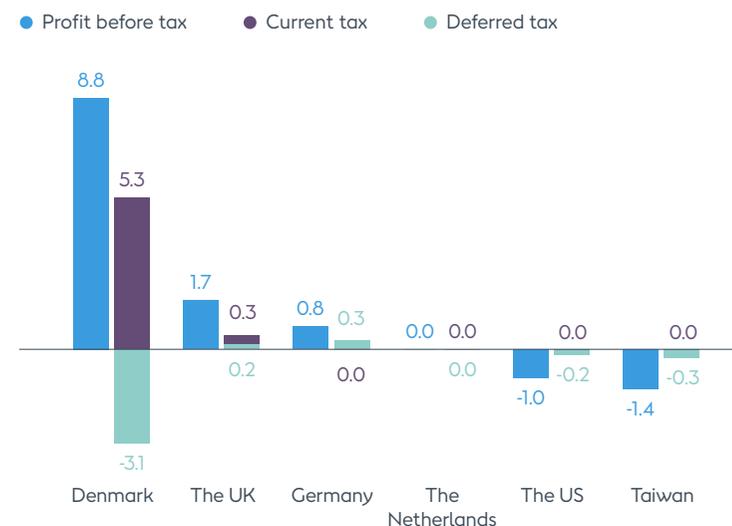

Because of the high level of investments and the subsequent deferrals of payable tax as a consequence of tax depreciation, our current tax is generally lower than the statutory corporate tax rates during construction and the initial years after first power. In 2019, however, the current tax included DKK 4,230 million which relate to accumulated income from the construction agreement regarding Hornsea 1.

### Current tax

Current tax is the payable tax expense incurred in Ørsted on profit for the year. This deviates from taxes paid as a result of payments or refunds regarding prior years and residual payments regarding the current year.

	2019		2018	
	Business performance	IFRS	Business performance	IFRS

### Current and deferred tax (business performance), 2019, DKKbn

The figure shows the relationship between profit before tax and current tax in the main countries where we do business.

### Effective current tax rate (business performance), 2019, %

The figure shows the tax rates based on business performance in the main countries where we do business.

Income tax for the year is calculated on the basis of the profit (loss) before tax from continuing operations.

# 5.3 Taxes paid

We have paid DKK 4,800 million in taxes in 2019, of which DKK 17 million related to residual tax for 2017, and DKK 81 million related to receivable residual tax regarding 2018.

We paid most of our Danish taxes in March. Accordingly, the income tax paid for the year was based on estimates and preliminary tax positions.

As we had a higher portion of income related to financial instruments in 2019 than we expected at the time we paid taxes on account, we expect to have a residual tax of DKK 595 million regarding 2019.

Taxes paid, DKKm

## 5.4 Deferred tax

### Development in deferred tax

In 2019, net deferred tax assets from continuing operations increased, primarily due to the completion of the construction of Hornsea 1, which triggered current tax on the deferred gain.

The adjustment regarding previous years comprised a decrease in recognition of tax assets relating to offshore wind farms and true-up of the 2018 tax return position with offset on current tax.

In 2018, deferred tax from continuing operations decreased due to the completion of the construction of Borkum Riffgrund 2 and Walney Extension, as these taxes were paid and increased due to the ongoing construction of Hornsea 1. Furthermore, our tax equity partner agreements in the US resulted in the recognition of the expected deferred tax liability that we will take over once the contribution from the tax equity partner has been repaid.

The adjustment regarding previous years comprised recognition of tax assets relating to offshore wind farms.

### Deferred tax by segment

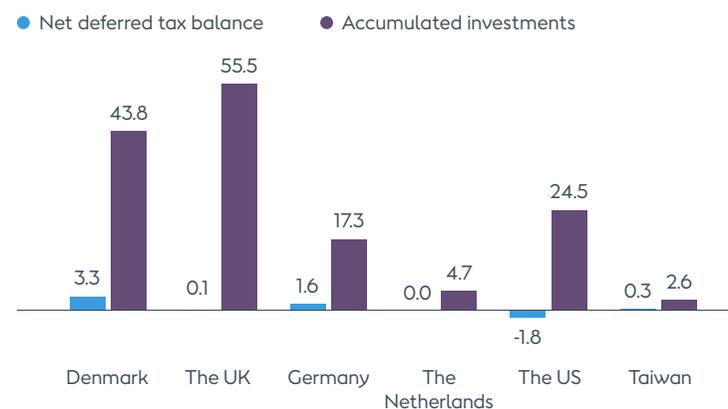

Net deferred tax in our segments primarily concerned the following:

- Offshore: upfront taxable income on internal gains where we get future tax depreciations in project companies, tax loss carryforwards and property, plant and equipment, for which depreciation for tax purposes exceeds depreciation for accounting purposes.
- Onshore: recognised deferred tax liabilities regarding wind farm assets in tax equity structures.
- Markets & Bioenergy: financial instruments and property, plant and equipment, for which depreciation for tax purposes exceeds depreciation for accounting purposes.
- Other activities/eliminations comprised intra-group eliminations in the joint taxation across segments.

The table shows the reconciliation of deferred tax to the balance sheet by segment. The non-recognised deferred tax assets are not expected to give rise to any material income tax consequence in the event of dividends received.

### Net deferred tax and accumulated investments, 2019, DKKbn

The figure shows the net deferred tax asset (+) or liability (-) on country level as well as total accumulated investments in each country

	Offshore	Onshore	Markets & Bioenergy	Other activities/eliminations	Deferred tax at 31 December
<b>Deferred tax 2019, DKKm</b>					
Deferred tax, assets	6,441	-	189	217	6,847
Deferred tax, liabilities	1,611	1,422	338	-	3,371
Unrecognised tax assets	7	-	25	-	32
<b>Deferred tax 2018, DKKm</b>					
Deferred tax, assets	3,565	235	1,152	(364)	4,588
Deferred tax, liabilities	2,838	1,293	249	(355)	4,025
Unrecognised tax assets	53	19	64	-	136

### Accounting policies

Deferred tax is recognised in respect of all temporary differences arising between the tax bases of assets and liabilities and their carrying amounts.

However, deferred tax is not recognised in respect of temporary differences relating to:

- the acquisition of joint operations, including licence interests
- other items where differences arise at the time of acquisition, affecting neither the profit (loss) for the year nor the taxable income. However, this does not include differences arising in connection with company acquisitions.

Deferred tax is measured depending on how we plan to use the assets and settle the liabilities. We set off tax assets and liabilities when the tax assets can be offset against tax liabilities in the year in which the deferred tax assets are expected to be used.

Deferred tax assets are recognised at the value at which they are expected to be used. They may be offset against future earnings. This is done within a joint taxation scheme. Intra-group gains and losses are eliminated.

Deferred tax is measured based on the tax rules and rates applying when the deferred tax becomes current tax. Changes in deferred tax as a result of changes in tax rates are recognised in profit (loss) for the year.

Deferred tax (net liability) related to the tax equity structures is recognised as tax income in the income statement when we take over the agreements. The liability recognised is the amount that we expect to take over once the contribution from the equity partner is repaid, and the tax equity structure 'flips.'

Liabilities in respect of uncertain tax positions are measured as follows:

- The most-likely-outcome method is applied in cases where there are only two possible outcomes.
- The weighted-average method is used in cases where there are more than two possible outcomes.

The liability is recognised under income tax payable or deferred tax, depending on how the realisation of the tax position will affect the financial statement.

Of which, recognised in the balance sheet under assets	2,865						4,588
Of which, recognised in the balance sheet under equity and liabilities	2,128						4,025

The increase in tax losses carried forward during 2019 is primarily a result of accelerated depreciations on fixed assets for tax purposes, as more wind farms enter into operation. The tax loss carryforwards are either offset against deferred tax liabilities on the same wind farm or jurisdiction or offset against expected future profits from the very same wind farm or jurisdiction.

Adjustments to prior years primarily relate to a decrease in recognition of tax assets relating to offshore wind farms and movements between deferred tax and current tax payable.

The amounts transferred to assets and liabilities classified as assets held for sale in 2018 concern our Danish power distribution, residential customer and city light businesses.

Addition of enterprises in 2018 includes the deferred tax liability recognised in relation to our US acquisitions.

# 5.5 Total tax contribution

According to the OECD classification, tax is a compulsory unrequited payment to general government. This means a payment by Ørsted paid to the government, including amounts paid through an agent. Tax does not result in a return of value to Ørsted for a right or asset used in the business.

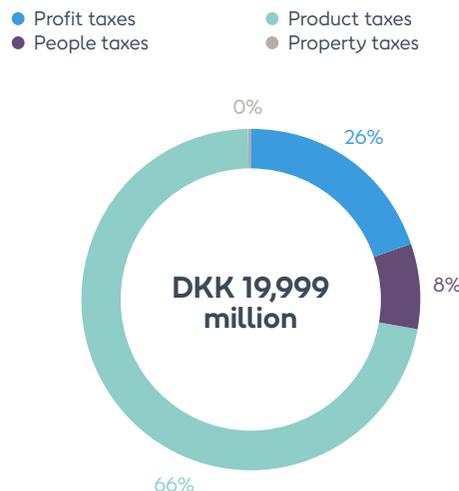

Taxes collected are those which are generated by Ørsted's operations, but not a tax liability for Ørsted. Ørsted generates the commercial activity that gives rise to the taxes and then collects and administers them on behalf of the tax authorities in the countries in which we operate.

Taxes borne by Ørsted are those that represent a direct cost and are reflected in the financial result. Taxes borne are charged to the profit and loss account or capitalised as part of an asset's costs.

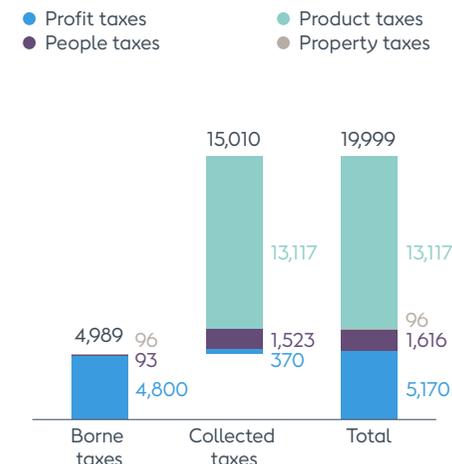

### Total global taxes that we paid in 2019

● Profit taxes	These include taxes on company profits that are borne (such as corporate income tax) and collected (such as withholding tax on payments to third parties). In 2019, Ørsted paid DKK 4,800 million in borne profit taxes and DKK 370 million in collected profit taxes. The collected profit taxes relate to withholding tax on dividends paid to Ørsted's shareholders.
● People taxes	Taxes on employment, both borne and collected (including income tax and social security tax payments). In 2019, Ørsted paid DKK 93 million in borne people taxes and DKK 1,523 million in collected people taxes.
● Product taxes	Indirect taxes on the production and consumption of goods and services, including VAT and sales tax, custom duties and insurance premium tax. In 2019, Ørsted paid DKK 13,117 million in collected product taxes. Borne product taxes were insignificant in 2019 for this summary.
● Property taxes	Taxes on the ownership, sale, transfer or occupancy of property. In 2019, Ørsted paid DKK 96 million in borne property taxes. Collected property taxes were insignificant in 2019 for this summary.

Total tax contribution, 2019, %

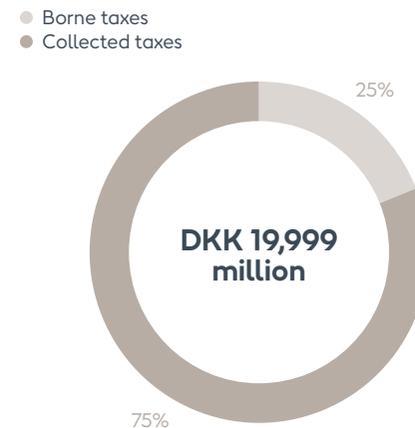

Total tax contribution, 2019, DKKm

Total tax contribution is highly impacted by collection of VAT, sales taxes, duties as well as profit taxes.

Total tax contribution, 2019, %

The chart shows the distribution between borne and collected taxes in 2019.

# 6. Capital structure

- 126 Capital structure
- 127 Interest-bearing debt and FFO
- 129 Equity
- 131 Hybrid capital
- 132 Financial resources
- 134 Financial income and expenses

# 6. Capital structure

An appropriate capital structure is important to ensure we have the ability to raise new debt at attractive terms.

In 2019, we issued new green senior bonds with a total proceed of DKK 10,174 million, consisting of GBP 900 million and NTD 12 billion.

We further issued a new hybrid bond of EUR 600 million (DKK 4,483 million) to refinance our 3015 hybrid bond, of which we redeemed EUR 524 million at the same time.

All new bonds were issued in accordance with our green finance framework.

In the coming years, we expect to raise new debt to partly fund our DKK 200 billion investment programme covering the period 2019-2025.

## Capital structure

To ensure the financial strength to operate in the international energy and capital markets and secure financing on attractive terms, we have defined credit rating and capital structure targets. The overarching capital structure targets are a credit rating of Baa1/BBB+ and an FFO/adjusted net debt credit metric of around 30%.

## Financing policy

The aim of our financing policy is to ensure that hedging needs and the best possible financing arrangements are taken into account, while also minimising financing costs, liquidity and refinancing risks.

The borrowing activities are diversified among various funding sources and maturities. In addition, we have robust financial resources.

Our borrowing activities are primarily consolidated in the parent company, where cash resources are available to the Group companies via an internal bank.

## Cash management

One of the most significant cash management objectives is to secure sufficient and flexible financial resources in relation to our day-to-day operations, investment programme and debt maturity profile.

Therefore, we define minimum financial resources for the coming calendar year. We maintain robust financial resources to limit the company's sensitivity to unrest in the financial markets.

# 31.0%

Funds from operations (FFO) relative to adjusted interest-bearing net debt amounted to 31% at 31 December 2019 against 69% at 31 December 2018.

# 17.2bn

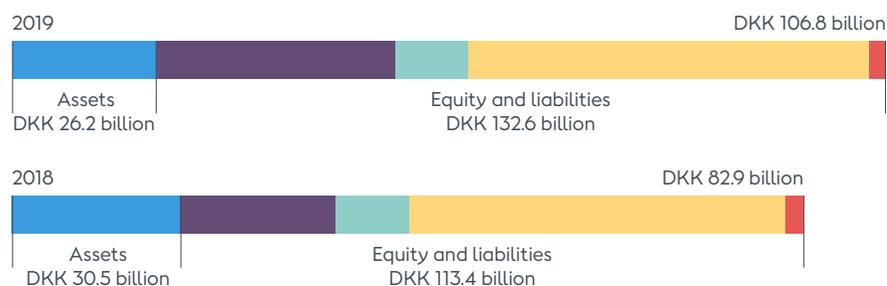

Our interest-bearing net debt totalled DKK 17,230 million at 31 December 2019 against DKK -2,219 million at 31 December 2018.

# 38.2bn

Our financial resources totalled DKK 38,244 million at 31 December 2019 against DKK 37,879 million at 31 December 2018.

## Equity and interest-bearing net debt, DKKbn

- Interest-bearing assets
- Interest-bearing debt
- Hybrid capital
- Equity attributable to shareholders in Ørsted A/S
- Non-controlling interests

# 6.1 Interest-bearing debt and FFO

## Interest-bearing debt and interest-bearing assets DKKm

	2019	2018
<b>Interest-bearing debt:</b>		
Bank debt	3,466	3,582
Bond debt	33,373	23,714
<b>Total bond and bank debt</b>	<b>36,839</b>	<b>27,296</b>
Tax equity liability (see note 4.5)	608	454
Lease liability	5,332	-
Other interest-bearing debt	649	570
<b>Total interest-bearing debt</b>	<b>43,428</b>	<b>28,320</b>
<b>Interest-bearing assets:</b>		
Securities	16,552	25,501
Cash	7,148	3,515
Receivables from associates and joint ventures	-	60
Other receivables	1,781	779
Receivables in connection with divestments	717	684
<b>Total interest-bearing assets</b>	<b>26,198</b>	<b>30,539</b>
<b>Total interest-bearing net debt</b>	<b>17,230</b>	<b>(2,219)</b>

The market value of our bond and bank debt amounted to DKK 39,281 million and DKK 3,526 million, respectively, at 31 December 2019 (2018: DKK 28,048 million and DKK 3,622 million, respectively).

The market value of our bond and bank debt exceeds the carrying amount due to the drop in interest levels since the issuance of the debt.

## Changes in interest-bearing debt, DKKm

	2019	2018
Interest-bearing debt at 1 January	28,320	29,636
Lease debt at 1 January (IFRS 16)	5,224	-
Instalments on loans according to the statement of cash flows	(2,043)	(6,429)
Proceeds from raising of loans according to the statement of cash flows	10,174	-
Debt from acquisition of enterprises	-	4,409
Instalments on leases	(664)	-
Raising of lease debt, etc.	772	-
Change in other interest-bearing debt and tax equity liability	231	570
Hybrid bond reclassified to interest-bearing debt	570	-
Foreign exchange adjustments and amortisation	844	134
<b>Interest-bearing debt at 31 December</b>	<b>43,428</b>	<b>28,320</b>

Due to the implementation of IFRS 16 'Leases' at 1 January 2019, the lease liability is included in interest-bearing debt on the balance sheet in 2019.

## Funds from operations (FFO), DKKm

	2019	2018
<b>EBITDA – business performance</b>	<b>17,484</b>	<b>30,029</b>
Interest expenses, net	(1,312)	(877)
Interest expenses, leasing	(171)	-
Reversal of interest expenses transferred to assets	(344)	(506)
Interest element of decommissioning obligations	(212)	(192)
Calculated interest paid on operating lease obligations	-	(196)
50% of coupon payments on hybrid capital	(279)	(272)
<b>Adjusted interest expenses, net</b>	<b>(2,318)</b>	<b>(2,043)</b>
Reversal of gain (loss) on divestment of assets	101	(14,995)
Reversal of recognised operating lease payment in profit (loss) for the year	-	778
Total current tax	(5,799)	(3,068)
<b>Funds from operations (FFO)</b>	<b>9,468</b>	<b>10,701</b>

FFO is calculated for the continuing operations.

We implemented IFRS 16 'Leases' at 1 January 2019. This has impacted FFO, as the in-substance fixed lease payments are recognised as depreciation of lease assets.

## Adjusted interest-bearing net debt, DKKm

	2019	2018
<b>Total interest-bearing net debt</b>	<b>17,230</b>	<b>(2,219)</b>
50% of hybrid capital	6,616	6,619

Deferred tax on decommissioning obligations	(866)	(757)
<b>Total adjusted interest-bearing net debt</b>	<b>30,575</b>	<b>15,516</b>

Due to the implementation of IFRS 16 'Leases' at 1 January 2019, the lease liability is included in 'Total interest-bearing net debt' in 2019.

## Funds from operations (FFO)/ adjusted interest-bearing net debt, %

	2019	2018
<b>Funds from operations (FFO)/ adjusted interest-bearing net debt</b>	<b>31.0%</b>	<b>69.0%</b>

### Interest-bearing net debt

Interest-bearing net debt totalled DKK 17,230 million at the end of 2019, an increase of DKK 19,449 million relative to 2018. The increase in interest-bearing net debt consists of an increase in interest-bearing debt of DKK 15,108 million and a decrease in interest-bearing assets of DKK 4,341 million.

In May 2019, we repaid the remaining outstanding amount EUR 280 million (DKK 2,092 million) on our bonds issued in May 2009.

In May 2019, we also issued a total of GBP 900 million (DKK 7,684 million) in new green bonds, split on three separate issues:

- GBP 350 million (DKK 2,988 million), 2.125% interest, maturing in May 2027.
- GBP 300 million (DKK 2,561 million), 2.5% interest, maturing in May 2033.
- GBP 250 million (DKK 2,135 million), interest of CPI+0.375%, maturing in May 2034.

In November, we issued a total of NTD 12 billion (DKK 2,653 million) in new green bonds, split on two separate issues:

- NTD 8 billion (DKK 1,769 million), 1.5% interest, maturing in November 2034.
- NTD 4 billion (DKK 884 million), 0.92% interest, maturing in November 2026.

### Rating

We have a corporate credit rating of BBB+/Baa1, stable outlook, from Standard & Poor's, Moody's and Fitch, which is in line with our target. FFO/adjusted interest-bearing net debt was 31% in 2019, in line with our target.

### Loan arrangements

At 31 December 2019, we had loan obligations totalling DKK 1,861 million (2018: DKK 1,964 million) to the European Investment Bank and the Nordic Investment Bank. The loans are recognised in the balance sheet under bank debt. The loans offered by these multilateral financial institutions include loans to co-fund infrastructure and energy projects on favourable terms and with maturities exceeding those normally

available in the commercial banking market. In connection with these loans, the Group may be met with demands for repayment or collateral in the event of the Danish state holding less than 50% of the share capital or voting rights in Ørsted A/S (change of control), or for repayment in the event of Moody's or S&P's downgrading our rating to Baa3 or BBB- or below, respectively.

### Credit facilities

Furthermore, we had non-cancellable credit facilities of DKK 15,990 million at 31 December 2019 (2018: DKK 10,447 million) with a number of Scandinavian, international and local banks in Taiwan. In connection with these credit facilities, we may be met with demands for cancellation and repayment of any drawn amount in the event of players other than a group consisting of the Danish state and Danish power distribution companies controlling more than 50% of the share capital or voting rights in Ørsted A/S, or in the event of the Danish state ceasing to hold at least 20% of the share capital. Our financing agreements are not subject to any other unusual terms or conditions.

### Accounting policies

Bond debt, bank debt and other payables are recognised at inception at market value (typically proceeds received) net of transaction costs incurred. In subsequent periods, the liabilities are measured at amortised cost, so that the difference between the cost (proceeds) and the nominal value is recognised in profit (loss) for the year as interest expenses over the term of the loan, using the effective interest rate method.

Financial liabilities are classified as current, unless the Group has an unconditional right to defer settlement of the liability to at least one year after the balance sheet date.

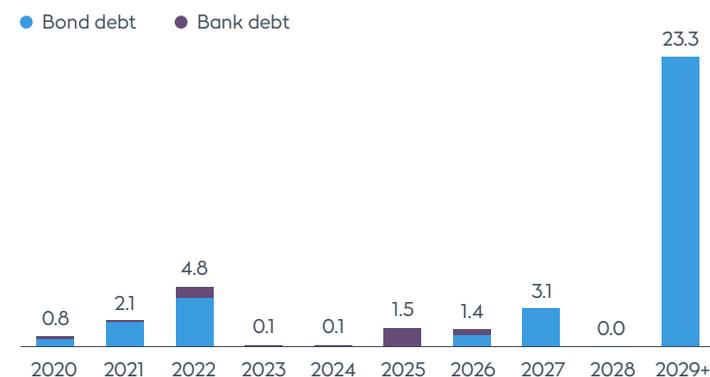

The market value of issued bonds has been determined as the market value at 31 December (level 1 – quoted prices).

The market value of bank loans has been determined as the present value of expected future instalments and interest payments using the Group's current interest rate on loans as the discount rate (level 2 – observable inputs).

### Senior bonds issued at 31 December 2019

### Maturity profile, DKKbn

In addition to senior bonds, we have issued a number of hybrid bonds; see note 6.3 'Hybrid capital'.

In 2020, we have an instalment on a bank loan and repayment of the remaining 3013 hybrid bond.

## 6.2 Equity

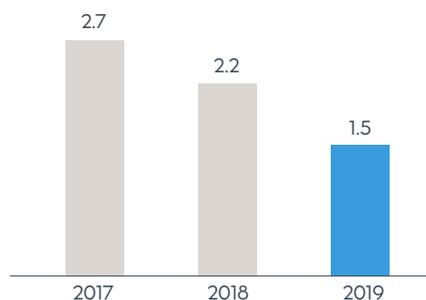

### Share capital

Ørsted's share capital is DKK 4,203,810,800 (2018: 4,204 million), divided into shares of DKK 10. The share capital is unchanged from last year. No shares are subject to special rights or restrictions on voting rights. All shares are fully paid up.

### Treasury shares

To secure our share programme, we acquired additional treasury shares in May 2019. The total portfolio of treasury shares consists of 395,619 shares at 31 December 2019 (2018: 335,904), corresponding to 0.1% of the share capital.

### Dividend yield, %

The graph shows the proposed dividends in relation to the closing price for an Ørsted share on the last trading day of the year.

### Dividends

The Board of Directors recommends that dividends of DKK 4,414 million (2018: DKK 4,099 million) be paid for the financial year, corresponding to DKK 10.50 per share (2018: DKK 9.75 per share). The proposed dividends correspond to a dividend yield of 1.5% (2018: 2.2%), calculated on the basis of the closing price for an Ørsted share on the last trading day of the year.

### Owners in Ørsted

The Danish state is the principal shareholder with an ownership interest of 50.1%. In addition, SEAS-NVE also has significant ownership interests. See note 16 'Ownership information' in the parent company's financial statements.

Asnæs power plant, Kalundborg, Denmark.

Earnings per share, DKKm	2019		2018

#### Foreign currency translation reserve

The foreign currency translation reserve comprises:

- exchange rate adjustments arising on translation of the financial statements of foreign entities with a currency that is not the Group's functional currency
- exchange rate adjustments relating to loans that form part of our net investment in such entities
- exchange rate adjustments relating to hedging transactions on our net investment in such entities.

On realisation or partial realisation of the net investment, the exchange rate adjustments are recognised in profit (loss) for the year if a foreign exchange gain (loss) is realised by the divested entity. The foreign exchange gain (loss) is transferred to the item in which the gain (loss) is recognised.

#### Hedging reserve

The hedging reserve covers:

- hedging of net investments in foreign operations
- cash flow hedging of currency risks, inflation risks associated with revenue and power price risk
- cash flow hedging of interest expenses and the currency risk associated with the construction of offshore wind farms.

#### Deferred costs of hedging

Changes in the basic spread on currency swaps and time value of options are included in deferred costs of hedging.

#### Share premium reserve

Retained earnings include the share premium reserve of DKK 21,279 million (2018: 21,279 million), representing the excess of the amount of subscribed-for share capital over the nominal value of these shares in connection with capital injections.

Deferral of interest payment	Optional	Optional	Optional	Optional

We have issued hybrid capital which is subordinate to our other creditors. The purpose of issuing hybrid capital is to strengthen our capital base and fund our investments. We have issued EUR hybrid bonds with a total nominal value of EUR 1,876 million (DKK 14,019 million).

In 2019, we have issued a new hybrid bond at a nominal value of EUR 600 million which is classified as equity. In addition, we redeemed EUR 524 million of the hybrid bond maturing in November 2020. The remaining EUR 76 million is to be settled on 7 February 2020.

This hybrid bond is therefore classified as interest-bearing debt as of 31 December 2019.

For hybrid bonds, we may defer coupon payments to bond holders and ultimately decide not to pay them at maturity. Deferred coupon payments become payable, however, if we decide to pay dividends to our shareholders or pay coupon payments on other hybrid bonds.

As a consequence of the special terms regarding the hybrid bonds, these are classified as equity, and therefore coupon payments are recognised in equity.

### Accounting policies

Hybrid capital comprises issued bonds that qualify for treatment in accordance with the rules on compound financial instruments due to the special characteristics

of the bonds. The notional amount, which constitutes a liability, is recognised at present value, and equity has been increased by the difference between the net proceeds received and the present value of the discounted liability. Accordingly, any coupon payments are accounted for as dividends, which are recognised directly in equity at the time the payment obligation arises. This is because the coupon is discretionary, and therefore any deferred coupon lapses upon maturity of the hybrid capital. Consequently, coupon payments do not have any effect on profit (loss) for the year.

The part of the hybrid capital that is accounted for as a liability is measured at amortised cost. However, as the carrying amount of this component amounted to nil on initial recognition and due to the 1,000-year term of the hybrid capital, amortisation charges will only have an impact on profit (loss) for the year towards the end of the 1,000-year term of the hybrid capital. Coupon payments are recognised in the statement of cash flows in the same way as dividend payments within financing activities.

On redemption of the hybrid capital, the payment will be distributed between liability and equity, applying the same principles as used when the hybrid capital was issued. This means that the difference between the payment on redemption and the net proceeds received on issue is recognised directly in equity, as the debt portion of the existing hybrid issues will be nil during the first part of the life of the hybrid capital.

On the date when the Board of Directors decides to exercise an option to redeem hybrid capital, the part of the hybrid capital that will be redeemed will be reclassified to loans and borrowings. The reclassification will be made at the market value of the hybrid capital at the date the decision is made. Coupon payments and exchange rate adjustments following the reclassification to loans and borrowings will be recognised in profit (loss) for the year as financial income or expenses.

## 6.4 Financial resources

Financial resources at 31 December 2019 amount to DKK 38,244 million (2018: 37,879 million). The change in financial resources is due an increase in cash and undrawn credit facilities of DKK 3,796 million and DKK 5,543 million, respectively; partially offset by a decrease of DKK 8,974 million in securitites. The increase in undrawn credit facilities relates to establishment of a NTD 25 billion facility in Taiwan.

### Cash, cash equivalents and securities

Securities are a key element in our financial resources, and therefore investments are mainly made in liquid AAA-rated Danish mortgage bonds and to a lesser extent in other bonds. Most of the securities qualify for repo transactions with the Danish central bank, 'Danmarks Nationalbank'.

Securities not available for use comprise securities pledged as collateral for:

- insurance-related provisions: DKK 397 million at 31 December 2019 (2018: DKK 399 million)
- trading in financial instruments: DKK 360 million at 31 December 2019 (2018: DKK 333 million).

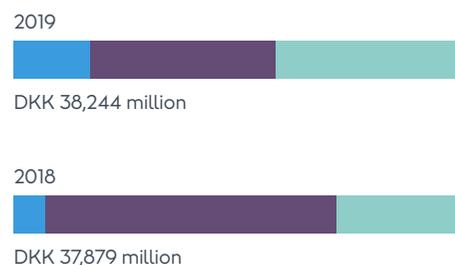

At 31 December 2019, we had received cash collateral in the amount of DKK 1,439 million (2018: DKK 852 million) concerning the positive market value of derivatives.

Cash not available for use comprises:

- collateral for insurance-related provisions: DKK 277 million (2018: DKK 264 million)
- collateral for US power purchase agreements: DKK 132 million (2018: DKK 246 million)
- collateral for other transactions: DKK 280 million (2018: DKK 342 million).

### Financial resources, DKK million

<b>Total payment obligations</b>	<b>24,348</b>	<b>5,090</b>	<b>8,400</b>	<b>40,066</b>	<b>77,904</b>

Maturity analysis of financial liabilities 2018, DKKm	2019	2020	2021-2022	After 2022	2018
Bank loans and issued bonds:					
- Notional amount	2,213	235	6,917	18,179	27,544
- Interest payments	1,003	873	1,654	8,074	11,604
Trade payables	13,093	-	-	-	13,093
Derivatives	6,066	1,626	133	414	8,239
Tax equity debt	66	59	143	334	602
Other payables	5,327	-	-	-	5,327
Liabilities relating to assets classified as held for sale	812	-	-	-	812
<b>Total payment obligations</b>	<b>28,580</b>	<b>2,793</b>	<b>8,847</b>	<b>27,001</b>	<b>67,221</b>

The Group's cash needs in respect of its financial loans and borrowings are shown in the table on the left. The maturity analysis was determined on 31 December.

The maturity analysis is based on undiscounted cash flows, including estimated interest payments. Interest payments are based on market conditions and interest-rate hedging entered into on 31 December.

The maturity analysis does not include hybrid capital classified as equity. At 31 December 2019, we had issued hybrid capital with a notional amount totalling DKK 13,449 million due in 3013 (DKK 5,230 million), 3017 (DKK 3,736 million) and 3019 (DKK 4,483 million), respectively.

The maturity analysis for leasing is part of note 8.2 'Leases'.

#### Accounting policies

Securities comprise bonds that are monitored, measured and reported at market value on an on-going basis in conformity with the Group's investment policy. Changes in market value are recognised in profit (loss) for the year as financial income and expenses. Purchase and sale of securities are recognised at the settlement date.

For listed securities, market value equals the market price, and for unlisted securities, market value is estimated based on generally accepted valuation methods and market data.

Divested securities where repurchase agreements (repo transactions) have been made at the time of sale are recognised in the balance sheet at the settlement date as if the securities were still held. The amount received is recognised as a liability, and the difference between the selling price and the purchase price is recognised in profit (loss) for the year over the term as interest. The return on the securities is recognised in profit (loss) for the year.

## 6.5 Financial income and expenses

### Net financial income and expenses, DKKm

	2019	2018
Interest expenses, net	(1,312)	(877)
Interest expenses, leasing	(171)	-
Interest element of provisions, etc.	(428)	(408)
Tax equity partner's contractual return	(307)	(44)
Value adjustments of derivatives, net	(181)	(64)
Exchange rate adjustments, net	1,038	285
Value adjustments of securities, net	147	(176)
Other financial income and expenses	79	6
<b>Net financial income and expenses</b>	<b>(1,135)</b>	<b>(1,278)</b>

### Financial income and expenses, DKKm

	2019	2018
Interest income from cash, etc.	65	62
Interest income from securities at market value	226	264
Capital gains on securities at market value	161	119
Foreign exchange gains	3,020	2,033
Value adjustments of derivatives	4,185	670
Other financial income	61	31
<b>Total financial income</b>	<b>7,718</b>	<b>3,179</b>
Interest expenses relating to loans and borrowings, etc.	(1,947)	(1,710)
Interest expenses transferred to assets	344	506
Interest expenses, leasing	(171)	-
Interest element of provisions	(289)	(280)
Tax equity partner's contractual return	(307)	(44)
Capital losses on securities at market value	(24)	(304)
Foreign exchange losses	(2,219)	(1,978)
Value adjustments of derivatives	(4,069)	(466)
Other financial expenses	(171)	(181)
<b>Total financial expenses</b>	<b>(8,853)</b>	<b>(4,457)</b>
<b>Net financial income and expenses</b>	<b>(1,135)</b>	<b>(1,278)</b>

The table shows net financial income and expenses, corresponding to our internal reporting.

Exchange rate adjustments and hedging contracts entered into to hedge currency risks are presented net under the item 'Exchange rate adjustments, net'.

In 2019, interest expenses, net were affected by the reversal of previously recognised interest expenses regarding the provision related to the Elsam competition case (DKK 276 million) and interest expenses related to payable tax.

The implementation of IFRS 16 as of 1 January 2019 has caused the interest element regarding lease liabilities to be recognised as financial expenses, see note 1.3 for further details.

Exchange rate adjustments of currency hedging are recognised in revenue and cost of sales with a loss of DKK 1,943 million (2018: a gain of DKK 268 million).

Borrowing costs transferred to property, plant and equipment under construction are calculated at the weighted average effective interest rate for general borrowing. This amounted to 4.0% in 2019 (2018: 4.1%).

### Accounting policies

Market value adjustments of interest rate and currency derivatives that have not been entered into for hedging purposes are presented as financial income or expenses.

The accounting policy for the tax equity partner's contractual return is described in note 4.5 'Tax equity liabilities'.

# 7. Risk management

- 136 Risk management
- 137 Market risks
- 139 Hedge accounting and economic hedging
- 142 Energy trading portfolio
- 143 Sensitivity analysis of financial instruments
- 144 Credit risks
- 145 Categories of financial instruments
- 146 Fair value measurement

# 7. Risk management

Market and credit risks are a natural part of our business activities and a precondition for being able to create value. Through risk management, risks are reduced to an acceptable level.

## Currency and energy exposures

Our forward-looking energy and currency exposures from production, sales, investments and divestments are presented in the figures to the right.

In April 2019, we took final investment decision on an offshore wind farm located in Taiwan and thereby increased our exposure towards NTD that, however, remains an insignificant risk for the period 2020-2024.

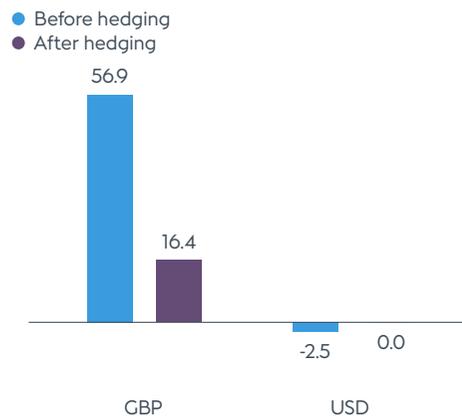

## Trading portfolio

We have a limited trading portfolio, the main purpose of which is to optimise the execution of hedging contracts and gains from short-term energy price fluctuations.

In 2019, we expanded our trading activities into the US energy market with the setup of a trading desk in Chicago to exploit opportunities from our growing activities in the US.

The trading activities comply with the mandates approved by the Board of Directors. Read more in note 7.3 'Energy trading portfolio'.

Currency exposure, GBP 2020-2024, USD 2020-2034, DKKbn

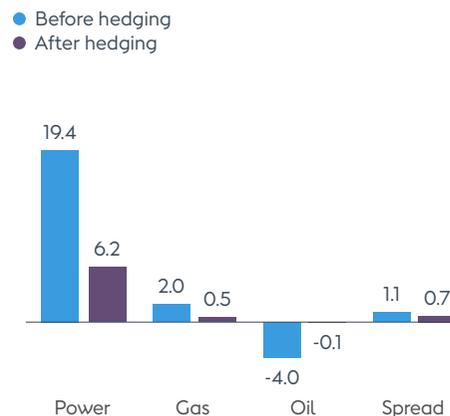

For USD, we manage our risk as a natural time spread between front-end capital expenditures and long-end revenue between 2020-2034.

NTD is not a material risk for the period 2020-2024.

We do not deem EUR to constitute a risk, as we expect that Denmark will maintain its fixed exchange-rate policy.

Energy exposure 2020-2024 DKKbn

Our energy exposures are significantly reduced due to hedging.

# +0.4bn

The value of our energy and currency hedging instruments at 31 December 2019 was a gain of DKK 441 million (2018 DKK -3,032 million), which will increase business performance EBITDA in a future period.

# 7.1 Market risks

## Market risks and market risk management

Our most significant market risks relate to:

- energy prices
- foreign exchange rates
- interest and inflation.

We manage market risks to protect Ørsted against market price volatility and ensure stable and robust financial ratios that support our growth strategy as well as protect the value of our assets.

In the short- to medium-term horizon, we primarily hedge future prices using derivatives to reduce cash flow fluctuations after tax. Minimum hedging levels are determined by the Board of Directors. In the first two years, we are almost fully hedged. The degree of hedging is declining in subsequent years due to:

- reduced certainty about long-term production volumes
- increasing hedging costs in the medium to long term; both spread costs and cost of collateral,
- adverse impact from collateral, potentially tying up large amounts of capital if hedging contracts become unfavourable.

Our long-term market risk picture is determined by our strategic asset portfolio. Our power exposure is partly mitigated through long-term power purchasing agreements (PPA), and we use debt to manage currency, interest rate and inflation risk.

## Energy price risks

Our consolidated energy exposure after hedging for the years 2020-2024 can be summarised as shown in the table.

Risk after hedging DKKbn	Effect of price change	
	+10%	-10%
Power: 6.2 sales position	+0.6	-0.6
Gas: 0.5 sales position	+0.0	-0.0
Oil: 0.1 purchase position	-0.0	+0.0
Spread: 0.7 sales position	+0.1	-0.1

A 10% increase in the power price in 2020-2024 will therefore result in a gain of DKK 0.6 billion in the period, all else remaining unchanged.

## Currency risks

Our consolidated currency exposure after hedging for the years 2020-2024 can be summarised as shown in the table.

Risk after hedging DKKbn	Effect of price change	
	+10%	-10%
GBP: 16.4 sales position	+1.6	-1.6
NTD: 0.3 sales position	+0.0	-0.0
USD: 0.0 purchase position	-0.0	+0.0

Our main currency exposure stems from offshore wind farms in the UK, but activities in the US and Taiwan have increased our USD and NTD exposure.

In general, highly certain cash flows in a foreign currency is hedged within the first five years.

Exchange rates related to energy prices in foreign currencies are not hedged until the energy price is hedged. Hence, the GBP exchange rate associated with power generation in the UK is not hedged until the GBP power price is hedged.

Cash flows that relate to fixed tariffs and guaranteed minimum prices from offshore wind farms in the UK deviate from the main principle. Hedging of these, less operating expenses, is based on a declining level of hedging over the five-year risk management horizon. The target is to hedge 100% of the risk in year 1, declining by 20 percentage points each year, to 20% in year 5.

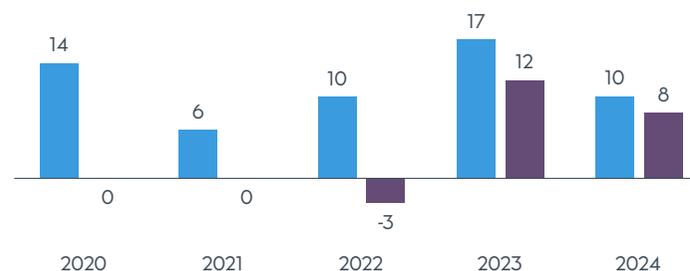

Our GBP exposure amounted to DKK 16.4 billion after hedging for the years 2020-2024. This unhedged GBP exposure stems from subsidised GBP income less operational expenditures.

The GBP exchange rate for hedges impacting EBITDA in 2020 and 2021 is hedged at an average exchange rate of DKK/GBP 8.4 and 8.2, respectively.

For our USD and NTD exposures from new markets, we do not yet have an existing portfolio against which we can net construction payments. Therefore, we seek to hedge the price risk in the near term, while simultaneously hedging a similar, but opposite, exposure in the longer term. Our EUR risk is subject to continuous assessment, but is generally not hedged, as we believe that Denmark will maintain its fixed-exchange-rate policy.

## GBP exposures, DKKbn

- Before hedging
- After hedging

The graph shows our GBP exposure before and after hedges from:

- divestment and investment
- green certificates
- hedged energy.

**Interest and inflation risk**

To a certain extent, our medium- to long-term earnings can be expected to follow the development in consumer and market prices, thereby protecting the real value of our assets and equity. This is the case for earnings related to our UK wind farms.

However, we are exposed to inflation risk on projects with fixed nominal cash flows, as an increase in inflation will erode the expected real value of the revenue. This is the case for:

- fixed nominal subsidies from offshore wind assets in Denmark, Germany, the Netherlands, Taiwan and the US
- fixed nominal power purchase agreements on onshore wind assets in the US.

The close relationship between inflation and interest rates protects our equity value against changes in interest rates to some extent. We manage interest rate and inflation risk by matching the sensitivity of our assets with the sensitivity of our debt. The share of our debt which is fixed in nominal terms partially offsets the inflation risk. We have fixed the inflation for part of the future revenue from our UK offshore wind farms at an average of 3.6% for the period 2024-2037 to create a better match with our fixed-rate UK debt.

**Offshore**

Earnings from power generation from offshore wind farms mainly comprise:

- fixed tariffs in Denmark, Germany, the Netherlands, the UK (CfD wind farms), the US and Taiwan,
- guaranteed minimum prices for green certificates in the UK (ROC wind farms)

- sale of power at market price from our out-of-subsidy wind farms or ROC wind farms in the UK.

At the end of 2019, such fixed tariffs and guaranteed minimum prices cover approx 87% of the expected income from offshore wind farms for the period 2020-2024. The remaining price exposure concerns sales of power at market price in the UK and Denmark.

**Onshore**

Earnings from power generation from onshore wind farms in the US comprise tax incentives, such as PTCs or ITCs, and power. The tax incentives have a fixed value. However, there is a price risk associated with the power which is reduced by entering into power purchase agreements (PPAs). The current PPAs cover approx 72% of the expected generation, spanning 12-15 years from the commissioning of the wind farm. The PPAs are entered into with large corporates or financial institutions.

**Markets & Bioenergy**

Our CHP plant portfolio consists of biomass and fossil-fuelled plants in Denmark. The CHP plants generate both heat and power. Concurrently with the biomass conversion of our CHP plants, a larger share of the related earnings will be coming from our heat generation. Heat generation does not give rise to price risks as the associated costs are covered by the heat customers. However, heat generation often entails a price risk for power, as heat and power are generated simultaneously to a large extent.

The profitability of power generation is determined by the difference between the selling price of power and the purchase price of fuel

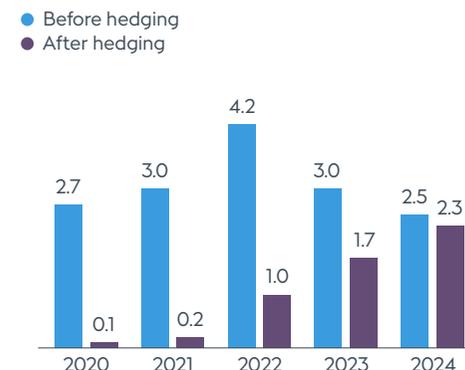

and carbon emissions allowances. For our coal-based power generation, we secure profitability by selling power and buying fuel and carbon emissions allowances, while for biomass-based power generation, we secure profitability by buying biomass at fixed prices and hedging the associated power generation. At the end of 2019, 50% of the expected power generation from our power stations in 2020 was hedged. The total net risk associated with the power stations' power generation for the 2020-2024 period is DKK 0.7 billion after hedging.

Our price risks in Markets arises from the purchase and sale of power and gas. The price risks associated with the purchase and sale of gas result from differences in the indexing of sales and purchase prices. Our largest gas purchase contracts include the option of renegotiating the contract price if it no longer reflects market conditions. We have completed most of these renegotiations in recent years; as a result, the contract prices have largely been indexed to pure gas prices and not to oil prices, as was previously the case. Therefore, we are less sensitive to differences in the oil and gas price development than before. The price risks associated with power purchases and sales are given by the difference between the purchase and sales prices. The price risk relates primarily to timing differences between purchases and sales and the related hedges and is therefore considered to be limited.

**Principles for estimating exposures**

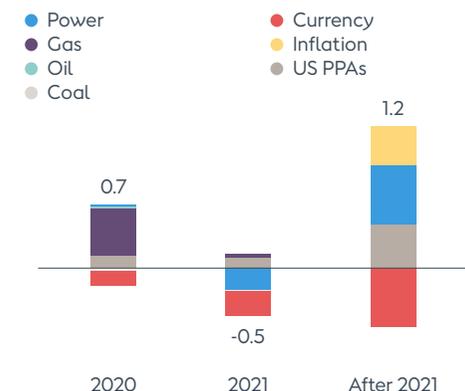

Exposure is calculated as the expected production (or net purchase/sale) times the forward price for the respective years. In addition, the exposure is determined on the basis of the expected exposure after renegotiations of oil-indexed gas purchase contracts.

**Offshore's power price exposure, DKKbn**

The table shows the exposure from Offshore's generation of power before and after hedges.

**Expected value for recognition in business performance EBITDA, DKKbn**

The table shows the time of the transfer of the value of hedging contracts in business performance EBITDA for both business performance and IFRS hedges together with deferred revenue from US power purchase agreements; see note 1.5 'Business performance'.

## 7.2 Hedge accounting and economic hedging

Note	Overview of the Group's derivative positions, DKKm	2019		2018	
		Contractual principal amount	Market value	Contractual principal amount	Market value
	<b>Recognised with EBITDA impact</b>				
1.5, 7.2	Economic hedging, currency	30,744	(1,509)	29,684	712
1.5, 7.2	Economic hedging, energy	19,026	617	27,927	(3,806)
	Hedging of cash flows, inflation	17,373	585	15,547	(69)
	Hedging of cash flows, energy	6,988	545	-	-
7.2	Hedging of cash flows, currency	243	(108)	12,434	22
7.3	Trading portfolio	9,271	1,148	6,509	313
	<b>Total</b>	<b>83,645</b>	<b>1,278</b>	<b>92,101</b>	<b>(2,828)</b>
	<b>Recognised in financial income and expenses</b>				
7.2	Hedging of fair value, currency	25,825	43	10,388	(761)
7.2	Hedging of cash flows, currency and interest	3,890	(130)	4,323	(216)
	Other currency derivatives	8,052	504	3,798	436
	Other interest derivatives	4,431	(85)	6,588	(39)
	<b>Total</b>	<b>42,198</b>	<b>332</b>	<b>25,097</b>	<b>(580)</b>
	<b>Recognised in other line items</b>				
7.2	Hedging of cash flows, energy and currency (gain/loss on divestment of enterprises)	10,487	318	-	-
7.2	Hedging of fair value, currency (discontinued)	999	(50)	2,285	(106)
7.2	Hedging of net investments (OCI)	46,717	(1,096)	27,839	888
	<b>Total</b>	<b>184,046</b>	<b>782</b>	<b>147,322</b>	<b>(2,626)</b>

The table shows the Group's derivatives and commercial contracts according to the type of accounting treatment and the items affected:

- Economic hedging comprises hedging of energy-related risks and related currency risks. These hedging contracts are treated as hedge accounting in accordance with the business performance principle (see note 1.5 'Business performance' for a detailed description).
- Hedging of cash flows includes hedging of interest rates, inflation, currencies, power prices and market risks related to the divestment of the LNG business.

- Hedging of the market value of securities or currencies comprises hedging of recognised assets or liabilities.
- Hedging of net investments comprises hedging of the currency risk associated with investments in assets located in foreign countries.
- The trading portfolio and other interest and currency derivatives are recognised at market value in the income statement.

The contractual principal amount has been determined as the net position per derivative type.

### Economic hedging and commercial contracts

The purpose of economic hedging is to reduce our risk from generation and sale of energy. Fluctuations in value are expected to be offset by the underlying exposure.

### Accounting policies

#### Economic hedging and commercial contracts

Market value adjustments of financial contracts offered to customers with a view to price hedging and financial instruments that have been entered into to hedge the Group's principal operating activities are recognised as revenue or cost of sales.

Under the business performance principle, economic hedging is accounted for as effective hedging. The resulting market value adjustment is consequently deferred to the period in which the hedged transaction affects results. See note 1.5 'Business performance' for further information.

The contractual principal amount has been determined as net position per derivative type.

Economic hedging and commercial contracts, DKKm	2019		2018	
	Contractual principal amount	Market value	Contractual principal amount	Market value
<b>Energy</b>				
Oil swaps	993	56	2,442	(182)
Gas swaps	-	-	5,717	(412)
Gas options	3,180	770	-	-
Power swaps	10,523	(490)	16,543	(3,267)
Power options	4,193	317	2,900	48
Coal	137	(36)	325	7
<b>Total</b>	<b>19,026</b>	<b>617</b>	<b>27,927</b>	<b>(3,806)</b>
<b>Currency</b>				
Forward exchange contracts	30,744	(1,509)	29,684	712
<b>Total</b>	<b>49,770</b>	<b>(892)</b>	<b>57,611</b>	<b>(3,094)</b>

Economic hedging is accounted for under the business performance principle, see description above.

The market value of DKK -892 million (2018: DKK -3,094 million) will be recognised in business performance profit or loss in a future period.

### Cash flow and fair value hedging

We have entered into forward exchange contracts for the purpose of hedging the currency risk associated with the construction of our partners' share of offshore wind farms.

Forward exchange contracts have also been concluded for the purpose of hedging the currency risk associated with interest payments on loans in GBP.

#### Cash flow hedge accounting 2019, DKKm

	Contractual principal amount	Maturity analysis			Market value		Recognised in comprehensive income	Expected transfers to income statement		
		2020	2021	After 2021	Asset	Liability		2020	2021	After 2021

### Ineffectiveness

Ineffectiveness of cash flow and fair value hedging totalled DKK 0 million (2018: DKK 0 million).

### Accounting policies

We primarily use hedge accounting for currency and interest where it is possible to use hedging instruments which hedge the desired risk one-to-one. The GBP exposure, for example, is hedged using GBP forward exchange contracts, GBP swaps or GBP loans. There are thus no significant sources of ineffectiveness. For currency swaps, the basic spread is accounted for according to the cost of the hedging model.

To the extent that a risk needs to be hedged, and if there is no fully effective instrument available in the market, analyses are performed of the expected effectiveness of the hedging instrument before the hedging transaction is concluded. In this case, the ratio between the hedged risk and the hedging instrument may deviate from the one-to-one principle and will be determined as the ratio which most effectively hedges the desired risk.

We recognise changes to the market value of hedging instruments that qualify for recognition as a hedge of future cash flows in other comprehensive income in the hedging reserve. On realisation of the hedged cash flow, the resulting gains or losses are transferred from equity and recognised in the same item as the hedged item. However, on hedging of proceeds from future loans, the resulting gain or loss is transferred from equity over the term of the loan.

When we conclude a hedging transaction, and each time we present financial statements thereafter, we assess whether the hedged exposure and the hedging instrument are still financially correlated. If the hedged cash flows are no longer expected to be realised, the accumulated value change is transferred to profit (loss) for the year.

Changes in the market value of derivatives that are classified as hedges of the fair value of a recognised asset or liability are recognised in profit (loss) for the year together with changes in the value of the hedged asset or liability to the extent of the hedged risk.

As of 1 January 2019, we have started to apply IFRS cash flow hedge accounting on power purchase agreements related to the Onshore business unit. Subsequent to entering into an agreement to divest our LNG business, all hedges related to the period after an expected closing date are reclassified from economic hedging to IFRS cash flow hedges (divestments).

The fair value hedges are related to hedges of loans and receivables in the balance sheet.

# 7.3 Energy trading portfolio

## Trading portfolio

The purpose of our trading portfolio is to:

- optimise hedging contracts
- contribute to increased market insight and
- profit from short-term fluctuations in energy prices.

The trading portfolio consists primarily of positions in power and gas.

In 2019, we expanded our trading activities into the US energy market with the setup of a trading desk in Chicago to exploit opportunities from our growing activities in the US.

The trading portfolio constitutes a smaller part of our total portfolio of derivatives, and the associated risk is limited.

When an economic hedging instrument (business performance hedge) does not fully correspond to the hedged risk, any difference between the hedging contract entered into and the hedged exposure is recognised in the income statement as part of the gain (loss) from the trading portfolio.

## Accounting policies

Market value adjustments of physical and financial contracts relating to energy that are entered into with the purpose of generating gains from short-term price changes are recognised as revenue.

Overview of the Group's trading portfolio, DKKm	2019		2018	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Power swaps and options	7,329	386	5,142	(127)
Gas swaps and options	1,467	720	1,126	308
Oil swaps	141	14	184	182
Coal swaps	5	36	50	(7)
Carbon emission allowances	329	(8)	7	(43)
<b>Total</b>	<b>9,271</b>	<b>1,148</b>	<b>6,509</b>	<b>313</b>

## Market trading mandates

VaR limit in 2019: DKK 70 million	Stress limit in 2019: DKK 400 million	Maximum open positions in trading portfolio
VaR indicates the largest loss in one trading day to a probability of 95%. VaR is based on data for the past 60 trading days with the heaviest weighting being assigned to the most recent trading days.	Stress indicates the largest daily loss we risk sustaining with the given portfolio. Stress is based on data from 1 January 2006 to the present day.	<ul style="list-style-type: none"> <li>– Max. 8TWh of power</li> <li>– Max. 15TWh of gas</li> <li>– Max. 4 million boe of oil</li> <li>– Max. 2 million tonnes of coal</li> <li>– Max. 3 million tonnes of carbon emissions</li> </ul>

## Daily position in the trading portfolio, market trading mandates, DKKm

The graph shows the daily value-at-risk position for the period 2018-2019. The mandates from the Board of Directors and Group Executive Management have not been breached during the period.

The contractual principal amount has been determined as the net position per derivative type.

Trading activities are carried out within mandates approved by the Board of Directors. The mandates comprise a value-at-risk (VaR) mandate and a stress mandate as well as a limit for the maximum positions measured in energy units per product (power, gas, etc.).

## 7.4 Sensitivity analysis of financial instruments

The sensitivity analysis in the table shows the effect of market value changes assuming a relative price change at 31 December 2019.

The effect on profit (loss) before tax comprises financial instruments that remained open at the balance sheet date, and which have an effect on profit (loss) in the current financial year. The effect is broken down by:

- trading portfolio: these contracts will affect profit
- other financial instruments, including economic hedging and commercial contracts: the market value changes of contracts allocated as economic hedges will be offset, in full or in part, by a change in the hedged risk.

Effect on equity before tax comprises financial instruments that remained open at the balance sheet date, and which are value-adjusted directly in equity.

Financial instruments include derivatives as well as receivables and payables in foreign currencies.

The illustrated sensitivities only comprise the impact from our financial instruments.

If the hedged exposure had been included in the sensitivity analysis, the effect of a price change would have been reduced or offset entirely.

### Sensitivity analysis of financial instruments DKKm

Risk	Price change	31 December 2019			31 December 2018		
		Effect on profit (loss) before tax		Effect on equity before tax	Effect on profit (loss) before tax		Effect on equity before tax
		Trading portfolio	Other financial instruments <sup>1</sup>		Trading portfolio	Other financial instruments <sup>1</sup>	
Oil	10%	(423)	106	335	(220)	230	-
	-10%	423	(106)	(335)	220	(230)	-
Gas	10%	(22)	(169)	(328)	12	(511)	-
	-10%	22	169	328	(12)	511	-
Power	10%	540	(1,334)	(827)	73	(2,385)	-
	-10%	(556)	1,350	827	(53)	2,365	-
Coal	10%	(10)	1	-	(33)	(5)	-
	-10%	10	(1)	-	33	5	-
USD	10%	(126)	81	135	(16)	(301)	(115)
	-10%	126	(81)	(135)	16	301	115
GBP	10%	68	(2,539)	119	51	(2,905)	(856)
	-10%	(68)	2,539	(119)	(51)	2,905	856
EUR	10%	(263)	(316)	(316)	(228)	(1,353)	420
	-10%	263	316	316	228	1,353	(420)
Interest	100 basis points	(268)	-	159	(454)	-	161
Inflation	100 basis points	-	-	(1,937)	-	-	(1,770)

<sup>1</sup> Other financial instruments, including derivatives classified as economic hedging, comprise derivatives entered into to hedge future financial risks. The market value changes of these contracts will be offset, in full or in part, by a change in the hedged risk. Also included are commercial contracts recognised at market value.

Net investments and associated hedging of net investments in foreign subsidiaries are not included in the table, as the effect of the sum of the investment and the hedging are considered to be neutral to changes in currencies.

A 10% increase in the currencies hedged in connection with net investments would reduce equity by DKK 4,672 million (2018: DKK -2,784 million).

## 7.5 Credit risks

We are exposed to credit risks from our trading partners and customers. A large part of our counterparty risks concerns major international energy companies and banks. Such trading is regulated under standard agreements, such as EFET and ISDA agreements, which feature, for instance, credit rating and netting provisions. Our credit exposure is mainly concentrated on counterparties in Denmark, the UK, Germany and the US.

We limit our credit risks by:

- systematically rating significant counterparties
- granting credit limits or
- demanding that collateral be furnished or credit insurance put in place.

The counterparties and credit limits granted are monitored on an ongoing basis. The monitoring is based on the framework established by our Board of Directors and Group Executive Management. For the most significant counterparties, an internal rating is required to determine credit limits. The rating is based on information from external credit rating agencies, publicly available information and our own analyses.

We suffered no losses from any single major counterparty in 2019 or 2018.

The credit risk from our financial assets primarily concerns derivatives, cash and bond portfolios as well as receivables.

Offsetting of financial assets, DKKm	2019			2018		
	Derivatives	Trade receivables		Derivatives	Trade receivables	
Financial assets	12,174	17,219	29,393	12,173	23,173	35,346
Financial liabilities, offset	(6,917)	(13,767)	(20,684)	(7,435)	(20,060)	(27,495)
<b>Financial assets in the balance sheet</b>	<b>5,257</b>	<b>3,452</b>	<b>8,709</b>	<b>4,738</b>	<b>3,113</b>	<b>7,851</b>
Amounts not offset in the balance sheet:						
Liabilities with offsetting rights	(2,044)	-	(2,044)	(1,485)	-	(1,485)
Collateral received	(1,438)	-	(1,438)	(614)	-	(614)
<b>Net</b>	<b>1,775</b>	<b>3,452</b>	<b>5,227</b>	<b>2,639</b>	<b>3,113</b>	<b>5,752</b>

The table shows our financial assets and liabilities where a share is offset and is therefore presented net. Offsetting is typically limited within specific products.

Offsetting of financial liabilities, DKKm	2019			2018		
	Derivatives	Trade payables		Derivatives	Trade payables	
Financial liabilities	13,108	16,764	29,872	13,410	23,085	36,495
Financial assets, offset	(6,917)	(13,767)	(20,684)	(7,435)	(20,060)	(27,495)
<b>Financial liabilities in the balance sheet</b>	<b>6,191</b>	<b>2,997</b>	<b>9,188</b>	<b>5,975</b>	<b>3,025</b>	<b>9,000</b>
Amounts not offset in the balance sheet:						
Assets with offsetting rights	(2,044)	-	(2,044)	(1,485)	-	(1,485)
Collateral provided	(331)	-	(331)	(713)	-	(713)
<b>Net</b>	<b>3,816</b>	<b>2,997</b>	<b>6,813</b>	<b>3,777</b>	<b>3,025</b>	<b>6,802</b>

The assessment is based on the individual counterparty's ratings with Standard & Poor's, Moody's and Fitch. The figures do not reflect our actual credit exposure as the positions are calculated before offsetting our debt to such counterparties.

### Accounting policies

We only offset positive and negative values if we are entitled to and intend to settle several financial instruments net.

### Credit quality of the Group's counterparties, DKKm

	2019	2018
AAA/Aaa	9,221	20,949
AA/Aa	4,000	3,078
A/A	11,593	6,428
BBB/Baa	5,284	3,817
Non-rated	12,246	11,638
<b>Total credit exposure</b>	<b>42,344</b>	<b>45,910</b>

The table shows the credit quality of our counterparties, distributed by category. In addition, we have receivables and construction agreements related to the construction of offshore wind farms amounting to DKK 1,017 million (2018: DKK 6,951 million) where we have collateral in the offshore wind farm under construction. The AAA/Aaa category covers our position in Danish AAA-rated government and mortgage bonds. The non-rated category primarily consists of trade receivables from customers, such as end-users.

## 7.6 Categories of financial instruments

Financial instruments are used for various purposes. The purpose determines the category, and whether the value adjustment of the instrument should be recognised in the profit (loss) for the year or as part of the hedging reserve in equity.

The fair value of financial instruments measured at amortised cost is identical to the carrying amount with the exception of bank loans and issued bonds where the market value is stated in note 6.1 'Interest-bearing debt'.

The table shows our financial instruments divided into categories. The categories indicate how the financial instruments are recognised in the financial statement.

Humberside Airport, UK.

Categories of financial instruments, DKKm	2019	2018
Energy and currency derivatives	5,072	4,096
Securities	16,552	25,501
<b>Financial assets measured at fair value via the income statement</b>	<b>21,624</b>	<b>29,597</b>
Energy derivatives	1,432	-
Interest and inflation derivatives	585	90

<b>Derivatives (assets) used as hedging instruments</b>	<b>2,668</b>	<b>1,372</b>
Trade receivables	8,140	10,741
Other accounts receivable	11,941	8,896
<b>Financial assets measured at amortised cost</b>	<b>20,081</b>	<b>19,637</b>
Energy and currency derivatives	4,397	6,480
<b>Financial liabilities measured at fair value via the income statement</b>	<b>4,397</b>	<b>6,480</b>
Energy derivatives	690	-
Interest and inflation derivatives	124	103
Currency derivatives	1,747	1,511
<b>Derivatives (liabilities) used as hedging instruments</b>	<b>2,561</b>	<b>1,614</b>
Bank loans and issued bonds	36,840	27,296
Trade payables	10,832	13,082
Other accounts payable	2,595	3,207
<b>Financial liabilities measured at amortised cost</b>	<b>50,267</b>	<b>43,585</b>

## 7.7 Fair value measurement

We measure our securities and derivatives at fair value. A number of our derivatives, mainly power purchase agreements, are measured based on non-observable inputs. The most significant non-observable input is the long-term US power price due to the long duration of the contracts.

### Valuation principles and key assumptions

In order to minimise the use of subjective estimates or modifications of parameters and calculation models, it is our policy to determine fair values based on the external information that most accurately reflects the market values. We use pricing services and benchmark services to increase the data quality. Market values are determined by the Treasury & Risk Management function which reports to the CFO. The development in market values is monitored on a continuing basis and reported to the Group Executive Management.

### Deferred revenue from US power purchase agreements

The deferred revenue from US PPAs consist of losses not recognised at initial recognition since the market value is based on non-observable inputs. The PPAs lock in the power price of the expected power generation over a period of 13-15 years. These contracts are accounted for at fair value. Due to the long duration of these PPAs, power prices are not observable for the last part of the duration. The deferred revenue is recognised in profit or loss in the future period to which the market value relates. In 2019, we have recognised an income of DKK 216 million (2018: DKK 12 million) related to the deferred fair value of PPAs not recognised in profit or loss at initial recognition. The total amount of deferred revenue as of 31 December 2019 amounts to DKK 995 million (2018: DKK 1,183 million).

### US power prices (ERCOT)

The US power purchase agreements give exposure to the long-term US power prices in the ERCOT region. The price is observable for the first four to six years. For the following four to six years, the power price is estimated based on observable inputs (gas prices and heat rates). For the subsequent period, the power price is non-observable and estimated by extrapolating the power price towards the U.S. Energy Information Administration's long-term power price forecast, assuming similar seasonality as in previous periods.

### Significant non-observable inputs

Market values based on non-observable input comprise primarily long-term contracts on the purchase/sale of especially power and to a less extent gas and coal. Since there are no active markets for the long-term prices

of power and gas, the market values have been determined through an estimate of the future prices. Normally, the price can be observed for a maximum of four to six years in the power market, after which an active market no longer exists.

For market prices other than ERCOT, the price is projected by extending the observable forward curve, only adjusted for the expected development in inflation.

### Accounting policies

Market values based on quoted prices comprise quoted securities and derivatives that are traded in active markets. The market value of derivatives traded in an active market are often settled on a daily basis, thereby minimising the market value presented on the balance sheet.

Market values based on observable inputs comprise derivatives where valuation models with observable inputs are used to measure fair value.

All assets and liabilities measured at market value are measured on a recurring basis.

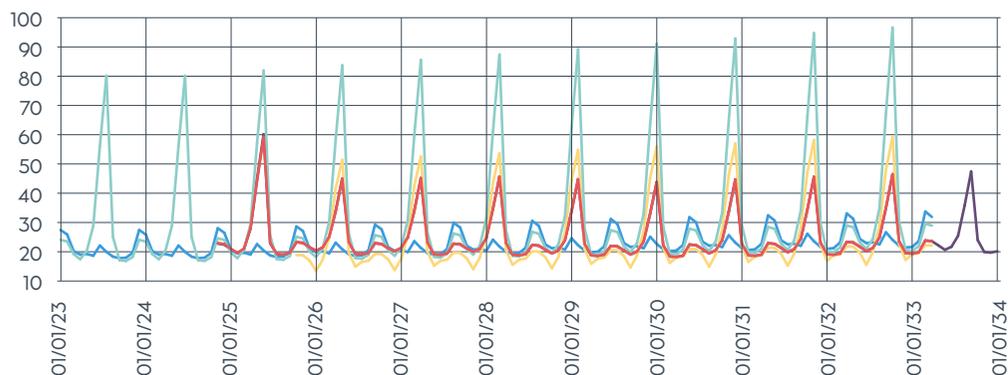

In business combinations, gain (loss) at initial recognition on derivatives whose values are based on non-observable inputs are deferred and recognised in the period to which the value relates.

Fair value hierarchy, DKKm	Assets				Liabilities	
	Inventories	Derivatives	Other receivables	Securities	Derivatives	Other payables
<b>2019</b>						
Quoted prices	959	16	-	-	21	-
Observable input	-	7,467	-	16,552	6,916	-
Non-observable input	-	257	-	-	21	-
<b>Total 2019</b>	<b>959</b>	<b>7,740</b>	-	<b>16,552</b>	<b>6,958</b>	-
<b>2018</b>						
Quoted prices	172	3	-	-	9	-
Observable input	-	5,206	-	25,501	7,179	-

<b>Market value at 31 December</b>	<b>236</b>	<b>(647)</b>

#### Non-observable inputs 2018, Monthly average power price (USD per MWh)

● SPP North RT ● Ercot North RT ● Ercot West DA ● Ercot West RT ● Ercot North DA

US power prices are no longer valued based on significant non-observable inputs, but we include 2018 comparatives. The graph shows the US power prices in the period when prices are not observable, and which we have used as basis for calculating market value as of 31 December 2018.

Non-observable inputs per commodity price input, DKKm	2019	2018
US power prices	-	(2,533)
Other power prices	221	(52)
Gas prices	15	127
<b>Total</b>	<b>236</b>	<b>(2,458)</b>

After a change in the valuation methodology, US power prices are no longer valued based on significant non-observable inputs, see description on previous page.

#### Sensitivity of non-observable inputs 2018, DKKm

Non-observable inputs	Market value	2018 Sensitivity	
		+10%	-10%
ERCOT North real time, 2024-2033	(194)	(105)	105
ERCOT North day ahead, 2024-2033	(388)	(275)	275
ERCOT West day ahead, 2023-2033	(90)	(33)	33
ERCOT West real time, 2025-2033	(132)	(34)	34
SPP North real time, 2023-2033	(288)	(68)	68
<b>Total</b>	<b>(1,092)</b>	<b>(515)</b>	<b>515</b>

US power prices are no longer valued based on significant non-observable inputs, but we include 2018 comparatives. The table shows the market value related to the non-observable input for the stated period and sensitivity per power price index. The sensitivity illustrates the impact on the market value as of 31 December 2018 if the

non-observable price increases/decreases by 10%. The most critical non-observable input in 2018 is US power prices in the period 2023-2033. If power prices as of 31 December 2018 increased/decreased by 10%, the market value would decrease/increase by DKK 515 million.

# 8.1 Related-party transactions

Related parties that have control over the Group comprise the Danish state, represented by the Danish Ministry of Finance.

Other related parties are the Group's associates and joint ventures, members of the Board of Directors and the Executive Board as well as other senior executives.

See note 8.5 'Company overview' for an overview of our joint ventures and associates.

Related-party transactions are made on arm's length terms. Intra-group transactions have been eliminated in the consolidated financial statements.

The remuneration and share programme for Group Executive Management and the Board of Directors are described in notes 2.6 'Employee costs' and 2.7 'Share-based payment'.

Through a directly owned company, Peter Korsholm, board member, has had ordinary transactions with Danish Oil Pipe A/S, a wholly owned subsidiary in the Ørsted Group.

We use the exemption set out in IAS 24.25 concerning entities in which the Danish state is a related party, and therefore transactions with government-related companies are not disclosed.

There were no other related-party transactions during the period.

Code Wind 1 & 2,  
North Sea, Germany.

## 8.2 Leases

Our lease liabilities increased by DKK 108 million relative to 1 January 2019. Additions primarily related to commenced leases of plots of land related to development and construction projects in Onshore.

Offshore's leases mainly comprise seabeds related to the offshore wind farms in the UK and US and service vessels. Onshore's leases comprise plots of land related to onshore wind farms. Markets & Bioenergy mainly lease gas storage facilities in Germany.

Leased assets recognised under 'Other activities' mainly comprise our two office premises in Gentofte and London. The premises are used by employees in all of our business units.

Seabed leases include variable lease payments which depend on the number of megawatt hours generated. However, we have typically agreed on minimum lease payments for the seabeds, and these minimum payments are included in the lease liabilities.

Expenses for the year relating to variable lease payments not included in lease liabilities amounted to DKK 311 million. Interests on lease debt expensed in profit (loss) were DKK 171 million in 2019. Operating lease payments recognised in profit (loss) in 2018 were DKK 778 million.

Total cash outflows for leases were DKK 1,147 million in 2019.

We have entered into leases of DKK 96 million which are not commenced and therefore, they are not included in our lease liabilities.

### Accounting policies

Our lease liabilities are initially measured at the net present value of the in-substance fixed lease payments for the use of a lease asset. If, at inception of the lease, we are reasonably certain about exercising an option to extend a lease, we will include the lease payments in the option period when calculating the lease liability. We measure the lease asset to the value of the lease liability at initial recognition.

Our lease assets are classified alongside our owned assets of similar type under property, plant and equipment. We depreciate our lease assets during the lease term. The depreciation method is straight-line basis for all our lease assets, except for seabed leases where the depreciation method is aligned with the depreciation method for the related offshore wind farm. Therefore, seabed lease assets are depreciated by using either the straight-line method or the reducing-fraction method.

Contracts may contain both lease and non-lease components. We allocate the consideration in a contract to the lease and non-lease components based on their relative stand-alone prices. We account for non-lease components in accordance with the accounting policy applicable for such items. Non-lease components comprise building services and operating costs of leased vessels, etc.

Variable lease expenses are recognised in other external expenses in the period when the condition triggering those payments occurs. Interests of lease liabilities are recognised in financial expenses.

Each lease payment is separated into repayment of the lease liability and payment of interests of the lease liability. Debt repayments are classified as cash flows from financing activities, and payment of interests are classified as cash flows from operating activities.

We implemented the new lease accounting rules in IFRS 16 'Leases' on 1 January 2019. See note 1.3 'Implementation of new or changed accounting standards and interpretations'.

We have implemented IFRS 16 after the modified retrospective method. Therefore, we have not restated comparative figures.

## 8.3 Auditor's fees

PwC is Ørsted's auditor appointed by the annual general meeting. PwC audits the consolidated financial statements of Ørsted and our subsidiaries' financial statements in all the countries where we are represented.

It is our policy that the annual fee for non-audit services provided by our statutory auditor cannot exceed the annual fee for statutory audit services measured at Group level. The cap may be exceeded subject to approval by the Audit & Risk Committee.

Other assurance engagements primarily included reviews of ESG data and reviews of regulatory financial statements.

Tax and VAT advice primarily included advice in connection with the divestment of assets and enterprises and advice in connection with the preparation of tax returns.

Other services included other consultancy services from PwC, including advice in connection with accounting, GDPR, due diligence and divestment of assets and enterprises.

Fees for services other than statutory audit supplied by PwC Denmark to Ørsted amounted to DKK 6 million (2018: DKK 11 million) and consisted of accounting and tax advice in connection with both acquisition and divestment of assets and enterprises, review of ESG data and other general accounting and tax advice.

Auditor's fees, DKKm	2019	2018
<b>Audit and audit-related fees</b>		
Statutory audit	12	11
Other assurance engagements	2	2
<b>Non-audit services</b>		
Tax and VAT advice	2	3
Other services	4	7
<b>Total fees to PwC</b>	<b>20</b>	<b>23</b>
<b>Fee for non-audit services in percent of statutory audit fee</b>	<b>47%</b>	<b>94%</b>

## 8.4 Contractual obligations

Our contractual obligations at 31 December 2019 mainly related to offshore wind turbines, foundations and cables, etc., for the construction of offshore wind farms. We have increased the obligations significantly relative to the last year due to the signing of contracts related to the construction of primarily Greater Changhua 1 & 2a in Taiwan, Hornsea 2 in the UK and Borssele 1 & 2 in the Netherlands.

The obligations in Onshore mainly related to purchases of onshore wind turbines and solar PV modules.

Lease liabilities are not part of the contractual obligations. See note 8.2 'Leases'.

Contractual obligations by segment, DKKm	 Offshore	 Onshore	 Markets & Bioenergy	Total
	0-1 year	22,991	1,316	
1-5 years	27,824	11	-	27,835
<b>2019</b>	<b>50,815</b>	<b>1,327</b>	<b>209</b>	<b>52,351</b>
<b>2018</b>	<b>18,813</b>	<b>2,811</b>	<b>981</b>	<b>22,605</b>

Overview of concluded contracts where delivery had not taken place at 31 December 2019.

<sup>1</sup> S = subsidiary

A = associate

JO = joint operation

JV = joint venture

NC = non-consolidated entity

<sup>2</sup> The company is owned through a company which is not owned 100% by Ørsted. The disclosed ownership interest is Ørsted's ultimate ownership interest in the company.

<sup>3</sup> The company applies the provision in section 5 or section 6 of the Danish Financial Statements Act to omit presenting a separate annual report.

<sup>4</sup> Subsidiaries owned directly by Ørsted A/S.

<sup>5</sup> One or more tax equity partners own an insignificant share of the company. See note 4.5 'Tax equity liabilities'. The company is fully consolidated.

<sup>6</sup> Unincorporated activity which is owned jointly with partners.

# Consolidated ESG statements

(additional information)

- 159** Basis of reporting
- 160** Environment
- 162** Social
- 163** Governance

The now operational Lockett Wind Farm is providing the state of Texas with green and flexible wind power. It is also supporting the local community, contributing to youth programmes, food bank donations and other non-profit contributions in the Wilbarger area.

# Basis of reporting

## Consolidated environmental, social and governance (ESG) statements

In the consolidated ESG statements, we present our results, objectives and accounting policies for the ESG data included in the management's review in this report.

Our full ESG data set can be seen in the independent publication '[ESG performance report 2019](#)'. The ESG performance report also includes additional information, such as selected ESG indicators by country and all ESG accounting policies, including a list of references for conversion factors used in calculations.

## Scope and consolidation

Unless otherwise stated, ESG data is reported on the basis of the same principles as the financial statements. Thus, the consolidated ESG statements include consolidated data from the parent company, Ørsted A/S, and subsidiaries controlled by Ørsted A/S. Data from associates and joint ventures are not included.

The consolidation of safety data deviates from the above described principles. Safety data is collected using an operational scope. This means that we, irrespective of our ownership share, include 100% of injuries and hours worked, etc., arising from all operations where Ørsted is responsible for safety, including safety related to external suppliers.

Data from acquisitions and divestments are included/excluded from the date of acquisition/divestment.

## Danish Financial Statements Act, sections 99a and 99b

Pursuant to section 99a of the Danish Financial Statements Act, Ørsted is under an obligation to account for the company's CSR activities and report on business strategies and activities with regard to human rights, labour rights, anti-corruption, the environment and the climate. By publishing our sustainability report ([orsted.com/sustainability2019](http://orsted.com/sustainability2019)), Ørsted complies with section 99a of the Danish Financial Statements Act.

Ørsted's work for greater gender diversity at management level is reported in accordance with section 99b of the Danish Financial Statements Act. The reporting of gender diversity can be seen in our [2019 ESG performance report](#).

## Business changes in 2019 affecting ESG data

There has been no M&A related business changes with significant ESG impact in 2019.

## New ESG indicators in 2019

– Scope 3 greenhouse gas emissions (introduced in the H1 2019 interim ESG report).

## Revised ESG indicator

– GHG intensity: Scope 1 and 2 GHG emission per kWh energy generated (introduced in the H1 2019 interim ESG report).

– People powered (added onshore wind capacity, solar capacity, revised load factors and state-specific emission factors for sites in the US).

## Discontinued ESG indicators

– System average interruption frequency index (SAIFI).  
– Customer satisfaction.

The two indicators can still be found in the ESG performance report for 2019.

Our full ESG data set can be seen in the ESG performance report 2019. ([orsted.com/ESGperformance2019](http://orsted.com/ESGperformance2019))

# 9.9GW

Our installed renewable capacity increased by 19% from 2018 to 2019. We have a target of 30GW installed renewable capacity in 2030.

# 86%

The green share of our heat and power generation increased from 75% in 2018 to 86% in 2019. We have a target of 99% in 2025.

# 65g CO<sub>2</sub>e/ kWh

Our greenhouse gas intensity was reduced by 50% to 65g CO<sub>2</sub>e/kWh in 2019. Our target is to reach 10g CO<sub>2</sub>e/kWh in 2025.

# 96%

The certified sustainable share of our sourced wooden biomass increased from 83% in 2018 to 96% in 2019. Our target is to reach 100% in 2020.

<sup>1</sup> Additional target is 95% (2023).

<sup>2</sup> Additional target is 20 (2023).

<sup>3</sup> Primary source of emission: wind farm suppliers.

<sup>4</sup> Primary source of emission: fossil-based power sales.

<sup>5</sup> Primary source of emission: natural gas sales.

<sup>6</sup> Remaining categories of the 15 defined scope 3 GHG categories according to the Greenhouse Gas Protocol.

<sup>7</sup> The 5GW target (2025) is for onshore wind and solar combined.

The green (renewable) share of our heat and power generation amounted to 86% in 2019, up 11 percentage points relative to 2018. The increase was primarily due to higher generation from wind farms, a larger share of biomass-based generation as well as lower use of gas following the divestment of the Enecogen power plant in 2018. Our target is 99% green energy generation in 2025.

Our greenhouse gas intensity was reduced by 50% for the same reasons as for the increase in the renewable energy share. We are well on track to meeting our target of a greenhouse gas emission intensity of no more than 10g CO<sub>2</sub>e/ kWh in 2025. We will continue to investigate solutions for the remaining emissions, which could also include investing in certified carbon removal projects.

Our scope 3 greenhouse gas emissions were reduced by 4% from 2018 to 2019. The main driver for this reduction was the reduced sales of gas (category 11, use of sold products). The second-largest scope 3 emission category '3: Fuel- and energy-related activities' was reduced by 10% from 2018 to 2019 due to lower fossil fuel consumption in the thermal heat and power generation and reduced sale of fossil-based power to end-customers. The third-largest category '2: Capital goods' includes greenhouse gas emissions from the supply chain and installation of the offshore wind farm Hornsea 1 and the onshore wind farm Lockett.

The installed renewable capacity increased by 19% in 2019 due to commissioning of the offshore wind farm Hornsea 1 (1,218MW) and the onshore wind farm Lockett (184MW).

Strategic target	Business driver	Indicator	Unit	Target	2019	2018
		<b>Generation, power and heat total</b>	<b>TWh</b>		<b>28.4</b>	<b>26.0</b>
	●	Power generation	TWh		20.1	17.2
	●	– Offshore wind	TWh		12.0	10.0
	●	– Onshore wind	TWh		3.5	0.5
	●	– Solar	TWh		0.0	0.0
	●	– Thermal	TWh		4.6	6.7
	●	Heat generation, thermal	TWh		8.3	8.8
		<b>Offshore wind</b>				
	●	Generation capacity	GW		3.6	3.0
	●	Wind speed	m/s		9.2	9.1
	●	Wind speed, normal wind year	m/s		9.2	9.2
	●	Load factor	%		42	42
	●	Availability	%		93	93
		<b>Onshore wind</b>				
		Generation capacity	GW		1.0	0.8

	●	Load factor	%		45	41
	●	Availability	%		98	98
		<b>Thermal heat and power generation</b>				
		Power generation capacity	GW		2.9	2.8
		Heat generation capacity	GW		3.6	3.4
	●	Degree days, Denmark	Number		2,399	2,526
		Coal share of fuels	%	0 (2023)	24	38
		Sourcing of certified wooden biomass	%	100% (2020)	96	83
		Green share of thermal heat and power generation	%		68	58
		<b>Avoided carbon emissions</b>	<b>Million tonnes CO<sub>2</sub>e</b>		<b>11.3</b>	<b>8.1</b>
		– From offshore wind generation	Million tonnes CO <sub>2</sub> e		7.6	6.3
		– From onshore wind generation	Million tonnes CO <sub>2</sub> e		2.3	0.4
		– From biomass-converted generation	Million tonnes CO <sub>2</sub> e		1.4	1.4
		<b>Sales and distribution</b>				
	●	Gas sales	TWh		125.0	131.1
	●	Power sales	TWh		27.6	27.3 <sup>1</sup>
	●	Power distribution	TWh		8.4	8.4

The increase in offshore wind capacity contributed to a 20% increase in offshore wind-based generation in 2019. The increase in onshore wind and solar power generation is mainly because it is the first full year with onshore power capacity.

Thermal power generation decreased by 31% in 2019, mainly due to generation of heat without combined power generation at Asnæs Power Station and the divestment of the Dutch power plant Enecogen in 2018.

Thermal heat generation decreased by 6% due to warmer weather in H1 2019, leading to a lower demand for heat, partly offset by colder weather and higher heat generation in H2 2019.

The coal share of fuels in our thermal heat and power generation decreased by 14 percentage points and the green share increased by 10 percentage points, in 2019. This was primarily the result of the Asnæs Power Station generating heat without power based on coal in the period up until the new biomass converted unit was taken in use and then generating heat based on biomass towards the end of the year.

The certified share of renewable wooden biomass increased from 83% in 2018 to 96% in 2019. Our target is to source all wooden biomass as certified sustainable biomass in 2020.

Due to the increase in renewable energy generation, the amount of avoided carbon emissions increased by 40% from 2018 to 2019. In 2019, our renewable energy generation avoided the emission of 11.3 million tonnes carbon dioxide.

<sup>1</sup> We have updated the previously announced 2018 value for power sales, as we have eliminated the internally sourced power generation volumes in Germany and the UK in the total external sales for Ørsted.

# Social

Strategic target	Business driver	Indicator	Unit	Target	2019	2018
		<b>Employees</b>				
		Total number of employees at 31 December	Number of FTEs		6,526	6,080
		Average number of employees for the year	Number of FTEs		6,329	5,796
●		Employee satisfaction	Scale 0-100	77 (2020) <sup>1</sup>	77	76
		<b>Safety</b>				
		Fatalities	Number		1	0
		LTIF (lost-time injury frequency)	Per million working hours		2.1	1.5
●		TRIR (total recordable injury rate)	Per million working hours	2.9 (2025)	4.9	4.7
		<b>Job year creation from offshore wind power value chain</b>				
		Based on installed capacity	Thousand job years		137	112
		Based on installed + FID capacity	Thousand job years		197	179
		Based on installed capacity + FID + awarded and contracted capacity	Thousand job years		297	258
		<b>People powered</b>				
		Based on installed capacity	Million people		15.2	12.2 <sup>2</sup>
		Based on installed + FID capacity	Million people		23.7	21.3
		Based on installed capacity + FID + awarded and contracted capacity	Million people		32.8	30.1

<sup>1</sup> We have reached our 2020 target of 77 one year in advance. Our new target from 2020 and onward is an employee satisfaction survey result in the top ten percentile compared with an external benchmark group.

<sup>2</sup> We have restated the 2018 value with an adjustment for actual load factors, state-specific consumption factors in the US and added onshore wind and solar capacity.

The number of employees increased by 7% from 2018 to 2019 due to growth in existing and new markets.

Employee satisfaction continued to be high. With a satisfaction and motivation score of 77 in 2019, our 2020 target of reaching a satisfaction and motivation score of 77 has been reached one year in advance. We have set a new target of staying in the top 10 percentile compared to our external benchmark group.

On 1 May 2019, Ørsted experienced a fatal accident at Avedøre Power Station where a contractor was buried under coal during work in a silo. An independent investigation was completed to identify the root causes. Safety is of utmost importance to us, and we have initiated several improvement tracks to ensure that an accident like this will never happen again.

Our total recordable injury rate (TRIR) increased from 4.7 in 2018 to 4.9 in 2019. We registered 106 total recordable injuries (TRIs), 71 of which involved employees working for our suppliers. LTIF increased from 1.5 in 2018 to 2.1 in 2019. We continue to have a strong focus on safety. Our target is a TRIR of 2.9 or below in 2025.

In a lifecycle perspective, our and our partners' investments in deploying green offshore energy have created 137,000 job years based on the installed renewable capacity.

Our 2030 target of 30GW renewable energy corresponds to more than 55 million people powered.

The Board of Directors is responsible for the overall management of the company. The Board of Directors lays down the company's strategy and makes decisions concerning major investments and divestments, the capital base, key policies, control and audit matters, risk management and significant operational issues.

Climate change is fundamental to our business strategy, and climate-related issues are an integral part of the board agendas. The Board monitors and oversee progress related to Ørsted's strategic ambitions, including our ambitious targets for addressing climate-related issues. The Board integrates considerations for climate protection when setting our strategic direction, reviewing sustainability risks, setting performance objectives, deciding on our capital allocation, and when approving and overseeing major investments, acquisitions and divestments.

Our employees and other associates may report serious offences, such as cases of bribery, fraud and other inappropriate or illegal conduct, to our whistleblower scheme or through our management system.

In 2019, three substantiated cases of inappropriate or unlawful behaviour were reported through our whistleblower scheme. Two cases concerned violation of good business conduct policies, and one case concerned conflict of interest between a third party representative and Ørsted. The cases had consequences for the individuals involved. None of the reported cases were critical to our business or impacted our financial results.

Whistleblower cases are taken very seriously, and we continuously enhance the awareness about good business conduct, e.g. through education as well as awareness campaigns to minimise future similar cases.

## Accounting policies – Environment

### Green share of heat and power generation

The green (renewable energy) share of our heat and power generation and the distribution of the generation from the individual energy sources and fuels are calculated on the basis of the energy sources used and the energy generated at the different energy plants.

Wind and solar-based generation is computed as the input from the individual plant (wind and solar), as there is only one source of power for each plant. For CHP plants, the share of the specific fuel (e.g. biomass) is calculated relative to the total fuel consumption for a given plant/unit within a given time period. The specific fuel share is then multiplied with the total heat and power generation for the specific unit in the specific period. The result is the fuel-based generation for the individual unit – for example the biomass-based generation of heat and power from the CHP unit within a given time period.

Energy generation based on fuel, wind and solar is added up to a total which tallies with total generation. The percentage shares of the individual energy sources are calculated by dividing generation from individual energy source with the total generation.

The following energy sources and fuels are considered renewable energy: wind, solar, biomass and biogas. The following energy sources are considered fossil energy sources: coal, natural gas, oil and regular power.

### Greenhouse gas intensity

Greenhouse gas intensity is defined as the scope 1 and 2 (market-based) greenhouse gas emissions divided by the total heat and power generation.

### Scope 1 and 2 greenhouse gas emissions

The scope 1 and 2 emissions are calculated based on the Greenhouse Gas Protocol. Scope 1 covers all direct emissions of greenhouse gases from Ørsted. The direct carbon emissions from the combined heat and power plants are determined on the basis of the fuel quantities used in accordance with the EU ETS scheme. Carbon dioxide and other greenhouse gas emissions outside the EU ETS scheme are for the most part calculated as energy consumptions multiplied by emission factors. Scope 2 emissions

are primarily calculated as the power volumes purchased multiplied by country-specific emission factors. Location based is calculated based on average emission factors for each country, whereas marked based takes account for green power purchased and assumes the non-green power is delivered as residual power where the green part has been taken out.

### Scope 3 greenhouse gas emissions

The scope 3 greenhouse gas emissions are reported based on the Greenhouse Gas Protocol which divides the scope 3 inventory into 15 subcategories.

GHG emissions from capital goods include upstream GHG emissions from installed wind farms. We calculate the emissions based on GHG life-cycle data from one of our wind turbine suppliers. Carbon emissions are included from cradle to operation and maintenance for single wind turbines. Wind farms are included in the month where the wind farm passes commercial operation date.

GHG emissions from fuel- and energy-related activities are calculated based on actual fuel consumption and power sales as reported in our ESG consolidation system. The fuel consumption is multiplied by emission factors to calculate the upstream GHG emissions from extraction, mining, forestry, transportation, etc., for the fuels. We include all power sales to end-customers and use separate emission factors for green and non-green power sales.

GHG emissions from use of sold products are calculated based on actual sales of gas (to both end-users and wholesale) as reported in our ESG consolidation system. The total gas sale is divided into natural gas, LNG gas and biogas which have specific upstream and downstream emission factors.

'Other' includes GHG emissions from:

- purchased goods and services calculated based on spend reports from our SAP system. All spends are divided into categories where relevant emission factors are used to calculate the GHG emissions from each spend category
- upstream transportation and distribution which are included in the emission factors we use for purchases and sale and are therefore not reported separately

- waste generated in operations calculated based on actual waste volumes multiplied with the relevant emission factors
- business travel which is calculated based on mileage allowances for employee travel in own car. GHG emissions from airplane travel is provided by our travel agent
- employee commuting is calculated based on estimates for distance travelled and travel type (e.g. car and train)
- downstream transportation and distribution which are calculated based on actual volumes of residual products generated from our CHP plants multiplied by relevant GHG emission factors for transportation

### Installed, decided and awarded renewable energy capacity

The installed renewable capacity is calculated as the cumulative renewable gross capacity installed by Ørsted before divestments. For installed renewable thermal capacity, we use the heat capacity, as heat is the primary outcome of thermal energy generation, and as bioconversions of the combined heat and power plants are driven by heat contracts. Decided (FID) capacity is the renewable capacity for which a final investment decision (FID) has been made. The awarded renewable capacity is based on the capacities which have been awarded to Ørsted in auctions and tenders. The contracted capacity is the capacity for which Ørsted has signed a contract or power purchase agreement (PPA) concerning a new renewable energy plant. Typically, offshore wind farms are awarded, whereas onshore wind farms are contracted. We include the full capacity if more than 50% of PPAs/offtake are secured.

### Heat and power generation

Power generation from wind is calculated as sold generation. The Gunfleet Sands and Walney 1 and 2 offshore wind farms have been consolidated according to ownership interest. The other wind farms are financially consolidated.

Thermal power generation is determined as net generation sold based on settlements from the official Danish production database. Data for generation from foreign facilities are provided by the operators. Thermal heat (including steam) generation is measured as net output sold to heat customers.

### Heat and power generation capacity

Power generation capacity from wind farms is included from the time when the individual wind turbine has passed a 240-hour test for offshore. For onshore, wind and solar farms the whole farm is included after COD. The Gunfleet Sands and Walney 1 and 2 offshore wind farms have been consolidated according to ownership interest. Other wind farms, solar and CHP plants are financially consolidated. The thermal heat and power generation capacity is a measure of the maximum capability to generate heat and power. The capacity can change over time with plant modifications. For each CHP plant, the capacity is given for generation with the primary fuel mix. Overload is not included.

### Availability and load factor

The production-based availability (PBA) is calculated as the ratio of actual production to the possible production, which is the sum of lost production and actual production in a given period. PBA is impacted by grid and wind-turbine outages, which are technical production losses. PBA is not impacted by market-requested shutdowns and wind farm curtailments, as this is deemed not to be reflective of site performance, but due to external factors.

The load factor is calculated as the ratio between actual generation over a period relative to potential generation, which is possible by continuously exploiting the maximum capacity over the same period. The load factor is commercially adjusted. Commercially adjusted means that, for Danish and German offshore wind farms, the load factor is adjusted if the offshore wind farm has been financially compensated by the transmission system operators in situations where the offshore wind farm is available for generation, but the output cannot be supplied to the grid due to maintenance or grid interruptions. Wind farms in other countries are not compensated for non-access to the grid.

### Wind speed

Wind speeds for the areas where Ørsted's offshore wind farms are located are provided to Ørsted by an external supplier. Wind speeds are weighted on the basis of the capacity of the individual offshore wind farms and consolidated to an Ørsted total. Onshore wind speed is based on wind speed measurements from anemometers on the wind turbines. Due to the location of these anemometers on the wind turbine nacelles, these measurements understate actual wind speed conditions on site as they are impacted by the wake and blockage effects.

**Sales and distribution**

Sales of power and natural gas are calculated as physical sales to retail and wholesale customers and exchanges. Sales of power and gas are based on readings from Ørsted's trading systems. Internal sales to Bioenergy are not included in the statement. Power distribution is determined on the basis of data from the official system in Denmark, which measures and calculates total area consumption.

**Degree days**

Degree days are a measure of how cold it has been, and thus indicate the amount of energy needed to heat a building. The number of degree days helps to compare the heat demand for a given year with a normal year. The number of degree days expresses the difference between an average indoor temperature of 17°C and the outside mean temperature for a given period. The need for heat increases with the number of degree days.

**Coal share of fuels used for thermal heat and power generation**

The coal share is calculated as the coal consumption in gigajoule relative to the total fuel volume in gigajoule.

**Sourcing of certified wooden biomass**

Certified biomass is defined as wooden biomass, i.e. wood pellets and wood chips. Biomass is measured as sourced wooden biomass delivered to the individual combined heat and power plants within the reporting period.

Certified sustainable wooden biomass sourced must be certified within at least one of the claim categories accepted by the Danish industry agreement on certified biomass. Accepted claim categories are: FSC 100%, FSC Mix, PEFC 100%, and SBP compliant. Certified biomass is calculated as the amount of sourced wooden biomass compared to the total amount of sourced wooden biomass delivered to individual CHP plants within the reporting period.

**Biomass share of thermal heat and power generation**

This is calculated as the green share of heat and power generation, but is only shown for thermal heat and power generation.

**Avoided carbon emissions**

The avoided carbon emissions due to generation from offshore and onshore wind farms are calculated under the assumption that the generation from wind farms replace an equal quantity of power generated using fossil fuels.

The carbon emissions avoided due to conversions of combined heat and power plants and subsequent switch of fuel from fossil to biomass is calculated from the energy content of the fuel used at CHP plants. It is assumed that the use of 1GJ of biomass fuel avoids the use of 1GJ of fossil fuels. The upstream emissions from biomass fuel production and transportation are included.

**Accounting policies – Social****Employees**

Our reporting covers contractually employed employees in all Ørsted companies in which Ørsted holds an ownership interest of more than 50%. Employees in associates are not included.

Employee data are recognised based on records from the Group's ordinary registration systems. The number of employees is determined as the number of employees at the end of each month converted to full-time equivalents (FTEs).

Employees who have been made redundant are recognised until the expiry of their notice period, regardless of whether they have been released from all or some of their duties during their notice period.

**Employee satisfaction**

Ørsted conducts a comprehensive employee satisfaction survey once a year. With a few exceptions, all Ørsted employees are invited to participate in the survey.

The following employees are not invited to participate: Employees who joined the company shortly before the employee satisfaction survey, employees who resigned shortly after the employee satisfaction survey, interns, consultants/advisers and external temporary workers who do not have an employment contract with Ørsted.

In the survey, a number of questions are asked. The answers are given on a scale from 1 to 10 and are

subsequently converted to index figures on a scale from 0 to 100.

**Safety**

Occupational injuries are calculated according to operational scope. Data from companies wholly or partly owned by Ørsted, and where Ørsted is responsible for safety, is included. Occupational injuries and lost-time injuries are calculated for both our own employees and suppliers. Data from all Ørsted locations is recognised.

The lost-time injury frequency (LTIF) is calculated as the number of lost-time injuries per one million hours worked. The number of hours worked is based on 1,667 working hours annually per full-time employee and monthly records of the number of employees converted into full-time employees. For suppliers, the actual number of hours worked is recognised on the basis of data provided by the supplier, access control systems at locations or estimates.

LTIF includes lost-time injuries defined as injuries that result in incapacity to work for one or more calendar days in addition to the day of the incident. In addition to lost-time injuries, TRIR also includes injuries where the injured person is able to perform restricted work the day after the accident as well as accidents where the injured person has received medical treatment. Fatalities are the number of employees who lost their lives as a result of a work-related incident.

**Job creation**

The number of job years is calculated based on a factor for job years per megawatt installed provided by the International Renewable Energy Agency, IRENA. The job year creation factor is based on a 500MW offshore wind farm. The factor is not adjusted for other details, such as when the wind farm was constructed (wind turbine size and other parameters), wind farm size-specific parameters beyond a simple scaling of capacity size or geographical position (i.e. water depths and distance to shore).

The number of job years created relates only to the value chain from procurement and manufacturing, over installation, operation and maintenance, to decommissioning.

This means that job years related to, for example, mining and manufacturing of steel and concrete

as well as local jobs, such as hotels and dining for people working on local sites, are not included. A lifetime of 25 years for all wind farms is used.

The number of job years relates to the installed capacity and not Ørsted's ownership share of the wind farm. The number of job years varies during the lifespan, and most of the jobs are created in the beginning during construction and installation.

**People powered**

The figure for people powered based on installed capacity is calculated using the capacity installed, the actual load factor and country-specific power consumption per person (state-specific consumption factors are used in the US). People powered based on FID and awarded capacity is calculated on the basis of capacity, an average load factor based on business cases for offshore wind, onshore wind and solar. Consumption is country-specific consumption per person (state-specific consumption factors are used in the US).

**Accounting policies – Governance****Board of Directors of Ørsted A/S**

The employee representatives on the Board of Directors are not included in the data for the Board of Directors.

**Substantiated whistleblower cases**

Ørsted's whistleblower hotline is available for internal and external reporting of suspected cases of inappropriate or illegal behaviour. Whistleblower cases are received and handled by the Internal Audit function, which also receives similar reports through the management system and from compliance officers. All reports are managed in accordance with the guidelines for the handling of whistleblower reports approved by the Audit & Risk Committee, which is ultimately responsible for the whistleblower scheme. Only cases, which are closed during the financial year, and which have been reported to the Audit & Risk Committee as fully or partially substantiated, are reported in the ESG statement.

**Cases transferred to the police**

Cases transferred to the police are defined as the number of cases reported in accordance with the above which are transferred to the police.

Share capital composition and dividends are disclosed in note 6.2 to the consolidated financial statements. Information on treasury shares is available in the note.

# 1. Basis of reporting

## Accounting policies

The parent company financial statements have been prepared in accordance with the provisions of the Danish Financial Statements Act (reporting class D).

The Danish Financial Statements Act allows us to use certain IFRS standards to interpret the act. Effective from 1 January 2019, we have implemented IFRS 16 'Leases'.

The implementation of IFRS 16 'Leases' in 2019 has increased our EBITDA for 2019 by DKK 149 million. Depreciation of lease assets amounted to DKK 146 million, and interests on lease debt amounted to DKK 38 million. The net effect on profit (loss) for 2019 was a loss of DKK 35 million.

The effect on the balance sheet per 31 December 2019 was an increase in assets of DKK 1,352 million and an increase in liabilities of DKK 1,387 million.

Also, IFRS 15 'Revenue' has been implemented. The implementation has no effect on the figures.

The accounting policies remain unchanged from the previous year with the exception of the implementation of IFRS 15 'Revenue' and IFRS 16 'Leases'.

Unless otherwise stated, the financial statements are presented in Danish kroner (DKK) rounded to the nearest million.

The parent company accounting policies are consistent with the accounting policies described for the consolidated financial statements, with the following exceptions.

## Foreign currency translation

We recognise exchange rate adjustments of receivables from and payables to subsidiaries as financial income and expenses in the income statement when the balances are accounted for as part of the total net investment in foreign enterprises. Likewise, we recognise foreign exchange gains and losses on loans and derivatives in the income statement as financial income and expenses when they have been entered into to hedge the net investment in the foreign enterprises.

## Revenue

Rental income comprises income from commercial leases and is recognised over the term of the lease. Income from services is recognised when delivery has taken place.

## Dividends from investments

Dividends from subsidiaries and associates are recognised in the income statement for the financial year in which the dividends are approved at the annual general meeting. If the dividends exceed the total income after the time of takeover, the dividends are recognised as a reduction of the cost of the investment under assets.

## Investments

We measure our investments in subsidiaries and associates at cost. If there is any indication that the value of a company is lower than our future earnings in the company, impairment testing of the company is carried out as described in the consolidated financial statements. The carrying amount is written down to the recoverable amount whenever the carrying amount exceeds the future earnings in the company (recoverable amount).

If we have a legal or constructive obligation to cover a deficit in subsidiaries and associates, we recognise a provision for this.

## Tax

Ørsted A/S is taxed jointly with its Danish subsidiaries. The jointly taxed companies are part of joint taxation with the parent company as the management company.

Subsidiaries are included in the joint taxation from the date they are consolidated in the consolidated financial statements and up to the date on which they are no longer consolidated.

Current tax for 2019 is recognised by the individual jointly taxed companies.

## Statement of cash flows

We do not prepare a separate statement of cash flows for the parent company. Reference is made to the consolidated statement of cash flows on page 71.

## Key accounting estimates

In connection with the preparation of the financial statements, a number of accounting estimates have been made that affect the profit (loss) and balance sheet. Estimates are regularly reassessed by management on the basis of historical experience and other relevant factors.

### Impairment test

If there is any indication that the carrying amount is lower than our future earnings in a company, we test for impairment as described in the consolidated financial statements. The future earnings of the company (recoverable amount) are calculated based on assumptions concerning significant estimates.

Formosa 1, north-western coast, Taiwan.

## 2. Employee costs

Employee costs, DKKm	2019	2018
Wages and salaries	27	24
Share-based payment	4	4
Remuneration of the Board of Directors	5	5
<b>Total employee costs</b>	<b>36</b>	<b>33</b>

Salaries and remuneration of the Executive Board, DKK '000	2019	2018
Fixed salary	16,810	16,400
Cash-based incentive scheme	4,561	4,630
Retention bonus, etc.	-	1,875
Share-based payment	4,046	3,537
Pension, incl. social security and benefits	564	555
<b>Total</b>	<b>25,981</b>	<b>26,997</b>

Notes 2.6 and 2.7 to the consolidated financial statements describe the remuneration of the Executive Board and the Board of Directors, share-based payment, termination and bonus scheme for the Executive Board and details on the remuneration of the Board of Directors.

The parent company had an average of six employees in 2019 (2018: five employees).

## 3. Financial income and expenses

Financial income and expenses, DKKm	2019	2018
Interest income from cash, etc.	103	56
Interest income from subsidiaries	2,546	1,803
Interest income from securities at market value	221	258
Capital gains on securities at market value	166	119

Value adjustments of derivatives	(9,676)	(2,330)
Other financial expenses	(8)	(30)
<b>Total financial expenses</b>	<b>(14,533)</b>	<b>(6,732)</b>
<b>Net financial income and expenses</b>	<b>4,210</b>	<b>3,282</b>

## 4. Tax on profit (loss) for the year and deferred tax

Income tax, DKKm	2019	2018
Tax on profit (loss) for the year	(376)	(69)
Tax on changes in equity	(30)	(86)
<b>Total tax for the year</b>	<b>(406)</b>	<b>(155)</b>
<b>Tax on profit (loss) for the year can be broken down as follows:</b>		
Current tax	(704)	(88)
Adjustments to deferred tax	226	(18)
Adjustments to current tax in respect of prior years	105	35
Adjustments to deferred tax in respect of prior years	(3)	2
<b>Tax on profit (loss) for the year</b>	<b>(376)</b>	<b>(69)</b>

Development in deferred tax, DKKm	2019	2018
Deferred tax at 1 January	97	81
Adjustments for the year recognised in profit (loss) for the year	(226)	18
Adjustments to deferred tax in respect of prior years	3	(2)
<b>Deferred tax at 31 December</b>	<b>(126)</b>	<b>97</b>

Specification of deferred tax, DKKm	2019	2018
Non-current liabilities	126	97
<b>Deferred tax, asset</b>	<b>126</b>	<b>-</b>
<b>Deferred tax, liability</b>	<b>-</b>	<b>97</b>

## 5. Distribution of net profit

Distribution of net profit, DKKm	2019	2018
<b>Profit (loss) for the year is attributable to:</b>		
Shareholders in Ørsted A/S, proposed dividends for the financial year	4,414	4,099
Shareholders in Ørsted A/S, retained earnings	(1,526)	(1,512)
Interest payments and costs, hybrid capital owners of Ørsted A/S	675	425
<b>Profit (loss) for the year</b>	<b>3,563</b>	<b>3,012</b>

## 6. Property, plant and equipment

Property, plant and equipment, DKKm	Land and buildings
Cost at 1 January 2019	-
Lease assets at 1 January 2019	1,498
<b>Cost at 31 December 2019</b>	<b>1,498</b>
Depreciation and amortisation at 1 January 2019	-
Depreciation and amortisation	146
<b>Depreciation and amortisation at 31 December 2019</b>	<b>146</b>
<b>Carrying amount at 31 December 2019</b>	<b>1,352</b>
<b>Value of leased assets</b>	<b>1,352</b>

Effective from 1 January 2019, we have implemented IFRS 16 'Leases', see note 1 'Basis of reporting'.

We have entered into leases for office premises, primarily in Gentofte (expiring in 2028).

We have entered into operating leases with subsidiaries for sublease of office premises.

In 2019, an amount of DKK 106 million was recognised (2018: DKK 97 million) in profit (loss) for the year in respect of rental income.

## 7. Investments in subsidiaries

Investments in subsidiaries, DKKm	2019	2018
Cost at 1 January	41,825	41,762
Additions	27	63
Disposals	(1,501)	-
<b>Cost at 31 December</b>	<b>40,351</b>	<b>41,825</b>
Value adjustments at 1 January	(1,400)	-
Impairment losses	(2,101)	(1,400)
<b>Value adjustments at 31 December</b>	<b>(3,501)</b>	<b>(1,400)</b>
<b>Carrying amount at 31 December</b>	<b>36,850</b>	<b>40,425</b>

Note 8.5 of the consolidated financial statements contains a complete overview of subsidiaries, etc.

We have tested investments in subsidiaries for impairment by comparing the expected future income from the individual subsidiaries with their carrying amounts.

The impairment test in 2019 gave rise to an impairment of DKK 2,101 million (2018: DKK 1,400 million) based on the individual subsidiaries recoverable amounts.

## 8. Receivables from subsidiaries

Non-current receivables from subsidiaries, DKKm	2019	2018
Cost at 1 January	55,131	48,706
Additions	50,844	17,641
Disposals	(14,136)	(11,216)
<b>Cost at 31 December</b>	<b>91,839</b>	<b>55,131</b>

Our Service Operations Vessel (SOV), Edda Mistral, at Hornsea 1, North Sea, UK.

## 9. Derivatives

Ørsted A/S has assumed the subsidiaries' currency risks via forward exchange contracts, which have subsequently been hedged in the market. Furthermore, hedging contracts have been concluded to hedge the currency risk associated with investments in subsidiaries in foreign currencies.

We have also entered into a number of interest rate swaps to manage our interest rate risk.

The company has fair value hedged loans and receivables in GBP, USD and EUR. The value of the fair value hedge offset in the income statement amounted to DKK 730 million (2018: DKK 263 million).

Derivatives at the end of December 2019 mature as follows: 2020: DKK -459 million, 2021: DKK -175 million, after 2021: DKK -225 million (2018: 2019: DKK -99 million, 2020: DKK -268 million, after 2020: DKK 147 million).

Overview of derivative positions, DKKm	2019		2018	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Interest derivatives	4,431	(85)	6,588	(39)
Currency derivatives	26,727	(774)	17,623	(181)
<b>Total</b>	<b>31,158</b>	<b>(859)</b>	<b>24,211</b>	<b>(220)</b>
<b>Assets</b>		<b>4,260</b>		<b>3,102</b>
<b>Equity and liabilities</b>		<b>(5,119)</b>		<b>(3,322)</b>

See note 7.1 to the consolidated financial statements and the management's review on pages 60-63 for more details on risk and risk management.

## 10. Securities

Securities are a key element in our financial resources, and therefore investments are primarily made in liquid AAA-rated Danish mortgage bonds and to a lesser extent in

other bonds. Most of the securities qualify for repo transactions in the Danish central bank, 'Danmarks Nationalbank'.

Securities, DKKm	2019	2018
Securities, available for us	15,795	24,407
Securities, not available for use	-	333
<b>Total securities</b>	<b>15,795</b>	<b>24,740</b>

Securities not available for use in 2018 was used as collateral for repo loans and trading in financial instruments.

## 11. Loans and borrowings

At 31 December 2019, we had issued hybrid capital with a total notional amount of DKK 14,019 million (2018: DKK 13,432 million). The hybrid bonds have a 1,000-year term and expire as follows: DKK 5,230 million in 3013, DKK 570 million in 3015, DKK 3,736 million in 3017 and DKK 4,483 million in 3019, respectively.

The long-term portion of bank loans and issued bonds amounted to DKK 31,808 million at 31 December 2019 (2018: DKK 23,482 million), of which DKK 24,938 million (2018: DKK 16,376 million) fall due in more than five years.

The long-term portion of lease debt amounted to DKK 1,272 million, of which DKK 749 million fall due in more than five years.

## 12. Other provisions

We have made provisions for non-current liabilities totalling DKK 683 million (2018: DKK 794 million), of which DKK 82 million fall due within 1 year, DKK 563 million fall due

in 1-5 years, and DKK 38 million fall due in more than 5 years. The liabilities concern the divestment of our Oil & Gas business which was closed in 2017.

## 13. Contingent liabilities

### Contingent liabilities

#### Guarantees

Ørsted A/S has provided guarantees in connection with participation by subsidiaries and subsidiaries' joint operations and joint ventures in the construction and operation of offshore wind farms and natural gas installations as well as guarantees in respect of leases, energy trading activities, purchase, sale and supply agreements, decommissioning obligations, farmdowns and other M&A transactions as well as secondary liability on decommissioning of offshore installations related to the divestment of the Oil & Gas business, etc.

Ørsted A/S also acts as guarantor or surety provider with primary liability for bank liabilities in certain subsidiaries. This includes guarantees provided in favour of banks and investors covering credit facilities established and bonds issued in Taiwan.

Furthermore, in support of the ratings of Ørsted Salg & Service A/S by Moody's and Ørsted Wind Power TW Holding A/S by Taiwan Ratings, Ørsted A/S has provided general guarantees covering all obligations and liabilities undertaken in the ordinary course of business by these two entities.

#### Indemnities

Ørsted A/S is taxed jointly with the Danish companies in the Ørsted Group. As management company, Ørsted A/S has unlimited as well as joint and several liability together with the other jointly taxed companies for Danish income taxes and withholding taxes on dividends, interest and royalties related to the jointly taxed companies.

#### Litigation

Ørsted A/S is not a party to any litigation proceedings or legal disputes that could have an effect on the company's financial position, either individually or collectively.

## 14. Related-party transactions

Related parties are the Board of Directors, the Executive Board, Ørsted A/S's subsidiaries and the Danish state.

Remuneration of the Board of Directors and the Executive Board is disclosed in notes 2.6 'Employee costs' and 2.7 'Share-based

payment' in the consolidated financial statements.

Our related-party transactions are made on arm's length terms.

## 15. Auditor's fees

Auditor's fees, DKKm	2019	2018
Statutory audit	2	2
Tax and VAT advice	-	1
<b>Total fees to PwC</b>	<b>2</b>	<b>3</b>

## 16. Ownership information

Ownership information 31 December 2019	Registered office	Ownership interests	Voting share
The Danish state represented by the Danish Ministry of Finance	Copenhagen K, Denmark	50.12%	50.64%
SEAS-NVE A.M.B.A.	Svinninge, Denmark	7.28%	7.35%
The Capital Group Companies, Inc.	Los Angeles, USA	-	5-10% <sup>1</sup>

<sup>1</sup> Interval shown, as precise voting share is not publicly available.

The table shows the shareholders with ownership interests and voting shares of at least 5%. Difference between ownership interests and voting shares arises when power of attorney is issued.

In connection with SEAS-NVE's acquisition of our Danish power distribution, residential customer and city light businesses, SEAS-NVE stated an intention to reduce its shareholding from 9.54% to a shareholding of approx 5% over the coming 12 months. In both November 2019 and January 2020, SEAS-NVE sold shares equivalent to 2.27% of the shares in Ørsted, bringing their shareholding to 5.01%.

# Management statement, auditors' reports and glossary

- 177** Statement by the Executive Board and the Board of Directors

- 182** Glossary

Walney Extension, located in the Irish Sea, generates green power for nearly 600,000 UK homes and was the world's largest offshore wind farm in operation until Hornsea 1 was commissioned at the end of 2019. Over the project's lifetime, we are investing GBP 15 million in social and environmental projects aimed at strengthening the local community and economy.

# Statement by the Executive Board and the Board of Directors

The Board of Directors and the Executive Board have today considered and approved the annual report of Ørsted A/S for the financial year 1 January - 31 December 2019.

The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards as adopted by the EU and additional requirements in the Danish Financial Statements Act. The financial statements of the parent company, Ørsted A/S, have been prepared in accordance with the provisions of the Danish Financial Statements Act.

In our opinion, the consolidated financial statements and the parent company financial statements provide a true and fair presentation of the Group's and the parent company's assets, liabilities and financial position at 31 December 2019 and of the results of the Group's and the parent company's operations and the Group's cash flows for the financial year 1 January - 31 December 2019.

In our opinion, the management's review provides a true and fair presentation of the development in the Group's and the parent company's operations and financial circumstances, of the results for the year and of the overall financial position of the Group and the parent company as well as a description

of the most significant risks and elements of uncertainty facing the Group and the parent company. The management's review has been prepared in accordance with the Danish Financial Statements Act.

In our opinion, the consolidated ESG statements ('Additional information') represent a reasonable, fair and balanced representation of the Group's social responsibility and sustainability performance and are presented in accordance with the stated accounting policies.

We recommend that the annual report be adopted at the annual general meeting.

# Independent Auditors' Report

## To the shareholders of Ørsted A/S

### Our opinion

In our opinion, the Consolidated Financial Statements give a true and fair view of the Group's financial position at 31 December 2019 and of the results of the Group's operations and cash flows for the financial year 1 January to 31 December 2019 in accordance with International Financial Reporting Standards as adopted by the EU ('IFRS') and further requirements in the Danish Financial Statements Act.

Moreover, in our opinion, the Parent Company Financial Statements give a true and fair view of the Parent Company's financial position at 31 December 2019 and of the results of the Parent Company's operations for the financial year 1 January to 31 December 2019 in accordance with the Danish Financial Statements Act.

Our opinion is consistent with our Auditor's Long-form Report to the Audit & Risk Committee and the Board of Directors.

### What we have audited

The Consolidated Financial Statements of Ørsted A/S for the financial year 1 January to 31 December 2019, pp 66 - 157 and 177, comprise the consolidated income statement, the consolidated statement of comprehensive income, the consolidated balance sheet, the consolidated statement of changes in

equity, the consolidated cash flow statement and the notes to the consolidated financial statements, including summary of significant accounting policies.

The Parent Company Financial Statements of Ørsted A/S for the financial year 1 January to 31 December 2019, pp 166 - 175, comprise the income statement, the balance sheet, the statement of changes in equity and the notes to the parent financial statements, including summary of significant accounting policies.

Collectively referred to as the "Financial Statements".

### Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs) and the additional requirements applicable in Denmark. Our responsibilities under those standards and requirements are further described in the *Auditor's Responsibilities for the Audit of the Financial Statements* section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

### Independence

We are independent of the Group in accordance with the International Ethics Standards Board for Accountants' Code of Ethics for

Professional Accountants (IESBA Code) and the additional ethical requirements applicable in Denmark. We have also fulfilled our other ethical responsibilities in accordance with the IESBA Code.

To the best of our knowledge and belief, prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014 were not provided.

### Appointment

We were first appointed auditors of Ørsted A/S on 19 April 2010 for the financial year 2010. We have been reappointed annually

### Key audit matter

#### Construction agreements

The accuracy of the revenue recognition related to large construction agreements for offshore wind farms and its presentation in the consolidated financial statements is dependent on complex estimates, such as the forecasted selling price and estimated costs related to the constructions as well as the degree of completion of the offshore wind farms under construction.

We focused on this area because the revenue recognised over time with reference to the degree of completion requires significant judgements and estimates by Management.

Refer to notes 1.2, 2.2 and 4.2 in the Consolidated Financial Statements.

by shareholder resolution for a total period of uninterrupted engagement of 10 years, including the financial year 2019.

### Key audit matters

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the Financial Statements for 2019. These matters were addressed in the context of our audit of the Financial Statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

### How our audit addressed the key audit matter

We reviewed the individual construction agreements for offshore wind farms and challenged the accounting treatment applied by Management.

On a sample basis, we tested whether revenue is accurately recorded by challenging the forecasted selling price and estimated costs related to the constructions of offshore wind farms, including the assumptions used, and by evaluating the outcome of previous estimates by agreeing the actual selling price and costs incurred post-year end to the forecasted selling price and estimated costs for the period.

We also assessed how the project managers determined that the degree of completion was substantiated by obtaining their calculations and agreeing the inputs to documentary evidence or our independently formed expectation as appropriate.

### Statement on Management's Review

Management is responsible for the Management's Review, pp 4 - 65.

Our opinion on the Financial Statements does not cover Management's Review, and we do not express any form of assurance conclusion thereon.

In connection with our audit of the Financial Statements, our responsibility is to read Management's Review and, in doing so, consider whether Management's Review is materially inconsistent with the Financial Statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

Moreover, we considered whether Management's Review includes the disclosures required by the Danish Financial Statements Act.

Based on the work we have performed, in our view, Management's Review is in accordance with the Consolidated Financial Statements and the Parent Company Financial Statements and has been prepared in accordance with the requirements of the Danish Financial Statement Act. We did not identify any material misstatement in Management's Review.

### Management's responsibilities for the Financial Statements

Management is responsible for the preparation of consolidated financial statements that

give a true and fair view in accordance with International Financial Reporting Standards as adopted by the EU and further requirements in the Danish Financial Statements Act and for the preparation of parent company financial statements that give a true and fair view in accordance with the Danish Financial Statements Act, and for such internal control as Management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the Financial Statements, Management is responsible for assessing the Group's and the Parent Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless Management either intends to liquidate the Group or the Parent Company or to cease operations, or has no realistic alternative but to do so.

### Auditor's responsibilities for the audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the Financial Statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs

and the additional requirements applicable in Denmark will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these Financial Statements.

As part of an audit in accordance with ISAs and additional requirements applicable in Denmark, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the Financial Statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness

of the Group's and the Company's internal control.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management.
- Conclude on the appropriateness of Management's use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's and the Parent Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the Financial Statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group or the Parent Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the Financial Statements, including the disclosures, and whether the Financial Statements represent the underlying transactions and events in a manner that achieves fair presentation.

- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the Consolidated Financial Statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the Financial Statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we

determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

# Limited Assurance Report on the consolidated ESG statements

## To the stakeholders of Ørsted A/S

Ørsted A/S engaged us to provide limited assurance on the data described below and set out in the consolidated environment, social and governance statements for the period 1 January - 31 December 2019 (consolidated ESG statements) as included on pages 158-165 in the Annual Report of Ørsted A/S for 2019.

## Our conclusion

Based on the procedures we performed and the evidence we obtained, nothing came to our attention that causes us not to believe that the consolidated ESG statements are free of material misstatements and are prepared, in all material respects, in accordance with the accounting policies as stated on pages 158-165.

This conclusion is to be read in the context of what we say in the remainder of our report.

## What we are assuring

The scope of our work was limited to assurance over data in the consolidated ESG statements for the period 1 January - 31 December 2019 on pages 158-165.

## Professional standards applied and level of assurance

We performed a limited assurance engagement in accordance with the International Standard on Assurance Engagements 3000 (revised) 'Assurance Engagements other than Audits and Reviews of Historical Financial Information'. A limited assurance engagement is substantially less in scope than a reasonable assurance

engagement in relation to both the risk assessment procedures, including an understanding of internal control, and the procedures performed in response to the assessed risks; consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

## Our independence and quality control

We have complied with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which includes independence and other ethical requirements founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour. The firm applies International Standard on Quality Control 1 and accordingly maintains a comprehensive system of quality control, including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements. Our work was carried out by an independent multi-disciplinary team with experience in sustainability reporting and assurance.

## Understanding reporting and measurement methodologies

Data and information need to be read and understood together with the accounting policies on pages 158-165, which management are solely responsible for selecting and applying. The absence of a significant body of established practice on which to draw to evaluate and

measure non-financial information allows for different, but acceptable, measurement techniques and can affect comparability between entities and over time.

## Work performed

We are required to plan and perform our work in order to consider the risk of material misstatement of the data. In doing so and based on our professional judgment, we:

- conducted interviews with Group functions to assess consolidation processes, use of company-wide systems and controls performed at Group level;
- performed an assessment of materiality and the selection of topics for the consolidated ESG statements for the period 1 January - 31 December 2019;
- conducted analytical review of the data and trend explanations submitted by all business units for consolidation at Group level;
- evaluated the evidence obtained.

## Management's responsibilities

Management of Ørsted A/S is responsible for:

- designing, implementing and maintaining internal control over information relevant to the preparation of data in the consolidated ESG statements on pages 158-165 that are free from material misstatement, whether due to fraud or error;
- establishing objective accounting policies for preparing data;
- measuring and reporting data in the consolidated ESG statements based on the accounting policies; and

- the content of the consolidated ESG statements for the period 1 January - 31 December 2019.

## Our responsibility

We are responsible for:

- planning and performing the engagement to obtain limited assurance about whether consolidated ESG statements for the period 1 January - 31 December 2019 on pages 158-165 are free from material misstatements and are prepared, in all material respects, in accordance with the accounting policies;
- forming an independent conclusion, based on the procedures performed and the evidence obtained
- reporting our conclusion to the stakeholders of Ørsted A/S.

# Glossary

**Alternating Current (AC):** The type of power transported to the utility grid and used in homes.

**Availability:** Availability is calculated as the ratio of actual production to the possible production, which is the sum of lost production and actual production in a given period. The production-based availability (PBA) is impacted by grid and wind turbine outages, which are technical production losses. PBA is not impacted by market requested shutdowns and wind farm curtailments, as this is deemed not to be reflective of site performance, but due to external factors.

**Avoided emissions:** The amount other sources of energy would have emitted, if we had not generated energy from renewable sources

**Awarded capacity:** Offshore capacity that we have been awarded in auctions and tenders, but where we have yet to sign a PPA and take final investment decision.

**Biomass conversion:** When a CHP plant is converted from using fossil fuels to using biomass, such as wood pellets, wood chips and straw. After the conversion, the CHP plant will typically be able to use biomass along with the original fuel types.

**Blockage effect:** The blockage effect arises from the wind slowing down as it approaches the wind turbines.

**Carbon emission allowances:** Carbon emission allowances subject to the European Union Emissions Trading Scheme (EU ETS).

**CfD:** A contract for difference is a subsidy that guarantees the difference between the market reference price and the exercise price won.

**CHP plant:** A combined heat and power (CHP) plant generates both heat and power in the same process.

**Commissioning/COD:** When our assets are in operation, and the legal liability has been transferred from the supplier to us.

**Contracted capacity:** Onshore capacity where we have signed a PPA, but where we have not yet taken final investment decision.

**Levelised cost of electricity (LCOE):** Average cost measured as present value per megawatt hour (MWh) generated power, covering costs for development and construction as well as subsequent operation and maintenance of the asset.

**Direct Current (DC):** The type of power generated by our solar panels.

**Decided (FID) and installed capacity:** Installed generation capacity plus capacity for assets where a final investment decision has been made.

**Degree days:** Number of degrees in absolute figures in difference between the average temperature and the official Danish indoor temperature of 17°C.

**EPC:** Engineering, procurement and construction. The part of our business which handles the construction and installation of assets.

**FTE:** Employees (full-time equivalent). The number of full-time employees during a fixed time period.

**Generation capacity:** Ørsted's ownership of the asset. Offshore wind turbines are included when each turbine has passed the 240-hour test.

**Green certificates:** Certificate awarded to producers of environment-friendly power as a supplement to the market price of power in the given price area.

**Green dark spread (GDS):** Green dark spread represents the contribution margin per MWh of power generated at a coal-fired CHP plant with a given efficiency. It is determined as the difference between the market price of power and the cost of the coal (including associated freight costs) and carbon emission allowances used to generate the power.

**Hedging instruments:** Financial and physical instruments that can be used to guarantee a specific price

for the purchase or sale of, for example, commodities and currency.

**Installed capacity:** Installed capacity where the asset has been completed and has passed a final test.

**Investment tax credits (ITCs):** Federal tax credit based on qualifying renewable investment costs.

**Load factor:** The ratio between the actual power generation in a given period relative to the potential generation, which is possible by continuously exploiting the maximum capacity over the same period.

**Nord Pool:** The Norwegian-based Nordic power exchange which facilitates power trading in Norway, Sweden, Finland and Denmark.

**Offshore transmission assets:** Offshore transmission assets connect offshore generation to the onshore grid and typically include the offshore power transmission infrastructure, an onshore substation and the electrical equipment relating to the operation of the substation.

**O&M:** Operation and maintenance. The part of our business that operate and maintain our assets after installation.

**Partnership income:** Income originating from our partners' purchase of ownership interests in the offshore wind farms. Includes both the gain in connection with the farm-down and the subsequent construction of the wind farm.

**Power purchase agreement (PPA):** An agreement between us and a buyer/seller to purchase/sell the power we generate, which includes all commercial terms (price, delivery, volumes etc).

**Production tax credit (PTC):** Federal tax credit based on eligible power generation in the US.

**Ramp-up:** Generation until an asset has been completed and commissioned.

**ROCs:** Renewable obligation certificates issued by Ofgem in the UK to operators of accredited generating stations for the eligible renewable energy they generate. Operators can trade ROCs with other parties.

**Stress:** Method of measuring the market trading risk of loss on a portfolio from day to day, calculated on a fair-value basis.

**Tax equity:** An arrangement where an investor obtains rights to federal tax credits and other tax attributes in exchange for a cash contribution.

**Thermal generation:** Heat and power generated through the combustion of fossil fuels, biomass or waste.

**TRIR:** In addition to lost-time injuries, the total recordable injury rate (TRIR) also includes injuries where the injured person is able to perform restricted work the day after the accident as well as accidents where the injured person has received medical treatment.

**TTF:** Title transfer facility, Dutch gas hub.

**TWh:** Terawatt hour. The amount of energy generated in one hour with the effect of 1TW. 1TWh is equivalent to 1,000GWh or 1,000,000MWh.

**Value at risk (VaR):** A financial term used for measuring the loss that may occur in connection with a risk position, assuming a certain volatility, and that the position is held for a certain period of time.

**Wake effect:** Wake within wind farms and between neighbouring wind farms. There is a wake after each wind turbine where the wind slows down. As the wind flow continues, the wake spreads, and the wind speed recovers.

**Wind speed:** Shows the wind speed for Ørsted's wind farms. The wind measurements are weighted on the basis of our generation capacity and can be compared to a normal wind period.

The aggregate market value of Eversource Energy's Common Shares, \$5.00 par value, held by non-affiliates, computed by reference to the price at which the common equity was last sold, or the average bid and asked price of such common equity, as of the last business day of Eversource Energy's most recently completed second fiscal quarter (June 30, 2017) was \$19,210,596,737 based on a closing market price of \$60.71 per share for the 316,432,165 common shares outstanding held by non-affiliates on June 30, 2017.

Indicate the number of shares outstanding of each of the issuers' classes of common stock, as of the latest practicable date:

<u>Company - Class of Stock</u>	<u>Outstanding as of January 31, 2018</u>
Eversource Energy Common Shares, \$5.00 par value	316,885,808 shares
The Connecticut Light and Power Company Common Stock, \$10.00 par value	6,035,205 shares
NSTAR Electric Company Common Stock, \$1.00 par value	200 shares
Public Service Company of New Hampshire Common Stock, \$1.00 par value	301 shares

Eversource Energy holds all of the 6,035,205 shares, 200 shares and 301 shares of the outstanding common stock of The Connecticut Light and Power Company, NSTAR Electric Company and Public Service Company of New Hampshire, respectively.

Eversource Energy, The Connecticut Light and Power Company, NSTAR Electric Company and Public Service Company of New Hampshire each separately file this combined Form 10-K. Information contained herein relating to any individual registrant is filed by such registrant on its own behalf. Each registrant makes no representation as to information relating to the other registrants.

---

## GLOSSARY OF TERMS

The following is a glossary of abbreviations and acronyms that are found in this report:

### Current or former Eversource Energy companies, segments or investments:

Eversource, ES or the Company	Eversource Energy and subsidiaries
Eversource parent or ES parent	Eversource Energy, a public utility holding company
ES parent and other companies	ES parent and other companies are comprised of Eversource parent, Eversource Service and other subsidiaries, which primarily includes our unregulated businesses, HWP Company, The Rocky River Realty Company (a real estate subsidiary), and the consolidated operations of CYAPC and YAEC, and Aquarion's water business from the date of acquisition on December 4, 2017 through December 31, 2017
CL&P	The Connecticut Light and Power Company
NSTAR Electric	NSTAR Electric Company
PSNH	Public Service Company of New Hampshire
NSTAR Gas	NSTAR Gas Company
Yankee Gas	Yankee Gas Services Company
Aquarion	Eversource Aquarion Holdings, Inc and its subsidiaries (formerly known as Macquarie Utilities Inc)
NPT	Northern Pass Transmission LLC
Northern Pass	The HVDC and associated alternating-current transmission line project from Canada into New Hampshire
Eversource Service	Eversource Energy Service Company
Bay State Wind	A project being developed jointly by Eversource and Denmark-based Ørsted (formerly known as DONG Energy) to construct an offshore wind farm off the coast of Massachusetts
CYAPC	Connecticut Yankee Atomic Power Company
MYAPC	Maine Yankee Atomic Power Company
YAEC	Yankee Atomic Electric Company
Yankee Companies	CYAPC, YAEC and MYAPC
Electric and Natural Gas Companies	The Eversource electric and natural gas companies are comprised of the electric distribution and transmission businesses of CL&P, NSTAR Electric and PSNH, the natural gas distribution businesses of Yankee Gas and NSTAR Gas, NPT, the generation facilities of PSNH, and the solar power facilities of NSTAR Electric

### Regulators:

DEEP	Connecticut Department of Energy and Environmental Protection
DOE	U.S. Department of Energy
DOER	Massachusetts Department of Energy Resources
DPU	Massachusetts Department of Public Utilities
EPA	U.S. Environmental Protection Agency
FERC	Federal Energy Regulatory Commission
ISO-NE	ISO New England, Inc., the New England Independent System Operator
MA DEP	Massachusetts Department of Environmental Protection
NHPUC	New Hampshire Public Utilities Commission
PURA	Connecticut Public Utilities Regulatory Authority
SEC	U.S. Securities and Exchange Commission
SJC	Supreme Judicial Court of Massachusetts

### Other Terms and Abbreviations:

Access Northeast	A project being developed jointly by Eversource, Enbridge, Inc. ("Enbridge"), and National Grid plc ("National Grid") through Algonquin Gas Transmission, LLC to bring needed additional natural gas pipeline and storage capacity to New England.
ADIT	Accumulated Deferred Income Taxes
AFUDC	Allowance For Funds Used During Construction
AOCL	Accumulated Other Comprehensive Loss
ARO	Asset Retirement Obligation
Bcf	Billion cubic feet
C&LM	Conservation and Load Management
CfD	Contract for Differences
Clean Air Project	The construction of a wet flue gas desulphurization system, known as "scrubber technology," to reduce mercury emissions of the Merrimack coal-fired generation station in Bow, New Hampshire
CO <sub>2</sub>	Carbon dioxide
CPSL	Capital Projects Scheduling List
CTA	Competitive Transition Assessment
CWIP	Construction Work in Progress
EDC	Electric distribution company
EPS	Earnings Per Share
ERISA	Employee Retirement Income Security Act of 1974

ESOP	Employee Stock Ownership Plan
ESPP	Employee Share Purchase Plan
Eversource 2016 Form 10-K	The Eversource Energy and Subsidiaries 2016 combined Annual Report on Form 10-K as filed with the SEC
Fitch	Fitch Ratings
FMCC	Federally Mandated Congestion Charge
FTR	Financial Transmission Rights
GAAP	Accounting principles generally accepted in the United States of America
GSC	Generation Service Charge
GSRP	Greater Springfield Reliability Project
GWh	Gigawatt-Hours
HQ	Hydro-Québec, a corporation wholly-owned by the Québec government, including its divisions that produce, transmit and distribute electricity in Québec, Canada
HVDC	High-voltage direct current
Hydro Renewable Energy	Hydro Renewable Energy, Inc., a wholly-owned subsidiary of Hydro-Québec
IPP	Independent Power Producers
ISO-NE Tariff	ISO-NE FERC Transmission, Markets and Services Tariff
kV	Kilovolt
kVa	Kilovolt-ampere
kW	Kilowatt (equal to one thousand watts)
kWh	Kilowatt-Hours (the basic unit of electricity energy equal to one kilowatt of power supplied for one hour)
LBR	Lost Base Revenue
LNG	Liquefied natural gas
LRS	Supplier of last resort service
MMcf	Million cubic feet
MGP	Manufactured Gas Plant
MMBtu	One million British thermal units
Moody's	Moody's Investors Services, Inc.
MW	Megawatt
MWh	Megawatt-Hours
NEEWS	New England East-West Solution
NETOs	New England Transmission Owners (including Eversource, National Grid and Avangrid)
NO <sub>x</sub>	Nitrogen oxides
OCI	Other Comprehensive Income/(Loss)
PAM	Pension and PBOP Rate Adjustment Mechanism
PBOP	Postretirement Benefits Other Than Pension
PBOP Plan	Postretirement Benefits Other Than Pension Plan that provides certain retiree benefits, primarily medical, dental and life insurance
PCRBs	Pollution Control Revenue Bonds
Pension Plan	Single uniform noncontributory defined benefit retirement plan
PPA	Pension Protection Act
RECs	Renewable Energy Certificates
Regulatory ROE	The average cost of capital method for calculating the return on equity related to the distribution and generation business segment excluding the wholesale transmission segment
RNS	Regional Network Service
ROE	Return on Equity
RRB	Rate Reduction Bond or Rate Reduction Certificate
RSUs	Restricted share units
S&P	Standard & Poor's Financial Services LLC
SBC	Systems Benefits Charge
SCRC	Stranded Cost Recovery Charge
SERP	Supplemental Executive Retirement Plans and non-qualified defined benefit retirement plans
SIP	Simplified Incentive Plan
SO <sub>2</sub>	Sulfur dioxide
SS	Standard service
TCAM	Transmission Cost Adjustment Mechanism
TSA	Transmission Service Agreement
UI	The United Illuminating Company

**EVERSOURCE ENERGY AND SUBSIDIARIES  
THE CONNECTICUT LIGHT AND POWER COMPANY  
NSTAR ELECTRIC COMPANY AND SUBSIDIARY  
PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE AND SUBSIDIARY**

**SAFE HARBOR STATEMENT UNDER THE PRIVATE SECURITIES  
LITIGATION REFORM ACT OF 1995**

References in this Annual Report on Form 10-K to "Eversource," the "Company," "we," "our," and "us" refer to Eversource Energy and its consolidated subsidiaries. CL&P, NSTAR Electric, and PSNH are each doing business as Eversource Energy.

From time to time, we make statements concerning our expectations, beliefs, plans, objectives, goals, strategies, assumptions of future events, future financial performance or growth and other statements that are not historical facts. These statements are "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. You can generally identify our forward-looking statements through the use of words or phrases such as "estimate," "expect," "anticipate," "intend," "plan," "project," "believe," "forecast," "should," "could," and other similar expressions. Forward-looking statements are based on the current expectations, estimates, assumptions or projections of management and are not guarantees of future performance. These expectations, estimates, assumptions or projections may vary materially from actual results. Accordingly, any such statements are qualified in their entirety by reference to, and are accompanied by, the following important factors that could cause our actual results to differ materially from those contained in our forward-looking statements, including, but not limited to:

- cyber breaches and other disruptions to our information technology system that may compromise the confidentiality of our proprietary information and the personal information of our customers,
- acts of war, terrorism or grid disturbances that may disrupt our transmission and distribution systems,
- ability or inability to successfully commence and complete our major strategic development opportunities,
- actions or inaction of local, state and federal regulatory, public policy and taxing bodies,
- changes in business conditions, which could include disruptive technology related to our current or future business model,
- changes in economic conditions, including impact on interest rates, tax policies, and customer demand and payment ability,
- fluctuations in weather patterns, including extreme weather due to climate change,
- changes in laws, regulations or regulatory policy,
- changes in levels or timing of capital expenditures,
- disruptions in the capital markets or other events that make our access to necessary capital more difficult or costly,
- developments in legal or public policy doctrines,
- technological developments and alternative energy sources,
- changes in accounting standards and financial reporting regulations,
- actions of rating agencies, and
- other presently unknown or unforeseen factors.

Other risk factors are detailed in our reports filed with the SEC and updated as necessary, and we encourage you to consult such disclosures.

All such factors are difficult to predict and contain uncertainties that may materially affect our actual results, many of which are beyond our control. You should not place undue reliance on the forward-looking statements, as each speaks only as of the date on which such statement is made, and, except as required by federal securities laws, we undertake no obligation to update any forward-looking statement or statements to reflect events or circumstances after the date on which such statement is made or to reflect the occurrence of unanticipated events. New factors emerge from time to time and it is not possible for us to predict all of such factors, nor can we assess the impact of each such factor on the business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statements. For more information, see Item 1A, *Risk Factors*, included in this combined Annual Report on Form 10-K. This Annual Report on Form 10-K also describes material contingencies and critical accounting policies in the accompanying *Management's Discussion and Analysis of Financial Condition and Results of Operations* and *Combined Notes to Financial Statements*. We encourage you to review these items.

**EVERSOURCE ENERGY AND SUBSIDIARIES  
THE CONNECTICUT LIGHT AND POWER COMPANY  
NSTAR ELECTRIC COMPANY AND SUBSIDIARY  
PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE AND SUBSIDIARY**

**PART I**

**Item 1. Business**

Please refer to the Glossary of Terms for definitions of defined terms and abbreviations used in this combined Annual Report on Form 10-K.

Eversource Energy, headquartered in Boston, Massachusetts and Hartford, Connecticut, is a public utility holding company subject to regulation by the FERC under the Public Utility Holding Company Act of 2005. We are engaged primarily in the energy delivery business through the following wholly-owned utility subsidiaries:

- The Connecticut Light and Power Company (CL&P), a regulated electric utility that serves residential, commercial and industrial customers in parts of Connecticut;
- NSTAR Electric Company (NSTAR Electric), a regulated electric utility that serves residential, commercial and industrial customers in parts of eastern and western Massachusetts and owns solar power facilities;
- Public Service Company of New Hampshire (PSNH), a regulated electric utility that serves residential, commercial and industrial customers in parts of New Hampshire and owns generation assets used to serve customers;
- NSTAR Gas Company (NSTAR Gas), a regulated natural gas utility that serves residential, commercial and industrial customers in parts of Massachusetts; and
- Yankee Gas Services Company (Yankee Gas), a regulated natural gas utility that serves residential, commercial and industrial customers in parts of Connecticut.
- Aquarion Water Company (Aquarion), a regulated water utility holding company that serves residential, commercial, industrial and fire protection customers through its separate three regulated utilities, AWC-CT, AWC-MA and AWC-NH in parts of Connecticut, Massachusetts and New Hampshire;

CL&P, NSTAR Electric and PSNH also serve New England customers through Eversource Energy's electric transmission business, and are each doing business as Eversource Energy in their respective service territories.

On December 31, 2017, Western Massachusetts Electric Company, a former subsidiary of Eversource Energy, merged with and into NSTAR Electric, with NSTAR Electric as the surviving entity. As a result, NSTAR Electric serves all of Eversource Energy's electric customers in Massachusetts. For purposes of this combined Annual Report on Form 10-K, the financial statements and financial information presented for prior years were retrospectively adjusted as if the merger had occurred on the first day of the earliest period presented. Upon the closing of the merger, all assets, contracts, rights and obligations of Western Massachusetts Electric Company were reflected as part of NSTAR Electric.

On December 4, 2017, Eversource acquired Macquarie Utilities Inc., subsequently renamed Eversource Aquarion Holdings, Inc., and its Aquarion Water Company subsidiaries. Collectively, these water utility companies serve residential, commercial, industrial and fire protection customers in parts of Connecticut, Massachusetts and New Hampshire.

Eversource Energy, CL&P, NSTAR Electric and PSNH each report their financial results separately. We also include information in this report on a segment basis for Eversource Energy. Eversource Energy recognizes three reportable segments: electric distribution, electric transmission, and natural gas distribution. Eversource Energy's electric distribution segment includes the results of PSNH's generation facilities and NSTAR Electric's solar power facilities. The energy transmission and distribution segments represented substantially all of Eversource Energy's total consolidated revenues for the years ended December 31, 2017, 2016 and 2015. CL&P, NSTAR Electric and PSNH do not report separate business segments.

## ELECTRIC DISTRIBUTION SEGMENT

### General

Eversource Energy's electric distribution segment consists of the distribution businesses of CL&P, NSTAR Electric and PSNH, which are engaged in the distribution of electricity to retail customers in Connecticut, Massachusetts and New Hampshire, respectively, plus the regulated electric generation facilities of PSNH and solar power facilities of NSTAR Electric.

The following table shows the sources of electric franchise retail revenues for Eversource Energy's electric distribution companies, collectively, based on categories of customers:

<i>(Thousands of Dollars)</i>	2017	2016	2015
Residential	\$ 3,457,986	\$ 3,448,043	\$ 3,608,155
Commercial	2,459,985	2,465,664	2,476,686
Industrial	330,995	328,103	326,564
Other	94,091	139,527	151,195
Total Retail Electric Revenues	\$ 6,343,057	\$ 6,381,337	\$ 6,562,600

A summary of our distribution companies' retail electric GWh sales volumes and percentage changes for 2017, as compared to 2016, is as follows:

	2017	2016	Percentage Change
Residential	20,496	21,002	(2.4)%
Commercial	26,570	27,206	(2.3)%
Industrial	5,180	5,434	(4.7)%
Total	52,246	53,642	(2.6)%

Certain Eversource electric, natural gas and water companies, including CL&P and NSTAR Electric (for a portion of its customers), have a regulatory commission approved revenue decoupling mechanism ("decoupled companies"). Distribution revenues are decoupled from customer sales volumes, where applicable, which breaks the relationship between sales volumes and revenues recognized. The decoupled companies reconcile their annual base distribution rate recovery to pre-established levels of baseline distribution delivery service revenues. Any difference between the allowed level of distribution revenue and the actual amount realized is adjusted through rates in a subsequent period.

Retail electric sales volumes at our electric utilities with a traditional rate structure (the eastern region of NSTAR Electric and PSNH) were lower in 2017, as compared to 2016, due primarily to the mild summer weather in 2017, as compared to 2016. Cooling degree days in 2017 were 14.7 percent lower in the Boston metropolitan area and 22.7 percent lower in New Hampshire, as compared to 2016. Sales volumes were positively impacted by improved economic conditions across our service territories, but this trend was offset by lower customer usage driven by the impact of increased customer energy conservation efforts.

CL&P and NSTAR Electric (for its western Massachusetts customer rates) reconcile their annual base distribution rate recovery amounts to their pre-established levels of baseline distribution delivery service revenues of \$1.059 billion and \$132.4 million, respectively, through December 31, 2017. Effective February 1, 2018, NSTAR Electric, operating entirely under decoupled rates, will reconcile its annual base distribution rate recovery to its new baseline of \$974.8 million.

## ELECTRIC DISTRIBUTION – CONNECTICUT

### THE CONNECTICUT LIGHT AND POWER COMPANY

CL&P's distribution business consists primarily of the purchase, delivery and sale of electricity to its residential, commercial and industrial customers. As of December 31, 2017, CL&P furnished retail franchise electric service to approximately 1.2 million customers in 149 cities and towns in Connecticut, covering an area of 4,400 square miles. CL&P does not own any electric generation facilities.

The following table shows the sources of CL&P's electric franchise retail revenues based on categories of customers:

<i>(Thousands of Dollars)</i>	CL&P		
	2017	2016	2015
Residential	\$ 1,649,294	\$ 1,603,351	\$ 1,641,165
Commercial	883,904	858,965	841,093
Industrial	144,672	139,556	129,544
Other	29,144	47,672	62,704
Total Retail Electric Revenues	\$ 2,707,014	\$ 2,649,544	\$ 2,674,506

A summary of CL&P's retail electric GWh sales volumes and percentage changes for 2017, as compared to 2016, is as follows:

	2017	2016	Percentage Change
Residential	9,642	9,907	(2.7)%
Commercial	9,161	9,461	(3.2)%
Industrial	2,146	2,249	(4.6)%
Total	20,949	21,617	(3.1)%

#### Rates

CL&P is subject to regulation by the PURA, which, among other things, has jurisdiction over rates, certain dispositions of property and plant, mergers and consolidations, issuances of long-term securities, standards of service and construction and operation of facilities. CL&P's present general rate structure consists of various rate and service classifications covering residential, commercial and industrial services. CL&P's retail rates include a delivery service component, which includes distribution, transmission, conservation, renewable energy programs and other charges that are assessed on all customers.

Under Connecticut law, all of CL&P's customers are entitled to choose their energy suppliers, while CL&P remains their electric distribution company. For those customers who do not choose a competitive energy supplier, under SS rates for customers with less than 500 kilowatts of demand (residential customers and small and medium commercial and industrial customers), and LRS rates for customers with 500 kilowatts or more of demand (larger commercial and industrial customers), CL&P purchases power under standard offer contracts and passes the cost of the purchased power to customers through a combined charge on customers' bills.

The rates established by the PURA for CL&P are comprised of the following:

- An electric GSC, which recovers energy-related costs incurred as a result of providing electric generation service supply to all customers that have not migrated to competitive energy suppliers. The GSC is adjusted periodically and reconciled semi-annually in accordance with the policies and procedures of the PURA, with any differences refunded to, or recovered from, customers.
- A revenue decoupling adjustment that reconciles the amounts recovered from customers, on an annual basis, to the distribution revenue requirement approved by the PURA in its last rate case, which currently is an annual amount of \$1.059 billion.
- A distribution charge, which includes a fixed customer charge and a demand and/or energy charge to collect the costs of building and expanding the infrastructure to deliver electricity to customers, as well as ongoing operating costs to maintain the infrastructure.
- An FMCC, which recovers any costs imposed by the FERC as part of the New England Standard Market Design, including locational marginal pricing, locational installed capacity payments, and any costs approved by the PURA to reduce these charges. The FMCC also recovers costs associated with CL&P's system resiliency program. The FMCC is adjusted periodically and reconciled semi-annually in accordance with the policies and procedures of the PURA, with any differences refunded to, or recovered from, customers.
- A transmission charge that recovers the cost of transporting electricity over high-voltage lines from generating plants to substations, including costs allocated by ISO-NE to maintain the wholesale electric market.
- A CTA charge, assessed to recover stranded costs associated with electric industry restructuring such as various IPP contracts. The CTA is reconciled annually to actual costs incurred and reviewed by the PURA, with any difference refunded to, or recovered from, customers.
- An SBC, established to fund expenses associated with various hardship and low income programs and a program that compensates municipalities for lost property tax revenues due to decreased values of generating facilities caused by electric industry restructuring. The SBC is reconciled annually to actual costs incurred and reviewed by the PURA, with any difference refunded to, or recovered from, customers.
- A Clean Energy Fund charge, which is used to promote investment in renewable energy sources. Amounts collected by this charge are deposited into the Clean Energy Fund and administered by the Clean Energy Finance and Investment Authority. The Clean Energy Fund charge is set by statute and is currently 0.1 cent per kWh.
- A conservation charge, comprised of a statutory rate established to implement cost-effective energy conservation programs and market transformation initiatives, plus a conservation adjustment mechanism charge to recover the residual energy efficiency spending associated with the expanded energy efficiency costs directed by the Comprehensive Energy Strategy Plan for Connecticut.

As required by regulation, CL&P, jointly with UI, entered into the following contracts whereby UI will share 20 percent and CL&P will share 80 percent of the costs and benefits (CL&P's portion of these costs are either recovered from, or refunded to, customers through the FMCC):

- Four capacity CfDs (totaling approximately 787 MW of capacity) with three electric generation units and one demand response project, which extend through 2026 and have terms of up to 15 years beginning in 2009. The capacity CfDs obligate both CL&P and UI to make or receive payments on a monthly basis to or from the project and generation owners based on the difference between a contractually set capacity price and the capacity market prices that the project and generation owners receive in the ISO-NE capacity markets.
- Three peaker CfDs (totaling approximately 500 MW of peaking capacity) with three peaking generation units. The three peaker CfDs pay the generation owners the difference between capacity, forward reserve and energy market revenues and a cost-of-service payment stream for 30 years beginning in 2008 (including costs of plant operation and the prices that the generation owners receive for capacity and other products in the ISO-NE markets).

Distribution Rates: On April 20, 2017, PURA approved the joint request of CL&P, the Connecticut Office of Consumer Counsel ("OCC") and the Connecticut Attorney General to amend the deadline to establish new electric distribution rates in the 2012 Connecticut merger settlement agreement from "no later than December 1, 2017" to "no later than July 1, 2018." On November 22, 2017, CL&P filed its application with PURA, which sought a rate increase of \$255.8 million, \$45.0 million and \$36.0 million effective May 2018, 2019, and 2020, respectively. On December 15, 2017, CL&P, the Prosecutorial Unit of PURA, and the OCC reached a settlement in principle.

On January 11, 2018, CL&P filed the distribution rate case settlement agreement for approval by PURA, which included, among other things, rate increases of \$97.1 million, \$32.7 million and \$24.7 million, effective May 1, 2018, 2019, and 2020, respectively, an authorized regulatory ROE of 9.25 percent, 53 percent common equity in CL&P's capital structure, and a new capital tracker through 2020 for capital additions, system resiliency, and grid modernization. The rate increases associated with the settlement agreement will be reduced by the impact of the decrease in the federal corporate income tax rate, as part of the "Tax Cuts and Jobs Act", which we currently estimate to average approximately \$45 million to \$50 million per year, while amounts related to ADIT will be addressed in a separate manner. We expect to receive final approval from PURA in the second quarter of 2018.

#### **Sources and Availability of Electric Power Supply**

As noted above, CL&P does not own any generation assets and purchases energy supply to serve its SS and LRS loads from a variety of competitive sources through requests for proposals. CL&P continues to supply approximately 42 percent of its customer load at SS or LRS rates while the other 58 percent of its customer load has migrated to competitive energy suppliers. Because this customer migration is only for energy supply service, it has no impact on CL&P's electric distribution business or its operating income.

CL&P periodically enters into full requirements contracts for SS loads for periods of up to one year. CL&P typically enters into full requirements contracts for LRS loads every three months. Currently, CL&P has full requirements contracts in place for 100 percent of its SS loads for the first half of 2018. For the second half of 2018, CL&P has 60 percent of its SS load under full requirements contracts, and intends to purchase an additional 40 percent of full requirements. None of the SS load for 2019 has been procured. CL&P has full requirements contracts in place for its LRS loads through June 2018 and intends to purchase 100 percent of full requirements for the remainder of 2018.

#### **ELECTRIC DISTRIBUTION – MASSACHUSETTS**

##### **NSTAR ELECTRIC COMPANY**

NSTAR Electric's distribution business consists primarily of the purchase, delivery and sale of electricity to residential, commercial and industrial customers within its franchise service territory. As of December 31, 2017, NSTAR Electric furnished retail franchise electric service to approximately 1.4 million customers in Boston and 139 cities and towns in eastern and western Massachusetts, including Cape Cod, Martha's Vineyard and the greater Springfield metropolitan area, covering an aggregate area of approximately 3,200 square miles. NSTAR Electric does not own any generating facilities used to supply customers and purchases its energy requirements from competitive energy suppliers.

On December 29, 2016, the DPU approved NSTAR Electric's application to develop 62 MW of new solar power facilities. Currently, NSTAR Electric owns 8 MW of solar power facilities on sites in Pittsfield, Springfield, and East Springfield, Massachusetts that were completed from 2010 through 2014. We expect development of the new facilities to be completed in 2018. Similar to NSTAR Electric's current practice on the existing 8MW of solar power facilities, we expect that NSTAR Electric will sell energy from the new facilities into the ISO-NE market. We estimate our investment in these new facilities will be approximately \$180 million.

The following table shows the sources of the electric franchise retail revenues of NSTAR Electric based on categories of customers:

(Thousands of Dollars)	NSTAR Electric		
	2017	2016	2015
Residential	\$ 1,271,253	\$ 1,322,778	\$ 1,461,184
Commercial	1,278,739	1,310,743	1,322,674
Industrial	113,952	117,683	120,106
Other	45,347	54,666	53,388
Total Retail Electric Revenues	\$ 2,709,291	\$ 2,805,870	\$ 2,957,352

A summary of NSTAR Electric's retail electric GWh sales volumes and percentage changes for 2017, as compared to 2016, is as follows:

	NSTAR Electric		
	2017	2016	Percentage Change
Residential	7,721	7,959	(3.0)%
Commercial	14,127	14,404	(1.9)%
Industrial	1,691	1,802	(6.2)%
Total	23,539	24,165	(2.6)%

In 2017 and 2016, NSTAR Electric operated under two different rate structures based on its service territory geography. For customers in eastern Massachusetts, including metropolitan Boston, Cape Cod and Martha's Vineyard, NSTAR Electric operated using Traditional rates. For customers in western Massachusetts, including the metropolitan Springfield region, NSTAR Electric operated using Decoupled rates. Effective February 1, 2018, all of NSTAR Electric's distribution revenues were decoupled as a result of the DPU-approved rate decision. See "Regulatory Developments and Rate Matters - Massachusetts - NSTAR Electric Distribution Rate Case Decision" in the accompanying Item 7, *Management's Discussion and Analysis of Financial Condition and Results of Operations*.

#### Rates

NSTAR Electric is subject to regulation by the DPU, which, among other things, has jurisdiction over rates, certain dispositions of property and plant, mergers and consolidations, issuances of long-term securities, acquisition of securities, standards of service and construction and operation of facilities. The present general rate structure for NSTAR Electric consists of various rate and service classifications covering residential, commercial and industrial services.

Under Massachusetts law, all customers of NSTAR Electric are entitled to choose their energy suppliers, while NSTAR Electric remains their electric distribution company. NSTAR Electric purchases power from competitive suppliers on behalf of, and passes the related cost through to, its customers who do not choose a competitive energy supplier (basic service). Most of the residential customers of NSTAR Electric have continued to buy their power from NSTAR Electric at basic service rates. Most commercial and industrial customers have switched to a competitive energy supplier.

The Cape Light Compact, an inter-governmental organization consisting of the 21 towns and two counties on Cape Cod and Martha's Vineyard, serves 200,000 customers through the delivery of energy efficiency programs, effective consumer advocacy, competitive electricity supply and green power options. NSTAR Electric continues to provide electric service to these customers including the delivery of power, maintenance of infrastructure, capital investment, meter reading, billing, and customer service.

NSTAR Electric continues to supply approximately 50 percent of its Residential customer load, 41 percent of its Small Commercial and Industrial (C&I) customer load, and 9 percent of its Large C&I customer load at basic service rates. The remainder of its customer load is distributed between Municipal Aggregation and Competitive Supply. Because customer migration is limited to energy supply service, it has no impact on the delivery business or operating income of NSTAR Electric.

The rates established by the DPU for NSTAR Electric are comprised of the following:

- A basic service charge that represents the collection of energy costs, including costs related to charge-offs of uncollectible energy costs from customers. Electric distribution companies in Massachusetts are required to obtain and resell power to retail customers through basic service for those who choose not to buy energy from a competitive energy supplier. Basic service rates are reset every six months (every three months for large commercial and industrial customers). Additionally, the DPU has authorized NSTAR Electric to recover the cost of its NSTAR Green wind contracts through the basic service charge. Basic service costs are reconciled annually, with any differences refunded to, or recovered from, customers.
- A distribution charge, which includes a fixed customer charge and a demand and/or energy charge to collect the costs of building and expanding the distribution infrastructure to deliver power to its destination, as well as ongoing operating costs.
- A revenue decoupling adjustment that reconciles distribution revenue, on an annual basis, to the amount of distribution revenue approved by the DPU. During 2017 only the western Massachusetts customer rates, including the metropolitan Springfield region,

were decoupled, which resulted in allowed distribution revenues of approximately \$132.4 million. Effective February 1, 2018, NSTAR Electric is allowed to collect distribution revenues of \$974.8 million annually, which covers its entire service territory.

- A transmission charge that recovers the cost of transporting electricity over high-voltage lines from generating plants to substations, including costs allocated by ISO-NE to maintain the wholesale electric market.
- A transition charge that represents costs to be collected primarily from previously held investments in generating plants, costs related to existing above-market power contracts, and contract costs related to long-term power contract buy-outs.
- A renewable energy charge that represents a legislatively-mandated charge to support the Massachusetts Renewable Energy Trust Fund.
- An energy efficiency charge that represents a legislatively-mandated charge to collect costs for energy efficiency programs.
- Reconciling adjustment charges that recover certain DPU-approved costs, including pension and PBOP benefits, low income customer discounts, lost revenue and credits associated with net-metering facilities installed by customers, costs associated with the solar power facilities, storms, long-term renewable contracts and energy efficiency programs.

As required by regulation, NSTAR Electric, along with two other Massachusetts electric utilities, signed long-term commitments to purchase a combined estimated generating capacity of approximately 334 MW of wind power from two wind farms in Maine over 15 years. One wind farm began operating in late 2015, and the other wind farm began operating in late 2016. In addition, NSTAR Electric previously signed a long-term commitment to purchase an estimated generating capacity of approximately 37.5 MW of wind power from a wind farm in Maine over 15 years that began operating in 2016.

Distribution Rates: On November 30, 2017, the DPU issued its decision in the NSTAR Electric distribution rate case, which approved an annual distribution rate increase of \$37 million, with rates effective February 1, 2018. On January 3, 2018, NSTAR Electric filed a motion to reflect a revenue requirement reduction of \$56 million (due to the decrease in the federal corporate income tax rate, as part of the "Tax Cuts and Jobs Act"), resulting in an annual net decrease in rates of \$19 million.

In addition to its decision regarding rates, the DPU approved an authorized regulatory ROE of 10 percent, the establishment of a revenue decoupling rate mechanism for the portion of the NSTAR Electric business that did not previously have a decoupling mechanism, and the implementation of an inflation-based adjustment mechanism with a five-year stay-out until January 1, 2023.

Among other items, the DPU approved the recovery of previously expensed merger-related costs over a 10-year period and the recovery of previously deferred storm costs with carrying charges at the prime rate, but disallowed certain property taxes. The rate case decision resulted in the recognition of an aggregate \$44.1 million pre-tax benefit recorded in 2017.

Service Quality Metrics: NSTAR Electric is subject to service quality ("SQ") metrics that measure safety, reliability and customer service, and could be required to pay to customers a SQ charge of up to 2.5 percent of annual transmission and distribution revenues for failing to meet such metrics. NSTAR Electric will not be required to pay a SQ charge for its 2017 performance as the company achieved results at or above target for all of its SQ metrics in 2017.

#### **Sources and Availability of Electric Power Supply**

As noted above, NSTAR Electric does not own any generation assets (other than solar power facilities), and it purchases its energy requirements from a variety of competitive sources through requests for proposals issued periodically, consistent with DPU regulations. NSTAR Electric enters into supply contracts for basic service for 50 percent of its residential and small commercial and industrial customers twice per year for twelve month terms. NSTAR Electric enters into supply contracts for basic service for 100 percent of large commercial and industrial customers every three months.

#### **ELECTRIC DISTRIBUTION – NEW HAMPSHIRE**

##### **PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE**

PSNH's distribution business consists primarily of the generation, delivery and sale of electricity to its residential, commercial and industrial customers. As of December 31, 2017, PSNH furnished retail franchise electric service to approximately 515,000 retail customers in 211 cities and towns in New Hampshire, covering an area of approximately 5,630 square miles. As of December 31, 2017, PSNH owned and operated approximately 1,200 MW of coal-, natural gas-, oil-fired, and hydro electricity generation facilities. PSNH's distribution business included the activities of its generation facilities.

On October 11, 2017, PSNH entered into a Purchase and Sale Agreement for the sale of its thermal generation facilities and a separate Purchase and Sale Agreement for the sale of its hydroelectric generation facilities. On January 10, 2018, PSNH completed the sale of its thermal generation facilities. The thermal generation facilities included approximately 1,100 MW of coal, natural gas, biomass and oil-fired electricity generation facilities. The sale of the hydroelectric generation facilities is targeted to close by the end of the first quarter of 2018. For further information, see "Generation Divestiture" below.

The following table shows the sources of PSNH's electric franchise retail revenues based on categories of customers:

<i>(Thousands of Dollars)</i>	PSNH		
	2017	2016	2015
Residential	\$ 537,439	\$ 521,914	\$ 505,806
Commercial	297,342	295,956	312,918
Industrial	72,371	70,864	76,914
Other	19,600	37,188	35,103
Total Retail Electric Revenues	\$ 926,752	\$ 925,922	\$ 930,741

A summary of PSNH's retail electric GWh sales volumes and percentage changes for 2017, as compared to 2016, is as follows:

	2017	2016	Percentage Change
Residential	3,134	3,136	(0.1)%
Commercial	3,282	3,342	(1.8)%
Industrial	1,342	1,382	(2.9)%
Total	7,758	7,860	(1.3)%

### Rates

PSNH is subject to regulation by the NHPUC, which, among other things, has jurisdiction over rates, certain dispositions of property and plant, mergers and consolidations, issuances of securities, standards of service and construction and operation of facilities.

Under New Hampshire law, all of PSNH's customers are entitled to choose competitive energy suppliers. Prior to the Generation Divestiture, PSNH provided default energy service under its ES rate for those customers who did not choose a competitive energy supplier. At the end of 2017, approximately 26 percent of all of PSNH's customers (approximately 56 percent of load) were taking service from competitive energy suppliers, compared to 25 percent of customers (approximately 56 percent of load) at the end of 2016.

The rates established by the NHPUC for PSNH are comprised of the following:

- A default energy service charge which recovers energy-related costs incurred as a result of providing electric generation service supply to all customers that have not migrated to competitive energy suppliers. Through March 31, 2018, the default energy service charge recovers the costs of PSNH's generation, as well as purchased power, and includes an allowed ROE of 9.81 percent. Effective April 1, 2018, as a result of the divestiture of its generation assets, PSNH will obtain power for retail customers who have not chosen a competitive supplier through a periodic market solicitation with the rate set to recover the cost of that power and statutorily mandated renewable portfolio standard costs. Effective April 1, 2018, any remaining costs from ownership of generation will be recovered as part of the SCRC described below.
- A distribution charge, which includes an energy and/or demand-based charge to recover costs related to the maintenance and operation of PSNH's infrastructure to deliver power to its destination, as well as power restoration and service costs. This includes a customer charge to collect the cost of providing service to a customer; such as the installation, maintenance, reading and replacement of meters and maintaining accounts and records.
- A transmission charge that recovers the cost of transporting electricity over high-voltage lines from generating plants to substations, including costs allocated by ISO-NE to maintain the wholesale electric market.
- An SCRC, which allows PSNH to recover its stranded costs, including above-market expenses incurred under mandated power purchase obligations and other long-term investments and obligations. The stranded costs associated with the sale of the generation facilities, which are targeted to be sold in their entirety by the end of the first quarter of 2018, will be recovered in the SCRC rate charged to PSNH customers.
- An SBC, which funds energy efficiency programs for all customers, as well as assistance programs for residential customers within certain income guidelines.
- An electricity consumption tax, which is a state mandated tax on electric energy consumption.

The default energy service charge and SCRC rates change semi-annually and are reconciled annually in accordance with the policies and procedures of the NHPUC, with any differences refunded to, or recovered from, customers.

In New Hampshire, PSNH distribution rates were established in a settlement approved by the NHPUC in 2010. Prior to the expiration of that settlement on June 30, 2015, the NHPUC approved the continuation of those rates, and increased funding via rates, of PSNH's reliability enhancement program.

## Generation Divestiture

In June 2015, Eversource and PSNH entered into the 2015 Public Service Company of New Hampshire Restructuring and Rate Stabilization Agreement, under the terms of which PSNH agreed to divest its generation assets, subject to NHPUC approval. The NHPUC approval for this agreement, as well as NHPUC approval of the final divestiture plan and auction process, were received in the second half of 2016. In October 2017, PSNH entered into two Purchase and Sale Agreements ("Agreements") to sell its thermal and hydroelectric generation assets to private investors at purchase prices of \$175 million and \$83 million, respectively, subject to adjustments as set forth in the Agreements. The NHPUC approved the Agreements in late November 2017.

On January 10, 2018, PSNH completed the sale of its thermal generation facilities. In accordance with the Purchase and Sale Agreement, the original purchase price of \$175 million was adjusted to reflect working capital adjustments, closing date adjustments and proration of taxes and fees prior to closing, totaling \$40.9 million, resulting in net proceeds of \$134.1 million. We are targeting for PSNH to complete the sale of its hydroelectric generation facilities by the end of the first quarter of 2018 at a sale price of \$83 million, subject to adjustment. On January 30, 2018, the NHPUC approved the issuance of rate reduction bonds up to \$690 million to recover stranded costs, subject to an audit by the NHPUC Audit Staff. This order is subject to an appeal period of 30 days.

Upon completion of the divestiture, full recovery of PSNH's generation assets and transaction-related costs are expected to occur through a combination of cash flows during the remaining operating period, sales proceeds, and recovery of stranded costs via the issuance of bonds that will be secured by a non-bypassable charge or through recoveries in future rates billed to PSNH's customers.

## Sources and Availability of Electric Power Supply

During 2017, approximately 47 percent of PSNH's load was met through its own generation, long-term power supply provided pursuant to orders of the NHPUC, and contracts with competitive energy suppliers. The remaining 53 percent of PSNH's load was met by short-term (less than one year) purchases and spot purchases in the competitive New England wholesale power market. Included in the above are PSNH's obligations to purchase power from approximately two dozen IPPs, the output of which it either uses to serve its customer load or sells into the ISO-NE market. With the anticipated completion of the divestiture of its own generation facilities in the first quarter of 2018, PSNH will meet its load requirements in 2018 with purchases of energy requirements from competitive sources through requests for proposals issued periodically, consistent with NHPUC regulations.

## ELECTRIC TRANSMISSION SEGMENT

### General

Each of CL&P, NSTAR Electric and PSNH owns and maintains transmission facilities that are part of an interstate power transmission grid over which electricity is transmitted throughout New England. Each of CL&P, NSTAR Electric and PSNH, and most other New England utilities, are parties to a series of agreements that provide for coordinated planning and operation of the region's transmission facilities and the rules by which they acquire transmission services. Under these arrangements, ISO-NE, a non-profit corporation whose board of directors and staff are independent of all market participants, serves as the regional transmission organization of the New England transmission system.

### Wholesale Transmission Revenues

A summary of Eversource Energy's wholesale transmission revenues is as follows:

<i>(Thousands of Dollars)</i>	2017	2016	2015
CL&P	\$ 609,880	\$ 575,735	\$ 513,025
NSTAR Electric	514,151	483,050	428,743
PSNH	177,821	151,354	127,509
Total Wholesale Transmission Revenues	\$ 1,301,852	\$ 1,210,139	\$ 1,069,277

### Wholesale Transmission Rates

Wholesale transmission revenues are recovered through FERC-approved formula rates. Annual transmission revenue requirements include recovery of transmission costs and include a return on equity applied to transmission rate base. Transmission revenues are collected from New England customers, including distribution customers of CL&P, NSTAR Electric and PSNH. The transmission rates provide for an annual true-up of estimated to actual costs. The financial impacts of differences between actual and estimated costs are deferred for future recovery from, or refunded to, transmission customers.

## **FERC Base ROE Complaints**

Four separate complaints have been filed at the FERC by combinations of New England state attorneys general, state regulatory commissions, consumer advocates, consumer groups, municipal parties and other parties (collectively the "Complainants"). In each of the first three complaints, the Complainants challenged the NETOs' base ROE of 11.14 percent that had been utilized since 2005, and sought an order to reduce it prospectively from the date of the final FERC order and for the 15-month complaint periods arising from the separate complaints. In the fourth complaint, the Complainants challenged the NETOs' base ROE of 10.57 percent and the maximum ROE for transmission incentive ("incentive cap") of 11.74 percent, asserting that these ROEs were unjust and unreasonable. In response to appeals of the FERC decision in the first complaint filed by the NETOs and the Complainants, the D.C. Circuit Court of Appeals issued a decision on April 14, 2017 vacating and remanding the FERC's decision. For further information, see "FERC Regulatory Issues - FERC ROE Complaints" in the accompanying Item 7, *Management's Discussion and Analysis of Financial Condition and Results of Operations*.

## **Transmission Projects**

During 2017, we were involved in the planning, development and construction of a series of electric transmission projects, including the Greater Hartford Central Connecticut projects and the Greater Boston Reliability Solutions, that will be built within the next five years and that will enhance system reliability and improve capacity. We were also involved in the planning and development of Northern Pass and the Seacoast Reliability Project. On February 1, 2018, the New Hampshire Site Evaluation Committee ("NHSEC") voted to deny Northern Pass' siting application. Consistent with Eversource's and HQ's long-term relationship to bring clean energy into New England, Eversource and HQ continue to support Northern Pass and the many benefits this project will bring to our customers and region. Eversource intends to seek reconsideration of the NHSEC's decision and to review all options for moving this critical clean energy project forward. For further information, see "Business Development and Capital Expenditures - Electric Transmission Business" in the accompanying Item 7, *Management's Discussion and Analysis of Financial Condition and Results of Operations*.

## **Transmission Rate Base**

Transmission rate base under our FERC-approved tariff primarily consists of our investment in transmission net utility plant less accumulated deferred income taxes.

Under our FERC-approved tariff, and with the exception of transmission projects that received specific FERC approval to include CWIP in rate base, transmission projects generally enter rate base after they are placed in commercial operation. At the end of 2017, our estimated transmission rate base was approximately \$6 billion, including approximately \$2.7 billion at CL&P, \$2.5 billion at NSTAR Electric, and \$765 million at PSNH.

## **NATURAL GAS DISTRIBUTION SEGMENT**

NSTAR Gas distributes natural gas to approximately 292,000 customers in 51 communities in central and eastern Massachusetts covering 1,067 square miles, and Yankee Gas distributes natural gas to approximately 232,000 customers in 72 cities and towns in Connecticut covering 2,187 square miles. Total throughput (sales and transportation) in 2017 was approximately 69.4 Bcf for NSTAR Gas and 56.0 Bcf for Yankee Gas. Our natural gas businesses provide firm natural gas sales service to retail customers who require a continuous natural gas supply throughout the year, such as residential customers who rely on natural gas for heating, hot water and cooking needs, and commercial and industrial customers who choose to purchase natural gas from Eversource Energy's natural gas distribution companies. A portion of the storage of natural gas supply for NSTAR Gas during the winter heating season is provided by Hopkinton LNG Corp., an indirect, wholly-owned subsidiary of Eversource Energy. NSTAR Gas has access to Hopkinton LNG Corp. facilities in Hopkinton, Massachusetts consisting of a LNG liquefaction and vaporization plant and three above-ground cryogenic storage tanks having an aggregate capacity of 3.0 Bcf of liquefied natural gas. NSTAR Gas also has access to Hopkinton LNG Corp. facilities in Acushnet, Massachusetts that include additional storage capacity of 0.5 Bcf and additional vaporization capacity.

Yankee Gas owns a 1.2 Bcf LNG facility in Waterbury, Connecticut, which is used primarily to assist Yankee Gas in meeting its supplier-of-last-resort obligations and also enables it to provide economic supply and make economic refill of natural gas typically during periods of low demand.

NSTAR Gas and Yankee Gas generate revenues primarily through the sale and/or transportation of natural gas. Predominantly all residential customers in the NSTAR Gas service territory buy natural gas supply and delivery from NSTAR Gas while all customers may choose their natural gas suppliers. Retail natural gas service in Connecticut is partially unbundled: residential customers in Yankee Gas' service territory buy natural gas supply and delivery only from Yankee Gas while commercial and industrial customers may choose their natural gas suppliers. NSTAR Gas offers firm transportation service to all customers who purchase natural gas from sources other than NSTAR Gas while Yankee Gas offers firm transportation service to its commercial and industrial customers who purchase natural gas from sources other than Yankee Gas. In addition, both natural gas distribution companies offer interruptible transportation and interruptible natural gas sales service to those high volume commercial and industrial customers, generally during the colder months, that have the capability to switch from natural gas to an alternative fuel on short notice, for whom NSTAR Gas and Yankee Gas can interrupt service during peak demand periods or at any other time to maintain distribution system integrity.

The following table shows the sources of the total Eversource Energy natural gas franchise retail revenues based on categories of customers:

<i>(Thousands of Dollars)</i>	<b>2017</b>	<b>2016</b>	<b>2015</b>
Residential	\$ 500,229	\$ 446,052	\$ 497,873
Commercial	312,034	279,001	327,439
Industrial	90,024	80,093	93,378
Total Retail Natural Gas Revenues	\$ 902,287	\$ 805,146	\$ 918,690

A summary of our firm natural gas sales volumes in million cubic feet and percentage changes for 2017, as compared to 2016, is as follows:

	<b>2017</b>	<b>2016</b>	<b>Percentage Change</b>
Residential	37,421	35,734	4.7%
Commercial	42,992	41,895	2.6%
Industrial	20,613	20,413	1.0%
Total	101,026	98,042	3.0%
Total, Net of Special Contracts <sup>(1)</sup>	96,617	93,346	3.5%

<sup>(1)</sup> Special contracts are unique to the customers who take service under such an arrangement and generally specify the amount of distribution revenue to be paid to Yankee Gas regardless of the customers' usage.

Our firm natural gas sales volumes are subject to many of the same influences as our retail electric sales volumes. In addition, they have benefited from customer growth in both of our natural gas distribution companies. Consolidated firm natural gas sales volumes were higher in 2017, as compared to 2016, due primarily to colder winter weather in the fourth quarter of 2017, as compared to 2016. Heating degree days in 2017 were 2.5 percent higher in Connecticut, as compared to 2016. Sales volumes were also positively impacted by improved economic conditions across our natural gas service territories.

For NSTAR Gas, the DPU approved a distribution revenue decoupling mechanism effective January 1, 2016. Natural gas distribution revenues are decoupled from their customer sales volumes, where applicable, which breaks the relationship between sales volumes and revenues recognized. As a result, fluctuations in natural gas sales volumes in Massachusetts do not impact earnings.

#### **Rates**

NSTAR Gas and Yankee Gas are subject to regulation by the DPU and the PURA, respectively, which, among other things, have jurisdiction over rates, certain dispositions of property and plant, mergers and consolidations, issuances of long-term securities, standards of service and construction and operation of facilities.

Retail natural gas delivery and supply rates are established by the DPU and the PURA and are comprised of:

- A distribution charge consisting of a fixed customer charge and a demand and/or energy charge that collects the costs of building and expanding the natural gas infrastructure to deliver natural gas supply to its customers. This also includes collection of ongoing operating costs.
- A seasonal cost of gas adjustment clause ("CGAC") at NSTAR Gas that collects natural gas supply costs, pipeline and storage capacity costs, costs related to charge-offs of uncollected energy costs and working capital related costs. The CGAC is reset semi-annually. In addition, NSTAR Gas files interim changes to its CGAC factor when the actual costs of natural gas supply vary from projections by more than five percent.
- A local distribution adjustment clause ("LDAC") at NSTAR Gas that collects all energy efficiency and related program costs, environmental costs, pension and PBOP related costs, attorney general consultant costs, and costs associated with low income customers. The LDAC is reset annually and provides for the recovery of certain costs applicable to both sales and transportation customers.
- Purchased Gas Adjustment ("PGA") clause, which allows Yankee Gas to recover the costs of the procurement of natural gas for its firm and seasonal customers. Differences between actual natural gas costs and collection amounts on August 31st of each year are deferred and then recovered from or refunded to customers during the following year. Carrying charges on outstanding balances are calculated using Yankee Gas' weighted average cost of capital in accordance with the directives of the PURA.
- Conservation Adjustment Mechanism ("CAM") at Yankee Gas, which allows 100 percent recovery of conservation costs through this mechanism including program incentives to promote energy efficiency, as well as recovery of any lost revenues associated with implementation of energy conservation measures. A reconciliation of CAM revenues to expenses is performed annually with any difference being recovered from or refunded to customers, with carrying charges, during the following year.

NSTAR Gas purchases financial contracts based on the New York Mercantile Exchange ("NYMEX") natural gas futures in order to reduce cash flow variability associated with the purchase price for approximately one-third of its normal winter season natural gas supplies. These purchases are made under a program approved by the DPU in 2006. This practice attempts to minimize the impact of fluctuations in natural gas prices to NSTAR Gas' firm natural gas customers. These financial contracts do not procure natural gas supply. All costs incurred or benefits realized when these contracts are settled are included in the CGAC.

NSTAR Gas is subject to SQ metrics that measure safety, reliability and customer service and could be required to pay to customers a SQ charge of up to 2.5 percent of annual distribution revenues for failing to meet such metrics. NSTAR Gas will not be required to pay a SQ charge for its 2017 performance as it achieved results at or above target for all of its SQ metrics in 2017.

NSTAR Gas distribution rates were set in its 2015 DPU approved rate case, which included an annualized base rate increase of \$15.8 million, plus other increases of approximately \$11.5 million, mostly relating to recovery of pension and PBOP expenses and the Hopkinton Gas Service Agreement, effective January 1, 2016. In the order, the DPU also approved an authorized regulatory ROE of 9.8 percent, the establishment of a revenue decoupling mechanism, the recovery of certain bad debt expenses, and a 52.1 percent equity component of its capital structure.

Yankee Gas' last rate case proceeding was in 2011, which approved an allowed ROE of 8.83 percent and allowed for a substantial increase in annual spending for bare steel and cast iron pipeline replacement. In 2015, Yankee Gas entered into a settlement agreement with the PURA staff pursuant to which Yankee Gas provided a \$1.5 million rate credit to firm customers beginning in December 2015, and established an earnings sharing mechanism whereby Yankee Gas and its customers will share equally in any earnings exceeding a 9.5 percent ROE in a twelve month period commencing with the period from April 1, 2015 through March 31, 2016. As of December 31, 2017, Yankee Gas had not triggered any of the earnings sharing thresholds.

### **Massachusetts Natural Gas Replacement and Expansion**

On July 7, 2014, Massachusetts enacted "An Act Relative to Natural Gas Leaks" (the "Act"). The Act established a uniform natural gas leak classification standard for all Massachusetts natural gas utilities and a program that accelerates the replacement of aging natural gas infrastructure. The program enabled companies, including NSTAR Gas, to better manage the scheduling and costs of replacement. The Act called for the DPU to authorize natural gas utilities to design and offer programs to customers that will increase the availability, affordability and feasibility of natural gas service for new customers.

In October 2014, pursuant to the Act, NSTAR Gas filed the Gas System Enhancement Program ("GSEP") with the DPU. NSTAR Gas' program accelerates the replacement of certain natural gas distribution facilities in the system to within 25 years. The GSEP includes a new tariff effective January 1, 2016 that provides NSTAR Gas an opportunity to collect the costs for the program on an annual basis through a newly designed reconciling factor. On April 30, 2015, the DPU approved the GSEP. We expect capital expenditures of approximately \$374.4 million for the period 2016 through 2020 for the GSEP.

### **Connecticut Natural Gas Expansion Plan**

In 2013, in accordance with Connecticut law and regulations, the PURA approved a comprehensive joint natural gas infrastructure expansion plan (the "Expansion Plan") filed by Yankee Gas and other Connecticut natural gas distribution companies. The Expansion Plan described how Yankee Gas expects to add approximately 82,000 new natural gas heating customers over a 10-year period. Yankee Gas estimates that its portion of the Expansion Plan will cost approximately \$700 million over 10 years. In January 2015, the PURA approved a joint settlement agreement proposed by Yankee Gas and other Connecticut natural gas distribution companies and regulatory agencies that clarified the procedures and oversight criteria applicable to the Expansion Plan. On November 30, 2016, Yankee Gas received PURA approval of its initial 2014 System Expansion Reconciliation as well as its 2015 Reconciliation after a combined review of the reconciliations by PURA. Yankee Gas filed its 2016 System Expansion Reconciliation in March 2017, which was approved by PURA on September 13, 2017.

### **Sources and Availability of Natural Gas Supply**

NSTAR Gas maintains a flexible resource portfolio consisting of natural gas supply contracts, transportation contracts on interstate pipelines, market area storage and peaking services. NSTAR Gas purchases transportation, storage, and balancing services from Tennessee Gas Pipeline Company and Algonquin Gas Transmission Company, as well as other upstream pipelines that transport gas from major gas producing regions in the U.S., including the Gulf Coast, Mid-continent region, and Appalachian Shale supplies to the final delivery points in the NSTAR Gas service area. NSTAR Gas purchases all of its natural gas supply under a firm portfolio management contract with a term of one year. In addition to the firm transportation and natural gas storage supplies mentioned above, NSTAR Gas utilizes contracts for underground storage and LNG facilities to meet its winter peaking demands. The LNG facilities, described below, are located within NSTAR Gas' distribution system and are used to liquefy and store pipeline natural gas during the warmer months for vaporization and use during the heating season. During the summer injection season, excess pipeline capacity and supplies are used to deliver and store natural gas in market area underground storage facilities located in the New York and Pennsylvania regions. Stored natural gas is withdrawn during the winter season to supplement flowing pipeline supplies in order to meet firm heating demand. NSTAR Gas has firm underground storage contracts and total storage capacity entitlements of approximately 6.6 Bcf. A portion of the storage of natural gas supply for NSTAR Gas during the winter heating season is provided by Hopkinton LNG Corp., which owns an LNG liquefaction and vaporization plant and three above-ground cryogenic storage tanks having an aggregate capacity of 3.0 Bcf of liquefied natural gas. NSTAR Gas also has access to Hopkinton LNG Corp. facilities that include additional storage capacity of 0.5 Bcf and additional vaporization capacity.

The PURA requires that Yankee Gas meet the needs of its firm customers under all weather conditions. Specifically, Yankee Gas must structure its supply portfolio to meet firm customer needs under a design day scenario (defined as the coldest day in 30 years) and under a design year scenario (defined as the average of the four coldest years in the last 30 years). Yankee Gas' on-system stored LNG and underground storage supplies help to meet consumption needs during the coldest days of winter. Yankee Gas obtains its interstate capacity from the three interstate pipelines that directly serve Connecticut: the Algonquin, Tennessee and Iroquois Pipelines, which connect to other upstream pipelines that transport gas from major gas producing regions, including the Gulf Coast, Mid-continent, Canadian regions and Appalachian Shale supplies.

Based on information currently available regarding projected growth in demand and estimates of availability of future supplies of pipeline natural gas, NSTAR Gas and Yankee Gas each believes that participation in planned and anticipated pipeline and storage expansion projects will be required in order for it to meet current and future sales growth opportunities.

## **WATER BUSINESS**

Eversource Water Ventures, Inc., a Connecticut corporation, through its wholly-owned subsidiary, Eversource Aquarion Holdings, Inc. (Aquarion), operates regulated water utilities in Connecticut (Aquarion Water Company of Connecticut, or "AWC-CT"), Massachusetts (Aquarion Water Company of Massachusetts, or "AWC-MA") and New Hampshire (Aquarion Water Company of New Hampshire, or "AWC-NH"). These regulated companies provide water services to approximately 226,000 residential, commercial, industrial, municipal and fire protection and other customers, in 59 towns and cities in Connecticut, Massachusetts and New Hampshire. As of December 31, 2017, approximately 87 percent of Aquarion's customers were based in Connecticut.

For the period from December 4, 2017, the date Aquarion was acquired by Eversource, through December 31, 2017, water franchise retail revenues based on categories of customers for residential, commercial, municipal and fire protection, industrial and other totaled \$9.9 million, \$2.3 million, \$2.5 million, \$0.2 million and \$1.0 million, respectively.

### **Rates**

Aquarion's water utilities are subject to regulation by the PURA, the DPU and the NHPUC in Connecticut, Massachusetts and New Hampshire, respectively. These regulatory agencies, have jurisdiction over, among other things, rates, certain dispositions of property and plant, mergers and consolidations, issuances of long-term securities, standards of service and construction and operation of facilities.

Aquarion's general rate structure consists of various rate and service classifications covering residential, commercial, industrial, and municipal and fire protection services.

The rates established by the PURA, DPU and NHPUC are comprised of the following:

- A base rate, which is comprised of fixed charges based on meter/fire connection sizes, as well as volumetric charges based on the amount of water sold. Together these charges are designed to recover the full cost of service resulting from a general rate proceeding.
- A revenue adjustment mechanism ("RAM") that reconciles earned revenues, with certain allowed adjustments, on an annual basis, to the revenue requirement approved by the PURA in AWC-CT's last rate case (2013), which is an annual amount of \$178.0 million.
- The water infrastructure conservation adjustment ("WICA") charge, which is applied between rate case proceedings and seeks recovery of allowed costs associated with WICA-eligible capital projects placed in-service. The WICA is updated semiannually in Connecticut and annually in New Hampshire.
- Treatment plant surcharges, which are a series of three surcharges in Massachusetts (one fixed and two volumetric in nature) that are designed to recover certain operating costs and the costs of the lease of the treatment plant located in Hingham. These surcharges are applicable only to customers in Hingham, Hull and Cohasset.

### **Sources and Availability of Water Supply**

Our water utilities obtain their water supplies from owned surface water sources (reservoirs) and groundwater supplies (wells) with a total supply yield of approximately 131 million gallons per day, as well as water purchased from other water suppliers. Approximately 98 percent of our annual production is self-supplied and processed at 10 surface water treatment plants and numerous well stations, which are all located in Connecticut, Massachusetts, and New Hampshire.

The capacities of Aquarion's sources of supply, and water treatment, pumping and distribution facilities, are considered sufficient to meet the present requirements of Aquarion's customers under normal conditions. On occasion, drought declarations are issued for portions of Aquarion's service territories in response to extended periods of dry weather conditions.

## **OFFSHORE WIND PROJECT**

Bay State Wind is a proposed offshore wind project being jointly developed by Eversource and Denmark-based Ørsted. Bay State Wind will be located in a 300-square-mile area approximately 25 miles off the coast of Massachusetts that has the ultimate potential to generate more than 2,000 MW of clean, renewable energy. Eversource and Ørsted each hold a 50 percent ownership interest in Bay State Wind.

For more information regarding the clean energy legislation, see "Regulatory Developments and Rate Matters – Massachusetts – Massachusetts RFPs" in the accompanying Item 7, *Management's Discussion and Analysis of Financial Condition and Results of Operations*.

## **PROJECTED CAPITAL EXPENDITURES**

We project to make capital expenditures of approximately \$10.8 billion from 2018 through 2021, of which we expect approximately \$5.7 billion to be in our electric and natural gas distribution segments, approximately \$4.1 billion to be in our electric transmission segment and \$0.4 billion to be in our water utility business. We also project to invest approximately \$0.5 billion in information technology and facilities upgrades and enhancements. These projections do not include any expected investments related to Bay State Wind.

## **FINANCING**

Our credit facilities and indentures require that Eversource parent and certain of its subsidiaries, including CL&P, NSTAR Electric, PSNH, NSTAR Gas, and Yankee Gas, and Aquarion comply with certain financial and non-financial covenants as are customarily included in such agreements, including maintaining a ratio of consolidated debt to total capitalization of no more than 65 percent. All of these companies currently are, and expect to remain, in compliance with these covenants.

As of December 31, 2017, \$961.0 million of Eversource's long-term debt, including \$450.0 million, \$300.0 million, \$110.0 million, \$100.0 million and \$1.0 million for Eversource parent, CL&P, PSNH, Yankee Gas and Aquarion, respectively, will be paid within the next 12 months.

## **NUCLEAR FUEL STORAGE**

CL&P, NSTAR Electric, PSNH, and several other New England electric utilities are stockholders in three inactive regional nuclear generation companies, CYAPC, MYAPC and YAEC (collectively, the Yankee Companies). The Yankee Companies have completed the physical decommissioning of their respective generation facilities and are now engaged in the long-term storage of their spent nuclear fuel. The Yankee Companies have completed collection of their decommissioning and closure costs through the proceeds from the spent nuclear fuel litigation against the DOE and has refunded amounts to its member companies. These proceeds were used by the Yankee Companies to offset the decommissioning and closure cost amounts due from their member companies or to decrease the wholesale FERC-approved rates charged under power purchase agreements with CL&P, NSTAR Electric and PSNH and several other New England utilities. The decommissioning rates charged by the Yankee Companies have been reduced to zero. CL&P, NSTAR Electric and PSNH can recover these costs from, or refund proceeds to, their customers through state regulatory commission-approved retail rates.

We consolidate the assets and obligations of CYAPC and YAEC on our consolidated balance sheet because we own more than 50 percent of these companies.

## **OTHER REGULATORY AND ENVIRONMENTAL MATTERS**

### **General**

We are regulated in virtually all aspects of our business by various federal and state agencies, including FERC, the SEC, and various state and/or local regulatory authorities with jurisdiction over the industry and the service areas in which each of our companies operates, including the PURA, which has jurisdiction over CL&P, Yankee Gas, and Aquarion, the NHPUC, which has jurisdiction over PSNH and Aquarion, and the DPU, which has jurisdiction over NSTAR Electric, NSTAR Gas, and Aquarion.

### **Environmental Regulation**

We are subject to various federal, state and local requirements with respect to water quality, air quality, toxic substances, hazardous waste and other environmental matters. Additionally, major generation and transmission facilities may not be constructed or significantly modified without a review of the environmental impact of the proposed construction or modification by the applicable federal or state agencies.

### **Water Quality Requirements**

The Clean Water Act requires every "point source" discharger of pollutants into navigable waters to obtain a National Pollutant Discharge Elimination System ("NPDES") permit from the EPA or state environmental agency specifying the allowable quantity and characteristics of its effluent. States may also require additional permits for discharges into state waters.

### **Air Quality Requirements**

The Clean Air Act Amendments ("CAAA"), as well as New Hampshire law, impose stringent requirements on emissions of SO<sub>2</sub> and NO<sub>x</sub> for the purpose of controlling acid rain and ground level ozone. In addition, the CAAA address the control of toxic air pollutants. Requirements for the installation of continuous emissions monitors and expanded permitting provisions also are included. Following the completion of the sale of PSNH's thermal generation facilities on January 10, 2018, we no longer own facilities subject to the provisions of the CAAA.

## **Renewable Portfolio Standards**

Each of the states in which we do business also has Renewable Portfolio Standards ("RPS") requirements, which generally require fixed percentages of our energy supply to come from renewable energy sources such as solar, wind, hydropower, landfill gas, fuel cells and other similar sources.

New Hampshire's RPS provision requires increasing percentages of the electricity sold to retail customers to have direct ties to renewable sources. In 2017, the total RPS obligation was 17.6 percent and it will ultimately reach 25.2 percent in 2025. The costs of the RECs are recovered by PSNH through rates charged to customers.

Similarly, Connecticut's RPS statute requires increasing percentages of the electricity sold to retail customers to have direct ties to renewable sources. In 2017, the total RPS obligation was 22.5 percent and will ultimately reach 28 percent in 2020. CL&P is permitted to recover any costs incurred in complying with RPS from its customers through its GSC rate.

Massachusetts' RPS program also requires electricity suppliers to meet renewable energy standards. For 2017, the requirement was 22.34 percent, and will ultimately reach 26.1 percent in 2020. NSTAR Electric is permitted to recover any costs incurred in complying with RPS from its customers through rates. NSTAR Electric also owns renewable solar power facilities. The RECs generated from NSTAR Electric's solar power facilities are sold to other energy suppliers, and the proceeds from these sales are credited back to customers.

## **Hazardous Materials Regulations**

We have recorded a liability for what we believe, based upon currently available information, is our reasonably estimable environmental investigation, remediation, and/or Natural Resource Damages costs for waste disposal sites for which we have probable liability. Under federal and state law, government agencies and private parties can attempt to impose liability on us for recovery of investigation and remediation costs at hazardous waste sites. As of December 31, 2017, the liability recorded for our reasonably estimable and probable environmental remediation costs for known sites needing investigation and/or remediation, exclusive of recoveries from insurance or from third parties, was \$54.9 million, representing 59 sites. These costs could be significantly higher if additional remediation becomes necessary or when additional information as to the extent of contamination becomes available.

The most significant liabilities currently relate to future clean-up costs at former MGP facilities. These facilities were owned and operated by our predecessor companies from the mid-1800's to mid-1900's. By-products from the manufacture of gas using coal resulted in fuel oils, hydrocarbons, coal tar, purifier wastes, metals and other waste products that may pose risks to human health and the environment. We currently have partial or full ownership responsibilities at former MGP sites that have a reserve balance of \$49.0 million of the total \$54.9 million as of December 31, 2017. MGP costs are recoverable through rates charged to our customers.

## **Electric and Magnetic Fields**

For more than twenty years, published reports have discussed the possibility of adverse health effects from electric and magnetic fields ("EMF") associated with electric transmission and distribution facilities and appliances and wiring in buildings and homes. Although weak health risk associations reported in some epidemiology studies remain unexplained, most researchers, as well as numerous scientific review panels, considering all significant EMF epidemiology and laboratory studies, have concluded that the available body of scientific information does not support the conclusion that EMF affects human health.

In accordance with recommendations of various regulatory bodies and public health organizations, we reduce EMF associated with new transmission lines by the use of designs that can be implemented without additional cost or at a modest cost. We do not believe that other capital expenditures are appropriate to minimize unsubstantiated risks.

## **Global Climate Change and Greenhouse Gas Emission Issues**

Global climate change and greenhouse gas emission issues have received an increased focus from state governments and the federal government. The EPA initiated a rulemaking addressing greenhouse gas emissions and, on December 7, 2009, issued a finding that concluded that greenhouse gas emissions are "air pollution" that endangers public health and welfare and should be regulated. The largest source of greenhouse gas emissions in the U.S. is the electricity generating sector. The EPA has mandated greenhouse gas emission reporting beginning in 2011 for emissions for certain aspects of our business including stationary combustion, volume of gas supplied to large customers and fugitive emissions of SF6 gas and methane.

We are continually evaluating the regulatory risks and regulatory uncertainty presented by climate change concerns. Such concerns could potentially lead to additional rules and regulations that impact how we operate our business, both in terms of the generating facilities we own and operate as well as general utility operations. These could include federal "cap and trade" laws, carbon taxes, fuel and energy taxes, or regulations requiring additional capital expenditures at our generating facilities. We expect that any costs of these rules and regulations would be recovered from customers.

Connecticut, New Hampshire and Massachusetts are each members of the Regional Greenhouse Gas Initiative (RGGI), a cooperative effort by nine northeastern and mid-Atlantic states, to develop a regional program for stabilizing and reducing CO<sub>2</sub> emissions from coal- and oil-fired electric generating plants. Because CO<sub>2</sub> allowances issued by any participating state are usable across all nine RGGI state programs, the individual state CO<sub>2</sub> trading programs, in the aggregate, form one regional compliance market for CO<sub>2</sub> emissions. The third three-year control period took effect on January 1, 2015 and extended through December 31, 2017. In this control period, each regulated power plant must hold CO<sub>2</sub> allowances equal to 50 percent of its emissions during each of the first two years of the three-year period, and hold CO<sub>2</sub> allowances equal to 100 percent of its remaining emissions for the three-year control period at the end of the period.

#### **FERC Hydroelectric Project Licensing**

Federal Power Act licenses may be issued for hydroelectric projects for terms of 30 to 50 years as determined by the FERC. Upon the expiration of an existing license, (i) the FERC may issue a new license to the existing licensee, (ii) the United States may take over the project, or (iii) the FERC may issue a new license to a new licensee, upon payment to the existing licensee of the lesser of the fair value or the net investment in the project, plus severance damages, less certain amounts earned by the licensee in excess of a reasonable rate of return.

PSNH currently owns nine hydroelectric generation facilities with a current claimed capability representing winter rates of approximately 71 MW, eight of which are licensed by the FERC under long-term licenses. PSNH and its hydroelectric facilities are subject to conditions set forth in such licenses, the Federal Power Act and related FERC regulations, including provisions related to the condemnation of a project upon payment of just compensation, amortization of project investment from excess project earnings, possible takeover of a project after expiration of its license upon payment of net investment and severance damages and other matters. We are targeting for PSNH to close on the sale of its hydroelectric generation facilities by the end of the first quarter of 2018.

#### **EMPLOYEES**

As of December 31, 2017, Eversource Energy employed a total of 8,084 employees, excluding temporary employees, of which 1,270 were employed by CL&P, 1,922 were employed by NSTAR Electric, and 918 were employed by PSNH. Approximately 50 percent of our employees are members of the International Brotherhood of Electrical Workers, the Utility Workers Union of America or The United Steelworkers, and are covered by 11 collective bargaining agreements.

#### **INTERNET INFORMATION**

Our website address is [www.eversource.com](http://www.eversource.com). We make available through our website a link to the SEC's EDGAR website (<http://www.sec.gov/edgar/searchedgar/companysearch.html>), at which site Eversource Energy's, CL&P's, NSTAR Electric's and PSNH's Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K and any amendments to those reports may be reviewed. Information contained on the Company's website or that can be accessed through the website is not incorporated into and does not constitute a part of this Annual Report on Form 10-K. Printed copies of these reports may be obtained free of charge by writing to our Investor Relations Department at Eversource Energy, 107 Selden Street, Berlin, CT 06037.

## Item 1A. Risk Factors

In addition to the matters set forth under "Safe Harbor Statement Under the Private Securities Litigation Reform Act of 1995" included immediately prior to Item 1, *Business*, above, we are subject to a variety of significant risks. Our susceptibility to certain risks, including those discussed in detail below, could exacerbate other risks. These risk factors should be considered carefully in evaluating our risk profile.

### **Cyberattacks could severely impair operations, negatively impact our business, lead to the disclosure of confidential information and adversely affect our reputation.**

A successful cyberattack on the information technology systems that control our transmission and distribution systems or other assets could impair or prevent us from managing these systems and facilities, operating our systems effectively, or properly managing our data, networks and programs. The breach of certain information technology systems could adversely affect our ability to correctly record, process and report financial information. A major cyber incident could result in significant expenses to investigate and to repair system damage or security breaches and could lead to litigation, fines, other remedial action, heightened regulatory scrutiny and damage to our reputation.

We have instituted safeguards to protect our information technology systems and assets. We devote substantial resources to network and application security, encryption and other measures to protect our computer systems and infrastructure from unauthorized access or misuse and interface with numerous external entities to improve our cybersecurity situational awareness. The FERC, through the North American Electric Reliability Corporation, requires certain safeguards to be implemented to deter cyberattacks. These safeguards may not always be effective due to the evolving nature of cyberattacks.

Any such cyberattacks could result in loss of service to customers and a significant decrease in revenues, which could have a material adverse impact on our financial position, results of operations or cash flows.

### **Acts of war or terrorism, both threatened and actual, or physical attacks could adversely affect our ability to operate our systems and could adversely affect our financial results and liquidity.**

Acts of war or terrorism, both threatened and actual, or actual physical attacks that damage our transmission and distribution systems or other assets could negatively impact our ability to transmit or distribute energy, distribute water, or operate our systems efficiently or at all. Because our electric transmission systems are part of an interconnected regional grid, we face the risk of blackout due to grid disturbances or disruptions on a neighboring interconnected system. If our assets were physically damaged and were not recovered in a timely manner, it could result in a loss of service to customers and a significant decrease in revenues.

Any such acts of war or terrorism, physical attacks or grid disturbances could result in a significant decrease in revenues, significant expense to repair system damage, costs associated with governmental actions in response to such attacks, and liability claims, all of which could have a material adverse impact on our financial position, results of operations and cash flows.

### **Strategic development opportunities may not be successful and projects may not commence operation as scheduled or be completed, which could have a material adverse effect on our business prospects.**

We are pursuing broader strategic development investment opportunities that will benefit the New England region related to the construction of electric transmission facilities, off-shore wind electric generation facilities, interconnections to generating resources and other investment opportunities. The development of these activities involve numerous risks. Various factors could result in increased costs or result in delays or cancellation of these projects. Risks include regulatory approval processes, new legislation, economic events or factors, environmental and community concerns, design and siting issues, difficulties in obtaining required rights of way, competition from incumbent utilities and other entities, and actions of strategic partners. Should any of these factors result in such delays or cancellations, our financial position, results of operations, and cash flows could be adversely affected or our future growth opportunities may not be realized as anticipated.

As a result of legislative and regulatory changes, the states in which we provide service have implemented new procedures to select for construction new major electric transmission, natural gas pipeline, off-shore wind and other clean energy facilities. These procedures require the review of competing projects and permit the selection of only those projects that are expected to provide the greatest benefit to customers. If the projects in which we have invested are not selected for construction, or even if our projects are selected, other legislative or regulatory actions could result in our projects not being probable of entering the construction phase, it could have a material adverse effect on our future financial position, results of operations and cash flows.

After being selected as the winning bidder in the Massachusetts clean energy RFP in January 2018, on February 1, 2018, the NHSEC voted to deny the siting application for our Northern Pass project. Following the NHSEC's decision, the Massachusetts EDCs, in coordination with the DOER and the independent evaluator, notified NPT that the EDCs will continue contract negotiations, with the option of discontinuing discussions and terminating its conditional selection by March 27, 2018.

### **The actions of regulators and legislators can significantly affect our earnings, liquidity and business activities.**

The rates that our electric, natural gas and water companies charge their customers are determined by their state regulatory commissions and by the FERC. These commissions also regulate the companies' accounting, operations, the issuance of certain securities and certain other matters. The FERC also regulates the transmission of electric energy, the sale of electric energy at wholesale, accounting, issuance of certain securities and certain other matters.

Under state and federal law, our electric, natural gas and water companies are entitled to charge rates that are sufficient to allow them an opportunity to recover their reasonable operating and capital costs and a reasonable ROE, to attract needed capital and maintain their financial integrity, while also protecting relevant public interests. Each of these companies prepares and submits periodic rate filings with their respective regulatory commissions for review and approval.

The FERC has jurisdiction over our transmission costs recovery and our allowed ROE. Certain outside parties have filed four complaints against all electric companies under the jurisdiction of ISO-NE alleging that our allowed ROE is unjust and unreasonable. An adverse decision in any of these four complaints could adversely affect our financial position, results of operations or cash flows.

FERC's policy has encouraged competition for transmission projects, even within existing service territories of electric companies. Implementation of FERC's goals, including within our service territories, may expose us to competition for construction of transmission projects, additional regulatory considerations, and potential delay with respect to future transmission projects, which may adversely affect our results of operation.

There is no assurance that the commissions will approve the recovery of all costs incurred by our electric, natural gas and water companies, including costs for construction, operation and maintenance, as well as a reasonable return on their respective regulated assets. The amount of costs incurred by the companies, coupled with increases in fuel and energy prices, could lead to consumer or regulatory resistance to the timely recovery of such costs, thereby adversely affecting our financial position, results of operations or cash flows.

**We outsource certain business functions to third-party suppliers and service providers, and substandard performance by those third parties could harm our business, reputation and results of operations.**

We outsource certain services to third parties in areas including information technology, transaction processing, human resources, payroll and payroll processing and other areas. Outsourcing of services to third parties could expose us to substandard quality of service delivery or substandard deliverables, which may result in missed deadlines or other timeliness issues, non-compliance (including with applicable legal requirements and industry standards) or reputational harm, which could negatively impact our results of operations. We also continue to pursue enhancements to standardize our systems and processes. If any difficulties in the operation of these systems were to occur, they could adversely affect our results of operations, or adversely affect our ability to work with regulators, unions, customers or employees.

**The effects of climate change, including severe storms, could cause significant damage to any of our facilities requiring extensive expenditures, the recovery for which is subject to approval by regulators.**

Climate change creates physical and financial risks. Physical risks from climate change may include an increase in sea levels and changes in weather conditions, such as changes in precipitation and extreme weather events including drought. Customers' energy needs vary with weather conditions, primarily temperature and humidity. For residential customers, heating and cooling represent their largest energy use. For water customers, conservation measures imposed by the communities we serve could impact water usage. To the extent weather conditions are affected by climate change, customers' energy and water usage could increase or decrease depending on the duration and magnitude of the changes.

Severe weather, such as ice and snow storms, hurricanes and other natural disasters, may cause outages and property damage, which may require us to incur additional costs that may not be recoverable from customers. The cost of repairing damage to our operating subsidiaries' facilities and the potential disruption of their operations due to storms, natural disasters or other catastrophic events could be substantial, particularly as regulators and customers demand better and quicker response times to outages. If, upon review, any of our state regulatory authorities finds that our actions were imprudent, some of those restoration costs may not be recoverable from customers. The inability to recover a significant amount of such costs could have an adverse effect on our financial position, results of operations and cash flows.

**Our transmission and distribution systems may not operate as expected, and could require unplanned expenditures, which could adversely affect our financial position, results of operations and cash flows.**

Our ability to properly operate our transmission and distribution systems is critical to the financial performance of our business. Our transmission and distribution businesses face several operational risks, including the breakdown, failure of, or damage to operating equipment, information technology systems, or processes, especially due to age; labor disputes; disruptions in the delivery of electricity, natural gas and water, including impacts on us or our customers; increased capital expenditure requirements, including those due to environmental regulation; catastrophic events such as fires, explosions, or other similar occurrences; extreme weather conditions beyond equipment and plant design capacity; other unanticipated operations and maintenance expenses and liabilities; and potential claims for property damage or personal injuries beyond the scope of our insurance coverage. Many of our transmission projects are expected to alleviate identified reliability issues and reduce customers' costs. However, if the in-service date for one or more of these projects is delayed due to economic events or factors, or regulatory or other delays, the risk of failures in the electricity transmission system may increase. Any failure of our transmission and distribution systems to operate as planned may result in increased capital costs, reduced earnings or unplanned increases in operation and maintenance costs. The inability to recover a significant amount of such costs could have an adverse effect on our financial position, results of operations and cash flows.

**New technology, conservation measures and alternative energy sources could adversely affect our operations and financial results.**

Advances in technology that reduce the costs of alternative methods of producing electric energy to a level that is competitive with that of current electric production methods, could result in loss of market share and customers, and may require us to make significant expenditures to remain competitive. These changes in technology could also alter the channels through which electric customers buy or utilize energy, which could reduce

our revenues or increase our expenses. Economic downturns or periods of high energy supply costs typically can lead to the development of legislative and regulatory policy designed to promote reductions in energy consumption and increased energy efficiency and self-generation by customers. Customers' increased use of energy efficiency measures, distributed generation and energy storage technology could result in lower demand. Similarly, mandatory water conservation imposed due to drought conditions could result in lower demand for water. Reduced demand for electricity due to energy efficiency measures and the use of distributed generation, and reduced demand for water due to mandatory or voluntary conservation efforts, to the extent not substantially offset through ratemaking or decoupling mechanisms, could have a material adverse effect on our financial condition, results of operations and cash flows.

**The unauthorized access to and the misappropriation of confidential and proprietary customer, employee, financial or system operating information could adversely affect our business operations and adversely impact our reputation.**

In the regular course of business, we maintain sensitive customer, employee, financial and system operating information and are required by various federal and state laws to safeguard this information. Cyber intrusions, security breaches, theft or loss of this information by cybercrime or otherwise could lead to the release of critical operating information or confidential customer or employee information, which could adversely affect our business operations or adversely impact our reputation, and could result in significant costs, fines and litigation. We maintain limited privacy protection liability insurance to cover limited damages and defense costs arising from unauthorized disclosure of, or failure to protect, private information, as well as costs for notification to, or for credit card monitoring of, customers, employees and other persons in the event of a breach of private information. This insurance covers amounts paid to avert, prevent or stop a network attack or the disclosure of personal information, and costs of a qualified forensics firm to determine the cause, source and extent of a network attack or to investigate, examine and analyze our network to find the cause, source and extent of a data breach. While we have implemented measures designed to prevent cyberattacks and mitigate their effects should they occur, these measures may not be effective due to the continually evolving nature of efforts to access confidential information.

**Contamination of our water supplies, the failure of dams on reservoirs providing water to our customers, or requirements to repair, upgrade or dismantle any of these dams, may disrupt our ability to distribute water to our customers and result in substantial additional costs, which could adversely affect our financial condition, and results of operations.**

Our water supplies, including water provided to our customers, are subject to possible contamination from naturally occurring compounds or man-made substances.

Our water systems include impounding dams and reservoirs of various sizes. Although we believe our dams are structurally sound and well-maintained, significant damage to these facilities, or a significant decrease in the water in our reservoirs, could adversely affect our ability to provide water to our customers until the facilities and a sufficient amount of water in our reservoirs can be restored. A failure of a dam could result in personal injuries and downstream property damage for which we may be liable. The failure of a dam would also adversely affect our ability to supply water in sufficient quantities to our customers. Any losses or liabilities incurred due to a failure of one of our dams may not be covered by existing insurance, may exceed such insurance coverage limits, or may not be recoverable in rates. Any such losses may make it difficult for us to obtain insurance at acceptable rates in the future, and may have a material adverse effect on our financial condition, results of operations and cash flows.

**Our goodwill is valued and recorded at an amount that, if impaired and written down, could adversely affect our future operating results and total capitalization.**

We have a significant amount of goodwill on our consolidated balance sheet, which, as of December 31, 2017, totaled \$4.4 billion. The carrying value of goodwill represents the fair value of an acquired business in excess of identifiable assets and liabilities as of the acquisition date. We test our goodwill balances for impairment on an annual basis or whenever events occur or circumstances change that would indicate a potential for impairment. A determination that goodwill is deemed to be impaired would result in a non-cash charge that could materially adversely affect our financial position, results of operations and total capitalization. The annual goodwill impairment test in 2017 resulted in a conclusion that our goodwill was not impaired.

**Eversource Energy and its utility subsidiaries are exposed to significant reputational risks, which make them vulnerable to increased regulatory oversight or other sanctions.**

Because utility companies, including our electric, natural gas and water utility subsidiaries, have large customer bases, they are subject to adverse publicity focused on the reliability of their distribution services and the speed with which they are able to respond to electric outages, natural gas leaks and similar interruptions caused by storm damage or other unanticipated events. Adverse publicity of this nature could harm the reputations of Eversource Energy and its subsidiaries; may make state legislatures, utility commissions and other regulatory authorities less likely to view them in a favorable light; and may cause them to be subject to less favorable legislative and regulatory outcomes or increased regulatory oversight. Unfavorable regulatory outcomes can include more stringent laws and regulations governing our operations, such as reliability and customer service quality standards or vegetation management requirements, as well as fines, penalties or other sanctions or requirements. The imposition of any of the foregoing could have a material adverse effect on the business, financial position, results of operations and cash flows of Eversource Energy and each of its utility subsidiaries.

**Limits on our access to and increases in the cost of capital may adversely impact our ability to execute our business plan.**

We use short-term debt and the long-term capital markets as a significant source of liquidity and funding for capital requirements not obtained from our operating cash flow. If access to these sources of liquidity becomes constrained, our ability to implement our business strategy could be

adversely affected. In addition, higher interest rates would increase our cost of borrowing, which could adversely impact our results of operations. A downgrade of our credit ratings or events beyond our control, such as a disruption in global capital and credit markets, could increase our cost of borrowing and cost of capital or restrict our ability to access the capital markets and negatively affect our ability to maintain and to expand our businesses.

**Our counterparties may not meet their obligations to us or may elect to exercise their termination rights, which could adversely affect our earnings.**

We are exposed to the risk that counterparties to various arrangements who owe us money, have contracted to supply us with energy, coal, or other commodities or services, or who work with us as strategic partners, including on significant capital projects, will not be able to perform their obligations, will terminate such arrangements or, with respect to our credit facilities, fail to honor their commitments. Should any of these counterparties fail to perform their obligations or terminate such arrangements, we might be forced to replace the underlying commitment at higher market prices and/or have to delay the completion of, or cancel a capital project. Should any lenders under our credit facilities fail to perform, the level of borrowing capacity under those arrangements could decrease. In any such events, our financial position, results of operations, or cash flows could be adversely affected.

**Costs of compliance with environmental laws and regulations may increase and have an adverse effect on our business and results of operations.**

Our subsidiaries' operations are subject to extensive federal, state and local environmental statutes, rules and regulations that govern, among other things, air emissions, water quality, water discharges, and the management of hazardous and solid waste. Compliance with these requirements requires us to incur significant costs relating to environmental monitoring, maintenance and upgrading of facilities, remediation and permitting. The costs of compliance with existing legal requirements or legal requirements not yet adopted may increase in the future. An increase in such costs, unless promptly recovered, could have an adverse impact on our business and our financial position, results of operations or cash flows.

For further information, see Item 1, *Business - Other Regulatory and Environmental Matters*, included in this Annual Report on Form 10-K.

**Market performance or changes in assumptions may require us to make significant contributions to our pension and other postretirement benefit plans.**

We provide a defined benefit pension plan and other postretirement benefits for a substantial number of employees, former employees and retirees. Our future pension obligations, costs and liabilities are highly dependent on a variety of factors beyond our control. These factors include estimated investment returns, interest rates, discount rates, health care cost trends, benefit changes, salary increases and the demographics of plan participants. If our assumptions prove to be inaccurate, our future costs could increase significantly. In addition, various factors, including underperformance of plan investments and changes in law or regulation, could increase the amount of contributions required to fund our pension plan in the future. Additional large funding requirements, when combined with the financing requirements of our construction program, could impact the timing and amount of future financings and negatively affect our financial position, results of operations or cash flows. For further information, see Note 9A, "Employee Benefits - Pensions and Postretirement Benefits Other Than Pensions," to the financial statements.

**The loss of key personnel or the inability to hire and retain qualified employees could have an adverse effect on our business, financial position and results of operations.**

Our operations depend on the continued efforts of our employees. Retaining key employees and maintaining the ability to attract new employees are important to both our operational and financial performance. We cannot guarantee that any member of our management or any key employee at the Eversource parent or subsidiary level will continue to serve in any capacity for any particular period of time. In addition, a significant portion of our workforce in our subsidiaries, including many workers with specialized skills maintaining and servicing the electric, gas and water infrastructure, will be eligible to retire over the next five to ten years. Such highly skilled individuals cannot be quickly replaced due to the technically complex work they perform. We have developed strategic workforce plans to identify key functions and proactively implement plans to assure a ready and qualified workforce, but cannot predict the impact of these plans on our ability to hire and retain key employees.

**As a holding company with no revenue-generating operations, Eversource parent's liquidity is dependent on dividends from its subsidiaries, its commercial paper program, and its ability to access the long-term debt and equity capital markets.**

Eversource parent is a holding company and as such, has no revenue-generating operations of its own. Its ability to meet its debt service obligations and to pay dividends on its common shares is largely dependent on the ability of its subsidiaries to pay dividends to or repay borrowings from Eversource parent, and/or Eversource parent's ability to access its commercial paper program or the long-term debt and equity capital markets. Prior to funding Eversource parent, the subsidiary companies have financial obligations that must be satisfied, including among others, their operating expenses, debt service, preferred dividends of certain subsidiaries, and obligations to trade creditors. Additionally, the subsidiary companies could retain their free cash flow to fund their capital expenditures in lieu of receiving equity contributions from Eversource parent. Should the subsidiary companies not be able to pay dividends or repay funds due to Eversource parent, or if Eversource parent cannot access its commercial paper programs or the long-term debt and equity capital markets, Eversource parent's ability to pay interest, dividends and its own debt obligations would be restricted.

**Item 1B. Unresolved Staff Comments**

We do not have any unresolved SEC staff comments.

## Item 2. Properties

### Transmission and Distribution System

As of December 31, 2017, Eversource and our electric operating subsidiaries owned the following:

Eversource	Electric Distribution	Electric Transmission
Number of substations owned	508	74
Transformer capacity (in kVa)	42,810,000	17,012,000
Overhead lines (in circuit miles)	40,532	3,947
Capacity range of overhead transmission lines (in kV)	N/A	69 to 345
Underground lines (distribution in circuit miles and transmission in cable miles)	17,438	405
Capacity range of underground transmission lines (in kV)	N/A	69 to 345

	CL&P		NSTAR Electric		PSNH	
	Distribution	Transmission	Distribution	Transmission	Distribution	Transmission
Number of substations owned	182	20	178	34	148	20
Transformer capacity (in kVa)	19,965,000	3,633,000	17,535,000	7,465,000	5,310,000	5,914,000
Overhead lines (in circuit miles)	16,955	1,673	11,404	1,233	12,173	1,041
Capacity range of overhead transmission lines (in kV)	N/A	69 to 345	N/A	69 to 345	N/A	115 to 345
Underground lines (distribution in circuit miles and transmission in cable miles)	6,639	137	8,875	267	1,924	1
Capacity range of underground transmission lines (in kV)	N/A	69 to 345	N/A	115 to 345	N/A	115

	Eversource	CL&P	NSTAR Electric	PSNH
Underground and overhead line transformers in service	624,472	289,986	170,383	164,103
Aggregate capacity (in kVa)	36,140,835	15,684,715	13,996,195	6,459,925

### Electric Generating Plants

As of December 31, 2017, PSNH owned the following electric generating plants:

Type of Plant	Number of Units	Year Installed	Claimed Capability* (kilowatts)
Steam Plants	5	1952-74	934,940
Hydro	20	1901-83	58,951
Internal Combustion	5	1968-70	101,535
Biomass	1	2006	42,594
Total PSNH Generating Plant	31		1,138,020

\* Claimed capability represents winter ratings as of December 31, 2017. The combined nameplate capacity of the generating plants is approximately 1,200 MW.

On January 10, 2018, Eversource and PSNH completed the sale of PSNH's thermal generation assets, including the steam, internal combustion and biomass units, above. See Note 12, "Assets Held for Sale," in the accompanying Item 8, *Financial Statements and Supplementary Data* for further information.

As of December 31, 2017, NSTAR Electric owned the following solar power facilities:

Type of Plant	Number of Sites	Year Installed	Claimed Capability** (kilowatts)
Solar Fixed Tilt, Photovoltaic	3	2010-14	8,000

\*\* Claimed capability represents the direct current nameplate capacity of the plant.

CL&P does not own any electric generating plants.

## **Natural Gas Distribution System**

As of December 31, 2017, Yankee Gas owned 28 active gate stations, 197 district regulator stations, and approximately 3,362 miles of natural gas main pipeline. Yankee Gas also owns a liquefaction and vaporization plant and above ground storage tank with a storage capacity equivalent of 1.2 Bcf of natural gas in Waterbury, Connecticut.

As of December 31, 2017, NSTAR Gas owned 21 active gate stations, 166 district regulator stations, and approximately 3,292 miles of natural gas main pipeline. Hopkinton, another subsidiary of Eversource, owns a satellite vaporization plant and above ground storage tanks in Acushnet, MA. In addition, Hopkinton owns a liquefaction and vaporization plant with above ground storage tanks in Hopkinton, MA. Combined, the two plants' tanks have an aggregate storage capacity equivalent to 3.5 Bcf of natural gas that is provided to NSTAR Gas under contract.

## **Water Distribution System**

Aquarion's properties consist of water transmission and distribution mains and associated valves, hydrants and service lines, water treatment plants, pumping facilities, wells, tanks, meters, dams, reservoirs, buildings, and other facilities and equipment used for the operation of our systems, including the collection, treatment, storage, and distribution of water.

As of December 31, 2017, Aquarion owned and operated sources of water supply with a combined yield of approximately 131 million gallons per day; 3,614 miles of transmission and distribution mains; 10 surface water treatment plants; 31 dams; and 106 wellfields.

## **Franchises**

**CL&P** Subject to the power of alteration, amendment or repeal by the General Assembly of Connecticut and subject to certain approvals, permits and consents of public authority and others prescribed by statute, CL&P has, subject to certain exceptions not deemed material, valid franchises free from burdensome restrictions to provide electric transmission and distribution services in the respective areas in which it is now supplying such service.

In addition to the right to provide electric transmission and distribution services as set forth above, the franchises of CL&P include, among others, limited rights and powers, as set forth under Connecticut law and the special acts of the General Assembly constituting its charter, to manufacture, generate, purchase and/or sell electricity at retail, including to provide Standard Service, Supplier of Last Resort service and backup service, to sell electricity at wholesale and to erect and maintain certain facilities on public highways and grounds, all subject to such consents and approvals of public authority and others as may be required by law. The franchises of CL&P include the power of eminent domain.

Connecticut law prohibits an electric distribution company from owning or operating generation assets. However, under "An Act Concerning Electricity and Energy Efficiency," enacted in 2007, an electric distribution company, such as CL&P, is permitted to purchase an existing electric generating plant located in Connecticut that is offered for sale, subject to prior approval from the PURA and a determination by the PURA that such purchase is in the public interest.

**NSTAR Electric** Through its charter, which is unlimited in time, NSTAR Electric has the right to engage in the business of delivering and selling electricity within its respective service territory, and has the power incidental thereto and is entitled to all the rights and privileges of and subject to the duties imposed upon electric companies under Massachusetts laws. The locations in public ways for electric transmission and distribution lines are obtained from municipal and other state authorities who, in granting these locations, act as agents for the state. In some cases, the actions of these authorities are subject to appeal to the DPU. The rights to these locations are not limited in time and are subject to the action of these authorities and the legislature. Under Massachusetts law, with the exception of municipal-owned utilities, no other entity may provide electric delivery service to retail customers within NSTAR Electric service territory without the written consent of NSTAR Electric. This consent must be filed with the DPU and the municipality so affected. The franchises of NSTAR Electric include the power of eminent domain.

The Massachusetts restructuring legislation defines service territories as those territories actually served on July 1, 1997 and following municipal boundaries to the extent possible. The restructuring legislation further provides that until terminated by law or otherwise, distribution companies shall have the exclusive obligation to serve all retail customers within their service territories and no other person shall provide distribution service within such service territories without the written consent of such distribution companies. Pursuant to the Massachusetts restructuring legislation, the DPU (then, the Department of Telecommunications and Energy) was required to define service territories for each distribution company, including NSTAR Electric. The DPU subsequently determined that there were advantages to the exclusivity of service territories and issued a report to the Massachusetts Legislature recommending against, in this regard, any changes to the restructuring legislation.

**PSNH** The NHPUC, pursuant to statutory requirements, has issued orders granting PSNH exclusive franchises to distribute electricity in the respective areas in which it is now supplying such service.

In addition to the right to distribute electricity as set forth above, the franchises of PSNH include, among others, rights and powers to manufacture, generate, purchase, and transmit electricity, to sell electricity at wholesale to other utility companies and municipalities and to erect and maintain certain facilities on certain public highways and grounds, all subject to such consents and approvals of public authority and others as may be required by law. PSNH's status as a public utility gives it the ability to petition the NHPUC for the right to exercise eminent domain for distribution services and for transmission eligible for regional cost allocation.

PSNH is also subject to certain regulatory oversight by the Maine Public Utilities Commission and the Vermont Public Utility Commission.

**NSTAR Gas** Through its charter, which is unlimited in time, NSTAR Gas has the right to engage in the business of delivering and selling natural gas within its respective service territory, and has the power incidental thereto and is entitled to all the rights and privileges of and subject to the duties imposed upon natural gas companies under Massachusetts laws. The locations in public ways for natural gas distribution pipelines are obtained from municipal and other state authorities who, in granting these locations, act as agents for the state. In some cases, the actions of these authorities are subject to appeal to the DPU. The rights to these locations are not limited in time and are subject to the action of these authorities and the legislature. Under Massachusetts law, with the exception of municipal-owned utilities, no other entity may provide natural gas delivery service to retail customers within the NSTAR Gas service territory without the written consent of NSTAR Gas. This consent must be filed with the DPU and the municipality so affected.

**Yankee Gas** Yankee Gas holds valid franchises to sell natural gas in the areas in which Yankee Gas supplies natural gas service, which it acquired either directly or from its predecessors in interest. Generally, Yankee Gas holds franchises to serve customers in areas designated by those franchises as well as in most other areas throughout Connecticut so long as those areas are not occupied and served by another natural gas utility under a valid franchise of its own or are not subject to an exclusive franchise of another natural gas utility or by consent. Yankee Gas' franchises are perpetual but remain subject to the power of alteration, amendment or repeal by the General Assembly of the State of Connecticut, the power of revocation by the PURA and certain approvals, permits and consents of public authorities and others prescribed by statute. Generally, Yankee Gas' franchises include, among other rights and powers, the right and power to manufacture, generate, purchase, transmit and distribute natural gas and to erect and maintain certain facilities on public highways and grounds, and the right of eminent domain, all subject to such consents and approvals of public authorities and others as may be required by law.

**Aquarion Water Company of Connecticut** AWC-CT derives its rights and franchises to operate from special acts of the Connecticut General Assembly and subject to certain approvals, permits and consents of public authority and others prescribed by statute and by its charter, AWC-CT has, with minor exceptions, solid franchises free from burdensome restrictions and unlimited as to time, and is authorized to sell potable water in the towns (or parts thereof) in which water is now being supplied by AWC-CT.

In addition to the right to sell water as set forth above, the franchises of AWC-CT include rights and powers to erect and maintain certain facilities on public highways and grounds, all subject to such consents and approvals of public authority and others as may be required by law. Under the Connecticut General Statutes, AWC-CT may, upon payment of compensation, take and use such lands, springs, streams or ponds, or such rights or interests therein as the Connecticut Superior Court, upon application, may determine is necessary to enable AWC-CT to supply potable water for public or domestic use in its franchise areas.

**Aquarion Water Company of Massachusetts** Through its charters, which are unlimited in time, AWC-MA has the right to engage in the business of distributing and selling water within its service territories, and has the power incidental thereto and is entitled to all the rights and privileges of and subject to the duties imposed upon water companies under Massachusetts laws. AWC-MA has the right to construct and maintain its mains and distribution pipes in and under any public ways and to take and hold water within its respective service territories. Subject to DPU regulation, AWC-MA has the right to establish and fix rates for use of the water distributed and to establish reasonable regulations regarding same. Certain of the towns within our service area have the right, at any time, to purchase the corporate property and all rights and privileges of AWC-MA according to pricing formulas and procedures specifically described in AWC-MA's respective charters and in compliance with Massachusetts law.

**Aquarion Water Company of New Hampshire** The NHPUC, pursuant to statutory law, has issued orders granting and affirming AWC-NH's exclusive franchise to own, operate, and manage plant and equipment and any part of the same, for the conveyance of water for the public located within its franchise territory. That franchise territory encompasses the towns of Hampton, North Hampton and Rye. Subject to NHPUC's regulations, AWC-NH has the right to establish and fix rates for use of the water distributed and to establish reasonable regulations regarding the same.

In addition to the right to provide water supply, the franchise also allows AWC-NH to sell water at wholesale to other water utilities and municipalities and to construct plant and equipment and maintain such plant and equipment on certain public highways and grounds, all subject to such consents and approvals of public authority and others as may be required by law.

AWC-NH's status as a regulated public utility gives it the ability to petition the NHPUC for the right to exercise eminent domain for the establishment of plant and equipment. It can also petition the NHPUC for exemption from the operation of any local ordinance when certain utility structures are reasonably necessary for the convenience or welfare of the public and the local conditions, and, if the purpose of the structure relates to water supply withdrawal, the exemption is recommended by the New Hampshire Department of Environmental Services.

### **Item 3. Legal Proceedings**

#### **1. Yankee Companies v. U.S. Department of Energy**

*DOE Phase I Damages* - In 1998, the Yankee Companies filed separate complaints against the DOE in the Court of Federal Claims seeking monetary damages resulting from the DOE's failure to begin accepting spent nuclear fuel for disposal by January 31, 1998 pursuant to the terms of the 1983 spent fuel and high-level waste disposal contracts between the Yankee Companies and the DOE ("DOE Phase I Damages"). Phase I covered damages for the years 1998 through 2002. Following multiple appeals and cross-appeals in December 2012, the judgment awarding \$39.6 million, \$38.3 million and \$81.7 million to CYAPC, YAEC and MYAPC, respectively, became final.

In January 2013, the proceeds from the DOE Phase I Damages Claim were received by the Yankee Companies and transferred to each Yankee Company's respective decommissioning trust.

In June 2013, FERC approved CYAPC, YAEC and MYAPC to reduce rates in their wholesale power contracts through the application of the DOE proceeds for the benefit of customers. Changes to the terms of the wholesale power contracts became effective on July 1, 2013. In accordance with the FERC order, CL&P, NSTAR Electric and PSNH began receiving the benefit of the DOE proceeds, and the benefits have been passed on to customers.

On September 17, 2014, in accordance with the MYAPC refund plan, MYAPC returned a portion of the DOE Phase I Damages proceeds to the member companies, including CL&P, NSTAR Electric and PSNH, in the amount of \$3.2 million, \$1.9 million and \$1.4 million, respectively.

*DOE Phase II Damages* - In December 2007, the Yankee Companies each filed subsequent lawsuits against the DOE seeking recovery of actual damages incurred related to the alleged failure of the DOE to provide for a permanent facility to store spent nuclear fuel generated in years 2001 through 2008 for CYAPC and YAEC and from 2002 through 2008 for MYAPC ("DOE Phase II Damages"). In November 2013, the court issued a final judgment awarding \$126.3 million, \$73.3 million, and \$35.8 million to CYAPC, YAEC and MYAPC, respectively. On January 14, 2014, the Yankee Companies received a letter from the U.S. Department of Justice stating that the DOE will not appeal the court's final judgment.

In March and April 2014, CYAPC, YAEC and MYAPC received payment of \$126.3 million, \$73.3 million and \$35.8 million, respectively, of the DOE Phase II Damages proceeds and made the required informational filing with FERC in accordance with the process and methodology outlined in the 2013 FERC order. The Yankee Companies returned the DOE Phase II Damages proceeds to the member companies, including CL&P, NSTAR Electric and PSNH, for the benefit of their respective customers, on June 1, 2014. Refunds to CL&P's, NSTAR Electric's and PSNH's customers for these DOE proceeds began in the third quarter of 2014 and all refunds under these proceedings have been disbursed.

*DOE Phase III Damages* - In August 2013, the Yankee Companies each filed subsequent lawsuits against the DOE seeking recovery of actual damages incurred in the years 2009 through 2012 ("DOE Phase III"). The DOE Phase III trial concluded on July 1, 2015, followed by a post-trial briefing that concluded on October 4, 2015. On March 25, 2016, the court issued its decision and awarded CYAPC, YAEC and MYAPC damages of \$32.6 million, \$19.6 million and \$24.6 million, respectively. In total, the Yankee Companies were awarded \$76.8 million of the \$77.9 million in damages sought in the DOE Phase III. The decision became final on July 18, 2016, and the Yankee Companies received the awards from the DOE on October 14, 2016. The Yankee Companies received FERC approval of their proposed distribution of certain amounts of the awarded damages proceeds to member companies, including CL&P, NSTAR Electric and PSNH, which CYAPC and MYAPC made in December 2016. MYAPC also refunded \$56.5 million from its spent nuclear fuel trust, a portion of which was also refunded to the Eversource utility subsidiaries. In total, Eversource received \$26.1 million, of which CL&P, NSTAR Electric and PSNH received \$13.6 million, \$8.6 million and \$3.9 million, respectively. All refunds under these proceedings have been disbursed.

*DOE Phase IV Damages* - On May 22, 2017, each of the Yankee Companies filed subsequent lawsuits against the DOE in the Court of Federal Claims seeking monetary damages totaling approximately \$100 million for CYAPC, YAEC and MYAPC, resulting from the DOE's failure to begin accepting spent nuclear fuel for disposal covering the years from 2013 to 2016 ("DOE Phase IV"). The DOE Phase IV trial is expected to begin in 2018.

## 2. Other Legal Proceedings

For further discussion of legal proceedings, see Item 1, *Business*: "- Electric Distribution Segment," "- Electric Transmission Segment," and "- Natural Gas Distribution Segment" for information about various state and federal regulatory and rate proceedings, civil lawsuits related thereto, and information about proceedings relating to power, transmission and pricing issues; "- Nuclear Fuel Storage" for information related to nuclear waste; and "- Other Regulatory and Environmental Matters" for information about proceedings involving water and air quality requirements, toxic substances and hazardous waste, electric and magnetic fields, and other matters. In addition, see Item 1A, *Risk Factors*, for general information about several significant risks.

## **Item 4. Mine Safety Disclosures**

Not applicable.

## **EXECUTIVE OFFICERS OF THE REGISTRANT**

The following table sets forth the executive officers of Eversource Energy as of February 23, 2018. All of the Company's officers serve terms of one year and until their successors are elected and qualified:

<b>Name</b>	<b>Age</b>	<b>Title</b>
James J. Judge	62	President and Chief Executive Officer
Philip J. Lembo	62	Executive Vice President and Chief Financial Officer
Gregory B. Butler	60	Executive Vice President and General Counsel
Christine M. Carmody	55	Executive Vice President-Human Resources and Information Technology
Joseph R. Nolan, Jr.	54	Executive Vice President-Customer and Corporate Relations
Leon J. Olivier	70	Executive Vice President-Enterprise Energy Strategy and Business Development
Werner J. Schweiger	58	Executive Vice President and Chief Operating Officer
Jay S. Buth	48	Vice President, Controller and Chief Accounting Officer

*James J. Judge.* Mr. Judge has served as Chairman of the Board, President and Chief Executive Officer of Eversource Energy since May 3, 2017; as a Trustee of Eversource Energy and as Chairman of CL&P, NSTAR Electric and PSNH since May 4, 2016; and as Chairman, President and Chief Executive Officer of Eversource Service and Chairman of NSTAR Gas and Yankee Gas since May 9, 2016. Mr. Judge has served as a Director of CL&P, PSNH, Yankee Gas and Eversource Service since April 10, 2012; and of NSTAR Electric and NSTAR Gas since September 27, 1999. Previously, Mr. Judge served as President and Chief Executive Officer of Eversource Energy from May 4, 2016 until May 3, 2017; as Chairman of WMECO from May 4, 2016 until December 31, 2017; as a Director of WMECO from April 10, 2012 until December 31, 2017; and as Executive Vice President and Chief Financial Officer of Eversource Energy, CL&P, NSTAR Electric, PSNH and WMECO from April 10, 2012 until May 4, 2016; of NSTAR Gas, Yankee Gas and Eversource Service from April 10, 2012 until May 9, 2016. Mr. Judge serves as a director of Analogic Corporation and as chairman of its audit committee. He serves on the Board of Directors of the Edison Electric Institute and the Massachusetts Competitive Partnership. He has also served on the Board of Directors of the United Way of Massachusetts Bay and Merrimack Valley. Mr. Judge has served as Chairman of the Board of Eversource Energy Foundation, Inc. since May 9, 2016; and as a Director since April 10, 2012. He previously served as Treasurer of the Eversource Energy Foundation, Inc. from May 10, 2012 until May 9, 2016. He has served as a Trustee of the NSTAR Foundation since December 12, 1995.

*Philip J. Lembo.* Mr. Lembo has served as Executive Vice President and Chief Financial Officer of Eversource Energy since May 3, 2017; and of CL&P, NSTAR Electric, NSTAR Gas, PSNH, Yankee Gas and Eversource Service since March 31, 2017. Mr. Lembo has served as a Director of CL&P, NSTAR Electric and PSNH since May 4, 2016; and of NSTAR Gas, Yankee Gas and Eversource Service since May 9, 2016. Mr. Lembo previously served as Executive Vice President and Chief Financial Officer of WMECO from May 3, 2017 until December 31, 2017; as a Director of WMECO from May 4, 2016 until December 31, 2017; as Executive Vice President, Chief Financial Officer and Treasurer of Eversource Energy from August 8, 2016 until May 3, 2017; of CL&P, NSTAR Electric, PSNH, WMECO, NSTAR Gas, Yankee Gas and Eversource Service from August 8, 2016 until March 31, 2017; as Senior Vice President, Chief Financial Officer and Treasurer of Eversource Energy, CL&P, NSTAR Electric, PSNH and WMECO from May 4, 2016 until August 8, 2016; and of NSTAR Gas, Yankee Gas and Eversource Service from May 9, 2016 until August 8, 2016; as Vice President and Treasurer of Eversource Energy, CL&P, PSNH and WMECO from April 10, 2012 until May 4, 2016; and of Yankee Gas and Eversource Service from April 10, 2012 until May 9, 2016. Mr. Lembo served as Vice President and Treasurer of NSTAR Electric and NSTAR Gas from March 29, 2006 until May 4, 2016. Mr. Lembo has served as a Director of Eversource Energy Foundation, Inc. since May 9, 2016. He previously served as Treasurer of Eversource Energy Foundation, Inc. from May 9, 2016 until March 31, 2017. He has served as a Trustee of the NSTAR Foundation since May 9, 2016.

*Gregory B. Butler.* Mr. Butler has served as Executive Vice President and General Counsel of Eversource Energy, CL&P, NSTAR Electric, NSTAR Gas, PSNH, Yankee Gas and Eversource Service since August 8, 2016. Mr. Butler has served as a Director of NSTAR Electric and NSTAR Gas since April 10, 2012; of Eversource Service since November 27, 2012; and of CL&P, PSNH and Yankee Gas since April 22, 2009. Mr. Butler previously served as Executive Vice President and General Counsel of WMECO from August 8, 2016 until December 31, 2017; as a Director of WMECO from April 22, 2009 until December 31, 2017; as Senior Vice President and General Counsel of Eversource Energy from May 1, 2014 until August 8, 2016; of NSTAR Electric and NSTAR Gas from April 10, 2012 until August 8, 2016; of CL&P, PSNH, WMECO, Yankee Gas and Eversource Service from March 9, 2006 until August 8, 2016; and as Senior Vice President, General Counsel and Secretary of Eversource Energy from April 10, 2012 until May 1, 2014. He has served as a Director of Eversource Energy Foundation, Inc. since December 1, 2002. He has been a Trustee of the NSTAR Foundation since April 10, 2012.

*Christine M. Carmody.* Ms. Carmody has served as Executive Vice President-Human Resources and Information Technology of Eversource Energy and Eversource Service since August 8, 2016. Ms. Carmody has served as a Director of Eversource Service since November 27, 2012. Previously Ms. Carmody served as Senior Vice President-Human Resources of Eversource Energy from May 4, 2016 until August 8, 2016; of Eversource Service from April 10, 2012 until August 8, 2016; as Senior Vice President-Human Resources of CL&P, PSNH, WMECO and Yankee Gas from November 27, 2012 until September 29, 2014; of NSTAR Electric and NSTAR Gas from August 1, 2008 until September 29, 2014; and as a Director of CL&P, PSNH, WMECO and Yankee Gas from April 10, 2012 until September 29, 2014; and of NSTAR Electric and NSTAR Gas from November 27, 2012 until September 29, 2014. Ms. Carmody has served as a Director of Eversource Energy Foundation, Inc. since April 10, 2012. She has served as a Trustee of the NSTAR Foundation since August 1, 2008.

*Joseph R. Nolan, Jr.* Mr. Nolan has served as Executive Vice President-Customer and Corporate Relations of Eversource Energy and Eversource Service since August 8, 2016. Mr. Nolan has served as a Director of Eversource Service since November 27, 2012. Previously Mr. Nolan served as Senior Vice President-Corporate Relations of Eversource Energy from May 4, 2016 until August 8, 2016; of Eversource Service from April 10, 2012 until August 8, 2016; of NSTAR Electric and NSTAR Gas from April 10, 2012 until September 29, 2014; and of CL&P, PSNH, WMECO and Yankee Gas from November 27, 2012 until September 29, 2014. Mr. Nolan previously served as a Director of CL&P, PSNH, WMECO and Yankee Gas from April 10, 2012 until September 29, 2014; and of NSTAR Electric and NSTAR Gas from November 27, 2012 until September 29,

2014. Mr. Nolan has served as a Director of Eversource Energy Foundation, Inc. since April 10, 2012, and as Executive Director of Eversource Energy Foundation, Inc. since October 15, 2013. He has served as a Trustee of the NSTAR Foundation since October 1, 2000.

*Leon J. Olivier.* Mr. Olivier has served as Executive Vice President-Enterprise Energy Strategy and Business Development of Eversource Energy since September 2, 2014; and of Eversource Service since August 11, 2014. Mr. Olivier has served as a Director of Eversource Service since January 17, 2005. Mr. Olivier previously served as Executive Vice President and Chief Operating Officer of Eversource Energy from May 13, 2008 until September 2, 2014; of Eversource Service from May 13, 2008 until August 11, 2008; as Chief Executive Officer of NSTAR Electric and NSTAR Gas from April 10, 2012 until August 11, 2014; of CL&P, PSNH, WMECO and Yankee Gas from January 15, 2007 until August 11, 2014; and of CL&P from September 10, 2001 until September 29, 2014; as a Director of NSTAR Electric and NSTAR Gas from November 27, 2012 until September 29, 2014; of PSNH, WMECO and Yankee Gas from January 17, 2005 until September 29, 2014; and of CL&P from September 10, 2001 until September 29, 2014. He has served as a Director of Eversource Energy Foundation, Inc. since April 1, 2006. Mr. Olivier has served as a Trustee of the NSTAR Foundation since April 10, 2012.

*Werner J. Schweiger.* Mr. Schweiger has served as Executive Vice President and Chief Operating Officer of Eversource Energy since September 2, 2014; of Eversource Service since August 11, 2014; and as Chief Executive Officer of CL&P, NSTAR Electric, NSTAR Gas, PSNH and Yankee Gas since August 11, 2014. Mr. Schweiger has served as a Director of Eversource Service, NSTAR Gas and Yankee Gas since September 29, 2014; and of CL&P, PSNH and NSTAR Electric since May 28, 2013. He previously served as Chief Executive Officer of WMECO from August 11, 2014 until December 31, 2017; as a Director of WMECO from May 28, 2013 until December 31, 2017; as President of CL&P from June 2, 2015 until June 27, 2016; as President of NSTAR Gas and Yankee Gas from September 29, 2014 until November 10, 2014; as President-Electric Distribution of Eversource Service from January 16, 2013 until August 11, 2014; as President of NSTAR Electric from April 10, 2012 until January 16, 2013; and as a Director of NSTAR Electric from November 27, 2012 until January 16, 2013. Mr. Schweiger has served as a Director of Eversource Energy Foundation, Inc. since September 29, 2014. He has served as a Trustee of the NSTAR Foundation since September 29, 2014.

*Jay S. Buth.* Mr. Buth has served as Vice President, Controller and Chief Accounting Officer of Eversource Energy, CL&P, NSTAR Electric, NSTAR Gas, PSNH, Yankee Gas and Eversource Service since April 10, 2012. Previously, Mr. Buth served as Vice President, Controller and Chief Accounting Officer of WMECO from April 10, 2012 until December 31, 2017; and as Vice President-Accounting and Controller of Eversource Energy, CL&P, PSNH, WMECO, Yankee Gas and Eversource Service from June 9, 2009 until April 10, 2012.

## PART II

### Item 5. Market for the Registrants' Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

#### (a) Market Information and (c) Dividends

Eversource. Our common shares are listed on the New York Stock Exchange. The ticker symbol is "ES." The high and low sales prices of our common shares and the dividends declared, for the past two years, by quarter, are shown below.

Year	Quarter	High	Low	Dividends Declared
2017	First	\$ 60.36	\$ 54.08	\$ 0.4750
	Second	63.34	58.11	0.4750
	Third	64.19	59.55	0.4750
	Fourth	66.15	59.59	0.4750
2016	First	\$ 58.81	\$ 50.01	\$ 0.4450
	Second	59.95	53.90	0.4450
	Third	60.44	53.08	0.4450
	Fourth	55.74	50.56	0.4450

Information with respect to dividend restrictions for us, CL&P, NSTAR Electric and PSNH is contained in Item 8, *Financial Statements and Supplementary Data*, in the *Combined Notes to Financial Statements*, within this Annual Report on Form 10-K.

There is no established public trading market for the common stock of CL&P, NSTAR Electric and PSNH. All of the common stock of CL&P, NSTAR Electric and PSNH is held solely by Eversource.

Common stock dividends approved and paid to Eversource during the year were as follows:

(Millions of Dollars)	For the Years Ended December 31,	
	2017	2016
CL&P	\$ 254.8	\$ 199.6
NSTAR Electric	272.0	316.3
PSNH <sup>(1)</sup>	23.9	77.6

<sup>(1)</sup> The 2017 amount does not include \$150.0 million of dividends declared but not paid as of December 31, 2017.

#### (b) Holders

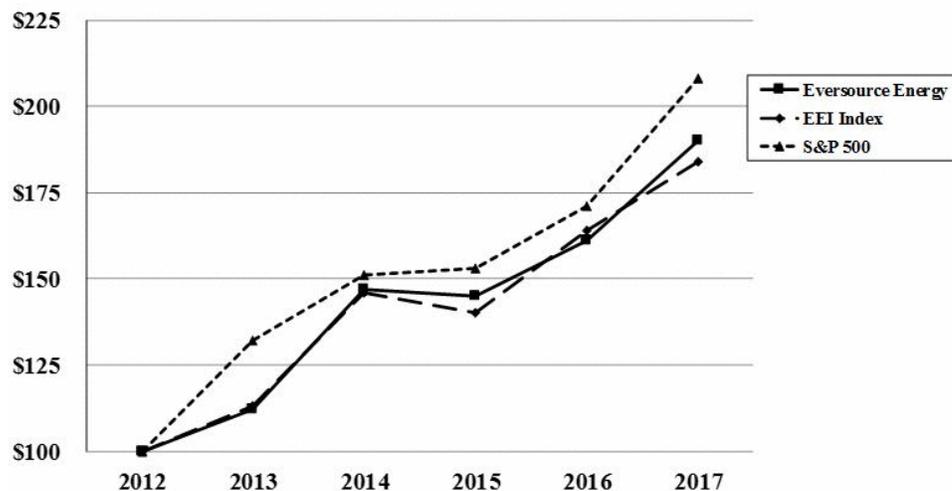

As of January 31, 2018, there were 37,428 registered common shareholders of our company on record. As of the same date, there were a total of 316,885,808 shares issued.

#### (d) Securities Authorized for Issuance Under Equity Compensation Plans

For information regarding securities authorized for issuance under equity compensation plans, see Item 12, *Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters*, included in this Annual Report on Form 10-K.

(e) Performance Graph

The performance graph below illustrates a five-year comparison of cumulative total returns based on an initial investment of \$100 in 2012 in Eversource Energy common stock, as compared with the S&P 500 Stock Index and the EEI Index for the period 2012 through 2017, assuming all dividends are reinvested.

	December 31,					
	2012	2013	2014	2015	2016	2017
Eversource Energy	\$100	\$112	\$147	\$145	\$161	\$190
EEI Index	\$100	\$113	\$146	\$140	\$164	\$184
S&P 500	\$100	\$132	\$151	\$153	\$171	\$208

Purchases of Equity Securities by the Issuer and Affiliated Purchasers

The following table discloses purchases of our common shares made by us or on our behalf for the periods shown below. The common shares purchased consist of open market purchases made by the Company or an independent agent. These share transactions related to shares awarded under the Company's Incentive Plan and Dividend Reinvestment Plan and matching contributions under the Eversource 401k Plan.

Period	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Approximate Dollar Value of Shares that May Yet Be Purchased Under the Plans and Programs (at month end)
October 1 - October 31, 2017	101,737	\$ 60.52	—	—
November 1 - November 30, 2017	6,411	64.22	—	—
December 1 - December 31, 2017	190,873	62.86	—	—
Total	299,021	\$ 62.09	—	—

## Item 6. Selected Consolidated Financial Data

<sup>(e)</sup> The closing market price divided by the book value per share.

See the *Combined Notes to Financial Statements* in this Annual Report on Form 10-K for a description of the acquisition of Aquarion on December 4, 2017, the classification as held for sale of PSNH's thermal and hydroelectric generating assets as result of generation divestiture, and any accounting changes materially affecting the comparability of the information reflected in the tables above.

## Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

### EVERSOURCE ENERGY AND SUBSIDIARIES

The following discussion and analysis should be read in conjunction with our consolidated financial statements and related combined notes included in this combined Annual Report on Form 10-K. References in this Annual Report on Form 10-K to "Eversource," the "Company," "we," "us," and "our" refer to Eversource Energy and its consolidated subsidiaries. All per-share amounts are reported on a diluted basis. The consolidated financial statements of Eversource, NSTAR Electric and PSNH and the financial statements of CL&P are herein collectively referred to as the "financial statements."

Refer to the Glossary of Terms included in this combined Annual Report on Form 10-K for abbreviations and acronyms used throughout this *Management's Discussion and Analysis of Financial Condition and Results of Operations*.

The only common equity securities that are publicly traded are common shares of Eversource. The earnings and EPS of each business discussed below do not represent a direct legal interest in the assets and liabilities of such business but rather represent a direct interest in our assets and liabilities, as a whole. EPS by business is a financial measure not recognized under GAAP that is calculated by dividing the Net Income Attributable to Common Shareholders of each business by the weighted average diluted Eversource common shares outstanding for the period. The discussion below also includes non-GAAP financial measures referencing our 2015 earnings and EPS excluding certain integration costs incurred by Eversource parent and our Electric and Natural Gas companies. We use these non-GAAP financial measures to evaluate and to provide details of earnings by business and to more fully compare and explain our 2017, 2016 and 2015 results without including the impact of these items. Due to the nature and significance of these items on Net Income Attributable to Common Shareholders, we believe that the non-GAAP presentation is a meaningful representation of our financial performance and provides additional and useful information to readers of this report in analyzing historical and future performance by business. These non-GAAP financial measures should not be considered as an alternative to reported Net Income Attributable to Common Shareholders or EPS determined in accordance with GAAP as an indicator of operating performance.

Reconciliations of the non-GAAP financial measures to the most directly comparable GAAP measures of consolidated diluted EPS and Net Income Attributable to Common Shareholders are included under "Financial Condition and Business Analysis – Overview – Consolidated" and "Financial Condition and Business Analysis – Overview – Electric and Natural Gas Companies" in this *Management's Discussion and Analysis of Financial Condition and Results of Operations*, herein.

The results of Aquarion and its subsidiaries, hereinafter referred to as "Aquarion," are included from the date of the acquisition, December 4, 2017, through December 31, 2017 throughout this *Management's Discussion and Analysis of Financial Condition and Results of Operations*.

#### Financial Condition and Business Analysis

##### Executive Summary

###### *Results and Future Outlook:*

- We earned \$988.0 million, or \$3.11 per share, in 2017, compared with \$942.3 million, or \$2.96 per share, in 2016.
- Our electric distribution segment, which includes generation results, earned \$497.4 million, or \$1.57 per share, in 2017, compared with \$462.8 million, or \$1.46 per share, in 2016. Our electric transmission segment earned \$391.9 million, or \$1.23 per share, in 2017, compared with \$370.8 million, or \$1.16 per share, in 2016. Our natural gas distribution segment earned \$74.6 million, or \$0.23 per share, in 2017, compared with \$77.7 million, or \$0.24 per share, in 2016.
- Eversource parent and other companies earned \$24.1 million, or \$0.08 per share, in 2017, compared with \$31.0 million, or \$0.10 per share, in 2016.
- We currently project 2018 earnings of between \$3.20 per share and \$3.30 per share.

###### *Liquidity:*

- Cash flows provided by operating activities totaled \$2.0 billion in 2017, compared with \$2.2 billion in 2016. Investments in property, plant and equipment totaled \$2.3 billion in 2017 and \$2.0 billion in 2016. Cash and cash equivalents totaled \$38.2 million as of December 31, 2017, compared with \$30.3 million as of December 31, 2016.
- In 2017, we issued \$2.5 billion of new long-term debt, consisting of \$1.2 billion by Eversource parent, \$700 million by NSTAR Electric, \$525 million by CL&P and \$75 million by Yankee Gas. Proceeds from these new issuances were used primarily to pay short-term borrowings and repay long-term debt at maturity. In 2017, Eversource, NSTAR Electric, CL&P, PSNH and NSTAR Gas repaid, at maturity, \$745 million, \$400 million, \$250 million, \$70 million and \$25 million, respectively, of previously issued long-term debt.

- In 2017, we paid cash dividends on common shares of \$602.1 million, compared with \$564.5 million in 2016. On February 7, 2018, our Board of Trustees approved a common share dividend of \$0.505 per share, payable on March 30, 2018 to shareholders of record as of March 6, 2018. The 2018 dividend represents an increase of 6.3 percent over the dividend paid in December 2017, and is the equivalent to dividends on common shares of approximately \$640 million on an annual basis.
- We project to make capital expenditures of \$10.8 billion from 2018 through 2021, of which we expect \$5.7 billion to be in our electric and natural gas distribution segments, \$4.1 billion to be in our electric transmission segment and \$0.4 billion to be in our water utility business. We also project to invest \$0.5 billion in information technology and facilities upgrades and enhancements. These projections do not include any expected investments related to Bay State Wind.

*Strategic Items:*

- On January 25, 2018, Northern Pass was selected from the 46 proposals submitted as the winning bidder in the Massachusetts clean energy request for proposal ("RFP"), which successfully positioned Northern Pass to provide a firm delivery of hydropower to Massachusetts. Northern Pass is Eversource's planned 1,090 MW HVDC transmission line from the Québec-New Hampshire border to Franklin, New Hampshire and an associated alternating current radial transmission line between Franklin and Deerfield, New Hampshire. On February 1, 2018, the New Hampshire Site Evaluation Committee ("NHSEC") voted to deny Northern Pass' siting application. We intend to seek reconsideration of the NHSEC's decision and to review all options for moving this critical clean energy project forward. As of December 31, 2017, we have approximately \$277 million in capitalized costs associated with Northern Pass.
- On December 20, 2017, Bay State Wind submitted two proposals, one for 400 MW and the other for 800 MW, in response to the Massachusetts clean energy RFP.
- On December 4, 2017, Eversource completed the acquisition of Aquarion (formerly Macquarie Utilities Inc.) from Macquarie Infrastructure Partners for \$1.675 billion, consisting of approximately \$880 million in cash and \$795 million of assumed debt. As a result, Aquarion became a wholly-owned subsidiary of Eversource.

*Legislative, Regulatory, Policy and Other Items:*

- On November 30, 2017, the DPU issued its decision in the NSTAR Electric distribution rate case, which approved an annual distribution rate increase of \$37 million, with rates effective February 1, 2018. As a result of this decision, we recognized an aggregate \$44.1 million pre-tax benefit to earnings in 2017. On January 3, 2018, NSTAR Electric filed a motion to reflect a revenue requirement reduction of \$56 million due to the decrease in the federal corporate income tax rate, as part of the "Tax Cuts and Jobs Act", resulting in an annual net decrease in rates of \$19 million.
- On January 11, 2018, CL&P filed a distribution rate case settlement agreement for approval with PURA, which included, among other things, rate increases of \$97.1 million, \$32.7 million and \$24.7 million, effective May 1, 2018, 2019, and 2020, respectively, an authorized regulatory ROE of 9.25 percent, and 53 percent common equity in CL&P's capital structure. The rate increases associated with the settlement agreement will be reduced by the impact of the decrease in the federal corporate income tax rate, as part of the "Tax Cuts and Jobs Act", which we currently estimate to average approximately \$45 million to \$50 million per year.
- On December 22, 2017, the "Tax Cuts and Jobs Act" (the "Act") became law, which amended existing federal tax rules and included numerous provisions that impacted corporations. In particular, the Act reduced the federal corporate income tax rate from 35 percent to 21 percent effective January 1, 2018. As of December 31, 2017, we estimated approximately \$2.9 billion of provisional regulated excess ADIT liabilities that we expect to benefit our customers in future periods. The ultimate amount and timing of when certain income tax benefits resulting from the Act benefit our customers will vary by jurisdiction.
- On January 10, 2018, PSNH completed the sale of its thermal generation facilities. In accordance with the Purchase and Sale Agreement, the original purchase price of \$175 million was adjusted to reflect working capital adjustments, closing date adjustments and proration of taxes and fees prior to closing, totaling \$40.9 million, resulting in net proceeds of \$134.1 million. We are targeting for PSNH to complete the sale of its hydroelectric generation facilities by the end of the first quarter of 2018.

Overview

*Consolidated:* Below is a summary of our earnings by business, which also reconciles the non-GAAP financial measure of EPS by business to the most directly comparable GAAP measure of diluted EPS, for the years ended December 31, 2017, 2016 and 2015. Also included in the summary for the year ended December 31, 2015, is a reconciliation of the non-GAAP financial measure of consolidated non-GAAP earnings to the most directly comparable GAAP measure of consolidated Net Income Attributable to Common Shareholders.

	For the Years Ended December 31,					
	2017		2016		2015	
	Amount	Per Share	Amount	Per Share	Amount	Per Share
<i>(Millions of Dollars, Except Per Share Amounts)</i>						
Net Income Attributable to Common Shareholders (GAAP)	\$ 988.0	\$ 3.11	\$ 942.3	\$ 2.96	\$ 878.5	\$ 2.76
Electric and Natural Gas Companies	\$ 963.9	\$ 3.03	\$ 911.3	\$ 2.86	\$ 884.8	\$ 2.78
Eversource Parent and Other Companies	24.1	0.08	31.0	0.10	9.5	0.03
Non-GAAP Earnings	N/A	N/A	N/A	N/A	894.3	2.81
Integration Costs (after-tax) <sup>(1)</sup>	—	—	—	—	(15.8)	(0.05)
Net Income Attributable to Common Shareholders (GAAP)	\$ 988.0	\$ 3.11	\$ 942.3	\$ 2.96	\$ 878.5	\$ 2.76

(1) The 2015 integration costs were associated with our branding efforts and severance costs.

*Electric and Natural Gas Companies:* Our electric and natural gas companies consist of the electric distribution (including PSNH's generation facilities and NSTAR Electric's solar power facilities), electric transmission and natural gas distribution segments. A summary of our segment earnings and EPS is as follows:

	For the Years Ended December 31,					
	2017		2016		2015	
	Amount	Per Share	Amount	Per Share	Amount	Per Share
<i>(Millions of Dollars, Except Per Share Amounts)</i>						
Electric Distribution	\$ 497.4	\$ 1.57	\$ 462.8	\$ 1.46	\$ 507.9	\$ 1.59
Electric Transmission	391.9	1.23	370.8	1.16	304.5	0.96
Natural Gas Distribution	74.6	0.23	77.7	0.24	72.4	0.23
Non-GAAP Earnings	N/A	N/A	N/A	N/A	884.8	2.78
Integration Costs (after-tax) <sup>(1)</sup>	—	—	—	—	(0.8)	—
Net Income - Electric and Natural Gas Companies	\$ 963.9	\$ 3.03	\$ 911.3	\$ 2.86	\$ 884.0	\$ 2.78

(1) The 2015 Electric and Natural Gas Companies' integration costs include severance in connection with cost saving initiatives.

Our electric distribution segment earnings increased \$34.6 million in 2017, as compared to 2016, due primarily to a lower effective tax rate, lower non-tracked operations and maintenance expense, higher lost base revenues at NSTAR Electric and higher distribution revenues at CL&P due in part to a higher rate base for the system resiliency program, partially offset by higher depreciation expense, lower sales volumes primarily driven by the mild summer weather in 2017, as compared to 2016 (primarily at NSTAR Electric), and higher property tax expense.

Our electric transmission segment earnings increased \$21.1 million in 2017, as compared to 2016, due primarily to a higher transmission rate base as a result of our continued investment in our transmission infrastructure, partially offset by the absence in 2017 of the FERC-allowed recovery of certain previously expensed merger-related costs in 2016, and a lower benefit in the second quarter of 2017 related to the annual billing and cost reconciliation filing with the FERC.

Our natural gas distribution segment earnings decreased \$3.1 million in 2017, as compared to 2016, due primarily to higher depreciation expense, lower demand revenues in Connecticut driven by lower peak usage in 2017, as compared to 2016, higher non-tracked operations and maintenance expense, and higher property tax expense, partially offset by higher sales volumes driven by colder winter weather in the fourth quarter of 2017, as compared to 2016.

*Eversource Parent and Other Companies:* Eversource parent and other companies earned \$24.1 million in 2017, compared with \$31.0 million in 2016. The decrease in earnings was due primarily to a higher effective tax rate, higher interest expense and the absence in 2017 of the earnings and gain on the sale of an unregulated business in 2016. These decreases were partially offset by the 2017 DPU-allowed recovery of certain previously expensed merger-related costs in NSTAR Electric's distribution rates, and increased gains on investments recorded in 2017.

*Electric and Natural Gas Sales Volumes:* Weather, fluctuations in energy supply costs, conservation measures (including utility-sponsored energy efficiency programs), and economic conditions affect customer energy usage. Industrial sales volumes are less sensitive to temperature variations than residential and commercial sales volumes. In our service territories, weather impacts electric sales volumes during the summer and both electric and natural gas sales volumes during the winter; however, natural gas sales volumes are more sensitive to temperature variations than are electric sales volumes. Customer heating or cooling usage may not directly correlate with historical levels or with the level of degree-days that occur.

Fluctuations in retail electric sales volumes at certain of our electric utilities impact earnings ("Traditional" in the table below). For others, fluctuations in retail electric sales volumes do not impact earnings due to their regulatory commission approved distribution revenue decoupling mechanisms ("Decoupled" in the table below). These distribution revenues are decoupled from their customer sales volumes, which breaks the relationship between sales volumes and revenues recognized.

In 2017 and 2016, NSTAR Electric operated under two different rate structures based on its service territory geography. For customers that were served in eastern Massachusetts, including metropolitan Boston, Cape Cod and Martha's Vineyard, NSTAR Electric operated using Traditional rates. For customers that were served in western Massachusetts, including the metropolitan Springfield region, NSTAR Electric operated using Decoupled rates. Effective February 1, 2018, all of NSTAR Electric's distribution revenues were decoupled as a result of the

DPU-approved rate decision. See "Regulatory Developments and Rate Matters - Massachusetts - NSTAR Electric Distribution Rate Case Decision" in this *Management's Discussion and Analysis of Financial Condition and Results of Operations*.

CL&P and NSTAR Electric (for its western Massachusetts customer rates) reconciled their annual base distribution rate recovery amounts to their pre-established levels of baseline distribution delivery service revenues of \$1.059 billion and \$132.4 million, respectively, through December 31, 2017. Effective February 1, 2018, NSTAR Electric, operating entirely under decoupled rates, will reconcile its annual base distribution rate recovery to its new baseline of \$974.8 million. Any difference between the allowed level of distribution revenue and the actual amount realized during a 12-month period is adjusted through rates in the following period.

Fluctuations in natural gas sales volumes in Connecticut impact earnings ("Traditional" in the table below). In Massachusetts, fluctuations in natural gas sales volumes do not impact earnings due to the DPU-approved natural gas distribution revenue decoupling mechanism approved in the last rate case decision ("Decoupled" in the table below). These distribution revenues are decoupled from their customer sales volumes, which breaks the relationship between sales volumes and revenues recognized.

A summary of our retail electric GWh sales volumes and our firm natural gas sales volumes in MMcf and percentage changes is as follows:

	Electric			Firm Natural Gas		
	For the Year Ended December 31, 2017 Compared to 2016			For the Year Ended December 31, 2017 Compared to 2016		
	Sales Volumes (GWh)		Percentage Decrease	Sales Volumes (MMcf)		Percentage Increase/(Decrease)
2017	2016	2017		2016		
Traditional:						
Residential	9,453	9,654	(2.1)%	15,502	15,118	2.5 %
Commercial	15,958	16,267	(1.9)%	20,649	19,846	4.0 %
Industrial	2,444	2,558	(4.5)%	10,806	10,350	4.4 %
Total - Traditional	27,855	28,479	(2.2)%	46,957	45,314	3.6 %
Decoupled:						
Residential	11,043	11,347	(2.7)%	21,919	20,616	6.3 %
Commercial	10,612	10,940	(3.0)%	21,859	21,583	1.3 %
Industrial	2,736	2,876	(4.9)%	5,882	5,833	0.8 %
Total - Decoupled	24,391	25,163	(3.1)%	49,660	48,032	3.4 %
Special Contracts <sup>(1)</sup>	N/A	N/A	N/A	4,409	4,696	(6.1)%
Total - Decoupled and Special Contracts	24,391	25,163	(3.1)%	54,069	52,728	2.5 %
Total Sales Volumes	52,246	53,642	(2.6)%	101,026	98,042	3.0 %

(1) Special contracts are unique to the natural gas distribution customers who take service under such an arrangement and generally specify the amount of distribution revenue to be paid to Yankee Gas regardless of the customers' usage.

Retail electric sales volumes at our electric utilities with a traditional rate structure (the eastern region of NSTAR Electric and PSNH) were lower in 2017, as compared to 2016, due primarily to the mild summer weather in 2017, as compared to 2016. Cooling degree days in 2017 were 14.7 percent lower in the Boston metropolitan area and 22.7 percent lower in New Hampshire, as compared to 2016. Sales volumes were positively impacted by improved economic conditions across our service territories, but this trend was offset by lower customer usage driven by the impact of increased customer energy conservation efforts.

On January 28, 2016, Eversource received approval of a three-year energy efficiency plan in Massachusetts, which included recovery of LBR in the NSTAR Electric eastern Massachusetts service territory until it was covered under a decoupled rate structure, which occurred on February 1, 2018. NSTAR Electric recorded LBR related to reductions in sales volume as a result of successful energy efficiency programs. LBR was recovered from retail customers through rates. NSTAR Electric recognized LBR of \$73.7 million and \$60.7 million in 2017 and 2016, respectively.

Our firm natural gas sales volumes are subject to many of the same influences as our retail electric sales volumes. In addition, they have benefited from customer growth in both of our natural gas distribution companies. Consolidated firm natural gas sales volumes were higher in 2017, as compared to 2016, due primarily to colder winter weather in the fourth quarter of 2017, as compared to 2016. Heating degree days in 2017 were 2.5 percent higher in Connecticut, as compared to 2016. Sales volumes were also positively impacted by improved economic conditions across our natural gas service territories.

#### Liquidity

*Consolidated:* Cash and cash equivalents totaled \$38.2 million as of December 31, 2017, compared with \$30.3 million as of December 31, 2016.

*Long-Term Debt Issuances and Repayments:* The following table summarizes long-term debt issuances and repayments:

<i>(Millions of Dollars)</i>	<b>Issue Date</b>	<b>Issuances/(Repayments)</b>	<b>Maturity Date</b>	<b>Use of Proceeds</b>
<b>CL&amp;P:</b>				
3.20% 2017 Series A First Mortgage Bonds	March 2017	\$ 300.0	2027	Repay short-term debt borrowings
4.30% 2014 Series A First Mortgage Bonds <sup>(1)</sup>	August 2017	225.0	2044	Refinance short-term debt and fund working capital and capital expenditures
5.375% 2007 Series A First Mortgage Bonds	March 2007	(150.0)	2017	N/A
5.75% 2007 Series C First Mortgage Bonds	September 2007	(100.0)	2017	N/A
<b>NSTAR Electric:</b>				
3.20% Debentures	May 2017	350.0	2027	Repay short-term borrowings and fund capital expenditures and working capital
3.20% Debentures <sup>(2)</sup>	October 2017	350.0	2027	Redeem long-term debt that matured in 2017
5.625% Debentures	November 2007	(400.0)	2017	N/A
<b>PSNH:</b>

<b>Other:</b>				
Yankee Gas 3.02% Series N First Mortgage Bonds	September 2017	75.0	2027	Repay short-term borrowings
NSTAR Gas 7.04% Series M First Mortgage Bonds	September 1997	(25.0)	2017	N/A
Eversource Parent 2.75% Series K Senior Notes	March 2017	300.0	2022	Repay short-term borrowings
Eversource Parent 2.75% Series K Senior Notes <sup>(3)</sup>	October 2017	450.0	2022	Repay short-term borrowings
Eversource Parent 2.90% Series L Senior Notes	October 2017	450.0	2024	Repay short-term borrowings
Eversource Parent 2.50% Series I Senior Notes <sup>(4)</sup>	January 2018	200.0	2021	Repay long-term debt due to mature in 2018 and repay short-term borrowings
Eversource Parent 3.30% Series M Senior Notes	January 2018	450.0	2028	Repay long-term debt due to mature in 2018
Eversource Parent 1.60% Series G Senior Notes <sup>(5)</sup>	January 2015	(150.0)	2018	N/A

(1) These bonds are part of the existing series initially issued by CL&P in 2014. The aggregate outstanding principal amount for these bonds is now \$475 million.

(2) These debentures are part of the same series initially issued by NSTAR Electric in May 2017. The aggregate outstanding principal amount for these debentures is now \$700 million.

(3) These notes are part of the same series issued by Eversource parent in March 2017. The aggregate outstanding principal amount for these notes is now \$750 million.

(4) These notes are part of the same series issued by Eversource parent in March 2016. The aggregate outstanding principal amount for these notes is now \$450 million.

(5) Represents a repayment at maturity on January 15, 2018.

*Commercial Paper Programs and Credit Agreements:* Eversource parent has a \$1.45 billion commercial paper program allowing Eversource parent to issue commercial paper as a form of short-term debt. Eversource parent, CL&P, PSNH, NSTAR Gas and Yankee Gas are also parties to a five-year \$1.45 billion revolving credit facility. On December 8, 2017, Eversource parent amended and restated the revolving credit facility. The amended and restated revolving credit facility terminates on December 8, 2022 and serves to backstop Eversource parent's \$1.45 billion commercial paper program. There were no borrowings outstanding on the revolving credit facility as of December 31, 2017 or 2016.

NSTAR Electric has a \$650 million commercial paper program allowing NSTAR Electric to issue commercial paper as a form of short-term debt. On December 8, 2017, NSTAR Electric increased its commercial paper program from \$450 million to \$650 million. NSTAR Electric is also a party to a five-year \$650 million revolving credit facility. On December 8, 2017, NSTAR Electric amended and restated the revolving credit facility, increasing it from \$450 million to \$650 million. The amended and restated revolving credit facility terminates on December 8, 2022 and serves to backstop NSTAR Electric's \$650 million commercial paper program. There were no borrowings outstanding on the revolving credit facility as of December 31, 2017 or 2016.

The amount of borrowings outstanding and available under the commercial paper programs and revolving credit facility was as follows:

<i>(Millions of Dollars)</i>	<b>Borrowings Outstanding as of December 31,</b>		<b>Available Borrowing Capacity as of December 31,</b>		<b>Weighted-Average Interest Rate as of December 31,</b>	
	<b>2017</b>	<b>2016</b>	<b>2017</b>	<b>2016</b>	<b>2017</b>	<b>2016</b>
Eversource Parent Commercial Paper Program	\$ 979.3	\$ 1,022.0	\$ 470.7	\$ 428.0	1.86%	0.88%
NSTAR Electric Commercial Paper Program	234.0	126.5	416.0	323.5	1.55%	0.71%
Revolving Credit Facility <sup>(1)</sup>	76.0	N/A	24.0	N/A	2.66%	N/A

<sup>(1)</sup> Aquarion has a \$100.0 million revolving credit facility, which expires on August 19, 2019.

Amounts outstanding under the commercial paper programs and revolving credit facility are included in Notes Payable for Eversource and NSTAR Electric and are classified in current liabilities on the balance sheets as all borrowings are outstanding for no more than 364 days at one time. As a result of the Eversource parent long-term debt issuances on January 8, 2018, the net proceeds of which were used to repay short-term borrowings

outstanding under its commercial paper program, \$201.2 million of commercial paper borrowings under the Eversource parent commercial paper program were reclassified to Long-Term Debt as of December 31, 2017.

As of December 31, 2017, there were intercompany loans from Eversource parent of \$69.5 million to CL&P and \$262.9 million to PSNH. As of December 31, 2016, there were intercompany loans from Eversource parent of \$80.1 million to CL&P, \$160.9 million to PSNH and \$51.0 million to NSTAR Electric. These intercompany loans from Eversource parent are included in Notes Payable to Eversource Parent and are classified in current liabilities on the respective subsidiary's balance sheets. Intercompany loans from Eversource parent are eliminated in consolidation on Eversource's balance sheets.

*Cash Flows:* Cash flows provided by operating activities totaled \$2.0 billion in 2017, compared with \$2.2 billion in 2016. The decrease in operating cash flows was due primarily to the \$166.3 million net unfavorable impact as a result of the change in income tax payments made, or refunds received, in 2017 when compared to 2016. This unfavorable impact was primarily the result of the December 2015 legislation, which extended the accelerated deduction of depreciation from 2015 to 2019. The legislation resulted in a significant refund of approximately \$275 million, which we received in the first quarter of 2016. Additionally, there was an increase of \$84.1 million in Pension and PBOP Plan cash contributions made in 2017, as compared to 2016, a decrease of \$59.8 million related to the absence in 2017 of the Yankee Companies' DOE Damages received in 2016, and the unfavorable impact related to the timing of regulatory recoveries, which were significantly impacted by NSTAR Electric's timing of collections of purchased power and transmission costs. Partially offsetting these unfavorable impacts was the benefit related to the timing of collections and payments of our working capital items, including accounts payable.

In 2017, we paid cash dividends of \$602.1 million, or \$1.90 per common share, compared with \$564.5 million, or \$1.78 per common share in 2016. Our quarterly common share dividend payment was \$0.475 per share, in 2017, as compared to \$0.445 per common share in 2016. On February 7, 2018, our Board of Trustees approved a common share dividend of \$0.505 per share, payable on March 30, 2018 to shareholders of record as of March 6, 2018. The 2018 dividend represents an increase of 6.3 percent over the dividend paid in December 2017, and is the equivalent to dividends on common shares of approximately \$640 million on an annual basis.

In 2017, CL&P, NSTAR Electric and PSNH paid \$254.8 million, \$272.0 million and \$23.9 million, respectively, in common stock dividends to Eversource parent.

Investments in Property, Plant and Equipment on the statements of cash flows do not include amounts incurred on capital projects but not yet paid, cost of removal, AFUDC related to equity funds, and the capitalized portions of pension expense. In 2017, investments for Eversource, CL&P, NSTAR Electric and PSNH were \$2.3 billion, \$824.4 million, \$719.6 million and \$312.7 million, respectively.

Eversource completed the acquisition of Aquarion from Macquarie Infrastructure Partners on December 4, 2017 for \$1.675 billion, consisting of approximately \$880 million in cash and \$795 million of assumed debt.

Eversource, CL&P, NSTAR Electric and PSNH each use its available capital resources to fund its respective construction expenditures, meet debt requirements, pay operating costs, including storm-related costs, pay dividends and fund other corporate obligations, such as pension contributions. Eversource's regulated companies recover their electric and natural gas distribution construction expenditures as the related project costs are depreciated over the life of the assets. This impacts the timing of the revenue stream designed to fully recover the total investment plus a return on the equity and debt used to finance the investments. The current growth in Eversource's construction expenditures utilizes a significant amount of cash for projects that have a long-term return on investment and recovery period, totaling approximately \$2.3 billion in cash capital spend in 2017. In addition, growth in Eversource's key business initiatives in 2017 required cash contributions of \$32.6 million, which are recognized as long-term assets. These factors have resulted in current liabilities exceeding current assets by \$1.1 billion, \$338.1 million, \$137.5 million, and \$183.1 million at Eversource, CL&P, NSTAR Electric and PSNH, respectively, as of December 31, 2017.

As of December 31, 2017, \$961.0 million of Eversource's long-term debt, including \$450.0 million, \$300.0 million, \$110.0 million, \$100.0 million and \$1 million for Eversource parent, CL&P, PSNH, Yankee Gas and Aquarion, respectively, will be paid within the next 12 months. Included in the current portion of long-term debt is \$35.4 million related to fair value adjustments from our business combinations that will be amortized within the next 12 months and have no cash flow impact. Eversource, with its strong credit ratings, has several options available in the financial markets to repay or refinance these maturities with the issuance of new long-term debt. Eversource, CL&P, NSTAR Electric and PSNH will reduce their short-term borrowings with operating cash flows or with the issuance of new long-term debt, determined by considering capital requirements and maintenance of Eversource's credit rating and profile. We expect the future operating cash flows of Eversource, CL&P, NSTAR Electric and PSNH, along with the access to financial markets, will be sufficient to meet any future operating requirements and capital investment forecasted opportunities.

*Credit Ratings:* On December 5, 2017, S&P upgraded Eversource and its subsidiaries' corporate credit rating to A+ and changed the outlook to stable.

A summary of our corporate credit ratings and outlooks by Moody's, S&P and Fitch is as follows:

	Moody's		S&P		Fitch	
	Current	Outlook	Current	Outlook	Current	Outlook
Eversource Parent	Baa1	Stable	A+	Stable	BBB+	Positive
CL&P	Baa1	Stable	A+	Stable	A-	Stable
NSTAR Electric	A2	Stable	A+	Stable	A	Stable
PSNH	A3	Stable	A+	Stable	A-	Stable

A summary of the current credit ratings and outlooks by Moody's, S&P and Fitch for senior unsecured debt of Eversource parent and NSTAR Electric, and senior secured debt of CL&P and PSNH is as follows:

	Moody's		S&P		Fitch	
	Current	Outlook	Current	Outlook	Current	Outlook
Eversource Parent	Baa1	Stable	A	Stable	BBB+	Positive
CL&P	A2	Stable	AA-	Stable	A+	Stable
NSTAR Electric	A2	Stable	A+	Stable	A+	Stable
PSNH	A1	Stable	AA-	Stable	A+	Stable

#### Business Development and Capital Expenditures

Our consolidated capital expenditures, including amounts incurred but not paid, cost of removal, AFUDC, and the capitalized portions of pension expense (all of which are non-cash factors), totaled \$2.5 billion in 2017, \$2.2 billion in 2016, and \$1.9 billion in 2015. These amounts included \$165.9 million in 2017, \$137.7 million in 2016, and \$102.0 million in 2015 related to information technology and facilities upgrades and enhancements, primarily at Eversource Service and The Rocky River Realty Company.

*Aquarion:* On December 4, 2017, Eversource acquired Aquarion (formerly Macquarie Utilities Inc.) from Macquarie Infrastructure Partners for \$1.675 billion, consisting of approximately \$880 million in cash and \$795 million of assumed Aquarion debt. As a result, Aquarion became a wholly-owned subsidiary of Eversource. Aquarion is a regulated water utility holding company that operates three separate regulated water utilities in Connecticut, Massachusetts and New Hampshire. Aquarion collects, treats and distributes water to residential, commercial and industrial customers, to other utilities for resale, and for private and municipal fire protection.

*Bay State Wind:* Bay State Wind is a proposed offshore wind project being jointly developed by Eversource and Denmark-based Ørsted. Bay State Wind will be located in a 300-square-mile area approximately 25 miles off the coast of Massachusetts that has the ultimate potential to generate more than 2,000 MW of clean, renewable energy. Eversource and Ørsted each hold a 50 percent ownership interest in Bay State Wind.

On June 29, 2017, the Bureau of Ocean Energy Management ("BOEM") approved the project's Site Assessment Plan ("SAP"), the first BOEM approval of an offshore wind SAP in the U.S.

In August 2016, Massachusetts passed clean energy legislation that requires EDCs to jointly solicit RFPs and enter into long-term contracts for offshore wind, creating RFP opportunities for projects like Bay State Wind. On June 29, 2017, the Massachusetts RFP was issued, seeking bids for a minimum of 400 MW of offshore wind capacity. The RFP stated that bids of up to 800 MW would be considered, provided they demonstrated significant net economic benefits to customers. On December 20, 2017, Bay State Wind submitted two proposals, one for 400 MW and the other for 800 MW, in response to the Massachusetts clean energy RFP.

For more information regarding the clean energy legislation, see "Regulatory Developments and Rate Matters – Massachusetts – Massachusetts RFPs" in this *Management's Discussion and Analysis of Financial Condition and Results of Operations*.

#### *Electric Transmission Business:*

Our consolidated electric transmission business capital expenditures increased by \$35.4 million in 2017, as compared to 2016. A summary of electric transmission capital expenditures by company is as follows:

(Millions of Dollars)	For the Years Ended December 31,		
	2017	2016	2015
CL&P	\$ 431.5	\$ 338.3	\$ 252.9
NSTAR Electric	301.9	398.7	354.2
PSNH	155.6	119.0	161.2
NPT	43.3	40.9	38.3
Total Electric Transmission Segment	\$ 932.3	\$ 896.9	\$ 806.6

Northern Pass: Northern Pass is Eversource's planned 1,090 MW HVDC transmission line that will interconnect from the Québec-New Hampshire border to Franklin, New Hampshire and an associated alternating current radial transmission line between Franklin and Deerfield, New Hampshire.

Northern Pass has achieved several key milestones, including the following:

- Receiving NHPUC approval on February 12, 2018 for the proposed lease of certain land and easement rights from PSNH to NPT, concluding that the lease is in the public interest;
- Receiving the U.S. Forest Service Record of Decision on January 5, 2018, which allows NPT to install approximately 11 miles of underground transmission lines in areas along existing roads through the White Mountain National Forest;
- Receiving the Province of Québec permit granted to HQ on December 21, 2017 to construct the hydroelectric transmission line that will connect at the border of New Hampshire;
- Receiving the DOE Record of Decision and Presidential Permit on November 16, 2017, which will allow construction of transmission facilities at the Québec-New Hampshire border; and
- Receiving the DOE final Environmental Impact Statement issued on August 10, 2017, which concluded that the proposed Northern Pass route is the preferred alternative, providing substantial benefits with only minimal impacts.

On January 25, 2018, Northern Pass was selected from the 46 proposals submitted as the winning bidder in the Massachusetts clean energy request for proposal ("RFP"), which successfully positioned Northern Pass to provide a firm delivery of hydropower to Massachusetts. On February 1, 2018, the NHSEC voted to deny Northern Pass' siting application. On February 14, 2018, pursuant to the NHSEC's decision, the Massachusetts EDCs, in coordination with the DOER and an independent evaluator, notified NPT that the EDCs will continue contract negotiations, with the option of discontinuing discussions and terminating its conditional selection by March 27, 2018.

Consistent with Eversource's and HQ's long-term relationship to bring clean energy into New England, Eversource and HQ continue to support Northern Pass and the many benefits this project will bring to our customers and region. We intend to seek reconsideration of the NHSEC's decision and to review all options for moving this critical clean energy project forward.

As of December 31, 2017, we have approximately \$277 million in capitalized costs associated with Northern Pass. We continue to believe that the Northern Pass project is probable of being placed in service. If in the future, events and changes in circumstances indicate that the Northern Pass project's capitalized costs may not be fully recoverable, we will then evaluate those costs for impairment. Should we conclude that these capitalized costs are impaired, this would have a significant negative impact on our financial position, results of operations, and cash flows.

For more information regarding the Massachusetts clean energy RFP, see "Regulatory Developments and Rate Matters – Massachusetts –Massachusetts RFPs" in this Management's Discussion and Analysis of Financial Condition and Results of Operations.

Greater Boston Reliability Solution: In February 2015, ISO-NE selected the Greater Boston and New Hampshire Solution (the "Solution"), proposed by Eversource and National Grid, to satisfy the requirements identified in the Greater Boston study. The Solution consists of a portfolio of electric transmission upgrades covering southern New Hampshire and northern Massachusetts and continuing into the greater Boston metropolitan area, of which 28 upgrades are in Eversource's service territory. The NHSEC issued its written order approving the New Hampshire upgrades on October 4, 2016. We are currently pursuing the necessary regulatory and siting application approvals in Massachusetts. To date, we have received approval for three of these projects from the Massachusetts Energy Facilities Siting Board. Construction has also begun on multiple smaller projects, several of which have been placed in service. All upgrades are expected to be completed by the end of 2019. We estimate our portion of the investment in the Solution will be approximately \$560 million, of which \$235.8 million has been capitalized through December 31, 2017.

GHCC: The Greater Hartford Central Connecticut ("GHCC") projects, which have been approved by ISO-NE, consist of 27 projects with an expected investment of approximately \$350 million that are expected to be placed in service through 2019. As of December 31, 2017, 18 projects have been placed in service, and six projects are in active construction. As of December 31, 2017, CL&P had capitalized \$210.0 million in costs associated with GHCC.

Seacoast Reliability Project: On April 12, 2016, PSNH filed a siting application with the NHSEC for the Seacoast Reliability Project, a 13-mile, 115kV transmission line within several New Hampshire communities, which proposes to use a combination of overhead, underground and underwater line design to help meet the growing demand for electricity in the Seacoast region. In June 2016, the NHSEC accepted our application as complete. The New Hampshire Department of Environmental Services has experienced delays with the issuance of permit conditions and now expects to complete its review in February 2018. As a result, siting hearings have yet to be rescheduled and we now expect the NHSEC decision in late-2018. This project is expected to be completed by the end of 2019. We estimate our investment in this project to be approximately \$84 million, of which, PSNH had capitalized \$24.5 million in costs, through December 31, 2017.

*Distribution Business:*

A summary of distribution capital expenditures by company is as follows:

<i>(Millions of Dollars)</i>	For the Years Ended December 31,					
	CL&P	NSTAR Electric	PSNH	Total Electric	Natural Gas	Total Electric and Natural Gas Distribution Segments
<b>2017</b>						
Basic Business	\$ 214.0	\$ 166.1	\$ 67.2	\$ 447.3	\$ 67.7	\$ 515.0
Aging Infrastructure	180.7	95.4	87.8	363.9	219.9	583.8
Load Growth and Other	52.3	96.6	13.2	162.1	47.7	209.8
Total Distribution	447.0	358.1	168.2	973.3	335.3	1,308.6
Solar Power and Generation	—	100.1	8.5	108.6	—	108.6
Total	\$ 447.0	\$ 458.2	\$ 176.7	\$ 1,081.9	\$ 335.3	\$ 1,417.2
<b>2016</b>						
Basic Business	\$ 179.8	\$ 146.0	\$ 70.0	\$ 395.8	\$ 70.7	\$ 466.5
Aging Infrastructure	144.7	105.7	84.7	335.1	155.9	491.0
Load Growth and Other	48.6	89.2	17.3	155.1	44.2	199.3
Total Distribution	373.1	340.9	172.0	886.0	270.8	1,156.8
Generation	—	—	17.5	17.5	—	17.5
Total	\$ 373.1	\$ 340.9	\$ 189.5	\$ 903.5	\$ 270.8	\$ 1,174.3
<b>2015</b>						
Basic Business	\$ 141.1	\$ 126.9	\$ 59.2	\$ 327.2	\$ 46.8	\$ 374.0
Aging Infrastructure	151.0	121.6	57.3	329.9	122.3	452.2
Load Growth and Other	42.2	58.5	25.5	126.2	43.5	169.7
Total Distribution	334.3	307.0	142.0	783.3	212.6	995.9
Generation	—	—	33.3	33.3	—	33.3
Total	\$ 334.3	\$ 307.0	\$ 175.3	\$ 816.6	\$ 212.6	\$ 1,029.2

For the electric distribution business, basic business includes the purchase of meters, tools, vehicles, information technology, transformer replacements, equipment facilities, and the relocation of plant. Aging infrastructure relates to reliability and the replacement of overhead lines, plant substations, underground cable replacement, and equipment failures. Load growth and other includes requests for new business and capacity additions on distribution lines and substation additions and expansions. For the natural gas distribution business, basic business addresses daily operational needs including meters, pipe relocations due to public works projects, vehicles, and tools. Aging infrastructure projects seek to improve the reliability of the system through enhancements related to cast iron and bare steel replacement of main and services, corrosion mediation, and station upgrades. Load growth and other reflects growth in existing service territories including new developments, installation of services, and expansion.

The natural gas distribution segment's capital spending program increased by \$64.5 million in 2017, as compared to 2016, primarily due to an increased investment in system replacement and reliability, as well as upgrades to our LNG facilities. We expect the LNG facility upgrades to cost approximately \$200 million and to be placed in service in late 2019.

**Projected Capital Expenditures:** A summary of the projected capital expenditures for the regulated companies' electric transmission and for the total electric distribution, solar development and natural gas distribution businesses for 2018 through 2021, including information technology and facilities upgrades and enhancements on behalf of the regulated companies, is as follows:

(Millions of Dollars)	Years					2018-2021 Total
	2018	2019	2020	2021		
CL&P Transmission	\$ 390	\$ 228	\$ 155	\$ 128	\$ 901	
NSTAR Electric Transmission	333	293	267	248	1,141	
PSNH Transmission	149	144	138	147	578	
NPT	300	718	436	70	1,524	
<i>Total Electric Transmission</i>	<i>\$ 1,172</i>	<i>\$ 1,383</i>	<i>\$ 996</i>	<i>\$ 593</i>	<i>\$ 4,144</i>	
Electric Distribution	\$ 1,094	\$ 963	\$ 984	\$ 940	\$ 3,981	
Solar Development	76	—	—	—	76	
Natural Gas Distribution	422	425	380	389	1,616	
<i>Total Distribution</i>	<i>\$ 1,592</i>	<i>\$ 1,388</i>	<i>\$ 1,364</i>	<i>\$ 1,329</i>	<i>\$ 5,673</i>	
Water	\$ 100	\$ 102	\$ 108	\$ 125	\$ 435	
Information Technology and All Other	\$ 178	\$ 124	\$ 111	\$ 112	\$ 525	
Total	\$ 3,042	\$ 2,997	\$ 2,579	\$ 2,159	\$ 10,777	

The projections do not include investments related to Bay State Wind. Actual capital expenditures could vary from the projected amounts for the companies and years above.

#### FERC Regulatory Issues

**FERC ROE Complaints:** Four separate complaints have been filed at the FERC by combinations of New England state attorneys general, state regulatory commissions, consumer advocates, consumer groups, municipal parties and other parties (collectively the "Complainants"). In each of the first three complaints, the Complainants challenged the NETOs' base ROE of 11.14 percent that had been utilized since 2005 and sought an order to reduce it prospectively from the date of the final FERC order and for the separate 15-month complaint periods. In the fourth complaint, filed April 29, 2016, the Complainants challenged the NETOs' base ROE of 10.57 percent and the maximum ROE for transmission incentive ("incentive cap") of 11.74 percent, asserting that these ROEs were unjust and unreasonable.

In response to appeals of the FERC decision in the first complaint filed by the NETOs and the Complainants, the U.S. Court of Appeals for the D.C. Circuit (the "Court") issued a decision on April 14, 2017 vacating and remanding the FERC's decision. The Court found that the FERC failed to make an explicit finding that the 11.14 percent base ROE was unjust and unreasonable, as required under Section 206 of the Federal Power Act, before it set a new base ROE. The Court also found that the FERC did not provide a rational connection between the record evidence and its decision to select the midpoint of the upper half of the zone of reasonableness for the new base ROE.

Hearings on the fourth complaint were held in December 2017 before the Administrative Law Judge ("ALJ"), who is expected to issue an initial decision in March 2018.

A summary of the four separate complaints and the base ROEs pertinent to those complaints are as follows:

Complaint	15-Month Time Period of Complaint (Beginning as of Complaint Filing Date)	Original Base ROE Authorized by FERC at Time of Complaint Filing Date <sup>(1)</sup>	Base ROE Subsequently Authorized by FERC for First Complaint Period and also Effective from October 16, 2014 through April 14, 2017 <sup>(1)</sup>	Reserve (Pre-Tax and Excluding Interest) as of December 31, 2017 (in millions)	FERC ALJ Recommendation of Base ROE on Second and Third Complaints (Issued March 22, 2016)
First	10/1/2011 - 12/31/2012	11.14%	10.57%	\$— <sup>(2)</sup>	N/A
Second	12/27/2012 - 3/26/2014	11.14%	N/A	39.1 <sup>(3)</sup>	9.59%
Third	7/31/2014 - 10/30/2015	11.14%	10.57%	—	10.90%
Fourth	4/29/2016 - 7/28/2017	10.57%	10.57%	—	N/A

(1) The ROE billed during the period October 1, 2011 through October 15, 2014 consisted of a base ROE of 11.14 percent and incentives up to 13.1 percent. On October 16, 2014, the FERC set the base ROE at 10.57 percent and an incentive cap at 11.74 percent for the first complaint period and also effective from the date of the FERC order on October 16, 2014. This FERC order was vacated on April 14, 2017.

(2) CL&P, NSTAR Electric and PSNH have refunded all amounts associated with the first complaint period, totaling \$38.9 million (pre-tax and excluding interest) at Eversource (consisting of \$22.4 million at CL&P, \$13.7 million at NSTAR Electric and \$2.8 million at PSNH), reflecting both the base ROE and incentive cap prescribed by the FERC order.

(3) The reserve represents the difference between the billed rates during the second complaint period and a 10.57 percent base ROE and 11.74 percent incentive cap. The reserve consisted of \$21.4 million for CL&P, \$14.6 million for NSTAR Electric and \$3.1 million for PSNH as of December 31, 2017.

On June 5, 2017, the NETOs, including Eversource, submitted a filing to the FERC to reinstate the base ROE of 11.14 percent with an associated ROE incentive cap of 13.5 percent effective June 8, 2017, as these were the last ROEs lawfully in effect for transmission billing purposes prior to the FERC order vacated by the Court on April 14, 2017. On October 6, 2017, the FERC did not accept the NETOs filing, temporarily leaving in place the ROEs (10.57 percent base ROE with an 11.74 percent incentive cap ROE) set in the first complaint proceeding until the FERC addresses the Court's decision. On November 6, 2017, the NETOs submitted a request for rehearing of the FERC's October 6, 2017 Order rejecting the compliance filing.

On October 5, 2017, the NETOs filed a series of motions, requesting that the FERC dismiss the four complaint proceedings. Alternatively, if the FERC does not dismiss the proceedings, the NETOs requested that the FERC consolidate all four complaint proceedings for expeditious resolution and/or stay the trial in the fourth complaint proceeding and resolve it based on the standards set in the April 14, 2017 Court decision.

At this time, the Company cannot reasonably estimate a range of gain or loss for the complaint proceedings. No events in 2017 provided a reasonable basis for a change to the reserve balance of \$39.1 million (pre-tax, excluding interest) for the second complaint period, and the Company has not changed its reserve or recognized ROEs for any of the complaint periods.

Management cannot at this time predict the ultimate effect of the Court decision or future FERC action on any of the complaint periods or the estimated impacts on the financial position, results of operations or cash flows of Eversource, CL&P, NSTAR Electric or PSNH.

The average impact of a 10 basis point change to the base ROE for each of the 15-month complaint periods would affect Eversource's after-tax earnings by approximately \$3 million.

#### Regulatory Developments and Rate Matters

##### *Electric, Natural Gas, and Water Utility Base Distribution Rates:*

Each Eversource utility subsidiary is subject to the regulatory jurisdiction of the state in which it operates: CL&P, Yankee Gas and Aquarion operate in Connecticut and are subject to PURA regulation; NSTAR Electric, NSTAR Gas and Aquarion operate in Massachusetts and are subject to DPU regulation; and PSNH and Aquarion operate in New Hampshire and are subject to NHPUC regulation. The regulated companies' distribution rates are set by their respective state regulatory commissions, and their tariffs include mechanisms for periodically adjusting their rates for the recovery of specific incurred costs.

In Connecticut, electric and natural gas utilities are required to file a distribution rate case, or for PURA to initiate a rate review, within four years of the last rate case. CL&P distribution rates were established in a 2014 PURA-approved rate case. On January 11, 2018, CL&P filed a distribution rate case settlement agreement for approval with PURA. See "Regulatory Developments and Rate Matters - Connecticut - CL&P Rate Case Settlement" in this *Management's Discussion and Analysis of Financial Condition and Results of Operations*, for more information. Yankee Gas distribution rates were established in a 2011 PURA-approved rate case. The requirement for Yankee Gas to file a base distribution rate case in 2015 was eliminated due to a rate review conducted by PURA and a resulting settlement in 2015 between Yankee Gas and PURA.

In Massachusetts, electric distribution companies are required to file at least one distribution rate case every five years, and natural gas local distribution companies to file at least one distribution rate case every 10 years, and those companies are limited to one settlement agreement in any 10-year period. On November 30, 2017, the DPU approved the NSTAR Electric rate case application. See "Regulatory Developments and Rate Matters - Massachusetts - NSTAR Electric Distribution Rate Case Decision" in this *Management's Discussion and Analysis of Financial Condition and Results of Operations*, for more information. NSTAR Gas distribution rates were established in a 2015 DPU-approved rate case.

In New Hampshire, PSNH distribution rates were established in a settlement approved by the NHPUC in 2010. Prior to the expiration of that settlement, the NHPUC approved the continuation of those rates, and increased funding via rates, of PSNH's reliability enhancement program.

##### *Electric and Natural Gas Retail Rates:*

The Eversource EDCs obtain and resell power to retail customers who choose not to buy energy from a competitive energy supplier. The natural gas distribution companies procure natural gas for firm and seasonal customers. These energy supply procurement costs are recovered from customers in energy supply rates that are approved by the respective state regulatory commission. The rates are reset periodically and are fully reconciled to their costs. Each electric and natural gas distribution company fully recovers its energy supply costs through approved regulatory rate mechanisms and, therefore, such costs have no impact on earnings.

The electric and natural gas distribution companies also recover certain other costs on a fully reconciling basis through regulatory commission-approved cost tracking mechanisms and, therefore, such costs have no impact on earnings. Costs recovered through cost tracking mechanisms include energy efficiency program costs, electric transmission charges, electric federally mandated congestion charges, system resiliency costs, certain uncollectible hardship bad debt expenses, and restructuring and stranded costs resulting from deregulation. The reconciliation filings compare the total actual costs allowed to revenue requirements related to these services and the difference between the costs incurred (or the rate recovery allowed) and the actual costs allowed is deferred and included, to be either recovered or refunded, in future customer rates.

*U.S. Federal Corporate Income Taxes:* On December 22, 2017, the "Tax Cuts and Jobs Act" (the "Act") became law, which amended existing federal tax rules and included numerous provisions that impacted corporations. In particular, the Act reduced the U.S. federal corporate income tax rate from 35 percent to 21 percent effective January 1, 2018. For our regulated companies, the most significant changes will be (1) the benefit of incurring a lower federal income tax expense, which we expect to be passed back to customers, and (2) the provisional regulated excess ADIT liabilities that we expect to benefit our customers in future periods, which were estimated to be approximately \$2.9 billion and recognized as regulatory liabilities as of December 31, 2017. We are currently working with our state regulatory commissions, who have opened investigations to examine the impact of the Act on customer rates. FERC has yet to address how the Act would impact transmission rates.

We will continue to evaluate the impacts of the Act on our statement of financial position, results of operations, and cash flows. The impacts will vary depending on the ultimate amount and timing of when certain income tax benefits will benefit our customers, and will vary by jurisdiction.

*Connecticut:*

CL&P Rate Case Settlement: On April 20, 2017, PURA approved the joint request of CL&P, the Connecticut Office of Consumer Counsel ("OCC") and the Connecticut Attorney General to amend the deadline to establish new electric distribution rates in the 2012 Connecticut merger settlement agreement from "no later than December 1, 2017" to "no later than July 1, 2018." On November 22, 2017, CL&P filed its application with PURA, which sought a rate increase of \$255.8 million, \$45.0 million and \$36.0 million effective in May 2018, 2019, and 2020, respectively. On December, 15, 2017, CL&P, the Prosecutorial Unit of PURA, and the OCC reached a settlement in principle.

On January 11, 2018, CL&P filed a distribution rate case settlement agreement for approval by PURA, which included, among other things, rate increases of \$97.1 million, \$32.7 million and \$24.7 million, effective May 1, 2018, 2019, and 2020, respectively, an authorized regulatory ROE of 9.25 percent, 53 percent common equity in CL&P's capital structure, and a new capital tracker through 2020 for capital additions, system resiliency, and grid modernization. The rate increases associated with the settlement agreement will be reduced by the impact of the decrease in the federal corporate income tax rate, as part of the "Tax Cuts and Jobs Act", which we currently estimate to average approximately \$45 million to \$50 million per year, while amounts related to ADIT will be addressed in a separate manner. We expect to receive final approval from PURA in the second quarter of 2018.

Clean Energy RFP: On January 31, 2018, pursuant to Section 8 of Public Act 13-303, "An Act Concerning Connecticut's Clean Energy Goals," as amended by Section 10 of Public Act 17-144, "An Act Promoting the Use of Fuel Cells for Electric Distribution System Benefits and Reliability and Amending Various Energy-Related Programs and Requirements," DEEP issued the Connecticut Clean Energy RFP, seeking bids from developers of qualified offshore wind, fuel cell and anaerobic digestion Class I resources. The maximum authorized procurement for qualified clean energy and RECs is 899,250 MWh per year, of which no more than 825,000 MWh per year may be provided by offshore wind, which in aggregate is the equivalent to the output of an approximate 200 MW facility. Energy deliveries under any resulting agreement must begin no earlier than July 1, 2019 and no later than December 31, 2025. The Connecticut EDC's, including CL&P, will be part of the evaluation team responsible for conducting an evaluation and ranking bids received. Eversource and Ørsted are expected to submit a bid in response to this RFP.

*Massachusetts:*

NSTAR Electric Distribution Rate Case Decision: On November 30, 2017, the DPU issued its decision in the NSTAR Electric distribution rate case, which approved an annual distribution rate increase of \$37 million, with rates effective February 1, 2018. On January 3, 2018, NSTAR Electric filed a motion to reflect a revenue requirement reduction of \$56 million (due to the decrease in the federal corporate income tax rate, as part of the "Tax Cuts and Jobs Act"), resulting in an annual net decrease in rates of \$19 million.

In addition to its decision regarding rates, the DPU approved an authorized regulatory ROE of 10 percent, the establishment of a revenue decoupling rate mechanism for the portion of the NSTAR Electric business that did not previously have a decoupling mechanism, and the implementation of an inflation-based adjustment mechanism with a five-year stay-out until January 1, 2023.

Among other items, the DPU approved the recovery of previously expensed merger-related costs over a 10-year period and the recovery of previously deferred storm costs with carrying charges at the prime rate, but disallowed certain property taxes. The rate case decision resulted in the recognition of an aggregate \$44.1 million pre-tax benefit recorded in 2017.

Eversource and NSTAR Electric Boston Harbor Civil Action: On July 15, 2016, the United States Attorney on behalf of the United States Army Corps of Engineers filed a civil action in the United States District Court for the District of Massachusetts under provisions of the Rivers and Harbors Act of 1899 and the Clean Water Act against NSTAR Electric, Harbor Electric Energy Company, a wholly-owned subsidiary of NSTAR Electric ("HEEC"), and the Massachusetts Water Resources Authority (together with NSTAR Electric and HEEC, the "Defendants"). The action alleged that the Defendants failed to comply with certain permitting requirements related to the placement of the HEEC-owned electric distribution cable beneath Boston Harbor. The action sought an order to compel HEEC to comply with cable depth requirements in the United States Army Corps of Engineers' permit or alternatively to remove the electric distribution cable and cease unauthorized work in U.S. waterways. The action also sought civil penalties and other costs.

The parties reached a settlement pursuant to which HEEC agreed to install a new 115kV distribution cable across Boston Harbor to Deer Island, utilizing a different route, and remove portions of the existing cable. Upon the installation and completion of the new cable and the removal of the portions of the existing cable, all issues surrounding the current permit from the United States Army Corps of Engineers are expected to be resolved, and such litigation is expected to be dismissed with prejudice.

In 2017, as a result of the settlement, NSTAR Electric expensed \$4.9 million (pre-tax) of previously incurred capitalized costs associated with engineering work performed on the existing cable that will no longer be used. In addition, NSTAR Electric agreed to provide a rate base credit of \$17.5 million to the Massachusetts Water Resources Authority for the new cable. This negotiated credit will result in the initial \$17.5 million of construction costs on the new cable to be expensed as incurred. Of this amount, NSTAR Electric expensed \$11.1 million (pre-tax) of costs incurred on the new cable in 2017. Construction of the new cable is expected to be completed in 2019.

Massachusetts RFPs: On March 31, 2017, pursuant to a comprehensive energy law enacted in 2016, "An Act to Promote Energy Diversity," (the "Act") the Massachusetts EDCs, including NSTAR Electric, and the DOER issued a joint RFP for 9.45 terawatt hours of clean energy per year, such as hydropower, land-based wind or solar. The RFP seeks proposals for long-term contracts of 15 to 20 years to provide the state's EDCs with clean energy generation with a submission due date of July 27, 2017.

On January 25, 2018, the Northern Pass project was selected from the 46 proposals submitted as a winning bidder. On February 1, 2018, the NHSEC voted to deny Northern Pass' siting application. On February 14, 2018, pursuant to the NHSEC's decision, the Massachusetts EDCs, in coordination with the DOER and an independent evaluator, notified NPT that the EDCs will continue contract negotiations, with the option of discontinuing discussions and terminating its conditional selection by March 27, 2018.

On June 29, 2017, pursuant to the Act, the Massachusetts EDCs, including NSTAR Electric, and the DOER issued a joint RFP for long-term contracts for offshore wind energy projects, seeking bids for a minimum of 400 MW of offshore wind capacity. The RFP stated that bids of up to 800 MW would be considered, provided they demonstrated significant net economic benefits to customers. On December 20, 2017, Bay State Wind submitted two proposals in response to the Massachusetts clean energy RFP to the EDCs. One proposal was for 400 MW and the other was for 800 MW. The selection of the winning proposals for further negotiation of power purchase agreements with the EDCs is currently expected to occur by April 23, 2018.

#### *New Hampshire:*

Generation Divestiture: In June 2015, Eversource and PSNH entered into the 2015 Public Service Company of New Hampshire Restructuring and Rate Stabilization Agreement, under the terms of which PSNH agreed to divest its generation assets, subject to NHPUC approval. The NHPUC approval for this agreement, as well as NHPUC approval of the final divestiture plan and auction process, were received in the second half of 2016. In October 2017, PSNH entered into two Purchase and Sale Agreements ("Agreements") to sell its thermal and hydroelectric generation assets to private investors at purchase prices of \$175 million and \$83 million, respectively, subject to adjustments as set forth in the Agreements. The NHPUC approved the Agreements in late November 2017.

On January 10, 2018, PSNH completed the sale of its thermal generation facilities. In accordance with the Purchase and Sale Agreement, the original purchase price of \$175 million was adjusted to reflect working capital adjustments, closing date adjustments and proration of taxes and fees prior to closing, totaling \$40.9 million, resulting in net proceeds of \$134.1 million. We are targeting for PSNH to complete the sale of its hydroelectric generation facilities by the end of the first quarter of 2018 at a sale price of \$83 million, subject to adjustment. On January 30, 2018, the NHPUC approved the issuance of rate reduction bonds up to \$690 million to recover stranded costs, subject to an audit by the NHPUC Audit Staff. This order is subject to an appeal period of 30 days.

Upon completion of the divestiture, full recovery of PSNH's generation assets and transaction-related costs are expected to occur through a combination of cash flows during the remaining operating period, sales proceeds, and recovery of stranded costs via the issuance of bonds that will be secured by a non-bypassable charge or through recoveries in future rates billed to PSNH's customers.

#### Legislative and Policy Matters

*Federal:* On December 22, 2017, the "Tax Cuts and Jobs Act" (the "Act") became law, which amended existing federal tax rules and included numerous provisions that will impact corporations. In particular, the Act reduced the federal corporate income tax rate from 35 percent to 21 percent effective January 1, 2018. See "Regulatory Developments and Rate Matters - U.S. Federal Corporate Income Taxes" in this *Management's Discussion and Analysis of Financial Condition and Results of Operations*, for more information.

*Massachusetts:* On August 11, 2017, Massachusetts issued final legislation, pursuant to Executive Order 569, which established volumetric limits on multiple greenhouse emission sources to ensure reductions are realized by deadlines established in the Massachusetts Global Warming Solutions Act enacted in 2008. Under this legislation, the initial target date for reduction in greenhouse gas emissions has been established in the year 2020. The legislation is not expected to have a material impact on the financial statements of Eversource or NSTAR Electric.

*New Hampshire:* On January 11, 2018, the New Hampshire Supreme Court issued a decision affirming the lower court's October 2016 decision that the Town of Bow, New Hampshire had over-assessed the value of the property owned by PSNH for the 2012 and 2013 property tax years. We estimate that the result of this decision will be approximately \$7.5 million in property taxes and interest payable to PSNH. PSNH plans to account for any recovery on the same basis that the taxes were originally expensed in the respective periods covered by the decision.

## Critical Accounting Policies

The preparation of financial statements in conformity with GAAP requires management to make estimates, assumptions and, at times, difficult, subjective or complex judgments. Changes in these estimates, assumptions and judgments, in and of themselves, could materially impact our financial position, results of operations or cash flows. Our management discusses with the Audit Committee of our Board of Trustees significant matters relating to critical accounting policies. Our critical accounting policies are discussed below. See the combined notes to our financial statements for further information concerning the accounting policies, estimates and assumptions used in the preparation of our financial statements.

*Regulatory Accounting:* Our regulated companies are subject to rate-regulation that is based on cost recovery and meets the criteria for application of accounting guidance for rate-regulated operations, which considers the effect of regulation on the timing of the recognition of certain revenues and expenses. The regulated companies' financial statements reflect the effects of the rate-making process.

The application of accounting guidance for rate-regulated enterprises results in recording regulatory assets and liabilities. Regulatory assets represent the deferral of incurred costs that are probable of future recovery in customer rates. Regulatory assets are amortized as the incurred costs are recovered through customer rates. In some cases, we record regulatory assets before approval for recovery has been received from the applicable regulatory commission. We must use judgment to conclude that costs deferred as regulatory assets are probable of future recovery. We base our conclusion on certain factors, including, but not limited to, regulatory precedent. Regulatory liabilities represent revenues received from customers to fund expected costs that have not yet been incurred or probable future refunds to customers.

We use judgment when recording regulatory assets and liabilities; however, regulatory commissions can reach different conclusions about the recovery of costs, and those conclusions could have a material impact on our financial statements. We believe it is probable that each of the regulated companies will recover the regulatory assets that have been recorded. If we determine that we can no longer apply the accounting guidance applicable to rate-regulated enterprises to our operations, or that we cannot conclude it is probable that costs will be recovered from customers in future rates, the costs would be charged to earnings in the period in which the determination is made.

*Unbilled Revenues:* The determination of retail energy sales to residential, commercial and industrial customers is based on the reading of meters, which occurs regularly throughout the month. Billed revenues are based on these meter readings, and the majority of our recorded annual revenues is based on actual billings. Because customers are billed throughout the month based on pre-determined cycles rather than on a calendar month basis, an estimate of electricity or natural gas delivered to customers for which the customers have not yet been billed is calculated as of the balance sheet date.

Unbilled revenues represent an estimate of electricity or natural gas delivered to customers but not yet billed. Unbilled revenues are included in Operating Revenues on the statement of income and are assets on the balance sheet that are reclassified to Accounts Receivable in the following month as customers are billed. Such estimates are subject to adjustment when actual meter readings become available or when there is a change in our estimates.

Unbilled revenues are recognized by allocating estimated unbilled sales volumes to the respective customer classes, and then applying an estimated rate by customer class to those sales volumes. Unbilled revenues can vary significantly from period to period as a result of seasonality, weather, customer usage patterns, customer rates in effect for customer classes, and the timing of customer billing. The estimate of unbilled revenues can significantly impact the amount of revenues recorded at the operating companies that do not have a revenue decoupling mechanism. CL&P, NSTAR Electric and NSTAR Gas record a regulatory deferral to reflect the actual allowed amount of revenue associated with their respective decoupled distribution rate design.

*Pension, SERP and PBOP:* We sponsor Pension, SERP and PBOP Plans to provide retirement benefits to our employees. For each of these plans, several significant assumptions are used to determine the projected benefit obligation, funded status and net periodic benefit cost. These assumptions include the expected long-term rate of return on plan assets, discount rate, compensation/progression rate and mortality and retirement assumptions. We evaluate these assumptions at least annually and adjust them as necessary. Changes in these assumptions could have a material impact on our financial position, results of operations or cash flows.

*Expected Long-Term Rate of Return on Plan Assets:* In developing this assumption, we consider historical and expected returns, as well as input from our consultants. Our expected long-term rate of return on assets is based on assumptions regarding target asset allocations and corresponding expected rates of return for each asset class. We routinely review the actual asset allocations and periodically rebalance the investments to the targeted asset allocations when appropriate. For the year ended December 31, 2017, our aggregate expected long-term rate-of-return assumption of 8.25 percent was used to determine our pension and PBOP expense. For the forecasted 2018 pension and PBOP expense, our expected long-term rate of return of 8.25 percent will be used reflecting our target asset allocations.

*Discount Rate:* Payment obligations related to the Pension, SERP and PBOP Plans are discounted at interest rates applicable to the expected timing of each plan's cash flows. The discount rate that was utilized in determining the 2017 pension, SERP and PBOP obligations was based on a yield-curve approach. This approach utilizes a population of bonds with an average rating of AA based on bond ratings by Moody's, S&P and Fitch, and uses bonds with above median yields within that population. As of December 31, 2017, the discount rates used to determine the funded status were within a range of 3.43 percent to 3.75 percent for the Pension and SERP Plans, and within a range of 3.55 percent to 3.70 percent for the PBOP Plans. As of December 31, 2016, the discount rates used were within a range of 4.01 percent to 4.33 percent for the Pension and SERP Plans, and 4.21 percent for the PBOP Plan. The decrease in the discount rates used to calculate the funded status resulted in an increase to the Pension and PBOP Plans' liability of approximately \$390 million and \$64 million, respectively, as of December 31, 2017.

Effective January 1, 2016, we elected to transition the discount rate to the spot rate methodology from the yield-curve approach for the service and interest cost components of Pension, SERP and PBOP expense because it provides a more precise measurement by matching projected cash flows to the corresponding spot rates on the yield curve. Historically, these components were estimated using the same weighted-average discount rate as for the funded status. The discount rates used to estimate the 2017 service costs were within a range of 3.58 percent to 3.90 percent for the Pension and SERP Plans, and 4.64 percent for the PBOP Plans. The discount rates used to estimate the 2017 interest costs were within a range of 3.20 percent and 3.36 percent for the Pension and SERP Plans, and 3.48 percent for the PBOP Plans.

**Mortality Assumptions:** Assumptions as to mortality of the participants in our Pension, SERP and PBOP Plans are a key estimate in measuring the expected payments a participant may receive over their lifetime and the corresponding plan liability we need to record. In 2017, the IRS issued a revised mortality table used for determining lump sum payments from the Pension Plan, resulting in an increase to the liability of approximately \$38 million. Also in 2017, a revised scale for the mortality table was released, having the effect of decreasing the estimate of benefits to be provided to plan participants. The impact of the adoption of the revised mortality scale resulted in a decrease of approximately \$26 million and \$4 million for the Pension and PBOP Plans, respectively, as of December 31, 2017.

**Compensation/Progression Rate:** This assumption reflects the expected long-term salary growth rate, including consideration of the levels of increases built into collective bargaining agreements, and impacts the estimated benefits that Pension and SERP Plan participants receive in the future. As of December 31, 2017, the compensation/progression rate used to determine the funded status was within a range of 3.50 percent to 4.00 percent. As of December 31, 2016, this rate was 3.50 percent.

**Health Care Cost:** In August 2016, we amended the Eversource PBOP Plan to standardize benefit design and make benefit changes. As a result, this plan is no longer subject to health care cost trends.

**Actuarial Determination of Expense:** Pension, SERP and PBOP expense is determined by our actuaries and consists of service cost and prior service cost, interest cost based on the discounting of the obligations, and amortization of actuarial gains and losses, offset by the expected return on plan assets. Actuarial gains and losses represent differences between assumptions and actual information or updated assumptions. Pre-tax net periodic benefit expense for the Pension and SERP Plans was \$64.9 million, \$71.9 million and \$134.7 million for the years ended December 31, 2017, 2016 and 2015, respectively. The pre-tax net periodic PBOP cost is income of \$39.6 million and \$17.9 million for the years ended December 31, 2017 and 2016, respectively, and expense of \$2.4 million for the year ended December 31, 2015.

The expected return on plan assets is determined by applying the assumed long-term rate of return to the Pension and PBOP Plan asset balances. This calculated expected return is compared to the actual return or loss on plan assets at the end of each year to determine the investment gains or losses to be immediately reflected in unrecognized actuarial gains and losses.

**Forecasted Expenses and Expected Contributions:** We estimate that the expense for the Pension and SERP Plans will be approximately \$45 million and income for the PBOP Plans will be approximately \$45 million in 2018. Pension, SERP and PBOP expense for subsequent years will depend on future investment performance, changes in future discount rates and other assumptions, and various other factors related to the populations participating in the plans.

Our policy is to fund the Pension Plans annually in an amount at least equal to the amount that will satisfy all federal funding requirements. We contributed \$235.2 million to the Pension Plans in 2017. We currently estimate contributing approximately \$180 million to the Pension Plans in 2018.

For the PBOP Plans, it is our policy to fund the PBOP Plans annually through tax deductible contributions to external trusts. We contributed \$7.6 million to the PBOP Plans in 2017. We currently estimate contributing \$10 million to the PBOP Plans in 2018.

**Sensitivity Analysis:** The following represents the hypothetical increase to the Pension Plans' (excluding the SERP Plans) and PBOP Plans' reported annual cost as a result of a change in the following assumptions by 50 basis points:

Assumption Change	Increase in Pension Plan Cost				Increase in PBOP Plan Cost			
	As of December 31,							
	2017		2016		2017		2016	
Eversource								
Lower expected long-term rate of return	\$	20.4	\$	19.5	\$	4.1	\$	3.9
Lower discount rate		19.7		20.7		3.6		3.9
Higher compensation rate		9.3		10.2		N/A		N/A

**Goodwill:** We recorded goodwill on our balance sheet associated with previous mergers and acquisitions. On December 4, 2017, we completed the acquisition of Aquarion, resulting in the addition of \$0.9 billion of goodwill. As of December 31, 2017, a total of \$4.4 billion of goodwill is recorded on our balance sheet. We have identified our reporting units for purposes of allocating and testing goodwill as Electric Distribution, Electric Transmission, Natural Gas Distribution and Water. These reporting units are consistent with our operating segments underlying our reportable segments. Electric Distribution and Electric Transmission reporting units include carrying values for the respective components of CL&P, NSTAR Electric and PSNH. The Natural Gas Distribution reporting unit includes the carrying values of NSTAR Gas and Yankee Gas. The Water reporting unit was created upon completion of the acquisition of Aquarion and includes its water utility businesses. As of December 31, 2017, goodwill was allocated to the reporting units as follows: \$2.5 billion to Electric Distribution, \$0.6 billion to Electric Transmission, \$0.4 billion to Natural Gas Distribution and \$0.9 billion to Water.

We are required to test goodwill balances for impairment at least annually by considering the fair values of the reporting units, which requires us to use estimates and judgments.

We have selected October 1st of each year as the annual goodwill impairment testing date. Goodwill impairment is deemed to exist if the carrying amount of a reporting unit exceeds its estimated fair value and if the implied fair value of goodwill based on the estimated fair values of the reporting units' assets and liabilities is less than the carrying amount of the goodwill. If goodwill were deemed to be impaired, it would be written down in the current period to the extent of the impairment.

We performed an impairment test of goodwill as of October 1, 2017 for the Electric Distribution, Electric Transmission and Natural Gas Distribution reporting units. This evaluation required the consideration of several factors that impact the fair value of the reporting units, including conditions and assumptions that affect the future cash flows of the reporting units. Key considerations include discount rates, utility sector market performance and merger transaction multiples, and internal estimates of future cash flows and net income.

The 2017 goodwill impairment test resulted in a conclusion that goodwill is not impaired and no reporting unit is at risk of a goodwill impairment.

*Long-Lived Assets:* Impairment evaluations of long-lived assets, including property, plant and equipment and strategic, infrastructure and other investments, involve a significant degree of estimation and judgment, including identifying circumstances that indicate an impairment may exist. Impairment analysis is required when events or changes in circumstances indicate that the carrying value of a long-lived asset may not be recoverable. Indicators of potential impairment include a deteriorating business climate, unfavorable regulatory action, decline in value that is other than temporary in nature, plans to dispose of a long-lived asset significantly before the end of its useful life, and accumulation of costs that are in excess of amounts allowed for recovery. The review of long-lived assets for impairment utilizes significant assumptions about operating strategies and external developments, including assessment of current and projected market conditions that can impact future cash flows.

As of December 31, 2017, we did not identify any impairment indicators for our long-lived assets. If events or changes in circumstances indicate the carrying value of a long-lived asset may not be recoverable, we would perform an impairment analysis. An impairment analysis would consist of two steps: first, the estimated undiscounted future cash flows attributable to the asset would be compared with the carrying value of the asset, and second, if the carrying value is greater than the undiscounted future cash flows, an impairment charge would be recognized equal to the amount by which the carrying value of the asset exceeds its estimated fair value.

*Income Taxes:* Income tax expense is estimated for each of the jurisdictions in which we operate and is recorded each quarter using an estimated annualized effective tax rate. This process to record income tax expense involves estimating current and deferred income tax expense or benefit and the impact of temporary differences resulting from differing treatment of items for financial reporting and income tax return reporting purposes. Such differences are the result of timing of the deduction for expenses, as well as any impact of permanent differences, non-tax deductible expenses, or other items that directly impact income tax expense as a result of regulatory activity (flow-through items). The temporary differences and flow-through items result in deferred tax assets and liabilities that are included in the balance sheets.

We also account for uncertainty in income taxes, which applies to all income tax positions previously filed in a tax return and income tax positions expected to be taken in a future tax return that have been reflected on our balance sheets. The determination of whether a tax position meets the recognition threshold under applicable accounting guidance is based on facts and circumstances available to us. Once a tax position meets the recognition threshold, the tax benefit is measured using a cumulative probability assessment. Assigning probabilities in measuring a recognized tax position and evaluating new information or events in subsequent periods requires significant judgment and could change previous conclusions used to measure the tax position estimate. New information or events may include tax examinations or appeals (including information gained from those examinations), developments in case law, settlements of tax positions, changes in tax law and regulations, rulings by taxing authorities and statute of limitation expirations. Such information or events may have a significant impact on our financial position, results of operations and cash flows.

On December 22, 2017, the "Tax Cuts and Jobs Act" (the "Act") became law, which amended existing federal tax rules and included numerous provisions that impacted corporations. In particular, the Act reduced the U.S. federal corporate income tax rate from 35 percent to 21 percent effective January 1, 2018. For our regulated companies, the most significant changes will be (1) the benefit of incurring a lower federal income tax expense, which we expect to be passed back to customers, and (2) the provisional regulated excess ADIT liabilities that we expect to benefit our customers in future periods, which were estimated to be approximately \$2.9 billion and recognized as regulatory liabilities as of December 31, 2017.

We will continue to evaluate the impacts of the Act, which will vary depending on the ultimate amount and timing of when certain income tax benefits will benefit our customers, and will vary by jurisdiction. Although the impacts could not be finalized upon the issuance of this combined Annual Report on Form 10-K, reasonable provisional estimates were recognized as of December 31, 2017. In accordance with SEC Staff Accounting Bulletin No. 118 ("SAB 118"), additional re-measurement may occur based on final analyses, computations, technical corrections, or other forms of guidance issued from regulatory agencies or commissions. While we believe the impacts of the Act were appropriately accounted for in accordance with applicable authoritative guidance, the ultimate outcome may be different from the provisional estimates recorded, and those differences may materially impact our future statement of financial position, results of operations, and cash flows.

*Accounting for Environmental Reserves:* Environmental reserves are accrued when assessments indicate it is probable that a liability has been incurred and an amount can be reasonably estimated. Adjustments made to estimates of environmental liabilities could have an adverse impact on earnings. We estimate these liabilities based on findings through various phases of the assessment, considering the most likely action plan from a variety of available remediation options (ranging from no action required to full site remediation and long-term monitoring), current site information from our site assessments, remediation estimates from third party engineering and remediation contractors, and our prior experience in remediating contaminated sites. If a most likely action plan cannot yet be determined, we estimate the liability based on the low end of a range of possible action plans. A significant portion of our environmental sites and reserve amounts relate to former MGP sites that were operated several decades ago and manufactured gas from coal and other processes, which resulted in certain by-products remaining in the environment that may pose a potential risk to human health and the environment, for which we may have potential liability. As assessments on these sites are performed, we may receive new information to be considered in our estimates related to the extent and nature of the contamination and the costs of required remediation.

Our estimates also incorporate currently enacted state and federal environmental laws and regulations and data released by the EPA and other organizations. The estimates associated with each possible action plan are judgmental in nature partly because there are usually several different remediation options from which to choose. Our estimates are subject to revision in future periods based on actual costs or new information from other sources, including the level of contamination at the site, the extent of our responsibility or the extent of remediation required, recently enacted laws and regulations or a change in cost estimates due to certain economic factors.

*Fair Value Measurements:* We follow fair value measurement guidance that defines fair value as the price that would be received for the sale of an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (an exit price). We have applied this guidance to our Company's derivative contracts that are not elected or designated as "normal purchases or normal sales" (normal), to marketable securities held in trusts, to our investments in our Pension and PBOP Plans, and to nonfinancial assets such as goodwill and AROs. This guidance was also applied in estimating the fair value of preferred stock and long-term debt.

Changes in fair value of the derivative contracts are recorded as Regulatory Assets or Liabilities, as we recover the costs of these contracts in rates charged to customers. These valuations are sensitive to the prices of energy and energy-related products in future years for which markets have not yet developed and assumptions are made.

We use quoted market prices when available to determine the fair value of financial instruments. If quoted market prices are not available, fair value is determined using quoted prices for similar instruments in active markets, quoted prices for identical or similar instruments that are not active and model-derived valuations. When quoted prices in active markets for the same or similar instruments are not available, we value derivative contracts using models that incorporate both observable and unobservable inputs. Significant unobservable inputs utilized in the models include energy and energy-related product prices for future years for long-dated derivative contracts and market volatilities. Discounted cash flow valuations incorporate estimates of premiums or discounts, reflecting risk-adjusted profit that would be required by a market participant to arrive at an exit price, using available historical market transaction information. Valuations of derivative contracts also reflect our estimates of nonperformance risk, including credit risk.

#### Other Matters

*Accounting Standards:* For information regarding new accounting standards, see Note 1D, "Summary of Significant Accounting Policies - Accounting Standards," to the financial statements.

*Contractual Obligations and Commercial Commitments:* Information regarding our contractual obligations and commercial commitments as of December 31, 2017, is summarized annually through 2022 and thereafter as follows:

#### **Eversource**

(Millions of Dollars)

	2018	2019	2020	2021	2022	Thereafter	Total
Long-term debt maturities <sup>(a)</sup>	\$ 961.0	\$ 801.0	\$ 296.1	\$ 922.8	\$ 1,188.9	\$ 7,643.1	\$ 11,812.9
Estimated interest payments on existing debt <sup>(b)</sup>	446.4	417.4	378.9	361.5	328.9	2,994.5	4,927.6

<b>CL&amp;P</b>							
<i>(Millions of Dollars)</i>							
	<b>2018</b>	<b>2019</b>	<b>2020</b>	<b>2021</b>	<b>2022</b>	<b>Thereafter</b>	<b>Total</b>
Long-term debt maturities <sup>(a)</sup>	\$ 300.0	\$ 250.0	\$ —	\$ —	\$ —	\$ 2,515.3	\$ 3,065.3
Estimated interest payments on existing debt <sup>(b)</sup>	137.1	121.7	114.8	114.8	114.8	1,462.8	2,066.0
Capital leases <sup>(c)</sup>	2.0	2.0	2.0	1.4	—	—	7.4
Operating leases <sup>(d)</sup>	1.8	1.5	1.3	1.1	1.0	1.0	7.7
Funding of pension obligations <sup>(d),(e)</sup>	82.0	—	—	—	—	—	82.0
Estimated future annual long-term contractual costs <sup>(f)</sup>	177.9	175.4	198.2	187.8	175.6	836.9	1,751.8
<b>Total <sup>(g)</sup></b>	<b>\$ 700.8</b>	<b>\$ 550.6</b>	<b>\$ 316.3</b>	<b>\$ 305.1</b>	<b>\$ 291.4</b>	<b>\$ 4,816.0</b>	<b>\$ 6,980.2</b>

- (a) Long-term debt maturities exclude the CYAPC pre-1983 spent nuclear fuel obligation, net unamortized premiums, discounts and debt issuance costs, and other fair value adjustments.
- (b) Estimated interest payments on fixed-rate debt are calculated by multiplying the coupon rate on the debt by its scheduled notional amount outstanding for the period of measurement. Estimated interest payments on floating-rate debt are calculated by multiplying the end of 2017 floating-rate reset on the debt by its scheduled notional amount outstanding for the period of measurement. This same rate is then assumed for the remaining life of the debt.
- (c) The capital lease obligations include interest.
- (d) Amounts are not included on our balance sheets.
- (e) These amounts represent expected pension and PBOP contributions for 2018. Future contributions will vary depending on many factors, including the performance of existing plan assets, valuation of the plans' liabilities and long-term discount rates.
- (f) Other than certain derivative contracts held by the regulated companies, these obligations are not included on our balance sheets.
- (g) Does not include other long-term liabilities recorded on our balance sheet, such as environmental reserves, employee medical insurance, workers compensation and long-term disability insurance reserves, ARO liability reserves and other reserves, as we cannot make reasonable estimates of the timing of payments. Also, does not include amounts not included on our balance sheets for future funding of Eversource's equity method investments, as we cannot make reasonable estimates of the periods or the investment contributions.

For further information regarding our contractual obligations and commercial commitments, see Note 6, "Asset Retirement Obligations," Note 7, "Short-Term Debt," Note 8, "Long-Term Debt," Note 9A, "Employee Benefits - Pension Benefits and Postretirement Benefits Other Than Pensions," Note 11, "Commitments and Contingencies," and Note 13, "Leases," to the financial statements.

## RESULTS OF OPERATIONS – EVERSOURCE ENERGY AND SUBSIDIARIES

The following provides the amounts and variances in operating revenues and expense line items in the statements of income for Eversource for the years ended December 31, 2017 and 2016 included in this Annual Report on Form 10-K:

<i>(Millions of Dollars)</i>	For the Years Ended December 31,		
	2017	2016	Increase/(Decrease)
Operating Revenues	\$ 7,752.0	\$ 7,639.1	\$ 112.9
Operating Expenses:			
Purchased Power, Fuel and Transmission	2,535.3	2,500.8	34.5
Operations and Maintenance	1,277.1	1,323.5	(46.4)
Depreciation	773.8	715.5	58.3
Amortization of Regulatory Assets, Net	90.0	71.7	18.3
Energy Efficiency Programs	480.8	533.7	(52.9)
Taxes Other Than Income Taxes	676.8	634.0	42.8
Total Operating Expenses	5,833.8	5,779.2	54.6
Operating Income	1,918.2	1,859.9	58.3
Interest Expense	421.8	401.0	20.8
Other Income, Net	78.0	45.9	32.1
Income Before Income Tax Expense	1,574.4	1,504.8	69.6
Income Tax Expense	578.9	555.0	23.9
Net Income	995.5	949.8	45.7
Net Income Attributable to Noncontrolling Interests	7.5	7.5	—
Net Income Attributable to Common Shareholders	\$ 988.0	\$ 942.3	\$ 45.7

### Operating Revenues

A summary of our Operating Revenues by segment was as follows:

<i>(Millions of Dollars)</i>	For the Years Ended December 31,		
	2017	2016	Increase/(Decrease)
Electric Distribution	\$ 5,542.9	\$ 5,594.3	\$ (51.4)
Natural Gas Distribution	947.3	857.7	89.6
Electric Transmission	1,301.7	1,210.0	91.7
Other and Eliminations	(39.9)	(22.9)	(17.0)
Total Operating Revenues	\$ 7,752.0	\$ 7,639.1	\$ 112.9

A summary of our retail electric GWh sales volumes and our firm natural gas sales volumes in MMcf and percentage changes was as follows:

	Electric				Firm Natural Gas			
	For the Years Ended December 31,				For the Years Ended December 31,			
	2017	2016	Decrease	Percent	2017	2016	Increase	Percent
Traditional	27,855	28,479	(624)	(2.2)%	46,957	45,314	1,643	3.6%
Decoupled and Natural Gas Special Contracts	24,391	25,163	(772)	(3.1)%	54,069	52,728	1,341	2.5%
Total Sales Volumes	52,246	53,642	(1,396)	(2.6)%	101,026	98,042	2,984	3.0%

Fluctuations in sales volumes at certain of the electric and natural gas utilities impact earnings ("Traditional" in the table above). Fluctuations in CL&P's, NSTAR Electric's (for a portion of its sales volumes as of December 31, 2017) and NSTAR Gas' sales volumes do not impact the level of base distribution revenue realized or earnings due to the commission-approved revenue decoupling mechanisms ("Decoupled and Natural Gas Special Contracts" in the table above). The revenue decoupling mechanisms permit recovery of a base amount of distribution revenues and breaks the relationship between sales volumes and revenues recognized. Effective February 1, 2018, all of NSTAR Electric's distribution revenues were decoupled as a result of the DPU-approved rate case decision.

Operating Revenues, which primarily consist of base electric and natural gas distribution revenues and tracked revenues further described below, increased by \$112.9 million in 2017, as compared to 2016.

*Base electric and natural gas distribution revenues:* Base electric distribution segment revenues, excluding LBR, decreased \$12.3 million in 2017, as compared to 2016, due primarily to a decrease in sales volumes driven by the mild summer weather in 2017 at our non-decoupled electric companies. LBR increased \$13.0 million in 2017, as compared to 2016. Effective February 1, 2018, NSTAR Electric no longer has an LBR mechanism. Base natural gas distribution revenues increased \$2.9 million in 2017, as compared to 2016. The impact of higher firm natural gas

sales volumes, which was driven by colder winter weather in the fourth quarter of 2017, was partially offset by lower demand revenues in Connecticut driven by lower peak usage in 2017, as compared to 2016.

*Tracked distribution revenues:* Tracked revenues consist of certain costs that are recovered from customers in rates through regulatory commission-approved cost tracking mechanisms and therefore, have no impact on earnings. Costs recovered through cost tracking mechanisms include energy supply procurement and other energy-related costs for our electric and natural gas customers, retail transmission charges, energy efficiency program costs, net metering for distributed generation and restructuring and stranded cost recovery revenues. In addition, certain tracked revenues include incentives earned and carrying charges that are billed in rates to customers.

Tracked natural gas distribution segment revenues increased as a result of an increase in natural gas supply costs (\$68.7 million) and an increase in energy efficiency program revenues (\$18.1 million). Tracked electric distribution revenues decreased as a result of a decrease in electric energy supply costs (\$21.7 million), driven by decreased average retail prices and lower sales volumes, a decrease in retail electric transmission charges (\$14.8 million), a decrease in transition and stranded cost recovery revenues (\$46.2 million), a decrease in pension rate adjustment mechanisms (\$21.6 million), a decrease in revenues related to the timing of the sale of PSNH's RECs (\$16.3 million), and a decrease in energy efficiency program revenues (\$10.4 million). Partially offsetting these decreases were increases in tracked electric distribution revenues related to federally-mandated congestion charges (\$30.1 million), net metering revenues (\$29.8 million) and revenues related to renewable energy requirements (\$41.9 million).

*Electric transmission revenues:* The electric transmission segment revenues increased by \$91.7 million due primarily to the recovery of higher revenue requirements associated with ongoing investments in our transmission infrastructure.

*Other:* Other revenues decreased due primarily to the sale of Eversource's unregulated telecommunication business on December 31, 2016 (\$20.0 million), partially offset by the addition of Aquarion revenues due to the acquisition on December 4, 2017 (\$15.9 million).

**Purchased Power, Fuel and Transmission** expense includes costs associated with purchasing electricity and natural gas on behalf of our customers. These energy supply costs are recovered from customers in rates through commission-approved cost tracking mechanisms, which have no impact on earnings (tracked costs). Purchased Power, Fuel and Transmission expense increased in 2017, as compared to 2016, due primarily to the following:

<i>(Millions of Dollars)</i>	<b>(Decrease)/Increase</b>
Electric Distribution	\$ (68.9)
Natural Gas Distribution	59.5
Transmission	43.9
Total Purchased Power, Fuel and Transmission	\$ 34.5

The decrease in purchased power expense at the electric distribution business in 2017, as compared to 2016, was driven primarily by lower prices associated with the procurement of energy supply and lower sales volumes. The increase in purchased power expense at the natural gas distribution business was due to higher average natural gas prices and higher sales volumes. The increase in transmission costs in 2017, as compared to 2016, was primarily the result of an increase in costs billed by ISO-NE that support regional grid investment, and Local Network Service charges, which reflect the cost of transmission service provided by Eversource over our local transmission network. This was partially offset by a decrease in the retail transmission cost deferral, which reflects the actual costs of transmission service compared to estimated amounts billed to customers.

**Operations and Maintenance** expense includes tracked costs and costs that are part of base electric and natural gas distribution rates with changes impacting earnings (non-tracked costs). Operations and Maintenance expense decreased in 2017, as compared to 2016, due primarily to the following:

<i>(Millions of Dollars)</i>	<b>Increase/(Decrease)</b>
Base Electric Distribution:	
Employee-related expenses, including labor and benefits	\$ (47.4)
Bad debt expense	(14.5)
Shared corporate costs (including computer software depreciation at Eversource Service)	24.2
Boston Harbor civil action settlement charges	16.0
Other non-tracked operations and maintenance	7.4
Total Base Electric Distribution	(14.3)
Base Natural Gas Distribution	3.7
Tracked costs (Electric Distribution, Electric Transmission and Natural Gas Distribution):	
Absence in 2017 of earnings benefit related to merger-related costs allowed for recovery through transmission rates	27.5
Other tracked operations and maintenance	(15.4)
Total Tracked costs (Electric Distribution, Electric Transmission and Natural Gas Distribution)	12.1
Other and eliminations:	
Merger-related costs allowed for recovery through NSTAR Electric distribution rates as a result of the November 30, 2017 DPU distribution rate case decision (earnings benefit)	(30.5)
Addition of Aquarion operations and maintenance expenses due to acquisition on December 4, 2017	7.2
Eversource Parent and Other Companies - other operations and maintenance	8.2
Eliminations	(32.8)
Total Operations and Maintenance	\$ (46.4)

**Depreciation** expense increased in 2017, as compared to 2016, due primarily to higher utility plant in service balances.

**Amortization of Regulatory Assets, Net** expense includes the deferral of energy supply and energy-related costs included in certain regulatory-approved tracking mechanisms, and the amortization of certain costs. The deferral adjusts expense to match the corresponding revenues. Amortization of Regulatory Assets, Net increased in 2017, as compared to 2016, due primarily to the deferral of energy supply and energy-related costs which can fluctuate from period to period based on the timing of costs incurred and the related rate changes to recover these costs. Energy supply and energy-related costs at the electric and natural gas companies are recovered from customers in rates and have no impact on earnings.

**Energy Efficiency Programs** expense decreased in 2017, as compared to 2016, due primarily to a State of Connecticut policy change impacting CL&P requiring the remittance of \$25.4 million of 2017 energy efficiency funds to the State (resulting in these costs being classified as Taxes Other than Income Taxes), and the deferral adjustment at NSTAR Electric. The deferral adjustment reflects the actual costs of energy efficiency programs compared to the estimated amounts billed to customers. The deferral adjusts costs incurred to match energy efficiency revenue billed to customers and the timing of the recovery of energy efficiency costs. The costs for various state energy policy initiatives and expanded energy efficiency programs are recovered from customers in rates and have no impact on earnings.

**Taxes Other Than Income Taxes** expense increased in 2017, as compared to 2016, due primarily to a State of Connecticut policy change requiring \$25.4 million of 2017 CL&P energy efficiency costs to be remitted to the State of Connecticut that is included in Taxes Other than Income Taxes, an increase in property taxes as a result of higher utility plant balances, partially offset by a decrease in gross earnings taxes. Gross earnings taxes are recovered from customers in rates and have no impact on earnings.

**Interest Expense** increased in 2017, as compared to 2016, due primarily to an increase in interest on long-term debt (\$30.3 million) as a result of new debt issuances and an increase in interest on notes payable (\$5.1 million), partially offset by a decrease in regulatory deferrals, primarily at NSTAR Electric, which decreased interest expense (\$14.7 million) due primarily to the November 30, 2017 NSTAR Electric DPU distribution rate case decision which allowed for a higher rate on carrying charges for past storm costs.

**Other Income, Net** increased in 2017, as compared to 2016, due primarily to increased gains on investments (\$27.2 million), primarily related to Eversource's investment in a renewable energy fund, changes in the market value related to deferred compensation plans (\$8.3 million) and higher AFUDC related to equity funds (\$8.2 million). Partially offsetting these favorable impacts was the absence in 2017 of a gain on the sale of an unregulated business in 2016 (\$11.8 million) and lower interest income (\$3.3 million).

**Income Tax Expense** increased in 2017, as compared to 2016, due primarily to higher pre-tax earnings (\$29.1 million), lower excess tax benefit (\$16.2 million), the absence of tax credits in 2017 (\$3.5 million), and the impact from federal tax rate change (\$0.5 million), partially offset by items that impact our tax rate as a result of regulatory treatment (flow-through items) and permanent differences (\$11.4 million), the sale of an unregulated business in 2016 (\$10.2 million), and lower state taxes (\$3.8 million).

**RESULTS OF OPERATIONS –  
THE CONNECTICUT LIGHT AND POWER COMPANY  
NSTAR ELECTRIC COMPANY AND SUBSIDIARY  
PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE AND SUBSIDIARY**

The following provides the amounts and variances in operating revenues and expense line items in the statements of income for CL&P, NSTAR Electric and PSNH for the years ended December 31, 2017 and 2016 included in this Annual Report on Form 10-K:

<i>(Millions of Dollars)</i>	For the Years Ended December 31,								
	CL&P			NSTAR Electric			PSNH		
	2017	2016	Increase/(Decrease)	2017	2016	Increase/(Decrease)	2017	2016	Increase/(Decrease)
Operating Revenues	\$ 2,887.4	\$ 2,806.0	\$ 81.4	\$ 2,980.6	\$ 3,041.6	\$ (61.0)	\$ 981.6	\$ 959.5	\$ 22.1
Operating Expenses:									
Purchased Power, Fuel and Transmission	930.8	919.7	11.1	1,025.4	1,084.3	(58.9)	237.5	210.8	26.7
Operations and Maintenance	500.4	490.1	10.3	463.7	489.9	(26.2)	257.2	260.8	(3.6)
Depreciation	249.4	230.5	18.9	274.0	259.3	14.7	128.2	116.5	11.7
Amortization of Regulatory Assets/ (Liabilities), Net	83.2	38.8	44.4	33.8	34.3	(0.5)	(16.6)	11.2	(27.8)

**Operating Revenues**

A summary of our retail electric GWh sales volumes was as follows:

	Rate Structure	For the Years Ended December 31,			
		2017	2016	Decrease	Percent
CL&P	Decoupled	20,950	21,617	(667)	(3.1)%
NSTAR Electric (eastern Massachusetts)	Traditional	20,097	20,619	(522)	(2.5)%
NSTAR Electric (western Massachusetts)	Decoupled	3,441	3,546	(105)	(3.0)%
PSNH	Traditional	7,758	7,860	(102)	(1.3)%

Fluctuations in retail electric sales volumes at certain of the electric utilities impact earnings ("Traditional" in the table above). For others, fluctuations in retail electric sales volumes do not impact earnings due to their regulatory commission-approved distribution revenue decoupling mechanisms ("Decoupled" in the table above). These distribution revenues are decoupled from their customer sales volumes, which breaks the relationship between sales volumes and revenues recognized.

In 2017 and 2016, NSTAR Electric operated under two different rate structures based on its service territory geography. For customers that were served in eastern Massachusetts, including metropolitan Boston, Cape Cod and Martha's Vineyard, NSTAR Electric operated using traditional rates. For customers that were served in western Massachusetts, including the metropolitan Springfield region, NSTAR Electric operated using decoupled rates. Effective February 1, 2018, all of NSTAR Electric's distribution revenues were decoupled as a result of the DPU-approved rate decision. See "Regulatory Developments and Rate Matters - Massachusetts - NSTAR Electric Distribution Rate Case Decision" in this *Management's Discussion and Analysis of Financial Condition and Results of Operations*.

CL&P and NSTAR Electric (for its western Massachusetts customer rates) reconcile their annual base distribution rate recovery amounts to their pre-established levels of baseline distribution delivery service revenues of \$1.059 billion and \$132.4 million, respectively, through December 31, 2017. Effective February 1, 2018, NSTAR Electric, operating entirely under decoupled rates, will reconcile its annual base distribution rate recovery to its new baseline of \$974.8 million. Any difference between the allowed level of distribution revenue and the actual amount realized during a 12-month period is adjusted through rates in the following period.

Operating Revenues, which consist of base distribution revenues and tracked revenues further described below, increased/(decreased) in 2017, as compared to 2016 as follows:

<i>(Millions of Dollars)</i>	CL&P	NSTAR Electric	PSNH
Operating Revenues	\$ 81.4	\$ (61.0)	\$ 22.1

*Base Distribution Revenues, with changes that impact earnings:*

- NSTAR Electric's base distribution revenues, excluding LBR, decreased \$10.8 million in 2017, as compared to 2016, as a result of lower sales volumes driven by the mild summer weather in 2017. LBR increased \$13.0 million in 2017, as compared to 2016. Effective February 1, 2018, NSTAR Electric no longer has an LBR mechanism.
- PSNH's base distribution revenues decreased \$1.5 million in 2017, as compared to 2016, as a result of lower sales volumes driven by the mild summer weather in 2017.

*Tracked Revenues:* Fluctuations in the overall level of operating revenues are primarily related to tracked revenues. Tracked revenues consist of certain costs that are recovered from customers in rates through commission-approved cost tracking mechanisms and therefore have no impact on earnings. Costs recovered through cost tracking mechanisms include energy supply procurement and other energy-related costs, retail transmission charges, energy efficiency program costs, net metering for distributed generation and restructuring and stranded cost recovery revenues. In addition, tracked revenues include certain incentives earned and carrying charges. Tracked revenues increased/(decreased) in 2017, as compared to 2016, due primarily to the following:

<i>(Millions of Dollars)</i>	<b>CL&amp;P</b>	<b>NSTAR Electric</b>	<b>PSNH</b>
Energy supply procurement	\$ 18.8	\$ (50.8)	\$ 10.3
All other distribution tracking mechanisms	35.0	(33.7)	(12.7)

*Transmission Revenues:* Transmission revenues increased by \$34.2 million, \$31.0 million and \$26.5 million at CL&P, NSTAR Electric and PSNH, respectively, due primarily to higher revenue requirements associated with ongoing investments in our transmission infrastructure.

**Purchased Power, Fuel and Transmission** expense includes costs associated with purchasing electricity on behalf of CL&P, NSTAR Electric and PSNH's customers. For PSNH, these costs also include PSNH's generation of electricity. These energy supply costs are recovered from customers in commission-approved cost tracking mechanisms, which have no impact on earnings (tracked costs). Purchased Power, Fuel and Transmission expense increased/(decreased) in 2017, as compared to 2016, due primarily to the following:

<i>(Millions of Dollars)</i>	<b>CL&amp;P</b>	<b>NSTAR Electric</b>	<b>PSNH</b>
Purchased Power Costs	\$ (41.4)	\$ (27.9)	\$ 3.7
Transmission Costs	52.5	(31.0)	23.0
Total Purchased Power, Fuel and Transmission	\$ 11.1	\$ (58.9)	\$ 26.7

*Purchased Power Costs:* Included in purchased power costs are the costs associated with certain energy supply tracking mechanisms and deferred energy supply costs. Energy supply tracking mechanisms recover energy-related costs incurred as a result of providing electric generation service supply to all customers who have not migrated to third party suppliers. In order to meet the demand of customers who have not migrated to third party suppliers, PSNH procures power through power supply contracts and spot purchases in the competitive New England wholesale power market and/or produces power through its own generation. The increase/(decrease) in purchased power costs in 2017, as compared to 2016, was due primarily to the following:

- The decrease at CL&P was due primarily to a decrease in the price of standard offer supply associated with the GSC.
- The decrease at NSTAR Electric was due primarily to lower prices associated with the procurement of energy supply, lower sales volumes and the expiration of certain purchase power agreements.
- The increase at PSNH was due primarily to higher purchased power energy expenses that are recovered as a component of the Energy Service rate, and Regional Greenhouse Gas Initiative related expenses recovered in the SCRC.

*Transmission Costs:* Included in transmission costs are charges that recover the cost of transporting electricity over high-voltage lines from generating plants to substations, including costs allocated by ISO-NE to maintain the wholesale electric market. The increase/(decrease) in transmission costs in 2017, as compared to 2016, was due primarily to the following:

- The increase at CL&P was primarily the result of an increase in costs billed by ISO-NE that support regional grid investment, Local Network Service charges, which reflect the cost of transmission service, and the retail transmission cost deferral, which reflects the actual costs of transmission service compared to estimated amounts billed to customers.
- The decrease at NSTAR Electric was primarily the result of a decrease in the retail transmission cost deferral. This was partially offset by an increase in costs billed by ISO-NE.
- The increase at PSNH was primarily the result of increases in costs billed by ISO-NE, Local Network Service charges, and the retail transmission cost deferral.

**Operations and Maintenance** expense includes tracked costs and costs that are part of base distribution rates with changes impacting earnings (non-tracked costs). Operations and Maintenance expense increased/(decreased) in 2017, as compared to 2016, due primarily to the following:

(Millions of Dollars)

	CL&P	NSTAR Electric	PSNH
Base Electric Distribution (Non-Tracked Costs):			
Employee-related expenses, including labor and benefits	\$ (4.5)	\$ (36.6)	\$ (6.3)
Bad debt expense	(6.8)	(7.5)	(0.2)
Shared corporate costs (including computer software depreciation at Eversource Service)	7.8	12.6	3.8
Boston Harbor civil action settlement charges	—	16.0	—
Other non-tracked operations and maintenance	8.8	0.6	(2.0)
Total Base Electric Distribution (Non-Tracked Costs)	5.3	(14.9)	(4.7)
Tracked Costs:			
Employee-related expenses, including labor and benefits	1.3	(16.2)	(0.5)
Other tracked operations and maintenance	3.7	4.9	1.6
Total Tracked Costs	5.0	(11.3)	1.1
