

PROPOSAL FOR PURCHASE OF OFFSHORE WIND RENEWABLE ENERGY CERTIFICATES ORECRFP18-1

Prepared for

The New York State Energy Research and Development Authority
(NYSERDA)

February 14, 2019

Submitted by

Bay State Wind LLC (d/b/a Sunrise Wind)
One International Place, Suite 2610
Boston, MA 02110

Portions of this proposal contain confidential, proprietary, and/or commercially sensitive information which has been redacted from the "Public Version" of this proposal. Bay State Wind LLC (d/b/a/ Sunrise Wind) has submitted a Confidential Version of this proposal which includes the redacted information, and which should be treated as a non-public record that is exempt from disclosure to the extent permitted under applicable laws and/or as expressly set forth in the Request for Proposals.

- 6 BUSINESS ENTITY AND FINANCING PLAN 6-1**
 - 6.1 Long-Term Contract Implications 6-1
 - 6.2 Business Entity Structure 6-2
 - 6.3 Description of Financing Plan..... 6-4
 - 6.4 Proposer Experience in Securing Financing..... 6-5
 - 6.5 Financial Resources and Strength 6-11
 - 6.6 Federal Production Tax Credit or Investment Tax Credit Role 6-13

CONFIDENTIALITY AND ENABLING STATEMENTS

Portions of this proposal contain confidential, proprietary, and/or commercially sensitive information (collectively, "Confidential Information") that constitute trade secrets or are submitted to NYSERDA by Bay State Wind LLC (d/b/a Sunrise Wind) ("Proposer") as a commercial enterprise or derived from information obtained from such commercial enterprise and which if disclosed would cause substantial injury to the competitive position of such enterprise. The Proposer has separately attached a Request for Exception from Disclosure letter accompanying the Confidential Information. In support of Proposer's claims of confidential, proprietary and trade secret information, the Proposer submits that the Confidential Information:

- consists of confidential, proprietary, and/or commercially sensitive records, forecasts of future energy production, costs, prices, processes, plans, studies, surveys, analyses, engineering, designs, critical infrastructure information, work product, cost allocation strategies and financial projections developed at considerable time and expense in order to compete with other developers;
- is not available in the public and cannot be easily obtained or developed from public information;
- contains confidential or proprietary information which is not published or divulged, disclosure of which would cause the Proposer substantial injury to its competitive position as a commercial enterprise; and
- would be of material economic value to competitors, including, without limitation, other proposers responding to this and future requests for proposals, and would provide them with an unfair advantage in their bidding and negotiating strategies.

The Confidential Information has been preserved pursuant to confidentiality agreements and has been shared only with those individuals whose roles in the preparation of this proposal required them to have access to it.

The Confidential Information is exempt from disclosure under the Public Officers Law, including, without limitation, pursuant to Section 87(2)(d) of the Public Officers Law which provides for exceptions to disclosure for such records or portions thereof and pursuant to 21 NYCRR 501.6 of NYSERDA's regulations. Accordingly, the Confidential Information has been redacted from the "Public Version" of this proposal in accordance with RFP Section 6.2.2.2.

In accordance with RFP Sections 6.2.2.1 and 8.1, the Proposer has submitted a Confidential Version of this proposal which has been labeled "Confidential" or "Proprietary" on each page and identifies Confidential Information through shading in the narrative portion of this proposal. The Confidential Version of this proposal should be treated as a non-public record that is exempt from disclosure to the maximum extent permissible under applicable laws (including, without limitation, Section 87(2)(d) of the Public Officers Law), and as expressly set forth in the Request for Exception from Disclosure pursuant to applicable law (including, without limitation, Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501).

This proposal includes information concerning the Proposer's expectations, beliefs, plans, objectives, goals, strategies, and assumptions of future events regarding the Project. That information constitutes "forward-looking statements" based on the current expectations,

estimates, assumptions or plans of the Proposer and does not guaranty the future. These expectations, estimates, assumptions or plans may vary materially from actual results. Factors affecting the development, construction and operation of the Project are difficult to predict, many of which are beyond the Proposer's control. New factors also may emerge from time to time, and it is not possible for the Proposer to predict all of those factors, nor can the Proposer assess the impact of each factor on the Project or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statements.

OFFER DATA FORMS

6.3 The Master Offers Form and Offer Data Form (ODF) documents are Microsoft Excel workbooks that can be downloaded from NYSERDA's procurement website. Each Proposer must submit a single Master Offers Form. A separate ODF document is required for the Required Base Proposal, the Required Transmission Proposal, and each Alternative Proposal with respect to aspects other than pricing. All pricing alternatives for Proposals with the same non-price aspects are included within a single ODF document. General user guide information for both forms is included in the Master Offers Form.

The purpose of the Master Offers Form is to summarize the Proposals and to calculate the total Proposal fee. The Master Offers Form includes common Project information, the list of ODF filenames and their respective aspects (capacity, interconnection control area, and the number of pricing/tenor offers) that create additional Proposal fees. The Master Offers Form also identifies, by ODF ID number, other ODFs with Proposals that would be precluded or required upon selection of a given Proposal.

The ODF document has five parts, listed below. If the Proposer provides information in other sections of its Proposal(s) that conflicts with the information provided in the ODF, the ODF shall be considered to contain the governing and binding information for both the evaluation and any resulting contract offer.

Part I Identification Worksheet

Proposer name, Offshore Wind Generation Facility unique Proposal name, BOEM renewable energy lease number, installed Offer Capacity, proposed interconnection (Injection Point) control area, names of other ODFs containing Proposals that would be precluded or required upon selection of a given Proposal.

Part II Project Definition Worksheet

Indicate whether full Offer Capacity will enter Commercial Operation in more than one tranche, the expected Commercial Operation Date of the first tranche, a monthly schedule of installed capacity for the first three years of Commercial Operation, the P10 Annual OREC Exceedance value, the summer and winter UCAP production factors, and Injection Point and Delivery Point descriptive information.

Part III Expected Performance Worksheet

Table III-1. P50 Generation (before outages and land-based transmission and curtailment losses) as fractions of installed capacity by month and hour of day.

Table III-2. Operable NYCA delivery capability as fractions of installed capacity by month and hour of day.

Part IV Pricing Worksheet

Offer nominal prices by Contract Year for each tenor and price shaping schedule selected. Four schedules are allowed, 25 and 20-year tenors combined with constant and non-decreasing prices. For each type of pricing schedule, both Fixed OREC Prices and Index OREC Strike Prices must be provided. The ODF with the Required Base Proposal must include offers for the nominal level 25-year Contract Tenor pricing schedule.

Part V Incremental Economic Benefits

Table V-1. Incremental Economic Benefits Category 1, Project-specific spending and job creation data are entered by ID number, Project phase, expenditure type, classified as related to the development, construction, or operation phase, and the net expenditure (stated in constant dollars) and the numbers of short-term and long-term jobs (stated in FTE-years) created in New York State. Expenditure and jobs data are included through the end of the third year of Commercial Operation. Also, the ID numbers of any related Economic Benefits Category 2 items are referenced for individual Category 1 expenditures.

Table V-2. Incremental Economic Benefits Category 2, offshore wind industry-related supply chain and infrastructure investment data are entered by ID number, Project phase, and investment type. Net investment costs (stated in constant dollars) are included through the end of the third year of Commercial Operation. Also, the ID numbers of any related Economic Benefits Category 3 activities are referenced for individual Category 2 expenditures.

Table V-3. Incremental Economic Benefits Category 3, input activities data are entered by ID number, commitment type, the Proposer's planned measurement metric, quantity of the input activity, and references to corresponding sections or pages in the Economic Benefits Plan.

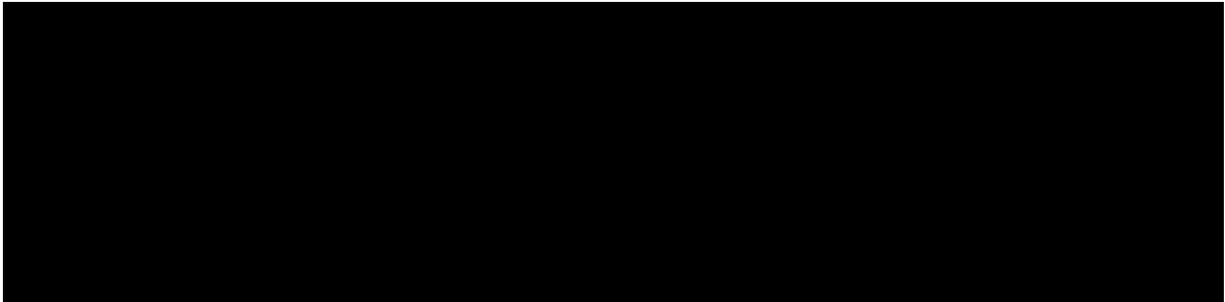

1 EXECUTIVE SUMMARY OF THE PROPOSAL

6.4.1 Proposers are required to provide an executive summary of the Proposal that documents the eligibility of the proposed Offshore Wind Generation Facility, the proposed Contract Tenor, the overall Project schedule including expected Commercial Operation Date, any contingencies specific to the Proposal or to other Proposals, and other factors the Proposers deem to be important.

1.1 Introduction to this Proposal

Bay State Wind LLC (d/b/a Sunrise Wind) (the Proposer) – part of a 50/50 joint venture detailed in Section 6.2 between Ørsted, the global leader in offshore wind, and Eversource, New England's largest energy delivery company – through Bay State Wind LLC (d/b/a Sunrise Wind) and its affiliates as detailed in Section 6.2 (the Proposer), submits this proposal for the Sunrise Wind Project (the Project) in response to the Request for Proposals ORECRFP18-1 issued on November 8, 2018 (the RFP) by the New York State Energy Research and Development Authority (NYSERDA), as authorized by the New York State Public Service Commission's (NYS PSC) Order Establishing Offshore Wind Standard and Framework for Phase 1 Procurement, issued on July 12, 2018 in Case No. 18-E-0071.

We are proud to be supported exclusively in this proposal by New York's premier transmission operators – Con Edison Transmission, LLC (Con Edison Transmission) and the New York Power Authority (NYPA). The Proposer has entered into memoranda of understanding (each, a MOU) with each of Con Edison Transmission and NYPA, with regard to the Delivery Facilities for the Project. The support and local knowledge of Con Edison Transmission and NYPA helps further ensure the viability and successful completion and operation of Sunrise Wind.

Sunrise Wind will consist of two principal components:

- The "**Wind Farm,**" wind turbines and related generation assets to be located [REDACTED] [REDACTED] as further detailed in Section 3 hereof. In accordance with Section 2.1.2 of the RFP, we are offering to sell to NYSERDA the Offshore Wind Renewable Energy Certificates (ORECs) produced by certain wind turbines in the Project constituting [REDACTED] of nameplate capacity. [REDACTED]

- The “**Delivery Facility**,” designed to allow [REDACTED] of interconnection capacity is [REDACTED] at LIPA’s [REDACTED] the “**Point of Interconnection**” (POI) for this proposal, as detailed in Section 7. [REDACTED]

1.2 Why NYSERDA Should Select Sunrise Wind

We applaud Governor Cuomo’s nation-leading goal of developing 9,000 MW of offshore wind. We recognize that achieving this goal will require NYSERDA to procure many projects, from multiple competing developers, over a period of many years. However, we also recognize that the long-term viability of this program – and the underlying political support required for achieving its goals – will depend a great deal on the success of the project or projects selected in NYSERDA’s first procurement. With that in mind, we have carefully crafted this proposal with a view towards creating a project that will deliver NYSERDA and Governor Cuomo a project that will clearly demonstrate the benefits of offshore wind and a compelling case for NYSERDA to begin to fulfill the State’s 9,000 MW goal.

Experience matters. Local knowledge and relationships are key to a successful project. Sunrise Wind assembled a team with unmatched experience building offshore wind globally and executing large regional electric transmission projects. Our acquisition of Deepwater further strengthens the team with long-term local relationships in downstate New York.

Sunrise Wind is being developed in Lease Areas with attributes that are key to success – proximate to the New York market, high wind speeds and shallow water depths, negligible visual impact and a location conducive to co-existing with the fishing industry. We know that the commitments made by early projects will shape the future of the offshore wind supply chain. Sunrise Wind’s economic development plan will provide permanent jobs in areas that need them and strategic investments that will position New York as a hub for the offshore wind industry. We also understand that NYSERDA must think long-term, so Sunrise Wind is offering a project that can fit into a balanced portfolio and that allows NYSERDA to capitalize on the benefits of the federal tax credits.

For these reasons, Sunrise Wind is the best option to deliver NYSERDA’s inaugural offshore wind project. Ørsted and Eversource recognize the magnitude of this important initiative before NYSERDA. This proposal will thoroughly address all of the RFP’s questions. If there are any perceived omissions, or if any of our responses require clarification, we will promptly respond to requests for information. We also will proactively supplement our responses as we continue to achieve important milestones.

1.2.1 We are the Most Capable and Trusted Team for New York

Sunrise Wind will deliver a world class project based on:

- our unmatched offshore wind experience and capabilities,
- our experience in constructing and maintaining large infrastructure projects
- our unrivaled financial capacity,
- our collaboration with New York’s premier transmission operators,
- our commitment to New York labor, and
- our focus on local support and presence in the community.

Unmatched Offshore Wind Experience and Capabilities

Ørsted built the world's first offshore wind farm in 1991, off the coast of Denmark. 25 years later, Ørsted built America's first offshore wind farm, serving Rhode Island. As detailed in Section 1.3.2, Ørsted has constructed 5.6 gigawatts (GW) of offshore wind capacity, nearly 30 percent of globally installed offshore wind capacity, with another 3.4 GW under construction. In addition to Rhode Island, the states of New York, Virginia, Maryland and Connecticut have each entrusted Ørsted with the profound responsibility of delivering their first offshore wind farms.

Ørsted has the deepest bench of technical offshore wind experts in the industry, with over 2,000 strong in our American, Danish and British offices - all devoted to ensuring the economic, technical, and environmental viability of our offshore wind projects. Ørsted's record of developing offshore wind projects on-time and on-budget is unmatched in the industry.

Industry Leading Experience in Constructing and Maintaining Large Infrastructure Projects

Eversource brings industry-leading experience in constructing and maintaining large energy infrastructure projects – especially transmission and distribution projects including high-voltage and extra high-voltage overhead, underground, submarine, and hybrid transmission lines, and associated terminal equipment.

Eversource brings to bear its deep commitment to supporting the Northeast's renewable energy goals, including battery storage, electric vehicle infrastructure and utility scale solar and will leverage its considerable experience in interconnecting renewable generation resources, such as wind power, into the electrical system. Eversource has a proven track record of interconnecting generation resources reliably and cost-effectively, sustaining the integrity of the transmission system while also alleviating costs for customers. Finally, Eversource is recognized as a leader in providing top-tier reliability, with the utmost focus on safety.

Unrivaled Financial Capacity

Ørsted and Eversource are both able to take advantage of their substantial balance sheets and strong investment-grade credit ratings to fully fund projects such as Sunrise Wind.

Ørsted is traded on the Copenhagen stock exchange and has a market capitalization of approximately \$30 billion. Ørsted's financial strength combined with its proven construction track record within offshore wind enables it to attract capital at very cost-efficient levels.

Eversource is a large cap company traded on the New York Stock Exchange, with an equity market capitalization of approximately \$21 billion. Eversource has invested \$6 billion in new energy infrastructure in the past three years. Eversource currently maintains the highest credit rating of any company in the Energy and Utility industry in the United States.

A major advantage of this financial strength is that we will not be relying on third-party debt, meaning we can:

- make major commitments faster,
- commence development sooner, and
- place equipment orders and start construction activities at an earlier phase in our Project’s development, improving schedule certainty.

Collaboration with New York’s Premier Transmission Operators

Delivering large quantities of offshore wind to New York will require significant new transmission, and no two companies are better positioned to partner with Sunrise Wind than Con Edison Transmission and the New York Power Authority. Con Edison Transmission and its affiliates operate one of the world’s largest, most complex and most reliable energy delivery systems, serving 10 million people in downstate New York. NYPA operates one-third of the bulk power transmission capacity in New York State – helping to form the backbone of the statewide electric grid. Con Edison Transmission and NYPA know New York State needs and standards of performance and are trusted by the State as infrastructure operators. Enlisting these two experts in Sunrise Wind not only ensures that this first project is deliverable, but also lays the foundation for the future development of the infrastructure necessary to facilitate the State’s larger offshore wind goals.

Long-Standing Commitments to New York Labor

Members of the Sunrise Wind development team have been working with labor in New York for nearly a decade. Through this on-going dialog, there is a broad base of support among the New York labor community, as demonstrated by the letters included in [REDACTED] Sunrise Wind will develop the Project under one or more Project Labor Agreements. Further, we are committed to ongoing training and workforce development to ensure that a growing number of New York residents and workers participate in and benefit from this burgeoning industry,

[REDACTED]

Support Earned from Community

Members of the Project team have been on the ground, working to bring offshore wind to New York for over 10 years, and we are excited to be opening a new large offshore wind development office in New York City. Sunrise Wind has a comprehensive outreach and engagement plan that builds on a broad base of understanding and accompanying stakeholder support. That local experience provides valuable insight and feedback to inform the Project design and permitting strategy. In connection with our South Fork Wind Farm, the team has executed a comprehensive community engagement program and has earned the support of numerous key individuals and groups, including:

- [REDACTED]
- [REDACTED]
- [REDACTED]
- [REDACTED]
- [REDACTED]

1.2.2 A Site Well-Suited for New York's Needs

A successful project starts with a well-suited site. Our site is located in a federal lease area for offshore wind generation on the Outer Continental Shelf (see Figure 1.2). Because our site was identified through a multi-year stakeholder engagement and scientific data analysis effort it is well positioned to address two significant challenges that can compromise other offshore wind projects: public visibility and protection of fishing waters. The years of stakeholder engagement and site investigation undertaken for this site allow it to be developed with more schedule certainty and with less controversy.

Limited Visibility and Viewshed Impacts

At more than [REDACTED] east of Montauk, the closest point in New York to the wind generation site, visual simulations show negligible impact from New York's viewpoints, which is further mitigated by the curvature of the earth, wave height, and atmospheric conditions. Our visual impact assessment is detailed in Section 15, and in Figure 1.1 below.

We encourage New York to carefully assess the risks of projects located closer to Long Island's popular beaches. This consideration is particularly important in the first phase of NYSERDA's offshore wind program. Litigation risk and local opposition can be largely mitigated by selecting a project very far from shore in this first round.

Figure 1.1 Visual Simulation of Sunrise Wind from Montauk, NY

Limited Conflict and Long Term Engagement with Fisheries

[REDACTED]. That key attribute will foster a collaborative relationship with the fishing industry, minimizing the potential for project delays. This should be an important factor in New York's decision-making.

The Sunrise Wind team has demonstrated its ability to successfully engage with the fishing community. Recently Ørsted announced that it was the first offshore wind developer to partner with the Responsible Offshore Development Alliance (RODA). RODA is a coalition of fishing industry associations and fishing companies with an interest in improving the compatibility of new offshore development with their businesses. RODA is a first-of-its-kind partnership that will create an unprecedented opportunity for commercial fisherman to provide direct input to the Sunrise Wind team on matters of significant interest to their businesses. The fisheries engagement for these projects has included dedicating significant resources to learn about potential conflicts and working with local fisheries representatives to develop mitigation strategies. Additionally, in our Bay State Wind Project we have demonstrated a willingness to adjust our project layout to better accommodate existing fishing patterns in the area and in response to feedback from the fishing community and other ocean users.

Lower Risk due to Extensive Outreach

Ørsted and Eversource are highly experienced conducting outreach to stakeholders in host communities. In addition to the experience with the Block Island Wind Farm, Sunrise Wind will benefit from current permitting activities for the South Fork Wind Farm, Revolution Wind and Bay State Wind projects, which are all located in the same BOEM lease areas. Our team is currently engaged in comprehensive environmental and technical surveys as well as extensive governmental and stakeholder consultations, in connection with each of these projects. In addition to the regulatory authorities, we have engaged key stakeholders early on in the process and established constructive relationships with key stakeholders that have allowed us to further reduce risks for Sunrise Wind.

Our approach to outreach and permitting allows Sunrise Wind to be developed with a higher degree of acceptance from the environmental, and host communities providing schedule certainty for the project's in service date.

1.2.3 We will Establish an Enduring Offshore Wind Supply Chain in New York

Sunrise Wind will help to achieve Governor Cuomo's goal of an enduring offshore wind supply chain in New York by committing to establish permanent jobs in New York in connection with our regional operations hub, as well as by supporting and funding initiatives in workforce and infrastructure development critical for offshore wind to succeed in New York. [REDACTED]

Permanent Jobs at our Regional Operations Hub

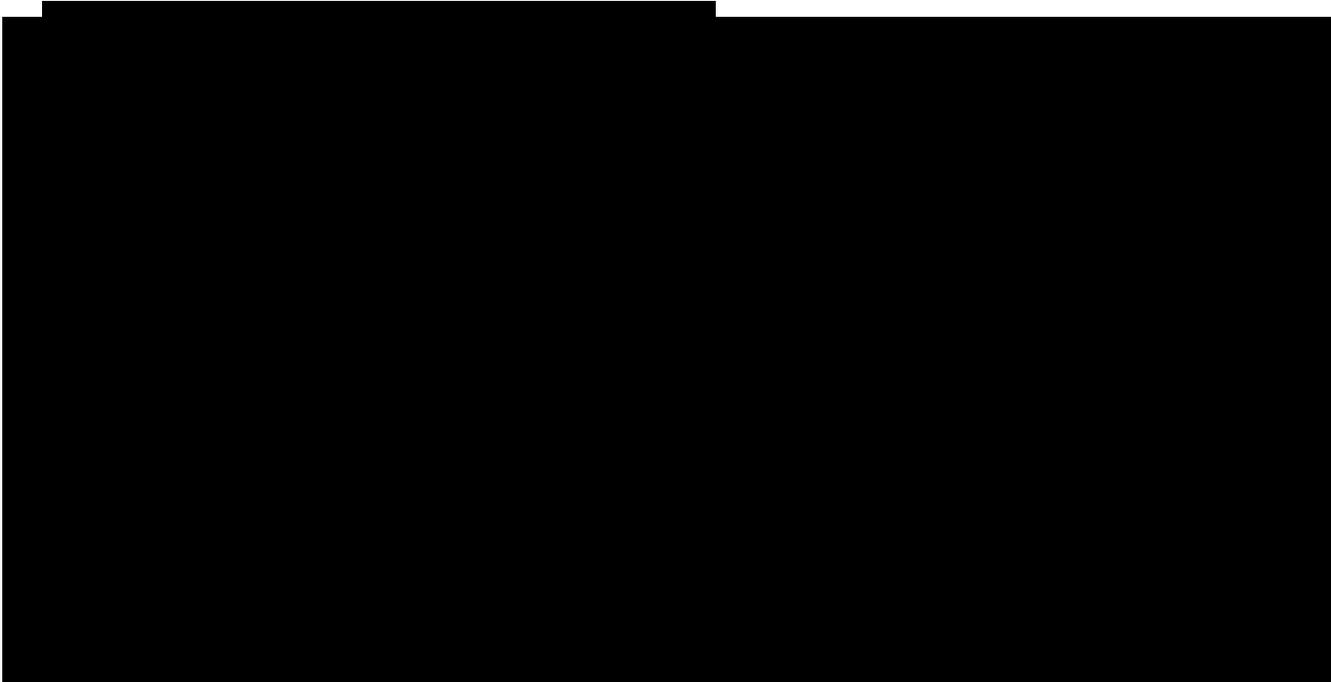

[REDACTED]

[REDACTED]

- █ [Redacted]
- █ [Redacted]
- █ [Redacted]
- █ [Redacted]

Infrastructure and Workforce Development

We will make investments that create sustainable worker capabilities across New York State, as shown in [Redacted] listed below, and further detailed in Section 16.

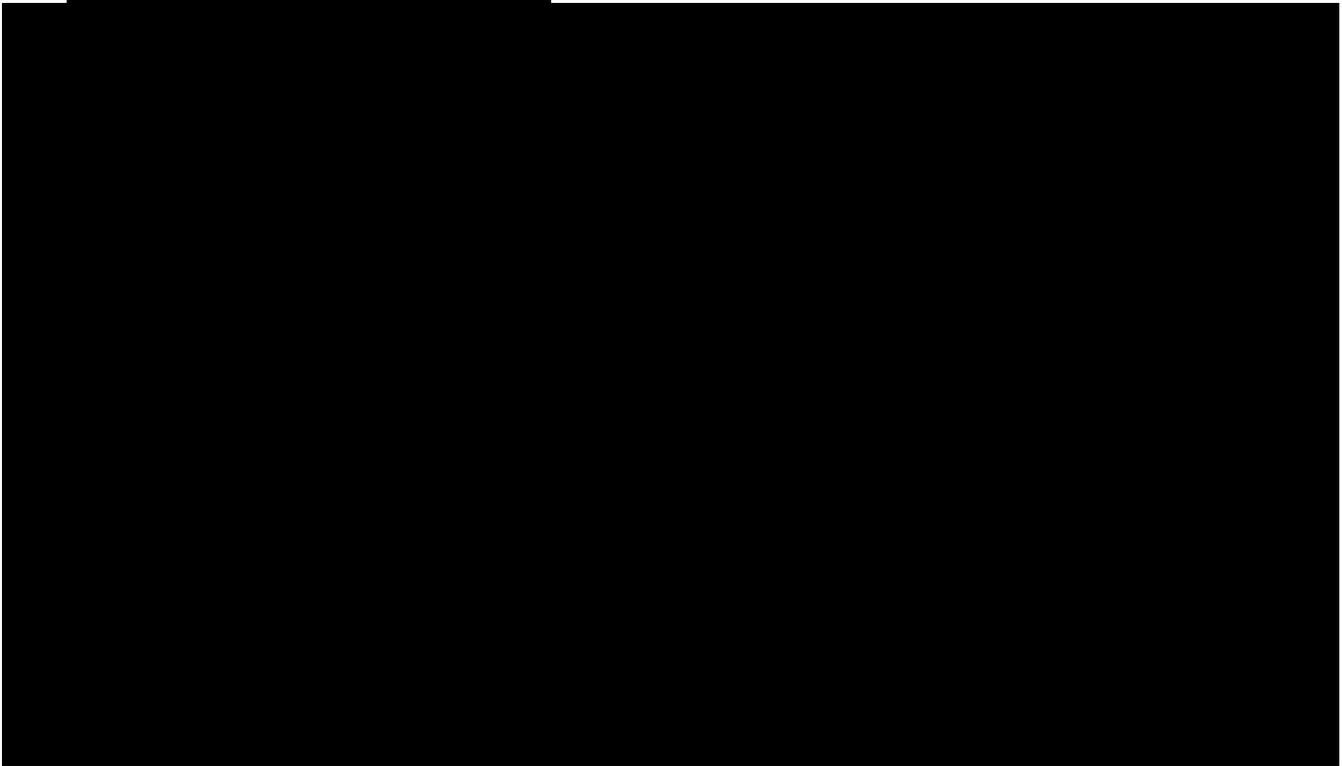

- █ [Redacted]

[REDACTED]

These expenditures and investments are expected to lower the cost of, and improve the public acceptance of, future offshore wind projects, both to the State and the region.

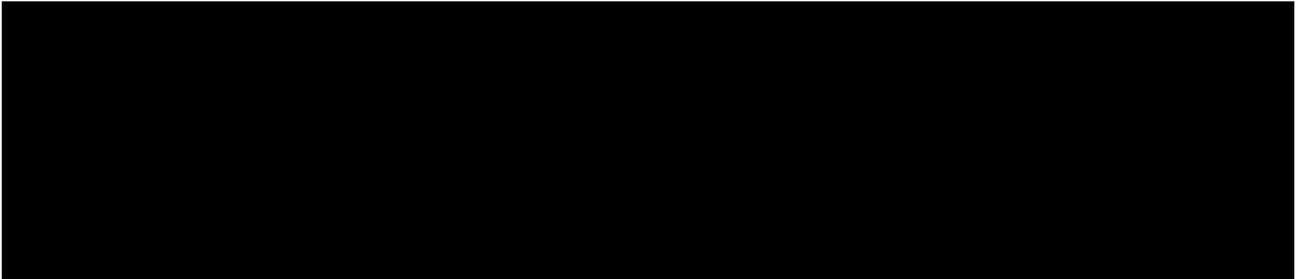

[REDACTED]

Quantifiable Benefits

Sunrise Wind offers New York a unique chance to build a new vibrant and sustainable homegrown renewable energy economy through a compelling package that includes

Strength of Commitments

We are committing to a verifiable level of funding and capital expenditures, which will create local jobs. We have developed a robust measurement and verification program to ensure that the Project delivers on its promises to New York. These economic development commitments are detailed in Section 16.

1.3 A World Class Team for New York

1.3.1 Proposer Introduction

Selecting this proposal allows NYSERDA to be confident that its inaugural offshore wind project will be executed with the highest level of diligence, capability, local expertise and prudence, based on the unmatched experience of this Project team.

The combined Sunrise Wind team has been selected in more U.S. offshore wind RFPs than any other developer. In addition to successfully constructing America's first offshore wind farm off the coast of Rhode Island, this team has been awarded contracts to develop the first offshore wind farms for New York and Connecticut. Ørsted also has been awarded the first contracts in Virginia and Maryland.

This Project team is the only one to have successfully navigated the challenges associated with developing, financing, constructing, operating and maintaining an offshore wind farm in America. Collectively, the team has secured power purchase agreements or comparable offtakes for 980 MW of offshore wind capacity:

- In 2008, the State of Rhode Island selected the 30 MW **Block Island Wind Farm** from among seven (7) competitive proposals to develop North America's first offshore wind farm.
- In 2016, the Long Island Power Authority (LIPA) selected the 90 MW **South Fork Wind Farm** from among 21 competitive proposals in a technology-neutral solicitation, to be New York State's first offshore wind farm. In 2018, LIPA awarded the South Fork Wind Farm an additional 40 MW.
- In 2017, the Maryland Public Service Commission awarded an OREC agreement to the 120 MW **Skipjack Wind Farm** (owned by Ørsted) in the first head-to-head competition between offshore wind developers in America.
- In 2018, the team won three competitive solicitations – 200 MW in the Connecticut DEEP offshore wind solicitation, 400 MW in the joint Massachusetts/Rhode Island 83C solicitation, and 100 MW in the Connecticut DEEP Zero Carbon RFP – for the 700 MW **Revolution Wind** project.

1.3.2 Ørsted

Ørsted is the world's leading developer of offshore wind and the only company to have successfully navigated the permitting, legal, financial, installation and operational challenges of offshore wind in America, in Europe and in Asia.

Over the past 25 years, Ørsted has constructed 5.6 GW of offshore wind capacity – approximately 30 percent of the total installed offshore wind capacity (see Figure 1.4), three times that of our nearest competitor.

Ørsted's Unparalleled Offshore Wind Experience:

- 25+ years of experience
- 2,000+ dedicated employees
- Dedicated in-house EPC arm
- 25 operational projects
- 5.6 GW constructed capacity
- 7 projects under construction
- 8.8 GW of capacity by 2022
- First and only major offshore wind farm decommissioning

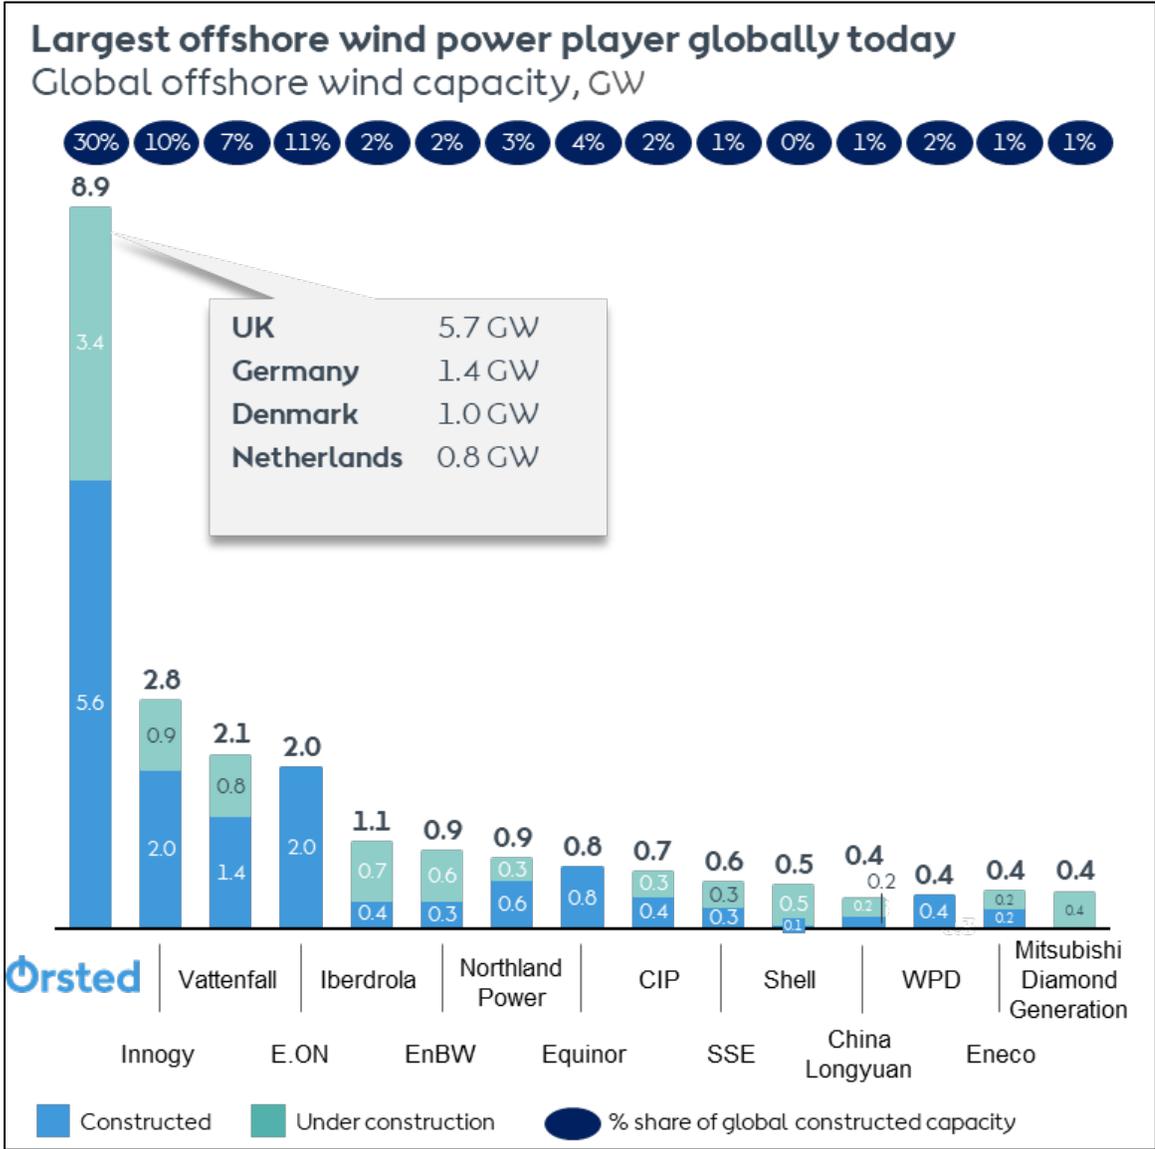

Ørsted's European Experience

Ørsted's experience in European offshore wind in development, construction, operation, and decommissioning is relevant to this Project. Examples of Ørsted's applicable expertise in development, construction and operations of offshore wind energy projects include:

- designed and constructed the largest wind farm in operation today (the 659-MW Walney Extension wind farm);
- successfully executed development for over 20 competitively awarded projects;
- awarded contracts to develop what will be the largest wind farms in the world once constructed (Hornsea 1 and 2's combined 2,600 MW);
- permitted complex projects with input and consent required from numerous stakeholders including regulatory agencies, non-governmental organizations, and the fishing industry across the UK, Germany, and Taiwan;
- designed and planned high voltage (HV) transmission solutions capable of delivering power from offshore wind projects to the identified onshore grid connection point (Walney Extension, Race Bank, and Hornsea 1);
- constructed offshore wind farms in challenging marine environments, including far from shore projects, high wave heights, high wind speeds and rough sea conditions;
- first to deploy "bubble curtains" to protect marine mammal species from noise during foundation installation;
- first to deploy the 167 m rotor diameter on the Siemens Gamesa Renewable Energy (Siemens Gamesa) 8 MW wind turbine generator (Borssele I and II); and
- experience in constructing offshore wind ports in Belfast (UK) and Esberg (DK), among others.

Leveraging the experience gained from the development, construction, and operation of offshore projects in Europe, we have designed Sunrise Wind using technical solutions that are appropriate and proven. Ørsted's understanding of lifecycle cost and risk, gained from almost three decades of offshore wind experience, allows capture of the first-mover advantage on key technology, as demonstrated in Figure 1.4.

Figure 1.4 Global Offshore Wind Capacity (GW)

1.3.3 Eversource Energy

Eversource is a leading electric and gas energy company, which brings extensive knowledge of electrical grid development, construction and operations. Eversource is committed to the green energy future and is the number one ranked electric and gas utility leader in energy efficiency year after year. Eversource, a Fortune 500 company based in Boston and Hartford, has served approximately 4 million electric, gas and water customers in Massachusetts, Connecticut and New Hampshire for over 100 years.

Eversource, which is one of only four North American energy companies recognized as an Environmental, Social, and Governance leader, is New England’s premier energy company and transmission developer. Eversource brings to bear its deep commitment to supporting the Northeast’s renewable energy goals, including battery storage, electric vehicle infrastructure and utility scale solar and will leverage its considerable experience in

interconnecting renewable generation resources, such as wind power, into the electrical system. Eversource has a proven track record of interconnecting generation resources reliably and cost-effectively, sustaining the integrity of the transmission system while also alleviating costs for customers. Finally, Eversource is recognized as a leader in providing top-tier reliability, with the utmost focus on safety.

Eversource brings industry-leading experience in constructing and maintaining large transmission and distribution projects including high-voltage and extra high-voltage overhead, underground, submarine, and hybrid transmission lines, and associated terminal equipment. Throughout New England and interconnecting to New York, Eversource has successfully completed hundreds of energy infrastructure projects over the past decade with a proven track record in:

- successful single state and multi-state project siting and permitting;
- working closely with other companies to develop major projects; and
- safely and efficiently constructing transmission and distribution projects.

1.3.4 Con Edison Transmission

Con Edison Transmission invests in electric and gas transmission projects. These investments will help expand and diversify Con Edison Transmission's energy portfolio to provide greater access to energy supplies and more competitive pricing for customers. The company was established in January 2016 after parent company Consolidated Edison, Inc. identified electric and gas transmission as two key areas of expertise and focus for the business. The company anticipates growth in the need for electric and gas transmission projects to meet the nation's changing energy priorities.

Con Edison Transmission is a successful developer of transmission projects. Con Edison Transmission is the largest partner and currently holds the leadership role within the New York Transco, the electric transmission partnership that includes the Investor Owned Utility (IOU) transmission operators in New York State. Con Edison Transmission is a subsidiary of Con Edison, Inc. Consolidated Edison, Inc., one of the nation's largest investor-owned energy-delivery companies, with approximately \$12 billion in annual revenues, and \$50 billion in assets.

1.3.5 New York Power Authority

The New York Power Authority is the largest state public power organization in the U.S., operating 16 generating facilities and more than 1,400 circuit-miles of transmission lines. More than 70 percent of the electricity NYPA produces is clean renewable hydropower. NYPA uses no tax money or state credit. It finances its operations through the sale of bonds and revenues earned in large part through sales of electricity. NYPA provides the lowest-cost electricity in New York State and is the only statewide electricity supplier.

State and federal regulations determine NYPA's customer base, which includes government agencies, rural electric cooperatives, not-for-profit organizations and private business. NYPA's principle administrative offices are in White Plains.

1.4 Project Definition

1.4.1 Proposed Design

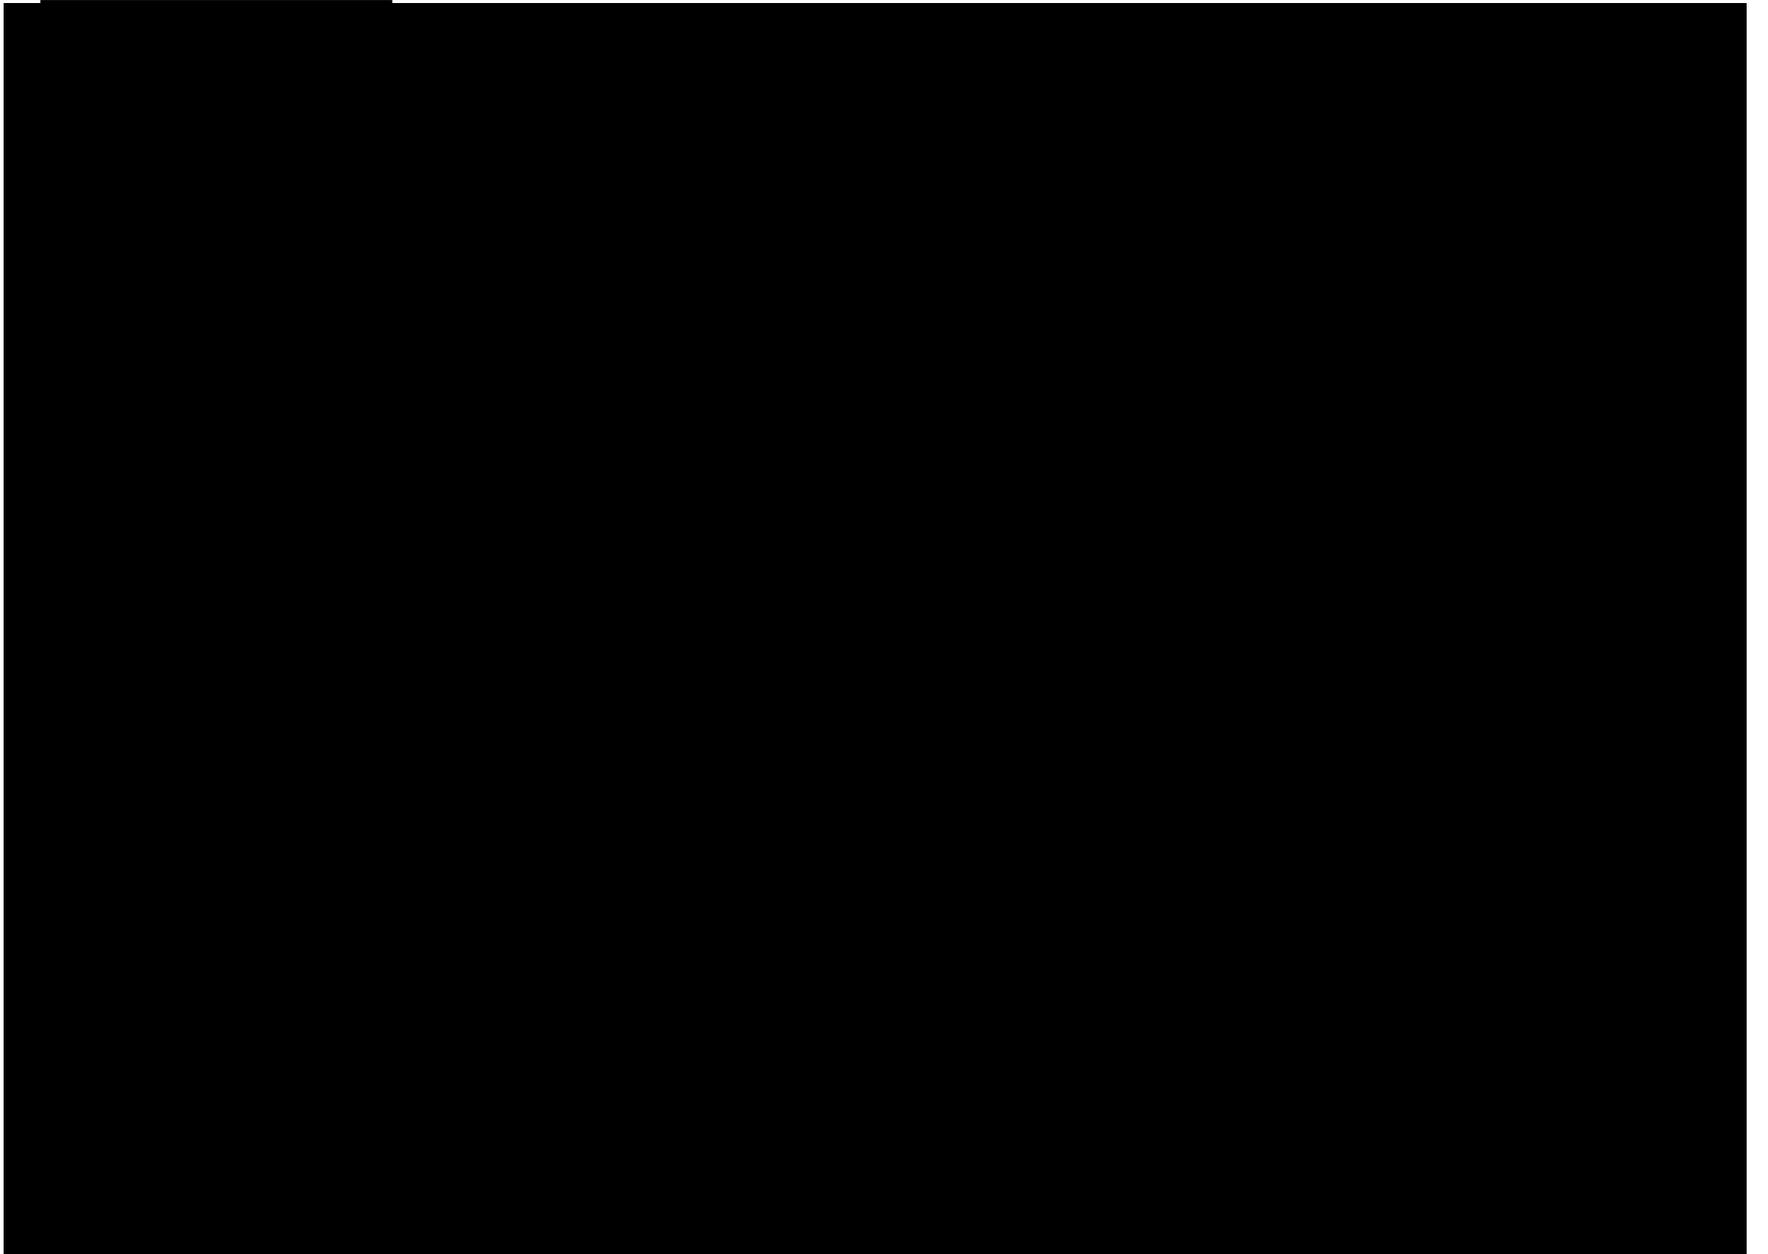

[REDACTED] and have specifically designed Sunrise Wind to meet the unique needs of New York.

1.4.2 Project Boundaries Defined through Extensive Outreach

[REDACTED]

Establishing the boundaries of the Lease Area and selecting the site for Sunrise Wind involved significant stakeholder and scientific review from multiple state and federal agencies. State of Rhode Island, together with the Commonwealth of Massachusetts and the federal Bureau of Ocean Energy Management (“BOEM”), conducted a stakeholder engagement and scientific review process to establish existing environmental conditions in, and alternative uses of, the AMI, particularly regarding the location of shipping lanes, commercial and recreational fishing areas and viewsheds of coastal areas, as well as other natural resources and physical conditions. As detailed in BOEM’s Environmental Assessment completed in 2013, the location of the AMI into the Rhode Island – Massachusetts Wind Energy Area based on the results of this research and discussion, and removed areas of “high value” fisheries.

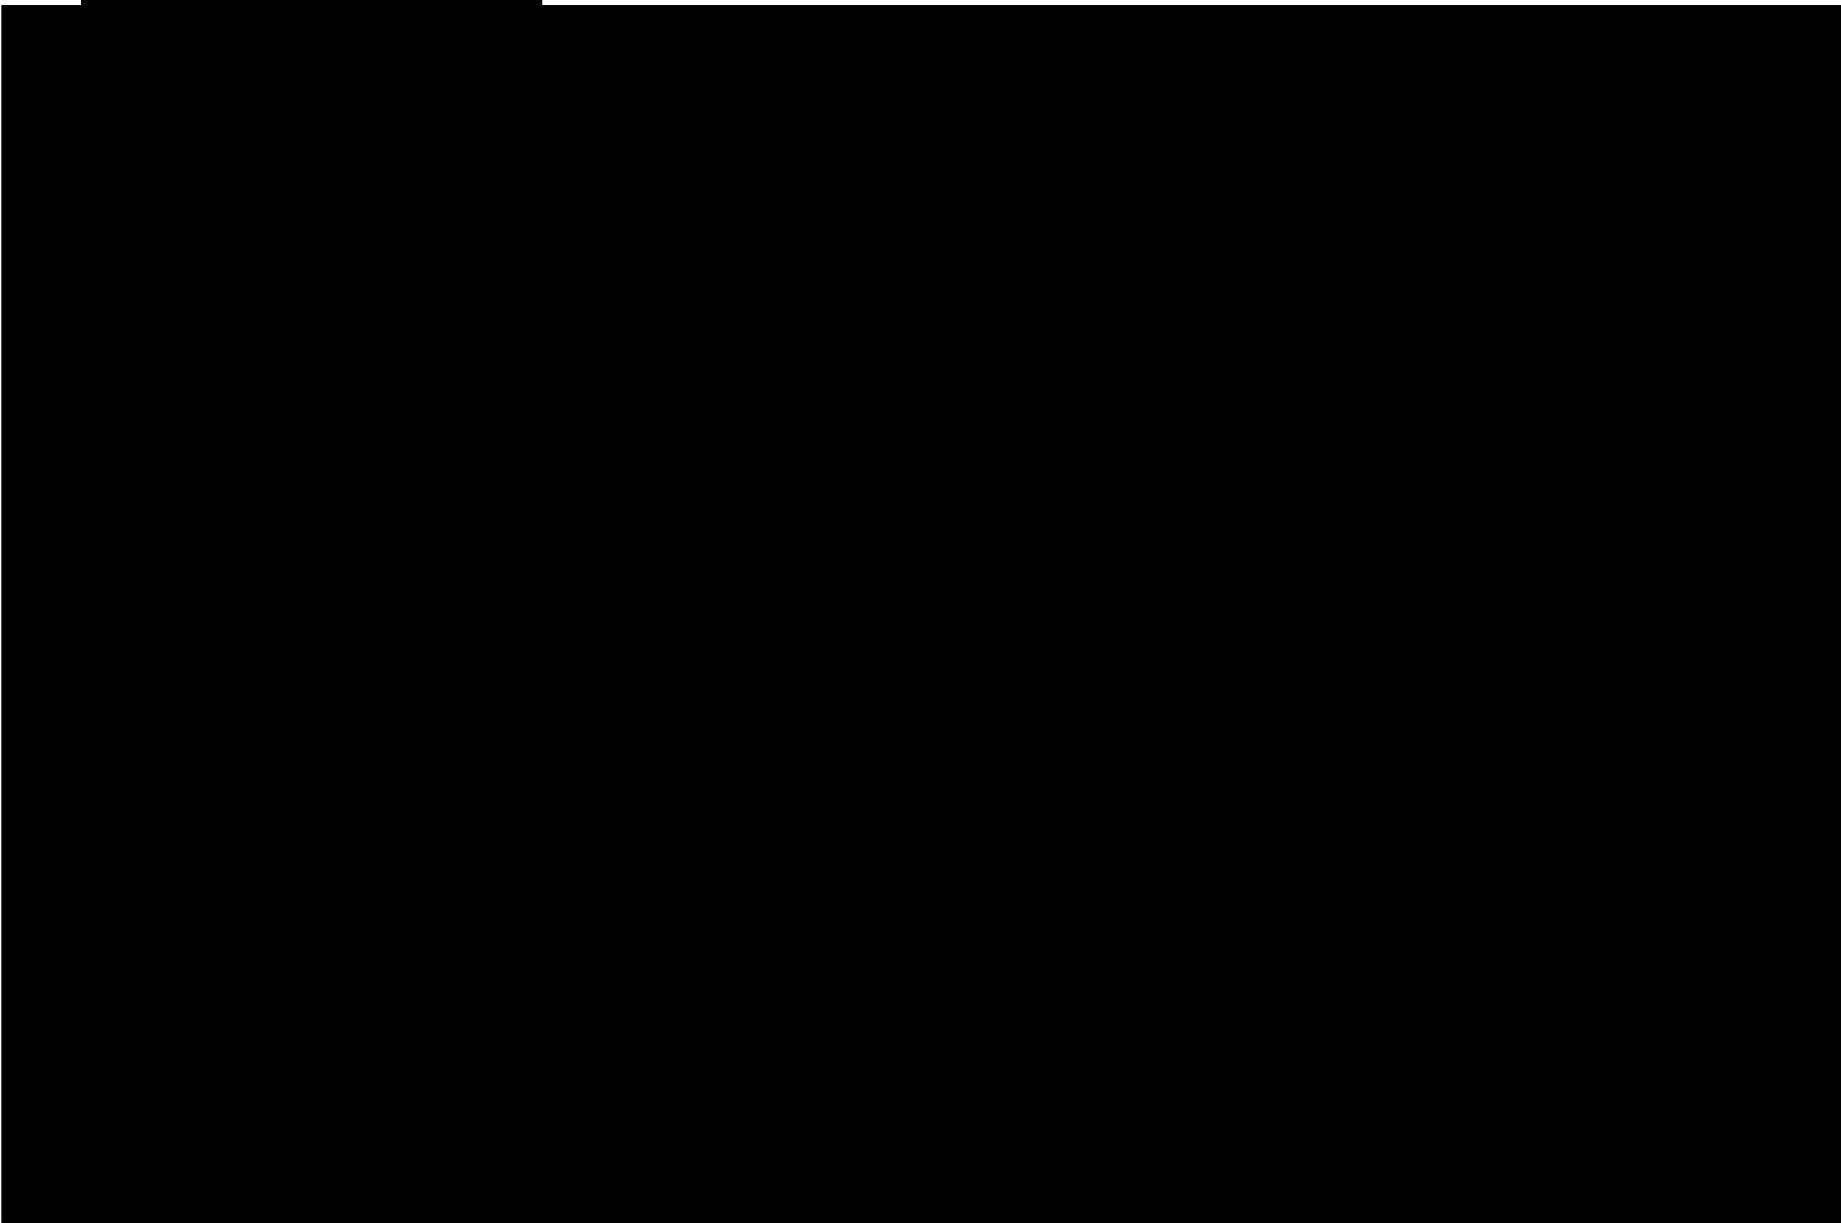

This multi-year stakeholder engagement process resulted in more scientific data being collected and publicly available for the RI-MA Wind Energy Area than for any other offshore wind site in America. Equally importantly, the time that the agencies and our team have invested in stakeholder engagement has created deep, trusting relationships with members of the local communities, fishing interests, environmental advocates and other stakeholders that are critical to successfully delivering Sunrise Wind.

[Redacted]

1.4.4 Advanced Transmission and Interconnection Plan

[Redacted]

1.5 Project Eligibility

This Proposal satisfies all of the Project Eligibility requirements established by the RFP.

1.5.1 ORECs Offered

Consistent with the RFP's requirements, Sunrise Wind will become operational after January 1, 2015, as detailed in Section 10. If this Proposal is selected, the Proposer will sell to NYSERDA the output of certain wind turbines having a nameplate capacity of approximately [REDACTED]. The OREC production from such wind turbines, up to the Annual OREC Cap, will not be contractually committed to any other entity over the proposed Contract Delivery Term.

1.5.2 Required and Alternate Proposals

[REDACTED]

1.5.3 Pricing

The required forms of pricing have been provided in the Offer Data Form (ODF).

1.5.4 Site Control

As further detailed in Section 6.2, the Proposer and its affiliates hold the BOEM leases within which the Project will be located. [REDACTED]

[REDACTED]

Section 3 describes the real estate rights necessary for the interconnection of the Project and the Proposer's plan for obtaining such rights.

1.5.5 Interconnection and Delivery

As detailed in Section 7, [REDACTED]

1.5.6 Conformance with NYGATS Operating Rules

In compliance with the OREC Agreement, the Proposer will obtain a valid NYGATS ID and operate in conformance with the NYGATS Operating Rules.

1.5.7 Contract Delivery Term

Section 10 provides the expected commercial operation date of the Project.

1.5.8 OREC Agreement

[REDACTED]

[REDACTED]

1.6 Proposal Administrative Items

1.6.1 Organization of this Proposal

The Proposer is submitting the following required forms:

- Offer Data Form;
- Proposal Narrative and Supporting Appendices (confidential and public narratives);
- Proposer Certification Form;
- Master Offer Form; and
- OREC Agreement.

1.6.2 Confidential and Public Versions of this Proposal

Certain data contained in the cover letter and in this document or electronic file, as well as in the Appendices hereto, which collectively form the proposal and have been submitted in confidence and contain trade secrets or proprietary information, the disclosure of which would cause a substantial injury to the competitive position of the Proposer. See the Confidentiality and Enabling Statements, which precede the ODFs.

1.6.3 Proposer Certification

The Proposer has executed Proposer Certification Form from Appendix B of the RFP, which is attached hereto as 

1.7 New York's Best Option for Offshore Wind

The Project will deliver competitive pricing and substantial economic benefits, as well as other important features, including:

- an attractive lease area proximate to New York, with high wind speeds and shallow water depths;
- negligible visual impact and a location conducive to co-existing with the fishing industry;
- unmatched wind experience and capabilities, including a portfolio of the first wind farms in the U.S.;
- commitment to local jobs and the establishment of an enduring offshore wind supply chain in New York;
- an emissions-free source of low cost renewable energy poised to provide environmental and grid reliability benefits;
- Ørsted's substantial expertise as a global leader in offshore wind development;
- Eversource's extensive experience over many decades in designing, building and operating transmission facilities; and
- collaboration with Con Edison Transmission and NYPA, New York's premier transmission operators.

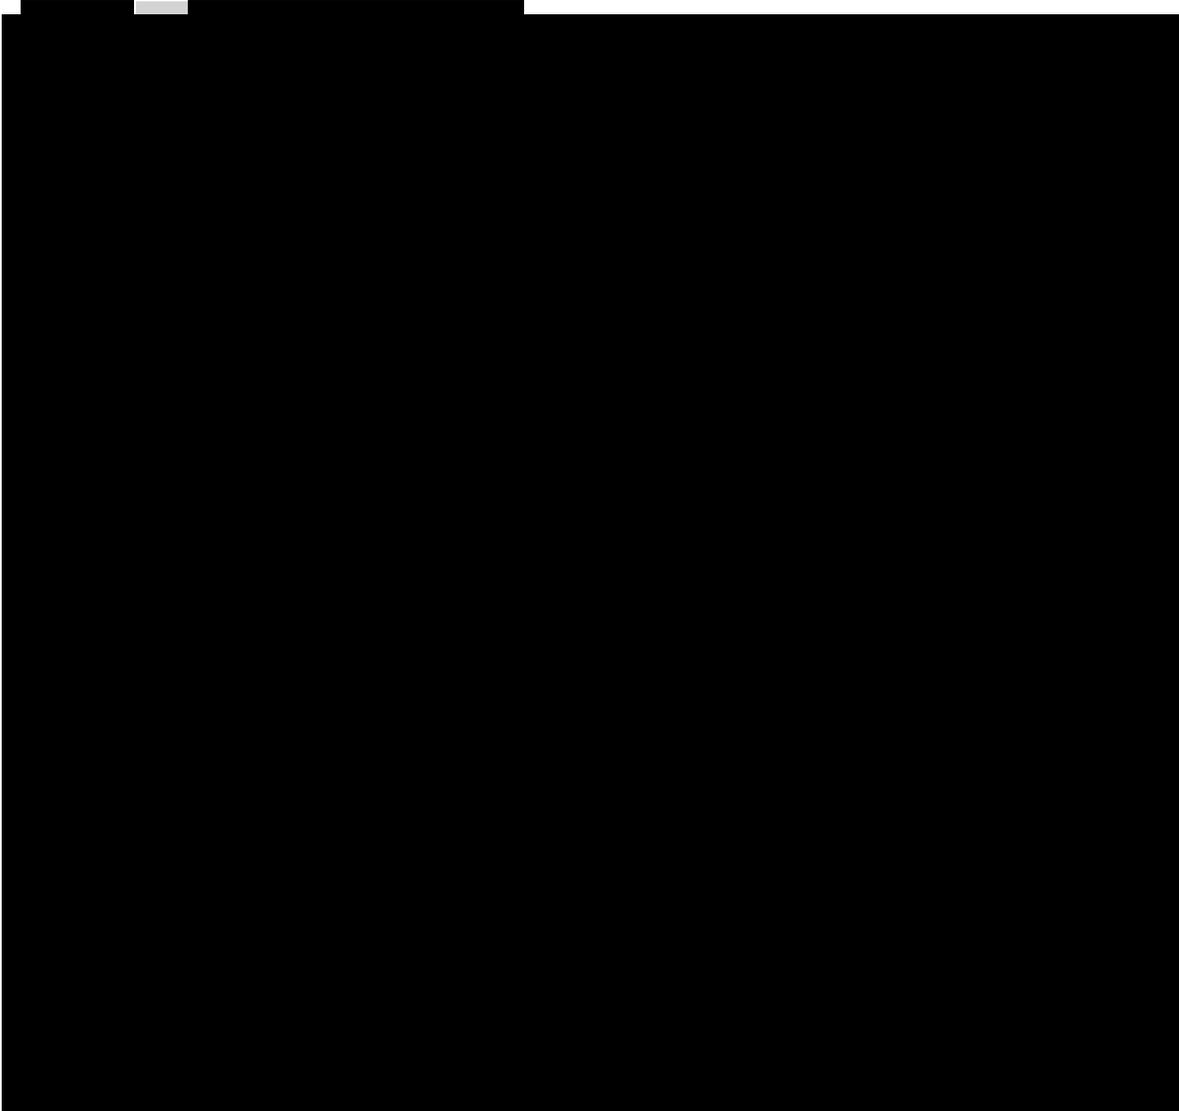

2 PROPOSER EXPERIENCE

6.4.2 Proposers are required to demonstrate project experience and management capability to successfully develop and operate the Project proposed. NYSERDA is interested in project teams that have demonstrated success in developing generating facilities of similar size and complexity and can demonstrate an ability to work together effectively to bring the Project to commercial operation in a timely fashion. Proposers are required to provide the following information with their Proposal:

2.1 Project Organizational Chart

1. An organizational chart for the Project that lists the Project participants and identifies the corporate structure, including general and limited partners.

In 2016, Ørsted NA and ESI formed the Proposer, with each controlling 50 percent of the Proposer and affiliated entities. An organization chart depicting the corporate structure is provided in [REDACTED]

2.2 Proposer and Project Participant Experience

2. Statements that list the specific experience of Proposers and each of the Project participants (including, when applicable, Proposers, partners, and proposed contractors), in developing, financing, owning, and operating generating and transmission facilities, other projects of similar type, size and technology, and any evidence that the Project participants have worked jointly on other projects.

2.2.1 Bay State Wind LLC (d/b/a Sunrise Wind)

As a 50/50 joint venture between Ørsted NA and ESI, the Proposer will benefit from the extensive experience that these organizations have gained over the past two decades in developing, constructing, and operating large energy projects. The Proposer provides additional details on similar projects in Section 2.4.

2.2.2 Ørsted

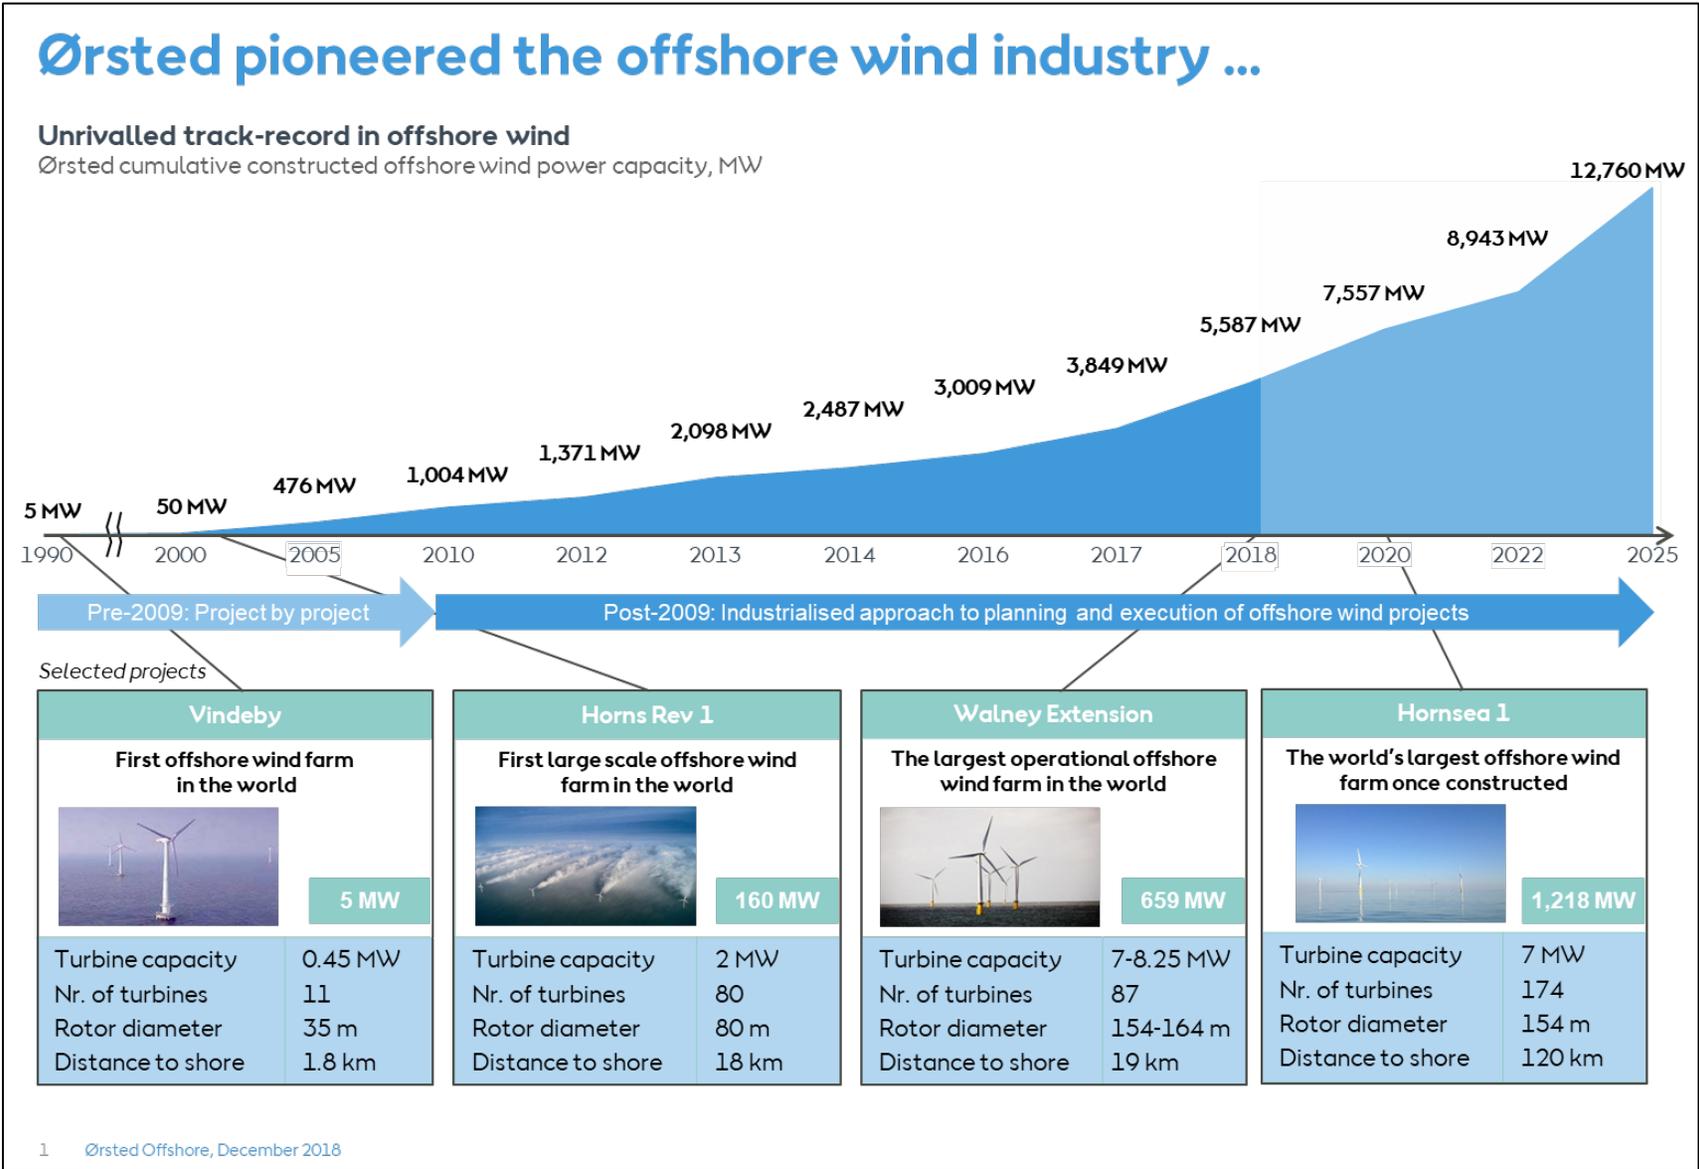

The Industry Leader

Ørsted is the global industry leader in offshore wind with significant experience with the rigors and challenges of the offshore wind business. Over the past 25 years, Ørsted has constructed 5.6 GW of offshore wind capacity (see Figure 2.2), which is just under 30 percent of globally installed offshore wind capacity. Ørsted's existing activities span a number of markets which include the United States, Denmark, the United Kingdom, Germany, the Netherlands, and Taiwan. As a result, Ørsted is well practiced in adapting to, and thriving within, new regulatory, permitting, and political landscapes. It is the current Ørsted leadership team that, within the short span of the past three to four years, has driven dramatic cost reductions and paved the way for exponential market growth.

Unmatched U.S. Experience

In 2018, Ørsted acquired Deepwater Wind, the company that built the nation's first offshore wind farm off Block Island, Rhode Island. The Deepwater Wind team gained invaluable experience working with regulators, stakeholders, vendors, and U.S. construction contractors through the development and execution of the Block Island Wind Farm project – experience and insights that are now a part of Ørsted. Together this expanded team is leading a stakeholder-centric approach to development that has made it the go-to partner for states up and down the Eastern Seaboard as they seek to develop offshore wind resources. In addition to successfully constructing and now operating the first offshore wind farm for Rhode Island, Ørsted has been awarded contracts to develop the first offshore wind farms serving New York (South Fork Wind Farm), Connecticut/Rhode Island (Revolution Wind), Maryland (Skipjack Wind), and Virginia (Coastal Virginia Offshore Wind). Currently, Ørsted has in its U.S. portfolio commitments for nearly 1,000 MWs of offshore wind serving five states.

Figure 2.2 Total Constructed Capacity by Ørsted (MW)

U.S. Experience

- Ørsted has been investing significantly in the development of offshore wind projects in the northeast and mid-Atlantic since 2005. The Company has gained unmatched experience in the development of offshore wind in the United States through its 30-MW Block Island Wind Farm project, which is the first offshore wind farm constructed in America. The Block Island Wind Farm project has been in commercial operations since December 2016. Ørsted team members managed all aspects of the development, permitting, engineering, procurement, financing, and contracting for the Block Island Wind Farm project, a process that began in 2008. Financing for the Block Island Wind Farm project was successfully closed in February 2015, making it the first offshore wind farm to be successfully financed in the United States. Its \$300 million in financing was supported by leading global equity and debt investors.
- In July 2013, Ørsted won the Department of the Interior's first competitive lease sale for offshore wind energy areas to acquire BOEM Leases OCS-A 0486 and OCS-A 0487, an area known as the Rhode Island-Massachusetts Wind Energy Area (RI-MA WEA). In 2015, Ørsted acquired BOEM Lease OCS-A 0500, immediately adjacent to the RI-MA WEA. Ørsted has been actively developing these sites and has completed major offshore surveys to support engineering permit applications.
- The first of these projects will be the South Fork Wind Farm, a 130 MW offshore wind farm located in OCS-A 0486 and designed specifically to serve Long Island's constrained South Fork as described below. The second project will be the Revolution Wind project, a 700-MW installation that will deliver 400 MWs to Rhode Island and 300 MWs to Connecticut, pending final regulatory approval, as described in Appendix 2-3.
- Ørsted is also actively developing the Skipjack Wind Farm, a 120-MW installation that will deliver power to Maryland, as well as Coastal Virginia Offshore Wind, a demonstration project that will deliver power to Virginia. These projects are described below.

Exceptional Capabilities

All of Ørsted's experience in development, construction, operation, and decommissioning of offshore wind energy is relevant to the Project. Specific examples of Ørsted's expertise in development and operations of offshore wind energy projects include:

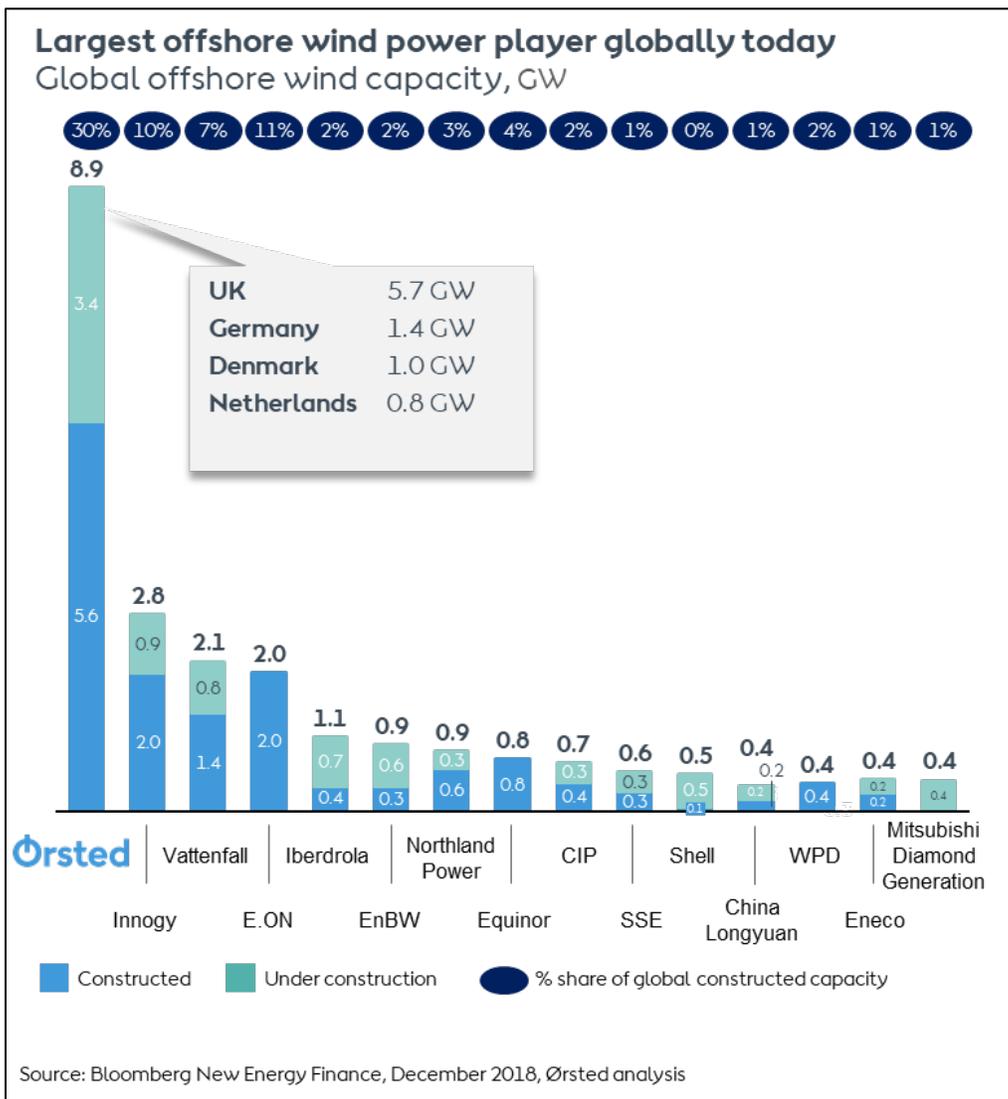

- Successfully developing the first commercial-scale offshore wind farm in the world (Horns Rev I, 2003);
- Designed and constructed the largest wind farm in operation today (Walney Extension, 2018);
- Successfully developed and now operates the first offshore wind farm in the U.S. (Block Island Wind Farm, 2016) and currently constructing New York's first offshore wind farm, the South Fork Wind Farm;
- Participating in over 20 competitive offshore wind tenders and unparalleled track record in executing on project development post-award;

- Competitively awarded a power purchase agreement (PPA) for what will be the largest wind farms in the world once constructed (Hornsea I and II's combined 2,600 MW);
- First-ever win with a zero-subsidy bid (Germany 2017);
- Permitting of complex projects across three continents with input and consent required from numerous stakeholders including regulatory agencies, non-governmental organizations, and the fishing industry;
- Design and planning of high-voltage transmission solutions capable of delivering power from offshore wind projects to the identified onshore grid connection point, from as far away as 50 miles (80 kilometers [km]) (Walney Extension, Race Bank and Hornsea 1);
- Construction of offshore wind farms in challenging marine environments, including far from shore projects, high wave heights, high wind speeds and rough sea conditions;
- Planning and execution of O&M strategy for offshore wind farms; and
- First-ever decommissioning of an offshore wind project, the Vindeby Offshore Wind Farm near Lolland, Denmark in March 2017².

Ørsted has the knowledge and experience with every phase of offshore wind development to design and implement solutions that are appropriate and proven. To demonstrate Ørsted's breadth and depth of industry knowledge, a partial list of previous projects is provided in Section 2.4. Key personnel are discussed in Section 2.3. Additionally, Ørsted's unparalleled experience in securing financing, and operating and maintaining offshore wind projects is demonstrated in Section 6.4.

² Hyperlink to YouTube video: <https://www.youtube.com/watch?v=QEJHB8V4hEE>.

Ørsted is an industry leader, with 3x the installed offshore wind-energy capacity than its nearest competitor.

2.2.3 Eversource

Eversource is an industry leader in constructing and maintaining large transmission and distribution projects including high-voltage and extra high-voltage overhead, underground, submarine, and hybrid transmission lines, and associated terminal equipment. Throughout New England and New York, Eversource has successfully completed hundreds of capital projects over the past decade with a proven track record in:

- Successful single state and multi-state project siting and permitting;
- Working closely with other companies to develop major projects; and
- Safely and efficiently constructing transmission and distribution projects.

As described in Section 6, Eversource, a Fortune 500 energy company, has significant financial resources and invests substantially in transmission facilities. Eversource financed those investments with its strong cash flows and ready access to the capital markets.

Eversource has successfully completed hundreds of traditional and major capital projects over the past decade. Eversource's innovative solutions to technical and environmental challenges include:

- The first and most extensive 345 kV applications of solid core cross linked polyethylene (XLPE) underground cables in the United States;
- Laying marine cable in Long Island Sound from a purpose-built ship; and
- Constructing overhead transmission support structures from the air, using helicopters.

Over the past 3 years alone, Eversource has planned, designed, permitted and constructed \$6.0 billion of energy infrastructure projects in the northeast.

Eversource is only one of four North American energy companies recognized as an Environmental, Social and Governance leader. Eversource brings to bear its deep commitment to supporting the Northeast's renewable energy goals, and will leverage its considerable experience in interconnecting renewable generation resources, such as wind power, into the electrical system. Eversource has a proven track record of interconnecting generation resources reliably and cost-effectively, sustaining the integrity of the transmission system while also alleviating costs for customers. Finally, Eversource is recognized as a leader in providing top-tier reliability, with the utmost focus on safety.

For the purposes of developing the Project, Eversource has replicated its successful formula by assembling a core team of seasoned professionals who have been involved in the development and construction of numerous large transmission facilities, supplemented by internal and external resources that provide the expertise to support project execution. A partial list of previous projects is provided in Section 2.4 to further illustrate Eversource's experience. Section 2.3 provides additional detail on key personnel dedicated to this Project.

[REDACTED]

2.3 Key Staff Experience

3. A management chart that lists the key personnel dedicated to this Project and resumes of the key personnel. Key personnel of Proposer’s development team having substantial project management responsibilities must have:

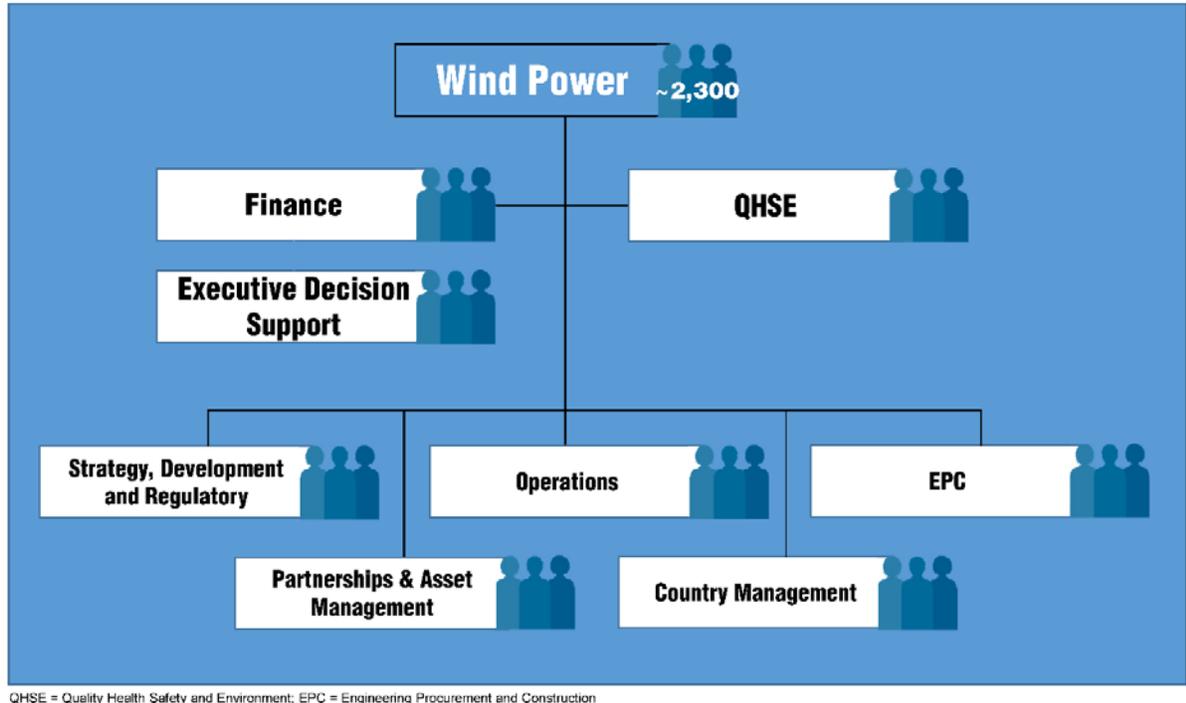

- a. Successfully developed and/or operated one or more projects of similar size or complexity or requiring similar skill sets; and
- b. Experience in financing power generation projects (or have the financial means to finance the project on Proposer’s balance sheet).

Ørsted has approximately 2,300 Wind Power employees dedicated to the development, construction and operation of utility scale offshore wind projects similar in nature to this Project (see Figure 2.3). The management structure of the Proposer is depicted in [REDACTED]. Eversource has approximately 8,000 employees dedicated to the development, construction and operation of utility scale transmission and distribution projects across the northeast.

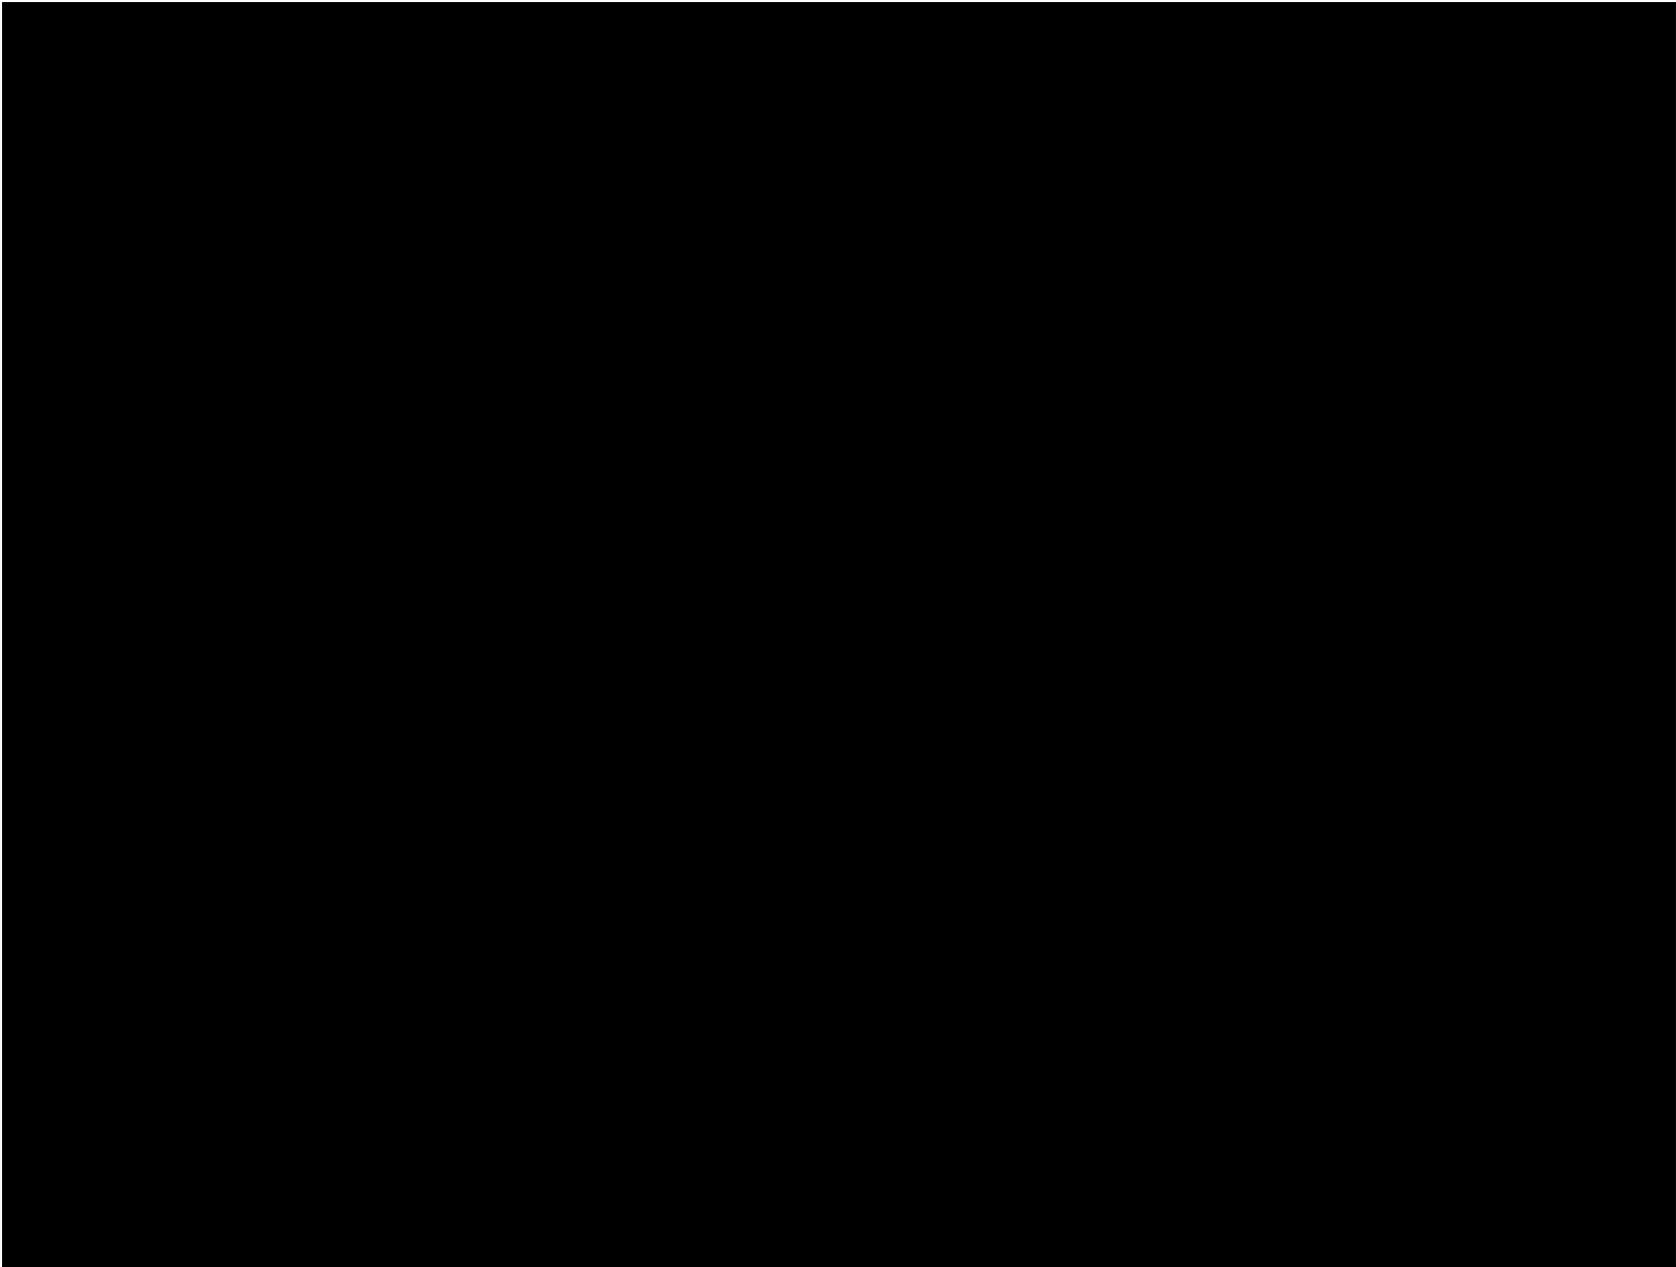

The Project development organization is provided in Figure 2.3. Once construction of the Project commences, some roles will be exchanged with people specialized in project execution: The project development manager is replaced by a program director from the Ørsted Engineering, Procurement, Construction (EPC) Division; the technical project manager is replaced by an EPC director and similarly for other roles.

The robust experience of the Proposer's supporting organization in securing financing is demonstrated in Section 6.4.

Figure 2.3 Ørsted’s Dedicated Offshore Wind Power Staff (as of January 2019)

QHSE = Quality Health Safety and Environment; EPC = Engineering Procurement and Construction

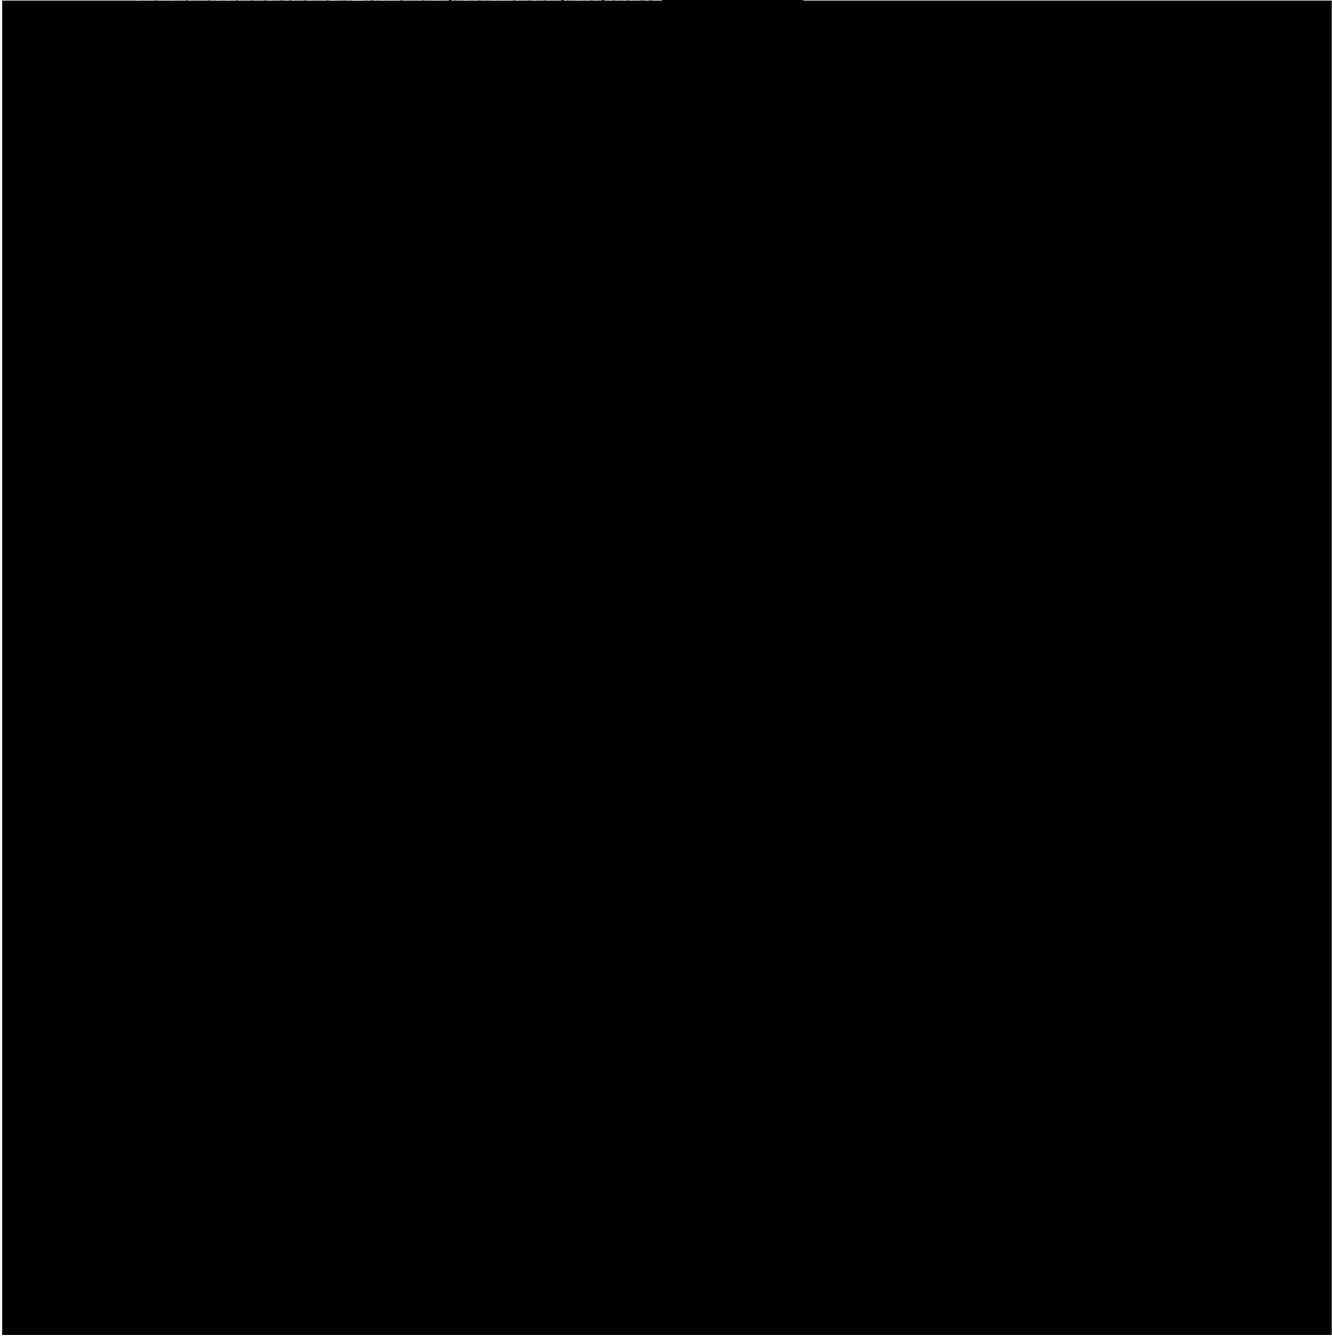

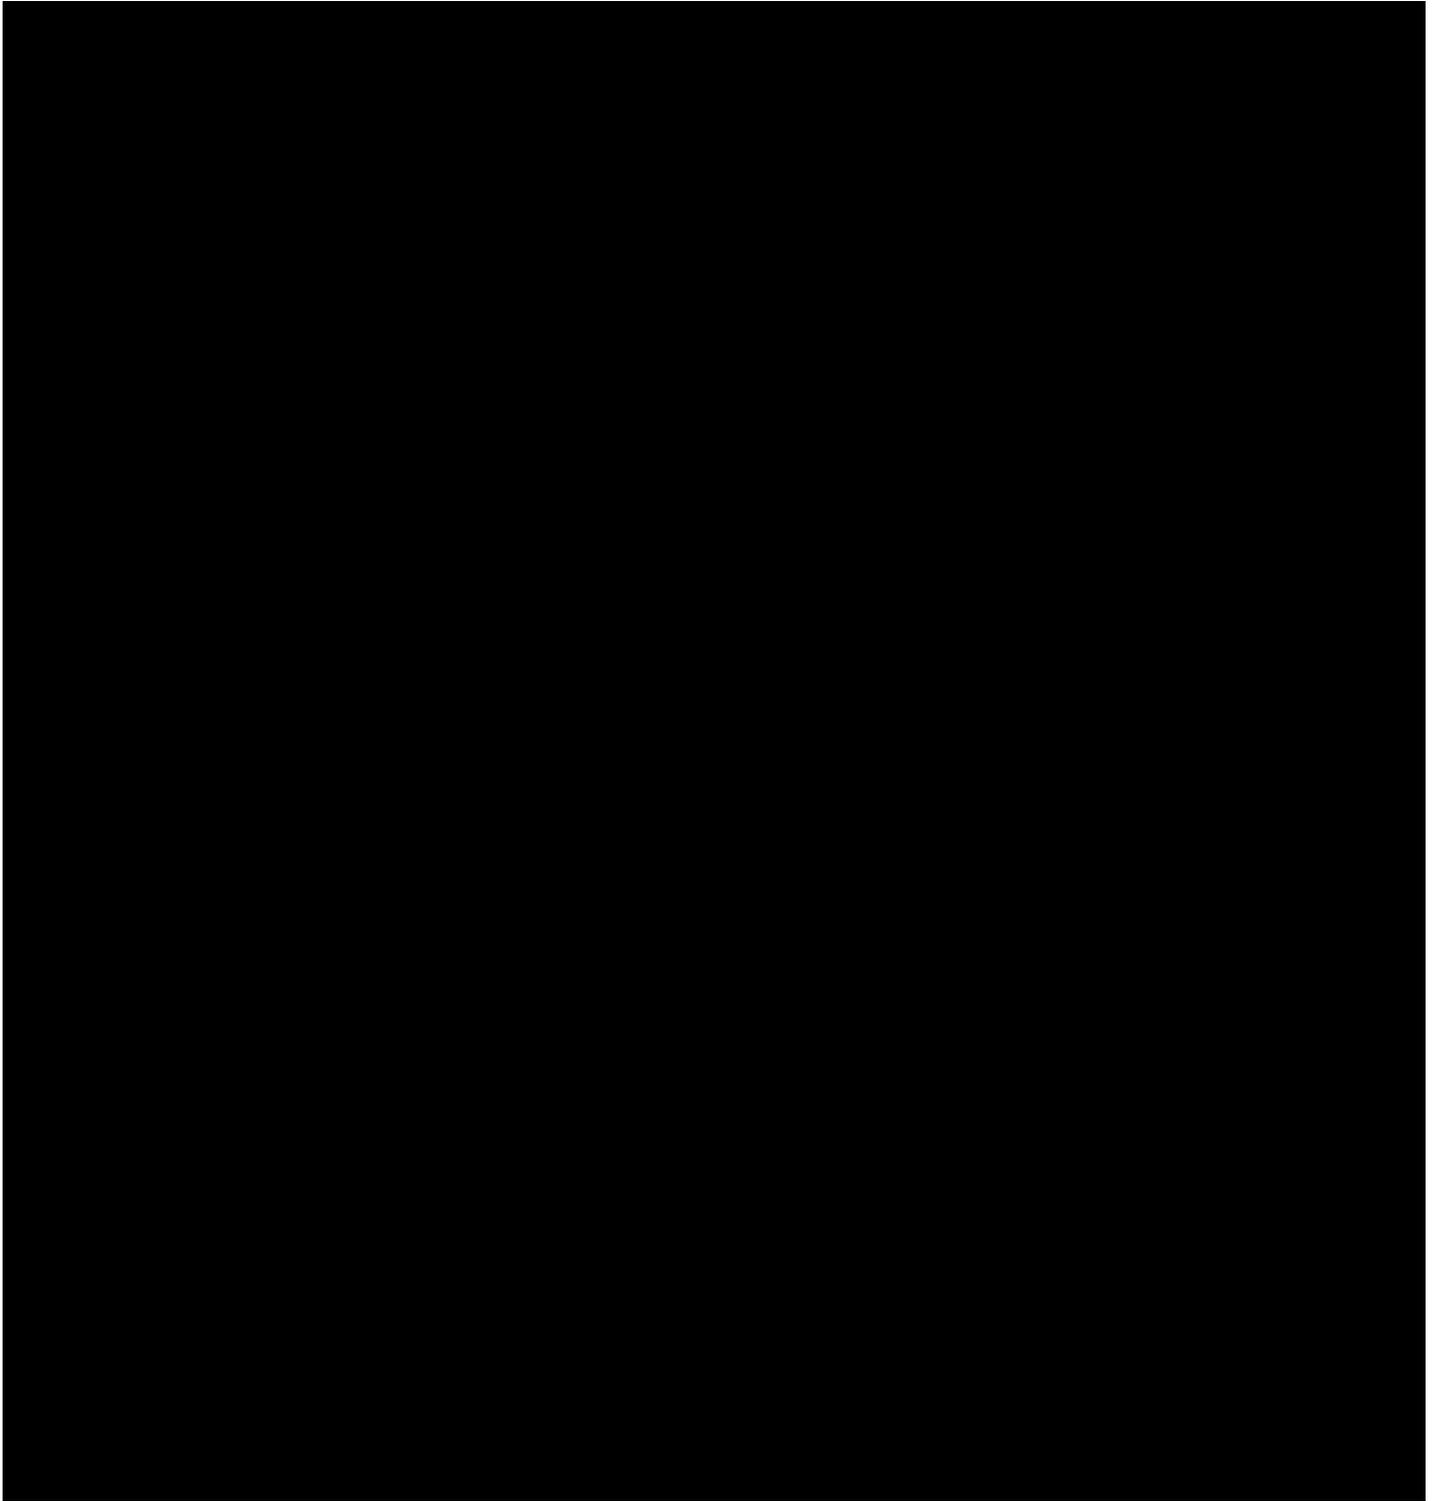

2.3.1 Key Personnel Directly Involved in the Management of the Project

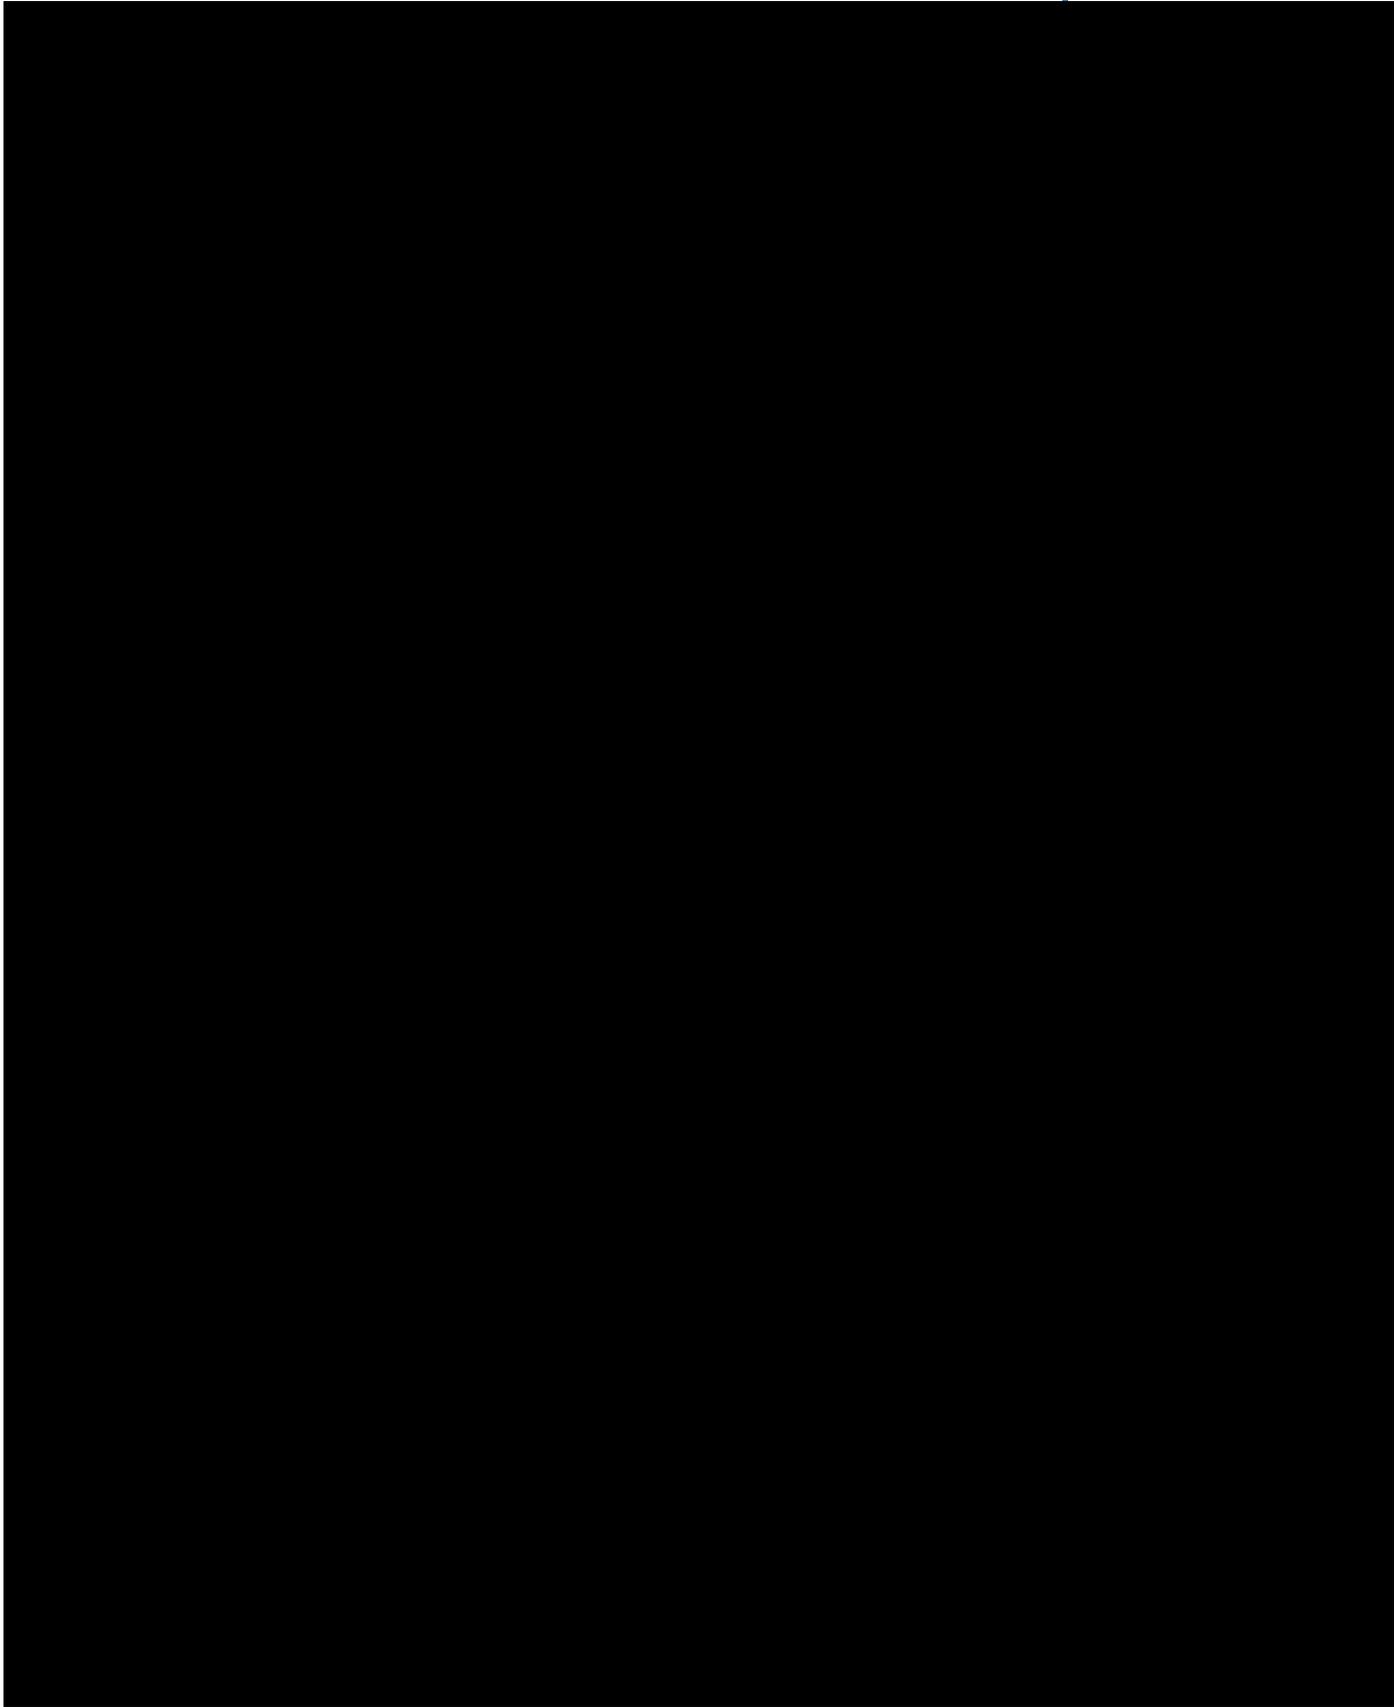

The key personnel directly involved in the management of this Project are identified below and resumes for those personnel are provided in [REDACTED]. Members of the Project team have substantial experience within different areas of the development project: consents/permitting, market development, project development, and partnerships, along with broader business and investment experience.

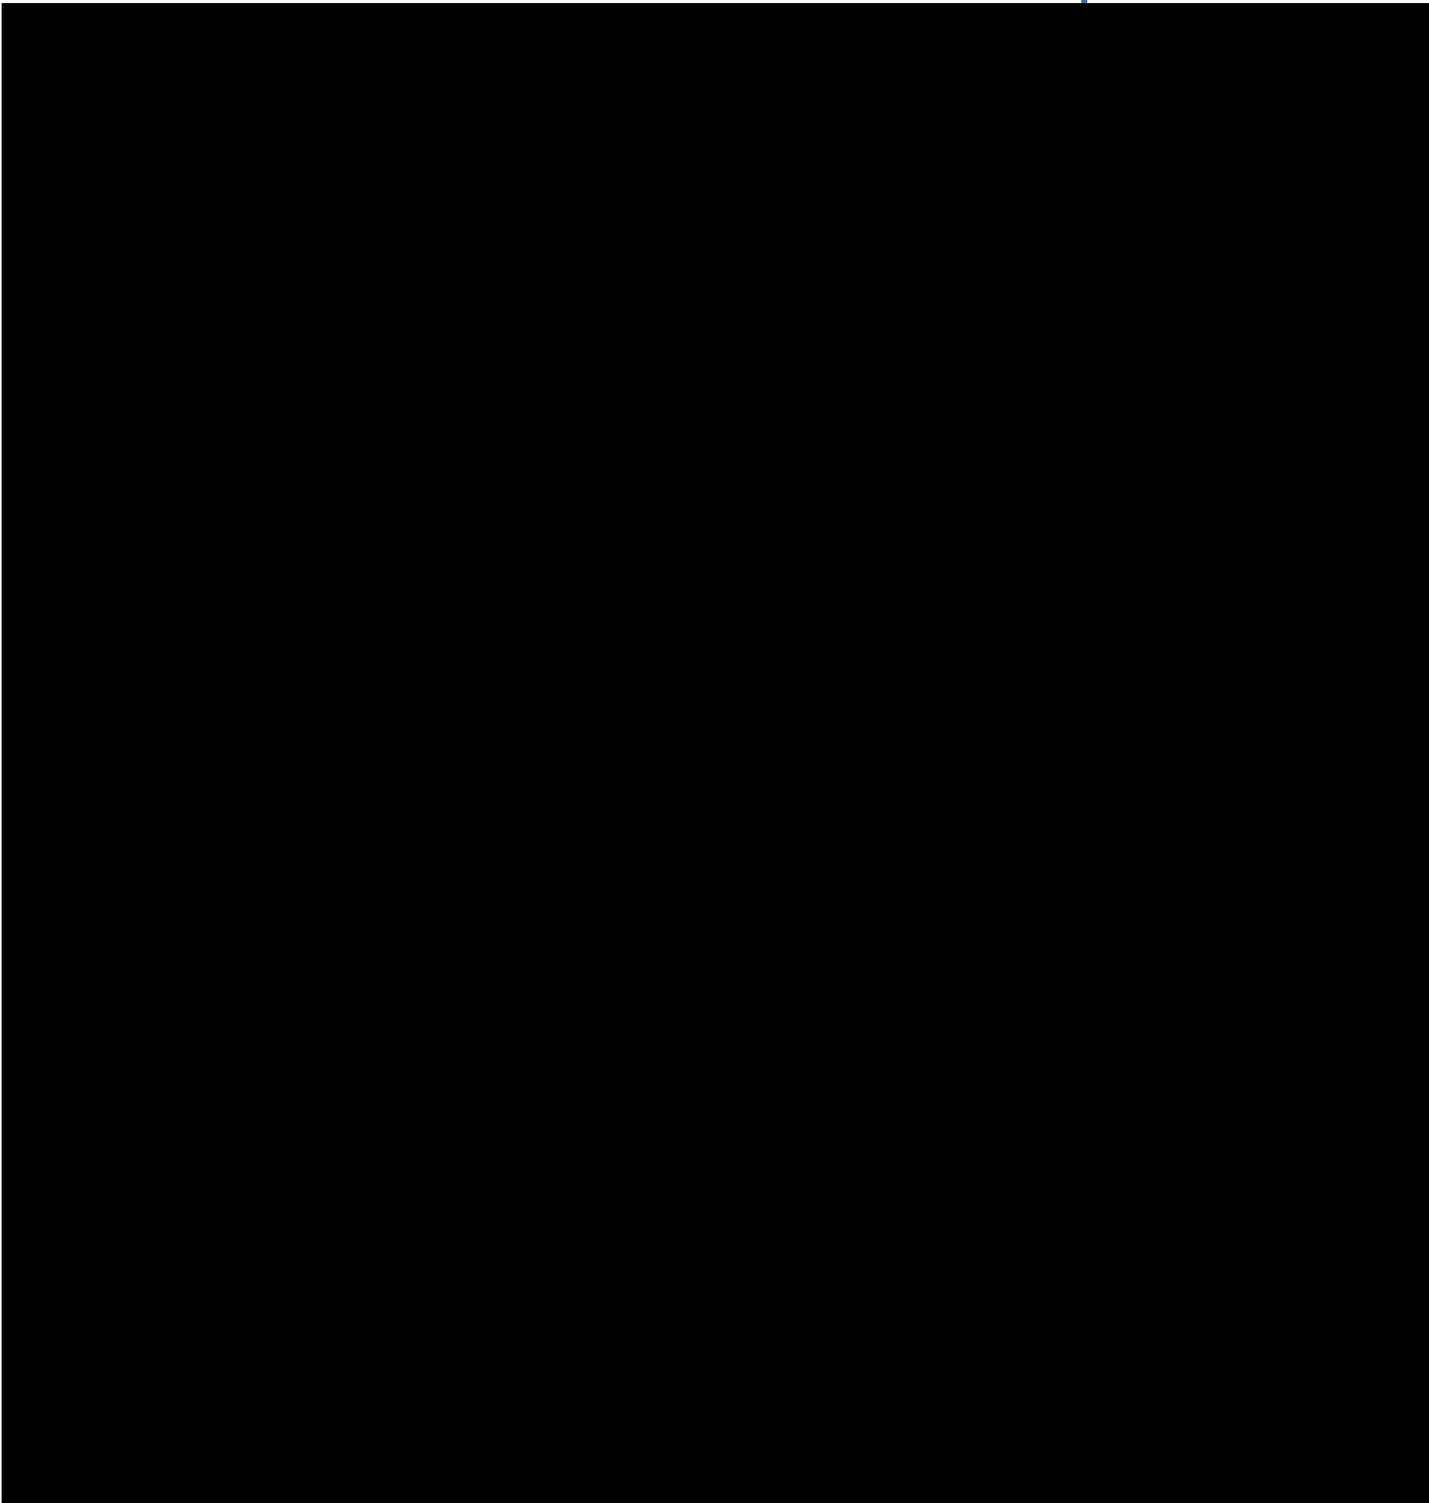

Ørsted Key Staff

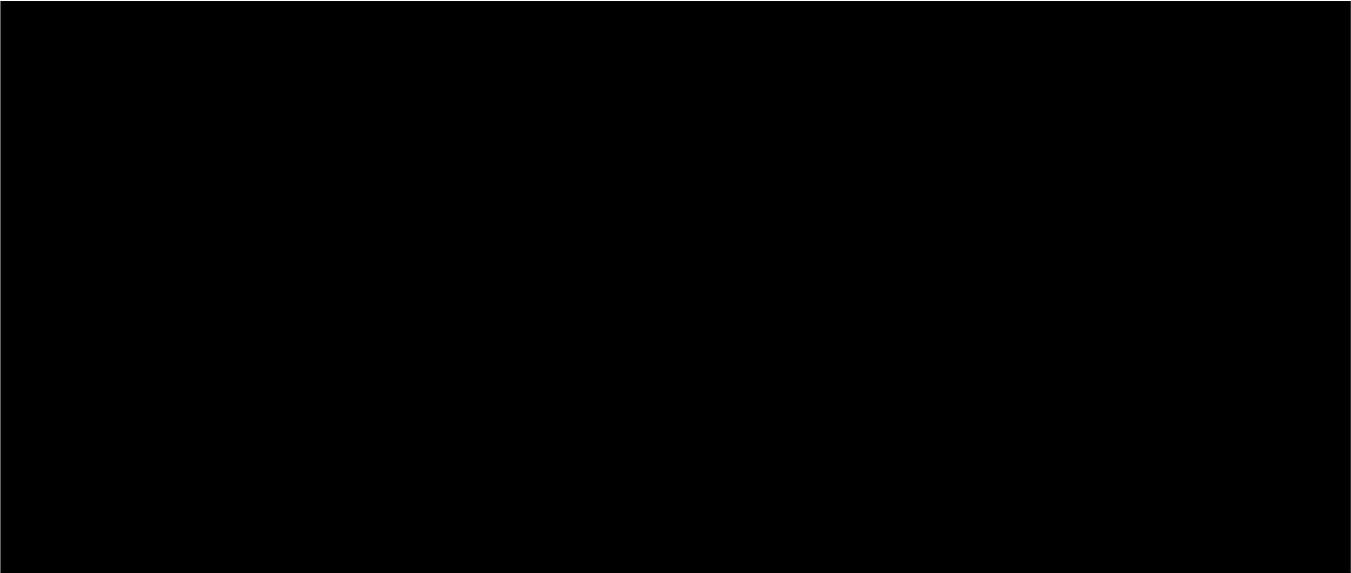

Ørsted relies on an experienced team to lead and manage the successful implementation of the Project throughout all development aspects in accordance with management models that have executed dozens of previous projects [REDACTED]

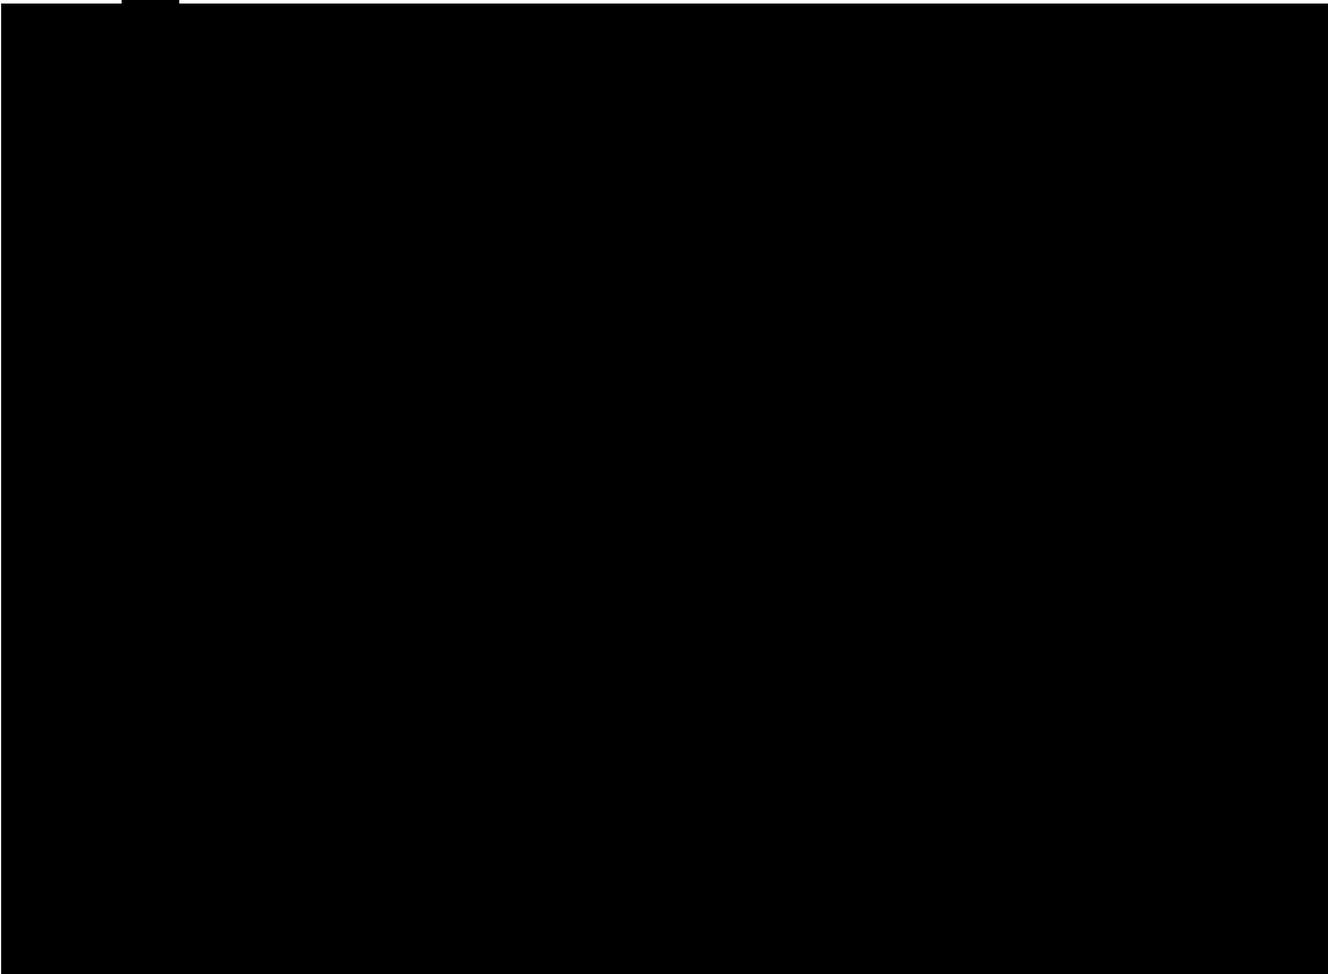

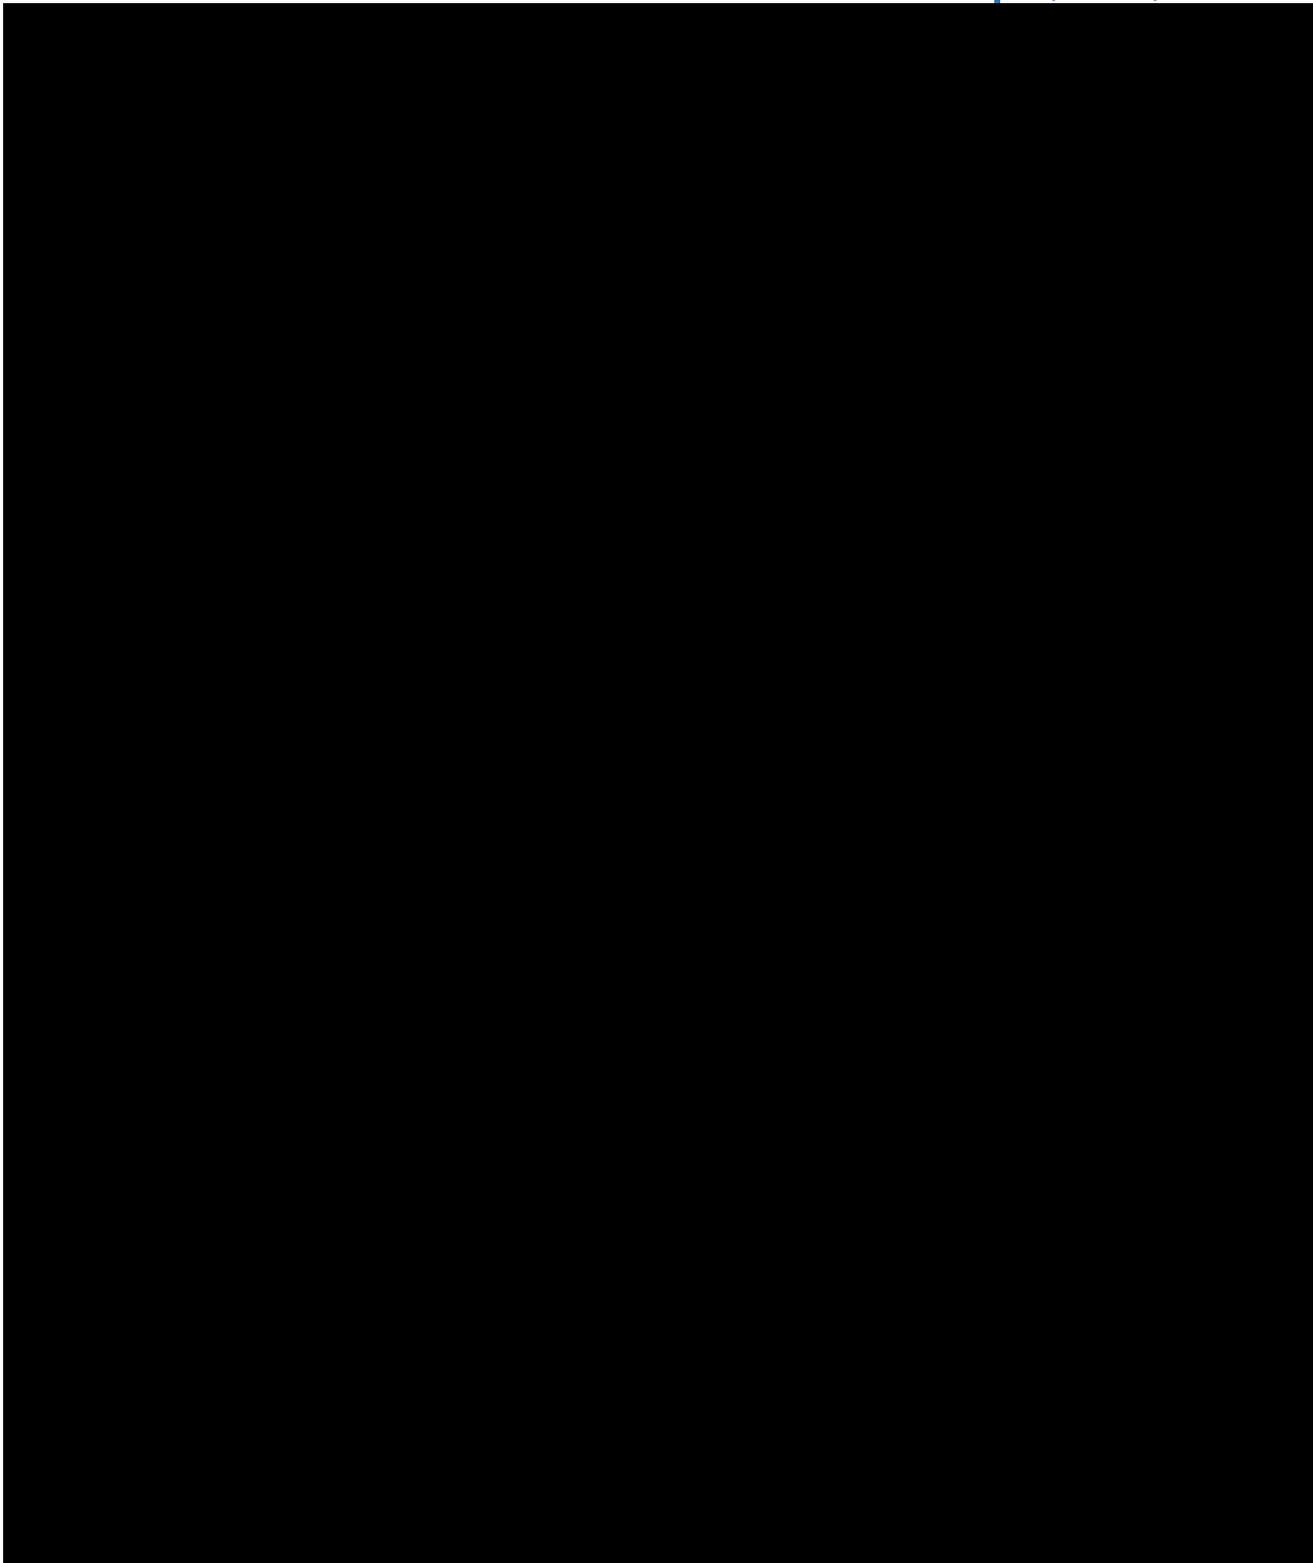

Eversource Key Staff

In its role as co-owner of Bay State Wind LLC (d/b/a Sunrise Wind) and service provider for development, construction and operation of the onshore facilities, Eversource has an experienced team to lead and manage the successful implementation of the facility [REDACTED]

2.4 Relevant Current Projects

4. A listing of projects the Project sponsor has successfully developed or that are currently under construction. Provide the following information for each project as part of the response:

- a. Name of the project
- b. Location of the project
- c. Project type, size and technology
- d. Commercial Operation Date
- e. Estimated and actual capacity factor of the project for the past three years
- f. Availability factor of the project for the past three years
- g. References, including the names and current addresses and telephone numbers of individuals to contact for each reference.

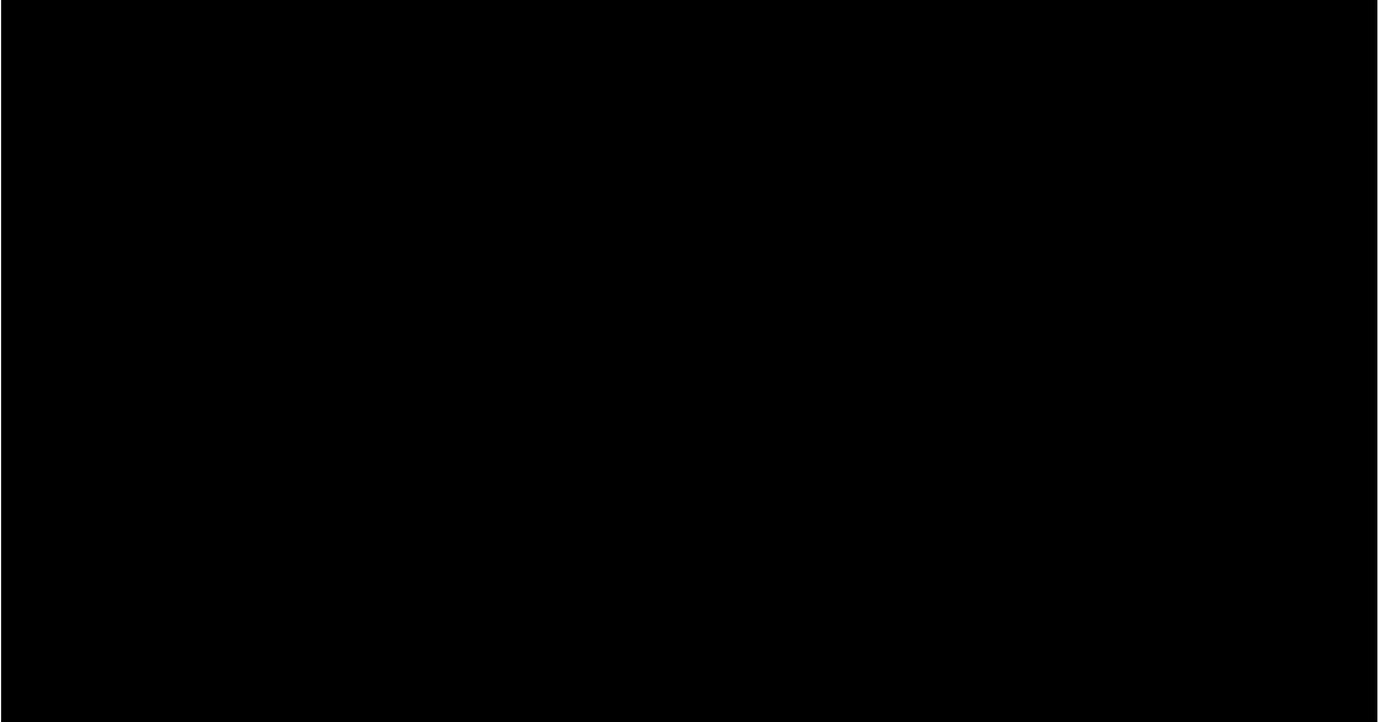

2.4.1 Ørsted

To date, Ørsted has constructed 5.6 GW of offshore wind capacity, which is approximately 30 percent of globally installed offshore wind capacity. Ørsted's existing activities span a number of markets, which include Denmark, the United Kingdom, Germany, the Netherlands, the United States, and Taiwan.

References are provided in [REDACTED]. Detailed information regarding Ørsted's offshore wind portfolio is provided in Table 2.4.

Ørsted's Unparalleled Offshore Wind Experience

- 25+ years' experience
- ~2,300 Wind Power employees
- 25 operational projects
- 5.6 GW constructed capacity

2.4.2 Eversource

Eversource has successfully developed several recent large transmission projects. Descriptions of those projects having a capital cost of more than \$70 million are provided in Table 2.4. Since the projects listed are not generation projects, there are no capacity and availability factors.

All the projects listed in Table 2.5 are owned by Eversource affiliates, [REDACTED]

Table 2.5 Eversource Project Experience

Project/Program	Location	Description	Size and Project Technology	In-Service Date2	Status
Bethel/Norwalk	CT	Electrical Transmission Line	21-mile (34-km) 345 kV line consisting of 2.1 miles (3.4 km) of XLPE cable, 9.7 miles (15.6 km) of high pressure fluid filled cables and 8.6 miles (13.8 km) of overhead construction	2006	In Operation
Glenbrook Cables	CT	Electrical Transmission Line	Two sets of parallel 115 kV XLPE cables installed along an 8.7-mile (14-km) route underneath roadways	2008	In Operation
Stoughton Cables	MA	Electrical Transmission Line	Two parallel 345 kV high pressure fluid filled cables installed along a 17-mile (27-km) route, and a third cable installed along an 11-mile (17-km) route, and new 345 kV switching station	2007 2009	In Operation
Long Island Replacement Cable	NY/CT	Electrical Transmission Line	Three 138 kV XLPE marine cables	2008	In Operation
Middletown/Norwalk	CT	Electrical Transmission Line	345 kV circuits consisting of 45 miles (72 km) of overhead line and 24 miles (39 km) of underground cables; reconstruction of 57 miles (92 km) of 115 kV line; construction of new substations and expansion of existing substations	2009	In Operation
Greater Springfield Reliability (NEEWS)	MA/CT	Electrical Transmission Line	39 linear miles (63 linear km) of new 345 kV transmission lines and reconstruction of existing 115 kV lines with 13 new or rebuilt substations and switching stations (110 circuit miles [177 circuit km])	2013	In Operation
Long-Term Lower Southern Massachusetts (SEMA) Upgrades	MA	Electrical Transmission Line	New 18-mile (29-km) 345 kV line and new 345 kV substation; reconstruction of pre-existing 345 kV line on separate towers, and related 115 kV modifications.	2014	In Operation
Interstate Reliability (NEEWS)	CT	Electrical Transmission Line	37 miles (59 km) of new 345 kV line with associated substation improvements	2015	In Operation

* = Eversource Cost Only

The Long Island Cable Replacement (LIRC) Project

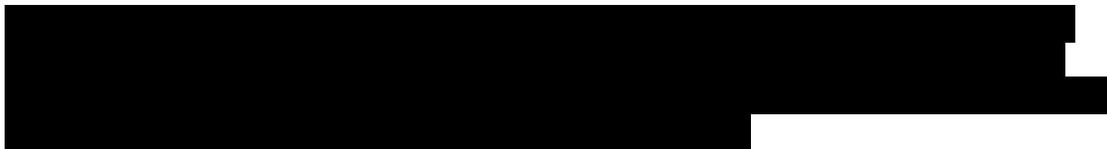

This 11 mile underwater cable reliability project was energized on July 29, 2008, months ahead of schedule, improving reliability for customers during the summer peak load period. Working jointly with the Long Island Power Authority, Eversource Energy replaced seven fluid-filled transmission cables between Norwalk, Connecticut and Northport, New York with three new 138 kV XLPE cables. The replacement cables significantly strengthened reliability of service to both states while improving the environmental integrity of Long Island Sound.

The original seven underwater cables, each of which were fluid-filled cables, were laid in 1969, and sat exposed on the seabed, except in near-shore areas. Over the years, damage done by fishing vessels, working barges and ship anchors required costly and complex repairs to the cable, sometimes with lengthy service interruptions. Impacts to these cables also occasionally resulted in environmental impacts due to release of dielectric fluids. The LIRC project was intended to achieve three significant benefits:

- 1) improve the system's reliability by making it less subject to lengthy interruptions from damage caused by anchors and other objects hitting the cables;
- 2) reduce future maintenance and repair costs; and
- 3) eliminate potential environmental concerns arising from the escape of insulating fluid whenever there is a break in the existing cables.

The LIRC Project used innovative technologies to reduce the number of cables required (from 7 single-phase cables to 3 three-phase cables, and to lay and bury the new cables approximately six feet beneath the seabed, thereby protecting Long Island Sound. The project used the Skagerrak, one of the world's most technologically innovative vessels at the time, to lay cable with a 7,000 ton capacity turntable and a state-of-the-art Global Positioning System. The GPS controlled the positioning of the ship while an underwater jet plow system used pressurized water to bury the cable below the seabed.

The new XLPE cable contains no fluid that could leak in the event of damage to the cable, and the cable is protected against external damage by its burial under the seabed. This project increased reliability for electric customers in New York and SWCT and improved the environmental integrity of Long Island Sound. It was energized on July 29, 2008, months ahead of schedule.

2.5 Project Team

5. With regard to Proposer's project team, identify and describe the entity responsible for the following, as applicable:

- a. Construction Period Lender, if any
- b. Operating Period Lender and/or Tax Equity Provider, as applicable
- c. Financial Advisor

- d. Environmental Consultant
 - e. Facility Operator & Manager
 - f. Owner's Engineer
 - g. EPC Contractor (if selected)
 - h. Transmission Consultant
 - i. Legal Counsel
-

The shared expertise of Owners Ørsted and Eversource in developing, financing, and operating energy projects will be supplemented by third party firms as outlined below.

2.5.1 Construction Period Lender

[REDACTED]

2.5.2 Operating Period Lender and/or Tax Equity Provider

[REDACTED]

[REDACTED]

The Proposer's tax equity financing strategy is discussed in Section 6.6.

2.5.3 Financial Advisor

[REDACTED]

2.5.4 Environmental Consultant

[REDACTED]

2.5.5 Facility Operator and Manager

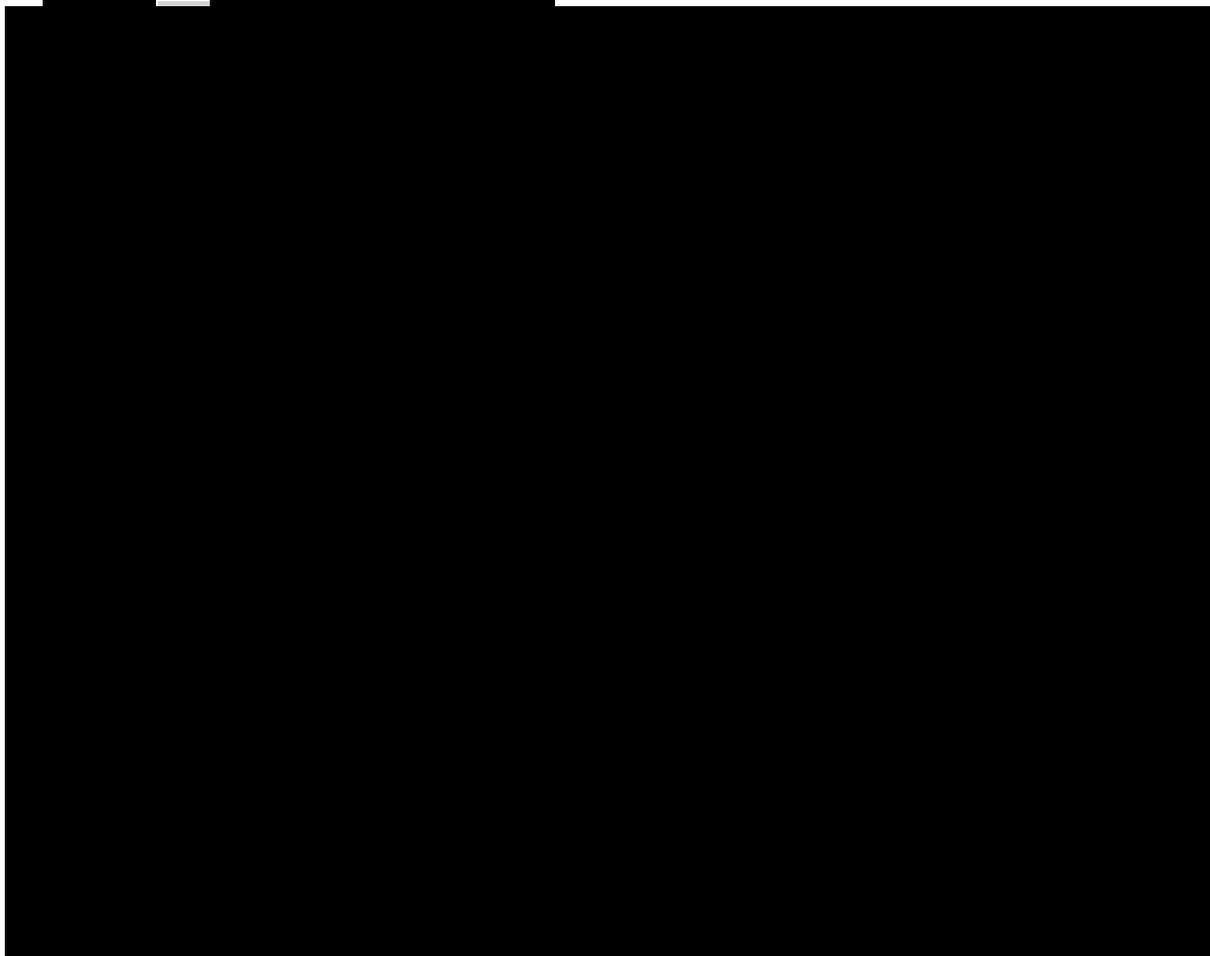

Offshore

The Proposer will be the Facility Operator and Manager.

The Proposer has developed a preliminary O&M plan that leverages the collective experience of Ørsted and Eversource. For offshore wind O&M, Ørsted has developed and instituted a rigorous operation and maintenance program that is continuously improved over time to benefit from lessons-learned. Modeled on the successful track record of Ørsted, the offshore portion of the Project's O&M plan has three major components:

- [REDACTED]
- [REDACTED]
- [REDACTED]

The anticipated team structure for the staff working on the offshore portion of the Project is provided in [REDACTED]

Onshore

[Redacted]

2.5.6 Owner's Engineer

[Redacted]

2.5.7 EPC Contractor (if selected)

[Redacted]

2.5.8 Transmission Consultant

[Redacted]

2.5.9 Legal Counsel

[Redacted]

2.6 Proposer's NYISO Market Experience

6. Details of Proposer's experience in NYISO markets. With regard to Proposer's experience with NYISO markets, please indicate the entity that will assume the duties of Market Participant for your proposed Offshore Wind Generating Facility. Please provide a summary of Proposer's or Market Participant's experience with the wholesale market administered by NYISO as well as transmission services performed by Con Edison, NYPA, and PSEG-LI/LIPA.

[Redacted]

[Redacted]

[Redacted]

[REDACTED]

[REDACTED]

[REDACTED]

3 PROJECT DESCRIPTION AND SITE CONTROL

3.1 Project Site Property Rights

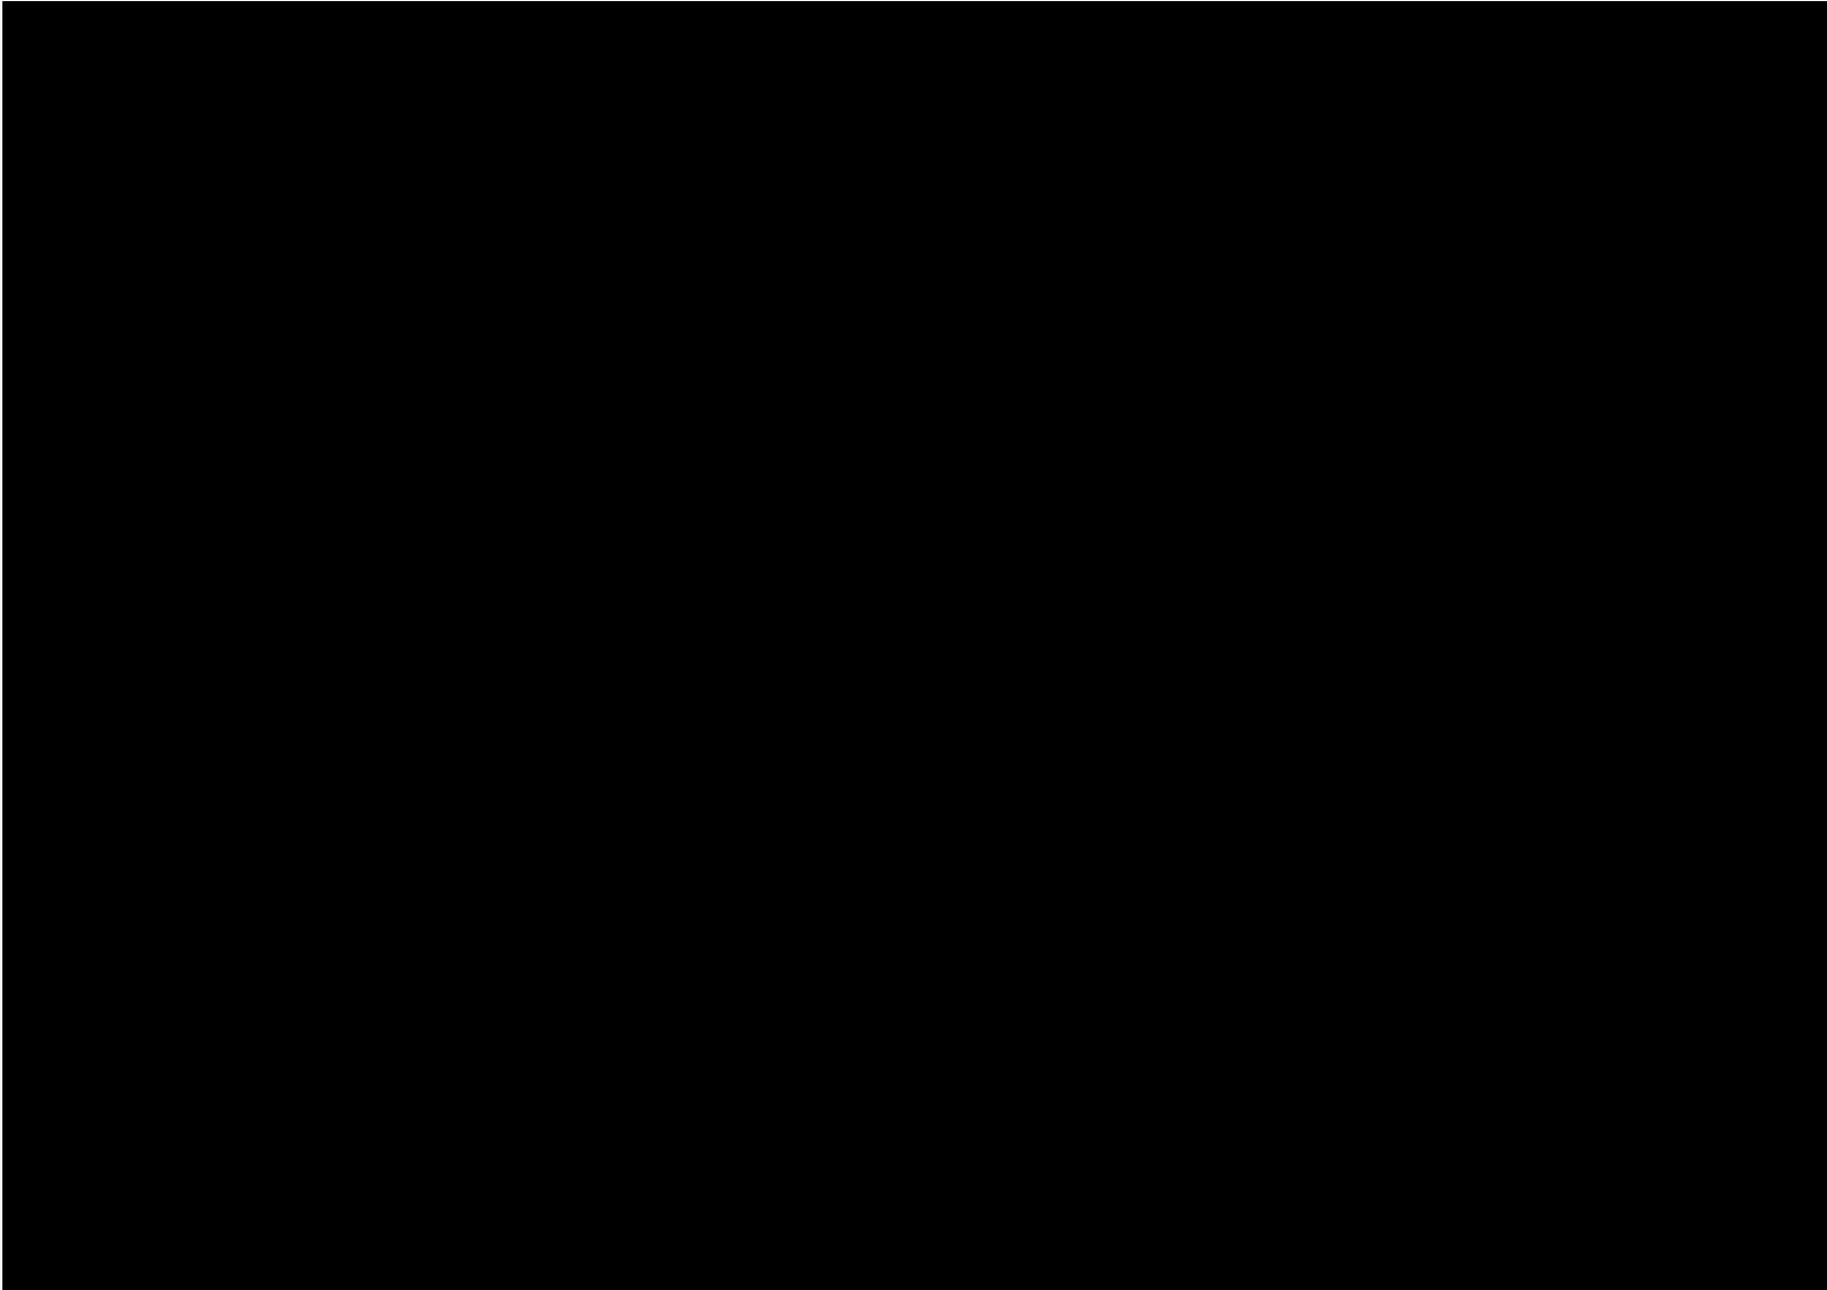

6.4.3 Identify the BOEM wind energy area where the proposed Offshore Wind Generation Facility will be located. Provide documentation that Proposer has a valid lease or irrevocable lease option to develop the leased area within this wind energy area over the entire Contract Tenor.

The Proposer has secured full and exclusive site control for its generation site for nearly the entire Contract Delivery Term of the OREC Agreement. Without BOEM granting an extension, all offshore wind leases expire 25 years after COP approval. Per Section 15.08 of the OREC Agreement, the Proposer will seek that extension for at least the balance of the Contract Delivery Term.

depicts the site subject to the Leases.

3.2 Site Plan

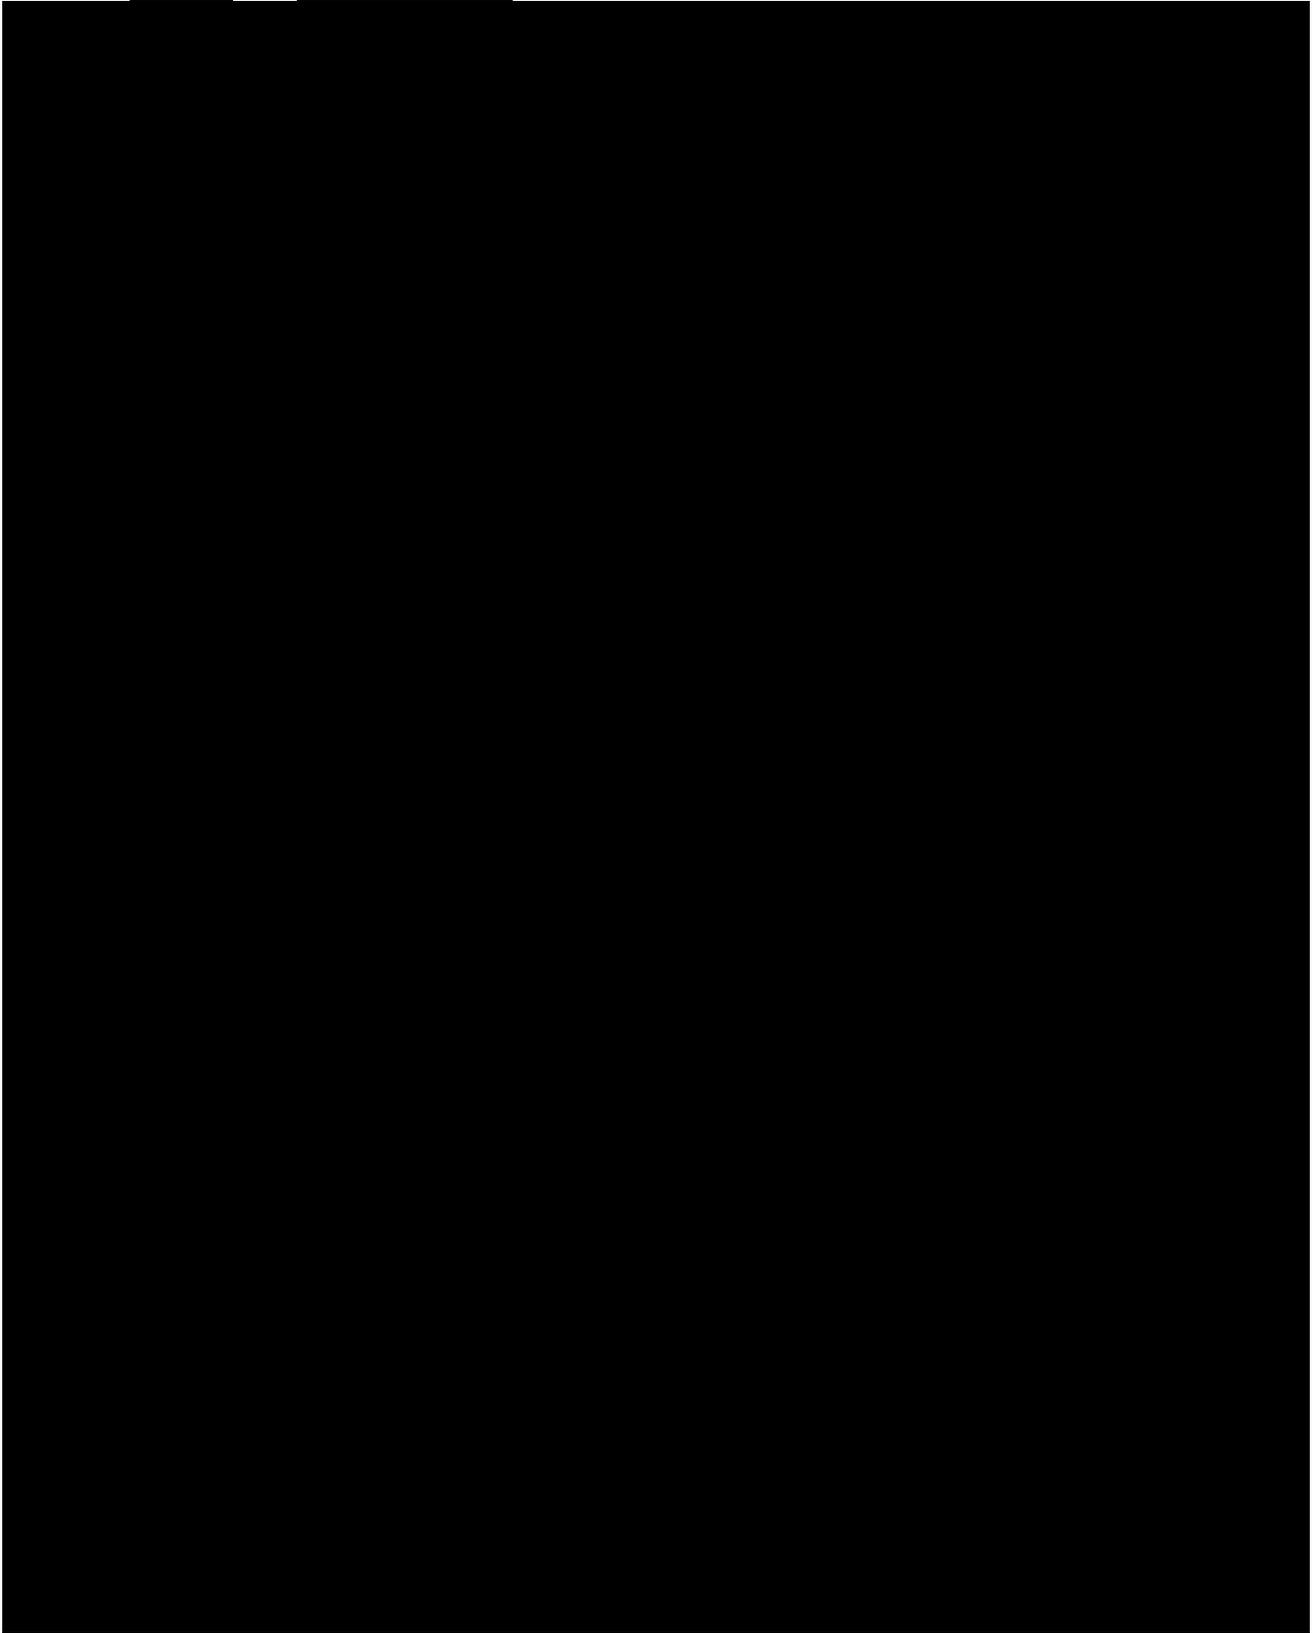

Provide a site plan (or plans) including a map (or maps) that clearly identifies the location of the proposed Offshore Wind Generation Facility, collection facilities, offshore and onshore route of the generator lead line to the interconnection point, converter station(s), and the assumed right-of-way width. Identify the anticipated interconnection point, support facilities, and the relationship of the interconnection point to other local infrastructure, including transmission facilities, roadways, and waterways.

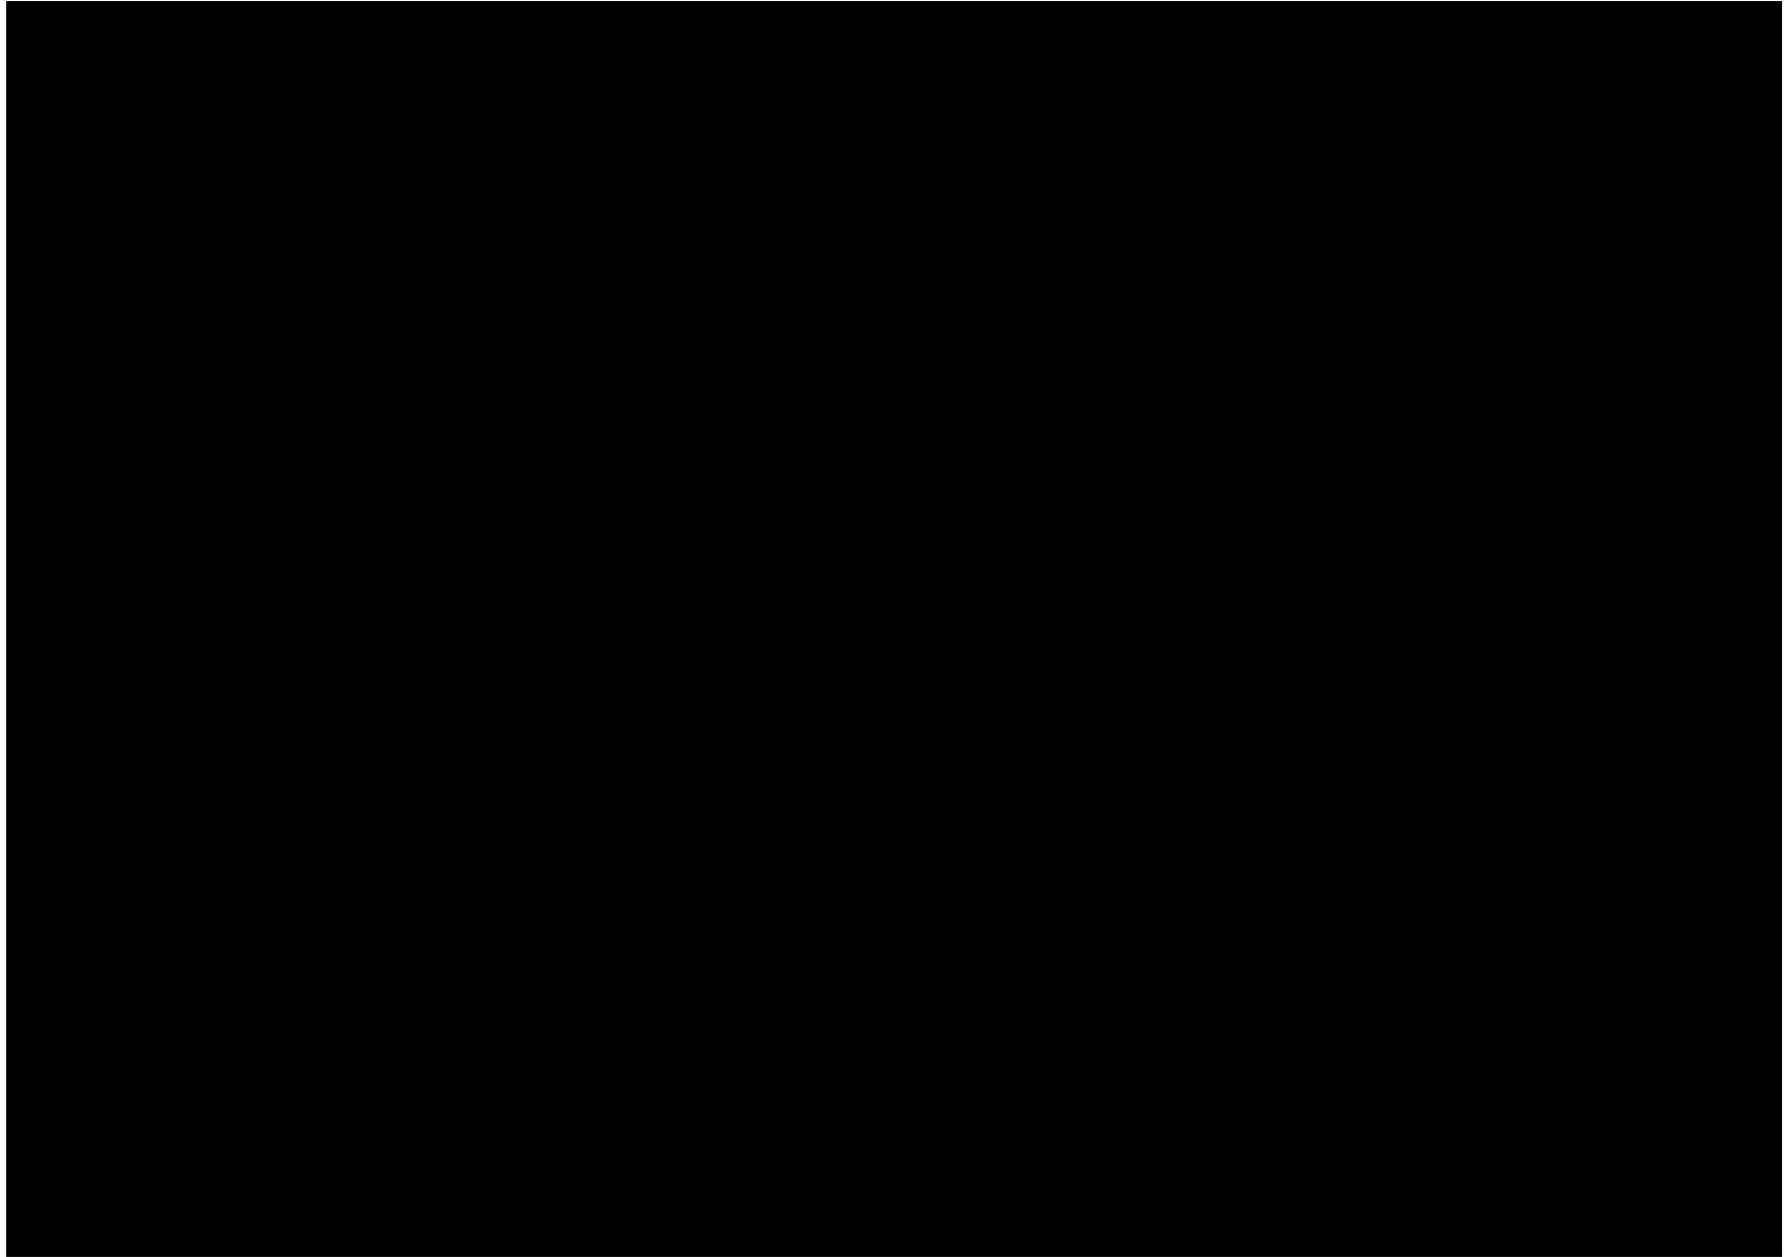

3.2.1 Project Facilities Overview

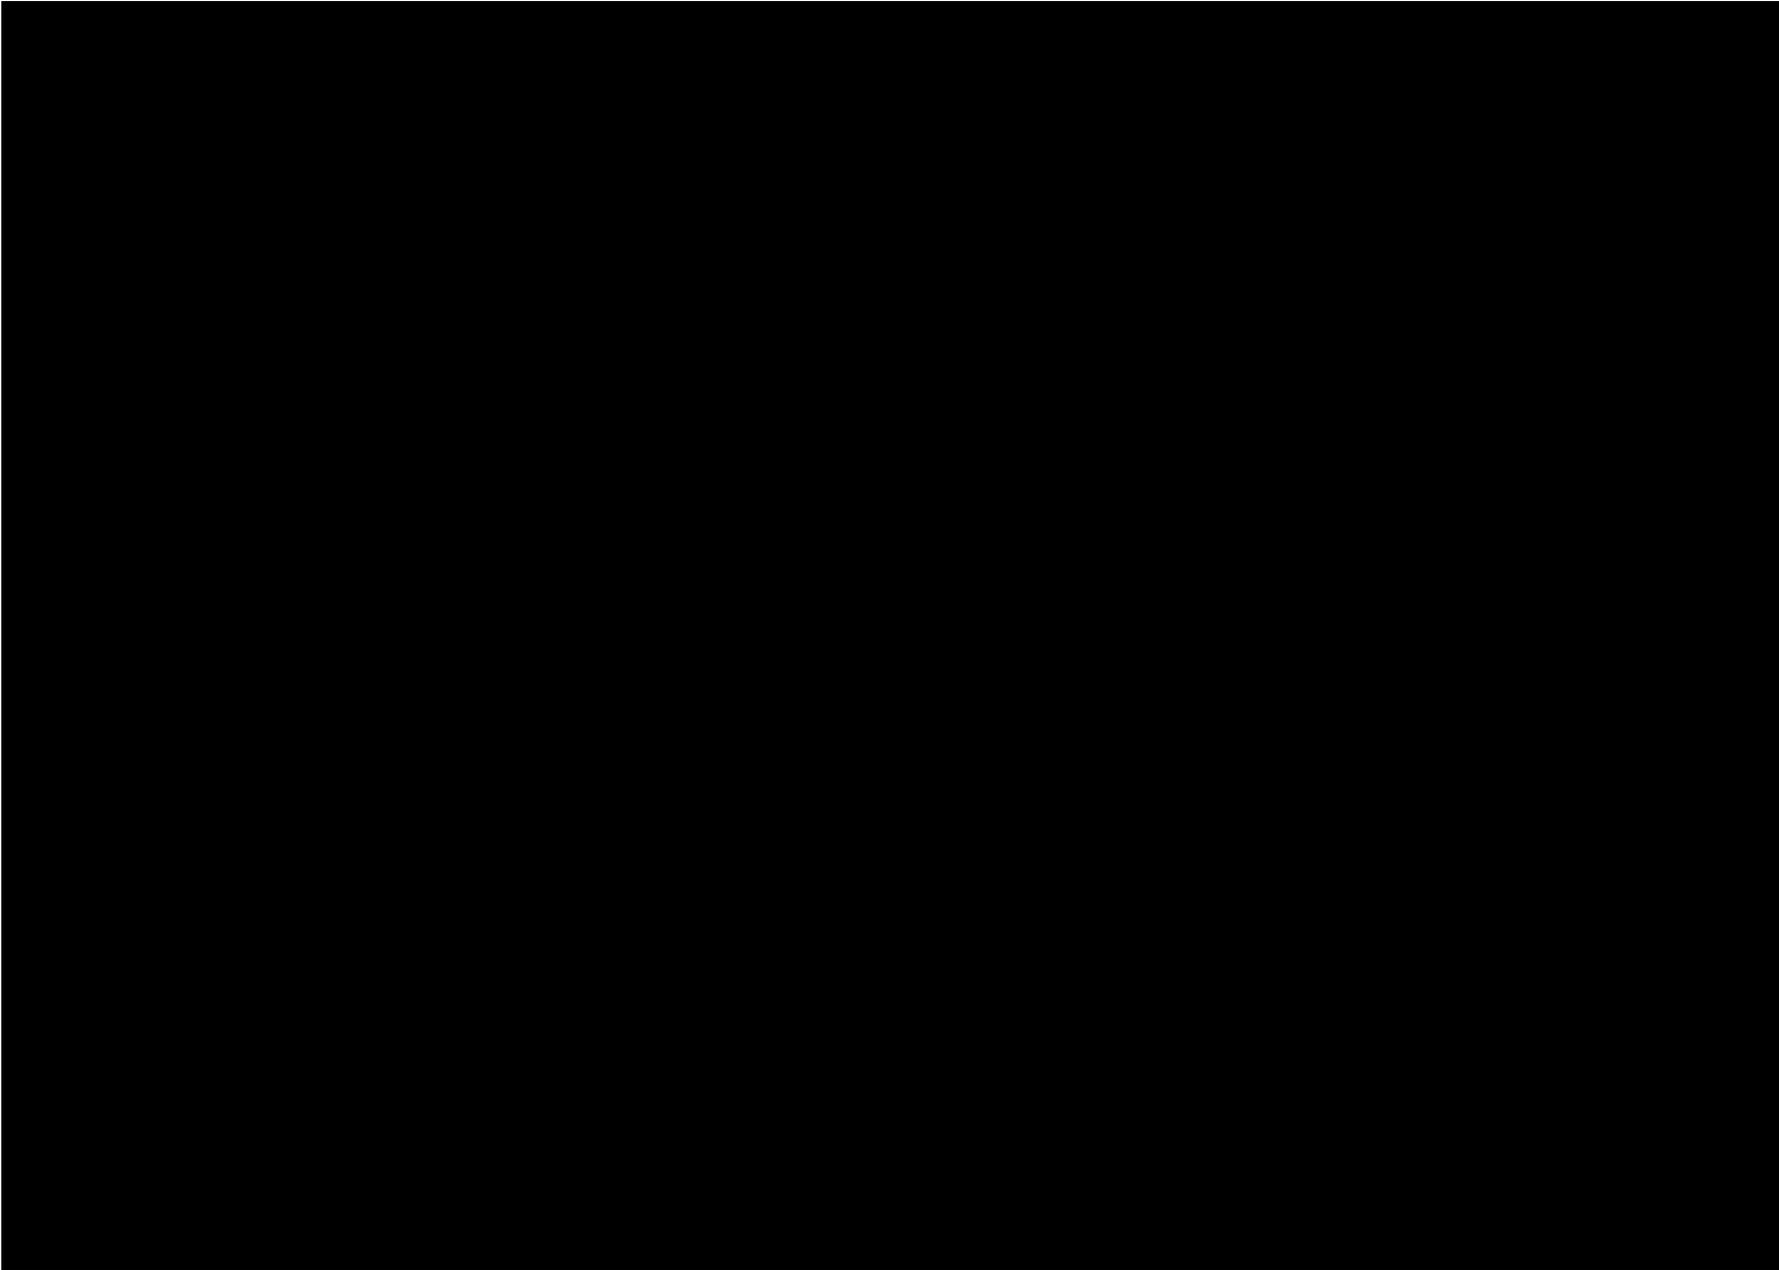

The location of the Project and maps depicting the Lease Areas and the Offshore Site Plan, as well as the distance between the near shoreline point and nearest Offshore Wind Generation Facility Turbines, are shown in [REDACTED]

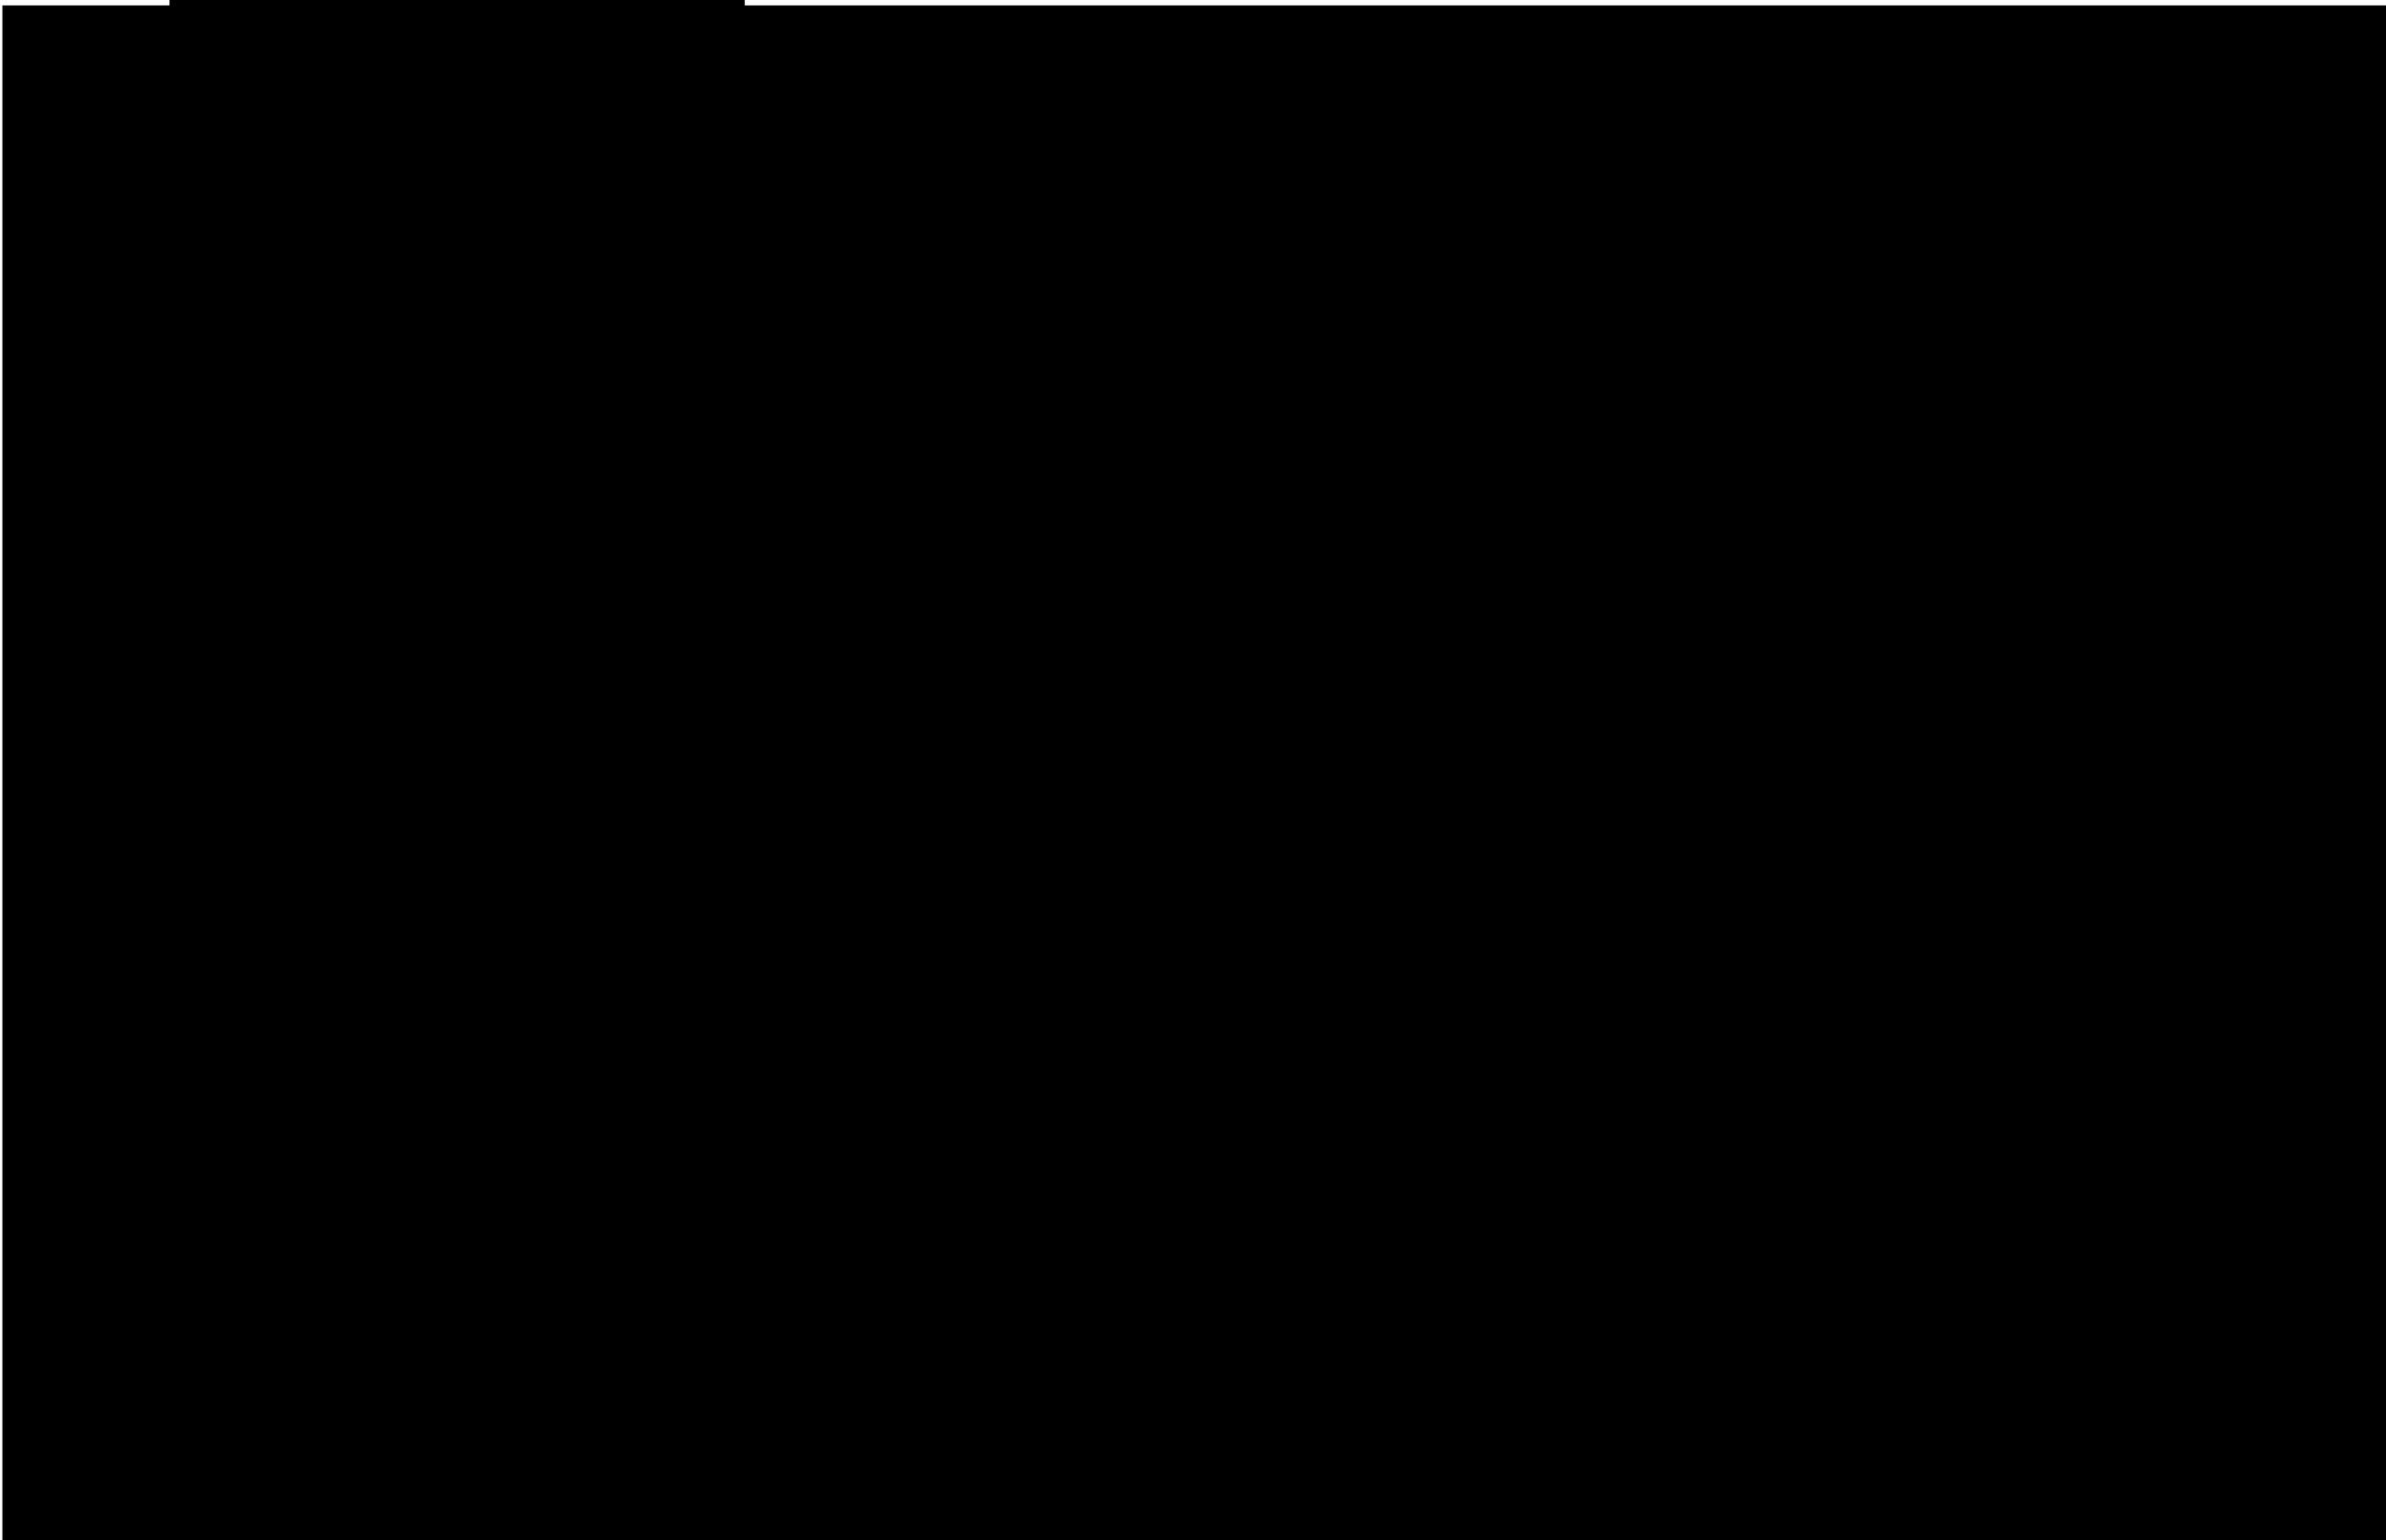

3.2.2 Interconnection Facilities Surroundings

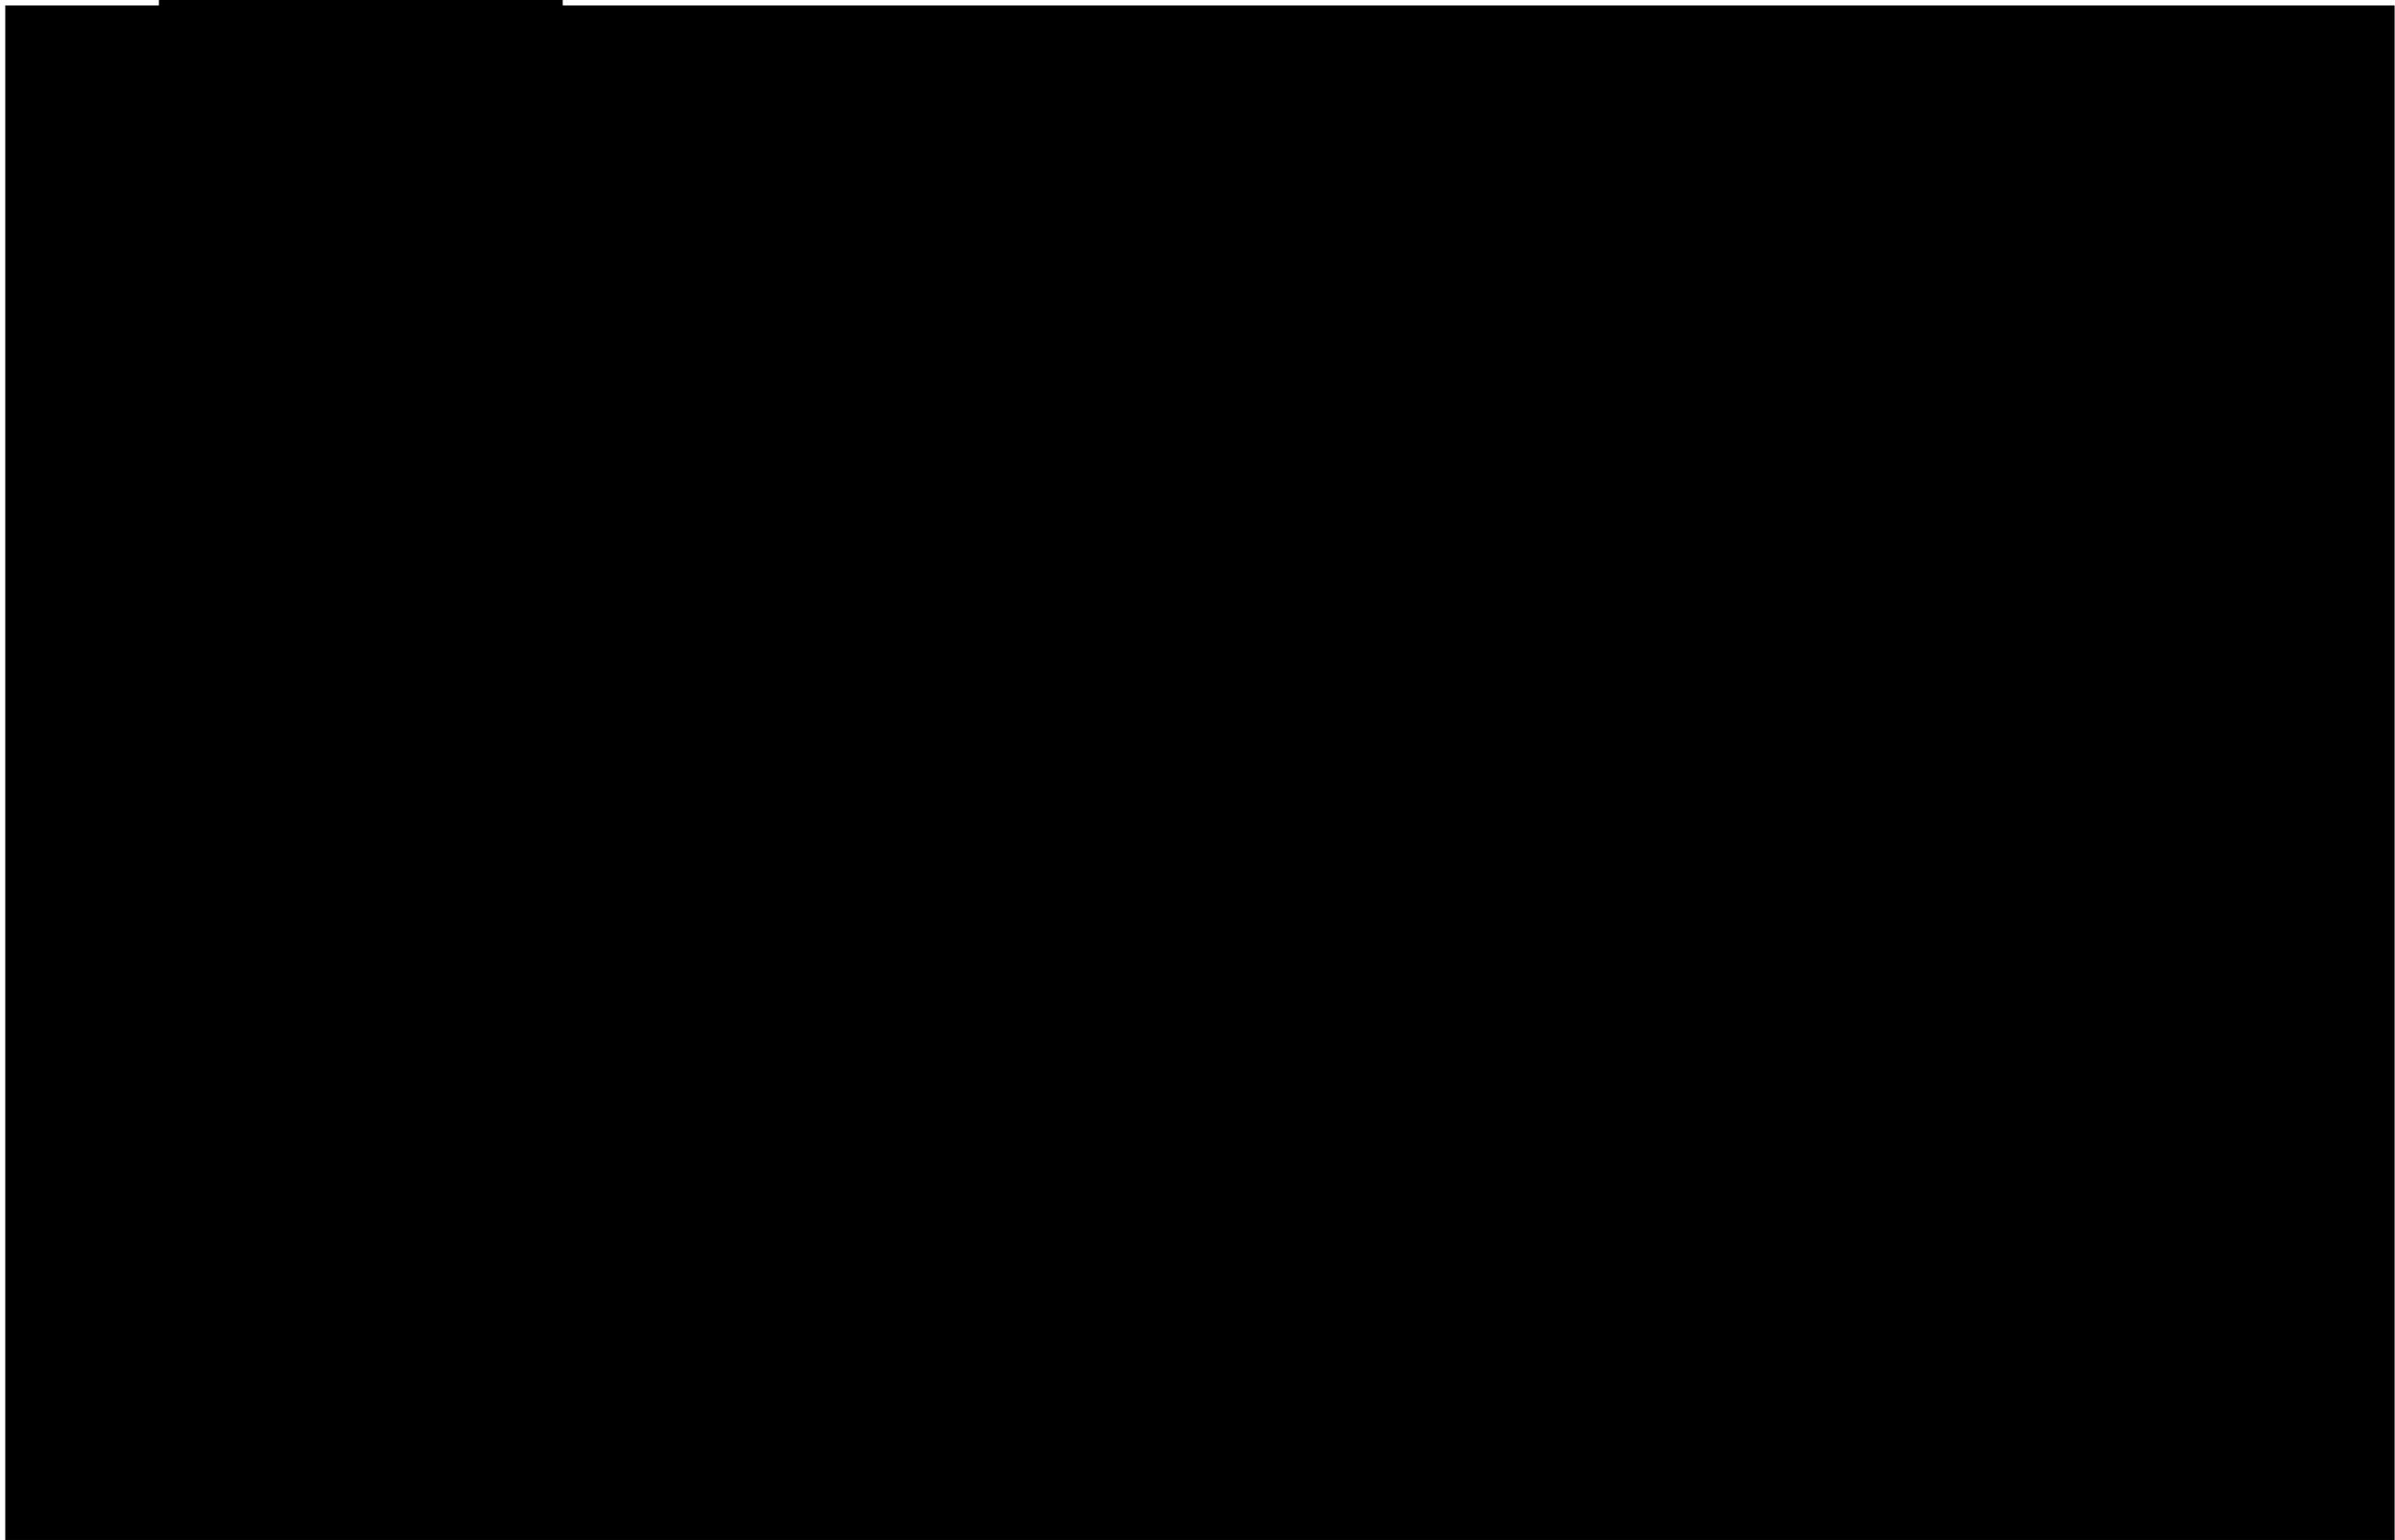

[Redacted text block]

[Redacted text block]

[Redacted text block]

[Redacted text block]

3.3 Interconnection Route Property Rights

Identify any rights that Proposer or its development partner has at the interconnection point and for the generator lead line right of way. Provide a detailed plan and timeline for the acquisition of any additional rights necessary for interconnection and for the generator lead line right-of-way. Include these plans and the timeline in the overall Project schedule in Section 6.4.10.

For portions of the Project's Delivery Facilities to be located in federal waters, but outside of the Proposer's offshore Lease Areas, BOEM would grant additional lease rights following successful completion of the federal permitting processes.

The Proposer expects the real estate rights for the Project's Delivery Facilities located within New York state waters or onshore will be secured by [REDACTED]. The process for requesting real estate rights follows established procedures. Rights must be obtained from the entities listed in [REDACTED]

[REDACTED]

[REDACTED]

3.3.1 State Agencies

As described above, the specified state agencies have established procedures for considering requests for real estate rights. [REDACTED]

[REDACTED] This experience provides critical insight into the review process of each agency that will inform and streamline the application process for the Project.

The portion of the Project located in New York is also subject to review under Article VII of the New York Public Service Law, which includes review of technical drawings and environmental assessments by the NYS Department of Public Service (DPS). For this reason, fully executed real estate rights are anticipated by [REDACTED].

If the Project is selected by NYSERDA, the Proposer will initiate consultations with the relevant state agencies. This consultation process followed by submission of a formal

application will provide significant insight into each agency's view of the request, substantially de-risking the process pending completion of the Article VII review.

[REDACTED]

[REDACTED]

3.3.3 Timeline

Section 10 includes a timeline within the overall Project schedule for the acquisition of the additional rights needed for the export cable and interconnection facilities.

3.4 Site Layout Plan

In addition to providing the required map(s), provide a site layout plan that illustrates the location of all on-shore and offshore equipment and facilities and clearly delineates the perimeter of the area in which offshore wind turbines will be placed. Identify the distance in statute miles between the nearest shoreline point and the nearest Offshore Wind Generation Facility turbines.

A site layout plan that illustrates the location of all onshore and offshore equipment and facilities and clearly delineates the perimeter of the area in which offshore wind turbines will be placed is provided in [REDACTED]

[REDACTED]

4 ENERGY RESOURCE ASSESSMENT AND PLAN

6.4.4 Provide a summary of all collected wind data for the proposed Offshore Wind Generation Facility site. Identify when and how (e.g., meteorological mast or LiDAR – for “Light Detection and Ranging”) the data was collected and by whom.

Indicate where the data was collected and its proximity to the proposed Offshore Wind Generation Facility site. Include an identification of the location and height for the anemometers and/or “range gate” heights for sensing by LiDAR that were used to arrive at an assessment of the site generation capability. Describe any additional wind data collection efforts that are planned or ongoing. Provide at least one year of hourly wind resource data. Data collected from the site is preferred, though projected data is permissible. The method of data collection must also be included.

The Proposer has dedicated significant resources to wind resource data collection for the Project, as well as the modeling and analysis of this data into Annual Energy Production (AEP) estimates.

[REDACTED]

In addition, the Proposer continues to gather data through its long-term development of the Project Area, its experience developing and operating the Block Island Wind Farm, and its ongoing development of the South Fork Wind Farm and Revolution Wind. [REDACTED]

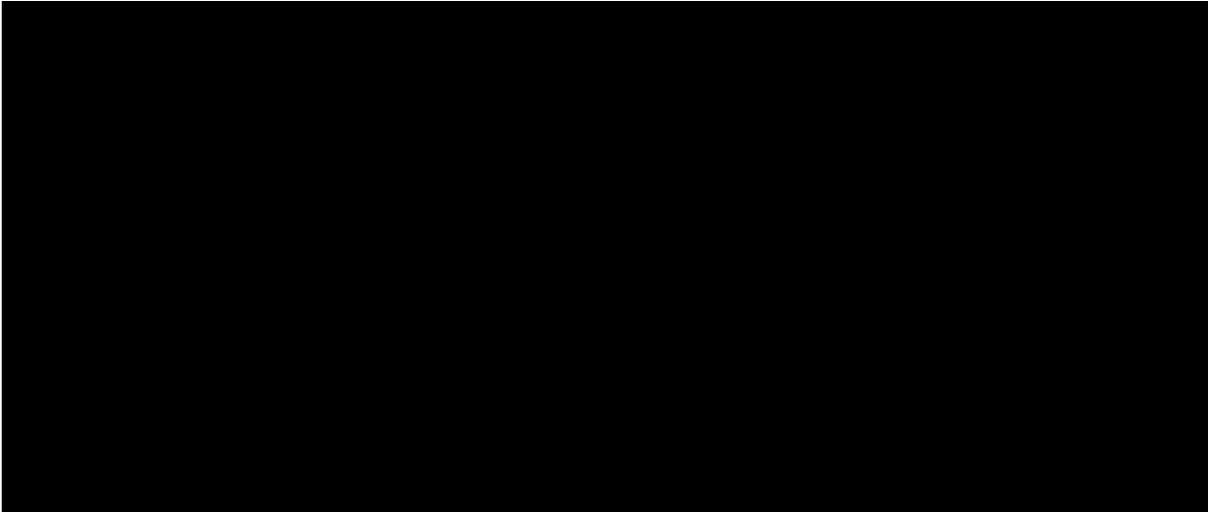

[REDACTED]

[REDACTED]

The Proposer’s wind yield assessment team applied production and electrical losses as well as operations and maintenance related outages, based on Ørsted’s more than two decades of experience in wind farm operations, to arrive at the projected net annual production for the Project.

4.1 Energy Resource Plan

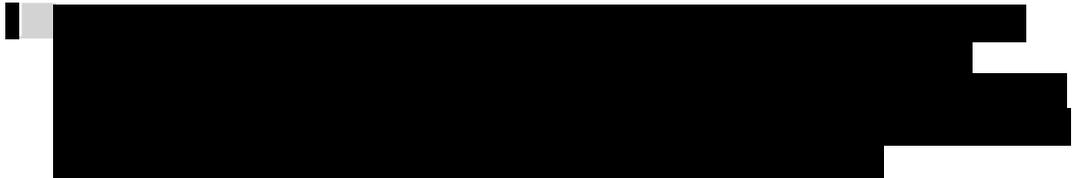

The following section provides a detailed summary of the data that support the Proposer’s energy yield estimate. Further, below is a summary table of wind data resources used by the Proposer to support the Project’s energy resource plan.

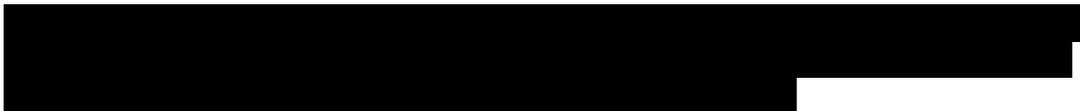

4.1.1 Wind Data

The Proposer has compiled Primary and Reference wind data in connection with its assessment of the Project site's wind energy resource.

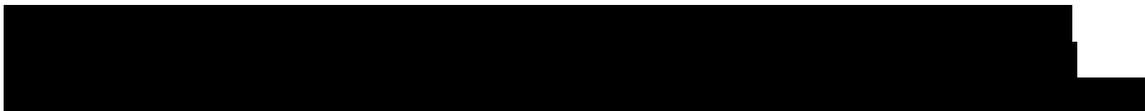

The Primary data set provides a statistical description of the wind conditions at the Project site.

To account for deviations between the mean wind speed in the measurement period and the historical long-term mean wind speed, the Proposer utilizes modeled mesoscale Reference data.

Primary Data

[Redacted]

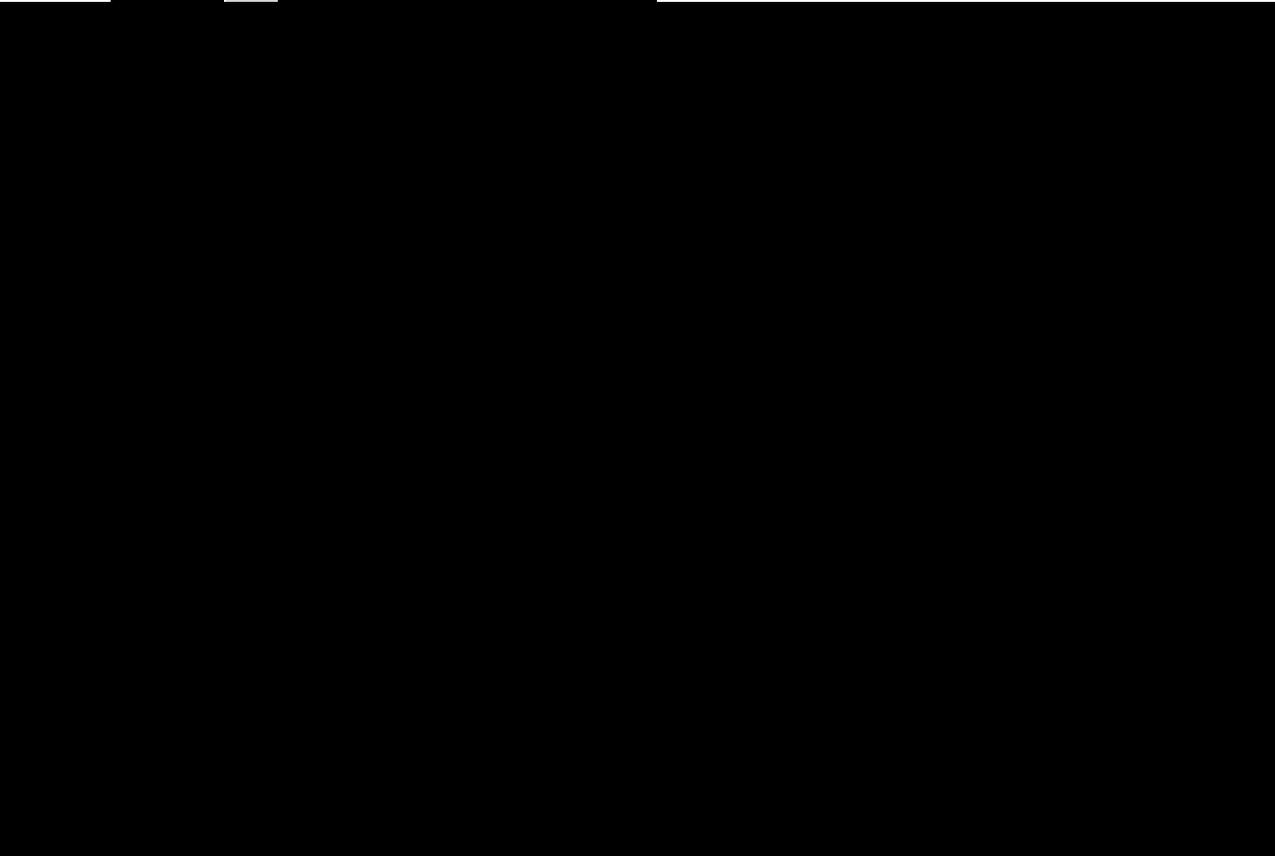

[Redacted]

[Redacted]

[Redacted]

[Redacted]

[Redacted]

[REDACTED]

[REDACTED]

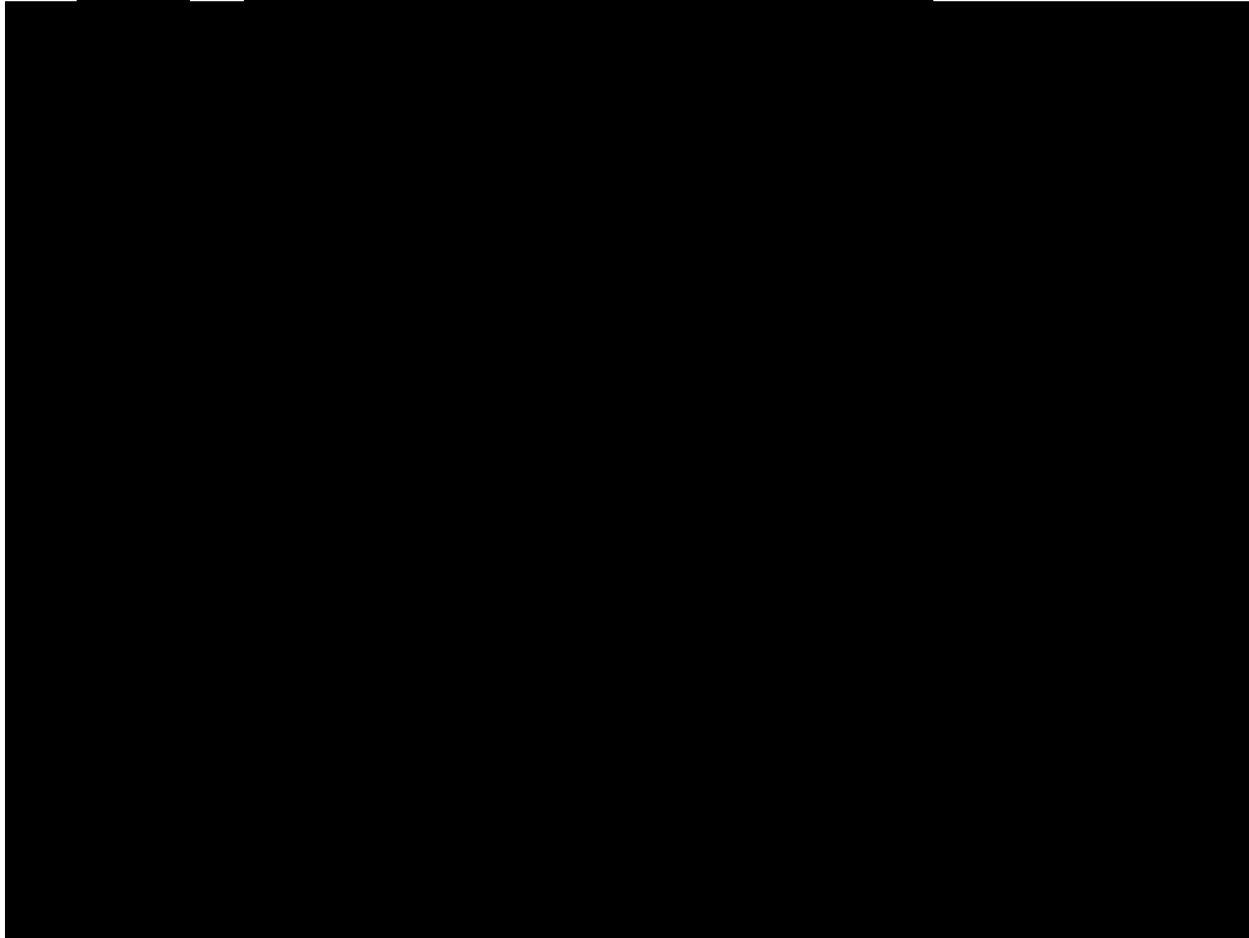

[REDACTED]

[REDACTED] The mesoscale data is modeled wind data derived by downscaling a global numerical weather prediction model to the local region. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Arriving at Final Long-Term Mean Wind Speed

To derive the long-term wind climate at the site the following steps are taken in the analysis:

- [REDACTED]

[REDACTED]

- The mean wind speed is then corrected using the mesoscale data as long-term reference. This accounts for differences between the mean wind speed in the measurement period and the long-term historical mean wind speed.

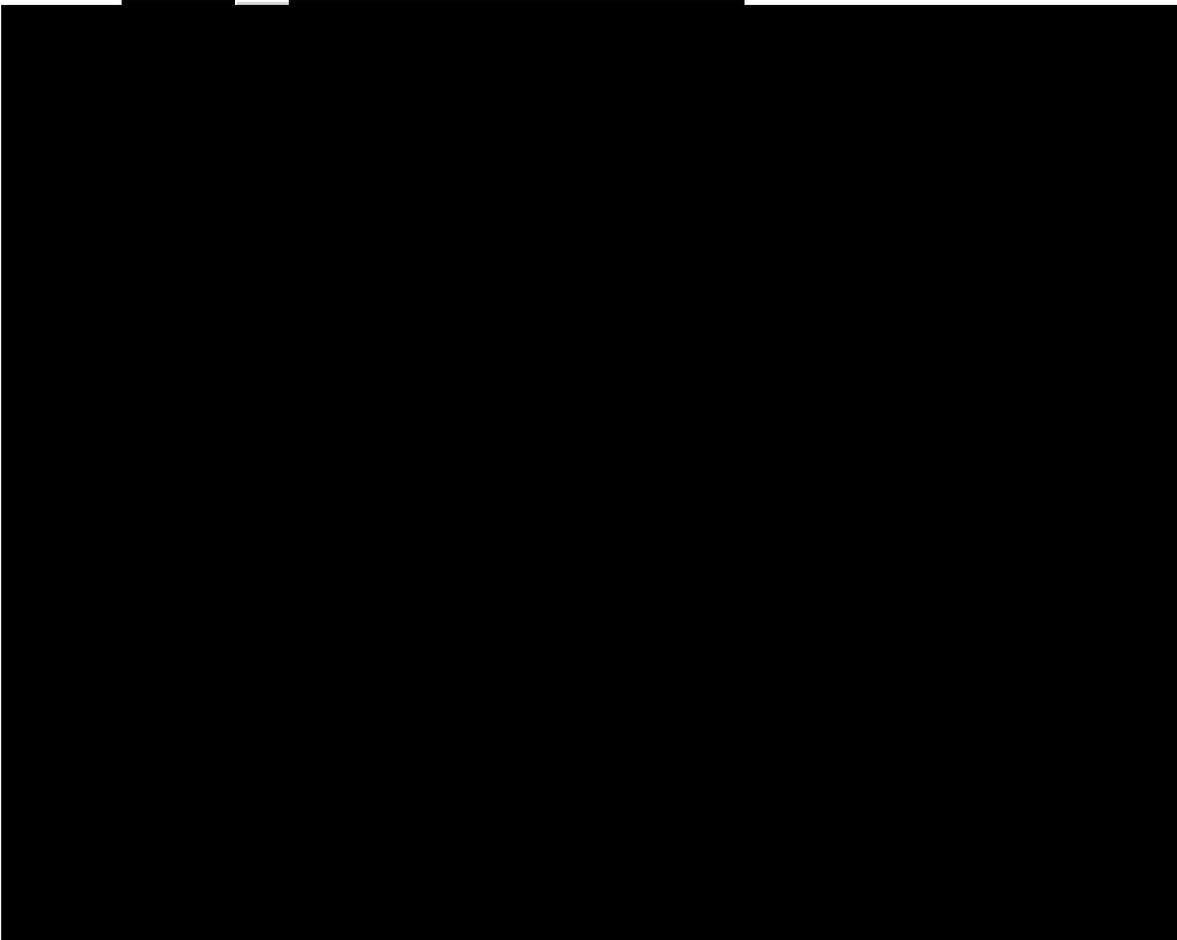

[REDACTED]

[REDACTED]

[REDACTED]

The wind rose is illustrated in [REDACTED] while [REDACTED] shows the wind speed distribution considering all wind direction sectors.

[REDACTED]

4.2 Wind Resource Assessment

Provide a wind resource assessment report for the Proposed Offshore Wind Generation Facility site. Include an analysis of the available wind data which addresses the relationship between wind conditions and electrical output. Provide a site-adjusted power curve. Each curve should list the elevation, temperature and air density used.

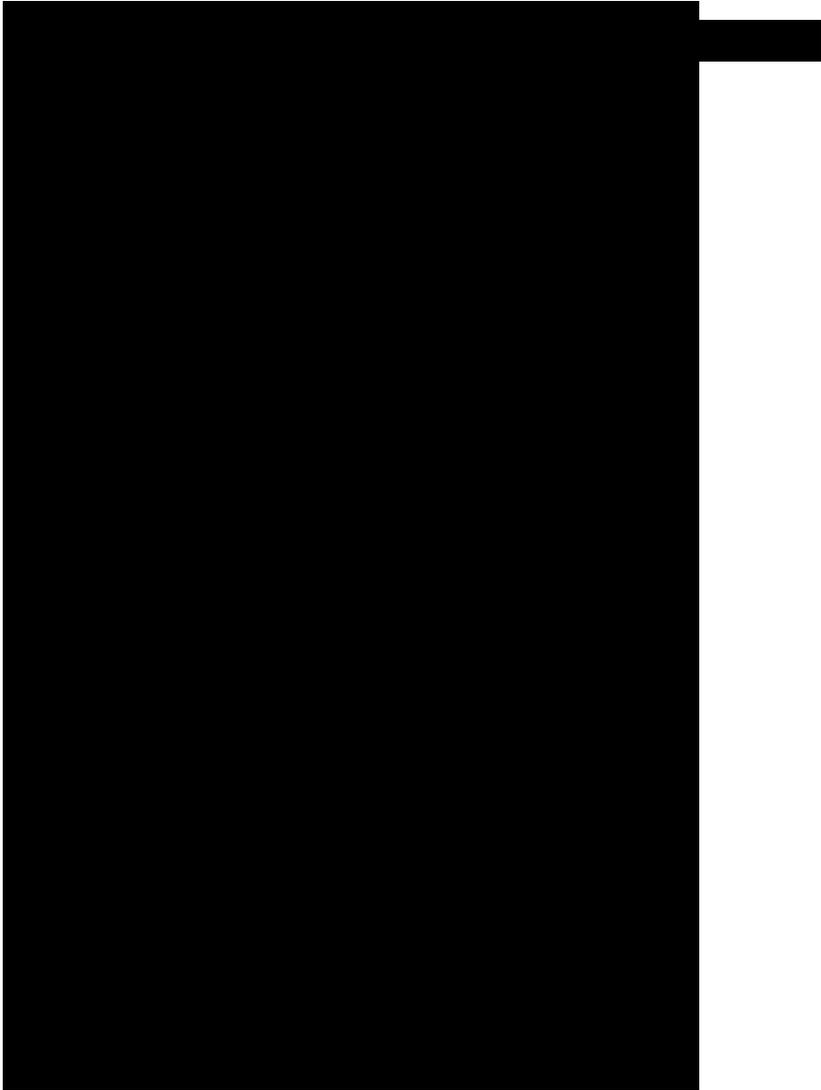

The Proposer has provided (a) more than one year of hourly wind resource data (Appendix 4-1), and (b) a third-party wind resource assessment report from [REDACTED] (Appendix 4-2).

The wind resource analysis summarized above together with the site-adjusted power curve (see below) gives the gross energy production of the Project. This is the annual production to be expected in the absence of any losses.

The gross production is then adjusted to account for expected losses. The largest of these is due to wake losses, the shadowing effect between the WTGs. The wake is calculated using Ørsted's in-house modelling tools that have been validated against data production data from a large number of offshore wind power plants. The wake loss depends on the site-specific wind conditions. Similarly, an electrical loss is modelled from the electrical infrastructure of the Project, while availabilities of the WTGs and the other components of the wind power plant are estimated based on Ørsted's vast experience and the Project's O&M

plan. [REDACTED]

A site-adjusted power curve is provided below in [REDACTED], which addresses the relationship between wind conditions and electrical output, and depicted in [REDACTED]

The power curve is the relationship between the wind speed and the produced power for a single WTG as calculated following industry standard procedures (International Electrotechnical Commission 61400-12-1). The site-adjusted power curve is specified at the mean air density at the site and corresponds to the hub height of [REDACTED]

[REDACTED]

[REDACTED]

[Redacted]

[Redacted]

5 OPERATIONAL PARAMETERS

With more than two decades of operational experience and 5.6 GW of installed capacity across 25 offshore wind farms, the Proposer’s organization has an unparalleled track-record in constructing and operating offshore wind farms. Unlike many developers that use the OEMs to maintain the offshore wind assets for life, the Proposer’s organization will assume maintenance responsibility after the OEM warranty period and employ best in class procedures. It is this experience that allows us to frequently secure above industry-average production figures on our assets (see [REDACTED]). Having assets with greater availability increases the reliability of our wind farms, which is reflected in the production figures in the ODF form and will flow through to New York customers.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

The maintenance plan is based on the specific equipment and features of the Project and details the activities and frequency of the surveys, inspections, and regular maintenance to be performed, including scheduled outage events. The Proposer intends to conduct all of these activities per industry best practices and based on the experience of the Proposer's Owners, to preserve asset integrity, extend its lifetime as far as possible, minimize outages, and deliver the highest performance possible for customers. [REDACTED]

5.1 Maintenance Outage Requirements

6.4.5 Provide partial and complete planned outage requirements in weeks or days for the Offshore Wind Generation Facility. Also, list the number of months required for the cycle to repeat (e.g., list time interval of minor and major overhauls, and the duration of overhauls).

[REDACTED] summarizes the planned outage requirements for the Project facilities. Detailed explanations are discussed further in the following subsections. All outage activities have been accounted for in the ODF form.

[REDACTED]

[REDACTED]

5.1.1 Wind Turbine Generators (WTGs)

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

It is expected that the WTG original equipment manufacturer (OEM) Service Provider will directly support the Project for [REDACTED] following first power. The WTGs will be subject to planned maintenance, including general inspection, sampling, testing, and part replacement. The WTGs also will be continuously remotely monitored. Uninterrupted monitoring facilitates a more immediate identification and response.

This offshore wind industry practice is based on the manufacturer's requirements as it is a precondition for maintaining the initial warranty. By installing equipment from a manufacturer with a history of reliable operation and increasing equipment condition monitoring, the Proposer aims to minimize the amount of service hours required during the annual service, [REDACTED]

5.1.2 Foundations and Structures

[REDACTED]

[REDACTED]

5.1.3 Offshore Transmission Assets (Offshore Substation, Offshore Export Cable and Array Cables)

The offshore transmission assets will be designed to support the TBA projected in the ODF. To realize that projection, the Proposer intends to employ a [REDACTED] approach for inspections of offshore transmission assets.

[REDACTED]

[REDACTED]

5.1.4 Onshore Transmission Assets (Onshore Substation)

The onshore substation will be monitored both remotely and locally on a continuous basis. The equipment in the onshore substation will be configured with a condition monitoring system that will sound an alarm upon detecting equipment issues.

5.2 Operating Constraints

Provide all the expected operating constraints and operational restrictions for the Project, the reason for the limitation, and characterize any applicable range of uncertainty.

Operating constraints for the Project are primarily related to technical parameters defined by the equipment OEMs, which can be categorized by wind resources and weather conditions (see Section 4.1 for more detailed information), grid outages, and Health, Safety, and Environment issues.

The below listed operating constraints and technical parameters have been accounted for in the availability and AEP assessment and are reflected in the ODF (Part III – Expected Performance Worksheet).

5.2.1 Technical Parameters

The operational constraints for the WTGs are:

- Cut-in wind speed: approximately [redacted] per second (m/s)
- Cut-out wind speed: approximately [redacted]
- Equipment operational temperature: [redacted]

For temperatures inside the WTG and related to temperature critical components at ambient temperatures between [REDACTED] a certain capacity de-rating would be expected, while the WTG will completely stop when the temperature reaches and exceeds [REDACTED]. Note that these parameters are intended for indicative purposes only, as they will vary depending on the specific WTG technology.

5.2.2 Offshore Accessibility for Maintenance Work

Accessibility is primarily determined by wave height for sailing operations, and wind speed and visibility conditions for flying operations. Typically, outages are planned around low wind periods and good offshore accessibility.

6 BUSINESS ENTITY AND FINANCING PLAN

6.4.6 Proposers are required to demonstrate the financial viability of their proposed project. Proposers should provide the following information:

Ørsted and Eversource are publicly traded companies with a combined market capitalization of approximately \$49 billion, and combined operating cash flows of approximately \$3 billion annually.

Ørsted is the global leader in financing, constructing and operating offshore wind. It has constructed 5.6 GW of generation over the past 25 years across numerous markets, with another 3.4 GW under construction. As a result of the recent acquisition of Deepwater Wind, the Proposer's team also includes the individuals responsible for the first ever financing of an offshore wind farm in the United States and the first tax equity financing of an offshore wind farm anywhere in the world; unique expertise that will further inform the financial planning of projects in its U.S. portfolio.

Eversource is an industry leader in the development and operation of large-scale transmission and distribution projects. With 8,000 employees, the Proposer's team has significant experience delivering projects throughout the northeast.

The financial strength and proven track record of these two entities that own the Proposer will allow them to fund on balance sheet project construction and operation costs.

The financial strength of Ørsted and Eversource – and by extension the Proposer's financial strength – is described in greater detail in the following responses.

6.1 Long-Term Contract Implications

1. Submit information and documentation that demonstrates that a long-term contract resulting from this RFP process would either permit Proposers to finance Proposals that would otherwise not be financeable or assist Proposers in obtaining financing of its Proposal.
-

A long-term agreement awarded through this RFP process will create a predictable, long-term revenue stream that appropriately values clean, renewable energy from offshore wind generation. Ørsted and Eversource have required long-term contracts before beginning construction on large projects historically, and will require a long-term contract to begin construction of this Project as well.

See Section 6.3 for details regarding the financing plan.

6.2 Business Entity Structure

2. Describe the business entity structure of Proposers' organization from a financial and legal perspective, including all general and limited partners, officers, directors, managers, members and shareholders, and involvement of any subsidiaries supporting the Project. Provide an organization chart showing the relationship among the different Project participants. For joint ventures, identify all owners and their respective interests, and document Proposers' right to submit a binding Proposal.

Ørsted NA and ESI (together, the Owners) have entered into a 50/50 joint venture through which they control the Proposer and its affiliates, and hold the Leases within which the Project will be located.⁵ If the Proposer is successful in the RFP, the Owners intend to assign the geographic portion(s) of the relevant Lease area(s)—or subdivisions/successor leases thereof—to an existing or newly formed project company, which will also be the entity that executes a corresponding OREC purchase-and-sale agreement with NYSERDA.

Specifically, the Owners jointly own the Proposer's parent company (and sole member-manager), Bay State HoldCo LLC. Neither the Proposer nor Bay State HoldCo LLC has any other members or shareholders.

Bay State HoldCo LLC is managed by a four-person board of directors who constitute "managers" within the meaning of the Delaware Limited Liability Company Act. At the direction and under the supervision of the directors of Bay State HoldCo LLC, the Proposer's project-development activities are facilitated by a four-person steering committee.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

As described in Sections 3, Deepwater Wind New England, LLC and the Proposer both hold federal offshore wind energy leases: Deepwater Wind New England, LLC holds BOEM Renewable Energy Leases OCS-A 0486 and OCS-A 0487; and Proposer holds BOEM Renewable Energy Lease OCS-A 0500. Both entities have engaged in permitting and project development activities with respect to the lease areas and the Project. BSW ProjectCo LLC has also engaged in project development activities for the Project, such as entering into agreements with partners, consultants, and property owners, as well as contributing to the drafting of this proposal. If the Project is selected by NYSERDA, the Proposer intends that the following actions will be taken in support of the Project:

(1) [Redacted]

(2) [Redacted]

The Proposer has been authorized to submit this proposal by a written consent from its sole member, Bay State HoldCo LLC. [Redacted]

[Redacted]

6.3 Description of Financing Plan

- 3. Provide a description of the financing plan for the Project, including construction and term financing. The financing plan should address the following:
 - a. Who will finance the Project (or are being considered to finance the Project) and the related financing mechanism or mechanisms that will be used (i.e., convertible debenture, equity or other) including repayment schedules and conversion features.

[Redacted]

Ørsted will secure the funds for Ørsted NA's portion of the capital contributions to the Project

[Redacted]

- cash flow from existing business (~\$1.1 billion average cash flow from operating activities per year from 2015 through 2018);

[Redacted]

[Redacted]

Eversource will secure the funds for ESI's portion of the capital contributions to the Project as it does for its other energy infrastructure investments, through a combination of:

- internally generated cash flow (~\$2.0 billion cash flow from operating activities in 2017); and

[Redacted]

- b. The Project's existing initial financial structure and projected financial structure

[Redacted]

c. Expected sources of debt and equity financing

[REDACTED]

d. Describe how any such agreements would differ, contingency on NYSERDA's selecting either the Fixed OREC or Index OREC form of pricing

The Fixed OREC or Index OREC form of pricing does not affect the Proposer's financing plan.

e. Estimated construction costs

[REDACTED]

f. The projected capital structure

[REDACTED]

g. Describe any agreements, both pre and post Commercial Operation Date, entered into with respect to equity ownership in the proposed project and any other financing arrangement.

[REDACTED]

6.4 Proposer Experience in Securing Financing

4. Provide documentation illustrating the experience of Proposer in securing financing for projects of similar size and technology. For each project previously financed provide the following information:
 - a. Project name and location
 - b. Project type and size
 - c. Date of construction and permanent financing

- d. Form of debt and equity financing
 - e. Current status of the project
-

The Proposer will rely on the extensive experience of Ørsted and Eversource to secure financing for the Project. Ørsted is the world's leader in offshore wind development and construction, with over 25 years of experience executing capital projects, including 25 operational offshore wind projects with 5.6 GW of constructed capacity. As a result of the recent acquisition of Deepwater Wind, the Proposer's team also includes the individuals responsible for the first ever financing of an offshore wind farm in the nation; unique expertise that will further inform the financial planning of projects in its U.S. portfolio.

Similarly, with the completion of hundreds of capital projects over the past decade, Eversource has established a successful track record in delivering customer value and demonstrated expertise in building, financing, owning and maintaining infrastructure for the electric industry. Eversource has invested approximately \$6.0 billion over the past 3 years on new energy infrastructure in the northeast.

Table 6.1, Table 6.2, and Table 6.3 provide lists of offshore wind projects and other large energy transmission projects financed and developed by the Owners.

Table 6.1 Projects Jointly Financed and Developed by Ørsted and Eversource

Project Name	Location	Type	Size (MW)	Construction Start (Year)	Construction Capital Structure / % Ørsted	Commercial Operation (Year)	Permanent Capital Structure (Year)	Permanent Capital Structure / % Ørsted	Status
Revolution Wind Farm	United States	Offshore Wind	700	Expected 2021	TBD	2023	TBD	TBD	Finalizing Award Agreements/Permitting/ Engineering Design Phase
South Fork Wind Farm	United States	Offshore Wind	130	Expected 2021	TBD	2022	TBD	TBD	Permitting/Engineering Design Phase

1. During construction, Eversource typically finances projects with a combination of short-term debt and internally generated cash flow. Projects are not financed at the project level with non-recourse debt, but rather on balance sheet at the regulated entity developing the project. Capital structure for the regulated entity is generally maintained at the allowed ratemaking capital structure, which can change over time. The current allowed capital structure has been provided.

2. Once a project reaches commercial operation, short-term financing during construction is typically replaced with long-term debt, but the capital structure will continue to be generally maintained at the allowed ratemaking capital structure, which can change over time. The current allowed capital structure has been provided.

6.5 Financial Resources and Strength

5. Provide evidence that Proposer has the financial resources and financial strength to complete and operate the project as planned.

As described throughout Section 6, Ørsted and Eversource are stable and diverse energy companies with robust balance sheets that reflect the financial strength needed to complete and operate the Project in the ordinary course of their respective businesses.

Financial and cash flow data for Ørsted and Eversource is provided in Table 6.4, Table 6.5, Table 6.6, and Table 6.7. Annual reports are provided in Appendices 6-2 through 6-7.

Table 6.4 Eversource Selected Consolidated Financial Data – Balance Sheet and Income Statement

(Millions of Dollars)	2017	2016	2015
<i>Balance Sheet Data:</i>			
Property, Plant and Equipment, Net	23,617	21,351	19,892
Total Assets	36,220	32,053	30,580
Total Capitalization	23,567	20,470	19,542
<i>Income Statement Data:</i>			
Operating Revenues	7,752	7,639	7,955
Net Income	996	950	886

(Millions of Dollars)	2018	2017 ⁶	2016
Cash flow from operating activities	1,551	153	1,691
Interest-bearing net debt	-333	-228	519

From Ørsted 2018 Annual Report
Assumes DKK to USD exchange rate of 0.15

As demonstrated, both Eversource and Ørsted are large, growing companies, and have a combined cash flow of approximately \$3 billion and a combined market capitalization of approximately \$49 billion. Moreover, both possess deep capital-market expertise, as evidenced by their ability to routinely access the public debt markets. For example, in November 2017, Ørsted successfully issued green hybrid capital securities and green senior unsecured bonds totaling €1.25 billion (approximately \$1.5 billion) and Eversource parent successfully issued \$650 million of Series I and M Senior Notes in January 2018 and an additional \$900 million of Series N and O Senior Notes in December 2018.

Eversource– Financial Highlights

- Eversource is a large cap company traded on the New York Stock Exchange, with an equity market capitalization of approximately \$21 billion.
- Eversource is listed as number 364 on the Fortune 500 2018 list of the largest U.S. corporations (by gross revenues).
- Eversource currently maintains the highest credit rating of any company in the Energy and Utility industry in the United States.
- Eversource has invested \$6 billion in new energy infrastructure in the past three years.

Ørsted – Financial Highlights

- Ørsted is traded on Nasdaq Copenhagen Stock Exchange, with an equity market capitalization of approximately \$28 billion.
- Ørsted was listed in June 2016. The IPO was the largest in Europe in the last 5 years and the largest IPO ever in Denmark both in terms of deal size and market cap.
- Ørsted has non-cancellable credit facilities totaling approximately \$1.7 billion.
- Ørsted has invested approximately \$7.8 billion in new energy infrastructure from 2016 to 2018.

As a result of the recent acquisition of Deepwater Wind, the Proposer’s team also includes the individuals responsible for the first ever project and tax equity financing of an offshore wind farm in the nation; unique expertise that provides enhanced flexibility in financing options to the Project. In February of 2015, Deepwater Wind closed on approximately \$300 million in senior secured project financing for the Block Island Wind Farm project, funded by a consortium of world-class lenders led by Societe Generale, and two world-class tax equity investors – Citi and GE. The financing was awarded Renewable Energy Deal of the Year in 2015 by Project Finance International and IJ Global.

⁶ The decrease in cash flow from operating activities between 2016 and 2017 is largely driven by a change in funds tied up in working capital of \$1,185 million in 2017 compared with \$225 million in 2016.

6.6 Federal Production Tax Credit or Investment Tax Credit Role

6. Describe the role and the amount of the Federal Production Tax Credit or Investment Tax Credit (or other incentives) on the financing of the project, including presumed qualification year and percentage. The Proposal may not be contingent on receipt of the Production Tax Credit or Investment Tax Credit.

[REDACTED]

6.7 Audited Financial Statements

7. Provide copies of the most recent audited financial statement and annual report for each Proposer for each of the past three years; including affiliates of Proposer (if audited statements are not available, unaudited statements are to be provided). Also, provide the credit ratings from Standard & Poor's and Moody's (the senior unsecured long term debt rating or if not available, the corporate rating) of Proposer and any affiliates and partners.

Although the Proposer does not have any audited financial statements or annual reports, the annual reports for Ørsted (formerly known as DONG Energy) for the past three fiscal years (ending December 31, 2018) are provided as Appendix 6-2, Appendix 6-3, Appendix 6-4. The annual reports for Eversource for the past three fiscal years (ending December 31, 2017) are provided as Appendix 6-5, Appendix 6-6, and Appendix 6-7. The unaudited 2016, 2017, and 2018 annual financials for the Proposer and its joint venture affiliates are provided as Appendix 6-8.

The Proposer does not have any outstanding debt and therefore does not have a credit rating. The current senior unsecured (long-term) debt ratings of Ørsted and Eversource are provided in Table 6.8.

Table 6.8 Ørsted and Eversource Credit Ratings

Sponsor	S&P	Moody's	Fitch
Ørsted	BBB+ (stable)	Baa1 (stable)	BBB+ (stable)
Eversource	A (stable) ¹	Baa1 (stable)	BBB+ (positive)

¹Rating for senior unsecured long-term debt. Corporate Credit rating is A+.

6.8 Board of Directors, Officers, and Trustees List

- List the board of directors, officers and trustees for the past three years and any persons who Proposer knows will become officers, board members or trustees.

The governance of the Owners' four jointly controlled companies is described in Section 6.2. The directors of both Bay State HoldCo LLC and BSW HoldCo LLC are

[REDACTED]

There are two former directors for Bay State HoldCo LLC and BSW HoldCo LLC:

[REDACTED]

There are no officers or trustees for the Proposer.

6.9 Bid Security

- Demonstrate Proposer's ability (and/or the ability of its credit support provider) to provide the required security, including its plan for doing so.

The Owners have ample resources to provide bid security on behalf of the Proposer. As of December 31, 2018,

[REDACTED]

Ørsted's financing strategy is to concentrate all group borrowings at the group parent level and to support finance operations and investments at subsidiary level through the injection of equity and group internal debt.

[REDACTED]

The Owners will provide contract security in accordance with the requirements of the OREC agreement.

6.10 Credit Issues/Credit Rating Downgrade Events

10. Provide a description of any current or recent credit issues/credit rating downgrade events regarding Proposer or affiliate entities raised by rating agencies, banks, or accounting firms.

Neither Ørsted nor Eversource have experienced any current credit issues or recent rating downgrade events, and neither is aware of any pending credit issues or credit rating downgrade events, nor any other financial issues raised by rating agencies, banks, or accounting firms. As demonstrated in Section 6.5, all three major credit rating agencies rate Ørsted's and Eversource's credit as stable or positive, and both are well regarded and maintain strong investment grade credit profiles. Eversource currently maintains the highest credit rating of any company in the Energy and Utility industry in the United States.

6.11 Pending Litigation

11. Disclose any pending (currently or in the past three years) litigation or disputes related to projects planned, developed, owned or managed by Proposer or any of its affiliates in the United States, or related to any energy product sale agreement.

See the annual reports referenced in Section 6.7, which disclose material litigations involving the Owners' respective affiliates. In particular, a historic Ørsted NA affiliate (Elsam Kraft A/S, which has now been merged with other Ørsted entities) was party to litigation in which the Danish competition authority found that it charged excessive prices in the Danish wholesale power market from July 1, 2003 through July 1, 2006 (Elsam Kraft A/S only became owned by Ørsted NA's ultimate parent company on July 1, 2006). On appeal, however, the High Court of Western Denmark ruled in Ørsted's favor on May 24, 2018 for the period of January 1, 2005 through July 1, 2006; and the Danish Appeals Permission Board subsequently ruled that that decision may not be appealed to the Danish Supreme Court. Nevertheless, following the Danish competition authority's finding, consumers also brought claims for damages, for which a litigation provision has been established; those claims remain pending notwithstanding Ørsted's victory on appeal.

Eversource Energy, one of the parent companies of the Proposer, and Avangrid, Inc. are defendants in a class action (PNE Energy Supply LLC v. Eversource Energy and Avangrid, Inc., Docket No. 1:18-cv-11690-DJC) alleging that the defendants manipulated the wholesale prices of natural gas sold to electric generation facilities in New England. Eversource has moved to dismiss the complaint. Oral arguments on the motion to dismiss were held on January 18, 2019, and a decision is expected shortly.

A similar consolidated class action case against Eversource Energy and Avangrid before the same judge (Scott Breiding, et al. v. Eversource Energy and Avangrid, Inc., C.A. No. 17-12274-DJC), asserting the same claims as in the PNE case, was dismissed by the court on September 11, 2018. The Breiding decision is now on appeal in the First Circuit Court of Appeals.

In connection with the development, construction, and operation of the Block Island Wind Farm, Ørsted's affiliate Deepwater Wind successfully defended several lawsuits and regulatory challenges, including an appeal of the Rhode Island Public Utilities Commission's approval of its power purchase agreement. Within the past three years: a federal appellate

court affirmed the dismissal of a lawsuit challenging the power purchase agreement, Riggs v. Curran, 863 F.3d 6 (1st Cir. 2017); and a federal district court dismissed a lawsuit seeking to enjoin cable-installation activities, Narragansett Indian Tribe v. Narragansett Elec. Co., No. 16-0216 (D.R.I. Nov. 30, 2016) (dismissing case). In June 2018, a complaint was filed with FERC challenging the power purchase agreement on grounds similar to those invoked in the Riggs case and its related regulatory proceedings. The matter was docketed as Kathryn E. Leonard v. Deepwater Wind Block Island, LLC et al., EL18-171, and motions to dismiss filed by Narragansett Electric Co. and the Rhode Island Public Utilities Commission have been pending since July 2018.

[REDACTED]

6.12 Expected Operating Life

-
12. Provide the expected operating life of the proposed Project and the depreciation period for all substantial physical aspects of the offer, including generation facilities, generator lead lines to move power to the grid, and transmission system upgrades.
-

[REDACTED]

[REDACTED]

[REDACTED]

6.13 Affiliated Entities and Joint Ventures

-
13. List all of Proposers' affiliated entities and joint ventures transacting business in the energy sector.
-

As detailed in Section 6.2, Ørsted NA and ESI jointly control the companies that are involved in the Project.

Virtually all of Eversource's business is conducted in the energy sector. Ørsted owns, sometimes jointly, over one hundred entities active in the energy sector. Please see Figure 6.1 for a corporate structure chart of the Owners' joint venture, as well as Ørsted's 2018 and Eversource's 2017 Annual Reports (Appendices 6-4 and 6-7) for a complete list of affiliated entities and joint ventures.

6.14 Litigation, Disputes, Claims or Complaints, or Events of Default

14. Describe any litigation, disputes, claims or complaints, or events of default or other failure to satisfy contract obligations, or failure to deliver products, involving Proposer or an affiliate, and relating to the purchase or sale of energy, capacity or renewable energy certificates or other electricity products.
-

Neither the Proposer nor any of its affiliates has been implicated in any litigation, disputes, claims or complaints, or events of default or other failure to satisfy contract obligations, or failure to deliver products, involving, and relating to the purchase or sale of energy, capacity or renewable energy certificates or other electricity products in the U.S.

See Section 6.11 for further details regarding pending litigation.

6.15 Statement Regarding any Governmental Investigation

15. Confirm that Proposer, and the directors, employees and agents of Proposer and any affiliate of Proposer are not currently under investigation by any governmental agency and have not in the last four years been convicted or found liable for any act prohibited by State or Federal law in any jurisdiction involving conspiracy, collusion or other impropriety with respect to offering on any contract, or have been the subject of any debarment action (detail any exceptions).
-

Neither the Proposer, the Owners or their affiliates, nor any of their respective directors, employees, or agents (acting in their professional capacities) is currently under investigation by any governmental agency, or has in the last four years been convicted or found liable for any act prohibited by State or Federal law in any U.S. jurisdiction involving conspiracy, collusion or other impropriety with respect to bidding on any contract, or has been the subject of any debarment action.

See Section 6.11 on litigation involving affiliates of Eversource.

7 INTERCONNECTION AND DELIVERABILITY

6.4.7 Proposers are required to demonstrate the Offshore Wind Generation Facility's interconnection status and deliverability capabilities. Proposers should provide the following information:

The Proposer takes a holistic view of interconnection and deliverability, from the Project's Lease Areas to the POI. This includes consideration of the critical aspects of development: interconnection studies, onshore route site control, and onshore permitting plan. This holistic approach applies not only to this Section 7, but also our approach with respect to site control (Section 3) and permitting (Section 8).

The Proposer's strategy started with performing extensive analysis of the onshore grid to understand deliverability and the extent of potential transmission system upgrades required [REDACTED]. The Proposer then proactively developed several potential onshore POIs and reviewed land rights and permitting requirements associated with each POI.

For the offshore transmission facilities, the Proposer was able to draw on proven designs, used extensively on other Ørsted offshore wind projects.

Describe measures to identify and control the regulatory and operational risks related to the delivery of energy from the Offshore Wind Generation Facility.

7.4 Energy Delivery into NYCA

4. Demonstrate that energy and associated ORECs generated by the facility can be delivered into the NYCA. For an Offshore Wind Generation Facility interconnecting in an adjacent Control Area, describe how Proposer intends to fulfill the External Project Delivery Requirement.
-

7.5 Injection Point Capacity

5. Provide detail regarding the available capacity, at the time of submission, of the proposed Injection Point.
-

[REDACTED]

8 ENVIRONMENTAL ASSESSMENT AND PERMIT ACQUISITION PLAN

6.4.8 Proposers are required to demonstrate a plan for environmental assessment and permit acquisition for the Offshore Wind Generation Facility. Proposers should provide the following information:

Ørsted has unmatched experience permitting offshore wind, having developed, permitted and installed more than 1,100 offshore WTGs in a wide range of water bodies around the globe. Additionally, through the development and construction of the Block Island Wind Farm, the Proposer's team has gained a unique understanding of the environmental conditions and permitting requirements for the waters of the northeast United States. Building upon over seven years of intensive environmental studies in these regional waters, as well as on-going engagement with state and federal resource agencies, the Proposer has developed a comprehensive permit acquisition plan.

In addition to its experience with the Block Island Wind Farm, the Project will benefit from the current permitting and outreach activities by the Proposer's team for the South Fork Wind Farm, the Revolution Wind Farm and the Bay State Wind project, which will also be located in the RI-MA Wind Energy Area (WEA). The Proposer's team is currently engaged in comprehensive environmental and technical surveys, as well as extensive governmental and stakeholder consultations, in connection with the South Fork Wind Farm and the Revolution Wind Farm. Expanding these efforts to include the Project will be an efficient and straightforward process.

As part of the development of the Block Island Wind Farm project, members of the Proposer's team conducted permit coordination with the BOEM, U.S. Army Corps of Engineers (USACE), National Ocean and Atmospheric Administration's (NOAA's) National Marine Fisheries Service (NOAA Fisheries), the U.S. Fish and Wildlife Service (USFWS), and the Rhode Island Coastal Resources Management Council (RI CRMC). In addition to these regulatory authorities, the development team engaged key stakeholders early in the process and established constructive relationships with the Wampanoag Tribe of Gay Head (Aquinnah), the Narragansett Indian Tribe, the commercial and recreational fishing community, and both regional and national environmental non-governmental agencies who advocate for the protection of marine mammals and ocean conservation.

The Proposer's team also has recent, relevant experience working with these same federal regulatory agencies to support the ongoing permitting of the South Fork Wind Farm, in the addition to experience working with New York State (NYS) entities that will also be engaged in the permitting of the Project. These agencies include the state Office of General Services (OGS), Department of State (DOS), Office of Parks Recreation & Historic Preservation (OPRHP), Department of Environmental Conservation (DEC), and Department of Public Service (DPS). In addition, Ørsted has developed a constructive working relationship with the Shinnecock Indian Nation on Long Island. The Proposer expects that the experience gained, and relationships established, during both the South Fork Wind Farm and the Block Island Wind Farm will streamline the permitting process for the Project.

Relying on these strengths, the Proposer is supported by a very experienced team, combining permitting and environmental assessment expertise and knowledge from the European wind markets with local knowledge of the regulatory regime and processes in the U.S. to ensure that the Project is fully permitted in accordance with the necessary regulations and in the most expedited fashion practicable.

8.1 Permits, Licenses, Environmental Assessments and/or Environmental Impact Statements Required

1. Provide a comprehensive list of all the permits, licenses, and environmental assessments and/or environmental impact statements required to construct and operate the Project. Along with this list, identify the governmental agencies that are responsible for issuing approval of all the permits, licenses, and environmental assessments and/or environmental impact statements. If a Proposer has secured any permit or has applied for a permit, please indicate this in the response.

A list of the Federal authorizations and required consultations with Federal regulatory agencies is provided in Table 8.1. Table 8.1 includes the status of any permit application(s) or permits that have been secured by the Proposer.

Table 8.1 Federal Authorizations and Required Consultations

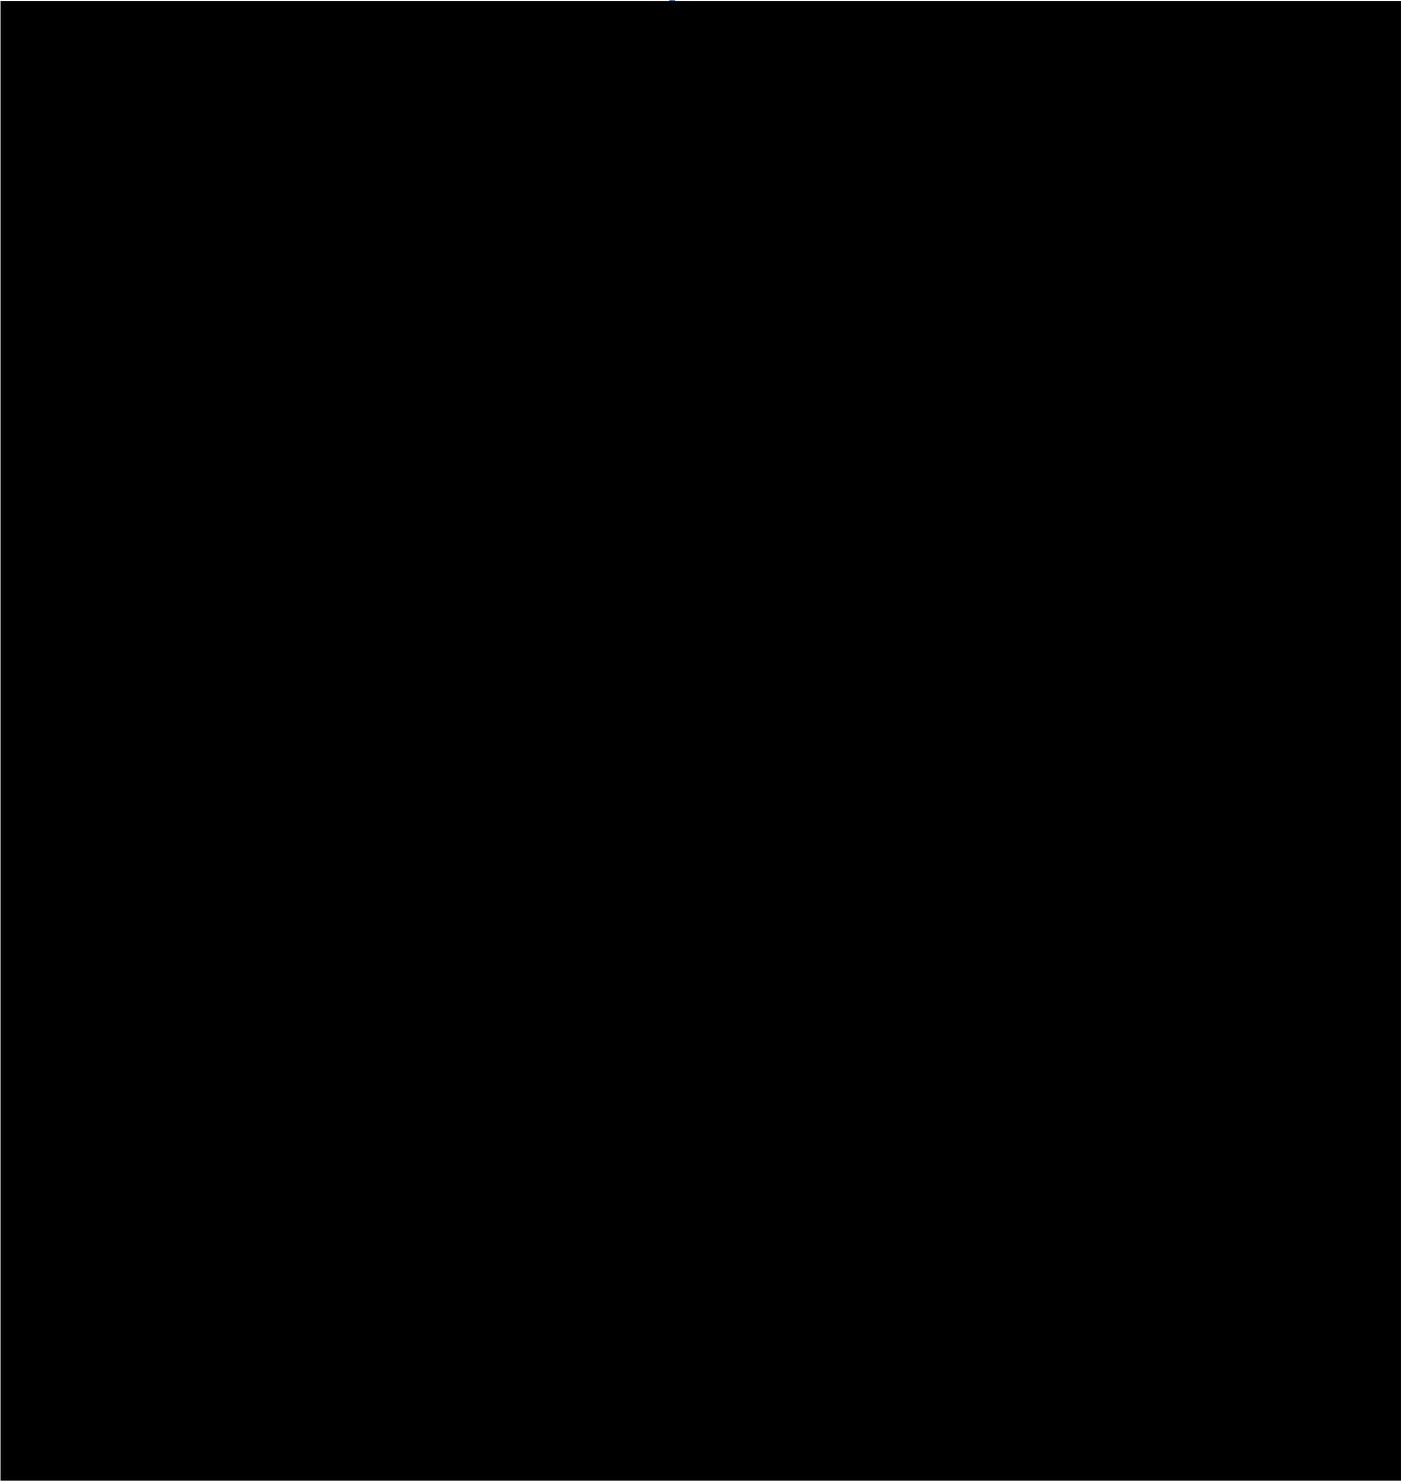

Consent/Permit and/or Consultation	Regulatory Agency	Status
Commercial Lease of Submerged Lands for Renewable Energy Development on the Outer Continental Shelf, in accordance with Section 8 of the Outer Continental Shelf Lands Act (OCSLA)	Department of the Interior, BOEM	[Redacted]
[Redacted]	BOEM	
[Redacted]	BOEM	
Facility and Design Report (FDR)	BOEM	
Fabrication and Installation Report (FIR) (30 Code of Federal Regulations [CFR] §§ 585.700-702)	BOEM	
National Environmental Policy Act (NEPA), including consultation under: Magnuson-Stevens Fishery Conservation and Management Act, Marine Mammal Protection Act, National Historic Preservation Act, Endangered Species Act	BOEM, USACE, NOAA Fisheries, U.S. Department of Defense (DoD), Advisory Council on Historic Preservation, USFWS Northeast Region (Region 5) and cooperating regulatory agencies	
Individual Permit pursuant to Rivers and Harbors Act, Section 10 and Clean Water Act (CWA), Section 404	USACE	

Table 8.1 Federal Authorizations and Required Consultations (continued)

Consent/Permit and/or Consultation	Regulatory Agency	Status
Private Aids to Navigation (PATON) Permit and Local Notice to Mariners	U.S. Coast Guard, District I	
No Hazard Determination	Federal Aviation Administration (FAA)	
Consultation with DoD	Office of the Assistant Secretary of Defense for Energy, Installations, and Environment, DoD Siting Clearinghouse and U.S. Naval Seafloor Cable Protection Office	
OCS Air Quality Permit and General Conformity Determination	U.S. Environmental Protection Agency (EPA) New England (Region 1)	
National Pollutant Discharge Elimination System (NPDES) 2017 Construction General Permit & Stormwater Pollution Prevention Plan (SWPPP)	EPA New England (Region 2)	
Incidental Take Authorization (i.e., Incidental Harassment Authorization or Letter of Authorization) pursuant to Section 101(a)(5) of the Marine Mammal Protection Act, Endangered Species Act, Migratory Bird Treaty Act, the Bald and Golden Eagle Protection Act, and the Magnuson-Stevens Fishery Conservation and Management Act	NOAA Fisheries and/or USFWS	

Components of the Project are located within State waters of New York and on land located within New York, including the onshore substation and electric transmission interconnections; therefore, certain New York regulatory agencies have jurisdiction over the Project. Necessary New York permits, licenses, and environmental assessments and/or environmental impact statements are identified in Table 8.2.

Under Article VII, the New York State Public Service Commission (NYSPSC) has the ability to waive any local ordinances or town code that is determined to be unduly restrictive in view of the existing technology, factors of costs or economics, or the needs of consumers. Except for those provisions the Proposer specifically requests that the Commission not apply, the Proposer is required to comply with all substantive local legal provisions that are applicable to the Project. [REDACTED]

8.1.2 Massachusetts

Massachusetts Office of Coastal Zone Management – Coastal Zone Program Federal Consistency Certification Letter of Concurrence

In Massachusetts the Office of Coastal Zone Management is the lead agency with regards to coastal and ocean uses and implements the state’s coastal program under the federal Coastal Zone Management Act (CZMA). In response to the Oceans Act of 2008, the Massachusetts Executive Office of Energy and Environmental Affairs (EO EEA) issued the original Massachusetts Ocean Management Plan in December 2009. The plan was revised in 2015 as the Oceans Act requires EO EEA to review and update the plan at least once every five years. The ocean plan provides a management framework that establishes how the relevant agencies coordinate review and approval of proposed projects within state waters, including the Project.

8.1.3 Rhode Island

RI CRMC—Coastal Zone Management Program Federal Consistency Certification Letter of Concurrence

On September 20, 2018, the Rhode Island Coastal Resources Management Council (RICRMC) requested concurrence from the NOAA Office for Coastal Management to issue approval for a routine program change for an amended geographic location description (GLD) as part of the RI Ocean Special Area Management Plan (SAMP) and Federal Consistency list as part of its federally approved Rhode Island Coastal Resources Management Program pursuant to the federal CZMA. RICRMC requested expanded federal consistency review authority of certain federal license or permit activities, namely offshore wind facilities and submarine cables, within the Massachusetts Wind Energy Area (WEA) and adjacent federal waters. On December 7, 2018, the NOAA Office for Coastal Management concurred with RICRMC’s routine program change request and approved the new, expanded GLD and modified federal consistency list, thus, granting authority to RICRMC to assess consistency of BOEM-issued licenses or permits with the RI Ocean SAMP enforceable policies (Rhode Island Code of Regulations [RICR] Section 11.10) to an expanded area of federal waters, including the Project’s Lease Areas.

8.2 Anticipated Timeline for Seeking and Receiving Required Permits

2. Provide the anticipated timeline for seeking and receiving the required permits, licenses, and environmental assessments and/or environmental impact statements. Include a project approval assessment which describes, in narrative form, each segment of the process, the required permit or approval, the status of the request or application and the basis for projection of success by the milestone date. All requirements should be included on the project schedule as described in Section 6.4.10.

In developing its permitting plan, the Proposer reviewed federal, state, and local permitting requirements to identify the applicable regulatory framework for the construction and

operation of an offshore wind energy project located primarily in federal waters. A comprehensive list of required permits and licenses, regulatory consultations, and environmental assessments necessary for Project authorization is provided in Section 8.1. A matrix of applicable regulations and permits, including the current status and/or anticipated date of receipt, is provided in Table 8.1 and Table 8.2.

As detailed in Section 2.2, the Proposer's organization has extensive experience in acquiring permits for commercial projects of similar scale. The timeline for application submittal and receipt for all required permits, licenses, and environmental assessments and/or environmental impact statements is detailed in Section 10.1 and is summarized below in

[REDACTED]

[REDACTED]

[REDACTED]

As shown in [REDACTED] the Proposer anticipates approval of the COP and BOEM's corresponding Record of Decision in [REDACTED]

[REDACTED] reflects:

- Consistent engagement with regulatory agencies;
- In-depth knowledge of federal and state permitting processes;
- Project milestones achieved to date; and
- Ørsted's and Eversource's collective experience, supported by NYPA and Con Edison Transmission, in conducting environmental impact assessments and permitting large infrastructure projects.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

The applicable federal and state regulatory requirements for Project development are summarized below.

8.2.1 Federal Permits and Approvals

Bureau of Ocean Energy Management—Commercial Lease, Approval of Site Assessment Plan and COP, Issuance of Record of Decision, and Approval of Facility and Design Report and Fabrication and Installation Report

For renewable energy and alternative use development on the Outer Continental Shelf (OCS), BOEM is the lead federal agency responsible for the issuance of an OCS commercial lease, authorization of a SAP and a COP and, pursuant to the National Environmental Policy Act (NEPA), issuance of a ROD approving the COP. An Environmental Impact Statement (EIS) will be drafted on behalf of BOEM to examine the Project’s potential impacts on the environment during the construction, operation and eventual decommissioning stages. During that NEPA review process, which includes multiple public comment and review periods, BOEM will solicit input from federally recognized tribes and federal agencies during informal and/or formal consultations. Federal regulatory agencies include:

- Advisory Council on Historic Preservation (and the State Historic Preservation Offices of Massachusetts, Rhode Island and New York);
- United States Army Corps of Engineers (USACE);
- United States Coast Guard (USCG);
- Federal Aviation Administration (FAA);
- United States Fish and Wildlife Service (USFWS);
- National Oceanic and Atmospheric Administration’s (NOAA’s) National Marine Fisheries Service (NOAA Fisheries);
- Department of Defense (DoD); and
- United States Environmental Protection Agency (EPA).

The ROD will record BOEM’s decision on its chosen “preferred alternative”, describe the alternatives BOEM considered in relation to the proposed action (i.e., construction of the Project), address public comments on the Draft EIS, and (if necessary) propose mitigation and monitoring measures to be undertaken by the Proposer.

Per Secretarial Order 3355⁸, in an effort to implement a more efficient federal review process, BOEM is obligated to undertake a page-limited EIS and complete its NEPA review within 12 months of the publication of a Notice of Intent to publish a Draft EIS. A ROD is anticipated to be issued in [REDACTED]. Additionally, per Executive Order 13807, a “One Federal Decision” policy promulgated a memorandum of understanding among federal regulatory agencies to agree to a single timeline of environmental reviews and authorization decisions for proposed major infrastructure projects, prepare a single EIS covering all federal

⁸ In August 2017, Department of Interior issued Secretarial Order 3355 Streamlining National Environmental Policy Act Reviews and Implementation of Executive Order 13807 “Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure.” The Secretarial Order imposes uniform page and time limits on the completion and review of an EIS.

agency actions, sign one ROD, and issue all necessary authorization decisions within 90 days of issuance of the ROD.⁹

States have the opportunity to directly weigh in on the NEPA process under the CZMA, National Historic Preservation Act, and Clean Water Act (CWA), as well as on issues arising under State laws or of general concern. The Proposer will engage with New York permitting authorities and host an interagency kick-off meeting. This will be a continuation of the Proposer's efforts to streamline federal and state permitting processes similar to the Proposer's interagency kick-off meeting with federal and MA and RI state agencies in February 2017.

After the issuance of the ROD, the Proposer will be required to submit both a Facility and Design Report (FDR) and a Fabrication and Installation Report (FIR) for BOEM's review pursuant to 30 Code of Federal Regulations (CFR) §§ 585.700-702. Fabrication and installation of the approved facilities may be initiated only after notification from BOEM that it has received these reports and had no objection.

U.S. Army Corps of Engineers—Individual Permit

Section 10 of the Rivers and Harbors Act of 1899 requires authorization from the USACE for construction of any structure or any obstruction or alteration to a navigable water of the United States. The excavation and dredging or deposition of material into the "waters of the United States", including wetlands, requires authorization from the USACE under Section 404 of the CWA. The New York District USACE will likely be a cooperating agency under BOEM's NEPA process to satisfy the NEPA requirements for these authorizations.

U.S. Coast Guard—Private Aids to Navigation Permit and Local Notice to Mariners

The USCG will issue a Private Aids to Navigation (PATON) approval for a lighting scheme permanently affixed to the wind turbine generator, offshore [REDACTED] to alert mariners to potential hazards to navigation.

[REDACTED] A Local Notice to Mariners is a weekly notification published by the USCG to disseminate information to mariners concerning aids to navigation, hazards to navigation, and other items of marine information of interest.

Federal Aviation Administration/Department of Defense—Consultation

The FAA has implemented specific regulations for the safe use of air space relative to the location of wind turbine generators, the majority of which are land-based. All structures that exceed 499 feet above ground level are considered obstructions and, therefore, the FAA is obligated to study them to determine their effect on the navigable airspace. In the offshore environment, the FAA's Obstruction Evaluation Group will conduct aeronautical studies based on information provided by the Proposer out to 12 nautical miles (nm) to assess hazards to

⁹ See Memorandum of Understanding Implementing One Federal Decision Under Executive Order 13807 (April 10, 2018). Available at: <https://www.whitehouse.gov/wp-content/uploads/2018/04/MOU-One-Federal-Decision-m-18-13-Part-2-1.pdf>.

flight patterns and radar interference and to also impose requirements under federal obstruction lighting and marking regulations.

The Proposer will initiate consultation with FAA regarding aviation and lighting. The Proposer will conduct a detailed analysis of the airspace to identify obstacles and clearance surfaces that would limit Project development (e.g., location of wind turbine generators) as well as a detailed analysis of any issues with radar line of sight. [REDACTED]

During its review, the FAA will engage with the DoD and Department of Homeland Security (i.e. USCG) and solicit input from these agencies. The FAA would then issue a Determination of No Hazard, noting that the WTGs and other offshore equipment would have no adverse effect on air navigation.

In addition, the Proposer will consult with the Office of the Assistant Secretary of Defense for Energy, Installations, and Environment, DoD Siting Clearinghouse which would provide an analysis of potential impacts to military operations (e.g., military testing and training operations and airborne military radar capabilities). The Proposer will also complete consultation with the U.S. Naval Seafloor Cable Protection Office in order to avoid the Navy's submarine assets, including cable systems.

U.S. Environmental Protection Agency—OCS Air Permit, General Conformity Determination, and Construction General Permit

The Project will require an OCS permit because of its location beyond 25 nm from the state seaward boundary (and be subject to federal air quality requirements). In accordance with Section 328(a)(1) of the Clean Air Act, the OCS permit would regulate the pollutants emitted from the pre-construction, construction and operation activities proposed for the Project.

Per Section 328, the definition of "OCS source" is broader in scope as compared to EPA's regulations for land-based stationary sources. Onsite construction equipment and emissions from that equipment, and pollutants emitted from certain vessels that service the OCS source are subject to regulation in the OCS air permit. Typically, these emissions sources would not be included for an analogous onshore project under stationary source regulations.

For this Project, marine vessels or other equipment employed for construction and/or operation are considered OCS sources.

Additionally, activities located in state territorial waters and within state nonattainment areas for national ambient air quality standards may require a General Conformity determination. As specified in 40 CFR Part 93, Subpart B, in the COP, the Proposer would demonstrate that the activity will not interfere with the state implementation plan for air quality control and would not cause or contribute to new violations and would ensure attainment and maintenance of the national ambient air quality standards.

Furthermore, the EPA would issue a National Pollutant Discharge Elimination System 2017 Construction General Permit and approve a Stormwater Pollution Prevention Plan (SWPPP) for the Project. A National Pollutant Discharge Elimination System Construction General Permit is needed because the onshore construction activities would disturb one or more acres of land and the Proposer is designated as an operator of a construction site and has control over construction plans and specifications, including modifications to them; or daily

site activities necessary to ensure compliance with the permit and SWPPP, including directing workers at the site to carry out permit compliance activities. A SWPPP is a permit compliance with a description specific to erosion and sediment implementation controls.

For federal compliance with the CWA for activities in New York, the New York SPDES program has been approved by the EPA and is administered by the New York State Department of Environmental Conservation (NYSDEC). The NYSDEC has issued a SPDES General Permit for Stormwater Discharges from Construction Activity (GP-0-15-002).

U.S. Fish and Wildlife Service and National Marine Fisheries Service—Incidental Take Authorization

During the NEPA review process, BOEM will engage in formal consultation with regulatory agencies, including NOAA, USFWS, USACE and EPA. These agencies are statutorily mandated to review the Project's reasonably foreseeable impacts to protected resources, assess whether additional analysis is warranted (e.g., Biological Assessment and/or Essential Fish Habitat Assessment), and evaluate the need for mitigation measures during Project construction and/or operation. USFWS and NOAA Fisheries will review Project impacts to marine, coastal, and terrestrial threatened and endangered species protected by the Federal Endangered Species Act. Impacts to non-listed species and habitats will also be evaluated under several other wildlife protection laws, including the Migratory Bird Treaty Act, the Bald and Golden Eagle Protection Act, the Marine Mammal Protection Act, and the Magnuson-Stevens Fishery Conservation and Management Act.

The Proposer will seek any additional required documentation as part of consultation on endangered species including Incidental Harassment Authorization (IHA) or a Letter of Authorization (LOA) requests.

8.2.2 State Permits, Approvals and Consultation

Although the Project will not be located within State waters of Massachusetts or Rhode Island, the Federal CZMA authorizes states with a federally approved coastal zone management program that may be affected by the issuance of a federal license or lease to review the proposed activities to ensure consistency with that state's enforceable coastal zone policies. New York, Massachusetts, and Rhode Island will all have jurisdiction to review the Project under the CZMA (as discussed in Section 8.1 and below).

Executive Office of Energy and Environmental Affairs, Massachusetts Office of Coastal Zone Management—Coastal Zone Management Program Federal Consistency Certification Letter of Concurrence

The Proposer will submit a letter to the Massachusetts Office of Coastal Zone Management (MA CZM) noting that the Proposer will voluntarily submit a request for a Federal Consistency Review by MA CZM for the Project. Additionally, by request, the Proposer will provide any necessary data and information to facilitate the State's review. The EO EEA must issue a letter of concurrence to the Consistency Certification prior to COP approval by BOEM.

A copy of all federal application materials will be submitted to MA CZM at the same time they are sent to BOEM. The Proposer will certify to BOEM and MA CZM that the Project complies and is consistent with the state's Coastal Management Program. By federal regulation, MA CZM has six months to complete its review of a consistency certification and make a decision; however, this process is typically completed within one to two months.

*Rhode Island Coastal Resources Management Council—Coastal Zone Management Program
Federal Consistency Certification Letter of Concurrence*

Similar to the Consistency Certification process in Massachusetts, the Proposer will submit a letter to the RICRMC noting that the Proposer will voluntarily submit a request for a Federal Consistency Review for the Project. Additionally, by request, the Proposer will provide (and has provided) any necessary data and information to facilitate the State’s review. The Proposer will meet with RICRMC to discuss reasonably foreseeable coastal effects to Rhode Island coastal resources from the Project.

The Proposer will submit a CZMA Consistency Certification to the RICRMC, with an explanation of how proposed activities potentially affecting State coastal resources are consistent with State coastal policies. Conformance with the RICRMP, Rhode Island’s federally approved program under the CZMA, will be the primary State regulatory driver for the Project. Conformance with the RI Ocean SAMP policies and the overall RICRMP will be assessed through the Federal Consistency Review that must be filed with the COP (30 CFR 585.611(b), 585.627).

New York

New York has direct jurisdiction over facilities that will occur in or traverse through its territorial waters within 3 nm (5.6 km) from shore.

[REDACTED]

The State requirements associated with installation of an export cable across State territorial waters in New York are described below.

8.3 Site Assessment Plan and COP

3. Provide the SAP and COP, if completed. If the SAP and/or COP are not completed, provide the status of development of these plans and a proposed plan and timeline for completion.
-

[Redacted content]

9 ENGINEERING AND TECHNOLOGY

6.4.9 Provide information about the specific technology or equipment including the track record of the technology and equipment and other information as necessary to demonstrate that the technology is viable.

9.1 Preliminary Engineering Plan

1. Provide a preliminary engineering plan which includes at least the following enumerated information. If specific information is not known, identify manufacturers, vendors, and equipment that will be considered.
 - a. Type of foundation, Offer Capacity, and generator lead line transmission technology

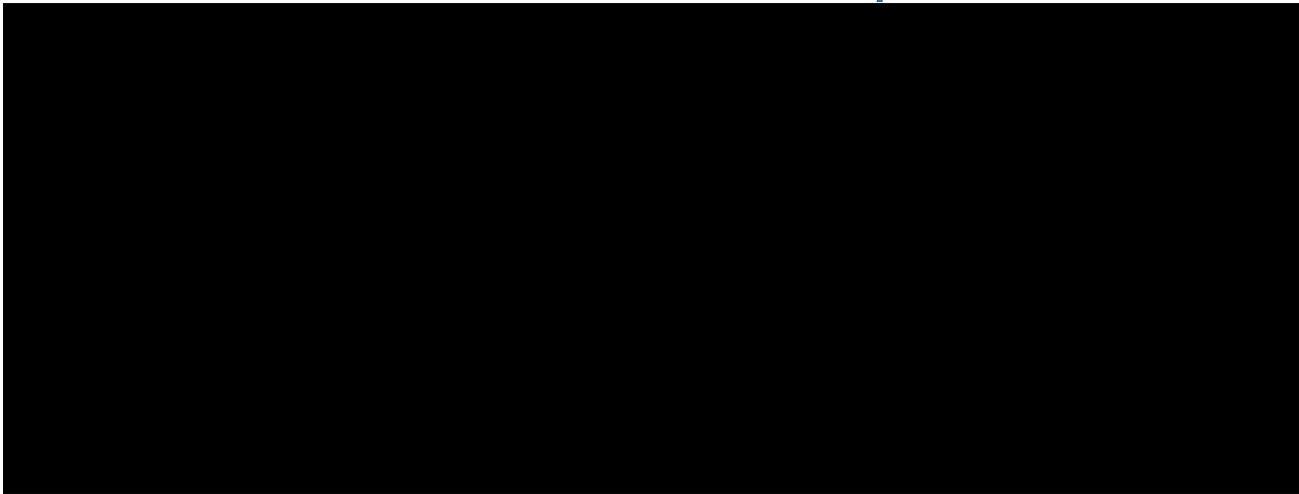

9.1.1 Preliminary Engineering Plan (Proposed Design¹⁰)

The Project is an offshore wind facility having a proposed [REDACTED]
[REDACTED]
[REDACTED]
[REDACTED] The generation will be interconnected with [REDACTED] via a network [REDACTED] array cables. [REDACTED] will collect the energy output from the generation and transform the voltage level from [REDACTED] [REDACTED] The energy will be delivered from the offshore substations via [REDACTED] to the onshore point of interconnection.

The Proposed Design for the Project (a preliminary engineering plan) can be broken down into the key components described in [REDACTED]:

[REDACTED]

[REDACTED]

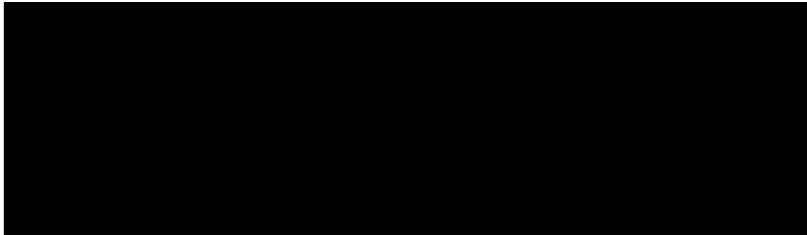

-
- b. Major equipment components to be used, including nacelle, hub, blade, tower, foundation, transmission structures and platforms, electrical equipment and cable)
-

Generation

Foundations

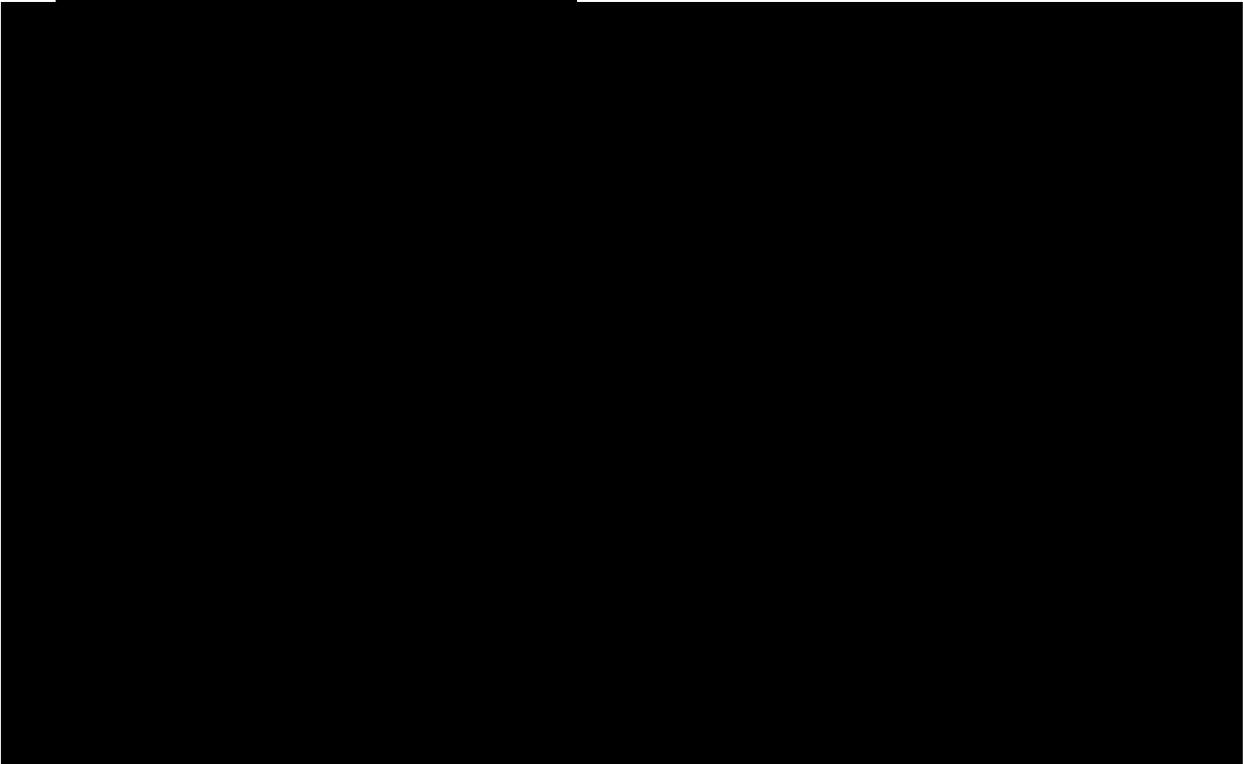

in [redacted] and shown

The final foundation package selected will depend on the water depth, WTG size, and the results of detailed geotechnical investigations.

WTGs

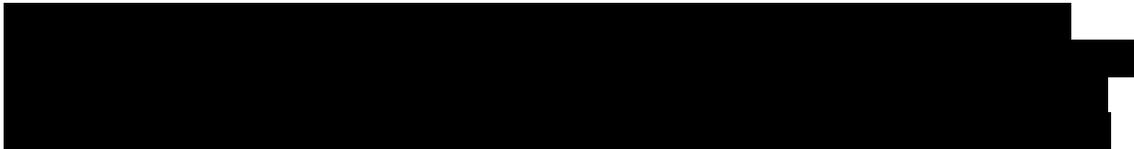

Transmission

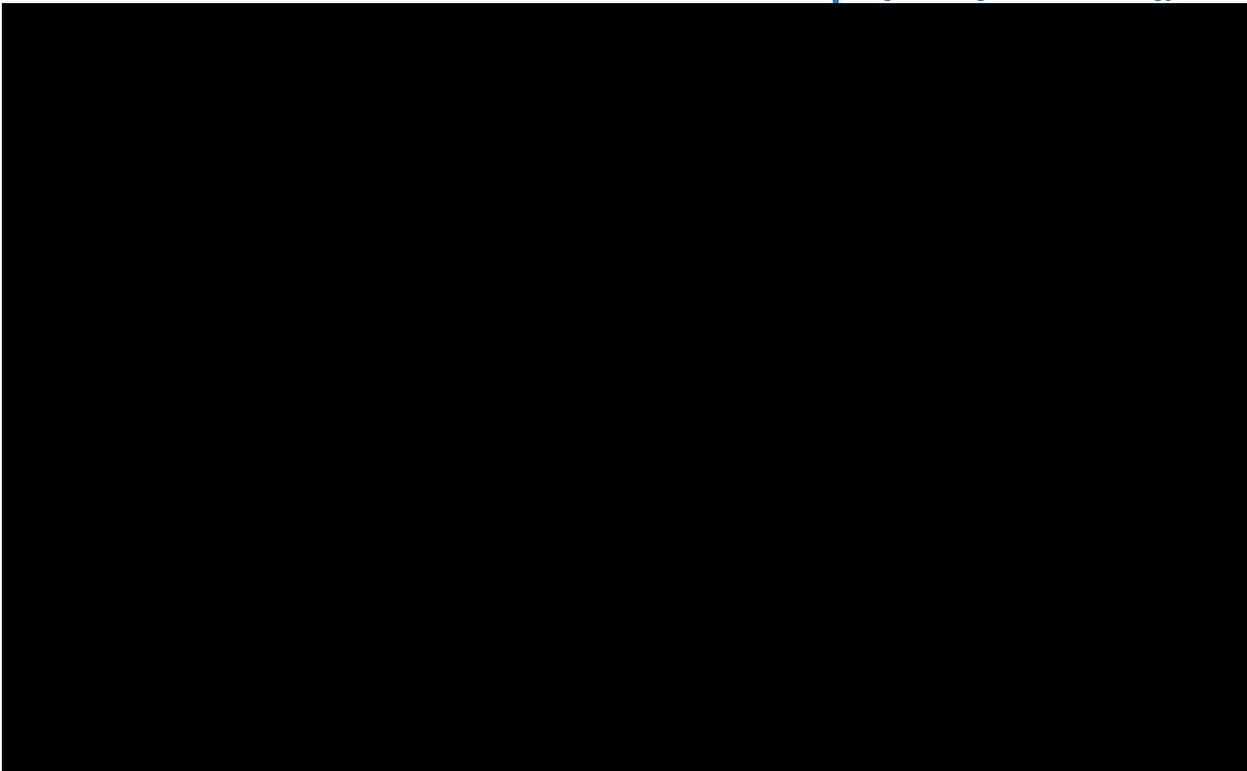

Array Cables

The array cables connect the WTGs to the offshore substation. The WTGs are arranged in “strings,” with a number of WTGs on a single cable string, based on the power capacity of the platform connecting the cables and the WTG rating.

The construction of the array cables is shown in Figure 9.4.

A map showing the cable layout can be found in [redacted]
[redacted]

Export Cable

The export cable system connects the offshore substations to the onshore substation, and ultimately delivers high voltage power to the onshore [REDACTED] for entry into the pool transmission system. The export cable system is comprised of [REDACTED]

A cross-section of the armored, insulated, highly engineered [REDACTED] is shown below (Figure 9.5)

A map showing the export cable route can be found in [REDACTED]

Offshore Substation

will carry equipment for high-voltage transmission and distribution, along with other equipment such as a backup diesel generator, batteries, and panels for WTG control.

The topside structure will be equipped with a crane and boat landing for maintenance of the and WTGs. The structural system for the topside is a steel brace column system with climate shield that are non-load-carrying except for local wind load. The main braces and columns are tubulars (circular members), and members in the decks are wide flange H profiles. This type of structural system has been used on 15 of Ørsted's previous offshore substations. This method has also been used at the majority of oil and gas installation in the Gulf of Mexico and elsewhere.

The reasons for choosing the system are:

- Many fabricators from which to choose ensuring selection of a proven structural solution and competitive pricing;
- Allows for parallel fabrication as each deck can be fabricated separately; and
- Robust system offering the flexibility needed to incorporate changes as design proceeds and/or if required by permits/siting agencies.

The cable and cellar deck will be open decks and the remaining rooms will in general be closed, climate-controlled rooms with the exception of the transformer and shunt rooms, which will be natural ventilated via openings in the walls.

[Redacted]

Onshore Suppliers

[Redacted]

f. *Equipment vendors selected/considered*

The Proposer has either designated the preferred vendor for other key elements of the Proposed Design [Redacted] or identified a pool of qualified vendors for other components. Appendix 9-2 summarizes those vendors and lists other potential suppliers for the Project.

g. Track record of equipment operations

All equipment in the Proposed Design (or under consideration) is proven technology, with a strong history of performance described in Table 9.5. See Section 5 for the expected operational performance of the Project.

Table 9.5 History of Equipment Operations

Item	History
Generation	
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
Transmission	
Array Cable	This technology has been reliably operating for decades, including in Ørsted projects.
Export Cable	The export cable technology is widely accepted in the offshore wind industry and has been used for decades (and has an even longer history in other applications).
Offshore Substation	The offshore substation consists of equipment that is operating and generally accepted in the offshore wind and other industries. Ørsted has installed similar offshore substation systems in 15 other projects.
[REDACTED]	[REDACTED]
Onshore Substation	The design of the onshore substation is consistent with similar equipment installed by transmission system owners/operators. Based on the experience with its system, Eversource expects a useful life of at [REDACTED].

The Proposer’s strategy for mitigating technology risk is to use proven technology.

The critical equipment components for the Project are either the same or are based on earlier versions that have been manufactured and operated with success on various large-scale offshore wind farms by Ørsted as well as the general offshore wind industry. As such, all equipment used in this Project has a history of proven and reliable operation, and poses no practical technological risk.

Ørsted or Eversource have installed, operated and maintained equipment from the majority of the manufacturers referenced in the table provided in Appendix 9-2. Table 9.6 identifies similar equipment in use by Ørsted from the same manufacturers.

Table 9.6 Same or Similar Equipment in Operation (based on Proposed Design)

[REDACTED]

[REDACTED]

- h. Design considerations (technology selection, layout) for climate adaptation and resiliency such as sea level rise, potential impacts from increased frequency and severity of storms (i.e. superstorms, hurricanes), seismic activity, etc.

Offshore

The WTGs, offshore substations and foundations will be designed in compliance with both national and international standards, as described in detail below.

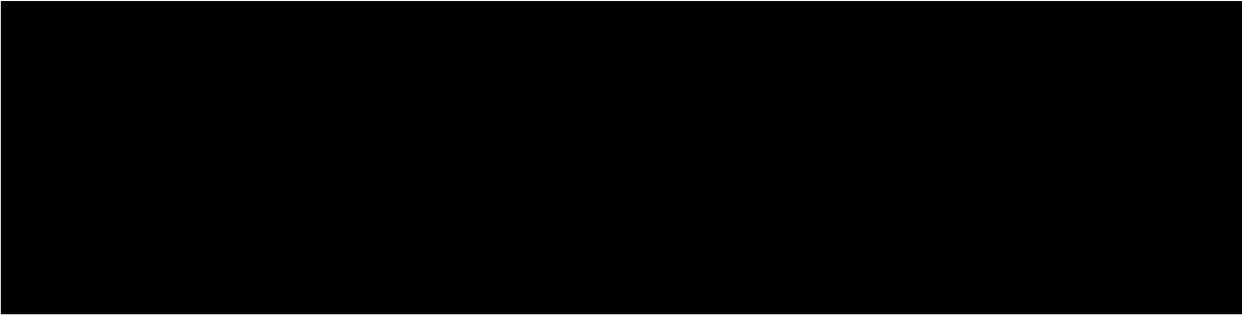

Overall, the design values necessitated by the metocean conditions within the Project Lease Areas are consistent with and/or lesser than what has been required within the 25 successfully operating wind farm sites owned and operated by Ørsted in the U.S., Europe, Taiwan and Germany.

Onshore

Onshore resiliency to sea level rise and storm surge will be achieved based on site selection for the onshore substation and the POI.

In accordance with the Community Risk and Resiliency Act of 2014 (CRRRA), the New York State Department of Conservation (NYS DEC) has adopted science-based projections of future sea level rise scenarios based on various greenhouse gas emission models. Specifically, NYS DEC has adopted sea level rise projections of 72 inches (6 feet) above current levels by the year 2100. A report developed by NYSERDA (also called ClimAID) has created models which project the sea level rise scenarios in three New York State regions over various time intervals, and under different emissions scenarios.

Additionally, existing site elevations were determined by accessing the NYS DEC, Coastal New York LiDAR (Tidal Water Raster DEM), 2012. Current Federal Emergency Management Agency (FEMA) flood mapping was accessed using the FEMA Map Service Center on-line mapping.

Infrastructure

[REDACTED] This corresponds to the anticipated end of life for the proposed onshore substation facilities and upgrades. [REDACTED]

[REDACTED]

[REDACTED]

Onshore Transmission Cable

The onshore transmission cable route would begin at a transition-joint bay (TJB). From the TJB the onshore transmission cables would be installed inland, [REDACTED] into the new onshore substation. The design for the onshore underground cables would be in accordance with the latest revision to all applicable industry codes and standards as well as applicable regulations of the federal, state and local authorities. These codes and standards, as well as industry best practice, include the assumption of groundwater presence, regardless of sea level. A rise in sea level would not impact cable design and operation. Location of the TJB and splice vaults along the onshore cable route will be evaluated in the detailed design phase with consideration for maintenance access given projected sea level rise, among other factors.

- i. In the event the equipment manufacturer has not yet been selected, identify in the equipment procurement strategy the factors under consideration for selecting the preferred equipment as well as the anticipated timing associated with the selection of the equipment manufacturer, including the timing for binding commercial agreement(s).

Ørsted's in-house *Product Line* team will apply the most recent technological advances; an optimized design, supply chain, and logistical train; and safe and environmentally sound solutions and work methods to the U.S. offshore wind market.

In addition, the Proposer has hired a dedicated full-time local procurement team, with the sole role of identifying and supporting local suppliers through the tender processes and development of the supply chain; and continuing to employ a multi-contract approach to the development and construction of our offshore wind projects.

To deepen the local supply chain, the Proposer generally requests major suppliers to set forth similar requirements for their sub-supplier markets. These goals include achieving a maximum of local supply and jobs by focusing on the right opportunities for local potential suppliers; collaborating with suppliers across tiers and across markets to develop a sustainable and competitive offshore wind supply chain; and identifying, developing, and sharing (e.g. via project specific supply chain events) opportunities to increase business for New York based suppliers.

In selecting the equipment for the Project, the Proposer will focus on the supplier's or manufacturer's:

- Ability to develop the local supplier market;
- Track record and references;
- Financial rating;
- Safety and quality records; and
- Price level of their proposals.

As described in Section 9.1, the Proposer has initiated detailed dialogues with equipment suppliers. A critical path schedule including a timeline for securing equipment components is provided in [REDACTED]. A detailed overview of this is provided in [REDACTED] below.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

9.2 Lighting Controls

1. Describe the lighting controls that will be utilized on the Offshore Wind Generation Facility and explain how these controls comply with the minimum contract standards and the Offshore Wind Order.

The Proposer's design for the aviation and navigation marking system for the Project will comply with the requirements of the relevant regulatory agencies. Compliance will be verified as part of the process for issuing relevant approvals and/or permit for the Project. [REDACTED]

[REDACTED]

See [REDACTED] for details regarding representative lighting controls for the Project that will be refined during the permitting process and further consultation with regulatory agencies.

10 PROJECT SCHEDULE

6.4.10 A Proposer must demonstrate that its Project can be developed, financed, and constructed within a commercially reasonable timeframe. Proposer is required to provide sufficient information and documentation showing that Proposer’s resources, process, and schedule are adequate for the acquisition of all rights, permits, and approvals for the financing of the Project consistent with the proposed milestone dates that support the proposed Commercial Operation Date.

Proposers are required to provide a complete critical path schedule for the project from the notice of award to the start of commercial operations. For each project element listed below, provide the start and end dates.

The Proposer will achieve commercial operation for the Project by [REDACTED]

The schedule for the development and construction of the Project is commercially reasonable and achievable. It is supported by Ørsted’s history with planning and executing multiple large scale offshore wind projects globally and the Proposer’s knowledge of the local regulatory framework and supply chain dynamics. The Proposer’s ability to execute the Project is supported by Ørsted’s track record of having 25 offshore wind farms successfully developed, constructed and in operation in the U.S., Europe and Taiwan, and an additional five wind farms under construction. Technical design and constructability is retained in-house and is based on almost three decades of experience with engineering, procuring, and constructing offshore wind farms and complex onshore/offshore transmission systems.

Below are highlights of the Proposer’s expertise in planning and demonstrates its ability to execute the Project in a commercially reasonable timeframe.

Some of the tools developed by Ørsted based on lessons learned from its previous projects, include:

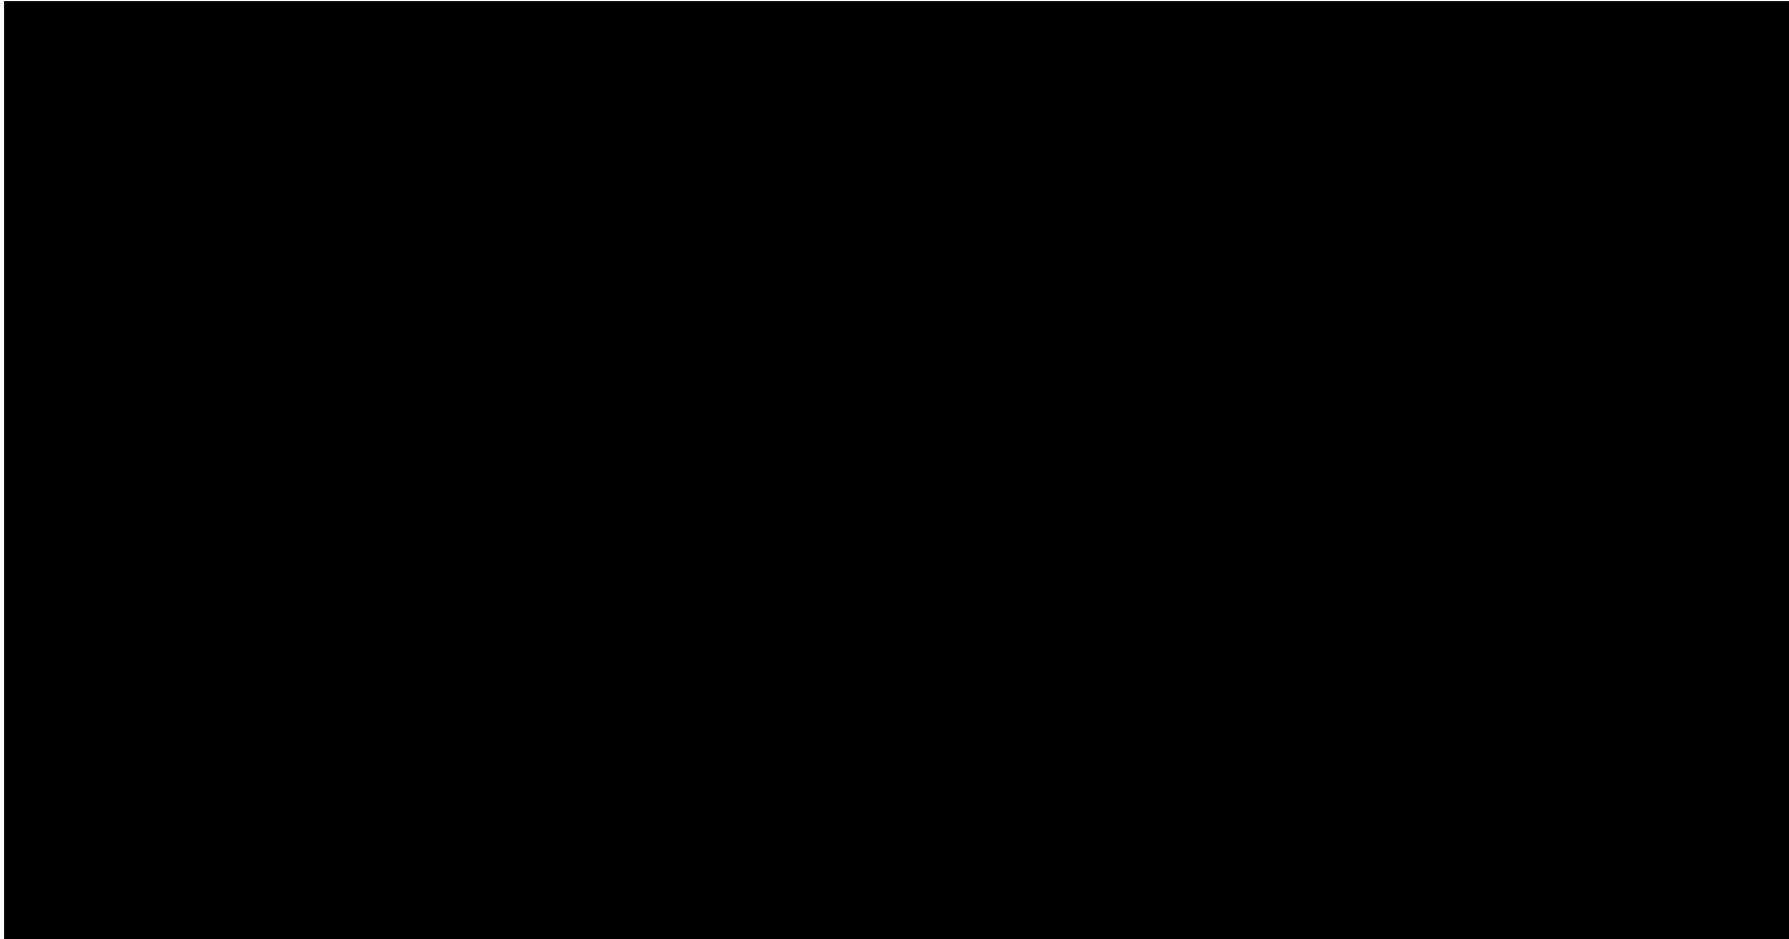

- [REDACTED]
- [REDACTED]
- [REDACTED]

10.1 Schedule and Critical Path

1. Identify the elements on the critical path. The schedule should include, at a minimum, preliminary engineering, financing, acquisition of real property rights, Federal, state and/or local permits, licenses, environmental assessments and/or environmental impact statements (including anticipated permit submittal and approval dates), completion of interconnection studies and approvals culminating in the execution of the Interconnection Service Agreement, financial close, engineer/procure/construct contracts, start of construction, construction schedule, and any other requirements that could influence the Project schedule.
-

The critical path schedule for the Project is detailed in [REDACTED] below. For a higher resolution critical path schedule, see [REDACTED].

10.2 Permissible Offshore Construction Windows

2. Describe the anticipated permissible offshore construction windows, and how the construction milestones will be accommodated within these windows.
-

[REDACTED]

In addition, the Proposer aims to utilize the periods of the year with the least amount of expected weather downtime for the offshore campaigns to ensure efficient and timely construction of the wind farm.

These marine life and weather constraints are accounted for in the Project schedule provided in Section 10.1. Further details on environmental constraints are provided in [REDACTED]

10.3 Status of all Critical Path Items

3. Detail the status of all critical path items, such as receipt of all necessary siting, environmental, and NYISO approvals.
-

The status of these critical path items is provided in [REDACTED].

[REDACTED]

11 CONSTRUCTION AND LOGISTICS

6.4.11 This section of the Proposal addresses necessary arrangements and processes for outfitting, assembly, storage, and deployment of major Project components such as turbine nacelles, blades, towers, foundations, and transmission support structures. Please provide a construction and logistics plan that captures the following objectives:

The Proposer brings to bear its deep well of experience in executing large-scale, offshore wind projects around the world. Indeed, the Proposer is the only company with actual experience of constructing and commissioning an offshore wind farm in the U.S. and will have constructed, interconnected, and commissioned three additional U.S. offshore wind farms by the time this Project is commissioned.

Through Ørsted's unique multi-contracting approach that breaks major work packages into more discrete tasks, and the greater deployment of its own human resources, the Proposer will retain control over the outfitting, assembly, deployment, and commissioning to a greater degree than any other developer in the business. This enhanced control covers not only the procurement phase and the division of work scopes into more narrow delivery packages, but also characterizes the construction phase.

The construction setup has evolved over years of collaboration with key suppliers and contractors. The Ørsted approach to collaboration is typically that of a long-standing relationship, where procedures, vessels, and tools are optimized from project to project to achieve those construction efficiencies for which Ørsted is known.

11.1 Major Tasks Associated with Deployment of Proposed Project

1. List the major tasks or steps associated with deployment of the proposed Project and the necessary specialized equipment (e.g., vessels, cranes).

As set out below there are seven major tasks associated with the construction and deployment of the Project. During the installation phase, daily progress will be recorded in corporate systems, which gives unique comparative data in helping to internally benchmark how much time each installation task should take and under all weather conditions. These major tasks, the specifics of which are discussed in greater detail in Section 11.3 below, include:

- foundations;
- WTGs;
- array cables;
- export cables;
- offshore substation [REDACTED];
- onshore cables; and
- onshore substation.

Each of the seven major packages listed typically will have its own installation contract with a specialized contractor, and each offshore package will require vessels (specialized

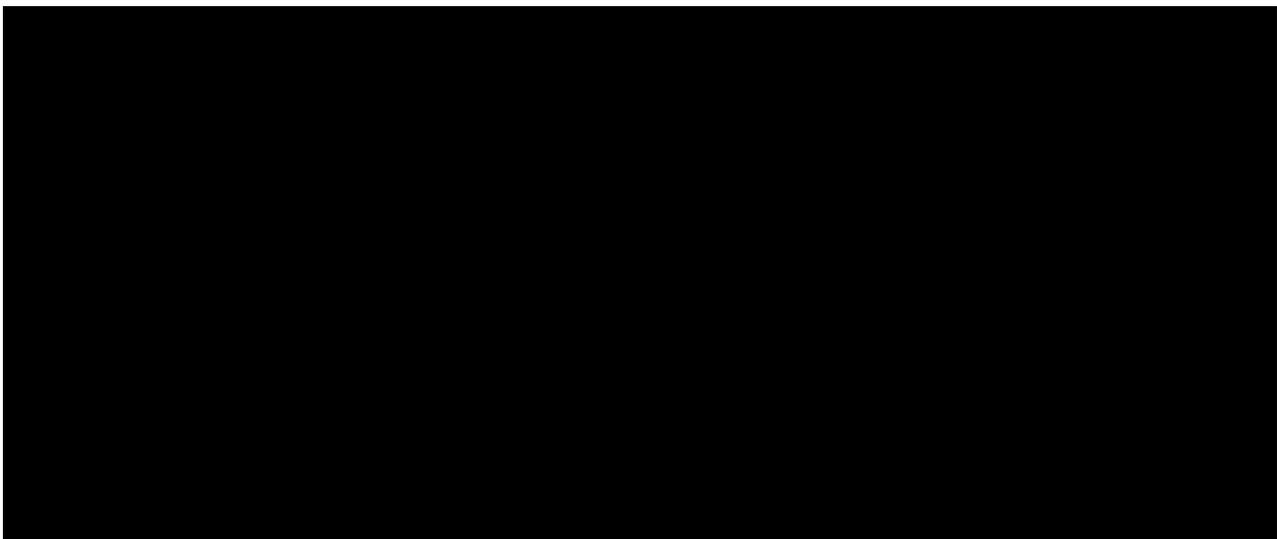

equipment) as described in Table 11.2. The WTG will be installed by the supplier, using the supplier’s specialized lifting equipment (see Section 11.3) and product specific procedures.

The overall coordination and management of the onshore and offshore construction work will be carried out under the Ørsted EPC Director, with dedicated construction site staffing. This approach gives the in-house EPC organization full control of the installation campaign, maintaining quality and schedule goals.

11.2 Documentation of Site Control for Marine Terminals and Other Waterfront Facilities

2. Identify the marine terminals and other waterfront facilities that will be used to stage, assemble, and deploy the Project for each stage of construction.
 - a. If available, evidence that Proposer or the equipment/service provider have right(s) to use a marine terminal and/or waterfront facility for construction of the Project (e.g., by virtue of ownership or land development rights obtained from the owner).
 - b. If not available, describe the status of acquisition of real property rights for necessary marine terminal and/or waterfront facilities, any options in place for the exercise of these rights and describe the plan for securing the necessary real property rights, including the proposed timeline. Include these plans and the timeline in the overall Project schedule in Section 6.4.10.
 - c. Identify any joint use of existing or proposed real property rights for marine terminal or waterfront facilities.

An overview of the Project’s use of marine terminals and other waterfront facilities with respect to each stage of construction is summarized in [REDACTED] and described in greater detail below. [REDACTED]

11.2.1 WTG staging and pre-assembly

The specific Project scope covering the installation of the WTG components consists of the marine facilities that would support the staging, pre-assembly and load out of the nacelle units, the tower sections and the blades.

[REDACTED]

Foundation staging

The specific Project scope covering the installation of the foundation structures consists of the marine facilities that would support the staging, outfitting and load out of the monopile units, the transition pieces and/or the secondary steel components for final outfitting.

[REDACTED]

Cables

The specific Project scope covering the U.S.-based installation of cables consists of the marine facilities that would support the staging, preparation and load out of the sub-sea array (in-field) cables.

[REDACTED]

Construction Base

The specific Project scope covering the Construction Base during the offshore installation phase consists of both the marine facilities that would support the berthing and sheltering (including mooring arrangements) of Crew Transfer Vessels (CTV) as well as the onshore office and warehouse facilities required to house the site personnel, offshore technicians and the tools and equipment to support the offshore installation activities.

[REDACTED]

11.3 Proposed Approach for Staging and Deployment of Major Project Components

-
3. Describe the proposed approach for staging and deployment of major Project components to the Project site. Include a description and discussion of the laydown facility/facilities to be used for construction, assembly, staging, storage, and deployment.
-

The development and construction plan for the Project breaks the proposed approach for staging and deployment to the Project site into the following major seven components:

- foundations
- WTGs
- electrical – array cables
- electrical – export cable
- offshore substation [REDACTED]
- onshore cables and
- onshore substation.

Section 11.4 describes the number, type and size of vessels that will be used and their respective roles in the staging and deployment plan. The proposed design, methods, and equipment are typical solutions which the Proposer is continuously improving, hence actual execution set-up may differ.

11.3.1 Foundations

The foundation construction and installation package consist of monopile and transition piece fabrication, transition piece outfitting, and monopile and transition piece installation on site.

Monopile and Transition Piece Tube Fabrication and Transit

[REDACTED]

Transition Piece Outfitting

Like the monopile, the transition piece consists of a tube, but is much shorter, on the order of 25 m. In addition to the pipe, the transition piece consists of an external steel/concrete platform, internal steel platforms, and electrical items, such as lights, wires, switch gears, cable trays and various gauges, as well as rails for the elevator that runs up to the nacelle from the top of the transition piece. The steel platforms consist of standard steel profiles that are cut and welded manually, produced either at a central production location near the port or dispatched to local subcontractors in the area. All steel parts must be painted before assembly. Once the platforms are mounted in the transition piece, the assembly of all

internal components can take place and the transition pieces loaded onto an installation vessel.

Monopile and Transition Piece Installation

After moving the hammer, an anode cage will be installed on the monopile. Next, the transition piece is placed on top of the monopile and bolted together. During the bolting process a remotely operated vehicle will create and secure a connection between the anode cage and the monopile for cathodic protection. When foundation installation is finished a tent or similar cover will be put on top of the transition piece to protect the structure and electrical components inside.

Figure 11.1 shows the transportation and installation of a monopile and transition piece.

Figure 11.1 Transportation and Installation of a Monopile (Westermost Rough, 2014)

Figure 11.2 Installation of a Transition Piece (Westermost Rough, 2014)

11.3.2 WTG

WTG installation will be staged out of the WTG pre-assembly harbor (see [REDACTED]).

WTG Pre Assembly

The WTG components will be pre-assembled and prepared for load out at the WTG pre-assembly harbor (see [REDACTED]). The load out harbor also functions as the storage buffer for WTG components, ensuring a constant supply to the installation vessel transiting between the offshore installation site and the load out port. The pre-assembly and storage activities in the harbor requires skilled workers and heavy lifting equipment such as crawler cranes to move the components around.

The main and most resource demanding pre-assembly activity is tower assembly and outfitting. Incoming tower sections are inspected for overseas transport damage, and temporary stored by means of purpose-built heavy-duty tower lift-trucks.

When assembling the complete tower structure, the bottom tower section is upended from horizontal to vertical and bolted into a temporary tower stacking foundation near the quayside (Figure 11.3). Thereafter, middle section(s) are stacked and bolted on top, the service-lift is installed inside the complete structure, and multiple electrical connections are run for HV cable, communication, DAVIT crane and nautical marking components. Certification work is carried out on certified structural elements and components. Pre-commissioning work prior to load out includes applying ID markings and a QC walk-down with the owner's representative (Figure 11.4 and Figure 11.5).

Figure 11.3 Upending of Tower Section in Load Out Port (Gode Wind, 2015)

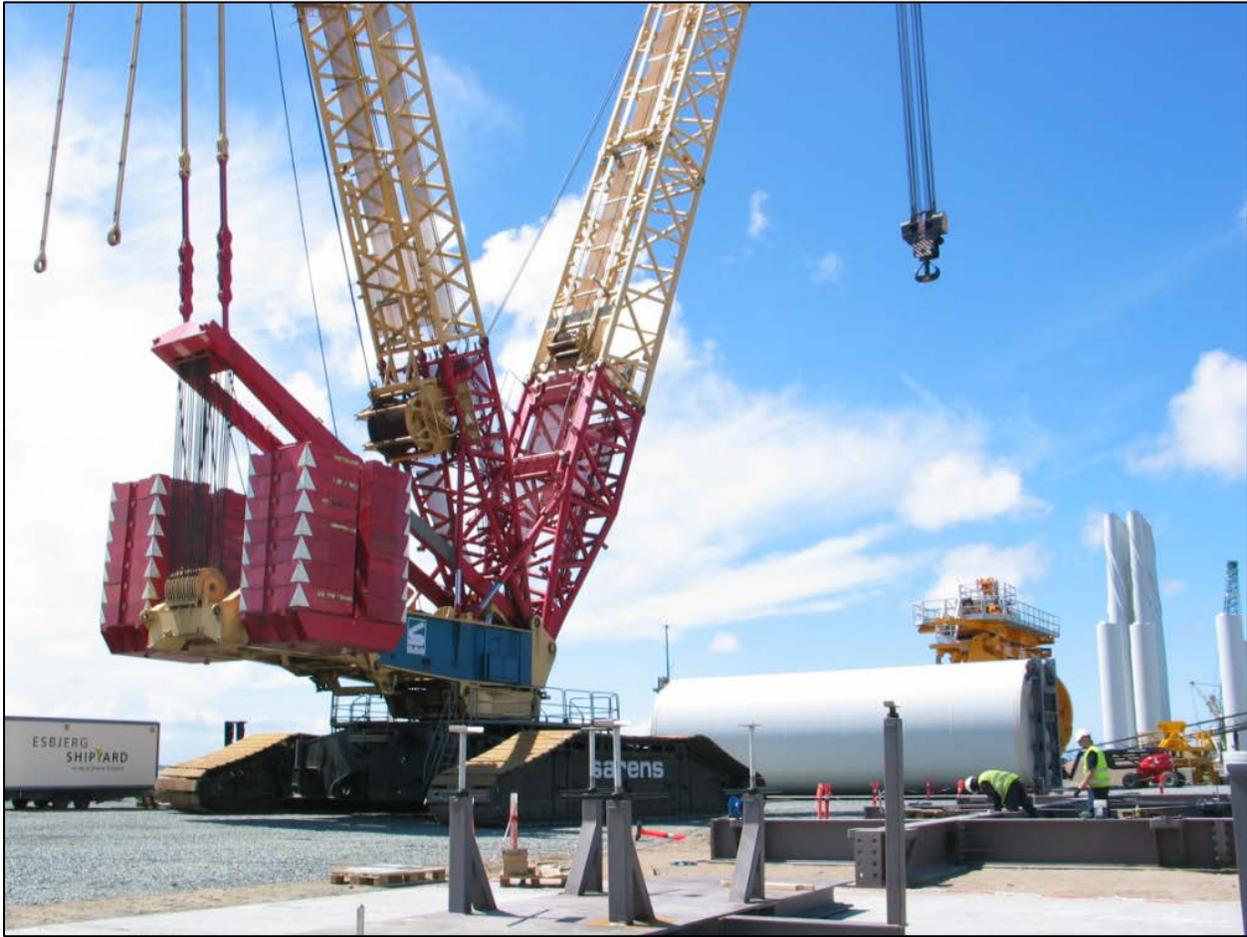

Figure 11.4 Towers Assembled and Ready at the Load Out Port (Gode Wind, 2015)

Figure 11.5 Towers Assembled and Ready for Load Out (Gode Wind, 2015)

Nacelles are unloaded at the pre-assembly harbor by means of multi wheelers or a harbor crane. A thorough inspection for overseas transport damage is conducted, and pre-assembly consists of mounting the heli-hoist (basket), cooling unit with wind measurement instruments, and aviation marking components. If a nacelle is stored for a longer period, it needs to be conditioned by means of dehumidification and rotating of the entire drive train (e.g. generator). Prior to getting ready for load out, the nacelle assembly are pre-commissioned, ID-markings applied, and a QC walk-down with the owner's representative is conducted (Figure 11.6).

Figure 11.6 Nacelles Pre-assembled and Ready at the Load Out Port (Gode Wind, 2015)

WTG blades are stored at the pre-assembly site as well, transported via harbor crane and trucks with special trailers. Little pre-assembly or inspection is required (Figure 11.7).

Figure 11.7 Blades Ready at the Load Out Port (Gode Wind, 2015)

Through its collaboration with a terminal operator, the Project will have access to the highly skilled and appropriately licensed workforce supporting blade load out including:

- Site management (e.g. Site Manager, Supervisor(s), Planner, HSE, Secretary);
- Crane drivers;
- Multi wheeler and heavy lifting truck drivers;
- Other logistics vehicle site drivers;
- High voltage electricians;
- Low voltage and communication electricians;
- Mechanical fitters; and
- Dock workers.

WTG Installation

After pre-assembly of the WTGs, the WTG components (blades, nacelle and tower) will be [REDACTED]. WTG components will be fastened onto the deck of the installation vessel using specially designed seaworthy fastenings. Once fully loaded up to eight WTGs sets can be stored on board for transport and installation offshore (Figure 11.8).

Figure 11.8 Loading Towers onto Installation Vessel (Gode Wind, 2015)

Once positioned at the offshore site, the installation vessel jacks up and connects with a pre-installed foundation via gangway. Installation for each WTG is performed in five lifts; tower, nacelle, and three blades. This method of installing full towers and single blades from a dedicated installation vessel has proven to be an efficient and safe way to install WTGs offshore (Figure 11.9).

Figure 11.9 WTG Installation Vessel at Work - Installation of a WTG Blade (Borkum Riffgrund Wind Farm 1, 2014)

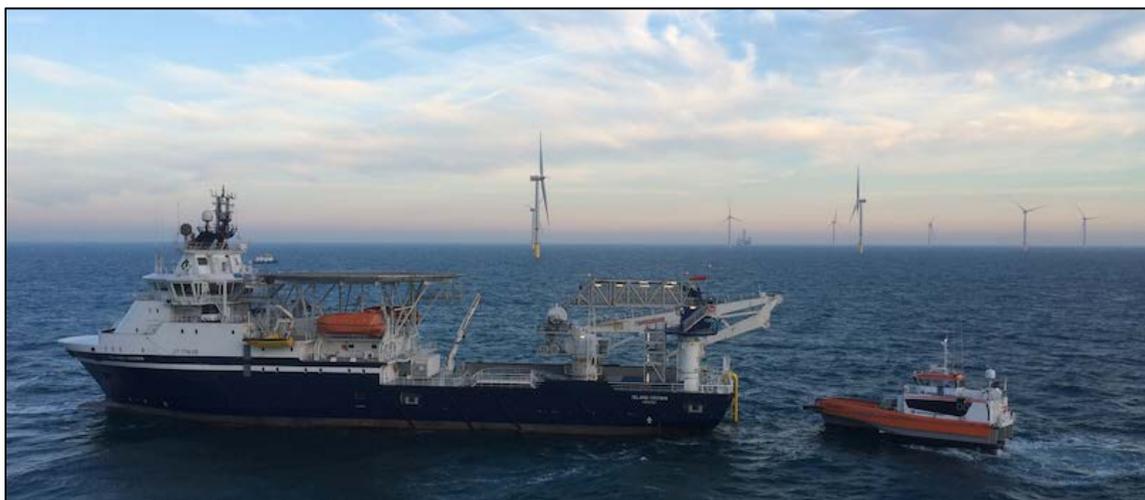

WTG Commissioning

After installation, the WTG is connected to the electric grid and commissioned. The commissioning harbor will be located in close proximity to the offshore windfarm and [REDACTED]; however, commissioning would likely be completed by technicians hosted by either a crew transfer vessel (CTV) and/or DP2 vessel with a “walk to work” access system (Figure 11.10). The DP2 vessel uses a gangway system to transfer commissioning technicians to the WTGs and acts as a hotel vessel at the same time. CTVs push onto the boat landing on the foundations to allow technicians to ascend the WTG.

WTGs typically begin producing power 1 to 4 days after installation has been completed.

Figure 11.10 DP2 Vessel and CTV (Gode Wind 01+02, 2015)

11.3.3 Electrical – Array Cable

A standard DP2 Cable Lay Vessel, and DP2 Post-lay burial vessel, with associated support craft, will be used to install the array cable. The Cable Lay Vessel will pick up a continuous length of cable and sail directly to site and start installation.

Full site characterization has yet to be undertaken; however, it is expected that sand (loose, becoming very dense) is the predominant feature with some harder formations that may be evident, in addition to boulders. Although subject to change, cable installation typically consists of:

- A DP2 vessel with turn tables or cable tanks will pick up and install the platform-connecting and inter-array cables, assisted by a pre dredging or mass flow excavation vessel for sand wave/excessive slope removal (route preparation);
- Another vessel will bury the cables by [REDACTED]; and
- Cable crossings will require special measures such as rock placement; mattresses; and/or propriety separation devices.

Further, the operation will be assisted by survey vessels for pre-cable lay surveys, post cable lay surveys, and Depth of Burial (DOB) surveys; and crew boats for tower teams, messenger wire installation, etc.; and a cable protection system during the cable installation period.

Both ends of the cable will be pulled into the transition piece or the offshore substation cable deck. After temporary hang-offs are installed a cable termination crew will commence final installation and commissioning.

11.3.4 Electrical – Export Cable

The installation of the route is anticipated to be completed with a standard installation vessel. An offshore joint will be required as a complete single cable cannot be transported in one transit due to weight and volume restrictions. Associated support craft will be used as necessary:

- Dredging, mass or controlled flow excavation vessels for sand wave/excessive slope removal (route preparation),
- DP2 vessels with turn table for cable transportation and installation,
- a jointing vessel or barge,
- a boulder clearance vessel equipped with a boulder clearance plough and/or orange peel grab,
- survey vessel(s) for pre-cable lay surveys, post cable lay surveys and DOB surveys,
- another vessel will bury the cables by either dredging, mass flow excavation, jet trenching, cutting and/or plowing,
- crew boats for platform access, etc.

Cable crossings will require special measures such as rock placement; mattresses; and/or propriety separation devices. A cable protection system will be implemented during cable installation.

The ends of the cable will be pulled into the transition joint bay and the offshore substation cable deck. A temporary hang-off will be installed and then the cable termination crew can commence their works.

11.3.5 Offshore Substation

Offshore Substation Fabrication and Installation

The offshore substation components - will be fabricated in selected fabrication yards, transported to the site, and installed.

[REDACTED]

[REDACTED]

It is anticipated that a [REDACTED] will lift and install the jacket and topside of the offshore substation. [REDACTED]

[REDACTED]

[REDACTED], on the installation vessel and installed during that campaign. Components are typically transported on a single transportation barge.

The topsides will be transported from the fabrication yard on a self-propelled HTV, as shown in Figure 11.12.

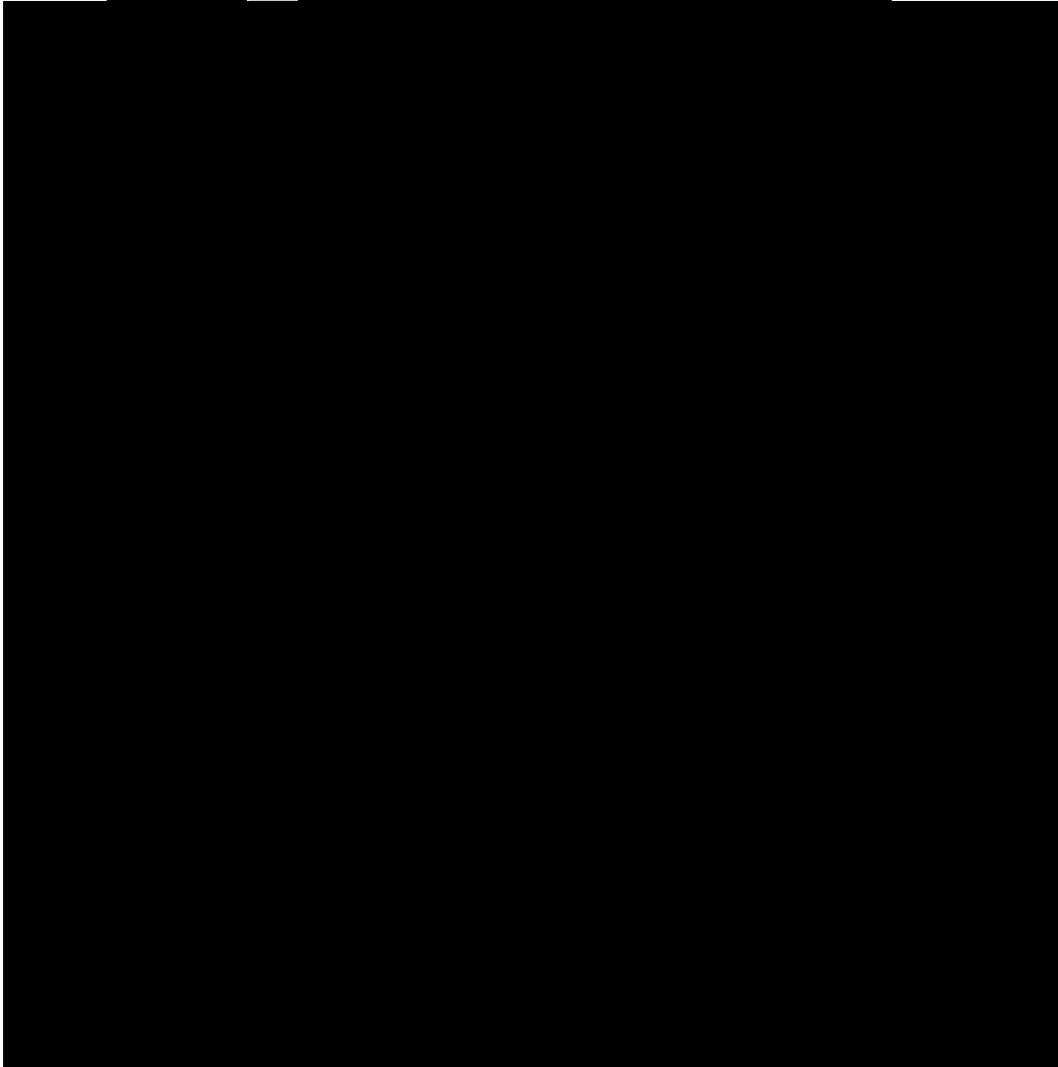

Figure 11.12 Typical Topside Transportation on HTV

The Installation Contractor’s HLV will rendezvous with the HTV at the offshore site and lift directly off the HTV deck.

Topside Installation

Offshore Substation Commissioning

All electrical equipment on the offshore substation needs to be commissioned for quality, safety and functionality of each individual system and well as the integrated substation. The phases of commissioning are:

Factory Acceptance Tests

Factory acceptance tests are carried out to confirm that the equipment under test has been manufactured in accordance with the approved design. These tests provide the supplier with the opportunity to identify any design or build quality issues in advance of the equipment being delivered to site. All issues identified should, where possible, be rectified by the supplier prior to shipment.

Site Acceptance Test

During the site acceptance test, the equipment suppliers commissioning engineer conducts testing of the components supplied (as stand-alone systems) under the Project scope, and tests the conformance of the delivered solution to the approved design and functional specifications. This process also confirms the integrity of the installation and the absence of any transit damage.

Site Integration Test

The site integration test involves the overall testing of the complete offshore substation. The system(s) under test may be composed of hardware, software, or hardware with embedded software. The site integration test is a process of verifying that the substation meets its requirements and performs in accordance with the design and the Proposer's expectations.

First Energization of HV equipment and On Load Tests

Following the completion of factory acceptance, site acceptance, and site integration tests, and providing all the associated documentation has been completed and a Pre-Energization Inspection carried out, the equipment can be considered ready for energization. At this stage, the system is handed over to the Senior Authorized Person who will carry out the actual energization of the HV system.

11.3.6 Onshore Substation

All the major equipment for the onshore substation will be installed upon completion of concrete foundations and cable duct banks. The equipment manufacturers are responsible for transportation, rigging, and placing the equipment on the concrete foundations.

The rigging company who acts as a subcontractor to the equipment manufacturer is responsible for all logistical services, e.g. engineered rigging and hauling plans, routing, permitting, clearance checking, escort, police escort, load analysis of transport, as well as dimensional restrictions. When required, the rigging company is also responsible for temporary local warehouse storage of equipment and components. Upon installation of the equipment on the foundations, the rigging company is responsible for checking alignment, anchoring, and proper temporary protection from weather.

Upon placing the equipment, the manufacturers are required to complete attachments of all components associated with each equipment piece. When required, as part of final deployment the equipment will be filled with an insulating fluid and/or insulating gas.

Onshore Substation Commissioning

All equipment, aside from the Static Synchronous Compensator (STATCOM), will be tested as soon as it is installed and control and protection equipment are available. Testing will be performed by competent and licensed contractors working in accordance with the test methodologies and plan reviewed and verified by qualified engineers. All tests will be documented by prescribed test reports and accepted by the Proposer. The commissioning will be performed in strict adherence to NY ISO's protocol on receiving permits and clearances.

and medium voltage breakers: Upon the installation of all breakers and control panels, each breaker will be acceptance tested. The acceptance testing will include operability of the breakers, functional testing of control and protection schemes, alarms and indications, as well as remote control (SCADA) operability.

Control Center: The control center will be acceptance tested at the manufacturer's facility. Upon the installation at the site, each control and protection scheme will be tested and commissioned along with other equipment.

STATCOM: The STATCOM will be installed and commissioned by the manufacturer. Upon successful commissioning of the STATCOM, the Proposer will commission the output of the STATCOM power feeders to the system. [REDACTED]

Step-Up Transformers: Upon the installation of the step-up transformers, they will be acceptance tested and commissioned.

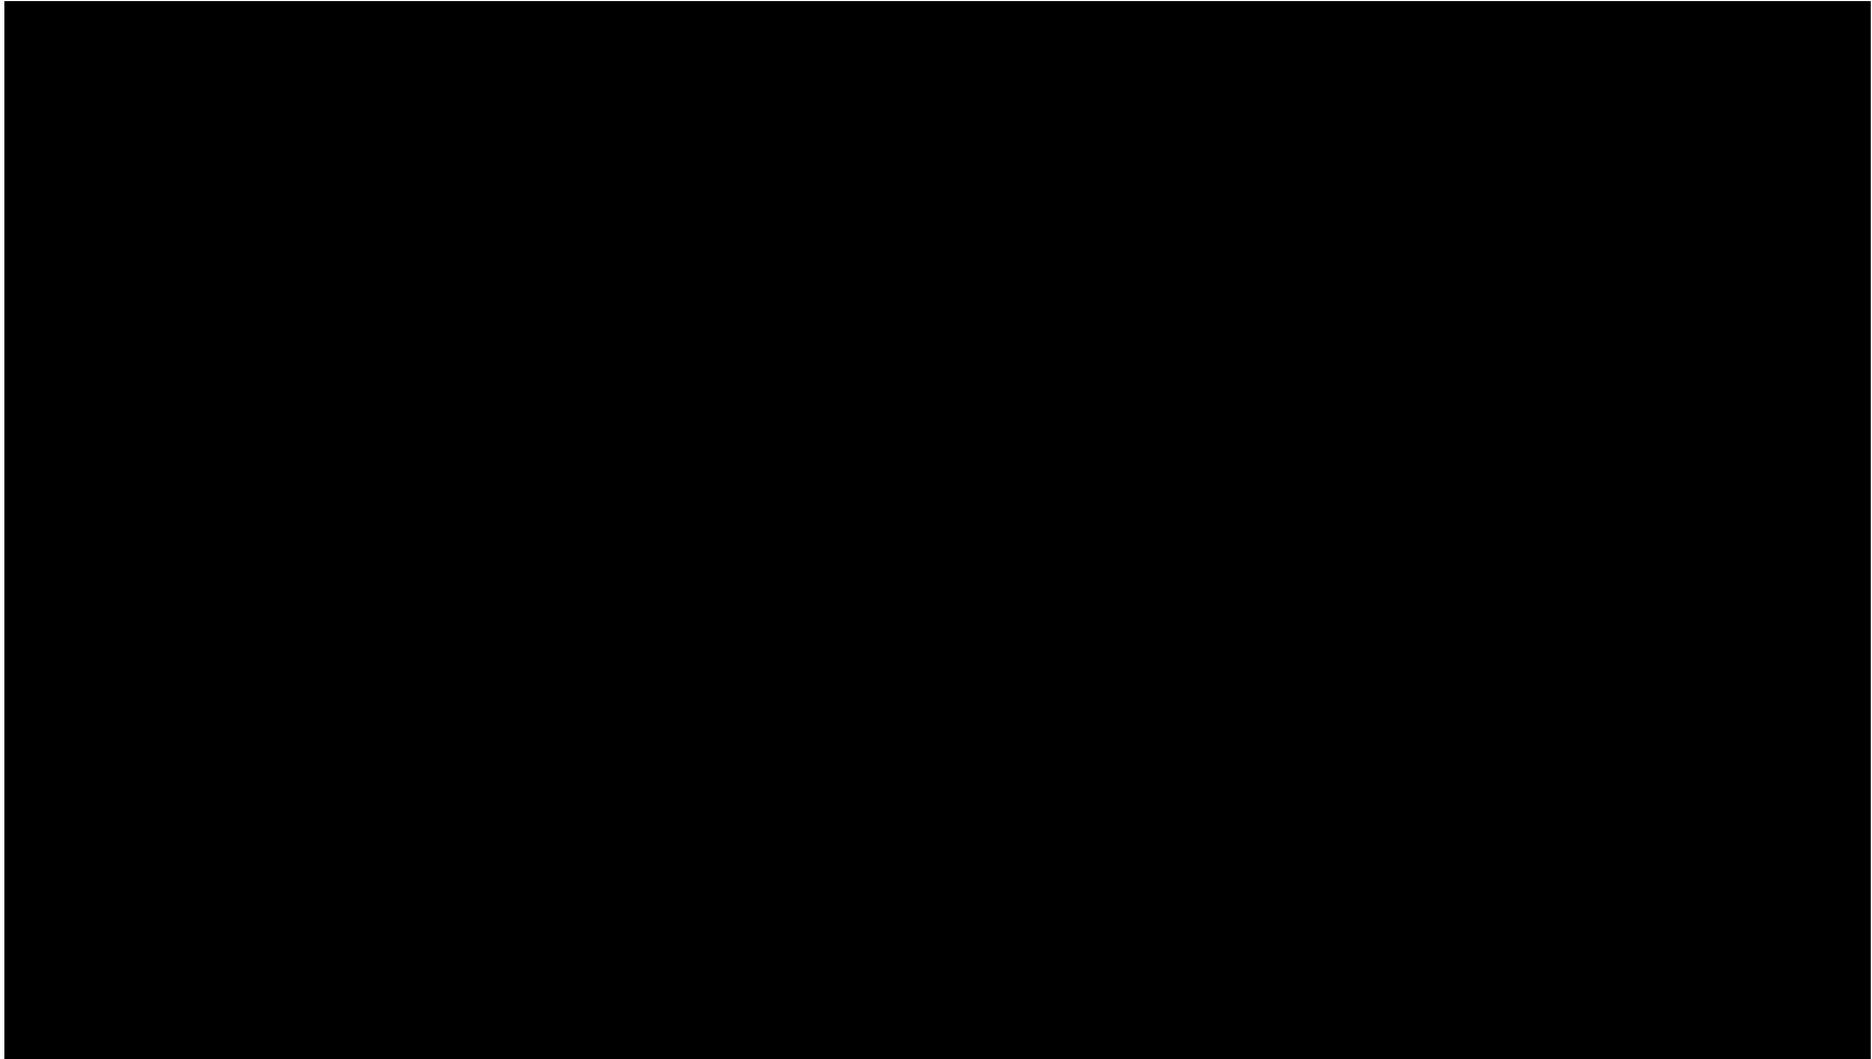

Commissioning of the Onshore Station: [REDACTED]

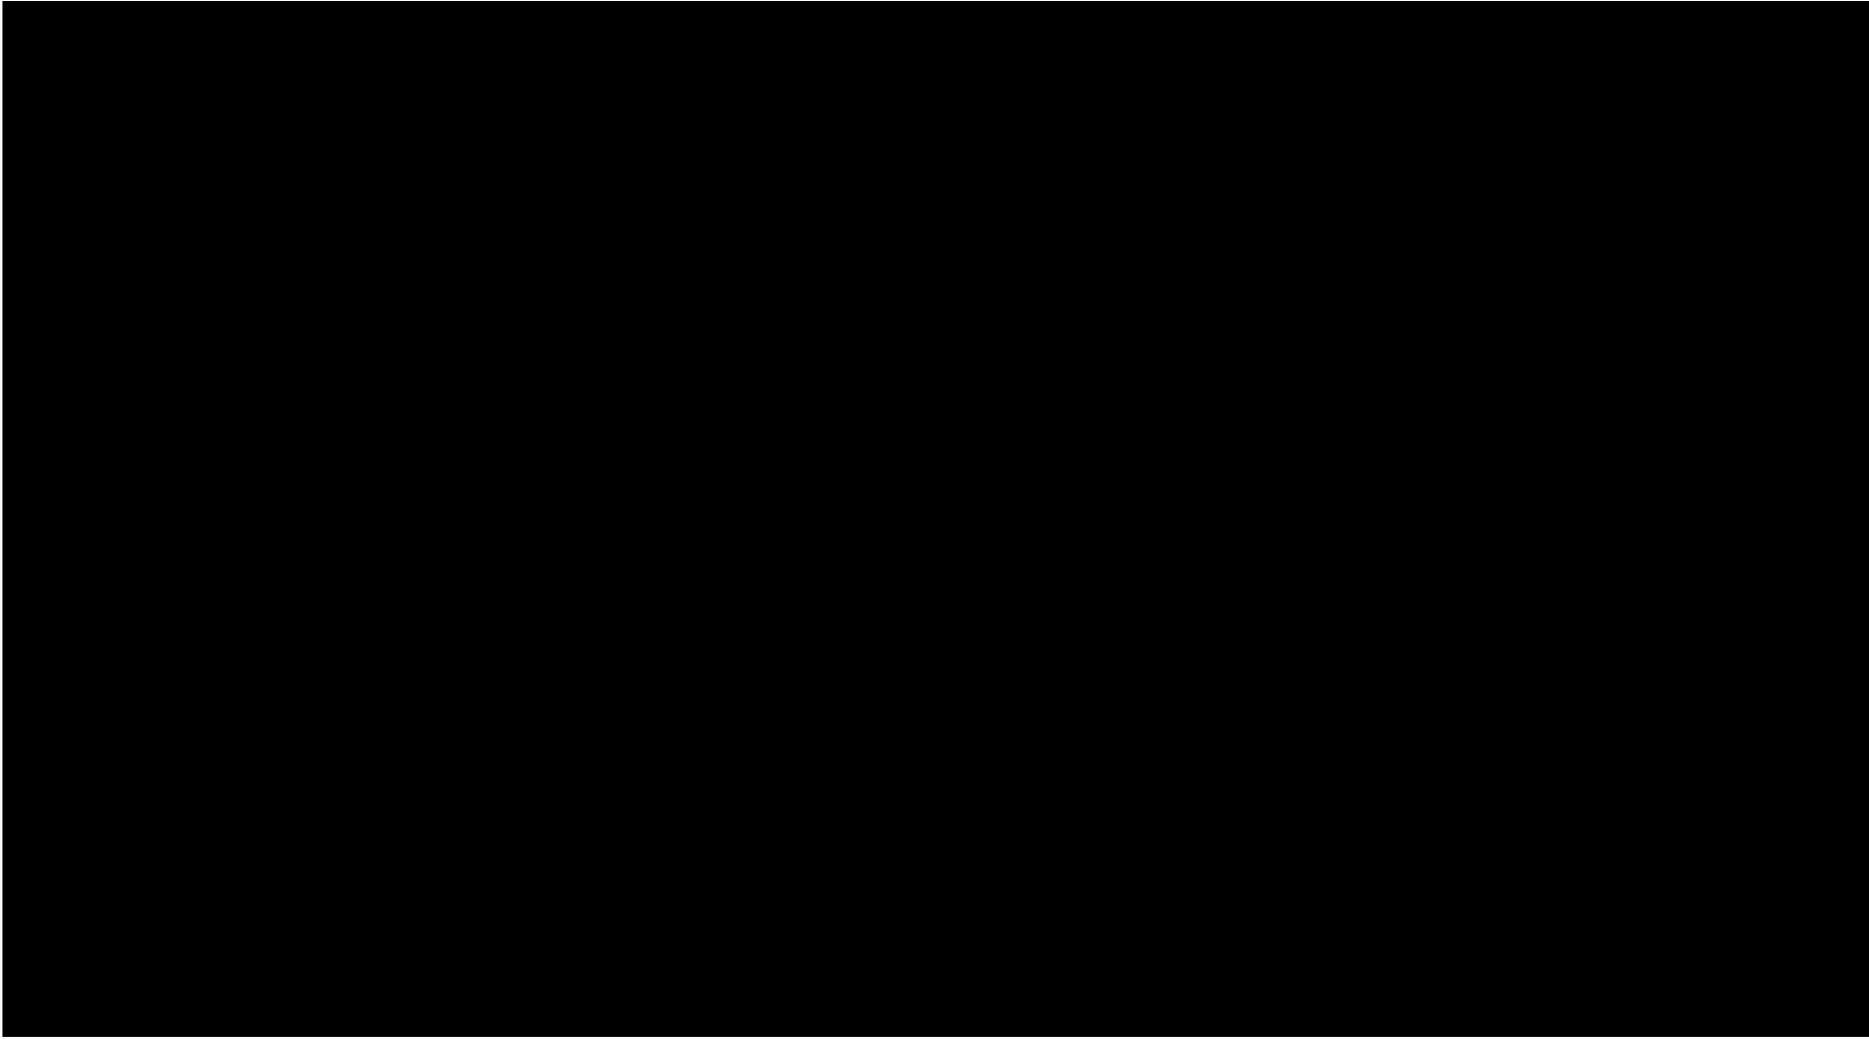

[REDACTED] The duration of the final commissioning will be approximately four weeks.

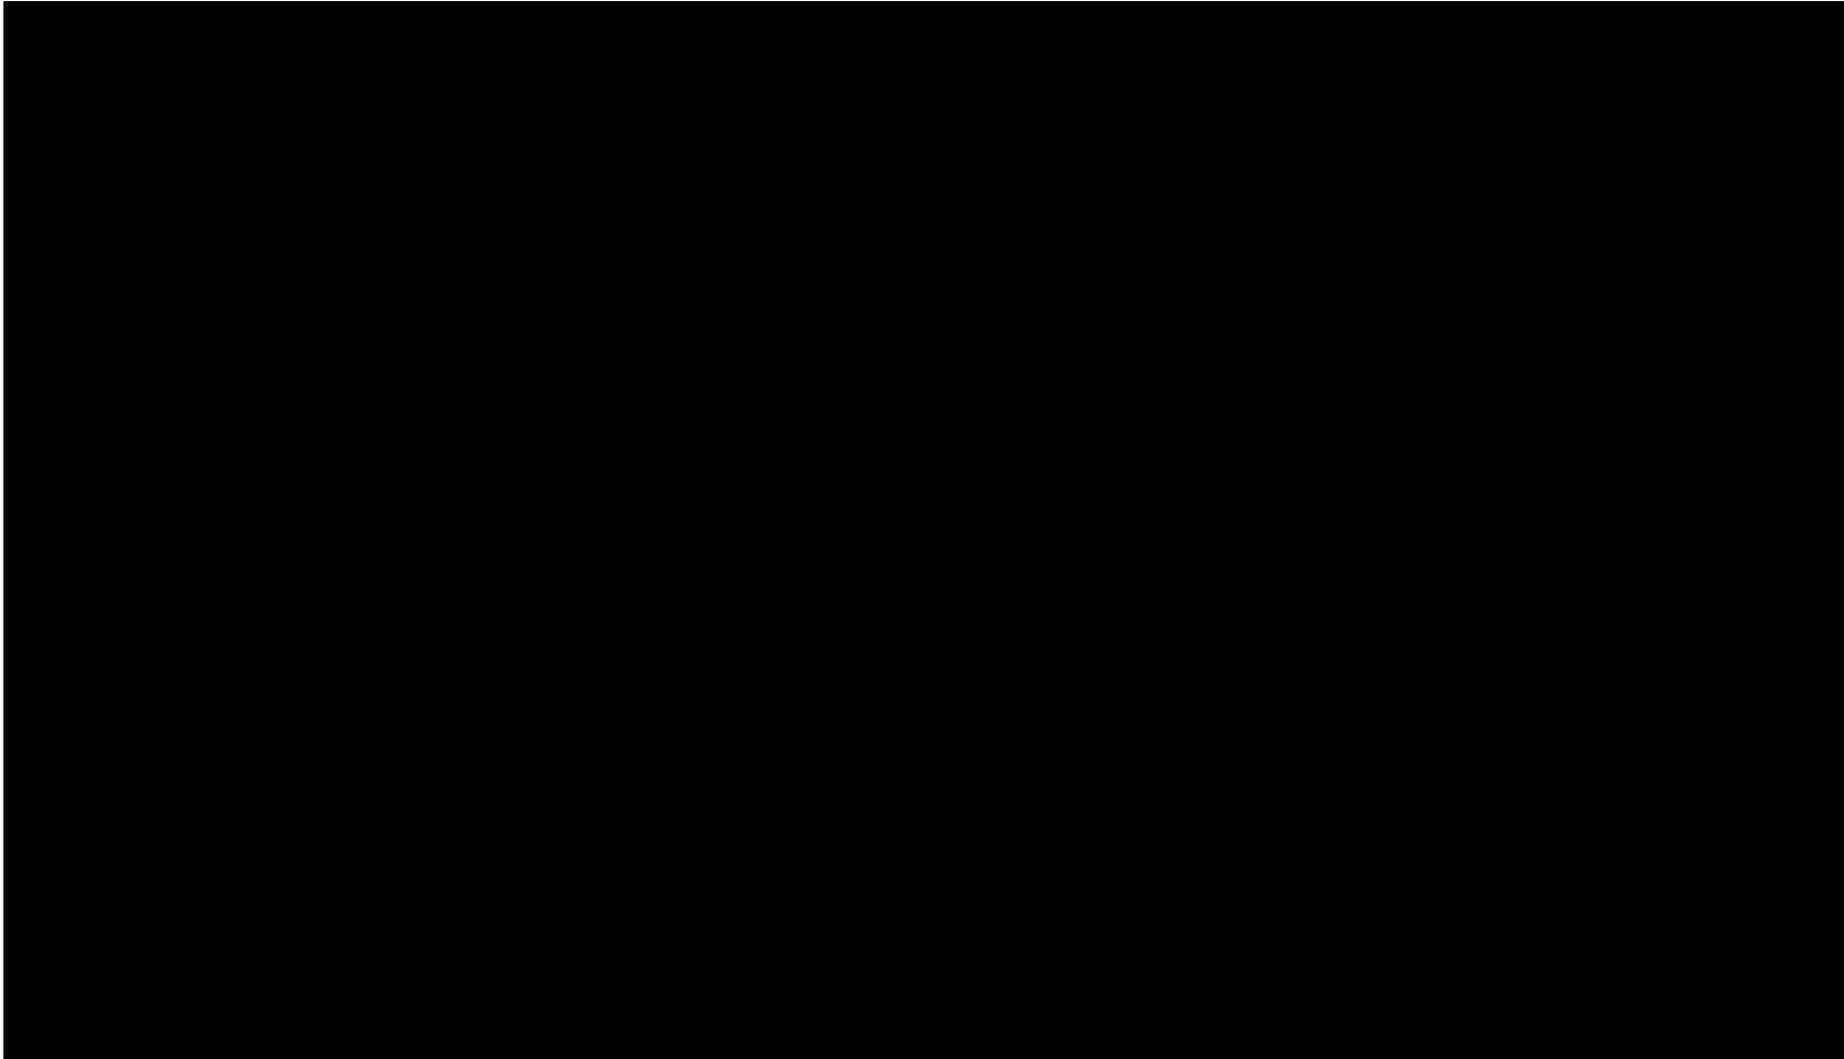

11.4 Vessels

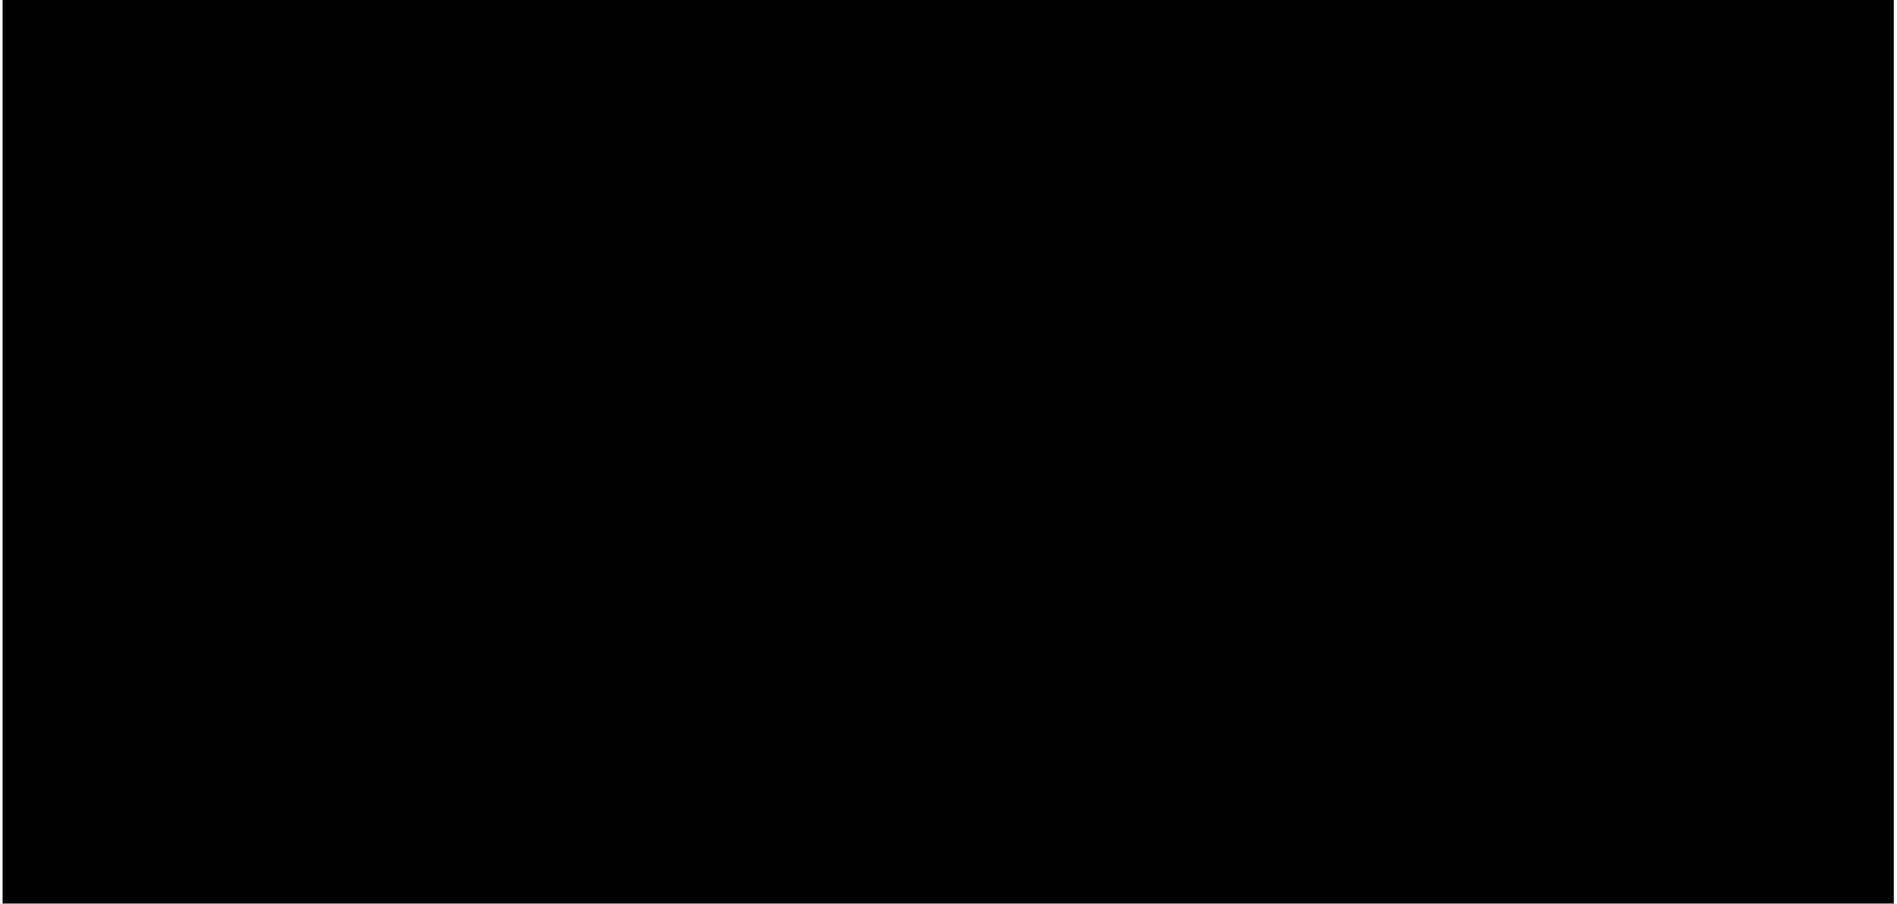

-
4. Indicate the number, type and size of vessels that will be used, their respective uses, and how vessels will be secured for the required construction period. Explain how Proposer's deployment strategy will conform to requirements of the Merchant Marine Act of 1920 (the Jones Act).
-

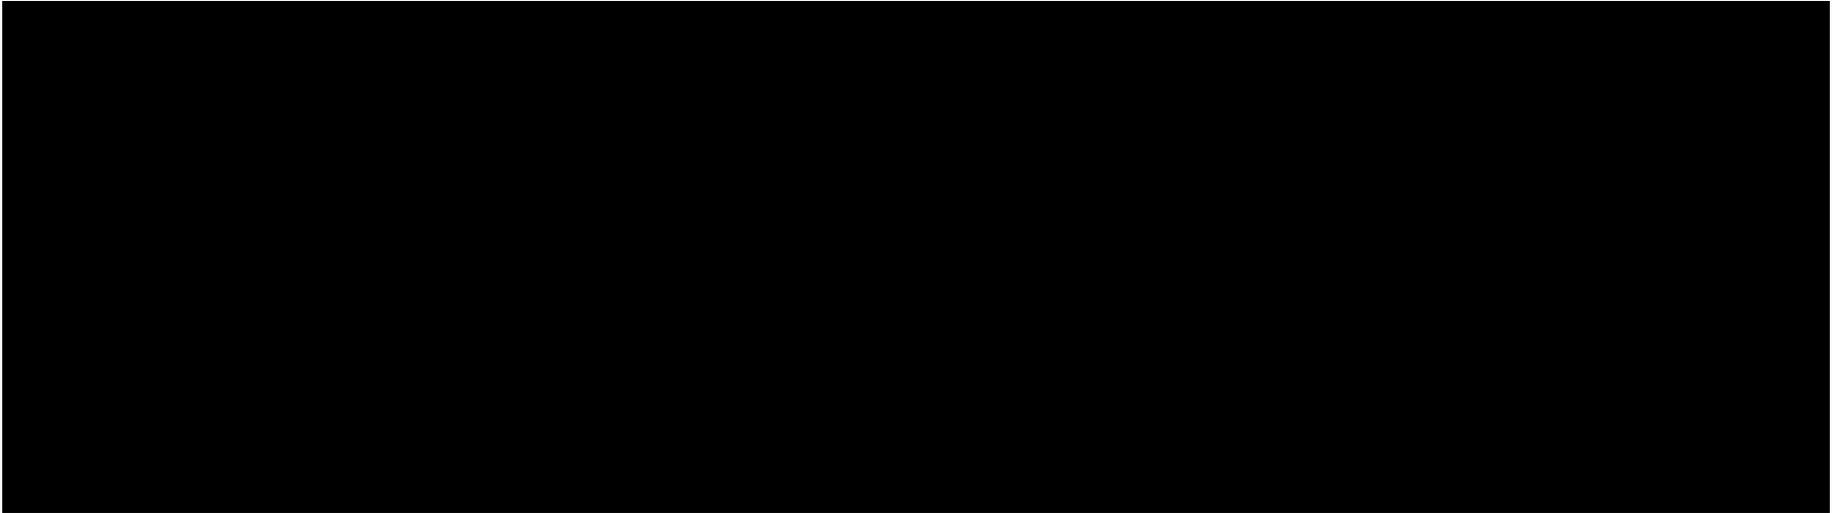

A summary table identifying the number, type and size of vessels that will be used and their respective roles is provided in [REDACTED]. Compliance of each vessel with the requirements of the Jones Act is dependent on the activity being performed, and is described below.

[REDACTED]

[REDACTED]

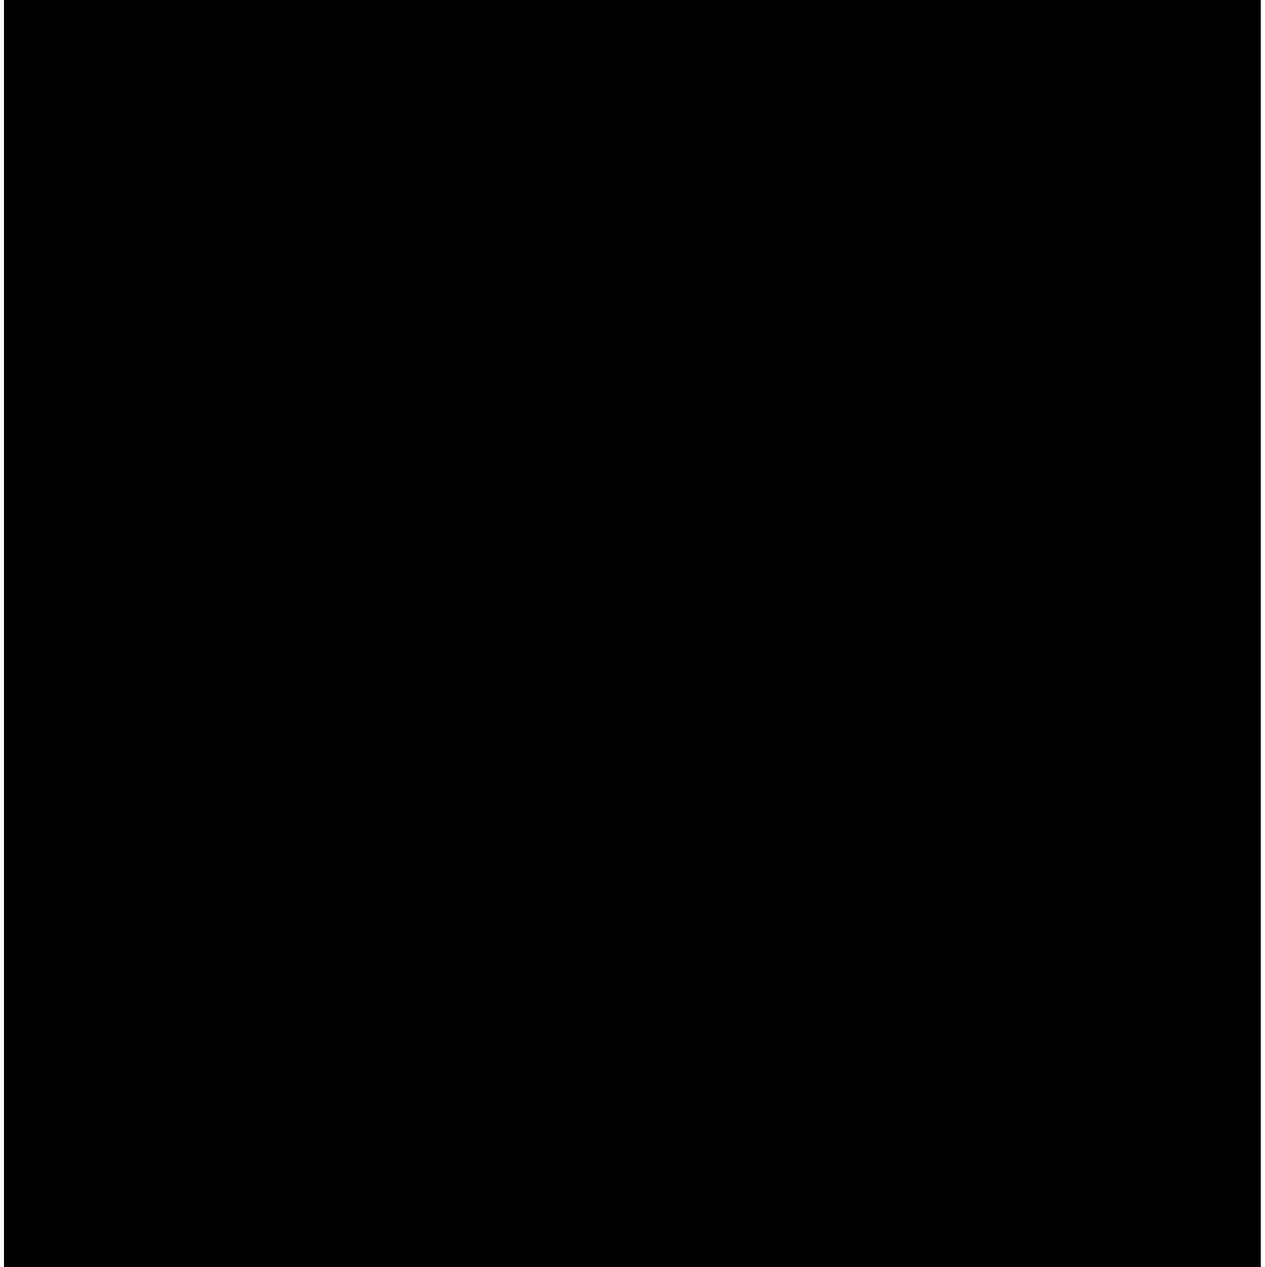

[REDACTED]

[REDACTED]

- [REDACTED]
- [REDACTED]
- [REDACTED]
- [REDACTED]

[REDACTED]

[REDACTED]

11.5 Party Responsible for Each Deployment Activity

5. List the party or parties responsible for each deployment activity and describe the role of each party. Describe the status of Proposer's contractual agreements with third-party equipment/service providers.
-

The Proposer's approach to the sourcing and supply of the components and skills required for construction and operation of the generation asset and offshore transmission asset of the Project is expected to be managed through a multi-contracting approach with the main packages and contractors described in Table 11.4. This is in contrast to a turnkey approach with only one contract for both supply and installation of the major scopes. The multi-

contracting approach combined with Ørsted's in-house engineering capabilities allows for full EPC control.

The Proposer's organization has a procurement team dedicated to broadening the supply chain by identifying, pre-qualifying and developing new suppliers, particularly within new markets to meet local content expectations, and manages the supply chain as a portfolio across the current and future portfolio of wind farms when procuring components for new wind farms.

Within the offshore wind industry, several of the suppliers have a portfolio of different products combined with a production capacity that enables them to both supply a range of different components used in the wind farm, such as cables and HV components, and supply to multiple wind farms.

Although competition is maintained by making sure alternative suppliers are available, the Ørsted organization primarily works with selected, strategic suppliers in order to develop more cost-efficient concepts and products that can be used in tomorrow's wind farms. The close interaction with the service-suppliers and manufacturers and the sharing of knowledge between the experts are a key success factor in developing more efficient manufacturing, installation methods, and technology.

An explanation of the responsibility split between contracts and the status of contracting the major scopes is provided in Table 11.4. Additional information about the procurement process is provided in Section 9.2. See also Section 11.4 for a description of negotiations and discussions regarding installation vessels for foundation, WTG, and cable deployment.

Table 11.4 Deployment Activity Responsible Parties

Deployment Activity	Responsible Party	Status of Procurement
Foundations	The foundations supplier will deliver the finalized MPs and the TPs at a quayside (see Table 11.1) in order for the installation contractor to be able to transport them to the site.	[REDACTED]
WTG	The WTG supplier will transport, pre-assemble, install, and commission WTG components. The Proposer will contract the installation vessel and free issue this vessel to the WTG supplier for the installation.	[REDACTED]
Array cables	The array cable supplier will manufacture and deliver the array cables at the designated harbor and the array cable. Installation contractor will take over the cables there, then transport, install and connect the cables from there.	[REDACTED]
Export cable	The export cable manufacturer will deliver the export cable to the designated site which can be a harbor or the offshore Project site where the installation contractor will take over the cable and install it and terminate it at shore.	[REDACTED]
Offshore substation	<p>The offshore substation fabrication contractor will load the monopiles onto a Jones Act-compliant transportation barge. The topsides will be loaded onto a separate Heavy Transport vessel.</p> <p>The offshore substation installation contractor will tow the transportation barges to the field using Jones Act-compliant tow tugs.</p> <p>The Heavy Transport vessel will transit from the fabrication yard directly to site.</p> <p>The offshore substation installation contractor's installation vessel will meet the transportation barges and the Heavy Transport vessel in the field to lift off and install the structures.</p>	[REDACTED]
Onshore Substation	Commonly the rigging companies hired by the manufacturers are primarily responsible for staging and deployment activities. When required, the manufacturers hire local experienced contractors for specialized services.	[REDACTED]

12 FISHERIES MITIGATION PLAN

6.4.12 Proposers must include in their Proposal a Fisheries Mitigation Plan in as much detail as possible that describes how Proposer will mitigate adverse impacts on the commercial fishing industry that may be caused by the Project. Elements of the Fisheries Mitigation Plan are described in detail in Appendix D. Proposers are advised to review the Fish and Fisheries Study prepared for the New York State Offshore Wind Master Plan with respect to the potential impacts of offshore wind energy development on the fishing industry, and also are advised to include in their mitigation plan the appropriate Best Management Practices described in the Master Plan and supporting studies.

See [REDACTED] for the Fisheries Mitigation Plan, which describes how the Proposer will mitigate potential adverse impacts on the recreational and commercial fishing industries that may be caused by the Project. In the development of the Fisheries Mitigation Plan, the Proposer reviewed the Fish and Fisheries Study and the Best Management Practices described in the New York State Offshore Wind Master Plan.

12.1 Coexistence as a Principle

The Sunrise Wind team is committed to the principle that offshore wind and fishing can coexist. While conflicts among ocean uses can seem inevitable, proactive dialogue and an openness to change can mitigate many of these conflicts. In this spirit of dialogue, our work with the commercial fisheries industry began many years ago – long before this solicitation was planned. We expect that those many years of work with fisheries will pay off in the form of a project that is relatively free from the conflicts that already exist between several of our competitors and the commercial fishing industry.

The Proposer has leveraged the experience of its Owners in developing its Fisheries Mitigation Plan. Specifically, Ørsted, the largest and most experienced offshore wind energy developer with 25 offshore wind farms in operation worldwide, has long understood the value of enlisting the input and local knowledge of fishermen from the outset of a project.

In the U.S., these outreach activities have been focused along the East Coast for many years in support of the development of the Sunrise Wind project, Bay State Wind project, South Fork Wind Farm, Skipjack Wind Farm, Revolution Wind project, and Block Island Wind Farm. The positive outcomes of this outreach have resulted in significant changes in its project design. For example:

- Ørsted revised a U.S. WTG layout design based on extensive consultations with fishermen who actively fish the area. The revised layout reflects existing longstanding agreements among fixed and mobile gear fishermen designed to avoid conflicts. The revised design has rows of WTG on an East-West orientation separated by fishing corridors. The pattern conforms to seabed contours and temperature gradients which influence fish aggregations and thus fishing patterns in the area.
- Similar consultations with affected fishermen have resulted in a layout for South Fork Wind Farm with WTG in a grid layout to accommodate feedback/input gained from various outreach methods including formal port outreach meetings and interviews with fishermen from multiple ports and states.

The Ørsted organization understands the critical need for effective communication with all mariners, including fishermen, during each phase of its projects. Communication on the development and construction of the Block Island Wind Farm by Ørsted's local team has been highly praised by local stakeholders and the USCG. A high standard of communication was set with the first offshore wind farm in the U.S., which the Ørsted organization will continue to focus and improve upon. The Ørsted organization has extensive experience in communicating and coordinating large, technical offshore projects worldwide. An added benefit of the ongoing development of the South Fork Wind Farm, as well as our other ongoing projects along the East Coast, means the Proposer will have a unique knowledge of the type of fishing that occurs in the Project Area, the fishermen who are working in the area, and the times of year that they are active.

The Fisheries Mitigation Plan builds on the best practices outlined by BOEM for communicating with the fishing industry, but goes further, as the Ørsted organization has established the most extensive fisheries outreach network in the U.S. including fisheries veteran such as [REDACTED]

Ørsted has also had a Fisheries Liaison based in Montauk, New York for 2 years and funds a Long Island Fisheries Representative. Ørsted is an original member of, and an active participant in, the NYSERDA F-TWG and already has established relationships with the federal and state agencies that govern fishing in New York. [REDACTED]

12.1.1 Responsible Offshore Development Alliance

In addition to project-specific efforts, Ørsted has entered into a first of its kind partnership agreement with the Responsible Offshore Development Alliance (RODA), see Appendix 12-1. This agreement focuses on improvement of communications and collaboration between the commercial fishing industry and offshore wind energy developers, based on data and evidence based decision making. Ørsted has previously engaged in extensive communication regarding topics, ranging from navigation concerns and other impact avoidance methods to identifying a mutual interest in developing transparent strategies for long-term mitigation, and will continue in these efforts. This new initiative will provide a more structured process for further collaboration between Ørsted and the fishing industry.

12.1.2 Block Island Wind Farm Experience

Ørsted has been conducting safe and successful offshore operations and maintenance activities in the U.S. since Block Island Wind Farm began commercial operations in 2016.

In connection with the Block Island Wind Farm, Ørsted has deeply invested in science and research to advance knowledge of how offshore wind energy development might affect fisheries resources and is committed to the collaborative and transparent sharing of that research. At the Block Island Wind Farm, Ørsted conducted Demersal Trawl and Lobster surveys before, during, and after construction over a period of six years. The trawl surveys

resulted in the publication of the first U.S. Offshore Wind related peer reviewed article titled “Flatfish habitat use near North America’s first offshore wind farm” and is just one example of research being conducted at Ørsted’s wind farm sites.

Ørsted's commitment to collaboration is exemplified by the approach to science at the Block Island Wind Farm:

- **Development of protocols in consultation with industry:** the study protocols were developed in consultation with the commercial fishing industry as well as state and federal regulators
- **Collaborative science:** the surveys are executed on commercial fishing vessels
- **Sharing data and results:**
 - Monthly and annual reports have been shared with regulators, fishing groups, and interested fishermen.
 - The data collected during the surveys is shared with the Rhode Island Department of Environmental Management yearly.
 - The data will be posted on the NE Regional Data Portal when the studies are complete.
 - In December 2017, the Block Island Wind Farm funded a science forum where the results of the fisheries studies as well as all of the other studies were shared publicly.
- **Collaboration with Federal Agencies and Universities on science:**
 - State of the art avian radar unit/camera monitoring installed on Block Island Wind Farm foundation.
 - Partnered with URI scientists to install monitoring equipment as part of an agreement with NFWS.
 - Bat monitoring equipment has been installed at Block Island Wind Farm.

Ørsted is committed to furthering the concept of regional science and has been an industry leader on these discussions. As noted above, Ørsted is the first offshore wind developer to support RODA. As stated on its website, RODA endeavors, through proposed collaborations with NOAA Fisheries and other partners like Ørsted, to coordinate science and policy approaches to managing development of the Outer Continental Shelf (OCS) in a way that minimizes conflicts with existing traditional and historical fishing. Members of the New York fishing community are currently represented on the RODA Board of Directors. RODA continues to build its membership. A top priority for RODA and Ørsted is to work with groups like the NYSERDA F-TWG to further the planning of regional, collaborative science and promote the use of data collection by local, commercial fishermen wherever possible.

13 ENVIRONMENTAL MITIGATION PLAN

6.4.13 Proposers must include in their Proposals a detailed Environmental Mitigation Plan that describes how Proposer will mitigate adverse environmental impacts that may be caused by the Project. Elements of the Environmental Mitigation Plan are described in detail in Appendix E. Proposers are advised to review the environmental studies prepared for the New York State Offshore Wind Master Plan with respect to the potential impacts of offshore wind energy development on the environment, and also are advised to include in their mitigation plan the appropriate Best Management Practices described in the Master Plan and supporting studies.

See [REDACTED] for the Environmental Mitigation Plan, which describes how the Proposer will mitigate potential adverse environmental impacts that may be caused by the Project. In the development of the Environmental Mitigation Plan, the Proposer reviewed the environmental studies and Best Management Practices described in the New York State Offshore Wind Master Plan.

14 COMMUNITY OUTREACH PLAN

6.4.14 Provide a community outreach plan that identifies proposed stakeholder engagement activities during construction and operation of the Project. Provide copies of any agreements with communities and other constituencies impacted by the Project, not already covered in the Fisheries Mitigation Plan or the Environmental Mitigation Plan. Discuss the status of implementing the community outreach plan.

Provide documentation identifying the level of public support for the Project including letters from public officials, newspaper articles, etc. Include information on specific localized support and/or opposition to the Project of which Proposer is aware.

The Local Developer

Sunrise Wind is local. We live and work in the New York communities we serve, and we are here to stay. We are developing offshore wind farms in our backyard, and we care about how we go about our business. We hire local professionals, including fishing industry veterans, to build the best possible development and communication methods.

Industry Experience

We know we can deliver this Project on time and with widespread public support because we are the only team to have successfully managed community relations for an offshore wind farm in the U.S., in addition to hundreds of transmission projects around the northeast and dozens of offshore wind projects around the globe. Based on our experience, we also know there will be real challenges ahead. But we will be the most prepared and skilled to overcome those challenges when they come.

Our Approach

We've been on the ground, working to bring offshore wind to New York for over 10 years. We have implemented a comprehensive outreach and engagement plan that has built a broad base of understanding and accompanying stakeholder support for offshore wind generally, and for specific projects we have proposed over the years, as demonstrated by our past letters and statements of support provided in [REDACTED]

Our plan also builds upon the hyper-local experience we have gained from the nearby South Fork Wind Farm where our "early and often" approach to engagement has proven both effective and essential, [REDACTED] with support from subject matter experts and the best available communication tools.

We also make a point of listening to our outreach teams and incorporating feedback into project design. For example:

- On Block Island, we changed the location of turbines based on feedback from the fishing community, and we worked together with leading environmental groups to develop protocols that would protect whales and other marine life during construction.

- For the South Fork Wind Farm, we changed the proposed route of the submarine transmission cable based on feedback from the fishing community, and designed our overland route and work constraints based on input from residents and local officials.
- For the Bay State Wind Project, we reconfigured the layout of the WTGs to reflect input from the fisheries industry and marine transportation and navigation community. This is one example of unparalleled engagement and constituent understanding and collaboration.

We will use a mix of social media, print, radio and TV spots to convey who we are, what this Project is, and how community members can engage with us. Additionally, we will meet with every local group that will have us, present before the Town Board, and host a series of outreach meetings, in addition to meeting one-on-one and in small groups with community members. For example:

[REDACTED]

[REDACTED]

Nonetheless, there will be obstacles and Project detractors – regardless of how much outreach we do, or how sound the merits of the Project may be. And in this electronic age, misinformation spreads quickly. We’ve experienced this challenge in connection with the Block Island and South Fork Wind Farms, too.

Our goal is to ensure the decision makers have the information and support they need when they vote. We’ll do this by responding to misinformation when its released through social media, print and radio, mobilizing others to write letters to the editors, attend public meetings, and by reaching out to decision makers to ask them support our Project. We’ll also count on the media to help clarify the issues as they have many times before, as demonstrated in [REDACTED]

Our plan, provided in [REDACTED] describes our team’s commitment to robust, inclusive, and transparent public involvement, and details the approach to public engagement that it will utilize to:

1. Identify key stakeholders in the area of the proposed project.
2. Advance public understanding of the project.
3. Encourage and collect public input.
4. Disseminate information to the public and other stakeholders.

5. Obtain local real estate rights for the onshore transmission route.
6. Deliver the Project on-time with widespread support.

Our plan should be viewed as a living document that will adapt as the market and Project develops, serving as a point of reference to guide outreach efforts for the Project.

15 VISIBILITY AND VIEWSHED IMPACTS

The Project is located far from shore and will have minimal impact on the views of New York State residents, tourists and other visitors. The closest inhabited shore to the Project's WTGs is Block Island, Rhode Island [REDACTED] followed by Martha's Vineyard, Massachusetts [REDACTED]. The closest point from New York State is Camp Hero State Park [REDACTED] on the eastern tip of Long Island in Montauk, which is well outside of the 20 statute mile area of concern.

Compared to other offshore wind projects that are closer to shore, the Project will have minimal adverse impacts due to the visibility of turbines from New York State. As a result, the Proposer does not anticipate any potential impacts on New York State's local and state economy and historic and visual resources. Similarly, the Project's relatively far distance from the shores of New York State will mitigate any potential economic and environmental concerns.

The Proposer [REDACTED] to perform the visual simulations in this Section 15. [REDACTED] concluded that in most typical instances, the visual impact of the Project would be negligible.

6.4.15 Proposers must address a Project's visibility from shore. If a Project is proposed to include turbines less than 20 statute miles from the nearest shoreline point of any state, Proposers must explain (i) how the Project will minimize adverse impacts related to visibility of turbines, including potential impacts on the local and state economy and historic and visual resources, such as publicly-accessible viewsheds, and (ii) how consideration of economic and environmental concerns contributed to the proposed distance from shore.

Additionally, all Proposals, regardless of distance from the nearest shoreline, must include a visibility study that presents visual simulations of the proposed Offshore Wind Generation Facility. Visibility studies must include a map or maps along with supporting GIS shape files that depict the nearest coastline, the boundary of the proposed site to be developed and any other reasonable reference points (e.g. coastal cities, historic sites, other wind energy areas).

Simulations must be single frame, photographic images with superimposed simulations of the proposed wind turbine technology configured to represent a commercially-scaled and technically feasible scenario that is consistent with the proposed Project including operating capacity, wind turbine size, and generic spacing and configuration. Viewing instructions must be included on each simulation.

Visual simulations must represent, at a minimum, clear, partly cloudy, and overcast conditions during early morning, mid-afternoon, and late day, as well as one simulation at night with the turbines lit under clear conditions. Visual simulations must be provided from a minimum of two representative vantage points which represent the closest points to shore from any turbine within the Offshore Wind Generation Facility and, if applicable, any sensitive or historic viewpoints within 20 statute miles of the nearest turbine. The visibility study must also include analysis of the percentage of time during which different visibility conditions are expected to occur based on past meteorological data.

The simulations must be provided in a format suitable to be printed or electronically viewed by the public and/or the Scoring Committee.

15.1 Visibility from Shore

[REDACTED]

The only settled land located within 20 statute miles of the Project WTGs is Block Island, Rhode Island. The southeastern coast of the island is located approximately [REDACTED] from the nearest Project WTG. Block Island is a summer tourist destination and is known for its recreational value and historic lighthouses. Much of the island is set aside for conservation and consists of an undeveloped natural area and resting stop for migratory birds along the Atlantic flyway. Due to the close proximity of the existing Block Island Wind Farm (located 3.8 miles from shore), the Project will be subordinate to Block Island Wind Farm in views from shore and is not expected to have an economic or environmental impact on the island. Visibility of the Project from Block Island is further evaluated in Section 15.2.

The closest shoreline point is approximately [REDACTED] to the nearest Project WTG and is on the southern coast of Nomans Land Island (Massachusetts), an uninhabited island. The island was previously used by the U.S. Navy as a bombing range between 1943 and 1996. The U.S. Fish & Wildlife Service began managing the eastern third of the island in 1970 under a joint Management Agreement with the U.S. Navy while it was using the island for military training purposes. In 1998, management of the entire island was transferred to the USFWS for the protection and management of migratory birds¹¹.

Due to the potential safety risks associated with unexploded ordinance, the refuge is closed to all public uses. As Nomans Land Island is not open to the public, impacts to local and state economy, historic and visual resources, and publicly-accessible viewsheds are not anticipated due to the construction and operation of the Project. Similarly, while the distance of the Project from Nomans Land Island is a function of the Proposer's Lease Areas, the location of the WTGs is not expected to implicate any economic or environmental concerns affecting that uninhabited island.

15.2 Visibility Study

15.2.1 Summary

The visibility study considered views from publicly accessible lands with the closest proximity to the Project from three neighboring states - the eastern coast of Long Island (Camp Hero State Park, Montauk), the southern coast of Martha's Vineyard (Aquinnah Overlook), and the eastern coast of Block Island (Southeast Lighthouse).

Overall, changes to the landscape conditions that will occur as the result of the Project are anticipated to be minimal to viewers located on publicly assessable lands. Furthermore, views will be limited primarily to coastal areas along these three islands with views of the Atlantic Ocean.

¹¹ USFWS. 2018. Nomans Land Island. Available online at: https://www.fws.gov/refuge/nomans_land_island/ (accessed December 12, 2018)

Overlook is a popular Martha's Vineyard's tourist spot and is located within the Aquinnah Circle Cultural District, which is a specific area of Aquinnah that has a concentration of cultural facilities, activities, and assets. This location provides open views towards the Project from an elevated vantage point and illustrates typical views that would be available to local residents and seasonal visitors of Martha's Vineyard.

Southeast Lighthouse is located approximately [REDACTED] northwest of the nearest WTG. This lighthouse is situated on the Mohegan Bluffs at the southeastern corner of Block Island. The lighthouse is listed on the National Register of Historic Places and is a designated National Historic Landmark. Southeast Lighthouse represents open, elevated views towards the Project from a historic resource. The Block Island Wind Farm is located approximately 3 statute miles southeast of the lighthouse.

See Appendix 15-1 for maps that depict the nearest coastline and the boundary of the proposed site to be developed. See Appendix 15-2 for supporting GIS shapefiles that were used in the creation of the visual simulations.

Photographic Simulations

At each of the KOPs, [REDACTED] selected an appropriate photo location based on the availability of an open view toward the Project site, appropriate composition, lighting, and, if possible, the inclusion of distinctive foreground features that allow recognition of the viewpoint by the public. At each viewpoint, a series of overlapping photos of the entire visible seascape were obtained in five-degree increments. A tripod-mounted, full frame digital single lens reflex (SLR) camera with a resolution of 30.4 megapixels and a 50-millimeter lens was used for all photos. This focal length is the standard used in VIAs because it most closely approximates normal human perception of spatial relationships and scale in the landscape.

For views lacking background alignment features (i.e., identifiable landscape features with known locations), the field crew also utilized global positioning system (GPS) equipment with sub-meter accuracy to document the location of each KOP and foreground reference features (e.g., buildings, fences, flag poles, driven stakes) visible in the photos. Precise locations of these features allow accurate camera alignment during the development of visual simulations. It also assures that the resulting simulations have a high degree of accuracy in terms of turbine location and perceived size relative to other landscape features.

In some cases where foreground reference features were lacking, [REDACTED] consulted the Automatic Identification System (AIS) when offshore anchored ships were present in the view. This system automatically documents a vessel's position in a central database that is accessible to the public. If a vessel was determined to be anchored and visible to the photographer, the precise coordinates of the vessel were logged and recorded every five minutes during the photography session (to account for potential anchor drag).

Once the KOP images were collected, [REDACTED] used high resolution image processing to modify each baseline base photograph in order to demonstrate each of the time of day (TOD) and weather scenarios requested by NYSERDA. To assist in replicating the correct sun position and lighting in the photograph, [REDACTED] utilized a large library of existing conditions photographs that precisely matched the requested condition. These photographs were used to replace the sky and ocean in each of the baseline conditions. A solar angle calculator was also used to determine the position of the sun during each of the TOD conditions. In order to maintain the exact earth curvature parameters (see visual simulation methodology below), the horizon

was kept in the exact same vertical position in each TOD and weather scenario photograph. The foreground of each scenario was also processed to make the image more realistic for the weather or TOD condition being represented (i.e. eliminating hard shadows during overcast conditions).

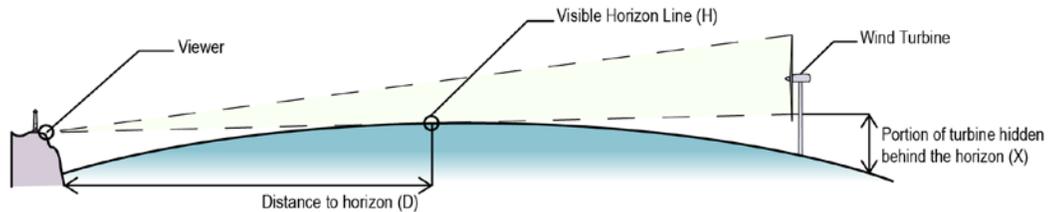

Visual Simulation Methodology

To show anticipated visual changes associated with the Project, high-resolution, computer-enhanced image processing was used to create realistic photographic simulations of the Project for each of the three viewpoints. The photographic simulations were developed by constructing a 3D computer model of the proposed offshore wind Project, including turbine layouts, and offshore substations. The Project specification utilized for the visual simulations was based on the engineering design set out in Section 9.

Simulations were created by aligning each photographic viewpoint through a virtual 3D camera, using digitized location data for elements visible in the photograph. This step involves utilizing aerial photographs and GPS data collected in the field to create an AutoCAD® drawing. The 3D AutoCAD data were then imported into 3DS Max®, and additional components (cameras, modeled scene, etc.) were added. These data were superimposed over photographs as seen through the virtual camera from each of the viewpoints, and minor camera changes (height, roll, bearing) were made as necessary to align all known reference points within the view. This process ensures that Project elements are shown in proportion, perspective, and proper relation to the existing landscape elements in the view. Consequently, the alignment, elevation, dimensions, and scale of the modeled Project components are representative in relationship to other landscape elements in each photo.

The next step involves positioning the WTG layout in each of the aligned views at the appropriate distance in front of, at, or below the horizon (depending on the distance from the viewer). This was done by first determining the distance to the horizon (ocean to sky interface) visible in the photograph. This is accomplished by entering the viewer position and elevation into the Haversine Formula. This formula uses the radius of the earth (corrected for refraction) to calculate the mathematical distance to the horizon (D), or the point at which the sky meets the water (see Figure 15.1). This distance is then used to draw a horizontal line (virtual horizon) in the 3D model representing the mathematical horizon line, which is visible through the virtual camera. The virtual horizon is then precisely aligned to the visible horizon (D) in the photograph by making minor adjustments to the virtual camera target on the vertical axis. With the virtual horizon aligned to the photographed horizon, the position of each individual turbine was placed relative to this horizon line. The Haversine formula was then used to determine each turbine's position relative to the horizon (X). For example, if the turbine appears in front of the horizon, the returned value is zero and the turbine will be placed at the horizon. If the turbine appears behind the visible horizon, the returned value will be a negative number (-X). This value was then applied to the turbine's vertical position in the model so that it appears on or below the visible horizon.

Figure 15.1 Curvature of the Earth and Refraction Diagram

At this point, a “wire frame” model of the facility and known reference points are shown on each of the photographs. The proposed exterior color/finish of the turbines was then added to the model, and the appropriate sun angle was simulated based on the specific date, time, and location (latitude and longitude) for each photographic position and TOD. This information allows the computer to illustrate highlights, shading, and shadows for each individual turbine shown in the view. All simulations show the WTGs with rotors oriented toward the viewer to demonstrate maximum visibility of the Project. In order to demonstrate the variability in sky conditions, the WTGs were rendered with a typical fall-off rate which essentially changes the degree to which the WTGs are masked from view as the viewing distance becomes greater. For the clear conditions, no masking was implemented. The partly cloudy and overcast conditions used variable masking, depending on the individual turbines distance from the camera. The result is a realistic depiction of potential visibility diminishment under each of the sky conditions represented in the simulations.

All of the simulations show a field of view of 38.7 degrees, which is equivalent to the field of view of a standard 50 mm camera lens and should be viewed at a distance of 22 inches from the viewer in order to simulate the correct perspective and scale of the simulated view.

Views from Representative Key Observation Points

Camp Hero State Park

This view is from the Bluff Lookout at Camp Hero State Park on Long Island, approximately [REDACTED] west of the nearest WTG. The viewpoint provides a unique vantage point from which the viewer can enjoy views of the open ocean from an elevated shoreline bluff. Camp Hero is a recreation area/tourist destination that receives high visitation throughout the summer and fall seasons. The foreground of this view to the east (toward the Project) is comprised of the edge of a shoreline bluff covered in low herbaceous and scrub-shrub vegetation, with a few larger shrubs occurring on the righthand side of view. The bluff overlooks the still, open ocean, which forms a well-defined horizon line where it contrasts with the light blue sky. The existing view is free of manmade elements and feels open and expansive. A visual simulation of the Project from this viewpoint can be seen in Figure 15.2 and Appendix 15-1.

Figure 15.2 Visual Simulation of the Project from Camp Hero State Park Viewpoint

Aquinnah Overlook

The existing view is from the Aquinnah Overlook, a State Scenic Area in Aquinnah, Massachusetts on Martha's Vineyard. This viewpoint, located approximately [REDACTED] northeast of the nearest WTG, is a location for tourists and Martha's Vineyard residents who come to experience the elevated views of the ocean and the Massachusetts coastline. The existing view is from the edge of an elevated bluff on the southwestern shore of Martha's Vineyard. The foreground of the view is dominated by a wooden fence which separates the viewer from the scrub-shrub dominated edge of the overlook. The fence continues gently downhill towards a wood shingle-sided building. A wooden deck is visible at the back of the building, where multiple people can be seen amid the patio seating. Native grasses and undulating shrubby slopes are visible in the middle ground below the deck. The bluff looks out onto views of open sky and overlooks a broad expanse of ocean that extends uninterrupted to the horizon. A strong vertical horizon line is created where the ocean meets the light blue sky and becomes a main focal point in the background. The vegetation provides a foreground edge and contributes to the viewer's sense of elevation above the water. The broad stretch of ocean and sky gives this view an open and expansive feel. A visual simulation of the Project from this viewpoint can be seen in Figure 15.3 and Appendix 15-1.

Southeast Lighthouse

This view is from the Southeast Lighthouse on the south shore of Block Island, Rhode Island, within the Mohegan Bluffs Scenic Area. It is approximately [REDACTED] northwest of the nearest WTG. This view would typically be experienced by residents and tourists in the summer season. The view to the southeast, toward the Project site, looks over the shoreline bluffs to the open ocean, which extends to the horizon. The foreground of the view is dominated by a wooden fence separating the viewer from the scrub-shrub vegetation at the crest of the shoreline bluffs. The horizon is well-defined by a clear light blue sky contrasting with the still, dark blue ocean. The broad expanse of ocean and sky gives this view an open and expansive feel, although views of the bluffs and shoreline are screened by the dense foreground vegetation. Additionally, an existing antenna presents a focal point that draws the viewers' eye from the horizon. The view features a seemingly endless horizon but, lacking the context of shoreline features, is not exceptionally interesting or scenic. At a distance of approximately 3 miles, the existing Block Island Wind Farm is a prominent visible feature, immediately outside the field of view to the right with one WTG present in the existing view. A visual simulation of the Project from this viewpoint can be seen in Figure 15.4 and Appendix 15-1.

Visual Simulation Results

With the Project in place (see Appendix 15-1), lighting conditions were significant factors in determining visibility of the WTGs. In general, the WTGs exhibited the greatest amount of contrast against the sky when they are backlit by the sun. For viewpoints located west of the Project, such as Southeast Lighthouse and Camp Hero State Park, backlighting was noted under early morning conditions. Conversely, at Aquinnah Overlook, which is located northeast of the Project, the greatest visibility was noted during late afternoon conditions when the turbines are somewhat backlit by the setting sun. Clear conditions also improved visibility. Under cloudy or overcast conditions, the contrast of the turbines is less pronounced, and the turbines become less noticeable to the viewer.

Figure 15.3 Visual Simulation of the Project from Aquinnah Overlook Viewpoint

Figure 15.4 Visual Simulation of the Project from Southeast Lighthouse Viewpoint

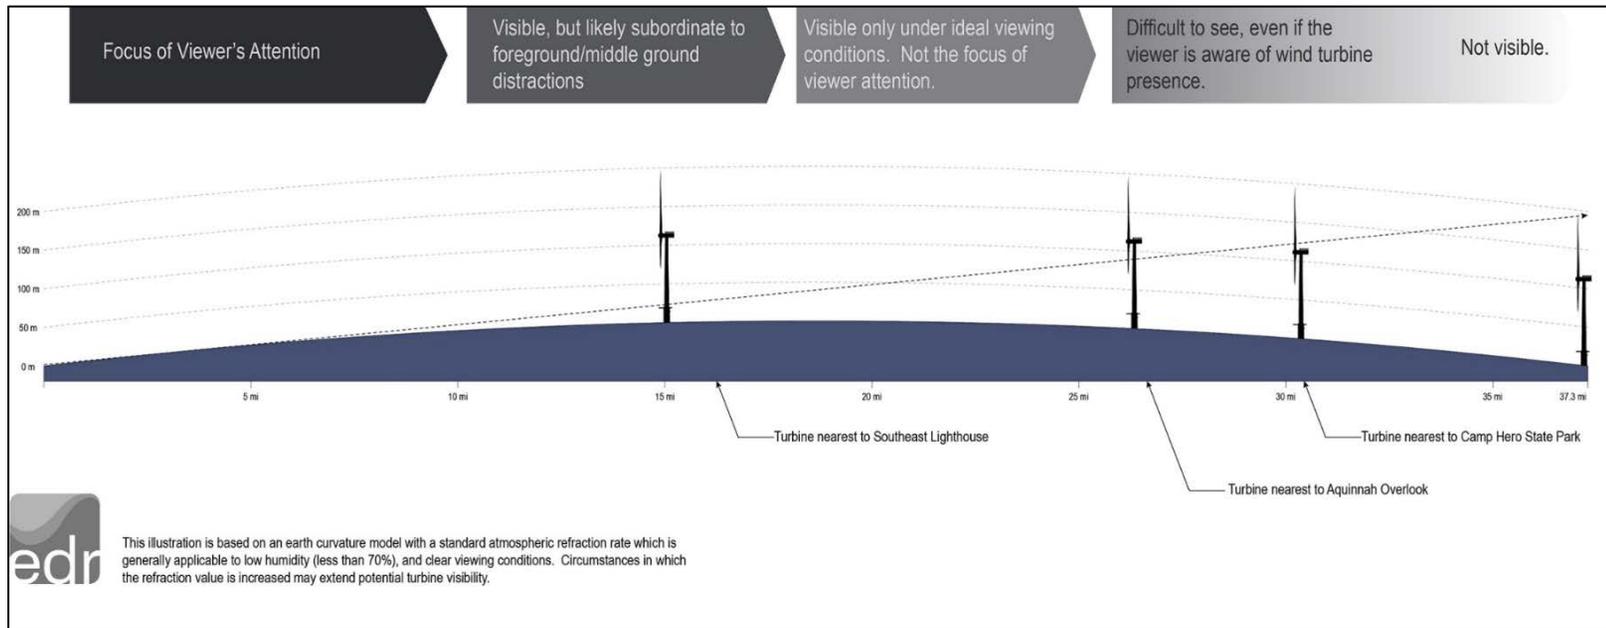

Distance was an important factor in the visibility of the Project, with the highest amount of visibility exhibited from Southeast Lighthouse, Rhode Island, which is the closest viewpoint to the Project. While the WTGs appear quite distant, especially in comparison to the existing Block Island Wind Farm WTG, their full nacelles are still visible above the horizon. Conversely, the WTGs were mostly imperceptible from Camp Hero State Park, which is located over [REDACTED] from the Project. From this distance, only portions of the blades would be visible due to the screening effects caused by curvature of the earth and the turbines are barely detectable on the horizon. Figure 15.5 demonstrates the curvature of the earth and diminishment over distance of the proposed Project.

The number of turbines present in the view also influenced visibility when considering nighttime simulations of the Project. The FAA warning lights appear as small pinpricks of light from each of the viewpoints and only start to become the focus of the viewer's attention when they appear in a dense array across the horizon, such as when viewed from Southeast Light or Aquinnah Overlook. There was no perceptible difference in nighttime views of the Project from Camp Hero State Park, and the warning lights are unlikely to impact nighttime activities when viewed from these distances.

An important consideration in visual impact assessment is to avoid the assumption that visibility automatically equates to an adverse visual impact. The degree of Project visibility will vary greatly depending on the distance of the viewer from the Project, meteorological conditions, degree of screening from structures, vegetation, and curvature of the earth, visual acuity of the viewer, and the ability of the viewer to recognize the Project. Offshore wind projects that are located great distances from the viewing public often go completely unrecognized, due to the fact that they are perceived as secondary to the larger visual landscape. Water, trees, lighthouses, and other natural and built features become the focus of attention. Results from a study in which offshore wind farms were viewed at various distances and conditions in Europe suggest that offshore wind farms may be visible to the unaided eye at distances greater than 26 miles (the maximum distance considered in that study). However, these same facilities were determined to be the focus of viewer attention when viewed at distances within 10 miles, noticeable to casual observers at distances of up to 18 miles, and only visible after concentrated viewing when viewed from greater than 25 miles (Sullivan et. al. 2010). This last viewing distance (which equates to the distances at which the Project will most often be viewed) also suggests that the viewer may need to be told where to look or would have to actively seek out the wind farm on the horizon before noticing it. Typically, viewers such as tourist, residents, through-travelers, and the fishing community would be concentrated on other activities unless genuinely interested in finding the Project. In instances such as this, the visual impact would be negligible.

Figure 15.5 Curvature of the Earth and Visibility Diminishment Over Distance

Meteorological Analysis

The New York State Energy Research and Development Authority (NYSERDA) and the Bureau of Ocean and Energy Management (BOEM) have both developed studies that analyze meteorological conditions associated with offshore wind lease areas. The reports were developed to help understand the meteorological conditions experienced from select viewpoint locations along the coast. The Area of Analysis (AoA) in the NYSERDA study consisted of the Atlantic shoreline of Long Island and offshore views roughly perpendicular to that shoreline. Therefore, the NYSERDA study was reviewed to identify the typical or average weather conditions and visibility conditions expected to occur for two representative vantage points identified along the coast of New York: Camp Hero State Park and Sag Main Beach. The BOEM study was developed to help understand the meteorological conditions experienced from select viewpoint locations on Martha's Vineyard, Nantucket and the southern coast of Massachusetts and Rhode Island (BOEM 2017¹⁴). Therefore, the BOEM study was reviewed to identify the typical or average weather conditions and visibility conditions expected to occur for the representative vantage point on Martha's Vineyard and Block Island (Aquinnah Overlook and Southeast Lighthouse, respectively). Meteorological conditions analyzed in the NYSERDA and BOEM studies are discussed below.

NYSERDA Visibility Threshold Study¹⁵

The NYSERDA Visibility Threshold Study assessed the visibility of a hypothetical wind farm at various distances (13.2 and 30 miles) from the coast of New York under different meteorological conditions within the AoA. Weather data was examined in the study to determine how frequently each combination of visibility (i.e., less than 10 miles or greater than 10 miles), background sky conditions (i.e., clear, partly cloudy, or overcast), and time of day (morning, midday, afternoon) is likely to occur during a typical year (NYSERDA 2017). The analysis was based on hourly meteorological surface data collected from the DS3505 data set available from the National Climatic Data Center (NDCC) for the weather stations at the John F. Kennedy International Airport and the Long Island-MacArthur Airport for a period of six years. As part of the study, visual simulations were developed depicting the hypothetical wind farm under various weather condition/time of day scenarios and, based on the meteorological assessment, the anticipated frequency of each scenario was determined.

Based on data collected from the weather stations and the results of the analysis, during daytime hours overcast conditions were most common over the course of a year, occurring approximately 61 percent of the daylight hours, followed by clear conditions occurring 17 percent of the daylight hours, followed by partly cloudy conditions which occurred approximately 6 percent of daylight hours. Under these conditions it is assumed that visibility would be 10 miles or greater. For the remaining 16 percent of the daylight hours, visibility was less than 10 miles.

¹⁴ BOEM (Bureau of Ocean Energy Management). 2017. Visualization Simulations for Offshore Massachusetts and Rhode Island Wind Energy Area: Meteorological Report. OCS Study BOEM 2017-037. Available online at: <https://www.boem.gov/Final-Meteorological-Report/> (accessed September 5, 2018)

¹⁵ NYSERDA (New York State Energy Research and Development Authority). 2015. New York State Offshore Wind Master Plan: Visibility Threshold Study. Available online at: <https://www.nyserda.ny.gov/-/media/Files/Publications/Research/Biomass-Solar-Wind/Master-Plan/17-25s-Visibility-Threshold-Study.pdf>. (accessed January 15, 2019)

The most frequent condition is overcast skies during the morning, which occurs 21.8 percent of daylight hours, followed by overcast skies during midday and afternoon hours, which occurs 21.5 percent and 17 percent of daylight hours, respectively (Table 15.1). The least frequent weather condition is partly cloudy skies during the midday hours (1.8 percent of total daylight hours). Tables 15.2 and 15.3 provide a summary of frequency of occurrence of the various time of day/weather scenarios. The study did not assess nighttime visibility.

Table 15.1 Frequency of Occurrence of Various Time of Day/Weather Scenarios

Time of Day	Percentage of Daylight Hours		
	Clear	Partly Cloudy	Overcast
Morning	7.6	2.2	21.8
Midday	4.2	1.8	17.0
Afternoon	5.3	1.9	21.5

BOEM Visualization Simulations for Offshore Massachusetts and Rhode Island Wind Energy Area: Meteorological Report

The BOEM report was developed to help understand the meteorological conditions experienced from select viewpoint locations on shore and how they may influence the visibility of wind energy projects (BOEM 2017). The analysis was based on hourly meteorological surface data collected at the National Weather Service (NWS) measurement sites (also referred to as meteorological sites) in Massachusetts and Rhode Island over a 10-year period. Data collected included wind speed and direction, cloud cover, cloud ceiling height, visibility, precipitation, and temperature.

The NWS station located at Martha’s Vineyard Airport was used to evaluate meteorological conditions on Martha’s Vineyard and Block Island¹⁶. Based on data collected from the meteorological site and the results of the analysis, during daytime hours clear conditions were most common over the course of a year, followed by cloudy conditions, then fog, rain, and haze. Clear conditions¹⁷ occurred between 50 percent and 57 percent of the daylight hours over the course of 1 year, with visibility during clear conditions averaging approximately 17 nm to 23 nm. Cloudy conditions¹⁸ occurred between 19 percent and 25 percent of the daylight hours over the course of a year, with visibility conditions averaging 10 nm to 15 nm. During nighttime hours, clear conditions were also most common over the course of a year, followed by cloudy, fog, rain and haze. Clear conditions occurred between 51 percent and 56 percent of the nighttime hours over the course of 1 year, with visibility during clear conditions averaging approximately 13 nm to 23 nm. Cloudy conditions occurred between 17 percent and 26 percent of the nighttime hours over the course of 1 year, with visibility during cloudy conditions averaging approximately 9 nm to 15 nm. Furthermore, visibility was generally found to be greater in winter time and lower in summer. Tables 15.2 and 15.3 provide a summary of the results of the meteorological conditions and visibility, respectively, observed at the Martha’s Vineyard meteorological site.

¹⁶ For meteorological conditions, Martha’s Vineyard data was used to evaluate Block Island. Martha’s Vineyard was selected because it is an island location similar to that of Block Island as compared to the more costal location of the Newport NWS station (BOEM 2017).

¹⁷ Clear conditions were defined as having an unlimited cloud ceiling height. Unlimited ceiling heights are associated with clear and scattered sky cover (up to 50 percent of the sky) (BOEM 2017).

¹⁸ Cloudy conditions were defined as broken or overcast sky cover; greater than 50 percent of the sky. (BOEM 2017)

Table 15.2 Summary of Meteorological Conditions—Distribution of Hourly Daylight Observations¹

Conditions	Martha's Vineyard Meteorological Site									
	Winter (Dec. 22 - March 21)		Spring (March 22 - June 21)		Summer (June 22 - Sept. 21)		Autumn (Sept. 22 - Dec. 21)		Annual	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
Clear	57%	56%	50%	51%	53%	54%	52%	53%	53%	54%
Foggy	14%	13%	18%	17%	20%	21%	15%	13%	17%	15%
Rainy	8%	9%	8%	8%	5%	6%	8%	8%	7%	7%
Hazy	<1%	<1%	1%	1%	3%	2%	<1%	<1%	1%	1%
Cloudy	21%	24%	23%	24%	19%	17%	25%	26%	22%	23%

¹ Data in the table represents the annual distribution of the five meteorological conditions during daylight hours as a percentage. Each hour is characterized as either clear, foggy, rainy, hazy, or cloudy.

Table 15.3 Summary of Average Daytime/Nighttime Visibility (nm) at the Martha's Vineyard Meteorological Site¹

Conditions	Martha's Vineyard Meteorological Site									
	Winter (Dec. 22 - March 21)		Spring (March 22 - June 21)		Summer (June 22 - Sept. 21)		Autumn (Sept. 22 - Dec. 21)		Annual	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
Clear	23	23	22	20	17	13	20	19	20	18
Foggy	3	4	3	3	3	3	4	4	3	3
Rainy	9	9	9	10	9	8	10	9	9	9
Hazy	5	4	4	4	5	4	4	5	5	4
Cloudy	15	15	13	12	10	9	14	14	13	13
Average	18	18	15	13	12	10	15	15	15	14

¹ Data in the table presents the average annual visibility distance for clear, foggy, rainy, hazy, or cloudy conditions for daylight and nighttime hours.

Additional Mitigation

In addition to the minimal visibility impacts of the Project indicated in the visibility study, the following mitigation measures have been or will be implemented to mitigate visual impacts:

- The Project will be located in a designated Lease Area identified by BOEM as suitable for commercial offshore wind development;
- All WTGs will be uniform in shape, color, size of rotor, nacelle and tower type; and
- The WTGs will be primarily white/off-white which will help to minimize contrast with the sky under most conditions.

16 NEW YORK ECONOMIC BENEFITS

New York is poised to become the center of the U.S. offshore wind industry due to Governor Cuomo’s ambitious goal of reaching 9,000 MW of offshore wind generation by 2035, the quality of its offshore wind resources, and its strategic central location in the U.S. offshore wind market. Long Island, with its rich history in maritime industries, skilled workforce, and world-class academic institutions, is now at the heart of a growing domestic industry expected to employ approximately 36,000 people by 2030¹⁹ in the U.S. [REDACTED]

[REDACTED] New York City’s dominance in professional and financial services with its history of complex construction, adds to the State’s competitiveness in attracting a global supply chain. In order to ensure that the offshore wind industry anchors itself in New York and that the state’s economy grows alongside the U.S. offshore wind industry, [REDACTED]

[REDACTED]

The Sunrise Wind Economic Benefits Plan [REDACTED] (the Economic Benefits Plan) is highly credible, verifiable, and focused on building a new American industry in New York. [REDACTED]

[REDACTED]

[REDACTED]

16.1.1 Quantification of Incremental Benefits

Below is a summary of the Project’s committed benefits as provided in the ODF [REDACTED]

[REDACTED]

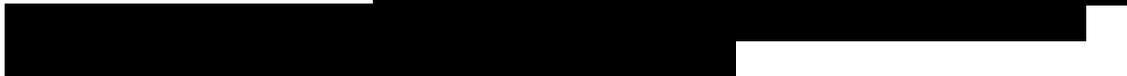

[REDACTED]

¹⁹ Based on job estimates contained in NYSERDA’s Offshore Wind Master Plan.

[REDACTED]

The Economic Benefits Plan commitments will be confirmed by detailed reporting on local spending, upholding the credibility of the Proposer, and providing confidence in economic claims made in this proposal.

The Economic Benefits Plan [redacted] addresses the detailed requirements of this Section 16 and Appendix C of the RFP, including a narrative description of Incremental Economic Benefits in the Offer Data Form. All of the commitments in the Economic Benefits Plan (as further described in this Section 16) are contingent on an award to the Proposer by NYSERDA and the execution of the OREC Agreement with the Economic Benefits Plan attached as [redacted]

16.2 Economic Benefits Plan

6.4.16 Proposers must submit their claimed Incremental Economic Benefits and Contingent Economic Benefits by category using the Offer Data Form and support these claims by submitting an Economic Benefits Plan. All claimed expenditures and investments should be in real dollars (U.S.) at the time of Proposal submission.

The Economic Benefits Plan must include descriptions and supporting documentation for their Incremental Economic Benefits and Contingent Economic Benefits claims, as described below.

The pro-rated portion of investments in oversized transmission and interconnection facilities not needed to support the Offshore Wind Generation Facility shall not be included as an Economic Benefit.

The purpose of the Economic Benefits Plan is (i) to allow Proposer to document its approach to fulfilling the claims that are provided in the Offer Data Form, (ii) to allow Proposer to explain and justify its Incremental and Contingent Economic Benefits claims, (iii) to help NYSERDA assess the credibility of the Incremental and Contingent Economic Benefits claimed in the Offer Data Form.

Contingent Economic Benefits must also be supported by a Contingent Economic Benefit analysis to be submitted as part of the Economic Benefits Plan. The Contingent Economic Benefit analysis must include technical, financial, operational, and economic detail sufficient for NYSERDA to evaluate such claims for their technical, financial, and operational viability, as well as their short- and long-term economic benefits to New York.

In the Economic Benefits Plan, Proposer must also describe the manner in which Proposer will comply with the New York State Supplier Opportunity requirement described in Section 2.2.9. The Economic Benefits Plan should:

1. Provide a description of how Proposer will evidence in post-contracting biannual reports such compliance for any package of work, on Proposer's behalf or on behalf of its Major Suppliers, with respect to information such as:
 - a. The expected scope of work;
 - b. The estimated value of the scope of work;
 - c. The names of New York companies invited to tender; and
 - d. Evidence that New York State companies have been made aware of the opportunity
2. Identify any exceptions to providing opportunities to New York vendors for those opportunities deemed by Proposer as impractical to be serviced by the New York State supply chain at this time, along with the reason and justification for designating the contracting opportunity as an exception. There are three exceptions to providing opportunities to New York vendors:
 - a. No New York company can reasonably be expected to have the capability to deliver a scope of work in the timescale needed for the Project;
 - b. Proposer or its Major Suppliers have existing or committed contractual arrangements at the time of the offer with suppliers outside of New York; or
 - c. The selection of a New York supplier would be impractical (for example, if the customer for the scope of work is outside of New York) or if it would add significant commercial or technical risk to the Project.

Economic Benefits Category 1 is comprised of offshore wind Project-specific spending and job creation in New York State. It includes those net expenditures by developers and their supply chains in New York State, including in-state purchases, employment, and payments/benefits to New York State government or other entities. The Proposal will also describe the degree to which the development and construction of the Offshore Wind Generation Facility will directly create short and long-term jobs in New York State. Induced benefits related to the expenditure of workers' and proprietors' salaries will not be considered.

A description of Category 1 expenditure types is provided in Appendix C.

Under Category 1 and Category 2, New York State content is the percentage of New York State expenditure in the base costs, where the base cost is the value of aggregated internal costs and external subcontracts. The calculation of New York State content excludes the ultimate destination of profits. If it is unclear whether an expenditure belongs in Category 1 or Category 2, Proposer may elect an allocation of the investment or expenditure between Categories 1 and 2 provided that there is no double counting of the same dollar expenditure, expenditures are appropriately cross referenced in the Offer Data Form, and such allocation is described in the Economic Benefits Plan. For dollars allocated to Category 2, Proposer must explain the basis for the claim of persistency.

Category 2 includes long-term capital investments in offshore wind-enabling supply chain, infrastructure, workforce development and research and development (R&D) initiatives in the state that will have an enduring impact on the offshore wind industry and the New York State economy. Such investments are expected to include economic benefits from subsequent Project development that would leverage improved infrastructure and deliver additional long-term economic benefits to New York State, lower the cost of future offshore wind energy, and/ or reduce future offshore wind project risk.

For Category 2, the Economic Benefit Plan must include a written description of the investments and benefits that are expected to arise from supply chain and infrastructural investments, including a description of the persistent nature of the investment. For each listed investment, Proposer must describe its approach, cost, the circumstances under which the investment will take place, and any risks or uncertainties associated with the likelihood that the investment will occur. Commitments of greater maturity and/or firmness will be considered to carry greater weight.

Proposer should quantify and provide a written description of the expenditures that are expected to arise from investment in enabling offshore wind supply chain, infrastructure, workforce development, and research and development (R&D) investment in New York State. Emphasis should be placed on investments that create an enduring impact on future offshore wind economic activity in New York, reduce cost of future offshore wind energy or reduced future offshore wind project risk. Proposer should explain the strategic importance of its commitment and how it fits into overall regional offshore wind market development and identify the duration of any commitment. In addition, Proposer may identify and discuss the capability of any partners, and provide supporting documentation to substantiate the nature, firmness and maturity of their commitments.

Investments meeting the definition of Incremental Economic Benefits that are not unique to the Project (e.g., supporting multiple offshore wind facilities) may be included for consideration under this RFP, provided that the investment is made on Category 2 investment types listed in Appendix C.

Category 3 consists of input activities that provide opportunities for New York State supply chain, workforce, and research and development. This category includes programmatic actions that will have desirable impacts on the New York State supply chain and workforce, but the value of which is not denominated in dollars and is therefore indirectly tied to, or difficult to compare to the large expenditures grouped under Category 1 or Category 2. These input activities include impactful actions taken on the part of Proposer to enhance the New York offshore wind market, supply chain development, or local workforce. Expenditures associated with these actions should be included in Category 2. The actions and value of those actions and metrics by which they are to be measured should be included in Category 3.

Input activities that have the potential to benefit New York State may include but are not limited to those actions and/or developments are delineated in Appendix C. Category 3 input activities are additional to the New York State Supplier Opportunity threshold requirement that Proposers must agree to provide companies with the

opportunity to offer to provide goods and services to developers of the Project for which there is capability in New York State.

The Economic Benefit Plan must include a written description of the input activities that Proposer will take under Category 3. Where possible, Proposer should seek to quantify the input activities, and provide documentary evidence of past examples of similar activities and the impacts they had and supporting documentation from potential partners or beneficiaries. In general terms, Proposers should describe:

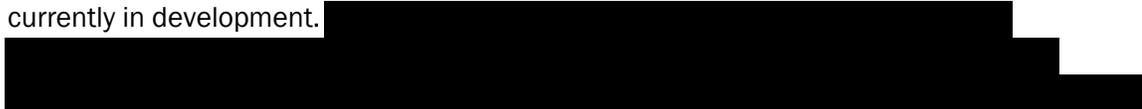

1. The nature of the intended commitment;
2. The timetable for undertaking the activity;
3. A discussion of any risks or uncertainties, including the degree to which it is dependent on factors outside Proposer's control, and describe what these factors are;
4. The potential impact of the activities and the factors that will influence the impact;
5. The resources Proposer will deploy (financial or manpower) to deliver the activity; and
6. The organizations with whom Proposer will work.

Proposer should summarize any engagement with third-party organizations that would be involved in the successful delivery of Proposer's commitments. The Category 3 description must also include subsections for Business and Workforce Engagement Plans. Proposer should explain the strategic importance of commitment and how it fits into overall regional offshore wind market development and identify

2. Identify any exceptions to providing opportunities to New York vendors for those opportunities deemed by Proposer as impractical to be serviced by the New York State supply chain at this time, along with the reason and justification for designating the contracting opportunity as an exception. There are three exceptions to providing opportunities to New York vendors:
 - a. No New York company can reasonably be expected to have the capability to deliver a scope of work in the timescale needed for the Project;
 - b. Proposer or its Major Suppliers have existing or committed contractual arrangements at the time of the offer with suppliers outside of New York; or
 - c. The selection of a New York supplier would be impractical (for example, if the customer for the scope of work is outside of New York) or if it would add significant commercial or technical risk to the Project.

16.2.1 Sunrise Wind's Economic Development Strategy

The U.S. offshore wind industry is growing rapidly, and Governor Cuomo's goal of 9,000 MW of offshore wind generation by 2035 places New York at the center of this growth. A sustainable supply chain, a skilled local workforce, and a capable domestic infrastructure are all critical to successfully delivering the billions of dollars of global wind power projects currently in development.

[REDACTED] The Economic Benefits Plan offers a comprehensive program that will produce both immediate and long-lasting positive economic benefits in New York.

The Sunrise Wind Project will help establish an unmatched U.S. offshore wind industry in New York by delivering a focused, strong and unique economic development program for New York. This program is built on Ørsted's more than 25 years of experience in developing offshore wind hubs around the world. The Project's economic development program is based on the following four principles:

U.S. Experience

1. BLOCK ISLAND WIND FARM

America's first offshore wind farm – the 30-MW Block Island Wind Farm – began commercial operations in December 2016 and generates enough power for 17,000 homes each year. In connection with the Block Island Wind Farm project, Ørsted also developed a transmission system – the Block Island Transmission System – connecting Block Island to the mainland electric grid for the first time. The Block Island Transmission System is the first offshore renewable energy transmission system in the United States, a 22-mile submarine cable system linking two new onshore substations, allowing the export of offshore wind energy to the mainland electric grid. Together, these two projects provide the equivalent of firm power to the Block Island Power Company, which enabled it to retire its existing diesel-fired generating station in 2017 when the Block Island Wind Farm project commenced commercial operations.

Ørsted began developing the Block Island Wind Farm and Block Island Transmission System projects in 2008 and has managed all aspects of their development. Ørsted conducted extensive pre-survey coordination with Bureau of Ocean Energy Management (BOEM), U.S. Army Corps of Engineers (USACE), National Oceanic and Atmospheric Administration (NOAA) National Marine Fisheries Service (NMFS), the U.S. Fish and Wildlife Service (USFWS), and the RI Coastal Resource Management Council (CRMC). The Block Island Wind Farm project required permits or consultation with more than 20 federal, state, and local authorities.

Ørsted engaged key stakeholders early in the process and established constructive relationships with the Wampanoag Tribe of Gay Head (Aquinnah), the Narragansett Indian Tribe of Rhode Island, the commercial and recreational fishing community, and both regional and national environmental non-governmental advocates for marine mammal protection and ocean conservation.

Through the development of the Block Island Wind Farm project, Ørsted has gained a unique set of skills, relationships and data specific to offshore wind development in the U.S. that have informed the design, development schedule, technology choices, construction methodologies, financing strategy, operational procedures and cost estimates for the Project, including:

- A hands-on approach to stakeholder engagement that begins early in the project development process. This approach generated widespread support and positive media attention through a concerted community outreach plan.
- Expertise specific to the southern waters of New England (the RI-MA WEA) in gathering and evaluating information related to wind and wave conditions; sea bottom type; alternative uses such as commercial fishing; environmental considerations such as avian, bat, marine mammal and sea turtle transit and foraging patterns; relationships with local vendors, including vessel captains, diving contractors, environmental scientists, engineers, consultants and many others who have supported the development of the Block Island Wind Farm project.
- Detailed understanding of the latest market developments, trends and costs in the development, site assessment, permitting, construction, operations & maintenance suitable for major offshore wind farms in the U.S.
- Strong relationships with key technology and equipment providers, such as General Electric, Siemens, Vestas, ABB, Fred.Olsen, Gulf Island Fabrication, EEW, LS Cable, Keystone Engineering, Mott MacDonald, Tetra Tech and many others for U.S.-based work.

- Strong relationships with global financial institutions involved in the renewable energy industry, including those in the offshore wind sector. The Block Island Wind Farm was very strongly received in the financial markets.

2. SOUTH FORK WIND FARM

Ørsted is actively developing the South Fork Wind Farm – a 130 MW offshore wind farm located approximately 35 miles east of Montauk, NY. The project is to be the first phase of development in the BOEM Leases OCS-A 0486. It is designed to interconnect with and deliver energy to a constrained part of the Long Island Power Authority’s (LIPA’s) grid in the south fork – an area commonly known as “The Hamptons” – and is scheduled to come online in December 2022.

Ørsted proposed the South Fork Wind Farm in response to a solicitation seeking new sources of energy and capacity that was specific to the south fork. This was not a renewables solicitation. In January 2017, the LIPA Board of Trustees approved a Power Purchase Agreement for the South Fork Wind Farm. In November 2018 the LIPA Board of Trustees approved an amendment to the PPA for 40 MW of additional power, capacity made possible by improvements in turbine technology. As with the Block Island Wind Farm, Ørsted has implemented a comprehensive stakeholder and community engagement program for the South Fork Wind Farm project that has resulted in demonstrated community support.

3. SKIPJACK WIND FARM

Ørsted is also developing the Skipjack Wind Farm – a new 120 MW offshore wind farm to be located more than 19 miles off the coast of Maryland. It will interconnect with the existing Delmarva Power 138 kV transmission system in Ocean City, Maryland.

The Skipjack Wind Farm will be located in the offshore wind energy area designated by the Department of Interior as OCS-A 0482. Based on the many years of development work already completed at this site, the Skipjack Project can be implemented as soon as, if not sooner than, any other utility-scale offshore wind farm in the region. Following receipt of a fully-approved, unappealable order from the Maryland Public Service Commission in May 2017, the Skipjack Wind Farm is scheduled to be in-service by the end of 2022.

4. REVOLUTION WIND

The Revolution Wind Project is a new offshore wind farm to be located in OCS-A 0486. In May and June of 2018 Ørsted was awarded opportunities to negotiate PPAs with the states of Rhode Island and Connecticut respectively, which collectively total 600 MWs of nominal nameplate capacity. In December of 2018, Ørsted was awarded a second opportunity to negotiate an agreement for an additional 100 MW of nominal nameplate capacity with Connecticut, increasing the nameplate output of Revolution Wind to 700 MW. Site characterization of the lease area has been ongoing for several years, and offshore survey work to support this project has been underway since summer 2018. Revolution Wind is scheduled for completion in 2023.

5. COASTAL VIRGINIA OFFSHORE WIND

The Coastal Virginia Offshore Wind Project is a 12 MW demonstration-scale offshore wind farm to be located in OCS-A 0483 off Virginia Beach. The project is led by Dominion

Energy, one of the largest public energy utilities in the U.S., in collaboration with Ørsted. In November 2018 the Virginia State Corporation Commission approved the project and granted a certificate of public convenience and necessity to construct and operate the Virginia Interconnect Facilities. The project is scheduled for completion in 2020.

Overview

Chairman's statement / At a glance / CEO's review
Outlook 2017 / Financial medium-term targets and financial policies

Our carbon emissions:

462 g CO₂e/kWh
2006

224 g CO₂e/kWh
2016

20 g CO₂e/kWh
2023 target

Chairman's statement

Making great progress in the green transformation

For the third year running, 2016 was the warmest year ever, and the global concentration of CO₂ in the atmosphere has never been higher. Halting climate change requires a fundamental transformation of the world's energy systems from fossil fuels to renewable energy sources.

DONG Energy is the energy company in Europe which has come the furthest in the transition to renewable energy, and 2016 was yet another important milestone. The Group's earnings from Wind Power doubled to DKK 11.9 billion and for the first time exceeded earnings from oil and gas production. We installed 0.6GW of new offshore wind capacity and completed the conversions of two CHP plants in Aarhus and Copenhagen to sustainable biomass. The Group's CO₂ emissions have been halved relative to 2006, and our goal is for DONG Energy to phase out coal completely by 2023.

The transformation of our business to increasingly more renewable energy also means becoming more international. Today, we are constructing and operating offshore wind farms in Denmark, the UK, Germany and the Netherlands, while also maturing new projects in the USA and Taiwan.

In June 2016, we completed an IPO, the biggest in Danish history, and in December 2016, DONG Energy was included in the OMX C20 index on Nasdaq Copenhagen. I would like to thank both Danish and international investors for the trust which they have shown our company.

In November 2016, we decided to initiate a process aimed at divesting the Group's oil and gas production activities. The decision should be seen in light of our desire to become world-leading in green energy. We have created a strong and competitive oil and gas business in the North Sea. The time has now come to find new owners who can provide the best possible conditions for developing this business area.

Our efforts to improve safety continued in 2016, and the injury frequency was at a record low. Making DONG Energy an even safer workplace is a key priority for the Board of Directors. We will therefore continue our efforts to improve safety standards to ensure that everybody working for DONG Energy – our employees and our business partners – get safely through their working day.

Profit after tax for the year was DKK 12.2 billion for the continuing operations – the best result ever in the history of DONG Energy and a significant increase compared to 2015. On behalf of the Board of Directors, I would like to thank our management and employees for the significant results achieved in the past year.

A handwritten signature in black ink, appearing to read 'T. Thune Andersen'.

Thomas Thune Andersen
Chairman of the Board of Directors

“
DONG Energy is the energy company in Europe which has come the furthest in the transition to renewable energy, and 2016 was yet another important milestone

DONG Energy at a glance

- Headquarters in Denmark
- 6,200 employees (including Oil & Gas)
- Revenue in 2016 DKK 61 billion

80%* Wind Power

Develops, constructs, owns and operates offshore wind farms in Denmark, Germany, the Netherlands and the UK. Development projects in Taiwan and the USA.

4%* Bioenergy & Thermal Power

Generates and sells power and heat to customers in Denmark and Northwestern Europe.

4%* Oil & Gas

(discontinued operations)
Produces oil and gas from fields in Denmark, Norway and the UK.

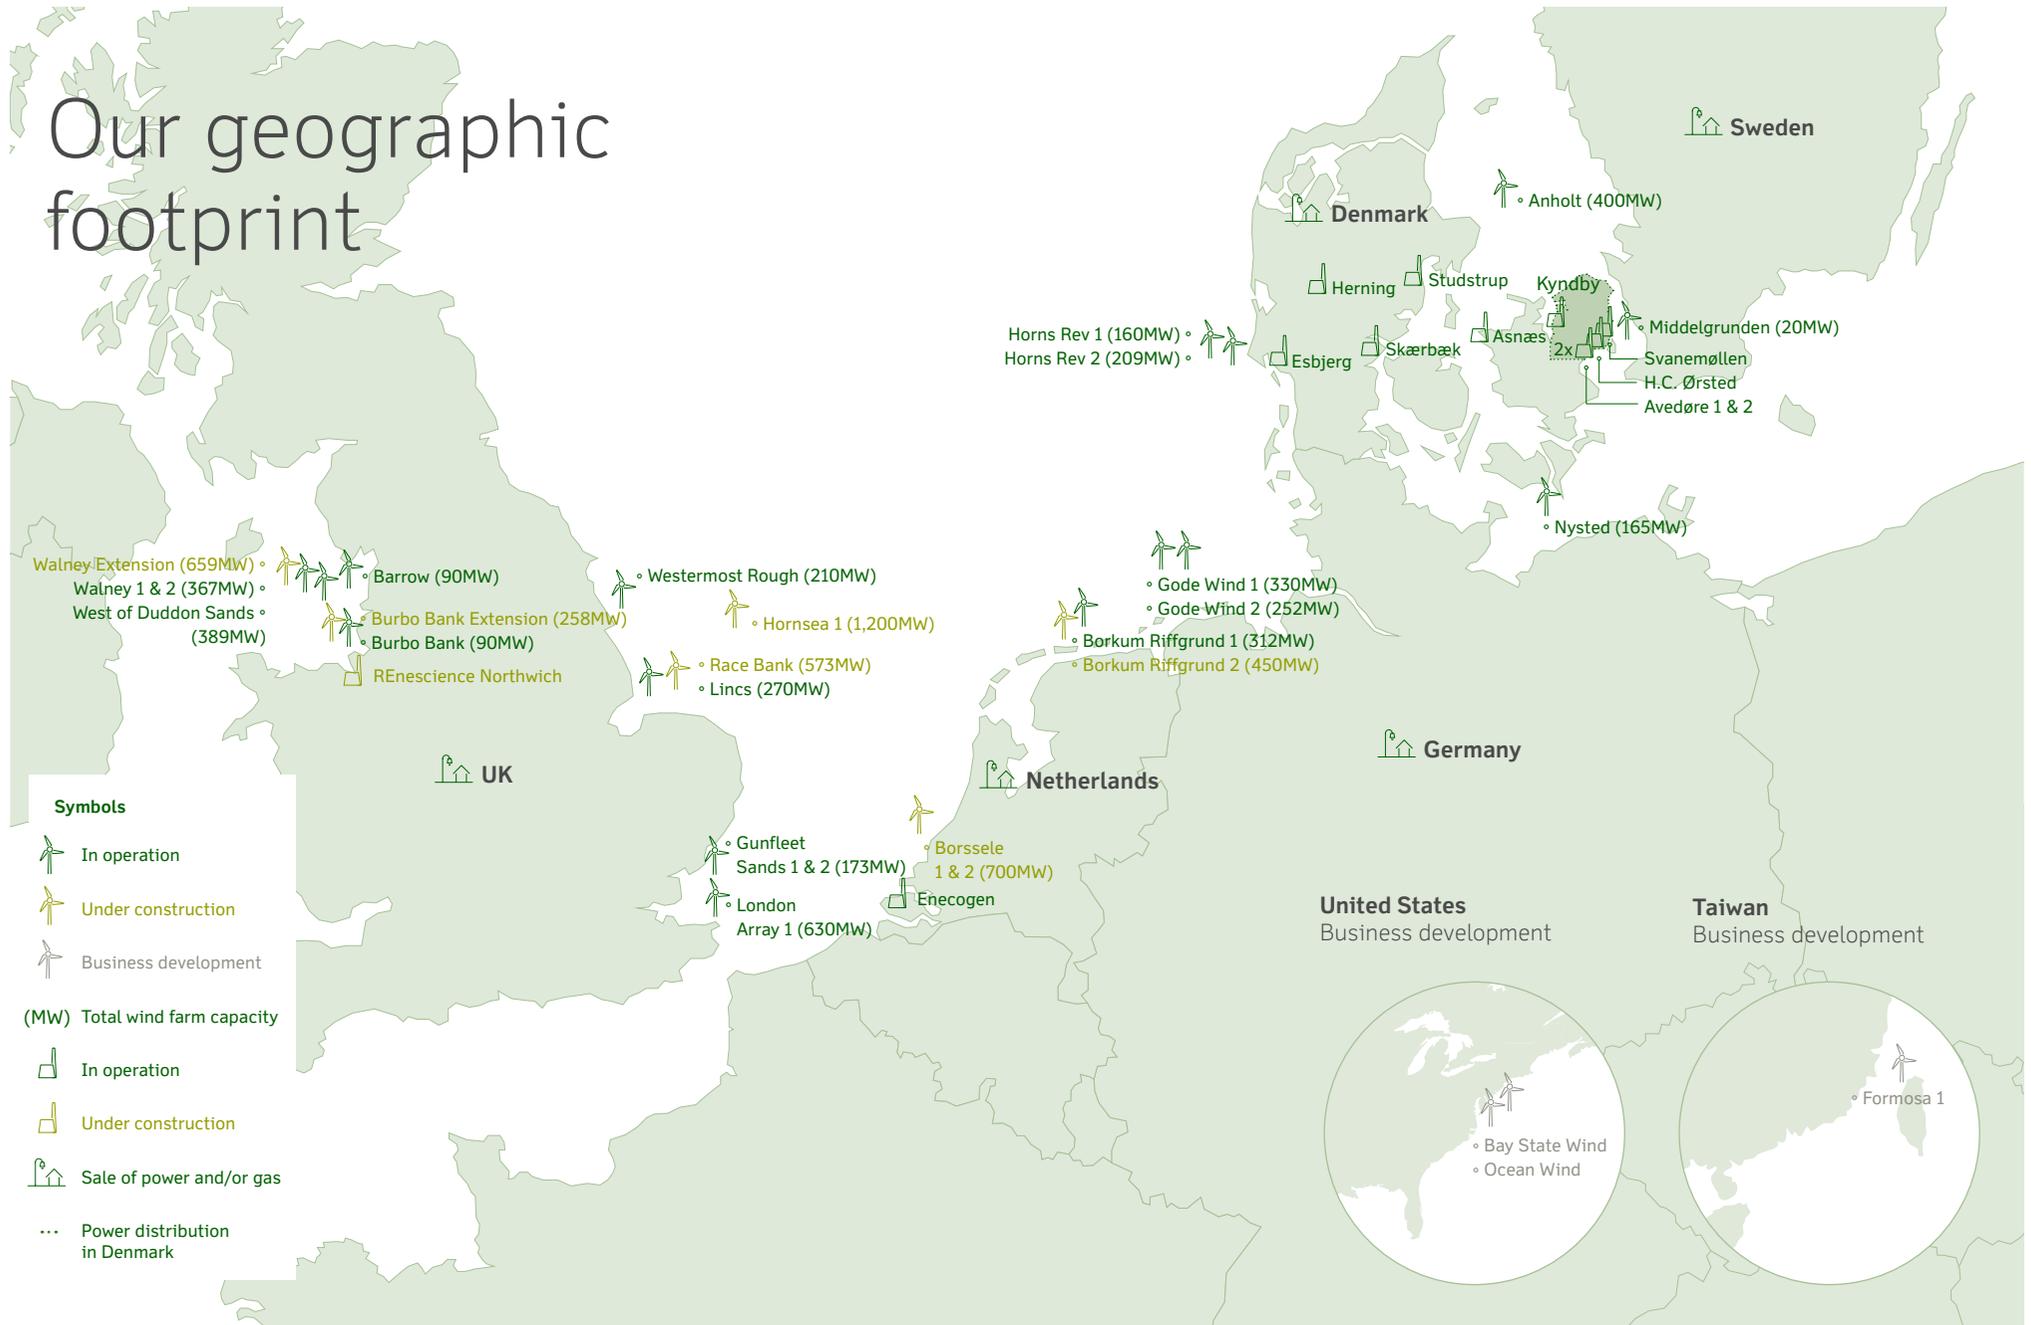

12%* Distribution & Customer Solutions

Power distribution grid on Zealand and sale of power and gas to customers in Northwestern Europe.

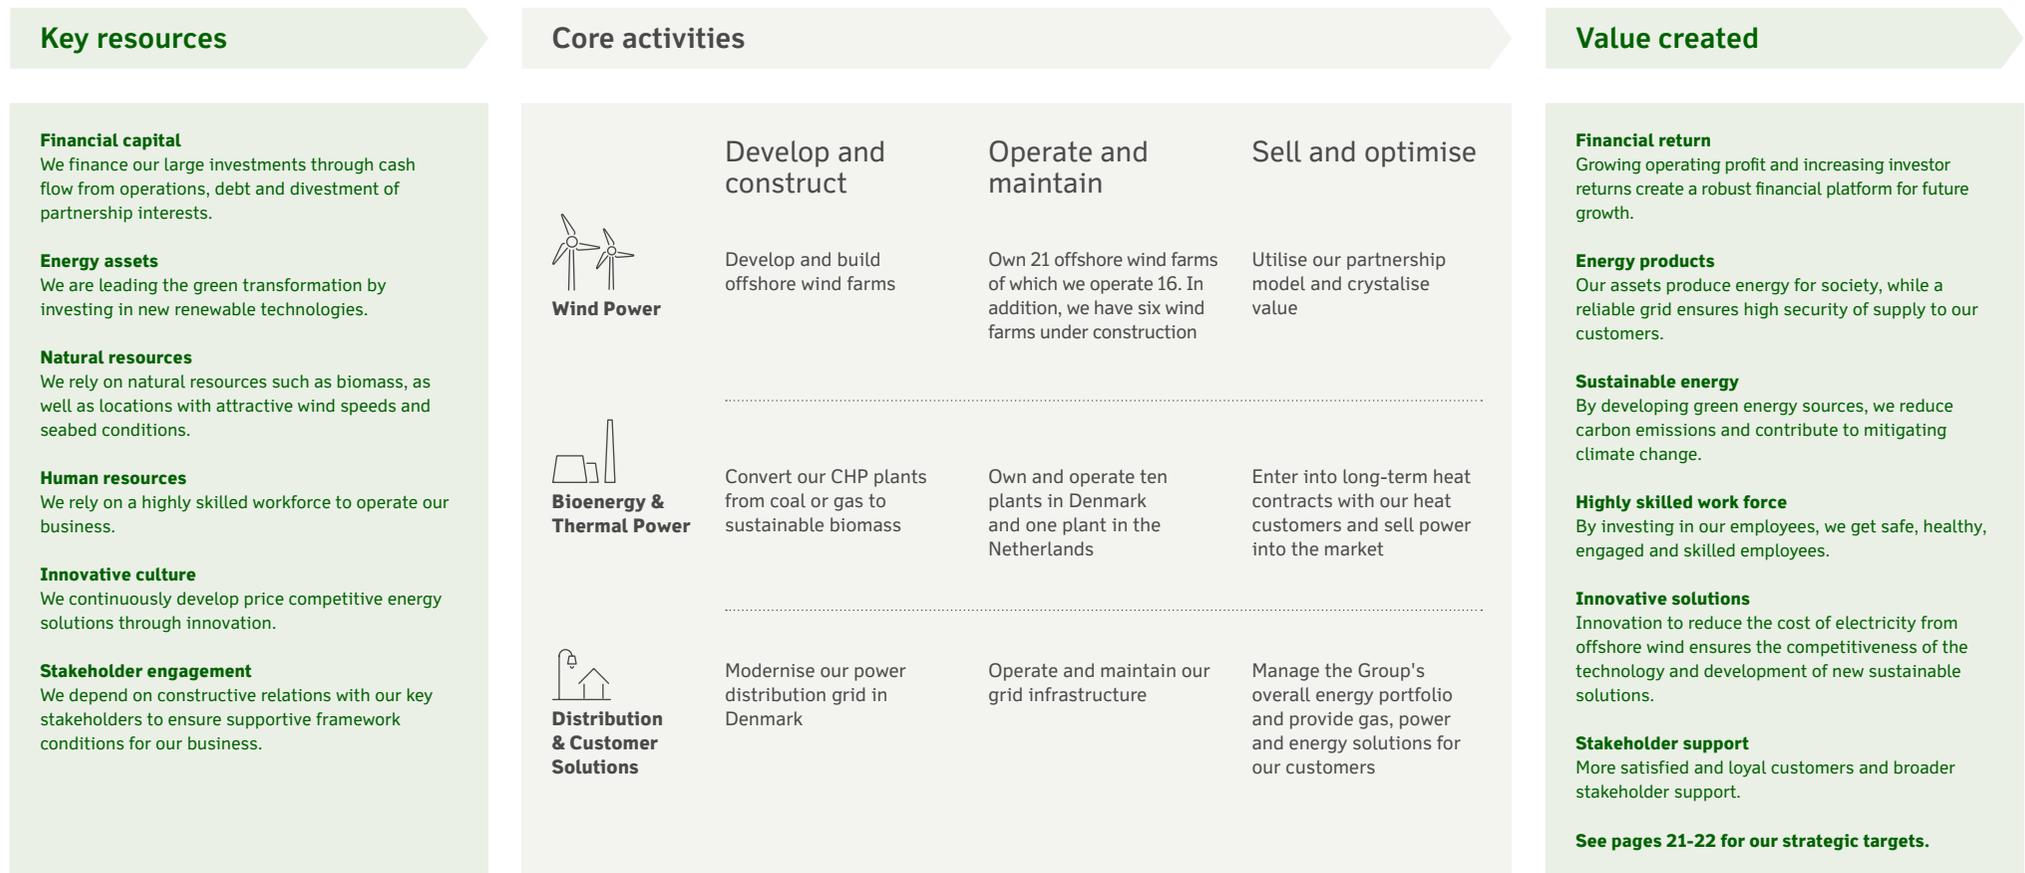

* Share of the Group's capital employed

Our geographic footprint

Business model

We are active across the entire power and heat value chain. We create value for our customers, shareholders, employees and society in large by building market-leading competitive positions.

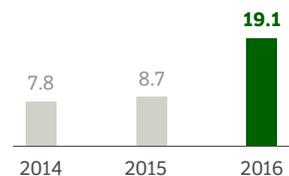

Our value creation enables us to maintain and develop our key resources.

Strong progress in consolidated results

(continuing operations)

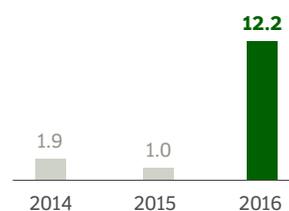

Operating profit (EBITDA), DKK billion

The increase was due partly to one-off payments from completed renegotiations of gas purchase contracts and partly due to higher activity from construction contracts and gains from the divestment of 50% of two offshore wind farms.

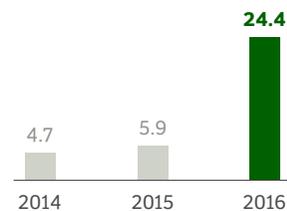

Net profit, DKK billion

The increase was primarily due to higher EBITDA and a gain from the divestment of the gas distribution network.

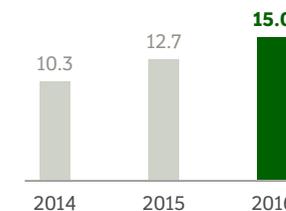

Return on capital employed (Adjusted ROCE¹), %

The increase in ROCE was primarily due to a higher EBITDA.

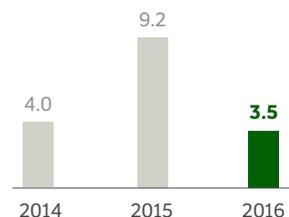

Gross investments, DKK billion

The increase in investments was due to our ongoing construction of several offshore wind farms.

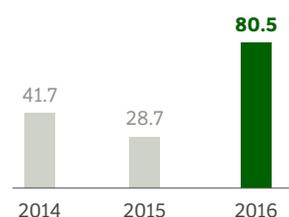

Interest-bearing net debt, DKK billion

Net debt was reduced as a result of the high EBITDA and divestments exceeding gross investments, and increased funds tied up in working capital.

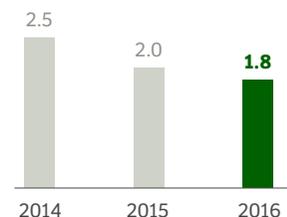

Credit metric (FFO/adjusted net debt²), %

The increase in FFO/adjusted net debt ratio was partly due to higher FFO and lower adjusted net debt.

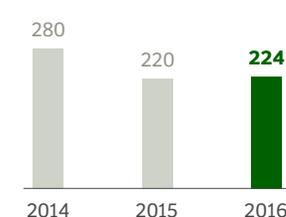

Safety, LTIF

Our continued focus on safety resulted in a historically low lost-time injury frequency.

Carbon emissions, g CO₂e/kWh

The marginal increase in CO₂ emissions was attributable to high thermal power generation due to a lower supply of hydro- and wind power.

¹Adjusted ROCE is calculated as EBIT with impairment losses added back/average capital employed (with impairment losses after tax added back to ultimo capital employed).

²Interest-bearing net debt including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligation less deferred tax.

Discontinued operations

As a consequence of the decision to divest the Oil & Gas business, the results from these discontinued operations are recognised separately (on one line) after net profit from continuing operations. The same applies to the cash flows. LTIF has also been calculated excluding Oil & Gas.

CEO's review

- **Doubling the Group's operating profit for continuing operations**
- **Wind Power's EBITDA up by 93% to DKK 11.9 billion**
- **Strong progress in Wind Power's construction of new offshore wind farms**
- **Decision to divest the Oil & Gas business**

Results

The results for 2016 are highly satisfactory with an operating profit (EBITDA) from continuing operations of DKK 19.1 billion; corresponding to underlying growth of 95%. Total EBITDA, including Oil & Gas totalled DKK 25.6 billion, which was slightly higher than the most recent guidance announced for the year. At the same time, we realised a very good return on capital employed, which increased from 6% to 24% for our continuing operations.

The net profit from continuing operations rose by DKK 11.2 billion to DKK 12.2 billion. The total net profit, including Oil & Gas, amounted to DKK 13.2 billion, which allows us to recommend to the annual general meeting that dividend of DKK 2.5 billion be paid in 2017.

2016 was an important year for our transformation to green energy. Wind Power's EBITDA grew by 93% to DKK 11.9 billion and

accounted for 62% of the Group's EBITDA. CO₂ emissions from our heat and power generation stagnated temporarily due to less favourable wind conditions compared to 2015.

Strategic development

Our strategy is to continue the transformation of the Group to green energy and to lead the transition towards a more sustainable energy system. We focus on competing from market-leading positions and on creating growth through innovative solutions. This is the case not least in Wind Power, where we have prospects of further profitable growth through the realisation of our pipeline of offshore wind power projects in the period leading up to 2020. From 2021 to 2025, it is our ambition to continue the value creating expansion and to reach an installed capacity of 11-12GW by the end of 2025.

We aim to transform our Danish utility business into an intelligent, green and growing business. We are converting our power stations to sustainable biomass based on long-term heat supply contracts. We have decided to stop using coal altogether at our power plants from 2023. In 2016, we decided to build the first REnescience waste treatment plant in Northwich in the UK. The plant will convert unsorted household waste into green energy by means of enzymes, based on the REnescience technology. In Distribution, we are expanding the intelligent power grid and investing in intelligent power meters as

“

Our strategy is to continue the transformation of the Group to green energy and to lead the transition towards a more sustainable energy system. We have decided to stop using coal altogether at our power plants from 2023

“

In 2016, we invested DKK 15 billion in our long-term competitiveness within offshore wind, biotechnologies, distribution and digitalisation

part of our continued efforts to deliver green and digitally supported customer solutions combined with a high level of service.

In 2016, we invested DKK 15 billion in our long-term competitiveness within offshore wind, bioenergy, distribution and digitalisation.

In November 2016, we decided to put our Oil & Gas business up for sale. We are thus continuing our long-term green transformation. Oil & Gas delivered a strong operational and financial performance in 2016. Our focus is now on creating the right conditions for the future development of the Oil & Gas business and to obtain the right price for the asset for our shareholders. The process is progressing as planned.

We extended our targets for the period up until 2023 of an average return on capital employed (ROCE) of 12-14% for the Group, 13-15% for Wind Power and 9-11% for Distribution & Customer Solutions.

In 2016, we made strong progress in relation to our strategic priorities for the business units.

Wind Power

Wind Power reached important milestones in 2016. The offshore wind farm Gode Wind 1 & 2 was completed, and final investment decisions were made for Hornsea 1 in the UK and Borkum Riffgrund 2 in Germany. With capacity of 1.2GW, Hornsea 1 will be the world's largest offshore wind farm when commissioned in 2020, and our biggest investment ever. In July, we won the contract for the Dutch offshore wind farms Borssele 1 and 2, adding a further 700MW of capacity to our portfolio of value-adding projects. The Hornsea 2 project was consented by the UK government in September. This means that the project can bid at future auctions for the right to construct subsidised offshore wind farms in the UK. Hornsea 2 has a capacity of up to 1.8GW.

We are currently involved in the construction of six major offshore wind farms. The projects are progressing according to plan, and thanks to these projects we are reaching new technical milestones. For example, we installed the world's first 8MW offshore wind turbine at Burbo Bank Extension in September. This means that we have been the first to install the latest four generations of wind turbines, confirming our position as a pioneer.

The only significant challenge for our portfolio of construction projects concerned Gode Wind in Germany, where a transmission cable fault delayed the final commissioning of the wind farm. The cable was not part of our construction responsibility, and we were to a large extent compensated by the transmission company. Gode Wind was commissioned during Q4 and is now in ramp up phase.

The development of our portfolio of offshore wind projects for construction after 2020 continued in 2016. We acquired the project rights to an additional 1GW of offshore wind capacity in the USA, bringing our total US project rights to 3GW. In addition, we increased our geographic reach by establishing an office in Taipei, which will be exploring offshore wind opportunities in the Asia Pacific region.

The cost of electricity from offshore wind was reduced further in 2016. This is due, among other things, to the continuous innovation of turbines and blades, improved installation methods and foundation design, higher cable capacity, a growing and competitive supply chain – and not least the synergies created by constructing offshore wind farms on a large scale. We are committed to further reducing the cost of electricity from offshore wind.

Our successful partnership model allows us to maintain a high paced build-out exposure to the offshore wind market and to diversify risks as we invest the proceeds from the divestment of 50% of our ownership interests in offshore wind farms in new wind farms. In February, we divested 50% of our ownership interest in Burbo Bank Extension, and in December, we divested 50% of our ownership interest in the Race Bank project.

Bioenergy & Thermal Power

BTP reached several important milestones within bioenergy. We completed the coal-to-biomass conversion of two CHP plants at the end of 2016: Studstrup Power Station in October and Unit 1 at Avedøre Power Station in December. In conjunction with the ongoing conversion of Skærbæk Power Station, these

conversions will contribute to meeting our target of doubling our earnings from sales of district heat from 2015 to 2017. Moreover, they will make a significant contribution to the green transformation in Denmark. Our goal is to phase out coal completely at our CHP plants by 2023.

As mentioned above, we decided to construct our first commercial-scale REnescience plant that converts unsorted waste into energy and recyclable materials. The plant is located in Northwich in the UK and will be the first full-scale plant based on our innovative, enzyme-based waste treatment technology. The plant is expected to be commissioned in the first half of 2017.

In 2016, the Copenhagen Maritime and Commercial Court found the former Elsam guilty of violating the Danish Competition Act in 2005 and the first half of 2006 without, however, providing clear grounds for its decision. We do not agree with the ruling and have decided to launch an appeal, which will now be heard by the High Court of Western Denmark.

Distribution & Customer Solutions

DCS continued to reduce the risk associated with the gas portfolio as renegotiations of a number of long-term gas purchase contracts were concluded in 2016 with satisfactory results. This means that we have renegotiated the most important contracts in the portfolio, which, resulted in one-off compensations totalling DKK 4.3 billion in 2016.

Another important achievement was the transition to new customer systems in

connection with the introduction of the new supplier-centric wholesale model for the Danish power market. In connection with the implementation, our power distribution company changed its name to Radius.

In 2016, customer satisfaction was on a par with last year in the Danish sales business. We continued our efforts to establish partnerships with our customers – rather than holding on to our classic role as a supplier of power and gas. We are seeing a growing demand for integrated, green energy solutions, and our ambition is to lead this paradigm shift. Among other things, we offer our customers climate partnerships with green power and advice on energy efficiency and procurement. Moreover, we are working on a service concept under which we offer to assume full responsibility for handling our customers' energy supply and guarantee energy savings from day one.

The divestment of our gas distribution network to Energinet.dk was completed at the end of Q3 with a gain of DKK 1.2 billion.

Oil & Gas

Oil & Gas continued the significant restructuring of the business and delivered a strong operational performance in 2016. Costs were further reduced as a result of the renegotiation of more supplier contracts, reduced exploration efforts and improved operational efficiency. Total costs and investments were reduced by 38% relative to 2015.

The production of first gas from the Laggan-Tormore field in the area west of the Shetland Isles marked an important milestone. When fully operational, the field is expected to add

maximum production capacity of 18,000 boe a day to Oil & Gas. The expansion of the Glenlivet-Edradour field has also seen satisfactory progress with commissioning planned for late 2017.

In March, we terminated the EPC contract concerning the platform for the Hejre project. The consortium working on the platform had not been able to fulfil its contractual obligations. We and our licence partner therefore lost faith in the consortium's ability to deliver a workable solution.

At the end of the year, we completed the sale of the Norwegian Trym, Ula, Tambar (including Tambar East) and Oselvar fields to Faroe Petroleum with a gain of DKK 0.2 billion.

Employees

We have a strong focus on safety and well-being for our employees, and in 2016 we continued the positive development in the Group's lost-time injury frequency (LTIF), which was reduced to 1.8. Our focused efforts on continuously improving safety for our employees and suppliers will continue with targeted initiatives in all business units. We maintain our target of an LTIF of 1.5 by 2020.

This year's employee survey showed further growth in well-being among the Group's employees. Employee satisfaction increased from index 74 in 2015 to 76 in 2016. We see improvements in the assessment of the Group's reputation, cooperation as well as the assessment of the daily management. It is important that we continue this development, with well-being and performance going hand in hand.

Our employees yet again deserve considerable recognition for their fantastic and dedicated efforts in 2016. In addition to going about their daily work, they have created significant strategic progress for the company and laid the foundation for the biggest IPO in Danish history.

Henrik Poulsen
CEO and President

Outlook 2017

EBITDA

EBITDA (business performance) is expected to increase by 4-18% on an underlying basis, to a total of DKK 15-17 billion for our continuing operations in 2017. The outlook is based on forward commodity prices and foreign exchange rates as well as the expected development in the Group's continuing operations as described below (compared to 2016).

Directional business unit EBITDA guidance for 2017 compared to 2016

Wind Power – higher

- Earnings from wind farms in operation are expected to increase following the commissioning of Burbo Bank Extension and due to higher earnings from Gode Wind 1 & 2, which were completed at the end of 2016. Moreover, the wind energy content was low – at index 93 – in 2016
- We expect to divest 50% of Walney Extension in 2017. Earnings from construction contracts and divestment gains are expected to increase (Race Bank and Walney Extension)
- EBITDA for 2017 is expected to be split more or less evenly between 1) wind farm operations and 2) construction contracts and divestment gains.

Bioenergy & Thermal Power – higher

- EBITDA for 2017 from the heating business is expected to improve relative to 2016, and double relative to 2015 as a result of the successful biomass conversions of Studstrup Power Station and Avedøre Power Station as well as the expected completion of the biomass conversion of Skærbæk Power Station in spring 2017

- EBITDA from our power business is expected to decline relative to 2016, as a result of the fact that market conditions remain challenging. However, total EBITDA from the power and heating business is expected to increase

- Ancillary services are expected to be at the same level as in 2015 and 2016.

Distribution & Customer Solutions – significantly lower

- The gas distribution activities contributed with an EBITDA of DKK 0.4 billion until the divestment in September 2016
- EBITDA for 2016 was positively affected by renegotiation of long-term gas purchase contracts totalling DKK 4.3 billion
- We do not expect to receive any significant one-off payments as a result of the renegotiation of gas purchase contracts in 2017. However, we do expect to see a

Outlook 2017 (DKK billion)	2017 Guidance	2016 Realised
EBITDA (continuing operations)	15-17	19.1
Wind Power	Higher	11.9
Bioenergy & Thermal Power	Higher	0.1
Distribution & Customer Solutions	Significantly lower	7.1
Gross investments	18-20	15.0

Our EBITDA guidance for the Group is the prevailing guidance, whereas the directional earnings development per business unit serves as a means to support this. Higher/lower indicates the direction of the business unit's earnings relative to the results for 2016.

	Guidance 4 Feb 2016	Guidance 27 Apr, 4 Aug & 8 Nov 2016	Guidance 9 Dec 2016	2016 realised
Follow-up on announced outlook for 2016				
EBITDA, incl. Oil & Gas	20-23	Unchanged	24-25	25.6 ✓
EBITDA (continuing operations)	-	-	-	19.1
Wind Power	Significantly higher (>6.2)	10-12	10-12 (high end)	11.9 ✓
Bioenergy & Thermal Power	Lower (<0.3)	Unchanged	Unchanged	0.1 ✓
Distribution & Customer Solutions	Significantly higher (>2.2)	Unchanged	Unchanged	7.1 ✓
EBITDA (discontinued operations, Oil & Gas)	Significantly lower (<9.8)	Unchanged	Unchanged	6.5 ✓
Gross investments, incl. Oil & Gas	20-23	18-21	18-21 (low end)	18.4 ✓
Gross investments (continuing operations)	-	-	-	15.0
Gross investments (discontinued operations)	-	-	-	3.4

EBITDA and gross investments, including Oil & Gas, are shown exclusively to be able to follow up on our guidance announced for all our activities including Oil & Gas. The figures do not appear from the consolidated financial statements.

positive full-year effect from the improved gas purchase prices renegotiated in 2016

- 2016 was also positively impacted by high earnings from locked-in gains from previous years in our portfolio optimisation business, strong results from our trading activities due to considerable market volatility and rising oil and gas prices at the end of the year, which resulted in a positive value adjustment of our gas inventories. These positive effects are not expected to be repeated in 2017
- EBITDA for 2017 is therefore expected to be significantly lower than the underlying EBITDA in 2016.

Gross investments

Gross investments for 2017 are expected to amount to DKK 18-20 billion. The outlook

Forward-looking statements

The annual report contains forward-looking statements, which include projections of short and long-term financial performance and targets as well as our financial policies. These statements are not guarantees of future performance and involve certain risks. Actual future results and developments may therefore differ materially from what is forecast due to a variety of factors.

These factors include, but are not limited to, changes in temperature, wind conditions and precipitation levels, the development in oil, gas, power, coal, CO₂, currency and interest rate markets, changes in legislation, regulation or standards, renegotiation of contracts, changes in the competitive environment in our markets and security of supply. Reference is made to the 'Risk and risk management' chapter and to note 7.

reflects a high level of activity in Wind Power (Walney Extension, Race Bank, Hornsea 1 and Borkum Riffgrund 2), biomass conversions of our CHP plants and the installation of remote power meters.

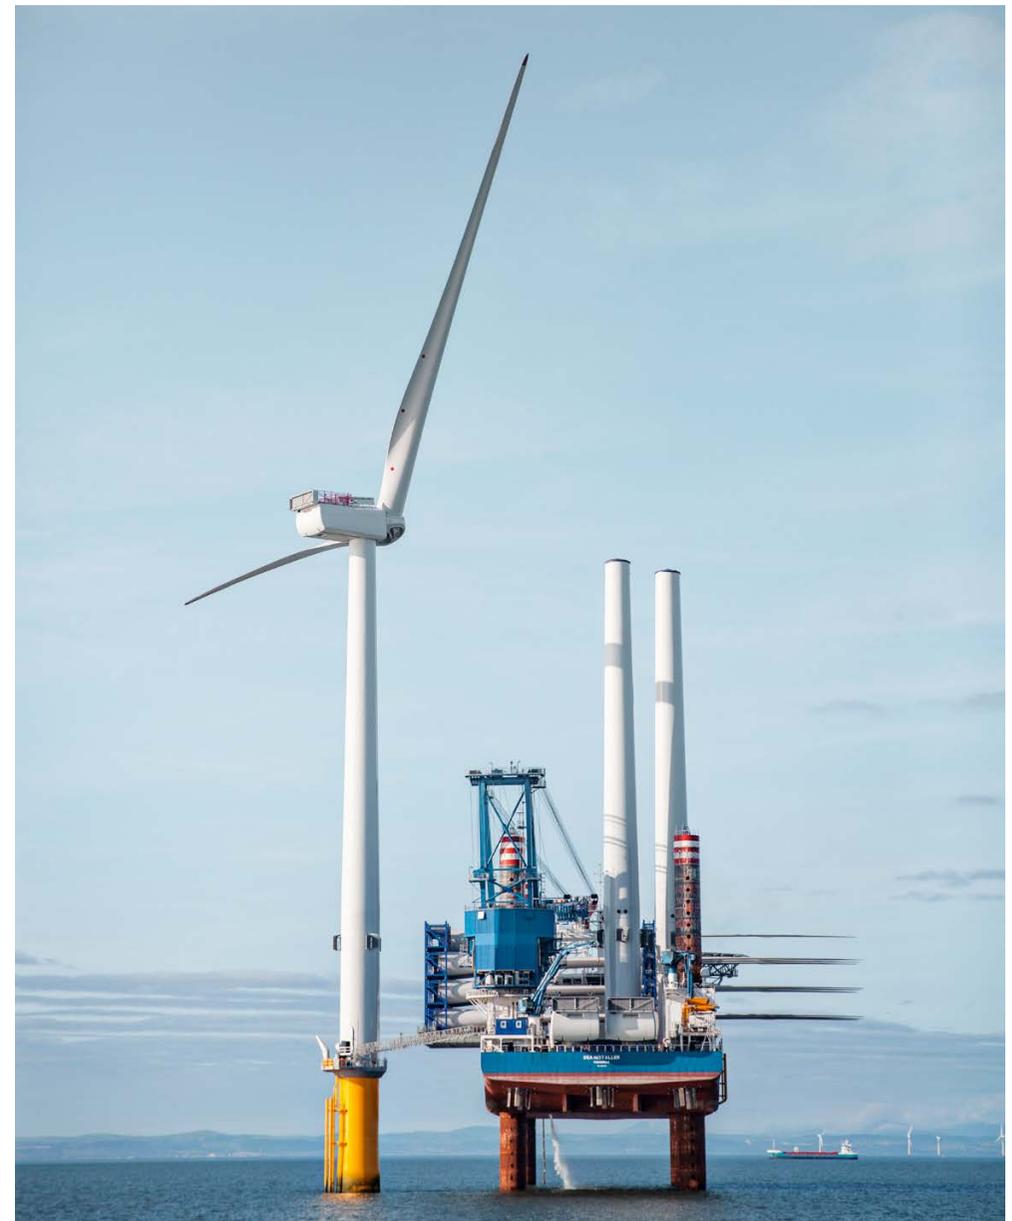

Prices and hedges

The outlook is sensitive to a number of factors, including changes in market prices and foreign exchange rates, despite the fact that a large portion of the price exposure for 2017 has been hedged.

The market value of financial hedging instruments relating to energy and derived currency risks and currency risks associated with our divestment of assets deferred for recognition in business performance EBITDA in 2017 amounted to DKK 0.7 billion at the end of 2016. This effect is included in the outlook for 2017 (see note 2.2).

Discontinued operations

EBITDA from discontinued operations is expected to be lower than in 2016 due to declining production from mature assets, the divestment of five Norwegian fields in December 2016 and the cease of catch-up volumes from the Ormen Lange field in Q1 2016. The higher forward prices going into 2017 are expected to have a positive impact on earnings. However, the positive effect will be partly offset by a lower contribution from hedges. The value of hedging contracts to be recognised in EBITDA in 2017 amounted to DKK 1.1 billion at the end of 2016.

Financial medium-term targets and policies

Financial medium-term targets

Our target is an average return on capital employed (ROCE) of 12-14% for the Group in the 2017-2023 period, with Wind Power as the main contributor.

We regard our ROCE as being less relevant for Bioenergy & Thermal Power, where our focus is rather on achieving positive free cash flows (FCF). Based on our current business plan for the biomass conversion of our CHP plants and the expansion of new bioenergy solutions, we expect to realise positive free cash flows for Bioenergy & Thermal Power from 2018.

Financial policies

In accordance with our dividend policy, which was revised in connection with the IPO, the Board of Directors recommends to the annual general meeting that dividends of DKK 2.5 billion be paid for the financial year 2016.

In the period up until 2020, our ambition is to increase the dividend annually by a high single-digit rate compared to the dividend for the previous year. Our dividend policy is subject to being able to maintain our target of a BBB+/Baa1 rating.

Within the next couple of years we will likely have excess investment capacity compared to the target rating of BBB+/Baa1 (assuming the current build out-plan and farm down strategy in Wind Power and the current dividend policy). We will utilise the investment capacity to pursue value creating investment opportunities. Reducing our farm down activities may be an alternative or supplement to new investment opportunities in order to balance the capital structure while maintaining our current rating. However, if value creating investment opportunities do not absorb the excess investment capacity we will remain disciplined and return cash to shareholders.

Financial medium-term targets	Target	Year
Return on capital employed (ROCE)	average in the period	
Group	12%-14%	2017-2023
Wind Power	13%-15%	2017-2023
Distribution & Customer Solutions	9%-11%	2017-2023
Free cash flow (FCF)		
Bioenergy & Thermal Power	Positive	2018
Financial policies		
Rating	Min. Baa1/BBB+/BBB+ (Moody's/S&P/Fitch)	
Capital structure	~ 30% (FFO/adjusted net debt)	

The ROCE target period has been extended from 2020 to 2023.

Our current rating is in accordance with the policy.

Market situation

Towards a greener energy system

The global temperature is the highest registered for the past 136 years. The concentration of CO₂ in the atmosphere is at an all-time high. And according to the Intergovernmental Panel on Climate Change (IPCC), it is 95-100% certain that the climate change is man-made. Based on current and expected CO₂ emissions, global emissions will exceed the limit defined by scientists as being crucial to preventing global temperatures from rising by more than two degrees compared to pre-industrial levels.

In 2016, a large number of countries, including the EU countries, India the USA and China, ratified the global climate agreement made at the UN Climate Change Conference in Paris (COP21) in December 2015. Under the agreement, the countries committed to keep the global temperature increase below two degrees up until the year 2100. At the UN Climate Change Conference in Marrakech in November 2016, the global community confirmed its commitment to reducing CO₂ emissions and combating climate change.

More than one third of all CO₂ emissions stem from the global energy sector. Consequently, there is a need for a fundamental conversion of the global energy systems from fossil fuels to renewable energy sources.

In Europe, new renewable energy accounted for 18% of total power generation in 2016. This proportion is expected to increase significantly in the coming years, as more than 80% of the generation capacity which will be built in Europe up until 2030 is expected to be green. This means that by 2030, 37% of the power generated in Europe is to come from new renewable energy.

The expansion of renewable energy in Europe is supported by the political framework conditions which are formulated in the EU's 20-20-20 plan. These framework conditions aim to reduce greenhouse gas emissions, increase the share of renewable energy and improve energy efficiency.

Outside Europe, the share of new renewable energy generation is considerably lower, currently 7%. In the period leading up to 2030, the share is expected to grow to 20%. As the demand for electricity is expected to increase by 34% towards 2030, this means that the new renewable energy supply will be almost quadrupled.

Market characteristics within our business units

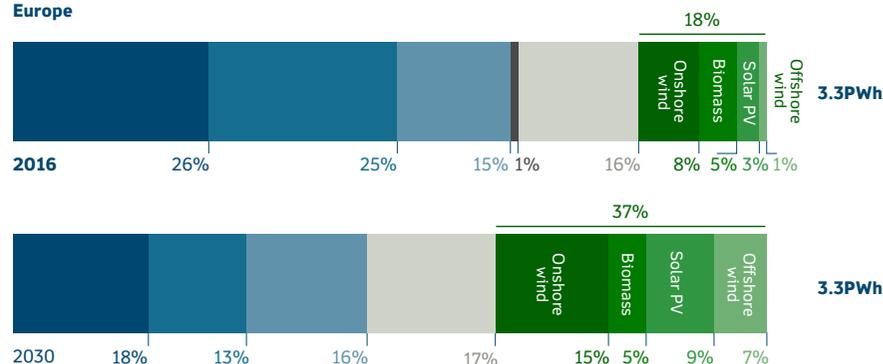

Offshore wind power

Offshore wind power is currently the fastest-growing energy technology in Europe with expected annual growth averaging 23% until

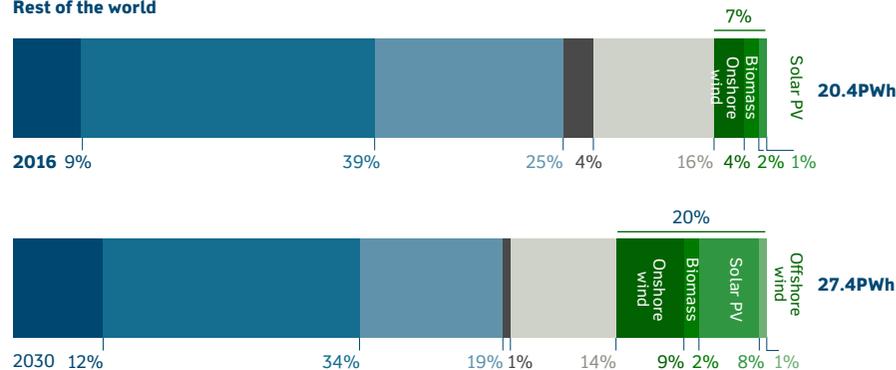

Share of power generation from new renewables

● Nuclear power ● Coal ● Gas ● Oil ● Hydro ●●●●● New renewables

Europe

Rest of the world

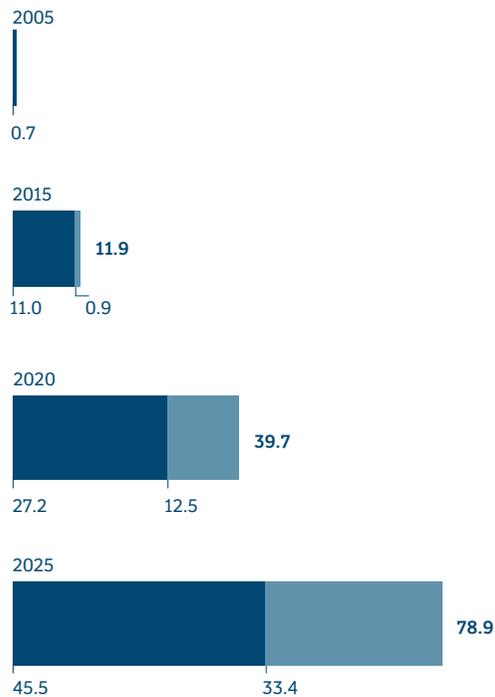

Source: Bloomberg New Energy Finance – NEO 2016

2020. At the end of 2015, installed capacity in Europe totalled 11GW. And from 2015 to 2020, Europe is expected to install an average of 3.2GW a year, gradually increasing total installed capacity to 27GW. The UK will remain the biggest European market with an installed capacity of 11GW in 2020.

In 2025, total installed capacity in Europe is expected to reach 45GW based on

Installed offshore wind capacity, GW

● Europe ● New markets

Source: Bloomberg New Energy Finance (BNEF). H2 2016 Offshore Wind Market Outlook.

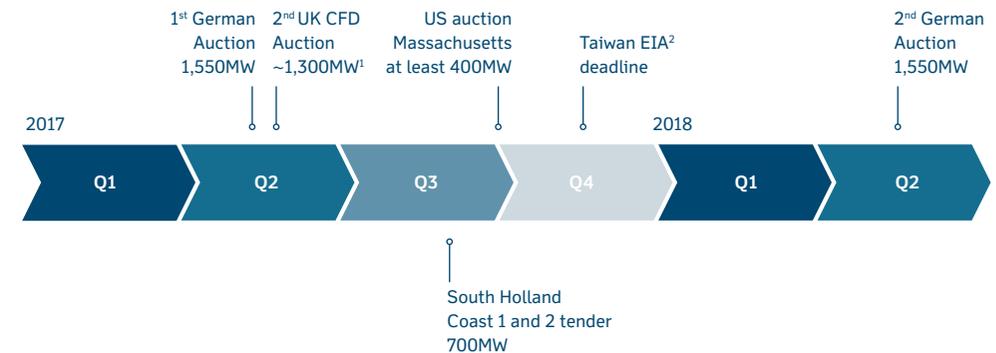

annual growth of 3.7GW from 2020 to 2025. In comparison, Bloomberg is forecasting that installed solar PV capacity will total 174GW in Europe by 2025, while an onshore wind power capacity of 157GW will have been installed.

Offshore wind power is growing, not only in Europe, but increasingly also in emerging markets. In 2015, a total of 0.9GW of offshore wind power capacity had been installed outside Europe, with capacity expected to grow by 2.3GW a year until 2020. In the 2020-2025 period, an annual increase of 3.9GW is expected, resulting in total capacity outside Europe of 33.4GW in 2025. The strongest growth is forecast in the Asian and US markets, where installed capacity is expected to reach 30.1GW and 3.3GW, respectively, in 2025.

Unlike other renewable energy technologies, such as solar energy and onshore wind power, offshore wind power can be expanded on a very large scale with only limited impact on the landscape. Also, energy can be generated for significantly more hours a year offshore than is possible from solar energy and onshore wind power, both because the wind blows at all hours of the day and night, and because the wind speeds at sea are higher than onshore.

The costs of establishing offshore wind farms is falling significantly at the moment, fast approaching the prices for new gas and coal-fired power stations. This is also evident from the most recent offshore wind farm tenders. Since 2012, the prices tendered have fallen by more than 50%, and there is still considerable potential for further cost reductions. This is due, not least, to the economies of scale

Upcoming auctions/tenders in the next 18 months

¹In 2016, the UK government announced CfD auctions of up to GBP 730 million for up to 4GW of offshore wind to be executed over three auctions by 2020. The exact capacity to be allocated in each round is uncertain.
²Environmental Impact Assessment

which can be achieved through building larger wind farms and installing larger wind turbines, through increased industrialisation and technological innovation as well as increased competition for the projects.

The market for offshore wind projects can roughly be divided into two categories called auctions and tenders: The first category (auctions) is prevalent in countries such as the UK, Germany, the USA and to some extent in Taiwan where project owners assume overall responsibility for developing projects – from selecting the site, developing the project and constructing the offshore wind farm and the transmission grid needed to operate the wind farm (in Germany, however, not the onshore power transmission grid). Projects in these countries are highly complex, requiring high-level competences on the part of project owners as well as entailing considerable capital requirements and investments up until the

approval of the project. The right to construct these full-scope projects is usually won through auctions where project owners present their projects in competition with other projects. The energy authorities then grant support for the most competitive projects.

The second category (tenders) is prevalent in countries such as Denmark and the Netherlands. Calls for tenders are invited by governments for pre-defined projects on sites selected by the national energy authorities which have also carried out the necessary technical pre-investigations of the seabed, wind conditions, etc. The transmission system is established by the national transmission system operator. Compared with full-scope projects, these projects require significantly lower up-front investments and not as high a level of technical competences on the part of the project owner. Overall, this means that projects in this category entail a significantly

lower risk for the project owners. Projects are awarded following a tender procedure, during which the various project developers offer the lowest possible price at which they are willing to build the project.

Within the segment of limited-scope projects, competition among project developers intensified further in 2016. At the same time, the market for full-scope projects both in the United States and Taiwan matured further. This was due, among other things, to the adoption of new energy legislation in Massachusetts in the USA, confirming the state's intention to build offshore wind power. The upcoming tenders and auctions within our footprint are shown in the figure on the previous page.

Thermal energy

The generation of power by conventional fossil fuel-fired power stations has long been under pressure. This is due to the transition to renewable energy, but also a decline in demand due to the global financial crisis. The earnings of conventional power stations have thus come under pressure. Power prices were historically low in 2015 due to the high level of generation of hydropower and wind power because of wet and windy weather. Less windy weather in 2016, a low hydrobalance and the unplanned, temporary shutdown of a number of French nuclear power plants since summer 2016 resulted in increasing power prices in 2016 compared to 2015.

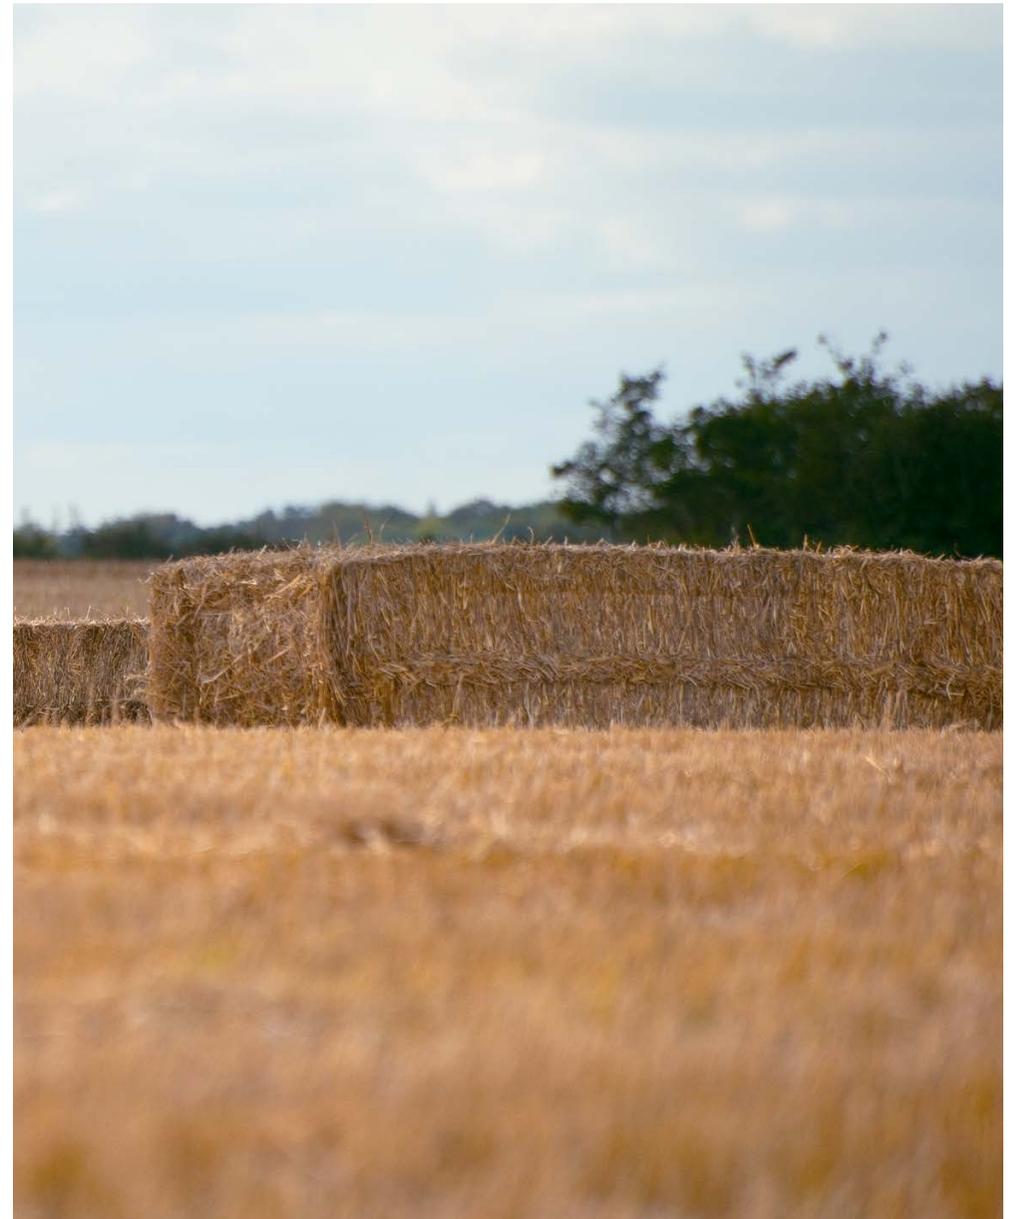

The pressure on earnings from power generation has increased the power stations' focus on district heating production. District heating is, in fact, a stable source of income

due to the long-term heat contracts made with the large urban communities in Denmark. A stable demand for district heating is expected in the coming years in Denmark, as there will be a balance between the expansion of supply areas and energy savings in the distribution networks and homes.

Distribution and sales

A demand among consumers for greener energy and lower energy bills combined with an increase in local energy generation is leading to a growing focus on smart and integrated green energy solutions. This is a new market segment with considerable potential characterised by many large and small players. In the UK and Germany, EUR 19 billion are expected to be invested a year in local solutions (small-scale CHP plants, solar energy, storage capacity and energy efficiency improvements).

Distribution and sales handles supplies to residential and business customers. In April 2016, a new wholesale model was introduced in Denmark, markedly changing the way in which the distribution and sales market works. According to the new model, power suppliers collect all payments for the consumption of power from customers. In addition to payments for power, suppliers also collect payments for the transmission of power through the transmission and distribution grid, electricity taxes and PSO charges. This means that customers only receive one single bill, i.e. from their power supplier. The distribution companies receive payments based on tariffs from power suppliers rather than directly from customers.

Our strategy

Our strategy is to continue the transformation of the Group to green energy and to take the lead in the transition to increasingly sustainable energy systems. We focus on building strong positions within attractive niche areas in which we enjoy a competitive advantage. We want to build on our strengths and to create long-term, profitable growth opportunities within renewable energy and business areas characterised by stable and regulated flows of income.

In the coming years, we will continue to invest primarily in offshore wind farms, in the conversion of power stations to sustainable biomass, in intelligent power meters for all customers, and in the continued digitalisation of our business platform.

Safety is an integrated part of our strategy. Whatever we do, we never compromise on safety for our employees and suppliers.

You can find a detailed review of the strategies for the three continuing business units and Oil & Gas on pages 34-44.

Wind Power's objectives are to:

- maintain the position as global market leader
- support profitable growth by realising our current build-out plan for the period towards 2020
- expand installed capacity to 11-12GW (ambition) by 2025 provided that the risk and return profile is sound
- continue to reduce the cost of electricity from offshore wind through industrialisation, economies of scale and innovation.

Bioenergy & Thermal Power's objectives are to:

- continuously strengthen operational excellence
- continue the conversion of Danish CHP plants to sustainable biomass
- phase out the use of coal and stop using coal from 2023
- continue the commercial development of our enzymatic waste technology REnescience.

Distribution & Customer Solutions' objectives are to:

- maintain a high level of security of supply and customer satisfaction in our distribution business
- further strengthen competitiveness and customer satisfaction among residential and business customers in our sales business
- optimise our energy portfolio and provide competitive market access.

Our sustainability strategy and results are reported on in our sustainability report, which constitutes our annual Communication on Progress to the UN Global Compact. The report highlights areas in which our expertise can make a real difference when it comes to promoting the UN's global goals for sustainable development.

With this report, we live up to the new requirements for corporate social responsibility reporting set out in section 99a of the Danish Financial Statements Act as well as section 99b on the gender balance at management levels etc.

Strategic targets

We ensure the progress of our strategy through 11 strategic targets divided into four themes:

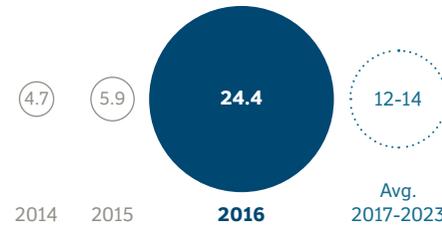

- **We create value for our shareholders** in the form of an attractive return on the capital employed.
- **We address profound societal challenges** by developing green, independent and economically viable energy systems.
- We are working at all times **to fulfil our customers' energy needs** by delivering innovative and efficient energy solutions through our distribution and sales activities, while in Denmark we have the most reliable power supply in Europe.
- We never compromise on safety for our employees, and keep a constant focus on **being a great and safe place to work** with committed, motivated and satisfied employees through continuous training and development.

* Calculation method changed compared to 2015.
 ** Applies from August where the industry agreement was implemented.

🎯 Create shareholder value

1. Adjusted ROCE, %

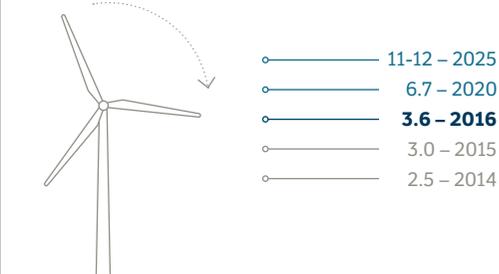

In 2016, ROCE was extraordinarily high due to completed renegotiations and divestment gains.

🎯 Address profound societal challenges

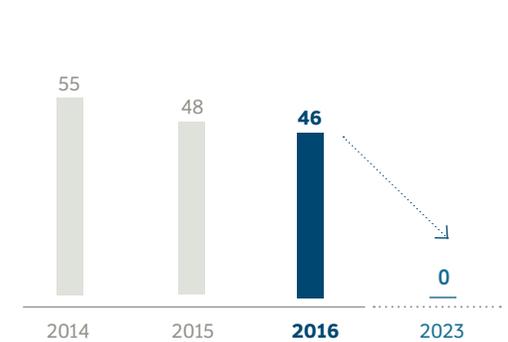

2. Installed offshore wind capacity, GW

We have an ambition of increasing the installed capacity to 11-12GW at the end of 2025. Following the completion of Hornsea 1, we will exceed our original target of installing 6.5GW of offshore wind capacity by 2020 by 0.2GW.

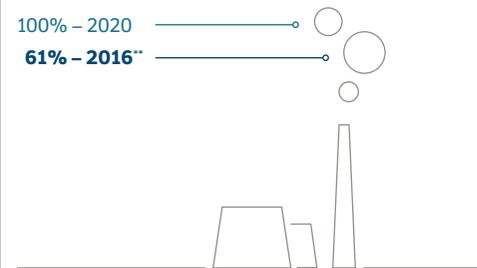

3. Coal share of fuels used for thermal power and heat generation, %

We have decided to stop using coal altogether at our power plants from 2023.

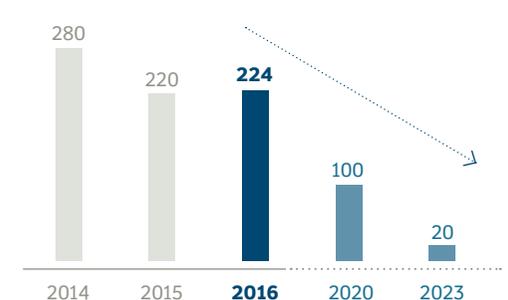

4. Sourcing of certified biomass, % (wood pellets and wood chips)

The phase-in of the Danish industry agreement runs until 2019, by which time the target is for 90% of the sustainable biomass to be certified. Our ambition is for all our biomass to be certified by 2020.

5. Carbon emissions*, g CO₂e/kWh

We have reduced our 2020 target to 100g CO₂e/kWh, which represents a halving of our original target. We have also defined a target of no more than 20g CO₂e/kWh in 2023.

☉ Serve the energy needs of our customers

6. Reputation, scale (0-100)

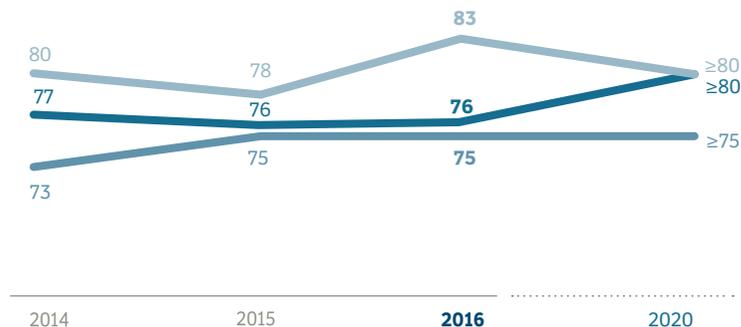

We are working to improve our reputation by ensuring a high level of integrity in our business, continuing the green transformation, helping our customers to save energy and being an attractive place to work.

8. Customer satisfaction, scale (1-100)

We are constantly working to improve our customers' experience. We are seeing a growing demand for integrated, green energy solutions, and our ambition is to spearhead this development. Our goal is that all our Danish power customers will have remote power meters before the end of 2020.

● B2C ● B2B ● Distribution

7. Security of supply, Power outage per customer

Our level of security of supply is still very high, although it decreased in 2016.

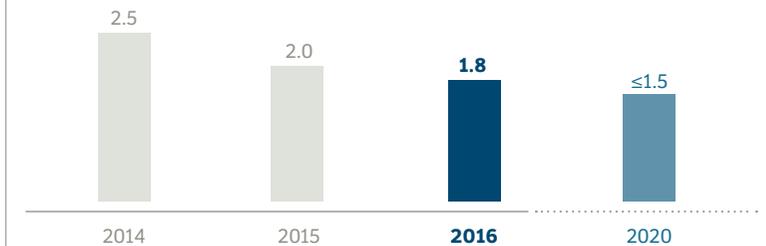

* Average security of supply in Denmark in 2015. Our ambition is to offer a level of security of supply which is higher than or on a par with the Danish average.

☉ Be a great and safe place to work

9. Safety, LTIF

The target for 2020 is expected to be met by maintaining a constant focus on safety and by involving our suppliers in contributing to a safe working environment for the whole of DONG Energy.

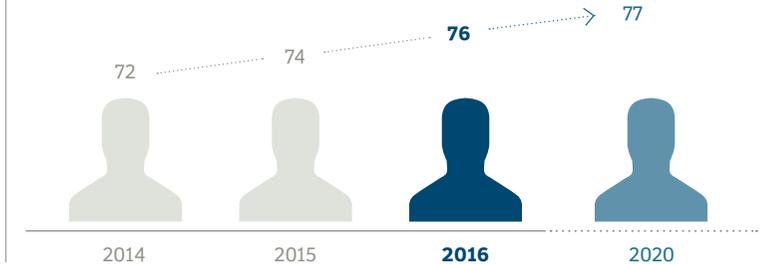

10. Safety, fatalities

We have not had any fatal accidents since December 2012.

11. Employee satisfaction, scale (0-100)

To achieve our 2020 targets, we have introduced a number of initiatives to promote employee satisfaction and motivation, including focus on management, various health initiatives and an internal initiative to strengthen our corporate identity.

Results

Financial results

Continuing and discontinued operations

As a consequence of the decision to divest the Oil & Gas business, it will be presented as discontinued operations in the annual report. Consolidated revenue, EBITDA and profit before tax will thus only comprise the continuing operations. The profit after tax from the discontinued operations will be presented on a single line after the profit after tax from our continuing operations. The same applies to the cash flows. LTIF and other non-financial ratios are also stated excluding Oil & Gas.

Revenue

Revenue was DKK 61.2 billion. The 6% decline relative to 2015 was primarily due to lower

gas prices and gas volumes. This was partially offset by higher revenue from construction contracts in Wind Power, which increased by DKK 6.0 billion.

Power generation from offshore wind increased by 5% and totalled 6.0 TWh in 2016, primarily as a result of generation from newly constructed offshore wind farms in Germany and the UK, which contributed 0.5 TWh. The increase was partially offset by significantly lower wind energy content than in 2015. The wind energy content was exceptionally low in 2016, ending up at 93% relative to a normal wind year. The wind energy content in 2015 was 103%. Offshore wind-generated power accounted for 42% of our power generation. Thermal power generation increased by 18%

Financial results (DKKm)	2016	2015	%
Revenue	61,201	65,444	(6%)
EBITDA	19,109	8,730	119%
Depreciation and amortisation	(5,232)	(5,673)	(8%)
Impairment losses	0	(1,184)	n.a.
EBIT	13,877	1,873	641%
Gain (loss) on divestment of enterprises	1,250	56	n.a.
Net financial income and expenses	(767)	(1,409)	(46%)
Tax	(2,191)	455	n.a.
Tax rate	15%	(89%)	n.a.
Profit for the year from continuing operations	12,161	967	n.a.
Profit for the year from discontinued operations	1,052	(13,051)	n.a.
Profit for the year	13,213	(12,084)	n.a.

In 2016, regulated and quasi-regulated activities and contracted activities accounted for 33% and 40% of our EBITDA from continuing operations respectively, whereas market exposed activities accounted for 27%.

Read more about profit for the year from discontinued operations in note 3.7.

“
Operating profits (EBITDA) increased by 119% and amounted to DKK 19.1 bn. in 2016”

Business performance vs. IFRS

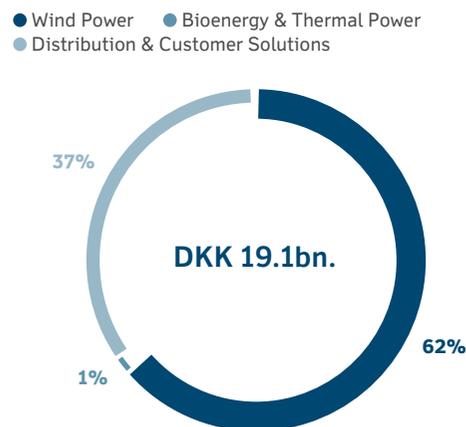

DONG Energy uses business performance as an alternative to the results prepared in accordance with IFRS. Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. The difference between the two principles will be eliminated as the contracts expire. Apart from this, there is no difference between business performance and the IFRS results.

EBITDA calculated in accordance with IFRS amounted to DKK 16.9 billion in 2016 against DKK 9.9 billion in 2015. Calculated in accordance with the business performance principle, EBITDA was DKK 19.1 billion and DKK 8.7 billion, respectively. The difference between the two principles was thus DKK -2.2 billion in 2016 compared with DKK 1.2 billion in 2015, and is specified below.

In the presentation of the results according to IFRS, DONG Energy does not apply the provisions on hedge accounting of commodities and related currency exposures. The market value adjustments of these are continuously recognised in the income statement, which means that the IFRS results for the individual years are not comparable. IFRS results do not reflect the commercial risk hedging, according to which the business units and the Group are managed and evaluated. In the management's review, comments are made on business performance only. Reference is also made to note 2.2

Business performance vs. IFRS (DKKm)	2016	2015
EBITDA – business performance	19,109	8,730
Market value adjustments for the year of financial and physical hedging contracts relating to a future period	(1,397)	1,632
Reversal of deferred gain (loss) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period	(773)	(474)
EBITDA – IFRS	16,939	9,887

EBITDA

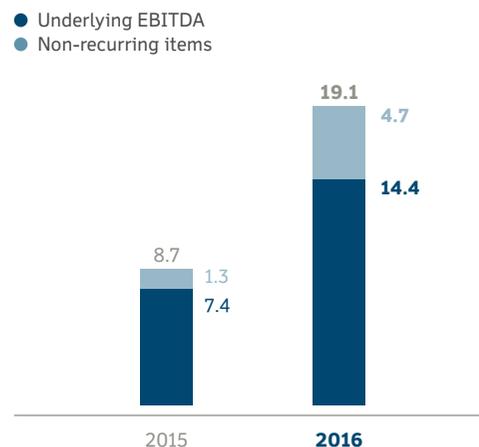

and totalled 8.4 TWh as a result of improved spreads and lower supply of hydropower and wind power. Heat generation was in line with 2015.

EBITDA

Operating profit (EBITDA) increased by DKK 10.4 billion, amounting to DKK 19.1 billion in 2016. Wind Power accounted for DKK 5.7 billion of the increase and Distribution & Customer Solutions for DKK 4.9 billion. Seven renegotiations of oil-indexed gas purchase contracts were completed, contributing a total of DKK 4.3 billion in 2016. One contract was renegotiated in 2015. In addition, 2015 was positively affected by insurance compensation and a settled dispute in Bioenergy & Thermal Power totalling DKK 0.5 billion.

EBITDA adjusted for the above items of a non-recurring nature was almost doubled relative to 2015. The underlying positive development in operating profit was primarily driven

Underlying EBITDA development, DKK bn.

The underlying operating profit excludes one-off payments related to renegotiations of gas purchase contracts, earnings from divested gas distribution assets, as well as insurance compensation and a settled dispute in Bioenergy & Thermal Power in 2015.

by higher activity relating to construction contracts for offshore wind farms in Germany and the UK, a gain from the divestment of 50% of the offshore wind farms Race Bank and Burbo Bank Extension, power generation from newly constructed offshore wind farms and improved margins in the wholesale gas business, among other things due to the completion of contract renegotiations. The positive development was partially offset by the less favourable wind conditions mentioned above.

EBIT

EBIT increased by DKK 12.0 billion to DKK 13.9 billion in 2016, primarily driven by the higher EBITDA.

Depreciation was down DKK 0.4 billion at DKK 5.2 billion in 2016. The lower depreciation was due to mature assets in Bioenergy & Thermal Power that were fully depreciated at the end of 2015 and the fact that the infrastructure assets in Distribution & Customer Solutions that were classified as assets held for sale in 2015 were not depreciated. The decrease was partially offset by higher depreciation in Wind Power as a result of more offshore wind farms in operation.

There were no impairment losses in 2016. Impairment losses in 2015 were related to a Dutch power station in Bioenergy & Thermal Power as well as older installation vessels and goodwill in Wind Power.

Gain (loss) from divestment of enterprises

Gain on divestment of enterprises totalled DKK 1.2 billion, mainly related to a gain from the divestment of the gas distribution network to Energinet.dk. Divestment of enterprises had no significant effect on earnings in 2015.

Net financial income and expenses

Net financial income and expenses amounted to DKK -0.8 billion against DKK -1.4 billion in 2015. The reduction in expenses was primarily due to positive exchange rate adjustments on loans and deposits in 2016 compared with negative adjustments in 2015, as well as lower net interest payments as a result of lower average interest-bearing debt and a higher share of capitalised interest. In 2016, issued bonds

and bank loans were reduced by DKK 12.2 billion through ordinary debt maturity and early repayment of long-term debt. The reduction in net financial income and expenses was partially offset by capital losses and expenses totalling DKK 0.9 billion in connection with the aforementioned repurchase of bonds and early repayment of bank debt and interest rate swaps totalling DKK 7.5 billion in 2016.

Tax and tax rate

Tax on profit for the year amounted to DKK 2.2 billion, which was DKK 2.6 billion more than in 2015. The effective tax rate was 15% against -89% in 2015. In 2016, the tax rate was affected by non-taxable divestment gains. In 2015, the tax rate was affected by, among other things, recognition of tax assets in respect of prior years. The effective tax rate adjusted for these effects was at level with a weighted average of the local tax rates in the countries, where the earnings were generated.

Profit for the year from continuing operations

Profit for the year from the Group's continuing operations totalled DKK 12.2 billion and was thus DKK 11.2 billion higher than in 2015. The increase was primarily due to higher EBIT and a gain from the divestment of the gas distribution network.

Profit for the year from discontinued operations

Profit for the year from discontinued operations

Tax and tax rate (DKKm)	Profit before tax	Tax hereof	Tax percentage
Gain/loss on divestments	4,243	(88)	2%
Rest of continuing operations	10,109	(2,103)	21%
Effective tax for the year	14,352	(2,191)	15%

In 2016, the tax percentage was affected by tax-exempt gains.

amounted to DKK 1.1 billion against a loss of DKK 13.1 billion in 2015, where impairment losses totalled DKK 14.8 billion after tax. Profit for the year adjusted for impairment losses decreased by DKK 0.7 billion due to lower EBITDA, partially offset by lower depreciation and tax. The lower EBITDA was partly due to lower oil and gas prices, which were partially offset by hedging, partly due to a provision of DKK 0.8 billion (without impact at EBIT level) as a result of the termination of the EPC¹ contract with the consortium responsible for the construction of the Hejre platform, and partly due to non-recurring items of DKK 1.2 billion, which contributed positively in 2015. This was partially offset by lower costs. EBITDA from the additional volumes from the Ormen Lange field amounted to DKK 0.3 billion compared to DKK 2.5 billion in 2015. Reference is made to note 3.7 for further information on the financial results of discontinued operations.

Cash flow from operating activities

Cash flow from operating activities totalled DKK 11.3 billion in 2016 compared to DKK 7.5 billion in 2015. The increase of DKK 3.8 billion was due to a doubling of EBITDA, partially offset by increased funds tied up in working capital, higher tax payments and higher net interest payments etc. due, among other factors, to the settlement of interest rate swaps relating to long-term loans of DKK 0.5 billion in 2016, while litigation interest from a dispute over CO₂ emission allowances was received in 2015. The portion of the higher EBITDA relating to divestment gains (DKK 2.9 billion in 2016) is not included in cash flows from operating activities, but is recognised as part of the net investments.

The increased funds tied up in working capital were primarily related to clearing counterparties in connection with exchange trading in Distribution & Customer Solutions and construction contracts for offshore transmission assets in Wind Power. The former contributed negatively in 2016 as a result of the increase in oil and gas prices at year-end 2016, but contributed positively in 2015 due to falling prices. Construction contracts contributed more negatively in 2016 than in 2015 due to the concurrent construction of a number of offshore transmission assets in the UK. This was partially offset by lower receivables at the end of the year and by the divestment of Westernmost Rough's offshore transmission asset in 2016.

Investments and divestments

Gross investments were DKK 2.3 billion higher than in 2015, totalling DKK 15.0 billion, of which Wind Power's share accounted for 83%. Net investments amounted to DKK 5.9 billion compared with DKK 10.7 billion in 2015. The most significant investments in 2016 were as follows:

- Offshore wind farms (DKK 12.4 billion), including the German Gode Wind 1 & 2 and Borkum Riffgrund 2 as well as the UK Burbo Bank Extension, Walney Extension, Race Bank and Hornsea 1.
- CHP plants (DKK 1.9 billion), including biomass conversion of the Skærbæk, Avedøre and Studstrup CHP plants and construction of a REnescience waste refinery plant in the UK.

Divestment of activities and enterprises amounted to DKK 9.1 billion in 2016 and primarily related to 50% of Race Bank and

Cash flows and net debt (DKK m)	2016	2015	%
Cash flow from operating activities	11,272	7,521	50%

Net debt 31 December	3,461	9,193	(62%)

Key ratios (DKK m., %)	2016	2015	%
ROCE	24.4	3.6	20.8%-p
Adjusted ROCE	24.4	5.9	18.5%-p
Adjusted net debt	18,046	25,505	(29%)
FFO/adjusted net debt	80.5	28.7	51.8%-p

Burbo Bank Extension, the gas distribution network as well as deferred payment from the divestment of 50% of Gode Wind 1 in 2015. Divestments in 2015 mainly concerned 50% of Gode Wind 1, receipt of deferred payment from the divestment of Westernmost Rough in 2014 as well as the Måbjerg CHP plant.

Interest-bearing net debt

Interest-bearing net debt totalled DKK 3.5 billion at the end of December 2016 against

DKK 9.2 billion the year before. The decrease was mainly due to a positive free cash flow from continuing operations of DKK 5.4 billion, as cash flows from operating activities and divestments exceeded investments. In addition, exchange rate adjustments of loans in pound sterling contributed to the decrease.

Equity

Equity was DKK 57.5 billion at the end of December 2016 against DKK 51.7 billion the

Gain/loss on sale of assets is a part of EBITDA but is presented as part of the 'divestment' cash flow. The EBITDA effect is thus reversed in the specification of cash flow from operating activities.

ROCE and FFO/adjusted net debt is specified in note 2.1 and 6.2.

¹engineering, procurement and construction

year before. The increase was primarily due to the positive results for the year.

Capital employed

Capital employed was in line with the year before, amounting to DKK 61.0 billion at year-end 2016. Wind Power's share of capital employed amounted to 80%.

Key ratios

Return on capital employed (ROCE) from continuing operations

The return on capital employed (ROCE) from continuing operations amounted to 24% in 2016 against 4% in 2015 (and 6% in 2015 adjusted for impairment losses). The increase was due to the higher EBIT.

Credit metric (FFO/adjusted net debt)

The credit metric funds from operations (FFO) in relation to adjusted net debt was 81% at the end of December 2016 compared to 29% the year before. The improvement was due to the increase in EBITDA as well as the lower adjusted net debt.

Non-financial results

CO₂ emissions

Our aim is to reduce CO₂ emissions from our power and heat generation to 100g CO₂e/kWh in 2020, which is approximately 80% lower than in 2006, and further to 20g CO₂e/kWh in 2023. In 2016, the result was 224g CO₂e/kWh against 220g CO₂e/kWh in 2015. The 2% increase was attributable to an 18% increase in power generation by our power stations in 2016 relative to 2015 due to a higher demand for power in the Nordic Region and a lower supply of hydropower and wind power. Also,

power generation by our Dutch power station was up 48% relative to 2015, where power generation was very low. As mentioned earlier, our wind-based power generation increased by a mere 5% relative to 2015 due to a significantly lower wind energy content.

In 2006, renewable energy accounted for 17% of our power and heat generation, while 83% was based on fossil fuels like coal, natural gas and oil. In 2016, the share of renewable energy reached 50%, and we are continuing the conversion to green energy generation.

Safety

A strong safety culture is important in the energy industry. We must ensure that our employees and people who work for us are able to perform their jobs under safe and appropriate conditions, whether they are working at the top of offshore wind turbines, on construction sites or in one of our offices. We focus on areas in which we believe that we are best able to influence the safety culture, manage risks and improve our safety performance.

The lost-time injury frequency (LTIF) declined from 2.0 in 2015 to 1.8 in 2016. We continue our work in order to reach our target of an LTIF of 1.5 in 2020. We have not had any fatal accidents since December 2012.

One of our focus areas is our safety culture. In 2016, we conducted a survey of the safety culture in the entire company. The survey showed a maturity level of 3.5 on a scale from 0 to 4. The survey will form the basis for our efforts in 2017.

A large proportion of our occupational injuries involve people tripping, falling or twisting of a

joint. Even though most of these accidents are not serious, we are working to reduce them even further. Moreover, we want to continue to focus on ensuring thorough follow-up and on reducing the number of near-miss incidents with the potential to cause harm to our employees and suppliers, as well as involving our suppliers further in our safety work.

In 2016, we increased our focus on the psychosocial working environment and its impact on physical safety. One example is that we have developed a stress reduction tool for our managers. The tool will be implemented in 2017 and will be integrated in our internal Safety Leadership Onboarding course.

Employee satisfaction

A high level of satisfaction and motivation among our employees is a sign that we are a healthy company, which our employees want to be a part of. The result is a high level of employee loyalty and a high retention rate. In the annual employee survey, our employee satisfaction and motivation index increased from 74 to 76 on a scale from 1 to 100.

This means that we are in line with the highest-ranking international companies, and that we are one point from achieving our 2020 target of an index of 77. At the same time, the loyalty index increased from 82 to 83, while the frequency of employees who chose to leave DONG Energy fell from 7.4% in 2015 to 6.7% in 2016.

The positive development in employee satisfaction and motivation is especially linked to employees holding a more positive view of DONG Energy's reputation and to the

employees' high rating of their immediate managers. The assessment of immediate managers was at 79 index points, which is 16 points higher than an international benchmark of 63.

Reputation

It is important for us that we have the support of our stakeholders, and that they perceive us as a positive player in the communities of which we are part. For this reason, we measure our reputation. In Denmark, our reputation has been negatively affected since the capital injection in 2014, where Goldman Sachs, ATP and PFA bought shares in the company. Through new strategies, we are working on improving our reputation in Denmark. Among other things, we are helping consumers reduce their power bill by communicating our green transition and by engaging in important social activities relevant to our business. On the international markets, our reputation is significantly better than in Denmark.

Our reputation is affected by a number of parameters. Most importantly, by the extent to which the Danish people see DONG Energy as a sympathetic company which you can trust and which conducts itself ethically, which is open about how it works, and which has a positive impact on society. At the moment, DONG Energy is assessed relatively low on these parameters. Since 2011, our reputation score has fallen by 6 points on a scale up to 100.

In connection with our listing in June, our reputation index increased by +2 points. Our reputation increased from 47 in 2015 to 48 in 2016, which is lower than the average among other large Danish companies. Our target is to reach a reputation index of at least 55 in 2020.

Five-year summary

Income statement (business performance) (DKKm)	2016	2015	2014	2013	2012

In general, the financial and non-financial data are stated excluding discontinued operations

Business performance vs. IFRS

Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. Apart from this, there is no difference between business performance and IFRS results. Read more in note 2.2.

ROCE is calculated for continuing operations.

¹⁾ EBIT/average capital employed.

²⁾ EBIT adjusted for impairment losses/ average capital employed (with impairment losses after tax added back to ultimo capital employed).

³⁾ Net debt including 50% of hybrid capital, cash and securities not available for use (with the exception

of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax.

⁴⁾ See definition on page 190 and in the non-financial statements.

⁵⁾ The figures indicate values from the latest regulatory financial statements (updated in June).

Fourth quarter

Financial performance – Group

Revenue

Revenue was DKK 15.7 billion in Q4 2016 compared with DKK 14.3 billion in Q4 2015. The 10% increase was primarily due to higher activity from construction contracts for transmission assets in the UK, and higher thermal power and heat generation due to improved spreads and colder weather. The increase was partially offset by lower revenue from gas sales and power distribution.

EBITDA

EBITDA increased by DKK 4.4 billion, amounting to DKK 6.3 billion in Q4 2016. The increase was due to higher activity from construction contracts for Burbo Bank Extension, a gain of DKK 2.5 billion from the divestment of 50% of Race Bank as well as a one-off payment from the completed renegotiation of a gas purchase contract in Distribution & Customer Solutions.

Profit (loss) for the period from continuing operations

Profit for the period from the Group's continuing operations totalled DKK 4.0 billion and was thus DKK 4.3 billion higher than in Q4 2015. The increase was primarily due to the higher EBITDA. In addition, Q4 2015 was negatively impacted by impairment losses totalling DKK 1.2 billion related to a Dutch power station in Bioenergy & Thermal Power as well as older installation vessels and goodwill in Wind Power.

Profit (loss) for the period from discontinued operations

Profit (loss) for the period from discontinued operations amounted to DKK -0.5 billion in Q4 2016 compared with DKK -15.0 billion in Q4 2015. The loss was negatively impacted by impairment losses totalling DKK 14.8 billion (after tax) in Q4 2015. Adjusted for these impairment losses, the loss was DKK 0.3 billion higher than in 2015.

Cash flow from operating activities

Cash flow from operating activities totalled DKK 1.8 billion in Q4 2016 compared with DKK 4.5 billion in Q4 2015. The decrease was mainly due to higher tax payments, a lower reduction in funds tied up in working capital, partially offset by the higher EBITDA (of which the gain from the divestment of 50% of Race Bank is not recognised in cash flow from operating activities). The lower release of funds tied up in working capital were primarily related to clearing counterparties in connection with exchange trading in Distribution & Customer Solutions due to the increase in oil and gas prices at year-end 2016 as well as construction contracts for offshore wind farms for partners in Wind Power, as a result of received milestone payments in Q4 2015.

Gross investments

Gross investments amounted to DKK 4.7 billion in Q4 2016, 85% of which in Wind Power. The investments were primarily related to Burbo Bank Extension, Walney Extension, Race Bank, Hornsea 1 as well as Borkum Riffgrund 2.

Financial performance (DKKm)	Q4 2016	Q4 2015	%
Revenue	15,678	14,319	10%
EBITDA	6,310	1,947	224%
Depreciation	(1,602)	(1,444)	11%

Financial performance – business units

Wind Power

Revenue increased by 6% to DKK 4.4 billion in Q4 2016. The increase was driven by higher activity from construction contracts, partly due to the ongoing construction of Burbo Bank Extension and partly due to transmission assets in the UK, partially offset by the Gode Wind 1 & 2 construction contracts in Germany, which saw a high level of activity in Q4 2015. Revenue from wind farms was in line with Q4 2015, as the generation from new wind farms was partially offset by lower wind energy content (108% against 123% in Q4 2015). In addition, generation in Q4 2015 was negatively affected by cable faults.

EBITDA tripled to DKK 5.1 billion. The increase was mainly due to the gain of DKK 2.5 billion from the divestment of 50% of Race Bank, as well as the aforementioned ongoing construction of Burbo Bank Extension. This was partially offset by a high level of activity on the Gode Wind 1 & 2 construction contracts in Q4 2015. In addition, EBITDA from construction contracts was negatively affected by accounting effects related to the construction of transmission assets in the UK in both quarters.

EBITDA from wind farms increased marginally to DKK 1.9 billion. Earnings from new wind farms and compensation from the German transmission owner TenneT for delays in the establishment of infrastructure for Gode Wind 1 & 2 were largely offset by the lower wind energy content.

EBITDA from Other including A2SEA and project development decreased as a result of A2SEA receiving fewer assignments than in Q4 2015.

Cash flow from operating activities decreased by DKK 5.1 billion, amounting to DKK -1.9 billion. The higher EBITDA (excluding the gain from divestment of Race Bank of DKK 2.5 billion) was more than offset by higher tax payments as well as increased funds tied up in working capital from construction contracts. The increased funds tied up were due to milestone payments, which affected cash flows positively in Q4 2015.

Free cash flow was DKK -1.0 billion compared with DKK 2.7 billion in Q4 2015. The lower cash flow from operating activities and a doubling of gross investments relative to Q4 2015 was only partially offset by the divestment of 50% of Race Bank.

Bioenergy & Thermal Power

Revenue increased by DKK 0.5 billion to DKK 2.0 billion in Q4 2016. Revenue from the heat business increased by DKK 0.3 billion as a result of colder weather, leading to a 9% increase in heat generation. Revenue from power (including ancillary services) also increased by DKK 0.3 billion, amounting to DKK 1.1 billion in Q4 2016. The increase was primarily due to higher power generation and a significantly higher average power price relative to Q4 2015.

EBITDA increased by DKK 0.2 billion, amounting to DKK 0.1 billion in Q4 2016. The increase was mainly driven by higher heat and power generation and improved spreads.

For more details on quarterly figures for our business units, please go to www.dongenergy.com/en/investors/key-figures/download-key-figures

¹ O&M: Operation and Maintenance Agreements PPA: Power Purchase Agreements.

Free cash flow was DKK 0.3 billion compared with DKK 0.9 billion in Q4 2015. The decrease was mainly due to lower received taxes than in Q4 2015.

Distribution & Customer Solutions

Revenue decreased by DKK 1.3 billion to DKK 10.9 billion in Q4 2016. The decrease was mainly due to lower gas prices, as well as lower revenue from power distribution, as tax and costs are no longer invoiced on behalf of the transmission owner.

EBITDA was DKK 1.2 billion in Q4 2016 compared to DKK 0.4 billion in Q4 2015. The increase was due to a one-off payment from the completed renegotiation of a long-term oil-indexed gas purchase contract and improved margins in wholesale gas sales.

Free cash flow decreased by DKK 0.6 billion to DKK 0.9 billion in Q4 2016. The higher EBITDA was thus more than offset by higher tax payments and increased funds tied up in working capital in Q4 2016 compared with a decrease in the same period of 2015. The increased funds tied up in working capital in Q4 2016 related, among other things, to central clearing counterparties, primarily as a consequence of rising oil and gas prices in Q4 2016 compared with falling prices in Q4 2015.

Business performance vs. IFRS

Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. Apart from this, there is no difference between business performance and IFRS results. Read more in note 2.2.

ROCE is calculated for continuing operations.

¹⁾ EBIT/average capital employed.

²⁾ EBIT adjusted for impairment losses/ average capital employed (with impairment losses after tax added back to ultimo capital employed).

³⁾ Net debt including 50% of hybrid capital, cash and securities not available for use (with the exception

of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax.

⁴⁾ See definition on page 190 and in the non-financial statements.

⁵⁾ The figures indicate values from the latest regulatory financial statements (updated in June).

⁶⁾ Last 12 months.

Wind Power

Highlights in 2016

- We decided to build Hornsea 1 in the UK and Borkum Riffgrund 2 in Germany
- We acquired project rights to more than 1GW in New Jersey (USA)
- We opened an office in Taiwan
- We won the tender to build the Dutch offshore wind farms Borssele 1 and 2, totalling 700MW
- We divested 50% of Burbo Bank Extension and Race Bank in the UK as well as 50% of Bay State Wind in the USA
- We got permission by the UK government to build Hornsea 2, and can thus participate in future auctions

Financial performance

Revenue increased by DKK 5.9 billion to DKK 22.4 billion in 2016.

The increase was primarily the result of higher revenue from construction contracts related to transmission systems in the UK, as well as the German offshore wind farm Gode Wind 1 and the British Burbo Bank Extension for partners.

In addition, revenue from wind farms increased due to higher generation from Westermost Rough in the UK and Borkum Riffgrund 1 in Germany, which were under construction in 2015 and inaugurated in July and October, respectively. The German offshore wind farms Gode Wind 1 & 2 were completed

in 2016, but generation was limited due to delayed network connection and faults in the onshore connections of the transmission cable. The transmission system operator is responsible for both conditions. The increase in generation from new wind farms was partially offset by lower power generation from the individual wind farms due to a lower wind energy content (93% compared with 103% in 2015). The wind energy content was unusually low in 2016, while it was higher than in a normal year in 2015 (see next page).

“

Our ambition for the period leading up to the end of 2025 is to expand our installed capacity to 11-12 GW with increased focus on relatively complex projects in strategic markets such as the UK, Germany, the USA and Taiwan, where developers are to deliver the full scope of the projects. Our integrated business model and in-depth technical expertise provide a good basis for maintaining our position as market leader within offshore wind while at the same time retaining a sound risk and return profile.”

Samuel Leupold, CEO, Wind Power

EBITDA increased by 93%.

EBITDA doubled and increased by DKK 5.7 billion to DKK 11.9 billion in 2016 as a result of divestment gains and construction contracts. EBITDA from these activities increased by DKK 5.7 billion to DKK 7.0 billion in 2016, partly due to the divestment of 50% of Race Bank to Macquarie in December 2016 and 50% of Burbo Bank Extension to PKA and KIRKBI in February 2016, and partly due to higher activity related to contracts for the construction of offshore wind farms for partners, particularly Burbo Bank Extension and Gode Wind 1 & 2.

EBITDA from wind farms was in line with 2015, totalling DKK 5.9 billion. Earnings from the new wind farms Westermost Rough and Borkum Riffgrund 1 and compensation from the German transmission owner TenneT for delays in the establishment of infrastructure for Gode Wind 1 & 2 were largely offset by lower generation as a result of the significantly lower wind energy content and cable faults at Walney 2.

EBITDA from Other including A2SEA and project development decreased by DKK 0.4 billion in 2016. The decrease was partly due to A2SEA, which, among other things, was negatively impacted by fewer assignments for older installation vessels than in 2015, and partly due to costs related to the development of our portfolio of offshore wind projects for construction after 2020.

Depreciation increased by DKK 0.4 billion due to the commissioning of new offshore wind farms in the UK and Germany.

Cash flow from operating activities totalled DKK 4.3 billion in 2016 compared with DKK 3.1 billion in 2015. The increase was driven by the higher EBITDA (of which the gain of DKK 2.9 billion from divestments is not recognised in cash flow from operating activities) and lower funds tied up in working capital, partially offset by higher tax payments. The fewer funds tied up in working capital compared to 2015 was due to lower receivables at the end of 2016, as well as the divestment of Westermost Rough's offshore transmission assets at a price of DKK 0.8 billion in 2016. The overall impact of funds tied up relating to construction contracts was more negative than in 2015 due to the concurrent construction of a number of offshore transmission assets in 2016, and because we received higher milestone payments in 2015 than in 2016 in connection with the construction of offshore wind farms for partners.

Gross investments amounted to DKK 12.4 billion in 2016. The largest investments related to the construction of the German offshore wind farms Gode Wind 1 & 2 and Borkum Riffgrund 2 as well as the UK offshore wind farms Burbo Bank Extension, Walney Extension, Hornsea 1 and Race Bank.

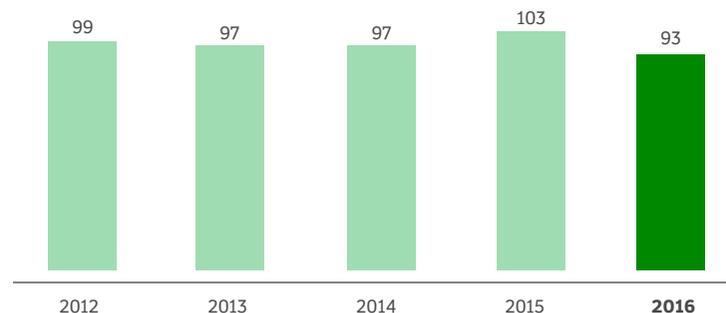

Divestments amounted to DKK 6.9 billion and related to the divestment of 50% of Race Bank and Burbo Bank Extension as well as receipt of the deferred selling price from the divestment of 50% of Gode Wind 1 in 2015.

Adjusted ROCE increased by 10 percentage points to 16%.

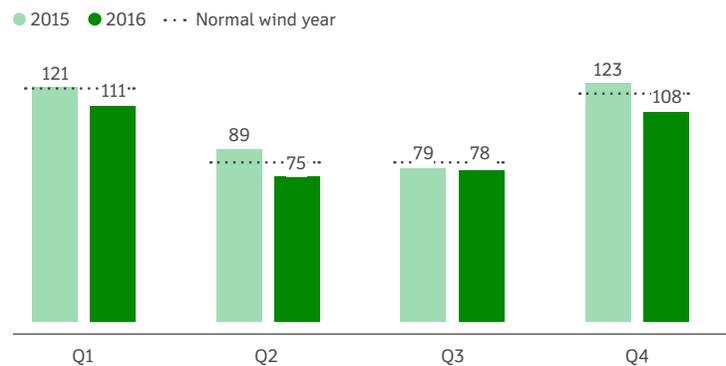

Wind energy content (WEC) for our offshore wind farms

WEC (%)

Yearly WEC

Quarterly WEC

Wind Energy Content ('WEC') roughly explains the relationship between actual wind speeds and normal wind speeds based on historical data for the actual site of an offshore wind farm. The resulting WEC percentage is 100% for the year if there is no deviation between the actual wind speeds and the normal wind speeds. Actual wind speeds can vary significantly from normal wind speeds across years and during a year.

The highest wind energy content is measured in Q1 and Q4, where the wind is at its strongest.

Strategy follow-up

WP's strategic focus is to:

- maintain the position as global market leader
- support profitable growth by realising our current build-out plan for the period towards 2020
- expand installed capacity to 11-12 GW by the end of 2025 provided that the risk and return profile is sound
- continue to reduce the cost of electricity from offshore wind through industrialisation, economies of scale and innovation

Maintain the position as global market leader

Offshore wind plays an important role in the European transition to clean energy, and the potential is considerable. As a company, we have constructed more offshore wind farms globally than any other developer. In fact, we

have constructed more than a quarter of the total offshore wind capacity in the world.

In 2016, we completed the offshore wind farms Gode Wind 1 & 2 in Germany, and we started the offshore installation of the wind farms Burbo Bank Extension and Race Bank in the UK. In connection with the construction of Gode Wind 2, we reached an important milestone by being the first in the world to have installed 1,000 offshore wind turbines.

To continue the future build-out of our capacity and to keep our position as market leader, in 2016 we decided to construct the offshore wind farms Hornsea 1 in the UK and Borkum Riffgrund 2 in Germany. In addition, we were awarded the concessions to the two Dutch offshore wind farms Borssele 1 & 2 in a competitive tender. Finally, we opened offices in the USA and Taiwan as a way of positioning ourselves at an early stage in two important emerging markets.

Realising our current build-out plan towards 2020

In the period leading up to 2020, we will build almost as much offshore wind capacity as in the preceding 25 years combined. Among other things, we will build Hornsea 1, which in 2020 will be the world's largest offshore wind farm with a capacity of 1.2 GW. Including Hornsea 1, we will have installed 6.7 GW by the end of 2020. This means that we will exceed our strategic target set in 2013 of installing 6.5 GW of offshore wind capacity by 2020.

In connection with our divestment of 50% of the Burbo Bank Extension and the Race Bank offshore wind farms in 2016, we again proved the viability of our partnership model to attract capital at the lowest possible cost. Burbo Bank Extension was sold to the Danish pension fund PKA and to the LEGO Group's parent company KIRKBI A/S (each owning 25%), while Race Bank was sold to Macquarie.

are all possible candidates for future German auctions. The first auction in Germany is confirmed to take place in April 2017.

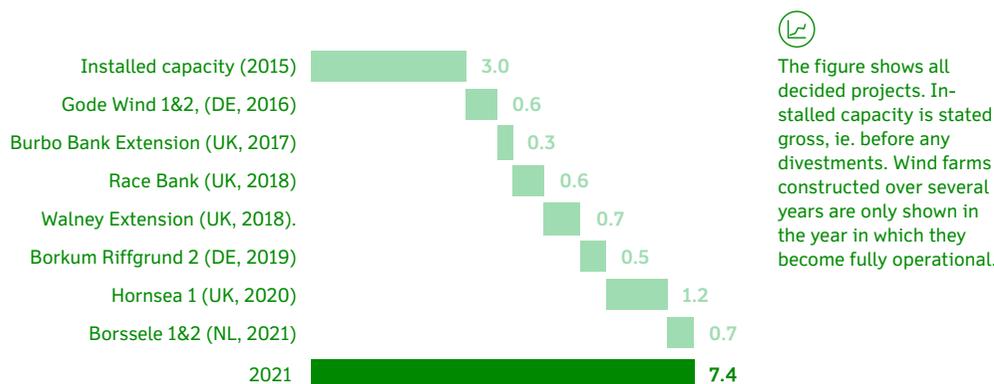

In 2016, we continued to establish ourselves in the emerging US market for offshore wind power. In February, we secured the rights to our second North American project, the Ocean Wind development project off the coast of New Jersey with a potential capacity in excess of 1 GW. With the Ocean Wind and Bay State Wind (potentially more than 2 GW) projects, we have positioned ourselves as one of the largest project developers of offshore wind in the USA. Following the adoption of the energy bill in Massachusetts, which foresees 1.6 GW of offshore wind power by 2027, prospects for the North American market continue to look promising.

At the end of the year, we entered into a strategic partnership with Eversource Energy, one of the largest utility companies in New England, with a view to jointly developing the Bay State Wind project. In our opinion, strategic partnerships with leading local players are a significant advantage when entering new markets.

In 2016, we also progressed the main part of the environmental impact assessments (EIAs) of four offshore wind farm projects in the Changhua region in Taiwan. Subject to approval of the EIAs by the Taiwanese authorities, Wind Power will develop these projects with a total offshore wind capacity of up to 2 GW by 2025.

In January 2017, we concluded an agreement to acquire a 35% ownership share in the

Expected development in installed offshore wind capacity, GW

Ambition to expand installed capacity to 11-12 GW by 2025

The licences to the two Dutch projects Borssele 1 & 2 represent the first 0.7 GW of capacity to be fully commissioned in the post-2020 period. Our project portfolio was further strengthened in 2016 when the British authorities gave us permission to construct the Hornsea 2 development project, which has a capacity of up to 1.8 GW. With development consent for Hornsea 2, we are well-positioned to bid at future auctions in the UK, the first of which is expected to be held in the second quarter of 2017. Similarly, we have a portfolio of several German development projects with a total capacity of more than 1 GW, which

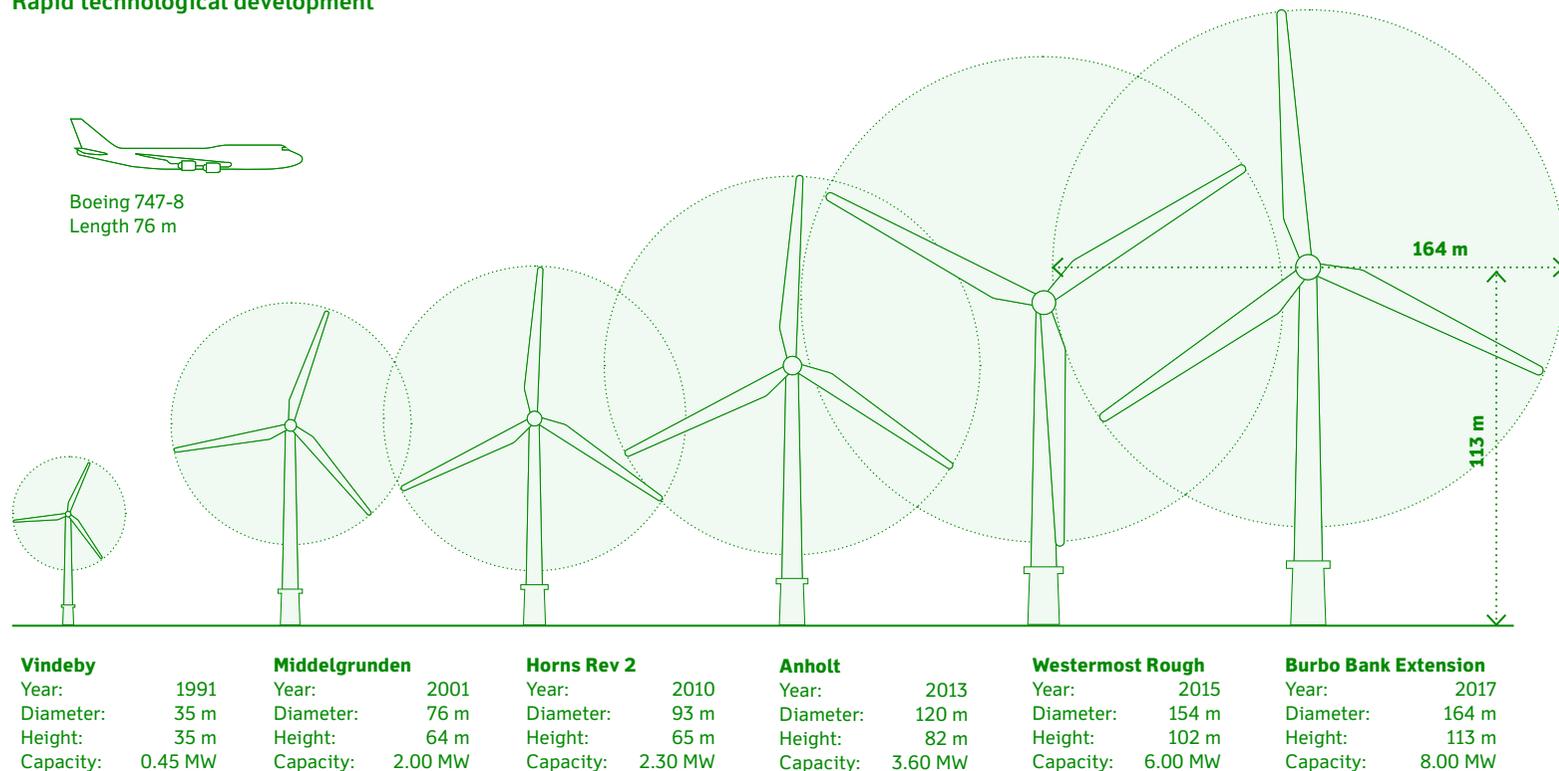

Taiwanese offshore wind farm project Formosa 1, which has been developed by the Taiwanese company Swancor Renewables. Formosa 1, which is Taiwan's first commercial offshore wind farm project, consists of two phases. The first phase was completed in October 2016 and has a size of 8 MW. The second phase is expected to have a size of 120 MW for installation in 2019 if a final investment decision is made.

Continue to reduce the cost of electricity from offshore wind

As mentioned, we were awarded the concessions to the two Dutch projects Borssele 1 & 2 in July 2016. They were based on an average price (exclusive of transmission costs) of EUR 72.7 per MWh during the subsidy period, which runs for the first 15 years. Looking at the average price during the lifetime of Borssele 1 & 2 (in the form of the fixed price guaranteed during the subsidy period and the income from power sales during the remainder of their lifetime) and transmission costs, this equates to EUR 78 per MWh. The price level is proving the increasing competitiveness of offshore wind relative to other energy technologies.

The cost of electricity from offshore wind has been reduced in cooperation with our partners in the energy sector, among other things through continuous innovation of wind turbines and blades, improved installation methods, advanced foundation designs, and a growing and competitive supply chain. In addition, synergies can be achieved by constructing offshore wind farms on a large scale, such as the Borssele 1 & 2. Innovation has not least resulted in much larger and more efficient wind turbines, as illustrated in

Rapid technological development

the figure. Most recently, we have been the first in the world to install MHI Vestas' 8 MW wind turbine at Burbo Bank Extension, which is expected to be fully commissioned in the first half of 2017.

We have previously announced a target for the cost of electricity from offshore wind of a maximum of EUR 100 per MWh for UK projects with final investment decision in 2020. In 2016, we met this target – four years ahead of schedule.

The setting of targets for the cost of electricity from offshore wind has become a sensitive issue in connection with tender and auction processes. For competitive reasons, we have therefore decided to no longer publish our targets for the further reduction of costs. However, we consistently pursue our strategy of further reducing the cost of electricity from offshore wind.

Significant advances are being seen within offshore wind power technology at the moment, resulting in markedly lower costs.

Bioenergy & Thermal Power

Highlights in 2016

- We decided to construct the world's first REnescence waste refinery plant in the UK for commercial use
- We inaugurated the biomass-converted CHP plants Studstrup and Avedøre 1
- We received and appealed against the judgment of the Copenhagen Maritime and Commercial High Court in the Elsam case

Financial performance

Revenue was in line with the year before, amounting to DKK 5.1 billion in 2016. Revenue from heat sales increased by DKK 0.2 billion, despite the fact that heat generation declined by 2% as a result of the sale of the Måbjerg CHP plant in June 2015. The increase was the result of higher underlying heat generation due to colder weather (more degree days). Conversely, revenue from power and ancillary services decreased by DKK 0.2 billion. This was primarily due to revenue from ancillary services in 2015 being positively affected by invoicing relating to previous years.

EBITDA declined by DKK 0.2 billion, mainly due to the recognition of compensation from a settled dispute and insurance compensation in 2015 (both of which are included in EBITDA from 'Power') totalling DKK 0.5 billion. Underlying EBITDA from the power business improved due to better spreads.

Depreciation amounted to DKK 0.8 billion, or a decrease of DKK 0.6 billion relative to the prior year. The decrease was due to the fact that a number of mature assets were fully depreciated by the end of 2015.

Cash flow from operating activities totalled DKK 1.3 billion in 2016 compared with DKK 2.5 billion the year before. The decline was due to lower EBITDA, increased funds tied up in working capital, lower received taxes, and interest received from the dispute over CO₂ emission allowances, which contributed positively in 2015. The increased funds tied up in working capital were primarily attributable to receivables from sales of heat.

“

With two completed bio conversions in 2016, we are well on the way towards establishing a green power and heat business in Denmark. And with the construction of one of the world's most innovative full-scale waste refinery plants in the UK, we show the way to a more circular waste sector.”

Thomas Dalgaard
CEO, Bioenergy & Thermal Power

The underlying EBITDA development was positive, as 2015 was positively impacted by two non-recurring items amounting to DKK 0.5 billion.

Gross investments increased by DKK 0.7 billion to DKK 1.9 billion in 2016. The largest investments were related to the biomass conversion projects at the Skærbæk, Studstrup and Avedøre CHP plants, as well as the construction of the REnescience bio plant in the UK.

Strategy follow-up

BTP's strategic focus is to:

- continuously strengthen operational excellence
- continue the conversion of Danish CHP plants to sustainable biomass
- phase out the use of coal and stop using coal from 2023
- continue the commercial development of our enzymatic waste technology REnescience.

Continuously strengthen operational excellence

For much of 2016, market conditions remained challenging for Danish CHP plants. We have therefore been strongly focused on maintaining our leading position as an efficient and flexible operator and on continuously reducing costs.

In 2016, we continued our efforts to increase the CHP plants' ability to adapt to and complement the increasing share of renewable energy in the power system. We did that, among other things, by further improving our scope for generating heat and power independently of each other, so that we may choose not to generate power at times when the demand for heat and wind power generation is high, and where power prices

are therefore low. One step in this direction was the commissioning of electric boilers at Esbjerg Power Station and Studstrup Power Station.

Conversion to sustainable biomass

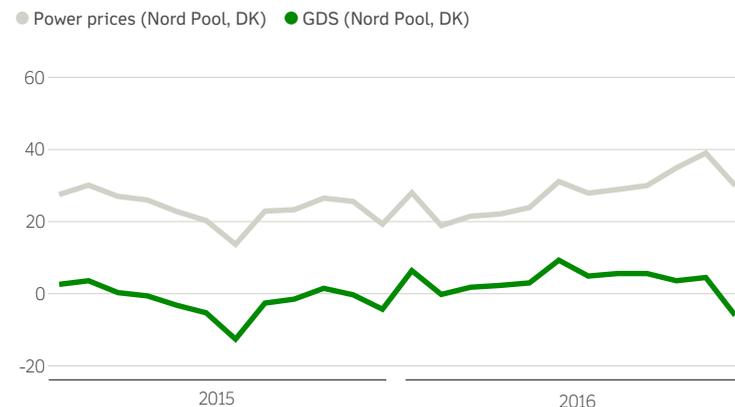

Sustainable biomass in the form of wood pellets and wood chips can supply green district heating and green power when the sun is not shining and the wind turbines are not spinning. In cooperation with our heat customers, in 2016 we came a long way with the execution of our three large-scale biomass conversion projects. Since October and December 2016, respectively, unit 3 at Studstrup Power Station and unit 1 at Avedøre Power Station have been fired with sustainable wood pellets rather than coal. And from the spring of 2017, unit 3 of Skærbæk Power Station will be able to use wood chips rather than gas. Avedøre Power Station, Skærbæk Power Station and Studstrup Power Station will rank among the largest biomass-fired CHP plants in the world. They will thus come to play an important role in the green transformation of the surrounding towns, cities and municipalities – and for Denmark as a whole.

In addition to these three conversions, plans for a biomass solution at Asnæs Power Station are far advanced. Furthermore, an agreement has been reached with our customers at Herning Power Station concerning the key aspects of our continued supply of green heating up until 2033. This means that, within the coming years, our portfolio of CHP plants will be able to supply green district heating equating to the consumption of almost one million Danes.

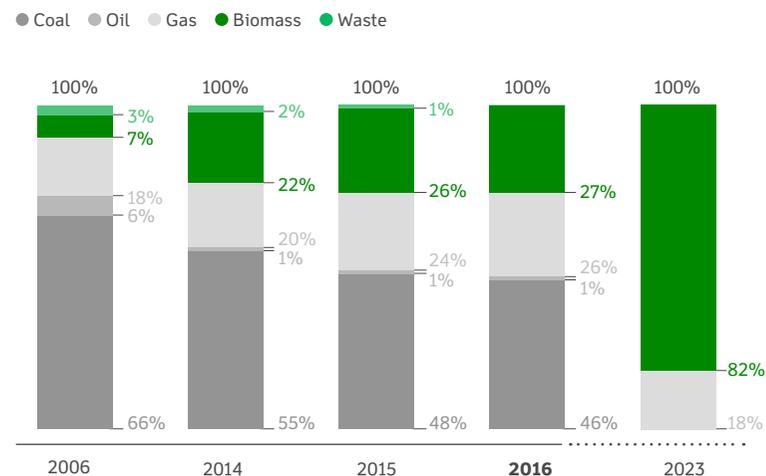

The power price in the two Danish price areas averaged EUR 28/MWh, which was 18% higher than in 2016. The increase was primarily due to a lower hydro-logical balance in the second half of the year, less windy weather and slightly higher coal prices than in 2015.

Power price and green dark spread (GDS), EUR/MWh

Biomass conversions will support a reduction in the usage of coal in the coming years.

Share of fuels in the thermal power and heat generation, %

It is important that our customers can be confident that the biomass-based heat and power, which we supply, is sustainable and makes a real and significant contribution to reducing their carbon footprint. Therefore, we fully support the Danish industry agreement on sustainable wood-based biomass which commits not just DONG Energy but the entire Danish energy industry to documenting the sustainability of our use of biomass. Together with other European energy companies, we are also part of the Sustainable Biomass Programme (SBP), which has developed a robust and independent scheme for the certification of sustainable biomass. This means that – following a phase-in period – our suppliers must provide documentation that the biomass they supply comes from sustainable forestry operations. Among other things, sustainable forestry operations ensure replanting and the protection of biodiversity. Wood pellets and wood chips also consist primarily of thinning trees, sawdust and other residual products.

The Danish industry agreement on sustainable wood-based biomass entered into force in 2016 and is being phased in during the period up until 2019. In the course of 2016, about 60 suppliers of wood pellets and wood chips were SBP-certified, and more are in the process of being so. We were also audited and obtained FSC, PEFC and SBP certification in 2016. This means that our procurement procedures have been reviewed and approved by independent auditors, and that we have now been approved for trading in certified biomass.

In 2016, we were also involved in work to ensure the establishment of robust

pan-European sustainability criteria for biomass. The purpose of the work has been to ensure that only sustainable biomass is used in the EU.

Phase-out the use of coal

In continuation of the conversion of our CHP plants to sustainable wood chips and wood pellets, we have decided to phase out the use of coal completely, so that from 2023 we will no longer be using coal to generate power and heat. Coal is the fuel with the greatest CO₂ impact per generated unit of power and heat, and our decision will significantly reduce our annual CO₂ emissions in Denmark in the period up until 2023. In just over 10 years, by 2023 we will have gone from being one of the most coal-intensive utility companies in Europe to no longer using coal in our generation.

Continue the commercial development of our enzymatic waste technology REnescience.

We are currently working to further develop and expand our bioenergy business, with special emphasis on the commercialisation of the REnescience technology. By means of enzymes, the technology efficiently converts household waste into biogas and recyclable materials (metal, plastic, etc). REnescience saw significant progress in 2016 with the decision to build the first full-scale plant in Northwich in the UK. We expect the plant to be able to process 120,000 tonnes of unsorted residual household waste a year, corresponding to the waste from approximately 110,000 households. We expect the plant to start operating in the spring of 2017. Other full-scale REnescience projects are being planned in the UK, the Netherlands and Malaysia.

The REnescience plant in Northwich, UK

Distribution & Customer Solutions

Highlights in 2016

- We successfully completed the renegotiations of long-term gas purchase contracts and obtained one-off payments of DKK 4.3 billion
- A new wholesale model for the Danish power supply was implemented on 1 April 2016
- We divested the gas distribution network to Energinet.dk

Financial performance

Revenue fell by DKK 11.4 billion to DKK 38.0 billion in 2016. This was primarily due to 5% lower gas sales and an average decline in gas prices of 29% relative to 2015.

EBITDA amounted to DKK 7.1 billion compared with DKK 2.2 billion in 2015 as a consequence of developments in Markets.

EBITDA from Markets increased by DKK 5.0 billion to DKK 5.8 billion as a result of one-off payments and ongoing margin improvement from the completed renegotiations of long-term gas purchase contracts. The total one-off payments from the renegotiations amounted to DKK 4.3 billion in 2016. Renegotiations were completed with three counterparties in 2016 and one counterparty in 2015. Furthermore, the increase was due to continued high earnings from trading and portfolio optimisation, a positive development in the value of our gas storage, as well as 2015 being

negatively impacted by timelag related to oil hedges.

EBITDA from the distribution business was in line with 2015, amounting to DKK 1.6 billion.

EBITDA from the sales business fell by DKK 0.2 billion relative to 2015, resulting in a moderate loss. The fall was due, among other things, to lower activity relating to servicing and maintenance of outdoor lighting. In addition, the implementation and the processes in connection with the operation of the wholesale model, mentioned elsewhere in the course of 2016, increased costs in the

“
We build bridges between our customers and the green transformation with targeted solutions and partnerships. Continued high customer satisfaction and loyalty in 2016 is proof that we are moving in the right direction.”

Morten Buchgreitz
 CEO, Distribution & Customer Solutions

EBITDA was positively affected by one-off payments of DKK 4.3 billion in 2016.

Gas distribution was a part of EBITDA until the divestment in September.

Adjusted ROCE	%	75.8	11.5	64.3%-p

sales business. Costs previously incurred by the distribution business are now being incurred by the sales division, which became responsible for all customer contact after the implementation.

EBITDA from LNG improved by DKK 0.1 billion, mainly due to lower net expenses related to the Gate terminal in the Netherlands and better margins.

Cash flow from operating activities totalled DKK 4.3 billion, up DKK 0.6 billion. The increase was driven by higher EBITDA, which was partially offset by increased funds tied up in working capital related to clearing counterparties in connection with exchange trading, following the rise in oil and gas prices at year-end 2016. Conversely, funds tied up related to clearing counterparties contributed positively in 2015 as a result of the falling prices throughout the year.

Gross investments totalled DKK 0.6 billion in 2016 and were mainly related to maintenance of the power distribution network.

Divestments amounted to DKK 2.2 billion and were related to the divestment of the gas distribution network to Energinet.dk.

Adjusted ROCE improved from 11% to 76% and was particularly impacted by the received one-off payments from the renegotiations.

Strategy follow-up

DCS' strategic focus is to:

- **maintain a high level of security of supply and customer satisfaction in our distribution business**
- **further strengthen competitiveness and customer satisfaction among residential and business customers in our sales business**
- **optimise our energy portfolio as a whole and provide competitive market access**

Maintain a high level of security of supply and customer satisfaction in our distribution business

It is crucial that our customers experience a high level of security of supply, first and foremost by ensuring that the supply is rarely interrupted, but also by ensuring swift action and accurate information when it happens.

In 2016, customers experienced a slight deterioration of the security of supply from 0.36 power failures a year to 0.49. The level is still very low. In 2016, we commissioned a new system for handling power failures and registrations. This means that we are now able to contact most of our customers by text message to inform them about announced and unannounced power outages. The initiative contributed to improving customer satisfaction in 2016.

On 1 April, DONG Energy Eldistribution changed its name to Radius. The new name is intended to make it easier for customers to distinguish between the Group's trading company and its power distribution company. From now on, customers will therefore see

Radius cars in the streets. The name change also coincides with the trading company being made responsible for billing both power sales and distribution. Our customers will still experience the same high level of service and quality from our power distribution company, even though the Radius name will not feature on the electricity bills sent to customers.

Before the end of 2020, all Danish power customers will have remote power meters. We are therefore busy preparing the replacement of one million power meters. The first meters were installed in 2016. The remote power meters offer many advantages for our customers, among other things because they no longer have to read their power meters and because consumption is billed on an hourly basis. Moreover, the new meters will make it easier for customers to keep an eye on their power consumption and manage their consumption during the day and across the year.

Further strengthen competitiveness and customer satisfaction among residential and business customers in our sales business

It must be easy to be a customer with us, and we must meet our customers at eye level and offer competitive solutions and products.

In 2016, the customer satisfaction score among residential customers who had been in touch with us was 76 on a scale of 1-100. This is the same high level as the year before. Customer loyalty increased from 67 to 69 in 2016, while our reputation among our customers improved considerably. To strengthen customer satisfaction, in 2016 we implemented a set of uniform and improved principles for how we treat our residential customers. The

principles are to ensure that all our customers are treated in an equally forthcoming and competent manner, regardless of the way in which they contact us. At the same time, we are constantly working to tailor our communication and self-service solutions to the needs of individual customers.

To further strengthen our competitiveness, we are developing a new, simple and flexible digital platform, while at the same time ensuring that our products remain competitively priced.

Our customer satisfaction score for business customers is a stable 75 out of 100. As regards our business customers, we are continuing our efforts – across all geographical markets – to establish partnerships with our customers rather than holding on to the classic role as a supplier of power and gas. We are seeing a growing demand for integrated, green energy solutions, and our ambition is to lead this development. Among other things, we offer to enter into climate partnerships with our customers, comprising green power and advice on energy efficiency and procurement. Moreover, we are also working on a service concept under which we offer to assume full responsibility for handling our customers' energy supply.

Optimise our energy portfolio as a whole and provide competitive market access

DCS Markets manages and optimises the Group's energy portfolio as a whole. This means, among other things, that we sell the Group's power and gas as well as green certificates in the market and make sure to balance the power and gas bought and sold in our power and gas portfolio. In addition,

we are responsible for hedging the Group's energy exposure.

The market access which we handle for the Group's power and gas generation, green certificates, etc, we also offer to external customers. In this way, we seek to create synergies across the portfolio. In 2016, we increased the number of external customers and the volumes of energy we handle on their behalf. We saw an increase in demand for balancing power-generating assets.

In 2016, we took a major step further in the renegotiation of our portfolio of long-term oil-indexed gas purchase contracts. We concluded seven renegotiations of gas purchase contracts with satisfactory results and entailing one-off payments of DKK 4.3 billion to cover our historical losses. This means we have closed 16 out of 18 contracts relating to the 2011-2015 period. In 2016, two additional renegotiations were opened. Following the renegotiations, a high proportion of our contracts are now gas-indexed. Our LNG activities are loss-making. This is due to the fixed costs associated with our access to the Gate terminal import facilities, which under our long-term lease agreement from 2007 are higher than the earnings generated from our trading activities. We therefore have a special focus on continuously optimising our LNG position, among other things through increasing the number of transactions and ensuring more LNG to the Gate. In this way, we improve the utilisation of our import capacity and increase the potential earnings from our trading activities.

Oil & Gas

(Discontinued operations)

Strategy follow-up

O&G's strategic focus is to:

- transform the business and improve cash flows
- execute on key projects

Transform the business and improve cash flows

During 2016 we continued our efforts to transform the business into a leading North Sea oil and gas company in terms of returns and cash generation. We are well underway to achieving this as we delivered a positive free cash flow and have competitive lifting costs relative to other North Sea companies.

The transformation of the O&G business has been through continuous improvement to become a stronger business, including restructuring the organisation, optimising the portfolio, focusing relentlessly on driving down costs and minimising new investments. This work continues in 2017.

In 2016, we optimised the portfolio by divesting five Norwegian assets (Ula, Tambar, Tambar East, Oselvar and Trym) and by withdrawing from the Cambo-Tornado licence. Furthermore, we focused the exploration portfolio and seek to relinquish several licences with no strategic fit or with limited value.

Our cost performance continues to improve driven by renegotiations of supplier contracts, reduced exploration spending and improved operational efficiency, with total costs and investments reduced by 38% compared to 2015. We ended the year with a positive free cash flow, an achievement we had not expected.

Execute on key projects

In March 2016, we and Bayerngas, our Hejre licence partner, terminated for cause the Hejre platform EPC contract with the EPC consortium with immediate effect. This was done on the basis of the consortium's material breach of its contractual obligations. The termination means that the Hejre topsides platform will not be completed, and that the Hejre project 'in its original form' has been stopped. We will, however, continue to consider alternative ways to develop the Hejre field together with Bayerngas.

Laggan-Tormore, in the UK's West of Shetland area, was brought on-stream early in 2016 and has produced an average of approximately 16 thousand barrels of oil equivalent per day net to DONG Energy. The ongoing development of the area is supported by the Edradour and Glenlivet projects, which will be tied in to the already established Laggan-Tormore infrastructure. The development of Edradour and Glenlivet is progressing according to schedule with expected first gas in late 2017.

Furthermore, we continue to assess other opportunities for value creation, with investments focused on field extensions or build-out near existing producing assets as well as already initiated developments.

Financial results

O&G's financial results for 2016 are described in note 3.7.

“

Safe. Successful. Sustainable. These are the key words of the strategy we are pursuing with the aim of thriving as a business in any price environment. To do that, the organisation is working hard to further improve cash flows, enhance production, align capabilities and optimise the portfolio.”

David Cook
CEO, Oil & Gas

Risk and risk management

Risks are a natural part of our business activities and a precondition for being able to create value. Through risk management, we reduce risks to an acceptable level.

In addition to general operational and business risks, as part of our activities we are exposed to a number of different risks, including fluctuations in commodity prices, foreign exchange, interest rates and credits. Managing these risks is an important focus area for us. The purpose of our risk management is to identify the various risks to which we are exposed, and then decide how to handle them. We assess the extent to which individual risks are acceptable or perhaps even desirable as well as the extent to which these risks can be reduced to ensure an optimum balance between risk and return.

In autumn 2016, we decided to initiate a process aimed at divesting our oil and gas business. Going forward, our revenue will therefore largely come from offshore wind. When we invest in new assets and divest other assets, the risk associated with our portfolio changes. We therefore always assess the impact of a given decision on the portfolio in advance.

We work systematically with risks and follow a plan for the year according to which

all business units and selected executive functions identify and prioritise their business risks. An assessment is made as to the potential financial impact of individual risks and as to whether they are of a short-term, long-term or recurring nature. The risks are consolidated and then prioritised at Group level. The ultimate responsibility for the individual risks rests with a member of Group Executive Management. Similar processes are in place for identifying and prioritising risks related to sustainability, compliance/legal and IT.

The most important business risks identified in connection with the process in autumn 2016 are shown on the right. They are also illustrated in the figure based on their potential impact (post-risk mitigation) on our value and credit metrics over the next few years. Due to the divestment of our oil and gas business, we have decided to only show our five most important risks this year. You can read more about these risks in the following pages. The risks relating to the oil and gas business still exist, but they are not described separately, except for the market risks which are described in note 3.7 to the consolidated financial statements.

The risks related to sustainability, compliance/legal and IT are assessed on the basis of other parameters, for which reason a consolidated picture of the combined risks cannot be

- DONG energy** Entire group

Top 5 business risks

Effect on our value and credit metric

shown. You can find a description of the three most important risks for each of these areas on page 50.

Moreover, we are exposed to risks entailing a very small probability of having a considerable impact on the Group's finances and/or reputation. These include, among other things, a 1,000-year storm, fires at or collisions with offshore wind farms, damage to export cables due to anchors being dragged along the seabed, damage to pipes at the Nybro Gas

Treatment Plant, power station breakdowns and the collapse of the financial markets.

For each of the identified risks, Group Executive Management has assessed whether the level of risk – after risk-reducing measures have been implemented – is appropriate or slightly or significantly higher than the desired level. If the risk is higher than the desired level, further risk-reducing measures are initiated to the extent possible.

Development in risks in 2016

Some risks were reduced in 2016, while the potential impact of other risks developed unfavourably.

Factors which contributed to reducing the Group's risks at the end of 2016 compared to the year before were:

- good progress for the development of the Glenlivet-Edrour field, the completion of the Laggan-Tormore field and the offshore wind farms Gode Wind 1 & 2 as well as the bioconversions of Studstrup Power Station and Avedøre Power Station, unit 1 (risk #2 in the annual report for 2015);
- termination of the Hejre project in its original form in March 2016 (risk #6 in the annual report for 2015);
- conclusion of the most significant renegotiations of gas purchase contracts (risk #10 in the annual report for 2015).

Areas in which the potential financial impact was increased or developed unfavourably were, in particular:

- operation of offshore wind farms (risk #7 in the annual report for 2015 and #4 in the annual report for 2016). In 2016, our offshore wind farm operations were negatively affected by transmission cable faults. Walney 2 was one of the wind farms affected by this. The fault led to just over three months without production at the start of the year. Production from the newly constructed offshore wind farms Gode Wind 1 & 2 in Germany was modest in 2016. This was due to faults in cable joints of the onshore

part of the transmission cable which is the responsibility of the transmission system operator. We are not compensated for faults in the transmission grid in the UK, and we are not fully compensated in Germany. The transmission system operator can deduct a number of days planned transmission grid maintenance and non-planned interruptions due to faults. Lost production from Gode Wind 1 & 2 was thus not fully compensated.

- The UK's decision to leave the European Union (indirectly risk #1 and 3, in the 2015 and 2016 annual reports). The consequences of the UK's decision to leave the EU have been subject to a great amount of uncertainty. The UK is our largest market, and all our business areas have activities in the UK. Wind Power's activities are exposed both to the DKK/GBP exchange rate in the long term and to the political environment, including subsidy regimes. We regard the exposure of our other business areas as being limited.
- Intensifying competition for the tendered offshore wind farm projects (covered by risk #3 in the 2015 and 2016 annual reports). The price per produced MWh in winning bids reflects a substantial reduction in the costs associated with the construction of the plants and the ongoing production, but also a reduced return requirement.

1 Market risks

Our primary market risks relate to energy prices, foreign exchange rates and interest rates.

Risk management

The management of market price risks is to ensure stable and robust financial ratios that support our growth strategy.

We hedge prices for up to five years to reduce cash flow fluctuations. Prices are not hedged in the medium to long term, and our long-term market risks are therefore determined by our strategic decisions on investments in new assets, the conclusion of long-term contracts as well as any divestment of assets.

Energy prices

Our energy price risks can be divided into direct price risks, where the exposure depends on a specific price, and spread risks, where the exposure depends on the difference between two or more prices. Direct price risks are generally considered to be higher than spread risks as prices are often co-variant.

We hedge prices based on minimum price hedging requirements for the three business units defined by the Board of Directors, see note 7.1. For the first two years, a high degree of hedging is wanted to ensure stable cash flows after tax, while the degree of hedging is lower in subsequent years. This is due to declining certainty about generated volumes and the increasing cost of hedging instruments due to the declining liquidity of the instruments.

Exchange rates

Our international activities entail a financial exposure to exchange rate fluctuations. The most important risk relates to GBP due to the Group's substantial investments in offshore wind farms in the UK.

The main currency risk management principle is that currency risks are hedged when it is deemed relatively certain that the underlying cash flows in foreign currencies will materialise. Currency risks relating to energy prices are therefore hedged only once the energy price is hedged. Similarly, currency risks relating to divestments and investments are hedged only once the divestment and investment prices are sufficiently certain.

Cash flows relating to fixed tariffs and guaranteed minimum prices from offshore wind farms in the UK derogate from the main principle as they are hedged, less operating expenses, based on a declining level of hedging over the five-year risk management horizon, see note 7.1. Fluctuations in GBP therefore constitute a strategic risk for DONG Energy.

Our EUR risk is subject to continuous assessment, but is generally not hedged as we believe that Denmark will maintain its fixed exchange rate policy.

Interest

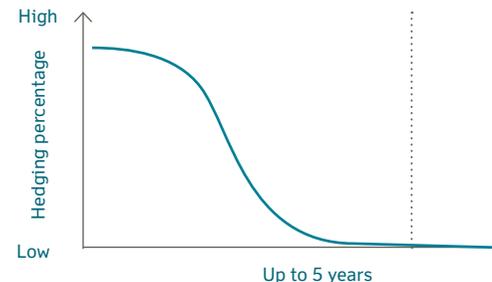

Our interest rate risks relate to interest-bearing loans and borrowings, interest-bearing assets and financial price hedges.

The management of interest rate risks is based on the composition of our assets and

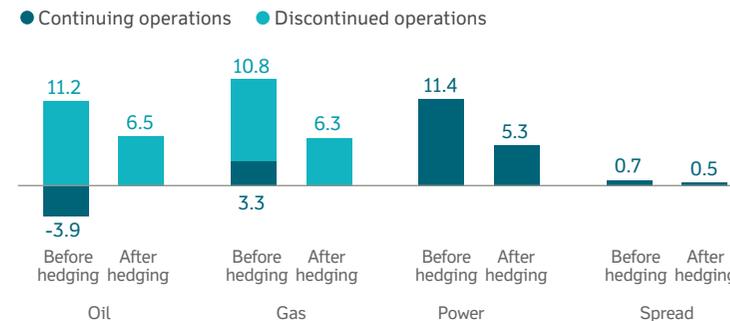

Risk horizon

We hedge market prices with a horizon of up to five years.

Energy exposure 2017–2021 DKK billion

Our energy exposures have been reduced from DKK 33.5bn to DKK 18.6bn via hedging.

Currency exposure 2017–2021 DKK billion

Our currency exposures have been reduced from DKK 58.1bn to DKK 15.6bn via hedging.

the interest rate sensitivity of the cash flows generated by these assets. Fixed-interest financing over a longer term is sought for assets with fixed, interest-insensitive cash flows over a longer term. Conversely, more variable-interest financing is sought for assets with varying, interest-sensitive cash flows.

2 Development and construction of production assets

Our strategy includes the construction of large-scale investment projects, especially in Wind Power. Value creation from new projects depends to a large extent on choosing the right technical and commercial solutions, on the design and construction phase progressing as planned, on avoiding investment budget overruns and on the timely start-up of production.

Most of the new investments are made in offshore assets, which naturally increases risks in the construction phase. The nature of the seabed, weather conditions and dependence on installation vessels are some of the risks associated with the construction of offshore assets.

In Wind Power and Bioenergy & Thermal Power, we have successfully completed a number of investment projects in recent years. Based on the experience gained, we have been able to considerably reduce the risks associated with our projects in progress.

3 Regulatory risks in Wind Power

The risk associated with regulatory regimes is twofold. It is associated with the possibilities for obtaining subsidies and with the possibilities for obtaining relevant approvals from the local authorities.

The EU member states have confirmed their ambitions to reduce CO₂ emissions by 40% and increase the share of production from renewable energy sources (RES) to at least 27% of the total production – both targets to be achieved before 2030.

Under the reformed EU guidelines on state aid for environmental protection and energy, subsidies are generally granted in a competitive bidding process, with the bid submitted by the bidder being the only or most important criterion. This will increase the competition, which can affect the profitability of the projects and the subsidies received.

We do not expect changes to be made to the subsidy schemes, including tax incentive schemes, with retrospective effect for existing offshore wind projects in any of the countries in which offshore wind farms have been commissioned, or in which offshore wind farms are planned.

The greatest risks relating to project development are associated with the need to obtain relevant approvals from the local authorities as well as the connection to the power grid. Delays in both areas may lead to the total or partial loss of subsidies. This risk is significantly reduced for projects where aid and possibly project rights are granted in competitive bidding processes.

We mitigate the risks by monitoring political developments in all the relevant countries and by engaging in an active dialogue with relevant authorities about environmental approvals, regulatory milestones and the economic regimes.

To ensure an appropriate pipeline and the realisation of the desired level of new projects, we are working with a flexible portfolio of projects, the number of which actually exceeds capacity. In this way, it is not critical if individual projects fail to materialise. Furthermore, we are continuously exploring new markets with a view to spreading the geographical risks.

4 Operation of offshore wind farms

The risks associated with the operation of offshore wind farms relate to forecasts for availability and operating expenses as well as faults in transmission cables and substations.

Our forecasts for availability and operating expenses are based on a number of assumptions received from our suppliers and on historical data. There is a risk that the assumptions do not hold, and that fault rates and costs are higher than expected. This may lead to deviations between actual production and the forecasts.

In addition, we are exposed to faults in transmission cables and substations, which may result in breakdowns and loss of production from parts of or entire wind farms over a longer period of time. We are

not compensated for loss of production in the UK. However, in Denmark we are fully compensated, and in Germany we receive compensation for a major part of the operating loss.

We have put in place various contingency plans to cater for unforeseeable events, including an acute repair function to handle transmission cable faults. Moreover, we are continuously working to reduce the risk of faults in the operation of offshore wind farms.

5 Cost of electricity for offshore wind power

A reduction in the cost of electricity for offshore wind power is essential to making offshore wind power less dependent on subsidies and more competitive in relation to other technologies, such as onshore wind power and solar PV. Reducing the cost of offshore wind power is also important to ensure that we can maintain our global market leader position by continuing to win auctions and tenders in key markets.

We want to meet the need for a lower cost, and we are therefore continuing our work on optimising development, installation and operations. We have created a streamlined organisation and initiated strategic cooperation with key suppliers to ensure continuous cost reductions.

Other risks

Sustainability

Risks associated with sustainability are assessed on the basis of their significance to our stakeholders and their strategic importance to the Group. The three most important risks are described below.

Personal safety and well-being

Personal safety is a basic expectation and, at the same time, a competitive aspect in the energy business. Fatal accidents and serious personal injuries are unacceptable, first and foremost due to the human consequences, but also because they can affect our reputation negatively and impact the effectiveness and efficiency of operations. We reduce the risks through a number of initiatives, including HSE action plans, emergency response drills, a new stress prevention programme and a general focus on strengthening the corporate safety culture.

Costs of the green transformation

The most significant risk in this area is that the criticism of the costs related to the green transformation will reduce the demand for offshore wind power after 2020. This may affect Wind Power's investment opportunities. We counter the risk by leading the way in the efforts to reduce costs – as evidenced by our winning Borssele 1 & 2 bid – and by shedding light on the positive contribution made by wind power to society.

Reputation

Having a good reputation matters to us. Our reputation has a bearing on our ability to

retain customers and employees as well as our dialogue with political decision-makers. In Denmark, our reputation has suffered since the capital injection in 2014 when Goldman Sachs, ATP and PFA bought shares in the company. We are seeking to improve our reputation in Denmark through new strategies, for example by helping consumers reduce their energy bills, increasing communication about our green transformation and committing to important societal activities. Our reputation in the international markets is considerably better than in Denmark.

Compliance and legal

Risks associated with compliance and legal are assessed on the basis of financial significance and probability. The three most important risks are described below.

Tax legislation

We are involved in a large number of intra-group transactions under various national tax regimes. These transactions must take place on market-based terms and conditions to comply with local transfer pricing rules and the OECD standards. To prevent problems in this area, we are engaged in dialogue with the tax authorities, particularly in Norway and the UK. Moreover, we have established internal transfer pricing policies and manuals and are developing a tool for controlling transfer pricing.

Public procurement law

Most of our products and services are subject to EU public procurement law, which is generally complex and constantly changing.

In 2016, a new EU directive came into force which the various Member States have interpreted differently. This is making it difficult to compete for contracts in different countries. To counter this risk, we have ensured that our procurement function is involved in the relevant activities.

Financial regulation

We are subject to a number of financial regimes, such as the EMIR, Dodd Frank, REMIT/MAD, SFTR and MiFID. The financial rules and related procedures are complex and constantly changing. In 2016, we have established a new compliance structure for financial regulation staffed by employees who are dedicated to handling these tasks. This will ensure a consistent level of compliance with financial regulations and related types of control throughout the Group.

IT

We assess IT-related risks based on the importance of a potential event for our operations and the likelihood that the event may occur. The three most important risks are described below.

Cyber attacks and security breaches

We are responsible for critical infrastructure, and we own various types of intellectual property rights. This means that we are a potential target for cyber attacks or industrial espionage. To ensure monitoring of system-related risks, we have implemented a global framework for safety risk management. Our strategy also focuses on protecting us against cyber attacks and on ensuring that

the necessary control systems are in place for monitoring and managing the Group's operations.

Breakdown of control systems

IT system failure is the most common type of failure and can lead to operational problems or breakdowns if the systems do not work as they should. In order to mitigate this risk, our IT systems feature extra controls, and we have a plan for restarting systems and hardware.

Breakdown of administrative systems

Systems for operations and finance, electronic communication and filing as well as customer service, etc, constitute a risk in relation to our business processes and the related production. In the past two years, we have intensified our focus on the most important systems, and today we mitigate the risk through maintaining a high level of governance and change management procedures.

Corporate Governance

We have worked with corporate governance for many years. Each year, we consider the recommendations from the Danish Committee on Corporate Governance, describe corporate governance in our annual report and prepare a detailed report, which you can find on our website.

The IPO has led to certain changes in our governance model. Relations between the major shareholders were previously governed by an agreement made between the shareholders who took part in the capital injection in 2014. In connection with the IPO, most parts of this agreement ceased to apply. This means that none of our major shareholders are now entitled to elect a member of our Board of Directors, and Goldman Sachs shall no longer approve certain Board decisions. Our governance model is now in line with that of other major Danish listed companies.

1. Shareholders

Our shareholders exercise their rights at the general meeting, which for example appoints the Board of Directors and the auditors.

2. General meeting

The general meeting adopts decisions in accordance with the general rules set out in the Danish Companies Act. However, for the general meeting to be able to approve proposals to amend the Articles of Association or to dissolve the company, the Danish State, as principal shareholder, must participate in the general meeting and vote in favour of the proposal.

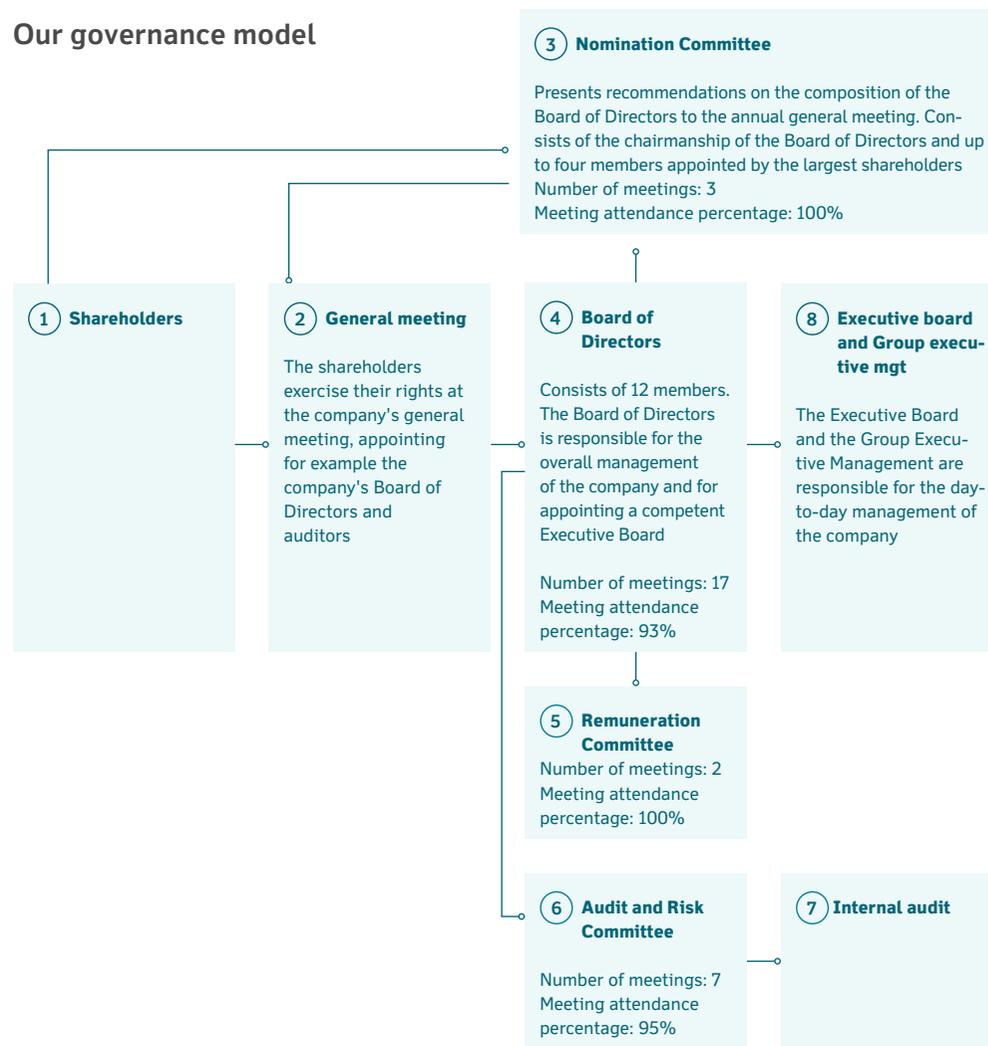

3. Nomination Committee

Members and duties

The Nomination Committee has been appointed in accordance with the Articles of Association and consists of the Chairman and Deputy Chairman of the Board of Directors and up to four members appointed by the largest shareholders every autumn. If one of the four largest shareholders decides not to be represented on the committee, the right of appointment is transferred to the fifth largest shareholder and so on.

Before the IPO, the shareholders Goldman Sachs, SEAS-NVE and ATP were each entitled to appoint a member of our Board of Directors. In addition, Goldman Sachs was represented by two observers on the board. These rights ceased to apply in connection with the IPO. Today, our Nomination Committee therefore plays an even more important role

Our governance model

in ensuring that the right candidates with the right skills are put forward for election by the shareholders at the general meeting.

Current members of the committee are Thomas Thune Andersen, Lene Skole, Rasmus Lønborg (elected by the Danish Ministry of Finance), Michael Specht Bruun (elected by Goldman Sachs), Jesper Hjulmand (elected by SEAS-NVE) and Kasper Ahrndt Lorenzen (elected by ATP).

The committee's work results in a number of written recommendations for the re-election or the new election of board members. We publish and submit the recommendations to the shareholders before the annual general meeting. The committee does not perform any other duties for the company.

The Nomination Committee's duties, meetings, etc, are described in its rules of procedure, which you can find at www.dongenergy.com/corporate_governance.

Special tasks in 2016

In March 2016, the committee recommended to the general meeting that all members of the Board of Directors be re-elected, and the general meeting followed the recommendation.

At its meeting in September 2016, the committee approved the meeting schedule for the year and discussed the composition of the Board of Directors as well as the need for replacements following the IPO. The committee also assessed the skills and profiles of the various board members, including the need to strengthen experience within management

of large investment projects and corporate finance. The committee decided to start a recruitment process to strengthen these skills on the Board of Directors.

4. Board of Directors

Members and duties

The Board of Directors has 12 members. The general meeting elects eight members each year, and the employees elect four members, usually every four years.

Information about the members of the Board of Directors, their other supervisory and executive positions, independence and special competencies can be found on page 60-61.

The Board of Directors is responsible for the overall management of the company. The Board of Directors lays down the company's strategy and makes decisions concerning major investments and divestments, the capital base, key policies, control and audit matters, risk management and significant operational issues. The Board of Directors appoints the Executive Board.

The Board of Directors has appointed two committees from among its members, an Audit and Risk Committee and a Remuneration Committee.

The Board of Directors has adopted rules of procedure, which describe the work and duties of the Board of Directors and the two committees. Each year, the Board of Directors assesses the need to update the rules of procedure. You can read about the rules of

procedure of the Board of Directors and the two committees at www.dongenergy.com/corporate_governance

Special tasks in 2016

Alongside the ordinary work of the Board of Directors, the Board of Directors spent a lot of time on the IPO. Throughout the IPO process, the Board of Directors and the Executive Board looked after the company's interests. Among other things, the Board of Directors considered the prospectus, compliance and corporate matters, our new share programme for senior executives and corporate governance. The Board of Directors also laid down a new investor relations policy and guidelines stipulating how the Board of Directors must act in the event of a takeover bid for DONG Energy. The ordinary work of the Board of Directors was also characterised by high levels of activity, among other things in connection with the final investment decisions taken on the three new offshore wind farms in the UK, Germany and the Netherlands.

Several board members hold executive positions in other companies in the energy sector or companies which have other business relations with us. The persons in question and the Board of Directors as a whole are therefore very aware of the risk of conflicts of interest. In 2016, the Board of Directors adopted supplementary guidelines to avoid conflicts of interest.

The Board of Directors conducted its annual self-assessment in November and December 2016. All members of the Board of Directors completed an anonymous questionnaire, and the Chairman of the Board of Directors had a

Important tasks of the Board of Directors in 2016:

Investments and divestments

- Capital investments in the offshore wind projects Hornsea 1 in the UK, Borssele 1 & 2 in the Netherlands and Borkum Riffgrund 2 in Germany
- Capital investment in a bio plant in the UK designed to handle unsorted household waste by means of enzymes
- Divestment of ownership interests in the offshore wind farms Burbo Bank Extension and Race Bank in the UK
- Divestment of the Danish gas distribution activities
- Divestment of certain Norwegian oil and gas fields.

Other tasks

- Development of our project portfolio for offshore wind after 2020, including start-up of activities in Taiwan and the USA
- Decision to divest the oil and gas business
- Termination of the contract concerning the construction of the Hejre platform
- Buy-back of senior bonds in the amount of just over EUR 500 million
- Appeal against the judgment of the Copenhagen Maritime and Commercial Court in the Elsam case.

dialogue with each individual member prior to the Board of Directors discussing the results. At the meeting, the Board of Directors also considered the follow-up items from last year's self-assessment.

Remuneration

Each year, the general meeting approves the remuneration for the members of the Board of Directors for the coming year. In the new section on remuneration on page 55-56, you can read more about the remuneration of the Board of Directors.

5. Remuneration Committee

Members and duties

Thomas Thune Andersen (Chairman), Pia Gjellerup and Martin Hintze are members of the Remuneration Committee.

The committee assists the Board of Directors in preparing and implementing the remuneration policy. The committee assesses and prepares recommendations on Group Executive Management's salary adjustments, bonuses, the application of retention schemes for key personnel, the use of one-off payments and the introduction of new compensatory elements. In 2016, the Remuneration Committee discussed, among other things, the introduction of a new share programme and a number of retention schemes.

6. Audit and Risk Committee

Members and duties

Benny D. Loft (Chairman), Lene Skole and Claus Wiinblad are members of the Audit and Risk Committee.

The committee assists the Board of Directors in overseeing the financial and non-financial reporting process, financial and business-related risks, compliance with statutory and other requirements from public authorities and the internal control environment. Moreover, the committee approves the framework for the work of the company's external and internal auditors, evaluates the external auditors' independence and qualifications and monitors the company's whistleblower scheme. You can find the description of our internal control environment in the statutory report on corporate governance, which is available on our website.

Special tasks in 2016

New rules governing statutory audits were implemented in Denmark in 2016. As a result, the committee's terms of reference have been updated to reflect the changed responsibilities. The committee has also approved a new policy for the use of a group auditor. Among other things, it introduces a cap on fees charged by the group auditor for the provision of non-audit services of 100% of the group fee as well as a preliminary approval of non-audit services. The committee may approve the exceeding of the limit.

7. Internal Audit

Members and duties

Our internal audit department reports to the Audit and Risk Committee. This means that the department is independent of our general management structures. Internal Audit suggests improvements and ways of streamlining our processes and control environment. Internal Audit is primarily involved in reviewing and advising on our key processes and risk management, amongst others in relation to IT security.

The Chairman of the Audit and Risk Committee is responsible for the whistleblower scheme. Internal Audit receives and processes any reports submitted.

Special tasks in 2016

Internal Audit undertook special revision and consultancy tasks within the following areas: management and control of model risks, implementation of a new system for monitoring various types of expenditure, hedging of commodities and currencies, as well as the monitoring of whether our suppliers and other business partners comply with international standards for human and labour rights, the environment and anti-corruption.

Whistleblower scheme

Our employees and other associates can report serious offences, such as cases of bribery, fraud and other criminal offences, to our whistleblower scheme or via our management system.

In 2016, the reports resulted in three substantiated cases. Two cases concerned

Important tasks of the Audit and Risk Committee in 2016

Audit and accounting

- Implementation of new auditor's report on consolidated financial statements
- Review of the presentation of Oil & Gas as discontinued operations
- Assessment of need for impairment of oil and gas assets
- Review of accounting treatment of the new share programme for senior executives
- Review of provisions regarding the termination of the contract concerning the Hejre platform
- Implementation of new structure in quarterly reports, annual report and sustainability report following IPO
- Review of expectations regarding market prices, foreign exchange rates, discount rates and risk-free interest.

Risk

- Review of IT security in operational and administrative areas as well as cyber defence
- Review of the impact of the UK's vote to leave the EU (Brexit)
- Review of cash reserves, repayment of bank loans and redemption of bonds
- Approval of new mandate for managing interest rate and inflation risks.

conflicts of interest in connection with external business partners, and one case concerned kickbacks from two suppliers. The cases have had consequences for the involved employees and consultants' employment with us.

None of the cases reported were critical to our business, nor have they impacted our financial results. We look very seriously on such cases and do what we can to avoid that similar cases occur again.

8. Executive Board and Group Executive Management

Members and duties

Henrik Poulsen (CEO) and Marianne Wiinholt (CFO) are the members of the Executive Board of DONG Energy A/S.

The Executive Board is responsible for the day-to-day management of the company. The Board of Directors has laid down guidelines for the work of the Executive Board, including the division of work between the Board of Directors and the Executive Board and the Executive Board's powers to enter into agreements on behalf of DONG Energy. The Board of Directors regularly discusses the CEO's performance, for example by following up on developments seen in relation to our strategy and objectives. The Chairman of the Board of Directors and the CEO also regularly discuss the cooperation between the Board of Directors and the Executive Board.

The daily management is also handled by Group Executive Management, which in addition to Henrik Poulsen and Marianne Wiinholt

comprises the Executive Vice Presidents of our four business units: Samuel Leupold (Wind Power), Thomas Dalsgaard (Bioenergy & Thermal Power), Morten H. Buchgreitz (Distribution & Customer Solutions) and David B. Cook (Oil & Gas).

You can find information about the members of the Executive Board, including their previous employment and other executive functions, on page 59. The section on remuneration on pages 55-56 includes a description of the remuneration of the Executive Board.

How we relate to the Recommendations on Corporate Governance

As a listed company, we consider the Recommendations on Corporate Governance prepared by the Danish Committee on Corporate Governance. You can find the recommendations at www.corporategovernance.dk. We derogate wholly or in part from the following recommendations:

- Our shareholders have decided not to stipulate a retirement age for members of the Board of Directors in our Articles of Association as an age limit is deemed to reduce the number of eligible candidates, thereby potentially reducing the expertise of the Board of Directors.
- Our shareholders have also decided that the Articles of Association should include provisions on a Nomination Committee

consisting of members of the Board of Directors as well as other members elected by the shareholders. The committee looks solely on the composition of the Board of Directors and prepares recommendations for the general meeting on the election of board members. The idea behind the committee is to structure the dialogue among our major shareholders on the composition of the Board of Directors. The members and duties of the Nomination Committee therefore differ from those envisaged by the Recommendations on Corporate Governance.

- After the IPO, we introduced a new share programme for the Executive Board. The programme complies with the Recommendations on Corporate Governance, except that the first vesting period is slightly shorter than the recommended three years. This is due to the fact that the programme was introduced in autumn 2016, and that we will prepare an assesment for the first time in spring 2019. Future allotments will take place in spring, so that the vesting period is three years.

Our statutory report on corporate governance can be found at www.dongenergy.com/statutory-reports, see section 107b of the Danish Financial Statements Act. The report describes whether and how we comply with or derogate from the 47 recommendations on corporate governance.

The Danish state has an ownership policy. The policy contains recommendations on corporate governance which apply to the minister responsible and the state-owned

companies. As a listed company, we consider the recommendations from the Danish Committee on Corporate Governance, and therefore we do not report on the recommendations in the ownership policy.

Remuneration report

Remuneration policy

The overall objective of our remuneration policy is to attract, motivate and retain qualified members of the Board of Directors and the Executive Board and to align the interests of the Board of Directors and the Executive Board with the interests of the shareholders.

The Remuneration policy is available at www.dongenergy.com/remuneration-policy.

Remuneration for the Executive Board

The overall objectives of the remuneration policy are:

- the remuneration level must be competitive, but not market-leading, compared to the level in similar major Danish listed companies with international activities
- to ensure the appropriate balance between fixed remuneration and incentive-based remuneration, which in turn aims at rewarding the performance of the individual member of the Executive Board.

The structure of the remuneration for the Executive Board is shown in the table. The two incentive schemes are further described below.

Cash-based incentive schemes ('STI')

The annual bonus is a cash-based incentive scheme that can be up to 30% of the fixed

Remuneration structure

Element	Objective	Remuneration level	Performance measures
Fixed salary	Attract and retain qualified managers.	Competitive but not market-leading.	n/a
Cash-based incentive schemes ('STI')	Ensure shared ownership of the entire company's performance and a clear link between overall performance and payment. The incentive scheme consists of a 40% group element and 60% individual element.	Target of 15% of the fixed annual salary. The maximum bonus amounts to 30% and will be paid in case of full achievement of all performance targets.	The performance reward agreement consists of four targets connected to strategic objectives: a financial target for DONG Energy, a Group safety target, a personal performance target and a behaviour target.
IPO Executive Retention Bonus	Retain the Executive Board after the IPO. Short-term bridge to long-term incentive schemes.	20% of the fixed annual salary as per 1 July 2016. The first instalment will be paid 14 months after the IPO and the second instalment will be paid 26 months after the IPO.	Employment at 1 September 2017 and 1 September 2018, respectively.
Share-based incentive scheme (long term)	Reward long-term value creation and align the Executive Board's interests with those of the shareholders.	Grant at 20% of the annual fixed salary conditional on a shareholding requirement for 75% of the annual base salary for the CEO and 50% for the CFO. Vesting at 0-200% of the grant depending on DONG Energy's performance compared to peers and conditional on employment at vesting.	The final number of performance share units (PSU) will be determined on the basis of DONG Energy's total shareholder return benchmarked against 10 peers. The PSU's granted will vest after three years.
Pension	n/a	The members of the Executive Board are not entitled to pension contribution.	

annual salary. The bonus targets underpin the company's strategy and results.

The Remuneration Committee sets bonus targets for and determines the performance of the CEO. The Chairman of the Board of Directors and the CEO set performance targets for and determine the performance of the CFO.

Share-based incentive scheme

The Executive Board is covered by the share programme for managers in DONG Energy. It is a condition for being granted performance share units (PSU) under the programme that the participant holds a number of DONG Energy shares representing a value equal to a share of each participant's annual base salary.

The CEO must hold shares with a value equal to 75% of the fixed salary. The CFO is required to hold 50%.

Participants in the programme must invest in DONG Energy shares prior to the first grant. If the participants fulfil the shareholding requirement at the time of the grant of the

Remuneration package for the Executive Board
Remuneration elements for the CEO and CFO are summarised in the table to the left.

PSUs, they will each year be granted a number of PSUs that represent a value equal to 20% of the annual base salary at the time of the grant.

The PSUs granted will vest after approximately three years, whereafter each PSU will represent a right to receive one share free of charge. The final number of PSUs for each participant will be determined on the basis of DONG Energy's total shareholder return benchmarked against 10 comparable European energy companies during the period of the share programme. The exercise rate will vary from 0% to 200% of the target number of PSUs granted. The maximum value granted will be 40% of the fixed annual salary for the Executive Board.

This maximum will apply if DONG Energy's performance is rated first among the companies included in the above benchmarking. For each lower ranking, the payout of PSUs will drop 20%-points, i.e. a second ranking will entitle the participants to 180% of the target.

If DONG Energy is rated number 11 in the benchmarking, no PSUs will be granted. Vesting of PSUs is conditional on continued employment. Employees who leave us as a consequence of their own resignation or breach of their employment will forfeit their right to PSUs.

Termination payment

If a member of the Executive Board is terminated by the company, that person is entitled to 24 month's pay made up of salary during their notice period (12 months) and a termination payment.

Remuneration for the Board of Directors

The remuneration for the Board of Directors is to be approved at the Annual General Meeting. Each member receives a fixed annual fee. The Chairman of the Board of Directors receives three times the fixed annual fee, and the Deputy Chairman of the Board of Directors receives twice the fixed annual fee. The Chairman of the Audit and Risk Committee receives 0.6 times the fixed annual fee, and for ordinary members the additional fee is 0.3 times the fixed annual fee. The Chairman of the Remuneration Committee receives 0.4 times the fixed annual fee, and for ordinary members the additional fee is 0.25 times the fixed annual fee.

Remuneration for the Board of Directors comprises fixed salary only. However, employee-elected members of the Board of Directors may due to their employment be covered by general incentive schemes applicable to the Group's employees. No agreements on termination payments to board members have been made.

Remuneration for the Board of Directors

The table shows the remuneration paid to the board representatives on each of the boards and committees. No remuneration has been paid to the Chairman and Deputy Chairman of the Nomination Committee.

¹ Employee representatives on the Board of Directors each held 837 shares at 31 December 2016, which was an increase of 465 shares compared to last year. No other board members held shares in the company. ² Martin Hintze has waived his right to receive directors' remuneration.

Shareholder information

DONG Energy was listed on Nasdaq Copenhagen on 9 June 2016, the biggest IPO in Danish history. In connection with the IPO, 20% of the company's shares were sold for a total value of DKK 19.7 billion. More than 1,700 employees attended the opening ceremony in Gentofte, which was transmitted to all our 49 locations.

Price development for the DONG Energy share in 2016

The DONG Energy share was introduced at a price of DKK 235 and closed the year at a price of DKK 268, equating a direct return of 14% in the period.

During the same period, the share prices of comparable European utility companies increased by 1%, and the OMX C20 index decreased by 11%.

The highest traded price was DKK 283. The lowest price was DKK 220, traded immediately

after the British no to continued membership of the EU at the end of June. DONG Energy's market value was DKK 112.5 billion at the end of the year, exclusive of the value of treasury shares of DKK 60 million.

The average daily turnover on Nasdaq Copenhagen was half a million shares. After the IPO, some of the selling shareholders were bound by a lock-up agreement, which expired on 22 November. In December, the DONG Energy share was included in both the Nasdaq OMX C20 index containing the most traded Danish shares and the MSCI index.

Share capital and share capital increase

DONG Energy's share capital is divided into 420 million shares enjoying the same voting and dividend rights. At the end of 2016, the company held a portfolio of 226 thousand treasury shares, which will be used to cover the incentive scheme. Treasury shares have not been acquired for the purpose of reducing the share capital.

On 28 June, the company allocated 2.7 million newly issued shares to 3,300 employees and managers. This increased the share capital by DKK 27 million to DKK 4,204 million.

Composition of shareholders

In connection with the IPO, 83.8 million shares were offered for sale. At the end of the year, the number of shareholders was 22,000. The figure to the left shows the composition of shareholders by country and specifies the four shareholders holding more than 5% of the share capital.

Annual general meeting and dividend

The annual general meeting will be held on 2 March 2017 in Copenhagen. In connection with the IPO, the total dividend for 2016 was fixed at DKK 2.5 billion, corresponding to DKK 6.0 per share. No dividend was paid for 2015.

Investor Relations

In order to achieve a fair pricing of our shares and corporate bonds, we seek to ensure a high level of openness and stability in our financial communication. In addition, our management and Investor Relations function engage in regular dialogue with investors and analysts. The dialogue takes the form of quarterly conference calls, road shows, conferences, capital market days and regular meetings with individual or groups of investors and analysts. The dialogue is subject to certain restrictions starting three weeks prior to the publication of our financial reports.

Sixteen share analysts and nine bond analysts cover the Group. Their recommendations and consensus estimates for DONG Energy's future financial performance can be seen at www.dongenergy.com/en/investors. On the site, you can also download our financial reports, investor presentations and a wide range of other data.

Profit (loss) for the year from our continuing operations

The Oil & Gas segment is presented as discontinued operations in 2016. Comparative figures for 2015 have been restated. The Group's business performance EBITDA has consequently been reduced by Oil & Gas' share corresponding to DKK 6,507 million in 2016.

Accounting policies

Business performance

The business performance principle was introduced by the DONG Energy Group in 2011. According to IFRS, market value adjustments of energy contracts and related currency risks (including hedging) are recognised on an ongoing basis in the income statement, whereas under the business performance principle, they are deferred and recognised in the period in which the hedged exposure materialises. The difference between IFRS and business performance is specified in the adjustments column. For further information about the business performance principle, see note 2.2.

Investments in property, plant and equipment

The most important investments were investments in new offshore wind farms and biomass conversions of existing CHP plants as well as intelligent grid investments.

Investments in offshore wind farms were made in the Borkum Riffgrund 2 and Gode Wind 1 and 2 wind farms in Germany, and in Race Bank, Walney Extension, Burbo Bank Extension and Hornsea 1 in the UK.

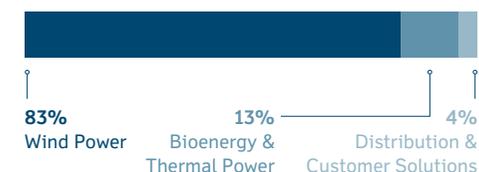

The most significant divestments in 2016 were made by Wind Power, which divested ownership interests in Race Bank and Burbo Bank Extension and by Distribution & Customer Solutions, which divested Gas Distribution.

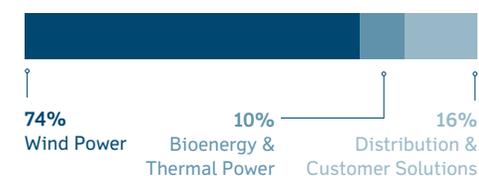

Assets classified as held for sale

The Oil & Gas segment is presented as assets classified as held for sale in 2016. Comparative figures for 2015 have not been restated – for more information, see note 3.7.

Gross investments by segment, % 2016 (DKK 14,960 million)

Property, plant and equipment by segment, % 2016 (DKK 70,182 million)

New circle of owners in DONG Energy

As a result of the IPO of DONG Energy on 9 June 2016, the Group's circle of owners has expanded. The Danish State and other investors sold shares to institutional investors, primarily in the USA, UK and Denmark and to private investors in Denmark.

On 19 December 2016, DONG Energy was included in the C20 index in Denmark.

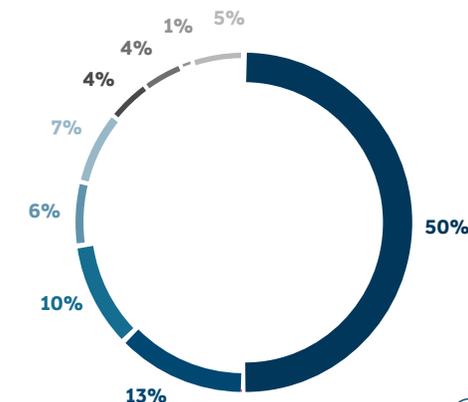

Liabilities relating to assets classified as held for sale

The Oil & Gas segment is presented in 2016 as liabilities relating to assets classified as held for sale. Comparative figures for 2015 have not been restated – for more information, see note 3.7.

Composition of shareholders

- The Danish State:
- New Energy Investment, Luxembourg
- SEAS-NVE, Denmark
- The Capital Group
- Danish institutional investors
- UK
- North America
- Private investors
- Other

DONG Energy's market value was DKK 112.5 billion at the end of the year, exclusive of the value of treasury shares of DKK 60 million.

The Board of Directors proposes that dividend of DKK 2,522 million be paid for the 2016 financial year. Read more in note 6.1.

Accounting policies

The hedging reserve covers:

- the cash flow hedging of interest payments
- the currency risk associated with the construction of wind farms
- less tax

The foreign currency translation reserve comprises:

- exchange rate adjustments arising on translation of the financial statements of foreign entities with a currency that is not the Group's functional currency
- exchange rate adjustments relating to loans that form part of our net investment in such entities
- exchange rate adjustments relating to hedging transactions on our net investment in such entities, less tax

On realisation or partial realisation of the net investment, the exchange rate adjustments are recognised in profit (loss) for the year if a foreign exchange gain or loss is realised by the divested entity. The foreign exchange gain (loss) is transferred to the item in which the gain (loss) is recognised.

The share premium reserve represents the excess of the amount of subscribed-for share capital over the nominal value of these shares in connection with capital injections. The reserve is part of DONG Energy's distributable reserves.

Statement of changes in equity

1 January – 31 December

2015 (DKK million)	Share capital	Hedging reserve	Foreign currency translation reserve	Share premium reserve	Retained earnings	Equity attributable to shareholders of DONG Energy A/S	Hybrid capital	Non-controlling interests	Total

				6.5	Cash and cash equivalents at 31 December	2,628	3,677

Our supplementary statements of gross and net investments appear from note 3.4 and free cash flows (FCF) from note 2.1.

Accounting policies

Cash flows from operating activities are determined using the indirect method as operating profit (loss) before depreciation, amortisation and impairment losses adjusted for changes in operating items without cash flow effect. Trade payables relating to purchases of intangible assets and property, plant and equipment are not recognised in change in net working capital.

Other items primarily comprise reversal of share of profit (loss) of and dividends in associates and joint ventures, and changes in bad debt provisions.

Cash flows from investing activities comprise payments in connection with the purchase and sale of

non-current assets and enterprises, and the purchase and sale of securities that are not recognised as cash and cash equivalents.

Cash flows from financing activities comprise changes in the size or composition of equity and loans. Proceeds from raising of short-term repo loans are presented net.

Cash flows in currencies other than the functional currency are translated at the average exchange rates for the month in question, unless these differ significantly from the rates at the transaction date.

1. Basis of reporting

In preparing the annual report, we focus on ensuring that the content is relevant to the reader, and that the presentation is clear.

In this section

- 1.1 Consolidated financial statements
- 1.2 Foreign currency translation
- 1.3 Implementation of new standards and interpretations
- 1.4 New standards and interpretations
- 1.5 Definitions of performance highlights

We regularly assess the effect of new IFRS reporting standards and interpretations and implement new reporting standards and interpretations from their mandatory effective dates at the latest.

In November 2016, the Board of Directors decided to initiate a process with the ultimate objective of divesting the Oil & Gas segment. Consequently, we have presented Oil & Gas' external activities, including revenue and other income and expenses, as discontinued operations in the annual report for 2016.

The internal trading between Oil & Gas and Distribution & Customer Solutions is not presented as discontinued operations, as management does not expect the internal trading between the companies to end following a divestment.

In accordance with IFRS, the income statement and statement of cash flows have both been restated in 2015 as well as in 2016. The balance sheet has not been restated in 2015.

In the annual report, we use the following symbol to indicate when the Oil & Gas segment is included in the table or graph.

Including our Oil & Gas activities

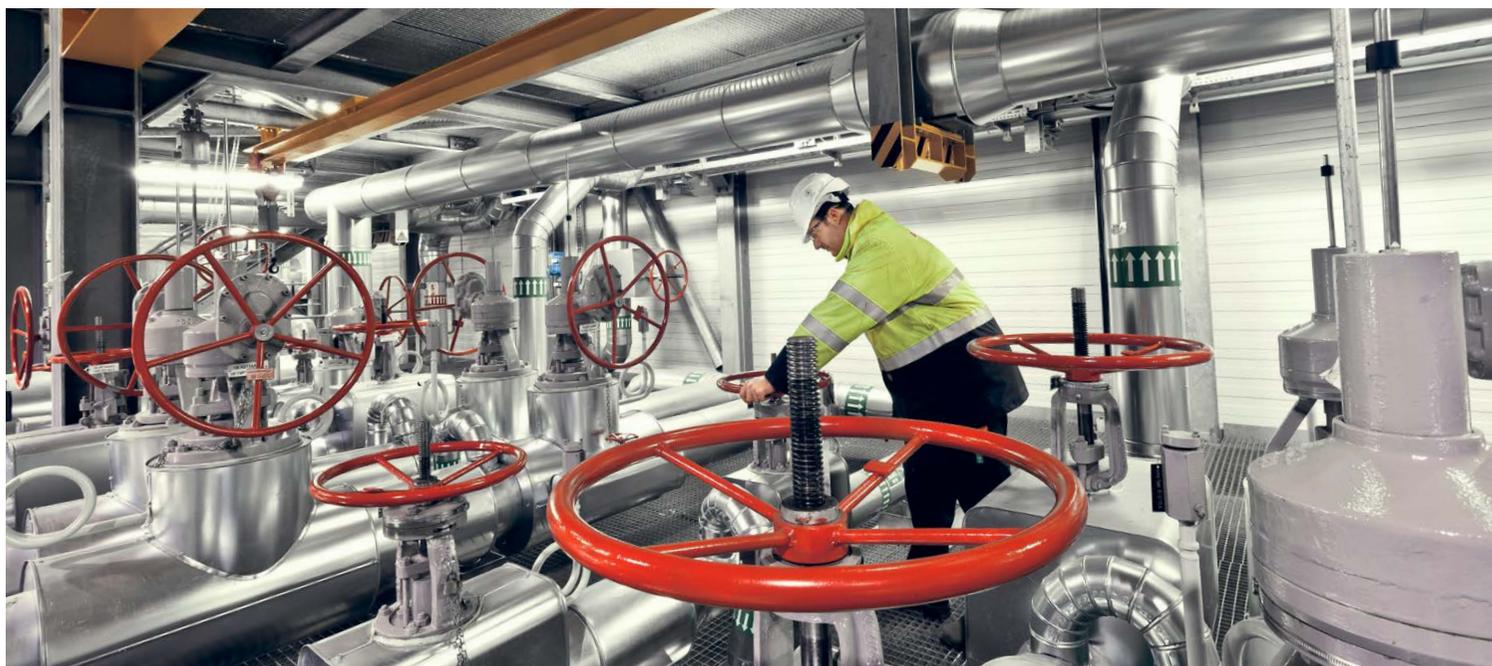

In preparing the consolidated financial statements, management makes a number of accounting estimates and judgements based on assumptions concerning future developments which affect our assets and liabilities as well as our income and costs. Realised figures may deviate from the estimates and judgements made.

Management regularly reassesses these estimates and judgements, based among other things on historical experience, the current situation in the financial markets, the expected effects of Brexit and a number of other relevant factors.

Accounting estimates, judgements and assumptions which may entail a risk of material adjustments in subsequent years are described in the following notes:

- 2.3 Revenue
- 2.5 Other operating income
- 3.1 Impairment test, intangible assets and property, plant and equipment
- 3.1 Useful lives of production assets
- 3.2 Decommissioning obligations
- 3.2 Onerous contracts
- 3.2 Litigation
- 3.3 Investments in associates and joint ventures
- 3.7 Discontinued operations
- 4.2 Construction contracts
- 5.4 Deferred tax

Accounting policies

The financial statements for the period 1 January – 31 December 2016 comprise the consolidated financial statements of DONG Energy A/S and its subsidiaries (the Group) as well as separate financial statements for the parent company, DONG Energy A/S. Reference is made to page 177 for the parent company's accounting policies.

The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS) as adopted by the EU and further requirements in the Danish Financial Statements Act.

The financial statements are presented in million Danish kroner (DKK), unless otherwise stated.

The consolidated financial statements have been prepared on the historical cost basis except for derivative financial instruments, financial instruments in trading portfolio, financial instruments classified as available for sale and CO₂ emissions allowances in trading portfolio that are measured at market value.

The accounting policies have been applied consistently to the financial year and the comparative figures.

The accounting policies applied to the consolidated financial statements as a whole are described below, while the remaining accounting policies are described in the notes to which they relate.

The descriptions of accounting policies in the statements and notes form part of the overall description of accounting policies.

1.1 Consolidated financial statements

The consolidated financial statements include the parent company DONG Energy A/S and subsidiaries controlled by DONG Energy A/S.

Enterprises in which we hold or have the ability to exercise, directly or indirectly, between 20% and 50% of the voting rights, but do not exercise control, are accounted for as associates. However, this is based on a specific assessment of our ability to exercise influence. Influence means our ability to influence financial and operational decisions with a bearing on our return.

Any such enterprises that satisfy the criteria for joint control are instead accounted for as investments in joint ventures.

The consolidated financial statements have been prepared as a consolidation of the parent company's and the individual subsidiaries' financial statements prepared in accordance with the Group's accounting policies. Intra-group income and expenses, shareholdings, balances and dividends as well as realised and unrealised gains and losses arising from intra-group transactions are eliminated on consolidation.

Unrealised gains resulting from transactions with associates and joint ventures are eliminated to the extent of the Group's ownership interest. Unrealised losses are eliminated in the same way as unrealised gains to the extent that there has been no impairment.

The Group's share in joint operations is recognised in the consolidated balance sheet through recognition of the Group's own assets and liabilities and income and expenses. The Group's share of joint income and expenses and assets and liabilities is then recognised. The proportionate share of realised and unrealised gains and losses arising from intra-group transactions between fully consolidated enterprises and joint operations is eliminated.

1.2 Foreign currency translation

For each reporting enterprise in the Group, items are determined in the currency of the primary economic environment in which the individual reporting enterprise operates (functional currency). Transactions in currencies other than the functional currency of each enterprise are accounted for as transactions in foreign currencies and translated on initial recognition at the exchange rate at the transaction date. Exchange differences arising between the exchange rate at the transaction date and at the date of payment are recognised in profit (loss) for the year as financial income or expenses.

Receivables, payables and other monetary items in foreign currencies are translated at the exchange rates at the balance sheet date. The difference between the exchange rate at the balance sheet date and the date at which the receivable or payable arose is recognised in profit (loss) for the year as financial income or expenses.

For foreign subsidiaries, joint operations, associates and joint ventures, the statements of comprehensive income are translated at monthly average exchange rates in so far as these do not deviate materially from the actual exchange rates at the transaction dates. Balance sheet items are translated at the exchange rates at the balance sheet date. All exchange differences are recognised in profit (loss) for the year, except for exchange differences arising on:

- translation of the opening equity of these entities at the exchange rates at the balance sheet date
- translation of the statements of comprehensive income of these enterprises from the exchange rates at the transaction date to the exchange rates at the balance sheet date
- translation of balances accounted for as part of the total net investment
- translation of the portion of loans and derivative financial instruments that has been entered into to hedge the net investment in these enterprises and that provides an effective hedge against corresponding foreign exchange gains (losses) on the net investment in the enterprise

The above types of exchange differences are recognised in other comprehensive income. Such exchange rate adjustments are allocated between the parent company's and the non-controlling interests' equity.

On full or partial disposal of the net investment, the accumulated exchange rate adjustments are recognised as follows:

- Disposal results in loss of control. The accumulated exchange rate adjustments, including any associated hedges, are recognised in the profit (loss) for the year if a foreign exchange gain (loss) is realised by the selling enterprise. Any foreign exchange gain (loss) is transferred to the item in which the gain (loss) is recognised. The part of the foreign currency translation reserve that relates to non-controlling interests is not transferred to profit (loss) for the year.
- Disposal does not result in loss of control. A proportionate share of the foreign currency translation reserve is transferred from the parent company shareholders' share of equity to the minority shareholders' share of equity.

Repayment of balances that are considered part of the net investment does not constitute a partial disposal of the subsidiary.

1.3 Implementation of new standards and interpretations

We implemented no new standards (IAS and IFRS) or interpretations (IFRIC) in 2016.

In 2016, we incorporated the following amendments to standards (IAS and IFRS), which are effective for financial years beginning on or after 1 January 2016:

- Amendment to IFRS 11 Joint Arrangements: The amendment adds new guidance to accounting for acquisitions of interests in a joint operation which is a business.
- IAS 1 Presentation of Financial Statements: The amendment is a clarification to the existing IAS 1.

The implementation of the amended standards in the consolidated financial statements for

2016 has not had any impact on our consolidated financial statements for 2016.

1.4 New standards and interpretations

IASB has issued a number of new or amended accounting standards and interpretations which have not yet entered into force and have consequently not been incorporated

into the consolidated financial statements for 2016 (impact is expected). The following accounting standards are the most relevant for DONG Energy:

Standard	Description of amendment	Expected effect	Commencement	Transitional provision
IFRS 15 – Revenue from Contracts with Customers	<p>New standard, which replaces IAS 11 and IAS 18 and associated interpretations. In the new standard, the model for recognising revenue is changed from having been based on the transfer of the risks and rewards of ownership of a product or service to being based on the transfer of control of the goods or services transferred to the customer.</p> <p>The basic principle is that our revenue must be recognised in a way that reflects the transfer of control of goods or services to our customers (customer obtains control) in an amount that reflects the consideration to which we expect to be entitled. Control is defined as the ability to direct the use of and obtain substantially all of the remaining benefits from the asset included in the goods or services.</p> <p>The five steps in the model are as follows:</p> <ol style="list-style-type: none"> 1. Identification of the contracts with the customer, including an assessment of whether several contracts should be treated as a single contract. 2. Identification of separate delivery terms in the contract. 3. Determination of the transaction price, including additional guidance on the treatment of variable consideration. 4. Allocation of the transaction price to identified performance obligations, including allocation in the event of subsequent changes to the agreed consideration. 5. Recognition of revenue when our customer obtains control, which may be either over time or at a certain point in time. <p>The standard also contains special rules concerning the recognition of costs related to the obtaining of contracts with our customers, to the performance of the contracts as well as enhanced disclosure requirements.</p>	<p>We have started an analysis of the cash flows in DONG Energy and a contract review where the analysis has indicated that the standard may impact the consolidated financial statements.</p> <p>Our construction contracts relate to the construction of offshore wind farms in collaboration with partners, where each party typically holds a 50% stake. In the UK, we offer construction contracts for offshore transmission assets, which are subsequently transferred to an OFTO. The assets are divested through a regulated sales process managed by Ofgem, which determines the final transfer value and the buyer. Management has assessed that no contract exists between DONG Energy and the final buyer, which creates legal rights and obligations for both parties when the construction of offshore transmission assets begins. When implementing IFRS 15, revenue from offshore transmission assets must be recognised when we are able to identify a contract which all parties have approved and intend to fulfil.</p> <p>IFRS 15 requires that contracts with a fixed quantity and variable price are recognised at the same average consideration over the term of the contract. We have a number of such contracts. These include contracts for the supply of power and gas where the customer has committed itself to buying a fixed volume at a variable price. As the cost of sales varies, this may defer the recognition of the contribution margin. We are still analysing the interpretation of IFRS 15 and the amendment's possible impact on revenue.</p> <p>We expect to finish the analysis and review of selected contracts in the course of 2017. It is still our assessment that IFRS 15 will not have any significant impact on the income statement, the balance sheet or the related key ratios in the consolidated financial statements.</p>	IFRS 15 will be implemented in our consolidated financial statements for the financial year beginning on 1 January 2018.	The standard will be implemented with retrospective effect as if its requirements have always been applied to our current contracts. We expect to use the relief from restating comparative figures provided by IFRS 15, so the standard's requirements only apply to contracts in progress at 1 January 2018 as well as subsequently concluded contracts.

Standard	Description of amendment	Expected effect	Commencement	Transitional provision
IFRS 9 – Financial Instruments	<p>New standard, which replaces IAS 39 and deals with the accounting treatment of financial assets and liabilities in relation to classification and measurement, hedge accounting and impairment.</p> <p>IFRS 9 simplifies the requirements for hedge accounting. Going forward, it will also become easier to use hedge accounting when engaging in proxy hedging, which is often necessary when hedging risks in the energy markets.</p> <p>The number of categories of financial assets is reduced to three: amortised cost, fair value or fair value through other comprehensive income. Fair value changes in financial liabilities arising from changes in own credit risk must be recognised in other comprehensive income.</p>	<p>The preliminary analysis of the impact of IFRS 9 shows that IFRS 9 is not expected to have any significant impact on the consolidated financial statements.</p> <p>We will be able to continue our application of the business performance principle for hedging of energy-related risks, which are currently recognised continuously at fair value via the income statement according to IFRS. We have started an analysis of our future possibilities of using hedge accounting for all or some of our energy and currency-related hedges according to IFRS 9.</p> <p>The majority of our receivables are trade receivables with a short credit period, and the new impairment rules are therefore not expected to have any significant impact on the impairment need.</p> <p>Our portfolio of securities is optimised on a regular basis, and it is therefore expected that all securities will continue to be recognised at fair value via the income statement according to IFRS 9.</p>	IFRS 9 will be implemented early in our consolidated financial statements for the financial year beginning on 1 January 2017.	The standard will be implemented with retrospective effect as if its requirements have always been applied. We expect to use the relief from restating comparative figures provided by IFRS 9, so the standard's requirements only apply to open contracts at 1 January 2017 as well as subsequently concluded contracts.
IFRS 16 – Leases	<p>New standard which replaces IAS 17. The new standard changes the accounting treatment of leases, which are currently treated as operating leases. The standard requires that all leases, regardless of type and with few exceptions, must be recognised in the lessee's balance sheet as an asset with a related liability. Also, the lessee's income statement will be affected, as the annual lease costs will in the future consist of two elements – depreciation and interest expenses – as opposed to now, where the annual costs relating to operating leases are recognised as one amount in other external expenses or in property, plant and equipment in connection with the construction of offshore wind farms.</p>	<p>We have started an analysis of the impact of IFRS 16 on the consolidated financial statements, which has not yet been completed. The preliminary conclusion is still that it will have a limited impact on both the balance sheet, the income statement and related key ratios. The impact at 1 January 2019 will deviate from the future minimum lease payments stated in note 8.3 (DKK 5,601 million) for the following reasons:</p> <ul style="list-style-type: none"> ◦ The scope of leases is expected to change up until 1 January 2019, partly as a result of the conclusion of new leases, partly as a result of run-off on the existing leases. ◦ The lease obligation (see note 8.3) is calculated without discounting, while the lease obligation at 1 January 2019 will be calculated as the present value of remaining lease payments at this date. <p>As a general rule, IFRS 16 requires that service elements which are incorporated into leases and which do not entitle us to use an underlying asset must be dealt with separately and treated as a current operating expense. This will not have an immediate impact as our total obligation stated in note 8.3 does not include payments relating to a service element. We intend to continue this practice so that the service element is not included in the lease obligation and the right-of-use asset in accordance with IFRS 16.</p>	IFRS 16 will be implemented in our consolidated financial statements for the financial year beginning on 1 January 2019.	We expect to implement the standard by using the standard by using a simplified approach (simplified transition method), where comparative figures will not be restated. We will calculate and recognise the accumulated effect for all ongoing leases at the beginning of 2019. Furthermore, we expect to use the other available reliefs to the widest possible extent, including the exclusion of leases with a term to maturity of less than 12 months and low value assets.

The new or amended standards and interpretations are not mandatory in connection with the financial reporting for 2016. We expect to implement the standards and interpretations from their mandatory effective dates at the latest. However, we will implement IFRS 9 – Financial Instruments early, cf. above.

1.5 Definitions of performance highlights

Performance highlights are calculated in accordance with the business performance principle.

Gross investments	Cash flows from investing activities, excluding dividends received from associates, joint ventures and equity investments, purchase and sale of securities, loans to joint ventures and joint operations, and divestments of assets and enterprises.	Adjusted operating profit (loss)	EBIT adjusted for current hydrocarbon tax with reversal of impairment losses for the year.
Net investments	Gross investments less divestments of assets and enterprises. To/from this is added/deducted acquired/transferred debt in connection with acquisitions and divestments of enterprises, and deducted non-controlling interests' share of investments in fully consolidated investment projects, and deducted the selling price of non-controlling interests.	Adjusted return on capital employed (adjusted ROCE)	$\frac{\text{Adjusted operating profit (loss)}}{\text{Average capital employed}^1 + \text{impairment losses for the year with tax added back}}$
Funds from operations (FFO)	Supplementary concept for cash flows from operating activities determined as EBITDA less interest expenses (net) on interest-bearing net debt and hybrid capital (50%), interest element of decommissioning obligations and current tax. In addition, operating lease obligations have been recognised as if they were finance lease obligations, where operating lease payments have been reversed, and calculated interest expenses of the present value of lease payments have been deducted.	Proposed dividend per share (DPS) of DKK 10	$\frac{\text{Total proposed dividend}}{\text{Number of shares year-end}}$
Adjusted interest-bearing net debt	Interest-bearing net debt plus 50% of the hybrid capital, cash and securities not available for use with the exception of repo transactions, present value of lease payments (operating lease obligations calculated as if they were finance lease obligations), and the present value of decommissioning obligations less deferred tax.	Payout ratio	$\frac{\text{Total proposed dividend}}{\text{Profit (loss) for the year attributable to shareholders}}$
FFO to adjusted interest-bearing net debt	$\frac{\text{FFO}}{\text{Adjusted interest-bearing net debt}}$	Average number of shares	$\frac{1}{\text{Number of days}} \times \sum_{i=1}^{\text{Number of days}} = X_i$
Free cash flow (FCF)	Cash flows from operating activities less gross investments and divestments.	Net working capital	Inventories, trade receivables, associates and joint ventures, prepayments and other operating current assets less trade payables and liabilities to associates and joint ventures, deferred income (net) and other operating current liabilities.
Capital employed	Non-interest-bearing net assets corresponding to non-interest-bearing assets less non-interest-bearing liabilities.	Net working capital, excluding trade payables relating to capital expenditure	Net working capital excluding trade payables relating to purchases of intangible assets and property, plant and equipment.
Average capital employed	$\frac{\text{Capital employed beginning of year} + \text{capital employed year-end}}{2}$	Profit (loss) per share	$\frac{\text{Shareholders' share of the profit (loss) for the period}}{\text{Average number of shares}}$
Return on capital employed (ROCE)	$\frac{\text{EBIT adjusted for current hydrocarbon tax}}{\text{Average capital employed}^1}$	Diluted profit (loss) per share	$\frac{\text{Shareholders' share of the profit (loss) for the period}}{\text{Average number of shares, including dilutive effect of free shares}}$

¹ ROCE (continuing operations) includes average capital employed for the continuing operations. ROCE (discontinued operations) includes average capital employed for the discontinued operations.

2. Return on capital employed

Segment information / Business performance / Revenue
Cost of sales / Other operating income and expenses
Employee costs / Share-based payment

2. Return on capital employed

19.1bn

EBITDA totalled DKK 19,109 million in 2016 against DKK 8,730 million in 2015

13.9bn

Adjusted operating profit (loss) totalled DKK 13,877 million in 2016 against DKK 3,057 million in 2015

24.4%

Adjusted return on capital employed (adjusted ROCE) totalled 24.4% in 2016 against 5.9% in 2015

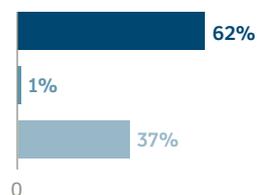

Adjusted return on capital employed (adjusted ROCE) is a strategic key ratio that shows how profitable our business is. The strategic target is for ROCE to constitute an average of 12-14% in the period 2017-2023.

Reporting according to business performance principle

We apply the business performance principle as an alternative to profit (loss) for the year stated in accordance with IFRS. Business performance represents the underlying financial performance of the Group in the reporting period adjusted for temporary fluctuations in the market value of contracts

EBITDA by segment, percentage of DKK 19,109 million, 2016¹

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions

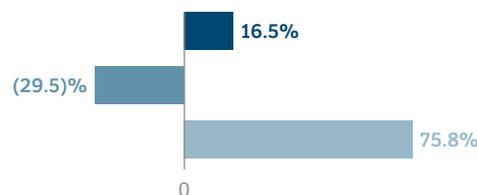

(including hedging transactions) relating to other periods. The difference between the two principles will be eliminated as the contracts expire. Apart from this, there is no difference between business performance and the IFRS financial statements. See more in note 2.2.

Adjusted return on capital employed (adjusted ROCE)

Adjusted ROCE for 2016 was 24.4% against 5.9% in 2015. The increase in ROCE adjusted for impairment losses was primarily due to the higher adjusted operating profit (loss). See more in note 2.1.

Adjusted return on capital employed (adjusted ROCE), % 2016²

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions

Adjusted operating profit (loss), business performance (DKK million)

	2016	2015
Operating profit (loss) (EBIT)	13,877	1,873
Reversal of impairment losses for the year	-	1,184
Adjusted operating profit (loss)	13,877	3,057

Adjusted operating profit (loss) consists of EBIT adjusted for current hydrocarbon tax and reversal of impairment losses for the year. Oil & Gas is not included in the above, as the segment is presented as discontinued operations.

¹ EBITDA stated according to the business performance principle

² Adjusted return on capital employed stated according to the business performance principle

2.1 Segment information

Wind Power (DKK million)

Revenue	22,428
EBITDA	11,867
Gross investments	12,426
Number of employees	2,318

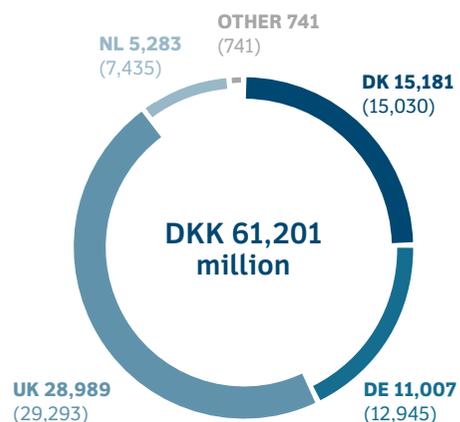

Primary activity

Development, construction, ownership and operation of offshore wind farms in Denmark, the UK, Germany, the Netherlands, Taiwan and the USA.

Revenue

DKK million 2016¹(2015)

- Denmark ● Germany ● UK
- Netherlands ● Other

Bioenergy & Thermal Power (DKK million)

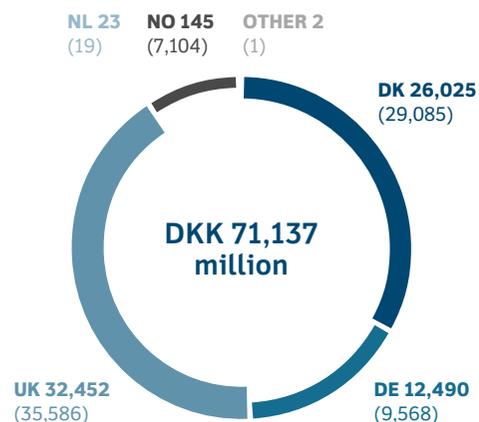

Revenue	5,149
EBITDA	100
Gross investments	1,926
Number of employees	784

Primary activity

Generation of power and heat from CHP plants in Denmark and a gas-fired power station in the Netherlands.

Intangible assets and property, plant and equipment, DKK million 2016¹(2015)

- Denmark ● Germany ● UK
- Netherlands ● Norway ● Other

Distribution & Customer Solutions (DKK million)

Revenue	38,009
EBITDA	7,108
Gross investments	569
Number of employees	1,338

Primary activity

Distribution of power and sales of power and gas in the wholesale and retail markets in Denmark, Sweden, Germany and the UK as well as optimisation and hedging of the Group's total energy portfolio.

Revenue and non-current assets are presented on the basis of the physical location of the customers and the assets

¹ Revenue is stated according to the business performance principle

Geographical distribution of revenue as well as intangible assets and property, plant and equipment

A significant part of our sales are effected via power exchanges and gas hubs in Europe, the physical location of which does not reflect our customer's geographical location.

Segment revenue is broken down, as far as possible, by the customer's geographical location based on supply point.

No single customer accounts for more than 10% of consolidated revenue.

Non-current assets are broken down geographically based on the physical location of the assets and comprise intangible assets and property, plant and equipment.

Accounting policies

We apply an alternative performance measure, business performance, in connection with the statement of profit (loss) for the year. Segment income and segment expenses are stated in accordance with this principle, which is described in note 2.2.

Segment income and segment expenses are those items that, in the internal management reporting, are directly attributable to the individual segment or can be indirectly allocated to the individual segment on a reliable basis.

2016

2.2 Business performance

Description of business performance

In 2011, we introduced an alternative performance measure, business performance, as a supplement to the financial statements prepared in accordance with IFRS. The business performance result reflects our internal risk management and shows the result for the period under review. Under the business performance principle, the value of the hedging transaction is deferred and recognised for the period in which the hedged risk materialises. This is illustrated in the example overleaf.

Our reason for introducing the business performance principle was:

- that we could not achieve the same timing of recognition of our commercial exposure and hedging contracts in accordance with the IFRS rules, for example with respect to option premiums and certain commercial fixed-price contracts, and
- a high risk of hedging contracts not being consistent with the IFRS rules on hedge accounting, requiring us to recognise the hedging contracts at market value with value adjustment via the income statement, whereas our commercial exposure is accrued.

Business performance – background

We hedge market risks for up to five years with the aim of stabilising our cash flows and creating certainty about our finances. With a view to ensuring transparency, it is desired

that the financial impact of the hedging transactions is reflected in the financial reporting simultaneously with the hedged exposure (for example sales of power). We can normally achieve this by applying the IFRS rules on hedge accounting. However, for energy companies it is sometimes difficult to ensure simultaneity. This is due to the fact that hedging instruments are not always available which precisely match the exposure which must be hedged, or that no sufficiently liquid market is available. Consequently, some hedging takes place in alternative markets or subject to alternative time horizons. For example, power generation in Denmark is to some extent hedged by financial contracts for nearby trading areas such as EEX (Germany) and the Nord Pool areas (Scandinavia). These areas normally develop relatively uniformly over time compared to Denmark.

This hedging method means that only some of the financial hedging transactions comply

with the IFRS rules on hedge accounting even though the financial risk has been reduced. In case of non-compliance, the hedging transactions must be recognised in the income statement on a regular basis. This may give rise to considerable fluctuations in the income statement, as the effect of the hedging and for example the sale of power are not recognised in the same period.

As a result, we do not apply the IFRS rules on hedge accounting to transactions hedging energy prices and associated currency risks. Value adjustments of these hedges are therefore recognised in the income statement in accordance with IFRS.

Recognition

In the income statement, the business performance result is shown alongside the IFRS results. In the income statement, the difference between the two performance measures is shown in a separate column, Adjustments.

Two types of contracts are included in the business performance principle:

- hedging contracts concerning energy and related currencies
- commercial contracts concerning energy recognised at market value

When we use hedging instruments which do not fully correspond to the underlying risk, any difference between the hedging instruments and the underlying risk is recognised immediately in the income statement. See note 7.3.

The accounting treatment under business performance is otherwise identical with the accounting treatment under IFRS. Our balance sheet, cash flows and equity are consequently not affected. The accounting treatment of our hedging contracts according to IFRS and business performance is summarised in the table below.

Type of hedging	IFRS	Business performance
Hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts	Market value adjustments in income statement	Market value adjustments are deferred and recognised in the period in which the exposure materialises
Hedging of: <ul style="list-style-type: none"> ◦ proceeds from the divestment of newly constructed offshore wind farms ◦ interest payments 	Market value adjustments are deferred and recognised in the period in which the exposure materialises	Recognition the same as under IFRS
Hedging of currency risks associated with investments in foreign entities	Market value adjustments are recognised in other comprehensive income	Recognition the same as under IFRS
Trading portfolio	Market value adjustments in income statement	Recognition the same as under IFRS

Only the recognition of the hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts differs under IFRS and the business performance principle.

Expected impact on business performance EBITDA from energy and currency hedging

At 31 December 2016, a gain of DKK 126 million had been deferred (2015: DKK 1,041 million gain), which will affect business performance EBITDA in subsequent years. Of the total deferred gain, business performance EBITDA is expected to be affected by a gain of DKK 737 million in 2017 (2015: DKK 1,462 million gain).

The increase in the market value of currency hedging is primarily attributable to a gain from GBP hedging due to the fall in GBP. Power and gas prices rose in 2016, which means that the market value of the hedging has fallen.

Expected impact on business performance EBITDA from energy and currency hedging (DKK million)

	2017	2018	after 2018	Deferred for subsequent recognition at 31 December 2016	2016	2017	after 2017	Deferred for subsequent recognition at 31 December 2015
Oil	(46)	(48)	18	(76)	(1,074)	(774)	(149)	(1,997)
Gas	104	(314)	(418)	(628)	1,543	(34)	137	1,646
Power	(396)	(290)	(329)	(1,015)	796	466	307	1,569
Coal	32	4	-	36	(156)	(33)	(2)	(191)
Currency	1,043	489	277	1,809	353	110	(449)	14
Total	737	(159)	(452)	126	1,462	(265)	(156)	1,041

The table shows when the deferred value adjustments are expected to be recognised in the business performance EBITDA. The table covers both hedging classified as business performance and IFRS.

Explanation of business performance principle

In year 1, we enter into a contract hedging the price risk associated with Wind Power's production of 1,000GWh in year 5 at GBP 52,000 per GWh. This ensures total revenue of GBP 52 million. In year 5, the power price has decreased to GBP 45,000 per GWh, which means that the hedging contract has a positive market value of GBP 7 million (a hedged price of GBP 52,000 per GWh minus the spot price of GBP 45,000 per GWh). This means that the total income including the hedging transaction is still GBP 52 million. The amount of GBP 52 million consists of a gain from the hedged contract of GBP 7 million and GBP 45 million from the sale of 1,000GWh at the spot price of GBP 45,000 per GWh. The financial impact of the hedging transaction

in years 1-5 is shown in the table. Under the business performance principle, the hedging transaction is recognised in the income statement in year 5, ie at the same time as the hedged contract, with a positive market value of GBP 7 million. The value development is, however, recognised continuously in the income statement according to IFRS. Upon the expiry of the contract in year 5, the total effect on results over the period is the same under the IFRS and the business performance principles. Only the timing differs. The business performance principle ensures simultaneity of recognition of the underlying exposure and the hedging contract.

Recognition in the income statement (GBP million)

	Power price (GBP '000 per GWh)	Sales of power, GBP million	Recognised in the income statement as follows:			Total financial impact	
			Market value	Business performance	IFRS	Business performance	IFRS
Year 1	52	0	0	0	0	0	
Year 2	50	0	2	0	2	2	
Year 3	55	0	(3)	0	(5)	0	
Year 4	46	0	6	0	9	0	
Year 5	45	45	7	7	1	52	
Total		45		7	7	52	

Example of recognition of the market value of a hedging contract according to the business performance and IFRS principles in the income statement.

Specification of the difference between EBITDA according to business performance and according to IFRS (DKK million)

	2016	2015
EBITDA – business performance	19,109	8,730
Business performance adjustments in respect of revenue for the year	(3,808)	1,264
Business performance adjustments in respect of cost of sales for the year	1,638	(106)
EBITDA – IFRS	16,939	9,888
Total business performance adjustments for the year comprise:		
Value adjustments for the year of hedging contracts that relate to future periods	(1,397)	1,632
Reversal of gains (losses) relating to hedges deferred from prior periods, where the hedged production or trading is recognised in business performance EBITDA for this period	(773)	(474)
Total adjustments	(2,170)	1,158

The table shows the difference between the income statement according to business performance and according to IFRS, which is shown in the adjustments column in the income statement.

Difference between IFRS and business performance for the year

The value adjustment in respect of future periods totalled DKK -1,397 million (2015: DKK 1,632 million) and reversal of deferred gains (losses) recognised according to business performance in 2016 totalled DKK -773 million (2015: DKK -474 million).

Market value adjustments for the year of hedging contracts

2016 was mainly affected by losses on the hedging of gas and power as a result of increasing prices in 2016. This was partially offset by gains on currency hedging due to the weakened GBP in 2016.

2015 was primarily affected by gains on hedging contracts related to gas and power as a result of a decline in prices in 2015. This was partly offset by losses on currency hedging due to the strengthened USD and GBP, as well as a loss on oil caused by falling prices and a purchase position for continuing operations.

Deferred gains (losses) from previous periods

In 2016, a gain of DKK 773 million was recognised in business performance EBITDA, but as the gain was recognised in IFRS EBITDA in a previous period, the gain was reversed in the Adjustments column in the income statement. The gain in 2016 is primarily attributable to the hedging of gas, power and currency, the sales of which have been hedged at prices exceeding the actual prices in 2016. This was, however, offset by a loss on oil, where purchases have been hedged at prices exceeding the actual prices in 2016.

2015 was primarily affected by gains on hedging contracts relating to currency, gas and power from previous periods. The gain is a result of the fact that sales were hedged at prices exceeding the actual prices in 2015. This was partly offset by a loss relating to oil, which has been hedged at prices exceeding the actual prices in 2015.

Value adjustments for the year of financial and physical hedging (DKK million)

	2016	2015
Oil	267	(930)
Coal	75	(189)
Currency	1,156	155
Gas (commercial and hedge)	(735)	806
Power (commercial and hedge)	(2,160)	1,790
Total value adjustments	(1,397)	1,632

The table shows value adjustments by product. The value adjustments are recognised in IFRS EBITDA, but not in business performance EBITDA, as the value relates to future periods.

Reversal of deferred gains (losses) on hedges from previous periods (DKK million)

	2016	2015
Oil	1,654	1,896
Coal	151	254
Currency	(615)	(556)
Gas (commercial and hedge)	(1,539)	(1,367)
Power (commercial and hedge)	(424)	(701)
Total deferred gains (losses) from previous periods	(773)	(474)

The table shows value adjustments by product. These gains (losses) are recognised in business performance EBITDA. The value adjustment was recognised in IFRS EBITDA in a previous period.

2.3 Revenue

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	 Other activities/eliminations	Total
2016 (DKK million)					
Distribution and transmission	-	-	2,318	(16)	2,302
Sales of heat and steam	-	2,255	-	-	2,255
Sales of gas	-	-	18,111	(1,224)	16,887
Sales of power	6,700	2,717	17,309	(3,416)	23,310
Revenue from construction contracts	14,301	-	-	-	14,301
Other revenue	1,427	177	271	271	2,146
Total, business performance	22,428	5,149	38,009	(4,385)	61,201
Adjustments	45	(450)	(3,639)	236	(3,808)
Total, IFRS	22,473	4,699	34,370	(4,149)	57,393

Revenue for the year according to business performance fell from DKK 65,444 million in 2015 to DKK 61,201 million in 2016, down 6.5%. The fall was mainly due to significantly lower gas prices and lower gas sales. This fall was partially offset by higher activity from construction contracts in Wind Power, which saw revenue from construction contracts almost double.

Revenue for the year from construction contracts mainly related to the construction of the offshore wind farms Burbo Bank Extension and Gode Wind 1 for partners as well as the construction of offshore transmission assets in the UK.

In 2016, revenue totalled DKK 57,393 million according to IFRS, of which DKK 53,874 million was revenue from the sale of goods, and DKK 3,519 million was revenue from the sale of services.

In 2015, revenue totalled DKK 66,708 million, of which DKK 60,322 million was revenue from the sale of goods, while DKK 6,386 million was revenue from the sale of services.

Accounting policies

We recognise revenue from the distribution and transmission of energy and the sale of heat and steam, oil, gas and power when:

- delivery and transfer of risk to the buyer have taken place,
- the income can be measured reliably and is expected to be received, and
- costs incurred or which will be incurred in connection with the sale can be measured reliably.

Revenue is measured at the market value of the agreed consideration excluding VAT and other indirect taxes collected on behalf of third parties.

All forms of discounts granted are recognised in revenue.

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	 Other activities/eliminations	Total
2015 (DKK million)					
Distribution and transmission	-	-	5,328	(38)	5,290
Sales of heat and steam	-	2,061	-	-	2,061
Sales of gas	-	-	26,102	(1,333)	24,769
Sales of power	6,893	2,592	18,587	(4,336)	23,736
Revenue from construction contracts	8,287	-	-	-	8,287
Other revenue	1,325	525	(573)	24	1,301
Total, business performance	16,505	5,178	49,444	(5,683)	65,444
Adjustments	591	46	1,231	(604)	1,264
Total, IFRS	17,096	5,224	50,675	(6,287)	66,708

Revenue from offshore wind farms comprises sales of power at market prices and regulated prices (fixed tariffs and guaranteed minimum prices for green certificates).

Revenue from offshore wind farms is recognised at the time of production.

We recognise construction contracts in revenue concurrently with the construction of offshore wind farms and offshore transmission assets. Revenue corresponds to the selling price of work performed during the year (percentage of completion method).

When the outcome of a construction contract cannot be estimated reliably, revenue is recognised to the extent of costs incurred. Reference is made to note 4.2.

Other revenue is income from the installation of offshore wind turbines using vessels in A2SEA. Trading activities, financial hedging transactions, etc, are also included in other revenue.

Adjustments consist of the reversal of business performance adjustments. Reference is made to note 2.2.

The table shows revenue by type and business unit.

Critical accounting estimates

Assumptions underlying accrual of revenue

We estimate revenue from power and gas sales to residential and business customers from the most recent meter readings until 31 December based on factors like:

- actual temperatures in the month and
- the individual customer's consumption history.

Our estimates are subject to considerable uncertainty. This is due to the fact that customers' realised consumption can only be verified through meter readings, which are not available at the date of presentation of the annual report.

2.4 Cost of sales

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	 Other activities/eliminations	Total
2016 (DKK million)					
Gas	-	830	10,440	(5,601)	5,669
Power	-	57	15,303	(3,077)	12,283
Biomass	-	1,408	-	-	1,408
Coal	-	819	-	-	819
Distribution and transmission costs	603	123	2,632	(147)	3,211
Costs associated with construction contracts	10,360	-	22	(22)	10,360
Other cost of sales	167	481	503	4,361	5,510
Cost of sales, business performance	11,130	3,718	28,900	(4,488)	39,260
Adjustments	-	(295)	(2,028)	685	(1,638)
Cost of sales, IFRS	11,130	3,423	26,872	(3,803)	37,622

Cost of sales relates partly to trading in gas and power, and partly to fuel used at the CHP plants in connection with power and heat generation.

Cost of sales decreased from 2015 to 2016, primarily as a result of lower activity levels and one-off payments from renegotiations which reduced cost of sales by DKK 4.3 billion in 2016.

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	 Other activities/eliminations	Total
2015 (DKK million)					
Gas	-	930	23,294	(8,588)	15,636
Power	-	77	17,086	(4,257)	12,906
Biomass	-	1,251	-	-	1,251
Coal	-	801	-	-	801
Distribution and transmission costs	617	159	4,238	(79)	4,935
Costs associated with construction contracts	7,383	-	34	(34)	7,383
Other cost of sales	(70)	601	606	7,385	8,523
Cost of sales, business performance	7,930	3,819	45,259	(5,573)	51,435
Adjustments	-	(21)	403	(276)	106
Cost of sales, IFRS	7,930	3,798	45,662	(5,849)	51,541

 The table shows cost of sales by type and business unit.

2.5 Other operating income and expenses

Other operating income (DKK million)	2016	2015
Gain on divestment of assets	3,356	108
Insurance compensation	137	103
Other compensation	877	689
Miscellaneous operating income	497	675
Other operating income	4,867	1,575

Specification of other operating income. Gains on divestment of assets are recognised as other operating income.

Other operating expenses (DKK million)	2016	2015
Loss on divestment of assets	416	138
Miscellaneous operating expenses	142	255
Other operating expenses	558	393

Specification of other operating expenses. Loss on divestment of assets are recognised as other operating expenses.

Other operating income

Gain on divestment of assets in 2016 consisted primarily of the divestment of 50% of our ownership interests in the UK offshore wind farms Burbo Bank Extension and Race Bank.

Insurance compensation received related to the settlement of insurance claims in Wind Power in 2016 and the settlement of insurance claims in Bioenergy & Thermal Power in 2015.

Compensation was mainly received from the transmission system operators (TSOs) and suppliers due to delayed deliveries for the construction of offshore wind farms.

In 2015, miscellaneous operating income mainly comprised the effect of a settled dispute relating to CO₂ emissions allowances in 2005 and the first half of 2006 in the amount of DKK 384 million in Bioenergy & Thermal Power.

Other operating expenses

Loss on divestment of assets in 2016 consisted among others of loss from the scrapping of a vessel for offshore wind turbine installation.

Accounting policies

Other operating income and other operating expenses comprise items of a secondary nature to the Group's primary activities.

Other operating income comprises:

- income from the divestment of non-current assets, scrapping premiums, etc
- compensation received from insurance companies in connection with the settlement of insurance claims
- compensation for operating losses received from suppliers and grid connection companies as well as
- other non-primary income

Other operating expenses comprise:

- losses in connection with the sale of property, plant and equipment, decommissioning and scrapping costs, etc
- other non-primary expenses, for example in connection with the termination of contracts etc.

Critical accounting estimates

Assessment of conditional remuneration

Agreements on the divestment of offshore wind farms under construction may contain provisions that are conditional on future conditions relating to the construction of the offshore wind farm and matters beyond our control. The determination of gains and the recognition of receivables are therefore subject to uncertainty. The determination is based on management's estimates of the most likely outcomes of future events.

Critical accounting judgements

Assessment of classification of divestment

As part of our business model, we develop and construct offshore wind farms. Before or during the construction phase, we often sell a share (often 50%) of the wind farm to free up cash, which we can then invest in new offshore wind farms. The divested ownership interest in the offshore wind farm under construction is typically not regarded as an enterprise as no employees and only limited processes are transferred in connection with the operation and maintenance of the wind farm.

Gains or losses from the sale are recognised under other operating income/expenses in the income statement.

2.6 Employee costs

Employee costs

Employee costs after transfer to assets fell by 7% relative to 2015. The fall is caused by a higher proportion of the employee costs in 2016 being related to investment projects which are capitalised in the balance sheet.

Pension plans and number of employees

Pension plans are primarily defined-contribution plans that do not commit DONG Energy beyond the amounts contributed. Under our defined-benefit plans, we are obliged to pay a defined benefit to a small number of employees from the CHP plants who are no longer with the company and to public servants taken over from municipally owned regional companies. In 2016, these obligations amounted to DKK 10 million (2015: DKK 12 million).

In 2016, our average number of employees was 5,894 (2015: 5,882).

Remuneration of Group Executive Management

The remuneration of Group Executive Management is based on a fixed salary, including personal benefits such as a company car, free telephone, etc, a variable salary, including a retention bonus in connection with the IPO and share-based payment. The other members of Group Executive Management¹ also receive a pension.

Termination of contract of service

If a member of Group Executive Management is terminated by the company, the member will be entitled to 24 months' salary, made up of the salary during the notice period (12 months) and a termination payment.

The Board of Directors receives fixed remuneration for their work in DONG Energy. Members of the Board of Directors are not entitled to variable remuneration, pension, termination payment or other payments.

Employee costs (DKK million)	2016	2015
Wages, salaries and remuneration	3,692	3,533
Share-based payment	37	88
Pensions	311	309
Other social security costs	128	132
Other employee costs	29	30
Employee costs before transfers to assets	4,197	4,092
Transfers to assets	(1,109)	(782)
Total employee costs	3,088	3,310

Salaries and wages for employees in the discontinued part of the business are shown in note 3.7.

Salaries and remuneration for Group Executive Management and the Board of Directors ('000)	Executive Board		Other members of Group Executive Management ¹		Board of Directors		Total	
	2016	2015	2016	2015	2016	2015	2016	2015
Fixed salary	14,487	13,988	18,995	17,418	-	-	33,482	31,406
Remuneration	-	-	-	-	5,024	2,596	5,024	2,596
Variable salary	4,311	3,001	9,826	4,132	-	-	14,137	7,133
Share-based payment	2,316	4,574	1,479	3,072	-	-	3,795	7,646
Pension	-	-	1,463	1,420	-	-	1,463	1,420

Total	21,118	21,567	31,772	26,051	5,024	2,596	57,914	50,214

¹ Other members of Group Executive Management are: David Cook, Samuel Leupold, Thomas Dalsgaard and Morten Hultberg Buchgreitz.

2.7 Share-based payment

Share programme

The Executive Board and a number of other members of management participate in our share programme which we established in 2016. Today, approximately 80 senior executives participate in the programme. As a condition for the granting of performance share units (PSUs), the participant must own a number of shares in DONG Energy corresponding to a portion of the individual participant's annual base salary. For the CEO, the portion is 75% of his fixed salary, and for the CFO 50%. The participants in the programme must invest in DONG Energy shares prior to the first granting.

If the participants fulfil the shareholding requirement at the time of granting, the participants will each year be granted a number of PSUs that represent a value equal to 20% of the annual base salary on the date of granting.

The granted PSUs have a vesting period of approximately three years, after which each PSU entitles the holder to one share without consideration. The final number of PSUs for each participant will be determined on the basis of the total shareholder return delivered by DONG Energy during the vesting period benchmarked against ten comparable European energy companies. The rate will vary from 0% to 200% of the number defined as the target for the granted PSUs. The maximum value is 40% of the fixed annual salary for Group Executive Management.

The highest rate will be triggered if DONG Energy's results, measured as the total return to shareholders, outperform those of the comparable companies. For each lower ranking, the number of PSUs granted will fall by 20 percentage points.

If, for example, DONG Energy ranks second, the participants will be entitled to 180% of the target. If DONG Energy ranks 11 in the comparison, no PSUs will be granted to the participants. The right to PSUs is conditional upon continued employment. Employees who leave us due to their own resignation or breach of their employment lose their right to PSUs.

Accounting policies

The share programme is classified as an equity-based programme as the programme is settled in shares. The market value of the PSUs and the estimated number of PSUs granted are measured at the time of granting and recognised:

- in the income statement under employee costs over the vesting period, and
- in the balance sheet under equity over the vesting period.

The valuation of the PSUs and the estimated number of PSUs granted is carried out as a probability simulation based on the expected performance of DONG Energy's total shareholder return relative to ten comparable European energy companies. The expectations are factored into the market value and are not adjusted subsequently.

Participants	Minimum	Target	Maximum
Group Executive Management	0%	20%	40%
Senior Vice Presidents, Vice Presidents and Senior Directors	0%	15%	30%

Participants	Number of locked-up shares relative to fixed salary
CEO	75% of fixed salary
CFO and other members of Group Executive Management	50% of fixed salary
Senior Vice Presidents	25% of fixed salary
Vice Presidents and Senior Directors	15% of fixed salary

Assumptions for valuation of PSUs	Time of granting 2016
Share price	275
Average volatility, peers	25.6%
Volatility, DONG Energy	24.1%
Risk-free interest rate	-0.5%
Expected term at time of granting	2.5 years

The figure shows the value of the PSUs at the time of granting relative to the participants' fixed salary. As the final number of PSUs granted to the participants depends on the total shareholder return delivered by DONG Energy during the vesting period benchmarked against ten peers, the programme may result in as few as 0 PSUs.

The figure shows the value of the DONG Energy share in percent of the participants' fixed salary which at the time of granting must be locked up for the duration of the share programme.

The figure shows the material assumptions underlying the valuation of the PSUs at the time of granting.

 **Maximum number of outstanding shares at the time of granting**
('000)

Time of granting	Executive Board	Other members of Group Executive Management	Senior executives	Total	% of share capital	Market value (at time of granting) DKK million	Years until expiry
1 September 2016	20	10	128	158	0.1	25	2.3
Maximum number of outstanding shares at 31 December 2016	20	10	128	158	0.1	25	

The figure shows the maximum number of outstanding shares at the time of granting.

Maximum number of outstanding shares ('000)	Executive Board	Other members of Group Executive Management	Senior executives	Other employees	Total	% of share capital
Maximum number of outstanding shares at 1 January 2016	119	80	1,247	1,262	2,708	0.6%
Cancelled (2014 programme)			(20)	(36)	(56)	0.0%
Granted (2014 programme)	(119)	(80)	(1,227)	(1,226)	(2,652)	(0.6%)
Issued (2016 programme)	20	10	128	-	158	0.1%
Maximum number of outstanding shares at 31 December 2016	20	10	128	-	158	0.1%
DKK million						
Market value of share programme at the time of granting	3	2	20	-	25	
Maximum market value of share programme at 31 December 2016	5	3	34	-	42	

The figure shows the development in the maximum number of shares outstanding in our share programme.

In June 2016, our 2014 share programme expired following the IPO. The 2014 programme was open to all employees. Under the programme, employees were entitled to a number of free shares, depending on their share purchase and DONG Energy's financial performance benchmarked against ten comparable European energy companies. The number of free shares could not exceed 125% of the number of shares subscribed for by the individual employee in 2014.

The maximum market value of the share programme at 31 December 2016 is based on the assumption that the participants receive the maximum number of shares.

3. Capital employed

Intangible assets and property, plant and equipment / Provisions and contingent assets and liabilities

Investments in associates and joint ventures / Gross and net investments

Divestment of enterprises / Assets classified as held for sale / Discontinued operations / Non-controlling interests

3. Capital employed

61.0bn

Capital employed totalled DKK 60,961 million at 31 December 2016

15.0bn

Gross investments, excluding Oil & Gas, totalled DKK 14,960 million in 2016

9.1bn

Cash flows from divestments, excluding Oil & Gas, totalled DKK 9,055 million in 2016

DONG Energy's capital employed primarily relates to production facilities, some of which are under construction. Investment projects are monitored closely, as a large part of the Group's value is created in the development and construction phases.

Investments and divestments in 2016

Total investments of DKK 14,960 million in offshore wind farms, biomass conversions and power infrastructure were made in 2016, and divestments of DKK 9,055 million were made. The most significant assets under construction at the end of 2016 consisted of offshore wind farms in the UK and Germany. See note 3.1.

Discontinued operations

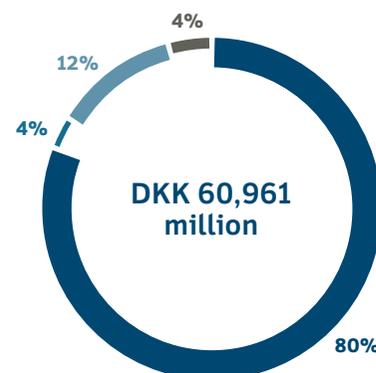

The Oil & Gas segment is presented as discontinued operations in the 2016 consolidated financial statements. As a result, our income statement and statement of cash flows have been restated for both 2015 and 2016, whereas the balance sheet for 2015 has not.

Capital employed (DKK million)

	2016	2015
Intangible assets and property, plant and equipment	71,137	81,363
Investments in associates and joint ventures as well as other equity investments	1,240	1,642

Assets classified as held for sale, net	1,680	1,452
Decommissioning obligations	(3,649)	(11,144)
Other provisions	(5,390)	(8,044)
Tax, net	(1,721)	(3,700)
Other receivables and other payables, net	(371)	(91)
Capital employed at 31 December	60,961	60,930
of which discontinued operations	2,769	5,444
of which continuing operations	58,192	55,486

Capital employed by segment, % 2016

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions
- Discontinued operations

80% of the capital employed is tied up in Wind Power.

The invested capital in Oil & Gas is included in each principal item in 2015. In 2016, Oil & Gas' internal working capital and financial instruments are included in the principal items, while the rest of the invested capital is included as assets classified as held for sale.

3.1 Intangible assets and property, plant and equipment

Intangible assets and property, plant and equipment (DKK million)	Intangible assets	Land and buildings	Production assets	Exploration assets	Other fixtures and fittings, tools and equipment	Property, plant and equipment under construction	Property, plant and equipment

Intangible assets

Intangible assets comprise goodwill of DKK 125 million (2015: DKK 125 million), CO₂ emissions allowances of DKK 247 million (2015: DKK 290 million), other rights of DKK 190 million (2015: DKK 392 million), completed development projects of DKK 317 million (2015: DKK 68 million) and development projects in progress of DKK 76 million (2015: DKK 259 million).

Collateral

We have secured loans on vessels with a carrying amount of DKK 1,756 million (2015: DKK 398 million). The outstanding balance is DKK 550 million (2015: DKK 244 million).

Impairment losses on property, plant and equipment under construction concerned the construction of the Hejre field (Oil & Gas). Provisions had been made for this in 2015, and the impairment loss thus had no effect on the profit for 2016.

The highlighted column on the left shows our intangible assets, while the column on the right shows property, plant and equipment.

 Intangible assets and property, plant and equipment (DKK million)	Intangible assets	Land and buildings	Production assets	Exploration assets	Fixtures and fittings, tools and equipment	Property, plant and equipment under construction	Property, plant and equipment

The highlighted column on the left shows our intangible assets, while the column on the right shows property, plant and equipment.

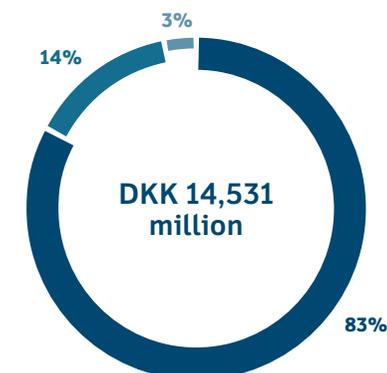

Production assets by segment, % 2016

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions

Property, plant and equipment under construction by segment, % 2016

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions

83% of property, plant and equipment under construction is ongoing construction of offshore wind farms in Wind Power.

Wind Power

The CGUs are made up of individual offshore wind farms and A2SEA, which each generate cash flows for the segment independently of each other.

The most significant are: Walney ▪ Anholt ▪ West of Duddon Sands ▪ Borkum Riffgrund 1 ▪ London Array ▪ Gunfleet Sands ▪ Westermost Rough ▪ Gode Wind 1 ▪ Gode Wind 2 ▪ A2SEA ▪ Burbo Bank Extension

Bioenergy & Thermal Power

The Danish CHP plants constitute a single CGU as overall production planning is for the entire Danish portfolio of CHP plants. The Dutch power station Enecogen constitutes a single CGU.

Central CHP plants (including goodwill)
▪ Enecogen

Distribution & Customer Solutions

The CGUs are constituted primarily by distribution assets which each generate cash flows for the segment independently of each other.

Power distribution ▪ Oil pipelines ▪ Offshore gas pipelines ▪ Street lighting

Impairment losses

Impairment losses relating to goodwill

We have not impaired goodwill or other intangible assets in 2016.

In 2015, goodwill and production assets in Wind Power were impaired by DKK 504 million, of which DKK 157 million pertained to goodwill, and DKK 347 million pertained to older installation vessels. The impairment losses were due to challenging market conditions.

Impairment losses relating to property, plant and equipment

In 2015, the Dutch power station Enecogen (Bioenergy & Thermal Power) was impaired by DKK 680 million, of which DKK 655 million related to production facilities and DKK 25 million related to land and buildings. The reason for the impairment loss was falling power prices. We based the calculation of the recoverable amount, which is calculated as a capital value, on a discount rate after tax of 6.5%.

Useful lives

Buildings	20-50 years
Offshore wind farms ¹	20-24 years
Production assets, power (thermal) and district heating	20-25 years
Gas transportation system (marine pipelines)	20-40 years
Oil transportation system (marine pipeline)	15 years
Distribution grids, power	20-40 years
Other fixtures and fittings, tools and equipment	3-10 years

¹ Depreciation is based on the straight-line method or the diminishing-balance method, resulting in declining depreciation over the lifetime of the offshore wind farm. The diminishing-balance method is the primary method used for offshore wind farms.

Accounting policies

Intangible assets

Rights are measured at cost less accumulated amortisation and impairment losses. Rights are amortised on a straight-line basis over their estimated future useful lives, which are 5-20 years.

Allocated and purchased CO₂ emissions allowances, including CO₂ credits that are accounted for as rights, are measured on recognition at cost. If a grant is received in connection with an allocation, the cost constitutes the actual consideration paid for the allowances, ie nil if the allowances are allocated free of charge. CO₂ emissions allowances are not amortised as the value of the allowances upon surrender is on a par with the cost price or higher (allocated emissions allowances).

Property, plant and equipment

Property, plant and equipment is measured at cost less accumulated depreciation and impairment losses. Cost of property, plant and equipment is, as a rule, depreciated on a straight-line basis over the estimated future useful lives.

Cost comprises purchase price and any costs directly attributable to the acquisition until the date the asset is available for use. The cost of self-constructed assets comprises direct and indirect costs of materials, components, sub-suppliers and labour. Borrowing costs relating to both specific and general borrowing directly attributable to assets under construction with a lengthy construction period are recognised in cost during the construction period. Cost is increased

by the present value of the estimated obligations for demolition and decommissioning of assets to the extent that they are recognised as a provision.

Subsequent costs, for example in connection with replacement of parts of an item of property, plant and equipment, are recognised in the carrying amount of the asset in question when it is probable that future economic benefits will flow to the Group. Replaced parts are derecognised from the balance sheet, and their carrying amount is recognised in profit (loss) for the year. All other repair and maintenance expenses are recognised in profit (loss) for the year as incurred.

Critical accounting estimates

Assumptions for impairment test

Production assets are tested for impairment if there is any indication of impairment. For production assets with a limited lifetime such as offshore wind farms and CHP plants, cash flows are calculated based on forecasts for the entire lifetime of the asset. For power distribution, cash flows are based on 25-year forecasts with the addition of a terminal value. The determination of the recoverable amount of production assets is based on a number of assumptions where estimates are made that are material to the determination. These assumptions include future market conditions, market prices of power, biofuel, gas, coal, CO₂, weighted average cost of capital (WACC), exchange rates, etc. The market prices applied are based on available forward prices for a period of up to five years and management's best estimate of long-term prices for the remainder of the period.

When calculating the recoverable amount of property, plant and equipment under construction, the expected completion costs and the commissioning dates are also material assumptions.

Useful lives of production assets

The expected useful lives of production assets are determined based on historical experience and expectations concerning the future use of these assets. The expected future uses may subsequently prove not to be realisable, which may require the useful lives to be reassessed.

3.2 Provisions and contingent assets and liabilities

Provisions

Decommissioning obligations mainly comprise future expenses relating to demolition and disposal of offshore wind farms, restoration of seabeds and the demolition of CHP plants.

As developers of offshore wind farms, we are obliged to decommission and restore the offshore wind farms for our own account. When constructing offshore wind farms in cooperation with investors, they are liable for their share of the decommissioning costs. We have therefore only included the decommissioning obligations in respect of our ownership interest in the offshore wind farms.

Onerous contracts comprise primarily:

- contract for booked LNG terminal capacity in the Netherlands, DKK 1,033 million (2015: DKK 1,158 million)
- contracts concerning the lease of gas storage capacity in Germany, DKK 1,179 million (2015: DKK 1,324 million) and regarding Stenlille Gas Storage Facility, DKK 384 million (2015: DKK 410 million)

Other provisions comprise primarily:

- warranty obligations for offshore wind farms
- possible repayments to electricity consumers in respect of previous years
- obligations in connection with divestments
- CO₂ obligations in respect of our own emissions
- other contractual obligations

Provisions (DKK million)	2016				2015			
	Decommissioning obligations	Onerous contracts	Other liabilities	Total	Decommissioning obligations	Onerous contracts	Other liabilities	Total
Provisions at 1 January	11,144	5,472	2,572	19,188	10,368	3,084	2,482	15,934
Exchange rate adjustments	(153)	(17)	128	(42)	(84)	-	88	4
Used during the year	(187)	(1,413)	(505)	(2,105)	(44)	(323)	(472)	(839)
Provisions reversed during the year	-	(774)	(350)	(1,124)	-	-	(264)	(264)
Provisions made during the year	746	-	1,490	2,236	368	2,579	738	3,685
Change in estimates of other factors	215	-	-	215	516	-	-	516
Transferred to assets classified as held for sale/disposal on divestment of enterprises	(6,941)	(883)	(532)	(8,356)	(474)	-	-	(474)
Interest element of provisions	534	211	-	745	494	132	-	626
Disposal on divestment of enterprises	(1,709)	-	(9)	(1,718)	-	-	-	-
Provisions at 31 December	3,649	2,596	2,794	9,039	11,144	5,472	2,572	19,188
Falling due as follows:								
0-1 year	49	327	326	702	31	1,070	333	1,434
1-5 years	73	1,089	2,016	3,178	1,894	2,993	1,688	6,575
After 5 years	3,527	1,180	452	5,159	9,219	1,409	551	11,179

In 2016, we used DKK 201 million (2015: DKK 235 million) of our provisions for own CO₂ emissions and made additional provisions of DKK 200 million (2015: DKK 204 million) for emissions in 2016, which have yet to be used. CO₂ obligations in respect of our own emissions amounted to DKK 173 million at 31 December 2016 (2015: DKK 174 million).

Provisions concerning the Oil & Gas segment for 2016 have been classified as assets held for sale. The most significant provisions consisted of decommissioning obligations as well as obligations concerning the construction of oil and gas-related production facilities.

Contingent assets

Deferred tax

We have deferred assets of DKK 528 million (2015: DKK 454 million) that have not been recognised as it is currently uncertain if they can be offset against future income. See note 5.4 on Deferred tax.

Contingent liabilities

Liability to pay compensation

According to legislation, the companies DONG Salg & Service A/S and DONG Oil Pipe A/S are liable to pay compensation for any environmental accidents or other types of damage caused by our oil and gas activities, even when there is no proof of negligence (strict liability). We have taken out insurance to cover any such claims.

Litigations

We are party to actions relating to the Danish competition authorities' claim that Elsam A/S and Elsam Kraft A/S charged excessive prices in the Danish wholesale power market in some periods. Following a merger in 2008, Elsam Kraft A/S is part of DONG Energy Thermal Power A/S.

The Danish Competition Appeals Tribunal has concluded that Elsam A/S and Elsam Kraft A/S abused their dominant position in the wholesale power market in Western Denmark to some extent in the periods 1 July 2003 to 31 December 2004 and 1 January 2005 to 30 June 2006 by charging excessive prices. We dispute the rulings, and appeals have been lodged with the Copenhagen Maritime and Commercial Court. In 2016, the Copenhagen Maritime and Commercial Court found the former Elsam guilty of violating the Danish Competition Act in 2005 and the first half of 2006 without, however, providing clear grounds for its

decision. We have decided to lodge an appeal, which will now be heard by the High Court of Western Denmark.

In connection with the above-mentioned cases, some energy companies, some of their customers and others have raised claims for damages. One group has chosen to commence legal proceedings before the Copenhagen Maritime and Commercial Court with a claim for damages of approximately DKK 4.4 billion with addition of interest, while suspension agreements have been concluded with others, meaning that the limitation period for these alleged claims has been suspended. In response to the claims for damages, we have made a provision of DKK 298 million plus interest. The provision has been calculated on the basis of the Danish Competition Council's determination of consumer losses.

In addition, we are party to a number of court cases and legal disputes. In our assessment,

none of these will significantly impact the company's financial position, neither individually nor collectively.

Change of control

Certain of our activities are subject to consents, permits and licences granted by public authorities. We can be faced with a claim for acceptance of the transfer, possibly with additional terms and conditions, if the Danish State holds less than 50% of the share capital or voting rights in DONG Energy A/S.

Decommissioning obligations by segment				Other activities	Total
	Wind Power	Bioenergy & Thermal Power	Distribution & Customer Solutions		
0-5 years	94	23	5	-	122
5-10 years	287	153	-	-	440
10-20 years	1,840	269	75	-	2,184
After 20 years	564	223	116	-	903
2016	2,785	668	196	-	3,649
2015	2,461	790	185	7,708	11,144

The table shows decommissioning obligations by segment as well as a maturity analysis. 2015 includes Oil and Gas.

Accounting policies

Provisions are recognised when the following criteria are fulfilled:

- we have a legal or constructive obligation as a result of an earlier event
- the settlement of the obligation is expected to result in an outflow of resources
- the obligation can be measured reliably

For onerous contracts, a provision is made when the expected income to be derived from a contract is lower than the unavoidable cost of meeting our obligations under the contract.

Provisions concerning CO₂ emissions are recognised when our actual emissions exceed our holding of CO₂ emissions allowances.

Decommissioning obligations are measured at the present value of the future liability in respect of demolition and decommissioning as expected at the balance sheet date. The present value of the provision is recognised as part of the cost of property, plant and equipment and depreciated together with the associated asset. The addition of interest on provisions is recognised in the income statement under financial expenses.

Critical accounting estimates

Timing, probabilities, amounts, etc, which have a bearing on our provisions estimates are updated quarterly based on management's expectations.

Assumptions for decommissioning obligations

Estimates of decommissioning obligations are based on management's expectations of, for example:

- timing and scope
- future cost level
- adopted laws and regulations on remediation

The timing of our decommissioning obligations depends on the expected useful lives of the assets. The expected useful life of our offshore wind farms is 24 years.

As regards our CHP plants in Denmark, we expect them to have to be removed within 12 years of decommissioning at the latest.

In measuring provisions, the costs required to meet the obligations are discounted. In determining decommissioning obligations at 31 December 2016, a discount rate of 4.5% is applied, the same discount rate that the Group applied at 31 December 2015. The rate has been estimated on the basis of expectations concerning the future, long-term interest rate level, based on historical interest rate levels.

Timing, special demolition and decommissioning requirements are assessed based on current legislation and standards in this area. Future cost levels are based, among other things, on expectations with regard to:

- general price development or development in market prices
- demand
- development of existing technologies

Assessment of onerous contracts

We have entered into a number of contracts with fixed terms. Depending on market developments etc and uncertainty about obligations incurred under the contracts made, these contracts may become onerous. Our estimates concerning these complex contracts and their future effects are subject to significant uncertainties.

Assessment of litigation outcomes

When exercising a judgement about a potential liability in connection with litigation, we assess the following factors:

- the nature of the litigation, claim or statement
- the development of the case
- the judgements and recommendations of legal or other advisers
- experience from similar cases
- management's decision on how we are going to react to the litigation, claim or statement

3.3 Investments in associates and joint ventures

Individually material associates

Name	Ownership interest	Registered office	Activity
Etzel Kavernenbetriebs-gesellschaft mbH & Co. KG	33%	Bremen, Germany	Gas storage facility

In the tables, we provide information on our individually material associates and joint ventures.

Individually material joint ventures

Name	Ownership interest	Registered office	Activity
Lincs Renewable Energy Holdings Ltd.	50%	London, UK	50% ownership interest in offshore wind farm

Accounting policies

Investments in associates and joint ventures are measured using the equity method.

We present the profit (loss) from investments in associates and joint ventures before EBITDA when deemed to pertain to the Group's principal activity. The profit (loss) from investments in associates and joint ventures is presented after EBIT when not deemed to pertain to the Group's principal activity.

Associates and joint ventures with negative net assets are measured at nil.

If we have a legal or constructive obligation to cover the negative equity of an associate or joint venture, the obligation is recognised as a liability.

Receivables from associates and joint ventures are measured at amortised cost. Write-downs are made for bad debts when there is an objective indication of impairment.

The proportionate share of associates' and joint ventures' profit (loss) after tax and non-controlling interests is recognised in profit (loss) for the year. We eliminate the proportionate share of internal gains (losses) in the profit (loss) for the year.

On acquisition of investments in associates and joint ventures, the acquisition method is applied.

Gains or losses on the disposal of investments in associates and joint ventures are determined as the difference between the selling price and the carrying

The most significant associates and joint ventures are Etzel Kavernenbetriebsgesellschaft mbH & Co. KG and Lincs Renewable Energy Holdings Ltd.

In 2016, the Group's share of the loss in associates and joint ventures of DKK 17 million (2015: DKK 104 million) has been recognised in the income statement as share of profit (loss) in associates and joint ventures. Of this amount, DKK 25 million (2015: DKK 112 million) was recognised in income from our principal activities and DKK -8 million (2015: DKK -8 million) was recognised in our non-principal activities.

No dividend was received from associates and joint ventures in 2016 and 2015.

Capital commitments

At the end of 2016 and 2015, we had not assumed capital commitments in respect of, for example, offshore wind farm projects in connection with associates and joint ventures.

amount of net assets, including goodwill at the date of disposal and transaction costs.

Gains and losses are recognised in profit (loss) for the year as gain or loss on the divestment of enterprises. The profit (loss) for the year and total comprehensive income from associates and joint ventures are identical.

Critical accounting estimates

Assumptions for impairment test

Investments in associates and joint ventures are tested for impairment if there is any indication of impairment of such investments.

Indications of impairment include, among other things:

- changes in regulatory, financial and technological factors, and
- general market conditions

Critical accounting judgements

Assessment of classification

On initial recognition of investments and in connection with any restructuring of joint ventures and joint operations, we assess whether an investment is a joint venture or a joint operation.

In assessing joint operations, we look at:

- the corporate form of the operation, and
- whether we are only entitled to the net profit or income and expenses resulting from the operation

In addition, the fact that the parties buy all output, for example the power generated, will lead to the structure being considered to be a joint operation.

In the tables, we provide financial information on our individually material associates and joint ventures. The amounts stated are the overall accounting figures for the individual associates and joint ventures, determined according to our accounting policies.

3.4 Gross and net investments

Gross and net investments (DKK million)	2016	2015
Cash flows from investing activities	(1,060)	(7,405)
Dividends received and capital reduction, reversed	(22)	(20)
Purchase and sale of securities, reversed	(4,564)	(3,237)
Loans to associates and joint ventures, reversed	(210)	(33)
Sale of non-current assets, reversed	(9,104)	(2,014)
Gross investments	(14,960)	(12,709)
Transactions with non-controlling interests in connection with divestments	(49)	(32)
Sale of non-current assets	9,104	2,014
Total cash flows from divestments	9,055	1,982
Net investments	(5,905)	(10,727)

The table shows gross and net investments based on cash flows from investing activities.

In 2016, gross investments totalled DKK 14,960 million (2015: DKK 12,709 million).

Gross investments in Wind Power primarily consisted in the development of wind activities (DKK 12.426 million), including the UK offshore wind farms Burbo Bank Extension, Race Bank, Walney Extension and Hornsea 1 as well as the German offshore wind farms Borkum Riffgrund 2 and Gode Wind 1 & 2.

In 2016, cash flows from the divestment of assets and enterprises totalled DKK 9,055 million (2015: DKK 1,982).

In 2016, Wind Power divested 50% of Burbo Bank Extension to PKA and KIRKBI as well as 50% of Race Bank to Macquarie.

In 2015, divestments in Wind Power consisted primarily of the farmdown of 50% of Gode Wind 1 to Global Infrastructure Partners and the receipt of a deferred selling price relating to the farmdown of 50% of Westermost Rough in 2014.

Distribution & Customer Solutions divested Gas Distribution to Energinet.dk in 2016.

For more information, see the management's review on page 25.

3.5 Divestment of enterprises

Enterprises divested (DKK million)	2016	2015
Non-current assets	1,432	218
Current assets	494	36
Non-current liabilities	(386)	(27)
Current liabilities	(938)	(36)
Gain on divestment of enterprises in the income statement	1,250	56
Selling price on divestment of enterprises	1,852	247
Of which selling price receivable	(81)	-
Of which recognised as other provisions	(14)	14
Cash transferred	242	-
Cash selling price on divestment of enterprises	1,999	261

In 2016, gains on the divestment of enterprises consisted primarily of a gain on the divestment of Gas Distribution (Distribution & Customer Solutions).

In 2015, gains on the divestment of enterprises consisted primarily of a gain on the divestment of Måbjergværket A/S (Bioenergy & Thermal Power).

The table shows gain on divestment of enterprises in the income statement and cash selling price on divestment of enterprises in statement of cash flows.

Accounting policies

We recognise income from divested enterprises in the income statement up until the date of divestment.

The date of divestment is the date on which we relinquish control of the divested enterprise.

Comparative figures in the income statement and statement of cash flows are restated to reflect divestments.

Gains or losses on the divestment or discontinuation of subsidiaries and associates are determined as the difference between the selling price and the carrying amount of the net assets divested.

Moreover, the fees of advisers etc in connection with the divestment or discontinuation of the enterprise are deducted.

3.6 Assets classified as held for sale

Assets classified as held for sale (DKK million)

	2016	2015
Intangible assets	5	1
Property, plant and equipment	12,719	2,328
Inventories	7	-
Trade receivables	192	163
Other receivables	1,139	85
Income tax	586	8
Cash	725	-
Assets classified as held for sale at 31 December	15,373	2,585
Deferred tax	1,057	190
Provisions	8,356	462
Trade payables	825	72
Other payables	1,479	345
Income tax	1,787	64
Liabilities relating to assets classified as held for sale	13,504	1,133
Net assets classified as held for sale	1,869	1,452

The table shows assets and liabilities which have been put up for sale, and which are therefore not expected to contribute to our earnings in future.

Accounting policies

Assets classified as held for sale comprise assets and liabilities, the value of which is highly probable to be recovered through a sale within 12 months rather than through continued use.

Assets and liabilities classified as held for sale are measured at the carrying amount at the classification date as 'held for sale' or at market value less selling costs, whichever is lower. The carrying amount is measured in accordance with the Group's accounting policies. Reference is made to note 3.7 for special policies concerning the Oil & Gas segment, which is presented as discontinued operations.

No depreciation or amortisation is effected on property, plant and equipment and intangible assets from the time when they are classified as 'held for sale'.

Impairment losses arising on first classification as 'held for sale' and gains and losses from the subsequent measurement are recognised in the income statement under the items they concern.

Assets classified as held for sale comprise primarily our Oil & Gas segment, where we have launched a process with the ultimate aim to divest the activities. Also included is the oil pipeline in the North Sea which is being divested to the Danish transmission system operator Energinet.dk (Distribution & Customer Solutions).

The sales process for both activities is expected to be completed within 12 months. The activities have therefore been classified as assets and liabilities classified as held for sale.

Furthermore, our Oil & Gas segment is presented as discontinued operations, for which reason both the income statement and the statement of cash flows have been restated for both 2015 and 2016. The balance sheet for 2015 has not been restated. Read more in note 3.7.

Gas Distribution, which was included in net assets classified as held for sale in 2015, was divested as at 30 September 2016. See note 3.5.

3.7 Discontinued operations

In November 2016, the Board of Directors decided to initiate a process with the ultimate objective of divesting the Oil & Gas segment. The aim is to ensure the best possible long-term development of the Oil & Gas segment.

The Board of Directors' decision was mainly based on the following:

- The Oil & Gas segment is not regarded as a long-term strategic business unit for DONG Energy
- The objective is to build a world-leading business within green energy with cutting-edge expertise within offshore wind farms, bioenergy and green distribution as well as power and heat generation

It is management's assessment that the divestment will be completed before year-end 2017.

As a result, we presented our Oil & Gas segment as assets classified as held for sale and as discontinued operations. This classification means that assets and liabilities are shown separately from other assets and liabilities at the end of 2016. Comparative figures for 2015 have not been restated.

The discontinued operations are also shown separately in the income statement and the statement of cash flows for 2016, and the comparative figures have been restated in both main statements.

The internal trading between Oil & Gas and Distribution & Customer Solutions is not presented as discontinued operations, as management does not expect the internal trading between the companies to end following a divestment.

Ineffective price hedges linked to oil and gas as well as related currency exposures resulting from production after the expected divestment are recognised in EBITDA in our business performance results with DKK 309 million in 2016.

In connection with the expected completion of the transaction in 2017, the equity reserves related to the Oil & Gas segment will be recycled in the statement of comprehensive income and recognised in the profit statement from discontinued operations in the income statement. Reserves from expected recycling represented a loss of DKK 661 million at 31 December 2016.

Highlights in 2016

- We terminated the Engineering, Procurement and Construction contract (EPC contract) for the construction of the Hejre platform
- The Laggan-Tormore field began production in February
- We achieved significant cost reductions
- We divested five Norwegian oil and gas fields to Faroe Petroleum

Financial performance

Revenue totalled DKK 10.5 billion, which is 18% lower than in 2015. The fall is attributable primarily to lower average oil and gas prices, which were partially offset by price hedges.

Oil and gas production fell by 10%, totalling 36.6 million boe.

Production from the Laggan-Tormore field in the UK, which started in February 2016, was more than offset by lower production levels in Norway, among other things as a result of the loss of additional volumes from the Ormen

Lange field from mid-February 2016 according to the redetermination in 2013.

The share of the production from the Ormen Lange field was 16% in 2016 – 2 percentage points higher than the ownership interest of 14% – compared with 24% in 2015. The lower share in 2016 was partially offset by a shut-down of production from the field for a period of 42 days in 2015 due to the connection of new infrastructure to the gas treatment plant at Nyhamna.

EBITDA totalled DKK 6.5 billion, down DKK 3.2 billion on 2015. The decline is attributable

to lower oil and gas prices, which were partially offset by hedging, to a provision of DKK 0.8 billion (without impact at EBIT level) as a result of the termination of the EPC contract with the consortium responsible for the construction of the Hejre platform, and to non-recurring items of DKK 1.2 billion, which conversely contributed positively in 2015. EBITDA from the additional volumes from the Ormen Lange field amounted to DKK 0.3 billion compared with DKK 2.5 billion in 2015.

EBITDA in Denmark declined by DKK 1.5 billion, driven mainly by the previously mentioned provision for onerous contracts

relating to the Hejre platform in 2016 as well as insurance compensation, which contributed positively in 2015.

EBITDA in Norway fell by DKK 4.0 billion as a result of lower production levels and lower prices. In the UK, EBITDA rose by DKK 0.5 billion as a result of the start-up of production from Laggan-Tormore, partially offset by a selling profit relating to 60% of the Glenlivet field, which contributed positively in 2015. Exploration expenses fell by DKK 0.3 billion as a result of lower activity.

Depreciation was DKK 0.9 billion lower in 2016, primarily due to the derived effect of impairment losses in Q4 2015, partially offset by higher depreciation as a result of the start-up of production at Laggan-Tormore.

Impairment losses (including provisions for onerous contracts relating to plants) totalled an income of DKK 0.8 billion in 2016, relating to a partial reversal of the onerous contracts in respect of the Hejre platform, for which provisions were made in December 2015.

Cash flows from operating activities decreased by DKK 1.9 billion, amounting to DKK 4.1 billion in 2016. The decrease was primarily due to lower EBITDA and increased funds tied up in working capital, partially offset by lower tax payments.

Gross investments amounted to DKK 3.4 billion in 2016, which was DKK 2.5 billion lower than in 2015. Investments primarily related to the UK Laggan-Tormore and Glenlivet-Edradour fields as well as the Danish Hejre and Syd Arne fields and the Siri area fields.

The Oil & Gas segment's total costs and investments were reduced by 38% relative to 2015, and this contributed to reaching a free cash flow of DKK 1.1 billion in 2016.

Discontinued operations (DKK million)	2016	2015

Other employee costs	10	18
Employee costs before transfers to assets	778	807
Transfers to assets	(325)	(313)
Employee costs	453	494

 The table shows salaries, wages and remuneration for the Oil & Gas segment, which is presented in the income statement in profit (loss) for the year from discontinued operations.

 Unrecognised tax assets, discontinued operations (DKK million)	2016	2015
Denmark, hydrocarbon income (Chapter 3A of DHTA), tax base	17,917	23,717
Denmark, hydrocarbon income (Chapter 2 of DHTA), tax base	3,421	546
The UK, hydrocarbon income, special income tax and hydrocarbon tax, tax base	4,084	6,011
Greenland and the Faroe Islands, hydrocarbon income, tax base	229	221
Total at 31 December	25,651	30,495

 Unrecognised tax assets can be carried forward indefinitely.

Employee costs

At the end of 2016, the number of employees in the Oil & Gas segment was 472 (2015: 727). In 2015 and 2016, different initiatives have been launched to reduce costs including significant reductions in the number of employees. Wages and salaries comprise wages and severance pay to former employees.

Tax

Unrecognised deferred tax assets
Our unrecognised deferred tax assets in discontinued operations relate partly to unutilised losses in hydrocarbon income in Denmark and the UK, and partly to the basis of depreciation for the hydrocarbon regime in Denmark. We consider it unlikely that these losses can be utilised in the foreseeable future.

 2016 (DKK million)	Business performance		
	Profit (loss) before tax	Tax	Tax rate
Oil and gas activities in Norway (hydrocarbon income)	1,860	(1,489)	80%
Oil and gas exploration activities in the UK and the Faroe Islands	269	0	n.a.
Gains (losses) from divestments and other non-taxable income and non-deductible costs	(17)	38	223%
Impairment losses	750	(1,575)	210%
Other activities in the Oil & Gas segment	1,557	(341)	22%

Tax on profit (loss) for the year, IFRS	(176)	(2,356)	(1,339)%

 2015 (DKK million)	Profit (loss) before tax	Tax	Tax rate
Oil and gas activities in Norway (hydrocarbon income)	4,664	(3,887)	83%
Oil and gas exploration activities in the UK and the Faroe Islands	(67)	47	70%
Impairment losses	(15,849)	1,012	6%
Other activities in the Oil & Gas segment	1,373	(344)	25%
Effective tax for the year	(9,879)	(3,172)	(32)%
Tax on profit (loss) for the year, IFRS	(7,598)	(3,709)	(49)%

Current tax

Total current tax amounted to DKK 879 million in 2016 against DKK 3,693 in 2015.

Impairment losses in the Oil & Gas segment in 2016 consisted of reversal of impairment losses from previous years as well as impairment of the remaining tax assets to zero.

Market risks

Oil & Gas

The price exposure of the Oil & Gas segment concerns the production of oil and gas.

The hedging of the gas and oil exposures is carried out after tax, including the special hydrocarbon tax, to achieve the desired stabilisation of cash flows after tax.

For 2017-2021, the oil and gas exposures totalled DKK 6.5 billion and DKK 6.3 billion, respectively, or DKK 12.8 billion in total after hedging. The market value of hedging contracts in the Oil & Gas segment at 31 December 2016 totalled DKK 1.4 billion, of which DKK 1.1 billion is expected to be recognised in business performance EBITDA for the discontinued operations in 2017.

Liability to pay compensation

According to legislation, the companies DONG E&P A/S, DONG E&P DK A/S and DONG E&P Grønland A/S are liable to pay

compensation for any environmental accidents or other types of damage caused by our oil and gas activities, even when there is no proof of negligence (strict liability). We have taken out insurance to cover any such claims.

Guarantees

DONG Energy has furnished the Danish State with guarantees for the fulfilment of obligations and liability in damages towards the State or third parties incurred by DONG E&P A/S or DONG E&P DK A/S in connection with the companies' participation in exploration and production licences, irrespective of whether the obligations and liability rest on DONG E&P A/S or DONG E&P DK A/S alone or jointly and severally with others.

The guarantees are not capped, but if claims are made under a guarantee due to obligations assumed by DONG E&P A/S or DONG E&P DK A/S on a joint and several basis with other licensees, the guarantee amount cannot exceed a amount corresponding to twice

DONG E&P's or DONG E&P DK A/S's share of each obligation or liability.

As a condition for approval of its participation in oil and gas exploration and production on the Norwegian, UK, Greenland and Faroese continental shelves, DONG Energy has provided a guarantee as normally required by the local authorities. The guarantee covers obligations and liability incurred or assumed by DONG Energy's Oil & Gas segment in connection with exploration and production activities.

The guarantees are not capped, and DONG Energy is jointly and severally liable with the other licensees for any environmental accidents or other damage.

Litigations

In March 2016, the Hejre licensing partners (DONG O&G and Bayerngas) terminated the EPC contract for the Hejre platform with immediate effect due to the EPC consortium's

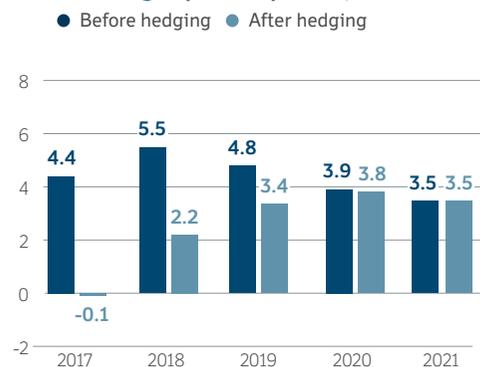

material breach of its contractual obligations. Both DONG O&G and the EPC consortium have instituted arbitration proceedings concerning the EPC contract; these were initiated before and after the EPC contract was terminated. The arbitration proceedings are in the preparatory phase, and the proceedings have not yet been scheduled for hearing.

Development projects in progress

In March 2015, the UK authorities approved the joint extension of the Edradour and Glenlivet gas fields. Both fields will be connected to the existing gas pipeline from Laggan-Tormore and Shetland Gas Plant. We expect that Edradour and Glenlivet will start production in 2017. The drilling of the first two wells and the extension work have gone according to plan in 2016.

The Oil & Gas segment consists of a strong portfolio of oil and gas assets in Denmark, Norway and the UK. The asset portfolio has attractive lifting costs and the potential to generate value-adding returns and cash flows.

Oil and gas price exposure, DKK billion

The figure shows the oil and gas price exposure before and after hedging for the years 2017-2021.

Exploration activities (DKK million)	2016	2015
Income from exploration activities	0	407
Exploration expenses	(522)	(868)
Exploration expenses, net	(522)	(461)
Exploration assets	7	39
Obligations in respect of exploration assets	(8)	(26)
Exploration assets, net	(1)	13
Cash flows from operating activities	(197)	(240)
Cash flows from investing activities	(191)	(139)
Free cash flow (FCF)	(388)	(379)

The table shows the development in exploration activities for discontinued operations.

Exploration activities

The exploration activities in the Oil & Gas segment have been scaled down over the years. Costs of exploration activities totalled net DKK 522 million in 2016 (2015: DKK 461 million).

The activities have been reduced significantly relative to 2015. The costs of exploration activities primarily relate to one exploration well in the Hejre oil/gas field. In 2015, the exploration wells Xana and Solsort were expensed.

The reason for the lower exploration activities is primarily the fall in oil and gas prices, which leads to uncertainty regarding the financial viability of any expansion of these.

Accounting policies

Exploration activities

Exploration assets comprise exploration drilling expenses that relate to successful wells. Costs are recognised using the successful-efforts method. Under the successful-efforts method, exploration drilling expenses for drilling specific exploration wells are recognised in the balance sheet if the well is successful. Recognition in the balance sheet is maintained pending determination of commercial viability.

Recognised exploration drilling expenses for commercial discoveries are transferred to property, plant and equipment under construction on commencement of the construction of a field. All exploration drilling expenses determined as unsuccessful are recognised in profit (loss) for the year as other external expenses.

Application of the successful-efforts method means that the value of the Group's exploration assets is lower than if the full-cost method had been applied.

Exploration assets are not depreciated, as depreciation of such assets does not commence until the assets are available for use, on which date they are transferred to production assets.

Tax

Subsidiaries that are engaged in oil and gas extraction (hydrocarbons) are subject to the hydrocarbon tax legislation in the countries in which they operate. Hydrocarbon taxes are calculated on the basis of taxable hydrocarbon income and comprise taxes calculated on the basis of the respective country's ordinary income tax rate as well as taxes calculated on the basis of increased tax rates. Hydrocarbon taxes are recognised under tax on profit (loss) for the year.

For other accounting policies concerning tax for the year as well as deferred tax, reference is made to notes 5.2 and 5.4.

Critical accounting estimates

Assumptions for impairment test

The assessment of oil and gas reserves is based on estimates of both proved and probable reserves (Proved plus Probable/2P). Proved reserves are the estimated volumes of oil and gas that, under existing economic conditions, are recoverable using known technology from reservoirs in which oil or gas has been proved.

Probable reserves are those additional reserves that are less likely to be recovered than proved reserves. DONG Energy conducts an annual internal evaluation and review of the Group's reserves. An independent valuer has reviewed DONG Energy's reserves classification system and guidelines and has verified that the internal guidelines are in agreement with the SPE-PRMS guidelines.

Oil and gas production assets are depreciated using the unit-of-production method, which means that the useful lives of these production assets are determined based on expectations concerning annual production and estimated reserves for each field. Changed expectations concerning future annual production and/or estimated reserves for each field may therefore result in a need to reassess the useful lives of the production assets of the individual fields.

For other accounting policies concerning intangible assets and property, plant and equipment as well as impairment test, reference is made to note 3.1.

3.8 Non-controlling interests

Transactions with non-controlling interests (DKK million)	2016	2015	(DKK million)	A2SEA A/S group		Gunfleet Sands Holding Ltd. group		Walney (UK) Offshore Windfarms Ltd.	
				2016	2015	2016	2015	2016	2015
Transactions with non-controlling interests			Statement of comprehensive income						
Dividends paid to non-controlling interests	(404)	(549)	Revenue	665	1,293	430	484	1,126	1,267

			of which dividends paid to non-controlling interests	-	(86)	(113)	(127)	(302)	(334)

The table shows transactions with non-controlling interests.

Subsidiaries with significant non-controlling interests	Non-controlling interest	Registered office
A2SEA A/S	49.0%	Fredericia, DK
Gunfleet Sands Holding Ltd.	49.9%	London, UK
Walney (UK) Offshore Windfarms Ltd.	49.9%	London, UK

Our subsidiaries with significant non-controlling interests.

Accounting policies

Transactions with non-controlling interests are accounted for as transactions with the shareholder base.

Gains and losses on the divestment of equity investments to non-controlling interests are recognised in equity when the divestment does not result in a loss of control.

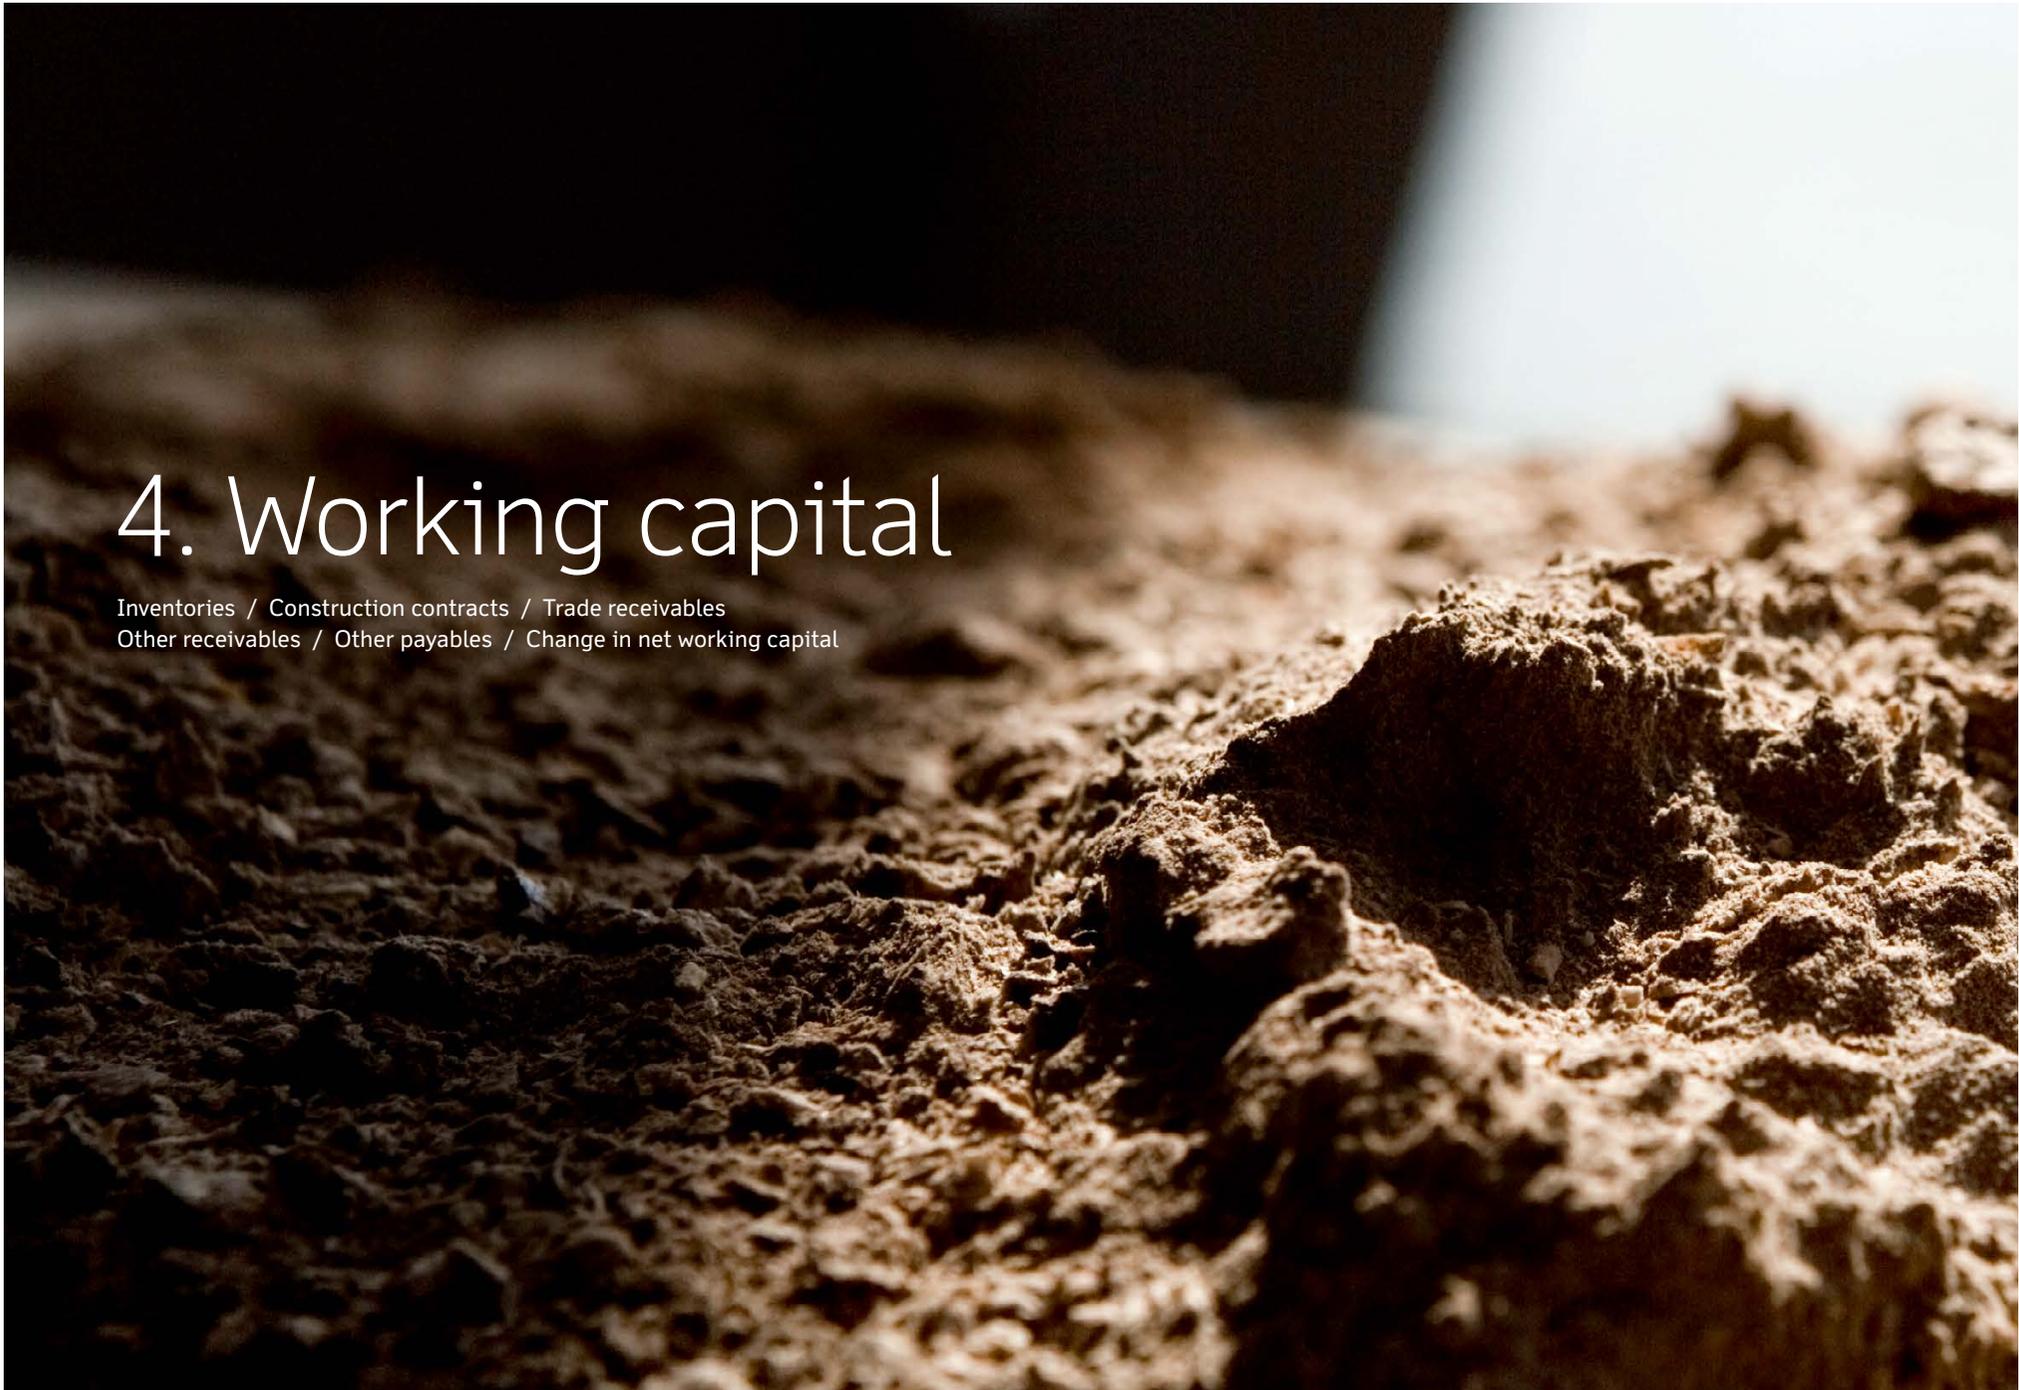

Net assets acquired are not revalued on the acquisition of non-controlling interests. Any difference between the carrying amount and the acquisition or selling price is recognised in equity.

In the table, we provide financial information for our subsidiaries with material non-controlling interests. The amounts stated are the consolidated figures of the individual enterprises/groups, determined according to our accounting policies.

4. Working capital

Inventories / Construction contracts / Trade receivables
Other receivables / Other payables / Change in net working capital

4. Working capital

-1.0bn

Our net working capital, excluding trade payables relating to capital expenditure in 2016

1.9bn

We have an additional amount of DKK 1,883 million tied up in working capital relative to 2015

We are continuously working to optimise funds tied up in working capital.

Working capital

Our most important working capital items consist of inventories, construction contracts, trade receivables, trade payables and other payables, including prepayments from heat customers and connection charges from power customers.

Working capital items vary across the year in line with the seasonal variations in our production and sales activities. The contracts in Wind Power for the construction of offshore wind farms with partners and for the construction of offshore transmission systems in the UK also vary over the year and from year to year. This is due to the fact that payments are received in the form of milestone payments from partners and upon divestment of the transmission assets after construction, respectively.

Trade payables relating to capital investments are not included in this section as they are presented as part of the cash flows from investing activities.

Total (DKK million)	2016	2015
Inventories	3,451	3,567
Construction contracts, net	6,282	3,193
Trade receivables	7,286	7,739
Other receivables	1,402	1,737
Receivables from associates and joint ventures	-	6
Trade payables, excluding trade payables relating to capital expenditure	(7,304)	(7,092)
Other payables	(12,121)	(12,037)
Net working capital, excluding trade payables relating to capital expenditure at 31 December	(1,004)	(2,887)
Of which construction contracts and related trade payables	3,944	1,701
Of which other working capital	(4,948)	(4,588)

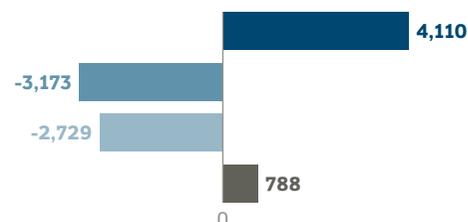

Our net working capital has changed substantially relative to 2015. This is due primarily to the development in construction contracts, net.

The Oil & Gas segment is presented as discontinued operations in 2016. As a consequence thereof, working capital is presented exclusive of Oil & Gas's external working capital.

Working capital, DKK million 2016

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions
- Other

Wind Power primarily has funds tied up in construction contracts, while BTP and DCS have a negative capital as a result of prepayments from heat and electricity customers.

4.1 Inventories

Inventories (DKK million)	2016	2015
Biomass	244	136
Gas	1,286	1,232
Coal	395	288
Oil	111	135
Green certificates	1,282	1,578
CO ₂ emissions allowances	80	127
Other inventories	53	71
Inventories at 31 December	3,451	3,567

The largest portfolios are gas for fuel and ROCs in connection with the generation of power by using renewable energy sources.

Biomass, gas, coal and oil are used as fuel in our CHP plants. Green certificates are primarily Renewables Obligation Certificates (ROCs), which are issued to producers of power by using renewable energy sources under the Renewables Obligation scheme in the UK.

Accounting policies

The cost of gas in the storage facility is determined as a weighted average of the previous month's purchase prices, including transportation costs.

Purchased CO₂ emissions allowances are measured at market value.

Other inventories are measured at cost using the first-in, first-out (FIFO) principle or net realisable value.

Inventories are written down to the lower of net realisable value and cost price.

The net realisable value is the amount (discounted), which the inventories are expected to generate through a normal sale.

4.2 Construction contracts

Construction contracts (DKK million)	2016	2015
Selling price of construction contracts	18,279	11,761
Invoicing on account	(11,997)	(8,568)
Construction contracts at 31 December	6,282	3,193
Construction contracts (assets)	6,453	3,864
Construction contracts (liabilities)	(171)	(671)
Construction contracts at 31 December	6,282	3,193

The table shows the selling price less invoiced on account as well as where construction contracts are presented in the balance sheet under assets and liabilities.

Construction contracts

We construct offshore wind farms in cooperation with partners, with each party owning 50% of the offshore wind farm. Construction contracts comprise our partners' shares of the offshore wind farms and our construction of offshore transmission systems for Ofgem in the UK. The contracts are negotiated individually in terms of their design, construction and technology.

Construction contracts at the end of 2016 include our partners' shares of the offshore wind farms Burbo Bank Extension, Gode Wind 1 and Gode Wind 2. The offshore wind farms are under construction, and we expect them to be completed in 2017. Construction contracts also include the construction of five offshore transmission systems in the UK. They are expected to be completed in 2017-2020.

In 2015, construction contracts included the offshore wind farms Borkum Riffgrund 1, Gode Wind 1 and Gode Wind 2 as well as five offshore transmission systems in the UK.

Accounting policies

The construction contracts are recognised in revenue when the outcome of the contracts can be estimated reliably.

The construction contracts are measured at the selling price of the work which we have performed on the offshore wind farms less invoiced on account. Our calculation of the selling price is based on the total expected income from the individual contracts and the completion degree of the offshore wind farm or offshore transmission system at the balance sheet date.

An expected loss is recognised when it is assessed probable that the total construction costs will exceed the total revenue from individual contracts. The expected loss is recognised as an expense and a provision.

Construction contracts are recognised as receivables when the selling price of the work which we have performed exceeds invoiced on account and expected losses.

Construction contracts are recognised as liabilities when invoiced on account and expected losses exceed the selling price. Prepayments from investors are recognised as liabilities.

Critical accounting estimates

We make an estimate when we are determining the expected selling price of an individual construction contract. These estimates are influenced by management's assessment of:

- the completion degree of the individual offshore wind farm and offshore transmission system
- the value of incentive agreements under which we may be paid a bonus for early delivery or have to pay compensation for late delivery
- liabilities assumed such as guarantee commitments
- share of total costs associated with offshore transmission systems which are expected to be covered upon handover etc.

Our determination of profit on payments received on account and the recognition of receivables are therefore subject to material uncertainty. We believe that our estimates are the most likely outcomes of future events.

4.3 Trade receivables

Trade receivables (DKK million)	2016	2015
Trade receivables, not overdue	6,661	7,345
Trade receivables, 1-30 days overdue	568	270
Trade receivables, more than 30 days overdue	171	228
Trade receivables, write-down	(114)	(104)
Trade receivables at 31 December	7,286	7,739

The table shows the classification by maturity of trade receivables.

Trade receivables

Our trade receivables primarily concern residential customers in Distribution & Customer Solutions, where the general terms of payment vary according to customer type and product type down to payment terms of 10 days.

Write-downs for the year totalled DKK 59 million (2015: DKK 24 million). Losses for the year totalled DKK 43 million (2015: DKK 21 million).

Accounting policies

Write-downs are made for bad debts when there is an objective indication of impairment.

The write-down is calculated as the difference between the carrying amount and the net present value of expected future cash flows associated with the receivable.

The discount rate used is the effective interest rate for the individual receivable or the individual portfolio.

4.4 Other receivables

Other receivables (DKK million)	2016	2015
Receivables from the divestment of equity investments to non-controlling interests	544	468
Receivables from the divestment of assets and investments	202	1,043
VAT and other indirect taxes receivable	367	456
Central clearing counterparties	400	40
Prepayments	207	657
Other accounts receivable	505	744
Other receivables	2,225	3,408
Of which working capital	1,402	1,737
Of which other capital employed	545	754
Of which interest-bearing net debt	278	917

The table shows our other receivables broken down on working capital, interest-bearing net debt and other capital employed.

Other receivables

Receivables from the divestment of equity investments to non-controlling interests in 2016 and 2015 related primarily to the divestment of investments in the offshore wind farms Gunfleet Sands and Walney.

Receivables from the divestment of assets and investments concerned primarily the sale of the German offshore wind farm project Gode Wind 1 in 2015 as well as receivables from the divestment of ownership interests in Glenlivet in 2014.

The Group's central clearing counterparties comprise receivables from banks in connection with trading on energy exchanges.

Prepayments in 2015 consisted primarily of prepayments from business partners in Oil & Gas. In 2016, these are presented as assets classified as held for sale.

The short-term portion of other receivables totalled DKK 1,710 million (2015: DKK 2,657 million).

Accounting policies

Other receivables are recognised at amortised cost or net realisable value, if lower.

Other receivables consist primarily of:

- Receivables from the divestment of assets and investments
- Receivables from the divestment of equity investments to non-controlling interests
- Prepayments
- VAT and other indirect taxes receivable

4.5 Other payables

Other payables (DKK million)	2016	2015
Payables to associates and joint ventures	136	345
Prepaid VAT on exports	1,749	1,549
CO ₂ rights	72	111
VAT and other indirect taxes payable	1,460	1,389
Salary-related items payable	736	838
Accrued interest	629	801
Virtual gas storage	69	40
Advance payments from heat customers	2,890	1,891
Grid connection charges	1,775	1,645
Other deferred income	1,320	1,037
Central clearing counterparties	1,096	1,952
Other accounts payable	967	2,223
Other payables	12,899	13,821
Of which working capital	12,121	12,037
Of which other capital employed	629	1,006
Of which interest-bearing net debt	149	778

The table shows our other payables broken down on working capital, interest-bearing net debt and other capital employed.

Other payables

In 2016, other payables were reduced by DKK 922 million relative to 2015. The main reason for this is that Oil & Gas has been presented as assets held for sale.

The majority of Oil & Gas's other payables consist of payables to business partners, which were included in other accounts payable in 2015.

The short-term portion of other payables totalled DKK 6,277 million in 2016 (2015: DKK 7,908 million).

4.6 Change in net working capital

Change in net working capital (DKK million)	2016	2015
Change in inventories	32	(589)
Change in construction contracts	(3,232)	(2,879)
Change in trade receivables	616	227
Change in other receivables	(322)	366
Change in trade payables	874	801
Change in other payables	520	2,661
Change in net working capital	(1,512)	587
Of which changes relating to construction contracts and related trade payables	(2,393)	(1,418)
Of which changes relating to other working capital	881	2,005

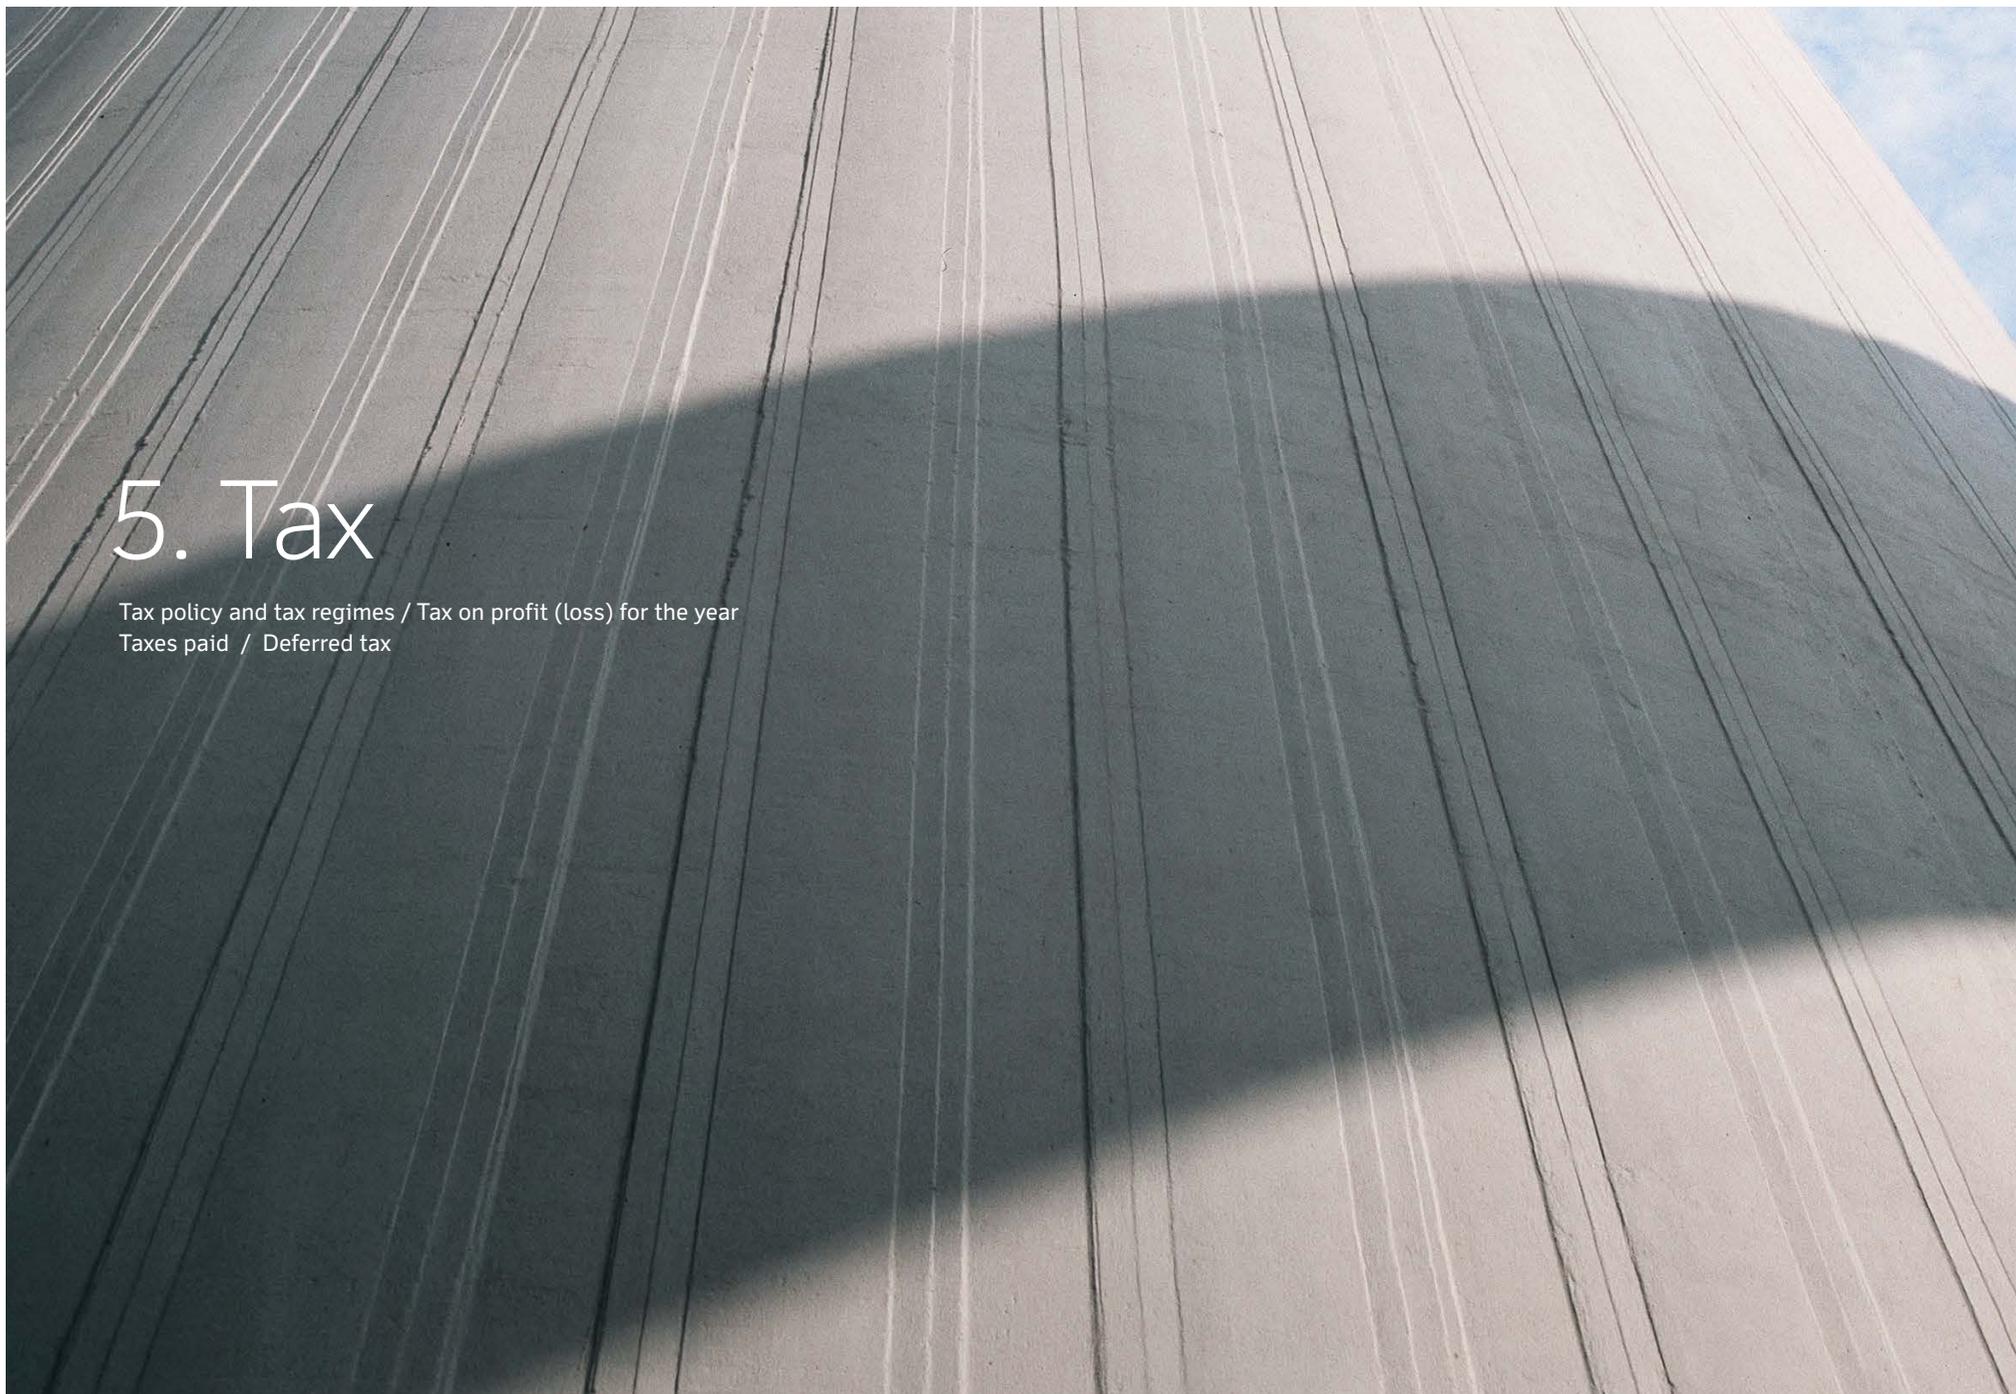

Specification of changes in net working capital.

Change in net working capital

Funds tied up in net working capital in 2016 primarily related to clearing counterparties in connection with trading on energy exchanges in Distribution & Customer Solutions and construction contracts for offshore transmission systems and offshore wind farms for partners in Wind Power.

5. Tax

Tax policy and tax regimes / Tax on profit (loss) for the year
Taxes paid / Deferred tax

5. Tax

14.4bn

The profit (loss) before tax according to business performance totalled DKK 14,352 million

3.2bn

Income tax paid by the Group totalled DKK 3,182 million

3.5bn

Current tax in 2016 totalled DKK 3,541 million

Responsible approach to tax

Our tax policy is public, and we acknowledge that tax plays a key role for society. We also believe that a responsible approach to tax is essential to the long-term sustainability of our business in the countries in which we operate.

Tax on profit (loss) for the year

The effective tax rate was 15% for the continuing operations. The effective tax rate was particularly affected by a tax-exempt gain on the divestment of Gas Distribution and 50% of the offshore wind farms Race Bank and Burbo Bank Extension.

Taxes paid

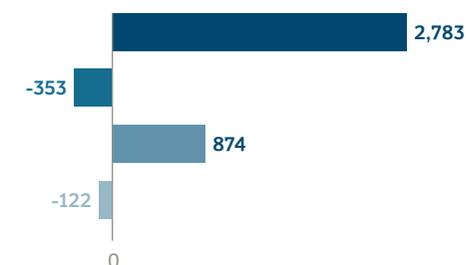

Based on the results of the activities in Denmark and retaxation on the divestment of 50% of Race Bank and Burbo Bank Extension, we paid DKK 3,182 million in taxes for 2016.

Deferred tax

Development in deferred tax was significantly impacted by the fact that the Oil & Gas segment was transferred to assets and liabilities classified as held for sale. The development was also affected by changes in tax relating to recognised profit received on account in Wind Power and to financial instruments in Distribution & Customer Solutions. The retaxation balance was affected by retaxation on divestments, and finally, the tax loss carryforwards changed due to the utilisation in 2016.

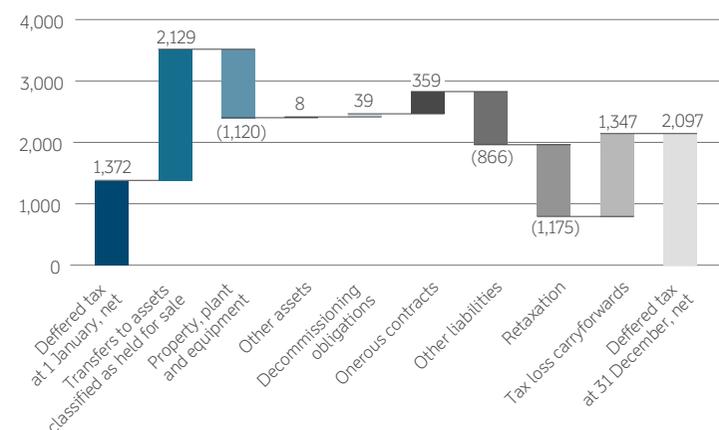

Income tax paid by segment, 2016 (DKK 3,182 million)

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions
- Group enterprises

The tax paid is mainly related to our wind activities.

Development in deferred tax assets and liabilities, DKK million 2016

As a result of the expected sale of our Oil & Gas segment, the Group's deferred tax assets have been reduced by DKK 2,129 million.

5.1 Tax policy and tax regimes

Our tax policy

We acknowledge that tax plays a key role for society. We also believe that a responsible approach to tax is essential to the long-term sustainability of our business in the countries in which we operate.

We are subject to a number of different rules on direct and indirect taxes as well as taxes collected on behalf of the Danish State. Also, many transactions involve different segments across national borders and between different tax systems. Due to this complexity, we have a strong focus on the management of our tax affairs.

→ Read more about our tax policy on www.dongenergy.com/taxpolicy

We comply with tax rules

We regularly assess our internal processes and controls to ensure that we comply with all local and international tax rules. Due to the scope of intra-group transactions across national borders, transfer pricing and VAT are particularly important issues.

We do not use structures which

- are artificially constructed tax structures designed for tax evasion
- have no commercial substance
- do not meet the spirit of local or international tax law

Use of incentives

We use the incentives and tax reliefs applying where we have commercial activities, and where this is the legislator's intention.

We engage in dialogue with tax authorities

As a proactive approach to handling any uncertainties about the interpretation of tax rules, we have an open dialogue with the national tax authorities in Denmark and abroad.

Countries in which we operate

We are subject to a number of different tax regimes in the countries in which we operate. At the end of 2016, we had the largest continuing operations in Denmark, the UK and Germany.

International joint taxation

We have been taxed under the Danish international joint taxation scheme since 2005. International joint taxation means that depreciation and amortisation for tax purposes and expenses incurred abroad can be deducted in the Danish statement of taxable income, just as profit earned abroad is taxed in Denmark. In recent years, we have made significant investments in Denmark and abroad, especially in wind power and in developing oil and gas production. Over the past ten years, we have realised significant depreciation and amortisation for tax purposes and thus major advanced deductions. This means that some

of the Danish tax payments are deferred to subsequent years.

The rules concerning Danish international joint taxation merely result in changes to the timing of the tax payments in Denmark. It thus leads to increased Danish tax payments at a later point in time, corresponding to the tax savings realised in previous years.

Provisions have been made for deferred tax payments, which totalled DKK 1,730 million in 2016 against DKK 2,903 million in 2015. See note 5.4.

Local taxes

In Denmark, we have for a number of years paid modest income tax. The reason for this is that we have incurred significant costs in connection with the establishment of offshore wind farms, biomass conversions in Bio-energy & Thermal Power and the development and maintenance of existing production facilities. In addition, earnings in previous years in Denmark were impacted by, among other things, falling power prices and large exchange rate fluctuations. In terms of tax, 2016 was positively impacted by a number of lump sum payments from the renegotiation of gas purchase contracts and completed construction contracts in connection with the construction of offshore wind farms.

As from 2015, the subsidiary A2SEA A/S joined the tonnage tax scheme for a

binding 10-year period. Under the tonnage tax scheme, the calculation of taxable income is not based on income and expenses as with normal income taxation. Instead, taxable income is calculated based on the tonnage used during the period with addition/deduction of taxable gains (losses) on the disposal of property, plant and equipment.

We have made significant investments in offshore wind farms in the UK, resulting in the accumulation of significant tax assets in recent years. Accordingly, we have not paid taxes in the UK. However, this will now change as a result of the new rules on interest and loss relief restriction entering into force in 2017.

We have also made significant investments in offshore wind farms in Germany. We expect to become liable to pay tax in Germany within the next couple of years.

5.2 Tax on profit (loss) for the year

Income tax

Tax on the business performance profit (loss) was DKK -2,191 million in 2016 against DKK 455 million in 2015. The effective tax rate was 15% in 2016 against -89% in 2015.

The effective tax rate in 2016 was particularly affected by a tax-exempt gain on the divestment of Gas Distribution and 50% of the offshore wind farms Burbo Bank Extension and Race Bank.

The tax rate in 2015 was effected by recognised tax assets in 2015 and previous years.

2016 (DKK million)	Business performance		
	Profit (loss) before tax	Tax	Tax rate
Gain (loss) on divestments	4,243	(88)	2%
Rest of the Group	10,109	(2,103)	21%
Effective tax for the year	14,352	(2,191)	15%

2015 (DKK million)	Business performance		
	Profit (loss) before tax	Tax	Tax rate
Unrecognised tax assets and capitalisation of tax assets not previously capitalised	-	497	n.a.
Effect of change in tax rate	-	49	n.a.
Rest of the Group	512	(91)	19%
Effective tax for the year	512	455	(89)%

Gain (loss) on divestments primarily consists of profit from the divestment of Gas Distribution, Burbo Bank Extension and Race Bank.

Accounting policies

We are taxed jointly with our Danish and foreign subsidiaries (international joint taxation). Subsidiaries are included in the joint taxation from the date they are included in the consolidation in the consolidated financial statements and up to the date on which they are no longer included in the consolidation.

Tax for the year consists of current tax, changes in deferred tax and adjustment in respect of previous years. In addition, some of the tax for the year is tonnage tax. Tonnage tax is recognised as current tax in the income statement. Tax on profit (loss) for the year is recognised in the income statement, and tax on other comprehensive income items is recognised in other comprehensive income.

Tax on profit (loss) for the year and other comprehensive income

In 2016, tax on the IFRS profit (loss) for the year amounted to DKK 1,715 million consisting of current tax of DKK 3,541 million, changes in deferred tax of DKK 1,385 million, tax on assets classified as held for sale of DKK 87 million and an adjustment of tax in respect of previous years of DKK 54 million.

In 2015, tax on the IFRS profit (loss) for the year amounted to DKK 184 million consisting of current tax of DKK 622 million, changes in deferred tax of DKK 596 million and an adjustment of tax in respect of previous years of DKK 211 million. The change in deferred tax for the year was primarily due to impairment losses in respect of property, plant and equipment.

	2016		2015	
	Business performance	IFRS	Business performance	IFRS
Income tax (DKK million)				
Tax on profit (loss) for the year	(2,191)	(1,715)	455	184
Tax on other comprehensive income	345	(131)	(345)	(74)
Tax on hybrid capital	141	141	172	172
Total tax for the year	(1,705)	(1,705)	282	282
Tax on profit (loss) for the year can be broken down as follows:				
Current tax	(3,541)	(3,568)	(622)	(622)
Deferred tax	1,385	1,801	867	596
Tax on assets classified as held for sale	(87)	(87)	(1)	(1)
Adjustment of tax concerning previous years	52	52	211	211
Tax on profit (loss) for the year	(2,191)	(1,715)	455	184
Tax on other comprehensive income can be broken down as follows:				
Current tax	(138)	(138)	(74)	(74)
Deferred tax	483	7	(271)	-
Tax on other comprehensive income	345	(131)	(345)	(74)

The effective tax for the year is calculated on the basis of the profit (loss) before tax from continued operations.

	2016				2015			
	Business performance		IFRS		Business performance		IFRS	
Effective tax rate (DKK million/%)	DKK million	%	DKK million	%	DKK million	%	DKK million	%

Tax effect of:								
Non-taxable income and non-deductible costs, net	709	(5)	709	(6)	(8)	-	(8)	-
Unrecognised tax assets and capitalisation of tax assets not previously capitalised	(28)	-	(28)	-	497	(97)	497	(30)
Share of profit (loss) in associates and joint ventures	4	-	4	-	24	(5)	24	(2)
Adjustment of tax concerning previous years	11	-	11	-	163	(32)	163	(10)
Effect of change in tax rate	41	-	41	-	49	(10)	49	(3)
Effective tax for the year	(2,191)	15	(1,715)	14	455	(89)	184	(11)

Adjustments of calculated tax in foreign subsidiaries were primarily due to elimination of internal gains in our German companies, which are taxed at a rate of 30%.

Non-taxable income and non-deductible expenses primarily concern the tax-exempt gain from the divestment of Gas Distribution and 50% of Burbo Bank Extension and Race Bank.

5.3 Taxes paid

(DKK million)	2016			2015		
	Denmark	Other countries	Total	Denmark	Other countries	Total
Tax on profit (loss) for the year:						
Income tax	3,520	20	3,540	587	35	622
Tonnage tax	1	-	1	-	-	-
Total	3,521	20	3,541	587	35	622
Taxes paid for the year:						
Income tax	3,133	49	3,182	1,050	65	1,115
Tonnage tax	-	-	-	-	-	-
Total	3,133	49	3,182	1,050	65	1,115

The table shows the relationship between the tax on profit (loss) for the year for accounting purposes and the taxes paid for the year.

The difference between tax on profit (loss) for the year and taxes paid can be explained as follows:

Income tax paid for the year is based on estimates and preliminary tax positions. This means that tax payable for the year may materialise if the final results for 2016 deviate from the estimates and the preliminary tax positions are changed.

Income tax paid in Denmark includes payment of DKK 705 million (2015: DKK 665 million) for the utilisation of losses for the Group's Danish companies in the Oil & Gas segment. These companies are still included in the Group's Danish joint taxation until they are divested.

5.4 Deferred tax

Other activities/
eliminations

Deferred tax at 31 December

Deferred tax 2016 (DKK million)	Wind Power	Bioenergy & Thermal Power	Distribution & Customer Solutions	Other activities/ eliminations	Deferred tax at 31 December
Deferred tax, assets	548	420	25	(905)	88
Deferred tax, liabilities	1,065	231	584	305	2,185
Unrecognised tax assets	209	11	308	-	528

Deferred tax 2015 (DKK million)

Deferred tax, assets	143	681	56	(606)	274
Deferred tax, liabilities	1,677	224	221	(476)	1,646
Unrecognised tax assets	177	1	276	-	454

Development in deferred tax assets and liabilities

We do not expect any of the deferred tax of DKK 2,097 million net (2015: DKK 1,372 million) to fall due within the first 12 months (2015: DKK 1,594 million).

In 2016, DKK 2,129 million related to Oil & Gas were transferred to assets classified as held for sale. The transferred deferred tax primarily comprises tax assets on decommissioning obligations of production assets and additional depreciation for tax purposes of the same production facilities.

In 2016, deferred tax from continuing operations fell by DKK 1,861 million as a result of the utilisation of deferred tax liabilities. This includes changes in the taxation of profit

on payments on works in progress, changes in the taxation of financial instruments and retaxation in the international joint taxation as a result of the divestment of 50% of Burbo Bank Extension and Race Bank. The deferred tax was affected positively by the utilisation of Danish joint taxation losses from previous years.

Adjustments concerning previous years primarily comprise changes between continuing and discontinued operations calculated on the basis of the final tax for 2015.

Deferred tax by segment

Deferred tax (liabilities) in Wind Power relates primarily to recognised profit received on account and property, plant and equipment, in respect of which depreciations for tax

The table shows the reconciliation of deferred tax to the balance sheet by segment.

Unrecognised tax assets comprise continuing operations. Reference is made to note 3.7 for a description of the unrecognised tax assets relating to the Oil & Gas segment.

purposes exceeds depreciations for accounting purposes. Deferred tax assets in Bioenergy & Thermal Power are primarily attributable to property, plant and equipment for which impairment was made in previous years.

Other activities/eliminations comprise the value of deferred tax liabilities resulting from Danish international joint taxation as well as intra-group eliminations in the joint taxation across segments.

Unrecognised deferred tax assets

Our unrecognised deferred tax assets relate to losses in foreign project companies as well as impairment losses in foreign companies, where we deem that such tax assets cannot be utilised in the foreseeable future.

Unrecognised tax assets can be carried forward indefinitely.

See note 3.7 for a description of the tax matters of the Oil & Gas segment.

Development in deferred tax assets and liabilities 2016 (DKK million)	Balance sheet 1 January	Transferred to assets and liabilities classified as held for sale	Exchange rate adjustments	Additions, individual assets and activities, net	Recognised in profit (loss) for the year	Recognised in other com- prehensive income	Adjustments in respect of previous years, etc	Balance sheet 31 December

Retaxation	2,656	-	-	-	677	-	(430)	2,903
Tax loss carryforwards	(1,960)	-	(73)	-	676	-	(1,353)	(2,710)
Deferred tax	3,649	(182)	16	(276)	(820)	-	(1,015)	1,372
Of which recognised in the balance sheet under assets	632							274
Of which recognised in the balance sheet under liabilities	4,281							1,646

The amount for 2015 covers the entire Group, including Oil & Gas.

In 2015, deferred tax was reduced by DKK 2,277 million, primarily due to impairment losses and an adjustment of deferred tax in previous years. In addition, an amount was transferred to tax payable in respect of uncertain tax positions which are expected to materialise as tax payable if the uncertain tax position is realised.

Accounting policies

Deferred tax is recognised in respect of all temporary differences arising between the tax bases of assets and liabilities and their carrying amounts.

However, deferred tax is not recognised in respect of temporary differences relating to:

- goodwill
- office premises acquired without any relation to business combinations
- the acquisition of joint operations, including licence interests
- other items, where differences arise at the time of acquisition without affecting neither the profit (loss) for the year nor the taxable income. However, this does not include differences arising in connection with company acquisitions

Deferred tax is measured depending on how we plan to use the assets and settle the liabilities. We set off tax assets and liabilities when the tax asset can be accommodated by tax liabilities in the year in which the deferred tax assets are expected to be used.

Deferred tax assets are recognised at the value at which they are expected to be used. They may be offset against future earnings or against deferred tax. This must be done in companies within the same legal tax entity. Intra-group gains and losses are eliminated.

Deferred tax is measured based on the tax rules and rates applying when the deferred tax becomes current tax. Changes in deferred tax as a result of changes in tax rates are recognised in profit (loss) for the year.

Liabilities in respect of uncertain tax positions are measured as follows:

- The most-likely-outcome method is applied in cases where there are two possible outcomes
- The weighted-average method is used in cases with more than two possible outcomes

The liability is recognised under income tax payable or deferred tax, depending on how the realisation of the tax position will affect the financial statements.

Critical accounting estimates

Estimated value of tax assets

Deferred tax assets, including tax loss carryforwards, are assessed once a year. Losses are recognised if it is likely that they will be utilised in the foreseeable future. Management's estimates depend on whether a final investment decision has been made, and the long-term outlook for the Group's development.

Critical accounting judgements

Assessment of disputes and litigation with tax authorities

As we operate our business across national borders, disputes may arise concerning taxation and transfer pricing with the tax authorities in the various countries. Management assesses the possible outcome of such disputes on a regular basis. We believe that sufficient provisions have been made for such unresolved disputes. However, the actual obligation may be different as it depends on the outcome of the disputes and settlements reached with the tax authorities in question.

6. Capital structure

Capital structure / Earnings per share / Interest-bearing debt / Hybrid capital / Financial resources
Financial income and expenses / Funds from operations (FFO)/adjusted interest-bearing net debt

6. Capital structure

80.5%

Funds from operations (FFO) relative to adjusted interest-bearing net debt amounted to 80.5% at 31 December 2016

3.5bn

Our interest-bearing net debt totalled DKK 3.461 billion at 31 December 2016

31.5bn

Our cash reserve totalled DKK 31,511 million at 31 December 2016

Our capital base reflects how we have financed our activities. The capital base consists of 54% equity, 16% hybrid capital and 30% interest-bearing debt.

DONG Energy has been listed on the stock exchange

In June 2016, we were listed on NASDAQ OMX Copenhagen. This facilitates our future access to issue new capital, and provides our existing owners with better opportunities for trading in our shares.

Early repayment of bank and bond debt as well as interest rate swaps

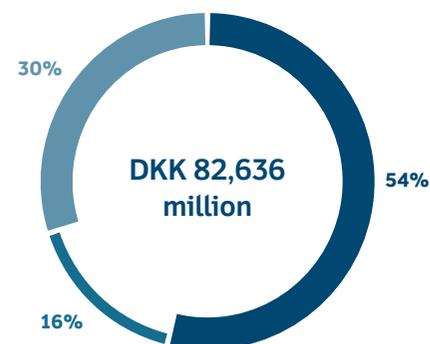

In spring 2016, we repaid bank and bond debt as well as interest rate swaps early at a combined market value of DKK 7.5 billion.

Hybrid capital and interest-bearing debt

Our hybrid capital is made up of bond loans that are subordinate to our other debt. The loans have a maturity of 1,000 years, and the coupon payments may be postponed if we lack the sufficient funds to make the payments. In return, these bond holders will receive a slightly higher interest rate than on the short-term bond loans. The other interest-bearing debt is obtained from several different financing institutions and with different maturities.

Capital base at 31 December 2016

- Equity
- Hybrid capital
- Interest-bearing debt

The figure shows the composition of our capital base.

6.1 Capital structure

Capital structure

To ensure the financial strength to operate in the international energy and capital markets and secure financing on attractive terms, we have defined a number of credit rating and capital structure targets. The overarching capital structure targets are a credit rating of Baa1/BBB+ and an FFO/adjusted net debt credit metric of around 30%.

In April 2016, Moody's added a negative outlook to our Baa1 credit rating. Our BBB+ rating with Standard & Poor's and Fitch has a stable outlook.

Financing policy

The aim of our financing policy is to ensure the best possible loan arrangements, while also minimising financing costs, liquidity and refinancing risks.

The borrowing activities are diversified among various funding sources and maturities. In addition, we have robust financial resources.

Our borrowing activities are consolidated in the parent company, where cash resources are available to the Group's companies via an internal bank.

Cash management

We have decided to maintain robust financial resources to limit the company's sensitivity to unrest in the financial markets.

The financial resources consist of bank deposits and securities, as well as non-cancellable credit facilities from a group of robust Nordic and international banks. At 31 December 2016, financial resources totalled DKK 31,511 million (2015: DKK 35,428 million).

Share capital

DONG Energy's share capital is DKK 4,203,810,800, divided into shares of DKK 10 (2015: DKK 4,177,263,730). No shares are subject to special rights or restrictions on voting rights. The shares are fully paid up.

Treasury shares

To secure our share programme, we acquired a portfolio of treasury shares consisting of 225,904 shares at 31 December 2016.

Dividends

The Board of Directors recommends that dividends of DKK 2,522 million be paid for the 2016 financial year, corresponding to DKK 6 per share. No dividends were paid for the 2015 financial year.

Development in share capital (DKK million)

	2016	2015

The table shows earnings per share divided into:

- continuing operations
- discontinued operations

6.3 Interest-bearing debt

Interest-bearing net debt

Interest-bearing net debt totalled DKK 3,461 million at the end of 2016, down DKK 5,732 million relative to 2015. The reduction covers a fall in interest-bearing debt of DKK 12,043 million, of which DKK 6,148 million was due to early repayment. The fall was partially offset by a decrease in the portfolio of securities and cash and cash equivalents. In 2015, interest-bearing net debt rose by DKK 5,215 million from DKK 3,978 million in 2014.

Market value of bond and bank debt

The market value of bond and bank debt totalled to DKK 26,010 million and DKK 4,110 million, respectively, at 31 December 2016 (2015: DKK 33,980 million and DKK 7,433 million, respectively).

The market value of bond and bank debt exceeds the carrying amount due to the fall in interest levels since the arrangement of the debt. The market value of issued bonds (level 1 – quoted prices) has been determined as the market value on the stock exchange at 31 December 2016. The market value of bank loans (level 2 – observable inputs) has been determined as the present value of expected future instalments and interest payments using our current interest rate on loans as discount rate.

Loan arrangements

At 31 December 2016, we had loan obligations totalling DKK 4,064 million (2015: DKK 7,186

million) primarily to the European Investment Bank and the Nordic Investment Bank. The loans are recognised in the balance sheet under bank debt. The loans offered by these multilateral financial institutions include loans to co-fund infrastructure and energy projects on favourable terms and with maturities exceeding those normally available in the commercial banking market. In connection with these loans, the Group may be met with demands for repayment or collateral in the event of the Danish State holding less than 50% of the share capital or voting rights in DONG Energy A/S (change of control), or repayment in the event of Moody's or Standard & Poor's downgrading our rating to Baa3 or BBB- or less, respectively.

Furthermore, at 31 December 2016, we had non-cancellable credit facilities of DKK 13,000 million (2015: DKK 13,061 million) with a number of Scandinavian and international banks. In connection with these credit facilities, we may be met with demands for cancellation and repayment of any used share in the event of players other than a group consisting of the Danish State and Danish power distribution companies acquiring more than 50% of the share capital or voting rights in DONG Energy A/S, or in the event of the Danish State ceasing to hold at least 20% of the share capital. Our financing agreements are not subject to any other unusual terms or conditions.

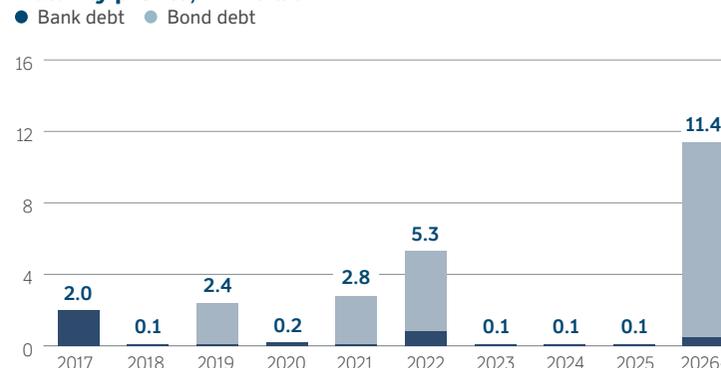

Interest-bearing debt and interest-bearing assets (DKK million)

	2016	2015
Interest-bearing debt comprises:		
Bank debt	4,064	7,186
Bond debt	20,119	29,215
Bond and bank debt	24,183	36,401
Liabilities classified as held for sale	803	-
Other interest-bearing debt	150	778
Total interest-bearing debt	25,136	37,179
Interest-bearing assets comprise:		
Securities	16,533	21,221
Cash	2,931	4,965
Receivables from associates and joint ventures	674	883
Other receivables	544	917
Assets classified as held for sale	993	-
Total interest-bearing assets	21,675	27,986
Total interest-bearing net debt	3,461	9,193

The table shows our interest-bearing debt and assets. The reduction in net debt covers a fall in our bond and bank debt which is partly offset by a decrease in securities and cash and cash equivalents.

Maturity profile, DKK billion

The graph shows the maturity profile for our bank loans and bond debt.

Interest rate risk

Our interest rate risks relate to interest-bearing debt, interest-bearing assets and financial price hedges. We manage the interest rate risk through the composition of assets and the variability of the cash flows generated by the assets. Fixed-interest financing over a longer term is sought for assets with fixed, interest-insensitive cash flows over a longer term. Conversely, more variable-interest financing is sought for assets with more varying, interest-sensitive cash flows.

We have hedged part of our future interest payments. The hedging is in the form of fixed-rate debt and interest rate swaps. At the end of 2016, 89% (2015: 89%) of the Group's debt was fixed-rate debt.

At 31 December 2016, the loan portfolio had an average time to maturity of 8.5 years (2015: 10.9 years).

Interest-bearing assets consist primarily of short-term bonds with limited risk.

Hedging of future interest payments

At 31 December 2016, interest-bearing receivables in the amount of DKK 677 million (2015: interest-bearing receivables in the amount of DKK 5,781 million) had been swapped from variable to fixed interest. The market value of interest rate swaps is DKK 78 million (2015: DKK -446 million) due to the fact that the hedged interest rate exceeds the current market rate.

The market value is recognised in other comprehensive income and transferred to the income statement over the term of the interest rate swap. In 2016, most of our interest

rate swaps were repaid. As the loans still exist, the value of the repaid interest rate swaps is recognised in equity and amortised over the maturity of the loans. In 2017, a total of DKK -84 million is expected to be transferred to the income statement (2015: DKK -161 million).

In connection with early repayment of loans, a loss has been recognised in the income statement from interest rate swaps with a total of DKK 70 million.

Forward exchange contracts have also been concluded for the purpose of hedging the currency risk associated with interest payments on loans in GBP. These forward exchange contracts correspond to a contractual principal amount of DKK 2,846 million (2015: DKK 3,308 million) and a market value of DKK -391 million (2015: DKK -51 million); see the table on the right for further information.

Accounting policies

Bond debt, bank debt and other payables are recognised at inception at market value (typically proceeds received) net of transaction costs incurred. In subsequent periods, the liabilities are measured at amortised cost so that the difference between the cost (proceeds) and the nominal value is recognised in profit (loss) for the year as interest expenses over the term of the loan, using the effective interest rate method.

Financial liabilities are classified as current unless the Group has an unconditional right to defer settlement of the liability to at least one year after the balance sheet date.

The market value of issued bonds has been determined as the market value at 31 December.

The market value of bank loans has been determined as the present value of expected future instalments and interest payments using the Group's current interest rate on loans as discount rate.

Hybrid capital due in 3013

Subordinate to other creditors
DKK 5,127 million
EUR 700 million (DKK 5,200 million)
June 2013
June 3013
26 June 2023
For the first ten years, the coupon is fixed at 6.25% p.a., after which it is adjusted every five years with the 5-year euro swap + 4.75 percentage points from 2023-2043 and + 5.5 percentage points after 2043
Optional deferral option

We have issued hybrid capital which is subordinate to our other creditors. The purpose of issuing hybrid capital is to strengthen our capital base and fund our investments. In the European capital markets, we have issued EUR hybrid bonds with a total nominal value of DKK 13,371 million (EUR 1,800 million). The hybrid bonds are subject to special terms.

Coupon payments on hybrid capital are settled annually and recognised in equity as they are regarded as dividends to the bond holders.

We may defer coupon payments to bond holders and ultimately decide not to pay them. Deferred coupon payments become payable, however, if we decide to pay dividends to our shareholders or pay coupon payments on another hybrid bond.

Hybrid capital due in 3013

Subordinate to other creditors
DKK 3,698 million
EUR 500 million (DKK 3,714 million)
July 2013
July 3013
8 July 2018
Coupon for the first five years is fixed at 4.875% p.a., after which it is adjusted every five years with the 5-year euro swap + 3.8 percentage points from 2018, 4.05 percentage points from 2023 and 4.80 percentage points from 2038
Optional deferral option

Accounting policies

Hybrid capital comprises issued bonds that qualify for treatment in accordance with the rules on compound financial instruments due to the special characteristics of the loan. The notional amount, which constitutes a liability, is recognised at present value, and equity has been increased by the difference between the net proceeds received and the present value of the discounted liability. Accordingly, any coupon payments are accounted for as dividends, which are recognised directly in equity at the time the payment obligation arises. This is because coupon is discretionary, and any deferred coupon therefore lapses upon maturity of the hybrid capital. Coupon payments consequently do not have any effect on profit (loss) for the year.

The part of the hybrid capital that is accounted for as a liability is measured at amortised cost. However, as the carrying amount of this component amounted to nil on initial recognition, and because of the 1,000-year term of the hybrid capital, amortisation charges will only impact on profit (loss) for the year towards the end of the 1,000-year term of the hybrid capital. Coupon

Hybrid capital due in 3015

Subordinate to other creditors
DKK 4,423 million
EUR 600 million (DKK 4,457 million)
May 2015
November 3015
6 November 2020
Coupon for the first 5.5 years is fixed at 3.0% p.a., after which it is adjusted every five years with the 5-year euro swap + 2.819 percentage points from 2020, 3.069 percentage points from 2025, and 3.819 percentage points from 2040
Optional deferral option

payments are recognised in the statement of cash flows in the same way as dividend payments within financing activities.

On redemption of the hybrid capital, the payment will be distributed between the liability and equity applying the same principles as used when the hybrid capital was issued. This means that the difference between the payment on redemption and the net proceeds received on issue is recognised directly in equity as the debt portion of the existing hybrid issues will be nil during the first part of the life of the hybrid capital.

On the date on which the Board of Directors decides to exercise an option to redeem the hybrid capital, the part of the hybrid capital that will be redeemed will be reclassified to loans and borrowings. The reclassification will be made at the market value of the hybrid capital at the date the decision is made. Coupon payments and exchange rate adjustments following the reclassification to loans and borrowings will be recognised in profit (loss) for the year as financial income or expenses.

6.5 Financial resources

Our liquidity and financing risks are managed centrally in accordance with the principles and delegated authorities laid down by the Board of Directors.

One of the most significant financial management tasks is to secure sufficient and flexible financial resources in relation to our day-to-day operations, investment programme and debt maturity profile.

We therefore define minimum financial resources for the coming calendar year. Due to divestment activities and the capital injection in 2014, our cash reserves at 31 December 2016 were still significantly above the minimum financial resource level defined.

Financial resources, DKK million

- Cash, available
- Securities, available
- Undrawn non-cancellable credit facilities

2016

DKK 31,511 million

2015

DKK 35,428 million

Cash and cash equivalents and securities

Cash not available for use which is not part of the financial resources primarily comprises:

- cash and cash equivalents pledged as collateral for insurance-related provisions, and
- cash and cash equivalents pledged as collateral for trading in financial instruments

Securities are a key element in our financial resources, for which reason investments are primarily made in liquid AAA-rated Danish mortgage bonds and to a lesser extent in other bonds. Most of the securities qualify for repo transactions in Danish Central Bank.

Securities not available for use comprise:

- Securities pledged as collateral for insurance-related provisions. These totalled DKK 394 million at 31 December 2016 (2015: DKK 459 million)
- Securities pledged as collateral for trading in financial instruments. These totalled DKK 276 million at 31 December 2016 (2015: DKK 2,072 million)

At 31 December 2016, we had received collateral in the amount of DKK 773 million (2015: DKK 65 million) concerning the market value of financial instruments.

Hedging of the market value of securities

As part of our risk management, we have hedged part of the interest rate risk on our securities portfolio. We have entered into interest rate swaps with a notional amount of DKK 794 million (2015: DKK 796 million). Market value amounts to DKK -3 million (2015: DKK -10 million).

The majority of our securities are invested in fixed-interest short-term instruments.

Maturity analysis of loans and borrowings

The Group's cash needs in respect of its financial loans and borrowings are shown in the table on the left. The maturity analysis was determined at 31 December 2016.

The maturity analysis is based on undiscounted cash flows, including estimated interest payments. Interest payments are based on market conditions and interest-rate hedging entered into at 31 December 2016.

The maturity analysis does not include hybrid capital. At 31 December 2016, we had issued hybrid capital with a notional amount totalling DKK 13,371 million due in 3013 (DKK 8,914 million) and 3015 (DKK 4,457 million), respectively.

Accounting policies

Securities comprise bonds that are monitored, measured and reported at market value on an ongoing basis in conformity with the Group's investment policy. Changes in market value are recognised in profit (loss) for the year as financial income and expenses.

For listed securities, market value equals the market price, and for unlisted securities, market value is estimated based on generally accepted valuation methods and market data.

Divested securities where a repurchase agreement (repo transactions) has been made at the time of sale are recognised in the balance sheet at the settlement date as if the securities were still held. The amount received is recognised as a liability, and the difference between the selling price and the purchase price is recognised in profit (loss) for the year over the term as interest. The return on the securities is recognised in profit (loss) for the year.

6.6 Financial income and expenses

We manage our currency and interest rate risks on a net basis and therefore present our financial income and expenses net.

Exchange rate adjustments and hedging contracts entered into to hedge currency risks are presented net under the item Exchange rate adjustments, net.

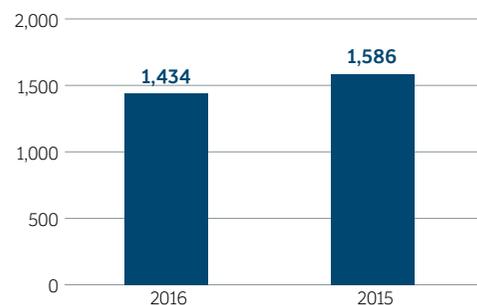

Exchange rate adjustments of currency hedging are recognised in revenue and cost of sales with a gain of DKK 1,893 million (2015: a loss of DKK 1,647 million).

Borrowing costs transferred to assets under construction are calculated at the weighted average effective interest rate for general borrowing, which is 4.4% (2015: 4.3%).

Net financial income and expenses

Net financial income and expenses decreased in 2016 as a result of large exchange rate adjustments and small capital losses on securities, which, however, are partially offset by capital losses in connection with the early repayment of loans and interest rate swaps.

Development in interest expenses concerning loans and borrowings, etc, DKK million

The graph shows the development in interest expenses concerning loans and borrowings. Interest expenses decreased as the interest-bearing debt was reduced.

Accounting policies

Market value adjustments of interest rate and currency derivatives that have not been entered into to hedge revenue, cost of sales or non-current assets are presented as financial income or expenses.

Financial expenses	(8,946)	(10,706)

The table shows gross financial income and expenses.

6.7 Funds from operations (FFO)/adjusted interest-bearing net debt

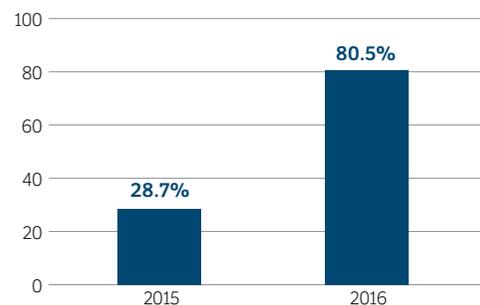

Funds from operations (FFO)

Our long-term target is for FFO to be around 30% of adjusted interest-bearing net debt.

FFO is calculated on the basis of business performance EBITDA less interest expenses, the interest element of decommissioning obligations, 50% of the hybrid capital coupon payments and calculated interest paid on the Group's operating lease obligations and total current tax. Operating lease payments in profit (loss) for the year are reversed.

FFO is calculated for the continuing operation, and the comparative figures have therefore been restated.

Development in FFO/adjusted interest-bearing net debt, %

Adjusted interest-bearing net debt

In the calculation of adjusted interest-bearing net debt, 50% of the hybrid capital is added, in line with the calculation method used by the Group's rating agencies, as well as cash, cash equivalents and securities not available for use. Similarly, the Group's decommissioning obligations after tax and operating lease obligations are regarded as part of the interest-bearing debt, regardless of the fact that the associated assets are not recognised under non-current assets.

Since FFO is calculated for the continuing operation, adjusted interest-bearing net debt has been changed so that items relating to the discontinued operation have been excluded. As a result, the comparative figures have been restated.

The Group's adjusted interest-bearing net debt amounted to DKK 18,046 million at 31 December 2016, down DKK 7,458 million relative to 2015.

The graph shows the development in FFO relative to adjusted interest-bearing net debt. The increase is attributable to the impact of renegotiations of gas contracts and divestment gains, among other things.

Funds from operations (FFO) (DKKK million)	2016	2015
EBITDA – business performance	19,109	8,730
Interest expenses, net	(402)	(294)
Reversal of interest expenses transferred to assets	(574)	(378)
Interest element of decommissioning obligations	(172)	(167)
50% of coupon payments on hybrid capital	(320)	(411)
Calculated interest paid on operating lease obligations	(194)	(191)
Adjusted interest expenses, net	(1,662)	(1,441)
Reversal of recognised operating lease payment in profit (loss) for the year	746	722
Total current tax	(3,665)	(697)

7. Risk management

Market risks / Hedge accounting and economic hedging
Trading portfolio / Sensitivity analysis of financial instruments / Credit risks

7. Risk management

5 years

We hedge prices for up to five years to reduce cash flow fluctuations

1.5bn

In 2016, business performance EBITDA from continuing operations was positively impacted by DKK 1,459 million from hedging contracts

64.7bn

We have entered into hedging contracts with a notional amount of DKK 64,655 million to hedge our energy and related currency exposure

Market and credit risks are a natural part of our business activities and a precondition for being able to create value. Through risk management, risks are reduced to an acceptable level

Energy and currency exposures

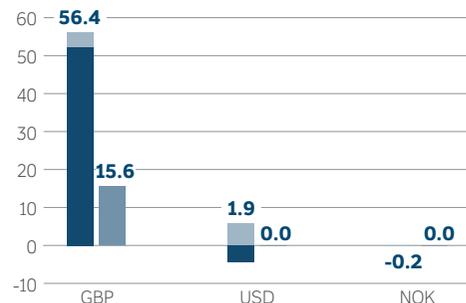

At the end of 2016, our energy and currency exposures from production, sales, investments and divestments in respect of continuing operations had been reduced from DKK 59.3 billion to DKK 21.4 billion via hedging.

Trading portfolio

We have a limited trading portfolio, the main purpose of which is to optimise the execution of hedging contracts and gain from short-term energy price fluctuations. The trading activities comply with the mandates approved by the Board of Directors. Read more in note 7.3.

Currency exposure 2017-2021,
DKK billion

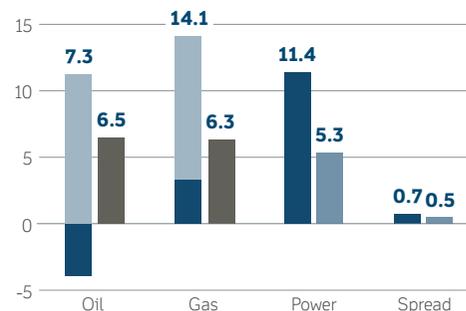

- Before hedging, continuing operations
- Before hedging, discontinued operations
- After hedging, continuing operations
- After hedging, discontinued operations

Our currency exposure totalled DKK 58.1 billion before hedging and DKK 15.6 billion after hedging at the end of 2016.

Energy exposure 2017-2021,
DKK billion

- Before hedging, continuing operations
- Before hedging, discontinued operations
- After hedging, continuing operations
- After hedging, discontinued operations

Our energy exposures totalled DKK 33.5 billion before hedging and DKK 18.6 billion after hedging at the end of 2016.

7.1 Market risks

This section describes market risks in respect of continuing operations. Market risks for O&G are described in note 3.7.

Market risks and market risk management

Our most significant market risks relate to:

- energy prices
- foreign exchange rates and
- interest rates (see note 6.2)

The management of market risks is to ensure stable and robust financial ratios that support our growth strategy.

We hedge prices for up to five years to reduce cash flow fluctuations. Prices are not hedged in the medium to long term, and our long-term market risks are therefore determined by our strategic decisions on investments in new assets, the conclusion of long-term contracts as well as any divestment of assets.

The Board of Directors determines the minimum hedging levels in the five-year period based on the following principles. In the first two years, a high degree of hedging is wanted to ensure stable cash flows after tax. The degree of hedging is lower in subsequent years. This is due to:

- reduced certainty about long-term production volumes and
- rising hedging costs in the medium to long term

Energy price risks

Our risks related to continuing operations after hedging for the years 2017-2021 can be summarised as follows:

Risk after hedging (DKK billion)	Effect of price change	
	+10%	-10%
Oil: 0.0 Purchase position	+0.0	-0.0
Gas: +0.0 Sales position	+0.0	-0.0
Power: +5.3 Sales position	+0.5	-0.5
Spread: +0.5 Sales position	+0.1	-0.1

A 10% increase in the power price in 2017-2021 will therefore result in a gain of DKK 0.5 billion in the period, all else remaining unchanged.

Currency risks

Our largest currency risk relates to GBP due to the investments in offshore wind farms in the UK.

The exchange rate related to proceeds in foreign currency from divestments is hedged when we have a high degree of certainty about the price and structure of the transaction. The expected cash flows from divestments reflect the cash flows we would otherwise had obtained from the operation of the offshore wind farms had we kept the share divested. As the payments are concentrated on a few years, they represent a relatively large share

of our GBP exposure the next two years. Any subsequent divestments are not included, as we do not have high certainty about the price and structure of the transaction.

Investments in GBP are set off against the expected proceeds from divestments before hedging.

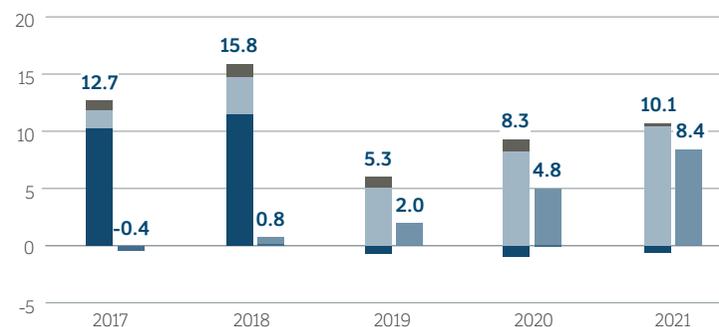

The exchange rate related to energy prices in foreign currency is not hedged until the energy price is hedged. This means that the GBP exchange rate associated with power generation in the UK is not hedged until the GBP power price is hedged.

Cash flows that relate to fixed tariffs and guaranteed minimum prices from offshore wind farms in the UK deviate from the main principle. Hedging of these, less operating expenses, is based on a declining level of hedging over the five-year risk management horizon. The target is to hedge 100% of the risk in year 1, declining by 20 percentage points each year, to 20% in year 5.

Our risk relating to continuing operations in terms of GBP exposures amounted to DKK 15.6 billion (sales position) after hedging for the years 2017-2021. Of these, unhedged prices of green certificates amount to DKK

GBP exposures, DKK billion

- Before hedging (from divestments and investments)
- Before hedging (from green certificates)
- Before hedging (from hedged energy)
- After hedging (from green certificates)
- After hedging (from hedged energy, divestments, etc)

The graph shows our GBP exposure which represents our largest currency exposure. Currency risks are hedged in accordance with our currency policy to ensure stable and robust key ratios.

16.0 billion, while other unhedged prices represent a value of DKK -0.4 billion. The GBP exchange rate for cash flows in 2017 is almost fully hedged at an average exchange rate of 9.4 DKK/GBP. A significant share of the GBP cash flows for 2018 is hedged at an average exchange rate of 9.2 DKK/GBP.

Our EUR risk is subject to continuous assessment, but is generally not hedged as we believe that Denmark will maintain its fixed exchange rate policy.

Our USD and NOK exposures after hedging amount to DKK 0.0 billion for the 2017-2021 period.

Wind Power

Earnings from our generation of power from offshore wind farms mainly comprise:

- fixed tariffs (Denmark, Germany, the Netherlands and the UK) and
- guaranteed minimum prices for green certificates (the UK)

At the end of 2016, such fixed tariffs and guaranteed minimum prices cover 85% of the expected income from offshore wind farms over the next five years. The remaining price exposure concerns sales of power at market price in the UK and Denmark.

The annual adjustment of the fixed tariffs varies from country to country.

- In the UK, the tariff is adjusted with inflation
- The tariff is not adjusted in Denmark, Germany and the Netherlands

This results in an inflation risk for earnings from tariff-based wind farms in Denmark, Germany and the Netherlands. The share of our debt which is fixed in nominal terms partially offsets this inflation risk.

Bioenergy & Thermal Power

Our CHP plant portfolio consists of biomass and coal-fired plants in Denmark and a gas-fired power station in the Netherlands. The plants in Denmark produce both heat and power.

Heat generation does not give rise to price risk as the associated costs are borne by the heat customers. However, heat generation often entails a price risk for power, as heat and power are generally generated simultaneously.

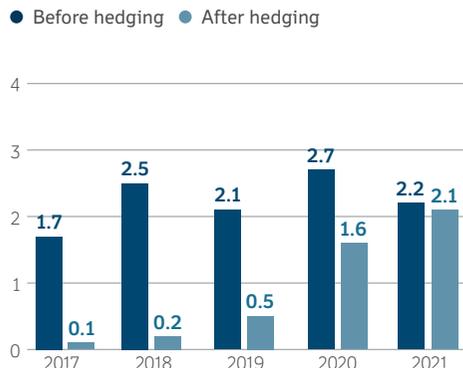

The profitability of power generation is determined by the difference between the selling price of power and the purchase price of fuel and CO₂ emissions allowances. We therefore hedge the contribution margin by simultaneously selling power and buying fuel as well as CO₂ emissions allowances.

The risk management horizon is three years due to low liquidity in the hedging markets. At the end of 2016, 58% of the power generation from our power stations expected in 2017 was hedged. The total net risk associated with the power stations' power generation for the period 2017-2021 is DKK 0.5 billion after hedging.

Distribution & Customer Solutions

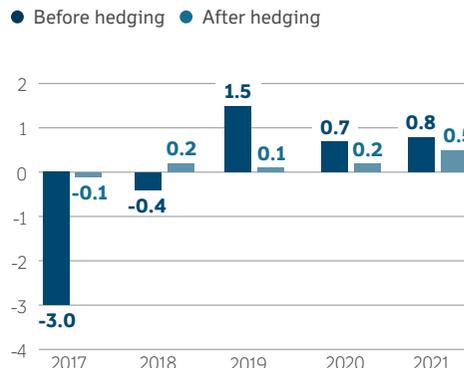

Our price risk in Distribution & Customer Solutions arises from the purchase and sale of power and gas.

Wind Power's power price exposure, DKK billion

The graph shows price exposures in Wind Power. Their primary exposures are power prices and associated currency risks as well as GBP exposures in connection with divestments.

Distribution & Customer Solutions price exposure, DKK billion

The graph shows the price exposure in Distribution & Customer Solutions, which only has a limited market risk after hedging.

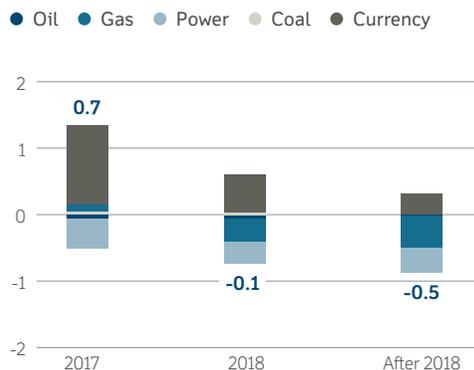

The price risks associated with the purchase and sale of gas result from differences in the indexing of sales and purchase prices. Our largest gas purchase contracts include the option of renegotiating the contract price if it no longer reflects market conditions. We have completed most of these renegotiations in recent years; as a result, the contract prices have largely been indexed to pure gas prices and not to oil prices, as was previously the case. We are therefore less sensitive to differences in the oil and gas price development than before.

Going forward, our oil price risk may rise again, however, as we conclude more and more LNG purchase agreements which are typically oil-indexed.

The price risks associated with power purchases and sales are constituted by the difference between the purchase and sales prices.

Expected value for recognition in business performance EBITDA

DKK billion

The price risk relates primarily to timing differences between purchases and sales and is therefore considered to be limited.

Financial impact of hedging

Our hedging of market risks is based on a number of different accounting principles depending on the type of risk being hedged.

Under the business performance principle, the gain or loss on contracts hedging energy and related currency risks is postponed and recognised in the period in which the hedged exposure materialises. The figure below shows the value of our energy and currency hedging which is expected to be recognised in EBITDA in the various years.

Accounting for hedges

The table on the next page shows the Group's derivative and hedging contracts according to the type of accounting treatment and the

affected items. The accounting treatment and classification of hedging contracts depends on the purpose of the hedging:

- Economic hedging comprises hedging of energy-related risks and related currency risks. These hedging contracts are treated as hedge accounting in accordance with the business performance principle (see note 2.2 for a detailed description), whereby the value adjustment (loss/gain) is postponed and only recognised during the period in which the hedged transaction materialises. Under IFRS, the value adjustment of this type of hedging is recognised directly in the income statement.
- Hedging of cash flows concerning interest rates and currencies comprises hedging of future interest payments and currency risks on future income. When hedging cash flows, the effective part of the market value

is temporarily recognised in equity until the hedged transaction materialises.

- Hedging of the market value of securities or currency comprises hedging of recognised assets or liabilities. By hedging of the market value of currency, the effective portion of the market value is recognised in profit for the year together with changes in the market value of the hedged asset or the hedged liability.
- Hedging of net investments comprises hedging of the currency risk associated with investments in assets located in foreign countries. By hedging of net investments, the effective portion of the market value is recognised in equity until the hedged net investment is divested.
- The trading portfolio and other interest and currency derivatives are recognised at market value in the income statement.

Note 2.2 provides further details on economic hedging, including information about the underlying products traded.

At 31 December 2016, the contractual value of contracts categorised as economic hedging totalled DKK 64,655 million against DKK 52,904 million at 31 December 2015.

Accounting policies

Exposure is calculated as the expected production (or net purchase/sale) times the forward price for the respective years. In addition, the exposure is determined on the basis of the expected exposure after renegotiations of oil-indexed gas purchase contracts.

The table shows the time of the transfer of the market value of hedging contracts in business performance EBITDA for both business performance and IFRS hedges.

The table provides an overview of our financial instruments. The table is divided according to where the financial instruments are recognised. See the individual sections for more details on the positions.

7.2 Hedge accounting and economic hedging

Positions recognised with EBITDA impact

When the market value of contracts classified as economic hedging, commercial contracts and partly cash flow hedging (currency) is recognised in the income statement, they are presented in an item which is included in EBITDA.

Economic hedging and commercial contracts

The purpose of economic hedging is to reduce our risk, for which reason the fluctuations in value are expected to be offset by the underlying exposure.

We have entered into a number of commercial contracts under which physical delivery is made, and which are managed together with the financial contracts, for which reason they are recognised at market value in accordance with IFRS.

Under the business performance principle, the market value adjustment of contracts concluded for the purpose of economic hedging and commercial contracts is postponed to the period during which the hedged transaction affects results, see note 2.2.

Our hedging of energy prices and commercial contracts recognised at market value is specified in the table.

The table shows an effect on EBITDA from agreements with a contractual principal

amount of DKK 42,265 million (2015: DKK 52,904 million).

Cash flow hedging

Forward exchange contracts have been concluded for the purpose of hedging the part of the currency risk associated with the construction of offshore wind farms which are expected to be divested. See the table on the bottom right.

Ineffectiveness of currency hedging totalled DKK 0 million (2015: DKK 0 million). Forward exchange contracts have also been concluded for the purpose of hedging the currency risk associated with interest payments on loans in GBP. This is specified in note 6.3.

Accounting policies

Market value adjustments of financial contracts offered to customers with a view to price hedging and financial instruments that have been entered into to hedge the Group's principal operating activities are recognised as revenue or cost of sales.

Under the business performance, economic hedging is accounted for as effective hedging. The resulting market value adjustment is consequently postponed to the period in which the hedged transaction affects results.

The contractual principal amount has been determined as the net position per derivative type.

Economic hedging and commercial contracts (DKK million)	2016		2015	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Energy				
Oil swaps	3,985	(76)	6,185	2,211
Gas swaps	7,522	(629)	17,499	4,588
Gas options	-	-	57	37
Power swaps	8,014	(641)	8,179	2,154
Power options	1,497	242	172	(8)
Coal	301	36	472	(191)
Currency				
Forward exchange contracts	20,946	512	20,340	(1,658)
Options	-	-	-	-
Total	42,265	(556)	52,904	7,133

Under the business performance principle, economic hedging is accounted for as effective hedging. The resulting market value adjustment is consequently postponed to the period in which the hedged transaction affects results. The contractual principal amount has been determined as the net position per derivative type.

Cash flow hedging, currency (DKK million)

Contractual principal amount	Market value	Recognised in comprehensive income	Expected date of transfer to EBITDA	
			2017	2018
15,532	1,476	1,309	1,032	277
2015			2016	2017
6,204	113	113	70	43

The table shows the Group's cash flow hedging which is transferred to EBITDA.

Hedging of market value, currency

Hedging contracts are classified as market value hedges when the contract hedges items that are recognised as financial assets or liabilities. Hedges are recognised in financial income and expenses.

The net position expresses our currency risk from financial assets and liabilities at 31 December.

Other currency and interest derivatives

Changes to the market value of currency and interest derivatives which are not categorised as hedging are recognised in financial income and expenses. These are shown in the table to the right.

The contractual principal amount of other currency and interest derivatives was DKK 1,401 million at 31 December 2016 (2015: DKK 5,010 million), and the market value at 31 December 2016 was DKK 319 million (2015: DKK 128 million).

Hedging of market value, currency 2016 (DKK million)

	EUR	USD	GBP	Other	Total
Financial assets	8,866	657	5,248	153	14,924

Financial liabilities	(30,717)	(2,282)	(18,686)	(456)	(52,141)
Hedged using hedging instruments	6,269	-	12,661	-	18,930
Net position	(8,075)	382	1,546	(46)	(6,193)
Market value of hedging instruments	14	-	1,389	-	1,403

Accounting policies

Changes to the market value of hedging instruments that qualify for recognition as a hedge of future cash flows are recognised in other comprehensive income within a separate hedging reserve. On realisation of the hedged cash flow, the resulting gain or loss is transferred from equity and recognised in the same item as the hedged item. However, on hedging of proceeds from future loans, the resulting gain or loss is transferred from equity over the term of the loan.

If the hedged cash flows are no longer expected to be realised, the accumulated value change is transferred to profit (loss) for the year.

Changes in the market value of derivative financial instruments that are classified as hedges of the market value of a recognised asset or liability are recognised in profit (loss) for the year together with changes in the value of the hedged asset or liability to the extent of the hedged risk.

Other currency and interest derivatives 2016 (DKK million)	Contractual principal amount	Market value
Forward exchange contracts and currency swaps	851	344
Interest rate swaps	550	(25)
Total derivative financial instruments	1,401	319

Other currency and interest derivatives 2015

Forward exchange contracts and currency swaps	2,258	113
Interest rate swaps	2,752	15
Total derivative financial instruments	5,010	128

The table presents the currency risk from financial assets and liabilities based on the currencies with the greatest impact on our business. A portion of this currency risk is hedged through the use of forward exchange contracts and currency swaps.

The tables show positions and values of the currency and interest trades not used for hedging purposes.

Hedging of net investments in foreign subsidiaries

Our foreign activities entail a currency risk. The currency risk is hedged through the raising of loans in foreign currencies as well as forward exchange contracts and currency swaps.

The table to the right presents our currency risk from investments in foreign enterprises after hedging. The net position expresses the accounting exposure. If, for example, the GBP/DKK exchange rate had gone up by 10% on 31 December 2016, equity would have increased by DKK 1,262 million, corresponding to 10% of 12,622.

At 31 December 2016, the accumulated exchange rate adjustments totalled DKK -1,710 million distributed on the exchange rate adjustment of the net investment of DKK -1,723 million and the hedging thereof of DKK 13 million.

Ineffectiveness relating to hedging of net investments in foreign subsidiaries totalled DKK 1 million (2015: DKK 9 million) and is recognised in financial income and expenses.

Accounting policies

Changes in the market value of derivative financial instruments and loans that are used to hedge net investments in foreign subsidiaries or associates are recognised in the consolidated financial statements directly in equity within a separate foreign currency translation reserve.

7.3 Trading portfolio

Trading portfolio

Our trading portfolio is managed by our central Risk Management department for the purpose of:

- optimising hedging contracts
- contributing to increased market insight and
- profiting from short-term fluctuations in energy prices

The trading portfolio consists primarily of positions in oil, gas and power.

The trading portfolio constitutes a small part of our total portfolio of derivatives, and the associated risk is limited. Also, earnings from the trading portfolio constitute a limited share of our total earnings.

Trading portfolio mandate

When hedging instruments do not fully correspond to the hedged risk, any difference between the hedging contract and the hedged exposure is recognised in the income statement as part of the gain (loss) from the trading portfolio.

Overview of the Group's trading portfolio (DKK million)	2016		2015	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Oil swaps	848	(810)	199	(312)
Gas swaps and options	2,199	440	1,365	823
Power swaps	1,647	3	57	8
CO ₂ emissions allowances	69	(18)	49	(21)
Coal	20	10	2	(2)
Total	4,783	(375)	1,672	496

Market trading mandates

VaR max in 2016: DKK 70 million	Stress max in 2016: DKK 400 million	Maximum open positions in trading portfolio
VaR indicates the largest loss in one trading day to a probability of 95%. VaR is based on data for the past 60 trading days with the heaviest weighting being assigned to the most recent trading days.	Stress indicates the largest daily loss which could be sustained with the given portfolio. Stress based on data from 1 January 2006 to the present day.	<ul style="list-style-type: none"> ◦ Max 10TWh gas ◦ Max 4 million boe oil ◦ Max 8TWh power ◦ Max 3 million tonnes CO₂ ◦ Max 2 million tonnes coal

Daily position in the trading portfolio, market trading mandates, DKK million

The graph shows the daily position in the trading portfolio.

Accounting policies

Market value adjustments of physical and financial contracts relating to energy that are concluded with a view to generating gains from short-term price changes are recognised as revenue.

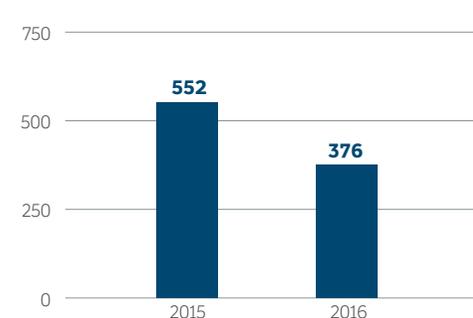

The contractual principal amount has been determined as the net position per derivative type. The table shows the market value of our derivatives which are included in the trading portfolio at 31 December.

Trading activities are carried out within mandates approved by the Board of Directors. The mandates comprise a Value at Risk (VaR) mandate and a stress mandate as well as a limit for the maximum positions measured in energy units per product (oil, gas, etc).

Annual contribution margin from the trading portfolio, DKK million

The graph shows the annual contribution margin from the trading portfolio.

7.4 Sensitivity analysis of financial instruments

The sensitivity analysis in the table shows the effect of market value changes assuming a relative price change at 31 December. The sensitivity analysis is calculated inclusive of the Oil & Gas segment for both 2015 and 2016.

Effect on profit (loss) before tax comprises financial instruments that remained open at the balance sheet date and which have an effect on profit (loss) in the current financial year.

The effect is broken down by:

- trading portfolio, these contracts will affect profit
- economic hedging, including commercial contracts. The market value changes of contracts allocated as economic hedging will be offset, wholly or in part, by a change in the hedged risk

Effect on equity before tax comprises financial instruments that remained open at the balance sheet date and which are value-adjusted directly in equity.

Financial instruments include derivatives as well as receivables and payables in foreign currencies.

The illustrated sensitivities only comprise our financial instruments and therefore omit the

Sensitivity analysis of financial instruments (DKK million)		31 December 2016			31 December 2015		
		Effect on profit (loss) before tax		Effect on equity before tax	Effect on profit (loss) before tax		Effect on equity before tax
Risk	Price change	Trading portfolio	Economic hedging ¹		Trading portfolio	Economic hedging ¹	
Oil	10%	10	(86)	-	(6)	(396)	-
	-10%	(10)	86	-	6	407	-
Gas	10%	(107)	(2,773)	-	(18)	(928)	-
	-10%	107	2,773	-	18	939	-
Power	10%	126	(885)	-	(3)	(506)	-
	-10%	(135)	894	-	3	515	-
Coal	10%	(1)	(43)	-	-	(34)	-
	-10%	1	43	-	-	34	-
USD	10%	38	(243)	-	(2)	(501)	3
	-10%	(38)	243	-	2	501	(8)
GBP	10%	(57)	(2,112)	(1,165)	(109)	(979)	(286)
	-10%	57	2,112	1,285	109	979	286
EUR	10%	175	(468)	-	107	(288)	-
	-10%	(175)	468	-	(107)	288	-
Interest	100 basis points	(255)	-	(4)	(333)	-	210

effect from contracts concluded under which physical delivery of the underlying assets is made, as these are not recognised as financial instruments in accordance with IAS 39.

If the hedged exposure had been included in the sensitivity analysis, the effect of a price change would have been reduced or offset entirely.

Net investments and associated hedging of net investments in foreign subsidiaries are not included in the table, as the effect of the sum of the investment and the hedging is considered to be neutral to price changes.

A 10% increase in the currencies hedged in connection with net investments would reduce equity by DKK 2,442 million (2015: DKK 2,796

million) arising from the hedging instruments. All other conditions being equal, a decrease in the exchange rate would have had a corresponding opposite effect.

¹ Economic hedging comprises derivatives entered into to hedge future financial risks. The market value changes of these contracts will be offset, wholly or in part, by a change in the hedged risk. Also included are commercial contracts recognised at market value.

7.5 Credit risks

We are exposed to credit risks from our trading partners and customers. A large part of our counterparty risks concerns large international energy companies and banks. Such trading is regulated under standard agreements, such as EFET and ISDA agreements, which feature, for instance, credit rating and netting provisions. Our credit exposure is mainly concentrated on counterparties in Denmark, the UK, Germany and Sweden.

We limit our credit risks by:

- systematically rating significant counterparties
- granting a credit limit or
- demanding that collateral be furnished

The counterparties and credit limits granted are monitored on an ongoing basis. The monitoring is based on the framework established by our Board of Directors and Executive Board. For the most significant counterparties, an internal credit rating is required to determine the internal rating and the granting of credit limits. The rating is based on information from external credit rating agencies, publicly available information and own analyses.

We suffered no losses from any single major counterparty in 2015 or 2016.

The credit risk from our financial assets primarily concerns derivatives, cash and

bond portfolios as well as receivables. The assessment is based on the individual counterparty's ratings with Standard & Poor's, Moody's and Fitch. The figures do not reflect our actual credit exposure as the positions are calculated before offsetting our debt to such counterparties.

The AAA/Aaa category covers our position in Danish AAA-rated government and mortgage bonds. The non-rated category primarily consists of trade receivables from customers such as end-users and PSO customers.

The credit quality of the Group's counterparties (DKK million)

	2016	2015
Clearing centres	1,652	3,734
AAA/Aaa	12,395	14,877

- Financial institutions
- Not distributed
- Energy and supply
- Other businesses
- Oil & Gas companies

The graph shows the distribution of our credit exposure.

Offsetting of financial assets and liabilities

We have a number of counterparties in respect of which we are both buyer and seller of financial contracts, etc. Consequently, our gross financial assets and liabilities can be significant before offsetting.

Offsetting is typically limited within specific products. According to IFRS, offsetting is possible when payment and receipt from the same counterparty occur simultaneously.

The table to the right shows financial assets and liabilities that are subject to offsetting agreements, and related collaterals.

The increase in the amount offset against derivative financial instruments is primarily attributable to the increase in the market value of oil-related trades.

Accounting policies

Positive and negative values are only offset if we are entitled to and intend to settle several financial instruments net.

Offsetting of financial assets DKK million	Derivative financial instruments	Trade receiv- ables	2016	Derivative financial instruments	Trade receiv- ables	2015

8. Other notes

174 companies

DONG Energy comprises 174 Danish and foreign companies in the continuing part of the Group

44.4bn

Our contractual obligations amounted to DKK 44,414 million at 31 December 2016

5.6bn

Our operating lease obligations amounted to DKK 5,601 million at 31 December 2016

This section contains the remaining statutory notes.

Operating lease obligations

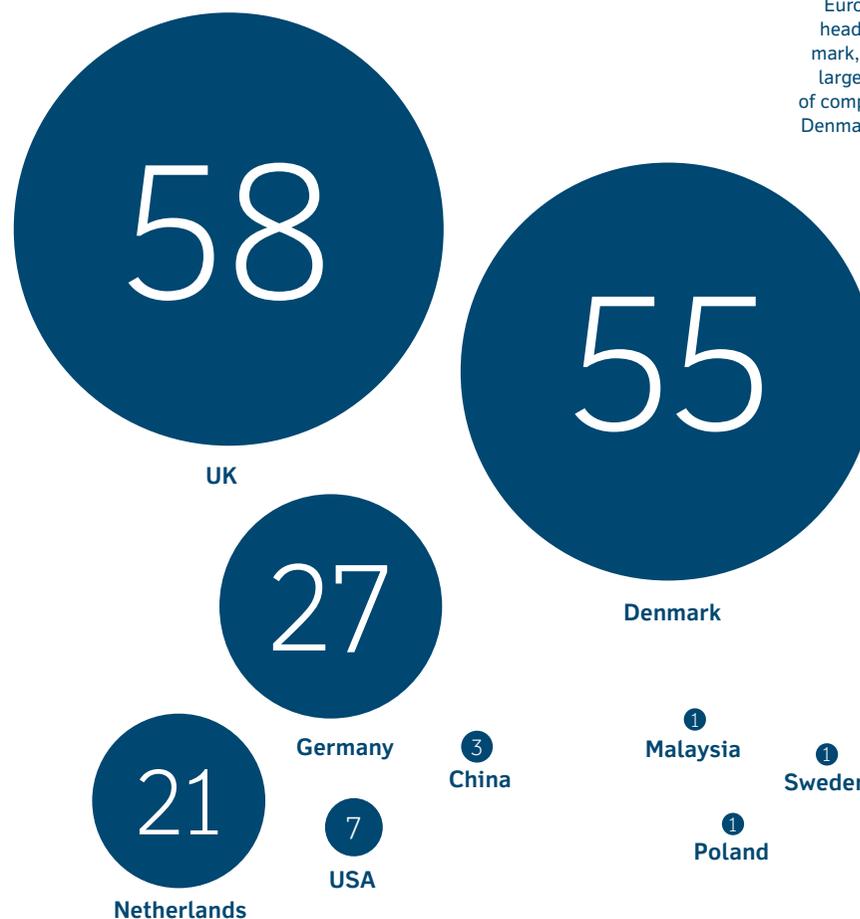

DONG Energy has entered into operating leases for use in the day-to-day operation and servicing of commissioned assets as well as in relation to the construction of offshore wind farms, in particular.

Assets held under operating leases comprise, among other things, land and seabeds for use for offshore wind farms in the UK, leased harbour areas and leased gas storage facilities in Germany. Finally, the office premises in Gentofte and London are also held under operating leases.

Contractual obligations

DONG Energy has entered into agreements on investments in property, plant and equipment in connection with the construction of offshore wind farms, biomass conversions of power station units and improvement of the power distribution network.

Distribution of companies

We are a Northern European group with headquarters in Denmark, and we have the largest concentration of companies in the UK, Denmark and Germany.

8.1 Related-party transactions

Related parties that have control over the Group comprise the Danish State, represented by the Danish Ministry of Finance.

Related parties with a significant influence include Goldman Sachs.

Other related parties are the Group's associates and joint ventures, members of the Board of Directors and the Executive Board and other senior executives.

Reference is made to note 8.7 for an overview of our joint ventures and associates.

In 2016, we divested Gas Distribution to Energinet.dk, which is owned by the Danish State. The cash selling price was DKK 2,325 million.

Related-party transactions are made on arm's length terms. Intra-group transactions have been eliminated in the consolidated financial statements.

The remuneration and share programme for management are described in notes 2.6 and 2.7.

We use the exemption set out in IAS 24.25 concerning entities in which the state is a related party, and transactions with state enterprises are therefore not disclosed. Transactions with owners consist solely of transactions with Goldman Sachs.

There were no other related-party transactions during the period.

Transactions with joint ventures, associates and owners are shown in the table.

8.2 Auditor's fees

The Danish Parliament has adopted amendments to the Danish Act on Approved Auditors and Audit Firms which came into force on 17 May 2016. The amendments implement the Directive of the European Parliament and of the Council amending the eighth Company Law Directive.

The purpose is to improve audit quality by focusing on the auditor's professional scepticism, increasing the requirement for auditor independence and the internal organisation of audit firms and their quality management and thereby strengthening public confidence in audited financial statements.

The change entails, among other things, limitations on which and how many non-audit services the auditor is allowed to provide.

We have prepared a new policy for the use of a group auditor. The purpose of the policy is to fulfil the Audit and Risk Committee's responsibility for monitoring non-audit services.

Among other things, the policy introduces a cap on fees charged by the group auditor for the provision of non-audit services of 100% of statutory audit as well as introducing a preliminary approval of non-audit services. The cap may be exceeded subject to approval by the Audit and Risk Committee.

PwC is DONG Energy's auditors appointed by the general meeting. PwC audits the

consolidated financial statements of DONG Energy and our subsidiaries' financial statements in all the countries where we are represented. In addition, PwC provides consultancy services and performs other audit-related tasks.

In 2015 and 2016, PwC also provided consultancy services in connection with the IPO as well as issuing a report on the prospectus and carrying out other assurance engagements in connection with the IPO. The total fees to PwC in connection with the IPO amounted to DKK 27 million, of which DKK 18 million in 2016.

Other assurance engagements include besides statements on the prospect reviews of non-financial data and of regulatory financial statements.

Tax and VAT advice primarily includes advice in connection with the divestment of assets and companies and advice in connection with the preparation of tax returns and the calculation of the income subject to international joint taxation.

Non-audit services include other consultancy services from PwC, including advice in connection with the divestment of assets and companies, capital injections, etc.

In 2016 tax advice and non-audit services include fee of DKK 5.6 million concerning the divestment process of Gas Distribution and oil pipeline in the North Sea to Energinet.dk

DKK million

	2016	2015
Statutory audit	9	9
Other assurance engagements	14	6
Tax and VAT advice	10	8
Non-audit services	9	11
Total fees to PwC	43	34

The table includes a fee of DKK 2.4 million in 2016 relating to the Oil & Gas segment.

8.3 Operating lease obligations

Wind Power's assets held under operating leases comprise mainly seabed relating to offshore wind farms in the UK, service vessels and a harbour area in Belfast, Northern Ireland.

Bioenergy & Thermal Power's significant leased assets are two plots of land. In the Netherlands, we lease the land on which the Enecogen Power Station is located, and in the UK, we lease land in Northwich which will be the site of our first REnescience plant.

Distribution & Customer Solutions mainly lease gas storage facilities in Germany.

Leased assets recognised under Other activities mainly comprise two office premises in Gentofte and London. The premises are used by employees in most of our segments.

We have entered into leases for service and installation vessels (Wind Power) for the period 2017–2023. These obligations are not included in the statement of operating lease obligations, as we had no right to use the leased assets at 31 December 2016. The minimum lease payments total DKK 959 million.

Seabed leases include variable lease payments which depend on the amount of MWh generated. However, we have agreed on minimum lease payments for seabeds.

Lease payments recognised in profit (loss) for the year amount to DKK 746 million (2015: DKK 722 million).

For the purpose of calculating the FFO/adjusted interest-bearing net debt, the present value and interest expenses of the lease obligations are calculated. The results and the discount rate are shown in the table with supplementary information for operating lease obligations.

Accounting policies

We recognise operating lease payments in profit (loss) for the year over the term of the lease on a straight-line basis. When using assets held under operating leases in respect of construction of offshore wind farms or other assets, we recognise lease payments in the cost of the asset in step with the construction of the asset.

Lease payments recognised in profit (loss) for the year	746	722
Calculated interest expenses on lease obligations	194	191
Discount rate applied	4.5%	4.5%

The present value is calculated by discounting the individual obligations each year using our internal discount rate of 4.5%.

8.4 Contractual obligations

Contractual obligations at 31 December 2016 in Wind Power mainly related to wind turbines, foundations and cables, etc, for the construction of offshore wind farms. The obligations of Bioenergy & Thermal Power mainly related to the biomass conversion of Skærbæk Power

Station and the construction of a REnescence plant in Northwich, UK, while the obligations of Distribution & Customer Solutions related to the roll-out of intelligent power meters.

 Contractual obligations by segment (DKK million)	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities	Total
	0-1 year	20,981	565	207	284
1-5 years	20,695	4	1,093	585	22,377
2016	41,676	569	1,300	869	44,414
2015	39,452	1,121	1,412	2,472	44,457

Overview of concluded contracts where delivery had not taken place at 31 December.

8.5 Categories of financial instruments

Categories of financial instruments

Financial instruments are used for various purposes. The purpose determines the category, and whether the value adjustment of the instrument should be recognised in the profit (loss) for the year or as part of the hedging reserve in equity.

Financial instruments are recognised at market value. However, bond and bank debt is recognised at amortised cost. The market value of bond and bank debt is stated in note 6.3.

 Categories of financial instruments (DKK million)	2016	2015
	Financial assets measured at market value in profit (loss) for the year (derivative financial instruments)	4,945
Financial assets measured at market value in profit (loss) for the year (securities)	16,533	21,221
Financial assets used as hedging instruments	3,744	7,429
Loans and receivables	12,490	15,548
Available-for-sale financial assets	158	190
Financial liabilities measured at market value in profit (loss) for the year	4,201	456
Financial liabilities used as hedging instruments	2,729	9,075
Financial liabilities measured at amortised cost	38,239	53,255

The table shows our financial instruments divided into categories. The category indicates how the financial instrument is recognised in the financial statements.

8.6 Assets and liabilities measured at fair value

Fair value hierarchy of financial instruments (DKK million)	Quoted prices (level 1)	Observable inputs (level 2)	Non-observable inputs (level 3)					
				2016	Quoted prices (level 1)	Observable inputs (level 2)	Non-observable inputs (level 3)	2015
Securities	13,428	3,105	-	16,533	16,739	4,482	-	21,221
Total securities	13,428	3,105	-	16,533	16,739	4,482	-	21,221
Commodities	2,461	2,914	269	5,644	4,993	8,569	796	14,358
Currency	-	2,967	-	2,967	-	1,195	-	1,195
Interest	-	78	-	78	-	89	-	89
Total derivative financial instruments	2,461	5,959	269	8,689	4,993	9,853	796	15,642
Total assets	15,889	9,064	269	25,222	21,732	14,335	796	36,863
Commodities	1,467	3,637	426	5,530	680	3,573	818	5,071
Currency	-	1,372	-	1,372	-	3,930	-	3,930
Interest	-	28	-	28	-	530	-	530
Total derivative financial instruments	1,467	5,037	426	6,930	680	8,033	818	9,531
Total equity and liabilities	1,467	5,037	426	6,930	680	8,033	818	9,531

The table shows our assets and liabilities which are measured at fair value distributed by types of price input. Fair values at level 3 where significant inputs cannot be observed in a market constitute a small part of the total fair values.

Valuation principles and material assumptions

In order to keep modifications of parameters, calculation models or the use of subjective estimates to a minimum, it is our policy to determine fair values on the basis of external information that most accurately reflects the fair values.

Fair values are determined continuously by our Risk Management function, which reports to the CFO.

- Level 1: Fair values are included in quoted prices if the fair value can be derived

directly from an active market, for example for listed securities.

- Level 2: Fair values are included in observable inputs if the fair value has been calculated using inputs which can be derived from active markets etc.
- Level 3: Fair values are included in non-observable inputs if the fair value has been calculated using inputs which cannot be derived from active markets etc. often because trading in the active market is within a short time horizon. The valuation of this group is therefore subject to some uncertainty.

The most important parameter resulting in contracts being classified as level 3 is the power price. Normally, the price can be observed for a maximum of five years in the power market, after which an active market no longer exists. Beyond the five-year horizon, the energy price is thus projected on the basis of the observable forward price for years 1 to 5. As the forward price of power develops stably during the five-year period, the projection over a small number of years is not deemed to be associated with any material risk.

Accounting policies

Level 1 comprises quoted securities and derivative financial instruments that are traded in active markets.

Level 2 comprises derivative financial instruments, where valuation models with observable inputs are used to measure fair value.

Level 3 comprises primarily long-term contracts on the purchase/sale of, in particular, power and gas, and oil options. The fair values are based on assumptions concerning the long-term prices of, in particular, power, gas, coal, USD, EUR, volatilities as well as risk premiums in respect of liquidity and market risks. Since there are no active markets for the long-term prices of power, oil and gas, the fair value has been determined through an estimate of the future prices.

All assets and liabilities measured at fair value are measured on a recurring basis.

¹ S = subsidiary
A = associate
JO = joint operation
JV = joint venture
NC = non-consolidated entity

² The company applies the provision in section 5 or section 6 of the Danish Financial Statements Act to omit presenting a separate annual report.

³ Subsidiaries owned directly by DONG Energy A/S

Supplementary information Consolidated non-financial statements

Address profound societal challenges / Serve the energy needs of our customers
Be a great and safe place to work / Basis of reporting

Consolidated non-financial statements

3.6GW

At the end of 2016, we had installed a total of 3.6GW of offshore wind capacity. Our ambition is to reach 11-12GW by the end of 2025

46%

The coal share of fuels used at the power stations was 46% in 2016. Our target is to phase out coal altogether in 2023

LTIF of 1.8

The lost-time injury frequency (LTIF) has been reduced from 2.0 in 2015 to 1.8 in 2016. The target is an LTIF of 1.5 or less by the end of 2020

To drive and document DONG Energy's green energy transformation and responsible business operations, we use a range of non-financial indicators in addition to the financial statements.

In the non-financial statements, we explain our results, developments, objectives and accounting policies for non-financial strategic targets and business drivers and for selected sustainability indicators.

We track the progress of our strategy through 11 strategic targets (page 21). Our business drivers (page 27) support the realisation of our strategic targets.

The full reporting of sustainability is available in two independent publications: Sustainability Report 2016 and Sustainability Performance 2016.

In 2016, we announced that we were planning to divest our Oil & Gas entity. Data from Oil & Gas are therefore not included in the non-financial statements. In the Sustainability Performance 2016 report, we show selected non-financial results for Oil & Gas.

In the non-financial statements, we report in accordance with the applicable Danish Financial Statements Act and selected standards. Data are consolidated according to the same principles as in the financial statements, unless otherwise stated.

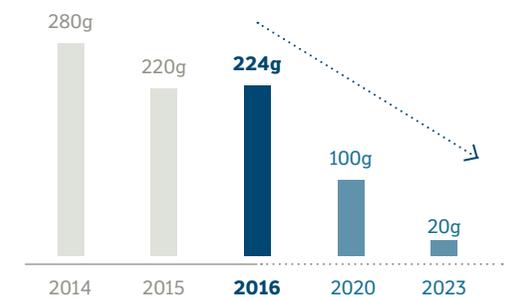

The non-financial statements are structured in the same way as our thematic division of the strategic targets.

- Address profound societal challenges
- Serving the energy needs of our customers
- Be a great and safe place to work

The purpose is to clarify how the non-financial indicators support DONG Energy's mission, vision and strategy.

Greenhouse gas emissions, g CO₂e/kWh

We have reduced our 2020 target to 100g CO₂e/kWh, which represents a halving of our original target. We have also defined a target of no more than 20g CO₂e/kWh in 2023.

We continue to reduce greenhouse gas emissions in step with our green energy expansion and phase-out of coal as a fuel. In 2016, emissions were 224g CO₂e/kWh, which is slightly higher than in 2015. This is primarily attributable to higher power generation at the power stations due to increased demand as a consequence of a lower supply of wind power and hydropower in the Nordic region in 2016. In addition, our Dutch power station generated 48% more power than in 2015, where power generation was low. We are working to achieve a maximum emissions level of 100g CO₂e/kWh by 2020 and 20g CO₂e/kWh by 2023.

We have changed our accounting policies in respect of the calculation of emissions of CO₂ per kWh. See page 165.

Address profound societal challenges

We address profound societal challenges by developing green, independent and economically viable energy systems.

¹ Our 2025 ambition is an installed offshore wind capacity of 11-12GW

² Our 2023 target is to stop using coal in 2023

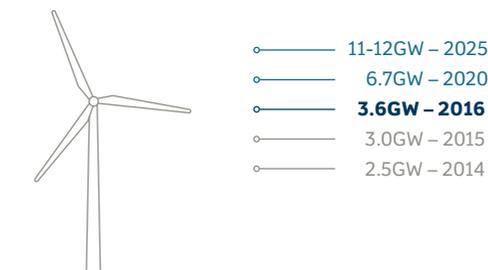

³ Our 2020 target is 100g CO₂e/kWh and our 2023 target is 20g CO₂e/kWh

* We started measuring and recording the sourcing of certified biomass in August 2016. Data have therefore been calculated for the period August to December 2016.

The wind energy content fell from 103% in 2015 to 93% in 2016. In 2016, we saw lower wind energy content than in a normal wind year, based on historical averages, whereas 2015 had higher wind energy content than a normal wind year.

Installed offshore wind capacity, GW

We have an ambition of increasing the installed capacity to 11-12GW at the end of 2025. Following the completion of Hornsea 1, we will exceed our original target of installing 6.5GW of offshore wind capacity by 2020 by 0.2GW.

We are the company that has constructed the most offshore wind turbines globally. We have constructed more than a quarter of the world's total offshore wind capacity.

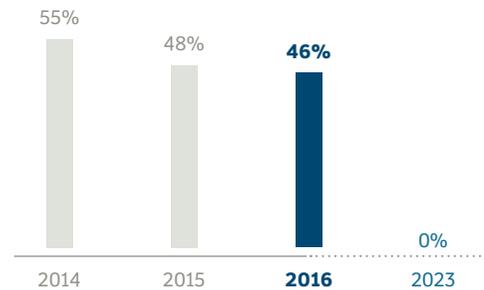

In 2016, we reached the milestone of offshore wind turbine no. 1,000.

In 2016, we completed the offshore wind farms Gode Wind 1 & 2 in Germany. We made a final investment decision to construct Hornsea 1 in the UK and Borkum Riffgrund 2 in Germany.

We continued our maturation of new offshore wind projects in the USA and opened an office in Taiwan.

Coal share of fuels used for thermal power and heat generation, %

Coal is the form of energy resulting in the highest CO₂ emissions from incineration. Our target is to completely phase out coal in our thermal power and heat generation by 2023.

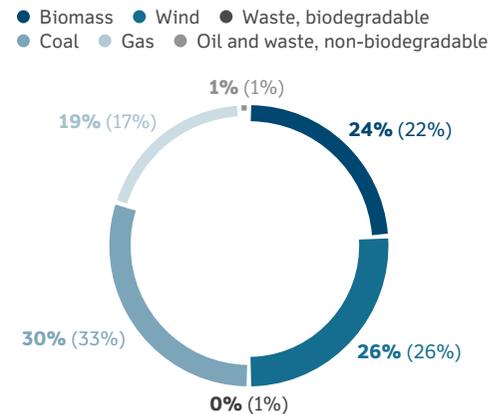

We are phasing out coal by converting our heat generation to sustainable biomass in the form of wood pellets and wood chips and by discontinuing our coal-based power generation.

The coal share of fuels used for thermal power and heat generation dropped from 48% in 2015 to 46% in 2016. At the end of 2016, we completed the conversion of unit 3 at Studstrup Power Station and unit 1 at Avedøre Power Station from coal to biomass.

The decision to stop all use of coal in 2023 means that we will have to find a future solution for the last two coal-fired power stations: Asnæs Power Station and Esbjerg Power Station.

Fuels and primary energy resources in power and heat generation, % 2016 (2015)

Energy generation from wind and biomass constitute green energy resources that can replace coal, gas and oil. We believe that renewable energy is crucial in the fight against climate change.

Since the establishment of DONG Energy in 2006, we have undergone a transformation from being one of the most coal-consuming companies in Europe to being a global leader within renewable energy.

Wind-based generation accounted for 26% of the total power and heat generation in both 2015 and 2016. The share has not increased even though wind-based generation rose by 5% from 2015 to 2016. This is due to the fact that thermal generation was also higher in 2016.

Biomass-based power and heat generation increased from 22% in 2015 to 24% in 2016. At the same time, the coal-based share fell from 33% in 2015 to 30% in 2016.

CO₂/kWh and renewable energy share – new accounting policies

In 2016, we changed our accounting policies in respect of the calculation of CO₂/kWh and renewable energy share. The Greenhouse Gas Protocol forms the basis of the change. The change has been implemented for all historical results and the 2020 target for CO₂e/kWh.

In the calculation of the total power and heat generation, we have previously translated the heat generation into so-called power equivalents. This means that we have translated the heat generation into how much power we could have generated by not having generated heat. In practice, this meant that the considerably higher energy efficiency that the combined power and heat generation entailed was not reflected in the results. The Greenhouse Gas Protocol recommends that, in the calculation of total generation from combined heat and power plants, power and heat generation be translated into the same unit and aggregated. We use GWh as the aggregated unit.

Based on the Greenhouse Gas Protocol, we have expanded our statement of CO₂ emissions to include the other two greenhouse gases N₂O and CH₄ from thermal generation. We now calculate CO₂e/kWh, which means that greenhouse gas emissions are measured in CO₂ equivalents per produced kWh of power and heat generation, rather than just CO₂. The change has only had a marginal impact.

Accounting policies

Decided (FID'ed) capacity, offshore wind

Decided (FID'ed) capacity is the accumulated installed offshore wind capacity, including capacity for offshore wind farms where a final investment decision has been made.

Installed capacity, offshore wind

Installed offshore wind capacity is calculated as the cumulative offshore wind capacity installed by DONG Energy. The capacity is calculated as installed gross capacity before divestments.

Production capacity, offshore wind

Production capacity is calculated as the capacity of the power generation which DONG Energy Wind Power produces and reports. The same scope and consolidation as for power generation are used.

Production capacity is calculated and factored in from the time when the individual wind turbine has passed the 240-hour test. Production capacity, offshore wind is calculated at 31 December. The wind farms Gunfleet Sands and Walney 1 & 2 have been consolidated according to ownership interest. The other wind farms are financially consolidated.

Availability, load factor and wind energy content for offshore wind

Availability, load factor and wind energy content are calculated only for offshore wind farms. The time-based availability factor (availability) is calculated as the ratio of the number of hours the offshore wind farms are available for power generation to the total number of hours in a given period. Total availability is determined by weighting the individual offshore wind farms' availability by the capacity of the offshore wind farm. Availability is commercially adjusted.

The load factor is calculated as the ratio between actual production over a period relative to potential production which is possible by continuously exploiting the maximum capacity over the same period. The load factor is commercially adjusted.

Commercially adjusted means that, for Danish and German offshore wind farms, availability and load factor, respectively, are adjusted if the offshore wind farm

has been financially compensated by the transmission system operators in situations where the offshore wind farm is available for generation, but the output cannot be supplied to the grid due to maintenance or grid interruptions. Offshore wind farms in the UK are not compensated for non-access to supply power to the grid.

New offshore wind turbines are included in the calculation of availability and load factor once they have passed the 240-hour test.

Wind energy content is calculated as the ratio between actual gross production in a given period and production in a 'normal wind year'. Actual production is calculated as actual net production adjusted for availability.

The wind energy content for new offshore wind farms is included from the beginning of the first calendar year in which the entire wind farm is in operation.

Generation

Power generation from wind is calculated as sold production. The wind farms Gunfleet Sands and Walney 1 & 2 have been consolidated according to ownership interest. The other wind farms are financially consolidated.

Thermal power generation is determined as net production sold based on settlements from the official Danish production database. Data for generation from foreign facilities are provided by the operators.

Thermal heat and steam generation is measured as net output sold to heat customers.

The average for degree days is based on the period 2000–2014. The degree days for a day are calculated as the difference between the average indoor temperature of 17 degrees Celsius and the average outdoor temperature.

Renewable energy share of power and heat generation

The renewable energy share of the power and heat generation and the distribution of the generation on the individual energy sources and fuels are calculated on the basis of the generation from the plants.

For wind-based generation, it is simply a question of calculating the individual energy-based generation for the plant, as it uses one energy source only.

For the combined heat and power plants, which can use several different fuels, the calculation is as follows: For the individual combined heat and power plant unit in the given period, the share of the specific fired fuel (eg biomass) is calculated relative to the total fired fuel quantity. The fired fuel share is then multiplied by the total power and heat generation (including steam) for the specific unit in the specific period. This results in the fuel-based generation for the individual unit – for example the biomass-based generation of power and heat in the combined heat and power plant unit.

All the calculated fuel-based generation and the wind power generation are then added up to a total, which tallies with the total generation. Based on this, the shares of the individual energy sources and the fuel-based generation can be divided by the total to arrive at the shares in per cent.

In practice, waste consists of a mixture of biomass and fossil fuel-based parts. When calculating the renewable energy share, waste fuel is therefore divided into a biodegradable and a non-biodegradable part. Key figures from the Danish Centre for Environment and Energy are used for this purpose. In 2016, 55% of the waste was biodegradable.

The following energy sources and fuels are considered renewable energy: Wind, biomass, waste (biodegradable). The following energy sources are considered fossil energy sources: Coal, natural gas, oil and waste (non-biodegradable).

Coal share used for thermal power and heat generation

The fuel consumption for power and heat generation at the individual power stations is stated in GJ. The coal-based share is calculated as the coal consumption in GJ relative to the total fuel volume in GJ.

Biomass share of thermal power and heat generation

The biomass share of thermal power and heat generation is calculated according to the same method as the

one used to calculate the renewable energy share of power and heat generation described above.

Sourcing of certified biomass

Certified biomass is defined as wood-based biomass; wood pellets and wood chips. Certified biomass must be certified within at least one of the categories defined in the Danish industry agreement on ensuring sustainable biomass.

Certified biomass is calculated as the share of sourced certified wood-based biomass of the total sourcing of wood-based biomass delivered to the combined heat and power plants.

Certified biomass is a new strategic target and a new non-financial indicator. The reporting began in August 2016 on the start date for the Danish industry agreement on certification and reporting of certified biomass.

Greenhouse gases

Greenhouse gas emissions per kWh of power and heat generation is defined as the greenhouse gas emissions divided by the total power, heat and steam generation supplied to the network.

CO₂ emissions (g CO₂e/kWh) are calculated as greenhouse gases measured in CO₂e (CO₂ equivalents) relative to the total generation of power, heat and steam, measured in kWh.

Greenhouse gases comprise greenhouse gas emissions from the combustion of fuels in thermal power and heat generation. These are covered by the GHG Protocol and comprise CO₂ (carbon dioxide), N₂O (nitrous oxide) and CH₄ (methane).

In practice, waste is considered a partially CO₂-neutral fuel, as it consists of both fossil fuels and biomass-based fuels. We use a conversion factor to calculate the CO₂ emissions from the incineration of waste. The conversion factor (37kg CO₂/GJ waste) has been used by the Danish Centre for Environment and Energy since 1990 and until today.

Serving the energy needs of our customers

Strategic target	Business driver	Sustainability indicator	Title	Unit	Target 2020	2016	2015
Reputation							
●		●	Reputation	Scale 0-100	≥55	48	47
Customer experience							
●		●	Customer satisfaction, residential customers in Denmark	Scale 1-100	≥80	76	76
●		●	Customer satisfaction, business customers in Denmark	Scale 1-100	≥75	75	75
●		●	Customer satisfaction, distribution customers in Denmark	Scale 1-100	≥80	83	78
		●	Customer complaints	Number		2,473	2,031
●		●	Security of supply (power outages per customer, SAIFI)	Number	0.5*	0.49	0.35
Sales and distribution							
	●		Gas sales	TWh		143.4	153.2
	●		Sales of power	TWh		36.5	35.2
	●		Gas distribution	TWh		5.8	8.1
	●		Distribution of power	TWh		8.5	8.4

We are working at all times to fulfil our customers' energy needs by delivering innovative and efficient energy solutions through our distribution and sales activities, while in Denmark we have the most reliable power supply in Europe.

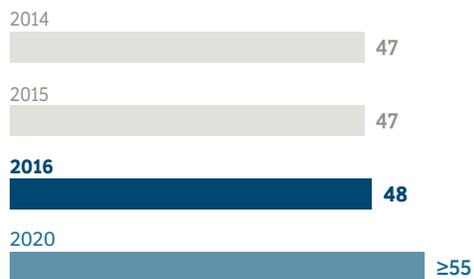

Sales of gas and power are exclusive of internal sales from Distribution & Customer Solutions to Bioenergy & Thermal Power.

* Average security of supply in Denmark in 2015. Our target is to offer a level of security of supply which is higher than or on par with the Danish average.

 **Reputation**, scale 0-100

We are working to improve our reputation by ensuring a high level of integrity in our business, continuing the green transformation, helping our customers to save energy and being an attractive place to work.

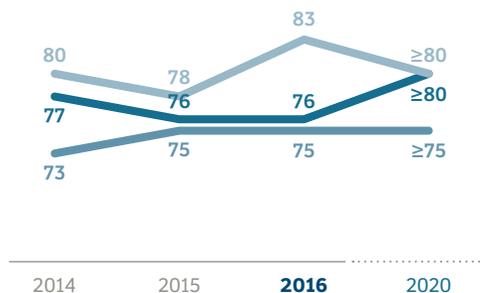

Our overall reputation is affected by a number of parameters, such as the extent to which the Danish people see DONG Energy as a likeable company which you can trust and which conducts itself in an ethically correct manner, and as an open and responsible company with a positive impact on society. We are currently being assessed relatively low on these parameters. Since 2011, our reputation score has fallen by 6 index points on a scale of 0 to 100.

In connection with our IPO on the stock exchange in Copenhagen in June 2016, we saw a brief boost in DONG Energy's reputation of +2 points. In 2016, our reputation score was 48 points, which is lower than the average for other large Danish companies.

Customer satisfaction, scale 1-100

A high level of customer satisfaction is key to retaining existing customers and attracting new ones. We regularly measure how satisfied our customers are with DONG Energy.

● B2C ● B2B ● Distribution

In 2016, we introduced new measures to ensure that our residential customers are treated in an open and competent way.

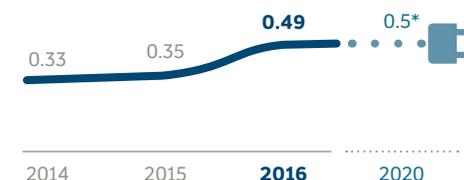

Customer satisfaction among our residential customers remained at 76 in 2016. Our objective of achieving at least 80 in 2020 is therefore still at distance.

Customer satisfaction among our business customers remained at 75 in 2016, which – like last year – corresponds to our 2020 target.

Our distribution customers' satisfaction increased from 78 in 2015 to 83 in 2016. The result is three index points above our 2020 target, and we are therefore very pleased with this development.

Security of supply, number of power outages per customer, SAIFI

Meeting our clients' expectations of a high level of security of supply requires a smoothly functioning power grid without interruptions. The frequency of power outages per customer increased from 0.35 in 2015 to 0.49 in 2016.

* Average security of supply in Denmark in 2015. Our target is to offer a level of security of supply which is higher than or on a par with the Danish average.

The number of 10kV cable faults on a special type of cables has been considerably higher in 2016, which has entailed that more customers experienced power outages compared with 2015.

One of the reasons for the increased error frequency was the high level of construction activity in the Copenhagen area.

Our cables were, among other things, impacted in connection with excavations, which they are very sensitive to due to their age and construction.

In 2016, we implemented a new IT system to monitor the power grid with a view to enabling quicker correction of technical problems.

Accounting policies

Reputation

DONG Energy's reputation is measured through interviews with 100 people per week in the Danish population aged 18-64. The respondents are selected at random and are representative in terms of age, gender and geography within the above-mentioned group. Each respondent is asked three questions about DONG Energy's reputation.

The questions are the same, and the survey is therefore comparable across the individual years. The responses are translated into an index of 0-100, and the total score for the year is the average of the results for the 12 months. The survey is carried out by an external research firm.

Our reputation is measured for DONG Energy as a whole. It was therefore not possible to remove Oil & Gas data from our reputation score for 2016 and all comparative years as opposed to the remaining consolidated non-financial statements for the Group.

Customer satisfaction in Denmark

In 2016, we introduced more detailed accounting policies for all three customer satisfaction surveys in order to strengthen the data quality of the historic customer satisfaction data in accordance with the changed practice.

Customer satisfaction for residential customers in Denmark is measured according to interaction between the customer and DONG Energy. The score is therefore not an expression of customers' overall satisfaction with DONG Energy, but is rather related to a given situation.

The score is a weighted score based on the contact volume of the underlying touch points. The current touch points are customer service for gas and power, outbound sales and web. An external supplier conducts interviews.

In 2016, it was specified that customer satisfaction for residential customers is a quarterly average of monthly values. The average for Q4 is shown in the annual report.

Customer satisfaction for business customers in Denmark is determined on the basis of customer satisfaction surveys among DONG Energy's business customers in Denmark. Customer satisfaction is determined on the basis of quarterly interviews about customers' satisfaction with DONG Energy as a whole.

The survey only comprises active customers with whom DONG Energy has been in touch in connection with contracts for the supply of power or gas in the previous or next month. So-called sleeping customers are therefore not included in the statement. The method follows the ACSI model based on the EPSI scale. An external agency conducts the interviews and reports absolute and weighted results via a web-based dashboard.

In 2016, it was specified that customer satisfaction for business customers is reported on a quarterly basis as a year-to-date simple average based on the number of respondents per quarter (approximately 250). Data for Q4 are shown in the annual report.

Customer satisfaction for distribution customers in Denmark is determined on the basis of four types of interactions with distribution customers: Disruption of supply, visits relating to gas, replacement of meters and customer and market support. Customer satisfaction is measured as the customer's satisfaction in a specific context. Respondents are randomly selected, and the survey is carried out by an external supplier.

In 2016, it was specified that customer satisfaction for distribution customers is reported on a quarterly basis as a year-to-date average of quarterly results. Data for Q4 are shown in the financial statements.

Customer satisfaction for residential and distribution customers thus relates to a specific situation, whereas customer satisfaction for business customers is an expression of customers' satisfaction with DONG Energy as a whole.

We have a number of very large business customers. In respect of these, it is important for us to assess the customer relationship in general and not just the experience of a specific situation.

Customer complaints, Denmark

The number of customer complaints received is calculated each month by a direct count from DONG Energy's case handling system. The number of customer complaints has been calculated on the basis of all customer groups in Denmark (residential, business and distribution customers). The number of new customer complaints is reported on a monthly basis, and monthly follow-up reports are prepared which are used internally to monitor the development.

Security of supply

The frequency of announced and unannounced power outages for customers is expressed in terms of SAIFI (System Average Interruption Frequency Index), which is calculated as the average number of power outages per customer per year.

Sales

Sales of power and gas are calculated as physical sales to retail and wholesale customers and exchanges. Sales of power and gas are based on readings from DONG Energy's trading systems. Internal sales to Bioenergy & Thermal Power are not included in the statement. Only natural gas is included in gas sales.

Distribution

Gas distribution has been determined on the basis of data from the official system in Denmark. Distribution of power has been determined on the basis of data from the official system in Denmark, EL-Panda, which measures and calculates total area consumption.

Be a great and safe place to work

Strategic target	Business driver	Sustainability indicator	Title	Unit	Target 2020	2016	2015

		●	Improvement points open at 31 December	Number		19	15
		●	Improvement points opened in the course of the year	Number		20	33
		●	Improvement points closed in the course of the year	Number		16	18

We never compromise on safety for our employees, and keep a constant focus on being a great and safe place to work with committed, motivated and satisfied employees through continuous training and development.

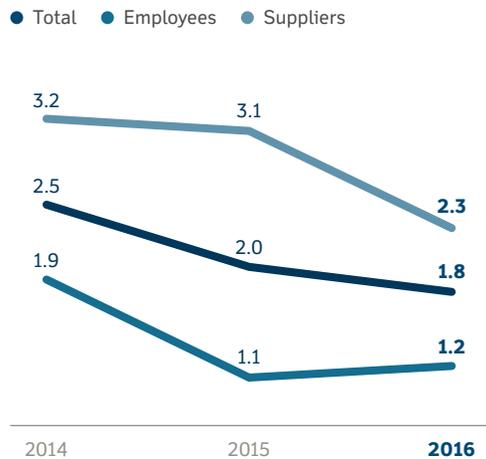

Our employee turnover rate increased from 12% in 2015 to 16% in 2016. The primary cause is the restructuring of A2SEA and the discontinuation of activities in the subsidiary CT Offshore.

In 2016, reporting on cases of inappropriate or illegal business conduct led to three substantiated whistle-blower cases. Two cases concerned conflicts of interest in connection with external business partners, and one case concerned kickbacks from two suppliers. The cases have had consequences for the involved employees and consultants' employment with us. None of the cases reported were critical to our business, nor have they impacted the Group's financial results. We take such cases very seriously and do what we can to avoid that similar cases occur again.

Safety for employees and suppliers, LTIF

We must ensure that our employees and suppliers return home from work safely, no matter whether they work at the top of an offshore wind turbine or in the office. In 2016, we achieved an LTIF of 1.8.

Lost-time injuries, LTIF

The frequency of lost-time injuries (LTIF) for both employees and suppliers has improved significantly over the past three years. LTIF was 1.8 at year-end 2016.

Our LTIF dropped from 2.0 in 2015 to 1.8 in 2016. We will continue to work towards achieving our target of an LTIF of ≤ 1.5 in 2020. Most importantly, we have had no fatalities since 2012.

We are constantly striving to improve safety for employees by focusing on areas in which

we believe that we are best able to influence the safety culture, manage risks and improve our safety performance.

One of our focus areas is the safety culture in DONG Energy. In 2016, we conducted the first safety culture survey in the entire company. The results showed a maturity level of 3.5 on a scale of 0 to 4 and is a good basis for our efforts in 2017.

A large proportion of our occupational injuries involves persons tripping, falling or twisting a limb or joint, and we are working to further reduce these types of injuries.

Furthermore, we will ensure thorough follow-up on and reduce the number of near-miss incidents with the potential to cause harm to our employees. We will also involve our suppliers further in our safety work.

In 2016, we increased our focus on the psychosocial working environment and its impact on physical safety. For example, we have developed a stress reduction tool for our managers. The tool will be rolled out in 2017 and will be integrated in our internal Safety Leadership Onboarding course.

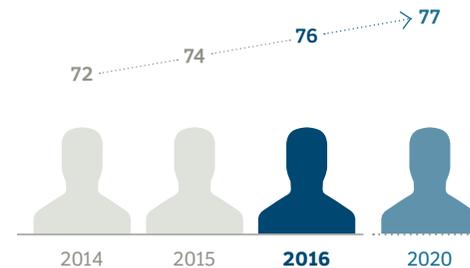

Women on the Board of Directors, number

Diversity creates a dynamic, innovative and inspiring working environment. In DONG Energy, three out of eight board members are women, which means that we live up to Danish legislation.

Employee satisfaction, scale 0-100

We cannot perform as well as we want to as a company if our employees are not satisfied and motivated. We measure our employees' satisfaction and motivation in our annual employee satisfaction survey.

A high level of satisfaction and motivation among our employees is a sign that ours is a healthy company that our employees want to be a part of. The result is a high level of employee loyalty and a high retention rate.

In the annual employee survey, our employee satisfaction and motivation increased from 74 to 76 on a scale of 0 to 100. We are one index point from reaching our 2020 target of 77. At the same time, the loyalty index increased from 82 to 83.

The positive development in employee satisfaction and motivation is ascribable especially to the employees' perception of DONG Energy's reputation and their high rating of their immediate managers.

The frequency of employees who voluntarily chose to leave DONG Energy decreased from 7.4 in 2015 to 6.7 in 2016.

Responsible business partners, number of points for improvement

We work with more than 22,000 suppliers and joint venture partners from all over the world. To help our business partners live up to international standards and our own Code of Conduct, we conduct assessments of their practices.

In 2016, we conducted 21 assessments of our business partners. As a result of these, we opened one very significant and 19 significant improvement points, which our business partners must address and improve. In addition, we closed one very significant improvement point which had been continued from 2015 and which concerned anti-corruption.

We closed a total of 15 significant improvement points identified in 2016, 14 of which were closed after business partners' successful implementation of improvements and one was closed due to discontinuity of the commercial relationship.

One significant improvement point from 2015 remained open. In 2016, we opened and closed two significant improvement points after satisfactory implementation of improvements.

Significant environmental incidents, number

The number of significant environmental incidents (C4) rose from 5 in 2015 to 8 in 2016. The number of very significant environmental incidents (C5) remained 0 in 2016. In Bioenergy & Thermal Power, the number of C4 environmental incidents rose from 0 to 3. The reasons include fly ash from a power station and two cases of spillage of oil-based products.

Accounting policies

Employees

The reporting covers contractually employed employees in Danish and foreign DONG Energy companies in which DONG Energy holds an ownership interest of more than 50%. Staff in associates are not included.

Employee data are recognised based on records from the Group's ordinary registration systems. The number of employees is determined as the number of employees at the end of each month converted to full-time equivalents (FTEs).

Employees who have been made redundant are recognised until the expiry of their notice period, regardless of whether they have been released from all or part of their duties during the notice period.

Employee satisfaction and loyalty

DONG Energy conducts a comprehensive employee satisfaction survey once a year. All DONG Energy employees are invited to participate in the survey. In the survey, the employees are, for example, asked a number of questions about their job satisfaction and loyalty. The answers are given on a scale from 1 to 10 and are subsequently converted to index figures on a scale from 0 to 100.

Employee turnover rate

The employee turnover rate is calculated as the number of permanent employees who have left the company relative to the average number of permanent employees in the financial year.

The voluntary employee turnover rate is calculated as the number of permanent employees who have voluntarily left the company relative to the average number of permanent employees in the financial year.

Women in management

The employee representatives on the Board of Directors are not included in the data and the targets for women on the Board of Directors. The Top Management comprises the CEO, the CFO and the Executive Vice Presidents, Senior Vice Presidents and Vice Presidents in the Group. The Leadership Forum consists of Senior Directors, Directors and Senior Managers. Other female managers include Managers and team leaders.

Women in management is calculated as the share of women out of the total number of employees converted into full-time equivalents (FTEs) at the relevant management levels.

Occupational injuries

Occupational injuries are calculated according to operational scope. Data from companies wholly or partly owned by DONG Energy and where DONG Energy is responsible for safety are included. Occupational injuries and lost-time injuries are calculated for both our own employees and suppliers. Data from Danish and foreign locations are recognised.

A lost-time injury is defined as an injury that results in incapacity for work for one or more calendar days in addition to the day of the incident. The lost-time injury frequency is calculated as the number of lost-time injuries per one million hours worked. The number of hours worked is based on 1,667 working hours annually per full-time employee and monthly records of the number of employees converted into full-time employees. For suppliers, the actual number of hours worked is recognised on the basis of data provided by the supplier, access control systems at locations or estimates.

Significant environmental accidents

An environmental incident is an unintended incident which has a negative impact on the environment. DONG Energy registers all environmental incidents at facilities for which DONG Energy is responsible in its capacity as operator or accountable for operations, including both actual and potential incidents.

The materiality of an incident is determined on the basis of an assessment of the extent, dispersion and impact on the environment. On this basis, all environmental incidents are categorised on a scale from 1 to 5. Actual incidents in categories 4 and 5 are reported.

Share of employees who have completed a course in good business conduct

All employees in wholly-owned business units are invited to take an e-learning course in good business conduct.

The number of employees who have completed a course in good business conduct is calculated as the proportion of employees at 31 December who have

completed an e-learning course in good business conduct relative to the number of employees invited to take the course.

Substantiated whistle-blower cases

DONG Energy's whistle-blower hotline is available to both internal and external business partners so that they can report suspected or actual cases of inappropriate or illegal business conduct.

Whistle-blower cases are received and handled by the Internal Audit function, which also receives similar reports through the management system and from Compliance Officers.

All reports are handled in accordance with the guidelines for the handling of whistle-blower cases approved by the Audit and Risk Committee, which is ultimately responsible for the whistle-blower scheme.

Only cases which are closed during the financial year, and which have been reported to the Audit and Risk Committee as fully or partially substantiated, are reported in the annual report.

Cases transferred to the police are the number of cases reported in accordance with the accounting policies mentioned above which are transferred to the police.

Responsible Business Partner Programme

A site assessment is a visit to a business partner's facilities for the purpose of carrying out an assessment of the ability of the business partner to live up to DONG Energy's Code of Conduct (or any other form of comprehensive CSR due diligence). The assessment is performed by DONG Energy and/or a third party.

Self-assessments are based on a questionnaire about DONG Energy's Code of Conduct which the business partner must complete. The questionnaire is verified by DONG Energy.

Improvement points are observations from assessments of a business partners' actions in respect of fulfilling the expectations set out in DONG Energy's Code of Conduct. DONG Energy monitors the implementation of improvements as part of its continuous engagement with its business partners, for example through meetings and telephone calls. Once it is

confirmed that satisfactory improvements have been implemented by the business partner, the improvement point is closed.

Improvement points are categorised according to the following scale: possible improvement point, less significant improvement point, significant improvement point and very significant improvement point.

A very significant improvement point is a very significant violation of applicable legislation, a policy or procedure or adopted good practices which may cause immediate danger to human or labour rights, the environment or anti-corruption, and which requires immediate action.

A significant improvement point is a significant violation of applicable legislation or a lack of policy, procedure or established good practices, which may lead to serious negative impacts on human or labour rights, the environment or anti-corruption in the short to medium term, or a lack of documentation in this respect.

The number of completed assessments reported for 2015 has been changed as a result of the more detailed accounting policies applied in 2016. We have done this in order to make it easier to separate our own efforts carried out in cooperation with business partners from efforts which required the assistance of the organisation Bettercoal (<http://bettercoal.org>), which has assessed coal mines with us.

Basis of reporting

Accounting policies

The accounting policies applied to the consolidated non-financial statements for the Group as a whole are described below, while the remaining accounting policies are described in the sections to which they relate.

In the non-financial statements, we give an account of results, developments, objectives and accounting policies according to non-financial strategic targets and business drivers as well as selected sustainability indicators.

We track the progress of our strategy through eleven strategic targets (page 21). Our business drivers (page 27) support the realisation of our strategic targets.

A selection of sustainability indicators are included in the non-financial statements. The full reporting of sustainability is available in two independent publications: Sustainability Performance 2016 and Sustainability Report 2016.

Requirements, standards and guidelines

We continuously monitor the development of national and international non-financial reporting requirements, standards and guidelines. We do this in order to evaluate which reporting form provides the most accurate insights into DONG Energy for our stakeholders.

Pursuant to section 99a of the Danish Financial Statements Act, DONG Energy is obliged to account for the company's CSR activities and report on business strategies and activities with regard to human rights, labour rights, anti-corruption as well as the environment and the climate.

DONG Energy is a signatory to the UN Global Compact. The UN Global Compact provides enterprises with a strategic framework for incorporating ten principles on human rights, labour rights, anti-corruption measures as well as the environment and the climate into their strategy and business processes. The ten principles

constitute the framework for DONG Energy's sustainability efforts, and the Group is consistently working to promote the principles.

Companies which are signatories to the UN Global Compact are under an obligation to submit and publish their annual Communication on Progress (COP) report, in which they must detail the progress made in implementing the ten UN Global Compact principles.

By publishing COP reports, companies comply with section 99a of the Danish Financial Statements Act, provided that the annual report includes a reference to where the information is publicly available.

DONG Energy's two independent reports Sustainability Performance 2016 (dongenergy.com/sustainabilitydata2016) and Sustainability Report 2016 (dongenergy.com/sustainability2016) constitute the Group's COP report available on the UN Global Compact website at <http://unglobalcompact.org/participant/2968-DONG-Energy-A-S>.

Under section 99b of the Danish Financial Statements Act, DONG Energy must account for the company's objectives and policies which over time will ensure greater diversity in relation to gender representation at management level. In addition to DONG Energy's COP report, the information is provided in the non-financial statements.

Consolidation of non-financial data

Non-financial data are consolidated according to the same principles as in the financial statements. The consolidated non-financial statements thus cover the parent company DONG Energy A/S and subsidiaries controlled by DONG Energy A/S.

Data from associates and joint ventures are not included in the consolidated non-financial statements with the exception of accident statistics data, which are included from individual enterprises where DONG Energy is responsible for safety, including safety for external suppliers.

Installed offshore wind capacity includes the wind farms in respect of which DONG Energy has overall responsibility for the installation and commissioning of the wind farms.

In 2016, we announced the decision to divest the Oil & Gas business unit. We have therefore omitted Oil & Gas data from the consolidated non-financial statements for the Group. Changes in historical data are due to the exclusion of Oil & Gas, unless otherwise specified. Read more about Oil & Gas's non-financial results in Sustainability Performance 2016 at dongenergy.com/sustainabilitydata2016.

Collection of non-financial data

In DONG Energy, we collect non-financial data in a number of systems in our various business units and group support functions. The data are reported in our consolidation tool, which is shared with the financial data reporting. This ensures that the non-financial data can be consolidated with the financial data and that comparisons can be made between, for example, earnings and capacity.

Evaluation of materiality

In DONG Energy, we have in 2016 systematically assessed the contents of the non-financial statements to ensure that they report on the focus areas which are part of the Group Executive Management's strategic focus, and which therefore form part of the Group's strategy for 2020 or are categorised as business drivers.

Moreover, the non-financial statements contain a selection of indicators which are not directly included in the 2020 strategy or categorised as business drivers, but which particularly support DONG Energy's mission, vision and strategy.

In deciding which areas to include in the annual report, we have taken account of the statutory requirements and the disclosure requirements to which DONG Energy is subject. This resulted in a number of indicators being removed from the non-financial statements. We have also added a number of new indicators.

In 2016, the following indicators were removed compared with 2015

- CO₂ emissions, power and heat generation, CO₂ g/kWh
- CO₂ emissions in thermal power and heat generation, CO₂ g/kWh
- Power and heat generation distributed on countries
- Gas customers, number
- Power customers, number
- Gas and power distribution customers, number
- Residential gas and power customers, number
- Business gas and power customers, number
- EU ETS CO₂ emissions from Bionergy & Thermal Power
- EU ETS CO₂ emissions per produced kWh from Bioenergy & Thermal Power
- Renewable energy share of power and heat generation, hydro, %
- Significant environmental accidents (C4) distributed on business units, number
- Employee distribution per country, number
- Average age of employees, years
- Lost-time injury frequency, suppliers, number
- LTIF distributed on business units

In 2016, the following indicators were added compared with 2015

- Greenhouse gases, power and heat generation, g CO₂e/kWh
- Greenhouse gases in thermal power and heat generation, g CO₂e/kWh
- Decided (FIDed) capacity, offshore wind, GW
- Generation: Power generation, wind, TWh
- Generation: Power generation, thermal, TWh
- Coal share of fuels used in thermal power and heat generation, %
- Biomass share of thermal power and heat generation, %
- Sourcing of certified biomass, %
- LTIF, employees
- LTIF, suppliers

Share capital composition and dividends are disclosed in note 6.1 to the consolidated financial statements. You can also find information on treasury shares.

1. Basis of reporting

Accounting policies

The parent company financial statements have been prepared in accordance with the Danish Financial Statements Act (reporting class D).

The accounting policies remain unchanged from the previous year.

Unless otherwise stated, the financial statements are presented in Danish kroner (DKK) rounded to the nearest million.

The parent company accounting policies are consistent with the accounting policies described for the consolidated financial statements, with the following exceptions:

Foreign currency translation

We recognise exchange rate adjustments of receivables from and payables to subsidiaries as financial income and expenses in the income statement when the balances are accounted for as part of the total net investment in foreign enterprises. Likewise, we recognise foreign exchange gains and losses on loans and derivative financial instruments in the income statement as financial income and expenses when they have been entered into to hedge the net investment in the foreign enterprises.

Revenue

Rental income comprises income from commercial leases and is recognised over the term of the lease. Income from services is recognised when delivery has taken place.

Dividends from investments

Dividends from subsidiaries and associates are recognised in the income statement for the financial year in which the dividends are approved at the annual general meeting. If the dividends exceed the total income after the time of takeover, the dividends are recognised as a reduction of the cost of the investment under assets.

Investments

We measure our investments in subsidiaries and associates at cost. If there is any indication that the value of a company is lower than our future earnings in the company, impairment testing of the company is carried out as described in the consolidated financial statements. The carrying amount is written down to the recoverable amount whenever the carrying amount exceeds the future earnings in the company (recoverable amount).

If we have a legal or constructive obligation to cover a deficit in subsidiaries and associates, we recognise a provision for this.

Tax

DONG Energy A/S is taxed jointly with its Danish and foreign subsidiaries. The jointly taxed companies are part of international joint taxation with the parent company as the management company.

Current tax for 2016 is recognised by the individual jointly taxed companies.

Statement of cash flows

We do not prepare a separate statement of cash flows for the parent company. Reference is made to the consolidated statement of cash flows on page 69.

Critical accounting estimates

In connection with the preparation of the financial statements, a number of accounting estimates have been made that affect the profit (loss) and balance sheet. Estimates are regularly reassessed by management on the basis of historical experience and other relevant factors.

Impairment test

If there is any indication that the carrying amount is lower than our future earnings in a company, we test for impairment as described in the consolidated financial statements. The future earnings of the company (recoverable amount) is calculated based on assumptions concerning significant estimates. See assumptions in note 3.1 to the consolidated financial statements.

2. Employee costs

Employee costs (DKK million)	2016	2015
Wages, salaries and remuneration	25	21
Share-based payment	3	5
Employee costs	28	26

The table shows the total employee costs including remuneration for Board of Directors (DKK million).

Executive Board (DKK '000)	Henrik Poulsen		Marianne Wiinholt		Executive Board, total	
	2016	2015	2016	2015	2016	2015
Fixed salary	9,425	9,112	5,062	4,876	14,487	13,988
Variable salary	2,751	1,815	1,560	1,186	4,311	3,001
Share-based payment	1,427	2,784	889	1,790	2,316	4,574
Social security	2	2	2	2	4	4
Total	13,605	13,713	7,513	7,854	21,118	21,567

Remuneration is described in more detail in notes 2.6 and 2.7 to the consolidated financial statements.

The remuneration report in the management's review and the consolidated financial statements notes 2.6 and 2.7 describe the remuneration of the Executive Board, share-based payment, termination and bonus scheme for the Executive Board and details on remuneration of the Board of Directors.

The parent company had an average of five employees in 2016 (2015: six employees).

3. Financial income and expenses

Financial income and expenses (DKK million)	2016	2015
Interest income from cash, etc	18	35
Interest income from subsidiaries	1,842	1,762
Interest income from securities at market value	417	563
Capital gains on securities at market value	141	85
Foreign exchange gains	1,715	4,948
Value adjustments of derivative financial instruments	14,363	13,030
Dividends received	1,630	1,170
Other financial income	95	31
Financial income	20,221	21,624
Interest expenses relating to loans and borrowings	(1,685)	(1,934)
Interest expenses to subsidiaries	(50)	(47)
Impairment of investments in subsidiaries	-	(15,663)
Capital losses on securities at market value	(252)	(594)
Foreign exchange losses	(4,282)	(3,534)
Value adjustments of derivative financial instruments	(15,349)	(9,084)
Other financial expenses	(27)	(58)
Financial expenses	(21,645)	(30,914)
Net financial income and expenses	(1,424)	(9,290)

The table shows financial income and expenses.

4. Tax on profit (loss) for the year and deferred tax

Income tax (DKK million)	2016	2015
Tax on profit (loss) for the year	623	(1,220)
Tax on changes in equity	169	159
Total tax for the year	792	(1,061)
Tax on profit (loss) for the year can be broken down as follows:		
Current tax	(231)	(1,404)
Adjustments to deferred tax	803	273
Adjustments to current tax in respect of prior years	670	(324)
Adjustments to deferred tax in respect of prior years	(619)	238
Effect of change in tax rate	-	(3)
Tax on profit (loss) for the year	623	(1,220)

Income tax for the year is divided into tax on profit (loss) for the year and tax on changes in equity.

Development in deferred tax (DKK million)	2016	2015
Deferred tax at 1 January	1,928	2,347
Adjustment for the year recognised in profit (loss) for the year	(803)	(273)
Adjustments to deferred tax in respect of prior years	619	(238)
Effect of change in tax rate	-	92
Deferred tax at 31 December	1,744	1,928

Development in deferred tax from beginning of year to end of year.

Deferred tax concerns (DKK million)	2016	2015
Property, plant and equipment	-	12
Non-current liabilities	(3)	(403)
Current liabilities	17	(2)
Retaxation	1,730	2,903
Tax loss carryforwards	-	(582)
Deferred tax	1,744	1,928

Deferred tax distributed by assets, equity and liabilities and tax items.

5. Investments in subsidiaries

Investments in subsidiaries (DKK million)	2016	2015
Cost at 1 January	54,291	45,107
Additions	16,500	9,184
Disposals	(355)	-
Cost at 31 December	70,436	54,291
Value adjustments at 1 January	(12,175)	(19)
Impairment losses	(3,506)	(12,156)
Value adjustments at 31 December	(15,681)	(12,175)
Carrying amount at 31 December	54,755	42,116

Note 8.7 of the consolidated financial statements contains a complete overview of subsidiaries, etc.

We have tested investments in subsidiaries for impairment by comparing the expected future income in the individual subsidiary with the carrying value of the individual subsidiary.

Our test in 2016 gave rise to impairment of investments in subsidiaries of DKK 3,506 million. Last year's impairment of receivables of DKK 3,506 million has been reversed.

In 2015, we impaired the carrying amount of our subsidiaries by DKK 15,663 million, of which DKK 12,156 million concerned investments in subsidiaries and the rest the receivables from subsidiaries.

6. Derivative financial instruments

DONG Energy A/S has assumed the subsidiary's currency risks via forward exchange contracts, which have subsequently been hedged in the market. Furthermore, hedging contracts have been concluded to hedge the currency risk associated with investments in subsidiaries in foreign currencies.

We have also entered into a number of interest rate swaps to manage our interest rate risk.

The company has market value-hedged loans in GBP and EUR. The value of the market value hedge offset amounted to DKK 1,793 million (2015: DKK -733 million).

Derivatives at the end of December 2016 mature as follows: 2017: DKK 1,344 million, 2018: DKK -379 million, after 2018: DKK -156 million (2015: 2016: DKK 3,558 million, 2017: DKK 2,182 million, after 2017: DKK -400 million).

Overview of derivatives (DKK million)	2016		2015	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Oil derivatives	6,016	1,300	9,264	4,207
Gas derivatives	4,834	257	7,955	2,973
Power derivatives	-	-	21	(3)
Interest derivatives	2,022	50	9,969	(430)
Currency derivatives	26,364	(798)	33,562	(1,407)
Total at 31 December	39,236	809	60,771	5,340
Assets		19,980		35,871
Equity and liabilities		(19,171)		(30,531)

See note 7.1 to the consolidated financial statements and the management's review on pages 46-50 for more details on risk and risk management.

7. Securities

Securities are primarily liquid AAA-rated Danish mortgage bonds that qualify for repo transactions in Danmarks Nationalbank. Repo

transactions are transactions where securities are provided as collateral for a loan.

Securities (DKK million)	2016	2015
Securities, available	15,864	18,690
Securities, not available for use	197	2,072
Securities at 31 December	16,061	20,762

Securities not available for use are used as collateral for repo loans and trading in financial instruments.

8. Loans and borrowings

At 31 December 2016, we had issued hybrid capital with a total notional amount of DKK 13,371 million (2015: 13,435). The hybrid bonds have a 1,000-year term and expire as follows: DKK 8,914 million in 3013 and DKK 4,457 million in 3015.

The long-term portion of bank loans and issued bonds amounted to DKK 22,164 million at 31 December 2016 (2015: DKK 31,775

million), of which DKK 16,901 million (2015: DKK 24,518 million) falls due in more than five years.

The long-term portion of other payables amounted to DKK 1,516 million at 31 December 2016 (2015: DKK 1,549 million) and falls due in more than five years.

9. Contingent liabilities

Contingent liabilities

Guarantees

DONG Energy A/S has furnished the Danish State with guarantees for the fulfilment of obligations and liability in damages towards the state or third parties incurred by DONG E&P A/S or DONG E&P DK A/S in connection with the companies' participation in exploration and production licences, irrespective of whether the obligations and liability rest on DONG E&P A/S or DONG E&P DK A/S alone or jointly and severally with others.

The guarantees are not capped, but if claims are made under a guarantee due to obligations assumed by DONG E&P A/S or DONG E&P DK A/S on a joint and several basis with other licensees, the guarantee amount cannot exceed an amount corresponding to twice DONG E&P A/S's or DONG E&P DK A/S's share of each obligation or liability.

As a condition for approval of its participation in gas and oil exploration and production on the Norwegian, UK, Greenland and Faroese continental shelves, DONG Energy A/S has provided a guarantee as normally required by the local authorities. The guarantee covers obligations and liability incurred or assumed by DONG Energy's oil and gas business in connection with its exploration and production activities.

The guarantees are not capped, and DONG Energy's oil and gas business is jointly and severally liable with the other licensees for any environmental accidents or other damage.

DONG Energy A/S has also provided guarantees in connection with participation by subsidiaries and subsidiaries' joint operations and joint ventures in natural gas and oil exploration and production, construction and operation of wind farms, and geothermal plants and natural gas installations, and has provided guarantees in respect of leases, decommissioning obligations, and purchase, sale and supply agreements, etc.

DONG Energy A/S also acts as guarantor with primary liability for bank balances in certain subsidiaries.

Indemnities

DONG Energy is a member of the reinsurance company Oil Insurance Ltd. In the event of exit, an exit premium will be payable, which has been calculated at USD 19.8 million at 31 December 2016 (2015: USD 16.5 million).

DONG Energy A/S is taxed jointly with other companies in the DONG Energy Group. As management company, the company has unlimited and joint and several liability together with the other jointly taxed companies for

Danish income taxes and withholding taxes on dividends, interest and royalties within the jointly taxed companies.

Litigation

DONG Energy A/S is not a party to any litigation proceedings or legal disputes that could have an effect on the company's financial position, either individually or collectively.

10. Related-party transactions

For a description of related parties, reference is made to note 8.1 to the consolidated financial statements.

Remuneration of the Board of Directors and the Executive Board is disclosed in notes 2.6

and 2.7 and the remuneration report in the review in the consolidated financial statements.

Our related-party transactions are made on arm's length terms.

11. Operating lease obligations

We have entered into leases for office premises, primarily in Gentofte (expiring in 2028), Virum (expiring in 2027) and Esbjerg (expiring in 2035). In 2016, an amount of DKK 173 million was recognised (2015: DKK 229 million) in profit (loss) for the year in respect of operating lease payments.

We have entered into leases with subsidiaries for subleasing of office premises. In 2016, an amount of DKK 146 million was recognised (2015: DKK 205 million) in profit (loss) for the year in respect of rental income.

We have minimum payments of DKK 2,196 million (2015: DKK 2,168 million), most of which concerns subleasing via subleasing agreements.

12. Auditor's fees

Auditor's fee (DKK million)	2016	2015
Statutory audit	1	1
Other assurance engagements	12	4
Tax and VAT advice	8	2
Non-audit services	7	5
Total auditor's fees	28	12

The table shows auditor's fees distributed by service.

13. Ownership information

Ownership information	Registered office	Ownership interest and voting share
The Danish State represented by the Danish Ministry of Finance	Copenhagen K, Denmark	50.12%
New Energy Investment S.à.r.l.	Luxembourg	13.31%
SEAS-NVE Holding A/S	Svinninge, Denmark	9.54%
The Capital Group Companies, Inc.	Los Angeles, USA	5.68%

The table shows the shareholders with ownership interests and voting shares of at least 5%.

A close-up photograph of industrial metal beams and cables, likely part of a wind turbine or offshore structure. The beams are dark and weathered, with some showing signs of rust. The cables are thick and dark, running diagonally across the frame. The background is a blurred, light-colored surface, possibly a concrete deck or walkway.

Management statement, auditor's reports and glossary

Statement by the Executive Board and the Board of Directors / Independent auditor's reports
Glossary

Statement by the Executive Board and the Board of Directors

The Board of Directors and the Executive Board have today considered and approved the annual report of DONG Energy A/S for the financial year 1 January – 31 December 2016.

The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards as adopted by the EU and additional requirements in the Danish Financial Statements Act. The financial statements of the parent company, DONG Energy A/S, have been prepared in accordance with the provisions of the Danish Financial Statements Act.

In our opinion, the consolidated financial statements and the parent company financial statements provide a fair presentation of the Group's and the parent company's assets, liabilities and financial position at 31 December 2016 and of the results of the Group's and the parent company's operations and the Group's cash flows for the financial year 1 January – 31 December 2016.

In our opinion, the management's review provides a true and fair account of the development in the Group's and the parent company's operations and financial circumstances, of the results for the year and of the overall financial position of the Group and the parent company as well as a description of the most significant

risks and elements of uncertainty facing the Group and the parent company.

In our opinion, the non-financial statements ("Supplemental information") represent a fair, reasonable and balanced representation of the Group's social responsibility and sustainability performance and are prepared in accordance with the stated accounting policies.

We recommend that the annual report be adopted at the annual general meeting.

Our opinion

In our opinion, the Consolidated financial statements give a true and fair view of the Group's financial position at 31 December 2016 and of the results of the Group's operations and cash flows for the financial year 1 January to 31 December 2016 in accordance with International Financial Reporting Standards as adopted by the EU and further requirements in the Danish Financial Statements Act.

Moreover, in our opinion, the Parent Company Financial Statements give a true and fair view of the Parent Company's financial position at 31 December 2016 and of the results of the Parent Company's operations for the financial year 1 January to 31 December 2016 in accordance with the Danish Financial Statements Act.

What we have audited

DONG Energy's Consolidated financial statements for the financial year 1 January to 31 December 2016, pp 62–161 and 184, comprise the consolidated income statement and statement of comprehensive income, the consolidated balance sheet, the consolidated statement of changes in equity, the consolidated cash flow statement and the notes to the financial statements, including summary of significant accounting policies.

DONG Energy's Parent Company Financial Statements for the financial year 1 January to 31 December 2016, pp 174–184, comprise

the income statement, the balance sheet, the statement of changes in equity and the notes to the financial statements, including summary of significant accounting policies. Collectively referred to as the 'financial statements'.

Basis for Opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs) and the additional requirements applicable in Denmark. Our responsibilities under those standards and requirements are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence

We are independent of the Group in accordance with International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants (IESBA Code) and the ethical requirements that are relevant to our audit of the financial statements in Denmark. We have also fulfilled our other ethical responsibilities in accordance with the IESBA Code.

Key Audit Matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements for 2016. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Key Audit Matter

Impairment assessment

The value of DONG Energy's tangible assets, of which the majority relates to offshore wind farms, oil and gas production and power and heat generation assets, is supported by either value-in-use calculations, which are based on future cash flow forecasts or fair value less costs of disposal (ie 'recoverable amount').

We focused on this area because the impairment assessments of these assets are dependent on complex and subjective judgements by Management.

Refer to note 3.1 in the Consolidated financial statements.

How our audit addressed the Key Audit Matter

We considered the overall impairment assessments prepared by Management and tested the relevant internal controls in place to check that the Group's assets are valued appropriately including those controls in place to identify any asset impairments or impairment reversals.

We considered the assumptions and estimates used to determine the value in use or the fair value less costs of disposal of the assets. This includes those relating to operating cost forecasts and expected production profiles. We tested these assumptions by reference to third-party documentation where available, such as commodity price forecasts, and inquired operational Management. We used PwC valuation specialists to assess the discount rates used by Management.

We performed a sensitivity analysis around key drivers of cash flow forecasts, including output volumes, commodity prices, operating costs and expected life of assets.

Key Audit Matter**Discontinuing the oil and gas business**

The Board of Directors has initiated a process with the aim of ultimately exiting from the Group's oil and gas business. Management has therefore assessed that the planned divestment should be presented as a disposal group and as discontinued operations in accordance with IFRS 5 Non-Current Assets Held for Sale and Discontinued Operations.

We focused on this area because determining the appropriate application of IFRS 5 are dependent on subjective judgements by Management, in particular:

- Whether the transaction meets the criteria for separate presentation of assets and liabilities classified as held for sale.
- Whether the oil and gas business represents a separate major line of business or geographical area of operations resulting in the presentation of discontinued operations.
- Whether the assets and liabilities are measured at the lower of the fair value less costs of disposal or their carrying amounts.

In addition, we focused on the disclosures relating to the oil and gas business as contained in the consolidated income statement, the consolidated balance sheet and the consolidated cash flow statement, especially in relation to eliminations of intragroup transactions between the continuing and the discontinued business and whether other activities within the Group should be classified as discontinued.

Refer to note 3.7 in the Consolidated financial statements.

How our audit addressed the Key Audit Matter

We evaluated whether Management had appropriately applied the requirements of IFRS 5 by for example:

- Examining minutes of Board of Directors' meetings, written correspondence between the Group and the prospective purchasers to assess the classification of assets held for sale and discontinued operations against the 'highly probable' criteria in the accounting standard.
- Assessing the valuation of assets and liabilities in the oil and gas business to consider whether any revaluation or impairment was required by considering the headroom between the fair value less costs of disposal and the carrying value of assets and liabilities in the Group.
- Assessing the completeness and accuracy of the disclosure of discontinued operations against the disclosure requirements of IFRS 5.
- Testing the Group's restatement of the comparative numbers, including eliminations of intragroup transactions, and associated disclosures to assess whether the relevant oil and gas business had been appropriately recognised as discontinued.

Key Audit Matter**Decommissioning provisions**

The decommissioning provisions are judgmental and based on the estimate of future costs of restoring sites to a pre-defined state. This estimate requires specialist knowledge and therefore our focus is on determining how Management made their estimate and that the decommissioning provisions are materially accurate and complete.

We focused on this area because determining the carrying value of the provisions are dependent on complex and subjective judgements by Management.

Refer to note 3.2 in the Consolidated financial statements.

Financial derivative transactions with forward energy trades

The Group enters into a number of forward energy trades. Certain of these arrangements are accounted for as derivative financial instruments and are recorded at fair value.

Judgement is required in valuing these derivative contracts, particularly where the life of the contract is beyond the liquid market period.

In addition, DONG Energy uses business performance as an alternative to profit (loss) for the year stated in accordance with IFRS as adopted by the EU. Business performance represents the underlying financial performance of the Group in the reporting period adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods.

We focused on this area because the valuation of financial instruments are dependent on complex and subjective judgements by Management and because the business performance reporting is dependent on the consistent use and documentation of hedging rules.

Refer to notes 2.2, 7.1, 7.2 and 7.4 in the Consolidated financial statements.

How our audit addressed the Key Audit Matter

We assessed Management's methodology compared to common industry practice. We also assessed the qualifications and experience of both Management's internal and external specialists. We considered the key assumptions used by Management and tested these to current market information comprising recent quotes, industry studies and benchmark data. This included rig rates and discount rates. In respect of discount rates, we used PwC valuation specialists to assess rates used by Management.

In addition, we performed detailed audit procedures on the decommissioning estimate model and performed a sensitivity analysis over the decommissioning liabilities.

We assessed the overall trading process for forward energy trades, including internal risk management procedures and the system and controls around origination and maintenance of complete and accurate information relating to derivative contracts.

We tested the valuation of derivative contracts at the year-end date. Our audit procedures focused on the integrity of these valuation models and the incorporation of the contract terms and the key assumptions, including future price assumptions and discount rates. We tested the prices in the models and recalculated valuations for a sample of derivatives, as well as performing sensitivity analyses for more complex derivatives.

We considered Management's use of business performance and tested the adjustments between IFRS and business performance. In this connection, we assessed the hedging rules applied under the business performance accounting policies and whether these are used consistently from period to period.

Key Audit Matter

Revenue recognition

The accuracy of (a) the revenue recognition related to unread and unbilled revenue and (b) related to work in progress of large construction contracts and its presentation in the income statement is dependent on complex estimation methodologies, including estimates such as the amount of energy supplied to customers between the date of the last meter reading and year-end (unread) and the percentage of completion for construction contracts.

We focused on this area because (a) the revenue recognition related to unread and unbilled revenues and (b) the revenue recognised with reference to percentage of completion both requires complex and subjective judgements by Management.

Refer to notes 2.3 and 4.2 in the Consolidated financial statements.

Onerous contracts and other contractual claims and obligations

The Group's operations include exposures to the risk of litigation, contractual claims from and against third parties and contracts being onerous, particularly in relation to significant capital projects and long-term contracts.

We focused on this area because of the range of potential outcomes and the considerable uncertainty around (a) the resolution of various litigations, claims and contractual disputes, and (b) the determination of the amount, if any, to be recognized in the financial statements as a provision, and the related disclosures are inherently subjective.

Refer to note 3.2 og 3.7 in the Consolidated financial statements.

How our audit addressed the Key Audit Matter

We focused our substantive testing on the manual processes over estimated revenue related to unread and unbilled revenue, assessing the appropriateness of the estimation methodologies and the level of subsequent true-ups to actual bills raised. We also tested the reconciliation of unbilled reports to the general ledger at year-end.

For construction contracts, our audit of whether revenue is accurately recorded focused on challenging the forecasted costs to complete a sample of contracts, including the assumptions used, and by evaluating the outturn of previous estimates and agreeing the actual costs incurred post-year-end to the forecast costs for the period. We also assessed how the project managers determined that the stage of completion was correctly determined through obtaining their calculations and agreeing the inputs to documentary evidence or our independently formed expectation as appropriate.

We considered the provisions recognised to cover contractual obligations and claims raised against the Group by third parties, inspected relevant legal advice received by the Group in connection with such claims and obtained formal confirmation from the Group's solicitors on the status and potential outcomes of any legal claims with which the Group is dealing. Moreover, we considered the assets related to claims raised by the Group against third parties. Finally, we also considered the Group's disclosures relating to provisions and/or contingent liabilities and assets for legal and other contractual obligations and claims.

We challenged the valuation of the onerous contract provisions by evaluating whether appropriate judgements and assumptions had been applied in determining the unavoidable costs of meeting the obligation and the estimate of the expected benefits to be received under the contract.

Statement on Management's Review

Management is responsible for the Management's Review, pp 4-61.

Our opinion on the financial statements does not cover Management's Review, and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read Management's Review and, in doing so, consider whether Management's Review is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

Moreover, we considered whether Management's Review includes the disclosures required by the Danish Financial Statements Act.

Based on the work we have performed, in our view, Management's Review is in accordance with the Consolidated financial statements and the Parent Company Financial Statements and has been prepared in accordance with the requirements of the Danish Financial Statements Act. We did not identify any material misstatement in Management's Review.

Responsibilities for the financial statements and the audit

Management is responsible for the preparation of Consolidated financial statements that give a true and fair view in accordance with International Financial Reporting Standards as adopted by the EU and further requirements in the Danish Financial Statements Act and for the preparation of Parent Company Financial Statements that give a true and fair view in accordance with the Danish Financial Statements Act, and for such internal control as Management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, Management is responsible for assessing the Group's and the Parent Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going-concern basis of accounting unless Management either intends to liquidate the Group or the Parent Company or to cease operations, or has no realistic alternative but to do so.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs and the additional requirements applicable in Denmark will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements. As part of an audit in accordance with ISAs and additional requirements applicable in Denmark, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design

audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's and the Company's internal control.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management.
- Conclude on the appropriateness of Management's use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's and the Parent Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group or the Parent Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information

of the entities or business activities within the Group to express an opinion on the Consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Independent Auditor's Assurance Report

To the Stakeholders of DONG Energy

We have undertaken a limited assurance engagement of the consolidated non-financial statements for 2016 as expressed on pp 162-173 and 184. A multidisciplinary team including assurance practitioners, engineers and other experts conducted this engagement.

Management's Responsibility for the Consolidated Non-financial Statements

Management of DONG Energy is responsible for the preparation of the consolidated non-financial statements in accordance with Group accounting policies as expressed on pages 166, 169 and 172-173. This responsibility includes design, implementation and maintenance of internal control relevant to the preparation of the consolidated non-financial statements ensuring that data are free from material misstatement, whether due to fraud or error.

The DONG Energy non-financial accounting policies contain Management's reasoning for the selection of topics and indicators as well as define reporting scope for each data type.

Our Independence and Quality Control

We have complied with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which includes independence and other requirements founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behavior.

PwC applies International Standard on Quality Control 1, and accordingly maintains a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Our Responsibility

Our responsibility is to express a limited assurance conclusion on the consolidated non-financial statements stated on pp 162-173 based on the procedures we have performed and the evidence we have obtained. We conducted our limited assurance engagement in accordance with International Standard on Assurance Engagements 3000, 'Assurance Engagements other than Audits or Reviews of Historical Financial Information'. The standard requires that we plan and perform this engagement to obtain limited assurance about whether the consolidated non-financial statements are free from material misstatement.

A limited assurance engagement undertaken in accordance with ISAE 3000 involves assessing the suitability in the circumstances of DONG Energy's use of stated accounting policies as the basis for the preparation of the consolidated non-financial statements. Furthermore, it involves assessing the risks of material misstatement whether due to fraud or error, responding to the assessed risks as necessary in the circumstances and evaluating the overall presentation of the consolidated non-financial statements. A limited assurance engagement is substantially less in scope than a reasonable assurance engagement in relation to both the risk assessment procedures, including an understanding

of internal control, and the procedures performed in response to the assessed risks.

The procedures we performed were based on our professional judgment and included inquiries, observation of processes performed, inspection of documents, analytical procedures, evaluating the appropriateness of quantification methods and reporting policies, and agreeing or reconciling with underlying records.

Given the circumstances of the engagement, in performing the procedures listed above we:

- Through inquiries, obtained an understanding of the DONG Energy control environment and information systems relevant to quantification and reporting of non-financial data;
- Conducted interviews and with Group functions to assess consolidation processes, use of company-wide systems and controls performed at group level as well as test non-financial data prepared at Group level to underlying documentation.

The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement. Consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had we performed a reasonable assurance engagement. Accordingly, we express a limited assurance opinion about whether the DONG Energy non-financial data have been prepared, in all material respects, in accordance with the non-financial

accounting policies applied and stated on pp 166, 169 and 172-173.

Limited Assurance Conclusion

Based on the procedures we have performed and the evidence we have obtained, nothing has come to our attention that causes us to believe that the consolidated non-financial statements for 2016 presented on pp 162-173 are not prepared, in all material respects, in accordance with the stated accounting policies as expressed on pp 166, 169 and 172-173.

Glossary

2P reserves: Sum of proved reserves plus probable reserves (according to Society of Petroleum Engineers and World Petroleum Congress (SPE/WPC) reserve classification standards).

Availability: Time-based availability is the ratio of the number of hours in a given period the offshore wind turbines are available for power generation to the total number of hours in the same period.

Biomass: Also known as biomass fuel. A term for all combustible organic material, including straw, wood chips and wood pellets. CO₂ emissions produced by the combustion of biomass are not covered by EU ETS. Biomass can be used in both central CHP plants and small-scale CHP plants.

Biomass conversion: When a CHP plant is converted from using fossil fuels to using biomass such as wood pellets, wood chips and straw. After the conversion, the CHP plant will typically be able to use biomass along with the original fuel types.

CHP plant: A Combined Heat and Power (CHP) plant generates both heat and power in the same process. The heat generated may be used for industrial purposes and/or district heating.

CO₂ emissions allowances: Carbon dioxide emissions allowances subject to the European Union Emissions Trading Scheme (EU ETS).

Cost of Electricity: Average cost measured as present value per megawatt hour (MWh) generated from offshore wind power covering costs for development and construction as well as subsequent operation and maintenance of the wind farm.

Decided (FID'ed) capacity: Installed offshore wind capacity plus capacity for wind farms where a final investment decision has been made.

Degree days: Number of degrees in absolute figures in difference between the average temperature and the official Danish indoor temperature of 17 degrees Celsius.

DK1 and DK2: Area prices for power in West Denmark (DK1) and East Denmark (DK2).

EEX: European Energy Exchange, German power exchange.

EMIR: Regulation (EU) No 648/2012/EU on OTC derivatives, central counterparties and trade repositories.

Fossil fuels: Fuel resources such as coal, coal products, gas, crude oil and other hydrocarbon products.

FTE: Employees (Full Time Equivalent). The number of full-time employees during a fixed time period.

Green certificate: Certificate awarded to producers of environment-friendly power as a supplement to the market price of power in the given price area.

Green dark spread (GDS): Green dark spread represents the contribution margin per MWh of power generated at a coal-fired CHP plant of a given efficiency. It is determined as the difference between the market price of power and the cost of the coal (including associated freight costs) and CO₂ emissions allowances used to generate the power.

Green spark spread (GSS): Green spark spread represents the contribution margin per MWh generated at a gas-fired power station of a given efficiency. It is determined as the difference between the market price of power and the costs of the gas and CO₂ emissions allowances used to generate the power.

Hedging instruments: Financial and physical instruments that can be used to guarantee a specific price for the purchase or sale of, for example, commodities and currency.

Hydrological balance: Most of the power generated in the Nordic countries comes from hydroelectric power plants, and their output depends on their water reservoir levels. The hydrological balance reflects whether the levels in the Norwegian and Swedish water and snow reservoirs are above or below normal.

Lifting costs: Operating and processing costs in accordance with industry practice. The repair costs for the Siri platform are not included as these costs were not part of the ordinary operations.

LNG: Liquefied Natural Gas. Gas that has been liquefied by cooling to minus 161 degrees Celsius. LNG takes up 600 times less space than conventional gas. LNG can be transported in customised tankers to receiving terminals, where the LNG is vapourised and pressurised before being routed into the transmission system for onwards distribution and sale.

Load factor: The ratio between the actual power generation in a given period relative to the potential generation which is possible by continuously exploiting the maximum capacity over the same period.

LTIF: Lost Time Injury Frequency. DONG Energy defines lost time injuries as occupational injuries resulting in at least one day's absence from work in addition to the day of the injury.

MiFID: Directive 2004/39/EC, as amended, on markets in financial instruments. A European law that provides harmonised regulation for investment services across all the member states of the European Economic Area.

NBP: National Balancing Points, UK gas hub.

Nord Pool: The Norwegian-based Nordic power exchange, which facilitates power trading in Norway, Sweden, Finland and Denmark.

Offshore transmission assets: Offshore transmission assets connect offshore generation to the onshore grid, and typically include the offshore power transmission infrastructure, an onshore substation and the electrical equipment relating to the operation of the substation.

Oil/gas spread: The difference in price of a TWh of gas traded on a gas hub and a TWh of gas bought or sold under an oil price-indexed contract.

Power station: A power station generates power only. A large (central) power station typically has a net installed capacity of more than 100MW.

PSO: Indirect taxes regarding the public service obligation (PSO) which are used to finance research and green energy and are charged to power customers along with other tariff elements.

Public obligation: A company with a public obligation is bound by law to deliver power or natural gas to a certain geographic area at prices approved by the Danish Energy Regulatory Authority.

QHSE: Quality, Health, Safety and Environment.

REnescience: An enzyme-based waste treatment technology in the early phase of commercialisation.

ROCs: Renewables Obligation Certificates issued by Ofgem in the UK to operators of accredited generating stations for the eligible renewable energy they generate. Operators can trade ROCs with other parties.

Stress: Method of measuring the market trading risk of loss on a portfolio from day to day, calculated on a fair-value basis.

Thermal generation: Power and heat generated through the combustion of fossil fuels, biomass or waste.

TTF: Title Transfer Facility, Dutch gas hub.

TWh: Terawatt hour. The amount of energy generated in one hour with the effect of 1TW. 1TWh is equivalent to 1,000GWh or 1,000,000MWh.

Value at Risk (VaR): A financial term used for measuring the loss that may occur in connection with a risk position, assuming a certain volatility and that the position is held for a certain period of time.

Wind energy content: The ratio between the actual reported generation in a given period, adjusted for availability losses, and the generation in a 'normal wind year', based on historical wind data for the individual areas where the offshore wind farms are located.

APPENDIX 6-3

Ørsted Annual Report 2017

Ørsted
Annual report 2017

The Ørsted Way

Let's create a world that runs entirely on green energy

Climate change is one of the biggest challenges for life on Earth. Today, the world mainly runs on fossil fuels. We need to transform the way we power the world; from black to green energy.

At Ørsted, our vision is a world that runs entirely on green energy. We want to revolutionise the way we power people by developing green, independent and economically viable energy systems. By doing so, we create value for the societies that we are a part of and for all our stakeholders.

The way we work is based on five guiding principles:

Integrity

We are open and trustworthy and uphold high ethical standards

Passion

We are passionate about what we do and proud of what we achieve

Team

We value diversity and collaborate in a non-hierarchical, respectful and trusting way

Results

We set the bar high, take ownership and get the right things done

Safety

We never compromise on health and safety standards

Integrity is our root. Passion is our energy. Team is our strength. Results give us freedom. The safe way or no way.

Chairman's statement

The transformation of the energy supply to green energy is one of the biggest challenges facing the world. Today, more than 80% of the world's energy supply comes from the burning of fossil fuels, which leads to serious climate change and impacts people's living conditions all over the planet. If we are to slow down this development, we need to supply the world with energy in a sustainable manner.

Over a period of 11 years, Ørsted has been transformed from a Danish utility company based on coal, oil and gas to an international energy company based on green energy. In 2017, we decided to phase out our use of coal by 2023, and we divested our oil and gas business. We also guaranteed our Danish residential customers that the power they receive from us is generated by offshore wind farms.

With the decisions we made in 2017, we completed our strategic transformation from black to green energy. None of the other major energy companies in Europe have come this far in their transformation processes, and among this group, we are now the fastest-growing company. As a result, we are a completely different company today. That is why we decided to change our name to Ørsted, inspired by the world-renowned Danish scientist H.C. Ørsted.

Our vision is a world that runs entirely on green energy. We have strong competences within sustainable energy solutions in all parts of our

business. We want to build on these strengths and help the world's transformation to green energy systems.

Our commitment to sustainability is fundamental. We therefore run our business in a way that supports the United Nations Sustainable Development Goals (SDGs). In our Sustainability Report, you can read more about how we contribute to these goals.

The heading for our strategy is 'Green growth'. In the coming years, growth will primarily be driven by our build-out of offshore wind, where we have the largest investment programme in the sector. We are also looking into new growth opportunities within green energy generation,

intelligent customer solutions and solutions integrating generation and consumption.

In 2017, we continued our tireless work to improve safety for our employees and suppliers. We achieved a lost-time injury frequency of 1.6, the lowest level ever in the Group's history. On this basis, we are now switching to an even more fine-meshed measuring method comprising all accidents, whether they lead to absence or not.

Profit for the year from continuing operations amounted to DKK 13.3 billion, our best ever result. The Board of Directors recommends to the annual general meeting that dividend payments be increased from DKK 6 to DKK 9

With the decisions we made in 2017, we completed our strategic transformation from black to green energy. None of the other major energy companies in Europe have come this far in their transformation processes.

per share, enabling us to retain an attractive level of dividend.

On behalf of the Board of Directors, I would like to thank the management and employees for having created one of the most successful energy companies in Europe, and one that is leading the way towards a world which runs entirely on green energy.

Thomas Thune Andersen
Chairman

CEO's review

Ørsted's vision of creating a world that runs entirely on green energy was supported by a strong performance in 2017.

- Strong growth in the Group's operating profit (EBITDA) of 18%
- Wind Power's EBITDA increased by 74% to DKK 20.6 billion, of which the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2 accounted for almost half
- Good progress in the build-out of new offshore wind farms
- New offshore wind projects awarded in Germany and the UK
- Important milestones for our offshore wind projects in the USA and Taiwan
- Inauguration of the biomass conversion of Skærbæk Power Station and start-up of the Asnæs Power Station conversion
- Divestment of our oil and gas business
- Change of name to Ørsted.

Results

In 2017, we achieved a strong operating profit (EBITDA), which more than lived up to our expectations at the beginning of the year.

Underlying growth in 2017 was 56%. The good results were driven by yet another strong year in Wind Power where EBITDA was up 74% and ended at DKK 20.6 billion, fuelled by the farm-downs of 50% of the Walney Extension and Borkum Riffgrund 2 offshore wind farms. In addition, there was an increase of 45% in earnings from our offshore wind farms in operation where the portfolio is continuously expanded.

The reported EBITDA for 2017 amounted to DKK 22.5 billion, corresponding to a growth of 18%. Our return on capital employed (ROCE) increased to 25% in 2017 from 17% in 2016, when adjusting for lump-sum payments related to gas purchase contracts amounting to DKK 4.3 billion in 2016.

The net profit for the continuing part of the Group increased by DKK 1.1 billion to DKK 13.3 billion. In addition, the result from the divested upstream oil and gas business contributed with DKK 6.9 billion.

In 2017, the green share of our heat and power generation increased by 14%-points to 64% as a result of the conversion of our CHP plants to sustainable biomass and increased generation from offshore wind farms. Our target is to

// Our target is to increase the green share of power and heat generation to at least 95% in 2023.

increase the green share of power and heat generation to at least 95% in 2023.

Strategic development

Our vision is to create a world that runs entirely on green energy. We want to spearhead the green transformation. We do so by continuously investing in our competitiveness and core competences to create opportunities for long-term, profitable growth within renewable energy.

Our business activities consist of three areas: offshore wind, utility business, as well as a portfolio of new long-term growth options.

We have an ambitious plan for the build-out of offshore wind that will enable us to maintain and strengthen our global, market-leading position and continue to expand in both existing and new markets. We will also maintain our focus on reducing the costs of offshore wind and on further developing innovative technical solutions. Over the next many years, offshore wind will remain our primary driver of growth and investment priority and constitute most of our business. It is our strategic core and will remain our priority, should we face bottlenecks in our resource allocation. We expect that more than 85% of our gross investments will be within offshore wind, and yield an average return on capital employed of 13-15% in the years up to and including 2023.

In our utility business, we are in the process of completing our conversion from fossil fuels to sustainable biomass, ensuring that coal can be phased out completely by 2023. At the same time, we will continue our roll-out of smart meters, build a smart power distribution grid,

while also focusing on improving customer experience through digitisation and innovation of our products. Our utility business complements our wind power business, enabling us to develop vertically integrated, green energy solutions. In addition, it provides access to and insight into the market and contributes stable, regulated earnings.

There is strong global support for accelerating the green transformation. In the past few years, we have created significant value through our investments in green energy, and we want to gradually expand our access to the significant, long-term growth opportunities, not just within offshore wind and bioenergy, but potentially also other green technologies. We want to build on Ørsted's vision, culture and competences to pursue further profitable growth.

As much as possible, our long-term growth must be a diversified journey combined with the ability to change our focus and direction in step with market developments. We cannot predict what the future will bring.

Our strategy is based on the vision of an integrated green energy system, where renewable energy technologies can be combined with each other and with energy storage solutions, more flexible and intelligent patterns of consumption and electrification of the transport sector, heating systems and industry. We believe that the ability to think integrated solutions across different technologies and parts of the energy system may in itself become a competitive advantage.

// We want to gradually expand our access to the significant, long-term growth opportunities, not just within offshore wind and bioenergy, but potentially also other green technologies.

Our portfolio of new long-term growth options includes, among other things, the Renaissance technology. We expect our first full-scale plant to be commissioned in H1 2018. Furthermore, we are seeking to mature our 'Energy-as-a-Service' concept as a way of meeting our industrial customers' needs for innovative and green energy solutions. We have also established a new unit focusing on energy storage and solar PV projects, and we also look into onshore wind. It is early days for these initiatives, and we are still working to establish a scalable commercial model for them. Thus, they are not expected to contribute significantly to the Group's financial development in the short term, but we are exploring them as long-term growth options.

Currently, our above-mentioned growth initiatives are all organic, but we will also consider making focused acquisitions should strategically relevant opportunities arise with the potential to create value – both within offshore wind and within new green growth areas where we can build on existing competences. Geographically we focus on North-western Europe, North America and selected Asian markets.

When it comes to storage, solar PV and onshore wind we first and foremost see value creation where we can take over projects from developers who do not have the scale, capabilities, and balance sheet to extract the full value from their projects. We have essentially built our leadership position in offshore wind

on the same business model. There are, of course, differences in technology and market dynamics across offshore wind, onshore wind, storage and solar PV. However, we also see many similarities where we can transfer this experience and learning from our existing business. Given the strength and growth of our offshore wind business, we are not under pressure to pursue new green avenues, but if attractive opportunities can be found within adjacent renewable technologies, a broader portfolio will further add to our strategic scale optionality, and long-term growth prospects.

In 2017, we changed our name to Ørsted – a name which better supports our position as a leading green energy company. The name is a tribute to the Danish scientist H.C. Ørsted, whose curiosity, dedication and skills, among other things, led to the discovery of electromagnetism, which today is a key component in the generation of power and thereby modern society. The name has generally been well received both internally in the company and among our external stakeholders. A few bearers of the Ørsted name have, however, chosen to file a subpoena with the Copenhagen Maritime and Commercial Court to prevent our use of the name. We are, of course, sorry about that as we have been keen to establish a friendly and respectful relationship with all bearers of the name. We still believe we are entitled to name our company after H.C. Ørsted.

Capital allocation

From 2019, we expect our business activities to generate sufficient cash flows to finance our planned portfolio investments.

Most of our capital will go towards supporting our existing ambitious growth plan for offshore wind, where our ambition is to reach an installed capacity of 11-12GW by the end of 2025. In addition, we will finalise the above-mentioned conversion of our CHP plants to sustainable biomass and install one million smart meters.

We maintain our strong commitment to our credit rating target (BBB+/Baa1) and the, at any time, announced expected dividend payments. Our capital structure allows us to increase dividends from DKK 6 to DKK 9 per share, totalling DKK 3.8 billion for 2017. This is a significant increase compared to our announcement at the time of the IPO and attributable to strong and growing cash flows from our offshore wind farms in operation. For the period up until 2020, we still expect a year-on-year high single-digit percentage increase in dividends relative to our new baseline.

Even with our current ambitious investment plans, clear commitment to our credit rating target and payment of increasing dividends, we expect to build additional financial capacity within a couple of years. This means that in the future, after the expected farm-down of Hornsea 1, we will only use farm-downs if we can continue to attain an attractive value creation or in order to spread our market and project risk.

We will invest any further excess financial capacity in value-adding growth to complement our existing investment plan, if we see relevant opportunities in the market.

After that, excess capital will be returned to our shareholders in the form of dividends and/or share buybacks.

Wind Power

In 2017, we reached several new milestones in our ambitious green strategy. Burbo Bank Extension in the UK and Gode Wind 1 and 2 in Germany were inaugurated in the early summer, contributing significantly to our continued growth in earnings from operating offshore wind farms. At the end of 2017, all turbines at Race Bank and at the first part of Walney Extension had been installed. Race Bank was fully commissioned in January 2018 and Walney Extension is expected to follow in H2 2018. In 2017, the build-out of our portfolio also included German Borkum Riffgrund 2, Dutch Borssele 1 and 2 and Hornsea 1 in the UK, which will be the world's largest offshore wind farm when commissioned.

We continued our partnership model in 2017, farming-down 50% of Walney Extension to the Danish pension funds PKA and PFA as well as 50% of Borkum Riffgrund 2 to Global Infrastructure Partners. The farm-downs testify to the continued considerable interest from investors in the green transformation and Ørsted's market-leading partnership model.

In April, we won the rights to build three offshore wind farms in the German part of the North Sea. Two of them were won with zero-subsidy bids. Commissioning of the projects is planned for 2024, provided that final investment decisions, as expected, are made in 2021.

In September, we were awarded a contract to construct Hornsea 2 in the UK. With a capacity of 1.4GW, it will overtake Hornsea 1 as the world's largest offshore wind farm when completed in 2022. The price of the contract for difference (CfD) was 50% lower than in the previous CfD round just two years ago. The decline illustrates the rapid cost reductions in the industry, which have made offshore wind power competitive relative to conventional power generation based on fossil fuels.

We are constantly observant to new opportunities for expanding our portfolio, creating more value and safeguarding our market position. This applies both in Europe, where the interest in offshore wind remains strong, and via business development in new markets, such as the USA and Taiwan. In the autumn, the UK and Dutch governments announced new ambitious targets for additional build-out of offshore wind in the 2020-2030 period.

In the USA, we bid at the first offshore wind auction in Massachusetts in December together with our partner Eversource Energy, participating with the Bay State Wind project. The preferred bidder or bidders are expected to be selected in April 2018 and will be invited to negotiate a fixed price contract with the three local power distribution companies. In addition, we entered into a partnership agreement with Dominion Energy about a development project off the coast of Virginia for further build-out of offshore wind in Virginia.

Since offshore wind is an important component in Taiwan's future energy supply, it is a potentially attractive market for us. At the end of 2017, the Taiwanese EIA evaluation panel

recommended approval of our environmental impact assessment of the four Greater Changhua projects with a total capacity of up to 2.4GW. Final approval is expected in Q1 2018. In addition, we have entered into cooperation with local Taiwanese companies on components for future projects. We expect the first of the potential projects in Taiwan to be commissioned in the early 2020's.

Bioenergy & Thermal Power

In accordance with our overall strategy, we continue to convert our Danish CHP plants to sustainable biomass. The phasing-out of coal is gaining momentum, and from 2023 we will no longer use coal to generate heat and power. In October 2017, we inaugurated Skærbæk Power Station's new unit which can now run up to 100% on sustainable biomass. We also entered into an agreement to convert Asnæs Power Station to sustainable biomass from 2019. Now, only Esbjerg Power Station remains to be converted for us to achieve our objective of coal-free operations.

Our first commercial Renaissance plant in Northwich, UK, was constructed in 2017. Through enzymatic treatment, unsorted household waste is converted into biogas and recyclable materials. The work on testing and optimising the mechanical parts of the plant is still ongoing and has taken longer than expected. We expect to commission the plant in H1 2018. When fully operational, the plant is expected to be able to treat waste from approximately 110,000 British households.

Distribution & Customer Solutions

At the beginning of the year, and as part of our green transformation, we decided that our

733,000 residential power customers in Denmark should have their total power consumption covered by green power generated by our offshore wind farms at no additional cost for them. Since 1 January 2017, we have therefore supplied green power to all our residential customers. We buy certificates from our own Danish offshore wind farms corresponding to the power consumed by our residential customers.

By the end of 2020, smart meters must be installed for all our Danish power customers. After a successful pilot project in late 2016 and early 2017, we initiated the large-scale roll-out in June. By the end of 2017, a total of 183,000 new meters were in use. In cooperation with Danish meter producer Kamstrup, our power distribution company Radius is tasked with replacing more than one million smart meters on Zealand.

Employees

We have a very strong focus on safety and well-being. During the year, we maintained the positive development in the Group's lost-time injury frequency (LTIF) and saw no life-changing accidents. Moreover, the feedback from our employees in this year's employee survey was again positive. We believe that well-being, safety and positive results go hand in hand. Therefore, we are working continuously to maintain and increase employee satisfaction and safety.

Effective from 2018, we have introduced a new safety target – total recordable injury rate (TRIR). This measure is more extensive than LTIF, and includes, besides lost-time injuries, accidents which do not result in absence, but

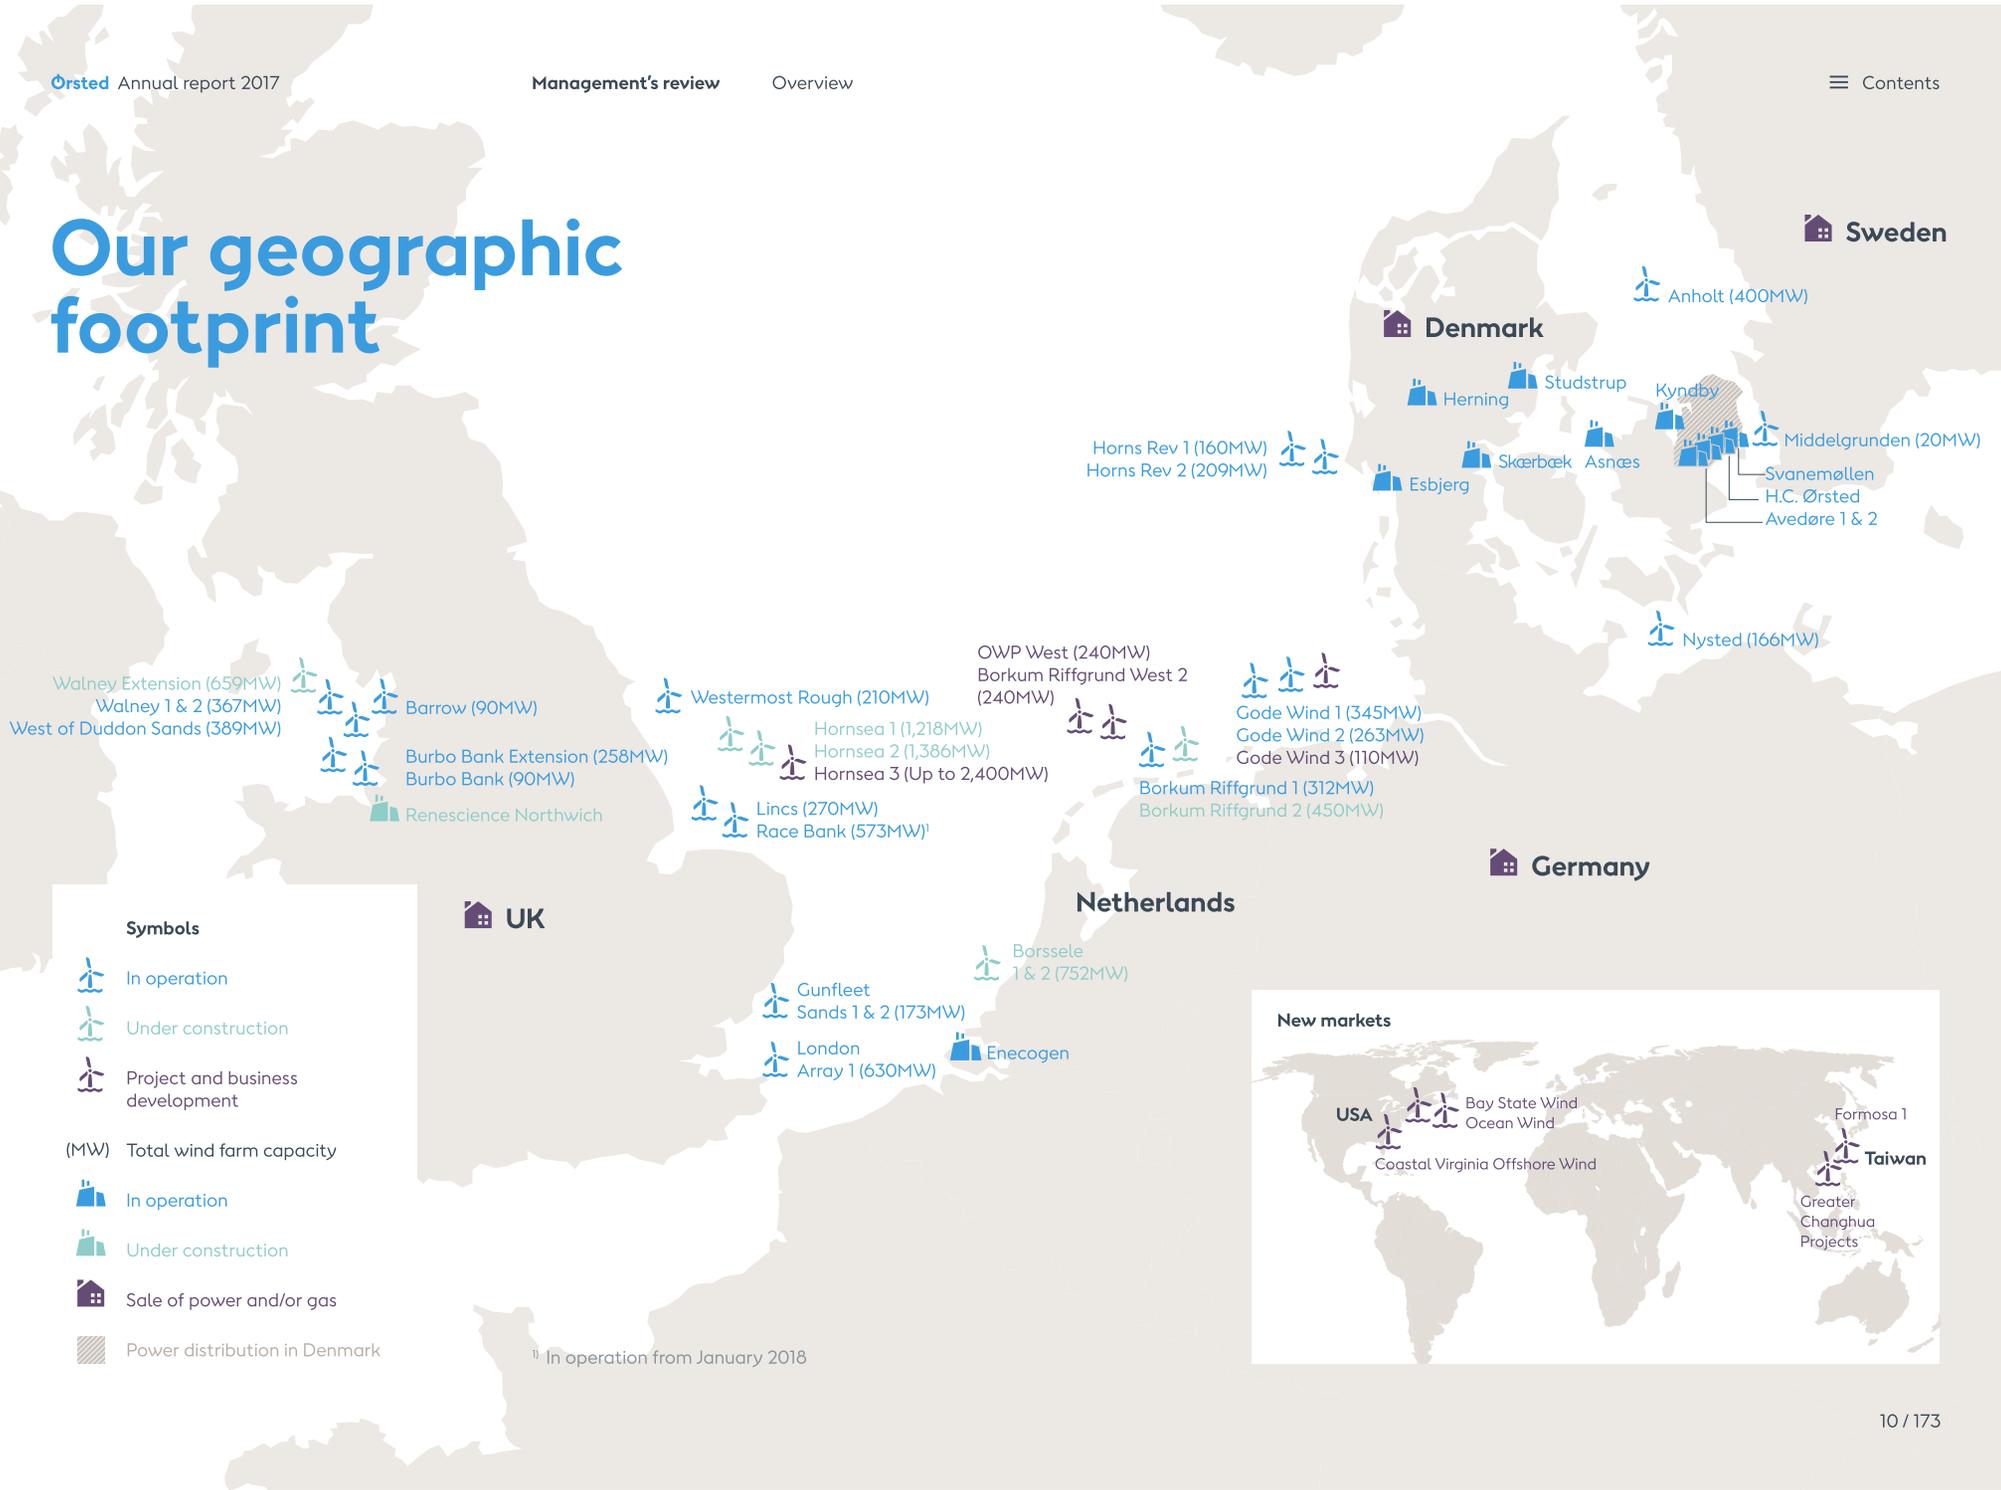

which make the employee unable to undertake normal work, or where medical treatment is required. It follows that there are more facets to TRIR compared to the previously used LTIF measure, and we believe that it reflects everyday life in Ørsted better and will help raise ambition levels for our safety efforts even further.

Our employees again deserve credit and acknowledgement for their dedicated performance all through 2017. Their strong competences, entrepreneurial spirit and passion for what Ørsted stands for and the work we do, are the very foundation of our company.

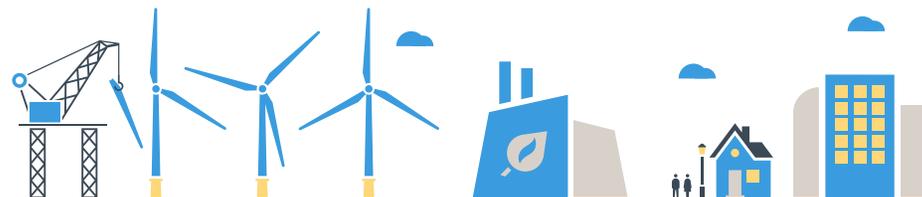

Henrik Poulsen
CEO and President

Our geographic footprint

Our business model

How we create a world that runs entirely on green energy

- Financial capital**
We finance our investments through cash flow from operations, debt and divestment of partnership interests
- Energy assets**
We invest in scalable, innovative green technologies and solutions
- Natural resources**
We rely on natural resources, such as biomass, as well as locations with attractive wind speeds and seabed conditions
- Human resources**
We rely on a highly skilled workforce to operate our business
- Innovative culture**
We continuously develop competitive energy solutions through innovation
- Stakeholder engagement**
We depend on constructive relations with our key stakeholders to ensure supportive framework conditions for our business

	Develop and construct	Operate and maintain	Sell and optimise
Wind Power Develop and build offshore wind farms. Five wind farms are under construction	Own 23 offshore wind farms of which we operate 19	Utilise our partnership model and crystallise value	
Bioenergy & Thermal Power Convert our CHP plants from coal or gas to sustainable biomass	Own and operate ten plants in Denmark and one plant in the Netherlands	Enter into long-term contracts with our heat customers and sell power to the market	
Distribution & Customer Solutions Modernise our power distribution grid in Denmark	Operate and maintain our grid infrastructure	Manage the Group's overall energy portfolio and provide gas, power and energy solutions for our customers	

- We create value for our shareholders** in the form of competitive total returns
- We address profound societal challenges** by developing green, independent and economically viable energy systems that reduce greenhouse gas emissions
- We fulfil our customers' energy needs** through green, innovative and efficient energy solutions
- We are committed to a sustainable working life** and keep a constant focus on being **a great and safe place to work** with motivated and satisfied employees

Strong progress in consolidated results

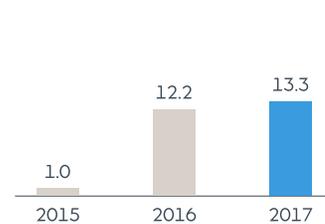

Operating profit (EBITDA), DKK billion

The increase was due partly to 45% growth in earnings from our offshore wind farms in operation, partly to higher partnership income from the farm-down of Walney Extension and Borkum Riffgrund 2. The increase was partially offset by the fact that 2016 was positively affected by compensation of DKK 4.3 billion from the renegotiation of gas purchase contracts.

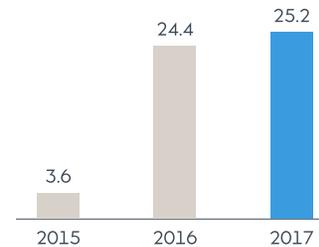

Net profit (continuing operations), DKK billion

The increase was mainly due to higher EBITDA, partially offset by a gain on the divestment of the gas distribution network in 2016.

Return on capital employed (ROCE), %

ROCE increased by 1%-point due to the higher EBITDA, which was partly offset by higher funds tied up in capital employed as a consequence of our continued high investment level. ROCE totalled 17% in 2016 adjusted for compensation from renegotiations.

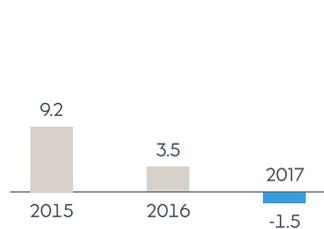

Gross investments, DKK billion

Investments were particularly substantial in 2017 due to construction on several offshore wind farms including Walney Extension, Race Bank, Borkum Riffgrund 2 and Hornsea 1.

Interest-bearing net debt, DKK billion

Net debt decreased by DKK 5.0 billion, due to the proceeds from the divestment of the Oil & Gas business and from its operation until the divestment. The continuing operation also achieved a positive free cash flow despite the high investments.

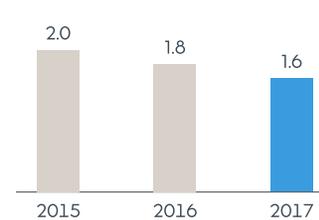

Credit metric (FFO/adjusted net debt)¹⁾, %

The decline in FFO/adjusted net debt was primarily due to lower FFO, as gains from the farm-downs of the offshore wind farms are not included in the calculation. Gains from the farm-downs were DKK 8 billion higher than in 2016, which on the other hand was positively affected by compensation from the renegotiations. However, debt was lower compared to 2016.

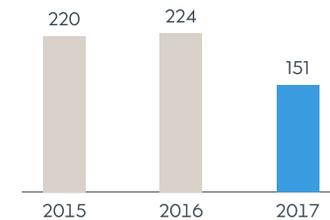

Safety, LTIF

Our continued focus on safety resulted in a historically low lost-time injury frequency in 2017. Effective from 2018, we have introduced a new safety target – total recordable injury rate (TRIR).

Carbon emissions, gCO₂e/kWh

Carbon emissions were reduced following the biomass conversion of CHP plants as well as 42% higher generation from offshore wind farms.

¹⁾ Interest-bearing net debt including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligation less deferred tax.

Outlook 2018

New EBITDA guidance method

We have, in 2018, decided to change our guidance method. In the future, our guidance will only include the effect from existing offshore wind partnership agreements. Previously, our outlook included the effect from partnership agreements which we expected to conclude during the year. That made our outlook particularly sensitive to the timing of farm-downs in Wind Power as well as the distribution of income between the years. Earnings from the new partnerships concerning Borkum Riffgrund 2 and Walney Extension amounted to DKK 9.8 billion in 2017.

EBITDA

EBITDA (business performance) excluding new partnership agreements is expected to be DKK 12-13 billion in 2018. The outlook is based on the expected development in the business units (compared to 2017), as described below.

Wind Power (without new partnerships) – higher

- Earnings from offshore wind farms in operation are expected to increase as a result of the full commissioning of Race Bank in January 2018 and Walney Extension in H2 2018, as well as higher earnings from Burbo Bank Extension, which was completed in May 2017

- Earnings from existing partnership agreements are expected to decline relative to 2017, when earnings were positively affected particularly by Race Bank, but also by Burbo Bank Extension and Gode Wind 1 and 2. In 2018, earnings from existing partnerships will primarily come from Walney Extension and Borkum Riffgrund 2

- A more negative contribution than in 2017 is expected from other activities as a result of higher expensed project development costs.

Bioenergy & Thermal Power – higher

- Total EBITDA from our heat and power generation activities is expected to increase, primarily as a result of the completed bioconversion of Skærbæk Power Station. Earnings from ancillary services are expected to be in line with 2017.

Distribution & Customer Solutions – significantly lower

- Earnings from Distribution are expected to be in line with 2017
- In 2017, Markets achieved high earnings from our gas portfolio and trading activities. We expect lower earnings from these activities in 2018. The increasing gas prices during 2017 led to an increase in the accounting value of our gas inventories, especially towards the end of the year. All else being equal, this will lead to an offsetting negative effect in 2018 when we sell the gas

Outlook 2018, DKKbn	2018 Guidance	2017 Realised
EBITDA (without new partnerships)*	12-13	12.7
Wind Power (without new partnerships)*	Higher	10.8
Bioenergy & Thermal Power	Higher	0.2
Distribution & Customer Solutions	Significantly lower	2.1
Gross investments	16-18	17.7

* EBITDA excluding new partnership agreements signed later than 1 January 2018 (respectively 2017).

Our EBITDA guidance for the Group is the prevailing guidance, whereas the directional earnings development per business unit serves as a means to support this. Higher/lower indicates the direction of the business unit's earnings relative to the results for 2017.

- In 2017, earnings from LNG were negatively impacted by a provision regarding our capacity in the Gate terminal in Rotterdam. Earnings are thus expected to improve in 2018.

Hornsea 1

We still expect a 50% farm-down of Hornsea 1, either in H2 2018 or in 2019. Should the divestment materialise in 2018, EBITDA including new partnerships is expected to be higher than the DKK 22.5 billion achieved in 2017. With a capacity of 1.2GW, this wind farm is around 85% larger than Walney Extension.

Gross investments

Gross investments for 2018 are expected to amount to DKK 16-18 billion. The outlook reflects a high level of activity in Wind Power (Walney Extension, Hornsea 1, Borkum Riffgrund 2, Borssele 1 and 2 and Hornsea 2), biomass conversion of Asnæs Power Station and installation of smart meters.

Work in progress

In addition to gross investments, significant funds are temporarily tied up in connection with the construction of offshore transmission assets for offshore wind farms in the UK and offshore wind farms for our partners. These funds are a part of our operating cash flow.

At the end of 2017, funds tied up in work in progress totalled DKK 7.5 billion. We expect to divest the Burbo Bank Extension offshore transmission asset during H1 2018, but we still expect to see an increase in funds tied up in work in progress in 2018 as a result of the construction of transmission assets at Hornsea 1 and 2. The construction of Borkum Riffgrund 2 and Walney Extension is expected to be more or less operating cash flow-neutral, as we will be receiving milestone payments from our partners during the construction phase.

Forward-looking statements

The annual report contains forward-looking statements, which include projections of financial performance and targets as well as our financial policies. These statements are not guarantees of future performance and involve certain risks. Many direct and indirect factors may affect future results and developments may therefore differ materially from what is forecast due to a variety of factors.

These factors include, but are not limited to, changes in temperature, wind conditions and precipitation levels, the development in inflation, currency, power, gas, coal, carbon, oil and interest rate markets, changes in legislation, regulation or standards, changes in the competitive environment in our markets, security of supply and cable break-downs or other disruptions. Reference is made to the 'Risk and risk management' chapter and to note 7.

Uncertainties, prices and hedges

Our offshore wind farms are largely subject to publicly regulated prices, implying a high degree of certainty about the income. This means that we know the price per generated MWh for most wind farms in Denmark and Germany as well as the CfD wind farms in the UK. For our British ROC wind farms, we also know the subsidy per generated MWh which we will receive in addition to the market price. In 2018, the ROCs are expected to account for 60% of the total income from these wind farms. In 2018, the total publicly regulated prices and subsidies are expected to account for 78% of the income from our offshore wind farms in operation.

The part of our generation from offshore wind farms and power stations, which is exposed to market prices, has to a large extent been hedged for 2018. The same applies to our currency risks. The market value of financial hedging instruments relating to our operations and divestment of assets deferred for recognition in business performance EBITDA in 2018 amounted to DKK -0.2 billion at the end of 2017. This effect is included in the outlook for 2018 (see note 1.1).

The most significant uncertainty surrounding the operating profit from existing activities in 2018 relates to the size of our power generation, which depends on the wind conditions, the ramp-up of new wind farms and potential break-downs, and to a less extent our earnings from existing partnership agreements, heat and market trading activities.

Financial targets and policies

Financial targets

Our target is an average return on capital employed (ROCE) of 12-14% for the Group in the 2018-2023 period (previously 2017-2023), with Wind Power as the main contributor with a targeted ROCE of 13-15% over the same period. We have maintained our target, even though we are now excluding 2017, where we achieved an ROCE of 25% for the Group and 28% for Wind Power.

In Bioenergy & Thermal Power, the focus is on realising positive free cash flows (FCF). Based on the biomass conversion of our CHP plants and the build-out of new bioenergy solutions, we expect to realise positive free cash flows for Bioenergy & Thermal Power from 2018.

This year, we are introducing a new directional target for the operating profit from our offshore wind farms in operation, as they will account for the largest share of our total earnings within a few years. Therefore, we expect an average annual increase in EBITDA from offshore wind farms in operation (including O&M agreements and power purchase contracts) of 13%-14% in the period from 2017 to 2023, from a starting point of DKK 8.5 billion in 2017. The portfolio includes the current decided offshore wind farms through Hornsea 2, and does not account for farm-downs after Hornsea 1, which we expect to farm down in H2 2018 or 2019.

Financial policies

The Board of Directors recommends to the annual general meeting that dividends of DKK 9 per share be paid for FY 2017, equating to an increase of 50% and a total of DKK 3.8 billion. This is a significantly higher increase than envisaged in our dividend policy, which was revised in connection with the IPO. The increase is driven by a strong and increasing cash flow from our offshore wind farms in operation. Our objective is still to increase dividends annually by a high single-digit rate compared to the dividends for the previous year up until 2020.

As described in the strategy section of this annual report, our dividend policy and other expected capital allocation are subject to our objective of maintaining a BBB+/Baa1 rating profile.

At the end of 2017, we adjusted our credit metrics to exclude the effect of gains on farm-downs of offshore wind farms. We have done this to align the metric to the credit rating agencies' method. Despite the alignment, our target is still a ratio of about 30%.

Financial targets

	Target	Year
Return on capital employed (ROCE)		
Group	12%-14%	2018-2023
Wind Power	13%-15%	2018-2023
Distribution & Customer Solutions	9%-11%	2018-2023
Free cash flow (FCF)		
Bioenergy & Thermal Power	Positive	2018
Average yearly increase in EBITDA (CAGR)		
Offshore wind farms in operation	13%-14%	2017->2023

Financial policies

Rating	Min. Baa1/BBB+/BBB+ (Moody's/S&P/Fitch)
Capital structure	~ 30% (FFO/adjusted net debt)

We have maintained our ROCE target, even though we are excluding 2017, where we achieved an ROCE of 25%.

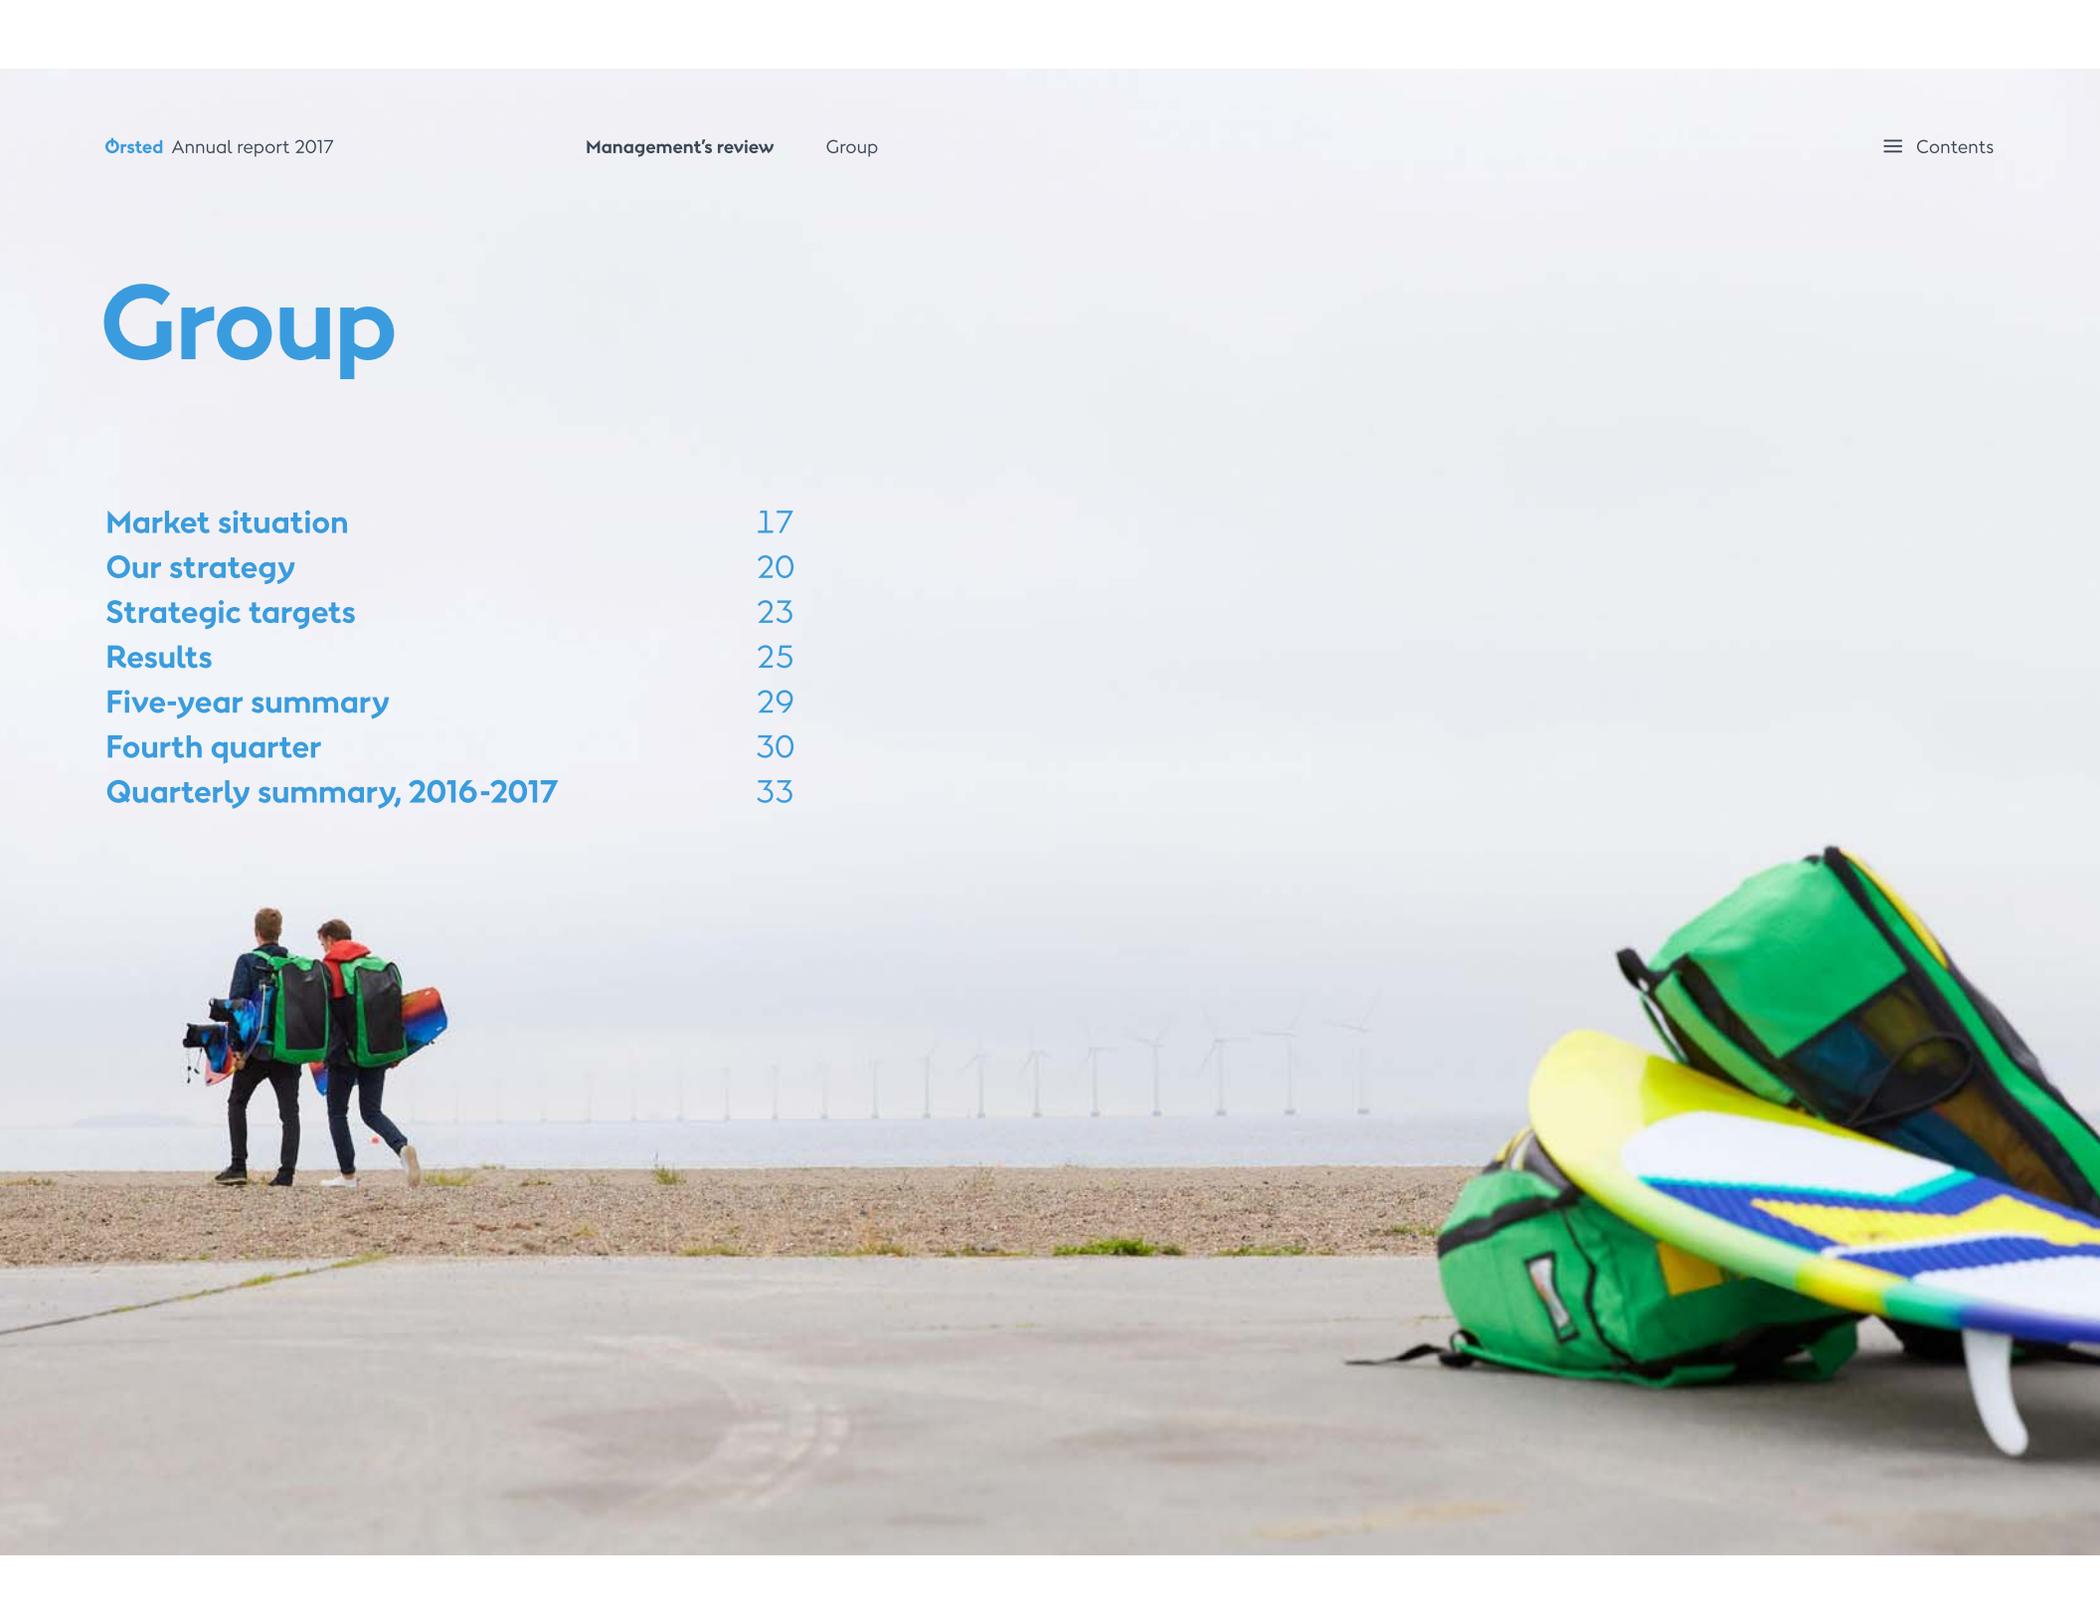

We are introducing a new directional target for our offshore wind farms in operation.

Our current rating is in accordance with the policy.

Market situation

Transforming global energy systems to renewable energy

Global carbon concentrations are now at 145% of the pre-industrial level of the mid-1800s, and 2017 was the fourth year in a row with extraordinarily high temperatures. According to the World Meteorological Organization, changes in the atmosphere over the last 70 years have been more abrupt and severe than ever before.

The vast majority of the world's countries acknowledged the need to fight climate change by ratifying the Paris Agreement in 2016. Under the agreement, the countries commit to keeping the global temperature increase well below two degrees towards the year 2100. The G20 summit in Hamburg in July 2017 emphasised the significance of that goal, and the leaders of the G20 countries agreed that developing innovative energy systems is required for a sustainable future. Today, more than 75% of the world's power generation is based on fossil fuels and nuclear energy.

Public support to continuing the green transformation is crucial. To understand the public opinion on the green transition, Ørsted conducted the inaugural 'Green Energy Barometer' survey in 2017, interviewing more than 26,000 people across thirteen countries. 82% of the respondents believe it is important to create a world fully powered by renewable energy. The support comes from all age groups, educational backgrounds and political

beliefs. 85% would like their country to phase out the use of coal.

Europe is leading the world's energy transformation, having 39% of its total power generation provided by renewable energy sources. In Europe, the share of renewables is expected to increase significantly, reaching 55% by 2030. Besides the wish to decarbonise energy generation, the key drivers behind the transition to green energy are the need to replace aging generation capacity and safeguard the security of energy supply as well as a wish to create local jobs.

Outside Europe, the share of power generation from renewables is considerably lower. In 2017, 24% of the power generation outside Europe was based on renewables, including hydro. Towards 2030, this share is expected to increase to 35%, driven by cost improvements in renewable energy technologies, and growing regulatory support for ambitious renewable deployment targets. By 2020, China aims to reach 210GW of accumulated wind power capacity, capable of generating 451TWh of power, and 110GW of accumulated solar capacity (PV and concentrated solar power), capable of generating 188TWh.

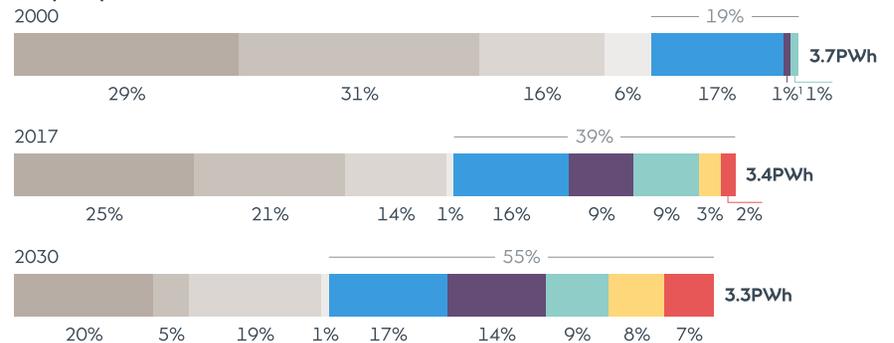

Our market situation

Ørsted operates in various parts of the energy value chain: offshore wind, bioenergy, energy storage and consumption of energy.

Share of power generation

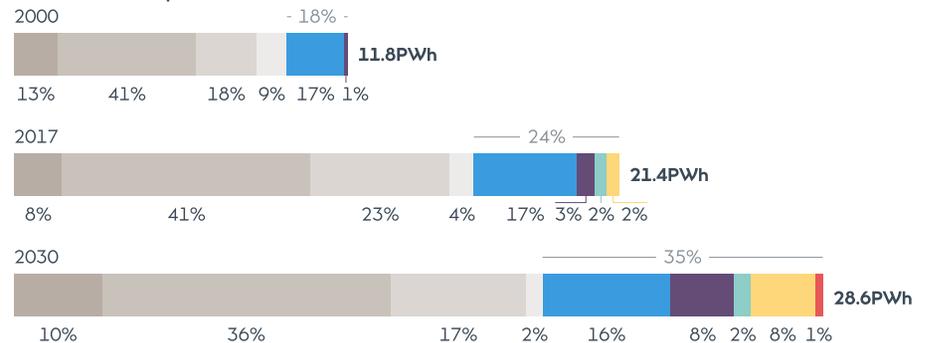

- Nuclear
- Coal
- Gas
- Oil
- Hydro
- Onshore wind

European power mix

¹⁾ Offshore and onshore wind combined

Rest of the world power mix

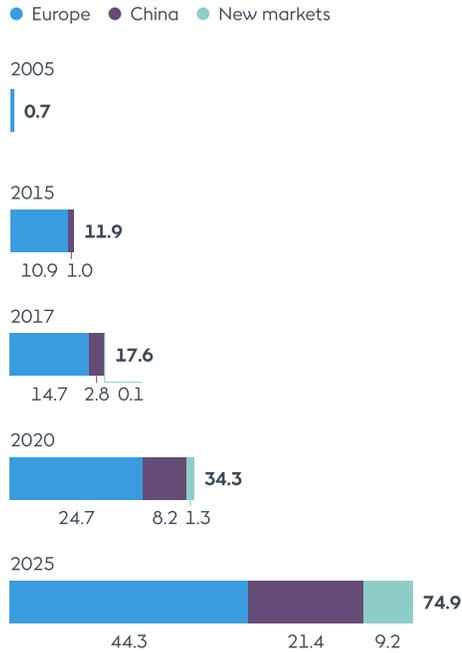

Source: International Energy Agency (IEA), World Energy Outlook 2017; Bloomberg New Energy Finance (BNEF), New Energy Outlook 2017.

Offshore wind

2017 witnessed the largest annual build-out of global offshore wind capacity, with more than 4GW coming online. Cumulative installed capacity reached 18GW globally. The offshore wind market is expected to grow at an average of 19% in the coming years, and the global offshore wind capacity is therefore expected to quadruple towards 2025.

Installed offshore wind capacity, GW

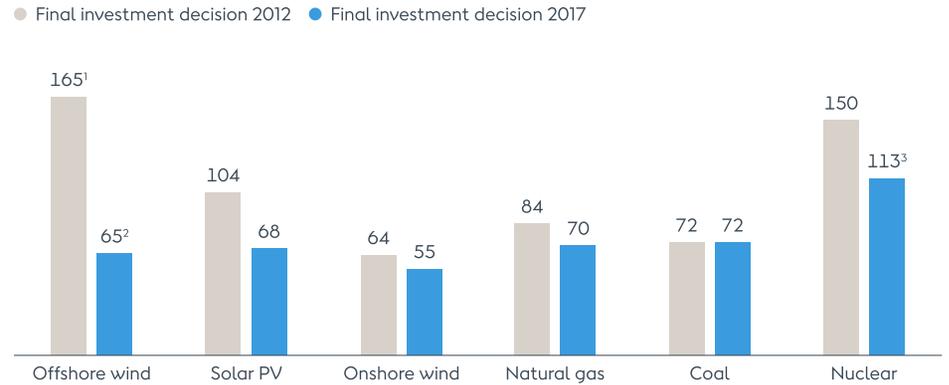

Source: Bloomberg New Energy Finance (BNEF), H2 2017 Offshore Wind Market Outlook

Today, offshore wind farms are primarily installed in Europe, but going forward, this segment of energy generation will become increasingly global. Towards 2020, the majority of capacity additions will take place in Europe, with 3.4GW being commissioned annually, while North America and Asia combined are expected to grow by 2.3GW annually. From 2020 to 2025, however, Europe is expected to add 3.7GW annually, while North America and Asia are expected to add 3.4GW annually. With an expected average annual growth rate of more than 150% from 2020 to 2025, the US market is among the fastest-growing markets.

A key driver of this capacity expansion is a significant reduction in costs. Over the past five years, the cost of offshore wind has been reduced by up to 60% in Northwestern Europe and there is still considerable potential for further cost reductions. Cost reductions are derived from economies of scale from building larger wind farms and installing larger wind turbines, supported by technological improvements in all parts of an offshore wind farm. Moreover, increased industrialisation, digitalisation, technological innovation and increased competition for the projects have contributed to cost reductions.

The most recent offshore wind farm auctions and tenders confirm the trend of rapidly falling costs. The German auction in April 2017 saw the first zero-subsidy bids for offshore wind projects to date. Two projects, OWP West and Borkum Riffgrund West 2, developed by Ørsted, will, if finally decided in 2021, be put in operation during 2024 without government subsidies. He Dreith, another subsidy-free project, which is developed by EnBW, is planned for commissioning in 2025.

Levelised cost of electricity for new generation capacity, Northwestern Europe, EUR/MWh (2016 prices)

Source: Bloomberg New Energy Finance (BNEF) and UK Department for Business, Energy and Industrial Strategy
¹ Generic offshore wind, including transmission, Northwestern Europe, final investment decision (FID) 2012.
² Hornsea 2, UK, including transmission. Calculated as levelised revenue (price) of power over the lifetime of the project. Market income based on BEIS (Department for Business, Energy & Industrial Strategy, UK) wholesale market price projections at the time of contracting.
³ Same approach as for Hornsea 2 with Hinkley Point strike price of GBP 92.5 per MWh in 2012 real prices. Lifetime of 60 years and 91% capacity factor.

Similarly, in the UK offshore wind auction in September 2017, the Hornsea 2 project (1.4GW developed by Ørsted) saw record-low costs, and was for the first time able to compete on cost with new-builds of conventional coal- and gas-fired power stations.

The allocation of offshore wind projects typically takes place through a public procurement process, organised as an auction or a tender.

In auctions, project developers compete with one or more of their own planned and

consented projects. The auction system is prevalent in countries such as the UK, the US, Germany (excluding part of the transmission grid) and to some extent Taiwan. Bid price is often the only award criterion.

In tenders, which is the method applied in Denmark and the Netherlands, the regulatory authority carries out preparations such as site investigations on wind, seabed and environmental conditions for preselected sites. For project developers who prequalify to bid, tender processes typically require lower

up-front investments than auction processes, and the risk for project owners of obtaining the necessary permissions is also lower. However, numerous project developers risk spending time and money on a project, for which only one is awarded a contract. In a tender process, the project is awarded to the bidder offering the lowest cost.

Bioenergy

For a long time, the generation of power by conventional fossil fuel-fired power stations in Europe has been under pressure from declining power prices. This pressure is also seen in Denmark, where Ørsted has the majority of its combined heat and power plants. The pressure on earnings from power generation has put an increased focus on the generation of district heating, which represents a stable

source of income due to the long-term heat contracts with large urban communities. In recent years, major heat customers have demanded that their deliveries to be covered by green sources, driving the conversions of conventional power stations to sustainable biomass. A bioenergy-based central heat and power plant provides flexible generation capacity to complement the fluctuating energy generation from wind and solar PV and provides large-scale green district heating.

On a European scale, between 0.5 and 1GW of new bioenergy generation capacity has been added annually since 2012, and by 2017, 30% of global bioenergy generation capacity was located in Europe. In Denmark, 13.4% of the total power generation came from biomass in 2016 against 7.5% for Europe in total.

Global waste volumes are growing rapidly at the moment and will continue to do so in the foreseeable future, and most of the waste is destined for landfills or dumped directly into natural habitats, creating large environmental problems, while missing the opportunity to capture the resources in the waste for recycling and energy production. New innovative and cost-effective solutions are needed to address this global challenge. Many countries are currently entering or undergoing major transformations of their waste systems, creating significant growth opportunities for competitive green waste treatment technologies.

Energy storage

Energy storage technologies are expected to play an important role in an energy system incorporating an increasing share of intermittent renewable sources. Storage solutions act

as enablers to balance supply and demand in the power markets, thus facilitating energy systems that are both green and secure. In recent years, mainly flexible rapid-response storage solutions have been deployed to provide ancillary services.

The deployment of storage solutions is expected to grow rapidly in the coming years. Today, the global market for storage capacity is 8GWh, but it is expected to increase to 121GWh by 2025, more than two thirds being large-scale utility facilities. In 2017, 80% of newly commissioned energy storage capacity was located in the Americas.

The costs of storage systems are expected to decrease significantly. Some analysts forecast a 20% cost reduction towards 2020 and 40% by 2025. As the volume of deployed storage solutions increases, additional cost reductions are expected, driven by economies of scale, technological innovation and increased competition.

Energy consumption

Energy customers are increasingly demanding green and more intelligent energy solutions to protect for the environment and save money. New technological solutions are key drivers in achieving this as they provide detailed overviews of consumption, can add flexibility and enable matching customers' consumption patterns to power generation based on intermittent renewable sources.

Currently, smart meters are being rolled out across Europe, providing customers with timely information about their consumption. By 2017, 128 million smart meters had been

installed in Europe, up from 96 million the year before, and this number is forecast to reach 266 million by 2021.

A growing portfolio of innovative solutions such as energy management systems allows consumers to better monitor and manage their power consumption. In 2016, EUR 8.3 billion were invested in smart energy solutions globally, primarily in digitalisation (49%) and energy efficiency solutions (30%).

Solutions to enable the green transformation are also deployed in the European heating sector. Electrification of heating with heat pumps is picking up, with approximately 1 million units sold in 2016 alone, totalling around 9.5 million units deployed across the EU. With some 244 million residential buildings across the EU, heat pumps cover approximately 4% of the building stock today.

Another sector that is becoming increasingly electrified is transportation. Towards 2030, the share of electric vehicles sold globally is expected to reach 24%. This will be driven by a sharp decline in battery costs, supportive regulation and a significant increase in available models with longer driving ranges, as car manufacturers are increasingly committed to lower greenhouse gas emissions.

Our strategy

Transformation of the company

Over the past 11 years, Ørsted has undergone a significant transformation towards green energy. Ørsted (then DONG Energy) was among the most coal-intensive utilities in Europe in 2006, and only 13% of our heat and power generation was based on renewable energy sources. In 2017 this ratio was 64%, and already by 2020 more than 80% of our heat and power generation is expected to be based on renewable sources. By 2023, when coal has been phased out completely, more than 95% of our heat and power generation will come from renewable energy sources.

This green transformation has been driven primarily by a significant expansion of our offshore wind capacity. More than DKK 80 billion has been invested to expand our offshore wind capacity to currently 3.9GW, and with more than 5GW in the construction pipeline, Ørsted is currently the largest European renewables developer. Our scalable offshore wind build-out has been instrumental in reducing the offshore wind cost-of-electricity by 60% since 2012. A key component in our build-out has been the formation of 16 project partnerships with investors, enabling us to attract DKK 83 billion of capital, a key factor in financing our expansion.

In our conventional power generation, we have closed more than 40% of total capacity and converted five of seven combined heat and power plants (CHP) to biomass

to decarbonise our generation and ensure sustainable financials. The initiatives taken have been instrumental in lowering our carbon emissions by 67% compared to 2006. By 2023 our CHP operations will be completely coal-free, and we will have reduced our total carbon emissions per produced kWh by 96% compared to 2006.

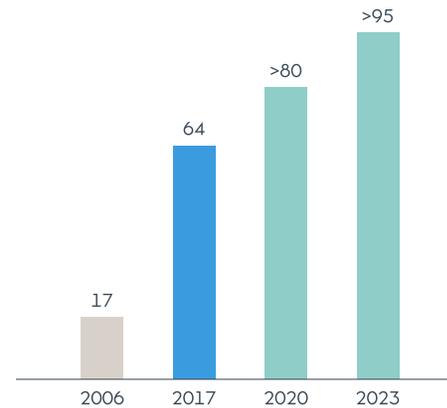

In our retail business, we have initiated a strategic shift from commodity sales to developing integrated green energy solutions for our private and business customers.

As part of Ørsted's green transformation, we announced in November 2016 the decision to divest our upstream oil and gas business to become a pure-play green energy company. A sale to INEOS was announced in May 2017 and closed in September. The divestment completed the strategic transformation of Ørsted.

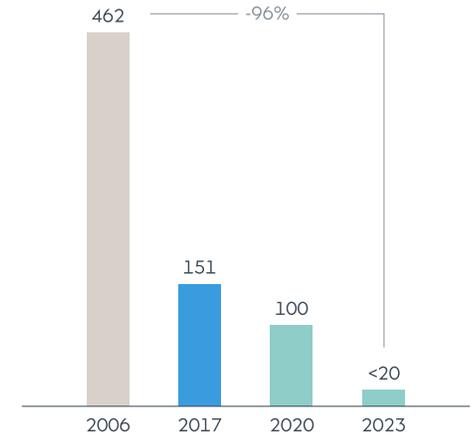

The transformation has made Ørsted one of the greenest and fastest-growing energy companies in Europe.

In financial terms, we have shifted our capital base profoundly from fossil fuels to renewables, which now account for 83% of capital employed, up from 21% in 2006. During the same span of years, we have more than doubled our operating profit (EBITDA) to DKK 22.5 billion, and more than quadrupled our return on capital employed, from 6% to 25%.

Green share of generation, %

Carbon emissions, g CO₂ e / kWh

To reflect our transformation, we decided to change our name from DONG Energy (Danish Oil and Natural Gas) to Ørsted in honour of the Danish 19th century scientist H.C. Ørsted, who discovered electromagnetism and thereby laid the foundation for modern generation of electricity. We also launched a new and bolder vision for the company: *Let's create a world that runs entirely on green energy.* We do not have all the answers to the climate problem, but we want to be part of the solution. And as the global leader within offshore wind, we are already an integral part of the solution.

↑
We expect more than 95% of our heat and power generation in 2023 to be green.

Strategic direction and priorities

We want to lead the transformation to green energy. We do that by investing in our competitiveness and core competences within offshore wind, flexible and sustainable CHP plants, intelligent grids and green customer solutions. At the same time, we are looking at further green growth initiatives that will enable us to gradually expand our strategic platform and flexibility. All of this with a view to creating long-term profitable growth.

Our business can be divided into three areas: offshore wind, our utility business and a portfolio of new growth initiatives. Across all three areas, our strategic focus is green growth.

Offshore wind

- Maintain our market leadership in offshore wind
- Continue to pioneer new markets and develop a global business
- Keep innovating and reducing the cost of electricity from offshore wind
- Leverage market-leading partnership model for incremental value creation and risk diversification
- Realise the current build-out plan of 8.9GW towards 2022 and expand to 11-12GW by 2025
- Implement operational excellence and digitisation initiatives across EPC and O&M

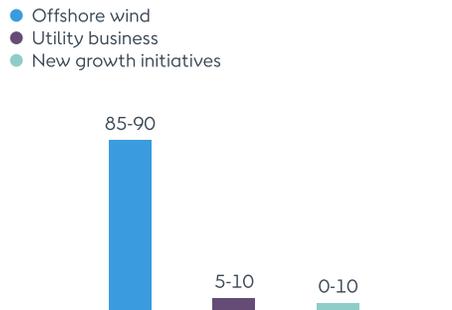

Utility business

- Complete biomass conversions of Danish CHP plants and phase out the use of coal by 2023
- Roll out smart meters to build an intelligent power distribution grid
- Enhance customer experience through digitisation and product innovation
- Provide a competitive route-to-market for our own and our customers' generation portfolios
- Optimise natural gas activities as a transition fuel to a world that runs entirely on green energy
- Drive cost efficiency across the utility business to maintain competitiveness

New growth initiatives

- Continue the commercial development of our innovative Renaissance technology for enzymatic waste treatment
- Mature the Energy-as-a-Service concept for our industrial and commercial customers
- Explore potential within other renewable energy technologies:
 - Energy storage
 - Solar PV
 - Onshore wind

Expected share of gross investment 2018-2023, %

Each of the three areas plays a particular role in our portfolio: Offshore wind is the main growth engine and adds scale to our green vision. Our utility business complements our offshore wind business by providing a route-to-market and enabling us to integrate large volumes of renewable generation into the energy system. Finally, our portfolio of new growth initiatives provides options for additional, profitable long-term growth that support an integrated, cost-efficient and green energy system. The growth initiatives are all in an early stage, and we are working on establishing a scalable, commercial model for them. As such, we do not expect them to make substantial financial contribution in the short term. They will contribute by diversifying our long-term growth journey and provide us with the strategic agility required to continually adapt to the market.

To support innovation, growth and long-term strategic renewal of our business platform, we invest significantly in four areas that enable our strategy: talent, digitalisation, operational excellence and innovation.

Our talent programmes focus on bringing people with the right competences into the business, and developing the leaders and specialists we need to drive growth and maintain a competitiveness in our business. We run our own internal Ørsted Academy, which supports talent at every level – from young talents to specialists to new and experienced leaders – to develop the professional and personal skills they need to perform, develop our business and create a good culture.

Our digital strategy is focused on bringing digital technologies, advanced analytics and automation to all parts of our business. We focus in particular on our O&M and EPC business in Wind Power, digitalising our heat and power plants through our 'Smart Plant Programme', as well as bringing more intelligence to our power grid and to our downstream customer solutions. To unleash the full potential of digitalisation, we work with new organisational models including digital labs based on agile methods.

In our core operating entities we implement excellence initiatives to drive efficiency, agility and quality into our processes and daily operations. These operational excellence programmes are implemented particularly within areas like grid operations, CHP plants, EPC, O&M, customer service and shared finance functions. Our cost efficiency and our ability to execute with speed, precision and according to high safety standards are, of course, critical to both near-term results and long-term competitiveness.

Within business innovation, we aim to stimulate the sourcing of new ideas, both from inside the company and from our external environment. We run cross-company Innovation Games, where internal teams collaborate and compete to generate new business or technology concepts to enhance our business. To increase our exposure to external innovation environments, we have established Ørsted Ventures. Located in Silicon Valley, California, Ørsted Ventures engages with venture funds, start-up companies, universities and think-tanks, to explore new technologies and business models.

Capital allocation

From 2019, we expect the free cash flow generated by our business to be sufficient to finance our planned investment programme.

The majority of our free cash flow will support our growth plan for offshore wind with the ambition of an installed capacity of 11-12GW by 2025. In addition, we will complete the conversions of our Danish CHP plants to biomass and install 1 million smart meters at our grid customers by 2020. In the period 2018-2023, we expect to allocate around 85-90% of our gross investments to offshore wind, 5-10% to our utility business and 0-10% to new growth initiatives.

In our ongoing capital allocation, we reaffirm our strong commitment to maintaining a BBB+ / Baa1 rating and to the dividend payout expectations stated at any time.

Even in light of our current ambitious investment plans, the clear commitment to our credit rating target and higher dividends, we expect to have further financial capital – depending on our success in winning new offshore wind projects and the extent to which we farm-down future projects. This means that, beyond Hornsea 1, we will evaluate farm-downs on a case-by-case basis, based on clear value creation criteria and risk diversification considerations.

To the extent possible, we will deploy potential excess investment capacity into new, value-creating growth initiatives that support our green energy vision, reinforce our long-term competitiveness, and deliver value for our shareholders. If possible, we will, in particular,

pursue additional value-creating investment opportunities in offshore wind beyond our 11-12GW ambition by 2025. In addition, we will continue to work with and potentially scale up new growth initiatives within Renaissance, Energy-as-a-Service, energy storage, solar PV and onshore wind if they meet our investment criteria. Growth investments can include both CAPEX and OPEX for organic business building as well as acquisitions.

Over time, excess capital beyond such value-creating growth investments will be distributed to shareholders through increased annual dividends and/or share buy-backs.

Corporate social responsibility reporting

Our sustainability strategy and results are reported on in our sustainability and ESG report, which constitutes our annual Communication on Progress to the UN Global Compact. The reports highlight areas in which our expertise can make a real difference when it comes to promoting the UN's global goals for sustainable development. With this report, we live up to the requirements for corporate social responsibility reporting set out in section 99a of the Danish Financial Statements Act as well as section 99b on the gender balance at management levels etc.

orsted.com/ESGperformance2017

Strategic targets

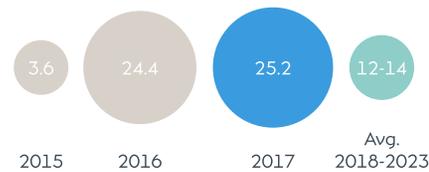

We implement our strategy by pursuing eight strategic targets, divided into four themes:

- We create value for our shareholders** in the form of competitive total returns.
- We address profound societal challenges** by developing green, independent and economically viable energy systems that reduce greenhouse gas emissions.
- We fulfil our customers' energy needs** through green, innovative and efficient energy solutions.
- We are committed to a sustainable work life and keep a constant focus on being **a great and safe place to work**, with motivated and satisfied employees.

Create shareholder value

1. ROCE, %

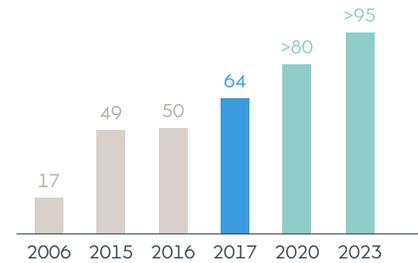

Our target is an average return on capital employed (ROCE) of 12-14% for the Group in the 2018-2023 period (formerly 2017-2023).

Address profound societal challenges

2. Green share of generation, %

In 2017, we decided to phase out our use of coal completely by 2023. Our objective is for more than 95% of our heat and power generation in 2023 to be green.

3. Carbon emissions, g CO₂e / kWh

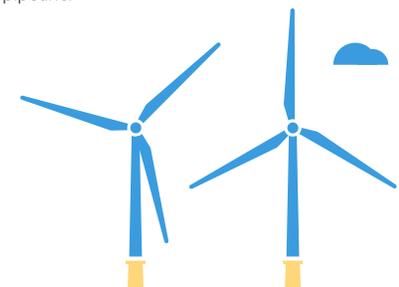

The conversion of our power stations to sustainable biomass has reduced our carbon emissions by 67% since 2006. Our target is to reduce emissions to no more than 20g CO₂e per kWh in 2023.

4. Installed offshore wind capacity, GW

Our ambition is to install 11-12GW by the end of 2025. Those of our projects where a final investment decision has already been made will increase capacity to 8.9GW at the end of 2022. The rest will come from a significant pipeline.

2025	11-12
2017	3.9
2016	3.6
2015	3.0
2006	0.5

Fulfil our customers' energy needs

5. Security of supply, power outage per customer

Our ambition is to offer a level of security of supply which is on a par with or higher than the Danish average, which is approximately 0.4 outages per customer per year.

● Radius ● DK average (excluding transmission grid)*

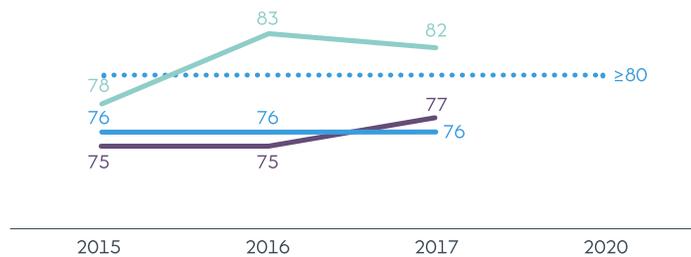

* DK average is published in April

6. Customer satisfaction, scale 1-100

Our ambition is to deliver a market-leading customer experience, which we continuously strive to do. Our target of customer satisfaction is at least 80 from 2020.

— B2C — B2B — Distribution ●●● Target 2020

Be a great and safe place to work

7. Employee satisfaction, scale 1-100

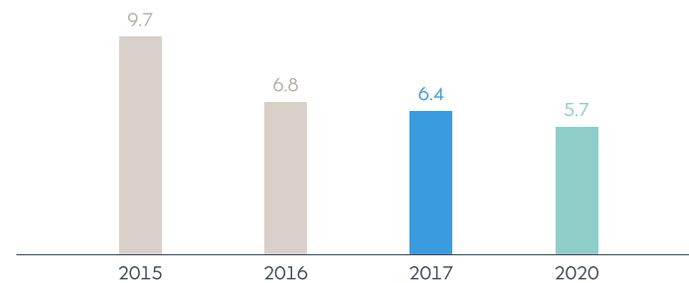

We believe that well-being and positive results go hand in hand. Therefore, we are working continuously to maintain and increase employee satisfaction. The employee satisfaction in Ørsted is above comparable companies.

— Ørsted — Ennova benchmark

8. Safety, TRIR

Effective from 2018, we have introduced a new safety target – total recordable injury rate (TRIR). There are more facets to TRIR compared to the previously used LTIF, and we believe that this reflects everyday life in Ørsted better.

Results

Follow-up on outlook announced for 2017

In the outlook announced in our annual report for 2016, we expected an EBITDA of DKK 15-17 billion and gross investments of DKK 18-20 billion for 2017.

With an EBITDA of DKK 22.5 billion, our expectations were exceeded. The main reasons were the farm-down of 50% of Borkum Riffgrund 2 in 2017 rather than at the beginning of 2018, as previously expected, and the fact that the farm-down of 50% of Walney Extension resulted in a different distribution of earnings between 2017 and 2018 than expected. In addition, earnings from our offshore wind farms in operation were higher than expected, especially towards the end of the year, as a result of stronger winds and faster ramp-up of

generation from new offshore wind farms as well as higher earnings from our gas portfolio and trading activities. Gross investments amounted to DKK 17.7 billion.

At the beginning of the year, we expected our interest-bearing net debt to increase in 2017. However, our net debt decreased by DKK 5.0 billion to DKK -1.5 billion at year-end. The decline was mainly due to higher proceeds in 2017 from the farm-downs described above. In addition, investments were at the low end of the announced range, and cash flows from operating activities were higher than expected. The latter was due partly to improved underlying earnings, and partly to lower than expected funds tied up in work in progress.

Follow-up on outlook for 2017, DKKbn	Guidance 2 Feb 2017	Guidance 7 Aug 2017	Guidance 1 Nov 2017	Guidance 11 Dec 2017	2017 Realised	
EBITDA	15-17	17-19	19-21	~21	22.5	✓
Wind Power	Higher (>11.9)	Significantly higher	Significantly higher	Significantly higher	20.6	✓
Bioenergy & Thermal Power	Higher (>0.1)	Higher	Higher	Higher	0.2	✓
Distribution & Customer Solutions	Significantly lower (<7.1)	Significantly lower	Significantly lower	Significantly lower	2.1	✓
Gross investments	18-20	18-20	18-20	18-20	17.7	✓

Business performance vs. IFRS

Ørsted uses business performance as an alternative to the results prepared in accordance with IFRS. Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. The difference between the two principles will be eliminated as the contracts expire. Apart from this, there is no difference between business performance and the IFRS results.

EBITDA calculated in accordance with IFRS amounted to DKK 22.6 billion in 2017 against DKK 16.9 billion in 2016. Calculated in accordance with the business performance principle, EBITDA was DKK 22.5 billion and DKK 19.1 billion, respectively. The difference between the two principles was thus DKK 0.1 billion in 2017 compared with DKK -2.2 billion in 2016, and is specified below.

In the presentation of the results according to IFRS, Ørsted does not apply the provisions on hedge accounting of commodities and related currency exposures. The market value adjustments of these are continuously recognised in the income statement, which means that the IFRS results for the individual years are not comparable. IFRS results do not reflect the commercial risk hedging, according to which the business units and the Group are managed and evaluated. In the management's review, comments are made on business performance only, unless otherwise is specified. Reference is also made to note 1.1.

Business performance vs. IFRS, DKKm	2017	2016
EBITDA – business performance	22,519	19,109
Market value adjustments for the year of financial and physical hedging contracts relating to a future period	(138)	(1,397)
Reversal of deferred gain (loss) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period	193	(773)
EBITDA – IFRS	22,574	16,939

Continuing and discontinued operations

Until 29 September 2017, Oil & Gas was presented as assets held for sale and discontinued operations. The results from the oil and gas business are therefore presented in a separate line in the income statement and the statement of cash flows.

Revenue

Power generation from offshore wind farms increased by 42% to 8.5TWh in 2017, as a result of newly constructed offshore wind farms in Germany and the UK and higher wind speeds in 2017. Thermal power generation declined by 2% to 8.2TWh. Heat generation also declined by 2% to 9.0TWh in 2017. Offshore wind power accounted for 51% of our total power generation, while the renewable energy share of our

total heat and power generation accounted for 64% in 2017 compared with 50% in 2016.

Revenue declined by 3% to DKK 59.5 billion in 2017 against DKK 61.2 billion in 2016. 2017 was primarily impacted by higher revenue from power generation from our offshore wind farms, an average increase in gas prices as well as increased power sales in the UK. 2016 was impacted by a high level of activity from our construction contracts.

EBITDA

Operating profit (EBITDA) increased by 18%, amounting to DKK 22.5 billion in 2017 compared with DKK 19.1 billion in 2016. Earnings from Wind Power were up 74% compared to 2016, amounting to DKK 20.6

billion. The higher earnings were attributable to power generation from the newly constructed offshore wind farms as well as an almost doubling of earnings from partnership agreements, which totalled DKK 13.7 billion in 2017. This was primarily due to gains from the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2. EBITDA for 2016 was positively affected by one-off payments of DKK 4.7 billion from the renegotiation of gas purchase contracts and earnings from the now divested gas distribution activities. Adjusted for the above-mentioned non-recurring income, our underlying EBITDA increased by 56%.

EBIT

EBIT increased by 17% to DKK 16.2 billion in 2017, primarily driven by the higher EBITDA.

Depreciation increased by DKK 0.5 billion to DKK 5.7 billion in 2017. The rise was due to a higher number of offshore wind farms in operation.

Impairment losses totalled DKK 0.5 billion and related to capitalised project development costs in Wind Power, due to uncertainty about the carrying through of the projects.

Gain (loss) on divestment of enterprises

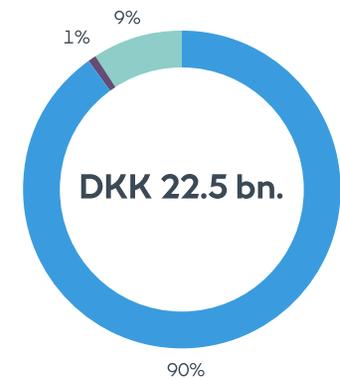

Gain (loss) on divestment of enterprises primarily concerned A2SEA in 2017 and the gas distribution network in 2016.

Financial income and expenses

Net financial income and expenses amounted to DKK -1.0 billion and were DKK 0.3 billion higher than in 2016. Both years were affected by capital losses and costs relating to the

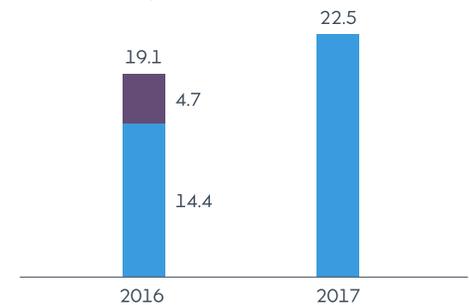

EBITDA

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions

Underlying EBITDA development, DKK bn.

- Underlying EBITDA
- Non-recurring items

The underlying operating profit excludes one-off payments related to renegotiations of gas purchase contracts and earnings from divested gas distribution assets in 2016.

Financial results, DKKm	2017	2016	%
Revenue	59,504	61,201	(3%)
EBITDA	22,519	19,109	18%
Underlying EBITDA	22,519	14,442	56%
Depreciation	(5,739)	(5,232)	10%
Impairment losses	(545)	-	n.a.
EBIT	16,235	13,877	17%
Gain (loss) on divestment of enterprises	(139)	1,250	n.a.
Net financial income and expenses	(1,042)	(767)	36%
Tax	(1,765)	(2,191)	(19%)
Tax rate	12%	15%	(3%p)
Profit for the year from continuing operations	13,279	12,161	9%
Profit for the year from discontinued operations	6,920	1,052	558%
Profit (loss) for the period	20,199	13,213	53%

In 2017, regulated and quasi-regulated activities and contracted activities accounted for 34% and 65% of our EBITDA from continuing operations respectively, whereas market exposed activities accounted for 1%.

Read more about profit for the year from discontinued operations in note 3.6.

early repurchase of bonds and, in 2016, also early repayment of bank loans and interest rate swaps. In 2016, there was a positive impact from exchange rate adjustments of loans and deposits.

Tax and tax rate

Tax on profit for the year amounted to DKK 1.8 billion, which was DKK 0.4 billion lower than in 2016. The effective tax rate was 3%-points lower than in 2016. In both periods, the tax rate was affected by non-taxable divestment gains. Gains on the farm-downs of Walney Extension and Borkum Riffgrund 2 as well as a deferred selling price for Race Bank impacted the tax rate in 2017, while gains on the farm-downs of Burbo Bank Extension and Race Bank as well as the divestment of our gas distribution activities impacted the tax rate in 2016.

Profit for the year from continuing operations

Profit for the year from continuing operations increased by 9%, totalling DKK 13.3 billion in 2017. The increase of DKK 1.1 billion is explained by substantial differences in our operations between the two years. 2017 was positively impacted by the significant increase in EBITDA in Wind Power, while 2016 was characterised by one-off payments from the above-mentioned renegotiations of gas purchase contracts.

Profit for the year from discontinued operations

Profit after tax from discontinued operations amounted to DKK 6.9 billion in 2017 against DKK 1.1 billion in 2016. The increase was due partly to a gain from the divestment of our

Oil & Gas business of DKK 2.4 billion, partly to higher EBIT and lower tax. The higher EBIT in 2017 relative to 2016 was due to the assets classified as held for sale at the end of 2016, not being depreciated in 2017. EBITDA was in line with 2016 despite one less quarter of production activities in 2017 compared with 2016 as a result of the divestment in September. The lower tax in 2017 relative to 2016 primarily reflected the reversal of the remaining tax assets, which contributed negatively in 2016.

Cash flows from operating activities

Cash flows from operating activities totalled DKK 1.0 billion in 2017 compared with DKK 11.3 billion in 2016. The decrease of DKK 10.2 billion was due to the lower EBITDA (adjusted for gains from farm-downs, as they are not recognised in cash flows from operating activities), the settlement of ineffective price hedges in the oil and gas business totalling DKK 2.0 billion between the Group's continuing and discontinued operations in Q2 2017 (no effect on the Group's total net debt) as well as a change in funds tied up in working capital of DKK 7.9 billion in 2017 against DKK 1.5 billion in 2016.

In 2017, funds tied up in work in progress increased by DKK 3.7 billion due to the construction of transmission assets at Hornsea 1, Race Bank and Walney Extension as well as the construction of Race Bank for partners. This was partially offset by milestone payments received from partners in connection with the construction of Borkum Riffgrund 2 in 2017 as well as high trade payables relating to the construction of Walney Extension. Funds tied up in work in progress in 2016 were lower than in 2017 (DKK 2.4 billion) due to the divestment

Cash flow and net debt, DKKm	2017	2016	%
Cash flow from operating activities	1,023	11,272	(91%)
EBITDA	22,519	19,109	18%
Financial instruments	(528)	806	n.a.
Change in provisions	98	(366)	n.a.
Reversal of gain (loss) on sale of assets	(10,835)	(2,939)	269%
Other items	297	217	37%
Interest expenses, net	36	(861)	n.a.
Paid tax	(2,660)	(3,182)	(16%)
Change in work in progress	(3,674)	(2,393)	54%
Change in other working capital	(4,230)	881	n.a.
Gross investments	(17,744)	(14,960)	19%
Divestments	16,982	9,055	88%
Free cash flow	261	5,367	(95%)
Net debt at 1 January	3,461	9,193	(62%)
Free cash flow continuing operations	(261)	(5,367)	(95%)
Free cash flow from discontinued operations	(9,025)	(1,106)	n.a.
Interest bearing receivable re Oil & Gas divestment	(1,014)	-	n.a.
Dividends and hybrid coupon paid	3,523	1,016	247%
Exchange rate adjustments etc.	1,799	(275)	n.a.
Net debt at 31 December	(1,517)	3,461	n.a.

Gain/loss on sale of assets is part of EBITDA but is presented as part of the 'divestment' cash flow. The EBITDA effect is thus reversed in the specification of cash flow from operating activities.

Key ratios, DKKm, %	2017	2016	%
ROCE	25.2	24.4	0.8%p
Adjusted net debt	15,900	18,046	(12%)
FFO/adjusted net debt	50.3	64.2	(13.9%p)

ROCE and FFO/adjusted net debt is specified in notes 2 and 6.6.

of the Westernmost Rough transmission asset and the receipt of milestone payments from partners in connection with the construction of Gode Wind 1 and Burbo Bank Extension, among other factors.

The high level of funds tied up in other working capital was primarily due to lower prepayments from heat customers in connection with biomass conversions, lower VAT payables as well as an increase in trade receivables as a consequence of the high power generation in Wind Power at the end of 2017.

Investments and divestments

Gross investments amounted to DKK 17.7 billion compared with DKK 15.0 billion in 2016. The most important investments in 2017 were as follows:

- offshore wind farms (DKK 15.7 billion), including Walney Extension, Race Bank and Hornsea 1 in the UK as well as Borkum Riffgrund 2 in Germany
- power stations (DKK 1.4 billion), including biomass conversions of the Skærbæk and Asnæs power stations and construction of a Renescence waste treatment plant in the UK.

25%

ROCE increased by 8%-point compared with 2016, when adjusting for lump-sums from renegotiations and amounted to 25% in 2017.

Divestment of activities and enterprises amounted to DKK 17.0 billion in 2017 and related primarily to the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2, receipt of a deferred payment concerning Race Bank as well as the divestment of A2SEA. Divestments in 2016 consisted of the farm-downs of 50% of Burbo Bank Extension and Race Bank, divestment of our gas distribution activities and receipt of a deferred payment related to the farm-down of 50% of Gode Wind 1 in 2015.

Interest-bearing net debt

Interest-bearing net debt totalled DKK -1.5 billion at the end of 2017 against DKK 3.5 billion at the end of 2016. The decrease was mainly due to a free cash flow from discontinued operations of DKK 9.0 billion, of which DKK 5.5 billion concerned cash flows from operating activities, including DKK 2.0 billion from the intragroup settlement of hedging instruments in Q2 2017. In addition, the divestment of our Oil & Gas business contributed positively with DKK 4.6 billion (DKK 3.7 billion of free cash flow and DKK 1.0 billion of interest-bearing receivable). The continuing operations contributed a positive free cash flow of DKK 0.3 billion.

This was partially offset by the payment of dividends to shareholders of DKK 2.5 billion in March.

Equity

Equity was DKK 71.8 billion at the end of December 2017 against DKK 57.5 billion at the end of 2016. The increase was primarily due to the positive results for the year less dividends paid.

Capital employed

Capital employed was DKK 70.3 billion on 31 December 2017 against DKK 61.0 billion at the end of 2016. Wind Power's share of capital employed was 83% at the end of 2017.

Return on capital employed (ROCE)

Return on capital employed (ROCE) was 25% in 2017 against 24% in 2016 (and 17% in 2016 adjusted for compensation received in connection with renegotiations). The increase was attributable to higher EBIT.

Credit metric (FFO/adjusted net debt)

The credit metric 'funds from operations' (FFO) relative to adjusted net debt was 50% in 2017 compared with 64% in 2016. The decline was attributable to the lower FFO, as gains from the farm-downs of offshore wind farms are not included in the calculation. Gains on divestments were DKK 7.9 billion higher than in 2016, whereas 2016 was positively affected by compensation from renegotiations of DKK 4.3 billion. However, adjusted net debt was lower. Read more about the change of the credit metric on page 15.

Non-financial results

Carbon emissions

In 2017, carbon emissions from our heat and power generation were 151 g CO₂e/kWh against 224 g CO₂e/kWh in 2016. Carbon emissions per kWh decreased due to the lower coal and gas consumption for thermal power generation as a result of the biomass conversions of the Avedøre, Studstrup and Skærbæk power stations. Moreover, generation from our offshore wind farms increased.

Green share of heat and power generation

The green share of heat and power generation was 64%, up 14%-points relative to 2016. The increase was attributable to a larger share of biomass-based generation as a result of the conversions of the above-mentioned power stations as well as increased generation from offshore wind farms.

Safety

In 2017, we registered 32 lost-time injuries, 25 of which involved employees working for our suppliers. Over the past 12 months, our lost-time injury frequency (LTIF) has declined from 1.8 in 2016 to 1.6 in 2017.

Five-year summary

Business performance vs. IFRS

Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. Apart from this, there is no difference between business performance and IFRS results. Read more in note 1.1.

ROCE is calculated for continuing operations.

¹ EBIT / average capital employed.

² Net debt including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax. The definition of FFO has been changed in 2017. Comparable figures have been restated.

³ See definition on page 172 and in the ESG statements.

⁴ The figures indicate values from the latest regulatory financial statements (updated in June).

Fourth quarter

Financial performance – Group

Revenue

Revenue in Q4 2017 was in line with Q4 2016 and amounted to DKK 15.6 billion compared with DKK 15.7 billion in the prior-year period. 2017 was driven primarily by 77% growth in revenue from wind farms in operation as a result of increased power generation from new wind farms as well as higher wind speeds. Q4 2016 was impacted by high revenue from construction contracts.

EBITDA

Operating profit (EBITDA) more than doubled to DKK 13.0 billion against DKK 6.3 billion in Q4 2016. The substantial increase was primarily due to high operating profit from our wind farms in operation as well as earnings from our partnership agreements, mainly gains from the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2. The operating profit for Bioenergy & Thermal Power also doubled in Q4 2017, amounting to DKK 0.2 billion, primarily driven by higher earnings from heat activities. The increase was partially offset by one-off payments from completed renegotiations of gas purchase contracts, which contributed positively in Q4 2016.

Profit for the period from continuing operations

Profit for the period from continuing operations totalled DKK 9.4 billion compared with DKK 4.0 billion in Q4 2016. The increase was primarily driven by the higher EBITDA.

Profit for the period from discontinued operations

Profit for the period from discontinued operations amounted to DKK 0.1 billion in Q4 2017 against DKK -0.5 billion in Q4 2016. The result in Q4 2017 related to an adjustment of the gains from the divestment of our oil and gas business.

Cash flows from operating activities

Cash flows from operating activities totalled DKK 3.1 billion in Q4 2017 compared with DKK 1.8 billion in 2016. The increase was mainly due to a higher EBITDA (adjusted for divestment gains and adjustment of provisions) as well as prepayments and milestone payments from partners in connection with the farm-downs of 50% of Borkum Riffgrund 2 and Walney Extension. The increase was partially offset by receivables received from completed renegotiations of gas purchase contracts in Q4 2016.

Gross investments and divestments

Gross investments amounted to DKK 5.8 billion in Q4 2017, with investments in Wind Power accounting for 86%. The main investments related to Walney Extension, Race Bank and Hornsea 1 in the UK and Borkum Riffgrund 2 in Germany.

Farm-downs totalled DKK 14.9 billion in Q4 2017 and related to Walney Extension and Borkum Riffgrund 2.

Financial performance – Business units

Wind Power

Power generation was up 61% on Q4 2016 due to generation from the new offshore wind farms Gode Wind 1 and 2, Burbo Bank Extension, Race Bank and partially Walney Extension as well as high wind speeds in Q4 2017.

Revenue totalled DKK 5.6 billion in Q4 against DKK 4.4 billion in Q4 2016. The increase was driven by revenue from wind farms in operation, which was up 77% as a result of increased power generation. Revenue from construction contracts amounted to DKK 1.7 billion in Q4 2017 against DKK 2.2 billion in Q4 2016. The decline was due to a high level of activity from construction contracts in Q4 2016, relating primarily to the construction of Burbo Bank Extension for partners and transmission assets in the UK. The decrease was partially offset by activities in connection with contract work on Race Bank and Walney Extension as well as transmission assets in Q4 2017.

EBITDA was up 149%, totalling DKK 12.6 billion in Q4 2017 compared with DKK 5.1 billion in Q4 2016.

Earnings from offshore wind farms increased by 70% as a result of the commissioning of new offshore wind farms as well as high wind speeds in Q4 2017. Earnings from partnership agreements tripled and were primarily attributable to gains on the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2 as well as the above-mentioned activities in connection with contract work on Race Bank and Walney Extension. The increase was partially offset by a gain on the farm-down of 50% of Race Bank in Q4 2016 and a high level

of activity from the construction contract for Burbo Bank Extension in the same period.

EBITDA from other activities totalled DKK -0.7 billion in Q4 2017 against DKK -0.2 billion in 2016. The decrease was mainly due to higher project development costs.

Cash flows from operating activities totalled DKK 3.6 billion in Q4 2017 compared with DKK -1.9 billion in Q4 2016. The increase was primarily due to higher tax payments in Q4 2016. In addition, we received milestone payments from partners in connection with the farm-downs of Borkum Riffgrund 2 and Walney Extension in Q4 2017.

Bioenergy & Thermal Power

Revenue was DKK 1.8 billion in Q4 2017 against DKK 2.0 billion in 2016. The decrease was due to revenue from sales of power and ancillary services which, due to lower generation, totalled DKK 0.9 billion in Q4 2017 against DKK 1.1 billion in the prior-year period. Revenue from heat sales remained unchanged in the two quarters in spite of lower generation. This is primarily attributable to Avedøre, Studstrup and Skærbæk power stations where heat generation was converted from coal to biomass at the first two power stations at the end of 2016. Skærbæk Power Station has generated heat using biomass from Q4 2017.

EBITDA doubled relative to Q4 2016 and amounted to DKK 0.2 billion in Q4 2017. The increase was primarily driven by higher earnings from heat activities on converted CHP plants. In addition, earnings from ancillary services and the power business were also higher.

Wind Power's results, DKKm

	Q4 2017	Q4 2016	%

¹⁾ O&M: Operation and Maintenance Agreements
PPA: Power Purchase Agreements.

Distribution & Customer Solutions

Revenue was DKK 10.4 billion in Q4 2017 compared with 10.9 billion in Q4 2016.

EBITDA was DKK 0.2 billion compared with DKK 1.2 billion in Q4 2016.

EBITDA from Markets decreased by DKK 0.6 billion, primarily due to one-off payments from completed renegotiations of gas purchase contracts totalling DKK 0.4 billion, which made a positive contribution in Q4 2016. Hence, underlying EBITDA from Markets was in line with Q4 2016.

EBITDA from our LNG activities decreased by DKK 0.5 billion, mainly as a result of further provisions in Q4 2017 related to the onerous contract at the Gate terminal in Rotterdam as well as provisions regarding purchase contracts.

Cash flows from operating activities totalled DKK 0.2 billion in Q4 2017. The negative development relative to Q4 2016 was primarily due to the lower EBITDA as well as the positive impact in Q4 2016 from receivables received from completed renegotiations of gas purchase contracts in both Q3 and Q4 2016.

Business performance vs. IFRS

Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. Apart from this, there is no difference between business performance and IFRS results. Read more in note 11.

ROCE is calculated for continuing operations.

¹⁾ EBIT/average capital employed.

²⁾ Net debt including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax. The definition of FFO has been changed in 2017. Comparable figures have been restated.

³⁾ See definition on page 172 and in the ESG statements.

⁴⁾ The figures indicate values from the latest regulatory financial statements (updated in June).

⁵⁾ Last 12 months.

Wind Power

Highlights 2017

- Power generation from our wind farms in operation increased by 42%
- We were awarded the contract for the construction of Hornsea 2 in the UK, which increased our FID capacity by 1.4GW
- We divested 50% of Walney Extension in the UK and 50% of Borkum Riffgrund 2 in Germany and divested A2SEA
- We inaugurated the Burbo Bank Extension and Gode Wind 1 and 2 offshore wind farms
- All wind turbines on Race Bank, and the first part of Walney Extension were installed
- We were awarded three offshore wind farm projects in Germany, two of which were won with zero-subsidy bids
- We participated in the first offshore wind auction in Massachusetts, USA, together with our partner Eversource Energy
- We entered into a partnership agreement with US-based Dominion Energy on an offshore wind farm project in Virginia
- Our environmental impact assessments of the Greater Changhua projects in Taiwan were recommended for final approval in Q1 2018.

Financial performance

Power generation increased 42% compared to 2016, driven by Gode Wind 1 and 2 and Burbo Bank Extension as well as the start-up of power generation from Race Bank and Walney Extension. In addition, wind speeds

were higher in 2017. We commissioned Gode Wind 1 and 2 in December 2016 and Burbo Bank Extension in May 2017. At Race Bank, we installed the last wind turbine in December 2017 and fully commissioned the wind farm in January 2018. Walney Extension is expected to be fully commissioned in H2 2018. Moreover, power generation in 2016 was negatively affected by a cable fault at Walney 2. Availability was 93% in 2017 against 92% in 2016.

Revenue from wind farms in operation was up 46%, driven by higher power generation and higher power prices, which were partially offset by lower contributions from price hedges. Walney 2 also contributed to the higher revenue due to the cable fault in 2016.

Revenue from construction contracts decreased by DKK 5.6 billion due to a high level of activity in 2016 with both Gode Wind

Our company has constructed the most offshore wind farms globally. In addition to maintaining our position as global market leader, we'll continue to pave the way for offshore wind power in new markets and develop a global business.

	ROCE	%	28.4	16.5	11.9%p

1 and 2 and Burbo Bank Extension under construction for partners. The decrease was also attributable to a higher level of activity regarding the construction of transmission assets in 2016 (Walney Extension, Race Bank and Burbo Bank Extension) than in 2017 (Hornsea 1, Race Bank and Walney Extension). The decrease was partially offset by activity at Walney Extension and Race Bank, which were under construction for partners in 2017.

EBITDA increased by 74% relative to 2016.

EBITDA from wind farms in operation increased by 45% to DKK 8.5 billion, driven by the factors described above.

EBITDA from partnership agreements almost doubled to DKK 13.7 billion in 2017. The year was positively affected by gains from the farm-down of 50% of Walney Extension (DKK 7.5 billion) and Borkum Riffgrund 2 (DKK 2.2 billion). 2017 was also positively impacted by the recognition of the deferred selling price and milestone income from Race Bank, as well as the construction of the wind farm for partners. 2016 was affected by a gain of DKK 2.5 billion from the divestment of Race Bank as well as a gain of DKK 0.6 billion from the farm-down of 50% of Burbo Bank Extension. In addition, 2016 was affected by high activity levels relating to the construction of Gode Wind 1 and 2 and Burbo Bank Extension for partners.

EBITDA from other activities totalled DKK -1.6 billion in 2017 against DKK -1.0 billion in 2016. The decrease was mainly due to higher project development costs.

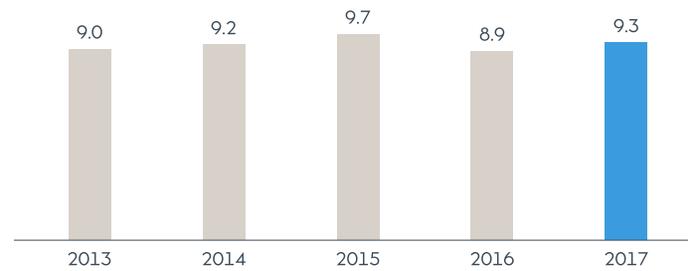

Depreciation increased by 14% due to the commissioning of new offshore wind farms in Germany and the UK.

Impairment losses totalled DKK 0.5 billion and related to capitalised project development costs in Wind Power, due to uncertainty about the carrying through of the projects.

Cash flows from operating activities totalled DKK 3.4 billion in 2017 compared with DKK 4.3 billion in 2016. The decrease was due to more funds tied up in offshore wind farm construction contracts in progress for partners and offshore transmission assets in the UK. In 2017, funds tied up in work in progress increased by DKK 3.7 billion due to the construction of transmission assets at Hornsea 1, Race Bank and Walney Extension as well as the construction of Race Bank for partners. This was partially offset by milestone payments received from partners in connection with the construction of Borkum Riffgrund 2 in 2017, as well as high trade payables relating to the construction of Walney Extension. Funds tied up in work in progress in 2016 were lower due to the divestment of the Westernmost Rough transmission asset and the receipt of milestone payments from partners during the construction of Gode Wind 1 and Burbo Bank Extension, among other factors. Funds tied up in work in progress totalled DKK 7.5 billion at the end of 2017.

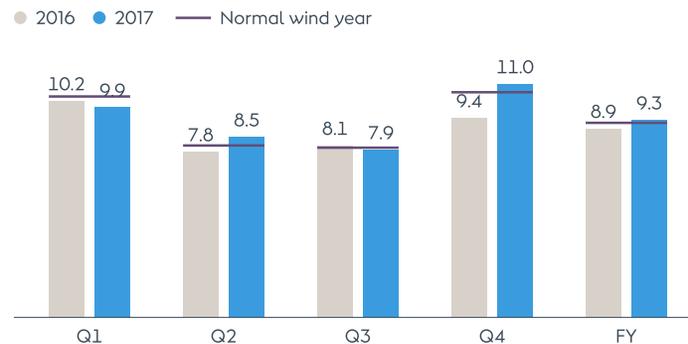

The high level of funds tied up in other working capital was primarily due to lower VAT payable as well as an increase in trade receivables following a high level of power generation at the end of 2017.

Yearly wind speed for our offshore wind farms, m/s

The wind speed indicates how many metres per second the wind has blown in the areas where we have offshore wind farms. The weighting is based on our generation capacity.

Quarterly wind speed for our offshore wind farms, m/s

The wind speed was higher than normal in Q4 2017.

Change from wind energy content (WEC) to wind speed

Wind speed and availability are the two most important parameters that can affect the volume of power generated by our offshore wind turbines in a given period. In the past, we have used wind energy content (WEC) as the residual for the power generation that cannot be explained by the availability of the offshore wind farms. However, this method means that generation constraints, with no negative impact on availability, are included in the calculation of wind energy content. This type of impact increased in 2017. For example, the German transmission system

operator curtailed our generation from Borkum Riffgrund 1 and Gode Wind 1 and 2 in periods of 2017 by reducing the available grid capacity.

In order to obtain a cleaner measure of the impact of wind on our generation, we now apply the measure of wind speed in metres per second. Wind speed is based on external data sources and is a transparent and easy-to-understand measure of how windy it has been at our offshore wind farms in a given period.

Gross investments amounted to DKK 15.5 billion in 2017. The largest investments related to the construction of Walney Extension and Race Bank, Hornsea 1 and Borkum Riffgrund 2.

Cash flows from divestments related to Walney Extension, Borkum Riffgrund 2, Race Bank and A2SEA. Divestments in 2016 related to the farm-down of 50% of Burbo Bank Extension, Race Bank as well as receipt of the deferred selling price from the farm-down of 50% of Gode Wind 1 in 2015.

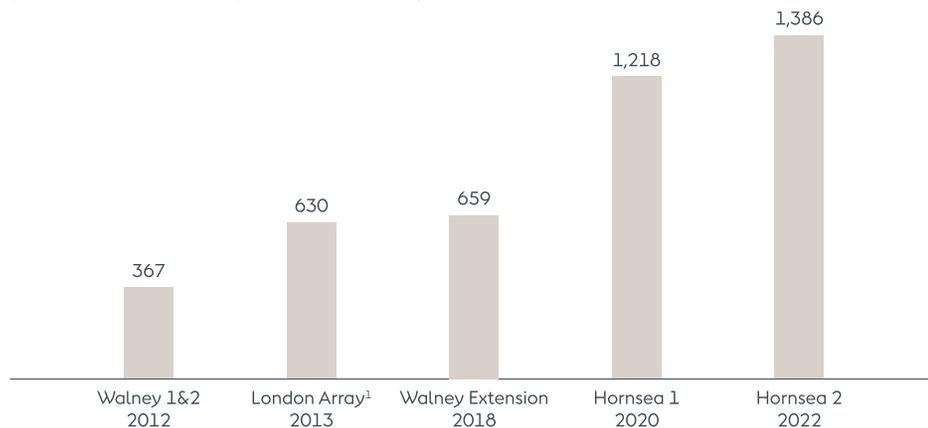

ROCE increased by 12%-points to 28%, particularly impacted by a gain on the farm-downs.

Strategy follow-up

Wind Power's strategic focus is to:

- maintain our market leadership in offshore wind
- continue to pioneer new markets and develop a global business
- keep innovating and reducing the cost of electricity from offshore wind
- leverage market-leading partnership model for incremental value creation and risk diversification
- realise the current build-out plan of 8.9GW towards 2022 and expand to 11-12GW by 2025
- implement operational excellence and digitisation initiatives across EPC and O&M.

The world's largest offshore wind farms since 2012, MW installed (year indicates actual or expected commissioning)

¹ London Array was built in partnership with E.ON UK Renewables and Masdar
Source: Bloomberg New Energy Finance (BNEF)

Maintain our market leadership in offshore wind

Offshore wind plays an increasingly important role in the European conversion to green energy, and the potential is enormous. Worldwide, we are the company that has constructed most offshore wind farms. In fact, we have constructed close to a quarter of the total global capacity.

In 2017, we completed the Burbo Bank Extension offshore wind farm in the UK, the first offshore wind farm in the world to feature the MHI Vestas 8MW offshore wind turbine. Including Burbo Bank Extension, at the end of 2017 we had installed 3.9GW of offshore wind capacity since the beginning in 1991, where we constructed the world's first offshore wind farm off Vindeby in Denmark. After more than 25 years, the Vindeby offshore wind farm, as the first offshore wind farm in the world, was decommissioned in the autumn of 2017.

In September, we were awarded a contract for difference (CfD) for our Hornsea 2 project in the UK. With a total capacity of 1.4GW, it will be the world's largest offshore wind farm when completed in 2022. The project will thus be larger than our Hornsea 1 offshore wind farm with a capacity of 1.2GW, which is expected to be completed in 2020.

Continue to pioneer new markets and develop a global business

2017 has been a year where we really fuelled our project development in two new strategic markets. Together with Eversource Energy, our partner on the US Bay State Wind project, we submitted a bid for capacity in the first offshore wind auction in Massachusetts in December

2017. The preferred bidder or bidders are expected to be selected in April 2018, followed by an invitation to negotiate a fixed-price agreement with the three local power distribution companies. In addition, we entered into an agreement to construct a demonstration project for Dominion Energy off the Virginia Beach coast. At the same time, we entered into a letter of intent, which gives us the exclusive right to negotiate a strategic partnership with Dominion Energy concerning their 2GW development project off the Virginia coast.

At the end of 2017, the Taiwanese EIA review panel recommended approval of our environmental impact assessments of the four Greater Changhua offshore wind sites in Taiwan with a total capacity of 2.4GW. We will now await the final approval by the EIA General Assembly, which is expected to convene in Q1 2018.

Keep innovating and reducing the cost of electricity from offshore wind

2017 was a breakthrough year for the competitiveness of offshore wind. For example, we were granted the Hornsea 2 CfD contract at a price which is 50% lower than the price in the CfD auction round only two years ago, illustrating how fast costs are reduced. Costs have been reduced across the industry by means of increasing levels of industrialisation, economies of scale and innovation.

A good example of our approach to innovation is our work on developing a new design standard for foundations for offshore wind farms. Together with leading industry experts, we have developed and tested a new foundation design that enables us to use far less steel. This design is used in the most recent

projects which we have bid for in auctions, and it has contributed to significantly reducing the cost of electricity.

Overall, the declining prices are tangible proof of the global potential of offshore wind technology as a cornerstone in an economically sustainable transition towards green energy systems. As a result, we are making a dedicated effort to further reduce the cost of power from offshore wind farms.

Leverage market-leading partnership model for incremental value creation and risk diversification

Our partnership model yet again proved its worth through the 50% divestment of the offshore wind farms Borkum Riffgrund 2 and Walney Extension in 2017. Borkum Riffgrund 2 was divested to Global Infrastructure Partners, which also owns 50% of our German offshore

wind farm Gode Wind 1, while Walney Extension was divested to a consortium consisting of the Danish pension funds PFA and PKA. PKA now has ownership interests in four Ørsted offshore wind farms.

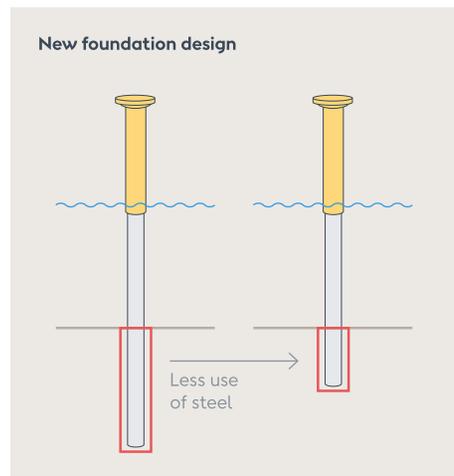

In addition to incremental value creation, the partnership model contributes to diversifying risk as well as releasing capital to invest in other offshore wind farms in strategic markets.

Realise the current build-out plan of 8.9GW towards 2022 and expand to 11-12GW by 2025

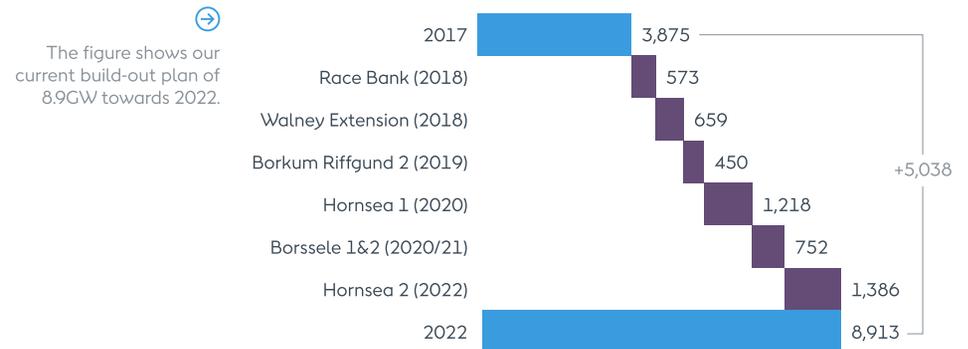

Race Bank was commissioned in January 2018 and consequently added 0.6GW to our installed capacity. Up until 2022, we will construct a further five offshore wind farms with a total capacity of 4.5GW. Out of these five wind farms, we have generated first power from the British offshore wind farm Walney Extension (40% of capacity commissioned), which is expected to be fully commissioned in H2 2018. The remaining four offshore wind farms under construction are all progressing according to plan, and when the last wind farm, Hornsea 2 in the UK, is commissioned, we will have 8.9GW installed by the end of 2022.

Up until 2025, we have a significant pipeline, and our ambition is to have 11-12GW installed by the end of 2025, provided that a healthy risk and return profile can be achieved.

In April, we were awarded the concessions for the three German offshore wind farms OWP West, Borkum Riffgrund West 2 and Gode Wind 3 in competition with other developers. Two of the wind farms have been awarded on zero-subsidy terms. Overall, this gives us

Build-out plan, installed MW

an option on 0.6GW capacity in Germany for commissioning in 2024, provided that the final investment decision is made in 2021.

The rest of the pipeline consists mainly of projects which we have the exclusive right to develop in preparation of an investment decision, which is typically conditional on the granting of subsidies via an auction process. A minor part of the pipeline consists of projects for which the authorities allocate capacity in a competitive process involving tendering of project rights. We are familiar with this process, e.g. from the tendering in recent years of offshore wind projects in Denmark and the Netherlands.

In addition to the opportunities in Taiwan and the USA, 2018 will see an auction for 1.6GW in Germany and a 700MW tender in the Netherlands. They will be followed by a CfD auction round in the UK in the spring of 2019 and another 700MW tender in the Netherlands in 2019.

Implement operational excellence and digitisation initiatives across EPC and O&M

The digital transformation is important in offshore wind. In Ørsted, we are exploring new and wider opportunities for leveraging technological advances. Using agile and advanced analytics in our business, we are starting to harvest the benefits of the digital transformation.

As an operational example, a higher temperature in the nacelle of the turbine puts the converter module at risk. Previously, a turbine would stop in case of high temperatures, which led to an availability loss until the turbine could be checked by a technician and restarted. Now, continuous temperature monitoring and predictive, in-house developed models identify the risk. A notification is then sent to the technician who proactively mitigates the risk by repairing the component before the turbine stops. This lowers lead time, limits the availability loss and creates value.

Bioenergy & Thermal Power

Highlights 2017

- We entered into an agreement to convert Asnæs Power Station to sustainable biomass from 2019
- We inaugurated Skærbæk Power Station's new plant following the conversion from gas to biomass. The plant can now run 100% on sustainable biomass
- In partnership with Bigadan, we decided to build a biogas plant in Kalundborg which will recycle and convert residues from the Novo Nordisk and Novozymes production facilities into biogas
- We completed our first commercial Renaissance plant in 2017. We expect to commission the plant in H1 2018.

Financial performance

Revenue increased by 14% to DKK 5.9 billion in 2017.

Revenue from heat sales increased by 16% despite lower heat generation. This is attributable to Avedøre, Studstrup and Skærbæk power stations where heat generation is based on biomass. Revenue from power and ancillary services rose by 13% to DKK 3.3 billion despite lower generation. This is due to an increase in the power price.

EBITDA increased by 52% to DKK 0.2 billion in 2017. The increase was mainly due to heat generation activities, where the bio-conversions led to a 71% increase in earnings to DKK 0.7

billion in 2017. The increase was partially offset by a decline in the power business where lower generation as well as unfavourable market conditions (primarily negative spreads) resulted in earnings of DKK -0.9 billion against DKK -0.6 billion in 2016.

EBITDA from ancillary services was in line with 2016.

Cash flows from operating activities totalled DKK 0.6 billion compared with DKK 1.3 billion in 2016. The decrease was mainly due to higher prepayments from heat customers in connection with biomass conversions in 2016 than in 2017. The decrease was partially offset by a lower level of funds tied up in inventories (wood pellets and coal) in 2017.

Gross investments amounted to DKK 1.4 billion in 2017. The largest investments related to the biomass conversions of the Skærbæk and Asnæs power stations as well as the construction of the Renaissance plant in the UK.

In 2017, we reached new milestones on our journey to convert all our CHP plants to sustainable biomass.

Thomas Dalsgaard
CEO, Bioenergy & Thermal Power

Operating profit from the heat business increased as a result of biomass conversions.

Strategy follow-up

Bioenergy & Thermal Power's strategic focus is to:

- continue the conversion of Danish CHP plants to sustainable biomass and phase out coal by 2023
- continue to strengthen operational efficiency
- continue the commercial development of our Renaissance enzyme based waste technology
- explore business opportunities within energy storage solutions.

Continue conversions to sustainable biomass and phase out coal by 2023

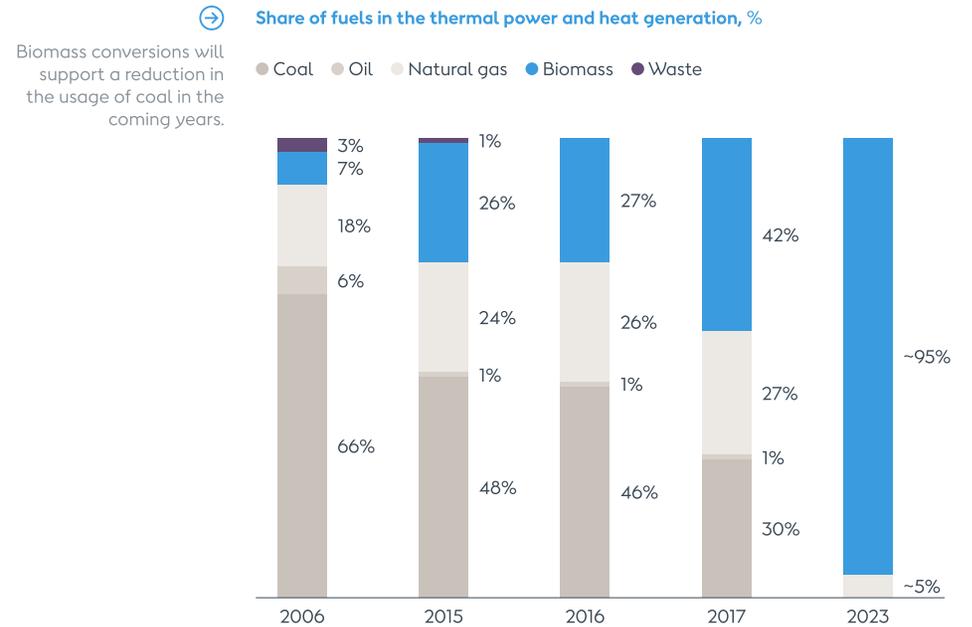

For several years, we have been committed to converting our power stations to use sustainable wood pellets and wood chips. And in 2017, we decided to phase out coal by 2023, as coal is the fuel with the greatest carbon impact per produced quantity of power and heat. Our ongoing work will reduce our annual carbon emissions in Denmark significantly towards 2023. In just over ten years, we will have gone from being one of the most coal-intensive utilities in Europe to having a completely coal-free generation by 2023.

In cooperation with our heat customers, we reached even more milestones in 2017 in the execution of our large-scale biomass conversion projects. The new biomass-fired CHP plant in Skærbæk was inaugurated in October by HRH Crown Princess Mary and now supplies green heat to district heating customers in the Danish Triangle Region and green power to the Danish grid. Later in October, we cut the first sod for our new biomass-fired CHP plant at

Asnæs near Kalundborg, Denmark. The plant is expected to be completed by the end of 2019 and will supply green district heating to district heating customers in and around Kalundborg, green steam to Novo Nordisk and Novozymes as well as green power to the Danish grid. In November, we decided to invest in flue gas condensation at the Herning Power Station, enabling us to increase the energy efficiency potential of the biomass used. At the same time, we extended our agreement with the heat customers in and around Herning until 2033. Finally, we are engaged in a constructive dialogue with our heat customers in and around Esbjerg on also supplying green solutions to them within a few years.

Our portfolio of seven central CHP plants in Denmark will thus be able to supply green district heating equivalent to the consumption of almost one million Danes in the near future. Our power stations will be some of the largest biomass-fired CHP plants in the world, making them key to the green transformation of the nearby towns, cities and municipalities – and of Denmark as a whole.

It is important to us that our customers can be confident that the biomass-based heat and power we supply is sustainable and makes a real and significant contribution to reducing their carbon footprint. Therefore, we fully support the Danish industry agreement on sustainable wooden biomass which commits not just Ørsted, but the entire Danish energy industry to documenting the sustainability of our use of biomass. Together with other European energy companies, we are also part of the Sustainable Biomass Programme (SBP) which has developed a robust and

independent scheme for the certification of sustainable biomass. The Danish industry agreement on sustainable wooden biomass entered into force in 2016 and is being phased in during the period up until 2019. In 2017, 72% of our purchased biomass came from certified partners, and our target is that 100% should come from certified partners in 2020.

Continue to strengthen operational efficiency

For much of 2017, market conditions remained challenging for Danish CHP plants. Therefore, we have focused on maintaining our leading

position as an efficient and flexible operator and on continuing to reduce costs. In 2017, we initiated a comprehensive digitisation programme aimed at streamlining and automating production at our CHP plants. With this programme, we introduce new technology and improved analytical tools across our CHP plants in order to strengthen our operational efficiency. In addition, we have increased our focus on our plant control processes. A case in point is the development of systems that support the balance between cost, risk and performance at our plants. This provides for efficient prioritisation of our capital expenditures.

Continue the commercial development of our innovative Rescience enzyme based waste technology

We are currently working to further develop and expand our bioenergy business – with special emphasis on the commercialisation of our Rescience technology. By means of enzymes, the technology efficiently converts household waste into biogas and recyclable materials (metal, plastic, etc.). In 2017, we established the first full-scale plant in Northwich in the UK. We are finalising the optimisation of the plant's mechanical operation, which has taken longer than expected. We expect to start full commercial operation in H1 2018. We expect the plant to process 120,000 tonnes of unsorted household waste per year, which corresponds to the waste from approximately 110,000 British households.

Explore business opportunities within energy storage solutions

In 2017, we established a new business unit, Energy Storage Solutions. This unit will support initiatives across Ørsted and at the same time offer battery power storage solutions, potentially in combination with solar PV, for our customers. In 2017, Radius commissioned a battery solution for the power distribution grid in the Nordhavn area in Copenhagen, and we initiated the work to establish a storage solution at our Burbo Bank offshore wind farm in the UK.

Distribution & Customer Solutions

Highlights 2017

- At the end of 2017, the customers in our power distribution company Radius had taken 183,000 smart meters in use
- We decided that the power consumption of our 733,000 Danish residential power customers is to be covered by green power from offshore wind farms – without any surcharge
- We installed Denmark's first large-scale battery for balancing the grid in Nordhavn, together with ABB
- We entered into an agreement with the Good Energy trading company about the supply of green power to their customers from the Westermøst Rough offshore wind farm.

Financial performance

Revenue increased by 6% to DKK 40.2 billion in 2017. The increase was driven primarily by a 24% average increase in gas prices relative to 2016 and higher power sales in the UK. The increase was offset by lower revenue from power distribution, given that duties and costs are no longer invoiced on behalf of the transmission asset owner, and from the distribution of gas following the divestment of activities to Energinet in September 2016.

EBITDA was DKK 2.1 billion compared with DKK 7.1 billion in 2016. The decrease was expected and was mainly ascribable to non-recurring items of DKK 4.7 billion in 2016 as well

as a provision of DKK 0.4 billion related to the onerous contract at the Gate terminal in Rotterdam.

EBITDA from the distribution business decreased by DKK 0.4 billion as a result of the divestment of our gas distribution activities in September 2016.

EBITDA from Markets decreased by DKK 4.3 billion, primarily due to one-off payments of DKK 4.3 billion from completed renegotiations of gas purchase contracts in 2016.

EBITDA from LNG declined by DKK 0.3 billion as a result of further provisions related to an onerous contract at the Gate terminal in Rotterdam as well as provisions regarding purchase contracts. This was partially offset by improved margins from renegotiated contracts, lower costs and short-term trades.

Our ambition is to bridge the gap between supply and demand in the green transformation.

Morten Buchgreitz

CEO, Distribution & Customer Solutions

	Free cash flow	DKKm	(1,289)	5,971 n.a.
	Capital employed	DKKm	9,780	7,797 25%
	ROCE	%	13.1	75.8 (62.7%p)

Cash flows from operating activities totalled DKK -0.6 billion in 2017. The decrease of DKK 4.9 billion was primarily due to lower EBITDA and the early settlement of Oil & Gas price hedges of DKK 1.6 billion in 2017. This was partially offset by a lower level of funds tied up in working capital, mainly higher trade payables relating to gas purchases.

Gross investments totalled DKK 0.9 billion in 2017, relating primarily to maintenance of the power distribution grid and installation of the new smart meters.

ROCE was 13% in 2017. This is a decrease of 63%-points relative to 2016, as that year was positively impacted by income in the form of one-off payments from renegotiations. ROCE adjusted for these one-off payments was 24% in 2016.

Strategy follow-up

Distribution & Customer Solutions (DCS) comprises four core activities: Sales B2C, Sales B2B, Markets (including LNG) and Distribution, bridging the gap between supply and demand in the green transformation.

Distribution & Customer Solutions' strategic focus within these four areas is to:

- **Sales B2C:** make it easier and financially possible for our customers to contribute to the green transformation
- **Sales B2B:** help business customers benefit from the green transformation
- **Distribution:** be industry-leading and maintain high levels of security of supply and customer satisfaction
- **Markets (including LNG):** manage Ørsted's energy portfolio and provide competitive access to the energy market for customers.

Sales B2C: make it easier and financially possible for our customers to contribute to the green transformation

We will make it easier for our customers to play a part in the green transformation. In 2017, we therefore decided to cover all our residential customers' power consumption with green power from our own Danish offshore wind farms by purchasing green certificates – at no extra cost for our customers.

With 824,000 residential customers, our ambition is to deliver Denmark's best customer experience, which we continuously strive to do. In 2017, the customer satisfaction score among residential customers, who had been in touch with us, was unchanged at 76 on a scale of 1-100. We have seen an increase in customer

loyalty to 71 from 69. During the year, we have, among other things, worked to make our customer service more accessible and also implemented a successful online chat function and a new website in connection with the launch of our new name.

By the end of 2020, all power customers in Denmark will have the option of hourly settlement of consumption via remote-read power meters. This means that our power customers can take advantage of variable power prices during each 24-hour period – for example free power during certain hours of the night – as our most common subscription is based on the hourly market prices.

We continuously strive to reduce our costs and strengthen our competitiveness. Among other things, we are developing a new, simple and flexible digital platform. The new platform will provide a better customer experience and reduce our costs.

Sales B2B: help business customers benefit from the green transformation

Across our geographical markets, we are working to establish and develop our partnerships with business customers beyond the classic role of a utility company. We are seeing growing demand for integrated, green energy solutions, and we would like to take the lead on this development.

Among other things, we offer our customers in Denmark climate partnerships comprising green power and advice on energy efficiency and procurement. For example, we are working with Novo Nordisk and Novozymes on a new biogas plant in Kalundborg that

will convert by-products from their factories to biogas.

We have also experienced strong growth in our flexibility solutions which contribute to balancing the energy system and ensuring lower costs. For example, we give our business customers the opportunity to move parts of their production to times when demand in the grid is lower. Our customer satisfaction score for business customers has increased to 77 out of 100.

Distribution: be industry-leading and maintain high levels of security of supply and customer satisfaction

Ørsted's distribution activities are undertaken by the subsidiary Radius Elnet.

It is crucial that our customers experience a high level of security of supply. This means that their supply is rarely interrupted, and that we ensure rapid response and communication of correct information when this happens. In 2017, customers experienced the security of supply of 0.42 disconnections a year, excluding faults in the primary transmission grid owned by the Danish transmission system operator, Energinet.

As mentioned above, all Danish households must have a remote-read power meter installed by the end of 2020. We are thus working hard to replace one million power meters. At the end of 2017, 183,000 meters were in use. We focus on ensuring that the replacement is a positive customer experience, so we are pleased that we succeeded in maintaining a high customer satisfaction score of 82 in 2017. The remote-read power meters come with a number of advantages for our customers.

Among other things, they no longer have to read their power meters themselves, and they can monitor and control their electricity consumption during the day and the year. From 1 December, billing by the hour was introduced for our first customers to have the new meters installed. For the individual customer, this is a chance to reduce costs by keeping consumption low during peak hours in the grid. On the other hand, customers with a more inexpedient consumption pattern will pay more. The average consumer will not experience any price changes.

On 1 January 2018, a new financial regulation for grid companies came into force. During the year, the Danish Energy Regulatory Authority will define new revenue caps that will give us healthier incentives and a more stable framework. Initially, the financial consequences of this regulation are as expected.

Markets (including LNG): manage Ørsted's energy portfolio and provide competitive access to the energy market for customers

Markets manages and optimises Ørsted's energy portfolio as a whole, and hedges the Group's energy exposures as part of that. We sell the Group's power and gas as well as green certificates in the market and buy with a view to covering our customers' consumption. In this way, we make sure to continuously balance the supply of, and demand for, power and gas in our portfolio.

We offer external customers the same access to the market as we deliver for Ørsted's own power generation, green certificates, etc. In this way, we create synergies across the portfolio.

In 2017, we made significant progress in the management of power portfolios – particularly in relation to balancing products for external customers. As a consequence, we increased our number of external customers and our managed production capacity. The assets which we manage in portfolios include offshore wind farms, onshore wind, waste-fired power stations and small-scale gas-fired electric motors. In addition to our focus on the administration of renewable energy, we have signed agreements with small and flexible gas-fired power stations, supporting the objective of creating balance in the power grid.

In the transition to renewable energy, gas, as the least polluting and most flexible of the fossil energy sources, will continue to play an important role on the way towards a fossil-free energy system. Our gas portfolio consists partly of long-term purchase contracts, partly of contracts on capacity in gas storage facilities and an LNG terminal. At the end of 2017, a plan was announced for the full redevelopment of the Mærsk-owned Tyra gas field in the North Sea, which has increased the security of continued deliveries from the Danish Underground Consortium (DUC) to us. In addition, we have further reduced our exposure to oil prices in our gas purchase contracts through renegotiations with our counterparties.

Our LNG activities are loss-making. And even though we experience great interest and activity in LNG, the earnings from these activities are not enough to cover our fixed costs for the lease of the terminal.

Board of Directors	61

Risk and risk management

In Ørsted, we regard risks as a natural and integral part of our business activities. Through risk management, risks are reduced to an acceptable level.

In addition to general operational and business risks, we are exposed – as part of our activities – to a number of different risks, including fluctuations in exchange rates, commodity prices and interest rates as well as credits and insurance. Managing these risks is an important focus area for us. The purpose of our risk management is to identify the various risks to which we are exposed, and then decide how to manage them. We assess the extent to which individual risks are acceptable or perhaps even desirable, as well as the extent to which these risks can be reduced to ensure an optimum balance between risk and return.

Following the divestment of our upstream oil and gas business in September 2017, our earnings are now to a large extent centred within offshore wind and green energy. When we invest in new assets and activities or divest other assets, the risk associated with our portfolio changes. We therefore assess the impact of a given decision on the portfolio in advance.

We work systematically with risks and follow a plan for the year according to which all business units and selected staff functions identify and prioritise their business risks. An assessment is made of the potential financial impact of individual risks and of whether they are of a short-term, long-term or recurring nature. The risks are consolidated and then prioritised at Group level. The ultimate responsibility for the individual risks rests with a member of the Group Executive Management. Similar processes are in place for identifying and prioritising risks related to sustainability, cybersecurity/IT and compliance/legal.

The most important business risks identified in connection with the process in the autumn of 2017 are shown on the right. They are also illustrated in the figure based on their potential impact (post-risk mitigation) on our value and credit metrics over the next few years. You can read more about these risks in the following pages.

The risks related to sustainability, cybersecurity/IT as well as compliance/legal are assessed using different parameters, which is why we are unable to show a consolidated picture of our combined risks. You can find a description of the most significant sustainability risks in our Sustainability Report and for each of the two other areas on page 50.

In addition, we are exposed to risks entailing a very small probability of having a

considerable impact on the Group's finances and/or reputation. These include, among other things:

- 1,000-year storm, which can lead to the loss of offshore wind farms
- Broken pipes at the Nybro gas treatment plant in Denmark, which can lead to personal injury and damage to the environment
- Breakdowns at power stations that can lead to personal injury and loss of assets.

For each of the identified risks, Group Executive Management has assessed whether the level of risk – after risk-reducing measures have been implemented – is appropriate or slightly or significantly higher than the desired level. If the risk is higher than the desired level, further risk-reducing measures are initiated to the extent possible.

Development in risks in 2017

The risk outlook diminished in 2017 after the divestment of our upstream oil and gas business, as that industry is generally characterised by a high level of inherent risk.

Our five most important business risks are unchanged in relation to last year, however.

Market risks are still deemed to be the most material business risks for us. Following the

Top 5 business risks Effect on our value and credit metric

- 1 (#1 2016) Market risks
- 2 (#2 2016) Development and construction of production assets
- 3 (#3 2016) Regulatory risks in Wind Power
- 4 (#4 2016) Operation of offshore wind farms
- 5 (#5 2016) Cost of electricity for offshore wind

Quantification of risk is based on a scenario where the risk occurs with 10% probability (P90).

divestment of the oil and gas business, our exposure to oil and gas prices has been reduced. In contrast, our exposure to exchange rate fluctuations, primarily GBP, has increased, due to our large investments in offshore wind farms in the UK.

Development and construction of production assets is still ranked as the second-largest risk. However, there were no significant challenges in 2017.

Our risks associated with the operation of offshore wind farms (risk no. 3) and regulatory risks in Wind Power (risk no. 4) switched places in 2017. This is due to an increasing risk of faults on e.g. transmission cables, as more and more offshore wind farms become operational. In addition, we believe that the regulatory risks in the European markets have diminished, as the terms and regimes that apply to us are well-known and clarified.

Further reducing the cost of electricity from offshore wind (risk no. 5) remains an important factor for us. 2017 saw a breakthrough for the price of offshore wind power, and our market-leading role in reducing the costs was reaffirmed. In April, we were granted the right to build three offshore wind projects in the German part of the North Sea, and in September we were awarded the contract to construct Hornsea 2. Two of the German projects were awarded on zero-subsidy terms, and the settlement price for Hornsea 2 is 50% lower than in the most recent CfD allocation in the UK only two years ago.

1. Market risks

Our primary market risks relate to energy prices, exchange rates, interest rates and inflation.

Risk management

The management of market price risks aims to ensure stable and robust financial ratios that support our growth strategy.

We hedge prices for up to five years to reduce cash flow fluctuations. Prices are normally not hedged in the longer term. This means that our long-term market risks are determined by our strategic decisions on investments in new assets, the conclusion of long-term contracts, debt issuance as well as any divestments of assets.

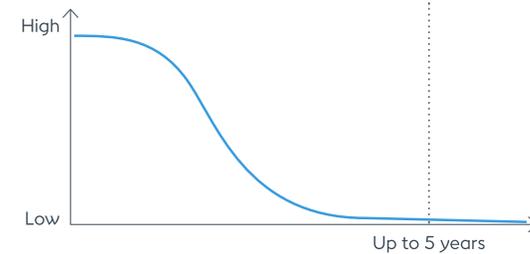

Energy prices

Our energy price risks can be divided into direct price risks, where the exposure depends on a specific price, and spread risks, where the exposure depends on the difference between two or more prices. Direct price risks are generally considered to be higher than spread risks as prices are often co-variant.

We hedge prices based on minimum hedging requirements, defined by the Board of Directors, for the three business units. See note 7.1 in the financial statements. In the first two years, a high degree of hedging is wanted to ensure stable cash flows after tax. The degree of hedging will be lower in the subsequent years. This is due to declining certainty about generated volumes and the increasing cost of hedging instruments due to declining liquidity of the instruments.

Risk horizon

We hedge market prices with a horizon of up to 5 years.

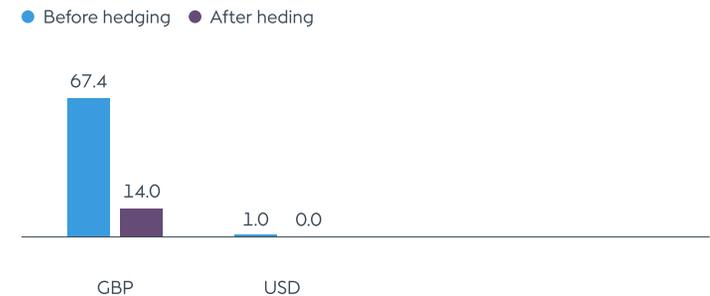

Energy exposure 2018-2022, DKK billion

Our energy exposures have been reduced from DKK 20.7bn to DKK 8.3bn via hedging.

Currency exposure 2018-2022, DKK billion

Our currency exposures have been reduced from DKK 68.4bn to DKK 14.0bn via hedging.

Exchange rates

Our international activities entail financial exposure to exchange rate fluctuations. The most important risk relates to GBP due to the Group's substantial investments in offshore wind farms in the UK.

The main currency risk management principle is that currency risks are hedged when it is deemed relatively certain that the underlying cash flows in foreign currencies will materialise. Currency risks relating to energy prices are therefore hedged only when the energy price is hedged.

Similarly, currency risks relating to divestments and investments are hedged only when the divestment and investment prices are sufficiently certain.

Cash flows that relate to fixed tariffs and guaranteed minimum prices from offshore wind farms in the UK deviate from the main principle and are hedged after deduction of operating costs, with a decreasing degree of hedging over the five-year risk management horizon. See note 7.1 in the financial statements. Fluctuations in GBP therefore constitute a strategic risk for Ørsted.

Our EUR risk is subject to continuous assessment, but is generally not hedged as we believe that Denmark will maintain its fixed exchange rate policy.

Interest rates and inflation

Our interest rate risks relate to interest-bearing loans and borrowings, interest-bearing assets and financial price hedges.

The management of interest rate risks is based on the composition of our assets and the interest rate sensitivity of the cash flows generated by these assets. We match assets and liabilities, aiming at fixed-interest financing of assets with fixed, interest-insensitive cash flows over the same periods. Conversely, more variable-interest financing is sought for assets with varying, interest-sensitive cash flows.

Our inflation risk primarily relates to fixed nominal earnings from offshore wind farms in Denmark, Germany and the Netherlands. We match the inflation risk by issuing debt with fixed nominal cash flows.

2. Development and construction of production assets

Our strategy includes the construction of large-scale investment projects, especially within offshore wind. Value creation from new projects heavily depends on choosing the right technical and commercial solutions, on the design and construction phase progressing as planned, including compliance with our agreements on the part of suppliers, on avoiding investment budget overruns and on the timely start-up of generation.

Most of our new investments are made in offshore assets, which naturally increases risks in the construction phase. The nature of the seabed, weather conditions and dependence on installation vessels are some of the risks associated with the construction of offshore assets.

In Wind Power and Bioenergy & Thermal Power, we have successfully completed several investment projects in recent years, including the construction of offshore wind farms in the UK and Germany as well as bioconversions of Danish CHP plants. Based on these experiences, we have been able to significantly reduce the risks associated with projects in progress due to the implementation of standard processes for the construction and estimation of project costs.

3. Operation of offshore wind farms

The risks associated with the operation of offshore wind farms relate to forecasts for availability and operating expenses as well as faults in transmission cables and substations.

Our forecasts for availability and operating expenses are based on a number of assumptions received from our suppliers, and on historical data. There is a risk that the assumptions do not hold, and that fault rates and costs are higher than expected. This may lead to deviations between actual generation and the forecasts.

In addition, we are exposed to faults in transmission cables and substations, which may result in breakdowns and loss of production from parts of or an entire offshore wind farm over an extended period of time. We are not compensated for loss of production in the UK. However, in Denmark we are fully compensated, and in Germany we are compensated for a large share of such operating losses. The German transmission system operator,

TenneT, is entitled to deduct up to 28 days for planned (10 days) and unplanned (18 days) maintenance of the transmission grid before we are entitled to financial compensation. The final form of the compensation rules is not yet clear in the new markets in the Netherlands, the USA and Taiwan, but we are monitoring the issue closely.

We have put in place various contingency plans to cater for unforeseeable events, including critical repair services to handle transmission cable faults. In addition, we are working continuously to reduce the risk of faults in the operation of offshore wind farms, among other things, by monitoring and analysing operational data collected and carrying out preventive remedial work of emerging damage.

4. Regulatory risks in Wind Power

The risk associated with regulatory regimes is twofold. It is associated with the possibilities for obtaining subsidies and with the possibilities for obtaining relevant approvals from the local authorities.

The EU targets are unchanged, and member states must still reduce carbon emissions by 40% and increase the share of generation from renewable energy sources (RES) to at least 27% of total generation – both targets to be achieved before 2030.

Under the reformed EU guidelines on state aid for environmental protection and energy, subsidies are generally granted in a competitive bidding process, with the price quoted by the bidder being the only or most important

criterion. This will increase the competition, which can affect the profitability of the projects and the number of projects we are allocated. Denmark, Germany and the Netherlands have tender-based funding schemes, while funding schemes are auction-based in the UK, the USA and Taiwan.

We do not expect changes to be made to the subsidy schemes, including tax incentive schemes, with retrospective effect for existing offshore wind projects in any of the countries where we have commissioned or planned offshore wind farms.

The greatest risks relating to project development are associated with the need to obtain relevant approvals from the local authorities and to be connected to the grid. Delays in both areas may lead to the total or partial loss of subsidies. This risk is significantly reduced for projects where subsidies and possibly project rights are granted in competitive bidding processes.

We mitigate the risks by monitoring political developments in all the relevant countries and by engaging in an active dialogue with relevant authorities about environmental approvals, regulatory milestones and the economic regimes.

To ensure an appropriate pipeline and the realisation of the desired level of build-out, we are working with a flexible portfolio of projects, the number of which actually exceeds our capacity. In this way, it is not critical if individual projects fail to materialise. Furthermore, we are continuously exploring new markets with a view to spreading the geographical risk.

5. Cost of electricity for offshore wind power

It is still imperative that the cost of electricity from offshore wind is reduced further. Especially if offshore wind is to be less dependent on subsidies and more competitive in relation to other technologies, such as onshore wind and solar PV. In addition, it is also important for us to maintain our market-leading position by continuing to win tenders and auctions in key markets.

We will continue our efforts to optimise both development and operations. We have created a streamlined organisation and initiated strategic cooperation with key suppliers to ensure continuous cost reductions. However, we are also very aware of the need to ensure financial sustainability in our industry to the benefit of all parties.

Other risks

Cybersecurity/IT

In 2017, several major cyberattacks were launched against companies around the world, and according to the Danish Centre for Cybersecurity, the risk of cyberattacks aimed at Danish companies is high. Thus, we have a strong focus on IT security.

We are responsible for critical infrastructure, and we own various types of intellectual property rights. This means that we are a potential target for cyberattacks or industrial espionage. To ensure monitoring of system-related risks, we have implemented a global framework for safety risk management.

Our strategy also focuses on protecting us against cyberattacks and on ensuring that the necessary control systems are in place for monitoring and managing the operation of our activities.

Compliance and legal

Risks associated with compliance and legal are assessed on the basis of financial significance and probability. Our most important risks are described below.

Financial regulation

We are subject to a number of financial regimes, such as REMIT, MAR, EMIR, Dodd Frank, MiFID, SFRT and AML. The financial rules and related procedures are complex and constantly changing. In 2016, we established a new compliance structure to ensure a consistent level of compliance controlling and reporting on financial regulation throughout Ørsted.

General Data Protection Regulation

We are subject to a number of rules on processing of personal data. From May 2018, we will be subject to the new EU General Data Protection Regulation (GDPR). Like today, we will be obliged to implement appropriate technical and organisational initiatives and procedures to ensure the protection of the rights of data subjects in connection with the processing of personal data. In order to ensure that we process personal data in a confidential and secure way, we have in recent years implemented a number of initiatives and carried out various analyses of our personal data security.

Public procurement law

Most of our products and services are subject to EU public procurement law, which is generally complex and constantly changing. Last year, a new EU Directive came into force, which the various member states have interpreted differently. This is making it difficult to compete for contracts in different countries. To counter the risk, we have ensured that our procurement function is involved in the relevant activities.

Corporate governance

Each year, we consider the recommendations from the Danish Committee on Corporate Governance, describe our corporate governance in the annual report and prepare a detailed report which you can find on our website.

Our governance model is illustrated in the figure to the right and explained below.

1. Shareholders

Our shareholders exercise their rights at the general meeting, which for example appoints the Board of Directors and the auditor.

2. General meeting

The general meeting adopts decisions in accordance with the standard rules set out in the Danish Companies Act. However, for the general meeting to be able to approve proposals to amend the Articles of Association or to dissolve the company, the Danish State as majority shareholder must participate in the general meeting and vote in favour of the proposal.

3. Nomination Committee Members and duties

The Nomination Committee has been appointed in accordance with the Articles of Association and consists of the Chairman and Deputy Chairman of the Board of Directors

and up to four members appointed by the largest shareholders every autumn. If one of the four largest shareholders does not want to sit on the committee, the right of appointment is transferred to the fifth largest shareholder and so on.

Current members of the committee are Thomas Thune Andersen, Lene Skole, Peder Lundquist (elected by the Danish Ministry of Finance), Jesper Hjulmand (elected by the Danish energy company SEAS-NVE), Claus Wiinblad (elected by the Danish pension fund ATP) and Anders Damgaard (elected by the Danish pension fund PFA Pension).

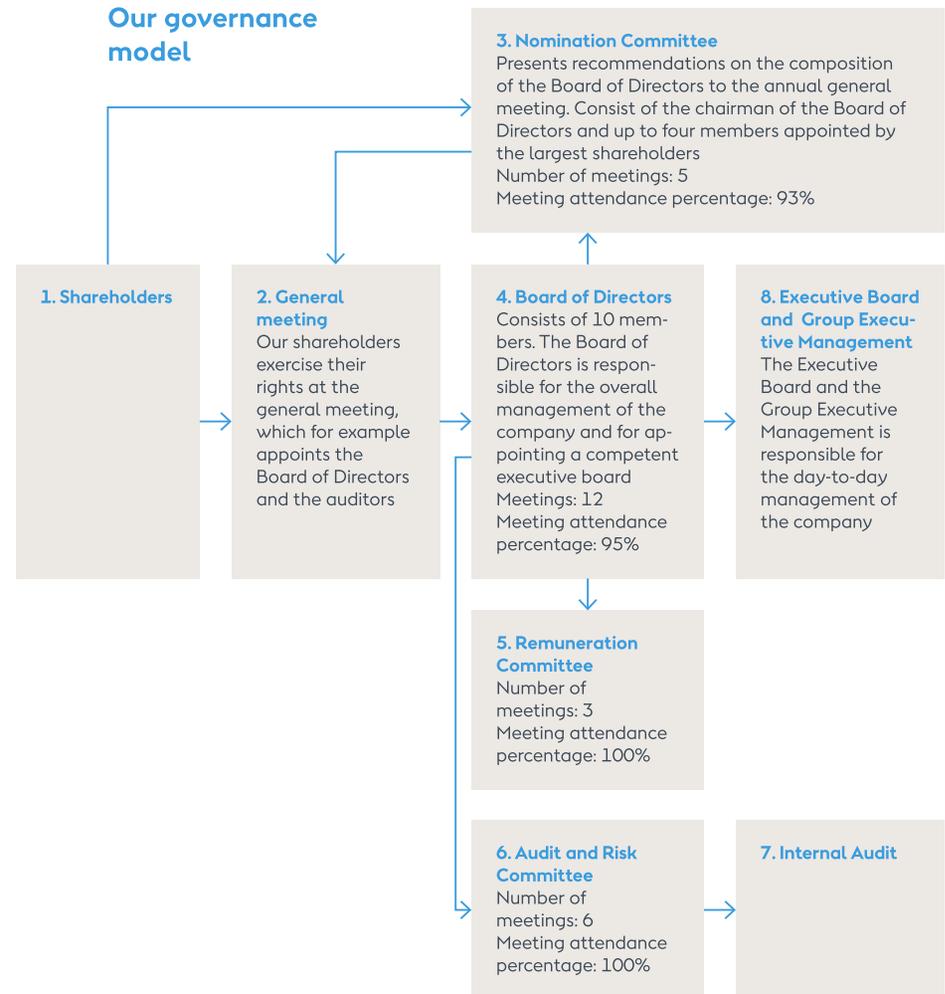

The committee's work results in recommendations for the re-election or new election of board members. We publish and submit the recommendations to the shareholders before the general meeting. The committee does not perform any other duties for the company.

The Nomination Committee's duties, meetings, etc., are described in its rules of procedure, which you can find at orsted.com/en/About-us/Corporate-Governance.

Special tasks in 2017

Claus Wiinblad, Poul Arne Nielsen and Martin Hintze stepped down from the Board of Directors in connection with the annual general meeting in 2017.

*The Nomination Committee is made up of four members in addition to the members from the Board of Directors.

The numbers indicate how many meetings the members have attended and not attended respectively.

In February 2017, the Nomination Committee recommended re-election of the other board members and election of Peter Korsholm as a new member of the Board. Peter Korsholm strengthens the Board of Directors' corporate finance competences.

After the annual general meeting in March 2017, the committee continued the process of finding a new board member with audit and accounting experience. In July 2017, the committee decided to recommend Dieter Wemmer as a new board member at the annual general meeting in March 2018.

In the autumn of 2017, the Nomination Committee decided to search for an additional board member with experience from Ørsted's primary business areas. In January 2018, the committee recommended Jørgen Kildahl as a new board member and reelection of the existing six members of the Board of Directors.

4. Board of Directors Members and duties

The annual general meeting elects six to eight members each year, and the employees elect a number of members every four years, corresponding to half of the board members

elected by the general meeting. The Board of Directors currently has ten members. The general meeting has elected six members, and the employees have elected four members. An election of employee representatives for the Board of Directors will be held in 2018, where the employees will have the right to elect three members. The reduction is attributable to the number of external board members being six at the time the election commenced.

Information about the members of the Board of Directors, their other supervisory and executive positions, independence and special competences can be found on pages 61-62.

The Board of Directors is responsible for the overall management of the company. The Board of Directors lays down the company's strategy and makes decisions concerning major investments and divestments, the capital base, key policies, control and audit matters, risk management and significant operational issues. The Board of Directors appoints the Executive Board.

The Board of Directors has appointed two committees from among its members, an Audit and Risk Committee and a Remuneration Committee.

The rules of procedure of the Board of Directors describe the work and duties of the Board of Directors and the two committees. Each year, the Board of Directors assesses the need to update the rules of procedure. You can read the rules of procedure for the two committees at orsted.com/en/About-us/Corporate-Governance.

Important tasks for the Board of Directors in 2017

Investments and divestments

- Investment in the offshore wind power project Hornsea 2 in the UK
- Investment in Taiwan's first offshore wind power project, Formosa 1
- Investment in the biomass conversion of Asnæs Power Station in Denmark
- Divestment of the upstream oil and gas business
- Sale of ownership interests in A2SEA
- Farm-down of offshore wind farms Borkum Riffgrund 2 in Germany and Walney Extension in the UK

Other tasks

- Development of our offshore wind project portfolio after 2020, including the German authorities' grant of the right to construct three offshore wind projects in Germany, submission of bid on the Bay State Wind project in Massachusetts in the USA in cooperation with Eversource as well as development of the project portfolio in Taiwan
- Conclusion of the partnership agreement with Dominion Energy on a development project in the USA
- Settlement of the contract on the construction of the Hejre platform and repair of the Siri platform
- Decision on a new organisation to support green growth and to change name to Ørsted
- Completion of the annual strategy process
- Issuance of subordinated green hybrid bonds and green unsecured senior bonds as well as buy-back of senior bonds.

Special tasks in 2017

Key tasks for the Board of Directors have been the divestment of our upstream oil and gas business, investment in the offshore wind farm project Hornsea 2, the build-out of our project portfolio in Germany, the USA, Taiwan and the Netherlands, farm-down of offshore wind farms in the UK and Germany as well as our name change.

The Board of Directors conducted its annual self-assessment in December 2017. All members responded to an anonymous questionnaire before the Board of Directors discussed the results. At the meeting, the Board of Directors also considered the follow-up items from last year's self-assessment.

Remuneration

Each year, the general meeting approves the remuneration for the members of the Board of Directors for the coming year. In the section on remuneration on page 57, you can read more about the remuneration of the Board of Directors.

5. Remuneration Committee

Members and duties

Thomas Thune Andersen (Chairman), Lene Skole and Pia Gjellerup are the members of the Remuneration Committee.

The committee assists the Board of Directors in preparing and implementing the remuneration policy. The committee assesses and prepares recommendations on Group Executive Management's salary adjustments, bonuses, the application of retention schemes for key

employees, the use of one-off payments and introduction of new compensatory elements.

In 2017, the Remuneration Committee discussed, among other things, payment of retention bonuses granted in connection with the divestment of our upstream oil and gas business.

6. Audit and Risk Committee

Members and duties

Benny D. Loft (Chairman), Lene Skole and Peter Korsholm are the members of the Audit and Risk Committee.

The committee assists the Board of Directors in overseeing the financial and non-financial reporting process, the capital structure development, financial and business-related risks, compliance with statutory and other requirements from public authorities and the internal controls.

Moreover, the committee approves the framework for the work of the company's external and internal auditors, evaluates the external auditors' independence and qualifications as well as monitoring the company's whistleblower scheme.

Special tasks in 2017

In 2017, the Audit and Risk Committee focused especially on the divestment of our upstream oil and gas business, IT/cyber security and our preparations for the implementation of the new General Data Protection Regulation in May 2018.

7. Internal Audit

Employees and duties

Internal Audit reports to the Audit and Risk Committee and is therefore independent of our administrative management structures. Internal Audit evaluates and suggests ways of improving and streamlining our processes and control environment. Internal Audit is primarily involved in reviewing and advising on our central and critical processes, governance, risk management and IT security.

The chairman of the Audit and Risk Committee is responsible for our whistleblower scheme. The Internal Audit function receives and considers any reports submitted.

Special tasks in 2017

Internal Audit undertook special audit and consultancy tasks within the following areas: Prevention of the risk of cybercrime, ensuring adequate IT security in connection with investments in major new IT systems, tests of our crisis control setup at Group level, investment management, commodity and currency hedging, ensuring adequate compliance and continuous monitoring as well as screening our suppliers' compliance with relevant international standards.

Whistleblower scheme

Our employees and other associates may report serious offences, such as cases of bribery, fraud and other criminal offences, to our whistleblower scheme or through our management system. In 2017, the reports resulted in three substantiated cases. Two concerning violation of employment policies and one concerning conflict of interest. The cases had consequences for the individuals

Important tasks for the Audit and Risk Committee in 2017

Audit and accounting

- Review of the recognition and presentation of the divestment of our upstream oil and gas business
- Supervision of the work involved in the early implementation of IFRS 9 as well as preparation for IFRS 15 implementation in 2018
- Review of expectations for market prices, exchange rates, discount rates and risk-free interest rates
- Review of significant provisions and warranties in the Group related to both continuing and discontinued operations
- Monitoring of capital structure development
- Monitoring of the voluntary limit for non-audit services as well as preliminary approval hereof

Risk

- Review of IT security in operational and administrative areas as well as cybersecurity
- Assessment of liquidity reserve and redemption of bonds as well as the basis for issuance of new green bonds and hybrid capital
- Review and assessment of our exposure to inflation
- Monitoring of currency and energy hedging mandates
- Supervision of the work involved in ensuring compliance with the requirements of the future General Data Protection Regulation.

involved. None of the cases reported were critical to our business, nor have they impacted on our financial results. We take such cases very seriously and do what we can to avoid that similar cases occur again.

8. Executive Board and Group Executive Management

Members and duties

Henrik Poulsen (CEO) and Marianne Wiinholt (CFO) are the members of the Executive Board of Ørsted A/S.

The Executive Board undertakes the day-to-day management through the Group Executive Management, which from 1 February 2018 will consist of seven members. In addition to Henrik Poulsen and Marianne Wiinholt, the Group Executive Management comprises the Executive Vice Presidents of our three business units Martin Neubert (Wind Power), Thomas Dalsgaard (Bioenergy & Thermal Power) and Morten H. Buchgreitz (Distribution & Customer Solutions) together with Executive Vice President of Wind Power Engineering, Procurement & Construction (EPC) Anders Lindberg and Executive Vice President of Wind Power Partnerships, M&A and Asset Management Ole Kjems Sørensen.

The Board of Directors has laid down guidelines for the work of the Executive Board, including the division of work between the Board of Directors and the Executive Board and the Executive Board's powers to enter into agreements on behalf of the company. The Board of Directors regularly discusses the CEO's performance, for example by following up on developments seen in relation to our strategy and objectives.

The Chairman of the Board of Directors and the CEO also regularly discuss the cooperation between the Board of Directors and the Executive Board.

You can find information about the members of the Executive Board, including their previous employment and other executive functions, on page 60. We describe the remuneration of the Executive Board in the section on remuneration on page 55.

How we relate to the Recommendations on Corporate Governance

We consider the Recommendations on Corporate Governance prepared by the Danish Committee on Corporate Governance on an annual basis. You can find the recommendations at www.corporategovernance.dk.

We do not comply with or comply partially with three out of 47 recommendations.

Our shareholders have decided that our Nomination Committee should have other members and duties than what is assumed in the recommendations, and that our Articles of Association should not stipulate a retirement age for members of the Board of Directors. From 2018, a fixed retirement age will no longer be part of the recommendations. We also have a share programme for the Executive Board with a slightly shorter first vesting period (2½ years) than the recommended three years, as the programme was issued in continuation of our IPO. The vesting period of future allotments is three years in accordance with the recommendations.

In November 2017, revised recommendations for corporate governance were announced, which will apply from 2018. We will review these and we expect to adjust our policies and procedures during 2018, so we can report on these in the 2018 annual report. We will present a proposal to update our remuneration policy at the general meeting in March 2018, enabling it to comply with the revised recommendations.

Our statutory report on corporate governance can be found at <https://orsted.com/en/About-us/Corporate-Governance/Statutory-reports>, see section 107b of the Danish Financial Statements Act. The report describes in more detail whether and how we comply with or deviate from the 47 Recommendations on Corporate Governance.

Remuneration report

Remuneration report

The overall objective of our remuneration policy is to attract, motivate and retain qualified members of our Board of Directors and our Executive Board and to align the interests of our Board of Directors and our Executive Board with the interests of our shareholders.

In addition, the policy aims to strike the right balance between the Executive Board's fixed and incentive-based remuneration with the target of awarding the members in relation to their achieved results for the company and individually.

The remuneration policy is available at orsted.com/en/About-us/Corporate-Governance.

Remuneration for the Executive Board Remuneration 2017

The remuneration paid to our CEO totalled DKK 15.9 million in 2017, representing an increase of 17% compared to 2016. His fixed salary increased by 6.4% to DKK 10.0 million (63% of the total remuneration in 2017). The cash bonus (STI) made up DKK 2.7 million, corresponding to 88% of the maximum bonus. The bonus percentage reflects a performance in excess of expectations as regards the Group's financial targets and our safety target. The score for the CEO's personal targets also exceeded expectations. The score was, among other things, affected by strong progress for our offshore wind farms under construction, auctions won, business development in new markets

Remuneration structure and remuneration for the Executive Board

Element	Henrik Poulsen			Marianne Wiinholt			Objective	Remuneration level	Performance measure
	2017	2016	2015	2017	2016	2015			
Fixed salary	10,024	9,425	9,112	5,255	5,062	4,876	Attract and retain qualified managers.	Competitive but not market leading, compared to the level in similar major listed Danish companies with international activities.	n/a
Cash-based incentive schemes (STI)	2,656	2,135	1,815	1,348	1,239	1,186	Ensure shared ownership of the entire company's performance and a clear link between value creation and payment.	Target of 15% of the fixed annual salary. The maximum bonus amounts to 30% and will be paid in case of full achievement of all performance targets.	The performance reward agreement consists of three targets: — financial target (30%) — safety target (10%) — personal targets (60%).
IPO Executive Retention Bonus	1,848	616	-	964	321	-	Retain the Executive Board after the IPO. Phasing in to a long-term incentive scheme	20% of the fixed annual salary as per 1 July 2016.	Employment at 1 September 2018.
Share-based incentive scheme (LTI)	1,367	1,427	2,784	713	889	1,790	Reward long-term value creation and align the Executive Board's interests with those of the shareholders.	Target of 20% of the annual fixed salary at the date of grant. After three years, shares will be allocated at 0-200%, depending on Ørsted's return compared to peers	The final number of shares will be determined on the basis of Ørsted's total shareholder return benchmarked against ten peers.
Pension incl. social security	2	2	2	2	2	2	n/a	The members of the Executive Board are not entitled to pension contribution, only social security	n/a
Severance pay	-	-	-	-	-	-		If a member of the Executive Board is terminated by the company, the person is entitled to 24 months' salary, composed of salary during the notice period (12 months) and a severance pay.	n/a
Total, DKK '000	15,897	13,605	13,713	8,282	7,513	7,854			

Amount of PSUs and shares owned by the Executive Management

	Henrik Poulsen	Marianne Wiinholt
Maximum amount of PSUs per 31 December 2017	28,838	15,150
Number of Ørsted shares owned	130,500	83,916
Owned shares in percentage of fixed salary	441%	541%

Number of shares

The table shows that both members of the Executive Board meet the share capital requirement.

as well as farm-downs of offshore wind farms. Moreover, the score was positively affected by the divestment of our Oil & Gas business.

The remuneration paid to our CFO totalled DKK 8.3 million, representing an increase of 10% compared to 2016. The fixed salary increased by 3.8% to DKK 5.3 million (63% of the total remuneration in 2017). The cash bonus (STI) made up DKK 1.3 million, corresponding to 86% of the maximum bonus. The bonus percentage reflects the same general targets that apply to the CEO. The score for the CFO's personal targets was above expectations. Among other things, the score was affected by the divestment of our Oil & Gas business and the handling of derived consequences in relation to our insurance captive, funding structure and the internal reorganisation of Ørsted, especially of the finance organisation. Moreover, the score was positively affected by the work done to establish a digital strategy and make our IT organisation more supportive of our business.

In 2017, the remuneration under the share-based incentive programme consisted of the market value of the scheme at the time of granting, distributed over the vesting period.

Both members of the Executive Board are covered by the share programmes from September 2016 and April 2017. The IPO retention bonuses for 2017 and 2018 constitute the phase-in to the first share programme, the vesting period of which ends in spring 2019. The increases in the IPO retention bonuses are attributable to the fact that the scheme covered only four months of 2016.

Remuneration structure

In February, the Board of Directors decided to keep the remuneration structure unchanged for 2017. The remuneration structure and the remuneration for the Executive Board are shown in the table. The two incentive schemes are described in more detail below.

Cash-based incentive schemes (STI)

The cash-based incentive scheme is an annual bonus with a target of 15% of the fixed annual remuneration and may not exceed 30%. The agreement is based on three elements - two general targets, and one individual target. The general targets relate to the Group's financial performance (weighting of 30%) and safety record (weighting of 10%). The individual target consist of personal performance targets related to the strategy (weighting of 60%).

The Remuneration Committee sets bonus targets and assesses the performance of the CEO. The Chairman of the Board of Directors and the CEO set bonus targets and assess the performance of the CFO.

Share-based incentive scheme (LTI)

The Executive Board is covered by the leader share programme in Ørsted. It is a condition for being granted performance share units (PSUs) under the programme that the participant holds a number of Ørsted shares representing a value equal to a share of each participant's fixed annual remuneration. For the CEO, this share is 75% of his fixed salary, and for the CFO 50%.

If the participants fulfil the shareholding requirement at the time of granting, they will each year be granted a number of PSUs representing a value equal to 20% of their fixed annual remuneration on the date of granting.

The granted PSUs have a vesting period of three years, after which each PSU entitles the holder to receive a number of shares free of charge, corresponding to 0-200% of the number of granted PSUs. The final number of shares for each participant will be determined on the basis of the total shareholder return delivered by Ørsted, benchmarked against ten comparable European energy companies.

If a member of the Executive Board leaves Ørsted as a result of his or her own resignation or due to breach of his/her employment, the entitlement to shares is lost.

Remuneration for the Board of Directors

Remuneration 2017

In March, the general meeting decided to keep the Board of Directors' fixed annual fee of DKK 320 thousand for the coming year until the general meeting in 2018.

Remuneration structure

The members of the Board receive a fixed fee each year. The Chairmanship and the members of the committees also receive a multiple of the fixed fee for their extra work. None of the members receives separate fees for consultancy work for Ørsted. The members' travel costs are covered by the company.

The remuneration for the Board of Directors comprises a fixed fee only. However, employee-elected board members may, based on their employment, be covered by general incentive schemes applicable to the Group's employees. Members of the Board of Directors are not entitled to severance payments.

Remuneration for the Board of Directors

The table shows the remuneration paid to the members of the Board of Directors and committees. No remuneration is paid to the members of the Nomination Committee.

¹ Per 31 December 2017, the board members own the following number of shares in Ørsted A/S: Peter Korsholm 4,500, Hanne Steen Andersen 3,187 (2016: 837), Poul Dreyer 837 (2016: 837), Benny Gøbel 837 (2016: 837) and Jens Nybo Stilling Sørensen 837 (2016: 837). No other board members own shares in Ørsted A/S.

² Martin Hintze has waived his right to receive Directors' remuneration.

Shareholder information

The Ørsted share yielded a total return of 29% in 2017, an increase in the share price of 27% and dividends of DKK 6 per share.

Price development for the Ørsted share in 2017

The Ørsted share started the year at a price of DKK 268 and closed the year at DKK 339. Prices of comparable European utility companies increased by 9%, and the OMX C25 cap increased by 13% in 2017. The market value of Ørsted was DKK 142 billion at the end of the year. Since the IPO in June 2016, the Ørsted share has generated an aggregate return from the share price and dividends of 47%.

Share information

ISIN	DK 0060094928220
Share classes	1
Nominal value	DKK 10 per share
Average daily volume	723,784
Exchange	Nasdaq OMX Copenhagen
Ticker	ORSTED
Year high	DKK 388 (11 October)
Year low	DKK 246 (3 February)
Registered share	99.6%
Number of shares	420,381,080 shares
Number of treasury shares	225,904 shares

The year's highest traded price of DKK 388 was on 11 October. The year's lowest traded price of DKK 246 was on 3 February.

The average daily turnover on Nasdaq Copenhagen was 724,000 shares. The trading volume showed an increase of 44% compared to 2016. This was particularly due to several of the original shareholders opting to sell all or some of their shareholdings in 2017 at a total trading value of DKK 17 billion. This amount should be compared to the value of the shares sold at our IPO of just under DKK 20 billion. New Energy Investment s.a.r.l. (managed by Goldman Sachs) sold its entire shareholding of 13.3% distributed over four transactions. The Danish energy company Syd Energi sold its entire shareholding of 0.9% at the beginning of the year, while the Danish pension fund ATP reduced its holding in the course of the year.

Share capital

Ørsted's share capital is divided into 420 million shares enjoying the same voting and dividend rights. The company's share capital remained unchanged in 2017. At the end of 2017, the company held a total of 226 thousand treasury shares, which will be used to cover incentive schemes.

Composition of shareholders

At the end of the year, the number of shareholders had increased by 12% to 24,600. Although the geographical spread of the share capital was greater, most of it (68%) is still with Danish owners. The figure to the left shows the composition of our shareholders by country, specifying the three shareholders holding more than 5% of the share capital each. Around 1% of the share capital is owned by private investors.

Annual general meeting and dividends

The annual general meeting will be held on 8 March 2018 in Copenhagen. Dividends for the year are expected to amount to DKK 9 per share, corresponding to DKK 3.8 billion. In 2017, dividends of DKK 6 per share were paid for the 2016 financial year, corresponding to a return of 2.7% relative to a share price of DKK 338.7 per 31 December 2017.

Investor Relations

In order to achieve a fair pricing of our shares and corporate bonds, we seek to ensure a high level of openness and stability in our financial communication. In addition, our management and Investor Relations function engage in regular dialogue with investors and analysts. The dialogue takes the form of quarterly conference calls, road shows, conferences, capital market days and regular meetings with individual or groups of investors and analysts. The dialogue is subject to certain restrictions from three weeks prior to the publication of our financial reporting.

22 share analysts and 12 bond analysts cover the Group. Their recommendations and consensus estimates for Ørsted's future financial performance are available at orsted.com/en/investors. On the site, it is also possible to download our financial reports, investor presentations and a wide range of other data.

Board of Directors

Thomas Thune Andersen

Chairman since 2014.
Born 1955.
Not independent.¹
Joined/re-elected: 2014/2017.
Term of office expires: 2018.

Special competencies:

Knowledge and experience within Ørsted's principal business areas. General management, safety management, risk management and stakeholder management.

Other management positions:

Chairman: Lloyds Register Group and Foundation
Deputy Chairman: VKR Holding A/S
Member: Arcon-Sunmark A/S, BW Offshore ltd.

Lene Skole²

Deputy Chairman since 2015.
Born 1959.
Independent.
Joined/re-elected: 2015/2017.
Term of office expires: 2018.

Special competencies:

General management, financial management, safety management, risk management, stakeholder management, human resources management and capital markets.

Present posts:

Lundbeckfonden, CEO.

Other management positions:

Deputy Chairman: ALK-Abello A/S, H. Lundbeck A/S, Falck A/S, TDC A/S.
Member: Tryg A/S, Tryg Forsikring A/S, two subsidiaries of Lundbeckfonden.

Hanne Sten Andersen

Employee representative.
Born 1960.
Not independent
Joined/re-elected: 2007/2014.
Term of office expires: 2018.

Special competencies:

General management and human resources management.

Present posts:

Ørsted, Lead HR Business Partner, Distribution & Customer Solutions.

Lynda Armstrong

Born 1950.
Independent.
Joined/re-elected: 2015/2017.
Term of office expires: 2018.

Special competencies:

General management, safety management, risk management, stakeholder management and human resources management.

Other management positions:

Chairman: ECITB
Member: KAZ Minerals plc³, Central Europe Oil Company, SBM Offshore N.V.⁴

Poul Dreyer

Employee representative.
Born 1964.
Not independent
Joined: 2014.
Term of office expires: 2018.

Special competencies:

Knowledge and experience within Distribution & Customer Solutions.

Present posts:

Ørsted, Technician, Distribution & Customer Solutions.

¹ Independence: Thomas Thune Andersen is considered independent of shareholder interests. Until December 2017, he was a member of the Board of Directors of Petrofac Limited which has had significant business relations with the oil and gas business now divested by Ørsted. Thus, he is not considered independent with respect to the 2017 reporting pursuant to the corporate governance recommendations.

² In addition to the positions mentioned above, Lene Skole also holds the following positions: member of the Audit and Election Committee at ALK, member of the Remuneration and Science Committee at Lundbeck, member of the Audit and Risk Committee at Tryg, member of the Remuneration and Election Committee at TDC, member of the Audit and Remuneration Committee at Falck A/S.

³ As well as Chairman of the Remuneration Committee, member of the HSE Committee and member of the Project Assurance Committee.

⁴ As well as member of the Technical and Commercial Committee and the Remuneration Committee.

Pia Gjellerup

Born 1959.
Independent.
Joined/re-elected: 2012/2017.
Term of office expires: 2018.

Special competencies:

General management, financial management, stakeholder management and human resources management.

Present posts:

Center for Public Innovation, Center Director.

Other management positions:

Chairman: Vanførefonden, Fondet Dansk-Norsk Samarbejde.

Member: Gefion Gymnasium

Benny Gøbel

Employee representative.
Born 1967.
Not independent
Joined/re-elected: 2011/2014.
Term of office expires: 2018.

Special competencies:

Knowledge and experience within Bioenergy & Thermal Power.

Present posts:

Ørsted, Engineer, Bioenergy & Thermal Power.

Peter Korsholm

Born 1971.
Independent.
Joined: 2017.
Term of office expires: 2018.

Special competencies:

General management, financial management, risk management, stakeholder management, capital markets and M&A.

Present posts:

DSVM Invest A/S, CEO, DSV Miljø Group A/S, CEO, Togu ApS, CEO.

Other management positions:¹

Chairman: Nymølle Stenindustrier A/S, GDL Transport Holding AB, Lion Danmark and two wholly owned subsidiaries in the Lomax group. **Member:** DSVM Invest A/S, Bone's Invest ApS, A/S United Shipping and Trading Company, Uni-tankers A/S and Bunker Holding A/S.

Benny D. Loft

Born 1965.
Independent.
Joined/re-elected: 2012/2017.
Term of office expires: 2018.

Special competencies:

General management, financial management, risk management, stakeholder management, human resource management, capital markets, IT and M&A.

Other management positions:

Member and Chairman of the Finance and Audit Committee: New Xellia Group A/S.

Jens Nybo Stilling Sørensen

Employee representative.
Born 1968.
Not independent
Joined/re-elected: 2007/2014.
Term of office expires: 2018.

Special competencies:

Knowledge and experience within Bioenergy & Thermal Power.

Present posts:

Ørsted, Key Business Project Manager, Bioenergy & Thermal Power.

	Total profit (loss) per share	46.4	-	44.5	30.6	-	18.1

Profit (loss) for the year from our continuing operations

In 2016, we decided to divest our Oil & Gas business. The divestment was approved and closed on 29 September 2017. The Oil & Gas business was therefore classified as discontinued operations in 2016 and 2017.

Profit (loss) per share

Diluted profit (loss) per share corresponds to profit (loss) per share, as the dilutive effect of the share programme is less than 0.1% of the share capital.

Accounting policies

Business performance

The business performance principle was introduced by the Ørsted Group in 2011 as an alternative performance measure. According to IFRS, market value adjustments of energy contracts and related currency risks (including hedging) are recognised on an ongoing basis in the profit (loss) for the year, whereas under the business performance principle, they are deferred and recognised in the period in which the hedged exposure materialises. The difference between IFRS and business performance is specified in the 'Adjustments' column. Read more about the business performance principle in note 1.1.

					Exchange rate adjustments of cash and cash equivalents	(55)	(5)
				6.4	Cash and cash equivalents at 31 December	3,891	2,628

Our supplementary statements of gross and net investments appear from note 3.3 and free cash flows (FCF) from note 2.1.

Accounting policies

Cash flows from operating activities are determined using the indirect method as operating profit (loss) before depreciation, amortisation and impairment losses adjusted for changes in operating items without cash flow effect. Trade payables relating to purchases of intangible assets and property, plant and equipment are not recognised in change in net working capital.

Other items primarily comprise reversal of share of profit (loss) of and dividends in associates and joint ventures as well as changes in bad debt provisions.

Cash flows from investing activities comprise payments in connection with the purchase and sale of non-current assets and enterprises, and the purchase and sale of securities that are not recognised as cash and cash equivalents.

Cash flows from financing activities comprise changes in the size or composition of equity and loans. Proceeds from raising of short-term repo loans are presented net.

Cash flows in currencies other than the functional currency are translated at the average exchange rates for the month in question, unless these differ significantly from the rates at the transaction date.

1. Basis of reporting

This section provides an overview of our principal accounting policies, key accounting estimates and judgements as well as new and amended IFRS standards and interpretations.

The following sections provide an overall description of the accounting policies applied to the consolidated financial statements as a whole. We provide a more detailed description of the accounting policies and key estimates and judgements in the notes.

The descriptions of accounting policies in the statements and notes form part of the overall description of accounting policies.

In November 2016, the Board of Directors decided to initiate a process with the ultimate objective of divesting our Oil & Gas business. The divestment of our Oil & Gas business was

closed on 29 September 2017. Consequently, we have presented the external activities of Oil & Gas, including revenue and other income and expenses, as discontinued operations in the annual reports for 2016 and 2017.

Accounting policies and key accounting estimates and judgements

The financial statements for the period 1 January - 31 December 2017 comprise the consolidated financial statements of Ørsted A/S and its subsidiaries (the Group) as well as separate financial statements for the parent company, Ørsted A/S. See page 158 for the parent company's accounting policies. The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS) as adopted by the EU and further requirements in the Danish Financial Statements Act (Årsregnskabsloven).

The financial statements are presented in million Danish kroner (DKK), unless otherwise stated.

All business units in the Ørsted Group apply the Group's accounting policies.

Measurement basis

The consolidated financial statements have been prepared on the historical cost basis except for derivatives, financial instruments in trading portfolio, financial instruments classified as available for sale, and carbon emissions allowances in trading portfolio that are measured at market value.

The accounting policies have been applied consistently to the financial year and for the comparative figures except for the early adoption of 'IFRS 9 – Financial Instruments'.

Key accounting estimates and judgements

When preparing the consolidated financial statements, we make a number of accounting estimates and judgements based on assumptions concerning future developments which affect our assets and liabilities as well as our income and costs. Actual amounts may differ from the amounts estimated and judgements made as more detailed information becomes available.

We regularly reassess these estimates and judgements, based among other things on historical experience, the current situation in the financial markets, the expected effects of Brexit and a number of other relevant factors.

Accounting estimates, judgements and assumptions which may entail a risk of material adjustments in subsequent years are described in the notes in the table below.

Note	Accounting policies	Key accounting estimates and judgements	Estimate/ judgement	Extent of accounting estimates and judgements
1.1	Consolidated financial statements	Assessment of classification of partnerships	Judgement	● ● ● ○
2.2	Revenue	Assessment of assumptions for recognition of revenue from the construction of offshore wind farms	Judgement	● ● ● ○
2.5	Other operating income	Assumptions for the accounting treatment of divestment gains Assessment of classification of divestment	Estimate Judgement	● ● ● ○ ● ● ● ○
3.2	Provisions and contingent liabilities	Assumptions for decommissioning obligations Estimate of onerous contracts Estimate of litigation outcomes	Estimate Estimate Estimate	● ● ○ ○ ● ● ○ ○ ● ● ○ ○
4.2	Construction contracts	Assumptions for the determination of the expected selling price and expected costs	Estimate	● ● ● ○

↻ Extent of accounting estimates and judgements relates to objectivity and business practice.

- Very objective/market-conforming
- Objective/partially conforming
- Partially subjective/partially distinctive
- Subjective/distinctive for Ørsted

Consolidated financial statements

The consolidated financial statements include the parent company Ørsted A/S and subsidiaries controlled by Ørsted A/S. See more in the company overview in note 8.5.

The consolidated financial statements have been prepared as a consolidation of the parent company's and the individual subsidiaries' financial statements prepared in accordance with the Group's accounting policies. Intra-group income and expenses, shareholdings, balances and dividends as well as realised and unrealised gains and losses arising from intra-group transactions are eliminated on consolidation.

Unrealised gains resulting from transactions with associates and joint ventures are eliminated to the extent of the Group's ownership interest. Unrealised losses are eliminated in the same way as unrealised gains to the extent that there has been no impairment.

The Group's share in joint operations is recognised in the consolidated balance sheet through recognition of the Group's own assets and liabilities and income and expenses. The Group's share of joint income and expenses and assets and liabilities is then recognised. The proportionate share of realised and unrealised gains and losses arising from intra-group transactions between fully consolidated enterprises and joint operations is eliminated.

Investments in associates and joint ventures are measured using the equity method.

If we hold or have the ability to exercise, directly or indirectly, 20%-50% of the voting

rights and do not exercise control, such enterprises are accounted for as associates. However, we carry out a specific assessment of our ability to exercise influence, including our ability to influence financial and operational decisions and thus our return.

Any such enterprises that satisfy the criteria for joint control are instead accounted for as investments in joint ventures.

We present the profit (loss) from investments in associates and joint ventures before EBITDA when deemed to pertain to our principal activity. The profit (loss) from investments in associates and joint ventures is presented after EBITDA when not deemed to pertain to the Group's principal activity.

Associates and joint ventures with negative net assets are measured at nil.

If we have a legal or constructive obligation to cover the negative equity of an associate or joint venture, the obligation is recognised as a liability.

Receivables from associates and joint ventures are measured at amortised cost. On initial recognition of our receivables, write-downs are made for bad debts.

The proportionate share of associates' and joint ventures' profit (loss) after tax and non-controlling interests is recognised in profit (loss) for the year. We eliminate the proportionate share of internal gains (losses) in the profit (loss) for the year.

On acquisition of investments in associates and joint ventures, the purchase method is applied.

Gains (losses) on the divestment of investments in associates and joint ventures are determined as the difference between the selling price and the carrying amount of net assets, including goodwill at the date of divestment and transaction costs.

Gains and losses are recognised in profit (loss) for the year as gain or loss on the divestment of enterprises. The profit (loss) for the year and total comprehensive income from associates and joint ventures are identical.

Key accounting judgements

Assessment of classification of partnerships

On initial recognition of investments and in connection with any restructuring of joint ventures and joint operations, we assess whether an investment is a joint venture or a joint operation.

In assessing joint operations, we look at:

- the corporate form of the operation, and
- whether we are only entitled to the net profit or income and expenses resulting from the operation.

In addition, the fact that the parties buy all output, for example the power generated, will lead to the structure being considered to be a joint operation.

Foreign currency translation

For each reporting enterprise in the Group, items are determined in the currency of the primary economic environment in which the individual reporting enterprise operates (functional currency). Transactions in currencies other than the functional currency of each enterprise are accounted for as transactions in foreign currencies and translated on initial recognition at the exchange rate at the transaction date. Exchange differences arising between the exchange rate at the transaction date and at the date of payment are recognised in profit (loss) for the year as financial income or expenses.

Receivables, payables and other monetary items in foreign currencies are translated at the exchange rates at the balance sheet date. The difference between the exchange rate at the balance sheet date and at the date at which the receivable or payable arose is recognised in profit (loss) for the year as financial income or expenses.

For foreign subsidiaries, joint operations, associates and joint ventures, the statements of comprehensive income are translated at monthly average exchange rates in so far as these do not deviate materially from the actual exchange rates at the transaction dates. Balance sheet items are translated at the exchange rates at the balance sheet date. All exchange differences are recognised in profit (loss) for the year, except for exchange differences arising on:

- translation of the opening equity of these entities at the exchange rates at the balance sheet date

- translation of the statements of comprehensive income of these enterprises from the exchange rates at the transaction date to the exchange rates at the balance sheet date
- translation of balances accounted for as part of the total net investment
- translation of the portion of loans and derivatives that has been entered into to hedge the net investment in these enterprises, and that provides an effective hedge against corresponding foreign exchange gains (losses) on the net investment in the enterprise.

The above types of exchange differences are recognised in other comprehensive income. Such exchange rate adjustments are divided between the equity of the parent company and the equity of the non-controlling interests. On full or partial divestment of the net investment, the accumulated exchange rate adjustments are recognised as follows:

- disposal results in loss of control: The accumulated exchange rate adjustments, including any associated hedges, are recognised in the profit (loss) for the year if a foreign exchange gain (loss) is realised by the selling enterprise. Any foreign exchange gain (loss) is transferred to the item in which the gain (loss) from the disposal is recognised. The part of the foreign currency translation reserve that relates to non-controlling interests is not transferred to profit (loss) for the year.
- disposal does not result in loss of control: A proportionate share of the foreign currency translation reserve is transferred from the parent company shareholders' share of equity to the minority shareholders' share of equity.

Repayment of balances that are considered part of the net investment does not constitute a partial disposal of the subsidiary.

Implementation of new standards and interpretations

We regularly assess the effect of new IFRS accounting standards and interpretations and implement new accounting standards and interpretations from their mandatory effective dates at the latest.

On 1 January 2017, we early adopted a new accounting standard, IFRS 9 – Financial Instruments, to be able to use the new hedge accounting rules.

The most important changes resulting from IFRS 9 compared to IAS 39 are:

- Simplification of the requirements for hedge accounting. For instance, hedge accounting will be facilitated for proxy hedging strategies, which are often used to hedge risks in the energy markets.
- The number of categories of financial assets is reduced from four to three: amortised cost, fair value through income statement or fair value through other comprehensive income.
- A loss allowance for expected credit losses must be recognised at initial recognition of a receivables. Previously a loss allowance could only be recognised if there was objective evidence of impairment.

The adoption of IFRS 9 has not had any significant impact on recognition and measurement of financial instruments in our consolidated financial statements for 2017.

Comparative figures are not restated as the effect is immaterial.

Effective from 1 January 2017, we have implemented the following amendments to other accounting standards (IAS and IFRS) and interpretations:

- Amendment to IAS 7 – Statement of Cash Flows: The amendment entails additional disclosure requirements in respect of financing activities.
- Amendment to IAS 12 – Income Taxes: The amendment is a clarification of the accounting treatment of tax assets related to unrealised losses on debt instruments measured at fair value.
- Annual improvements to IFRS 2014-2016 concerning IFRS 12 – Disclosure of Interests in Other Entities: The amendment is a clarification of the disclosure requirements.

The implementation of other amended standards has not affected our consolidated financial statements for 2017.

New standards and interpretations

IASB has issued a number of new or amended accounting standards and interpretations which have not yet entered into force, and which have consequently not been incorporated into the consolidated financial statements for 2017 (impact is expected).

On the next page, we have assessed how IFRS 15 – Revenue from Contracts with Customers and IFRS 16 – Leases will be implemented and the consequences thereof. The two standards are deemed to be the most relevant for the Ørsted Group.

Standard	Expected effect		Commencement	Transitional provision
IFRS 15 – Revenue from Contracts with Customers	<p>We have completed our review of contracts and the analysis of the cash flows in Ørsted. The analysis concluded that the implementation only affects the recognition of income from our transmission assets in connection with the construction of offshore wind farms.</p> <p>In the UK, we offer construction contracts for transmission assets, which are subsequently sold to a new owner. When construction of the assets is completed, they are sold to an Offshore Transmission Owner (OFTO) through a regulated sales process. The UK energy regulator 'Office of Gas and Electricity Markets' (Ofgem) manages the sales process, determines the final transfer value and appoints the buyer. Under the new standard, a customer relationship does not exist between Ørsted and a final buyer. As a result, no mutual legal rights and obligations exist between the parties when the construction of transmission assets commences.</p> <p>Following the implementation of IFRS 15, we will initially recognise revenue from transmission assets when we have entered into a contract with a customer which both parties (buyer and seller):</p> <ul style="list-style-type: none"> – have approved and – intend to perform. <p>Thus, the recognition of income does not begin until we sell a share of the transmission asset under construction to a partner, which takes place upon such partner joining the project.</p>	<p>We recognise the remaining part of the transmission asset when we find that control has passed to the OFTO.</p> <p>Transmission assets have so far been recognised in step with the construction based on the completion degree of the asset.</p> <p>The change has the consequence that revenue is recognised at a later point in time than was the case under the former practice. Similarly, the costs of construction do not affect operations until the sale is recognised as income.</p> <p>The change does not affect the Group's cash flows or results, but only the time when income and costs are recognised in the consolidated financial statements.</p> <p>Historically we have not had, and we do not expect a significant contribution margin in connection with the sale of transmission assets to partners and OFTOs, and the Group's EBITDA, balance sheet total and equity will therefore remain unchanged in all material respects as a consequence of the changed accounting policies.</p> <p>As the effect of the implementation of IFRS 15 on EBITDA, equity and the balance sheet total is immaterial, the expected disaggregated effect has not been disclosed.</p>	IFRS 15 will be implemented on 1 January 2018.	We will implement the standard with retrospective effect as if its requirements have always been applied to our current contracts. We use the option under IFRS 15 of not restating comparative figures, and of reflecting the effect in equity. The requirements of the standard therefore only apply to agreements in progress at 1 January 2018 as well as subsequently concluded agreements.
IFRS 16 – Leases	<p>We are still analysing the effect of IFRS 16 on the consolidated financial statements. The preliminary conclusion is that it will have a limited impact on both the balance sheet, the income statement and related credit key ratios except effects of classifications. The impact at 1 January 2019 will deviate from the present value of the future minimum lease payments stated in note 8.2 (DKK 6,095 million) for the following reasons:</p> <ul style="list-style-type: none"> – The scope of leases is expected to change up until 1 January 2019, partly as a result of the conclusion of new leases, partly as a result of run-off on the existing leases. 	<ul style="list-style-type: none"> – On recognition of lease obligations in the balance sheet at 1 January 2019, we will apply the implicit interest rates in the determination of the present value of the lease obligations. At 31 December 2017, the present value of our lease obligations was determined at an interest rate of 3.5%. <p>As a general rule, IFRS 16 requires that service elements which are incorporated into leases, and which do not entitle us to use an underlying asset, must be dealt with separately and treated as a current operating expense. This will not have an immediate impact as our total obligation stated in note 8.2 does not include payments relating to service elements. We intend to continue this practice so that service elements are not included in the lease obligation and the right-of-use asset in accordance with IFRS 16.</p>	IFRS 16 will be implemented on 1 January 2019.	We expect to implement the standard based on the simplified transition method, where comparative figures will not be restated. We expect to calculate and recognise the cumulative effect for all ongoing leases at 1 January 2019. Furthermore, we expect to use the other available reliefs to the widest possible extent, including the exclusion of leases with a term to maturity of less than 12 months and low-value assets.

The new or amended standards and interpretations are not mandatory in connection with the financial reporting for 2017. We will implement the standards and interpretations from their mandatory effective dates at the latest.

1.1 Business performance

Description of business performance

In 2011, we introduced an alternative performance measure, business performance, as a supplement to the financial statements prepared in accordance with IFRS. The business performance results reflect our internal risk management and show the results for the period under review. Under the business performance principle, the value of the hedging transaction is deferred and recognised for the period in which the hedged risk materialises. This is illustrated in the example overleaf.

Our reason for introducing the business performance principle in 2011 was:

- that we could not achieve the same timing of recognition of our commercial exposure and hedging contracts in accordance with the IFRS rules, for example with respect to option premiums and certain commercial fixed-price contracts, and
- a high risk of hedging contracts not being consistent with the IFRS hedge accounting rules, requiring us to recognise the hedging contracts at market value with value adjustment via the income statement, whereas our commercial exposure is accrued.

Our risk management is described in note 7.1.

Business performance – background

We hedge market risks for up to five years with the aim of stabilising our cash flows and creating certainty about our finances. With a view to ensuring transparency, we

want the financial impact of the hedging transactions to be reflected in the financial reporting simultaneously with the hedged exposure (for example sales of power). We can normally achieve this by applying the IFRS rules on hedge accounting. For energy companies, it is, however, sometimes difficult to ensure simultaneity. This is due to the fact that hedging instruments are not always available which precisely match the exposure which must be hedged, or that no sufficiently liquid market is available. Consequently, some hedging takes place in alternative markets or subject to alternative time horizons. For example, power generation in Denmark is to some extent hedged by financial contracts for nearby trading areas such as EEX (Germany) and Nord Pool (Scandinavia). These areas normally develop relatively uniformly over time compared to Denmark.

This hedging method means that only some of the financial hedging transactions comply

with the IFRS rules on hedge accounting even though the financial risk has been reduced. In case of non-compliance, under IFRS the hedging transactions must be recognised in the income statement on a regular basis. This may give rise to considerable fluctuations in the income statement, as the effects of the hedging and for example the sale of power are not recognised in the same period.

Consequently, we have decided not to apply the IFRS rules on hedge accounting to transactions hedging energy prices and associated currency risks. Value adjustments of these hedges are therefore recognised in the income statement in accordance with IFRS.

Recognition

In the income statement, the business performance results are shown alongside the IFRS results. In the income statement, the difference between the two performance measures is shown in a separate column, 'Adjustments'.

Two types of contracts are included in the business performance principle:

- hedging contracts concerning energy and related currencies
- commercial contracts concerning energy recognised at market value (typically fixed-price physical gas and power contracts).

When we use hedging instruments which do not fully correspond to the underlying risk, any difference between the hedging instruments and the underlying risk is recognised immediately in the income statement. See note 7.3.

The accounting treatment under business performance is otherwise identical to the accounting treatment under IFRS. Our balance sheet, cash flows and equity are consequently not affected. The accounting treatment of our hedging contracts according to IFRS and business performance is summarised in the table below.

Type of hedging	IFRS	Business performance
Hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts	Market value adjustment in the income statement	Market value adjustments are deferred and recognised in the period in which the exposure materialises
Hedging of: – proceeds from the divestment of newly constructed offshore wind farms – interest payments	Market value adjustments are deferred and recognised in the period in which the exposure materialises	Recognition the same as under IFRS
Hedging of currency risks associated with investments in foreign entities	Market value adjustments are recognised in other comprehensive income	Recognition the same as under IFRS
Trading portfolio	Market value adjustment in the income statement	Recognition the same as under IFRS

☞ Only the recognition of the hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts differs under IFRS and the business performance principle.

Expected impact on business performance EBITDA from energy and currency hedging

At 31 December 2017, a loss of DKK 812 million has been deferred (2016: DKK 126 million gain), which will affect business performance EBITDA in subsequent years. Of the total deferred loss, a loss of DKK 159 million is expected on business performance EBITDA in 2018 (2016: DKK 737 million gain in 2017).

The decrease in the deferred gain on currency hedging is primarily attributable to the transfer of gains to the income statement in 2017 as a consequence of the hedged transactions having occurred. Power prices rose in 2017, which means that the market value of the hedges has fallen as we are selling power.

Expected impact on business performance EBITDA from energy and currency hedging, DKK million

	2018	2019	after 2019	Deferred for subsequent recognition at 31 December 2017	2017	2018	after 2018	Deferred for subsequent recognition at 31 December 2016
Oil	174	137	63	374	(46)	(48)	18	(76)
Gas	(262)	(266)	(97)	(625)	104	(314)	(418)	(628)
Power	(650)	(385)	(519)	(1,554)	(396)	(290)	(329)	(1,015)
Coal	34	6	1	41	32	4	-	36
Currency	545	139	268	952	1,043	489	277	1,809
Total	(159)	(369)	(284)	(812)	737	(159)	(452)	126

The table shows when the deferred value adjustments are expected to be recognised in the business performance EBITDA. The table covers both hedging classified as business performance and IFRS.

Explanation of the business performance principle

In year 1, we enter into a contract hedging the price risk associated with Wind Power's generation of 1,000GWh in year 5 at GBP 52,000 per GWh. This ensures a total revenue of GBP 52 million. In year 5, the cost of power has decreased to GBP 45,000 per GWh, which means that the hedging contract has a positive market value of GBP 7 million (a hedged price of GBP 52,000 per GWh minus the spot price of GBP 45,000 per GWh). This means that we ensure that the total income, including the hedging transaction, is still GBP 52 million. The amount of GBP 52 million consists of a gain from the hedging contract of GBP 7 million and GBP 45 million from the sale of 1,000GWh at the spot price of

GBP 45,000 per GWh. The financial impact of the hedging transaction in years 1-5 is shown in the table. Under the business performance principle, the hedging transaction is recognised in the income statement in year 5, i.e. at the same time as the hedged contract with a positive market value of GBP 7 million. The value development is, however, recognised continuously in the income statement according to IFRS. Upon the expiry of the contract in year 5, the total effect on results over the period is the same under the IFRS and the business performance principle. Only the timing differs. The business performance principle ensures simultaneity of recognition of the underlying exposure and the hedging contract.

	Recognition in the income statement, GBP million		Recognised in the income statement as follows			Total financial impact	
	Power price (GBP '000 per GWh)	Sales of power, GBP million	Market value	Business performance	IFRS	Business performance	IFRS
Year 1	52	-	-	-	-	-	-
Year 2	50	-	2	-	2	-	2
Year 3	55	-	(3)	-	(5)	-	(5)
Year 4	46	-	6	-	9	-	9
Year 5	45	45	7	7	1	52	46
Total		45		7	7	52	52

Example of recognition of the market value of a hedging contract according to the business performance and IFRS principles in the income statement.

Specification of the difference between EBITDA according to business performance and according to IFRS, DKK million

	2017	2016
EBITDA – business performance	22,519	19,109
Business performance adjustments in respect of revenue for the year	205	(3,808)
Business performance adjustments in respect of cost of sales for the year	(150)	1,638
EBITDA – IFRS	22,574	16,939
Total business performance adjustments for the year comprise:		
Value adjustments for the year of hedging contracts that relate to future periods	(138)	(1,397)
Reversal of gains (losses) relating to hedges deferred from prior periods where the hedged production or trading is recognised in business performance EBITDA for this period	193	(773)
Total adjustments	55	(2,170)

Value adjustments for the year of financial and physical hedging, DKK million

	2017	2016
Currency	150	1,156
Power (commercial and hedge)	(836)	(2,160)
Gas (commercial and hedge)	106	(735)
Oil	404	267
Coal	38	75
Total value adjustments	(138)	(1,397)

The table shows value adjustments by product. The value adjustments are recognised in IFRS EBITDA, but not in business performance EBITDA, as the value relates to future periods.

Reversal of deferred gains (losses) on hedges from previous periods, DKK million

	2017	2016
Currency	(12)	(615)
Power (commercial and hedge)	297	(424)
Gas (commercial and hedge)	(106)	(1,539)
Oil	46	1,654
Coal	(32)	151
Total deferred gains (losses) from previous periods	193	(773)

The table shows reversal of value adjustments by product. These gains (losses) are recognised in business performance EBITDA. The reversal of value adjustment was recognised in IFRS EBITDA in a previous period.

Difference between IFRS and business performance for the year

The value adjustment in respect of future periods totalled DKK -138 million (2016: DKK -1,397 million) and reversal of deferred gains (losses) recognised according to business performance in 2017 totalled DKK 193 million (2016: DKK -773 million).

Market value adjustments for the year of hedging contracts

2017 was mainly affected by losses on the hedging of power as a result of rising prices in 2017. This was partially offset by a gain on the hedging of oil as a consequence of the rising oil prices in 2017.

2016 was mainly affected by losses on the hedging of gas and power as a result of rising prices in 2016. This was partially offset by gains on currency hedging due to the weakened GBP in 2016.

Deferred gains (losses) from previous periods

In 2017, a loss of DKK 193 million was recognised in business performance EBITDA, but as the loss was recognised in IFRS EBITDA in a previous period, the gain was reversed in the 'Adjustments' column in the income statement. The loss was primarily attributable to the hedging of power.

In 2016, a gain of DKK 773 million was recognised in business performance EBITDA, but as the gain was recognised in IFRS EBITDA in a previous period, the gain was reversed in the 'Adjustments' column in the income statement. The gain, which was primarily attributable to the hedging of gas, power and currency, was offset by a loss on oil.

1.2 Definitions of performance highlights

Performance highlights are calculated in accordance with the business performance principle.

Gross investments	Cash flows from investing activities, excluding dividends received from associates, joint ventures and equity investments, purchase and sale of securities, loans to joint ventures and joint operations, and divestments of assets and enterprises.
Net investments	Gross investments less divestments of assets and enterprises. To/from this is added/deducted acquired/transferred debt in connection with acquisitions and divestments of enterprises, and deducted non-controlling interests' share of investments in fully consolidated investment projects, and deducted the selling price of non-controlling interests.
Funds from operations (FFO)	Supplementary concept for cash flows from operating activities determined as business performance EBITDA less the effect of gains on the divestment of ownership interests in offshore wind farms, interest expenses (net) on interest-bearing net debt and hybrid capital (50%), interest element of decommissioning obligations and current tax. In addition, operating lease obligations have been recognised as if they were finance lease obligations, where operating lease payments have been reversed, and calculated interest expenses of the present value of lease payments have been deducted.
Adjusted interest-bearing net debt	Interest-bearing net debt plus 50% of the hybrid capital, cash and securities not available for use with the exception of repo transactions, present value of lease payments (operating lease obligations calculated as if they were finance lease obligations), and the present value of decommissioning obligations less deferred tax.
FFO to adjusted interest-bearing net debt	$\frac{\text{FFO}}{\text{Adjusted interest-bearing net debt}}$
Free cash flow (FCF)	Cash flows from operating activities less gross investments and plus divestments.
Capital employed	Non-interest-bearing net assets corresponding to non-interest-bearing assets less non-interest-bearing liabilities.
Average capital employed	$\frac{\text{Capital employed beginning of year} + \text{capital employed year-end}}{2}$
Return on capital employed (ROCE)	$\frac{\text{EBIT}}{\text{Average capital employed}^1}$

Proposed dividend per share (DPS) of DKK 10

$$\frac{\text{Total proposed dividend}}{\text{Number of shares year-end}}$$

Dividend yield

$$\frac{\text{Dividend per share (proposed)}}{\text{Stock price the last trading day of the year}}$$

Average number of shares

$$\frac{1}{\text{Number of days}} \times \text{Number of days} = X_i$$

Net working capital

Inventories, trade receivables and other current operating assets less trade payables, deferred income (net) and other current operating liabilities.

Net working capital, excluding trade payables relating to capital expenditure

Net working capital excluding trade payables relating to purchases of intangible assets and property, plant and equipment.

Profit (loss) per share

$$\frac{\text{Shareholders' share of the profit (loss) for the period}}{\text{Average number of shares}}$$

Diluted profit (loss) per share

$$\frac{\text{Shareholders' share of the profit (loss) for the period}}{\text{Average number of shares, including dilutive effect of free shares}}$$

¹ ROCE (continuing operations) is based on average capital employed for the continuing operations. Non-interest-bearing net assets related to the oil and gas activities divested in September 2017 are not included.

2. Return on capital employed

Segment information	81
Revenue	84
Cost of sales	85
Government grants	86
Other operating income and expenses	87
Employee costs	88
Share-based payment	89

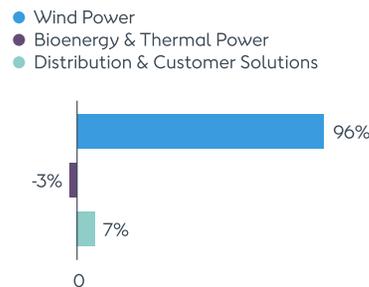

2. Return on capital employed

Return on capital employed is a key ratio that shows how profitable our business is. The strategic target is for ROCE to constitute an average of 12-14% in the period 2018-2023.

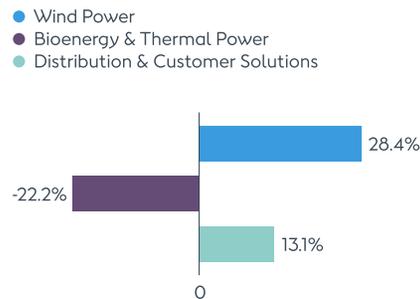

Return on capital employed

Return on capital employed was 25.2% against 24.4% in 2016. The improved operating profit was partially offset by more funds tied up in invested capital. See more in note 2.1.

EBIT by segment, percentage of DKK 16,581 million in 2017

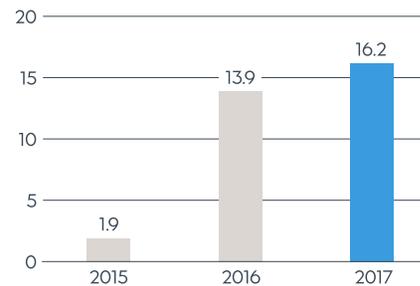

Return on capital employed (ROCE), % 2017

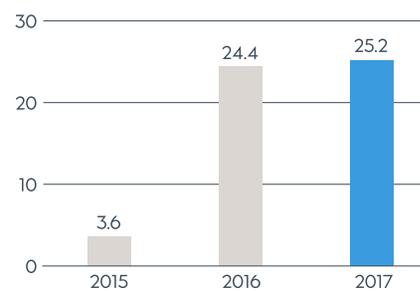

EBIT and return on capital employed stated according to the business performance principle. EBIT of DKK 16,581 million is calculated as EBIT for reportable segments.

EBIT, business performance, DKK million

Return on capital employed (ROCE), %

Return on capital employed (ROCE) was 25% against 24% in 2016 (and 17% in 2016 adjusted for compensation received in connection with renegotiations). The increase was attributable to higher EBIT.

22.5bn

EBITDA totalled DKK 22,519 million in 2017 against DKK 19,109 million in 2016.

16.2bn

Operating profit totalled DKK 16,235 million in 2017 against DKK 13,877 million in 2016.

25.2%

Return on capital employed (ROCE) totalled 25.2% in 2017 against 24.4% in 2016.

2.1 Segment information

Wind Power, DKK million

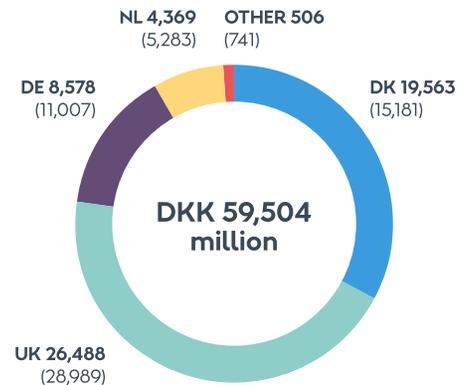

Revenue	20,352
EBITDA	20,595
Gross investments	15,462
Number of employees	2,253

Primary activity

Development, construction, ownership and operation of offshore wind farms in the UK, Germany, Denmark, the Netherlands, the USA and Taiwan.

Revenue, DKK million 2017¹ (2016)

- Denmark
- Germany
- UK
- The Netherlands
- Other

Bioenergy & Thermal Power, DKK million

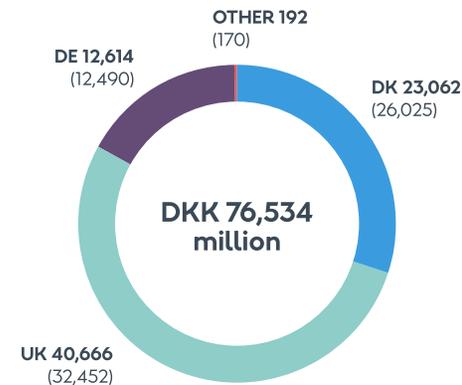

Revenue	5,864
EBITDA	152
Gross investments	1,390
Number of employees	749

Primary activity

Generation of heat and power from CHP plants in Denmark and a gas-fired power station in the Netherlands as well as a Renaissance plant in the UK.

Intangible assets and property, plant and equipment, DKK million 2017 (2016)

- Denmark
- Germany
- UK
- Other

Distribution & Customer Solutions, DKK million

Revenue	40,195
EBITDA	2,082
Gross investments	857
Number of employees	1,263

Primary activity

The distribution of power and sales of power and gas in the wholesale and retail markets in Denmark, Sweden, Germany and the UK as well as optimisation and hedging of the Group's total energy portfolio.

Revenue, intangible assets and property, plant and equipment are presented based on the locations of our customers and assets.

¹ Revenue determined according to the business performance principle.

Accounting policies

Our operating segments are consistent with our internal reporting to our top decision-making body, Group Executive Management.

We apply the business performance principle, as described in note 1.1, in connection with our internal management.

Geographical distribution of revenue as well as intangible assets and property, plant and equipment

Geographical revenue is broken down, as far as possible, by the customer's geographical location based on supply point.

A significant part of our sales takes place via power exchanges and gas hubs in Europe, the physical locations of which do not reflect the geographical locations of our customers. When breaking down these sales by geographical location we use the physical locations of the exchange or hub since we do not in all cases know the physical location of our customer.

No single customer accounts for more than 10% of our consolidated revenue.

Non-current assets are broken down geographically based on the physical locations of the assets.

The operating segments are managed primarily on the basis of EBITDA and investments. Financial income and expenses and tax are allocated to the operating segments, while we manage them at Group level.

Segment income and segment expenses are those items that, in the internal management reporting, are directly attributable to individual segments or can be indirectly allocated to individual segments on a reliable basis.

¹ Of which the elimination of intra-group revenue accounts for DKK -6,939 million.

2.2 Revenue

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities/ eliminations	Total
Revenue 2017, DKK million					
Distribution and transmission	-	-	2,520	(32)	2,488
Sales of heat and steam	-	2,607	-	-	2,607
Sales of gas	-	-	19,197	(1,556)	17,641
Sales of power and power generation	10,052	3,097	17,743	(5,722)	25,170
Revenue from the construction of offshore wind farms	8,734	-	-	-	8,734
Other revenue	1,566	160	735	403	2,864
Total, business performance	20,352	5,864	40,195	(6,907)	59,504
Adjustments	(7)	95	(109)	226	205
Total, IFRS	20,345	5,959	40,086	(6,681)	59,709

Revenue for the year according to business performance fell from DKK 61,201 million in 2016 to DKK 59,504 million in 2017, down 2.8%. The fall was mainly due to lower activity from the construction of offshore wind farms in Wind Power. This was partially offset by higher gas prices as well as higher generation from offshore wind farms in operation.

Revenue for the year from the construction of offshore wind farms mainly related to transmission assets in the UK and the construction of the offshore wind farms Race Bank, Walney Extension, Gode Wind 1 and 2 as well as Burbo Bank Extension for partners.

In 2017, revenue totalled DKK 59,709 million according to IFRS, of which DKK 52,347 million was revenue from the sale of goods,

and DKK 7,362 million was revenue from the sale of services. In 2016, IFRS revenue totalled DKK 57,393 million, of which DKK 53,874 million was related to revenue from the sale of goods, while DKK 3,519 million was related to revenue from the sale of services.

Accounting policies

We recognise revenue from the distribution and transmission of energy and the sale of heat and steam, oil, gas and power when:

- delivery and transfer of risk to the buyer have taken place,
- the income can be measured reliably and is expected to be received, and
- costs incurred or which will be incurred in connection with the sale can be measured reliably.

Revenue is measured at the market value of the agreed consideration excluding VAT and other indirect taxes collected on behalf of third parties.

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities/ eliminations	Total
Revenue 2016, DKK million					
Distribution and transmission	-	-	2,318	(16)	2,302
Sales of heat and steam	-	2,255	-	-	2,255
Sales of gas	-	-	18,111	(1,224)	16,887
Sales of power and power generation	6,700	2,717	17,309	(3,416)	23,310
Revenue from the construction of offshore wind farms	14,323	-	-	-	14,323
Other revenue	1,405	177	271	271	2,124
Total, business performance	22,428	5,149	38,009	(4,385)	61,201
Adjustments	45	(450)	(3,639)	236	(3,808)
Total, IFRS	22,473	4,699	34,370	(4,149)	57,393

All forms of discounts granted are recognised in revenue.

Revenue from offshore wind farms comprises sales of power at market prices and regulated prices (fixed tariffs and guaranteed minimum prices for green certificates).

Revenue from offshore wind farms is recognised at the time of generation.

We recognise construction contracts in revenue concurrently with the construction of the offshore wind farms and transmission assets. Revenue corresponds to the selling price of work performed during the year (percentage of completion method).

When the outcome of a construction contract cannot be estimated reliably, revenue is recognised to the extent of costs incurred. See also note 4.2.

Other revenue is income from the installation of offshore wind turbines using vessels in A2SEA, which was divested in August 2017. Trading activities,

financial hedging transactions, etc., are also included in other revenue.

Adjustments consist of the reversal of business performance adjustments. See more in note 1.1.

Key accounting judgements

Assumptions for the ongoing recognition of revenue from the construction of offshore wind farms

We construct offshore wind farms in collaboration with partners, where we construct the partner's share. We assess each construction agreement at the time of conclusion of the agreement.

In our view, the transfer of control, risks and rewards takes place in step with the construction of offshore wind farms. This is supported by the regular approval of part deliveries and milestone payments from partners. Revenue is therefore recognised in step with the construction of the offshore wind farms.

2.3 Cost of sales

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities/eliminations	Total
Cost of sales 2017, DKK million					
Gas	-	976	16,237	(4,477)	12,736
Power	188	90	16,520	(5,510)	11,288
Biomass	-	2,091	-	-	2,091
Coal	-	829	-	-	829
Distribution and transmission costs	625	138	2,496	(102)	3,157
Costs for construction of offshore wind farms	5,720	-	14	17	5,751
Other cost of sales	32	276	965	3,419	4,692
Total, business performance	6,565	4,400	36,232	(6,653)	40,544
Adjustments	-	4	164	(18)	150
Total, IFRS	6,565	4,404	36,396	(6,671)	40,694

Cost of sales according to business performance increased from DKK 39,260 million in 2016 to DKK 40,544 million in 2017, up 3.3%. The increase was mainly due to higher gas prices and that 2016 was impacted by one-off payments from completed renegotiations that reduced cost of sales by DKK 4.3 billion. The increase was partly offset by lower cost in connection with construction of offshore wind farms.

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities/eliminations	Total
Cost of sales 2016, DKK million					
Gas	-	830	10,440	(5,601)	5,669
Power	-	57	15,303	(3,077)	12,283
Biomass	-	1,408	-	-	1,408
Coal	-	819	-	-	819
Distribution and transmission costs	603	123	2,632	(147)	3,211
Costs for construction of offshore wind farms	10,360	-	22	(22)	10,360
Other cost of sales	167	481	503	4,359	5,510
Total, business performance	11,130	3,718	28,900	(4,488)	39,260
Adjustments	-	(295)	(2,028)	685	(1,638)
Total, IFRS	11,130	3,423	26,872	(3,803)	37,622

 Cost of sales relate partly to trading in gas and power, partly to fuel used at CHP plants in connection with heat and power generation and partly to the construction of offshore wind farms.

2.4 Government grants

Government grants, DKK million

	2017	2016
Government grants recognised in profit (loss) for the year under revenue	1,917	-
Government grants recognised in profit (loss) for the year under other operating income	4	5
Government grants recognised in the balance sheet	(4)	(5)
Government grants recognised for the year	1,917	5

In Denmark, the Danish transmission system operator Energinet administers subsidies for eco-friendly power generation, including for example offshore wind farms. Until 2017, the grant was paid by consumers as a tariff (public service obligation (PSO)) added to their electricity bill. In 2016, a political agreement was made to gradually phase out the PSO tariff. From 2017, the PSO costs will gradually be financed under the Danish Finance Act.

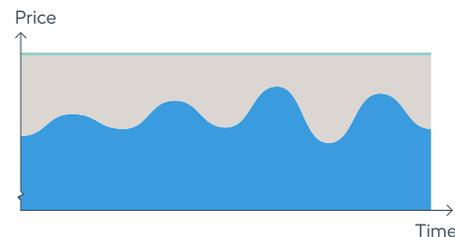

Following the changed legislation, which means that PSO funding will be provided under the Danish Finance Act, we regard the grant for eco-friendly power generation as a government grant as it is paid by the Danish State.

In 2013, the UK introduced a new CfD (Contracts-for-Difference) subsidy scheme as a replacement for the RO (Renewable Obligations) scheme for renewable energy projects. The Burbo Bank Extension and Walney Extension offshore wind farms are our first offshore wind farms under the

CfD-regime. 2017 is the first year where we have received this subsidy. We treat the payments from the CfD scheme as a government grant.

Illustrative example of CfD

- Market price of power
- Government grants (difference between the market price of power and the power price fixed in the CfD contract)
- Power price fixed in the CfD contract

When participating in a CfD, we receive a feed-in premium in connection with the generation of power from an offshore wind turbine. The feed-in premium is the difference between the market price of power and the price fixed in the CfD (strike price).

Accounting policies

Government grants comprise grants for eco-friendly power generation, grants for the funding of development projects as well as investment grants, etc.

Government grants are recognised when there is reasonable assurance that the grants will be received.

Grants for the acquisition of assets which we recognise in the balance sheet are recognised under deferred revenue and are transferred to other operating income in step with the depreciation of the assets to which the grants relate.

As grants for power generation are intended as a compensation for the price of power, we systematically recognise the grants under revenue in step with the power generation and thus the related revenue.

Government grants, which are recognised under revenue, are presented as the sale of power and power generation. See note 2.2.

2.5 Other operating income and expenses

Other operating income, DKK million	2017	2016
Gain on divestment of assets	11,142	3,356
Insurance compensation	-	137
Other compensation	369	877
Miscellaneous operating income	154	497
Total other operating income	11,665	4,867

Other operating expenses, DKK million	2017	2016
Loss on divestment of assets	307	416
Miscellaneous operating expenses	242	142
Total other operating expenses	549	558

Other operating income

Gains on the divestment of assets in 2017 primarily concerned the farm-downs of 50% of our ownership interests in the offshore wind farms Walney Extension (UK) and Borkum Riffgrund 2 (Germany), contingent consideration relating to the divestment of Race Bank (UK) in 2016 (DKK 1,385 million), and to a lesser extent an adjustment in respect of the divestment of ownership interests in London Array.

In 2016, gains on the divestment of assets consisted primarily of the farm-downs of 50% of our ownership interests in the Burbo Bank Extension and Race Bank offshore wind farms.

Insurance compensation received in 2016 related to the settlement of insurance claims in Wind Power.

Compensation was mainly received from the transmission system operators (TSOs) and suppliers due to delayed deliveries for the construction of offshore wind farms in Wind Power.

Other operating expenses

Losses on the divestment of assets in 2017 consisted, among other things, of the scrapping of components for a new type of foundation in an offshore wind farm under construction.

Losses on the divestment of assets in 2016 consisted, among other things, of the scrapping of a vessel for installation of offshore wind turbines.

Accounting policies

Other operating income and other operating expenses comprise items of a secondary nature to the Group's primary activities.

In connection with the divestment of ownership interests in offshore wind farms before or during the construction phase, the gain is recognised on the divestment date under other operating income/other operating expenses in the income statement.

The gain for the future construction of the partner's share of the offshore wind farm is recognised on an ongoing basis in the income statement in step with the construction. See more in notes 2.2 and 4.2.

Divestment of ownership interests in our offshore wind farms

When we divest an ownership interest in an offshore wind farm to a partner, we typically also enter into agreements on the future construction and operation of the offshore wind farm.

Contracts in connection with divestment are typically:

- Agreement on the sale of shares (divestment of assets)
- Agreement on the future construction of the offshore wind farm (construction contract)
- Agreement on the future operation of the offshore wind farm.

Key accounting estimates

Assumptions for the accounting treatment of divestment gains

Our accounting recognition of the gain in the divestment contracts is based on the individual accounting selling prices of the relevant contracts.

Our accounting treatment of the gains in the contracts is therefore not necessarily identical with the prices negotiated in the individual contracts.

Key accounting judgements

Assessment of classification of divestment

When we divest ownership interests in an offshore wind farm under development, we carry out an individual assessment of whether the divestment qualifies as a divestment of an enterprise or a divestment of assets. We have typically assessed that the offshore wind farms do not constitute an enterprise, as no employees are transferred, and processes are transferred to a limited extent only.

2.6 Employee costs

Employee costs, DKK million	Continuing operations		Discontinued operations	
	2017	2016	2017	2016
Wages, salaries and remuneration	3,650	3,692	365	692
Share-based payment	15	37	-	6
Pensions	310	311	27	51
Other social security costs	117	128	11	19
Other employee costs	61	29	5	10
Employee costs before transfers to assets	4,153	4,197	408	778
Transfers to assets	(956)	(1,109)	(126)	(325)
Total employee costs	3,197	3,088	282	453

Employee costs

Employee costs before transfer to assets were on a par with 2016. Employee costs transferred to assets relate to investment projects, which are capitalised in the balance sheet.

Pension plans and number of employees

Pension plans are defined-contribution plans that do not commit Ørsted beyond the amounts contributed.

In 2017, our average number of employees was 5,738 (2016: 5,894).

Remuneration of Group Executive Management

The remuneration of the Executive Board is based on a fixed salary, including personal benefits, such as a company car, free telephone, etc., a variable salary, a retention bonus in connection with the IPO, and share-based payment. The other members of Group Executive Management¹ also receive a pension.

The members of the Board of Directors are paid fixed remuneration only for their work in Ørsted. In addition, Ørsted reimburses any travel expenses.

For further details about the remuneration of the Executive Board and the Board of Directors, reference is made to the remuneration report on page 55.

Salaries and remuneration for Group Executive Management and the Board of Directors, DKK '000	Executive Board		Other members of Group Executive Management ¹		Board of Directors		Total	
	2017	2016	2017	2016	2017	2016	2017	2016
Fixed salary	15,279	14,487	17,924	18,995	-	-	33,203	33,482
Remuneration	-	-	-	-	4,934	5,024	4,934	5,024
Variable salary	4,004	3,374	3,917	3,500	-	-	7,921	6,874
Retention bonus	2,812	937	6,535	6,326	-	-	9,347	7,263
Share-based payment	2,080	2,316	949	1,479	-	-	3,029	3,795
Pension	-	-	1,499	1,463	-	-	1,499	1,463
Termination payment	-	-	5,330 ²	-	-	-	5,330	-
Social security	4	4	9	9	-	-	13	13
Total	24,179	21,118	36,163	31,772	4,934	5,024	65,276	57,914

¹ Other members of Group Executive Management in 2017 are: Samuel Leupold (departing 28 February 2018), Thomas Dalsgaard, Morten Hultberg Buchgreitz and David Cook (departed 29 September 2017).

² The compensation relates primarily to the non-competition clause in connection with Samuel Leupold's notice of termination.

2.7 Share-based payment

Participants	Number of locked-up shares relative to fixed salary
CEO	75% of fixed salary
CFO and other members of Group Executive Management	50% of fixed salary
Senior Vice Presidents	25% of fixed salary
Vice Presidents and Senior Directors	15% of fixed salary

The figure shows the value of the Ørsted share in per cent of the participants' fixed salary which, at the time of granting, must be locked up for the duration of the share programme.

Key assumptions for valuation of PSUs	Time of granting 2017	Time of granting 2016
Share price	269	275
Average volatility, peers	24.9%	25.6%
Volatility, Ørsted	20.3%	24.1%
Risk-free interest rate	(0.3)%	(0.5)%
Expected term at time of granting	3 years	2.5 years

Share programme

Group Executive Management and a number of other senior executives participate in our share programme. Today, approximately 90 senior executives participate in the programme. As a condition for the granting of performance share units (PSUs), the participant must own a number of shares in Ørsted corresponding to a portion of the individual participant's annual fixed salary. The portion depends on the employee category and, for our CEO, makes up 75% of the fixed salary; see the figure to the left for more information. The participants in the programme must invest in Ørsted shares prior to the first granting.

If the participants fulfil the shareholding requirement at the time of granting, they will be granted a number of PSUs each year, representing a value of 15%-20% of the annual fixed salary on the date of granting.

The granted PSUs have a vesting period of approximately three years, after which each PSU entitles the holder, without payment, to receive a number of shares corresponding to 0-200% of the number of PSUs granted. The final number of shares for each participant will be determined on the basis of the total shareholder return delivered by Ørsted, benchmarked against ten comparable European energy companies.

The highest rate will be triggered if Ørsted's results, measured as the total return to shareholders, outperform those of the comparable companies. For each lower ranking, the number of shares granted will fall by 20 percentage points. If, for example, Ørsted ranks third, the participants will be entitled to 160% of the target.

If Ørsted ranks 11 in the comparison, no shares will be granted to the participants. The right to shares is conditional upon continued employment.

Accounting policies

The share programme is classified as an equity-based programme as the programme is settled in shares. The market value of the PSUs and the estimated number of PSUs granted are measured at the time of granting and recognised:

- in the income statement under employee costs over the vesting period and
- as a set-off in the balance sheet under equity over the vesting period.

The valuation of the PSUs and the estimate of the number of PSUs expected to be granted are carried out as a probability simulation based on Ørsted's expected total shareholder return relative to ten comparable European energy companies. The expectations are factored into the market value and are not adjusted subsequently.

Maximum number of outstanding shares at the time of granting, '000

Time of granting	Executive Board	Other members of Group Executive Management	Senior executives	Total	% of share capital	Market value (at time of granting) DKK million	Years until expiry
1 September 2016	21	10	123	154	0.04%	24	1.2
1 April 2017	23	10	140	173	0.04%	28	2.2
Maximum number of outstanding shares at 31 December 2017	44	20	263	327	0.08%	52	

Development in maximum number of outstanding shares, '000	Executive Board	Other members of Group Executive Management	Senior executives	Total	% of share capital
Maximum number of outstanding shares at 1 January 2017	20	10	128	158	0.04%
Compensation for dividends paid (2016 programme)	1	0	2	3	0.00%
Granted (2017 programme)	23	10	146	179	0.04%
Cancelled (2016 programme)			(7)	(7)	0.00%
Cancelled (2017 programme)			(6)	(6)	0.00%
Maximum number of outstanding shares at 31 December 2017	44	20	263	327	0.08%
(DKK million)					
Market value of share programme at the time of granting	7	3	42	52	
Maximum market value of share programme at 31 December 2017	15	7	89	111	

The maximum market value of the share programme at 31 December 2017 is based on the assumption that the participants receive the maximum number of shares. This requires that Ørsted delivers the highest shareholder return benchmarked against the ten comparable companies.

3. Capital employed

Intangible assets and property, plant and equipment	93
Provisions and contingent assets and liabilities	96
Gross and net investments	98
Divestment of enterprises	98
Assets classified as held for sale	99
Discontinued operations	100
Non-controlling interests	103

3. Capital employed

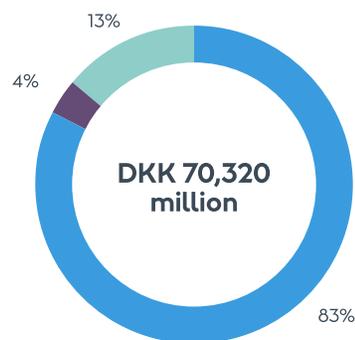

Our capital employed primarily relates to production assets, some of which are under construction. We monitor investment projects closely, as a large part of the Group's value is created in the development and construction phases.

Investments and divestments in 2017

We made total investments of DKK 17,744 million in offshore wind farms, biomass conversions and power infrastructure in 2017 and divestments of DKK 16,982 million. The most significant assets under construction at the end of 2017 consisted of our offshore wind farms in the UK and Germany. See note 3.1.

Capital employed by segment, % 2017

Total capital employed	70,320	60,961
of which discontinued operations	(236)	2,769
of which continuing operations	70,556	58,192

83% of the capital employed is tied up in Wind Power. Capital employed by segment is based on capital employed for reportable segments DKK 71,986.

70.3bn

Capital employed totalled DKK 70,320 million at 31 December 2017 against DKK 60,961 million in 2016.

17.7bn

Gross investments amounted to DKK 17,744 million in 2017 against DKK 14,960 million in 2016.

16.9bn

Cash flows from divestments, exclusive of Oil & Gas, totalled DKK 16,921 million in 2017 against DKK 9,055 million in 2016.

In 2016, the internal working capital and financial instruments of Oil & Gas were included in the principal items, while the rest of the capital employed was included in the item 'Assets classified as held for sale'. Following the divestment of the oil and gas business on 29 September 2017, capital employed from discontinued operations includes our receivables and liabilities from the transaction.

3.1 Intangible assets and property, plant and equipment

Carrying amount at 31 December 2017	689	1,501	60,603	413	13,328	75,845

¹ An accounting change in the classification of our share of the Lincs offshore wind farm from an equity investment to a joint operation in 2017 resulted in additions of DKK 2,024 million under cost and DKK -385 million under depreciation and amortisation.

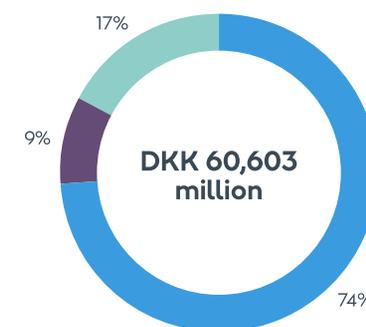

Intangible assets

Intangible assets comprise goodwill of DKK 125 million (2016: DKK 125 million), carbon emissions allowances of DKK 180 million (2016: DKK 247 million), other rights

of DKK 33 million (2016: DKK 190 million), completed projects of DKK 321 million (2016: DKK 317 million) and development projects in progress of DKK 30 million (2016: DKK 76 million).

CGUs in Wind Power

The CGUs are made up of individual offshore wind farms, each of which generates cash flows for the segment independently of each other.

Most significant offshore wind farms: Anholt – Borkum Riffgrund 1 – Borkum Riffgrund 2 – Burbo Bank Extension – Gode Wind 1 – Gode Wind 2 – Gunfleet Sands – Hornsea 1 – London Array – Race Bank – Westermost Rough – Walney – Walney Extension – West of Duddon Sands

CGUs in Bioenergy & Thermal Power

The Danish power stations constitute a single CGU as overall production planning is for the entire Danish portfolio of CHP plants. The Dutch power station Enecogen is deemed to constitute a single CGU, just as the not yet commissioned waste power station Renaissance Northwich is deemed to constitute an independent CGU.

– Central CHP plants (including goodwill)
– Renaissance Northwich
– Enecogen

CGUs in Distribution & Customer Solutions

The CGUs are constituted primarily by distribution assets, each of which generates cash flows for the segment independently of each other.

– Power distribution – Oil pipelines – Offshore gas pipelines – Street lighting

Impairment losses

Impairment losses relating to goodwill

We have not impaired goodwill or other intangible assets in 2017.

Impairment losses relating to property, plant and equipment

In 2017, impairment losses of DKK 545 million were recognised on projects in progress in Wind Power due to uncertainty about the carrying through of the project.

Useful lives

Buildings	20-50 years
Offshore wind farms	20-24 years
Production assets, power (thermal) and district heating	20-25 years
Gas transportation system (marine pipelines)	20-40 years
Oil transportation system (marine pipeline)	15 years
Distribution grids, power	20-40 years
Fixtures and fittings, tools and equipment	3-10 years

Accounting policies

Intangible assets

Rights are measured at cost less accumulated amortisation and impairment losses. Rights are amortised on a straight-line basis over their estimated future useful lives, which are 5-20 years.

Property, plant and equipment

Property, plant and equipment is measured at cost less accumulated depreciation and impairment losses. Cost of property, plant and equipment is depreciated on a straight-line basis, using the diminishing-balance method or the reducing-fraction method. The diminishing-balance method and the reducing-fraction method result in decreasing depreciation over the useful life of the offshore wind farm.

Cost comprises purchase price and any costs directly attributable to the acquisition until the date the asset is available for use. The cost of self-constructed assets comprises direct and indirect costs of materials, components, sub-suppliers and labour. Borrowing costs relating to both specific and general borrowing directly attributable to assets under construction with a lengthy construction period are recognised in cost during the construction period. Cost is increased by the present value of the estimated obligations for demolition and decommissioning of assets to the extent that they are recognised as a provision.

Subsequent costs, for example in connection with replacement of parts of an item of property, plant and equipment, are recognised in the carrying amount of the asset in question when it is probable that future economic benefits will flow to the Group from the expenses incurred. Other repair and maintenance expenses are recognised in profit (loss) for the year as incurred.

Assumptions for impairment test

Production assets are tested for impairment if there is any indication of impairment. For production assets with a limited lifetime, such as offshore wind farms and CHP plants, cash flows are calculated based on forecasts for the entire lifetime of the asset. For power distribution, cash flows are based on 25-year forecasts with the addition of a terminal value. The determination of the recoverable amount of production assets is based on a number of assumptions where estimates are made for the determination. These assumptions include future market conditions, market prices of power, biofuel, gas, coal, carbon, weighted average cost of capital (WACC), exchange rates, etc. The market prices applied are based on available forward prices for a period of up to five years and our best estimate of long-term prices for the remainder of the period.

When calculating the recoverable amount of property, plant and equipment under construction, the expected completion costs and the commissioning dates are also assumptions which are based on estimates.

3.2 Provisions and contingent assets and liabilities

Provisions

Decommissioning obligations mainly comprise estimated expenses relating to demolition and disposal of our offshore wind farms, restoration of seabeds and the demolition of our CHP plants.

As developers of offshore wind farms, we are obliged to decommission offshore wind farms and restore the surroundings at our own expense. When we construct offshore wind farms in cooperation with partners, they are liable for their share of the decommissioning costs. Therefore, we have included only the decommissioning obligations associated with our ownership interest in the offshore wind farms.

Decommissioning obligations increased by DKK 1,102 million from 2016 to 2017, due primarily to a change in the discount rate applied and to an adjustment of other assumptions applied in the determination of our decommissioning obligations.

Onerous contracts comprise the following:

- contract for booked LNG terminal capacity in the Netherlands, DKK 1,329 million. (2016: DKK 1,033 million)
- contract for the lease of gas storage capacity in Germany, DKK 1,075 million (2016: DKK 1,179 million)
- contract for the lease of gas storage capacity in Denmark, DKK 290 million (2016: DKK 384 million).

0-1 year	23	335	322	680	49	327	326	702
1-5 years	43	1,025	3,080	4,148	73	1,089	2,016	3,178
After 5 years	4,685	1,351	656	6,692	3,527	1,180	452	5,159

Other provisions comprise primarily:

- warranty obligations for offshore wind farms
- possible repayments to electricity consumers in respect of previous years
- obligations in connection with divestments, primarily in relation to the divestment of our Oil & Gas business
- obligations in respect of our own carbon emissions
- other contractual obligations.

Contingent liabilities

This note primarily concerns our continuing operations – see also note 3.6 regarding our discontinued operations.

Liability to pay compensation

In case of any environmental accidents or other types of damage caused by our oil and gas transport, the companies Ørsted Salg & Service A/S and Danish Oil Pipe A/S are liable

to pay compensation according to legislation. This also applies if there is no proof of negligence (strict liability). We have taken out insurance to cover any such claims.

↑
Provisions mainly consisted of decommissioning obligations and onerous contracts.

Litigation

We are party to actions relating to the Danish competition authorities' claim that Elsam A/S and Elsam Kraft A/S charged excessive prices in the Danish wholesale power market in some periods. Following a merger in 2008, Elsam Kraft A/S is part of Ørsted Bioenergy & Thermal Power A/S.

The Danish Competition Appeals Tribunal has concluded that Elsam A/S and Elsam Kraft A/S abused their dominant position in the wholesale power market in Western Denmark to some extent in the periods 1 July 2003 to 31 December 2004 and 1 January 2005 to 30 June 2006 by charging excessive prices. We dispute the rulings, and appeals have been lodged with the Copenhagen Maritime and Commercial Court. In 2016, the Copenhagen Maritime and Commercial Court found the former Elsam guilty of violating the Danish Competition Act in 2005 and the first half of 2006 without, however, providing clear grounds for its decision. We have appealed the case to the High Court of Western Denmark, where the case is pending.

In connection with the above-mentioned cases, some energy companies, some of their customers and others have raised claims for damages. One group has chosen to commence legal proceedings before the Copenhagen Maritime and Commercial Court with a claim for damages of approximately DKK 4.4 billion with addition of interest, while suspension agreements have been concluded with others, meaning that the limitation period for these alleged claims has been suspended. In response to the claims for damages, we have made a provision of DKK 298 million plus interest. The provision has been calculated on the basis of the Danish Competition Council's determination of consumer losses.

In addition, we are party to a number of court cases and legal disputes. In our assessment, none of these will significantly impact the company's financial position, neither individually nor collectively.

Change of control

Some of our activities are subject to consents, permits and licences granted by public

authorities. We may be faced with a claim for acceptance of any transfer, possibly with additional terms and conditions, if the Danish State holds less than 50% of the share capital or voting rights in Ørsted A/S. Read more in note 6.1

Accounting policies

Provisions are recognised when the following criteria are fulfilled:

- we have a legal or constructive obligation as a result of an earlier event
- the settlement of the obligation is expected to result in an outflow of resources
- the obligation can be measured reliably.

For onerous contracts, a provision is made when the expected income to be derived from a contract is lower than the unavoidable cost of meeting our obligations under the contract.

Provisions concerning carbon emissions are recognised when our actual emissions exceed our holding of carbon emissions allowances.

Decommissioning obligations are measured at the present value of the future liability in respect of demolition and decommissioning as expected at the balance sheet date. The present value of the provision is recognised as part of the cost of property, plant and equipment and depreciated together with the associated asset. The addition of interest on provisions is recognised in the income statement under financial expenses.

Key accounting estimates

Timing, probabilities, amounts, etc. which have a bearing on our provisions estimates are updated quarterly based on our expectations.

Assumptions for decommissioning obligations

Estimates of decommissioning obligations are based on our expectations of, for example:

- timing and scope
- future cost level
- adopted laws and regulations on remediation.

The timing of our decommissioning obligations depends on the expected useful lives of the assets. The expected useful life of our offshore wind farms is 24 years.

We expect that our CHP plants in Denmark must be removed within 12 years of decommissioning at the latest.

In measuring provisions, the costs required to meet the obligations are discounted. In determining decommissioning obligations at 31 December 2017, a discount rate of 3.5% is applied. The rate has been reduced from 4.5% in 2016 due to the continued low interest rate environment. The rate has been estimated on the basis of expectations concerning the future, long-term interest rate level, based on historical interest rate levels.

Timing as well as special demolition and decommissioning requirements are assessed based on current legislation and standards in this area. Future cost levels are based, among other things, on expectations with regard to:

- general price development or development in market prices
- demand
- development of existing technologies.

Estimates of onerous contracts

We have entered into a number of contracts with fixed terms. Depending on market developments, etc., and uncertainty about obligations incurred under the contracts made, these contracts may become onerous. Our estimates concerning these complex contracts and their future effects are subject to significant uncertainties.

Estimates of litigation outcomes

When exercising a judgement about a potential liability in connection with litigation, we assess the following factors:

- the nature of the litigation, claim or statement
- the development of the case
- the judgements and recommendations of legal or other advisers
- experience from similar cases
- management's decision on how we are going to react to the litigation, claim or statement.

Decommissioning obligations by segment, DKK million				Total
	Wind Power	Bioenergy & Thermal Power	Distribution & Customer Solutions	
0-5 years	60	4	2	66
5-10 years	350	119	-	469
10-20 years	2,261	190	-	2,451
After 20 years	874	420	471	1,765
2017	3,545	733	473	4,751
2016	2,785	668	196	3,649

The table shows decommissioning obligations by segment as well as a maturity analysis.

3.3 Gross and net investments

Gross and net investments, DKK million	2017	2016
Cash flows from investing activities	(10,054)	(1,060)
Dividends received and capital reduction, reversed	(13)	(22)
Purchase and sale of securities, reversed	9,197	(4,564)
Loans to associates and joint ventures, reversed	47	(210)
Sale of non-current assets, reversed	(16,921)	(9,104)
Total gross investments	(17,744)	(14,960)
Transactions with non-controlling interests in connection with divestments	61	(49)
Sale of non-current assets	16,921	9,104
Total cash flows from divestments	16,982	9,055
Total net investments	(762)	(5,905)

In 2017, gross investments totalled DKK 17,744 million (2016: DKK 14,960 million).

Gross investments in Wind Power primarily consisted in the build-out of offshore wind farms (DKK 15,462 million), including the UK offshore wind farms Race Bank, Walney Extension and Hornsea 1 as well as the German offshore wind farm Borkum Riffgrund 2.

In 2017, cash flows from the divestment of assets and enterprises totalled DKK 16,982 million (2016: DKK 9,055 million).

In 2017, Wind Power farmed down 50% of Walney Extension to the Danish pension funds PKA and PFA, 50% of Borkum Riffgrund 2 to Global Infrastructure Partners as well as divesting all ownership interests in A2SEA.

Wind Power also received contingent consideration regarding the divestment of UK Race Bank in 2016.

In 2016, Wind Power divested 50% of Burbo Bank Extension to the Danish pension fund PKA and the Danish investment company KIRKBI as well as 50% of Race Bank to Macquarie.

Distribution & Customer Solutions divested Gas Distribution to the Danish transmission asset owner Energinet in 2016.

For more information, see the management's review on page 28.

3.4 Divestment of enterprises

Selling price, DKK million	2017	2016
Payment	605	2,348
Addition/reduction for receivables/payables transferred	-	(113)
Working capital adjustment	(1)	(117)
Selling price on divestment of enterprises	604	2,118
Transaction costs	(20)	(38)
Of which selling price receivable	4	(81)
Cash selling price on divestment of enterprises	588	1,999

Gain (loss) on divestment of enterprises, DKK million	2017	2016
Selling price on divestment of enterprises	604	2,118
Net assets sold	(725)	(844)
Provisions as a result of the transaction	2	14
Transaction costs	(20)	(38)
Gain (loss) on divestment of enterprises	(139)	1,250

Gains on the divestment of enterprises in 2017 primarily concerned A2SEA. Transferred cash and cash equivalents totalled DKK 278 million.

In 2016, gains on the divestment of enterprises consisted primarily of a gain on the divestment of Gas Distribution to Energinet (Distribution & Customer Solutions). Transferred net cash and cash equivalents in the form of bank deposits and drawn bank overdrafts totalled DKK -242 million.

Accounting policies

We recognise income from divested enterprises in the income statement up until the date of divestment.

The date of divestment is the date on which we relinquish control of the divested enterprise.

Gains or losses on the divestment or discontinuation of subsidiaries and associates are determined as the difference between the selling price and the carrying amount of the net assets divested.

Moreover, the fees of advisers, etc., in connection with the divestment or discontinuation of the enterprise are deducted.

3.5 Assets classified as held for sale

At 31 December 2017, assets classified as held for sale comprised only our oil pipe system in Denmark which is to be sold to the Danish transmission asset owner Energinet.

At 31 December 2016, assets classified as held for sale comprised our Oil & Gas business and our oil pipe system.

On 29 September 2017, we divested our Oil & Gas business to INEOS. Until the divestment,

we presented our Oil & Gas business as assets classified as held for sale and as discontinued operations. Read more in note 3.6.

The sales process for our oil pipeline is expected to be completed within 12 months. Consequently, these activities have been classified as assets held for sale.

Assets classified as held for sale, DKK million	2017	2016
Intangible assets	20	5
Property, plant and equipment	2,119	12,719
Inventories	16	7
Trade receivables	73	192
Other receivables	368	1,139
Income tax	46	586
Cash	-	725
Total assets classified as held for sale	2,642	15,373
Deferred tax	99	1,057
Provisions	359	8,356
Trade payables	80	825
Other payables	92	1,479
Income tax	-	1,787
Total liabilities relating to assets classified as held for sale	630	13,504
Net assets classified as held for sale	2,012	1,869

Accounting policies

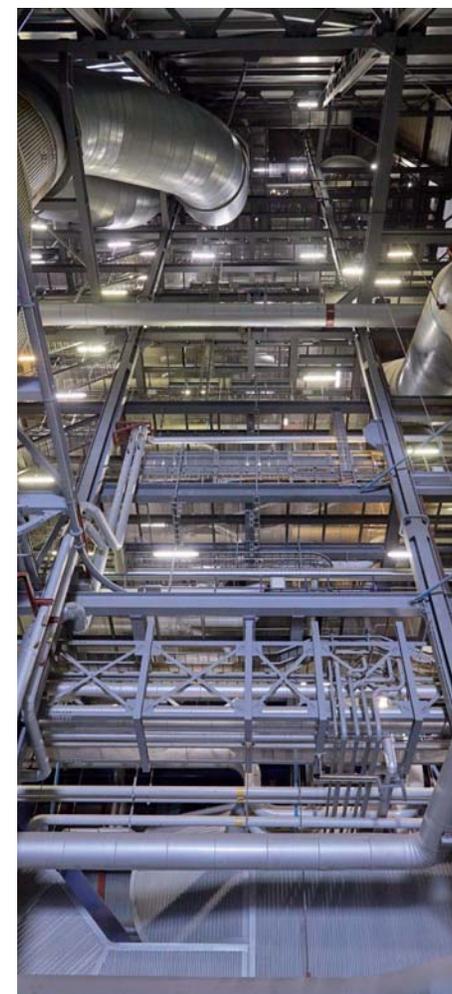

Assets classified as held for sale comprise assets and liabilities, the value of which is highly probable to be recovered through a sale within 12 months rather than through continued use.

Assets and liabilities classified as held for sale are measured at the carrying amount at the time of classification as 'held for sale' or at market value less selling costs, whichever is lower. The carrying amount is measured in accordance with the Group's accounting policies.

No depreciation or amortisation is effected on property, plant and equipment and intangible assets from the time of classification as 'held for sale'.

The table shows assets and liabilities which have been put up for sale, and which are therefore not expected to contribute to our earnings in future.

3.6 Discontinued operations

In November 2016, the Board of Directors decided to initiate a process with the ultimate objective of divesting Oil & Gas.

As a result of this decision, we have presented our oil and gas business as assets classified as held for sale and as discontinued operations from the end of 2016. The classification means that assets and liabilities are presented separately from other assets and liabilities. Discontinued operations are also shown separately in the income statement and the statement of cash flows.

The divestment of Oil & Gas to INEOS was closed on 29 September 2017.

Financial performance

The key figures for discontinued operations in 2017 comprise only results for the first nine months of the year up until the divestment. In addition to the results from the first nine months of 2017, net profit from discontinued operations, cash flows from operating activities and cash flows from divestments include adjustments after the closing of the transaction. See more below.

EBITDA totalled DKK 6.4 billion, which is unchanged relative to the first nine months of 2017 and on a par with all of 2016. EBITDA rose as a result of the recognition of inefficient price hedges totalling DKK 1.4 billion as well as a provision (without impact at EBIT level) which contributed negatively in 2016. This was

offset by one less quarter of operations in 2017 compared with 2016.

Net profit from discontinued operations amounted to DKK 6.9 billion in 2017 against DKK 1.1 billion in 2016. The increase of DKK 5.8 billion was due partly to a gain on the divestment of DKK 2.4 billion, partly to higher EBIT and lower tax. The higher EBIT in 2017 relative to 2016 was due to non-depreciation of the Oil & Gas assets since the business was classified as assets held for sale at the end of 2016. The lower tax in 2017 relative to 2016 primarily reflected the impairment of the remaining tax assets, which contributed negatively in 2016.

Cash flows from operating activities totalled DKK 5.5 billion in 2017 against DKK 4.1 billion in 2016. The increase was due primarily to the recognition of price hedges mentioned above. The increase was offset by one less quarter of operations in 2017 than in 2016. Cash flows from operating activities totalled DKK 0.3 billion in Q4 2017 and were due to a tax receivable received relating to net losses on hedging instruments in 2016 and 2017.

Cash flows from divestments totalled DKK 0.2 billion in 2017 compared with DKK 0.4 billion in 2016. In both periods, they were impacted by payments received concerning the Glenlivet field. Moreover, the Norwegian fields Trym, Ula, Tambar and Oselvar were divested in 2016. There were no significant changes in cash flows from divestments in Q4 2017.

Key figures	2017	2016
Business drivers (million boe)		
Oil and gas production	21.4	36.6
Financial performance (DKK million)		
Revenue	7,999	10,530
EBITDA	6,436	6,507
EBIT	7,149	5,082
Profit from discontinued operations	4,488	1,052
Gain (loss) on disposal of discontinued operations	2,432	-
Net profit from discontinued operations	6,920	1,052
Cash flows from operating activities	5,545	4,138
Gross investments	(430)	(3,436)
Divestments	233	404
Payment from the divestment of Oil & Gas	3,677	-
Free cash flow	9,025	1,106

Cash flows from discontinued operations, DKK million	2017	2016
Cash flows from operating activities	5,545	4,138
Cash flows from investing activities	3,480	(3,032)
Cash flows from financing activities	-	360
Total cash flows from discontinued operations	9,025	1,466

Capital employed, discontinued operations, DKK million	2017	2016
Property, plant and equipment and intangible assets	-	11,914
Equity investments and non-current receivables	691	2
Net working capital, other items	-	1,121
Derivatives, net	-	1,356
Decommissioning obligations	-	(6,971)
Other provisions	(935)	(2,415)
Tax, net	(3)	(2,238)
Other receivables and other payables, net	11	-
Total net assets	(236)	2,769

The remaining net assets under discontinued operations consist of the selling price receivable and provisions as a result of the divestment of Oil & Gas.

Divestment of Oil & Gas

The payment from the divestment of Oil & Gas consisted of:

- an unconditional payment of USD 1,050 million on a cash and debt-free basis
- a conditional payment of USD 150 million, which relates to the stabilisation plant in Fredericia, and
- a payment of up to USD 100 million, which is conditional upon the development of the Rosebank field.

'Payment' in the table includes the unconditional payment and the fair value of the conditional payment in respect of the Rosebank field.

Under the agreement with INEOS, all cash flows from 1 July to 29 September 2017 accrued to the buyer. As control of Oil & Gas remained with us until 29 September, we have consolidated results and cash flows for accounting purposes in this period. The obtained net debt reduction of DKK 707 million from the consolidation in this period has therefore been deducted from the selling price for discontinued operations. In addition, the selling price from INEOS was reduced by the outstanding tax payable and creditors regarding assets at 30 June 2017. These payables concern activities from before the financial exposure and risks passed to INEOS.

Thus, the accounting selling price from the transaction amounted to DKK 5,456 million, of which DKK 3,652 million was received and recognised in our free cash flow from discontinued operations in Q3 2017. All in all, the transaction reduced the Group's net debt by DKK 4,588 million, as USD 150 million of the outstanding selling price is interest-bearing.

The gain on the divestment was recognised at DKK 2,179 million in net profit from discontinued operations in Q3 2017. In Q4 2017, we reversed a proportion of the provision for indemnification of INEOS concerning tax matters prior to 30 June 2017 as well as other minor adjustments. This resulted in an increase in the gain of DKK 253 million and is a consequence of the adoption of the bill concerning extended right to deduct payroll costs within a group. The profit statement includes provisions of DKK 935 million which primarily concern two factors:

- indemnification of INEOS concerning tax matters prior to 30 June 2017
- difference between INEOS' conditional payment to Ørsted A/S concerning the stabilisation plant and our expected payment.

The payments from INEOS for the stabilisation plant are expected to be settled over a 10-year period beginning in 2019-2021. The remaining non-interest-bearing net assets (capital employed) in our balance sheet relating to Oil & Gas amounted to DKK -236 million at 31 December 2017. In addition to the above-mentioned provision, this includes the non-interest-bearing part of the outstanding payment. The net assets will be recognised in cash flows from discontinued operations as they fall due.

Secondary liability

As part of the divestment of Oil & Gas, we have assumed a secondary liability regarding the decommissioning of offshore installations. We consider the payment of the liability to be very unlikely. The matter is described in further detail in the interim financial report for the first nine months of 2017.

Main elements of the divestment on 29 September 2017

Selling price, DKK million	2017	
Payment	7,209	
Reduction for outstanding tax payable and creditors concerning non-current assets at 30 June 2017	(1,198)	
Accounting adjustment for reduction of net debt from 30 June 2017 to 29 September 2017	(707)	
Working capital adjustment and interest	152	
Selling price for discontinued operations	5,456	
Transaction costs	(78)	
Of which selling price receivable	(1,726)	
Cash selling price for discontinued operations	3,652	

The table shows the items included in the determination of the selling price from the divestment of Oil & Gas.

Transferred cash on the divestment of Oil & Gas amounted to DKK 1,524 million.

Net debt, impact, DKK million	2017	
Cash selling price for discontinued operations	(3,652)	
Interest-bearing receivable payment	(1,014)	
Transaction costs	78	
Net debt	(4,588)

Impairment losses in Oil & Gas consisted of a reversal of impairment losses from previous years.

3.7 Non-controlling interests

Transactions with non-controlling interests, DKK million	2017	2016
Transactions with non-controlling interests		
Dividends paid to non-controlling interests	(376)	(404)
Divestment of equity investments to non-controlling interests	(108)	(100)
Other capital transactions with non-controlling interests	53	(23)
Total transactions, see statement of cash flows	(431)	(527)
Divestment of equity investments to non-controlling interests		
Selling price	8	19
Of which changes in receivables relating to the acquisition and divestment of non-controlling interests	(116)	(119)
Cash selling price, total	(108)	(100)

Accounting policies

Transactions with non-controlling interests are accounted for as transactions with the shareholder base.

Gains and losses on the divestment of equity investments to non-controlling interests are recognised in equity when the divestment does not result in a loss of control.

Net assets acquired are not revalued on the acquisition of non-controlling interests. Any difference between the carrying amount and the acquisition or selling price is recognised in equity.

4. Working capital

Working capital

Our key working capital items consist of inventories, construction contracts, trade receivables, trade payables and other payables, including prepayments from heat customers and connection charges from power customers.

Working capital items vary across the year in line with the seasonal variations in our production and sales activities. Our construction contracts in Wind Power, which are the construction of offshore wind farms for partners

and the construction of transmission assets in the UK, also vary over the year and from year to year. This is due to the fact that payments are received in the form of milestone payments from partners and upon divestment of the transmission assets after construction.

Trade payables relating to capital investments are not included in this section as they are presented as part of the cash flows from investing activities.

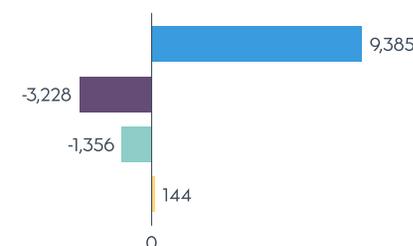

Working capital, DKK million	2017	2016
Inventories	3,853	3,451
Construction contracts, net	9,500	6,282
Trade receivables	9,170	7,286
Other receivables	2,082	1,402
Trade payables, excluding trade payables relating to capital expenditure	(8,460)	(7,304)
Other payables	(11,200)	(12,121)
Net working capital, excluding trade payables relating to capital expenditure at 31 December	4,945	(1,004)
Of which work in progress and related trade payables	7,526	3,944
Of which other working capital	(2,581)	(4,948)

↶ Our net working capital has changed substantially relative to 2016. The primary cause is the development in construction contracts, net and trade receivables.

Work in progress consists of construction contracts and service level agreements in connection with the construction of transmission assets and offshore wind farms for partners as well as related trade payables.

Working capital, DKK million 2017

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions
- Other

↷ Wind Power primarily has funds tied up in construction contracts and trade receivables, while Bioenergy & Thermal Power and Distribution & Customer Solutions have a negative working capital as a result of prepayments from heat and power customers.

4.9bn

Our net working capital excluding trade payables relating to capital expenditure in 2017 against -1.0bn in 2016.

5.9bn

We have an additional amount of DKK 5949 million tied up in working capital relative to 2016, of which DKK 3,581 million pertained to work in progress and related trade payables in Wind Power.

4.1 Inventories

Inventories, DKK million	2017	2016
Biomass	258	244
Gas	1,526	1,286
Coal	396	395
Oil	124	111
Green certificates	1,441	1,282
Carbon emissions allowances	52	80
Other inventories	56	53
Total inventories	3,853	3,451

Accounting policies

The cost of gas is determined as a weighted average of the previous month's acquisition prices, including transportation costs.

Purchased carbon emissions allowances are measured at market value.

Green certificates, which we earn by generating power using renewable energy sources, are recognised in inventories in step with our generation. We measure green certificates (earned and bought) at cost using the FIFO principle.

Other inventories are measured at cost using the FIFO principle or net realisable value.

Inventories are written down to the lower of net realisable value and cost price.

The net realisable value is the sum (discounted) which the inventories are expected to generate through a normal sale.

We use biomass, gas, coal and, to a limited extent, oil as fuel at our CHP plants. Green certificates are primarily renewables obligation certificates (ROCs) which are issued to generators of power sourcing from renewable energy sources under the Renewables Obligation support mechanism in the UK.

4.2 Construction contracts

Construction contracts, DKK million	2017	2016
Selling price of construction contracts	11,679	18,279
Invoicing on account	(2,179)	(11,997)
Construction contracts, total	9,500	6,282
Construction contracts (assets)	10,817	6,453
Construction contracts (liabilities)	(1,317)	(171)
Construction contracts, total	9,500	6,282

The table shows the selling price less invoicing on account as well as the way in which construction contracts are presented in the balance sheet under assets and liabilities.

Construction contracts

We construct offshore wind farms in co-operation with partners, with each party usually owning 50% of the offshore wind farm. Construction contracts comprise our partners' shares of the offshore wind farms and our construction of offshore transmission assets for Ofgem in the UK. The contracts are negotiated individually in terms of their design, construction and technology.

At the end of 2017, construction contracts included our partners' share of the Walney Extension and Borkum Riffgrund 2 offshore wind farms. The offshore wind farms are under

construction, and we expect them to be finished in 2018. Construction contracts also included the construction of the transmission assets for the Burbo Bank Extension, Race Bank, Walney Extension and Hornsea 1 offshore wind farms in the UK. They are expected to be finished in 2018-2020.

At the end of 2016, construction contracts included our partners' shares of the offshore wind farms Burbo Bank Extension and Gode Wind 1 and 2. Construction contracts also included the construction of four transmission assets in the UK.

Accounting policies

The construction contracts are recognised in revenue when the outcome of the contracts can be estimated reliably.

The construction contracts are measured at the selling price of the work which we have performed on the offshore wind farms less invoicing on account. Our calculation of the selling price is based on the total expected income from the individual contracts and the completion degree of the offshore wind farm or offshore transmission asset at the balance sheet date.

We estimate the degree of completion on the basis of an assessment of the work performed, normally calculated as the ratio between the costs incurred and the total expected costs incidental to the contract in question.

An expected loss is recognised when it is deemed probable that the total construction costs will exceed the total revenue from individual contracts.

We recognise construction contracts as receivables when the selling price of the work which we have performed exceeds invoicing on account and expected losses.

Construction contracts are recognised as liabilities when invoicing on account and expected losses exceed the selling price of the work which we have performed. Prepayments from our investors are recognised as liabilities.

Key accounting estimates

Assumptions for the determination of the expected selling price and expected costs

We make estimates when determining the expected selling price of individual construction contracts.

These estimates are influenced by our assessment of:

- the completion degree of the individual offshore wind farms and offshore transmission assets
- total expected costs for the individual contract
- the value of incentive agreements under which we may be paid a bonus for early delivery or have to pay compensation for late delivery
- guarantee commitments undertaken
- share of total costs associated with transmission assets which are expected to be covered upon handover etc.

Our determination of profit on payment received on account and the recognition of receivables are therefore subject to significant uncertainty. We believe that our estimates are the most likely outcomes of future events.

4.3 Trade receivables

Trade receivables, DKK million	2017	2016
Trade receivables, not due	8,644	6,661
Trade receivables, 1-30 days overdue	303	568
Trade receivables, more than 30 days overdue	305	171
Trade receivables, write-down	(82)	(114)
Total trade receivables	9,170	7,286

The table shows the due dates of our trade receivables.

Trade receivables

Our trade receivables primarily concern residential customers in Distribution & Customer Solutions where the general terms of payment vary according to customer type and product type down to payment terms of 10 days.

In 2017, the supply of services in the form of construction management of the construction of our partner's share of Race Bank resulted in a receivable of DKK 1,344 million.

We perform credit ratings as described in note 7.5. For customers with a general credit risk, a write-down of 0-1% is carried out on initial recognition. In 2017, write-downs of receivables amounted to DKK 6 million (2016: DKK 59 million). Losses for the year totalled DKK 25 million (2016: DKK 43 million).

Accounting policies

Receivables

We keep our receivables until maturity, and they are therefore measured at amortised cost.

Write-down is carried out from initial recognition of our receivables in accordance with IFRS 9. The write-down is calculated as the difference between the carrying amount of the receivable and the net present value of expected future cash flows from the receivable. The discount rate used is the effective interest rate for the individual receivable or the individual portfolio.

We apply the simplified approach to the write-down of trade receivables, which permits calculating the write-down as the full loss during the entire term of the receivable.

4.4 Other receivables

Other receivables, DKK million	2017	2016
Receivables from the divestment of equity investments to non-controlling interests	648	544
Receivables from the divestment of assets and investments	2,680	202
VAT and other indirect taxes receivable	572	367
Collateral provided	775	400
Prepayments	304	207
Other accounts receivables	495	505
Other receivables	5,474	2,225
Of which working capital	2,082	1,402
Of which other capital employed	1,622	545
Of which interest-bearing net debt	1,770	278

The table shows our other receivables broken down into working capital, interest-bearing net debt and other capital employed.

Other receivables

Receivables from the divestment of equity investments to non-controlling interests in 2017 and 2016 related primarily to the divestment of our ownership interests in the Gunfleet Sands and Walney offshore wind farms.

In 2017, receivables from the divestment of assets and investments primarily included receivables related to the divestment of our Oil & Gas business as well as the divestment of 50% of our ownership interests in the Walney Extension offshore wind farm.

The collateral provided by the Group is receivables from banks in connection with trading on energy exchanges.

The short-term portion of other receivables amounted to DKK 3,519 million (2016: DKK 1,710 million).

Other non-current receivables consist primarily of receivables from the divestment of the Oil & Gas business, where it is assessed that there is no material credit risk.

4.5 Other payables

Other payables, DKK million	2017	2016
Payables to associates and joint ventures	-	136
Prepaid VAT on exports	1,500	1,749
Carbon rights	42	72
VAT and other indirect taxes payable	1,312	1,460
Salary-related items payable	762	736
Accrued interest	882	629
Virtual gas storage	83	69
Advance payments from heat customers	3,286	2,890
Grid connection charges	1,893	1,775
Other deferred income	1,114	1,320
Collateral received	119	1,096
Other payables	1,089	967
Total other payables	12,082	12,899
Of which working capital	11,200	12,121
Of which other capital employed	882	629
Of which interest-bearing net debt	-	149

Other payables

In 2017, the short-term portion of other payables amounted to DKK 6,369 million (2016: DKK 6,277 million).

Export VAT was repaid in January 2018.

The table shows our other payables broken down into working capital, interest-bearing net debt and other capital employed.

4.6 Changes in net working capital

Change in net working capital, DKK million	2017	2016
Change in inventories	(423)	32
Change in construction contracts	(3,318)	(3,232)
Change in trade receivables	(3,705)	616
Change in other receivables	(563)	(322)
Change in trade payables	1,188	874
Change in other payables	(1,083)	520
Total change in net working capital	(7,904)	(1,512)
Of which changes relating to work in progress and related trade payables	(3,674)	(2,393)
Of which changes relating to other working capital	(4,230)	881

Work in progress consists of construction contracts and service agreements in connection with the construction of transmission assets and offshore wind farms for partners as well as related trade payables.

Change in net working capital

Our funds tied up in work in progress and related trade payables increased due to high activity in 2017 related to construction contracts for the construction of transmission assets as well as from higher receivables from the sale of services in the form of construction management of the construction of the offshore wind farm Race Bank. The increase was partly offset by receipt of milestone payments in 2017 regarding construction contracts for the construction of offshore wind farms for partners.

Our funds tied up in other net working capital increased due to higher trade receivables as a consequence of high power generation at the end of 2017 in Wind Power, lower prepayments from heat customers in connection with bioconversions in Bioenergy & Thermal Power as well as more funds tied up in inventories (mainly gas) at the end of 2017.

5. Tax

Tax policy and tax regimes	112
Tax on profit (loss) for the year	113
Taxes paid	115
Deferred tax	116

5. Tax

Tax on profit (loss) for the year

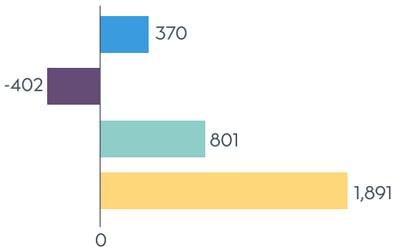

The effective tax rate was 12% for the continuing operations. The effective tax rate was particularly affected by a tax-exempt gain on the farm-downs of 50% of the Walney Extension and Borkum Riffgrund 2 offshore wind farms and the remaining portion of the tax-exempt gain on Race Bank, which was divested in 2016.

Taxes paid

We have paid DKK 2,660 million in taxes for 2017, of which DKK 689 million related to residual tax for 2016. The tax paid reflects our activities and that we expect to exit the international joint taxation scheme. We expect to have a residual tax of DKK 570 million regarding 2017 as earnings in the last part of the year were higher than expected.

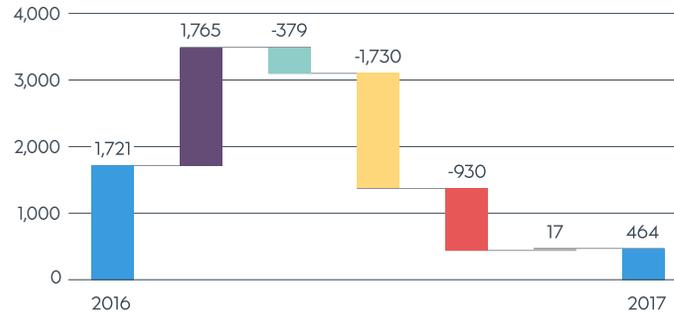

Income tax paid by segment, DKK million 2017

- Wind Power
- Bioenergy & Thermal Power
- Distribution & Customer Solutions
- Ørsted A/S and other activities

Development in current and deferred tax asset and liabilities (tax, net), DKK million 2017

- Tax, net liability
- Tax on profit (loss) for the year
- Tax on other comprehensive income and hybrid capital
- Retaxation, paid
- Other paid corporate taxes
- Other effects

2017, DKK million	Business performance		
	Profit (loss) before tax	Tax	Tax in %
Gain (loss) on divestments	10,965	(714)	7%
Rest of the Group	4,079	(1,051)	26%
Effective tax for the year	15,044	(1,765)	12%

Tax on gain (loss) on divestments related to taxable gains. See more in note 2.5. The tax rate for 'Rest of the Group' is higher than the weighted average tax rate in the countries in which we generate income as a result of adjustments relating to previous years as well as non-deductible expenses and non-taxable income.

2.7bn

Income tax paid by the Group in 2017 totalled DKK 2,660 million against DKK 3,182 million in 2016.

2.7bn

Current tax in 2017 totalled DKK 2,698 million against DKK 3,541 million in 2016.

5.1 Tax policy and tax regimes

Our tax policy

We acknowledge that tax plays a key role for society. We also believe that a responsible approach to tax is essential to the long-term sustainability of our business in the countries in which we operate.

We are subject to a number of different rules on direct and indirect taxes as well as taxes collected on behalf of the public authorities. Also, many transactions involve different segments across national borders and between different tax systems. This complexity demands a strong focus on the management of our tax affairs.

Read more about our tax policy at <https://orsted.com/taxpolicy>

We comply with tax rules

We regularly assess our internal processes and controls to ensure that we comply with all local and international tax rules.

We only use structures that have commercial substance and meet the spirit of the relevant local or international tax law.

We use the incentives and tax reliefs applying where we have commercial activities, and where this is the legislator's intention.

As a proactive approach to handling any uncertainties about the interpretation of tax rules,

we have an open dialogue with the national tax authorities in Denmark and abroad.

At the end of 2017, our major activities were in Denmark, the UK and Germany.

International joint taxation

In 2005, we chose Danish international joint taxation. Under international joint taxation, subsidiaries are included in joint taxation from the date they are consolidated in the consolidated financial statements and up to the date on which they are no longer consolidated. International joint taxation means that profit earned abroad is taxed in Denmark, and that depreciation and amortisation for tax purposes and expenses incurred abroad can be deducted in the Danish statement of taxable income.

The rules concerning Danish international joint taxation merely result in changes to the timing of the tax payments in Denmark. Thus, it leads to increased Danish tax payments at a later point in time, corresponding to the tax savings realised in previous years.

We have continuously assessed when it will be the most appropriate time to exit from the international joint taxation scheme, and we currently expect that this will be for the income year 2017, which is reflected in the annual report. We will make the final decision in 2018 when preparing the tax returns for 2017.

Therefore, the retaxation liability has been transferred to tax payable in 2017.

In 2016, deferred tax payments were recognised as a retaxation liability and amounted to DKK 1,730 million. See note 5.4.

Local taxes

In terms of taxation, we were affected by completed construction contracts in connection with the construction of offshore wind farms in Denmark in 2017.

We have made significant investments in offshore wind farms in the UK and Germany, resulting in the accumulation of large tax assets in recent years. Accordingly, we have not paid taxes in the UK and Germany. Going forward, this will change as the offshore wind farms are commissioned and generate positive results.

We expect to start paying tax in the UK in 2018, and in 2019 in Germany.

5.2 Tax on profit (loss) for the year

	2017				2016			
	Business performance		IFRS		Business performance		IFRS	
	DKK million	%	DKK million	%	DKK million	%	DKK million	%
Effective tax rate, DKK million/%								
Tax on profit (loss) for the year can be explained as follows:								
Calculated 22% tax on profit (loss) before tax (2016: 22%)	(3,310)	22	(3,323)	22	(3,157)	22	(2,681)	22
Adjustments of calculated tax in foreign subsidiaries in relation to 22% (2016: 22%)	86	-	86	-	229	(2)	229	(2)
Tax effect of:

Unrecognised tax assets and capitalisation of tax assets not previously capitalised	(184)	1	(184)	1	(28)	-	(28)	-
Share of profit (loss) in associates and joint ventures	(12)	-	(12)	-	4	-	4	-
Adjustment of tax concerning previous years	332	(2)	332	(2)	11	-	11	-
Effect of change in tax rate	-	-	-	-	41	-	41	-
Effective tax for the year	(1,765)	12	(1,778)	12	(2,191)	15	(1,715)	14

Income tax

Tax on the business performance profit (loss) was DKK 1,765 million in 2017 against DKK 2,191 million in 2016. The effective tax rate was 12% in 2017 against 15% in 2016.

The effective tax rate in 2017 was particularly affected by a tax-exempt gain on the farm-down of 50% of our Walney Extension and Borkum Riffgrund 2 offshore wind farms.

In addition, our effective tax rate was affected by the remaining portion of the tax-exempt gain on Race Bank, which was divested in 2017, and adjustments to prior years.

The effective tax rate in 2016 was particularly affected by a tax-exempt gain on the divestment of Gas Distribution and 50% of the Burbo Bank Extension and Race Bank offshore wind farms.

Accounting policies

Tax for the year consists of current tax, changes in deferred tax and adjustment in respect of previous years. Tax on profit (loss) for the year is recognised in the income statement. Tax relating to other items is recognised in other comprehensive income.

Adjustments of calculated tax in foreign subsidiaries were due to the differences in tax rates between Denmark and primarily the UK and Germany.

Non-taxable income and non-deductible expenses primarily concern the tax-exempt gain on divestments. See more in note 2.5.

	2017		2016	
	Business performance	IFRS	Business performance	IFRS
Income tax, DKK million				
Tax on profit (loss) for the year	(1,765)	(1,778)	(2,191)	(1,715)
Tax on other comprehensive income	238	251	345	(131)
Tax on hybrid capital	141	141	141	141
Total tax for the year	(1,386)	(1,386)	(1,705)	(1,705)
Tax on profit (loss) for the year can be broken down as follows:				
Current tax	(2,698)	(2,698)	(3,541)	(3,541)
Deferred tax	586	573	1,385	1,861
Tax relating to assets classified as held for sale	15	15	(87)	(87)
Adjustment of tax concerning previous years	332	332	52	52
Tax on profit (loss) for the year	(1,765)	(1,778)	(2,191)	(1,715)
Tax on other comprehensive income can be broken down as follows:				
Current tax	255	255	(138)	(138)
Deferred tax	(17)	(4)	483	7
Tax on other comprehensive income	238	251	345	(131)

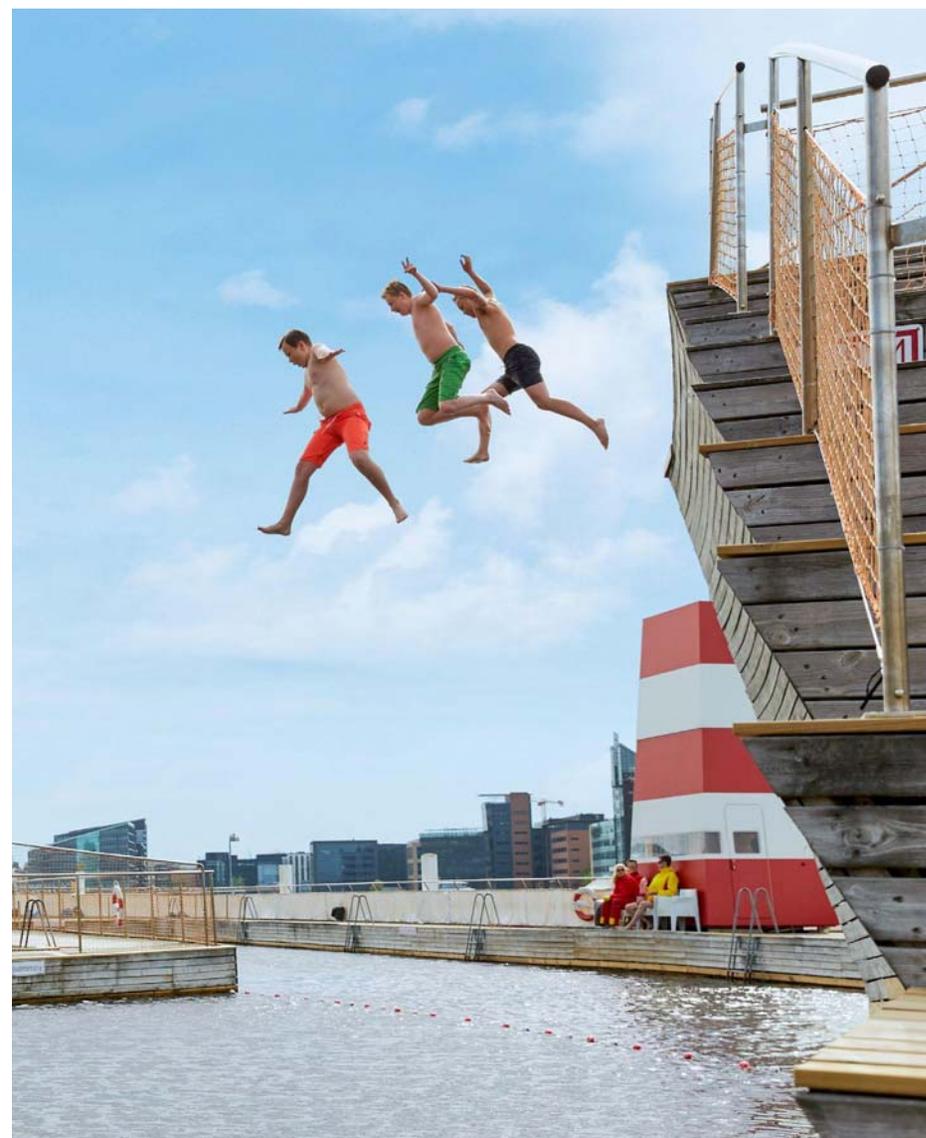

Tax on profit (loss) for the year and other comprehensive income

In 2017, tax on the IFRS profit (loss) for the year amounted to DKK 1,778 million, consisting of current tax of DKK 2,698 million, changes in deferred tax of DKK 573 million, tax on assets classified as held for sale of DKK 15 million, and an adjustment of tax in respect of previous years of DKK 332 million.

In 2016, tax on the IFRS profit (loss) for the year amounted to DKK 1,715 million, consisting of current tax of DKK 3,541 million, changes in deferred tax of DKK 1,861 million, tax on assets classified as held for sale of DKK 87 million, and an adjustment of tax in respect of previous years of DKK 52 million.

Income tax for the year is calculated on the basis of the profit (loss) before tax from continuing operations.

5.3 Taxes paid

In 2017, we paid DKK 2,660 million in taxes. The tax paid mainly related to ordinary operations and retaxation in connection with the expected exit from the Danish international joint taxation scheme.

We paid most of our Danish taxes in November. Accordingly, the income tax paid for the year was based on estimates and preliminary tax positions. As our earnings towards the end of the year were higher than

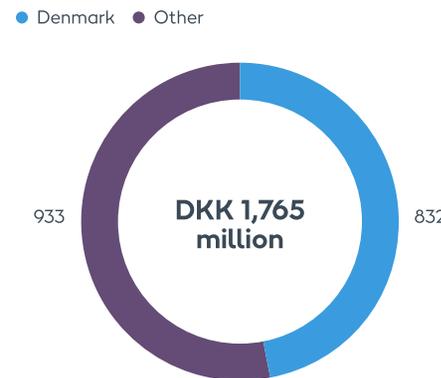

expected, we expect to have a residual tax of DKK 570 million regarding 2017, which has been recognised as a payable tax.

The tax payment included residual tax for 2016 of DKK 689 million in total for continuing operations. DKK 236 million related to the utilisation of losses for the Group's Danish companies in the oil and gas business for the period during which they were included in the joint taxation.

Taxes paid for the year, 2017, DKK million

Tax on profit (loss) for the year, 2017, DKK million

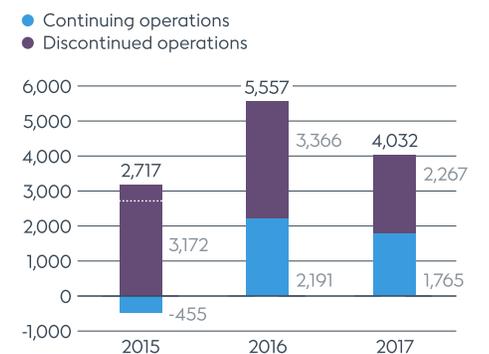

The figures only shows our continuing operations.

Taxes paid, DKK million

Tax on profit (loss) for the year, DKK million

The figures show the relationship between the tax on profit (loss) for the year for accounting purposes and the taxes paid for the year.

* Relates to internal transfers between continuing and discontinued operations.

5.4 Deferred tax

Development in deferred tax

In 2017, deferred tax from continuing operations decreased as a result of deferred tax liabilities materialising as tax payable. This includes differences in the tax and accounting treatment of profit received on account on works in progress, differences in the tax and accounting recognition of financial instruments, retaxation due to the expected exit from the international joint taxation scheme and adjustments to prior years.

The adjustment concerning previous years mainly comprised adjustments of work in progress and recognition of tax assets relating to offshore wind farms in Germany.

The most significant changes in 2016 concerned the taxation of profit received on account, affecting deferred tax on property, plant and equipment, and a reduction of the retaxation balance relating to the farm-downs of 50% of the Burbo Bank Extension and Race Bank offshore wind farms in the UK.

Deferred tax by segment

Deferred tax (liabilities) in our segments primarily concerned the following:

- Wind Power: recognised profit received on account and property, plant and equipment, in respect of which depreciation for tax purposes exceeds depreciation for accounting purposes

- Bioenergy & Thermal Power: property, plant and equipment for which impairment was made in previous years
- Distribution & Customer Solutions: financial instruments.

Other activities/eliminations comprised intra-group eliminations in the joint taxation across segments.

Accounting policies

Deferred tax is recognised in respect of all temporary differences arising between the tax bases of assets and liabilities and their carrying amounts.

However, deferred tax is not recognised in respect of temporary differences relating to:

- The acquisition of joint operations, including licence interests
- Other items, where differences arise at the time of acquisition affecting neither the profit (loss) for the year nor the taxable income. However, this does not include differences arising in connection with company acquisitions.

Deferred tax is measured depending on how we plan to use the assets and settle the liabilities. We set off tax assets and liabilities when the tax assets can be offset against tax liabilities in the year in which the deferred tax assets are expected to be used.

Deferred tax assets are recognised at the value at which they are expected to be used. They may be offset against future earnings or against deferred tax. This is done within a joint taxation scheme. Intra-group gains and losses are eliminated.

Deferred tax is measured based on the tax rules and rates applying when the deferred tax becomes current tax. Changes in deferred tax as a result of changes in tax rates are recognised in profit (loss) for the year.

Liabilities in respect of uncertain tax positions are measured as follows:

- the most-likely-outcome method is applied in cases where there are only two possible outcomes
- the weighted-average method is used in cases with more than two possible outcomes.

The liability is recognised under income tax payable or deferred tax, depending on how the realisation of the tax position will affect the financial statements.

	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities/eliminations	Deferred tax at 31 December
Deferred tax 2017, DKK million

6. Capital structure

During the year, we issued new senior bonds of EUR 750 million, corresponding to DKK 5,584 million. We also redeemed bonds with a notional amount of DKK 1,480 million early.

Also, in 2017, we issued a new hybrid bond of EUR 500 million, corresponding to DKK 3,723 million. In addition, it was decided to redeem the hybrid bond issued in 2013 with a notional amount of EUR 500 million at the first redemption date in 2018.

Capital structure

To ensure the financial strength to operate in the international energy and capital markets and secure financing on attractive terms, we

have defined credit rating and capital structure targets. The overarching capital structure targets are a credit rating of Baa1/BBB+ and an FFO/adjusted net debt credit metric of around 30%.

Financing policy

The aim of our financing policy is to ensure the best possible loan arrangements, while also minimising financing costs, liquidity and refinancing risks.

The borrowing activities are diversified among various funding sources and maturities. In addition, we have robust financial resources.

Our borrowing activities are consolidated in the parent company, where cash resources are available to the Group's companies via an internal bank.

Cash management

We have decided to maintain robust financial resources to limit the company's sensitivity to unrest in the financial markets.

The financial resources consist of bank deposits and securities, as well as non-cancellable credit facilities from a group of robust Nordic and international banks. The financial resources totalled DKK 39,158 million at 31 December 2017 (2016: DKK 31,511 million).

50.3%

Funds from operations (FFO) relative to adjusted interest-bearing net debt amounted to 50.3% at 31 December 2017 against 64.2% at 31 December 2016.

-1.5bn

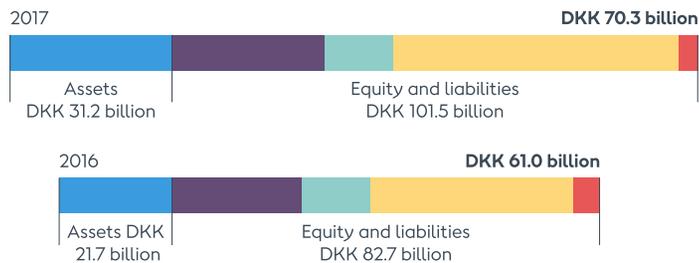

Our interest-bearing net debt totalled DKK -1.517 billion at 31 December 2017 against DKK 3,461 million at 31 December 2016.

39,2bn

Our cash reserve totalled DKK 39,158 million at 31 December 2017 against DKK 31,511 million at 31 December 2016.

Capital losses on early repayment of debt	230	653
Foreign exchange adjustments and amortisation	(368)	(1,774)
Bond and bank debt 31 December	29,636	24,183

Interest-bearing net debt

Interest-bearing net debt totalled DKK -1,517 million at the end of 2017, down DKK 4,978 million relative to 2016. The decline was due to an increase in interest-bearing assets of DKK 9,478 million, partially offset by an increase in interest-bearing debt of DKK 4,500 million.

In November 2017, we issued a new bond of EUR 750 million, corresponding to DKK 5,584 million. We also redeemed bonds with a notional amount of DKK 1,480 million early. At the same time, it was decided to redeem the hybrid bond issued in 2013 with a notional amount of EUR 500 million at the first

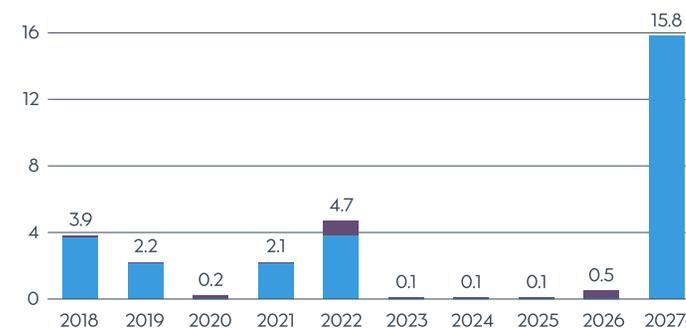

redemption date in 2018. As a consequence of this, we have reclassified the hybrid bond from equity to interest-bearing debt with a carrying amount of DKK 3,810 million at 31 December 2017.

Market value of bond and bank debt

The market value of our bond and bank debt amounted to DKK 32,959 million and DKK 2,108 million, respectively, at 31 December 2017 (2016: DKK 26,010 million and DKK 4,110 million, respectively). The market value of our bond and bank debt exceeds the carrying amount due to the drop in interest levels since the arrangement of the debt.

Maturity profile, DKK billion

● Bond debt ● Bank debt

The tabel shows the changes in bond and bank debt.

The graph shows the maturity profile for our bank loans and bond debt.

Loan arrangements

At 31 December 2017, we had loan obligations totalling DKK 2,069 million (2016: DKK 4,064 million), primarily to the European Investment Bank and the Nordic Investment Bank. The loans are recognised in the balance sheet under bank debt. The loans offered by these multilateral financial institutions include loans to co-fund infrastructure and energy projects on favourable terms and with maturities exceeding those normally available in the commercial banking market. In connection with these loans, the Group may be met with demands for repayment or collateral in the event of the Danish State holding less than 50% of the share capital or voting rights in Ørsted A/S (change of control), or repayment in the event of Moody's or Standard & Poor's downgrading our rating to Baa3 or BBB- or less, respectively.

Furthermore, at 31 December 2017, we had non-cancellable credit facilities of DKK 10,424 million (2016: DKK 13,000 million) with a number of Scandinavian and international banks.

In connection with these credit facilities, we may be met with demands for cancellation and repayment of any used share in the event of players other than a group consisting of the Danish State and Danish power distribution companies acquiring more than 50% of the share capital or voting rights in Ørsted A/S, or in the event of the Danish State ceasing to hold at least 20% of the share capital. Our financing agreements are not subject to any other unusual terms or conditions.

Interest rate risk

Our interest rate risks relate to interest-bearing debt, interest-bearing assets and financial price hedges. We manage the interest rate risk through the composition of assets and the variability of the cash flows generated by the assets. Fixed-interest financing over a longer term is sought for assets with fixed, interest-insensitive cash flows over a longer term. Conversely, more variable-interest financing is sought for assets with more varying, interest-sensitive cash flows.

We have fixed the interest rate on most of our debt by issuing fixed-rate debt. At the end of 2017, 95% (2016: 89%) of the Group's debt was fixed-rate debt. In addition, forward exchange contracts have been concluded to hedge the currency risk associated with interest payments on loans in GBP over the next five years at an average price of 9.3. See note 7.2 for further information.

At 31 December 2017, the loan portfolio had an average time to maturity of 9.8 years (2016: 8.5 years). Interest-bearing assets consist primarily of short-term bonds with limited risk.

Accounting policies

Bond debt, bank debt and other payables are recognised at inception at market value (typically proceeds received) net of transaction costs incurred. In subsequent periods, the liabilities are measured at amortised cost so that the difference between the cost (proceeds) and the nominal value is recognised in profit (loss) for the year as interest expenses over the term of the loan, using the effective interest rate method.

Financial liabilities are classified as current unless the Group has an unconditional right to defer settlement of the liability to at least one year after the balance sheet date.

The market value of issued bonds has been determined as the market value at 31 December (Level 1 – quoted prices).

The market value of bank loans has been determined as the present value of expected future instalments and interest payments using the Group's current interest rate on loans as the discount rate (Level 2 – observable inputs).

Bond issues at 31 December 2017

Development in share capital (DKK million)

	2017	2016
Share capital at 1 January	4,204	4,177
Capital injection	-	27
Share capital at 31 December	4,204	4,204

Share capital

Ørsted's share capital is DKK 4,203,810,800, divided into shares of DKK 10 (2016: DKK 4,204 million). No shares are subject to special rights or restrictions on voting rights. The shares are fully paid up.

Treasury shares

To secure our share programme, we acquired a portfolio of treasury shares consisting of 225,904 shares at 31 December 2017 (2016: 225,904), corresponding to 0.1% of the share capital.

The table shows earnings per share distributed on continuing and discontinued operations. Diluted profit (loss) per share corresponds to profit (loss) per share, as the dilutive effect of the share programme is less than 0.1% of the share capital (2016: 0.3% of the share capital).

The table shows a change in the share capital, which is due to the issuance of bonus shares in connection with the expiry of the 2014 share programme.

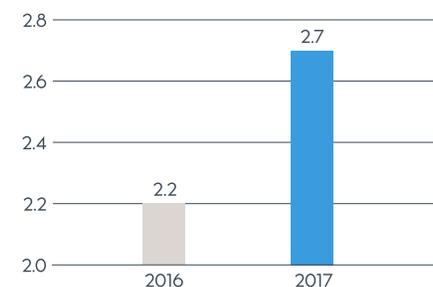

Dividends

The Board of Directors recommends that dividends of DKK 3,783 million (2016: DKK 2,522 million) be paid for the financial year, corresponding to DKK 9 per share (2016: DKK 6 per share). The proposed dividends correspond to a dividend yield of 2.7% (2016: 2.2%) calculated on the basis of the closing price for an Ørsted share on the last trading day of the year.

Owners in Ørsted

The Danish State is the principal shareholder with an ownership interest of 50.1%. In addition, SEAS-NVE and The Capital Group also have significant ownership interests. See also note 16 in the parent company's financial statements.

Dividend yield, %

The graph shows the proposed dividends in relation to the closing price for an Ørsted share on the last trading day of the year.

Accounting policies**Foreign currency translation reserve**

The foreign currency translation reserve comprises:

- exchange rate adjustments arising on translation of the financial statements of foreign entities with a currency that is not the Group's functional currency
- exchange rate adjustments relating to loans that form part of our net investment in such entities
- exchange rate adjustments relating to hedging transactions on our net investment in such entities.

On realisation or partial realisation of the net investment, the exchange rate adjustments are recognised in profit (loss) for the year if a foreign exchange gain (loss) is realised by the divested entity. The foreign exchange gain (loss) is transferred to the item in which the gain (loss) is recognised.

Hedging of net investments

Hedging of net investments comprises:

- exchange rate adjustments relating to hedging transactions on our net investment in such entities.

Hedging reserve

The hedging reserve covers:

- the cash flow hedging of interest payments
- the currency risk associated with the construction of offshore wind farms.

Deferred costs of hedging

Changes in the basic spread on currency swaps and time value of options are included in deferred costs of hedging.

Share premium reserve

Retained earnings include the share premium reserve of DKK 21,279 million, representing the excess of the amount of subscribed-for share capital over the nominal value of these shares in connection with capital injections.

6.3 Hybrid capital

Hybrid bonds	Due in 3013	Due in 3013	Due in 3015	Due in 3017

Interest	For the first ten years, the coupon is fixed at 6.25% p.a., after which it is adjusted every five years with the 5-year euro swap + 4.75 percentage points from 2023-2043 and + 5.5 percentage points after 2043.	Coupon for the first five years is fixed at 4.875% p.a., after which it is adjusted every five years with the 5-year euro swap + 3.8 percentage points from 2018, 4.05 percentage points from 2023, and 4.80 percentage points from 2038.	Coupon for the first 5.5 years is fixed at 3.0% p.a., after which it is adjusted every five years with the 5-year euro swap + 2.819 percentage points from 2020, 3.069 percentage points from 2025, and 3.819 percentage points from 2040.	Coupon for the first seven years is fixed at 2.25% p.a., after which it is adjusted every five years with the five-year euro swap + 1.899 percentage points from 2024, 2.149 percentage points from 2029 and 2.899 percentage points from 2044.
Deferral of interest payment	Optional	Optional	Optional	Optional

We have issued hybrid capital which is subordinate to our other creditors. The purpose of issuing hybrid capital is to strengthen our capital base and fund our investments. In the European capital markets, we have issued EUR hybrid bonds with a total nominal value of DKK 17,125 million (EUR 2,300 million).

In 2017, we issued a further hybrid bond at a nominal value of EUR 500 million which is classified as equity. In addition, in 2017, we decided to redeem the hybrid bond maturing in July 3013 at par at the first redemption date on 8 July 2018. This hybrid bond is therefore reclassified to loans and borrowings.

For hybrid bonds, we may defer coupon payments to bond holders and ultimately decide

not to pay them. Deferred coupon payments become payable, however, if we decide to pay dividends to our shareholders or pay coupon payments on another hybrid bond.

As a consequence of the special terms attaching to the hybrid bonds, these are classified as equity, and coupon payments are therefore recognised in equity.

Accounting policies

Hybrid capital comprises issued bonds that qualify for treatment in accordance with the rules on compound financial instruments due to the special characteristics of the loan. The notional amount, which constitutes a liability, is recognised at present value, and equity has been increased by

the difference between the net proceeds received and the present value of the discounted liability. Accordingly, any coupon payments are accounted for as dividends, which are recognised directly in equity at the time the payment obligation arises. This is because coupon is discretionary, and any deferred coupon therefore lapses upon maturity of the hybrid capital. Coupon payments consequently do not have any effect on profit (loss) for the year.

The part of the hybrid capital that is accounted for as a liability is measured at amortised cost. However, as the carrying amount of this component amounted to nil on initial recognition, and because of the 1,000-year term of the hybrid capital, amortisation charges will only impact on profit (loss) for the year towards the end of the 1,000-year term of the hybrid capital. Coupon payments are recognised in the statement of cash flows in the same way as dividend payments within financing activities.

On redemption of the hybrid capital, the payment will be distributed between the liability and equity applying the same principles as used when the hybrid capital was issued. This means that the difference between the payment on redemption and the net proceeds received on issue is recognised directly in equity as the debt portion of the existing hybrid issues will be nil during the first part of the life of the hybrid capital.

On the date on which the Board of Directors decides to exercise an option to redeem the hybrid capital, the part of the hybrid capital that will be redeemed will be reclassified to loans and borrowings. The reclassification will be made at the market value of the hybrid capital at the date the decision is made. Coupon payments and exchange rate adjustments following the reclassification to loans and borrowings will be recognised in profit (loss) for the year as financial income or expenses.

6.4 Financial resources

Our liquidity and financing risks are managed centrally in accordance with the principles and delegated authorities laid down by the Board of Directors.

One of the most significant financial management tasks is to secure sufficient and flexible financial resources in relation to our day-to-day operations, investment programme and debt maturity profile.

We therefore define minimum financial resources for the coming calendar year.

Cash and cash equivalents and securities

Cash not available for use which is not part of the financial resources primarily comprises:

- cash and cash equivalents pledged as collateral for insurance-related provisions and
- cash and cash equivalents pledged as collateral for trading in derivatives.

Securities are a key element in our financial resources, for which reason investments are primarily made in liquid AAA-rated Danish mortgage bonds and to a lesser extent in other bonds. Most of the securities qualify for repo transactions in the Danish central bank, 'Danmarks Nationalbank'.

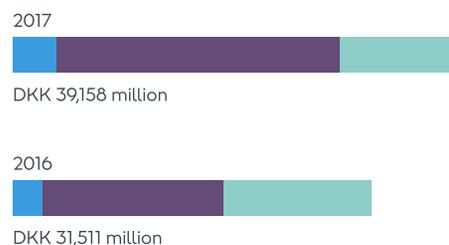

Securities not available for use comprise:

- Securities pledged as collateral for insurance-related provisions. These amounted to DKK 397 million at 31 December 2017 (2016: DKK 394 million)
- Securities pledged as collateral for trading in financial instruments. These amounted to DKK 40 million at 31 December 2017 (2016: DKK 276 million).

At 31 December 2017, we had received collateral in the amount of DKK 787 million (2016: DKK 773 million) concerning the positive market value of derivatives.

Maturity analysis of loans and borrowings

The Group's cash needs in respect of its financial loans and borrowings are shown in the table on the left. The maturity analysis was determined on 31 December 2017.

The maturity analysis is based on undiscounted cash flows, including estimated interest payments. Interest payments are based on market conditions and interest-rate hedging entered into on 31 December 2017.

The maturity analysis does not include hybrid capital classified as equity. At 31 December 2017, we had issued hybrid capital with a notional amount totalling DKK 13,402 million due in 3013 (DKK 5,212 million), 3015 (DKK 4,467 million) and 3017 (DKK 3,723 million), respectively.

Accounting policies

Securities comprise bonds that are monitored, measured and reported at market value on an on-going basis in conformity with the Group's investment policy. Changes in market value are recognised in profit (loss) for the year as financial income and expenses. Purchase and sale of securities are recognised at the settlement date.

For listed securities, market value equals the market price, and for unlisted securities, market value is estimated based on generally accepted valuation methods and market data.

Divested securities where a repurchase agreement (repo transactions) has been made at the time of sale are recognised in the balance sheet at the settlement date as if the securities were still held. The amount received is recognised as a liability, and the difference between the selling price and the purchase price is recognised in profit (loss) for the year over the term as interest. The return on the securities is recognised in profit (loss) for the year.

6.5 Financial income and expenses

Net financial income and expenses, DKK million

	2017	2016
Interest expenses, net	(629)	(402)
Interest element of provisions, etc.	(451)	(392)
Capital losses on early repayment of loans and interest rate swaps	(230)	(892)

Net financial income and expenses	(1,042)	(767)

Accounting policies

Market value adjustments of interest rate and currency derivatives that have not been entered into for hedging purposes are presented as financial income or expenses.

The table shows net financial income and expenses, corresponding to our internal control. Exchange rate adjustments and hedging contracts entered into to hedge currency risks are presented net under the item 'Exchange rate adjustments, net'.

Exchange rate adjustments of currency hedging are recognised in revenue and cost of sales with a gain of DKK 190 million (2016: a gain of DKK 1,257 million).

Borrowing costs transferred to property, plant and equipment under construction are calculated at the weighted average effective interest rate for general borrowing. This amounted to 5.3% in 2017 (2016: 4.4%).

6.6 Funds from operations (FFO)/ adjusted interest-bearing net debt

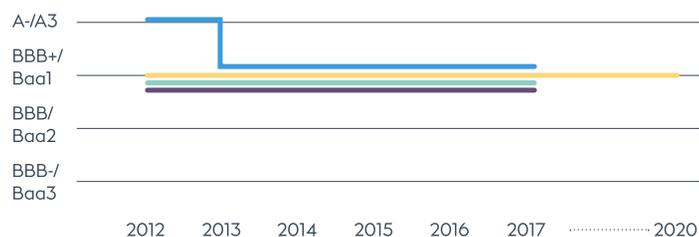

Our long-term target is for funds from operations (FFO) to be around 30% of adjusted interest-bearing net debt.

In 2017, the calculation of FFO has been updated to exclude gain (loss) on divestment

of assets. This brings our calculation of FFO more in alignment with the principles used by the rating agencies. Comparative figures have been restated.

Rating, category

● S&P ● Moody's ● Fitch ● Financial objective

The figure shows the development in our credit rating since 2012 compared to our objective.

Credit rating

Standard & Poor's	Minimum BBB+
Moody's	Minimum Baa1
Fitch	Minimum BBB+

Funds from operations (FFO), DKK million	2017	2016
EBITDA – business performance	22,519	19,109
Interest expenses, net	(629)	(402)
Reversal of interest expenses transferred to assets	(754)	(574)
Interest element of decommissioning obligations	(194)	(172)
50% of coupon payments on hybrid capital	(320)	(320)

Decommissioning obligations	4,751	3,649
Deferred tax on decommissioning obligations	(797)	(627)
Total adjusted interest-bearing net debt	15,900	18,046

The table shows which items are included in the adjusted interest-bearing debt as well as FFO relative to adjusted interest-bearing debt.

Funds from operations (FFO)/ adjusted interest-bearing net debt, %	2017	2016
Funds from operations (FFO)/ adjusted interest-bearing net debt	50.3%	64.2%

7. Risk management

Market risks	131
Hedge accounting and economic hedging	134
Trading portfolio	136
Sensitivity analysis of financial instruments	137
Credit risks	138
Categories of financial instruments	139
Fair value measurement	139

7. Risk management

Market and credit risks are a natural part of our business activities and a precondition for being able to create value. Through risk management, risks are reduced to an acceptable level.

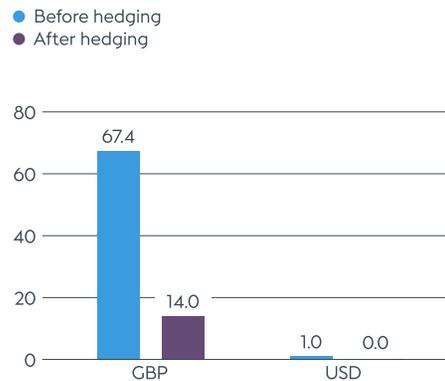

Energy and currency exposures

At the end of 2017, our forward looking energy and currency exposures from production, sales, investments and divestments had been reduced from DKK 89.1 billion to DKK 22.3 billion via hedging.

Trading portfolio

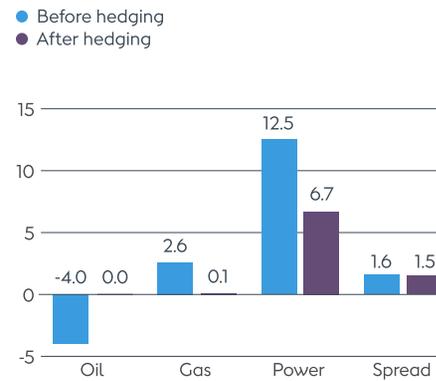

We have a limited trading portfolio, the main purpose of which is to optimise the execution of hedging contracts and gain from short-term energy price fluctuations. The trading activities comply with the mandates approved by the Board of Directors. Read more in note 7.3.

Currency exposure 2018-2022, DKK billion

Our currency exposure totalled DKK 68.4 billion before hedging and DKK 14.0 billion after hedging at the end of 2017. We do not deem EUR to constitute a risk, as we expect that Denmark will maintain its fixed-exchange-rate policy.

Energy exposure 2018-2022, DKK billion

Our energy exposures totalled DKK 20.7 billion before hedging and DKK 8.3 billion after hedging at the end of 2017.

5 years

We hedge prices for up to five years to reduce cash flow fluctuations.

+1.7bn

In 2017, business performance EBITDA was positively impacted by DKK 1,665 million from hedging instruments against DKK 1,459 million in 2016.

-0.8bn

The value of our energy and currency hedging instruments at 31 December 2017 was negative at DKK 812 million, which will reduce business performance EBITDA for a future period against DKK +737 million at 31 December 2016.

7.1 Market risks

Market risks and market risk management

Our most significant market risks relate to:

- energy prices
- foreign exchange rates
- inflation rates and
- interest rates (see note 6.1).

The management of market risks is to ensure stable and robust financial ratios that support our growth strategy.

We hedge prices for up to five years to reduce cash flow fluctuations. Prices are not hedged in the long term, and our long-term market risks are therefore determined by our strategic decisions on investments in new assets, the conclusion of long-term contracts as well as any divestment of assets.

The Board of Directors determines the minimum hedging levels in the five-year period. In the first two years, a high degree of hedging is wanted to ensure stable cash flows after tax. The degree of hedging is lower in subsequent years. This is due to:

- reduced certainty about long-term production volumes and
- rising hedging costs in the medium to long term.

Energy price risks

Our risks after hedging for the years 2018-2022 can be summarised as shown in the table.

Risk after hedging, DKK billion	Effect of price change	
	+10%	-10%
Oil: 0.0 purchase position	+0.0	-0.0
Gas: 0.1 sales position	+0.0	-0.0
Power: 6.7 sales position	+0.7	-0.7
Spread: 1.5 sales position	+0.1	-0.1

A 10% increase in the power price in 2018-2022 will therefore result in a gain of DKK 0.7 billion in the period, all else remaining unchanged.

Currency risks

Our risks after hedging for the years 2018-2022 can be summarised as shown in the table.

Risk after hedging, DKK billion	Effect of price change	
	+10%	-10%
GBP: 14.0 sales position	+1.4	-1.4
USD: 0.0 sales position	+0.0	-0.0

Our largest currency risk relates to GBP due to our investments in offshore wind farms in the UK.

The exchange rate related to proceeds in foreign currency from divestments is hedged when we have a high degree of certainty about the price and structure of the transaction. The proceeds are estimated to be the cost price of the divested asset added an estimated markup that is increased as we gain certainty of the markup. The expected cash flows from divestments reflect the cash flows

we would otherwise have obtained from the operation of the offshore wind farms had we kept the share divested. As the payments are concentrated on a few years, they represent a relatively large share of our GBP exposure the next two years. Any subsequent divestments are not included, as we do not have high certainty about the price and structure of the transaction. Investments in GBP are set off against the expected proceeds from divestments before hedging.

The exchange rate related to energy prices in foreign currency is not hedged until the energy price is hedged. This means that the GBP exchange rate associated with power generation in the UK is not hedged until the GBP power price is hedged.

Cash flows that relate to fixed tariffs and guaranteed minimum prices from offshore wind farms in the UK deviate from the main principle. Hedging of these, less operating expenses, is based on a declining level of hedging over the five-year risk management horizon. The target is to hedge 100% of the risk in year 1, declining by 20 percentage points each year, to 20% in year 5.

Our GBP exposure amounted to DKK 14.0 billion after hedging for the years 2018-2022. Of these, unhedged prices of green certificates amounted to DKK 14.3 billion, while other unhedged prices represent a value of DKK -0.3 billion.

GBP exposures, DKK billion

The graph shows our GBP exposure from:
 - divestment and investment
 - green certificates
 - hedged energy

before and after hedges.

The GBP exchange rate for hedges impacting EBITDA is in 2018 and 2019 hedged at an average exchange rate of DKK/GBP 9.0 and 8.5. The average exchange rates are calculated excluding options that only account for a smaller part of our GBP hedges.

Our EUR risk is subject to continuous assessment, but is generally not hedged as we believe that Denmark will maintain its fixed-exchange-rate policy.

Our USD exposure after hedging amounts to DKK 0.0 billion for the 2018-2022 period. Our USD exposure relates to the purchase of gas, LNG and coal.

Wind Power

Earnings from our generation of power from offshore wind farms mainly comprise:

- fixed tariffs (Denmark, Germany, the Netherlands and the UK) and
- guaranteed minimum prices for green certificates (the UK).

At the end of 2017, such fixed tariffs and guaranteed minimum prices cover 82% of the expected income from offshore wind farms over the next five years. The remaining price exposure concerns sales of power at market price in the UK and Denmark. See the graph 'Distribution of revenue from Wind Power's power generation' for further information.

The annual adjustment of the fixed tariffs varies from country to country:

- In the UK, the tariff is adjusted with inflation
- In Denmark, Germany and the Netherlands, the tariff is not adjusted.

This results in an inflation risk for earnings from tariff-based wind farms in Denmark, Germany and the Netherlands. The share of our debt which is fixed in nominal terms partially offsets this inflation risk.

Bioenergy & Thermal Power

Our CHP plant portfolio consists of biomass and coal-fired plants in Denmark and a gas-fired power station in the Netherlands. The plants in Denmark generate both heat and power.

Concurrently with the biomass conversion of our CHP plants, a larger share of our earnings will be coming from our heat generation. Heat generation does not give rise to price risk as the associated costs are borne by the heat customers. However, heat generation often entails a price risk for power, as heat and power are generated simultaneously.

The profitability of power generation is determined by the difference between the selling price of power and the purchase price of fuel and carbon emissions allowances. For our coal-based power generation, we secure profitability by selling power and buying fuel and carbon emissions allowances, while for biomass-based power generation, we secure profitability by buying biomass at fixed prices and hedging the associated power generation.

The risk management horizon is three years due to low liquidity in the hedging markets.

At the end of 2017, 42% of the power generation expected in 2018 from our power stations was hedged. The total net risk associated

with the power stations' power generation for the 2018-2022 period is DKK 1.5 billion after hedging.

Distribution & Customer Solutions

Our price risk in Distribution & Customer Solutions arises from the purchase and sale of power and gas. The price risks associated with the purchase and sale of gas result from differences in the indexing of sales and purchase prices. Our largest gas purchase contracts include the option of renegotiating the contract price if it no longer reflects market conditions. We have completed most of these renegotiations in recent years; as a result, the contract prices have largely been indexed to pure gas prices and not to oil prices, as was previously the case. We are therefore less sensitive to differences in the oil and gas price development than before. Going forward, our oil price risk

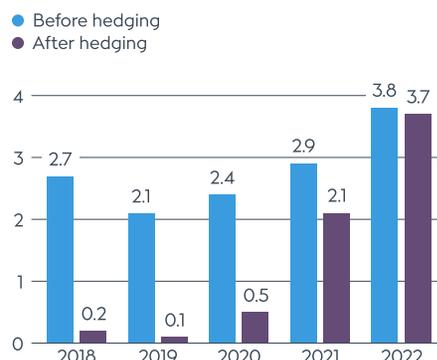

may rise again, however, as we conclude more and more LNG purchase agreements which are typically oil-indexed.

The price risks associated with power purchases and sales are constituted by the difference between the purchase and sales prices. The price risk relates primarily to timing differences between purchases and sales and is therefore considered to be limited.

Principles for estimating exposures

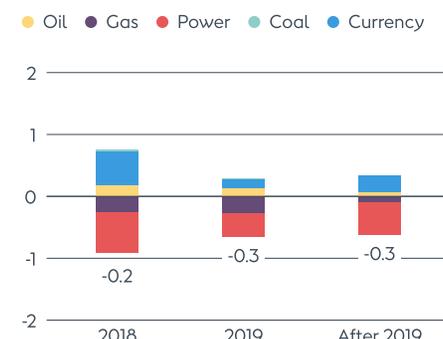

Exposure is calculated as the expected production (or net purchase/sale) times the forward price for the respective years. In addition, the exposure is determined on the basis of the expected exposure after renegotiations of oil-indexed gas purchase contracts.

Wind Power's power price exposure, DKK billion

The table shows the split of income from Wind Power's generation of power divided into market prices and other fixed elements.

Expected value for recognition in business performance EBITDA, DKK billion

The table shows the time of the transfer of the value of hedging contracts in business performance EBITDA for both business performance and IFRS hedges.

The table shows the Group's derivatives and commercial contracts according to the type of accounting treatment and the affected items. The accounting treatment and classification of hedging contracts depend on the purpose of the hedging:

- Economic hedging comprises hedging of energy-related risks and related currency risks. These hedging contracts are treated as hedge accounting in accordance with the business performance principle (see note 1.1 for a detailed description), whereby the value adjustment (loss/gain) is deferred and only recognised during the period in which the hedged transaction materialises. Under IFRS, the value adjustment of this type of hedging is recognised directly in the income statement.
- Hedging of cash flows concerning interest rates and currencies comprises hedging of future interest payments and currency risks on future income. When hedging cash flows, the effective portion of the market value is temporarily recognised in equity until the hedged transaction materialises.
- Hedging of the market value of securities or currency comprises hedging of recognised assets or liabilities. By hedging the market value, the effective portion of the market value is recognised in profit (loss) for the year together with changes in the market value of the hedged asset or the hedged liability.
- Hedging of net investments comprises hedging of the currency risk associated with investments in assets located in foreign countries. By hedging of net investments, the effective portion of the market value is recognised in equity until the hedged net investment is divested.
- The trading portfolio and other interest and currency derivatives are recognised at market value in the income statement.

Note 1.1 provides further details on economic hedging, including information about the underlying products traded.

7.2 Hedge accounting and economic hedging

Hedge accounting 2017, DKK million	Contractual principal amount	Maturity analysis			Market value		Recognised in comprehen- sive income	Expected transfers to income statement

USD	150	-	-	150	1	-				

Accounting policies

We primarily use hedge accounting for currency and interest where it is possible to use hedging instruments which hedge the desired risk one-to-one. The GBP exposure, for example, is hedged using GBP forward exchange contracts, GBP swaps or GBP loans. There are thus no significant sources of ineffectiveness. For currency swaps, the basic spread is accounted for according to the cost of the hedging model.

To the extent that a risk needs to be hedged, and if there is no fully effective instrument available in the market, analyses are performed of the expected effectiveness of the hedging instrument before the hedging transaction is concluded. In this case, the ratio between the hedged risk and the hedging instrument may deviate from the one-to-one principle and will be determined as the ratio which most effectively hedges the desired risk.

Hedge accounting 2016, DKK million	Contractual principal amount	Maturity analysis			Market value		Recognised in comprehen- sive income	Expected transfers to income statement		
		2017	2018	After 2018	Asset	Liability		2017	2018	After 2018

GBP	10,895	-	-	10,895	-	(377)				
Hedging of net investment										
EUR	5,656	-	1,199	4,457	16	(4)				
GBP	18,765	(2,817)	8,327	13,255	2,136	(1,895)				

Cash flow hedging

Forward exchange contracts have been concluded for the purpose of hedging the currency risk associated with the construction of offshore wind farms which are expected to be divested.

Ineffectiveness of currency hedging totalled DKK 0 million (2016: DKK 0 million). Forward exchange contracts have also been concluded for the purpose of hedging the currency risk associated with interest payments on loans in GBP.

All hedges take place using an instrument with the same price risk as the exposure. The GBP exposure, for example, is hedged using GBP derivatives or GBP loans. Therefore, the hedging ratio for all IFRS hedges is one-to-one.

When we conclude a hedging transaction, and each time we present financial statements thereafter, we assess whether the hedged exposure and the hedging instrument are still financially correlated. If the hedged cash flows are no longer expected to be realised, the accumulated value change is transferred to profit (loss) for the year.

Changes in the market value of derivatives that are classified as hedges of the fair value of a recognised asset or liability are recognised in profit (loss) for the year together with changes in the value of the hedged asset or liability to the extent of the hedged risk.

Economic hedging and commercial contracts

The purpose of economic hedging is to reduce our risk from generation and sale of energy. Fluctuations in value are expected to be offset by the underlying exposure.

When the market value of contracts classified as economic hedging, commercial contracts and partly cash flow hedging (currency) is recognised in the income statement, we present them in the hedging item which is included in EBITDA.

We have entered into a number of commercial contracts under which physical delivery is made, and which are managed together with the financial contracts, for which reason they are recognised at market value in accordance with IFRS.

Under the business performance principle, the market value adjustment of contracts concluded for the purpose of economic hedging and commercial contracts is deferred to the period during which the hedged transaction affects results. See note 1.1.

Our hedging of energy prices and commercial contracts recognised at market value is specified in the table below.

The table shows an effect on EBITDA from agreements with a contractual principal amount of DKK 46,699 million (2016: DKK 42,265 million).

Hedging of net investments in foreign subsidiaries

Our foreign activities entail currency risk. We hedge this currency risk by raising loans in foreign currencies, entering into forward exchange contracts and investing in currency swaps and options.

Economic hedging and commercial contracts, DKK million	2017		2016	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Energy				
Oil swaps	3,595	374	3,985	(76)
Gas swaps	6,939	(626)	7,522	(629)
Power swaps	7,745	(1,009)	8,014	(641)
Power options	2,941	280	1,497	242
Coal	176	41	301	36
Currency				
Forward exchange contracts	25,303	592	20,946	512
Total	46,699	(348)	42,265	(556)

Under the business performance principle, economic hedging is accounted for as effective hedging. The resulting market value adjustment is consequently deferred to the period in which the hedged transaction affects results.

The contractual principal amount has been determined as the net position per derivative type.

At 31 December 2017, the accumulated exchange rate adjustments totalled DKK -1,606 million divided between the exchange rate adjustment of the net investment of DKK -2,189 million and the hedging thereof of DKK 583 million.

Hedging of net investments in foreign subsidiaries, DKK million

	Net investment ¹	Of which non-controlling interests	Hedged amount in currency	Net position	Accumulated exchange rate adjustment in equity
2017					
Currency					
GBP	35,991	(3,777)	(23,868)	8,346	(1,527)
EUR	13,784	-	(5,668)	8,116	(15)
Other	286	-	(150)	136	(64)
Total	50,061	(3,777)	(29,686)	16,598	(1,606)
2016					
Currency					
GBP	35,678	(4,291)	(18,765)	12,622	(1,309)
EUR	15,220	-	(5,656)	9,564	(38)
Other	3,349	-	-	3,349	(363)
Total	54,247	(4,291)	(24,421)	25,535	(1,710)

At 31 December 2017, net investments hedged by a derivative were hedged at an average price of 8.61 for GBP and 7.43 for EUR.

Accounting policies

Economic hedging and commercial contracts

Market value adjustments of financial contracts offered to customers with a view to price hedging and financial instruments that have been entered into to hedge the Group's principal operating activities are recognised as revenue or cost of sales.

Under the business performance principle, economic hedging is accounted for as effective hedging. The resulting market value adjustment is consequently deferred to the period in which the hedged transaction affects results. See note 1.1 for further information.

Ineffectiveness relating to hedging of net investments in foreign subsidiaries totalled DKK 0 million (2016: DKK 1 million) and is recognised in financial income and expenses.

The table shows our hedging of investments in foreign subsidiaries. The table also shows the exchange rate adjustment of the investment as well as the associated hedging value.

The net position expresses the accounting exposure. If, for example, the GBP/DKK exchange rate had gone up by 10% on 31 December 2017, equity would have increased by DKK 835 million, corresponding to 10% of DKK 8,346 million.

The contractual principal amount has been determined as net position per derivative type.

Hedging of net investments in foreign subsidiaries

Changes in the market value of derivatives and loans that are used to hedge net investments in foreign subsidiaries or associates are recognised in the consolidated financial statements directly in equity within a separate foreign currency translation reserve.

7.3 Trading portfolio

Trading portfolio

The purpose of our trading portfolio is to:

- optimise hedging contracts
- contribute to increased market insight and
- profit from short-term fluctuations in energy prices.

The trading portfolio consists primarily of positions in oil, gas and power.

The trading portfolio constitutes a smaller part of our total portfolio of derivatives, and the associated risk is limited. Also, earnings from the trading portfolio constitute a limited share of our total earnings.

When a hedging instrument does not fully correspond to the hedged risk, any difference between the hedging contract entered into and the hedged exposure is recognised in the income statement as part of the gain (loss) from the trading portfolio.

Accounting policies

Market value adjustments of physical and financial contracts relating to energy that are concluded with a view to generating gains from short-term price changes are recognised as revenue.

Overview of the Group's trading portfolio, DKK million	2017		2016	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Oil swaps	287	(361)	848	(810)
Gas swaps and options	2,772	170	2,199	440
Power swaps and options	5,566	363	1,647	3
Carbon emissions allowances	44	(14)	69	(18)
Coal	51	(40)	20	10
Total	8,720	118	4,783	(375)

Market trading mandates

VaR max. in 2017: DKK 70 million

VaR indicates the largest loss in one trading day to a probability of 95%. VaR is based on data for the past 60 trading days with the heaviest weighting being assigned to the most recent trading days.

Stress max. in 2017: DKK 400 million

Stress indicates the largest daily loss we risk sustaining with the given portfolio. Stress is based on data from 1 January 2006 to the present day.

Maximum open positions in trading portfolio

- Max. 15TWh of gas
- Max. 4 million boe of oil
- Max. 8TWh of power
- Max. 3 million tonnes of CO₂
- Max. 2 million tonnes of coal

The contractual principal amount has been determined as the net position per derivative type. The table shows the market value of our derivatives which are included in the trading portfolio at 31 December 2017.

Trading activities are carried out within mandates approved by the Board of Directors. The mandates comprise a value-at-risk (VaR) mandate and a stress mandate as well as a limit for the maximum positions measured in energy units per product (oil, gas, etc.).

Daily position in the trading portfolio, market trading mandates, DKK million

Annual contribution margin from the trading portfolio, DKK million

7.4 Sensitivity analysis of financial instruments

The sensitivity analysis in the table shows the effect of market value changes assuming a relative price change at 31 December 2017.

Effect on profit (loss) before tax comprises financial instruments that remained open at the balance sheet date, and which have an effect on profit (loss) in the current financial year. The effect is broken down by:

- trading portfolio; these contracts will affect profit
- Other financial instruments include economic hedging and commercial contracts; the market value changes of contracts allocated as economic hedges will be offset, in full or in part, by a change in the hedged risk.

Effect on equity before tax comprises financial instruments that remained open at the balance sheet date, and which are value-adjusted directly in equity.

Financial instruments include derivatives as well as receivables and payables in foreign currencies.

The illustrated sensitivities only comprise our financial instruments and therefore omit the effect from contracts concluded under which physical delivery of the underlying assets is made, as these are not recognised as financial instruments in accordance with IFRS 9.

Sensitivity analysis of financial instruments, DKK million

Risk	Price change	31 December 2017			31 December 2016		
		Effect on profit (loss) before tax		Effect on equity before tax	Effect on profit (loss) before tax		Effect on equity before tax
		Trading portfolio	Other financial instruments ¹		Trading portfolio	Economic hedging ¹	
Oil	10%	10	134	-	10	(86)	-
	-10%	(10)	(134)	-	(10)	86	-
Gas	10%	(81)	(607)	-	(107)	(2,773)	-
	-10%	75	607	-	107	2,773	-
Power	10%	86	(952)	-	126	(885)	-
	-10%	(81)	959	-	(135)	894	-
Coal	10%	(6)	(43)	-	(1)	(43)	-
	-10%	6	43	-	1	43	-
USD	10%	91	131	(132)	38	(243)	-
	-10%	(91)	(131)	132	(38)	243	-
GBP	10%	31	(2,312)	(1,534)	(57)	(2,112)	(1,165)
	-10%	(31)	2,312	1,942	57	2,112	1,285
EUR	10%	419	(1,304)	522	175	(468)	-
	-10%	(419)	1,304	(522)	(175)	468	-
Interest	100 basis points	-	-	-	(255)	-	(4)

If the hedged exposure had been included in the sensitivity analysis, the effect of a price change would have been reduced or offset entirely.

Net investments and associated hedging of net investments in foreign subsidiaries are not included in the table, as the effect of the

sum of the investment and the hedging is considered to be neutral to price changes.

A 10% increase in the currencies hedged in connection with net investments would reduce equity by DKK -2,969 million (2016: DKK -2,442 million) arising from the hedging instruments. All other conditions being equal, a decrease in

the exchange rate would have had a corresponding opposite effect.

¹ Other financial instruments include derivatives classified as economic hedging comprises derivatives entered into to hedge future financial risks. The market value changes of these contracts will be offset, in full or in part, by a change in the hedged risk. Also included are commercial contracts recognised at market value.

7.5 Credit risks

We are exposed to credit risks from our trading partners and customers. A large part of our counterparty risks concerns major international energy companies and banks. Such trading is regulated under standard agreements, such as EFET and ISDA agreements, which feature, for instance, credit rating and netting provisions. Our credit exposure is mainly concentrated on counterparties in Denmark, the UK, Germany and Sweden.

We limit our credit risks by:

- systematically rating significant counterparties
- granting credit limits or
- demanding that collateral be furnished or credit insurance.

Credit quality of the Group's counterparties, DKK million

	2017	2016
AAA/Aaa	23,329	14,047
AA/Aa	5,197	3,687
A/A	4,969	7,382
BBB/Baa	1,712	2,558
Non-rated	11,072	9,849
Total credit exposure	46,279	37,523

The table shows the credit quality of our counterparties distributed by category. In addition, we have receivables and construction contracts related to the construction of offshore wind farms amounting to DKK 13,349 million where we have collateral in the offshore wind farm under construction.

The counterparties and credit limits granted are monitored on an ongoing basis. The monitoring is based on the framework established by our Board of Directors and Executive Board. For the most significant counterparties, an internal credit rating is required to determine the internal rating and the granting of credit limits. The rating is based on information from external credit rating agencies, publicly available information and own analyses.

We suffered no losses from any single major counterparty in 2017 or 2016.

The credit risk from our financial assets primarily concerns derivatives, cash and bond portfolios as well as receivables. The assessment is based on the individual counterparty's ratings with Standard & Poor's, Moody's and Fitch. The figures do not reflect our actual credit exposure as the positions are calculated before offsetting our debt to such counterparties.

The AAA/Aaa category covers our position in Danish AAA-rated government and mortgage bonds. The non-rated category primarily consists of trade receivables from customers, such as end-users and PSO customers.

Accounting policies

We only offset positive and negative values if we are entitled to and intend to settle several financial instruments net.

Offsetting of financial assets, DKK million	Derivatives	Trade receivables	2017	Derivatives	Trade receivables	2016
Financial assets	9,743	33,270	43,013	21,734	30,349	52,083
Financial liabilities, offset	(5,000)	(29,480)	(34,480)	(14,065)	(28,061)	(42,126)
Financial assets in the balance sheet	4,743	3,790	8,533	7,669	2,288	9,957
Amounts not offset in the balance sheet:						
Liabilities with right of set-off	(1,611)	-	(1,611)	(1,697)	-	(1,697)
Collateral received in the form of bonds	(787)	-	(787)	(773)	-	(773)
Net	2,345	3,790	6,135	5,199	2,288	7,487
Offsetting of financial liabilities, DKK million	Derivatives	Trade payables	2017	Derivatives	Trade payables	2016
Financial liabilities	8,700	32,327	41,027	19,683	30,330	50,013
Financial assets, offset	(5,000)	(29,480)	(34,480)	(14,065)	(28,061)	(42,126)
Financial liabilities in the balance sheet	3,700	2,847	6,547	5,618	2,269	7,887
Amounts not offset in the balance sheet:						
Assets with right of set-off	(1,611)	-	(1,611)	(1,697)	-	(1,697)
Collateral provided in the form of bonds	(40)	-	(40)	(276)	-	(276)
Net	2,049	2,847	4,896	3,645	2,269	5,914

The table shows our financial assets and liabilities where a share is offset and is therefore presented net. We have a number of counterparties in respect of which we are both buyer and seller of financial contracts, etc. Consequently, our gross financial assets and liabilities can be significant before offsetting. Offsetting is typically limited within specific products.

The decrease in the amount offset regarding derivatives is mainly attributable to the decrease in the market value of oil derivatives.

7.6 Categories of financial instruments

Categories of financial instruments

Financial instruments are used for various purposes. The purpose determines the category, and whether the value adjustment of the instrument should be recognised in the profit (loss) for the year or as part of the hedging reserve in equity.

Categories of financial instruments, DKK million

	2017	2016
Energy and currency derivatives	2,589	4,945
Securities	25,280	16,533
Financial assets measured at fair value via income statement	27,869	21,478
Interest derivatives	-	78
Currency derivatives	2,281	3,666
Derivatives (assets) used as hedging instrument	2,281	3,744
Trade receivables	9,170	7,286
Other accounts receivable	8,812	5,204
Financial assets measured at amortised cost	17,982	12,490
Energy and currency derivatives	2,214	4,201
Financial liabilities measured at fair value via income statement	2,214	4,201
Interest derivatives	-	3
Currency derivatives	2,160	2,726
Derivatives (liabilities) used as hedging instrument	2,160	2,729
Bank loans and issued bonds	29,636	24,183
Trade payables	11,499	10,024
Other accounts payable	2,767	4,032
Financial liabilities measured at amortised cost	43,902	38,239

The fair value of financial instruments measured at amortised cost is identical to the carrying amount with the exception of bank loans and issued bonds where the market value is stated in note 6.1.

The table shows our financial instruments divided into categories. The category indicates how the financial instrument is recognised in the financial statements.

7.7 Fair value measurement

Fair value hierarchy, DKK million

	Assets			Equity and liabilities
	Securities	Derivatives	Other receivables	Derivatives
2017				
Level 1	22,490	444	-	667
Level 2	2,790	3,478	-	2,602
Level 3	-	948	105	1,105
Total 2017	25,280	4,870	105	4,374
2016				
Level 1	13,428	2,461	-	1,467
Level 2	3,105	5,959	-	5,037
Level 3	-	269	-	426
Total 2016	16,533	8,689	-	6,930

Valuation principles and key assumptions

In order to minimise the use of subjective estimates or modifications of parameters and calculation models, it is our policy to determine fair values based on external information that most accurately reflects the fair values.

Fair values are determined continuously by our Risk Management function, which reports to the CFO.

Accounting policies

Level 1 comprises quoted securities and derivatives that are traded in active markets.

Level 2 comprises derivatives, where valuation models with observable inputs are used to measure fair value.

Level 3 comprises primarily long-term contracts on the purchase/sale of, in particular, power and gas.

The fair values are based on assumptions concerning the long-term prices of, in particular, power, gas, coal, USD, EUR, volatilities as well as risk premiums in respect of liquidity and market risks. Since there are no active markets for the long-term prices of power, oil and gas, the fair value has been determined through an estimate of the future prices. The most important parameter resulting in commodity contracts being classified as level 3 is the power price. Normally, the price can be observed for a maximum of five years in the power market, after which an active market no longer exists. Beyond the five-year horizon, the energy price is thus projected on the basis of the observable forward price for years one to five. As the forward price of power develops stably during the five-year period, the projection over a small number of years is not deemed to be associated with any material risk.

In connection with the divestment of our Oil & Gas business, we will receive USD 100 million if the Rosebank field is developed. This payment is recognised at fair value under other receivables.

All assets and liabilities measured at fair value are measured on a recurring basis.

8. Other notes

Related-party transactions	141
Operating lease obligations	142
Auditor's fees	143
Contractual obligations	143
Company overview	144

8.1 Related-party transactions

Related parties that have control over the Group comprise the Danish State, represented by the Danish Ministry of Finance.

Related parties with a significant influence included Goldman Sachs until 2 March 2017, when Martin Hintze from Goldman Sachs stepped down from Ørsted A/S's Board of Directors.

Other related parties are the Group's associates and joint ventures, members of the Board of Directors and the Executive Board as well as other senior executives.

See note 8.5 for an overview of our joint ventures and associates.

Related-party transactions are made on arm's length terms. Intra-group transactions have been eliminated in the consolidated financial statements.

The remuneration and share programme for Group Executive Management and the Board of Directors is described in notes 2.6 and 2.7.

Board member Peter Korsholm has, through a company indirectly owned by him, had ordinary transactions with Danish Oil Pipe A/S, a wholly-owned subsidiary in the Ørsted Group.

In 2016, we divested Gas Distribution A/S to the Danish transmission system operator Energinet, which is owned by the Danish State. The cash selling price was DKK 2,325 million.

We use the exemption set out in IAS 24.25 concerning entities in which the Danish State is a related party, and transactions with government-related companies are therefore not disclosed. Transactions with owners consist solely of transactions with Goldman Sachs until 2 March 2017.

There were no other related-party transactions during the period.

Payables	11	-

8.2 Operating lease obligations

Our total operating lease obligations increased by DKK 3,106 million relative to last year. The increase in the obligations is primarily due to the fact that we have launched the Hornsea 1 project and in this connection entered into leases amounting to just over DKK 2 billion.

Wind Power's assets held under operating leases comprise mainly seabeds relating to the offshore wind farms in the UK, service vessels and a harbour area in Belfast, Northern Ireland.

Bioenergy & Thermal Power's most significant leased assets are two plots of land. In the Netherlands, we lease the land on which the Enecogen Power Station is located, and in the UK, we lease land in Northwich which will be the site of our first Renaissance plant.

Distribution & Customer Solutions mainly lease gas storage facilities in Germany.

Leased assets recognised under 'Other activities' mainly comprise our two office premises in Gentofte and London. The premises are used by employees in most of our segments.

Seabed leases include variable lease payments which depend on the number of MWh generated. However, we have typically agreed on minimum lease payments for the seabeds.

Lease payments recognised in profit (loss) for the year amounted to DKK 885 million (2016: DKK 746 million).

For the purpose of calculating the FFO/adjusted interest-bearing net debt credit metric, the present value and interest expenses of the lease obligations are calculated. The results and the discount rate are shown in the table with supplementary information for operating lease obligations. We reduced the discount rate in 2017 due to the continued low interest rate environment.

Accounting policies

We recognise operating lease payments in profit (loss) for the year over the term of the lease on a straight-line basis. When using assets held under operating leases in respect of construction of offshore wind farms or other assets, we recognise lease payments in the cost of the asset in step with the construction of the asset.

Operating lease obligations by segment 2017, DKK million

	Wind Power	Bioenergy & Thermal Power	Distribution & Customer Solutions	Other activities	Total

Supplementary information to operating lease obligations, continuing operations, DKK million

	2017	2016
Present value of lease payments	6,095	3,986
Lease payments recognised in profit (loss) for the year	885	746
Calculated interest expenses on lease obligations	234	194
Discount rate applied	3.5%	4.5%

The present value is calculated by discounting the individual obligations each year using our internal discount rate of 3.5% (2016: 4.5%).

8.3 Auditor's fees

PwC is Ørsted's auditors appointed by the annual general meeting. PwC audits the consolidated financial statements of Ørsted and our subsidiaries' financial statements in all the countries where we are represented.

Other assurance engagements primarily included reviews of the internal interim balance sheet for Oil & Gas, reviews of non-financial data and of regulatory financial statements.

Tax and VAT advice primarily included advice in connection with the divestment of assets and enterprises and advice in connection with the preparation of tax returns and the calculation of the income subject to international joint taxation.

Other services include other consultancy services from PwC, including advice in connection with due diligence and the divestment of assets and enterprises.

Fees for services other than statutory audit supplied by PwC Denmark to Ørsted amounted to DKK 8 million and consisted of accounting and tax advice in connection with the divestment of assets and enterprises, review of non-financial data and other general accounting and tax advice.

In 2016, PwC provided consultancy services in connection with the IPO. The fee for this totalled DKK 18 million.

Auditor's fees, DKK million	2017	2016
Statutory audit	11	9
Other assurance engagements	2	14
Tax and VAT advice	4	11
Other services	7	9
Total fees to PwC	24	43

In 2017, PwC provided advisory services totalling DKK 1.8 million concerning acquisition and divestment activities, which are not included in our limit for the use of PwC for non-audit services.

8.4 Contractual obligations

At 31 December 2017, contractual obligations in Wind Power mainly related to offshore wind turbines, foundations and cables, etc., for the construction of offshore wind farms. The obligations of Bioenergy & Thermal Power mainly related to the biomass conversion of

Asnæs Power Station, while the obligations of Distribution & Customer Solutions related to the roll-out of smart meters.

Contractual obligations by segment, DKK million	 Wind Power	 Bioenergy & Thermal Power	 Distribution & Customer Solutions	Other activities	Total
	0-1 year	14,363	605	590	-
1-5 years	17,122	285	531	-	17,938
2017	31,485	890	1,121	-	33,496
2016	41,676	569	1,300	869	44,414

Overview of concluded contracts where delivery had not taken place at 31 December 2017.

Consolidated ESG statements (additional information)

Introduction	148
Environment	149
Social	151
Governance	153
Basis of reporting	154

Introduction

Consolidated ESG statements

In the consolidated ESG statements, we give an account of our results, objectives and accounting policies in accordance with our strategic targets, business drivers and selected environmental, social and governance data.

Consolidation

Unless otherwise stated, ESG data are consolidated according to the same principles as the financial statements.

Data for accident statistics are calculated according to operational scope, which means that data are included for operations where Ørsted is responsible for safety, including the safety of external suppliers.

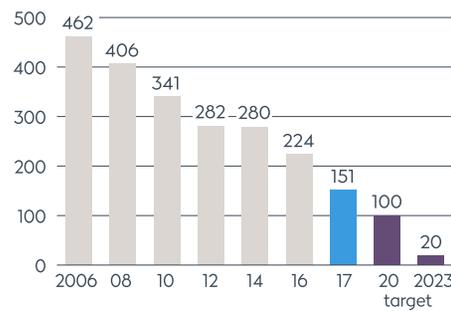

For further ESG data

Our full ESG data set can be seen in the independent publication 'ESG performance report 2017', which includes:

- a description of Ørsted's work for greater gender diversity at management level in accordance with section 99b of the Danish Financial Statements Act
- the distribution of selected ESG indicators by business unit and country.

In addition, we report on our sustainability efforts in the publication 'Sustainability report 2017'.

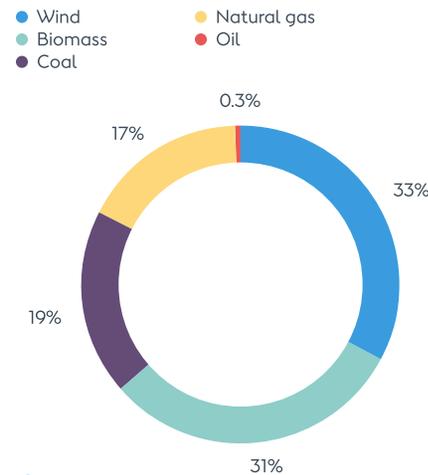

Greenhouse gas intensity, CO₂e/kWh

In 2017, our CO₂e/kWh target was approved as a science-based target. Through this target, we are contributing to keeping the temperature increase below 2°C, which is the objective of the Paris Agreement from 2015.

Our goal is to reduce greenhouse gas emissions from heat and power generation by 96% by 2023 relative to 2006.

Total power and heat generation 2017 by energy source

The green share of the generation increased from 50% in 2016 to 64% in 2017.

The increase was due to higher generation from off-shore wind combined with increased use of biomass and reduced use of coal for thermal generation.

TRIR of 6.4

Total Recordable Injury Rate (TRIR) has been reduced from 6.8 in 2016 to 6.4 in 2017. The target is a TRIR of 5.7 or less by the end of 2020.

LTIF of 1.6

The Lost-Time Injury Frequency (LTIF) has been reduced from 1.8 in 2016 to 1.6 in 2017.

0 fatal accidents

Our last fatal accident was in 2012.

Environment

Strategic target	Business driver	Title	Unit	Target	2017	2016
		Capacity				
●	●	Decided (FID) capacity, offshore wind	GW		8.9	7.4
	●	Installed capacity, offshore wind	GW	11-12 (ambition in 2025)	3.9	3.6

		Coal and biomass in thermal heat and power generation				
		Coal share of fuels used for thermal heat and power generation	%	0 (2023)	30	46
		Biomass share of thermal heat and power generation	%		47	32
		Sourcing of certified biomass	%	100% (2020)	72	61
		Greenhouse gases				
●		Greenhouse gas intensity	g CO ₂ e/kWh	≤ 100 (2020) ≤ 20 (2023)	151	224
		Renewable energy				
●		Green share of heat and power generation	%	≥ 95 (2023)	64	50

Decided offshore wind capacity rose by 1.5GW from 2016 to 2017. The increase was mainly due to the investment decision on Hornsea 2, which contributed 1.4GW.

Installed offshore wind capacity increased by 0.3GW to a total of 3.9GW after the opening of Burbo Bank Extension in 2017. Our 2025 ambition is to construct 11-12GW of offshore wind capacity.

The generation capacity of offshore wind increased by 0.5GW from 2016 to 2017. The increase can be attributed to Burbo Bank Extension as well as generation from the first offshore wind turbines at Race Bank and Walney Extension.

The combination of higher offshore wind capacity and better wind conditions contributed to 42% higher wind-based generation in 2017 than in 2016.

In 2017, thermal heat and power generation was 2% lower than in 2016. In 2017, we inaugurated the converted Skærbæk Power Station, which can now use biomass instead of natural gas. We will continue the transition from fossil fuels to biomass, and we will stop the use of coal by 2023.

As a result of the above, the green share of our generation increased from 50% in 2016 to 64% in 2017.

At the same time, we reduced our greenhouse gas intensity (mainly CO₂) by 33% from 2016 to 2017.

Accounting policies

Decided (FID) capacity, offshore wind

Decided (FID) capacity is the cumulative installed offshore wind capacity, including capacity for offshore wind farms where a final investment decision (FID) has been made.

Installed capacity, offshore wind

Installed offshore wind capacity is calculated as the cumulative offshore wind capacity installed by Ørsted. The capacity is calculated as installed gross capacity before divestments.

Generation capacity, offshore wind

Generation capacity is calculated as the power generation capacity which Ørsted produces and reports. The same scope and consolidation as for power generation are used.

Generation capacity is calculated and included from the time when individual offshore wind turbines pass the 240-hour test. Generation capacity, offshore wind has been calculated at 31 December. The Gunfleet Sands and Walney 1 and 2 offshore wind farms have been consolidated according to ownership interest. The other wind farms are financially consolidated.

Availability, load factor, wind speed and wind energy content for offshore wind

Availability, load factor, wind speed and wind energy content are calculated only for offshore wind farms. The time-based availability factor (availability) is calculated as the ratio of the number of hours the offshore wind farms are available for power generation to the total number of hours in a given period. Total availability is determined by weighting the individual offshore wind farms' availability by the capacity of the offshore wind farm. Availability is commercially adjusted.

The load factor is calculated as the ratio between actual generation over a period relative to potential generation which is possible by continuously exploiting the maximum capacity over the same period. The load factor is commercially adjusted.

Commercially adjusted means that, for Danish and German offshore wind farms, availability and load factor, respectively, are adjusted if the offshore

wind farm has been financially compensated by the transmission system operators in situations where the offshore wind farm is available for generation, but the output cannot be supplied to the grid due to maintenance or grid interruptions. Offshore wind farms in the UK are not compensated for non-access to the grid.

New offshore wind turbines are included in the calculation of availability and load factor once they have passed the 240-hour test.

Wind speed shows the wind speeds of Ørsted's offshore wind farms. The wind speed is delivered for a number of areas where the individual offshore wind farms are located. Wind speed measurements are weighted on the basis of the capacity of the individual offshore wind farms and consolidated into an Ørsted total in the same way as generation. The wind speed of the period can be compared to a historical average. The wind speed measurements are provided by an external supplier.

Wind energy content is calculated as the ratio between actual gross generation in a given period and generation in a 'normal wind year'. Actual generation is calculated as actual net generation adjusted for availability. The wind energy content for new offshore wind farms is included from the beginning of the first calendar year in which the entire offshore wind farm is in operation.

Generation

Power generation from wind is calculated as sold generation. The Gunfleet Sands and Walney 1 and 2 offshore wind farms have been consolidated according to ownership interest. The other wind farms are financially consolidated.

Thermal power generation is determined as net generation sold based on settlements from the official Danish production database. Data for generation from foreign facilities are provided by the operators.

Thermal heat and steam generation is measured as net output sold to heat customers.

Degree days are a measure of how cold it has been and thus indicate the amount of energy needed to heat a building. The number of degree days helps to compare the heat demand for a given year with

a normal year. A degree day is an expression of a difference of 1°C between the inside daily mean temperature of 17°C and the outside daily mean temperature over a period of 24 hours. The number of degree days in a day is therefore calculated as the difference between 17°C and the outside daily mean temperature. The source of degree days is the Danish Technological Institute, Energy and Climate.

Coal share of fuels used for thermal heat and power generation

The fuel consumption for heat and power generation at the individual power plants is stated in GJ. The coal share is calculated as the coal consumption in GJ relative to the total fuel volume in GJ.

Biomass share of thermal heat and power generation

This is calculated as the green share of heat and power generation, but is only shown for thermal generation, i.e. for the business unit Bioenergy & Thermal Power.

Sourcing of certified biomass

Certified biomass is defined as wood-based biomass; wood pellets and wood chips.

Certified biomass must be certified within at least one of the categories defined in the Danish industry agreement on sustainable biomass.

Certified biomass is calculated as the share of sourced certified wooden biomass out of the total sourcing of wooden biomass delivered to the CHP plants.

The reporting of certified biomass began in August 2016 on the start date of the Danish industry agreement on certification and reporting of certified biomass.

Greenhouse gas emissions

Greenhouse gas intensity is defined as the greenhouse gas emissions divided by the total heat, power and steam generation.

Greenhouse gases comprise greenhouse gas emissions in accordance with the GHG Protocol from the combustion of fuels in thermal heat and power generation. Greenhouse gases thus comprise CO₂ (carbon dioxide), N₂O (dinitrogen oxide) and CH₄ (methane).

In practice, waste is considered a partially carbon-neutral fuel, as it consists of both fossil fuels and biomass-based fuels. We use a conversion factor to calculate the carbon emissions from the incineration of waste. The conversion factor (37kg CO₂/GJ waste) has been used by the Danish Centre for Environment and Energy since 1990 and until today.

Green share of heat and power generation

The green (renewable energy) share of our heat and power generation and the distribution of the generation on the individual energy sources and fuels are calculated on the basis of the generation from the plants.

Wind-based generation is calculated as a total, as there is only one source of power.

For the CHP plants which can use several different fuels the calculation is as follows: For the individual CHP plant unit in the given period, the share of the specific fired fuel (e.g. biomass) is calculated relative to the total fired fuel quantity. The fired fuel share is then multiplied by the total heat and power generation (including steam) for the specific unit in the specific period.

This results in the fuel-based generation for the individual unit – for example the biomass-based generation of heat and power in the CHP plant unit.

All the calculated fuel-based generation and the wind power generation are then added up to a total, which tallies with the total generation.

The percentage share of the individual energy sources is calculated by dividing the generation from the individual energy source by the total generation.

In practice, waste consists of a mixture of biomass and fossil fuel-based parts. When calculating the renewable energy share, waste fuel is therefore divided into a biodegradable and a non-biodegradable part. Key figures from the Danish Centre for Environment and Energy are used for this purpose.

The following energy sources and fuels are considered renewable energy: wind, biomass, waste (biodegradable). The following energy sources are considered fossil energy sources: coal, natural gas, oil and waste (non-biodegradable).

Social

Strategic target	Business driver	Title	Unit	Target	2017	2016
		Employees				
		Total number of employees at 31 December	Number of FTEs		5,638	5,775
		Average number of employees for the year	Number of FTEs		5,738	5,894
		Loyalty	Scale 0-100		84	83
●		Employee satisfaction	Scale 0-100	≥ 77 (2020)	76	76
		Safety				
		Fatal accidents	Number	0	0	0
		LTIF (lost-time injury frequency)	Per million working hours		1.6	1.8
●		TRIR (total recordable injury rate)	Per million working hours	≤ 5,7 (2020)	6.4	6.8
		Sales and distribution				
	●	Gas sales	TWh		129.0	143.4
	●	Power sales	TWh		37.5	36.5
	●	Power distribution	TWh		8.4	8.5
		Reliability of supply				
●		Reliability of supply (power cuts per customer, SAIFI)	Number	≤ DK average	0.42	0.39
		Customer satisfaction				
●		Customer satisfaction, B2C in Denmark	Scale 1-100	≥ 80 (2020)	76	76
●		Customer satisfaction, B2B	Scale 1-100	≥ 80 (2020)	77	75
●		Customer satisfaction, distribution customers in Denmark	Scale 1-100	≥ 80 (2020)	82	83

The number of employees fell by 2% from 2016 to 2017. The decrease was due to the divestment of the company A2SEA and staff reductions in the business units Bioenergy & Thermal Power and Distribution & Customer Solutions. On the other hand, the number of employees increased in Wind Power.

Loyalty and satisfaction are both high. With an employee satisfaction score of 76 in this year's employee satisfaction survey, we are close to achieving our target of 77 in 2020.

Safety KPIs showed good progress again in 2017.

In 2017, we introduced a new safety target, TRIR. TRIR decreased from 6.8 in 2016 to 6.4 in 2017. The aim is for a TRIR of less than 5.7 in 2020.

LTIF decreased from 1.8 in 2016 to 1.6 in 2017.

There were no fatal accidents in 2017.

We have increased our satisfaction target for business customers (B2B) to at least 80 in 2020 (previously 75).

Accounting policies

Employees

The reporting covers contractually employed employees in Danish and foreign Ørsted companies in which Ørsted holds an ownership interest of more than 50%. Employees in associates are not included.

Employee data are recognised based on records from the Group's ordinary registration systems. The number of employees is determined as the number of employees at the end of each month converted to full-time equivalents (FTEs).

Employees who have been made redundant are recognised until the expiry of their notice period, regardless of whether they have been released from all or some of their duties during their notice period.

Employee satisfaction and loyalty

Ørsted conducts a comprehensive employee satisfaction survey once a year. All Ørsted employees are invited to participate in the survey. In the survey, a number of questions are asked, for example, about employee satisfaction and loyalty. The answers are given on a scale from 1 to 10 and are subsequently converted to index figures on a scale from 0 to 100.

Safety

Occupational injuries are calculated according to operational scope. Data from companies wholly or partly owned by Ørsted and where Ørsted is responsible for safety are included. Occupational injuries and lost-time injuries are calculated for both our own employees and suppliers. Data from Danish and foreign locations are recognised.

The lost-time injury frequency (LTIF) is calculated as the number of lost-time injuries per one million hours worked. The number of hours worked is based on 1,667 working hours annually per full-time employee and monthly records of the number of employees converted into full-time employees. For suppliers, the actual number of hours worked is recognised on the basis of data provided by the supplier, access control systems at locations or estimates.

LTIF includes lost-time injuries defined as injuries that result in incapacity for work for one or more calendar days in addition to the day of the incident.

In addition to lost-time injuries, TRIR also includes injuries where the injured person is able to perform restricted work the day after the accident as well as accidents where the injured person has received medical treatment.

Power and gas sales

Sales of power and natural gas are calculated as physical sales to retail and wholesale customers and exchanges. Sales of power and gas are based on readings from Ørsted's trading systems. Internal sales to Bioenergy & Thermal Power are not included in the statement.

Power distribution

Power distribution is determined on the basis of data from the official system in Denmark, which measures and calculates total area consumption.

Reliability of supply

The frequency of announced and unannounced power cuts for customers is expressed in terms of SAIFI (system average interruption frequency index), which is calculated as the average number of power cuts per customer per year.

In 2017, we adjusted SAIFI to only include the distribution networks for which Radius is responsible. This means that SAIFI is shown exclusive of transmission grids. Comparative figures are adjusted accordingly. In the ESG performance report 2017, SAIFI is shown both with and without transmission grids.

Customer satisfaction

Customer satisfaction for residential customers (B2C) in Denmark is measured according to interaction between the customer and Ørsted. The score is therefore not an expression of customers' overall satisfaction with Ørsted, but is rather related to a given situation. The score is calculated as a weighted score based on a number of different types of touch points. The current touch points are customer service for gas and power, outbound sales and web. An external supplier conducts interviews.

Customer satisfaction for business customers (B2B) is determined on the basis of customer satisfaction surveys among Ørsted's business customers in Denmark, the UK and Sweden. Customer satisfaction is determined on the basis of interviews about customers' satisfaction with Ørsted as a whole. The survey only comprises active customers with whom Ørsted has been in touch in connection with contracts for the supply of power or gas in the previous or next month. So-called sleeping customers are therefore not included in the statement. The method follows the ACSI model based on the EPSI scale. External agencies conduct the interviews and report absolute and weighted results. As of 2017, B2B customer satisfaction is extended from comprising Danish customers only to also include customers from other markets.

Customer satisfaction for distribution customers in Denmark is determined on the basis of different types of interactions with distribution customers: Disruption of supply, replacement of meters as well as customer and market support. Customer satisfaction is measured as the customer's satisfaction in a specific context. Respondents are randomly selected, and the survey is carried out by an external supplier.

Customer satisfaction for residential and distribution customers thus relates to a specific situation, whereas customer satisfaction for business customers is an expression of customers' satisfaction with Ørsted as a whole. We have a number of very large business customers. In respect of these, it is important for us to assess the customer relationship in general and not just the experience of a specific situation.

Governance

Strategic target	Business driver	Title	Unit	Target	2017	2016
Board members						
		Women on the Board of Directors of Ørsted A/S	%		50	38
Good business conduct						
		Substantiated whistleblower cases	Number		3	3
		– Cases transferred to the police	Number		0	0

In 2017, there was equal gender representation on the Board of Directors, as the share of women was 50%.

In 2017, three substantiated cases of inappropriate or unlawful behaviour were reported through our whistleblower scheme. Two cases concerned violation of employment policies, and one case concerned a conflict of interest.

The cases have had consequences for the employees involved.

None of the cases reported were critical to the business or affected Ørsted's financial results.

We take all cases seriously and do what we can to prevent recurrences.

Accounting policies

Women on the Board of Directors of Ørsted A/S

The employee representatives on the Board of Directors are not included in the data and the targets for women on the Board of Directors.

Substantiated whistleblower cases

Ørsted's whistleblower hotline is available to both internal and external business partners so that they can report suspected or actual cases of inappropriate or illegal business conduct.

Whistleblower cases are received and handled by Internal Audit, which also receives similar reports through the management system and from compliance officers.

All cases are handled in accordance with the guidelines for the handling of whistleblower reports approved by the Audit and Risk Committee which is ultimately responsible for the whistleblower scheme.

Only cases which are closed during the financial year, and which have been reported to the Audit and Risk Committee as fully or partially substantiated, are included.

Cases transferred to the police

Cases transferred to the police are the number of whistleblower cases reported in accordance with the accounting policies mentioned above which are transferred to the police.

Basis of reporting

Accounting policies

This section describes the accounting policies applied to the ESG statements for the Group as a whole, while the specific accounting policies for the individual items are described in the previous sections.

Requirements, standards and guidelines

Pursuant to section 99a of the Danish Financial Statements Act, Ørsted is obliged to account for the company's CSR activities and report on business strategies and activities with regard to human rights, labour rights, anti-corruption as well as the environment and the climate.

Ørsted is a signatory to the UN Global Compact. The UN Global Compact provides enterprises with a strategic framework for incorporating ten principles on human rights, labour rights, anti-corruption measures as well as the environment and the climate into their strategy and business processes. The ten principles form the basis of Ørsted's sustainability efforts. Ørsted is consistently working to promote the principles.

Companies which are signatories to the UN Global Compact are under an obligation to submit and publish their annual communication on progress (COP) report, in which they must detail the progress made in implementing the ten UN Global Compact principles.

By publishing its COP report, Ørsted complies with section 99a of the Danish Financial Statements Act, provided that the annual report includes a reference to where the information is publicly available.

Ørsted's Sustainability Report (Orsted.com/baeredygtighed2017) is the Group's COP report and is available on the Global Compact website at <https://www.unglobalcompact.org/what-is-gc/participants/2968#cop>.

Under section 99b of the Danish Financial Statements Act, Ørsted must account for the company's objectives and policies which over time will ensure greater diversity in relation to gender representation at management level. This account can be found in our report 'ESG performance report 2017', but information about gender distribution is also included in Ørsted's COP report and consolidated ESG statements.

Consolidation of ESG data

Unless otherwise stated, ESG data are consolidated according to the same principles as the financial statements – financial scope.

Thus, the consolidated ESG statements include the parent company Ørsted A/S and subsidiaries controlled by Ørsted A/S. Data from associates and joint ventures are not included in the consolidated ESG statements.

Data for accident statistics are calculated according to operational scope, which means that data are included for operations where Ørsted is responsible for safety, including the safety of external suppliers.

In 2017, we divested our Oil & Gas business unit. Data for Oil & Gas are therefore not included in the consolidated ESG statements, neither for 2017 nor for previous years, as it is a discontinued activity.

Materiality assessment

In 2017, we focused the contents of the ESG statements on areas which are strategic focus areas for Group Executive Management. These are areas which are either included in the Group's strategic targets, or which are categorised as business drivers. We also include the other ESG data described in the Group's annual report.

In 2017, this has resulted in a number of – primarily supplementary sustainability indicators – being omitted from the consolidated ESG statements compared to 2016.

In 2017, the following indicators are not included compared to 2016

- Biomass share of Danish CHP generation capacity
- EU ETS carbon emissions
- Gas distribution
- Customer complaints
- Reputation
- Employee turnover rate
- Gender diversity in management (organisational levels)
- Lost-time injuries (number)
- Environmental accidents
- Share of employees who have completed a course in good business conduct
- Business partner screenings

In 2017, the following indicators were added compared to 2016

- Wind speed
- TRIR

Share capital composition and dividends are disclosed in note 6.2 to the consolidated financial statements. You can also find information on treasury shares.

1. Basis of reporting

Accounting policies

The parent company financial statements have been prepared in accordance with the provisions of the Danish Financial Statements Act (reporting class D).

The accounting policies remain unchanged from the previous year.

Unless otherwise stated, the financial statements are presented in Danish kroner (DKK) rounded to the nearest million.

The parent company accounting policies are consistent with the accounting policies described for the consolidated financial statements, with the following exceptions:

Foreign currency translation

We recognise exchange rate adjustments of receivables from and payables to subsidiaries as financial income and expenses in the income statement when the balances are accounted for as part of the total net investment in foreign enterprises. Likewise, we recognise foreign exchange gains and losses on loans and derivatives in the income statement as financial income and expenses when they have been entered into to hedge the net investment in the foreign enterprises.

Revenue

Rental income comprises income from commercial leases and is recognised over the term of the lease. Income from services is recognised when delivery has taken place.

Dividends from investments

Dividends from subsidiaries and associates are recognised in the income statement for the financial year in which the dividends are approved at the annual general meeting. If the dividends exceed the total income after the time of takeover, the dividends are recognised as a reduction of the cost of the investment under assets.

Investments

We measure our investments in subsidiaries and associates at cost. If there is any indication that the value of a company is lower than our future earnings in the company, impairment testing of the company is carried out as described in the consolidated financial statements. The carrying amount is written down to the recoverable amount whenever the carrying amount exceeds the future earnings in the company (recoverable amount).

If we have a legal or constructive obligation to cover a deficit in subsidiaries and associates, we recognise a provision for this.

Tax

In 2005, we chose Danish international joint taxation. We have continuously assessed when it will be the most appropriate time to withdraw from the international joint taxation scheme, and we currently expect that this will be for the 2017 income year, which is reflected in the annual report. We will make the final decision in 2018 when preparing the tax returns for 2017. Therefore, the retaxation liability has been transferred to tax payable in 2017.

Ørsted A/S is taxed jointly with its Danish subsidiaries. The jointly taxed companies are part of joint taxation with the parent company as the management company.

Subsidiaries are included in the joint taxation from the date they are consolidated in the consolidated financial statements and up to the date on which they are no longer consolidated.

Current tax for 2017 is recognised by the individual jointly taxed companies.

Statement of cash flows

We do not prepare a separate statement of cash flows for the parent company. Reference is made to the consolidated statement of cash flows on page 68.

Key accounting estimates

In connection with the preparation of the financial statements, a number of accounting estimates have been made that affect the profit (loss) and balance sheet. Estimates are regularly reassessed by management on the basis of historical experience and other relevant factors.

Impairment test

If there is any indication that the carrying amount is lower than our future earnings in a company, we test for impairment as described in the consolidated financial statements. The future earnings of the company (recoverable amount) are calculated based on assumptions concerning significant estimates.

2. Employee costs

Employee costs, DKK million	2017	2016
Wages and salaries	24	20
Share-based payment	2	3
Remuneration for the Board of Directors	5	5
Total employee costs	31	28

Remuneration for the Executive Board, DKK '000	Henrik Poulsen		Marianne Wiinholt		Executive Board, total	
	2017	2016	2017	2016	2017	2016
Fixed salary	10,024	9,425	5,255	5,062	15,279	14,487
Variable salary	4,504	2,751	2,312	1,560	6,816	4,311
Share-based payment	1,367	1,427	713	889	2,080	2,316
Social security	2	2	2	2	4	4
Total	15,897	13,605	8,282	7,513	24,179	21,118

The remuneration report in the management's review and notes 2.6 and 2.7 to the consolidated financial statements describe the remuneration of the Executive Board and the Board of Directors, share-based payment, termination and bonus scheme for the Executive Board and details on the remuneration of the Board of Directors.

The parent company had an average of five employees in 2017 (2016: five employees).

3. Financial income and expenses

Financial income and expenses, DKK million	2017	2016
Interest income from cash, etc.	14	18
Interest income from subsidiaries	1,432	1,842
Interest income from securities at market value	211	417

Other financial expenses	(21)	(27)
Total financial expenses	(10,486)	(21,645)
Net financial income and expenses	3,181	(1,424)

4. Tax on profit (loss) for the year and deferred tax

Income tax, DKK million	2017	2016
Tax on profit (loss) for the year	(76)	623
Tax on changes in equity	132	169
Total tax for the year	56	792
Tax on profit (loss) for the year can be broken down as follows:		
Current tax	(1,379)	(231)
Adjustments to deferred tax	1,298	803
Adjustments to current tax in respect of prior years	(360)	670
Adjustments to deferred tax in respect of prior years	365	(619)
Tax on profit (loss) for the year	(76)	623

Development in deferred tax, DKK million	2017	2016
Deferred tax at 1 January	1,744	1,928
Adjustment for the year recognised in profit (loss) for the year	(1,298)	(803)
Adjustments to deferred tax in respect of prior years	(365)	619
Deferred tax at 31 December	81	1,744

Specification of deferred tax, DKK million	2017	2016
Non-current liabilities	81	(3)
Current liabilities	-	17
Retaxation	-	1,730
Deferred tax	81	1,744

5. Distribution of net profit

Distribution of net profit, DKK million	2017	2016
Profit (loss) for the year is attributable to:		
Shareholders of Ørsted A/S, proposed dividends for the financial year	3,783	2,522
Shareholders of Ørsted A/S, retained earnings	(5,718)	(2,546)
Coupon and bond discount after tax, hybrid capital owners of Ørsted A/S	716	499
Profit (loss) for the year	(1,219)	475

6. Investments in subsidiaries

Investments in subsidiaries, DKK million

	2017	2016
Cost at 1 January	70,436	54,291
Additions	2,333	16,500
Disposals	(31,007)	(355)
Cost at 31 December	41,762	70,436
Value adjustments at 1 January	(15,681)	(12,175)
Impairment losses	-	(3,506)
Disposals	15,681	-
Value adjustments at 31 December	-	(15,681)
Carrying amount at 31 December	41,762	54,755

Note 8.5 of the consolidated financial statements contains a complete overview of subsidiaries, etc.

We have tested investments in subsidiaries for impairment by comparing the expected future income from the individual subsidiaries with their carrying amounts.

Disposal for the year concern primarily the divestment of our Oil & Gas business, which was closed on 29 September 2017. The divestment resulted in a loss of DKK 4,179 million in the parent company financial statements. See also the description in note 3.6 to the consolidated financial statements.

The sale resulted in a gain of DKK 2,179 million in the consolidated financial statements. The difference occur due to different accounting policies.

Our impairment test in 2017 did not give rise to any impairment of investments in subsidiaries.

In 2016, we impaired the carrying amount of our subsidiaries by DKK 3,506 million. At the same time, a write-down of receivables from subsidiaries from 2015 of DKK 3,506 million was reversed.

7. Receivables from subsidiaries

Non-current receivables from subsidiaries, DKK million

	2017	2016
Cost at 1 January	50,402	64,435
Additions	18,552	21,667
Disposals	(20,248)	(35,700)
Cost at 31 December	48,706	50,402

8. Derivatives

Ørsted A/S has assumed the subsidiaries' currency risks via forward exchange contracts, which have subsequently been hedged in the market. Furthermore, hedging contracts have been concluded to hedge the currency risk associated with investments in subsidiaries in foreign currencies.

We have also entered into a number of interest rate swaps to manage our interest rate risk.

The company has fair value hedged loans in GBP and EUR. The value of the fair value hedge offset in the income statement amounted to DKK 289 million (2016: DKK 1,793 million).

Derivatives at the end of December 2017 mature as follows: 2018: DKK -24 million, 2019: DKK -76 million, after 2019: DKK -324 million (2016: 2017: DKK 1,344 million, 2018: DKK -379 million, after 2018: DKK -156 million).

Overview of derivative positions, DKK million	2017		2016	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Oil derivatives	-	-	6,016	1,300
Gas derivatives	-	-	4,834	257
Interest derivatives	550	-	2,022	50
Currency derivatives	4,817	(424)	26,364	(798)
Total	5,367	(424)	39,236	809
Assets		3,596		19,980
Equity and liabilities		(4,020)		(19,171)

See note 7.1 to the consolidated financial statements and the management's review on pages 47-50 for more details on risk and risk management.

9. Securities

Securities are primarily liquid AAA-rated Danish mortgage bonds that qualify for repo transactions in the Danish central bank 'Danmarks Nationalbank'. Repo transactions

are transactions where securities are provided as collateral for a loan.

Securities, DKK million	2017	2016
Securities, available	24,766	15,864
Securities, not available for use	40	197
Total securities	24,806	16,061

Securities not available for use are used as collateral for repo loans and trading in financial instruments.

10. Loans and borrowings

At 31 December 2017, we had issued hybrid capital with a total notional amount of DKK 17,125 million (2016: DKK 13,371 million). In 2018, one hybrid bond with a notional amount of DKK 3,723 million is expected to be redeemed early and is therefore included in current liabilities. The other hybrid bonds have a 1,000-year term and expire as follows: DKK 5,212 million in 3013, DKK 4,467 million in 3015 and DKK 3,723 million in 3017, respectively.

The long-term portion of bank loans and issued bonds amounted to DKK 25,715 million at 31 December 2017 (2016: DKK 22,164 million), of which DKK 16,528 million (2016: DKK 16,901 million) falls due in more than five years.

The long-term portion of other payables amounted to DKK 27 million at 31 December 2017 (2016: DKK 1,516 million) and falls due in 1-5 years.

11. Other provisions

We have made provisions for non-current liabilities totalling DKK 775 million of which DKK 0 million falls due in more than five years. The liabilities concern the divestment of our Oil & Gas business, which was closed on 29 September 2017.

12. Contingent liabilities

Contingent liabilities

Guarantees

Ørsted A/S has provided guarantees in connection with participation by subsidiaries and subsidiaries' joint operations and joint ventures in the construction and operation of offshore wind farms and natural gas installations, and has provided guarantees in respect of leases, decommissioning obligations, and purchase, sale and supply agreements, etc.

Ørsted A/S also acts as guarantor with primary liability for bank balances in certain subsidiaries.

Indemnities

Ørsted is a member of the reinsurance company Oil Insurance Ltd. In the event of exit, an exit premium will be payable, which has been calculated at USD 6.8 million at 31 December 2017 (2016: USD 19.8 million).

Ørsted A/S is taxed jointly with other companies in the Ørsted Group. As management company, the company has unlimited and joint and several liability together with the other jointly taxed companies for Danish income taxes and withholding taxes on dividends, interest and royalties within the jointly taxed companies.

Litigation

Ørsted A/S is not a party to any litigation proceedings or legal disputes that could have an effect on the company's financial position, either individually or collectively.

13. Related-party transactions

Related parties are the Board of Directors, the Executive Board, Ørsted A/S's subsidiaries and the Danish State.

Remuneration of the Board of Directors and the Executive Board is disclosed in notes 2.6 and 2.7 and the remuneration report in the review in the consolidated financial statements.

Our related-party transactions are made on arm's length terms.

14. Operating lease obligations

We have entered into leases for office premises, primarily in Gentofte (expiring in 2028), Virum (expiring in 2027) and Esbjerg (expiring in 2035). In 2017, an amount of DKK 153 million was recognised (2016: DKK 173 million) in profit (loss) for the year in respect of operating lease payments.

We have entered into leases with subsidiaries for subleasing of office premises.

In 2017, an amount of DKK 123 million was recognised (2016: DKK 146 million) in profit (loss) for the year in respect of rental income.

We have minimum payments of DKK 1,816 million (2016: DKK 2,196 million), most of which concerns subleasing via subleasing agreements.

15. Auditor's fees

Auditor's fees, DKK million	2017	2016

Statement by the Executive Board and the Board of Directors

The Board of Directors and the Executive Board have today considered and approved the annual report of Ørsted A/S for the financial year 1 January - 31 December 2017.

The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards as adopted by the EU and additional requirements in the Danish Financial Statements Act. The financial statements of the parent company, Ørsted A/S, have been prepared in accordance with the provisions of the Danish Financial Statements Act.

In our opinion, the consolidated financial statements and the parent company financial statements provide a fair presentation of the Group's and the parent company's assets, liabilities and financial position at 31 December 2017 and of the results of the Group's and the parent company's operations and the Group's cash flows for the financial year 1 January - 31 December 2017.

In our opinion, the management's review provides a fair presentation of the development in the Group's and the parent company's operations and financial circumstances, of the results for the year and of the overall financial position of the Group and the parent company as well as a description of the most significant

risks and elements of uncertainty facing the Group and the parent company.

In our opinion, the consolidated ESG statements (Additional information) represent a reasonable, fair and balanced representation of the Group's social responsibility and sustainability performance and are presented in accordance with the stated accounting policies.

We recommend that the annual report be adopted at the annual general meeting.

Independent Auditors' Report

To the shareholders of Ørsted A/S

Our opinion

In our opinion, the Consolidated Financial Statements give a true and fair view of the Group's financial position at 31 December 2017 and of the results of the Group's operations and cash flows for the financial year 1 January to 31 December 2017 in accordance with International Financial Reporting Standards as adopted by the EU ('IFRS') and further requirements in the Danish Financial Statements Act.

Moreover, in our opinion, the Parent Company Financial Statements give a true and fair view of the Parent Company's financial position at 31 December 2017 and of the results of the Parent Company's operations for the financial year 1 January to 31 December 2017 in accordance with the Danish Financial Statements Act.

Our opinion is consistent with our Auditor's Long-form Report to the Audit and Risk Committee and the Board of Directors.

What we have audited

The Consolidated Financial Statements of Ørsted A/S for the financial year 1 January to 31 December 2017, pp 63-146 and 166, comprise the consolidated income statement, the consolidated statement of comprehensive income, the consolidated balance sheet, the consolidated statement of changes in equity, the consolidated cash flow statement

and the notes to the consolidated financial statements, including summary of significant accounting policies.

The Parent Company Financial Statements of Ørsted A/S for the financial year 1 January to 31 December 2017, pp 155-166, comprise the income statement, the balance sheet, the statement of changes in equity and the notes to the parent company financial statements, including summary of significant accounting policies.

Collectively referred to as the "Financial Statements".

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs) and the additional requirements applicable in Denmark. Our responsibilities under those standards and requirements are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence

We are independent of the Group in accordance with the International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants (IESBA Code) and

the additional ethical requirements applicable in Denmark. We have also fulfilled our other ethical responsibilities in accordance with the IESBA Code.

To the best of our knowledge and belief, prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014 were not provided.

Appointment

We were first appointed auditors of Ørsted A/S on 19 April 2010 for the financial year 2010. We have been reappointed annually

Key Audit Matter

Divestment of the Oil & Gas-business

In 2016, the Board of Directors initiated a process with the aim of ultimately exiting from the Group's Oil & gas-business. The divestment was completed On 29 September 2017.

We focused on this area because the divestment is considered a non-routine transaction, with estimates and judgements in respect of the identification and measurement of guarantees, indemnities etc. given to the purchaser.

Refer to note 3.6 in the Consolidated Financial Statements and note 11 in the Parent Company Financial Statements.

by shareholder resolution for a total period of uninterrupted engagement of 8 years including the financial year 2017.

Key audit matters

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the Financial Statements for 2017. These matters were addressed in the context of our audit of the Financial Statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

How our audit addressed the Key Audit Matter

We evaluated whether Management had appropriately determined the divestment gain by for example:

- Reading the share purchase agreement.
- Testing the gain statement including the provisions recognised to cover guarantees, indemnities etc. in the share purchase agreement.
- Consider whether the disclosures of the discontinued Oil & gas-business and divestment thereof was in compliance with IFRS.

Key Audit Matter

Divestments of partnership interests

In connection with divestments of partnership interests (often 50%) in offshore wind farms under construction, estimates and judgement are required in respect of the sales price for accounting purpose for the divestment and the subsequent construction contract, respectively, and in calculating the divestment gain. Furthermore, judgement is required in respect of classifying the divested interest as either divestment of assets (gain recognised as part of Other income) or divestment of an enterprise (gain recognised as part of Gain/loss from divestment of enterprises). Finally, judgement is required in respect of whether the Group's retained share in the partnership is a joint operation or a joint venture.

We focused on this area because the calculation of the divestment gain is dependent on complex and subjective judgements by Management and because the presentation in the Income statement is dependent on judgement about the partnership interest disposed and whether the partnership interest retained is a joint operation or a joint venture.

Refer to note 2.5 in the Consolidated Financial Statements.

Construction contracts

The accuracy of the revenue recognition related to work in progress of large construction contracts and its presentation in the consolidated income statement is dependent on complex estimation methodologies, including estimates such as the forecasted costs related to the constructions and the degree of completion for construction contracts.

We focused on this area because the revenue recognised with reference to degree of completion both requires complex and subjective judgements by Management.

Refer to note 2.2 and 4.2 in the Consolidated Financial Statements.

How our audit addressed the Key Audit Matter

We evaluated whether Management had appropriately determined the divestment gain, the presentation hereof and the subsequent treatment of the partnership interest by for example:

- Reading the share purchase agreements.
- Reading the shareholders agreements.
- Reading the construction and other related agreements.
- Consider the sales price for accounting purpose for the divestment and the construction contract, respectively.
- Testing the gain statement on the divestment of the partnership interest including the provisions recognised to cover guarantees, indemnities etc. in the share purchase agreement.
- Consider whether the disclosures of the divestment gain and the subsequent recognition and presentation of the partnership was in compliance with IFRS.

On a sample basis, we tested whether revenue is accurately recorded and challenged the forecasted costs related to the constructions, including the assumptions used, and by evaluating the outturn of previous estimates by agreeing the actual costs incurred post-year end to the forecasted costs for the period.

We also assessed how the project managers determined that the degree of completion was correctly determined through obtaining their calculations and agreeing the inputs to documentary evidence or our independently formed expectation as appropriate.

Key Audit Matter

Transactions with energy financial derivative contracts

The Group enters into a number of energy contracts. Certain of these arrangements are accounted for as derivative financial instruments and are recorded at fair value.

Judgement is required in valuing these derivative contracts, particularly where the life of the contract is beyond the liquid market period.

In addition, Ørsted uses business performance as an alternative to profit (loss) for the year stated in accordance with IFRS. Business performance represents the underlying financial performance of the Group in the reporting period adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods.

We focused on this area because the valuation of financial instruments are dependent on complex and subjective judgements by Management and because the business performance reporting is dependent on consistent use and documentation of hedging rules.

Refer to note 1.1 and 7.2 in the Consolidated Financial Statements.

How our audit addressed the Key Audit Matter

We assessed the overall trading process for energy contracts, including internal risk management procedures and the system and controls around origination and maintenance of complete and accurate information relating to derivative contracts.

We tested the valuation of derivative contracts at the year-end date. Our audit procedures focused on the integrity of these valuation models and the incorporation of the contract terms and the key assumptions, including future price assumptions and discount rates.

We tested the prices in the models and recalculated valuations for a sample of derivatives, as well as performing sensitivity analyses for Level 3 energy derivatives.

We considered Management's use of business performance and tested the adjustments between IFRS and business performance. In this connection, we assessed the hedging rules applied under the business performance accounting policies and whether these are used consistently from period to period.

Key Audit Matter

Onerous contracts and other contractual claims and obligations

The Group's operations include exposures to the risk of litigation, contractual claims from and against third parties and contracts being onerous, particularly in relation to long-term contracts.

We focused on this area because of the range of potential outcomes and the considerable uncertainty around (a) the resolution of various litigations, claims and contractual disputes, and (b) the determination of the amount, if any, to be recognised in the financial statements as a provision, and the related disclosures are inherently subjective.

Refer to note 3.2 in the Consolidated Financial Statements.

How our audit addressed the Key Audit Matter

We considered the provisions recognised to cover contractual obligations and claims raised against the Group by third parties, inspected relevant legal advice received by the Group in connection with such claims and obtained formal confirmations from the Group's lawyers on the status and potential outcomes of any legal claims with which the Group is dealing. Moreover, we considered the assets related to claims raised by the Group against third parties.

We challenged the valuation of the onerous contract provisions by evaluating whether appropriate judgements and assumptions had been applied in determining the unavoidable costs of meeting the obligation and the estimate of the expected benefits to be received under the contract.

Finally, we also considered the Group's disclosures relating to provisions and/or contingent liabilities and assets for legal and other contractual obligations and claims.

Statement on Management's Review

Management is responsible for the Management's Review, pp 4-62.

Our opinion on the Financial Statements does not cover Management's Review, and we do not express any form of assurance conclusion thereon.

In connection with our audit of the Financial Statements, our responsibility is to read Management's Review and, in doing so, consider whether Management's Review is materially inconsistent with the Financial Statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

Moreover, we considered whether Management's Review includes the disclosures required by the Danish Financial Statements Act.

Based on the work we have performed, in our view, Management's Review is in accordance with the Consolidated Financial Statements and the Parent Company Financial Statements and has been prepared in accordance with the requirements of the Danish Financial Statement Act. We did not identify any material misstatement in Management's Review.

Management's responsibilities for the Financial Statements

Management is responsible for the preparation of consolidated financial statements that give a true and fair view in accordance with International Financial Reporting Standards as adopted by the EU and further requirements in the Danish Financial Statements Act

and for the preparation of parent company financial statements that give a true and fair view in accordance with the Danish Financial Statements Act, and for such internal control as Management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the Financial Statements, Management is responsible for assessing the Group's and the Parent Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless Management either intends to liquidate the Group or the Parent Company or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the Financial Statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs and the additional requirements applicable in Denmark will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these Financial Statements.

As part of an audit in accordance with ISAs and additional requirements applicable in Denmark, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the Financial Statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's and the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management.

- Conclude on the appropriateness of Management's use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's and the Parent Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the Financial Statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group or the Parent Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the Financial Statements, including the disclosures, and whether the Financial Statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the Consolidated Financial Statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the Financial Statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Limited assurance report of the independent auditor

To the Stakeholders of Ørsted A/S

Ørsted A/S engaged us to provide limited assurance on the data described below and set out in the Environment, Social and Governance (ESG) Statement of the Annual Report of Ørsted A/S for the year ended 31 December 2017.

Our conclusion

Based on the procedures we have performed and the evidence we have obtained, nothing has come to our attention that causes us to believe that data in the 2017 ESG Statement on pages 147-154 of the Annual Report for the year ended 31 December 2017 has not been prepared, in all material respects, in accordance with the accounting policies.

This conclusion is to be read in the context of what we say in the remainder of our report.

What we are assuring

The scope of our work was limited to assurance over data in the ESG Statement on pages 147-154 of the Ørsted A/S Annual Report for the year ended 31 December 2017.

Professional standards applied and level of assurance

We performed a limited assurance engagement in accordance with International Standard on Assurance Engagements 3000 (Revised) 'Assurance Engagements other than Audits and Reviews of Historical Financial Information'. A limited assurance engagement is substantially less in scope than a reasonable assurance engagement in relation to both the risk assessment procedures, including an understanding of

internal control, and the procedures performed in response to the assessed risks; consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

Our independence and quality control

We have complied with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which includes independence and other ethical requirements founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour. The firm applies International Standard on Quality Control 1 and accordingly maintains a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements. Our work was carried out by an independent multidisciplinary team with experience in sustainability reporting and assurance.

Understanding reporting and measurement methodologies

Data and information need to be read and understood together with the accounting principles (pages 147-154 of the 2017 Ørsted A/S Annual Report), which Management are solely responsible for selecting and applying. The absence of a significant body of established practice on which to draw to evaluate and measure non-financial information allows for different,

but acceptable, measurement techniques and can affect comparability between entities and over time.

Work performed

We are required to plan and perform our work in order to consider the risk of material misstatement of the data. In doing so and based on our professional judgement, we:

- Conducted interviews with Group functions to assess consolidation processes, use of company-wide systems and controls performed at Group level;
- Performed an assessment of materiality and the selection of topics for the 2017 Ørsted A/S ESG Statement;
- Conducted analytical review of the data and trend explanations submitted by all business units for consolidation at Group level;
- Evaluated internal and external documentation to determine whether information in the 2017 Ørsted A/S ESG Statement is supported by sufficient evidence.

Management's responsibilities

Management of Ørsted A/S is responsible for:

- Designing, implementing and maintaining internal control over information relevant to the preparation of data in the 2017 ESG Statement on pages 147-154 in the Annual Report that are free from material misstatement, whether due to fraud or error;
- Establishing objective accounting principles for preparing data;
- Measuring and reporting data in the 2017 ESG Statement based on the accounting principles; and

- The content of the 2017 ESG Statement.

Our responsibility

We are responsible for:

- Planning and performing the engagement to obtain limited assurance about whether data in the 2017 Ørsted A/S ESG Statement on pages 147-154 of the 2017 Annual Report are free from material misstatement, whether due to fraud or error;
- Forming an independent conclusion, based on the procedures we have performed and the evidence we have obtained; and
- Reporting our conclusion to the Stakeholders of Ørsted A/S.

Glossary

Availability: Time-based availability is the ratio of the number of hours in a given period the offshore wind farms are available for power generation to the total number of hours in the same period. Total availability is weighted on the basis of the size of the individual wind farms. Availability is adjusted for breakdowns if compensation is received from the transmission owner.

Biomass conversion: When a CHP plant is converted from using fossil fuels to using biomass such as wood pellets, wood chips and straw. After the conversion, the CHP plant will typically be able to use biomass along with the original fuel types.

Carbon emissions allowances: Carbon dioxide emissions allowances subject to the European Union Emissions Trading Scheme (EU ETS).

CfD: A Contract for Difference is a subsidy that guarantees the difference between the market reference price and the exercise price won.

CHP plant: A Combined Heat and Power (CHP) plant generates both heat and power in the same process.

Commissioning/COD: When our assets are in operation, and the legal liability has been transferred from the supplier to us.

Cost of electricity: Average cost measured as present value per megawatt hour (MWh) generated from offshore wind power covering costs for development and construction as well as subsequent operation and maintenance of the offshore wind farm.

Decided (FID) capacity: Installed offshore wind capacity plus capacity for wind farms where a final investment decision has been made.

Degree days: Number of degrees in absolute figures in difference between the average temperature and the official Danish indoor temperature of 17 degrees Celsius.

EEX: European Energy Exchange, German power exchange.

EPC: Engineering, Procurement and Construction. The part of our business which handles the construction and installation of our offshore wind farms.

FTE: Employees (Full-Time Equivalent). The number of full-time employees during a fixed time period.

Generation capacity: Ørsted's ownership of the wind turbines. The wind turbines are included when each wind turbine has passed the 240-hour test.

Green certificates: Certificate awarded to producers of environment-friendly power as a supplement to the market price of power in the given price area.

Green dark spread (GDS): Green dark spread represents the contribution margin per MWh of power generated at a coal-fired CHP plant of a given efficiency. It is determined as the difference between the market price of power and the cost of the coal (including associated freight costs) and carbon emissions allowances used to generate the power.

Green spark spread (GSS): Green spark spread represents the contribution margin per MWh generated at a gas-fired power station of a given efficiency. It is determined as the difference between the market price of power and the costs of the gas and carbon emissions allowances used to generate the power.

Hedging instruments: Financial and physical instruments that can be used to guarantee a specific price for the purchase or sale of, for example, commodities and currency.

Installed capacity: Installed capacity where the offshore wind farm has been completed and has passed the 200-hour test.

LNG: Liquefied Natural Gas. Gas that has been liquefied by cooling to minus 161 degrees Celsius. LNG takes up 600 times less space than conventional gas.

Load factor: The ratio between the actual power generation in a given period relative to the potential generation which is possible by continuously exploiting the maximum capacity over the same period.

LTIF: Lost-Time Injury Frequency. Ørsted defines lost-time injuries as occupational injuries resulting in at least one day's absence from work in addition to the day of the injury.

NBP: National Balancing Points, UK gas hub.

Nord Pool: The Norwegian-based Nordic power exchange, which facilitates power trading in Norway, Sweden, Finland and Denmark.

Offshore transmission assets: Offshore transmission assets connect offshore generation to the onshore grid, and typically include the offshore power transmission infrastructure, an onshore substation and the electrical equipment relating to the operation of the substation.

O&M: Operation and Maintenance. The part of our business that operates and maintains our offshore wind farms after installation.

Partnership income: Income originating from our partners' purchase of ownership interests in the offshore wind farms. Includes both the gain in connection with the farm-down and the subsequent construction of the wind farm.

Power station: A power station generates power only.

PSO: Indirect taxes regarding the public service obligation (PSO) which are used to finance research and green energy and are charged to power customers along with other tariff elements.

Public obligation: A company with a public obligation is bound by law to deliver power or natural gas to a certain geographic area at prices approved by the Danish Energy Regulatory Authority.

QHSE: Quality, Health, Safety and Environment.

Ramp-up: Generation until an offshore wind farm has been completed and commissioned.

ROCs: Renewable Obligation Certificates issued by Ofgem in the UK to operators of accredited generating stations for the eligible renewable energy they generate. Operators can trade ROCs with other parties.

Stress: Method of measuring the market trading risk of loss on a portfolio from day to day, calculated on a fair-value basis.

Thermal generation: Power and heat generated through the combustion of fossil fuels, biomass or waste.

TRIR: In addition to lost-time injuries, TRIR also includes injuries where the injured person is able to perform restricted work the day after the accident as well as accidents where the injured person has received medical treatment.

TTF: Title Transfer Facility, Dutch gas hub.

TWh: Terawatt hour. The amount of energy generated in one hour with the effect of 1TW. 1TWh is equivalent to 1,000GWh or 1,000,000MWh.

Value at Risk (VaR): A financial term used for measuring the loss that may occur in connection with a risk position, assuming a certain volatility and that the position is held for a certain period of time

Wind energy content: The ratio between the actual reported generation in a given period, adjusted for availability losses, and the generation in a 'normal wind year', based on historical wind data for the individual areas where the offshore wind farms are located.

Wind speed: Shows the wind speed for Ørsted's offshore wind farms. The wind measurements are weighted on the basis of our generation capacity and can be compared to a normal wind period, based on 20 years' historical wind observations.

Chairman's statement

Green light ahead

The UN's 2030 Agenda for Sustainable Development calls for making significant progress on some of the world's greatest challenges. Global climate change caused by man-made carbon emissions is one of the key threats to human societies and the planet, and urgent action is needed. Human activity has already caused an increase of approx 1.1°C above pre-industrial levels. If emissions continue at the current rate, global warming is likely to reach 1.5°C above pre-industrial levels at the earliest in 2030, crossing a key threshold set by climate science to avoid irreversible climate change.

The challenge of global warming requires a profound transformation of our global energy systems – from black to green energy. At Ørsted, our vision is a world that runs entirely on green energy. As one of the global leaders

in green energy, we are committed to providing tangible and scalable solutions to transform global energy systems from black to green.

In 2018, we continued our successful deployment of green energy, reaching 8.3GW of renewable energy capacity built by Ørsted. Over the past decade, Ørsted and our partners have invested approx DKK 165 billion in deploying green energy. For the next seven years, we plan to further accelerate our build-out. By 2025, more than 99% of our energy generation will come from renewable sources, and by 2030, our ambition is to reach more than 30GW of green energy deployed, allowing more than 50 million people to be powered by green energy built by Ørsted. The ambitious decarbonisation of our power and heat generation puts the carbon reduction from our own operations 27 years ahead of the decarbonisation trajectory for the energy industry

that is recommended by climate scientists to stay below the 2°C-threshold defined in the Paris Agreement. We further commit ourselves to reduce our carbon emissions in line with the recent scientific recommendation to limit global temperature increases to no more than 1.5°C above pre-industrial levels.

In 2018, we took important steps in shaping our portfolio towards becoming one of the world's leading renewable energy companies. We announced our intention to exit our power distribution and residential customer businesses, which will allow us to focus entirely on renewable energy generation and market access. We also announced the acquisition of Lincoln Clean Energy, which will serve as our platform for creating a leading North American onshore renewables business, spanning onshore wind, solar energy and storage. Finally, we announced the acquisition of Deepwater Wind, creating a leading offshore wind platform in the US together with our existing US organisation.

Our commitment to people remain strong. Particularly, safety is a focus area for us, and in 2018, we once again improved workplace safety with a total recordable injury rate per million working hours (TRIR) at a record low level of 4.7. Furthermore, we reaffirmed our commitment to being an inclusive workplace for all employees regardless of personal characteristics by joining the UN LGBTI Standards of Conduct for Business. To further support gender diversity

in management, we implemented the 'Female Spotlight' programme that prepares talented women for senior leadership positions.

Profit for the year amounted to DKK 19.5 billion, Ørsted's best result ever. The Board of Directors recommends paying a dividend of DKK 9.75 per share.

On behalf of the Board of Directors, I would like to thank the employees and management of Ørsted for their spirited commitment to turning the vision of green energy into reality, and for bringing green solutions to existing and new markets that share our vision of a world that runs entirely on green energy.

Thomas Thune Andersen
Chairman

“
As one of the global leaders in green energy, we are committed to providing tangible and scalable solutions to transform global energy systems from black to green.

CEO's review

Strong operational and financial results and strategic acquisitions have strengthened our position as a world leader in green energy:

- Operating profit (EBITDA) increased by 33% and totalled DKK 30.0 billion.
- Operating profit from offshore wind farms in operation increased by 29% to DKK 11.0 billion.
- Farm-down of 50% of Hornsea 1 was one of the largest renewable energy M&A transactions ever and contributed DKK 15.1 billion to EBITDA.
- Green share of generation increased from 64% to 75%.
- Strong progress in the construction of our new wind projects.
- New offshore wind projects awarded in the US, Germany and Taiwan.
- Acquisition of the US-based onshore wind developer Lincoln Clean Energy.
- Acquisition of the leading US-based offshore wind developer Deepwater Wind.
- Decision to exit our Danish power distribution and residential customer businesses.
- New ambitious targets for the Group's long-term strategic and financial development.

Financial results

In 2018, we achieved a strong operating profit (EBITDA) which significantly exceeded our expectations at the beginning of the year.

EBITDA (excluding new partnerships) increased by 18% to DKK 15.0 billion. The good results were driven by an increase in generation from our offshore wind farms in operation, which led to an increase of 29% in EBITDA from these activities. Including new partnerships, EBITDA increased by 33% to DKK 30.0 billion, of which DKK 15.1 billion came from the 50% farm-down of Hornsea 1.

Return on capital employed (ROCE) was 32% compared to 25% in 2017.

Net profit amounted to DKK 19.5 billion, which was DKK 6.2 billion higher than last year.

Following the bioconversions of our CHP plants and the continued ramp-up of our offshore wind capacity, the green share of our heat and power generation increased from 64% to 75% in 2018.

Strategic development

Our vision is to create a world that runs entirely on green energy. We expect the global market for renewable energy to more than triple towards 2030. As one of the leading companies within renewable energy, Ørsted has a strong platform to take part in this build-out. In November, we launched new, ambitious targets for our long-term strategic and financial development.

Towards 2030, it is our strategic ambition to reach an installed capacity of more than 30GW renewable energy, provided that the build-out creates value for our shareholders.

By the end of 2018, our portfolio consisted of 12GW of offshore and onshore wind farms and biomass-fired combined heat and power plants that are either in production, under construction or have obtained final investment decision (FID). We also have projects with a capacity of 4.8GW for which we have been awarded the construction concessions or entered into offtake agreements, but are yet to make FID. In addition, we have a strong pipeline of projects under development. Towards 2030, it is our strategic ambition to reach an installed capacity of more than 30GW renewable energy, provided that the build-out creates value for our shareholders. Contributing to this ambition, we raised our 2025 ambition for offshore wind from 11-12GW to 15GW.

Our strategic ambition will be supported by an extensive investment programme. From 2019 to 2025, we currently expect total gross investments of approx DKK 200 billion. Investments in offshore wind farms are expected to constitute 75-85% of this programme. Onshore investments are expected to constitute 15-20%, while our investments in Bioenergy and Customer Solutions combined are expected to constitute 0-5%. The allocation reflects the changes we made to our asset portfolio in 2018, including the two acquisitions in the US and the decision to exit our power distribution and residential customer businesses.

The strategic plan is subject to our four capital allocation priorities. Firstly, we maintain our strong commitment to our credit rating target (BBB+/Baa1). Secondly, we intend to increase our annual dividends by a high single-digit percentage. The horizon of this dividend commitment is extended from 2020 to 2025. Thirdly, we will invest in value-creating growth. Finally, potential excess capital will be returned to our shareholders in the form of additional dividends and/or share buy-backs.

Offshore

In 2018, we reached significant milestones in our ambitious green strategy. In the UK, we commissioned Race Bank in January and Walney Extension, the world's largest wind farm, in May, and in Germany, we commissioned Borkum Riffgrund 2 in December. All were

commissioned ahead of schedule, underpinning our experience and efficiency within the construction of offshore wind farms. Together with the rest of the portfolio, the three commissioned offshore wind farms contributed to the continued growth in earnings.

In addition, our current offshore wind construction projects continue to progress according to plan. We have installed most of the foundations at Hornsea 1 in the UK, which will be the world's largest wind farm when completed, expectedly in the second half of this year.

The build-out of our portfolio also includes Borssele 1 & 2 in the Netherlands and Hornsea 2 in the UK. In February, we selected Siemens Gamesa Renewable Energy's 8MW wind turbines with a 167-metre rotor for Hornsea 2.

We continued our partnership model in 2018 with the 50% farm-down of Hornsea 1 to Global Infrastructure Partners. As part of the agreement, we will provide long-term operations and maintenance services (O&M) as well as a route to market for the power generated through our Customer Solutions business. The farm-down was one of the largest renewable energy M&A transactions ever and included the largest single-project renewable energy financing scheme to date. The valuation underpins the attractiveness of our offshore wind assets.

In April, we were awarded 900MW capacity in the first Taiwanese grid allocation as Greater Changhua 1 & 2a were awarded 605MW and 295MW, respectively. In the price auction in June, we were awarded an additional 920MW. With a total capacity of 1,820MW, we are as such able to fully utilise our Greater Changhua 1, 2 and 4 sites.

On 30 January 2019, the 2019 feed-in tariff was announced. We take note of the 6% tariff reduction compared to the 2018 tariff as well as the introduction of a cap on annual full-load hours, and we will now collaborate closely with the supply chain to mitigate the adverse impact of these PPA changes with the objective of making the projects investable.

Greater Changhua 1 & 2a are facing extraordinarily high costs related to creating a local supply chain at scale, reinforcing the onshore grid infrastructure and building, operating and maintaining offshore wind farms in challenging site and weather conditions.

We continue to work with the Taiwanese authorities and local stakeholders to reach

key outstanding project milestones, such as obtaining the establishment permit, completing the supply chain plan and signing the power purchase agreement.

Once we have clarity on the outcome of supply contract renegotiations and have achieved all key project milestones, Ørsted's Board of Directors will review and decide on the final investment case.

In Germany, we were awarded the right to build Borkum Riffgrund West 1 and Gode Wind 4 with a capacity of 420MW and 132MW, respectively. Combined with the awards from the auction in 2017, we have secured the full capacity of 900MW in the Borkum Riffgrund cluster (Cluster 1) without subsidies. In addition, we have secured a total capacity of 242MW for Gode Wind 3 and 4 at a weighted average feed-in tariff of EUR 81 per MWh. Subject to FID, the wind farms are expected to be operational in 2024/25, respectively.

In October, The Crown Estate in the UK confirmed that we have satisfied the application criteria for the development of our Race Bank Extension offshore wind farm, which expectedly will now be subject to a plan-level Habitats Regulations Assessment (HRA). Subject to all necessary consents being granted, Race Bank Extension will be able to participate in future auctions under the contracts for difference (CfD) scheme.

Early October, we entered into an agreement to acquire Deepwater Wind. The acquisition was completed in November at an enterprise value of DKK 4.7 billion. Deepwater Wind is the leading US-based offshore wind developer

Portfolio changes support focus on renewable generation

<p>Lincoln Clean Energy</p> <p>– Transaction closed</p>	<p>Deepwater Wind</p> <p>– Transaction closed</p>	 Offshore  Onshore  Bioenergy  Customer Solutions	<p>Power distribution, residential customer (B2C) and city light businesses</p> <p>– Expected in 2019</p>

with an attractive and geographically diverse portfolio of projects along the US East Coast.

In the US, we were awarded an additional 104MW in December in the clean energy auction in Connecticut. Our Revolution Wind project has now secured a total capacity of 704MW connecting into New England, including previously awarded capacity in Rhode Island and Connecticut, which we will construct as one joint project, and thus unlock significant procurement, construction and operational synergies.

By end 2018, the Deepwater Wind portfolio totals a capacity of approx 2.6GW, consisting of 30MW in operation, 954MW of development projects with long-term revenue contracts in place or under negotiation and approx 1.6GW which potentially may be developed in three awarded lease areas.

In October, we bid into Rhode Island's auction for up to 400MW of renewable energy. Further, in December 2018, we bid into the 1,100MW New Jersey auction with our Ocean Wind project, and we expect to bid into the announced 800MW auction in New York in February 2019.

In January 2019, we furthermore announced that we have signed a memorandum of understanding to work jointly with Tokyo Electric Power Company (TEPCO) on the Choshi offshore wind project near Tokyo, and towards a broader strategic partnership.

We look forward to expanding our footprint in both Europe, the US and Asia-Pacific and working together with our new partners.

Onshore

In August, we entered into an agreement to acquire Lincoln Clean Energy (LCE), a US-based developer, owner and operator of onshore wind farms. The acquisition was completed on 1 October 2018 at an enterprise value of DKK 5.6 billion. Through LCE, our onshore business will be a growth platform and provide strategic diversification to Ørsted's portfolio.

Our aim is to create a leading North American company within renewable energy, including onshore wind, solar energy and energy storage.

Lincoln Clean Energy has an operating portfolio of 813MW and a near-term portfolio of 714MW of onshore capacity in advanced stages of development.

In December, we commissioned the 300MW onshore wind farm Tahoka in Texas. Furthermore, we took FID on the onshore wind farm Lockett. The wind farm is under construction and is expected to be commissioned in Q3 2019.

In addition, we announced a 500MW wind and solar power purchase agreement (PPA) with ExxonMobil, distributed evenly between the Sage Draw onshore wind farm and the Permian solar PV project.

From our Capital Markets Day in Gentofte on 28 November.

//

2018 was a year with many changes, and with the acquisitions of Lincoln Clean Energy and Deepwater Wind, we welcome more highly skilled employees to our company.

Utility business

In June, we announced our plans to divest our Danish power distribution, residential customer and city light businesses. The process came to a stop in January when our majority shareholder, the Danish State, informed us that there was no longer the necessary political support. It is still the Board of Directors assessment that Ørsted is not the best long-term owner of these businesses. Consequently, we have classified the businesses as assets held for sale and continue to investigate the different options for exiting them. We expect an exit from all of these businesses during 2019.

In June, we divested our 50% ownership share in the gas-fired power plant Enecogen in the Netherlands. The divestment reinforces our focus on green energy.

In June, we commissioned our new biogas plant in Kalundborg, Denmark, together with our partner Bigadan. The plant will recycle

waste from the local production facilities of our corporate customers Novozymes and Novo Nordisk and convert it into biogas. We are looking to expand our portfolio of biogas plants in the future.

The development of our first Renaissance plant in the UK is still in progress. By means of enzymes, the technology efficiently converts household waste into biogas and recyclable materials. While the enzymatic process is working satisfactory, we have experienced mechanical challenges in the sorting process and have had to undertake a programme to enhance flexibility and redundancy in the sorting hall. We are currently finalising this optimisation. Final commissioning is expected during the first half of this year.

In May, the High Court of Western Denmark ruled that Elsam, one of the six companies that merged into DONG Energy, now Ørsted, back in 2006, had not abused its dominant

market position in 2005 and the first half of 2006. In October, the Danish Appeals Permission Board ruled in favour of Ørsted and decided that the Danish competition authorities would not be given permission to try the ruling before the Supreme Court. Consequently, the ruling of the High Court stands. We are pleased that we can put this court case behind us and move forward. However, we are still awaiting the development in the Elsam competition case for the period 2003 to 2004 and the related compensation case.

At the end of December, 679,000 smart meters installed by Radius and Kamstrup had been taken into use by our power distribution customers. This is a significant milestone, marking that we are well on our way to replacing meters for all our 1 million customers by the end of this year.

Finally, our Customer Solutions business has signed a 15-year agreement with Innogy to balance the power generation from their 860MW offshore wind farm Triton Knoll in the UK. Under the agreement, Ørsted will sell the expected generation from the wind farm on the power market on a day-ahead basis, thus handling deviations from the expected generation the following day.

Employees

We have a strong focus on the safety and well-being of our employees. In 2018, we achieved a positive development in the total recordable injury rate (TRIR) and saw yet another year with no life-changing accidents. The 2018 employee survey showed a continued high score on satisfaction and motivation – in line with the 2017 results. It positions

Ørsted in the top 10% compared to external benchmarks in all major markets.

Once again, 2018 was a year with many changes, and with the acquisitions of Lincoln Clean Energy and Deepwater Wind, we welcome more highly skilled employees to our company. The integration of the organisations is already well under way. All our employees deserve credit and acknowledgement for their dedicated performance during the past year. Their strong competences and entrepreneurial spirit – fuelled by the passion for what Ørsted stands for and the work we do – constitute the very foundation of our company.

Henrik Poulsen
CEO and President

Performance highlights

Profits and returns

Operating profit (EBITDA)
DKKbn

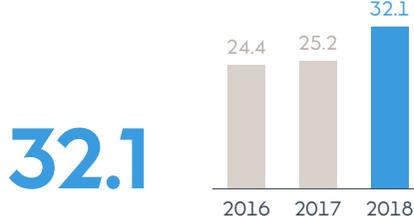

In 2018, we achieved a strong EBITDA which significantly exceeded our expectations at the beginning of the year. It was the highest to date and was driven by an increase in generation from our offshore wind farms and profit from the 50% farm-down of Hornsea 1. The amount above the dotted lines represent profits from new partnerships.

Net profit (continuing operations)
DKKbn

Profit for the year amounted to DKK 19.5 billion, Ørsted's best result ever driven by the strong operating profit.

Return on capital employed (ROCE)
%

ROCE was also significantly impacted by the Hornsea 1 farm-down gain in 2018. Our target is an average ROCE of around 10% for the Group in the 2019-2025 period.

Sustainability

Green share of generation
%

The green share of heat and power generation continued to increase to a new high of 75%, following continued ramp-up of our offshore wind capacity, and full-year effect from our most recent biomass-converted CHP plants.

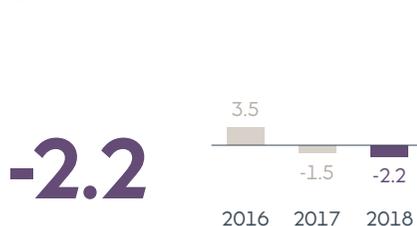

Cash flow and balance sheet

Gross investments
DKKbn

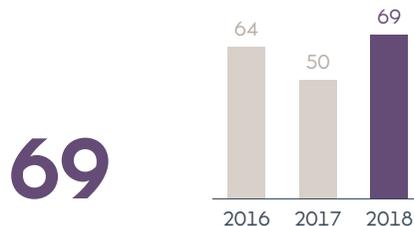

The gross investment level was high in 2018 due to the acquisitions of Deepwater Wind (DKK 4.0 billion) and Lincoln Clean Energy (DKK 5.6 billion) in addition to high construction activity in our project portfolio.

Interest-bearing net debt¹⁾
DKKbn

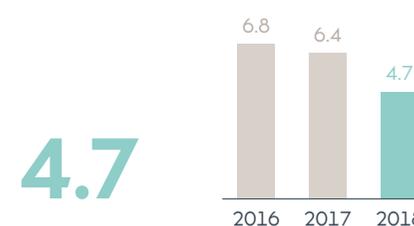

We had a net cash position of DKK 2.2 billion at the end of 2018.

Credit metric (FFO/adjusted net debt¹⁾
%

The credit metric 'funds from operations' (FFO) relative to adjusted net debt amounted to 69% in 2018, positively affected by our strong operating profit and low adjusted net debt.

Safety
TRIR

We have a strong focus on the safety and well-being of our employees. In 2018, we achieved a record-low total recordable injury rate (TRIR).

¹⁾ Interest-bearing net debt, including 50% of hybrid capital and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax.

Follow-up on outlook announced for 2018

In the outlook announced in our annual report for 2017, we expected EBITDA without new partnerships of DKK 12-13 billion and gross investments of DKK 16-18 billion for 2018.

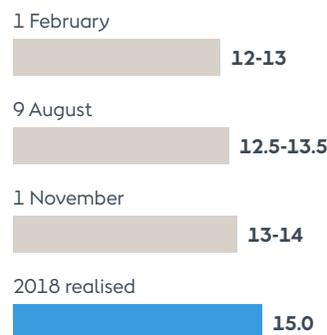

With EBITDA, excluding new partnerships, of DKK 15.0 billion, our expectations were exceeded. The main reasons were good progress on the construction of our new offshore wind farms Walney Extension and Borkum Riffgrund 2 during the year, including higher earnings from construction agreements, as well as faster ramp-up than expected. Furthermore, we had a positive outcome of an arbitration related to a gas purchase contract, positive effect in our gas portfolio business from increasing gas prices in 2018 (which all other things equal will have a reverting negative effect in 2019) and better than expected performance in our LNG business from strong market fundamentals.

EBITDA, including the profit from the Hornsea 1 partnership, amounted to DKK 30.0 billion, which was significantly higher than the 2017 EBITDA level of DKK 22.5 billion, in line with our guidance.

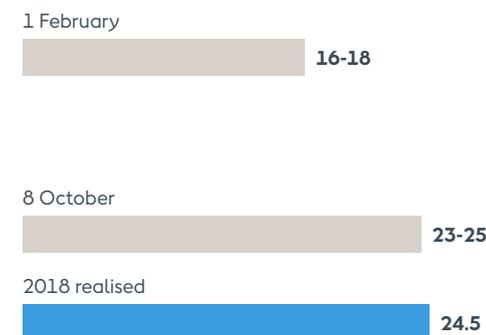

Gross investments amounted to DKK 24.5 billion. The main reasons for the increase were the acquisitions of Lincoln Clean Energy and Deepwater Wind and early investments in the US offshore and onshore portfolio in Q4 2018 to qualify for future tax credits. In addition, gross investments related to construction of offshore wind farms were lower than expected due to shifts in spending across years and the Race Bank and Walney Extension construction projects being finalised at a lower capex spend than expected.

In Bioenergy, the focus has been on realising positive free cash flows from 2018. The free cash flows was positive and amounted to DKK 518 million of which the divestment of Enecogen contributed with DKK 383 million.

EBITDA excl. new partnerships, realised vs guidance DKKbn

Investments, realised vs guidance, DKKbn

Outlook 2019

EBITDA guidance method

As in 2018, our guidance is based on our existing activities and thus only include the effect of existing partnership agreements. Earnings from new partnerships in 2018 concerned Hornsea 1 and amounted to DKK 15.1 billion. We do not expect new partnerships in 2019.

EBITDA

EBITDA (business performance), excluding new partnership agreements, is expected to be DKK 15.5-16.5 billion in 2019, corresponding to an increase of 4-10%. The outlook is based on the expected development in the business units (compared to 2018), as described below.

Offshore – higher

- Earnings from offshore wind farms in operation are expected to increase as a result of the full commissioning of Hornsea 1 in H2 2019 as well as higher earnings from Borkum Riffgrund 2 and Walney Extension, which were fully commissioned during 2018.
- Earnings from existing partnership agreements, which amounted to DKK 3.7 billion in 2018, are expected to decline. In 2019, earnings from existing partnerships will primarily come from the remaining part of the Hornsea 1 farm-down (approx 15%).
- Expensed project development costs are expected to increase as a result of efforts

to drive global expansions. Other, including project development costs, are expected to make up approx DKK 2.4 billion.

Onshore – significantly higher

- As we acquired Lincoln Clean Energy on 1 October 2018, 2019 will be the first full year of operation from this business unit.
- Earnings from onshore wind farms in operation are expected to increase as a result of ramp-up from our new wind farms. In December 2018, we commissioned Tahoka, and we expect to commission Lockett in Q3 2019.

Bioenergy – higher

- Total EBITDA from our heat and power generation activities is expected to increase, primarily as a result of expected increased generation on biomass and expected increase in Danish wood pellet spreads and green dark spreads.
- Earnings from our ancillary services were high in 2018, driven by higher demand during the summer and increased demand from Germany (DK/DE connection). We expect 2019 earnings from our ancillary services to be in line with 2017.

Customer Solutions – significantly lower

- We expect a significant decline in Markets due to gains from increasing gas prices in 2018 reverting with negative impact in 2019.

Outlook 2019, DKKbn	2018 realised	2019 guidance
EBITDA (without new partnerships)	15.0	15.5-16.5
Offshore (without new partnerships)	12.7	Higher
Onshore	0.0	Significantly higher
Bioenergy	0.4	Higher
Customer Solutions	2.0	Significantly lower
Gross investments	24.5	21-23

Our EBITDA guidance for the Group is the prevailing guidance, whereas the directional earnings development per business unit serve as a means to support this. Higher/lower indicates the direction of the business unit's earnings relative to the results for 2018.

- Earnings from the gas portfolio were further positively affected by a positive outcome of an arbitration case in 2018, which is not expected to be repeated in 2019.
- In 2018, earnings from our LNG business was positively affected by strong market fundamentals. We expect lower earnings from these activities in 2019.
- We plan to exit our Danish power distribution and residential customer businesses during 2019, but have included them throughout the year in our outlook. We do not expect any significant changes in earnings from these compared to 2018.

IFRS 16 impact

EBITDA in 2019 is expected to be positively affected by DKK 0.6 billion from the

implementation of IFRS 16, compared to a continued expensing of operational lease costs. The majority of the impact is in Offshore.

Gross investments

Gross investments for 2019 are expected to amount to DKK 21-23 billion. The outlook reflects a high level of activity in Offshore (Hornsea 1, Borssele 1 & 2, Hornsea 2 and Greater Changhua 1 & 2a (assuming FID)), Onshore (Lockett, Sage Draw and Plum Creek), biomass conversion of Asnæs Power Station and installation of smart meters.

In addition to gross investments, significant funds are temporarily tied up in connection with the construction of transmission assets for offshore wind farms in the UK and for our partners. These funds are a part of our operating cash flows.

At the end of 2018, funds tied up in work in progress totalled DKK 9.7 billion. During 2019, we expect to divest the Walney Extension and Race Bank offshore transmission assets, but we still expect to see high level of funds tied up in work in progress in 2019 as a result of the construction of transmission assets at Hornsea 1 and 2. The construction of Hornsea 1 for partners is expected to be operating cash flow neutral, as we will receive milestone payments continuously from our partner during the construction phase.

Uncertainties, prices and hedges

Our offshore wind farms are largely subject to publicly regulated prices, implying a high degree of certainty about the income. This means that we know the price per generated MWh for most wind farms in Denmark and Germany as well as the CfD wind farms in the UK. For our British ROC wind farms, we also know the subsidy per generated MWh which we will receive in addition to the market price. In 2019, the ROCs are expected to account for 62% of the total income from these wind farms. In 2019, the total publicly regulated prices and subsidies are expected to account for 78% of the income from our offshore wind farms in operation.

The part of our generation from offshore wind farms and power stations which is exposed to market prices has to a large extent been hedged for 2019. The same applies to our currency risks. The market value of financial hedging instruments and US power purchase agreements relating to our operations and divestment of assets deferred for recognition in business performance EBITDA in 2019 amounted to DKK -1.5 billion at the end of

2018. This effect is included in the outlook for 2019 (see note 1.6).

The most significant uncertainty surrounding the operating profit from existing activities in 2019 relates to the size of our power generation, which depends on wind conditions, the ramp-up of new wind farms and potential break-downs, and to a lesser extent our earnings from existing partnership agreements, timing in value adjustments related to gas at storages, heat and market trading activities. In addition, we are subject to litigation cases that potentially are concluded in 2019.

If a financially viable way forward is not found for our Greater Changhua projects, and we consequently decide not to progress with the projects during 2019, we have made certain commitments, which we will need to provide for.

Forward-looking statements

The annual report contains forward-looking statements which include projections of our short and long-term financial performance and targets as well as our financial policies. These statements are by nature uncertain and associated with risk. Many factors may cause the actual development to differ materially from our expectations.

These factors include, but are not limited to, changes in temperature, wind conditions and precipitation levels, the development in power, coal, carbon, gas, oil, currency and interest rate markets, changes in legislation, regulation or standards, the renegotiation of contracts, changes in the competitive environment in our markets and reliability of supply. Read more about the risks in the chapter 'Risk and risk management' and in note 7.

Financial estimates and policies

Financial estimates

In connection with our Capital Markets Day in November 2018, we introduced new strategic estimates towards 2025.

From 2019-2025, we expect total gross investments of approx DKK 200 billion. Investments in offshore wind farms are expected to constitute 75-85% of the investment programme. Onshore investments are expected to constitute 15-20%, while our combined investments in Bioenergy and Customer Solutions are expected to constitute 0-5%.

Towards 2023, we expect an average increase in operating profit (EBITDA) from offshore and onshore wind farms in operation (including O&M agreements and power purchase contracts) of 20% a year, reaching an estimated level of DKK 25-26 billion in 2023.

The largest share of Ørsted's operating profit (EBITDA) will still be generated by contract-based or regulated activities. We expect an average of around 90% of EBITDA in 2019-2025 to come from contract-based or regulated activities.

Our target is an average return on capital employed (ROCE) of around 10% for the Group in the 2019-2025 period. The reduction compared to our earlier target of 12-14% for 2018-2023 is a result of earnings from the partial divestment of Hornsea 1 in 2018 being outside the new period and the acquisitions of Lincoln

Clean Energy and Deepwater Wind, which will increase the capital expenditure in these years, but contribute to earnings with some delay.

Financial policies

The Board of Directors recommends to the annual general meeting that dividends of DKK 9.75 per share be paid for 2018, equating an increase of 8% and a total of DKK 4.1 billion.

Supported by the expected increased cash flows from future offshore and onshore wind farms, we still intend to increase annual dividends by a high single-digit percentage compared to the previous year's dividends. This policy has been extended to cover the period until 2025 (previously 2020).

Our dividend policy and other expected capital allocations are subject to our commitment to our BBB+/Baa1 rating profile.

Financial estimates

	Target	Year
Total CAPEX spend	DKK 200bn	2019-2025
Average return on capital employed (ROCE)	~10%	2019-2025
Average share of EBITDA from regulated and contracted activities	~90%	2019-2025
Average yearly increase in EBITDA from offshore and onshore wind farms in operation	~20%	2017-2023

Financial policies

Rating	Min. Baa1/BBB+/BBB+ (Moody's/S&P/Fitch)
Capital structure	~30% (FFO/adjusted net debt)
Dividend policy	Ambition to increase the dividend paid by a high single-digit rate compared to the dividends for the previous year up until 2025

We have a ROCE target of 10% on average for the period 2019-2025. Read more about our key metrics, financial targets and policies in the presentation from our Capital Markets Day in November 2018 on orsted.com/en/capital-markets-day

Our current rating is in accordance with the policy.

The green transformation

One third of all global carbon emissions come from the production of energy. To avoid an irreversible change in the global climate and ensure a habitable planet for future generations, we need to transform the world's energy systems from black to green.

The Sustainable Development Goals (SDGs) were adopted by all United Nations' member states in 2015. The goals cover the world's greatest challenges that must be addressed towards 2030 to improve conditions for people and the planet. The defining challenge of our generation, impacting all other SDGs, is to decelerate climate change – addressed in SDG 13.

The latest report by the UN's IPCC confirms that human activity has already caused temperatures on our planet to increase by approx 1.1°C above pre-industrial levels. Staying below 1.5°C warming necessitates a 45% reduction of emissions by 2030 (from 2010-levels) and 'net-zero' emissions by 2050. This requires an almost completely decarbonised power sector.

Carbon emissions originate from a range of sectors that all need to be decarbonised to effectively avoid severe climate change: electricity and heat generation (25%), other energy generation (10%), industry (21%), transportation (14%), land use (24%) and buildings (6%).

So far, global decarbonisation has mainly taken place in power generation, driven by the deployment of renewable energy at scale, reducing cost to a level which is now competitive to fossil fuels and nuclear power in many markets. This is good news for the continued decarbonisation of global energy production and for other sectors benefitting from increased electrification.

The continued deployment of renewable energy systems will create significant business opportunities for green energy solutions. From 2018 to 2030, Bloomberg New Energy Finance (BNEF) expects global investments in renewable energy to amount to approx USD 3.5 trillion.

Living up to the Paris Agreement

The Paris Agreement, signed by 195 countries in 2016, is the most ambitious and comprehensive global political framework advancing SDG 13 on climate action. The agreement demonstrates the global commitment among a vast majority of the world's countries to combat climate change. According to the Paris Agreement, the countries commit to keeping the global temperature increase well below 2°C and to pursue efforts to limit the temperature increase even further to 1.5°C.

However, actions and decisions taken so far by the countries under the Paris Agreement currently put the world on a path towards

a global warming of more than 3°C. Hence, there is a need for more ambitious national action plans to channel investments towards a greener and more climate-resilient economy.

Climate-related financial disclosures

Capital allocation decisions are one of the key levers for decarbonising the global economy. In 2017, the industry-led Task Force on Climate-Related Financial Disclosures (TCFD) launched its recommendations on how to improve the way climate-related risks and opportunities are factored into investment decisions. The initiative was launched by the G20 and illustrates how political and private sector leaders can unite in facilitating progress towards the climate-related SDGs.

The TCFD recommendations aim to improve understanding and disclosure of companies' climate-related risks and opportunities. These include physical factors, such as the sea level rising or storms that can affect assets, and transitional factors, such as carbon prices or technology shifts that can affect business strategies. By adopting the recommendations, companies signal that they are considering and acting on the impacts of climate change on their business. Ultimately, this will help fight climate change and drive the transition towards a sustainable, low-carbon economy.

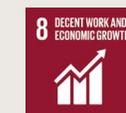

Top three SDGs that we help promote

Adopted by all United Nations member states in 2015, the 17 Sustainable Development Goals (SDGs) constitute the most pressing economic, social and environmental challenges that the world needs to solve. In Ørsted, we focus particularly on advancing two of the SDGs, namely 7 (clean and affordable energy) and 13 (fighting climate change), and by consequence we also contribute significantly to SDG 8 (economic growth).

SDG 7 aims to ensure access to clean and affordable energy for all. Today, 81% of global energy consumption is based on fossil fuels. To achieve the goal, societies need to accelerate the transformation of our energy systems from black to green.

SDG 8 aims to promote sustainable economic growth and decent work for all. Converting the world's energy systems from black to green requires significant investments that create economic growth and employment.

SDG 13 calls for urgent action to fight climate change and its impacts. Approx 75% of global carbon emissions come from the use of fossil-based energy. This energy is used for power, heat, industrial processes and for transportation. The remaining 25% of global emissions come from agriculture, forestry and other land use. Creating a world on green energy will be necessary to limit climate change.

Ørsted's response to the global climate challenge

Society's need to phase out fossil fuels and deploy renewable energy at scale has been the key driver in Ørsted's decade-long strategic transformation from black to green energy. From being one of the most coal-intensive utilities in Europe a decade ago, we are today among the global leaders in renewable energy, driven by a vision of creating a world that runs entirely on green energy.

We are keenly committed to being among the leading companies that help make societies progress towards the SDGs.

We contribute to the achievement of SDG 7 by deploying renewable energy at scale. Our strategic target is to increase the green energy share of our heat and power generation to 99% by 2025. By 2025, our installed offshore wind capacity alone will be able to power more than 30 million people.

Through our green energy investments, we also contribute to SDG 8. We have invested DKK 120 billion in deploying green energy in the past 10 years. Including our partners' share of Ørsted-led offshore wind build-outs, investments amount to DKK 165 billion in this period. In a lifecycle perspective, our and our partners' investments in deploying green offshore energy have created approx 180,000 jobs from the installed capacity and FID projects. Towards 2025, we plan to invest DKK 200 billion within renewables, adding significantly to further local economic growth and job creation, not least in our new markets.

The decarbonisation of our heat and power generation also helps contribute significantly to SDG 13. So far, we have reduced our carbon intensity by 72% from 462g CO₂e/kWh in 2006 to 131g CO₂e/kWh in 2018. In absolute terms, we have reduced our carbon emissions from 18 million tonnes in 2006 to 3.4 million tonnes in 2018. This has been realised by reducing our coal consumption by 81%, replacing it with sustainable biomass. Adding to this, we have contributed to avoiding more than 31 million tonnes of carbon emissions by deploying offshore wind farms.

As we deploy green energy and plan to phase out coal entirely by 2023, our carbon intensity will be reduced by 96% in 2023 compared to 2006. Our target puts us 27 years ahead of the 2°C trajectory projected by the International Energy Agency. This places our strategy well ahead of the Paris Agreement.

By pursuing our green vision and strategy, we are aligned with the TCFD recommendations to a large extent, and we decided to endorse the recommendations in 2018. The Board of Directors is directly or indirectly addressing climate-related risks and opportunities when assessing and deciding on new investments in assets or activities or on discontinuation of activities. In addition, climate-related risks are assessed as an integral part of our risk management processes. Still, however, the TCFD recommendations help us improve our understanding of climate-related financial risks and opportunities and disclose it in a useful way to our investors and other stakeholders. Our vision is aligned with investors who

are still more observant of climate-related risks as well as business opportunities offered to companies positioned to benefit from the important transformation from black to green.

Ørsted's response to the global climate challenge and our full range of sustainability programmes and SDG contributions are documented in our sustainability report.

Corporate social responsibility reporting

Our sustainability strategy and results are reported on in our sustainability and ESG performance reports which constitute our annual Communication on Progress to the UN Global Compact. The reports highlight areas in which our expertise can make a real difference when it comes to promoting the UN's global goals for sustainable development. With these reports, we live up to the requirements for corporate social responsibility reporting set out in section 99a of the Danish Financial Statements Act as well as section 99b on the gender balance at management levels, etc.

See and download the reports here:
orsted.com/sustainability2018
orsted.com/ESGperformance2018

Our strategic playing field

The renewable energy value chain is made up of various components. These range from generation of green power, through storage, transmission and distribution to the consumption side. Within this energy system, we have taken the following strategic positions.

Offshore wind is our core focus and has been since we decided to transform Ørsted to a green energy company. It is a rapidly growing market in the global energy system with attractive value-creating opportunities. We have been successful in leveraging our capabilities to become the leading global player in the offshore wind market, representing a 30% share of the total capacity in operation or under construction.

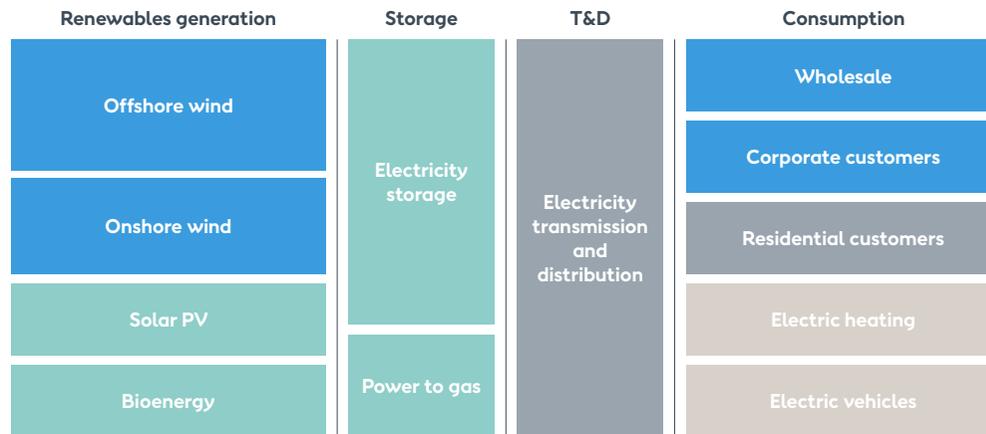

Onshore wind is our second growth platform where we now have a strong regional position, with the acquisition of Lincoln Clean Energy in the US. The US onshore market offers attractive value-creating opportunities and has significant long-term growth potential. The transaction provides technology and market diversification and enables us to serve the future energy demand through a multi-technology business platform. In addition, the US market will add to our scale and critical mass.

To secure market access, our strategic focus is on wholesale and corporate customers which account for the largest share of energy consumption. This position enables a route to market for our green energy generation.

Besides existing market positions, we explore the strategic and financial potential of additional green growth opportunities. Both solar PV, bioenergy and storage offer significant growth opportunities on the back of significant cost reductions.

Considering our rapidly growing global portfolio of renewable energy assets, we decided to initiate a structured divestment process of our Danish power distribution, residential customer and city light businesses in June 2018. Although the political support for continuing this structured process ceased on 13 January this year, we are continuing to investigate different options for exiting the businesses during 2019. In addition, following the political agreement in support of our IPO, we are conducting a structured divestment process of our offshore gas pipeline (including the Nybro Gas Treatment Plant) and oil pipeline (including the Frederica stabilisation plant). The transactions are expected to be signed in 2019.

Although we acknowledge electric heating and electric vehicles as key components in the renewable energy value chain, we have no actual plans to enter these markets.

● Invest to grow ● Explore potential ● Exit ● No presence

Our markets

The market share of renewables is increasing

The renewable energy share of global power generation is increasing. Excluding hydro, it grew from less than 2% in 2000 to 12% in 2018. This share is expected to continue to grow and to reach 26% by 2030. With renewable energy representing 27% of Europe's total power generation in 2018 (excl. hydro), Europe is leading the transformation. By 2030, renewable energy is expected to account for more than half of the European power generation (55%).

The global installed capacity of renewables (excluding Middle East, Africa and hydro) was 1,153GW in 2018 and is forecast to more than triple by 2030, reaching 3,678GW according to Bloomberg New Energy Finance (BNEF).

In 2018, China and Europe were the regions with most renewable capacity installed, each accounting for approx 30%. The global installed capacity is expected to continue to grow 10% annually, with China and Europe remaining the major regions followed by North America.

The technologies that constituted the largest share of installed renewable capacity in the world in 2018 were onshore wind and solar photovoltaics (PV). Onshore wind accounted for almost half of the renewable capacity, 46%, while solar PV accounted for 41%. Both technologies will remain the primary sources, accounting for 88% of the total renewable

capacity. However, offshore wind is expected to grow the fastest towards 2030 at an annual rate of 16%.

A key driver behind the growth in renewable energy is the rapidly declining costs. Onshore wind has become the most cost-competitive energy technology due to its rapidly expanding global capacity, which has contributed to economies of scale, higher learning effects and more technological innovation. On the other hand, conventional non-renewable technologies, such as coal, are facing increased costs due to reduced capacity factors, as they face increasing competition from renewable technologies.

Offshore wind

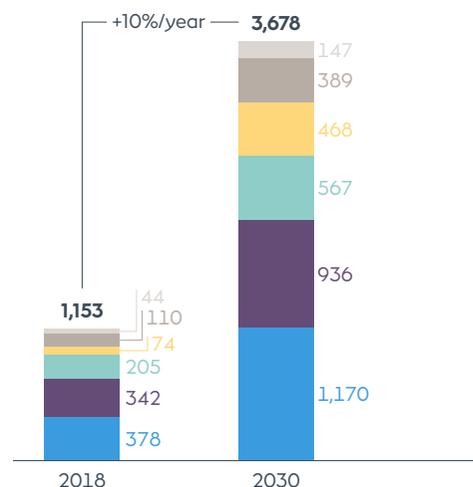

Installed global offshore wind capacity reached 21GW in 2018. In just three years, it has almost doubled, with an annual growth rate of 22%. According to BNEF, the offshore wind market is expected to continue this strong growth trajectory.

With an annual addition of more than 6GW, the capacity is expected to reach 34GW by 2020. Thereafter, it is expected to grow by 15% on average, bringing the global installed capacity to 132GW in 2030.

Currently, most offshore wind farms are located in Europe, which makes up approx 80%

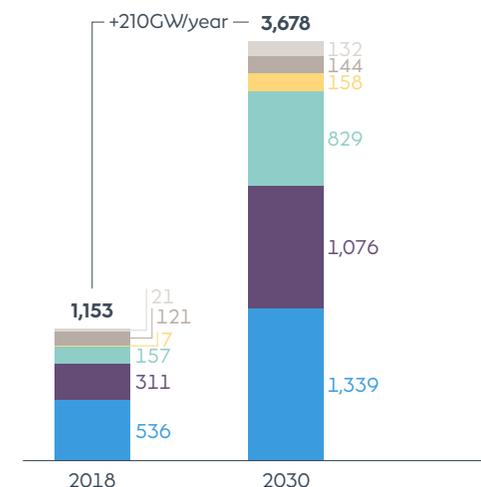

Global¹ renewable capacity by geography, GW installed

- Offshore wind

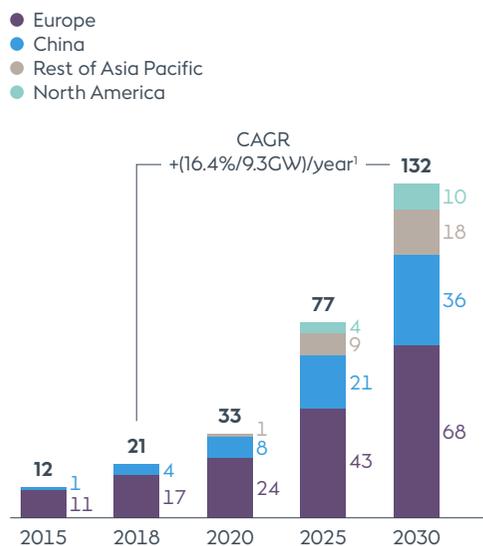

Source: Bloomberg New Energy Finance (BNEF), H1 2018 offshore wind market outlook. US includes the latest BNEF US offshore wind forecast from September 2018 (3GW higher than H1 2018 offshore wind market outlook from July 2018).

¹ Excludes Middle East and North Africa

² Excludes 'Other' (solar, thermal and geothermal), accounting for less than 2%

of the total market. Europe is expected to continue growing at strong double-digit rates towards 2030, thus upholding the position as the largest offshore wind market in the world with an expected share of the global installed capacity of 50% in 2030.

Installed offshore wind capacity, GW

Source: Bloomberg New Energy Finance (BNEF), 1H 2018 offshore wind market outlook. US includes the latest BNEF US offshore wind forecast from September 2018 (3GW higher than the H1 2018 offshore wind market outlook from July 2018)

¹⁾ Global CAGR

However, new markets in Asia Pacific (APAC) and North America are expected to follow with booming growth. Asia Pacific, excluding China, is expected to grow at an average annual growth rate of 58% towards 2030. North America is also expected to grow significantly after 2020, with installed capacity expected to increase from 30MW in 2018 to 10GW by 2030 according to BNEF. This expectation does not fully take the recent 9GW by 2035 ambition from the New York Governor into account.

The strong growth in offshore wind can be attributed to the significant reduction in costs. In 2018, the levelised cost of electricity for newly commissioned generation capacity in North-western Europe was reduced by approx 45% compared to the level four years earlier, and it is expected to decrease further.

Newly built offshore wind has become more competitive than conventional generation technologies using gas and coal. The continuous reductions in offshore wind costs are evident in recent auctions in Germany and the Netherlands where some developers bid for zero subsidy projects.

Onshore renewables

Onshore wind

The global onshore wind market, excluding Middle East and Africa, shows strong growth as the installed capacity reached 536GW in 2018, up from 395GW in 2015, growing at 11% annually. The global market is forecasted to almost triple by 2030.

Among key markets, Asia Pacific represents 43% of the global onshore capacity, driven by China. Europe reached 164GW installed capacity in 2018, representing 31% of the market. Another key market is North America with 121GW, representing 23% of the global capacity.

Onshore wind is the most cost-competitive renewable energy resource, with the lowest levelised cost of electricity in the US in 2018. North America is expected to continue installing onshore wind with an annual average growth rate of 11% towards 2020 and to double its capacity by 2030. In the short term, the market will continue to be driven by projects that have secured production tax credits (PTCs), but once all PTC-backed projects have been built in 2024, the low cost of onshore wind will be the main driver for further capacity build-outs.

Solar photovoltaic (PV)

Among the new renewable technologies, solar PV witnessed the fastest growth, as the global capacity grew by 31% from 2015 to 2018. The global capacity, excluding Middle East and Africa, reached 468GW in 2018. This strong growth is expected to continue towards 2030, reaching 1,905GW installed capacity at an annual growth rate of 12%. Large-scale PV, with a power capacity greater than 1MW, represented 66% of the total capacity in 2018, while small-scale PV, typically for residential use with a 5kW power capacity, is expected to catch up towards 2030, reaching a share of 43% of cumulative solar PV installations.

North America reached 65GW in 2018 and was one of the fastest growing regions. It is expected to continue this growth trajectory with an

Installed onshore wind capacity, GW

Source: Bloomberg New Energy Finance (BNEF), New Energy outlook 2018

annual growth rate of 23% towards 2020 and is to quadruple its installed capacity, reaching 261GW by 2030.

Towards 2023, the levelised cost of electricity for solar PV is expected to be cheapest in North America, barely overtaking onshore wind. Key drivers supporting cost reductions are scale, material savings due to less waste, and more incentives for technological innovations.

Energy storage

As the share of intermittent renewable sources is increasing in the global energy mix, the need for more dynamic dispatchable units to store energy and support rapid load-shifting

is also growing. Battery storage solutions can balance electricity supply and demand and may also provide ancillary services.

Global energy storage, excluding Middle East and Africa, is expected to rise significantly over the next decade. In 2018, it had grown by 58% from 2015, reaching 6GW, and it is expected to continue this strong growth path to reach 158GW by 2030.

Today, most of the capacity (73%) is developed for large-scale and only 27% for small-scale storage. Large-scale storage systems (+1MW) primarily provide services directly to the grid, while small-scale storage systems typically provide end-customer services.

A key driver for the strong outlook is the decreasing cost of lithium-ion battery packs. Between 2010 and 2017, prices fell by 80% and going forward, BNEF forecasts further cost reductions, supported by economies of scale from increasing battery manufacturing capacity.

Bioenergy

Global waste volumes are rapidly increasing. In 2004, the municipal solid waste (MSW) generated globally amounted to 680 million tonnes per year. By 2016, volume had tripled to 2.0 billion tonnes per year, and it is expected to continue growing. In 2016, only 17% of MSW was recycled, while the majority was sent to landfilling, which can potentially have significant negative effects on the environment. Regulation is attempting to boost the recycling share. The EU has set targets to

increase the recycling share of MSW to 65% by 2030 and reduce landfilling to less than 10%.

Alternatives to landfilling, such as incineration and full-source separation, contribute to high carbon emission levels and only marginally to recycling. Hence, it is increasingly important to find alternative solutions.

In addition to MSW, industries produce waste from their production activities, e.g. organic residues and by-products, that need to be handled. In 2014, bio-based waste from industrial processes and agriculture, forestry, fishing and water treatment in the EU accounted for 157 million tonnes per year. For companies that depend on natural gas and are looking for greener processes, the conversion of organic waste into bio-methane is an appealing solution.

Customer Solutions

In 2018, the downstream electricity market size in Europe was 3.3PWh. Of this, the business segment accounted for the largest share with 60-70%, while residential customers accounted for 30-40%.

In 2018, 42% of the European power demand was met by renewable energy (incl. hydro), and the share is forecasted to reach 69% by 2030. Considering the growth in renewables, the consequent increase in intermittent power generation will lead to continuous discrepancies between forecasted and actual production. There is value in efficiently managing this gap for wholesale customers by providing balancing services.

With subsidies for renewable power generation trending lower and eventually reaching zero, it becomes increasingly important to find ways to manage the increasing merchant power price exposure. This entails development of new products and solutions for the wholesale and retail markets.

In the business segment, many corporate customers demand greener and more innovative energy solutions that are also sustainable and cost efficient. To address this demand, the market for corporate power purchase agreements (cPPA) has experienced considerable growth. Despite remaining a smaller share of the total downstream power market, the global market size for cPPAs is expected to reach 28GW in 2018, up from only 9GW in 2015. As customers pursue sustainable and greener solutions, 74% of the cPPAs are sourced from wind and 24% from solar energy.

Our strategy and capital allocation

Strategic direction and growth

Our strategic shift from black to green energy is reflected in our capital base. In 2007, only 16% of our total capital employed was invested in renewables. In 2018, the share of renewables had increased to 87%.

In addition, our strategic transformation to become a green energy company has positioned Ørsted as one of the largest commercial renewable energy companies in the world, measured by the capacity of renewable energy that is installed and under construction. By the end of 2018, we had 12GW of renewable energy capacity installed, under construction, or where a FID has been taken, with the vast majority being in offshore wind. In addition, we have been awarded or contracted projects with a capacity of 4.8GW where investment decisions are yet to be taken. Furthermore, we have a strong pipeline of projects under development.

Towards 2030, we expect that the global market for renewable energy will more than triple to 3,600GW. As one of the leading companies in renewable energy, Ørsted is strongly positioned to take part in this growth.

We have increased our ambition for offshore wind from a capacity of 11-12GW to a capacity of 15GW by 2025. By 2030, our strategic ambition is to achieve an installed renewable capacity of more than 30GW, provided that the development creates value for our shareholders.

Strategic growth platform

	Europe	Americas	Asia
Offshore — Wind — Transmission — Storage	Global leader in offshore wind — Strategic core — Growth and value creation — Scale — Keep pioneering and innovating		
Onshore — Wind — Solar PV — Storage		Leading US renewable company — Strategic diversification — Scale — Technology integration — New value-creating growth platform	
Bioenergy — Biomass — Renescience — Biogas	— Explore growth and value creation potential of Bioenergy		
Customer Solutions	— Route to market for Ørsted's product portfolio — Risk management — Incremental value creation		

We have a strong growth platform to support our strategic ambition, comprising our four business units: Offshore, Onshore, Bioenergy and Customer Solutions.

Our Offshore business unit includes offshore wind, transmission and storage. We strive to maintain our global market leadership in offshore wind and will continue to expand

in Europe, North America, and Asia. We will keep pioneering and innovating the industry. Offshore wind will remain the strategic core of our company.

The second growth avenue is our Onshore business unit, where the aim is to create a leading North American company within renewable energy, with a main emphasis on

onshore wind, but also including solar energy and energy storage.

Bioenergy includes our biomass-converted combined heat and power plants in Denmark and our waste-to-energy and biogas technologies. We will continue to explore the growth and value creation potential within bioenergy.

Customer Solutions provides route-to-market services for our product portfolio as it brings our power, gas and green certificates to market, while also managing the risk profile of our portfolio.

Our key milestones for 2019 are shown in the figure to the right.

Towards 2025, we plan to invest substantially in green energy, thereby contributing to the conversion of the global energy system and creating value for our shareholders and the communities within our footprint.

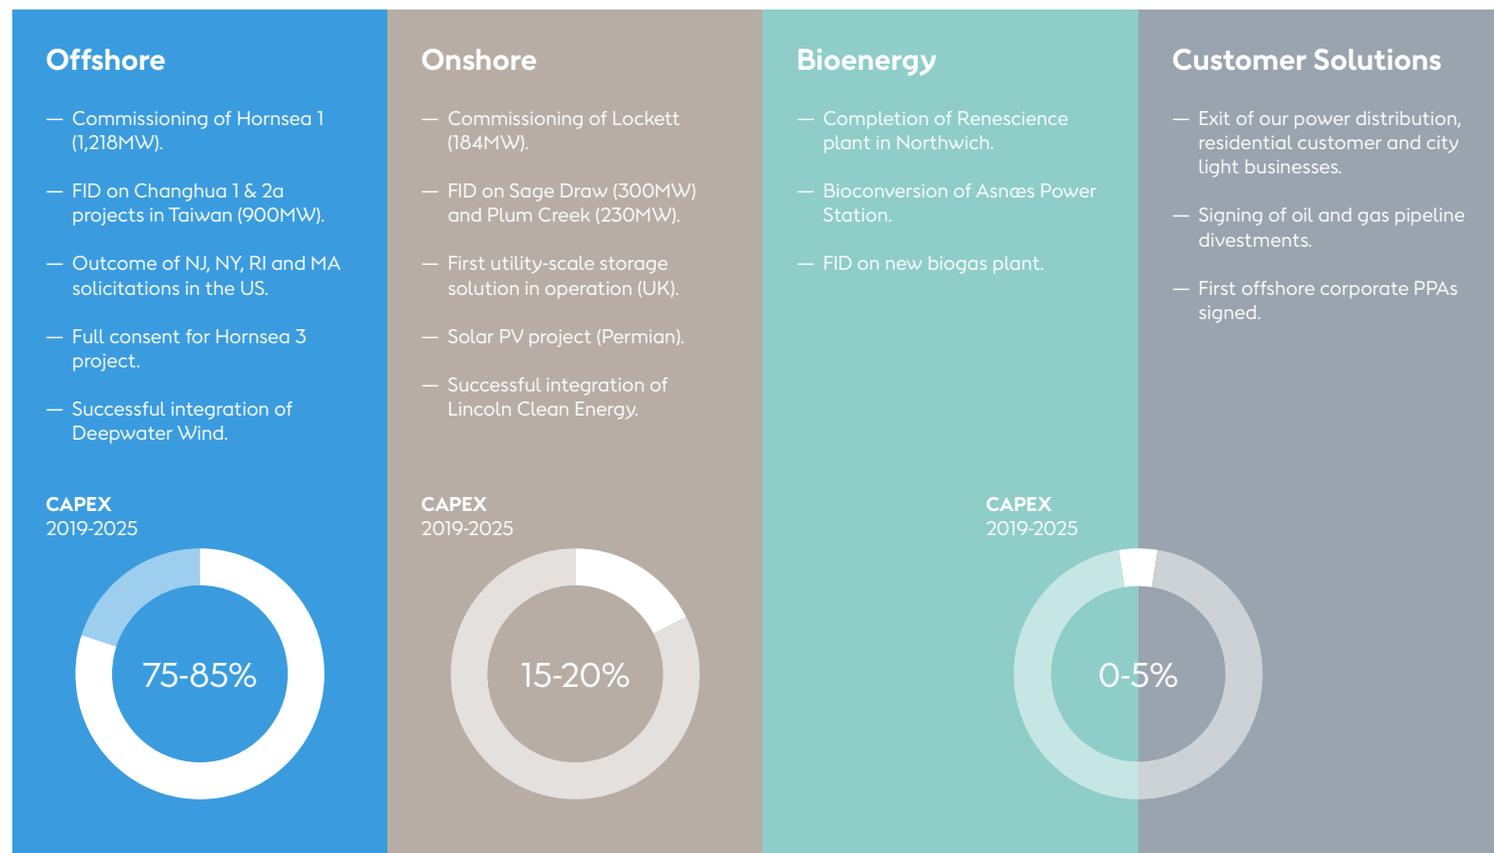

Capital allocation

Subject to continued value creation, we expect to invest DKK 200 billion in the period 2019-2025 to continue our growth towards an installed renewables capacity of +30GW by 2030. Our capital will be allocated to the best risk-return project opportunities in our portfolio. We have already committed gross investments of DKK 40-45 billion in the period, assuming no further partial divestments of offshore wind farms in Europe after the recent Hornsea 1 farm-down. Additional investments will primarily be allocated to our awarded 3.9GW offshore wind projects, our offshore pipeline as well as our contracted 0.9GW onshore wind and solar projects and our onshore pipeline.

In the period discussed, we expect to allocate 75-85% of our gross investments to Offshore, 15-20% to Onshore, and 0-5% to Bioenergy and Customer Solutions together.

Based on the above anticipated build-out of offshore and onshore wind, including the

Key milestones for 2019 for our four business units

acquisitions of Lincoln Clean Energy and Deepwater Wind, we expect our current financial headroom, relative to our rating commitment, to be deployed within a few years. Thus, our leverage, based on market value, is expected to increase from 8% at the end of 2018 to 25% in the early 2020's.

We expect our average return on capital employed (ROCE) for the years 2019-2025 to be around 10%.

In addition to our ambitious investment plan, we aim at maintaining a high single-digit annual growth in dividends until 2025.

Enablers of the strategy

To support our ambitious strategy and enable our businesses to perform effectively and profitably, we continue to invest significantly in talent, digitalisation, operational excellence and innovation.

Talent

As one of the global leaders in renewable energy, Ørsted offers a strong environment for professional growth and career development. With our global growth ambition, we will need gifted, ambitious and world-class talent to drive our business forward. Our aim is to hire the best people and to offer unparalleled opportunities for professional development through attractive learning opportunities for all employees and through dynamic and mobile careers. To support our ambition, we are strengthening our employer branding and talent acquisition efforts, our people development and performance management approaches and our talent development activities. As we expand our global business, we will also increase workforce diversity to create a truly international culture. To drive more structured talent acquisition, development and deployment of high potentials, we are establishing cross-business 'talent pipeline forums' led by senior business executives.

Digitalisation

Our digital strategy focuses on keeping us at the forefront of our industry. The key focus areas lie within offshore wind power operations, customer solutions, market trading and risk management, combined heat and power plant operations and shared services. Across these areas, we have defined financial targets and established rigorous processes for delivering and tracking value. The key drivers for increased digital value creation are increasing deployment of advanced analytics and artificial intelligence, strengthening interfaces and mobility by augmenting our employees' or customers' experiences through human-machine interfaces, as well as a raised

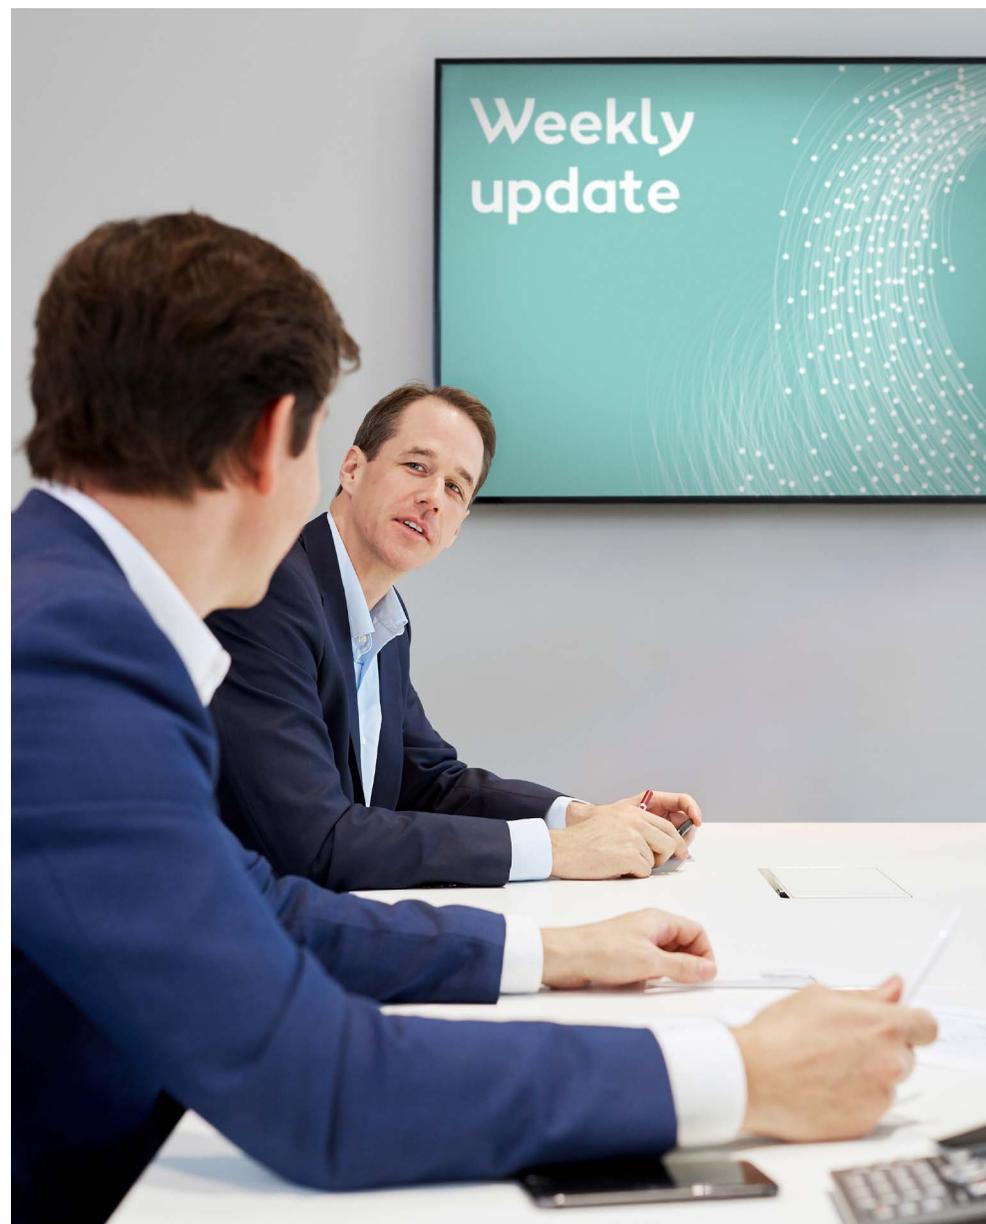

level of automation. In 2018, we significantly scaled up our digitalisation efforts, increasing external recruitment and further leveraging our in-house capabilities.

Operational effectiveness

We continuously drive asset productivity, cost efficiency and quality across all major operational areas. In particular, we run operational excellence programmes within O&M and EPC in offshore wind, our CHP plants, shared services and our sales operations. Across our businesses, all operational excellence programmes are driven rigorously, based on clear target setting, well-defined initiatives and clear follow-up processes for delivering and tracking value creation.

Innovation

To maintain our competitive edge and stay at the forefront of a rapidly evolving renewable energy industry, innovation is a key priority. Across our business units, we invest significantly in innovating and strengthening our existing product offerings and in bringing new solutions into our portfolio. To reinforce our strategic radar for emerging technologies and business models, we established Ørsted Ventures in Silicon Valley, California, in 2017. In 2018, we expanded our venture engagements to also include our European markets. To nurture internal innovation, we run cross-organisational Innovation Games, where internal teams from across the company present innovative business ideas aimed at promoting growth and strengthening our competitive edge.

Our business model

Key resources

Core activities

Value created

Financial capital
We finance our investments through cash flows from operations, debt and divestment of ownership interests.

Energy assets
We invest in scalable, innovative green technologies and solutions.

Natural resources
We rely on natural resources, such as construction materials, biomass, as well as locations with attractive wind speeds and seabed conditions.

Human resources
We rely on a highly skilled workforce to operate our business.

Innovative culture
We continuously innovate our energy solutions to drive competitiveness.

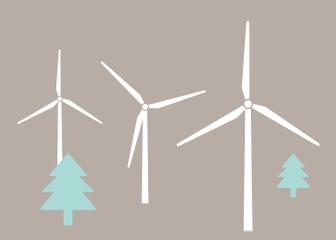

Stakeholder engagement
We depend on constructive relations with our key stakeholders to ensure supportive framework conditions for our business.

Offshore

- Develop, build, own and operate offshore wind farms (three wind farms are under construction).
- Own 26 offshore wind farms of which we operate 22.
- Development projects in progress in the UK, Germany, Taiwan and the US.
- Additional new markets being developed in Asia and Europe.

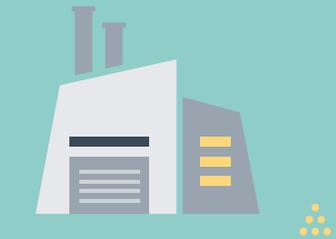

Capital employed **79%**

Onshore

- Develop, build, own and operate onshore wind farms.
- Three wind farms are in operation, one wind farm is under construction, and two wind farms are under development.
- Explore opportunities within solar PV and storage.

Capital employed **6%**

Bioenergy

- Convert our CHP plants to biomass.
- Own and operate ten CHP plants in Denmark.
- Enter into long-term contracts with our heat customers and sell power to the market.
- Explore opportunities within biogas and waste recycling.

Capital employed **2%**

Customer Solutions

- Route-to-market services for our own and partners' power, gas and certificates.
- Manage the Group's energy portfolio risks.

Capital employed **13%** of which assets we plan to exit **10%**

Society
We address profound societal challenges by developing green, independent and economically viable energy systems that reduce greenhouse gas emissions and stimulate local growth and job creation.

Customers
We fulfil our customers' energy needs through green, innovative and efficient energy solutions.

Employees
We are committed to a sustainable working life and keep a constant focus on being a great and safe place to work with motivated and satisfied employees.

Shareholder return
We create value for our shareholders in the form of competitive total returns.

Strategic targets

1. EBITDA from operating wind farms, %

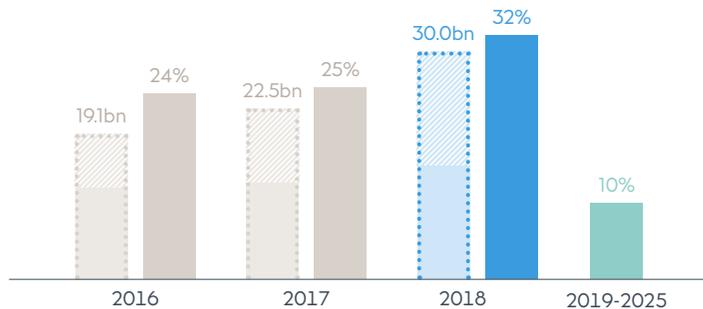

EBITDA from our wind farms in operation is on average expected to increase by 20% per year from 2017 to 2023.

2. ROCE, %

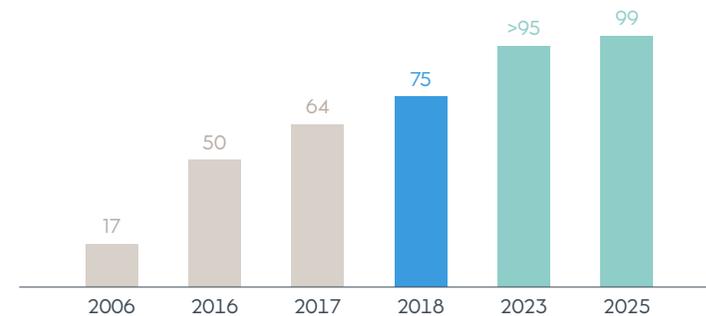

Our target is an average return on capital employed (ROCE) of around 10% for the Group in the 2019-2025 period. EBITDA in 2016-2018 has been positively impacted by significant profits from new partnership agreements, particularly divestment gains, which are not expected to be repeated going forward.

● ROCE ● EBITDA ▨ of which EBITDA from new partnerships

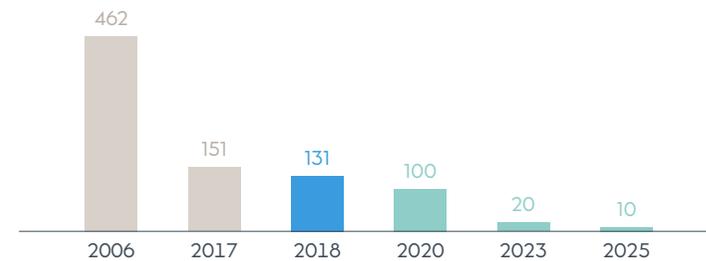

3. Green share of generation, %

In 2018, we increased the green share of generation by 11%-points compared to the previous year. We are on track to meet our objective of exceeding 95% by 2023 and reaching 99% by 2025.

4. Carbon emissions, g CO₂e/kWh

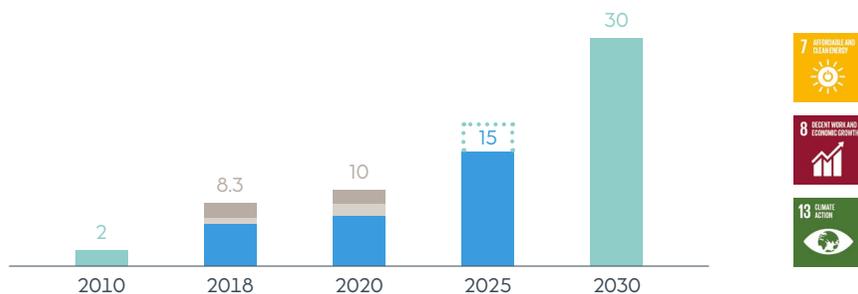

The conversion of our heat and power stations to sustainable biomass, together with our build-out of offshore wind, has reduced our carbon emissions intensity by 72% since 2006. We are well on track to meet our target of an emission intensity of no more than 20g CO₂e per kWh in 2023 and 10g CO₂e in 2025.

5. Installed renewable capacity, GW

In 2018, we defined an ambition of installing more than 30GW of green capacity by 2030 through offshore wind, onshore wind, bioenergy and solar PV technologies. In addition, our ambition is to have installed 15GW of offshore wind by 2025, up from our previous target of 11-12GW. The upward revision is based on strong progress since we set the ambition in 2016, with 5.6GW installed by 2018, 3.4GW under construction towards 2022 and 3.9GW of capacity awarded.

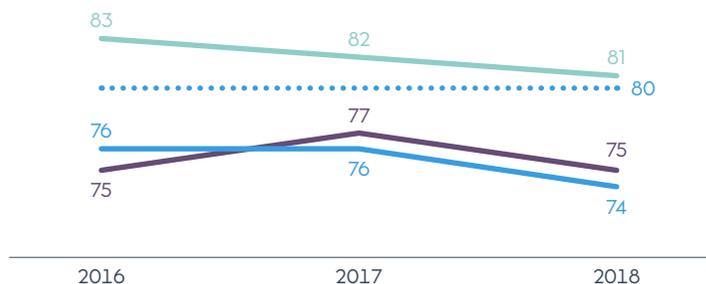

● Offshore wind ● Onshore wind ● Bioenergy ● Other renewables ● Total renewables

6. Customer satisfaction, scale 1-100

Our ambition is to deliver a market-leading customer experience for our corporate customers, which we continuously strive to do. Our target is a customer satisfaction of at least 80 by 2020.

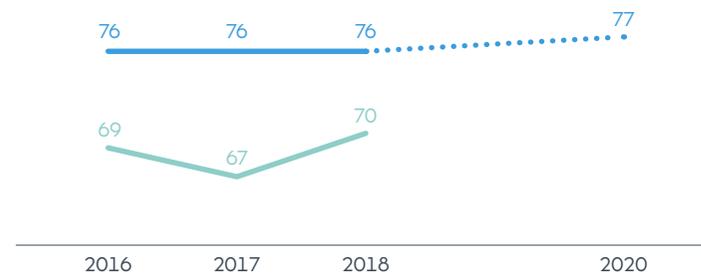

— B2C — B2B — Distribution ●●● Target 2020

7. Employee satisfaction, scale 1-100

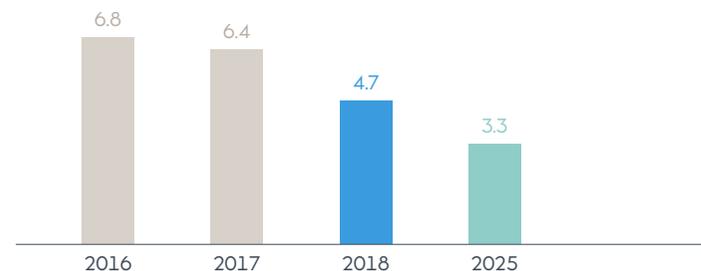

We believe that well-being and positive results go hand in hand. Therefore, we are continuously working to maintain and increase employee satisfaction. The employee satisfaction in Ørsted is above comparable companies.

— Ørsted — Ennova benchmark

8. Safety, TRIR

From 2018, we introduced a new safety target – total recordable injury rate (TRIR). In 2018, TRIR significantly improved and outperformed the target of 5.7 we had set for 2020. We have therefore raised our ambition and set a target of reducing TRIR to 3.3 by 2025. In 2019, we expect a TRIR of 5.2. The increase compared to 2018 is due to future activities in new markets with immature offshore wind supply chains.

Results

Results	31
Five-year summary	35
Fourth quarter	36
Quarterly summary, 2017-18	38

Results

Assets held for sale

We have classified our power distribution, residential customer and city light businesses as assets held for sale at the end of 2018, as we expect to exit these activities within the next 12 months. Contrary to the classification of our upstream oil and gas activities as assets held for sale in 2016, these activities are not presented as discontinued operations due to their more limited relative size for the Group. This means that the results and cash flows are still presented together with the rest of the Group. EBITDA from the power distribution, residential customer and city light businesses amounted to DKK 1.1 billion in 2018 (4% of total EBITDA), while capital employed amounted to DKK 8.3 billion (10% of total capital employed).

Financial results

Revenue

Power generation from offshore wind farms increased by 18% to 10.0TWh in 2018 due to the ramp-up of generation from Race Bank, Walney Extension and Borkum Riffgrund 2. Power generation from onshore wind farms amounted to 0.6TWh in 2018. Thermal power generation was 18% lower than in 2017, driven by the divestment of our Dutch power plant in June, and amounted to 6.7TWh. Power generation from our Danish CHP plants increased by 4%, while heat generation decreased by 2% to 8.8TWh in 2018. Offshore and onshore wind farms accounted for 62% of our total power generation, an increase of 11 percentage points compared to last year. The renewable energy share of our total heat and power generation accounted for 75% of total generation in 2018 compared with 64% in 2017.

Revenue amounted to DKK 76.9 billion. The increase of 29% relative to 2017 was primarily due to higher revenue from construction agreements due to high activity on construction of offshore wind farms for partners and divestment of transmission assets, higher revenue from wind farms in operation and higher gas and power prices in 2018.

EBITDA

Operating profit (EBITDA) totalled DKK 30.0 billion compared with DKK 22.5 billion in 2017. Earnings from Offshore increased by 35% to

Business performance vs. IFRS

Ørsted uses business performance as an alternative to the results prepared in accordance with IFRS. Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. The difference between the two principles will be eliminated as the contracts expire. Apart from this, there is no difference between business performance and the IFRS results.

EBITDA calculated in accordance with IFRS amounted to DKK 28.5 billion in 2018 against DKK 22.6 billion in 2017. Calculated in accordance with the business performance principle, EBITDA was DKK 30.0 billion and DKK 22.5 billion, respectively. The difference between the two principles was thus DKK 1.5 billion in 2018 compared with DKK 0.1 billion in 2017 and is specified below.

In the presentation of the results according to IFRS, Ørsted does not apply the provisions on hedge accounting of commodities and related currency exposures. The market value adjustments of these are continuously recognised in the income statement, which means that the IFRS results for the individual years are not comparable. IFRS results do not reflect the commercial risk hedging, according to which the business units and the Group are managed and evaluated. In the management's review, comments are based on the business performance principles only, unless otherwise specified. Reference is also made to note 1.6.

Business performance vs. IFRS, DKKm	2018	2017
EBITDA – business performance	30,029	22,519
Market value adjustments for the year of financial and physical hedging contracts relating to a future period	(1,734)	(138)
Reversal of deferred gains (losses) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period	196	193
EBITDA – IFRS	28,491	22,574

DKK 27.8 billion, of which the farm-down of Hornsea 1 represented more than half (DKK 15.1 billion). Higher power generation due to ramp-up and commissioning of new offshore wind farms contributed to a 29% increase in earnings from offshore wind farms in operation.

Earnings from Onshore contributed marginally, while Bioenergy earnings more than doubled and amounted to DKK 0.4 billion due to higher spreads as well as full-year impact from the bioconversion of Skærbæk Power Station, which was inaugurated in Q4 2017.

Earnings from Customer Solutions were almost flat year-on-year and amounted to DKK 2.0 billion.

EBIT

EBIT increased by DKK 8.4 billion to DKK 24.7 billion in 2018, primarily as a result of the higher EBITDA.

Depreciation increased by DKK 0.2 billion to DKK 6.0 billion in 2018. The increase was due to a higher number of wind farms in operation.

In connection with the classification of the power distribution activities as assets held for sale, we have reversed a previous impairment loss of DKK 0.6 billion.

Gain (loss) on divestment of enterprises

Gain (loss) on divestment of enterprises primarily concerned the divestment of our 50% share of the Dutch gas-fired power plant Enecogen in 2018.

Financial income and expenses

Net financial income and expenses amounted to DKK -1.3 billion and were DKK 0.2 billion higher than last year. The increase was mainly due to a lower level of capitalised interests, mainly related to Walney Extension and Race Bank, due to the progress of the projects.

Tax and tax rate

Tax on profit for the year amounted to DKK 4.0 billion, which was DKK 2.3 billion higher than in 2017. The effective tax rate was 17% against 12% in 2017. In both years, the tax rate was affected by non-taxable divestment gains. Gain on the 50% farm-down of Hornsea 1 impacted the effective tax rate in 2018, while gains on the farm-downs of Walney Extension, Borkum Riffgrund 2 and Race Bank impacted the tax rate in 2017.

Profit for the year from continuing operations

Profit for the year from continuing operations totalled DKK 19.5 billion, DKK 6.2 billion higher than in 2017. The increase was primarily due to the higher EBIT, partly offset by higher net finance costs and higher taxes.

Tax rate	17%	12%	5%p
Profit for the year from continuing operations	19,486	13,279	47%
Profit for the year from discontinued operations	10	6,920	(100%)
Profit (loss) for the year	19,496	20,199	(3%)

In 2018, regulated and quasi-regulated activities and contracted activities accounted for 31% and 64% of our EBITDA, respectively, whereas market exposed activities accounted for 5%.

Read more about profit for the year from discontinued operations in note 3.7.

Cash flows and net debt

Cash flows from operating activities

Cash flows from operating activities totalled DKK 10.3 billion in 2018 compared with DKK 1.0 billion in 2017. The increase of DKK 9.3 billion was due to the higher EBITDA (excluding gains from divestments which are not recognised in cash flows from operating activities), settlement of intra-group hedges related to the now divested oil and gas business having a negative effect in 2017, a lower increase of funds tied up in work in progress and other working capital as well as a positive contribution from tax equity partners related to the Tahoka onshore wind farm.

This was partly offset by higher net interest, etc., due to a lower level of capitalised interests, lower accrued interest and exchange rate losses as well as higher paid taxes.

In 2018, funds tied up in work in progress increased by DKK 2.3 billion and primarily related to the construction of Borkum Riffgrund 2 and Walney Extension as well as offshore transmission assets at Hornsea 1 and Hornsea 2 in the UK. This was partly offset by milestone payments from partners related to the construction of Race Bank, Borkum Riffgrund 2, Walney Extension and Hornsea 1 as well as the divestment of the Burbo Bank Extension transmission assets.

Less funds were tied up in other working capital due to funds being tied up in clearing accounts in 2017 and less funds tied up in receivables in 2018. This was partly offset by the repayment of a VAT export credit loan to the Danish tax authorities in 2018.

Investments and divestments

Gross investments amounted to DKK 24.5 billion against DKK 17.7 billion in 2017. The main investments in 2018 were:

- offshore wind farms (DKK 11.1 billion), including Hornsea 1 and Walney Extension in the UK, Borkum Riffgrund 2 in Germany, Borssele 1 & 2 in the Netherlands and early investments in the US to qualify for future tax credits
- onshore wind farms (DKK 1.1 billion), including Lockett and Tahoka in the US
- the acquisitions of Deepwater Wind (DKK 4.0 billion) and Lincoln Clean Energy (DKK 5.6 billion)
- power stations (DKK 1.4 billion), mainly the bioconversion of Asnæs Power Station.

Cash flow from divestments in 2018 related to the 50% farm-down of Hornsea 1, receipt of deferred proceeds from the farm-down of 50% of Walney Extension in 2017 and proceeds from the divestment of our 50% ownership share in Enecogen.

Interest-bearing net debt

Interest-bearing net debt totalled DKK -2.2 billion (net cash position) at the end of 2018. The free cash flow of DKK 5.8 billion more than offset the payment of dividends to shareholders (DKK 3.8 billion) and non-controlling interests (DKK 0.4 billion) and interests on hybrid capital (DKK 0.5 billion).

Cash flows and net debt, DKKm	2018	2017	%
Cash flows from operating activities	10,343	1,023	911%

Reversal of gain (loss) on sale of assets	(14,995)	(10,835)	38%
Other items	203	297	(32%)
Interest paid and similar items, net	(700)	36	n.a.
Paid tax	(3,367)	(2,660)	27%
Change in work in progress	(2,326)	(3,674)	(37%)
Change in tax equity liabilities	1,835	-	n.a.
Change in other working capital	(427)	(4,230)	(90%)
Gross investments	(24,481)	(17,744)	38%
Divestments	19,950	16,982	17%
Free cash flow	5,812	261	n.a.
Net debt at 1 January	(1,517)	3,461	n.a.
Free cash flow from continuing operations	(5,812)	(261)	n.a.
Free cash flow from discontinued operations	(209)	(9,025)	(98%)
Interest-bearing receivables re Oil & Gas divestment	292	(1,014)	n.a.
Dividends and hybrid coupons paid	4,700	3,523	33%
Exchange rate adjustments, etc.	327	1,799	(82%)
Net debt at 31 December	(2,219)	(1,517)	46%
Key ratios, DKKm, %	2018	2017	%
ROCE	32.1%	25.2%	6.9%p
Adjusted net debt	15,516	15,900	(2%)
FFO/adjusted net debt	69.0%	50.3%	18.7%p

Gain (loss) on sale of assets is part of EBITDA, but is presented as part of the 'divestment' cash flow. The EBITDA effect is thus reversed in the specification of cash flows from operating activities.

ROCE and FFO/adjusted net debt is specified in notes 2.1 and 6.6.

Equity and capital employed

Equity

Equity was DKK 85.1 billion at the end of 2018 against DKK 71.8 billion at the end of 2017. The increase was primarily due to the positive result for the year less dividends paid.

Capital employed

Capital employed was DKK 82.9 billion at the end of 2018 against DKK 70.3 billion at the end of 2017. Offshore's share of capital employed was 79% at the end of 2018.

Financial ratios

Return on capital employed (ROCE)

Return on capital employed was 32% in 2018, up 7 percentage points compared to 2017. The increase was mainly attributable to the higher EBIT. Both years were significantly positively impacted by farm-downs – Hornsea 1 in 2018 and Walney Extension and Borkum Riffgrund 2 in 2017.

Credit metric (FFO/adjusted net debt)

The credit metric 'funds from operations' (FFO) relative to adjusted net debt was 69% in 2018 relative to 50% in 2017. The increase was due to a higher FFO together with lower adjusted net debt in 2018.

Non-financial results

Green share of heat and power generation

The green share of our heat and power generation amounted to 75% in 2018, up 11 percentage points relative to 2017. The increase was due to higher generation from offshore wind farms, a larger share of biomass-based generation as a result of the bioconversion of Skærbæk Power Station as well as a decrease in the use of gas following the divestment of the Enecogen power plant.

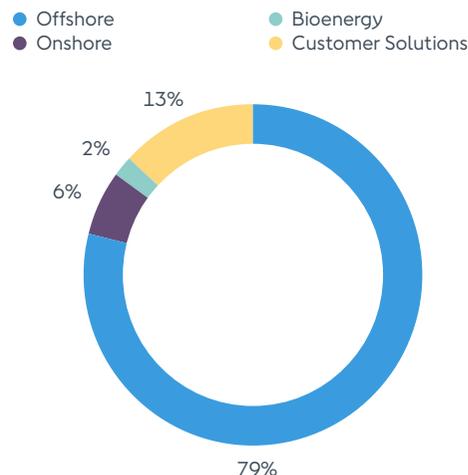

Carbon emissions

Carbon emissions from our heat and power generation decreased by 13% to 131g CO₂e/kWh in 2018 against 151g CO₂e/kWh in 2017. Carbon emissions per kWh decreased for the same reasons as mentioned above.

Safety

In 2018, we registered 98 total recordable injuries (TRIs), 61 of which involved employees working for our suppliers. Over the past 12 months, our total recordable injury rate (TRIR) has declined from 6.4 in 2017 to 4.7 in 2018.

Capital employed, %

Business performance vs. IFRS

Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. Apart from this, there is no difference between business performance and IFRS results. Read more in note 1.6.

ROCE is calculated for continuing operations.

¹⁾ EBIT/average capital employed.

²⁾ Net debt, including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax.

³⁾ See definition on page 192 and in the ESG statements.

⁴⁾ The figures indicate values from the latest regulatory financial statements (updated in June).

Fourth quarter

Financial performance – Group

Revenue

Revenue in Q4 2018 increased by 51% relative to Q4 2017 and amounted to DKK 23.5 billion. The increase was mainly driven by construction agreements where revenue increased by DKK 4.6 billion to DKK 6.3 billion due to the partial divestment of the Hornsea 1 transmission assets as part of the 50% farm-down of Hornsea 1. In addition, revenue increased due to higher gas and UK power prices and higher generation from offshore wind farms.

EBITDA

Operating profit (EBITDA) totalled DKK 19.2 billion in Q4 2018 compared with DKK 13.0 billion in Q4 2017. The 47% increase was mainly due to the 50% farm-down of Hornsea 1 in Q4 2018, which was only partly offset by the 50% farm down gains from Walney Extension and Borkum Riffgrund 2 in Q4 2017. Earnings from offshore wind farms in operation increased by 26% as a result of ramp-up at Walney Extension, Race Bank and Borkum Riffgrund 2.

Earnings from our Bioenergy and Customer Solutions businesses were in line with Q4 2017. Earnings from Onshore had a limited impact.

Profit from continuing operations

Profit for the period from continuing operations increased by DKK 5.8 billion to DKK 15.2 billion. The increase was mainly due to the higher EBITDA.

Cash flows from operating activities

Cash flows from operating activities totalled DKK 7.6 billion in Q4 2018 compared with DKK 3.1 billion in Q4 2017.

The increase of DKK 4.5 billion was due to lower paid Danish taxes (taxes were paid on account in March in 2018 and in November in 2017), a tax equity contribution received from our partner at the Tahoka onshore wind farm and lower receivables.

This was partly offset by a lower release of funds tied up in work in progress, mainly due to prepayments and milestone payments received from partners in Q4 2017 at Walney Extension and Borkum Riffgrund 2 and high construction activity at Hornsea 1 in Q4 2018.

Gross investments and divestments

Gross investments amounted to DKK 14.9 billion in Q4 2018, of which DKK 9.6 billion related to the acquisitions of Deepwater Wind and Lincoln Clean Energy. The other main investments related to Hornsea 1, Borssele 1 & 2, Lockett and early investments in the US to qualify for future tax credits.

Divestments amounted to DKK 18.7 billion in Q4 2018 and related mainly to the 50% farm-down of Hornsea 1.

Financial performance, DKKm

Financial performance – business units

Offshore

Power generation was up 14% in Q4 2017 due to ramp-up of generation at Walney Extension and Borkum Riffgrund 2.

Revenue totalled DKK 10.7 billion in Q4 2018 against DKK 5.6 billion in Q4 2017. The increase was driven by revenue from wind farms in operation, which was up 15% as a result of increased power generation, and an increase in revenue from construction agreements due to the partial divestment of the Hornsea 1 transmission assets.

EBITDA was up 49%, totalling DKK 18.8 billion in Q4 2018 compared with DKK 12.6 billion in Q4 2017.

Earnings from offshore wind farms in operation increased by 26% as a result of the commissioning of new offshore wind farms. Earnings from partnership agreements increased by DKK 5.4 billion and related primarily to the farm-down of Hornsea 1 in Q4 2018 compared to the farm-downs of 50% of Walney Extension and Borkum Riffgrund 2 in Q4 2017.

EBITDA from other activities totalled DKK -0.7 billion in Q4 2018, which was in line with the same period last year, and related primarily to project development costs.

Cash flows from operating activities totalled DKK 3.6 billion in Q4 2018 in line with Q4 2017. Release of funds tied up in work in progress contributed more positively in Q4 2017, where prepayments and milestone payments were received from partners at Walney Extension and Borkum Riffgrund 2. This was partially offset by lower paid taxes in Q4 2018.

Onshore

For Onshore, the quarterly and full-year results are identical. See page 46.

Bioenergy

Revenue was DKK 1.9 billion in Q4 2018 against DKK 1.8 billion in Q4 2017. The increase was due to higher power prices which led to higher income despite lower power generation in Q4 2018. Revenue from heat generation remained unchanged.

EBITDA was at the same level as the year before and amounted to DKK 0.2 billion.

Customer Solutions

Revenue amounted to DKK 12.9 billion in Q4 2018 compared with 10.4 billion in Q4 2017. The increase was mainly due to higher gas and UK power prices.

EBITDA was at the same level as Q4 2017 and amounted to DKK 0.2 billion.

EBITDA from Markets decreased by DKK 0.5 billion, primarily due to an increase in the value of gas at storages in Q4 2017 compared to a loss in Q4 2018, where the gas prices decreased during December.

EBITDA from our LNG activities increased by DKK 0.5 billion, mainly as a result of provisions in Q4 2017 related to the onerous contract at the Gate terminal in Rotterdam as well as provisions regarding purchase contracts.

Cash flows from operating activities totalled DKK 0.7 billion in Q4 2018, DKK 0.5 billion higher than in Q4 2017. The positive effect was mainly due to lower receivables in Q4 2018 and lower paid taxes.

Business performance vs. IFRS

Business performance represents the underlying financial performance of the Group in the reporting period as results are adjusted for temporary fluctuations in the market value of contracts (including hedging transactions) relating to other periods. Apart from this, there is no difference between business performance and IFRS results. Read more in note 1.6.

ROCE is calculated for continuing operations.

¹⁾ EBIT/average capital employed.

²⁾ Net debt, including 50% of hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease obligations, and decommissioning obligations less deferred tax.

³⁾ See definition on page 192 and in the ESG statements.

⁴⁾ The figures indicate values from the latest regulatory financial statements (updated in June).

⁵⁾ Last 12 months.

Offshore

Highlights 2018

- We inaugurated the Race Bank and Walney Extension offshore wind farms.
- Borkum Riffgrund 2 was commissioned by the end of 2018, ahead of schedule.
- We divested 50% of the 1,218MW Hornsea 1 offshore wind farm in the UK to Global Infrastructure Partners.
- We were awarded two offshore wind farm projects in Germany with a total capacity of 552MW, one of which was won with a zero-subsidy bid.
- We were awarded 900MW grid capacity in Taiwan's first offshore wind grid allocation process and an additional 920MW in the country's first offshore wind auction, resulting in a total build-out pipeline in Changhua of 1,820MW.
- We acquired Deepwater Wind and created a leading US offshore wind platform.
- In the US, we were awarded an additional 104MW in December in the clean energy auction in Connecticut.
- Application criteria were fulfilled for further development of the Race Bank Extension offshore wind farm.

Financial performance

Power generation increased by 20% relative to 2017, primarily due to the ramp-up of generation from Race Bank, Walney Extension and Borkum Riffgrund 2. We commissioned Race Bank in January, Walney Extension in May and Borkum Riffgrund 2 in December 2018.

Wind speeds were 2% lower than in 2017 and amounted to a portfolio average of 9.1m/s, which was in line with a normal wind year. The availability of 93% was at the same level as the year before.

Revenue increased by 50% to DKK 30.6 billion. Revenue from offshore wind farms in operation increased by 23% due to the above-mentioned ramp-up from new offshore wind farms. Revenue from construction agreements increased by DKK 7.8 billion due to high activity on construction of the Borkum Riffgrund 2 and Walney Extension offshore wind farms for partners as well as the divestment of the Burbo Bank Extension transmission asset and a partial divestment of the Hornsea 1 transmission assets as part of the 50% farm-down of Hornsea 1. Following the implementation of IFRS 15, revenue from construction of transmission assets are recognised at the time of divestment.

EBITDA increased by 35%.

EBITDA increased by 35% relative to 2017.

EBITDA from sites, O&Ms and PPAs amounted to DKK 11.0 billion, up DKK 2.5 billion compared to 2017. The increase was driven by the factors mentioned above.

EBITDA from construction agreements was DKK 5.1 billion higher than in 2017, amounting to DKK 18.8 billion in 2018. The total gain from the farm-down of Hornsea 1 (DKK 15.1 billion) as well as a high level of activity related to the construction of Walney Extension and Borkum Riffgrund 2 for partners contributed positively in 2018. In 2017, EBITDA was positively affected

by the farm-down of Walney Extension (DKK 7.5 billion) and Borkum Riffgrund 2 (DKK 2.2 billion), construction progress on Race Bank and completion of Burbo Bank Extension and Gode Wind 1 & 2 as well as the recognition of a deferred farm-down gain on Race Bank.

EBITDA from other activities amounted to DKK -2.0 billion against DKK -1.6 billion in 2017. The decrease of DKK 0.4 billion was mainly due to higher project development costs.

Depreciation increased by 9% due to the commissioning of new offshore wind farms in the UK and Germany.

Cash flows from operating activities amounted to DKK 5.8 billion in 2018 compared to DKK 3.4 billion in 2017. The increase was due to the higher EBITDA (adjusted for farm-down gains), a lower increase in funds tied up in construction of offshore wind farms for partners and a VAT refund. This was partly offset by higher paid taxes. Paid taxes in 2018 were significantly higher than in 2017, mainly due to taxation of construction agreement gains in the year of commissioning (Race Bank, Walney Extension and Borkum Riffgrund 2 in 2018 compared to Burbo Bank Extension in 2017) as well as higher earnings from offshore wind farms in operation.

In 2018, funds tied up in work in progress increased by DKK 2.3 billion and primarily related to the construction of Borkum Riffgrund 2 and Walney Extension as well as the offshore transmission assets at Hornsea 1 and Hornsea 2. This was partly offset by milestone payments from partners related to the construction of Race Bank, Walney Extension, Borkum Riffgrund 2 and Hornsea 1 and the divestment of the Burbo Bank Extension transmission asset.

Introduction to Offshore

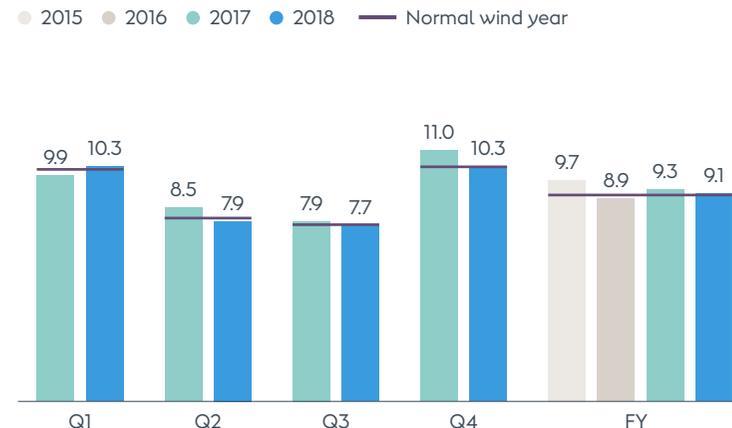

- We are active in all parts of the value chain and develop, construct, own and operate offshore wind farms in Denmark, the UK, Germany, the Netherlands, the US and Taiwan.
- We have been pioneers in the industry since we built the world's first offshore wind farm in 1991, and we have established ourselves as the market leader within global offshore wind power generation with 25+ years of experience, 26 offshore wind farms in operation and presently three offshore wind farms under construction.
- Worldwide, we are the company that has constructed most offshore wind farms with a total installed capacity of 5.6GW, which has provided us with an unparalleled experience. Our integrated EPC organisation has a strong

- track record of delivering projects on time and on budget and can construct multiple large-scale wind farms in parallel across regions.
- With 3.4GW currently under construction, we have the largest market share with approx 30% of the total global capacity.
- Our total installed capacity of 5.6GW covers more than 12 million people's annual power consumption with carbon-free electricity.
- By 2020, we will have expanded our installed offshore wind capacity to 7.6GW, and we aim for a capacity of 15GW in 2025.

Quarterly and annual wind speed for our offshore wind farms, m/s

The wind speed indicates how many metres per second the wind has blown in the areas where we have offshore wind farms. The weighting is based on our generation capacity.

Gross investments amounted to DKK 15.1 billion in 2018, of which the acquisition of Deepwater Wind amounted to DKK 4.0 billion (including acquired debt and excluding DKK 0.7 to be paid in 2019). The largest investments related to the construction of Hornsea 1, Borkum Riffgrund 2, Borssele 1 & 2, Walney Extension and early investments in the US to qualify for future tax credits.

Cash flows from divestments in 2018 related to the 50% farm-down of Hornsea 1 and receipt of deferred proceeds from the farm-down of 50% of Walney Extension in 2017.

ROCE increased by 9 percentage points to 37% and was in both periods impacted by gains from farm-downs – Hornsea 1 in 2018 and Walney Extension and Borkum Riffgrund 2 in 2017.

Strategy follow-up

Offshore wind is our core business, and we will continue pioneering and innovating the industry. It is a rapidly growing market in the global energy system with attractive value creation opportunities, and we will maintain our global market leadership in offshore wind and continue the expansion in Europe, North America and Asia Pacific.

Offshore's strategic focus is to:

- maintain our market leadership in offshore wind with a targeted capacity of 15GW in 2025
- continue to pioneer new markets and develop a global business
- continue to reduce the cost of electricity
- implement operational excellence and innovation and digitalisation initiatives across the business
- leverage our market-leading partnership model.

Maintain our market leadership in offshore wind with a targeted capacity of 15GW in 2025

In 2018, we commissioned Race Bank and Walney Extension in the UK and Borkum Riffgrund 2 in Germany. Walney Extension is currently the world's largest offshore wind farm and was delivered well ahead of schedule and below budget before summer. Together, the three wind farms added approx 1.7GW to our installed capacity, and we have now installed 5.6GW of offshore wind capacity.

All of our current construction projects are progressing according to plan. In January 2018, offshore construction began at Hornsea 1, and

we expect commissioning in late 2019. At Borssele 1 & 2, the procurement phase is completed with main contracts well within budget, and construction work for the O&M building started in December 2018. For the Hornsea 2 project, we have selected Siemens Gamesa Renewable Energy as exclusive supplier of wind turbines, and recently we passed the first 12-month milestone delivery requirement under the contracts for difference (CfD) scheme. When Hornsea 2 is commissioned in 2022, we will have 9.0GW of capacity installed.

In addition to these three wind farms, we are also constructing the 12MW Coastal Virginia demonstration project in the US on behalf of our partner Dominion Energy. Further, a final investment decision has been taken on phase 2 of the Formosa 1 project in Taiwan, in which we have a 35% ownership share. After receiving the construction permit in September, manufacturing and preparation for the construction phase of the 120MW wind farm have commenced.

In April, the results of the second German transitional auction for offshore wind were announced, and we were awarded the right to build Borkum Riffgrund West 1 and Gode Wind 4 in the German North Sea. Borkum Riffgrund West 1 was won with a zero-subsidy bid, while Gode Wind 4 was won at a price of EUR 98.3 per MWh. The two offshore wind farms have a total capacity of 552MW, which, together with the three projects awarded in April 2017, gives us an option of 1,142MW new offshore wind capacity in Germany for commissioning in 2024/2025, subject to us taking final investment decision, expectedly in 2021.

Also in April, following a thorough and comprehensive grid allocation process, Taiwan's Ministry of Economic Affairs awarded us 900MW grid capacity for our Greater Changhua offshore wind farms. In June, following Taiwan's first and highly competitive auction process, we were awarded an additional 920MW of grid capacity for our Greater Changhua projects. Overall, we now have a total offshore wind pipeline in Changhua of 1,820MW.

On 30 January 2019, the 2019 feed-in tariff was announced. We take note of the 6% tariff reduction compared to the 2018 tariff as well as the introduction of a cap on annual full-load hours, and we will now collaborate closely with the supply chain to mitigate the adverse impact of these PPA changes with the objective of making the projects investable.

Greater Changhua 1 & 2a are facing extraordinarily high costs related to creating a local supply chain at scale, reinforcing the onshore grid infrastructure and building, operating and maintaining offshore wind farms in challenging site and weather conditions.

We continue to work with the Taiwanese authorities and local stakeholders to reach key outstanding project milestones, such as obtaining the establishment permit, completing the supply chain plan and signing the power purchase agreement.

Once we have clarity on the outcome of supply contract renegotiations and have achieved all key project milestones, Ørsted's Board of Directors will review and decide on the final investment case.

In 2018, we continued to establish ourselves in the US market. The merger of our existing US organisation with Deepwater Wind at the end of 2018 added an attractive and geographically diverse US East Coast portfolio of projects at varying degrees of development with significant synergy potential, both in terms of geography and project timing. As part of the Deepwater Wind portfolio, we have secured offshore wind development projects with a combined capacity of 954MW with long-term revenue contracts in place or under negotiation with expected completion of the projects in 2022/2023, subject to final investment decisions in the early 2020s. Of the awarded 954MW capacity, 104MW was won in Connecticut's clean energy auction in December.

Our ambition, as set out in 2016, was to drive profitable growth and have 11-12GW installed offshore wind capacity worldwide by 2025. With the awarded capacity in Germany and Taiwan and the addition of Deepwater Wind's 954MW secured capacity in the US, our total secured capacity has increased to 12.9GW. Having reached our 2025 ambition well ahead of time, we have increased our ambition to approx 15GW by 2025.

Continue to pioneer new markets and develop a global business

The US is a key market to us. With favourable wind and seabed conditions off the East Coast, and the federal states' growing interest in developing clean energy, we continue to see the US as a significant, long-term growth opportunity. With New York Governor Cuomo's recent commitment to 9GW offshore wind by 2035, the states along the US East Coast have

set out accumulated targets of close to 20GW of offshore wind capacity towards 2035. With the integration of Deepwater Wind, we now have the largest project pipeline in the US with a gross capacity of 7.5GW to bid in future auctions in the North East and Mid-Atlantic regions.

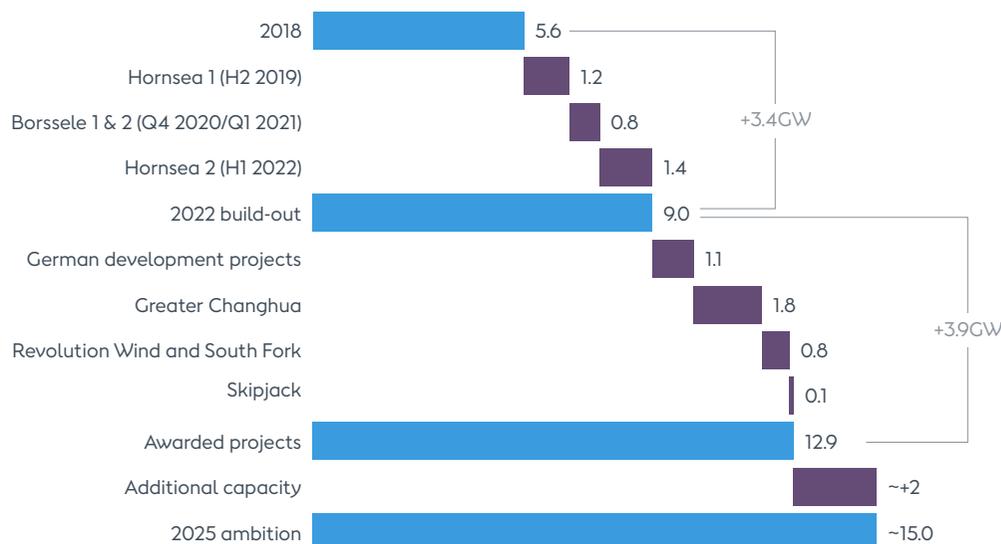

In October 2018, we bid in Rhode Island's auction for up to 400MW of renewable energy. Further, in December 2018, we bid in the New Jersey Board of Public Utilities' auction to build our Ocean Wind project. Outcomes of both auctions are expected in Q2 2019.

In the UK, The Crown Estate has confirmed that we have satisfied the application criteria for the development of our Race Bank Extension offshore wind farm with a capacity of 573MW. Together with Hornsea 3's 2,400MW capacity and Hornsea 4's 1,200MW capacity, we have a total pipeline of opportunities of up to 4.2GW, which underlines our continued commitment to the UK's energy transition. Subject to all necessary consents being granted, the three projects will be able to participate in future auctions under the contracts for difference (CfD) scheme.

Further, we announced that we have signed a memorandum of understanding to work jointly with Tokyo Electric Power Company (TEPCO) on the Choshi offshore wind project near Tokyo and towards a strategic partnership for broader collaborations in Japan. In addition, we see potential in selected next-horizon markets for offshore wind in the APAC region, such as South Korea.

In addition to the opportunities in the US, the UK and Japan, 2019 will see two 760MW tenders in the Netherlands. They will be followed

Build-out towards 2025, installed GW

The figure shows our current build-out plan towards 2025.

by additional 760MW tenders in 2020 and 2021, respectively. In 2020-2021, we will see the first of three 800MW tenders in Denmark, and in 2021, we expect a tender of approx 700MW in Belgium and the first central tender in Germany.

Continue to reduce the cost of electricity

Levelised cost of electricity (LCoE) has decreased substantially since the first large-scale wind farms were constructed, and costs are continuously being reduced across the industry by means of increasing levels of industrialisation, economies of scale and innovation. At Ørsted, we strive to deliver continuous reductions in LCoE through a systematic, institutionalised approach.

Implement operational excellence and innovation and digitalisation initiatives across the business

Since its infancy, we have played a key role in developing offshore wind energy into a fully matured industry and globally, we are the company that has constructed most offshore wind farms. Our integrated EPC organisation possesses a complete set of strong inhouse engineering, procurement and construction capabilities which set us apart from our peers. An example of our approach to innovation is how we continue to work with turbine suppliers to be first movers in bringing new technology to the offshore wind market. Another example is foundations, where we continue to optimise steel design and design tools. At Borkum Riffgrund 2 and Hornsea 1, grouted connections between the monopile and the transition piece were replaced by bolted connections, leading to large cost reductions on supply and the possibility for all-year installation.

We are the largest offshore wind operator globally with approx 1,100 wind turbines in operation. Our operational portfolio is growing which provides substantial scale benefits, but at the same time fleet complexity remains low, currently with five different turbine platforms from two original equipment manufacturers only, which allows for deep technical insights.

The share of turbines we operate ourselves is increasing, improving our ability to drive standardisation and performance improvements as well as implement digital solutions, reduce service hours and increase power generation from turbines. An example of our approach to innovation and digitalisation is how we utilise the vast amounts of data captured from each turbine we have in operation. Through state-of-the-art data analytics, we are able to continuously improve processes leading to an uplift in power generation and reduced lifetime maintenance costs.

In terms of operational excellence, we have implemented regional hub structures across the portfolio to reap full-scale and synergy benefits from clusters. Today, we operate two hubs in the UK and one hub in Germany, each with a capacity of 1-2GW. An example of hub benefits includes having a regional support organisation, allowing for standardisation of processes and activities leading to performance optimisation across a region instead of a single-site focus.

Also, a growing cluster capacity allows for investment in better logistics, e.g. in the form of joint facilities and vessel operations.

Leverage our market-leading partnership model

In 2018, our market-leading partnership model yet again proved its value through the 50% farm-down of the 1,218MW offshore wind farm Hornsea 1 to Global Infrastructure Partners (GIP). This is our third partnership with GIP, which also owns 50% of our German offshore wind farms Gode Wind 1 and Borkum Riffgrund 2. Hornsea 1 is under construction and will by far be the world's largest offshore wind farm when commissioned by the end of 2019.

In the Taiwanese market, which is still new to the offshore wind industry, we see an advantage in establishing partnerships, particularly with local investor involvement, to combine our international experience with local expertise. Subject to a FID, we will look into the possibility of farming down a 50% interest in the 605MW Greater Changhua 1 project to local and international partners.

In the US, we will also consider diversifying risks by either partnering with domestic utilities or potentially farming down on projects to reduce single-asset exposure.

Onshore

Highlights 2018

- We acquired Lincoln Clean Energy (LCE) in October.
- We commissioned the 300MW Tahoka wind farm in Texas in December.
- We took FID on the 184MW Lockett wind farm.
- We secured PPAs for our near-term onshore portfolio projects Sage Draw (250MW) and Plum Creek (additional 104MW) and our first large-scale solar PV project Permian Solar (250MW).
- Our first 20MW battery storage project, Carnegie Road, in the UK is now in operation.

Introduction to Onshore

- The acquisition of Lincoln Clean Energy has provided a strong onshore renewables growth platform in the US, which is one of our strategic growth markets.
- We are active in the value chain as a developer, owner and operator, with a lean execution and asset management business model.
- We are able to deliver wind, solar PV and battery solutions and thereby shape the generation profile to customer demand.
- Our total installed capacity of 813MW comprises three operating wind farms in Texas and a small solar project in New Jersey. In addition, our near-term portfolio includes three onshore wind farms with a total capacity of 714MW to be constructed by 2020.
- It is our ambition to realise an additional 1GW through 2022 in the US onshore renewable market. We are pursuing a portfolio of regionally diversified projects across the ERCOT, SPP and MISO markets.

Financial performance

This sections covers Q4 2018, as we acquired LCE and established the Onshore business unit on 1 October.

Power generation amounted to 552GWh in 2018, of which our Amazon and Willow Springs wind farms accounted for most of the generation. Power generation from newly commissioned Tahoka had a limited impact in 2018. Wind speed averaged 7.3m/s, which was slightly lower than in a normal wind year in Texas.

Revenue from wind farms in operation amounted to DKK 80 million, of which the majority came from Amazon and Willow Springs.

There are no comparable figures as the Onshore business unit was established in 2018.

EBITDA from onshore wind farms in operation amounted to DKK 40 million, and production tax credits (PTCs) contributed with DKK 85 million.

Project development and other costs amounted to DKK -81 million.

Cash flows from operating activities amounted to DKK 1.9 billion, which primarily comprised a tax equity contribution from our partner at the Tahoka wind farm in Texas in December.

Gross investments amounted to DKK 6.8 billion, of which DKK 5.6 billion was the acquisition price paid for Lincoln Clean Energy (including acquired debt). The largest investments related to the Tahoka and Lockett wind farms.

Strategy follow-up

By acquiring Lincoln Clean Energy (LCE) in October 2018, we established a strong and scalable platform for the US onshore market, which is expected to grow significantly in the coming years. Our aim is to create a leading North American company within renewable energy, including onshore wind, solar energy, and energy storage. Onshore wind is expected to be the key growth platform and provide strategic diversification to Ørsted's portfolio.

As Onshore is a new business unit, an overall introduction is provided in the following sections:

- onshore wind farms, from development to owning and operating
- operational and near-term portfolio
- pipeline, ambition and strategy
- tax credits and tax equity partnerships.

Onshore wind farms, from development to owning and operating

Large-scale onshore wind projects have certain similarities with the offshore wind development business, especially within EPC (e.g. turbine supply agreements and park layout) and O&M (e.g. performance analytics and predictive maintenance), however, the project risk profile is different. The development of an onshore wind farm takes two to three years and construction another 9 to 12 months compared to offshore wind projects which typically have significantly longer development and construction cycles.

We are present in the value chain as a developer, owner and operator. As the US onshore

market has matured, industry standardisation has developed. We act as facilitator between project functions and select experienced industry partners with proven track records to perform construction activities. This model provides the ability to scale quickly and efficiently.

Typical development activities include preliminary site selection, assessment of wind resources and environmental impact, securing real estate, transmission and congestion analyses, securing interconnection rights as well as local, state and federal permissions, offtake, etc.

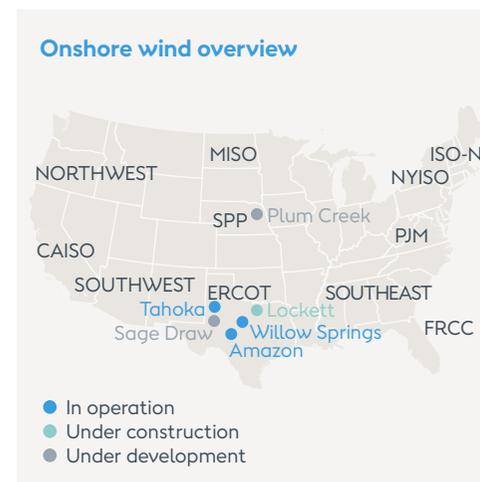

Turbine selection is based on project-specific levelised cost of electricity (LCoE) analysis, taking into account installation cost, power generation and long-term O&M costs.

We seek to capitalise on continued technological advancement and increasing size of swept wind area.

Operational and near-term portfolio

The geographic focus has been Texas, where all of our onshore wind farms in operation are situated. A small operational solar project is located in New Jersey.

Our current portfolio comprises three operating wind farms, Willow Springs (250MW), Amazon (253MW) and Tahoka (300MW) as well as a solar PV asset (Oak, 10MW) with a total capacity of 813MW. The operational wind portfolio is recently commissioned, supported by power offtake agreements for more than 650MW through long-term contracts with solid corporate and blue-chip partners.

Our near-term pipeline (2020 projects) includes three onshore wind farms (Lockett, Sage Draw and Plum Creek) with a total capacity of 714MW. We made final investment decision (FID) on Lockett in late 2018, and we expect it to reach commercial operation date (COD) in Q3 2019. At Plum Creek, we have secured more than 70% offtake and expect COD in 2020.

In November, we announced 500MW of wind and solar PPAs with ExxonMobil, equally divided between Sage Draw and the solar PV project Permian Solar, with expected COD dates of 2020 and 2021, respectively.

Pipeline, ambition and strategy

We expect to build on our solid operational and near-term portfolio and add up to 1GW of additional capacity by 2022, taking our total US capacity to 2.5GW. We are pursuing a portfolio of regionally diversified projects across the ERCOT, SPP and MISO markets, including:

- Greenfield onshore wind projects with an average size of 250-300MW and eligible for at least 60% PTC
- Greenfield solar PV opportunities (including Permian Solar), where opportunities arise via corporate and utility PPA partnerships.

Beyond the production tax credit (PTC) era, we are in a favourable position to meet demands for onshore wind power in the US by leveraging our value chain experience. Our growth will thus be driven by our ability to remain a significant market developer, providing competitive LCoE levels. Our onshore development activities are focused on areas where large-scale opportunities with a high likelihood of success have been available, and where onshore wind LCoE is competitive with the alternatives on a pure LCoE basis.

Tax credits and tax equity partnerships

Federal support for renewable energy is provided in the form of tax incentives, of which production tax credits (PTCs) dominate within onshore wind. PTCs are inflation-adjusted per kilowatt-hour (kWh) tax credits for power generated by eligible energy resources for the first ten years of operation. Projects eligible for 100% PTCs must have started construction by the end of 2016 and must be completed before the end of 2020, four years from qualifying.

Federal tax attributes constitute a significant component of overall project economics and have led to projects being able to offer long-term offtake prices to customers (e.g. PPAs with utilities or C&I customers) at a discount to merchant power price projections.

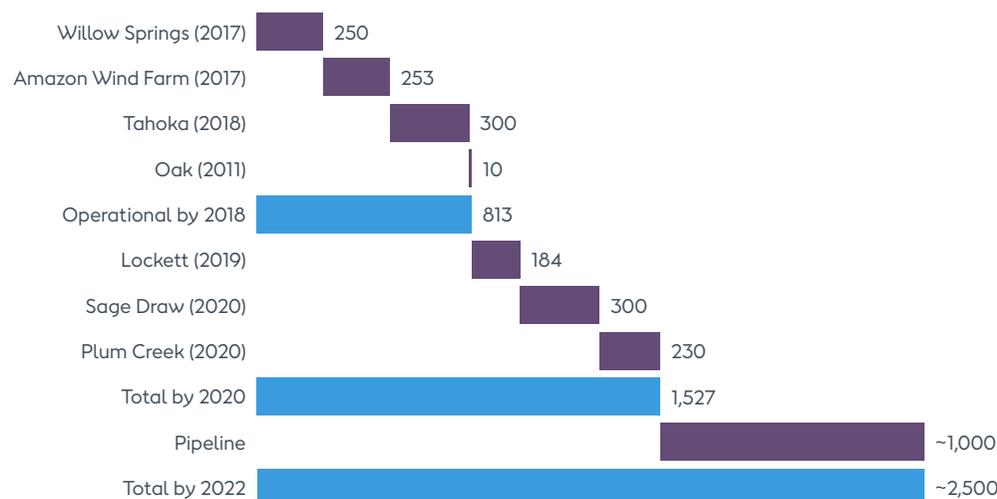

PTCs are currently being phased out with a linear decline by 20% per year until 2019, after which it expires. However, competitive LCoE projections of new built onshore wind and consumer demand drive significant growth expectations from the mid-2020s onward.

Our three operational wind farms and three near-term development projects are all eligible for 100% PTCs, and they are expected to be commissioned before the end of 2019 and 2020, respectively. In addition, our pipeline of 1GW by 2022 is eligible for 60% PTCs.

Solar investment tax credits (ITCs) provide a direct credit based on a percentage of the eligible capital expenditures. Projects starting construction in 2019 receive the full ITC of 30%. During the next few years, the ITC percentage will gradually decline and end at 10% from 2021.

The tax attributes can only be utilised by a tax-paying entity. Since we are currently not in a tax-paying position in the US due to significant investments, we partner with investors who contribute capital to efficiently monetise the tax attributes. Upon achievement of commercial operations, these tax equity investors contribute a substantial portion of the total project investment.

Build-out plan, installed MW

Bioenergy

Highlights 2018

- The High Court of Western Denmark and the Danish Appeals Permission Board ruled in favour of Ørsted in the case concerning the former Elsam.
- We commissioned the green gas facility 'Kalundborg Bioenergi', which transforms the organic waste of long-time corporate customers Novo Nordisk and Novozymes into green gas that is utilised in Novo Nordisk's production.
- We divested our 50% ownership share in the Dutch gas-fired power plant Enecogen.

Introduction to Bioenergy

Bioenergy consists of our combined heat and power generation business (CHP) in Denmark and our growth platform within green biogas and waste, Green Waste Solutions (GWS).

- Our CHP business is a leading generator of district heating in Denmark through our large combined heat and power plants and dedicated heat plants. We provide around one quarter of Denmark's district heating and around one third of Denmark's thermal power.
- GWS offers innovative green waste solutions in Denmark and the UK through our patented enzyme technology, Renescience, and our biogas production and upgrading facilities.

Financial performance

Revenue increased by DKK 0.5 billion to DKK 6.4 billion in 2018.

Power generation was 18% lower than in 2017, driven by the divestment of our Dutch power plant, and amounted to 6.7TWh. Power generation from our Danish plants increased by 4% driven by higher spreads, while heat generation decreased slightly by 2% to 8.8TWh in 2018 due to warmer weather.

Revenue from heat sales increased by 11% despite a decrease in heat generation. This was due to the bioconversion of the Skærbæk Power Station as well as higher revenue from the Avedøre Power Station due to ramp-up in Q1 2017 following the bioconversion in December 2016. Revenue from power and ancillary services increased by 6% to DKK 3.5 billion, driven by an increase of 45% in power prices compared to last year. This more than offset the 18% decrease in generation due to the divestment of the Enecogen power plant.

EBITDA increased by DKK 0.2 billion and amounted to DKK 0.4 billion in 2018. The increase was due to higher spreads in 2018 as well as the bioconversion of Skærbæk Power Station, partly offset by higher project development costs related to new activities.

ROCE	%	(12.9)	(22.2)	9.3%p

EBITDA from ancillary services was DKK 0.1 billion higher than in 2017 driven by higher demand during the summer and increased demand from Germany (DK1/DE connection).

Cash flows from operating activities amounted to DKK 1.5 billion and was thus DKK 0.9 billion higher than in 2017. The increase was due to the higher EBITDA, prepayments related to the bioconversion of Asnæs Power Station, and lower receivables.

Gross investments amounted to DKK 1.4 billion in 2018. The largest investments related to the bioconversion of Asnæs Power Station.

Bioenergy achieved positive free cash flows of DKK 0.5 billion, of which the divestment of Enecogen contributed with DKK 0.4 billion.

Strategy follow-up

In Bioenergy, we are completing the conversions of our Danish combined heat and power (CHP) plants to sustainable biomass, and we continue to explore the potential for growth and value creation within waste-to-energy and biogas technologies.

Bioenergy's strategic focus is to:

- complete the conversion of our Danish CHP plants to sustainable biomass and phase out coal by 2023
- operate our plants smartly and safely and prepare for a transition towards a more electrified green district heating system
- establish a leading growth platform within biogas and waste recycling.

Complete the conversion to sustainable biomass and phase out coal by 2023

For several years, we have been committed to converting our heat and power plants to using sustainable wood pellets and wood chips instead of fossil fuels. We will phase out coal entirely towards 2023, thereby reducing our annual carbon emissions in Denmark significantly. In just over ten years, we will have gone from being one of the most coal-intensive utilities in Europe to having a completely coal-free generation by 2023.

Along with other European energy companies, we remain committed to the Sustainable Biomass Programme (SBP) which promotes a robust and independent system for the certification of sustainable biomass. In 2018, all our biomass came from sustainable sources, mostly in the form of residues from timber production such as sawdust, branches

and thinnings, and 83% was certified by third parties. We expect that 100% of our biomass will be third party certified by 2020.

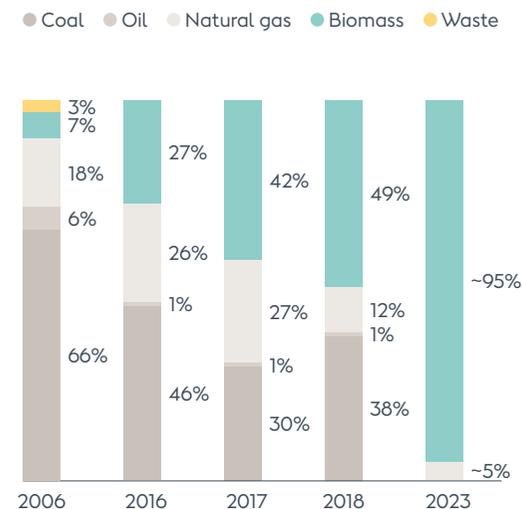

In 2018, we experienced an increase in the use of coal, reflecting improved power market conditions and a demand for our power stations to supplement the intermittent generation from wind and solar PV, also at times when no heat generation was required.

In collaboration with our heat customers, we have reached important milestones in 2018. Our conversion of the Asnæs Power Station is progressing on schedule, implying that we will be supplying green district heating to the general Kalundborg area from 2020 onwards, while providing green steam to Novo Nordisk's and Novozymes' production facilities. We are also progressing our flue gas condensation project in Herning, enabling us to substantially increase the heat and power output of the biomass used from mid-2019 onwards.

The Esbjerg Power Station is our last remaining unconverted CHP plant. The heat customers in the Esbjerg and Varde areas have been granted an exemption from the regulatory requirement to apply CHP solutions for providing district heating. This means that there is no longer a viable business case for Ørsted for a new CHP plant. We have consequently informed the heat customers that we will cease providing districting heat to the area by the end of 2022.

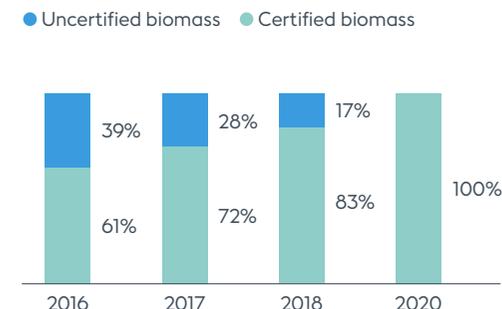

As part of our green transition, we divested our 50% share in Enecogen, a gas-fired power plant in the Netherlands, to Castleton Commodities International LLC in July 2018.

Share of fuels in the thermal heat and power generation, %

Biomass conversions will support a continued reduction in the usage of coal in the coming years.

Certified biomass, %

Further, we have entered into a conditional agreement to transfer our Svanemølle Power Station to CPH City & Port Development by 2023. The transfer is made to allow for an extensive assessment of the feasibility of transforming the iconic buildings into a state-of-the-art Science & Technology Museum. The power station currently provides district heating during peak hours to two utility companies in Copenhagen.

Operate our plants smartly and safely and prepare for a transition towards a more electrified green district heating system

Our portfolio of large bio-converted CHP plants in Denmark will continue to be a key component in the green transition of the heat and power sector in Denmark, while also supporting the power grid during times of low wind and solar generation.

To operate them efficiently, we are rolling out a comprehensive digitalisation programme at our power stations, allowing us to further optimise generation and reduce costs. In parallel, we are taking initial steps to investigate opportunities in electrified district heating, for instance in the form of large-scale heat pumps and heat storage.

Establishing a leading growth platform within biogas and waste recycling

During 2018, we continued to test and improve our Renescence facility in Northwich in the UK. The Renescence technology efficiently converts household waste into biogas and recyclable materials through enzymes and mechanical sorting technologies. The Northwich plant has confirmed that the core enzymatic sorting process works as expected,

also when applied in large scale. We are currently finalising the optimisation of the plant's mechanical operations, which has been more challenging and taken longer than expected. Final commissioning is expected during the first half of 2019.

In April 2018, we commissioned our first industrial Danish biogas plant together with Bigadan – Kalundborg Bioenergi. The facility transforms 300,000 tonnes of organic waste from Novo Nordisk and Novozymes in Kalundborg into biogas for approx 5,000 Danish homes and utilises the remaining products as fertiliser for farmland. In addition, we finalised the construction of the extension of the Danish Linkogas biogas-upgrading facility in December. We are now operating four major biogas-upgrading facilities in Denmark. We are investigating similar opportunities in collaboration with industrial partners, collectively promoting conversion of organic industrial waste into green energy.

Customer Solutions

Highlights 2018

- We signed a 15-year route-to-market agreement for the 860MW UK wind farm Triton Knoll.
- We decided to exit the Danish power distribution, residential customer, and city light businesses.
- At the end of December, the customers in our power distribution company, Radius, had taken 679,000 smart meters in use.

Financial performance

Revenue was up 19% at DKK 48.0 billion in 2018, driven primarily by an average increase in gas and UK power prices of 32% and 26%, respectively, relative to 2017. This was only partly offset by a 1% decline in gas and a 6% decline in power volumes sold.

EBITDA amounted to DKK 2.0 billion compared to DKK 2.1 billion in 2017.

EBITDA from Distribution amounted to DKK 1.2 billion, which was in line with 2017.

EBITDA from Sales decreased compared to 2017 and amounted to DKK -0.1 billion. The decrease was primarily due to higher business development costs in the B2B energy solutions business and implementation of a new billing system in our residential customer (B2C) business.

EBITDA from Markets decreased by DKK 0.5 billion and amounted to DKK 0.9 billion. The decrease was mainly due to high earnings related to trading of our financial energy exposures in 2017, and a negative impact from changes in the value of our gas at storages due to a decline in gas prices in December 2018 (versus a positive effect in 2017). This was partially offset by a one-off compensation awarded following the completion of an arbitration relating to a gas purchase contract in 2018.

EBITDA from LNG increased by DKK 0.5 billion to a marginal loss. The increase was mainly due to provisions in 2017 related to an onerous contract for the Gate terminal in Rotterdam and purchase contracts. Furthermore, 2018 was positively affected by increased gas prices and utilisation of location spreads between Asia and Europe, and optimisation of physical positions.

Previous impairment losses of DKK 0.6 billion regarding the power distribution grid were reversed in connection with the classification as assets held for sale at the end of the year.

Cash flows from operating activities amounted to DKK 2.3 billion in 2018. The increase of DKK 2.9 billion was primarily due to settlement of intra-group hedges related to the negative effect in 2017 of the now divested oil and gas business, less funds tied up in clearing accounts toward trading partners, and less

funds tied up in receivables due to lower gas sales at the end of 2018 compared to 2017. This was partly offset by more funds tied up in ROC inventories due to higher offshore wind power generation.

Gross investments totalled DKK 1.2 billion in 2018, relating mainly to maintenance of the power distribution grid and the installation of new smart meters.

ROCE increased by 5 percentage points to 18%, mainly due to the higher EBIT.

Strategy follow-up

Customer Solutions has assumed a more integrated role in Ørsted as the front-end of the value chain, providing efficient route-to-market services. To develop market access to wholesale, corporate and traded markets, we increasingly focus on developing customer relationships to go beyond commodities and revolve around renewable power generation, waste to energy, and energy efficiency.

We will investigate different options for exiting our power distribution, residential customer and city light businesses.

Customer Solutions' strategic focus is to:

- add further scale to our green power and gas and green certificates business
- mitigate merchant risk through trading and green energy corporate PPAs
- optimise our portfolio of legacy gas-sourcing contracts and LNG positions.

Add further scale to our green power and gas and green certificates business

During 2018, the power portfolio grew by 1.4GW to more than 4.5GW, as we added long-term route-to-market contracts for the newly commissioned Walney Extension and Borkum Riffgrund 2 offshore wind farms and extended contracts for existing offshore wind farms. Furthermore, we entered into a contract to balance the British offshore wind farm Triton Knoll (860MW) for a 15-year period, starting from the planned commissioning in 2021. These additions add to the diversification and flexibility of our portfolio of power and green certificates.

Ørsted was granted approx 13% of all renewable obligation certificates (ROCs) presented to the UK's Office of Gas and Electricity Markets (Ofgem) for the April 2017-March 2018 ROC period. When selling power to UK corporate customers, we present the required number of ROCs to Ofgem. However, our offshore wind generation in the UK significantly outweighs our UK power sales, and once a year, we therefore auction out parts of our excess ROCs from the latest and the three upcoming ROC periods to UK utilities with ROC imbalances. This ROC

regime will continue until 2037, when the 20-year ROC subsidies will expire for the last renewable assets that were entitled to ROCs.

Mitigate merchant risk through trading and green energy corporate PPAs

In 2018, we increased our focus on offering corporate power purchase agreements (cPPAs) with fixed power prices and long tenures to our wholesale and corporate customers. The aim of this is twofold. Our customers achieve certainty about their power price for a long period of time and add to their green profile. For Ørsted, these cPPAs reduce the exposure to merchant risk by limiting the power volumes that we will have to sell at prevailing market prices. Today, we have merchant power exposure from our UK wind farms under the ROC regime. Going forward, merchant risk mitigation will also be needed for existing wind farms as subsidies expire and for potential new wind farms without subsidies.

Within our market trading activities, we benefited from proactive trading e.g. by reducing our exposure to the event risk from the UK Government's changes in the carbon price support scheme, and by successfully managing the price volatility during the cold spell in early spring.

In 2018, our energy efficiency advisory services helped our Danish corporate customers achieve aggregated energy savings of approx 133GWh.

Customer satisfaction among our corporate customers remained high at 75, although down from 77 in 2017 (on a scale from 1-100).

Introduction to Customer Solutions

Customer Solutions provides the Group with access to wholesale, corporate and traded markets.

- We create incremental value by providing route-to-market services for the Group and our partners by selling power, gas and green certificates to the market. In doing so, we own and operate portfolios of contracts within gas and power, which we optimise by leveraging our origination and trading capabilities and utilising the size of the portfolios.
- We generate access to wholesale and corporate customers to whom we seek to develop strong partnerships beyond conventional commodity supply, including offering corporate power purchase agreements (cPPAs), green waste solutions as well as energy efficiency and energy portfolio risk management services.
- We proactively manage the merchant risks arising from our generation assets and

contracts by trading commodities, and we mitigate risks and create value through time-to-market decisions, proxy hedging and netting.

We plan to exit our power distribution, residential customer and city light businesses which comprise:

- Radius, which owns and operates Denmark's largest power distribution grid measured by number of connection points with approx one million customers.
- Our residential customer business with sale of power to approx 725,000 customers and gas to approx 102,000 customers.
- Our city light business which is the largest Danish street light operator, covering 17 municipalities across Zealand.

Optimise our portfolio of legacy gas-sourcing contracts and LNG positions

During 2018, we settled additional price reviews of our long-term gas-sourcing contracts, with an outcome that ensures profitability of our portfolio of conventional gas contracts.

However, we expect our LNG activities to continue to be loss-making going forward, although losses in 2018 were limited by our increased global trading activities.

Key focus areas within the businesses held for sale (power distribution, B2C and city light)

During 2018, our power distribution customers experienced a decrease in the security of supply as on average they had 0.65 disconnections, excluding faults in the primary transmission grid owned by the Danish transmission system owner, Energinet. This was an increase of 0.23 disconnections compared to 2017 and worse than our target of 0.50. The increase was influenced by a combination of two unintentional incidents on the 50kV grid in early 2018 as well as damage to the 30kV grid during third-party construction works, which led to repeated disconnections of a large number of customers in Central Copenhagen. The roll-out of smart meters to all customers by 2020 is progressing according to plan and reached a significant milestone in September, where the project was half-way through instalment. By the end of 2018, 679,000 smart meters had been taken into use.

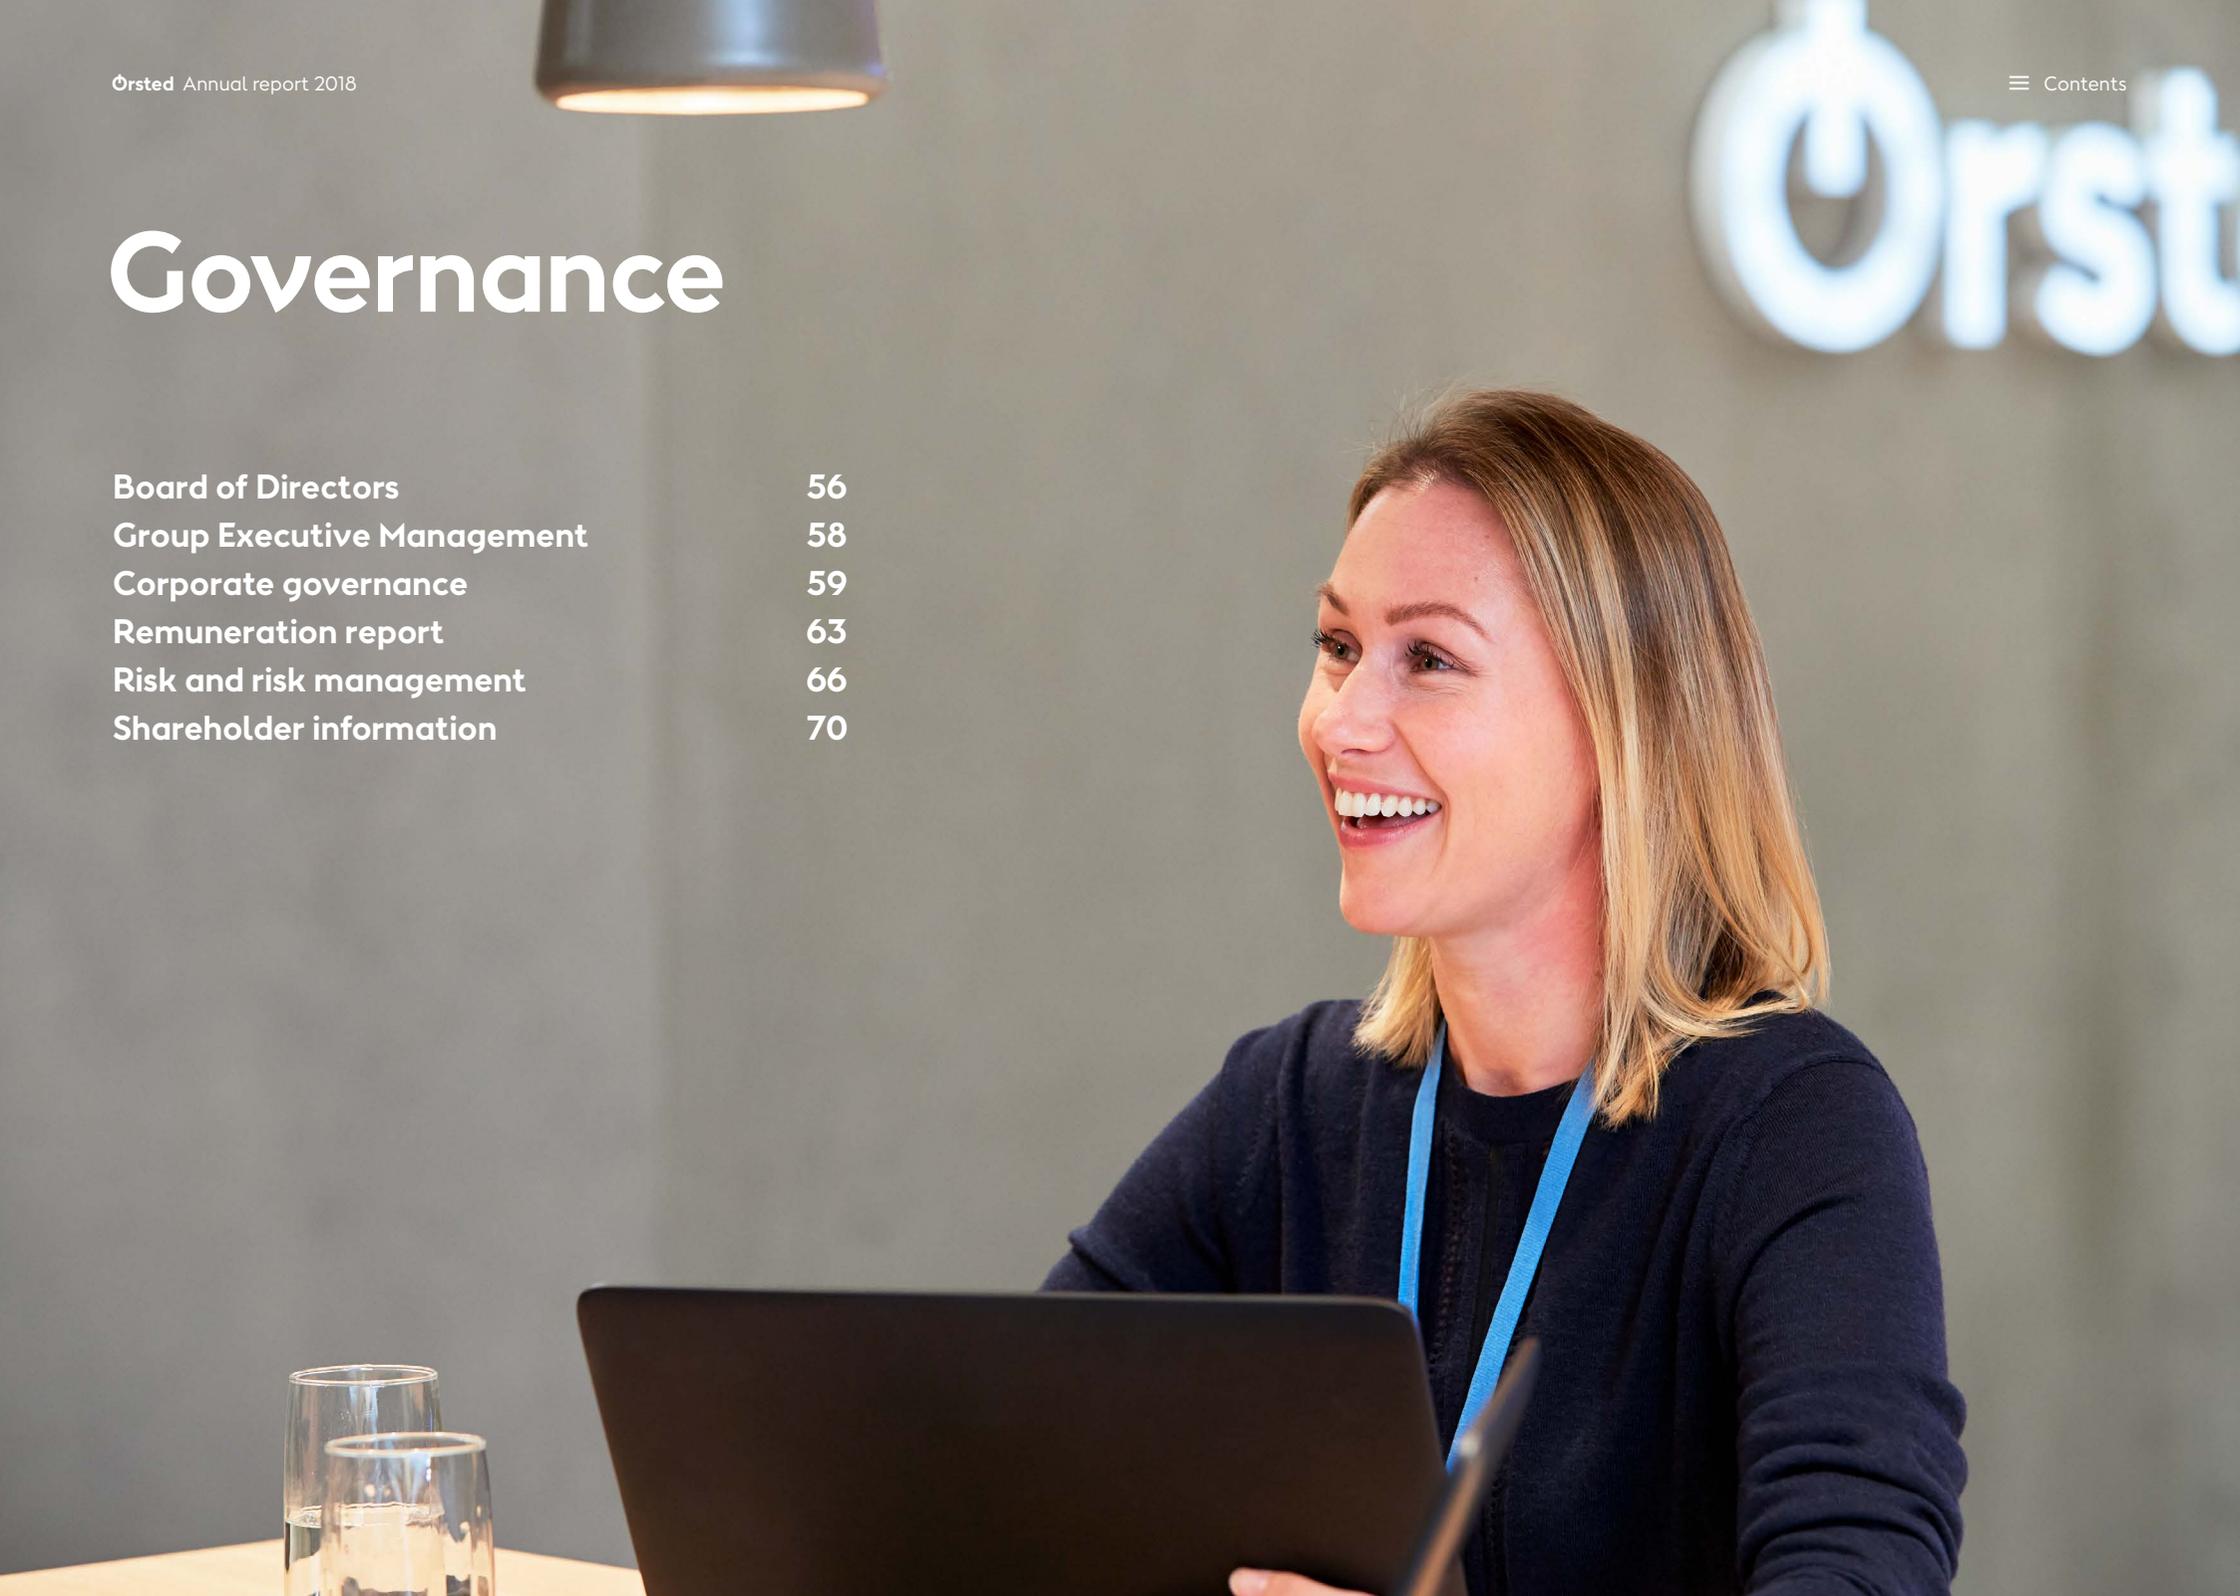

Radius' customer satisfaction remained high at 81, down from 82 in 2017 (on a scale from 1-100) despite the increase in grid disconnections and the replacement of smart meters.

Our residential customer business is pioneering the transition to time-of-day based power prices which have been offered where possible since late 2017. By the end of 2018, 94% of our customers with this option had transitioned. Customer satisfaction among residential customers who had been in contact with us was 74 in 2018, down from 76 in 2017 (on a scale from 1-100). Contrary to this decrease, our loyalty increased to 72 from 71 and our net promoter score turned 0 (on a scale from -100 to +100), following negative scores ranging from -22 to -2 from 2013 to 2017.

Corporate governance

Our governance model has its offspring in our Scandinavian roots and our listing on the Nasdaq Copenhagen Stock Exchange.

The overall and strategic management of the company is anchored in a board of non-executive directors appointed by the shareholders. The Board of Directors has appointed an Executive Board for handling the day-to-day management. None of the members of the Executive Board are members of the Board of Directors.

Our governance model is illustrated in the figure to the right and explained below.

Shareholders and general meeting

Our shareholders exercise their rights at the general meeting. The general meeting adopts decisions, such as the appointment of the Board of Directors and the auditor, in accordance with the standard Danish rules. However, the approval of a proposal to amend the Articles of Association or dissolve the company requires that the Danish State as majority shareholder participate in the general meeting and vote in favour of the proposal.

Board of Directors

Members and duties

Each year at the annual general meeting, the shareholders elect six to eight board members. In addition, our employees may elect members corresponding to half of the board members elected by the general meeting pursuant to Danish mandatory rules. Employee elections are typically held every four years.

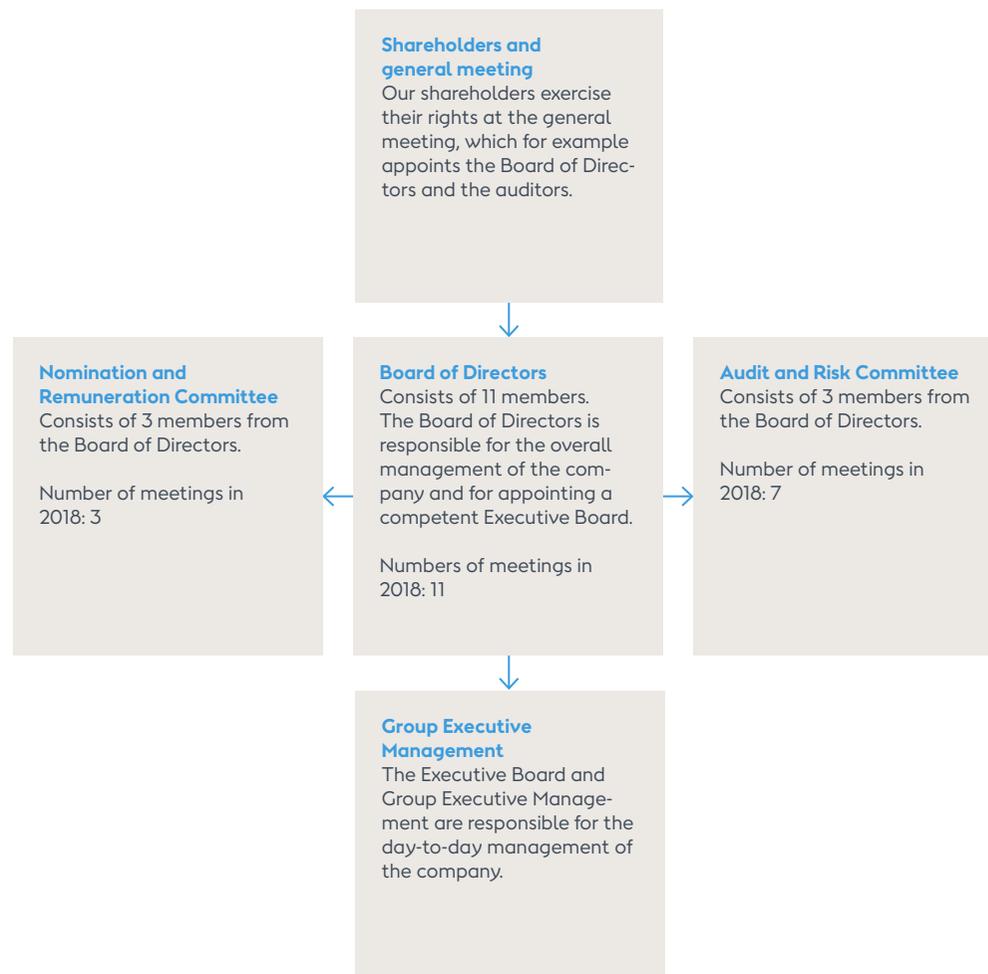

Our Board of Directors currently comprises eleven members, eight members elected by the general meeting and three members elected by the employees.

In 2018, Dieter Wemmer and Jørgen Kildahl joined the Board of Directors as new members elected by the general meeting.

The Board of Directors has prepared an overview of the competences required on the board. The list of required competences can be found on orsted.com/competences-overview. In the table on the next page, we have illustrated how the current board members compare against the required competences.

The Board of Directors is responsible for the overall management of the company and appoints the Executive Board. The Board of Directors lays down the company's strategy

Our governance model

and makes decisions concerning major investments and divestments, the capital base, key policies, control and audit matters, risk management and significant operational issues.

The Board of Directors has appointed two committees from among its members: an Audit and Risk Committee and a Nomination and Remuneration Committee.

The rules of procedure of the Board of Directors describe the work and duties of the Board of Directors. Terms of reference are also in place for the two committees.

Information about the members of the Board of Directors, their other supervisory and executive positions and independence can be found on pages 56-57.

The green transformation is on the board agenda

Since climate change is fundamental to Ørsted's business strategy and all our investments, climate-related issues are directly or indirectly an agenda item at all board meetings. As such, climate-related issues are integrated in reviewing and guiding our strategy, in setting performance objectives, and in overseeing major

investments, acquisitions and divestments. The Board of Directors monitors and oversees progress related to Ørsted's strategic ambitions and targets for addressing climate-related issues.

Special tasks in 2018

Key tasks for the Board of Directors have been the build-out of our offshore wind project portfolio after 2020, the establishment of a new onshore wind platform in the US through the acquisition of Lincoln Clean Energy, the acquisition of the US wind developer Deepwater Wind, the farm-down of Hornsea 1 in the UK and the initiation of a structured divestment

The numbers indicate how many meetings in 2018 the members have attended and not attended, respectively, during the year.

process for our Danish power distribution, residential customer and city light businesses.

The Board of Directors conducted its annual board effectiveness assessment in December 2018. The assessment was conducted with assistance from an external adviser, who conducted a survey and interviewed all board members. The input from the survey and interviews was processed and analysed with international benchmarking. The external adviser also acted as an observer during a board meeting.

Important tasks for the Board of Directors in 2018

Investments, acquisitions and divestments

- Acquisition of the US onshore wind developer Lincoln Clean Energy.
- Acquisition of the US offshore wind developer Deepwater Wind.
- Farm-down of the offshore wind farm Hornsea 1 in the UK.
- Initiation of divestment of our Danish power distribution and residential customer and city light businesses.

Other tasks

- Preparation of new ambitious targets for our long-term strategic and financial development with an ambition to lead the green transformation.
- Appointment of new CEO for Offshore.
- Establishment and appointment of CEO for Onshore.
- Development of our offshore wind project portfolio in the UK, Germany, the Netherlands, Taiwan and the US.
- Development of our onshore wind project portfolio in the US.
- Review of overall IT security.
- Preparation of a Global Diversity & Inclusion Policy.

The external adviser concluded that the Board of Directors has evolved in many dimensions and was in good shape for the challenges ahead. The Board of Directors has a strong and relevant composition with a breadth of skills, competences and perspectives and solid financial knowledge. Although many board members are relatively new, the Board of Directors is well aligned in relation to strategic priorities and its modus operandi, which is steered effectively by the Chairmanship.

Remuneration

Each year, the general meeting approves the remuneration for the members of the Board of Directors for the coming year. In the section on remuneration on page 65, you can read more about the remuneration of the Board of Directors.

Nomination and Remuneration Committee

Members and duties

Thomas Thune Andersen (Chairman), Lene Skole and Pia Gjellerup are the members of the Nomination and Remuneration Committee.

The committee assists the Board of Directors in matters regarding the composition, remuneration and performance of the Board of Directors and Group Executive Management.

You can read more about the Nomination and Remuneration Committee and the terms of reference for the committee at orsted.com/nomination-remuneration-committee.

Special tasks in 2018

In 2018, the committee discussed, among other matters, payment of retention bonuses granted in connection with the planned divestment of our Danish power distribution, residential customer and city light businesses as well as retention bonuses to individual business-critical employees in companies acquired during the year.

Additionally, the committee discussed a share-based retention tool which was introduced in 2018 and targeted at a limited number of employees responsible for critical long-term projects.

The committee also reviewed an update of the compensation model and governance for our top 100 employees.

Audit and Risk Committee

Members and duties

Benny D. Loft (Chairman), Dieter Wemmer and Peter Korsholm are the members of the Audit and Risk Committee.

The committee assists the Board of Directors in overseeing the financial and ESG reporting process, the capital structure development, financial and business-related risks, compliance with statutory and other requirements from public authorities as well as the internal controls.

Moreover, the committee approves the framework for the work of the company's external and internal auditors, evaluates the external auditors' independence and qualifications as

well as monitors the company's whistleblower scheme.

Our Internal Audit function reports to the Audit and Risk Committee and is independent of our administrative management structures. Internal Audit enhances and protects the organisational value by providing risk-based and objective assurance, advice and insight. Further, Internal Audit is primarily involved in auditing and advising on our core processes, governance, risk management, control processes and IT security.

The Chairman of the Audit and Risk Committee is responsible for managing our whistleblower scheme. Internal Audit receives and handles reports submitted. Our employees and other associates may report serious offences, such as cases of bribery, fraud and other inappropriate or illegal conduct, to our whistleblower scheme or through our management system. In 2018, two substantiated cases of inappropriate or unlawful behaviour were reported through our whistleblower scheme. One case concerned violation of procure-to-pay policies, and one case concerned misappropriation of assets. The cases had consequences for the individuals involved. None of the reported cases were critical to our business or impacted our financial results. Whistleblower cases are taken very seriously, and an awareness campaign was conducted to avoid similar cases.

You can read more about the Audit and Risk Committee and the terms of reference for the committee at orsted.com/audit-risk-committee.

Important tasks for the Audit and Risk Committee in 2018

Audit and accounting

- Review of the accounting policy applied for US subsidies and tax attributes.
- Review of the principles and disclosures related to the two acquisitions (business combinations) and divestments.
- Review of the implementation of IFRS 15 as well as supervising the preparation for IFRS 16 implementation in 2019.
- Review of expectations for market prices, exchange rates, discount rates and risk-free interest rates.
- Review of significant provisions and warranties in the Group.
- Monitoring of capital structure development.
- Monitoring of the voluntary limit for non-audit services as well as preliminary approval thereof.

Risk

- Monitoring of business and emerging risks.
- Review and assessment of the principles applied for the adopted inflation exposure management policy.
- Review of IT security in operational and administrative areas as well as cybersecurity.
- Assessment of liquidity reserve and capital structure.
- Monitoring of currency and energy hedging mandates.
- Supervision of the work involved in ensuring compliance with the requirements of the General Data Protection Regulation.

Special tasks in 2018

In 2018, the Audit and Risk Committee focused on the two acquisitions of Lincoln Clean Energy and Deepwater Wind in the US, IT/ cybersecurity together with the implementation of the new General Data Protection Regulation (GDPR) and the inflation exposure management policy adopted in 2018.

Internal Audit undertook special audit and consultancy tasks within the following areas: prevention of cybercrime, GDPR, compliance, internationalisation, asset management, commodity and currency hedging, compliance monitoring and business conduct.

Executive Board and Group Executive Management

Members and duties

Henrik Poulsen (CEO) and Marianne Wiinholt (CFO) are members of the Executive Board of Ørsted A/S.

The Executive Board undertakes the day-to-day management through Group Executive Management, which consists of seven members. In addition to Henrik Poulsen and Marianne Wiinholt, Group Executive Management comprises the executive vice presidents of our four business units: Martin Neubert (Offshore), Ole Kjems Sørensen (Onshore), Thomas Dalsgaard (Bioenergy) and Morten H. Buchgreitz (Customer Solutions) together with Anders Lindberg, Executive Vice President of Offshore EPC and QHSE.

The Board of Directors has laid down guidelines for the work of the Executive Board, including the division of work between the Board of Directors and the Executive Board and the Executive Board's powers to enter into agreements on behalf of the company. The Board of Directors regularly discusses the CEO's performance, for example by following up on developments seen in relation to our strategy and objectives.

The Chairman of the Board of Directors and the CEO also regularly discuss the cooperation between the Board of Directors and the Executive Board.

You can find information about the members of the Executive Board, including their previous employment and other executive functions, on page 58. We describe the remuneration of the Executive Board in the section on remuneration on pages 63-65.

Our corporate governance positions

We comply or partly comply with all 47 recommendations prepared by the Danish Committee on Corporate Governance as last updated in November 2017 (please see corporategovernance.dk).

Our only deviation is that the first grant under the share programme for the Executive Board has a slightly shorter vesting period than the recommended three years. Upon vesting of the first grant in May 2019, we will comply with all 47 recommendations.

Our statutory report on corporate governance can be found at orsted.com/statutory-reports. The report describes in more detail whether and how we comply with or deviate from the recommendations.

Remuneration report

Remuneration policy

The overall objective of our remuneration policy is to attract, motivate and retain qualified members of our Board of Directors and our Executive Board.

In addition, the policy aims to strike the right balance between the Executive Board's fixed and incentive-based remuneration with the target of remunerating the members in relation to the results achieved at company and individual levels. This ensures a tightly aligned interest between the Executive Board and the shareholders.

The remuneration policy is available at orsted.com/Remuneration-policy-2018.

Remuneration of the Executive Board

Remuneration structure

In February 2018, the Board of Directors decided to keep the remuneration structure unchanged for 2018 compared to 2017. The remuneration structure and the remuneration for the Executive Board are shown in the table to the right. The two incentive schemes are described in more detail below.

Cash-based incentive schemes (STI)

The cash-based incentive scheme is an annual bonus with a target of 15% of the fixed salary and may not exceed 30%. The Nomination and Remuneration Committee sets the targets

Remuneration structure and remuneration for the Executive Board

Element	Henrik Poulsen			Marianne Wiinholt			Objective	Remuneration level	Performance measure
	2018	2017	2016	2018	2017	2016			
Fixed salary	10,500	9,700	9,238	5,900	5,061	4,820	Attract and retain qualified managers.	Competitive, but not market leading, compared to the level in similar major listed Danish companies with international activities.	
Cash-based incentive schemes (STI)	2,993	2,656	2,135	1,637	1,348	1,239	Ensure shared ownership of the entire company's performance and a clear link between value creation and pay-out.	Target of 15% of the fixed salary. The maximum bonus amounts to 30% and will be paid-out in case of full achievement of all performance targets.	The performance reward agreement consists of three targets: – specific individual business targets and leadership (60%) – financial target (30%) – safety target (10%).
Share-based incentive scheme (LTI)	2,306	1,367	1,427	1,231	713	889	Reward long-term value creation and align the Executive Board's interests with those of the shareholders.	Target of 20% of the annual fixed salary at the date of grant. After three years, shares will be allocated at 0-200% of the number of PSUs granted, depending on Ørsted's total shareholder return compared to peers.	The final number of shares will be determined on the basis of Ørsted's total shareholder return benchmarked against ten peers.
IPO Executive Retention Bonus	1,232	1,848	616	643	964	321	Retain the Executive Board after the IPO. Phasing into a share based long-term incentive scheme.	20% of the fixed annual salary at 1 July 2016.	Employment at 1 September 2017 and 1 September 2018, respectively.
Pension, incl. social security and benefits	313	326	187	242	196	244		The members of the Executive Board are not entitled to pension contributions, only social security.	
Severance pay								If a member of the Executive Board is terminated by the company, the person is entitled to 24 months' salary, composed of full remuneration during the 12 month notice period and 12 months of severance pay (fixed salary only).	
Total, DKK '000	17,344	15,897	13,605	9,653	8,282	7,513			
STI in % of maximum bonus	95%	91%	91%	93%	88%	94%			

for and assesses the performance of the CEO. The Chairman of the Board of Directors and the CEO set the targets for and assess the performance of the CFO.

The Executive Board's specific individual business targets are tied directly to Ørsted's green growth strategy to build out renewable energy. The specific individual business targets comprise a number of items which are defined at the beginning of the year and updated during the year if new targets become relevant to ensure continuous alignment with shareholder interests. See table to the right for a more detailed description of the targets.

Share-based incentive scheme (LTI)

The Executive Board is covered by a share programme. It is a condition for being granted performance share units (PSUs) that the participant holds a number of Ørsted shares, representing a value equal to a share of each participant's fixed salary. For the CEO, this share is 75% of the fixed salary, and for the CFO it is 50%.

If the participants fulfil the shareholding requirement at the time of the annual grant, they will receive a number of PSUs, representing a value equal to 20% of their fixed salary on the date of granting.

The PSUs granted have a vesting period of three years, after which each PSU entitles the holder to receive a number of shares free of charge, corresponding to 0-200% of the number of PSUs granted. Assuming no share price development since the grant, this would correspond to 0-40% of the fixed salary on the date of grant. The final number of shares

for each participant will be determined on the basis of the total shareholder return delivered by Ørsted, benchmarked against ten comparable European energy companies, i.e. 200% if Ørsted ranks first, 100% if sixth, and no shares if we rank last. At the end of 2018, Ørsted ranked first, second and fourth, respectively, in the three outstanding share-programmes against the ten peers.

If a member of the Executive Board leaves Ørsted as a result of his or her own resignation or due to breach of his or her employment, the entitlement to shares vesting after the notice period is lost.

The IPO Executive Retention Programme, which purpose was to phase into a long-term share based incentive scheme, expired in 2018, as the LTI programme will start to vest from 2019.

The table is a non-exhaustive summary of the individual business targets for our CEO and CFO as well as shared Group targets. They must deliver fully on all their individual targets in order to achieve the maximum cash bonus (STI).

The other members of the Group Executive Management have their own individual business targets and are remunerated according to the same model as described to the right.

Number of PSUs and shares owned by the Executive Board

	Henrik Poulsen	Marianne Wiinholt
Share-programme		
Maximum number of PSUs at 31 December 2018	41,368	22,062
Maximum fair value of PSUs at 31 December 2018	DKK 18 million	DKK 10 million
Current holding of Ørsted shares		
Number of Ørsted shares owned	130,500	83,916
Fair value of Ørsted shares at 31 December 2018 in percentage of fixed salary for 2018	542%	620%

The table shows that both members of the Executive Board meet the share capital requirement.

Overview of targets and performance in the cash bonus (STI)

Objectives and performance 2018	Henrik Poulsen		Marianne Wiinholt	
	Objectives	Score	Objectives	Score
Safety target (10%)	– TRIR compared to target	100%	– TRIR compared to target	100%
Financial target (30%)	– EBITDA compared to guidance	100%	– EBITDA compared to guidance	100%
Specific individual business targets and leadership (60%)	– First-class safety culture and standards – ROCE in line with plan – Deliver major construction projects on budget and time – Winning auctions and/or securing key access rights/permits in Offshore's existing and new strategic markets, e.g. the US and Taiwan, with a sustained focus on value creation – Investigate and pursue additional value-creating growth opportunities within renewable energy, incl. potential acquisitions – Continue to reduce the cost of electricity in offshore wind – Farm-down of Hornsea 1 – Develop potential new markets for offshore wind	92%	– First-class safety culture and standards – ROCE in line with plan – Manage capital structure within current rating commitments – Support green growth by providing high-quality decision input related to financial analysis, tax, risk management, funding, etc. – Proactively manage risks related to currencies, interest rates and inflation – Increase quality and cost effectiveness in IT and exploit digital opportunities – Develop plan and implement initiatives to raise IT security level – Lead the implementation of the GDPR project – Update the tax strategy	88%

Clawback clause

The Executive Board's incentive schemes are subject to a clawback clause whereby any paid-out bonus must be repaid if:

- the circumstances and data that the bonus was based on are erroneous
- the Executive Board member knew or should have known about this circumstance.

The Executive Board member must repay any amount of the incentive pay received in excess of the incentive pay calculated, applying the correct data.

Remuneration 2018

The remuneration paid to our CEO totalled DKK 17.3 million in 2018, representing an increase of 9.1% compared to 2017. The cash bonus (STI) made up DKK 3.0 million, corresponding to 92% of the maximum bonus. The bonus percentage reflects a performance exceeding the targets for the Group's financial and safety results. The score for the CEO's specific individual business targets and leadership is also at the high end of the range. See table on page 64 for an overview of the specific individual business targets.

The remuneration paid to our CFO totalled DKK 9.7 million, representing an increase of 16.6% compared to 2017. The cash bonus (STI) made up DKK 1.6 million, corresponding to 88% of the maximum bonus. The bonus percentage reflects a performance exceeding the targets for the Group's financial and safety results. The score for the CFO's specific individual business targets and leadership is also at the high end of the range.

In 2018, the remuneration under the share-based incentive programme consisted of the market value of the scheme at the time of granting, distributed over the vesting period. Both members of the Executive Board are covered by the share programmes from September 2016, April 2017 and April 2018. The IPO retention bonuses for 2017 and 2018 constitute the phase-in to the vesting of the first share programme in May 2019. The decreases in the IPO retention bonuses in 2018 are attributable to the fact that the scheme covered only eight months of 2018 after which it expired.

Comparison to development in the Group's average salary

In 2018, the fixed salary for the CEO and CFO increased by 8.2% and 16.6%, respectively, which was more than the average salary increase in the Group of 2.9%¹ (2.8% in Denmark). The higher increases for the CEO and CFO were given to narrow the gap in total remuneration compared to the market median levels for similar roles in large Danish peer companies.

Remuneration of the Board of Directors

Remuneration structure

The members of the Board of Directors receive a fixed fee each year. The Chairmanship and the members of the committees also receive a multiple of the fixed fee for their extra work. None of the members receive separate fees for consultancy work for Ørsted. The members' travel costs are covered by the company. The members are not entitled to severance payments.

Remuneration multiple 2018, Board of Directors and committees

	Board of Directors	Audit and Risk Committee	Nomination and Remuneration Committee
Chairman	3.0	0.6	0.4
Deputy Chairman	2.0	n.a.	n.a.
Member	1.0	0.3	0.25

The remuneration multiples are unchanged from 2017.

Remuneration of the Board of Directors

Claus Wiinblad (resigned in March 2017)	-	-	-	-	104
Total	4,454	392	288	5,134	4,934

The table shows the remuneration paid to the members of the Board of Directors and committees. The remuneration of the Board of Directors comprises a fixed fee only, and the fee remains unchanged at DKK 320,000 as last year.

¹⁾ At 31 December 2018, the board members own the following number of shares in Ørsted A/S: Thomas Thune Andersen 550 (2017: 0), Lene Skole 1,160 (2017: 0), Peter Korsholm 4,500 (2017: 4,500), Hanne Steen Andersen 2,394 (2017: 3,187), Poul Dreyer 837 (2017: 837), Benny Gøbel 1,087 (2017: 837). No other board members own shares in Ørsted A/S.

¹⁾ Calculated based on the salary after the yearly salary adjustment for all employees who remained employed at the time of the yearly salary adjustment.

Risk and risk management

Risks are a natural and integral part of our business activities. Our aim is to mitigate our risks and reduce them to an acceptable level through risk management.

We are exposed to several risks. In addition to operational, business and environmental risks, we are exposed to fluctuations in exchange rates, interest rates, inflation and commodity prices, as well as credit and insurance risks. The purpose of our risk management is to identify all risks we are exposed to and decide how best to manage and mitigate them. We assess the extent to which individual risks are acceptable or perhaps even desirable, as well as the extent to which these risks can be reduced to ensure an optimum balance between risk and return.

To a large extent, our earnings are centred within offshore wind and other green energy technologies. Although, Denmark and the UK are key contributors to our current earnings, our future earnings will increasingly be spread across different geographical regions and technologies. Therefore, political and other macroeconomic factors play an important role in our risk management. When we invest in new assets and activities or divest assets, the risk associated with our portfolio changes. We therefore assess the impact of a given decision on the portfolio in advance.

We work systematically with risks and follow a plan for the year according to which all business units and selected staff functions identify and prioritise business risks. An assessment is made of the potential financial impact of individual risks, and whether they are of a short-term (0-2 years), medium-term (2-5 years), long-term (5+ years) or recurring nature. All of our risks are then consolidated and evaluated at Group level. The ultimate responsibility for all the individual risks rests with a member of the Group Executive Committee. As for business risks, similar processes are in place for identifying and prioritising risks related to sustainability, cybersecurity and legal compliance.

The top five business risks identified during 2018 are shown to the right, where they are illustrated based on their potential impact (post-risk mitigation) on our value and credit metrics over the next years. You can read more about these risks on the following pages.

Brexit is not in itself part of our top five business risks, as the UK's decision to leave the EU will not, in our opinion, result in fundamental changes in the UK's energy policy. Recent announcements by the UK Government show that the UK is committed to a clean, green energy future, and offshore wind can be the backbone of this green vision. We have analysed a number of Brexit scenarios and believe that even if a deal is not reached between the UK and the EU, and there is a disruption to the

flow of goods between the UK and the EU, trade and customs facilities will still function in the medium term. Our most significant risk related to Brexit is assessed to be a long-term depreciation of the GBP, which is a part of our top 1 business risks.

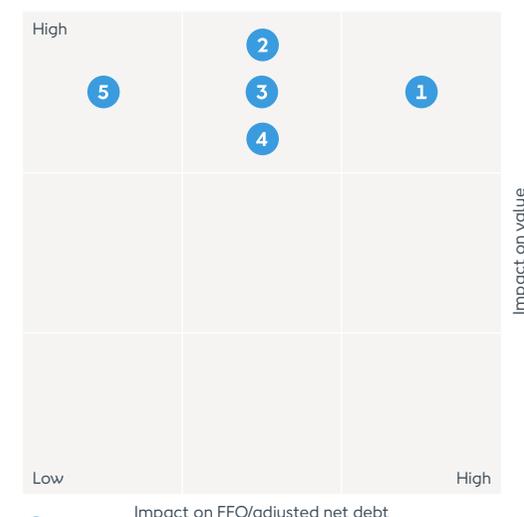

The risks related to sustainability, cybersecurity and legal compliance are assessed using different parameters, which is why we are unable to show a consolidated picture of our combined risks. A description of the most significant sustainability risks can be found in our sustainability report and for each of the other two areas on page 69.

We are also exposed to risks which have a very small probability of occurring, but which could potentially impact our finances and/or reputation substantially. These risks include, but are not limited to:

- 1,000-year storms, hurricanes, typhoons or earthquakes, which may lead to the loss of offshore and onshore wind farms
- broken pipes at the Nybro Gas Treatment Plant in Denmark, which may lead to personal injury and damage to the environment
- breakdowns at power stations that may lead to personal injury and loss of assets.

After risk-reducing measures are implemented, the Group Executive Management assesses whether the level of each risk is appropriate or

Top 5 business risks
Effect on our value and credit metric

Quantification of risks is based on a scenario where the risk occurs with 10% probability (P90). Our Internal Audit function has examined the process for identifying and measuring the accompanying portfolio risks.

- 1** (#1 2017)
Currency, inflation and interest rates
- 2** (#1 2017)
Commodity prices
- 3** (#2 2017)
Development and construction of production assets
- 4** (#3 2017)
Operation of offshore wind farms
- 5** (#4 2017)
Regulatory risks within offshore wind

slightly or significantly higher than the desired level. If the risk level is still too high, further risk-reducing measures are initiated to the extent possible.

Climate-related risks

We address climate-related risks and opportunities as an integral part of our daily business, as these are directly linked to our green vision and strategy. We seek to exploit climate-related opportunities through our development and construction of renewable heat and power generation capacity and adjacent sustainable activities. At the same time, we seek to reduce both our transitional and physical climate-related risks in the short, medium and long term. We do that by, among other things:

- influencing regulators and other public authorities toward ambitious targets for the build-out of renewable capacity and regulatory frameworks that support this
- continuously working to improve the future competitiveness of green technologies, i.e. lowering the levelised cost of electricity
- assessing acute and chronic weather development; in particular wind speeds and patterns, but also the temperature and precipitation levels in general
- taking extreme weather conditions and other relevant factors into account when we design and construct our assets.

In that way, we seek to avoid ending up with stranded assets or assets and activities with a significantly lower value than originally expected, which we potentially need to write down or provide for.

When we prepare business cases for investments in new assets or activities, we take

climate-related risks and opportunities into account by assessing the expected changes in the technology mix that will be delivering heat and power in the future. On this basis, we assess the expected derived impact on input and output prices of energy, including the price development of components and services to be used for the construction of these assets as part of our LCoE analysis.

Our planning scenario until 2040 for the power systems in North Western Europe is in accordance with a carbon emission reduction trajectory for these countries leading to a 2-degree temperature increase.

We track the impact of undertaking these new investments on our carbon footprint to enable us to disclose our own direct greenhouse gas emissions from heat and power generation and the derived avoided emissions from displacing fossil-based generation. We have also recently started to track and assess the total impact on greenhouse gas emissions across our entire business portfolio as well as across the full value chain from our procurement through to the final consumption at our end-users.

Development in risks in 2018

The acquisitions of US-based Deepwater Wind and Lincoln Clean Energy in 2018 have significantly increased our exposure to the US market, and the allocation of grid capacity in Taiwan will significantly increase our exposure to this market if we continue with our projects. These developments have had an impact on the ranking of our top five business risks.

Due to our increased international activities, we have divided our market risks into currency, inflation and interest rate risks, and commodity price risks. Our exposure to exchange rate fluctuations, primarily GBP, USD and potentially New Taiwan dollar (NTD), has increased due to significant investments in offshore wind in these areas. Currency and interest rate risks are deemed to be our most significant business risk, whereas commodity prices are rated our second largest risk.

Our third largest risk now includes the development and construction of production assets in new markets, where there are higher risks associated with construction, among other things, due to the need for developing the value chain in these immature markets.

Risks associated with the operation of offshore wind farms is our fourth largest risk.

Regulatory risks within offshore wind is our fifth largest risk and has renewed focus due to the expansion into new markets.

A continued reduction of the levelised cost of electricity (LCoE) remains a key focus area, but has moved out of our top five risks.

1 Currency, inflation and interest rates

Description

Our main currency exposure relates to GBP due to our substantial investments in offshore wind farms in the UK. However, our recent expansion has increased our USD exposure and will increase our NTD exposure if we continue with the projects.

To a large extent, our medium- to long-term earnings can be expected to follow the development in consumer and market prices, thereby protecting the real value of our assets and equity. Fixed nominal subsidies from wind assets in Denmark, Germany and the Netherlands, fixed-price power purchase agreements (PPAs) from assets in the US and potentially Taiwan, as well as fixed nominal cash flows related to debt are exceptions. We are exposed to inflation risk in these markets, where an increase in inflation will adversely impact the expected real value of the revenue.

Potential impact

Fluctuations in exchange rates, interest rates and inflation may adversely impact our earnings.

Mitigation initiatives

Currency risks are generally hedged for up to five years when cash flows in foreign currency are deemed relatively certain. However, for cash flows related to fixed tariffs and guaranteed minimum prices from offshore wind farms in the UK, we apply a decreasing degree of hedging over the risk management horizon.

Consequently, we are well protected against exchange rate fluctuations in the short-term, but only partly hedged in the medium-term. Our inflation and interest rate exposure is managed by matching assets and liabilities in the same currency and with similar payment structure. Hence, our European fixed nominal subsidies are offset by EUR-denominated fixed-rate debt. The close relationship between inflation and interest rates also protects the equity value of Ørsted against changes in interest rates to some extent.

2 Commodity prices

Description

We are primarily exposed to power price risks from the sale of our wind-based power generation. In addition, we typically enter into agreements to buy our partners' share of the power from our jointly owned offshore wind farms. These investor power purchase agreements (iPPAs) entail further exposure as they include floors and caps related to a pre-determined power price level.

To a lesser extent, we are exposed to oil and gas price risks related to sourcing contracts for gas and LNG on oil-indexed prices as well as the sale of gas at fixed prices. Finally, power generation from our CHP plants entails a spread exposure between the difference in the power price and the fuel price (i.e. biomass, coal, gas and carbon quotas).

Potential impact

Fluctuations in commodity prices may adversely impact our earnings.

Mitigation initiatives

We hedge commodity prices for up to five years, and in some cases longer, to reduce cash flow fluctuations. We hedge based on minimum hedging requirements for each of the business units, with a high hedge level in the first two years. The degree of hedging is lower in the subsequent years. This is due to declining certainty about generated volumes and increasing costs due to the declining liquidity of the hedge instruments.

As an alternative to hedging, we seek to enter into long-term corporate power purchase agreements (cPPAs), under which we sell power from our renewable assets. Corporate PPAs or hedges with a duration of 12-15 years are often a prerequisite for obtaining tax equity partnerships in the US. In addition, cPPAs will be a means to reducing business case uncertainty for offshore wind farms to be built without subsidies.

3 Development and construction of production assets

Description

Our strategy includes the construction of large-scale investment projects. Value creation from new projects heavily depends on choosing the right technical and commercial solutions, on the design and construction phase progressing as planned, on our suppliers living up to their obligations, on maturing the value chain in new markets, on avoiding investment budget overruns and on timely start-up of generation.

The majority of our new investments are made in offshore assets, which naturally increases the risks in the construction phase. Some of these are the nature of sea beds, weather conditions and dependence on installation and transit vessels.

Our entry into the US and potentially Taiwan entails some further risks due to the immaturity of offshore wind in these markets. These risks include, local legislation, such as the Jones Act in the US, and the inability to fulfil local content requirements without unappropriated costs and delays due to limited experience among local manufacturers.

Potential impact

If we fail to take any of the conditions mentioned above into account, we may experience delays and budget overruns. Delays can lead to failure to meet deadlines and possibly partial loss of subsidies, grid connection and/or project rights.

Mitigation initiatives

We are continuously working on standardising processes based on our vast experience from previous complex investment projects. This has led to, and will continue to lead to, industrialisation of the installation activities. In recent years, this has led to successful completion of several large investment projects, many of which have been completed ahead of schedule and below budget.

4 Operation of offshore wind farms

Description

The risks associated with the operation of offshore wind farms relate to forecasts for availability and operating expenses as well as faults in transmission cables and substations. Faults like this may result in breakdowns and loss of generation from parts of or an entire offshore wind farm over an extended period of time. Such losses are not compensated in the UK, whereas they are fully compensated in Denmark and partly compensated in Germany and Holland.

Potential impact

Our forecasts for availability and operating expenses are based on several assumptions received from suppliers and on historical data. There is a risk that these assumptions do not hold, and that fault rates and costs are higher than expected. This may lead to deviations between actual generation and forecasts. Faults in transmission assets and substations may have a negative effect on our earnings in case of a lack of compensation thereof.

Mitigation initiatives

We are implementing an operational excellence programme on all wind farms with the aim of increasing the availability and power generation and reducing operational costs. We have put in place various contingency plans to cater for unforeseeable events, including critical repair services to handle cable faults, monitoring signs of damage and initiating repair campaigns where deemed necessary. In addition, we are working continuously to reduce the risk of faults in the operation of offshore wind farms, e.g. by monitoring and applying advanced analytics to operational data collected and by carrying out preventive remedial work on emerging damage.

5 Regulatory risks within offshore wind

Description

The risk associated with regulatory regimes is twofold. First, it is associated with the possibilities for obtaining subsidies or in other ways support for offshore build-out. Secondly, it is associated with the possibilities for obtaining the needed consents, grid connections and relevant approvals from local authorities, including permits or other agreements needed to secure a viable project.

Although the EU countries have increased their 2030 renewable energy targets, the implementation rests with the member states, which means that some uncertainty still prevails. In the US, several East Coast states have committed themselves to offshore build-out, and Taiwan is also expected to continue the build-out of offshore wind towards 2030.

Most markets have tender or auction-based subsidy regimes, where the only or most important factor is the bid price. However, in some countries, a certain level of local content is required.

Potential impact

We do not expect changes to be made to the subsidy schemes with retrospective effect for existing offshore wind projects. The greatest risks are associated with the need to obtain relevant consents and approvals from local authorities and to be connected to the grid. Delays in these areas may lead to total or partial loss of subsidies. This risk is significantly reduced for projects where subsidies and possibly project rights are granted in competitive bidding processes.

Mitigation initiatives

We mitigate the risk by monitoring political and regulatory developments in all relevant countries and by engaging in an active dialogue with relevant authorities about environmental approvals, regulatory milestones and the economic regimes. We also engage in the development of local capabilities to increase local content in the projects.

Cybersecurity

Description

In recent years, several major cyberattacks have been launched against companies around the world, and according to the Danish Centre for Cybersecurity, the risk of cyberattacks aimed at Danish companies is high. Thus, we have a strong focus on IT security.

We are responsible for critical infrastructure, and we own various types of intellectual property rights. This means that we are a potential target for cyberattacks or industrial espionage.

Potential impact

Minor digital risk events like viruses and attempted break-ins are everyday risks without significant impact. However, major cyberattacks or events may impact all or part of our shared infrastructure for administrative systems or industrial control systems. For the latter, the impact could range from a single asset to potentially all assets and activities in the company. Cyberattacks of a certain size can be costly if it forces us to shut down operations for a period of time.

Mitigation initiatives

We have launched a significant resourced programme with the aim to improve resilience against cyberattacks and other threats across Ørsted. In addition, we are running cyber risk awareness campaigns throughout the organisation in order to decrease threats from phishing campaigns, etc.

Furthermore, we are participating in relevant forums across the energy sector to harvest and contribute with information and experience. One example is the Systems & Cyber Resilience working group organised by the World Economic Forum. We are also part of the Danish Network Security Service under the Danish Ministry of Defence to enhance resilience.

Legal compliance

Description

Risks associated with legal compliance are assessed based on financial and reputational significance and probability. Our most significant risks are financial regulation, the EU General Data Protection Regulation (GDPR) and tender law.

We are subject to several financial regulations, such as REMIT, MAR, EMIR, Dodd Frank, MiFID, SFTR and AML. The financial regulations are relevant for a large part of our activities. In relation to GDPR, we are primarily processing personal data regarding our Danish residential customers and our employees. Most of our contracts for goods, services and works are subject to EU and local tender law rules.

Potential impact

Failure to comply with the above-mentioned rules and regulations may result in severe legal sanctions, such as imprisonment, fines and damage claims.

Mitigation initiatives

We have implemented comprehensive policies, procedures, training and controls for relevant parts of our business to ensure compliance with financial regulations.

To ensure that we process personal data in compliance with GDPR, we have mapped and analysed our personal data processing and developed a Group-wide compliance programme. The compliance programme includes various organisational and technical measures and mandatory training of employees in risk-exposed positions.

To counter the tender law risk, our procurement department is involved in almost all procurement activities, and our legal department carries out courses on tender law and review of documents for larger tenders.

Shareholder information

The Ørsted share yielded a total return of 32% in 2018, an increase in the share price of 29%, and dividends of DKK 9 per share.

Price development for the Ørsted share in 2018

The Ørsted share started the year at a price of DKK 339 and closed the year at DKK 436. Prices of comparable European utility companies decreased by 1%, and the OMX C25 cap decreased by 13% in 2018. The market value

of Ørsted was DKK 183 billion at the end of the year. Since the IPO in June 2016, the Ørsted share has generated an aggregate return from share price appreciation and dividends of 92%.

The year's highest traded price of 474 was on 28 November. The year's lowest traded price of 332 was on 3 January.

The average daily turnover on Nasdaq Copenhagen was 447,000 shares. The trading volume showed a decrease of 38% compared to 2017. This was particularly due to several of

the original shareholders opting to sell all or some of their shareholdings in 2017 at a total trading value of DKK 17 billion.

Share capital

Ørsted's share capital is divided into 420 million shares, enjoying the same voting and dividend rights. The company's share capital remained unchanged in 2018. At the end of 2018, the company held a total of 335 thousand treasury shares, which will be used to cover incentive schemes.

Composition of shareholders

At the end of the year, the number of shareholders had increased by 5,175 to 29,727. Although the geographical spread of the share capital was greater, most of it (66%) is still with Danish owners. The figure on the next page shows the composition of our shareholders by country, specifying the three shareholders each holding more than 5% of the share capital. Around 1% of the share capital is owned by private investors.

Annual general meeting and dividends

The annual general meeting will be held on 5 March 2019 in Copenhagen. Dividends for the year are expected to amount to DKK 9.75 per share, corresponding to DKK 4.1 billion. In 2018, dividends of DKK 9.00 per share were paid for the 2017 financial year, corresponding to a return of 2.2% relative to a share price of DKK 436 at 31 December 2018.

Selected company announcements in 2018

- 27 Apr. Ørsted wins 552MW in German offshore wind auction
- 30 Apr. Taiwan awards Ørsted 900MW grid capacity for offshore wind
- 24 May The High Court of Western Denmark rules in favour of Ørsted in case concerning the former Elsam
- 22 June Ørsted wins 920MW offshore wind projects in Taiwan
- 26 June Ørsted initiates a structured divestment process for its Danish power distribution and residential customer businesses
- 9 Aug. Ørsted agrees to acquire Lincoln Clean Energy, a US onshore wind developer
- 18 Sep. Ørsted agrees to divest 50% of Hornsea 1 Offshore Wind Farm
- 8 Oct. Ørsted agrees to acquire Deepwater Wind and creates leading US offshore wind platform
- 2 Jan. 2019 Establishment permit and power purchase agreement delayed on Taiwanese offshore wind projects

Investor Relations

In order to achieve a fair pricing of our shares and corporate bonds, we seek to ensure a high level of openness and stability in our financial communication. In addition, our management and Investor Relations function engage in regular dialogue with investors and analysts. The dialogue takes the form of quarterly conference calls, roadshows, conferences, capital markets days and regular meetings with individual or groups of investors and analysts. The dialogue is subject to certain restrictions from three weeks prior to the publication of our financial reporting.

On 28 November 2018, Ørsted hosted a Capital Markets Day in Gentofte with more than 150 participants, mainly equity and institutional investors. CEO Henrik Poulsen presented Ørsted's new ambitious targets for the Group's long-term strategy and financial development, followed by breakout sessions hosted by the management team. The full Capital Market Day material is available at orsted.com/en/capital-markets-day.

The Group is covered by 22 equity analysts and 12 bond analysts. Their recommendations and consensus estimates for Ørsted's future financial performance are available at orsted.com/en/investors. On this site, you can also download our financial reports, investor presentations and a wide range of other data.

Profit (loss) for the year from our continuing operations

Our former Oil & Gas business, which was divested on 29 September 2017, is presented as discontinued operations.

Profit (loss) per share

Diluted profit (loss) per share corresponds to profit (loss) per share, as the dilutive effect of the share incentive programme is less than 0.1% of the share capital.

Accounting policies

Business performance

The business performance principle is our alternative performance measure. According to IFRS, market value adjustments of energy contracts and related currency risks (including hedging) are recognised on an ongoing basis in the profit (loss) for the year, whereas under the business performance principle, they are deferred and recognised in the period in which the hedged exposure materialises. The difference between IFRS and business performance is specified in the 'Adjustments' column. Read more about the business performance principle in note 1.6 'Business performance'.

Statement of comprehensive income

1 January - 31 December

Note	DKKm	2018			2017

	Non-controlling interests	-	-	(4)	-	-	(169)
	Total comprehensive income	-	-	17,916	-	-	18,803

Statement of comprehensive income

All items in other comprehensive income may be recycled to the income statement.

Value adjustments for the year for cash flow hedging according to IFRS of DKK -1,107 million mainly consist of losses related to the divestments of Hornsea 1. The loss is transferred to the income statement.

Value adjustments for the year for cash flow hedging according to the adjustment column of DKK 1,734 million mainly consist of losses on power hedges that are recognised in the income statement under IFRS, but under business performance, the losses are deferred to the period where the hedged exposure relates.

Foreign exchange losses relating to net investments in foreign enterprises of DKK 417 million were in 2018 primarily attributable to a drop of 1% in the GBP exchange rate. 2017, foreign exchange losses relating to net investments in foreign enterprises amounted to DKK 1,513 million and were primarily attributable to a drop of 4% in the GBP exchange rate.

					Equity and liabilities	174,575	146,521

Contract assets and contract liabilities

The adoption of IFRS 15 has changed our presentation, as we have introduced contract assets and contract liabilities. As we have implemented IFRS 15 after the modified retrospective method, we have not restated comparative figures. The comparative figures we have shown for 'Contract assets' and 'Contract liabilities' were presented as 'Construction contracts' in the 2017 annual report.

The effects of change in accounting policy are identical for business performance profit (loss). Read more about the impact in note 1.4 'Implementation of new or changed accounting standards and interpretations'.

5.3	Income tax paid	(3,367)	(2,660)
	Cash flows from operating activities	10,343	1,023

Accounting policies

Cash flows from operating activities are determined using the indirect method as operating profit (loss) before depreciation, amortisation and impairment losses adjusted for changes in operating items without cash flow effect. Trade payables relating to purchases of intangible assets and property, plant and equipment are not recognised in change in net working capital.

Change in work in progress consists of elements in contract assets, contract liabilities, construction management agreements related to construction of offshore wind farms, construction of offshore transmission assets (inventory) and related trade payables.

Change in tax equity partner liabilities relates to cash contributions from tax equity partners and distributions of PTCs and other tax attributes to tax equity partners. See also note 4.5 'Tax equity liabilities'.

Other items primarily comprise reversal of share of profit (loss) of and dividends in associates and joint ventures as well as changes in bad debt provisions.

Cash flows from investing activities comprise payments in connection with the purchase and sale of non-current assets and enterprises as well as the purchase and sale of securities that are not recognised as cash and cash equivalents.

Cash flows from financing activities comprise changes in the size or composition of equity and loans, including net proceeds from and to tax equity partners. Proceeds from raising of short-term repo loans are presented net.

Cash flows in currencies other than the functional currency are translated at the average exchange rates for the month in question, unless these differ significantly from the rates at the transaction date.

1. Basis of reporting

Significant changes in the current reporting period	80
Basis of preparation	81
Key accounting estimates and judgements	83
Implementation of new or changed accounting standards and interpretations	84
Alternative performance measures	87
Business performance	88

1.1 Significant changes in the current reporting period

The financial position and performance of the Ørsted Group was particularly affected by the following events and transactions during 2018.

For a detailed discussion about the Ørsted Group's performance and financial position, please refer to our management's review on pages 4 to 54.

Acquisitions

Lincoln Clean Energy

In October 2018, we acquired Lincoln Clean Energy, which forms the basis of our new Onshore business unit, see note 3.3 'Acquisition of enterprises'. The transaction has been recognised using the acquisition method whereby all identifiable assets and liabilities have been measured at fair value. The acquisition introduced new accounting concepts, such as tax equity liability, see note 4.5 'Tax equity liabilities', and power purchase agreements (PPAs) (derivatives), classified as financial products with significant elements of non-observable data, see note 7.7 'Fair value measurement'.

With the acquisition, we established a strong and scalable platform for the US onshore market, which will be a key growth platform and provide strategic diversification to our portfolio.

Deepwater Wind

In November 2018, we acquired Deepwater Wind, which will be part of our existing Offshore business unit, see note 3.3 'Acquisition of enterprises'. The transaction has been recognised using the acquisition method whereby all identifiable assets and liabilities have been measured at fair value. Similar to Lincoln Clean Energy, the acquisition includes a tax equity liability, see note 4.5 'Tax equity liabilities'.

With this acquisition, we created a leading US offshore wind platform with a geographically diverse US East Coast portfolio of projects at varying degrees of development and with significant synergy potential both in terms of geography and project timing.

Divestments/ assets held for sale

Hornsea 1 offshore wind farm

In November 2018, we farmed-down 50% of Hornsea 1. The transaction is classified as a divestment of assets, see note 2.5 'Other operating income and expenses' and 3.1 'Intangible assets and property, plant and equipment'.

Danish power distribution, residential customer and city light businesses

We plan to exit our Danish power distribution, residential customers and city light businesses during 2019 and have therefore classified them as assets held for sale, see note 3.6 'Assets classified as held for sale'.

Enecogen gas-fired power plant

In July 2018, we divested our 50% ownership share in the Dutch gas-fired power plant Enecogen. The transaction is classified as a divestment of enterprises, see note 3.4 'Divestment of enterprises'.

IFRS

2018

Accounting policy

Adoption of IFRS 15

We have adopted the new IFRS standard on revenue from contracts with customers. The standard has an insignificant impact on profit (loss) for the year and diluted profit (loss) per share. The equity and the consolidated statement of cash flows are not affected. The impact on our consolidated financial statements is described in note 1.4 'Implementation of new or changed accounting standards and interpretations'. The disclosure requirements in IFRS 15 is included in note 2.2 'Revenue'.

New operating segment

The Onshore business unit was established in connection with the acquisition of Lincoln Clean Energy, see note 2.1 'Segment information' and management's review on pages 46 to 48.

1.2 Basis of preparation

This section provides an overall description of the accounting policies applied in our consolidated financial statements. We provide a more detailed description of the accounting policies applied in the specific notes. Key estimates and judgements and new and amended IFRS standards and interpretations are discussed in detail in note 1.3 'Key accounting estimates and judgements' and 1.4 'Implementation of new or changed accounting standards and interpretations', respectively.

Basis of preparation

The financial statements for the period 1 January - 31 December 2018 comprise the consolidated financial statements of Ørsted A/S and its subsidiaries (the Group) as well as separate financial statements for the parent company, Ørsted A/S. See page 178 for the parent company's accounting policies.

The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards (IFRS) as adopted by the EU and further requirements in the Danish Financial Statements Act (Årsregnskabsloven).

The financial statements are presented in million Danish kroner (DKK), unless otherwise stated.

All business units in the Ørsted Group apply the Group's accounting policies.

Measurement basis

The consolidated financial statements have been prepared on the historical cost basis except for derivatives, financial instruments in trading portfolio, and carbon emissions allowances in trading portfolio that are measured at market value.

The accounting policies have been applied consistently to the financial year and for the comparative figures except for:

- the adoption of 'IFRS 15 – Revenue from Contracts with Customers'
- the adoption of IAS 20 'Accounting for Government Grants and Disclosure of Government Assistance' with respect to subsidies received under the Renewable Obligation scheme in the UK and feed-in tariffs in Germany
- the adoption of IFRIC 22 'Foreign Currency Transactions and Advance Consideration'
- the adoption of IFRIC 23 'Uncertainty over Income Tax Treatments' (early adoption).

Principles for consolidation

The consolidated financial statements include the parent company Ørsted A/S and subsidiaries controlled by Ørsted A/S. See more in note 8.5 'Company overview'.

The consolidated financial statements have been prepared as a consolidation of the parent company's and the individual subsidiaries' financial statements which have been prepared in accordance with the Group's

accounting policies. Intra-group income and expenses, shareholdings, balances and dividends as well as realised and unrealised gains and losses arising from intra-group transactions are eliminated on consolidation.

Unrealised gains resulting from transactions with associates and joint ventures are eliminated to the extent of the Group's ownership interest. Unrealised losses are eliminated in the same way as unrealised gains to the extent that there has been no impairment.

The Group's share in joint operations is recognised in the consolidated balance sheet through recognition of the Group's own assets, liabilities, income and expenses. The Group's share of joint income, expense, assets and liabilities is recognised afterwards. The proportionate share of realised and unrealised gains and losses arising from intra-group transactions between fully consolidated enterprises and joint operations is eliminated.

Investments in associates and joint ventures are measured using the equity method.

If we hold or have the ability to exercise, directly or indirectly, 20%-50% of the voting rights and do not exercise control, such enterprises are accounted for as associates. However, we carry out a specific assessment of our ability to exercise influence, including our ability to influence financial and operational decisions and thus our return. Enterprises

that satisfy the criteria for joint control are accounted for as investments in joint ventures.

We present the profit (loss) from investments in associates and joint ventures before EBITDA when deemed to pertain to our principal activities. The profit (loss) from investments in associates and joint ventures is presented after EBITDA when not deemed to pertain to the Group's principal activities.

Associates and joint ventures with negative net assets are measured at nil.

If we have a legal or constructive obligation to cover the negative equity of an associate or joint venture, the obligation is recognised as a liability.

Receivables from associates and joint ventures are measured at amortised cost. On initial recognition of our receivables, write-downs are made for bad debts.

The proportionate share of associates' and joint ventures' profit (loss) after tax and non-controlling interests is recognised in profit (loss) for the year. We eliminate the proportionate share of internal gains (losses) in the profit (loss) for the year.

On acquisition of investments in associates and joint ventures, the purchase method is applied.

Gains (losses) on the divestment of investments in associates and joint ventures are determined as the difference between the selling price and the carrying amount of net assets, including goodwill at the date of divestment and transaction costs.

Gains and losses are recognised in profit (loss) for the year as gain or loss on the divestment of enterprises. The profit (loss) for the year and total comprehensive income from associates and joint ventures are identical.

Key accounting judgements

Assessment of classification of partnerships

On initial recognition of investments and in connection with any restructuring of joint ventures and joint operations, we assess whether an investment is a joint venture or a joint operation.

In assessing joint operations, we look at:

- the corporate form of the operation
- whether we are only entitled to the net profit or income and expenses resulting from the operation.

In addition, the fact that the parties buy or are assigned all output, for example the power generated, will lead to the structure being considered a joint operation.

Foreign currency translation

For each reporting enterprise in the Group, items are determined in the currency of the primary economic environment in which the individual reporting enterprise operates (functional currency). Transactions in currencies other than the functional currency of each enterprise are accounted for as transactions in foreign currencies and translated on initial recognition at the exchange rate on the transaction date. Exchange differences arising between the exchange rate on the transaction date and on the date of payment are recognised in profit (loss) for the year as financial income or expenses.

Receivables, payables and other monetary items in foreign currencies are translated at the exchange rates on the balance sheet date. The difference between the exchange rate on the balance sheet date and on the date at which the receivable or payable arose is recognised in profit (loss) for the year as financial income or expenses.

For foreign subsidiaries, joint operations, associates and joint ventures, the statements of comprehensive income are translated at monthly average exchange rates in so far as these do not deviate materially from the actual exchange rates at the transaction dates. Balance sheet items are translated at the exchange rates on the balance sheet date.

All exchange differences are recognised in profit (loss) for the year, except for exchange differences arising on:

- translation of the opening equity of these entities at the exchange rates on the balance sheet date
- translation of the statements of comprehensive income of these enterprises from the exchange rates at the transaction date to the exchange rates on the balance sheet date
- translation of balances accounted for as part of the total net investment
- translation of the portion of loans and derivatives that has been entered into to hedge the net investment in these enterprises, and that provides an effective hedge against corresponding foreign exchange gains (losses) on the net investment in the enterprise.

The above types of exchange differences are recognised in other comprehensive income. Such exchange rate adjustments are divided between the equity of the parent company and the equity of the non-controlling interests. On full or partial divestment of the net investment, the accumulated exchange rate adjustments are recognised as follows:

- Disposal results in loss of control: The accumulated exchange rate adjustments, including any associated hedges, are recognised in the profit (loss) for the year if

a foreign exchange gain (loss) is realised by the selling enterprise. Any foreign exchange gain (loss) is transferred to the item in which the gain (loss) from the disposal is recognised. The part of the foreign currency translation reserve that relates to non-controlling interests is not transferred to profit (loss) for the year.

- Disposal does not result in loss of control: A proportionate share of the foreign currency translation reserve is transferred from the parent company shareholders' share of equity to the minority shareholders' share of equity.

Repayment of balances that are considered part of the net investment does not constitute a partial disposal of the subsidiary.

1.3 Key accounting estimates and judgements

The use of reasonable estimates and judgements is an essential part of the preparation of the consolidated financial statements.

Given the uncertainties inherent in our business activities, we make a number of estimates regarding valuation and judgements. The estimates and judgements are based on assumptions concerning future developments which affect our application of accounting policies

and reported amounts of our assets, liabilities, sales, costs, cash flows and related disclosures. Actual amounts may differ from the amounts estimated and judgements made as more detailed information becomes available.

We regularly reassess these estimates and judgements, based among other things on historical experience, the current situation in the financial markets and a number of

other relevant factors, ie. the expected effects of Brexit.

Accounting estimates, judgements and assumptions which may entail a risk of material adjustments in subsequent years are listed in the table below.

In addition, we make judgements when we apply the accounting policies.

Reference is made to the specific notes for further information on the key accounting estimates and judgements as well as the assumptions applied.

Note		Key accounting estimates and judgements	Estimate/ judgement	Extent of accounting estimates and judgements
1.2	Basis of preparation	Assessment of classification of partnerships	Judgement	● ● ● ○
2.2	Revenue	Assessment of assumptions for recognition of revenue from the construction of offshore wind farms over time Assumptions for the determination of the expected selling price and expected costs	Judgement Estimate	● ● ● ○ ● ● ● ○
2.5	Other operating income	Assessment of classification of divestment Assumptions for the accounting treatment of divestment gains related to the share purchase agreements and construction agreements	Judgement Estimate	● ● ● ○ ● ● ● ○
3.2	Provisions and contingent assets and liabilities	Assumptions for decommissioning obligations Estimate of onerous contracts Estimate of litigation outcomes	Estimate Estimate Estimate	● ● ○ ○ ● ● ○ ○ ● ● ○ ○

Extent of accounting estimates and judgements relates to objectivity and business practice.

- ○ ○ ○ Very objective/market-conforming
- ● ○ ○ Objective/partially conforming
- ● ● ○ Partially subjective/partially distinctive
- ● ● ● Subjective/distinctive for Ørsted

1.4 Implementation of new or changed accounting standards and interpretations

We regularly assess the impact of new IFRS standards and interpretations. We implement new IFRS standards and interpretations from their mandatory effective dates at the latest.

Effective from 1 January 2018, we have implemented the following new or changed standards (IAS and IFRS) and interpretations:

- IFRS 15 'Revenue from Contracts with Customers' including amendments and clarifications. See separate section below.
- IFRIC 22 'Foreign Currency Transactions and Advance Consideration'.
- IFRIC 23 'Uncertainty over Income Tax Treatments' (early adoption).

Besides the impact from IFRS 15, the adoption of the new and changed standards has not impacted the consolidated financial statements for 2018.

In the following section, you can read more about the impact on recognition and measurement from IFRS 15 'Revenue from Contracts with Customers'. The standard has an insignificant impact on profit (loss) for the year and diluted profit (loss) per share. The equity and the consolidated statement of cash flows are not affected.

Implementation of IFRS 15

On 1 January 2018, we implemented IFRS 15, 'Revenue from Contracts with Customers', which replaces IAS 11, IAS 18 and associated interpretations.

We have implemented IFRS 15 with retrospective effect. However, we use the relief from restating comparative figures (modified retrospective method).

The most important changes resulting from our implementation can be summarised as follows:

- The model for recognition of revenue is changed from having been based on the transfer of the risks and rewards of ownership of a product or service to being based on the transfer of control of the goods or services transferred to the customer.
- More detailed guidelines for how elements in a contract of sale are identified, and how the individual components will be recognised and measured.
- More detailed guidance for recognition of revenue over time.

Changes in our accounting policies resulting from IFRS 15

In the UK, we offer construction agreements for offshore transmission assets. When construction of the offshore transmission assets is completed, they are sold to an offshore transmission owner (OFTO) through a regulated sales process. The UK energy regulator 'Office of Gas and Electricity Markets' (Ofgem) manages the sales process, determines the final transfer value and appoints the buyer. Under IFRS 15, a customer relationship does not exist between Ørsted and the final buyer when the construction of the offshore transmission assets commences. Therefore, we have deferred revenue recognition on offshore transmission assets from commencement of construction to the date of entering into a contract with a customer.

In other words, the recognition of revenue begins when we sell a share of the offshore transmission asset under construction to a partner and takes place upon such partner joining the project. We recognise the remaining part of the offshore transmission asset when we find that control has passed to the OFTO.

Impact on our consolidated financial statements from IFRS 15

In previous reporting periods, offshore transmission assets were recognised in step with the construction based on the completion degree of the asset (over time). Under IFRS 15, revenue from offshore transmission assets are recognised at a later point in time.

The change in policy does not affect the Group's cash flows or results, but only the timing of when income and costs are recognised in the consolidated financial statements.

Historically, we have not had, and we do not expect to have, a significant contribution margin relating to the sale of offshore transmission assets to partners and OFTOs. The Group's EBITDA, balance sheet total and equity will therefore remain unchanged in all material respects as a consequence of the changed accounting policies.

The implementation of the terminology in IFRS 15 had the following effects on the presentation of the construction contracts, receivables and other payables in the balance sheet:

	1 January 2018			31 December 2018

Profit (loss) for the year				18,276	-	18,276

¹ Effect of change to timing of revenue recognition from transmission assets in profit (loss).

² Effect of changed presentation of certain amounts in the balance sheet to reflect the terminology of IFRS 15.

- Construction of offshore transmission assets is classified as inventory.
- Construction agreements other than offshore transmission assets are presented as contract assets and liabilities.
- Construction agreements related to offshore transmission assets are presented as contract assets and liabilities.
- Receivables related to ongoing services or in other ways where the receivables are not unconditional are presented as contract assets.
- Other payables related to prepayments from heat customers are presented as contract liabilities.
- Other payables related to prepayments and deferred revenue as such are presented as contract liabilities.

In summary, the adjustments made to the amounts recognised in the balance sheet on the date of initial application (1 January 2018) are illustrated in the table to the left.

Comparatives for the 2017 financial year are not restated as we have applied the modified retrospective method. The effects of change in accounting policy are identical for business performance profit (loss).

Change in accounting policy

On 1 January 2018, we changed our accounting policy with respect to subsidies received under the Renewable Obligation Scheme in the UK, known as green certificates or renewable obligation certificates (ROCs), and feed-in tariffs in Germany under the German Renewable Energy Sources Act (EEG2014).

We apply IAS 20 'Accounting for Government Grants and Disclosure of Government Assistance', under which subsidies are recognised when there is a reasonable assurance that the grant will be received.

Prior to this change in policy, we applied IAS 18 'Revenue' to ROCs and feed-in tariffs in Germany, while we applied IAS 20 to feed-in tariffs in Denmark and contracts for difference (CfDs) in the UK.

We believe the new policy is preferable as it provides more relevant information about the received subsidies, aligns our accounting of all subsidies received for our renewable power generation and allows comparability between years.

This voluntary change in accounting policy did not result in any impact on the current year or any years included within these consolidated financial statements. The recognition, measurement, timing and presentation of ROCs and feed-in tariffs are unchanged.

The change in accounting policy only impacts the presentation of ROCs and feed-in tariffs in Germany.

Profit (loss), equity and the consolidated statement of cash flows are therefore not affected by the change in accounting policy.

New standards and interpretations

IASB has issued a number of new or amended standards and interpretations which have not yet entered into force, and which have consequently not been incorporated into the consolidated financial statements for 2018.

In the tabel below, we have assessed how IFRS 16 'Leases' will be implemented and the consequences thereof. IFRS 16 is deemed to be the most relevant of the new or amended standards and interpretations for Ørsted.

Standard Expected effect

IFRS 16 'Leases' We have completed our analysis of the impact of implementing IFRS 16 in Ørsted. The conclusion is that the implementation will have limited effect on our balance sheet, income statement and key credit ratios.

When applying IFRS 16, our lease obligations amount to DKK 5,224 million on 1 January 2019, which is slightly higher than our operating lease obligations on 31 December 2018. This amounts to DKK 4,819 million at net present value. The difference between the obligations are primarily due to the fact that the weighed average incremental borrowing rates applied under IFRS 16 are lower than the 3.5%, which we apply for calculation of the net current value of our operating lease obligations in accordance with our present accounting policy for key credit metrics.

IFRS 16 requires that service elements which are incorporated into leases, and which do not entitle us to use an underlying asset, are dealt with separately and treated as current operating expenses. This requirement does not have an effect on our lease obligations as our current accounting policy is to separate the service elements in the leases from the leasing elements. In Ørsted, this matter is partially relevant to leases of office premises.

Commencement

IFRS 16 will be implemented on 1 January 2019.

Transitional provision

The standard will be implemented with retrospective effect, and the comparative figures will not be restated. The requirements of the standard therefore only apply to ongoing and/or leases commencing on 1 January 2019.

For all leases, we will measure the lease asset at the same amount as the lease debt, adjusted by the amount of prepayments and accrued lease payments on 1 January 2019.

We apply the practical expedient regarding reassessment of whether a contract is, or contains, a lease on 1 January 2019. This means that we do not reassess whether a contract is, or contains, a lease when applying IFRS 16.

We do also make use of the possibility to apply a single rate to a portfolio of leases with reasonable similar characteristics. In accordance with this, we apply incremental borrowing rates per class of underlying asset (nature) in similar economic environments (currency) and remaining lease term.

1.5 Alternative performance measures

Performance measures are calculated in accordance with the business performance principle.

Business performance	Business performance is a supplement to our financial statements prepared in accordance with IFRS. Under the business performance principle, the value of the hedging transaction is deferred and recognised for the period in which the hedged risk materialises. Reference is made to note 1.6 'Business performance'.
Gross investments	Gross investments reflect our total investments in assets and enterprises. It comprises cash flows from investing activities, excluding dividends received from associates, joint ventures and equity investments, purchase and sale of securities, loans to joint ventures and joint operations, and divestments of assets and enterprises. To this is added acquired debt and restricted cash in connection with acquisitions.
Net investments	Gross investments less divestments of assets and enterprises, the selling price for non-controlling interests and subsequent capital injections from non-controlling interests. Furthermore, interest-bearing debt transferred in connection with a divestment is deducted.
Funds from operations (FFO)	Supplementary statement for cash flows from operating activities determined as business performance EBITDA less the effect of gains on the divestments of ownership interests in offshore wind farms, interest expenses (net) on interest-bearing net debt and hybrid capital (50%), interest element of decommissioning obligations and current tax. In addition, operating lease obligations have been recognised as if they were finance lease obligations, where operating lease payments have been reversed, and calculated interest expenses of the present value of lease payments have been deducted.
Adjusted interest-bearing net debt	Interest-bearing net debt plus 50% of the hybrid capital, cash and securities not available for use (with the exception of repo transactions), present value of lease payments (operating lease obligations calculated as if they were finance lease obligations), and the present value of decommissioning obligations less deferred tax.

FFO to adjusted interest-bearing net debt	$\frac{\text{FFO}}{\text{Adjusted interest-bearing net debt}}$
Free cash flow (FCF)	Cash flows from operating activities less gross investments and plus divestments.
Capital employed	All assets and liabilities except for equity and interest-bearing net debt.
Average capital employed	$\frac{\text{Capital employed beginning of year} + \text{capital employed year-end}}{2}$
Return on capital employed (ROCE)	$\frac{\text{EBIT}}{\text{Average capital employed}^1}$
Proposed dividend per share (DPS) of DKK 10	$\frac{\text{Total proposed dividend}}{\text{Number of shares year-end}}$
Dividend yield	$\frac{\text{Dividend per share (proposed)}}{\text{Share price on the last trading day of the year}}$
Average number of shares	$\frac{1}{\text{Number of days}} \times \sum_{i=1}^{\text{Number of days}} = X_i$
Net working capital	Inventories, trade receivables and other current operating assets less trade payables, deferred income (net), other current operating liabilities and working capital element of tax equity balances.
Net working capital, excluding trade payables relating to capital expenditure	Net working capital, excluding trade payables relating to purchases of intangible assets and property, plant and equipment.
Profit (loss) per share	$\frac{\text{Shareholders' share of the profit (loss) for the period}}{\text{Average number of shares}}$
Diluted profit (loss) per share	$\frac{\text{Shareholders' share of the profit (loss) for the period}}{\text{Average number of shares, including dilutive effect of free shares}}$

¹ ROCE (continuing operations) is based on average capital employed for the continuing operations. Capital employed related to the oil and gas activities divested on 29 September 2017 are not included.

1.6 Business performance

Description of business performance

In 2011, we introduced an alternative performance measure, business performance, as a supplement to the financial statements prepared in accordance with IFRS. The business performance results reflect our internal risk management and show the results for the period under review. Under the business performance principle, the value of the hedging transaction is deferred and recognised for the period in which the hedged risk materialises. This is illustrated in the example overleaf.

Our reason for introducing the business performance principle in 2011 was:

- that we could not achieve the same timing of recognition of our commercial exposure and hedging contracts in accordance with the IFRS rules, for example with respect to option premiums and certain commercial fixed-price contracts, and
- that there was a high risk that the hedging contracts were not consistent with the IFRS hedge accounting rules, requiring us to recognise the hedging contracts at market value with value adjustments via the income statement, whereas our commercial exposure is accrued.

Our risk management is described in note 7.1 'Market risks'.

Business performance – background

We hedge market risks for up to five years with the aim of stabilising our cash flows and

create certainty about our finances. With a view to ensuring transparency, we want the financial impact of the hedging transactions to be reflected in the financial reporting simultaneously with the hedged exposure (for example sales of power). We can normally achieve this by applying the IFRS rules on hedge accounting. For energy companies, it is, however, sometimes difficult to ensure simultaneity. This is due to the fact that hedging instruments are not always available which precisely match the exposure which must be hedged, or that there is no sufficiently liquid market available. Consequently, some hedging takes place in alternative markets or subject to alternative time horizons. For example, power generation in Denmark is to some extent hedged by financial contracts for nearby trading areas, such as the European Energy Exchange (EEX) in Germany and Nord Pool in Scandinavia. These areas normally develop relatively uniformly over time compared to Denmark.

This hedging method means that only some of the financial hedging transactions comply with the IFRS rules on hedge accounting even though the financial risk has been reduced. In case of non-compliance, under IFRS the hedging transactions must be recognised in the income statement on a regular basis. This may give rise to considerable fluctuations in the income statement, as the effects of the hedging and for example the sale of power are not recognised in the same period.

Consequently, we have decided not to apply the IFRS rules on hedge accounting to transactions hedging energy prices and associated currency risks. Value adjustments of these hedges are therefore recognised in the income statement in accordance with IFRS.

Recognition

In the income statement, the business performance results are shown alongside the IFRS results. In the income statement, the difference

between the two performance measures is shown in a separate column, 'Adjustments'.

Two types of contracts are included in the business performance principle:

- hedging contracts concerning energy and related currencies
- commercial contracts concerning energy recognised at market value (typically fixed-price physical gas and power contracts).

When we use hedging instruments which do not fully correspond to the underlying risk, any difference between the hedging instruments and the underlying risk is recognised immediately in the income statement. See note 7.3 'Energy trading portfolio'. The accounting treatment under business performance is otherwise identical to the accounting treatment under IFRS. Our balance sheet, cash flows and equity are consequently not affected. The accounting treatment of our hedging contracts according to IFRS and business performance is summarised in the table below.

Type of hedging	IFRS	Business performance
Hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts	Market value adjustment in the income statement	Market value adjustments are deferred and recognised in the period in which the exposure materialises
Hedging of: – proceeds from the divestment of newly constructed offshore wind farms – interest payments	Market value adjustments are deferred and recognised in the period in which the exposure materialises	Recognition is the same as under IFRS
Hedging of currency risks associated with investments in foreign entities	Market value adjustments are recognised in other comprehensive income	Recognition is the same as under IFRS
Trading portfolio	Market value adjustments in the income statement	Recognition is the same as under IFRS

Only the recognition of the hedging of energy and associated currency risks as well as fixed-price physical gas and power contracts differs under IFRS and the business performance principle.

Expected impact on business performance EBITDA from energy and currency hedging

At 31 December 2018, a loss of DKK 1,849 million has been deferred (2017: loss of DKK 812 million), which will affect business performance EBITDA in subsequent years. Of the total deferred loss, a loss of DKK 1,470 million is expected on business performance EBITDA in 2019 (2017: DKK 159 million loss in 2018).

Power prices rose in 2018, which means that the market value of the hedges has fallen as we are selling power. The decrease in the deferred gain on currency hedging is primarily attributable to the transfer of gains to the income statement in 2018 as a consequence of the hedged transactions having occurred.

Expected impact on business performance EBITDA from energy and currency hedging, DKKm

	Deferred for subsequent recognition at 31 December 2018				Deferred for subsequent recognition at 31 December 2017			
	2019	2020	After 2020	Total	2018	2019	After 2019	Total
Power	(1,324)	(1,190)	(353)	(2,867)	(650)	(385)	(519)	(1,554)
Gas	(294)	(118)	-	(412)	(262)	(266)	(97)	(625)

Inflation	-	-	(69)	(69)	-	-	-	-
Total hedges	(1,679)	(1,134)	(219)	(3,032)	(159)	(369)	(284)	(812)
Deferred revenue from US power purchase agreements	209	183	791	1,183	-	-	-	-
Total	(1,470)	(951)	572	(1,849)	(159)	(369)	(284)	(812)

The table shows when the deferred value adjustments are expected to be recognised in the business performance EBITDA. The table covers both hedging classified as business performance and IFRS. Gains are shown as '+' and losses are shown as '-'. Deferred revenue from US power purchase agreements is explained in more detail in note 7.7 'Fair value measurement'.

Explanation of the business performance principle

In year 1, we enter into a contract hedging the price risk associated with Offshore's generation of 1,000GWh in year 5 at GBP 52,000 per GWh. This ensures a total revenue of GBP 52 million. In year 5, the cost of power has decreased to GBP 45,000 per GWh, which means that the hedging contract has a positive market value of GBP 7 million (a hedged price of GBP 52,000 per GWh minus the spot price of GBP 45,000 per GWh). This means that we ensure that the total income, including the hedging transaction, is still GBP 52 million. The income of GBP 52 million consists of a gain from the hedging contract of GBP 7 million and GBP 45 million from the sale of 1,000GWh at a spot price of

GBP 45,000 per GWh. The financial impact of the hedging transaction in years 1-5 is shown in the table. Under the business performance principle, the hedging transaction is recognised in the income statement in year 5, i.e. at the same time as the hedged contract with a positive market value of GBP 7 million. The value development is, however, recognised continuously in the income statement according to IFRS. Upon the expiry of the contract in year 5, the total effect on results over the period is the same under the IFRS and the business performance principle. Only the timing differs. The business performance principle ensures simultaneity of recognition of the underlying exposure and the hedging contract.

	Recognition in the income statement, GBP million		Recognised in the income statement as follows			Total financial impact

Specification of the difference between EBITDA according to business performance and according to IFRS, DKKm

	2018	2017
EBITDA – business performance	30,029	22,519
Business performance adjustments in respect of revenue for the year	(1,426)	205
Business performance adjustments in respect of cost of sales for the year	(112)	(150)
EBITDA – IFRS	28,491	22,574
Total business performance adjustments for the year comprise:		
Market value adjustments for the year of financial and physical hedging contracts relating to a future period	(1,734)	(138)
Reversal of deferred gains (losses) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period	196	193
Total adjustments	(1,538)	55

Market value adjustments for the year of financial and physical hedging contracts relating to a future period, DKKm

	2018	2017
Currency	313	150
Power (commercial and hedge)	(1,617)	(836)
Gas (commercial and hedge)	(48)	106
Oil	(382)	404
Coal	-	38
Total value adjustments	(1,734)	(138)

Reversal of deferred gains (losses) relating to hedging contracts from previous periods, where the hedged production or trade is recognised in business performance EBITDA in this period, DKKm

	2018	2017
Currency	(165)	(12)
Power (commercial and hedge)	307	297
Gas (commercial and hedge)	262	(106)
Oil	(174)	46
Coal	(34)	(32)
Total deferred gains (losses) from previous periods	196	193

Difference between IFRS and business performance for the year

The value adjustment in respect of future periods totalled DKK -1,734 million (2017: DKK -138 million) and reversal of deferred gains (losses) recognised according to business performance in 2018 totalled DKK 196 million (2017: DKK 193 million).

Market value adjustments for the year of hedging contracts

2018 was mainly affected by losses on the hedging of power as a result of rising prices, due to a selling position and hedging of oil as a result of lower prices due to a purchase position.

The table shows value adjustments by product. The value adjustments are recognised in IFRS EBITDA, but not in business performance EBITDA, as the value relates to future periods.

The table shows reversal of value adjustments by product. These gains (losses) are recognised in business performance EBITDA. The reversal of value adjustment was recognised in IFRS EBITDA in a previous period.

Deferred gains (losses) from previous periods

In 2018, a loss of DKK 196 million was recognised in business performance EBITDA, but as the loss was recognised in IFRS EBITDA in a previous period, the gain was reversed in the 'Adjustments' column in the income statement. The loss was primarily attributable to the hedging of power and gas, partly reduced by gains on hedging of oil and currency.

Share-based payment	103

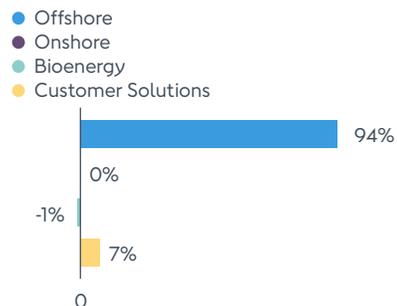

2. Return on capital employed

Return on capital employed is a key ratio showing how profitable our business activities are. Our target is an average ROCE of around 10% for the Group for the 2019-2025 period.

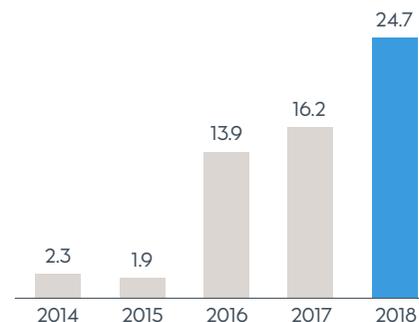

Return on capital employed

Return on capital employed was 32.1% in 2018 compared to 25.2% in 2017. The increase was mainly due to higher EBIT, which in both years was significantly positively affected by farm-down gains. Reference is made to note 2.1 'Segment information'.

EBIT by segment, percentage of DKK 24,856 million in 2018

EBIT, business performance DKKm

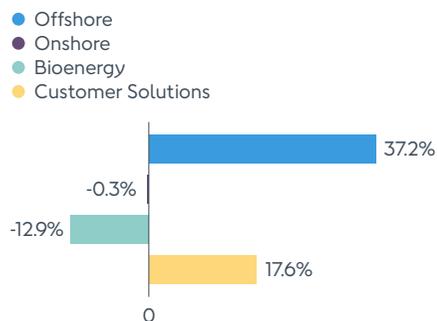

30.0bn

EBITDA totalled DKK 30,029 million in 2018 against DKK 22,519 million in 2017.

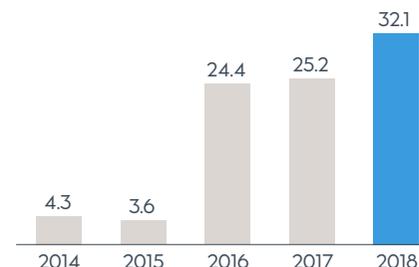

24.7bn

Operating profit totalled DKK 24,654 million in 2018 against DKK 16,235 million in 2017.

Return on capital employed (ROCE) % 2018

Return on capital employed (ROCE) %

32.1%

Return on capital employed (ROCE) totalled 32.1% in 2018 against 25.2% in 2017.

EBIT and return on capital employed are stated according to the business performance principle. EBIT of DKK 24,856 million is calculated as EBIT for reportable segments.

Return on capital employed (ROCE) was 32.1% against 25.2% in 2017. The increase was attributable to a higher EBIT.

2.1 Segment information

Offshore, DKKm

Revenue	30,566
EBITDA	27,809
Gross investments	15,081
Number of employees	2,431

Primary activity

Development, construction, ownership and operation of offshore wind farms in the UK, Germany, Denmark, the Netherlands, the US and Taiwan.

Onshore, DKKm

Revenue	80
EBITDA	44
Gross investments	6,779
Number of employees	40

Primary activity

Development, ownership and operation of onshore wind and solar farms in the US and a minor storage solution in the UK.

Bioenergy, DKKm

Revenue	6,353
EBITDA	367
Gross investments	1,356
Number of employees	731

Primary activity

Generation of heat and power from CHP plants in Denmark, operation of a Renaissance plant in the UK, a few biogas upgrade facilities, and a biogas plant.

Customer Solutions, DKKm

Revenue	47,999
EBITDA	1,970
Gross investments	1,166
Number of employees	1,254

Primary activity

Distribution of power and sales of power and gas in the wholesale and retail markets in Denmark, Sweden, Germany and the UK as well as optimisation and hedging of the Group's total energy portfolio.

Geographical distribution of revenue as well as intangible assets and property, plant and equipment

Geographical revenue is broken down, as far as possible, by the customer's geographical location based on supply point.

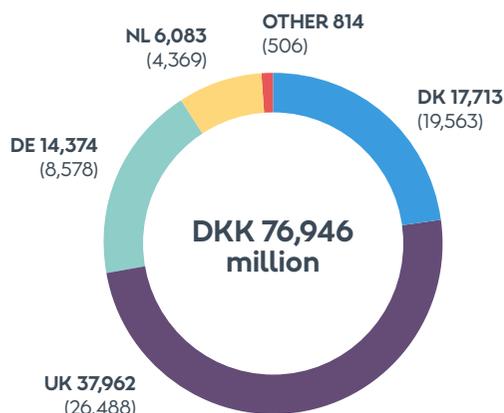

A significant part of our sales takes place via power exchanges and gas hubs in Europe, the physical locations of which do not reflect the geographical locations of our customers. When breaking down these sales by geographical location, we use the physical locations of the exchange or hub since we do not know the physical location of our customers in all cases.

No single customer accounts for more than 10% of our consolidated revenue.

Non-current assets are broken down geographically based on the physical locations of the assets.

Accounting policies

Our operating segments are consistent with our internal reporting to our top decision-making body, Group Executive Management.

We apply the business performance principle, as described in note 1.6 'Business performance', in connection with our internal management.

The operating segments are managed primarily on the basis of EBITDA and investments. Financial income and expenses as well as tax are allocated to the operating segments, while we manage them at Group level.

Segment income and segment expenses are those items that, in our internal management reporting, are directly attributable to individual segments or can be indirectly allocated to individual segments on a reliable basis.

Revenue, intangible assets as well as property, plant and equipment are presented based on the locations of our customers and assets.

¹ Revenue determined according to the business performance principle.

Over time	16,776	-	3,057	17,203	(7,428)	29,608
Total revenue from customers, IFRS	23,058	64	6,273	47,404	(7,880)	68,919

¹ The elimination column includes elimination of the internal sale of ROCs between Offshore (included as government grants, see note 2.4 'Government grants') and Customer Solutions. The ROCs are recognised as inventory in Customer Solutions before being sold to external customers, which creates a mismatch in the timing of the internal purchase and the external sale of the ROCs in Customer Solutions. The amount to be eliminated may exceed the amount of ROCs recognised in Offshore for the period.

The timing of transfer of goods or services to customers is categorised as follows:

'At a point in time' mainly comprises:

- sale of gas or power in the market, e.g. North Pool, TTF, NBP
- transmission assets for offshore wind farms.

'Over time' mainly comprises:

- construction agreements of offshore wind farms and transmission assets
- long-term contracts with customers to deliver gas, power or heat.

				Other activities/ eliminations	Total
Revenue 2017, DKKm	Offshore	Bioenergy	Customer Solutions		
Sale of gas	-	-	19,540	(1,556)	17,984

Total revenue, business performance	20,352	5,864	40,195	(6,907)	59,504

We have implemented IFRS 15 after the modified retrospective method. Therefore, we have not restated comparative figures.

In 2017, we presented revenue from green certificates, mainly ROCs, as generation and sale of power. In 2018, revenue from green certificates is presented as government grants.

Revenue for the year (business performance) increased by 29% to DKK 76,946 million in 2018. The increase was mainly due to a high activity on construction of offshore wind farms for partners, higher revenue from wind farms in operation as well as higher gas and power prices.

implementation of IFRS 15, revenue from construction of transmission assets are recognised at the time of divestment.

Revenue for the year from the construction of offshore wind farms mainly related to the construction of the offshore wind farms Walney Extension, Borkum Riffgrund 2 and Hornsea 1 as well as the divestment of the Burbo Bank transmission asset and a partial divestment of the Hornsea 1 transmission asset as part of the 50% farm-down of Hornsea 1. Following the

In 2018, revenue totalled DKK 75,520 million according to IFRS, of which DKK 70,736 million was revenue from the sale of goods, and DKK 4,784 million was revenue from the sale of services.

In 2017, revenue totalled DKK 59,709 million according to IFRS, of which DKK 52,347 million was revenue from the sale of goods, and DKK 7,362 million was revenue from the sale of services.

Unsatisfied long-term contracts

Our remaining performance obligations expected to be recognised in more than one year relate to the construction of wind farms and offshore transmission assets. The constructions are expected to be finalised within two years.

Key accounting estimates

Assumptions for the determination of the expected selling price and expected costs

We make estimates when determining the expected selling price of individual construction agreements. These estimates are influenced by our assessment of:

- the completion degree of the individual offshore wind farms and offshore transmission assets
- total expected costs for the individual contract
- the value of incentive agreements under which we may be paid a bonus for early delivery or have to pay compensation for late delivery
- guarantee commitments undertaken
- share of total costs associated with transmission assets which are expected to be covered upon handover, etc.

Therefore, our determination of profit and the recognition of revenue and related contract assets are subject to significant uncertainty. We believe that our estimates are the most likely outcomes of future events.

Key accounting judgements

Assumptions for the recognition of revenue from the construction of offshore wind farms over time

We construct offshore wind farms with partners, where we construct our partner's share of the wind farm. We assess each construction agreement at the time of conclusion of the agreement.

Unsatisfied long-term contracts with customers, DKKm

	31 December 2018	Expected to be recognised in		
		2019	2020	2020+
Aggregate amount of the transaction price allocated to long-term contracts	11,473	91%	9%	0%

In our view, our partner assumes control of the offshore wind farm in step with the construction. This is supported by:

- the regular approval of part deliveries
- approval or rejection of significant variations to the construction
- the partner's take-over of work from subcontractors, both concerning risk and legal title to the wind farm on an on-going basis
- milestone payments from the partner.

Revenue is therefore recognised over time during the construction of the offshore wind farms.

Accounting policies

Revenue is measured based on the consideration specified in a contract with a customer (transaction price) and excludes amounts collected on behalf of third parties, i.e. VAT. We recognise revenue when we transfer control over a product or service to a customer.

If a part of the transaction price is variable, i.e. bonus payments, incentive payments for unmissed deadlines, etc., the variable consideration is recognised in revenue when it is highly probable that the revenue will not be reversed in subsequent periods.

We adjust the transaction price for the time value of money if the payments exceed twelve months.

Sales agreements are divided into individually identifiable performance obligations. If a sales agreement includes several performance obligations, the sales agreement's transaction price is allocated to each performance obligation's stand-alone selling price.

In the comparative period, revenue was measured at the fair value of the consideration received or receivable. Revenue from the sale of goods was recognised when the significant risks and rewards of ownership had been transferred to the customer; recovery of the consideration was probable, the associated costs and possible return of goods could be estimated reliably, there was no continuing management involvement with the goods, and the amount of revenue could be measured reliably. Revenue from rendering of services was recognised in proportion to the stage of completion of the work performed at the reporting date.

Sale of gas

Timing of satisfaction of delivery obligations and significant estimates

Revenue is recognised when control of the gas is transferred to the buyer. Transfer of control occurs either when the gas is injected into the distribution system or physically delivered to the customer.

Significant terms of payment and associated estimates and judgements

Sales contracts for a fixed amount of gas at a variable price, or where we are exclusive suppliers to the customer at a variable price, are considered one

The transaction price allocated to the remaining performance obligation (unsatisfied or partially satisfied) as at 31 December 2018.

In accordance with IFRS 15, the overview does not include revenue from contracts with customers to deliver power, gas and heat or our operation and maintenance agreements. For these types of goods and services, we recognise the revenue that correspond directly to the value transferred to the customer.

performance obligation with multiple deliveries to be satisfied over time. For such contracts, we recognise revenue in the amount up to which we have a right to invoice.

Some long-term gas sales contracts include clauses which give the right to renegotiate the fixed sales prices. Expectations for the outcomes of renegotiations are not included in revenue before we know the outcome of the individual renegotiations.

In most cases, the consideration for the gas is due when the gas is injected into the distribution system or delivered to the customer. The delivery of gas is invoiced on a monthly basis, and the payment is due within 10-30 days.

Generation and sale of power

Types of goods and services

Revenue from generation and sale of power includes the sale of power produced at own wind farms and power plants, the sale of power sourced from other producers, and the sale of ancillary services.

Timing of satisfaction of delivery obligations, and significant estimates

Revenue is recognised when control of the goods is transferred to the buyer. Transfer of control occurs when the actual power is delivered to the customer, which for power generated by us occurs when it is produced.

Significant terms of payment and associated estimates and assessments

Revenue from ancillary services consist of fees for having power plants on standby in periods with a demand for power generation. Ancillary services are considered one performance obligation which is fulfilled over time when the power plants are on standby.

Sales contracts for a fixed amount of power at a variable price, or where we are exclusive suppliers to the customer at a variable price, are considered one performance obligation with multiple deliveries to be satisfied over time. For such contracts and for long-term agreements on selling power at a fixed price, we recognise revenue in the amount up to which we have a right to invoice.

In most cases, the consideration for the power is due when the actual power is delivered to the customer. The delivery of power is invoiced on a monthly basis, and the payment is due within 10-30 days.

Ancillary services are invoiced on a monthly basis, and consideration is payable when invoiced.

Revenue from construction of offshore wind farms

Types of goods and services

Revenue from construction of offshore wind farms includes development and construction.

The construction agreements cover the construction from design to delivery of an operational asset. The agreement consists of two performance obligations:

- Offshore wind farms.
- Offshore transmission assets, if applicable.

The construction agreements cover our partners' shares of the construction of the wind farm and offshore transmission asset, if applicable.

If the contracts include multiple performance obligations, the transaction price will be allocated to each performance obligation based on the stand-alone selling prices. Where these are not directly observable, they are estimated based on the expected cost-plus margin.

Timing of satisfaction of delivery obligations, and significant estimates

We recognise revenue from the construction agreements over time, using an input method to measure progress towards complete satisfaction of

the performance obligation because the customer gains control of the offshore wind farm during the construction process. The input method reflects our ongoing transfer of control to the customer.

When the outcome of the performance obligation in the contract can be measured reasonably, the construction agreement is measured at the transaction price of the work performed less progress billings, based on the percentage of completion of the contract at balance sheet date and the total expected revenues from the individual contracts.

We estimate the degree of completion on the basis of an assessment of the work performed, normally calculated as the ratio between the costs incurred and the total costs expected related to the contract in question.

The transaction price is based on the total expected income from individual contracts. Estimates of revenues are based on the transaction price and the completion degree of the offshore wind farm or offshore transmission asset at the balance sheet date.

Estimates of revenues, costs and percentage of completion are revised if circumstances change. Any resulting increases or decreases in estimated revenue or costs are reflected in profit or loss in the period in which the circumstances that give rise to the revision come to our knowledge.

An expected loss is recognised when it is deemed probable that the total construction costs will exceed the total revenue from the individual contracts.

Significant terms of payment and associated estimates and assessments

The consideration for the construction of an offshore wind farm consists of a fixed fee and a relatively minor variable fee, depending on when the wind farm can be put into operation.

The consideration for an offshore transmission asset is a fixed fee.

After signing of the construction agreement, we carry out an assessment determining when the wind farm is expected to be completed and calculate the size of the variable payment on this basis. We only recognise the variable fee when it is highly probable that a subsequent reversal will not take place.

At each balance sheet date, an assessment is made of the size of the variable payment which can be included in the transaction price. Revenue is adjusted accordingly.

The customer pays the fixed consideration based on a payment schedule. The payment schedule is determined and based on the expected progress of the construction and transfer of control to the customer.

If the work which we have performed exceeds invoicing on account, a contract asset is recognised. If the payments exceed the work we have performed, a contract liability is recognised.

Generation and sale of heat

Timing of satisfaction of delivery obligations and significant estimates

Heat is sold under long-term heat contracts.

Revenue is recognised when control is transferred to the customer. Transfer of control occurs when the heat is physically delivered to the customer.

In connection with a biomass conversion of a CHP plant, the heat customer makes a prepayment to finance the majority of our CAPEX associated with the conversion. The prepayment is recognised as a contract liability. The contract liability is recognised as revenue in step with the transfer of heat to the customer.

Significant terms of payment and associated estimates and assessments

Payment for the sale of heat consists of fixed costs associated with operation and maintenance of a CHP plant plus fuel costs for the generation of heat and a financial return.

The delivery of heat is invoiced on a monthly basis, and the payment is due within 10-30 days.

Distribution and transmission

Timing of satisfaction of delivery obligations, and significant estimates

Revenue from the distribution and transmission of gas and power is recognised when the gas or power is delivered to the buyer, or when the capacity is made available.

Significant terms of payment and associated estimates and assessments

Revenue is calculated as the amount we are entitled to when the service is delivered to the customer and invoiced on a monthly basis, and consideration is payable when invoiced.

Other revenue

Types of goods and services

Other revenue primarily includes operations and maintenance agreements and other services.

Timing of satisfaction of delivery obligations and significant estimates

Revenue from providing services is recognised in the accounting period in which the services are rendered.

For fixed-priced contracts, revenue is recognised based on the actual service rendered at the end of the reporting period as a proportion of the total services to be rendered because the customer receives and uses the benefits simultaneously. This is determined based on the actual labour hours spent relative to the total labour hours expected.

Significant terms of payment and associated estimates and assessments

The consideration for operations and maintenance agreements consists of a fixed fee and a minor variable fee, e.g. bonuses or compensation for wind farm availability.

Availability bonuses will be recognised on an ongoing basis when it is highly probable that a subsequent reversal will not take place.

Fixed-price contracts are invoiced on a monthly basis, and consideration is payable when invoiced. Variable fee services are generally due after the services are rendered.

Warranty obligations

We typically have a five-year responsibility to remedy defects that exists at the relevant taking-over date when we construct offshore wind farms. These types of warranties are accounted for under IAS 37 'Provisions, Contingent Liabilities and Contingent Assets'. Reference is made to the accounting policy on warranty provisions in note 3.2 'Provisions and contingent assets and liabilities'.

2.3 Cost of sales

Cost of sales, DKKm					Other activities/ eliminations	2018 total				Other activities/ eliminations	2017 total
	Offshore	Onshore	Bioenergy	Customer Solutions			Offshore	Bioenergy	Customer Solutions		
Gas	-	-	529	20,428	(558)	20,399	-	976	16,391	(4,477)	12,890
Power	27	-	76	19,580	(7,159)	12,524	188	90	16,520	(5,510)	11,288
Biomass	-	-	2,468	-	-	2,468	-	2,091	-	-	2,091
Coal	-	-	960	2	-	962	-	829	-	-	829
Distribution and transmission costs	754	-	191	2,711	(88)	3,568	625	138	2,496	(102)	3,157
Costs for construction of offshore wind farms	12,590	-	-	38	-	12,628	5,720	-	14	17	5,751
Other cost of sales	(1)	-	334	1,013	123	1,469	32	280	975	3,401	4,688
Total, IFRS	13,370	-	4,558	43,772	(7,682)	54,018	6,565	4,404	36,396	(6,671)	40,694
Adjustments	-	-	(31)	87	(168)	(112)	-	(4)	(164)	18	(150)
Total, business performance	13,370	-	4,527	43,859	(7,850)	53,906	6,565	4,400	36,232	(6,653)	40,544

Cost of sales according to business performance increased from DKK 40,544 million in 2017 to DKK 53,906 million in 2018, up 33%.

The increase was mainly due to higher gas prices, higher sale of ROCs due to higher power generation from offshore wind farms and higher costs in connection with construction of offshore wind farms, including the

divestment of the Burbo Bank transmission asset and a partial divestment of the Hornsea 1 transmission asset as part of the 50% farm-down of the Hornsea 1.

Following the implementation of IFRS 15, cost of sales from construction of transmission assets are recognised at the time of divestment.

 Cost of sales relate partly to trading in gas and power, partly to fuel used at CHP plants in connection with heat and power generation and partly to the construction of offshore wind farms and offshore transmission assets.

2.4 Government grants

In Denmark, the Danish transmission system operator, Energinet, administers subsidies for environmentally sustainable power generation, including offshore wind farms. We regard the grant for environmentally sustainable power generation as a government grant as it is paid by the Danish State.

In 2013, the UK introduced a new contracts for difference (CfD) subsidy scheme as a replacement for the Renewable Obligations scheme for renewable energy projects. The Burbo Bank Extension and Walney Extension offshore wind farms were our first offshore wind farms under the CfD regime. In 2017, we received this subsidy for the first time. We treat the payments from the CfD scheme as a government grant.

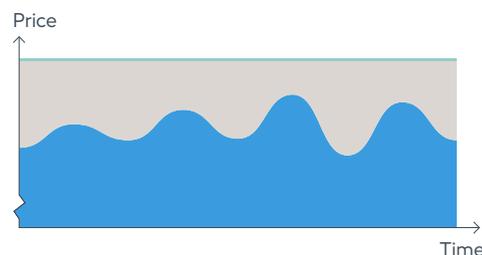

On 1 January 2018, we changed our accounting policy with respect to subsidies under the Renewable Obligation scheme in the UK, known as green certificates or ROCs, and feed-in tariffs in Germany under the German Renewable Energy Sources Act (EEG2014). Consequently, we treat the payments from ROCs and feed-in tariffs as government grants. Reference is made to note 1.4 'Implementation of new or changed accounting standards and interpretations'.

Government grants, DKKm	2018	2017
Government grants recognised in profit (loss) for the year under revenue	8,461	4,527
Government grants recognised in profit (loss) for the year under other operating income	4	4
Government grants recognised in the balance sheet	(4)	(4)
Government grants recognised for the year	8,461	4,527

← Following the changed accounting policy with respect to subsidies, ROCs and feed-in tariffs, we have restated comparatives for the 2017 financial year.

Illustrative example of CfD

- Market price of power
- Government grants (difference between the market price of power and the power price fixed in the CfD contracts)
- Power price fixed in the CfD contract

When participating in a CfD, we receive a feed-in premium in connection with the generation of power from an offshore wind turbine. The feed-in premium is the difference between the market price of power and the price fixed in the CfD (strike price).

Accounting policies

Government grants comprise grants for environmentally sustainable power generation, grants for the funding of development projects as well as investment grants, etc.

Government grants are recognised when there is reasonable assurance that the grants will be received.

Grants for the purchase of assets which we recognise in the balance sheet are recognised under deferred revenue and are transferred to other operating income in step with the depreciation of the assets to which the grants relate.

As grants for power generation are intended as a compensation for the price of power, we systematically recognise the grants under revenue in step with the power generation and thus the related revenue.

2.5 Other operating income and expenses

Other operating income, DKKm	2018	2017
Gain on divestment of assets	15,086	11,142
Other compensation	594	369
US tax credits and tax equity income	85	-
Miscellaneous operating income	510	154
Total other operating income	16,275	11,665

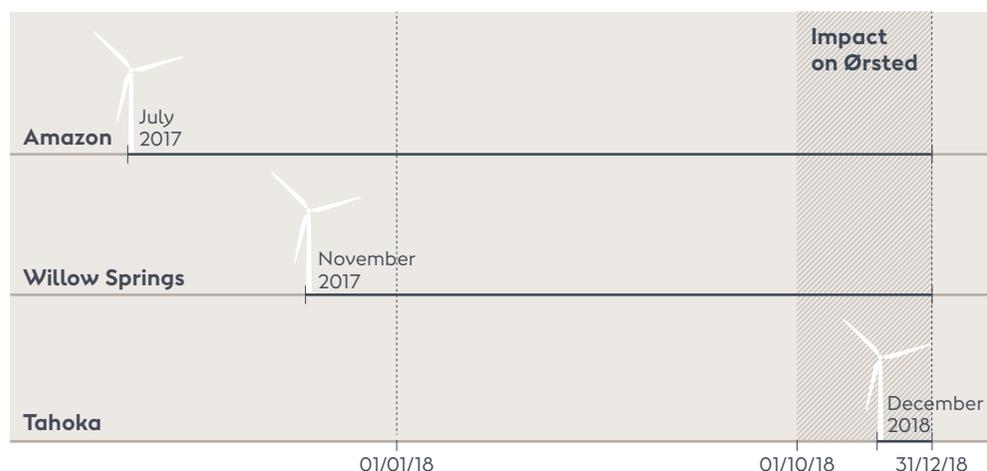

Other operating expenses, DKKm	2018	2017
Loss on divestment of assets	91	307
Miscellaneous operating expenses	198	242
Total other operating expenses	289	549

2018 is the first year of recognising US tax credits and tax equity income originating from our acquisitions and entry in the US market.

US tax credit and tax equity income are earned from the time of commissioning and only in Ørsted's ownership period.

Other operating income

In 2018, other operating income amounted to DKK 16,275 million, which was 40% higher than in 2017. In 2018, gain on divestment of assets related to the divestment of 50% of the Hornsea 1 offshore wind farm, whereas the 50% farm down of Walney Extension and Borkum Riffgrund 2 and a contingent consideration relating to the divestment of Race Bank in 2016 contributed positively in 2017.

US tax credits and tax equity income originate from our acquisition of Lincoln Clean Energy in October 2018 and correspond to the tax credits and other tax attributes provided to tax equity partners for three months of generated power, as well as our own share.

Accounting policies

In connection with the divestment of ownership interests in offshore wind farms before or during the construction phase, the gain is recognised on the divestment date under other operating income/ expenses in the income statement.

The gain for the future construction of the partner's share of the offshore wind farm is recognised over time in the income statement in step with the construction. See notes 2.2 'Revenue' and 4.2 'Contract assets and liabilities'.

The accounting policies for US tax credits and tax equity income is described in note 4.5 'Tax equity liabilities'.

Divestment of ownership interests in our offshore wind farms

When we divest an ownership interest in an offshore wind farm to a partner, we typically also enter into agreements on the future construction and operation of the offshore wind farm.

Contracts in connection with divestment are typically:

- Agreements on the sale of shares (divestment of assets) (SPA).
- Agreements on the future construction of the offshore wind farm (construction agreements).
- Agreements on the future operation of the offshore wind farm (O&M agreements).

Key accounting judgements

Assessment of classification of divestment

When we divest ownership interests in an offshore wind farm under development, we carry out an individual assessment of whether the divestment qualifies as a divestment of an enterprise or a divestment of assets. We have typically assessed that the offshore wind farms do not constitute an enterprise, as no employees are transferred, and processes are transferred to a limited extent only.

Key accounting estimates

Assumptions for the accounting treatment of divestment gains related to share purchase agreements and construction agreements

Our accounting recognition of the gains in the divestment contracts is based on the individual accounting transaction prices of the relevant contracts.

Our accounting treatment of the gains in the contracts is therefore not necessarily identical with the prices negotiated in the individual contracts.

2.6 Employee costs

Employee costs, DKKm	2018	2017
Wages, salaries and remuneration	3,768	3,650
Share-based payment	24	15
Pensions	317	310
Other social security costs	124	117
Other employee costs	24	61
Employee costs before transfers to assets	4,257	4,153
Transfers to assets	(1,131)	(956)
Total employee costs	3,126	3,197

Employee costs

Employee costs before transfer to assets were 2.5% higher in 2018 compared with 2017, mainly reflecting salary increases and a higher average number of employees. Employee costs transferred to assets relate to investment projects, which are capitalised in the balance sheet.

Pension plans and number of employees

Pension plans are defined-contribution plans that do not commit Ørsted beyond the amounts contributed.

In 2018, our average number of employees was 5,796 (2017: 5,738).

Remuneration of Group Executive Management

The remuneration of the Executive Board is based on a fixed salary, including personal benefits, such as a company car, free telephone, etc., a variable salary, a retention bonus in connection with the IPO, and share-based payment. The other members of Group Executive Management¹ also receive a pension. The Group Executive Management was expanded by one member in 2018.

The members of the Board of Directors are paid fixed remuneration only for their work in Ørsted. In addition, Ørsted reimburses any travel expenses.

For further details about the remuneration of the Executive Board and the Board of Directors, reference is made to the remuneration report on page 63.

Salaries and remuneration for Group Executive Management and the Board of Directors, DKK '000	Executive Board		Other members of Group Executive Management ¹		Board of Directors		Total	
	2018	2017	2018	2017	2018	2017	2018	2017
Fixed salary	16,400	14,761	19,611	16,509	5,133	4,934	41,144	36,204
Cash-based incentive scheme	4,630	4,004	5,329	3,917	-	-	9,959	7,921
Retention bonus etc.	1,875	2,812	2,860	6,535	-	-	4,735	9,347
Share-based payment	3,537	2,080	3,142	949	-	-	6,679	3,029
Pension incl. social security and benefits	555	522	5,060	2,923	-	-	5,615	3,445
Termination payment	-	-	-	5,330 ²	-	-	-	5,330
Total	26,997	24,179	36,002	36,163	5,133	4,934	68,132	65,276

¹ Other members of Group Executive Management in 2018 are: Thomas Dalsgaard, Morten Hultberg Buchgreitz, Martin Neubert, Ole Kjems Sørensen and Anders Lindberg.

² The compensation relates primarily to the non-competition clause in connection with Samuel Leupold's notice of termination.

2.7 Share-based payment

Required number of locked-up shares relative to fixed salary

CEO	75% of fixed salary
CFO and other members of Group Executive Management	50% of fixed salary
Senior vice presidents	25% of fixed salary
Vice presidents and senior directors	15% of fixed salary

The figure shows the value of the Ørsted share in percent of the participants' fixed salary which, at the time of granting, must be locked up for the duration of the executive share programme.

Key assumptions in executive share programme for valuation of PSUs	Time of granting 2018	Time of granting 2017	Time of granting 2016
Share price	392	269	275
Average volatility, peers	24.5%	24.9%	25.6%
Volatility, Ørsted	19.7%	20.3%	24.1%
Risk-free interest rate	(0.3)%	(0.3)%	(0.5)%
Expected term at time of granting	3 years	3 years	2.5 years

Executive share programme

Group Executive Management and a number of other senior executives participate in our share programme. 94 senior executives participate in the programme. As a condition for the granting of performance share units (PSUs), the participant must own a number of shares in Ørsted corresponding to a portion of the individual participant's annual fixed salary. The portion depends on the employee category and, for our CEO, makes up 75% of the fixed salary; see the figure above for more information. The participants in the programme must invest in Ørsted shares prior to the first granting.

If the participants fulfil the shareholding requirement at the time of granting, they will be granted a number of PSUs each year, representing a value of 15%-20% of the annual fixed salary on the date of granting.

The granted PSUs have a vesting period of approximately three years, after which each PSU entitles the holder, without payment, to receive a number of shares corresponding to 0-200% of the number of PSUs granted. Assuming no share price development since the grant, this would correspond to 0-40% of the fixed salary on the date of grant. The final number of shares for each participant

will be determined on the basis of the total shareholder return delivered by Ørsted, benchmarked against ten comparable European energy companies.

The highest rate will be triggered if Ørsted's results, measured as the total return to shareholders, outperform those of the comparable companies. For each lower ranking, the number of shares granted will fall by 20 percentage points. If, for example, Ørsted ranks third, the participants will be entitled to 160% of the target.

If Ørsted ranks 11 in the comparison, no shares will be granted to the participants. The right to shares is conditional upon continued employment.

Retention share programme

In 2018 we introduced share-based retention agreements as a replacement for cash-based settlement by using restricted share units (RSUs) when granting new retention agreements.

The target group for the share-based retention agreements will typically be employees responsible for vital, long-term projects. The use of these share-based retention agreements will be limited to 25 concurrent agreements with an individual time frame of up to five years. Members of the Executive Board (CEO and CFO) cannot be granted such retention agreements.

The number of RSUs to be granted will be determined on the basis of the price of Ørsted's shares at the time of the grant and will be limited to an amount corresponding to a maximum of six months' base pay for the employee in question. At vesting, each RSU will entitle the employee to one Ørsted share free of charge. However, the total value of the shares to be received at vesting will be capped at a maximum of twelve months' base pay for the employee in question.

Accounting policies

The share programme is classified as an equity-based programme as the programme is settled in shares. The market value of the PSUs/RSUs and the estimated number of PSUs granted are measured at the time of granting and recognised:

- in the income statement under employee costs over the vesting period and
- as a set-off in the balance sheet under equity over the vesting period.

The valuation of the PSUs/RSUs and the estimate of the number of PSUs/RSUs expected to be granted are carried out as a probability simulation based on Ørsted's expected total shareholder return relative to ten comparable European energy companies. The expectations are factored into the market value and are not adjusted subsequently. The participants are compensated for any dividend payments by receiving additional PSUs.

Maximum number of outstanding shares at the time of granting, '000

Time of granting	Executive Board	Other members of Group Executive Management	Senior executives	Other employees	Total	% of share capital	Market value (at time of granting) DKK million	Years until expiry
1 September 2016	21	17	113	-	151	0.04%	24	0.3
1 April 2017	24	18	131	-	173	0.04%	28	1.3
1 April 2018	19	22	83	-	124	0.03%	29	2.3
Share retention programme	-	-	-	18	18	0.00%	4	-
Maximum number of outstanding shares at 31 December 2018	64	57	327	18	466	0.11%	85	

Development in maximum number of outstanding shares, '000	Executive Board	Other members of Group Executive Management	Senior executives	Other employees	2018	2017	2018 in % of share capital
Maximum number of outstanding shares at 1 January	44	34	249	-	327	158	0.08%
Compensation for dividends paid (2016 and 2017 programme)	1	1	5	-	7	3	0.00%
Granted (2018 programme)	19	22	83	-	124	-	0.03%
Granted (2017 programme)	-	-	-	-	-	179	
Cancelled (2017 programme)	-	-	(4)	-	(4)	(6)	0.00%
Cancelled (2016 programme)	-	-	(6)	-	(6)	(7)	0.00%
Share retention program	-	-	-	18	18	-	0.00%
Maximum number of outstanding shares at 31 December	64	57	327	18	466	327	0.11%
(DKKm)							
Market value of share programme at the time of granting	12	11	58	4	85	52	
Maximum market value of share programme on 31 December	28	25	142	8	203	111	

The maximum market value of the share programme at 31 December is based on the assumption that the participants receive the maximum number of shares. This requires that Ørsted delivers the highest shareholder return benchmarked against the ten comparable companies.

3. Capital employed

Capital employed	106

Non-controlling interests	117

3. Capital employed

Our capital employed primarily relates to production assets, including assets under construction. We monitor investment projects closely, as a large part of our value is created in the development and construction phases.

Investments and divestments in 2018

Our gross investments amounted to DKK 24.5 billion in 2018, of which Offshore accounted for 62%. In addition to offshore wind farms, our gross investments were related to the acquisitions of the onshore wind company Lincoln Clean Energy and the offshore wind company Deepwater Wind in the US, bioconversion of Asnæs Power Station and the replacement of smart meters at our residential power customers in Radius.

Divestments amounted to DKK 20.0 billion and was primarily related to the 50% farm-down of Hornsea 1, receipt of deferred proceeds from the farm-down of 50% of Walney Extension in 2017 and proceeds from the divestment of our 50% ownership share of Enecogen.

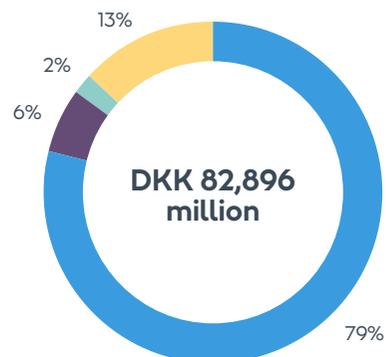

The most significant asset under construction at the end of 2018 was the offshore wind farm Hornsea 1 in the UK.

Capital employed, DKKm

Carrying amount at 31 December 2017	689	1,501	60,603	413	13,328	75,845

¹ An accounting change in the classification of our share of the Lincs offshore wind farm from an equity investment to a joint operation in 2017 resulted in additions of DKK 2,024 million under costs and DKK -385 million under depreciation and amortisation.

Production assets by segment, % 2017

Property, plant and equipment under construction by segment, % 2017

CGUs in Offshore

The CGUs are made up of individual offshore wind farms, each of which generates cash flows for the segment independently of each other.

Most significant offshore wind farms:
Anholt – Borkum Riffgrund 1 – Borkum Riffgrund 2 – Borssele 1&2 – Burbo Bank Extension – Gode Wind 1 – Gode Wind 2 – Gunfleet Sands – Hornsea 1 – London Array – Race Bank – Westernmost Rough – Walney – Walney Extension – West of Duddon Sands

CGUs in Onshore

The CGUs are made up of individual onshore wind farms, each of which generates cash flows for the segment independently of each other.

– Amazon – Lockett – Tahoka – Willow Springs

CGUs in Bioenergy

The Danish power stations constitute a single CGU as overall production planning is for the entire Danish portfolio of CHP plants. The not yet commissioned waste-to-energy plant Rescience in Northwich in the UK is deemed to constitute an independent CGU.

– Central CHP plants (including goodwill)
– Rescience Northwich

CGUs in Customer Solutions

The CGUs are constituted primarily by distribution assets, each of which generates cash flows for the segment independently of each other.

– Power distribution – Oil pipelines – Offshore gas pipelines – City light

Impairment losses

Impairment losses relating to goodwill

We have not impaired goodwill or other intangible assets in 2018.

Impairment losses relating to property, plant and equipment

We have not impaired any property, plant and equipment in 2018.

In connection with reclassification of our power distribution business to assets classified as held for sale, we have reversed an impairment loss from previous years of DKK 603 million as we expect to recover a higher amount than the carrying amounts of the assets after reversal of the impairment loss in previous years.

Certain development projects, which were impaired in previous years, were disposed of in 2018.

In 2017, impairment losses of DKK 545 million were recognised on projects in progress in Offshore.

Useful lives

Buildings	20-50 years
Offshore wind farms	20-24 years
Onshore wind farms	24-30 years
Production assets, power (thermal) and district heating	20-25 years
Gas transportation system (marine pipelines)	20-40 years
Oil transportation system (marine pipeline)	15 years
Distribution grids, power	20-40 years
Fixtures and fittings, tools and equipment	3-10 years

Accounting policies

Intangible assets

Rights are measured at cost less accumulated amortisation and impairment losses. Rights are amortised on a straight-line basis over their estimated future useful lives, which are 5-20 years.

Property, plant and equipment

Property, plant and equipment is measured at cost less accumulated depreciation and impairment losses. Cost of property, plant and equipment is depreciated on a straight-line basis, using the diminishing-balance method or the reducing-fraction method. The diminishing-balance method and the reducing-fraction method result in decreasing depreciation over the useful life of the offshore wind farm. Cost comprises purchase price and any costs directly attributable to the acquisition until the date the asset is available for use. The cost of self-constructed assets comprises direct and indirect costs of materials, components, sub-suppliers and labour. Borrowing costs relating to both specific and general borrowing directly attributable to assets under construction with a lengthy construction period are recognised in cost during the construction period. Cost is increased by the present value of the estimated obligations for demolition and decommissioning of assets to the extent that the obligations are recognised as a provision.

Subsequent costs, for example in connection with replacement of parts of an item of property, plant and equipment, are recognised in the carrying amount of the asset in question when it is probable that future economic benefits will flow to the Group from the expenses incurred. Other repair and maintenance expenses are recognised in profit (loss) for the year as incurred.

Assumptions for impairment test

Production assets are tested for impairment if there is any indication of impairment. For production assets with a limited lifetime, such as offshore wind farms and CHP plants, cash flows are calculated based on forecasts for the entire lifetime of the asset. For power distribution, cash flows are based on 25-year forecasts with the addition of a terminal value. The determination of the recoverable amount of production assets is based on a number of assumptions where estimates are made for the determination. These assumptions include future market conditions, market prices of power, biofuel, coal, carbon, weighted average cost of capital (WACC), exchange rates, etc. The market prices applied are based on available forward prices for a period of up to five years and our best estimate of long-term prices for the remainder of the period.

When calculating the recoverable amount of property, plant and equipment under construction, the expected completion costs and the commissioning dates are also assumptions which are based on estimates.

3.2 Provisions and contingent assets and liabilities

Provisions

Decommissioning obligations mainly comprise estimated expenses relating to decommissioning and disposal of our offshore and onshore wind farms, restoration of seabeds and the decommissioning of our CHP plants.

As developers of offshore wind farms, we are obliged to decommission offshore wind farms and restore the surroundings at our own expense. When we construct offshore wind farms in cooperation with partners, they are liable for their share of the decommissioning costs. Therefore, we have included only the decommissioning obligations associated with our ownership interest in the offshore wind farms.

Decommissioning obligations increased by DKK 721 million from 2017 to 2018, primarily due to the construction of new offshore wind farms and the acquisition of Lincoln Clean Energy. The increase in other provisions compared to 2017 primarily relates to Hornsea 1.

Onerous contracts comprise:

- a contract for booked liquified natural gas (LNG) terminal capacity in the Netherlands amounting to DKK 1,235 million (2017: DKK 1,329 million)
- a contract for the lease of gas storage capacity in Germany amounting to DKK 949 million (2017: DKK 1,075 million)
- a contract for the lease of gas storage capacity in Denmark amounting to DKK 229 million (2017: DKK 290 million).

Provisions, DKKm	2018				2017			
	Decommissioning obligations	Onerous contracts	Other provisions	Total	Decommissioning obligations	Onerous contracts	Other provisions	Total
Provisions at 1 January	4,751	2,711	4,058	11,520	3,649	2,596	2,794	9,039
Exchange rate adjustments	(26)	-	(1)	(27)	(58)	-	(8)	(66)
Used during the year	(117)	(373)	(636)	(1,126)	(134)	(436)	(235)	(805)
Provisions reversed during the year	(1)	(8)	(484)	(493)	-	(22)	(28)	(50)
Provisions made during the year	547	-	2,459	3,006	320	464	1,584	2,368
Change in estimates of other factors	86	-	-	86	219	-	-	219

Total provisions	5,472	2,418	5,564	13,454	4,751	2,711	4,058	11,520
Falling due as follows:								
0-1 year	-	271	409	680	23	335	322	680
1-5 years	193	967	4,508	5,668	43	1,025	3,080	4,148
After 5 years	5,279	1,180	647	7,106	4,685	1,351	656	6,692

Other provisions comprise primarily:

- warranty obligations for offshore wind farms
- possible repayments to power consumers in respect of previous years
- obligations in connection with divestments, primarily in relation to the divestment of our Oil & Gas business and wind farms
- obligations in respect of our own carbon emissions
- other contractual obligations.

Decommissioning obligations by segment, DKKm

	 Offshore	 Onshore	 Bioenergy	 Customer Solutions	Total
0-5 years	159	-	34	-	193
5-10 years	630	-	92	-	722
10-20 years	1,938	-	443	-	2,381
After 20 years	1,283	217	141	535	2,176
2018	4,010	217	710	535	5,472
2017	3,545	-	733	473	4,751

Contingent liabilities

This note primarily concerns our continuing operations – see also note 3.7 'Discontinued operations'.

Liability to pay compensation

In case of any environmental accidents or other types of damage caused by our oil and gas transport, the companies Ørsted Salg & Service A/S and Danish Oil Pipe A/S are liable to pay compensation according to legislation. This also applies if there is no proof of negligence (strict liability). We have taken out insurance to cover any such claims.

Litigation

We are party to actions relating to the Danish competition authorities' claim that the former Elsam A/S and Elsam Kraft A/S ('Elsam'), now part of Ørsted, charged excessive prices in the Danish wholesale power market in some periods.

In 2006 and 2008, respectively, the Danish Competition Appeals Tribunal concluded that Elsam abused its dominant position in the wholesale power market in Western Denmark to some extent in the periods 1 July 2003 to 31 December 2004 and 1 January 2005 to 30 June 2006 by charging excessive prices. We disputed the rulings and appealed both rulings to the Copenhagen Maritime and Commercial Court, where the parties agreed to stay the case concerning the period 1 July 2003 to 31 December 2004 on the outcome of the case concerning the period 1 January 2005 to 30 June 2006. In the latter case, the Copenhagen Maritime and Commercial Court found Elsam guilty of violating the Danish Competition Act in 2016. Following an appeal,

this judgement was, however, overturned by the High Court of Western Denmark in 2018, and after an unsuccessful attempt from the Danish competition authorities to get permission to appeal the judgement, it also became final in 2018.

In connection with the above-mentioned cases, some energy companies, some of their customers and others have raised claims for damages. In 2007, one group chose to commence legal proceedings before the Copenhagen Maritime and Commercial Court with a claim for damages of approx. DKK 4.4 billion with addition of interest, while suspension agreements have been concluded with others, meaning that the limitation period for these alleged claims has been suspended. In response to the claims for damages, we have made a provision of DKK 298 million plus interest. The provision has been calculated on the basis of the Danish Competition Council's determination of consumer losses.

In addition, we are party to a number of court cases and legal disputes. In our assessment, none of these will significantly impact the company's financial position, neither individually nor collectively.

Change of control

Some of our activities are subject to consents, permits and licences granted by public authorities. We may be faced with a claim for acceptance of any transfer, possibly with additional terms and conditions, if the Danish State holds less than 50% of the share capital or voting rights in Ørsted A/S. Read more in note 6.1 'Interest-bearing debt'.

Accounting policies

Provisions are recognised when the following criteria are fulfilled:

- We have a legal or constructive obligation as a result of an earlier event.
- The settlement of the obligation is expected to result in an outflow of resources.
- The obligation can be measured reliably.

For onerous contracts, a provision is made when the expected income to be derived from a contract is lower than the unavoidable cost of meeting our obligations under the contract.

Provisions concerning carbon emissions are recognised when our actual emissions exceed our holding of carbon emissions allowances.

Decommissioning obligations are measured at the present value of the future liability in respect of decommissioning as expected at the balance sheet date. The present value of the provision is recognised as part of the cost of property, plant and equipment and depreciated together with the associated asset. The addition of interest on provisions is recognised in the income statement under financial expenses.

Key accounting estimates

Timing, probabilities, amounts, etc. which have a bearing on our provisions estimates are updated quarterly based on our expectations.

Assumptions for decommissioning obligations

Estimates of decommissioning obligations are based on our expectations of, for example:

- timing and scope
- future cost level
- adopted laws and regulations on remediation.

The timing of our decommissioning obligations depends on the expected useful lives of the assets.

We expect that our CHP plants in Denmark must be removed within 12 years of decommissioning at the latest.

In measuring provisions, the costs required to meet the obligations are discounted. In determining decommissioning obligations at 31 December 2018, a discount rate of 3.5% is applied. The rate has been estimated on the basis of expectations concerning the future, long-term interest rate level, based on historical interest rate levels.

Timing as well as decommissioning requirements are assessed based on current legislation and standards in this area. Future cost levels are based, among other things, on expectations with regard to:

- general price developments or developments in market prices
- demand
- development of existing technologies.

Estimates of onerous contracts

We have entered into a number of contracts with fixed terms. Depending on market developments and uncertainty about obligations incurred under the contracts made, these contracts may become onerous. Our estimates concerning these complex contracts and their future effects are subject to significant uncertainties.

Estimates of litigation outcomes

When exercising a judgement about a potential liability in connection with litigation, we assess:

- the nature of the litigation, claim or statement
- the development of the case
- the judgements and recommendations of legal or other advisers
- experience from similar cases
- our decision on how we are going to react to the litigation, claim or statement.

3.3 Acquisition of enterprises

Cash flows used for acquisitions in 2018, DKKm	Lincoln Clean Energy	Deepwater Wind	Total
Fair value at time of acquisition:			
Property, plant and equipment	9,707	5,781	15,488
Other assets	28	158	186
Cash	77	363	440
Interest-bearing debt	(2,337)	(1,702)	(4,039)
Tax equity liabilities	(2,126)	(90)	(2,216)
Provisions	(384)	(43)	(427)
Derivatives	(1,185)	57	(1,128)
Deferred tax, net	(486)	(1,239)	(1,725)
Other liabilities	(198)	(57)	(255)
Net assets acquired	3,096	3,228	6,324
Goodwill	-	-	-
Purchase price	3,096	3,228	6,324
Cash, available acquired	(28)	(37)	(65)
Contingent consideration	-	(657)	(657)
Cash flow used for acquisition of enterprises	3,068	2,534	5,602
Purchase price	3,096	3,228	6,324
Adjustments for cash	(77)	(363)	(440)
Adjustments for interest-bearing tax equity liability	280	90	370
Adjustments for interest-bearing debt	2,337	1,702	4,039
Enterprise value	5,636	4,657	10,293

In 2018, we have completed acquisitions of enterprises as detailed above. We made no acquisitions in 2017.

On 1 October 2018, we acquired all of the membership interests in Lincoln Clean Energy LLC, effectively gaining control of the company. The acquisition represents the first step into our new business area, Onshore.

On 8 November 2018, we acquired all of the membership interests in Deepwater Wind LLC, effectively gaining control of the company,

which will be incorporated in our offshore business unit.

Part of the purchase price of Deepwater Wind is a contingent consideration of DKK 657 million that we will pay upon the relevant regulator's approval of two specific power purchase agreements. The maximum payable consideration is DKK 657 million.

Since the date of the acquisition, Lincoln Clean Energy has contributed with a revenue according to business performance

principles of DKK 80 million and loss before tax of DKK 14 million. This revenue and profit corresponds to three months of operations for Lincoln Clean Energy and is scalable for what an estimated full-year effect would have been if the acquisition had been made on 1 January 2018. Since the date of the acquisition, Deepwater Wind has contributed with a revenue of DKK 38 million and a loss before tax of DKK 120 million. If the acquisition had been made on 1 January 2018, the full year revenue would have been DKK 187 million, and loss before tax would have been DKK 250 million. The loss was due to project development costs.

As part of the acquisition processes, we have incurred costs amounting to DKK 63 million which have been expensed in our income statement.

The fair values of the assets and liabilities acquired are not considered final until 12 months after acquisition.

Accounting policies

Acquisition of enterprises are recognised using the acquisition method whereby assets and liabilities as well as contingent liabilities of the acquired enterprise are measured at fair value on the date of acquisition.

The fair value of production assets and assets under construction are normally determined using an income approach where they are valued at present value based on the expected cash flows they can generate, including any non-separable power purchase agreements, as well as income, such as production tax credits.

The fair value of derivatives is determined using our normal approach for such items, based on market prices or expectations for prices over the term of the derivatives, as described in note 7.7 'Fair value measurement'.

The fair values of other assets and liabilities are valued using the approach we find most relevant for the individual item, which can be either a market approach, an income approach or a cost approach.

An acquired enterprise is included in the consolidated financial statements from the date of acquisition, which is the date when we obtain control of the acquired enterprise.

When an acquired enterprise has entered into a power purchase agreement classified as a derivative, the fair value of the agreement will be included in the opening balance. Post-acquisition, this fair value is recognised as an adjustment to revenue over the duration of the contract, based on the fair value calculation at the time of the acquisition.

Key accounting estimates

Purchase price allocations in business combinations
When we apply the acquisition method for business combinations, by nature this involves judgement in assessing the fair value of identifiable assets and liabilities.

Property, plant and equipment

Our assessment of fair value is based on a number of estimates regarding WACC and expected cash flows, which both have a large impact on the fair value.

Derivatives

Our assessment of fair value is dependent on expected future prices. See note 7.7 'Fair value measurement' for our valuation principles.

Deferred tax

Our expectation to the timing of repayment of tax equity liabilities, and thereby the expected 'flip' of the tax equity structure, impacts the fair value of deferred tax on the assets and liabilities that are part of wind farms with tax equity partners. The expected tax rate also significantly impacts deferred tax.

3.4 Divestment of enterprises

Selling price, DKKm	2018	2017
Payment	497	605
Working capital adjustment	(68)	(1)
Selling price on divestment of enterprises	429	604
Transaction costs	(66)	(20)
Of which selling price receivable	-	4
Cash selling price on divestment of enterprises	363	588

Gain (loss) on divestment of enterprises DKKm	2018	2017
Selling price on divestment of enterprises	429	604
Net assets sold	(240)	(725)
Provisions as a result of the transaction	4	2
Transaction costs	(66)	(20)
Gain (loss) on divestment of enterprises	127	(139)

Gain on divestment of enterprises amounted to DKK 127 million compared to DKK -139 million in 2017. In 2018, gain on divestment of enterprises related to the sale of our 50% ownership interest in Enecogen (Bioenergy). Transferred cash and cash equivalents totalled DKK 6 million. In 2017, gain on divestment of enterprises related to the sale of A2SEA. Transferred cash and cash equivalents totalled DKK 278 million.

Accounting policies

We recognise income from divested enterprises in the income statement up until the date of divestment.

The date of divestment is the date on which we relinquish control of the divested enterprise.

Gains or losses on the divestment or discontinuation of subsidiaries and associates are determined as the difference between the selling price and the carrying amount of the net assets divested.

Moreover, we deduct the fees of advisers, etc., in connection with the divestment, or discontinuation of the enterprise.

The divestment of our Oil & Gas business in 2017 is not included in the figures as it is presented as discontinued activities. See note 3.7 'Discontinued operations'.

3.5 Gross and net investments

Gross and net investments, DKKm	2018	2017
Cash flows from investing activities	(1,026)	(10,054)
Dividends received and capital reduction, reversed	(25)	(13)
Purchase and sale of securities, reversed	595	9,197
Loans to associates and joint ventures, reversed	12	47
Sale of non-current assets, reversed	(20,002)	(16,921)
Interest-bearing debt in acquired enterprises	(4,409)	-
Restricted cash in acquired enterprises	374	-
Total gross investments	(24,481)	(17,744)
Transactions with non-controlling interests in connection with divestments	(52)	61
Sale of non-current assets	20,002	16,921
Total cash flows from divestments	19,950	16,982
Total net investments	(4,531)	(762)

Gross investments amounted to DKK 24,481 million in 2018, which was 38% higher than in 2017.

Gross investments in Offshore amounted to DKK 15,081 million and was related to the construction of Hornsea 1 and Walney Extension in the UK, Borkum Riffgrund 2 in Germany, Borssele 1 & 2 in the Netherlands, early investments in the US to qualify for future tax credits as well as the acquisition of Deepwater Wind in the US. In 2017, gross investments primarily related to the construction of Walney Extension, Borkum Riffgrund 2 and Race Bank.

In Onshore, gross investments amounted to DKK 6,779 million and related to the acquisition of Lincoln Clean Energy and construction of the Tahoka and Lockett onshore wind farms in the US.

Divestments amounted to DKK 19,950 million in 2018 and related to the 50% farm-down of Hornsea 1, receipt of deferred proceeds from the farm-down of 50% of Walney Extension in 2017 and proceeds related to the divestment of our 50% ownership share in Enecogen.

In 2017, divestments amounted to DKK 16,982 million and were primarily related to the 50% farm-downs of the offshore wind farms Walney Extension and Borkum Riffgrund 2.

3.6 Assets classified as held for sale

At 31 December 2018, assets classified as held for sale comprised our Danish power distribution, residential customer and city light businesses as well as our oil pipe system in Denmark.

We are currently investigating the different options for exiting our Danish power distribution, residential customer and city light businesses. The oil pipe system is to be sold to the Danish transmission system operator, Energinet.

At 31 December 2017, assets classified as held for sale only comprised our oil pipe system in Denmark.

Accounting policies

Assets classified as held for sale comprise assets and liabilities, the values of which are highly probable to be recovered through a sale within 12 months rather than through continued use.

Assets and liabilities classified as held for sale are measured at the carrying amount at the time of classification as 'held for sale' or at market value less selling costs, whichever is lower. The carrying amount is measured in accordance with the Group's accounting policies.

No depreciation or amortisation is effected on intangible assets and property, plant and equipment from the time of classification as 'held for sale'.

Assets classified as held for sale, DKKm	2018	2017
Intangible assets	80	20
Property, plant and equipment	13,951	2,119
Inventories	16	16
Trade receivables	701	73
Other receivables	430	368
Income tax	45	46
Total assets classified as held for sale	15,223	2,642
Deferred tax	823	99
Provisions	372	359
Contract liabilities	2,737	-
Trade payables	92	80
Other payables	826	92
Income tax	1	-
Total liabilities relating to assets classified as held for sale	4,851	630
Net assets classified as held for sale	10,372	2,012

The table shows assets and liabilities which have been put up for sale, and which are therefore not expected to contribute to our future earnings.

3.7 Discontinued operations

Discontinued operations comprise our Oil & Gas business, which was sold to INEOS on 29 September 2017.

Financial results

Profit (loss) in 2018 amounted to DKK 10 million (2017: DKK 6,920 million, including gain (loss) on disposal of discontinued operations).

Total cash flows in 2018 amounted to DKK 209 million (2017: DKK 9,025 million), of which DKK -53 million was from operating activities and mainly concerned the payment of fees for existing Oil & Gas insurance activities. The insurance fee was provided for at the time of the divestment in 2017. Cash flows from investing activities amounted to DKK 262 million and concerned primarily the receipt of a selling price receivable of USD 50 million. The receivable was interest-bearing and therefore had no impact on our interest-bearing net debt.

Capital employed

Our capital employed in discontinued operations at 31 December 2018 mainly consisted of provisions relating to the sale (tax indemnifications and payments related to the Fredericia stabilisation plant) as well as a conditional payment (receivable selling price) which does not carry interest.

In addition, we have interest-bearing receivables of USD 100 million (not part of capital employed), which we expect to receive in the period 2019-2020.

Divestment of Oil & Gas in 2017

The selling price from the transaction amounted to DKK 5,456 million, of which DKK 3,652 million was received and recognised in our free cash flow from discontinued operations in Q3 2017.

All in all, the transaction reduced the Group's net debt by DKK 4,588 million, as USD 150 million of the outstanding selling price was interest-bearing.

Secondary liability

As part of the divestment of Oil & Gas, we have assumed a secondary liability regarding the decommissioning of offshore installations. We consider the payment of the liability to be very unlikely. The matter is described in further detail in the interim financial report for the first nine months of 2017.

Employee costs, DKKm	2018	2017
Wages, salaries and remuneration	-	365
Pensions	-	27
Other social security costs	-	11
Other employee costs	-	5

Subsidiaries with significant non-controlling interests	Non-controlling interest	Registered office
Gunfleet Sands Holding Ltd.	49.9%	London, UK
Walney (UK) Offshore Windfarms Ltd.	49.9%	London, UK

In the table, we provide financial information for subsidiaries with significant non-controlling interests. The amounts stated are the consolidated accounting figures of the individual enterprises/groups, determined according to our accounting policies. Amounts are stated before intra-group eliminations.

Accounting policies

Transactions with non-controlling interests are accounted for as transactions with the shareholder base.

Gains and losses on the divestment of equity investments to non-controlling interests are recognised in equity when the divestment does not result in a loss of control.

Net assets acquired are not revalued on the acquisition of non-controlling interests. Any difference between the carrying amount and the acquisition or selling price is recognised in equity.

4. Working capital

Working capital	119
Inventories	120
Contract assets and liabilities	121
Trade receivables	122
Other receivables	122
Tax equity liabilities	123
Other payables	124
Changes in net working capital	124

4. Working capital

Our key working capital items consist of inventories, net contract assets, trade receivables and payables, tax equity liabilities and other payables, including prepayments from heat customers. Connection charges in our power distribution business has been classified as assets held for sale at 31 December 2018.

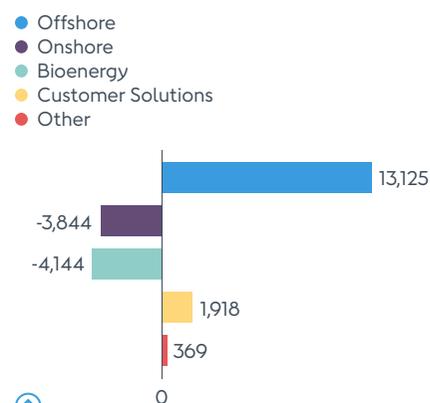

Working capital items vary with the seasonal variations in our generation and sales activities during the year. Our net contract assets relate primarily to construction of offshore wind farms for partners and vary within and across years, depending on the portfolio of offshore construction assets. They also depend on when we reach certain milestones and trigger payments from our partners.

Contract assets, net also include prepayment from heat customers in connection with our bioconversions and therefore vary depending on the progress of these projects. Construction of offshore transmission assets in the UK, which are recognised as inventories, will continue to tie up cash until they are divested. Tax equity liabilities also vary within and across years. This is due to the fact that we receive cash contributions from tax equity partners at the point in time when a US onshore wind farm enters into operation.

Trade payables relating to capital investments are not included in this section as they are presented as part of the cash flows from investing activities.

Working capital, DKKm	2018	2017
Inventories	13,943	3,853
Contract assets, net	(3,115)	9,500
Trade receivables	10,741	9,170
Other receivables	2,968	2,082
Trade payables, excluding trade payables relating to capital expenditure	(10,099)	(8,460)
Tax equity liabilities	(3,719)	-
Other payables	(3,295)	(11,200)
Net working capital, excluding trade payables relating to capital expenditure at 31 December	7,424	4,945
Of which work in progress and related trade payables	9,654	7,526
Of which tax equity partner liabilities and other working capital	(2,230)	(2,581)

Working capital, DKKm 2018

Offshore primarily has funds tied up in inventories, construction agreements and trade receivables. The most significant working capital item in Onshore consists of liabilities regarding tax equity contributions from our partners. Bioenergy has a negative working capital, mainly as a result of prepayments from heat customers. Customer Solutions has funds tied up mainly in inventories, receivables and clearing counterparties in connection with exchange trading.

The composition of our net working capital has changed relative to last year. In 2017, we recognised offshore transmission assets as construction agreements. Following the implementation of IFRS 15, we recognise offshore transmission assets as inventory. Furthermore, the introduction of tax equity elements in our Onshore business has impacted our working capital. Work in progress consists of inventories related to transmission assets, construction agreements and construction management agreements in connection with the construction of transmission assets and offshore wind farms for partners as well as related trade payables.

7.4bn

Our net working capital, excluding trade payables relating to capital expenditure amounted to DKK 7,424 million in 2018 against DKK 4,945 million in 2017.

2.5bn

We had an additional amount of DKK 2,479 million tied up in working capital relative to 2017, of which DKK 2,128 million pertained to work in progress and related trade payables in Offshore.

4.1 Inventories

Inventories, DKKm	2018	2017
Offshore transmission assets	9,885	-
Biomass	253	258
Gas	1,620	1,526
Coal	261	396
Oil	119	124
Green certificates	1,555	1,441
Carbon emissions allowances	172	52
Other inventories	78	56
Total inventories	13,943	3,853
Inventories recognised as an expense in 'Cost of sales' during the year	25,262	13,180

Following the implementation of IFRS 15, we recognise offshore transmission assets as inventory. In 2017, we recognised offshore transmission assets as construction contracts.

We use biomass, coal, gas and, to a limited extent, oil as fuel at our CHP plants. In 2019, the use of gas will

Accounting policies

Offshore transmission assets are measured at cost. The cost comprises costs of materials used in construction, site labour costs, costs of renting equipment as well as indirect production costs, such as employee costs.

The cost of gas is determined as a weighted average of the previous month's purchase prices, including transportation costs.

Purchased carbon emissions allowances are measured at market value.

be very limited as a result of the biomass conversion of the Skærbæk Power Station in Denmark and the divestment of the Enecogen Power Station in the Netherlands. Green certificates are primarily renewable obligation certificates (ROCs) which are issued to power generators sourcing from renewable energy sources in the UK.

Green certificates, which we earn by generating power using renewable energy sources, are recognised in inventories in step with our generation. We measure green certificates (earned and bought) at cost using the first in, first out (FIFO) principle.

Other inventories are measured at cost determined on a first in, first out basis or a net realisable value, where this is lower.

Inventories are written down to the lower of net realisable value and cost price.

The net realisable value is the sum (discounted) which the inventories are expected to generate through a normal sale.

4.2 Contract assets and liabilities

Contract balances, DKKm	2018	1 January 2018
Contract assets		
Current contract assets	1,451	1,693
Total contract assets	1,451	1,693
Contract liabilities		
Non-current contract liabilities	3,642	5,327
Current contract liabilities	924	1,455
Total contract liabilities	4,566	6,782

As we have implemented IFRS 15 in accordance with the modified retrospective method, we have not restated comparative figures. Read more about the adoption of IFRS 15 and the effect on the changed presentation in note 1.4 'Implementation of new or changed accounting standards and interpretations'.

Revenue from contracts with customers DKKm	2018
Revenue recognised included in contract liabilities at the beginning of the year	228
Revenue recognised from performance obligations satisfied in previous years	95

The tabel shows how much of our revenue recognised in 2018 that relates to contract liabilities carried forward (as prepayments and deferred revenue), and how much that relates to performance obligations satisfied in a prior year (e.g. renegotiations or constraints on variable considerations that are not recognised until they are highly probable).

Contract asset and contract liabilities are primarily related to:

- the construction of offshore wind farms with partners, with each party usually owning 50% of the offshore wind farm
- prepayments from heat customers.

At the end of 2018, contracts assets and liabilities included our construction of our partners' share of the Hornsea 1, Walney Extension and Borkum Riffgrund 2 offshore wind farms.

Non-current contract liabilities amounted to DKK 3,642 million compared to DKK 5,327 million as of 1 January 2018. The decrease was primarily related to a reclassification of grid connection charges and prepayments in our Danish power distribution, residential customer and city light businesses to assets held for sale at the end of 2018. Reference is made to note 3.6 'Assets classified as held for sale'.

Accounting policies

We recognise a contract asset when we perform a service or transfer goods in advance of receiving consideration, and the consideration is conditional.

When the consideration is unconditional, and the goods or services are delivered, we recognise a receivable. A right to consideration is unconditional if only the passage of time is required before the payment is due.

Contract assets are measured at the transaction price of the good or services which we have performed less invoicing on account.

We recognise a contract liability when the invoicing on account and expected losses exceed the transaction price of the goods or services transferred to our customer.

4.3 Trade receivables

Trade receivables, DKKm	2018	2017
Trade receivables, not due	10,186	8,644
Trade receivables, 1-30 days overdue	293	303
Trade receivables, more than 30 days overdue	326	305
Trade receivables, write-down	(64)	(82)
Total trade receivables	10,741	9,170

Trade receivables primarily relates to customers in Customer Solutions. The general terms of payment vary according to customer type and product.

We continuously perform credit ratings of our customers, as described in note 7.5 'Credit risks'. For customers with a general credit risk, a write-down of 0-1% is carried out on initial recognition. In 2018, write-downs of receivables amounted to DKK 35 million (2017: DKK 6 million). Losses for the year totalled DKK 36 million (2017: DKK 25 million).

Accounting policies

We keep our receivables until maturity, and they are therefore measured at amortised cost.

Write-down is carried out from initial recognition of our receivables. The write-down is calculated as the difference between the carrying amount of the receivable and the net present value of expected future cash flows from the receivable. The discount rate used is the effective interest rate for the individual receivable or the individual portfolio.

We apply the simplified approach to the write-down of trade receivables, which permits calculating the write-down as the full loss during the entire term of the receivable.

4.4 Other receivables

Other receivables, DKKm	2018	2017
Receivables from the divestment of assets and investments	3,218	2,680
Receivables from the divestment of equity investments to non-controlling interests	634	648
VAT and other indirect taxes receivable	427	572
Collateral provided	710	775
Prepayments	330	304
Other account receivables	1,741	495
Other receivables	7,060	5,474
Of which working capital	2,968	2,082
Of which other capital employed	2,628	1,770
Of which interest-bearing net debt	1,464	1,622

The table shows our other receivables broken down into working capital, interest-bearing net debt and other capital employed.

In 2018, receivables from the divestment of assets and investments primarily relate to receivables in connection with the divestment of 50% of our ownership interests in the Hornsea 1 wind farm and receivables related to the divestment of our Oil & Gas business. In 2017, receivables from divestment of assets and investments related to the divestment of our Oil & Gas business as well as the divestment of 50% of our ownership interests in the Walney Extension wind farm.

Receivables from the divestment of equity investments to non-controlling interests primarily relate to the divestment in 2011 of our ownership interests in Gunfleet Sands.

The collateral provided by the Group is receivables from banks in connection with trading on energy exchanges.

The short-term portion of other receivables amounted to DKK 4,390 million (2017: DKK 3,519 million).

Other accounts receivables consist primarily of receivables from adjustments in connection with prior year divestments, including the Oil & Gas business, where it is assessed that there is no material credit risk.

4.5 Tax equity liabilities

Tax equity liabilities, DKKm	2018	2017
Balance at 1 January	-	-
Contribution received from tax equity partner	1,995	-
Tax equity balances from business acquisitions	2,216	-
Tax attributes and PTCs recognised in other operating income	(79)	-
Cash paid to tax equity partner	(3)	-
Tax equity partners' contractual return	44	-
Balance at 31 December	4,173	-
Of which working capital	3,719	-
Of which interest-bearing debt	454	-

2018 is the first year of recognising US tax liabilities originating from our acquisitions and entry into the US market.

We have entered into several tax equity partner agreements in the US. These agreements are characterised by a tax equity partner who contributes an upfront payment of a part of the initial project investment. The partner does not have an operational role in the project. The partner receives a contractually agreed return on the contribution. The initial contribution and the return is 'repaid' by receiving almost all of the production tax credits (PTCs) the project generates as well as the majority of other tax attributes (accelerated tax depreciation and other taxable results) from the project in the first part of the project's lifetime as well as some cash payments. Once the contribution has been repaid, the agreement 'flips', and the partner is typically

entitled to a minor part of the cash distributions from the project unless we purchase this right from them, which is highly likely.

We have three onshore wind farms with tax equity partners. The first two are Amazon (253MW) and Willow Springs (250MW), which were operational at the time of the acquisition of Lincoln Clean Energy. The third is Tahoka (300MW) where we signed a tax equity agreement in Q4 2018, and which was commissioned in December 2018. In addition we have one offshore wind farm with a tax equity partner. This is Block Island (30MW), which was operational at the time of the acquisition of Deepwater Wind.

Accounting policies

When a tax equity partner contributes to a US company, we evaluate our right to variable returns as well as our ability to exercise influence, including our ability to influence financial and operational decisions influencing these returns, to determine if the company should be fully consolidated. Due to the operational and financial nature of the projects, and the influence normally given to tax equity partners in such agreements, it is normally possible for us to have the influence to fully consolidate companies that have tax equity partners.

The terms of the tax equity partner's contribution are evaluated to determine the accounting treatment. As the initial contribution of the tax equity partner is repaid, including an agreed return, and as they do not share in the risks of the project in the same way as a shareholder, the contribution has the characteristics of a liability, is accounted for as such and is measured at amortised cost. The liability is based on the expected method of repayment and is divided into:

- a net working-capital element to be repaid through PTCs and other tax attributes
- an interest-bearing debt element expected to be repaid through cash distributions.

The partner's agreed return is expensed as a financial expense and is recognised as an increase of the tax equity liability. PTCs and other tax attributes transferred to the tax equity partner are recognised as other operating income. Tax attributes allocated to the tax equity partner are deferred and recognised on a straight-line basis over the estimated contractual length of the partner structure, while PTCs are recognised in the periods earned, similar to recognition of our own PTCs.

In addition to the above, we recognise a liability for the expected purchase price for the partners post-flip rights to return. This is recognised at fair value and adjustments are expensed as a financial item.

This recognition reflects the intention and high likelihood that we will purchase the right, and that this is part of the financial cost of the arrangement.

If we choose not to buy the partner's right to post-flip returns, the tax equity partner will be entitled to part of the company returns in the post-flip period, and they will share in the risks and rewards in the company as a shareholder. This interest will be considered a non-controlling interest.

Key accounting judgements

Assessment of recognition of tax equity partner

On recognition of a tax equity partner, we assess the appropriate recognition of their contribution as well as the method of recognition for the elements used to repay the partner, such as PTCs and tax attributes.

In assessing recognition of tax equity partners, we look at:

- the expected flows of PTCs, tax attributes and cash payments expected to the partner
- the rights and obligations of both us and the tax equity partner.

The deferral of the income related to tax attributes and the recognition of the contribution as working capital or interest-bearing debt, are affected by our expectation to the size, method and timing of repayments.

4.6 Other payables

Other payables, DKKm	2018	2017
Prepaid VAT on exports	-	1,500
Carbon rights	62	42
VAT and other indirect taxes payable	780	1,312
Salary-related items payable	809	762
Accrued interest	687	882
Virtual gas storage	107	83
Prepayments from heat customers	-	3,286
Grid connection charges	-	1,893
Other deferred income	84	1,114
Collateral received	34	119
Purchase price, acquisition of enterprises	653	-
Other	1,986	1,089
Total other payables	5,202	12,082
Of which working capital	3,295	11,200
Of which other capital employed	1,337	882
Of which interest-bearing net debt	570	-

The table shows our other payables broken down into working capital, interest-bearing net debt and other capital employed.

In 2018, other payables were reduced by DKK 6,880 million. Prepayments from heat customers and the majority of deferred income have been classified as contract liabilities from 2018 due to the implementation of IFRS 15. Grid connection charges in the power distribution business have been classified as

'Assets classified as held for sale', due to the expected exit during 2019. In addition, the export VAT was repaid in January 2018.

In 2018, the short-term portion of other payables amounted to DKK 4,793 million (2017: DKK 6,368 million).

4.7 Changes in net working capital

Change in net working capital, DKKm	2018	2017
Change in inventories	243	(423)
Change in contract assets and liabilities	(1,478)	(3,318)
Change in trade receivables	(2,261)	(3,705)
Change in other receivables	(31)	(563)
Change in trade payables	1,601	1,188
Change in tax equity liabilities	1,835	-
Change in other payables	(827)	(1,083)
Total change in net working capital	(918)	(7,904)
Of which changes relating to work in progress	(2,326)	(3,674)
Of which changes relating to tax equity liabilities and other working capital	1,408	(4,230)

Work in progress consists of elements in contract assets and liabilities, construction agreements related to construction of offshore wind farms, construction of offshore transmission assets (inventory) and related trade payables.

The change in funds tied up in work in progress and related trade payables was DKK 2,326 million in 2018 due to high activity related to the construction of offshore wind farms for partners (Walney Extension and Borkum Riffgrund 2) as well as offshore transmission assets in the UK (Hornsea 1 and Hornsea 2), partly offset by receipt of milestone payments from partners and the divestment of the Burbo Bank Extension transmission asset.

In 2017, the change in funds tied up in work in progress and related trade payables was

DKK 3,674 million due to the construction of offshore wind farms for partners (mainly Race Bank) as well as offshore transmission assets in the UK (mainly Hornsea 1), partly offset by receipt of milestone payments from partners.

The change in funds tied up in other working capital was a cash inflow of DKK 1,408 million in 2018 and primarily concerned the tax equity contribution from the partner on Tahoka.

5. Tax

Tax	126
Tax policy and tax regimes	127
Tax on profit (loss) for the year	128
Taxes paid	130
Deferred tax	131
Total tax contribution	133

5. Tax

Tax on profit (loss) for the year

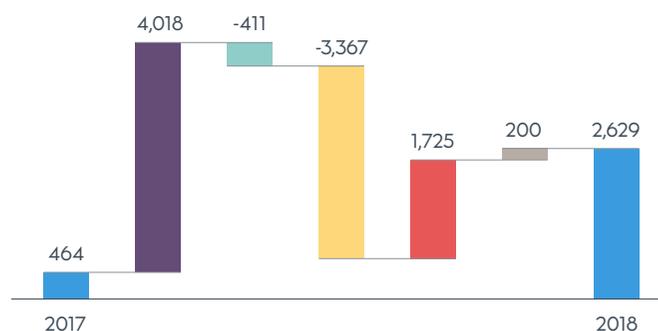

The effective tax rate was 17% for the continuing operations. The effective tax rate was primarily affected by the tax-exempt gain on the farm-down of 50% of Hornsea 1.

Corporate income taxes paid

We have paid DKK 3,367 million in taxes in 2018, of which DKK 711 million related to residual tax for 2017. We expect to have a residual receivable tax of DKK 245 million regarding 2018 as a higher portion of income related to non-taxable income in 2018 than we expected at the time we paid taxes on account.

Development in current and deferred tax asset and liabilities (tax, net), 2018 DKKm

- Tax, net liability
- Tax on profit (loss) for the year
- Tax on other comprehensive income and hybrid capital
- Corporate taxes paid
- Addition US investment
- Other effects

The net tax is highly impacted by the US investments.

3.4bn

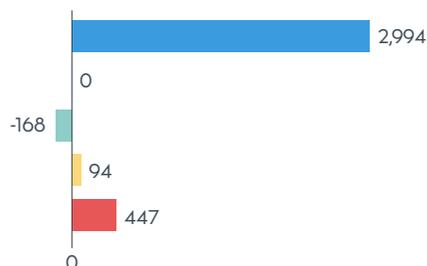

Corporate income tax paid by the Group in 2018 totalled DKK 3,367 million against DKK 2,660 million in 2017.

3.2bn

Current corporate income tax in 2018 totalled DKK 3,161 million against DKK 2,698 million in 2017.

Corporate income tax paid by segment, 2018 DKKm

- Offshore
- Onshore
- Bioenergy
- Customer Solutions
- Ørsted A/S and other activities

2018, DKKm	Business performance		
	Profit (loss) before tax	Tax	Tax in %
Gain (loss) on divestments	14,886	(1,155)	8%
Tax equity, deferred tax liability, Tahoka	-	(444)	n.a.
Rest of the Group	8,618	(2,419)	28%
Effective tax for the year	23,504	(4,018)	17%

Tax on gain (loss) on divestments related to taxable gains. See more in note 2.5 'Other operating income and expenses'. The tax rate for 'Rest of the Group' is higher than the weighted average tax rate in the countries in which we generate income as a result of adjustments relating to previous years as well as non-deductible expenses and non-taxable income.

5.1 Tax policy and tax regimes

Our tax policy

We recognise the key role that tax plays in society and the development of the countries where we operate. We also believe that a responsible approach to tax is essential to the long-term sustainability of the societies where we have activities and of our business across the globe.

The world's governments have defined the greatest challenges for our societies towards 2030 through the UN Sustainable Development Goals (SDGs). At Ørsted, we are committed to running our business in a way that contributes to the SDGs. Tax payments contribute both directly and indirectly to most of the SDGs, in particular target #16.6 on the development of effective, accountable and transparent institutions.

Tax is a core part of our corporate responsibility and governance and is overseen by the Board of Directors. The Board of Directors is accountable for the tax policy, and the responsibility for tax risk management lies with the CFO and overseen by the Audit and Risk Committee.

Compliance

Our ambition is to apply best practices at all times and act in accordance with applicable legislation on tax computation and

tax reporting to ensure that we pay the right amount of tax at the right time in the countries where we operate. We continuously evaluate our processes and controls to ensure that we are compliant with local and international standards relevant to our business.

Our attitude to tax planning

We only use business structures that are driven by commercial considerations, aligned with business activity and which have genuine substance.

We make use of incentives and tax reliefs where they apply in areas where we have commercial substance.

We seek, wherever possible, to develop cooperative relationships with tax authorities, based on mutual respect, transparency and trust.

Transparency

In line with our belief in transparency, we provide regular information to our stakeholders – including investors, policy makers, employees, civil society and the general public – about our approach to tax and taxes paid.

Read more about our tax policy at <https://orsted.com/taxpolicy>

Tax regimes

At the end of 2018, our major activities were in Denmark, the UK, Germany, the Netherlands and the US.

US tax equity partnerships

We have entered into several tax equity partnership agreements in the US. For more information on our tax equity partnership structure, see note 4.5 'Tax equity liabilities'. The expected value of the deferred tax liability related to property, plant and equipment at the 'flip date' in the tax equity partnership agreement is included in our accounts when the tax equity partnership is established.

International joint taxation

For the income year 2017 and going forward, we opted to exit the international joint taxation scheme. The retaxation liability was transferred to tax payable and has been settled.

Local taxes paid

In terms of taxation, we were affected in Denmark by completed construction agreements in connection with the construction of offshore wind farms in the UK and Germany in 2018.

We have made significant investments in offshore wind farms in the UK, Germany and the Netherlands, resulting in the accumulation of large tax assets in recent years. Accordingly, we have not paid significant taxes in these countries. Going forward, this will change as the offshore wind farms are commissioned and will be generating positive results.

We expect to start paying more significant corporate tax in the UK in 2019, in Germany in 2019 and in the Netherlands in 2021.

We are currently making significant investments in the US, and we do therefore not expect to pay any material corporate income tax in the foreseeable future.

5.2 Tax on profit (loss) for the year

	2018				2017			
	Business performance		IFRS		Business performance		IFRS

Effective tax rate, DKKm/%								
Tax on profit (loss) for the year can be explained as follows:								
Calculated 22% tax on profit (loss) before tax (2017: 22%)	(5,172)	22	(4,834)	22	(3,310)	22	(3,323)	22
Adjustments of calculated tax in foreign subsidiaries in relation to 22% (2017: 22%)	94	-	74	-	86	-	86	-
Tax effect of:								
Non-taxable income and non-deductible costs, etc., net	1,912	(8)	1,912	(9)	1,323	(9)	1,323	(9)
Unrecognised tax assets and capitalisation of tax assets not previously capitalised	(50)	-	(50)	-	(184)	1	(184)	1
Share of profit (loss) in associates and joint ventures	-	-	-	-	(12)	-	(12)	-
Adjustment of tax concerning previous years	(802)	3	(802)	4	332	(2)	332	(2)
Effective tax for the year	(4,018)	17	(3,700)	17	(1,765)	12	(1,778)	12

Non-taxable income and non-deductible expenses primarily concern the tax-exempt gain on divestments and US investment matters. See more in note 2.5 'Other operating income and expenses'.

Income tax

Tax on business performance profit (loss) was DKK 4,018 million in 2018 against DKK 1,765 million in 2017. The effective tax rate was 17% in 2018 against 12% in 2017.

The effective tax rate in 2018 was particularly affected by a tax-exempt gain on the farm-down of 50% of Hornsea 1. In addition, the effective tax rate was affected by the recognition of a deferred tax liability related to a tax equity partner (see more in notes 4.5 'Tax equity liabilities' and 5.4 'Deferred tax'). The deferred tax liability will be reduced gradually once we have repaid the contribution to the tax equity partners.

The difference in tax rates from 22% to the statutory tax rates across our jurisdiction impacts the effective tax rate.

The effective tax rate in 2017 was primarily affected by tax-exempt gains on the farm-downs of 50% of the Walney Extension and Borkum Riffgrund 2 offshore wind farms. In addition, our effective tax rate was affected by the remaining portion of the tax-exempt gain on Race Bank, which was divested in 2017, and adjustments to prior years.

Accounting policies

Tax for the year consists of current tax, changes in deferred tax and adjustments in respect of previous years. Tax on profit (loss) for the year is recognised in the income statement. Tax relating to other items is recognised in other comprehensive income.

Key accounting judgements

Estimates regarding recognition of income tax assets and provisions for uncertain tax positions

Ørsted is subject to income taxes in all the countries where we operate. Significant judgement and estimates are required in determining the worldwide accrual for income taxes, income tax assets and liabilities and provisions for uncertain tax positions.

In the course of conducting business around the world, tax and transfer pricing disputes with tax authorities may occur. Judgement is applied to assess the possible outcome of such disputes. We apply the methods prescribed in IFRIC 23 'Uncertainty over Income Tax Treatments' when making provisions for uncertain tax positions, and we consider the provisions made to be adequate. However, the actual obligation may deviate and depends on the result of litigations and settlements with the relevant tax authorities.

Ongoing tax disputes, primarily related to transfer pricing cases, are included as part of 'Tax payables', 'Tax receivables' and 'Deferred tax'.

Tax on profit (loss) for the year and other comprehensive income

In 2018, tax on IFRS profit (loss) for the year amounted to DKK 3,700 million, consisting of current tax of DKK 3,161 million, changes in deferred tax of DKK 266 million, tax on assets classified as held for sale of DKK 3 million, and an adjustment of tax in respect of previous years of DKK 802 million. The adjustment primarily relates to amendments of asset values in UK and Germany and reclassification of Danish liabilities.

Current tax

Current tax is the tax incurred in Ørsted which is payable within the same year as the profit.

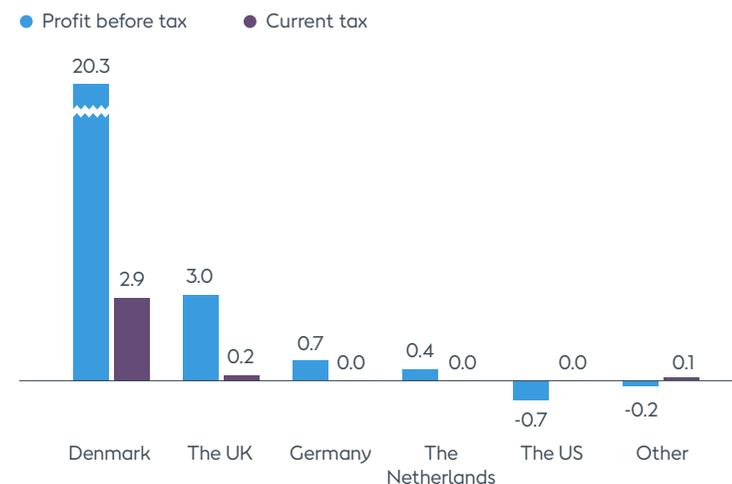

This deviates from taxes paid as a result of payments regarding prior years and residual payments regarding the current year.

Included in the current tax for 2018 is DKK 2,135 million which relate to gains from construction agreements regarding Walney Extension and Borkum Riffgrund 2 and the construction management agreement regarding Race Bank.

Due to the high level of investments and the subsequent deferrals of payable tax as a consequence of tax depreciation, our current tax is generally lower than the statutory corporate tax rates during construction and the initial years after first power.

Current tax (business performance), 2018, DKKbn

The figure shows the relationship between profit before tax and current tax in the main countries where we do business.

Current tax rate (business performance), 2018, %

The figure shows the tax rates based on business performance in the main countries where we do business.

Income tax for the year is calculated on the basis of the profit (loss) before tax from continuing operations.

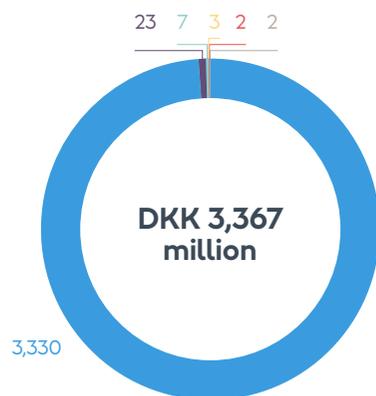

5.3 Taxes paid

In 2018, we paid DKK 3,367 million in taxes. The tax payment included residual tax for 2017, amounting to DKK 711 million in total for continuing operations for Denmark.

We paid most of our Danish taxes in March. Accordingly, the income tax paid for the year was based on estimates and preliminary tax positions. As our non-taxable income was higher than expected when we paid our Danish taxes on account, we expect to have a receivable tax of DKK 245 million in Denmark regarding 2018.

5.4 Deferred tax

Development in deferred tax

In 2018, deferred tax from continuing operations decreased due to the completion of the construction of Borkum Riffgrund 2 and Walney Extension as these taxes were paid and increased due to the ongoing construction of Hornsea 1. Also, our tax equity partner agreements in the US (see note 4.5 'Tax equity liabilities') have resulted in the recognition of the expected deferred tax liability that we will take over once the contribution from the tax equity partner has been repaid.

The adjustment regarding previous years comprised recognition of tax assets relating to offshore wind farms.

In 2017, deferred tax from continuing operations decreased as a result of deferred tax liabilities materialising as tax payable. This included differences in the tax and accounting treatment of profit received on account on work in progress, differences in the tax and accounting recognition of financial instruments, retaxation due to the expected exit from the international joint taxation scheme and adjustments to prior years.

Deferred tax by segment

Deferred tax (liabilities) in our segments primarily concerned the following:

- Offshore: recognised profit received on account and property, plant and equipment, in respect of which depreciation for tax purposes exceeds depreciation for accounting purposes.
- Onshore: recognised deferred tax liability regarding wind farm assets in tax equity structures.
- Bioenergy: property, plant and equipment in respect of which depreciation for tax purposes exceeds depreciation for accounting purposes.
- Customer Solutions: financial instruments.
- Other activities/eliminations comprised intra-group eliminations in the joint taxation across segments.

Accounting policies

Deferred tax is recognised in respect of all temporary differences arising between the tax bases of assets and liabilities and their carrying amounts.

However, deferred tax is not recognised in respect of temporary differences relating to:

- the acquisition of joint operations, including licence interests
- other items, where differences arise at the time of acquisition affecting neither the profit (loss) for the year nor the taxable income. However, this does not include differences arising in connection with company acquisitions.

Deferred tax is measured depending on how we plan to use the assets and settle the liabilities. We set off tax assets and liabilities when the tax assets can be offset against tax liabilities in the year in which the deferred tax assets are expected to be used.

Deferred tax assets are recognised at the value at which they are expected to be used. They may be offset against future earnings or against probable tax losses carried forward. This is done within a joint

taxation scheme. Intra-group gains and losses are eliminated.

Deferred tax is measured based on the tax rules and rates applying when the deferred tax becomes current tax. Changes in deferred tax as a result of changes in tax rates are recognised in profit (loss) for the year.

Deferred tax (net liability) related to the tax equity structures is recognised as tax income in the income statement when we take over the agreements. The liability recognised is the amount that we expect to take over once the contribution from the equity partner is repaid, and the tax equity structure 'flips.'

Liabilities in respect of uncertain tax positions are measured as follows:

- The most-likely-outcome method is applied in cases where there are only two possible outcomes.
- The weighted-average method is used in cases where there are more than two possible outcomes.

The liability is recognised under income tax payable or deferred tax, depending on how the realisation of the tax position will affect the financial statement.

Of which recognised in the balance sheet under assets	88							2,865
Of which recognised in the balance sheet under equity and liabilities	2,185							2,128

The amounts transferred to assets and liabilities classified as assets held for sale concern our Danish power distribution, residential customer and city light businesses.

Addition of enterprises includes the deferred tax liability recognised in relation to our US investments.

Adjustments to prior years primarily relate to movements between deferred tax and tax payable. Also, asset value reassessment in Germany and the UK.

The increase of tax losses carried forward during 2018 is primarily a result of the accelerated depreciation on fixed assets for tax purposes. The tax loss carryforwards will be set off against realisation of either deferred tax liabilities on the same wind farm or jurisdiction or set off against future profits on that wind farm or jurisdiction.

5.5 Total tax contribution

According to the OECD classification, tax is a compulsory unrequited payment to general government. This means a payment by Ørsted paid to the government, including amounts paid through an agent. Tax does not result in a return of value to Ørsted for a right or asset used in the business.

Taxes collected are those which are generated by Ørsted' operations, but not a tax liability for Ørsted. Ørsted generates the commercial activity that gives rise to the taxes and then collects and administers them on behalf of the tax authorities in the countries in which we operate.

Taxes borne by Ørsted are those that represent a direct cost and are reflected in the financial result. Tax borne is charged to the profit and loss account or capitalised as part of an asset's cost.

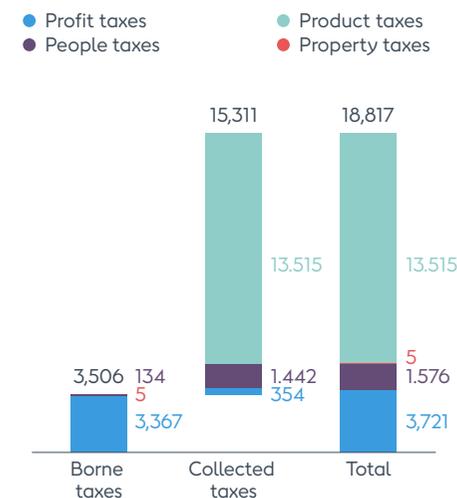

Total global taxes that we paid in 2018

● Profit taxes	These include taxes on company profits that are borne (such as corporate income tax) and collected (such as withholding tax on payments to third parties). In 2018, Ørsted paid DKK 3,367 million in borne profit taxes and DKK 354 million in collected profit taxes. The collected profit taxes relate to withholding tax on dividends paid to Ørsted's shareholders.
● People taxes	Taxes on employment, both borne and collected (including income tax and social security tax payments). In 2018, Ørsted paid DKK 134 million in borne people taxes and DKK 1,442 million in collected people taxes.
● Product taxes	Indirect taxes on the production and consumption of goods and services, including VAT and sales tax, custom duties and insurance premium tax. In 2018, Ørsted paid DKK 13,515 million in collected product taxes. Borne product taxes were insignificant in 2018 for this summary.
● Property taxes	Taxes on the ownership, sale, transfer or occupancy of property. In 2018, Ørsted paid DKK 5 million in borne property taxes. Collected property taxes were insignificant in 2018 for this summary.

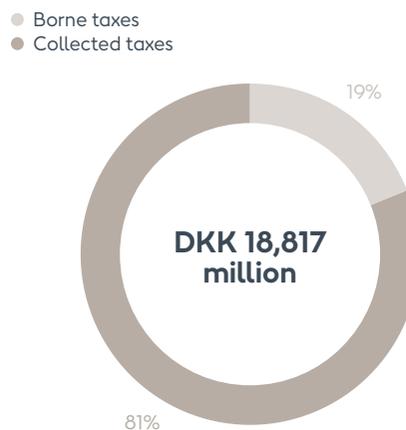

Total tax contribution, 2018, %

Total tax contribution, 2018, DKKm

Total tax contribution, 2018, %

Total tax contribution is highly impacted by collection of VAT, sales tax, duties as well as profit taxes.

The chart shows the distribution between borne and collected taxes in 2018.

6. Capital structure

Capital structure	135
Interest-bearing debt	136
Equity	138
Hybrid capital	140
Financial resources	141
Financial income and expenses	143
Funds from operations (FFO)/ adjusted interest-bearing net debt	144

6. Capital structure

In 2018, we acquired Lincoln Clean Energy and Deepwater Wind in the US and thereby entered into tax equity partnerships with associated liabilities. The interest-bearing part of our tax equity liability amounts to DKK 454 million as of 31 December 2018.

We have not issued new bonds or raised new loans in 2018. However, we have taken over bank loans in the amount of DKK 4,039 million in connection with the two acquisitions.

Capital structure

To ensure the financial strength to operate in the international energy and capital markets and secure financing on attractive terms, we

have defined credit rating and capital structure targets. The overarching capital structure targets are a credit rating of Baa1/BBB+ and an FFO/adjusted net debt credit metric of around 30%.

Financing policy

The aim of our financing policy is to ensure the best possible loan arrangements, while also minimising financing costs, liquidity and refinancing risks.

The borrowing activities are diversified among various funding sources and maturities. In addition, we have robust financial resources.

Our borrowing activities are consolidated in the parent company, where cash resources are available to the Group's companies via an internal bank.

Cash management

We have decided to maintain robust financial resources to limit the company's sensitivity to unrest in the financial markets.

The financial resources consist of bank deposits and securities as well as non-cancellable credit facilities from a group of robust Nordic and international banks. The financial resources totalled DKK 37,879 million at 31 December 2018 (2017: DKK 39,158 million).

69.0%

Funds from operations (FFO) relative to adjusted interest-bearing net debt amounted to 69% at 31 December 2018 against 50.3% at 31 December 2017.

-2.2bn

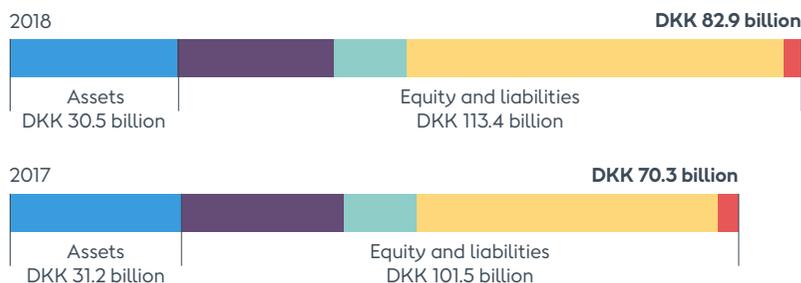

Our interest-bearing net debt totalled DKK -2,219 million at 31 December 2018 against DKK -1,517 million at 31 December 2017.

37.9bn

Our financial resources totalled DKK 37,879 million at 31 December 2018 against DKK 39,158 million at 31 December 2017.

Change in other interest-bearing debt	570	-
Reclassification to bond and bank debt	-	4,192
Capital losses on early repayment of debt	-	230
Foreign exchange adjustments and amortisation	134	(368)
Interest-bearing debt 31 December	28,320	29,636

The tabel shows the changes in interest-bearing debt.

Interest-bearing net debt

Interest-bearing net debt totalled DKK -2,219 million at the end of 2018, up DKK 702 million relative to 2017. The increase in the net cash position comprise of a decrease in interest-bearing assets of DKK 614 million and a decrease in interest-bearing debt of DKK 1,316 million.

In 2018, we have entered the US market where we have entered into tax equity liabilities. The part of the tax equity liability we expect to repay with tax credits (PTCs) and other tax attributes is not considered part of interest-bearing debt. This amounts to DKK 3,719 million (2017: DKK 0 million). The part of the tax equity liability we expect to repay with cash is included in interest-bearing debt.

This amounts to DKK 454 million (2017: DKK 0 million). For more information, see note 4.5 'Tax equity liabilities'.

In July 2018, we redeemed a hybrid bond classified as debt with a notional amount of EUR 500 million, corresponding to DKK 4,208 million.

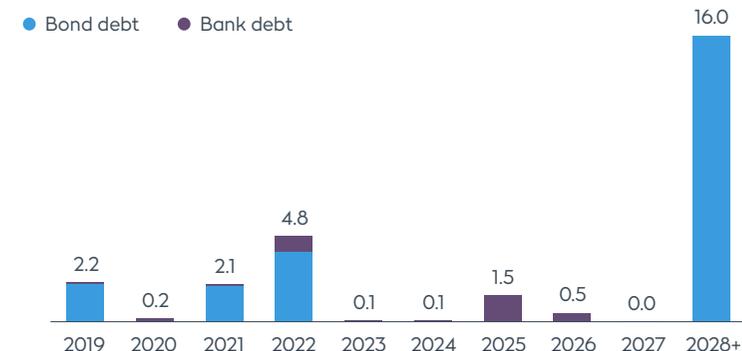

In October and November 2018, we acquired Lincoln Clean Energy and Deepwater Wind. We took over a bank debt of DKK 4,039 million and interest-bearing tax equity liabilities of DKK 370 million in connection with the transactions.

In October and December, bank debt in Lincoln Clean Energy of DKK 2,406 million was repaid.

Maturity profile, DKKbn

The graph shows the maturity profile for our bank loans and bond debt.

Market value of bond and bank debt

The market value of our bond and bank debt amounted to DKK 28,048 million and DKK 3,622 million, respectively, at 31 December 2018 (2017: DKK 32,959 million and DKK 2,108 million, respectively). The market value of our bond and bank debt exceeds the carrying amount due to the drop in interest levels since the establishment of the debt.

Loan arrangements

At 31 December 2018, we had loan obligations totalling DKK 1,964 million (2017: DKK 2,069 million) to the European Investment Bank and the Nordic Investment Bank. The loans are recognised in the balance sheet under bank debt. The loans offered by these multilateral financial institutions include loans to co-fund infrastructure and energy projects on favourable terms and with maturities exceeding those normally available in the commercial banking market. In connection with these loans, the Group may be met with demands

for repayment or collateral in the event of the Danish State holding less than 50% of the share capital or voting rights in Ørsted A/S (change of control), or for repayment in the event of Moody's or Standard & Poor's downgrading our rating to Baa3 or BBB- or below, respectively.

Furthermore, we had non-cancellable credit facilities of DKK 10,447 million at 31 December 2018 (2017: DKK 10,424 million) with a number of Scandinavian and international banks. In connection with these credit facilities, we may be met with demands for cancellation and repayment of any used share in the event of players other than a group consisting of the Danish State and Danish power distribution companies acquiring more than 50% of the share capital or voting rights in Ørsted A/S, or in the event of the Danish State ceasing to hold at least 20% of the share capital. Our financing agreements are not subject to any other unusual terms or conditions.

Interest rate risk

We have fixed the interest rate on most of our debt by issuing fixed-rate debt. At the end of 2018, 95% (2017: 95%) of the Group's debt was fixed-rate debt. Interest payments on loans in GBP have been covered with forward exchange contracts over the next five years at an average exchange rate of 8.9. See note 7.2 'Hedge accounting and economic hedging' for further information.

At 31 December 2018, the loan portfolio had an average time to maturity of 9.9 years (2017: 9.8 years). Interest-bearing assets consist primarily of short-term bonds with limited risk.

Our interest rate risk is described further in note 7.1 'Market risks'.

Accounting policies

Bond debt, bank debt and other payables are recognised at inception at market value (typically proceeds received) net of transaction costs incurred. In subsequent periods, the liabilities are measured at amortised cost, so that the difference between the cost (proceeds) and the nominal value is recognised in profit (loss) for the year as interest expenses over the term of the loan, using the effective interest rate method.

Financial liabilities are classified as current, unless the Group has an unconditional right to defer settlement of the liability to at least one year after the balance sheet date.

The market value of issued bonds has been determined as the market value at 31 December (level 1 – quoted prices).

The market value of bank loans has been determined as the present value of expected future instalments and interest payments using the Group's current interest rate on loans as the discount rate (level 2 – observable inputs).

Senior bond issued at 31 December 2018

Million	Outstanding amount		Coupon (%)	Time of issue	Maturing	Quoted in

GBP	750	6,235	4.875	12 Jan. 2012	12 Jan. 2032	London
GBP	500	4,157	5.750	9 Apr. 2010	9 Apr. 2040	London

In addition to senior bonds, we have issued a number of hybrid bonds; see note 6.3 'Hybrid capital'.

6.2 Equity

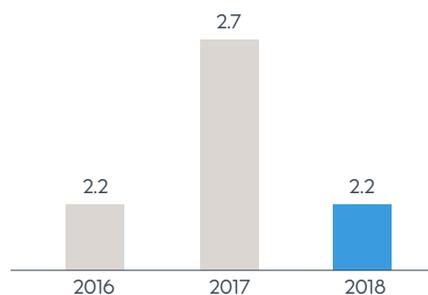

Share capital

Ørsted's share capital is DKK 4,203,810,800, divided into shares of DKK 10. The share capital is unchanged from last year. No shares are subject to special rights or restrictions on voting rights. The shares are fully paid up.

Treasury shares

To secure our share programme, we acquired additional treasury shares in November 2018. The total portfolio of treasury shares consist of 335,904 shares at 31 December 2018 (2017: 225,904), corresponding to 0.1% of the share capital.

Dividend yield, %

The graph shows the proposed dividends in relation to the closing price for an Ørsted share on the last trading day of the year.

Dividends

The Board of Directors recommends that dividends of DKK 4,099 million (2017: DKK 3,783 million) be paid for the financial year, corresponding to DKK 9.75 per share (2017: DKK 9 per share). The proposed dividends correspond to a dividend yield of 2.2% (2017: 2.7%) calculated on the basis of the closing price for an Ørsted share on the last trading day of the year.

Owners in Ørsted

The Danish State is the principal shareholder with an ownership interest of 50.1%. In addition, SEAS-NVE and The Capital Group also have significant ownership interests. See note 16 'Ownership information' in the parent company's financial statements.

The table shows earnings per share distributed on continuing and discontinued operations. Diluted profit (loss) per share corresponds to profit (loss) per share, as the dilutive effect of the share programme is 0.1% of the share capital (2017: 0.1% of the share capital).

¹ Cost of hedging related to basis spread on currency swaps included in hedging reserve amounts to DKK 183 million (2017: 33 million).

Accounting policies

Foreign currency translation reserve

The foreign currency translation reserve comprises:

- exchange rate adjustments arising on translation of the financial statements of foreign entities with a currency that is not the Group's functional currency
- exchange rate adjustments relating to loans that form part of our net investment in such entities
- exchange rate adjustments relating to hedging transactions on our net investment in such entities.

On realisation or partial realisation of the net investment, the exchange rate adjustments are recognised in profit (loss) for the year if a foreign exchange gain (loss) is realised by the divested entity. The foreign exchange gain (loss) is transferred to the item in which the gain (loss) is recognised.

Hedging reserve

The hedging reserve covers:

- hedging of net investments in foreign operations
- cash-flow hedging of currency risks and inflation risks associated with revenue
- cash-flow hedging of the currency risk associated with the construction of offshore wind farms and interest expenses.

Deferred costs of hedging

Changes in the basic spread on currency swaps and time value of options are included in deferred costs of hedging.

Share premium reserve

Retained earnings include the share premium reserve of DKK 21,279 million, representing the excess of the amount of subscribed-for share capital over the nominal value of these shares in connection with capital injections.

6.3 Hybrid capital

Hybrid bonds

Type	Due in 3013
Carrying amount	Subordinate to other creditors
Financial classification	DKK 5,148 million
Notional amount	Equity
Issued	EUR 700 million (DKK 5,224 million)
Maturing	June 2013
First redemption date at par	June 3013
Interest	26 June 2023
Deferral of interest payment	For the first ten years, the coupon is fixed at 6.25% p.a., after which it is adjusted every five years with the five-year euro swap + 4.75 percentage points from 2023-2043 and + 5.5 percentage points after 2043
	Optional

We have issued hybrid capital which is subordinate to our other creditors. The purpose of issuing hybrid capital is to strengthen our capital base and fund our investments. In the European capital markets, we have issued EUR hybrid bonds with a total nominal value of DKK 13,432 million (EUR 1,800 million).

On 8 July 2018, we redeemed the hybrid bond maturing in July 3013 at par at the first redemption date.

For hybrid bonds, we may defer coupon payments to bond holders and ultimately decide not to pay them. Deferred coupon payments become payable, however, if we decide to pay dividends to our shareholders or pay coupon payments on other hybrid bonds.

As a consequence of the special terms regarding the hybrid bonds, these are classified as equity, and coupon payments are therefore recognised in equity.

Type	Due in 3015
Carrying amount	Subordinate to other creditors
Financial classification	DKK 4,423 million
Notional amount	Equity
Issued	EUR 600 million (DKK 4,477 million)
Maturing	May 2015
First redemption date at par	November 3015
Interest	6 November 2020
Deferral of interest payment	Coupon for the first 5.5 years is fixed at 3.0% p.a., after which it is adjusted every five years with the five-year euro swap + 2.819 percentage points from 2020, + 3.069 percentage points from 2025, and + 3.819 percentage points from 2040
	Optional

Accounting policies

Hybrid capital comprises issued bonds that qualify for treatment in accordance with the rules on compound financial instruments due to the special characteristics of the bonds. The notional amount, which constitutes a liability, is recognised at present value, and equity has been increased by the difference between the net proceeds received and the present value of the discounted liability. Accordingly, any coupon payments are accounted for as dividends, which are recognised directly in equity at the time the payment obligation arises. This is because the coupon is discretionary, and any deferred coupon therefore lapses upon maturity of the hybrid capital. Coupon payments consequently do not have any effect on profit (loss) for the year.

The part of the hybrid capital that is accounted for as a liability is measured at amortised cost. However, as the carrying amount of this component amounted to nil on initial recognition and due to the 1,000-year term of the hybrid capital, amortisation charges will only have an impact on profit (loss) for the year towards the end of the 1,000-year term of the hybrid

Type	Due in 3017
Carrying amount	Subordinate to other creditors
Financial classification	DKK 3,668 million
Notional amount	Equity
Issued	EUR 500 (DKK 3,731 million)
Maturing	November 2017
First redemption date at par	November 3017
Interest	24 November 2024
Deferral of interest payment	Coupon for the first seven years is fixed at 2.25% p.a., after which it is adjusted every five years with the five-year euro swap + 1.899 percentage points from 2024, + 2.149 percentage points from 2029 and + 2.899 percentage points from 2044
	Optional

capital. Coupon payments are recognised in the statement of cash flows in the same way as dividend payments within financing activities.

On redemption of the hybrid capital, the payment will be distributed between liability and equity, applying the same principles as used when the hybrid capital was issued. This means that the difference between the payment on redemption and the net proceeds received on issue is recognised directly in equity as the debt portion of the existing hybrid issues will be nil during the first part of the life of the hybrid capital.

On the date on which the Board of Directors decides to exercise an option to redeem the hybrid capital, the part of the hybrid capital that will be redeemed will be reclassified to loans and borrowings. The reclassification will be made at the market value of the hybrid capital at the date the decision is made. Coupon payments and exchange rate adjustments following the reclassification to loans and borrowings will be recognised in profit (loss) for the year as financial income or expenses.

6.4 Financial resources

Our liquidity and financing risks are managed centrally in accordance with the principles and delegated authorities laid down by the Board of Directors.

One of the most significant financial management tasks is to secure sufficient and flexible financial resources in relation to our day-to-day operations, investment programme and debt maturity profile.

We therefore define minimum financial resources for the coming calendar year.

Cash, cash equivalents and securities

Securities are a key element in our financial resources, for which reason investments are primarily made in liquid AAA-rated Danish mortgage bonds and to a lesser extent in other bonds. Most of the securities qualify for repo transactions in the Danish central bank, 'Danmarks Nationalbank'.

Securities not available for use comprise securities pledged as collateral for:

- insurance-related provisions; DKK 399 million at 31 December 2018 (2017: DKK 397 million)
- trading in financial instruments; DKK 333 million at 31 December 2018 (2017: DKK 40 million).

At 31 December 2018, we had received collateral in the amount of DKK 852 million (2017: DKK 787 million) concerning the positive market value of derivatives.

Cash not available for use comprise:

- collateral for insurance-related provisions; DKK 264 million (2017: DKK 312 million)
- collateral for US power purchase agreements; DKK 246 million (2017: DKK 0 million)
- collateral for other transactions; DKK 342 million (2017: DKK 0 million).

* The amount primarily relates to reclassified hybrid capital. See more in note 6.3 'Hybrid capital'.

**Maturity analysis of loans and borrowings**

The Group's cash needs in respect of its financial loans and borrowings are shown in the table on the left. The maturity analysis was determined on 31 December.

The maturity analysis is based on undiscounted cash flows, including estimated interest payments. Interest payments are based on market conditions and interest-rate hedging entered into on 31 December.

The maturity analysis does not include hybrid capital classified as equity. At 31 December 2018, we had issued hybrid capital with a notional amount totalling DKK 13,432 million due in 3013 (DKK 5,224 million), 3015 (DKK 4,477 million) and 3017 (DKK 3,731 million), respectively.

Accounting policies

Securities comprise bonds that are monitored, measured and reported at market value on an on-going basis in conformity with the Group's investment policy. Changes in market value are recognised in profit (loss) for the year as financial income and expenses. Purchase and sale of securities are recognised at the settlement date.

For listed securities, market value equals the market price, and for unlisted securities, market value is estimated based on generally accepted valuation methods and market data.

Divested securities where repurchase agreements (repo transactions) has been made at the time of sale are recognised in the balance sheet at the settlement date as if the securities were still held. The amount received is recognised as a liability, and the difference between the selling price and the purchase price is recognised in profit (loss) for the year over the term as interest. The return on the securities is recognised in profit (loss) for the year.

6.5 Financial income and expenses

Net financial income and expenses, DKKm

	2018	2017
Interest expenses, net	(877)	(629)
Interest element of provisions, etc.	(408)	(451)
Tax equity partner's contractual return	(44)	-
Capital losses on early repayment of loans and interest rate swaps	-	(230)
Value adjustments of derivatives, net	(64)	(67)
Exchange rate adjustments, net	285	391
Value adjustments of securities, net	(176)	(150)
Other financial income and expenses	6	94
Net financial income and expenses	(1,278)	(1,042)

The table shows net financial income and expenses, corresponding to our internal control.

Exchange rate adjustments and hedging contracts entered into to hedge currency risks are presented net under the item 'Exchange rate adjustments, net'.

Accounting policies

Market value adjustments of interest rate and currency derivatives that have not been entered into for hedging purposes are presented as financial income or expenses.

The accounting policy for the tax equity partner's contractual return is described in note 4.5 'Tax equity liabilities'.

Financial income and expenses, DKKm

	2018	2017
Interest income from cash, etc.	62	71
Interest income from securities at market value	264	216
Capital gains on securities at market value	119	250
Foreign exchange gains	2,033	1,523
Value adjustments of derivatives	670	2,043
Other financial income	31	150
Total financial income	3,179	4,253
Interest expenses relating to loans and borrowings, etc.	(1,710)	(1,670)
Interest expenses transferred to assets	506	754
Interest element of provisions	(280)	(303)
Tax equity partner's contractual return	(44)	-
Capital losses on securities at market value	(304)	(419)
Foreign exchange losses	(1,978)	(1,568)
Value adjustments of derivatives	(466)	(1,887)
Other financial expenses	(181)	(202)
Total financial expenses	(4,457)	(5,295)
Net financial income and expenses	(1,278)	(1,042)

Exchange rate adjustments of currency hedging are recognised in revenue and cost of sales with a gain of DKK 268 million (2017: a gain of DKK 190 million).

Borrowing costs transferred to property, plant and equipment under construction are calculated at the weighted average effective interest rate for general borrowing. This amounted to 4.1% in 2018 (2017: 5.3%).

6.6 Funds from operations (FFO)/ adjusted interest-bearing net debt

Funds from operations (FFO), DKKm	2018	2017
EBITDA – business performance	30,029	22,519
Interest expenses, net	(877)	(629)
Reversal of interest expenses transferred to assets	(506)	(754)
Interest element of decommissioning obligations	(192)	(194)
50% of coupon payments on hybrid capital	(272)	(320)
Calculated interest paid on operating lease obligations	(196)	(234)
Adjusted interest expenses, net	(2,043)	(2,131)
Reversal of gain (loss) on divestment of assets	(14,995)	(10,835)
Reversal of recognised operating lease payment in profit (loss) for the year	778	885
Total current tax	(3,068)	(2,447)
Funds from operations (FFO)	10,701	7,991

The table shows which items are included in FFO. FFO is calculated for the continuing operations.

Adjusted interest-bearing net debt, DKKm	2018	2017
Total interest-bearing net debt	(2,219)	(1,517)
50% of hybrid capital	6,619	6,619
Cash and securities not available for distribution, excluding repo loans	1,583	749
Present value of operating lease payments	4,819	6,095
Decommissioning obligations	5,471	4,751
Deferred tax on decommissioning obligations	(757)	(797)
Total adjusted interest-bearing net debt	15,516	15,900

The table shows which items are included in the adjusted interest-bearing debt as well as FFO relative to adjusted interest-bearing debt.

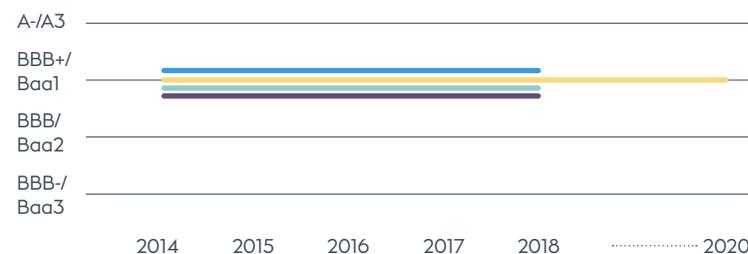

Funds from operations (FFO)/ adjusted interest-bearing net debt, %	2018	2017
Funds from operations (FFO)/ adjusted interest-bearing net debt	69.0%	50.3%

Our long-term target is for funds from operations (FFO) to be around 30% of adjusted interest-bearing net debt.

FFO/adjusted interest-bearing net debt was 69% in 2018, exceeding the target.

Hedge accounting and economic hedging	150
Energy trading portfolio	152
Sensitivity analysis of financial instruments	153
Credit risks	154
Categories of financial instruments	155
Fair value measurement	156

7. Risk management

Market and credit risks are a natural part of our business activities and a precondition for being able to create value. Through risk management, risks are reduced to an acceptable level.

Aquisitions in 2018

We have acquired Lincoln Clean Energy in October 2018 and Deepwater Wind in November 2018. The two acquisitions have increased our power and USD exposure.

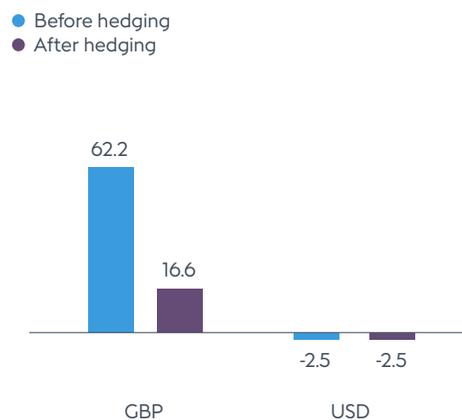

Currency and energy exposures

At the end of 2018, our forward-looking energy and currency exposures from production, sales, investments and divestments for 2019-2023 had been reduced from DKK 24.0 billion and DKK 64.7 billion to DKK 9.1 billion and DKK 19.1 billion respectively via hedging.

Trading portfolio

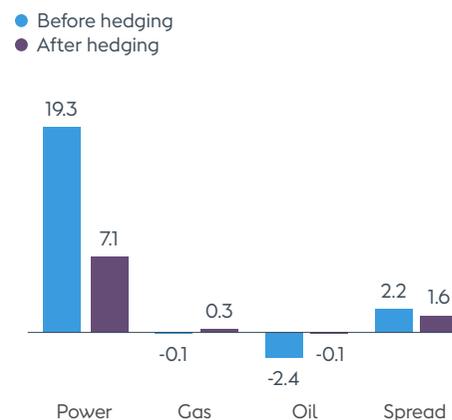

We have a limited trading portfolio, the main purpose of which is to optimise the execution of hedging contracts and gain from short-term energy price fluctuations. The trading activities comply with the mandates approved by the Board of Directors. Read more in note 7.3 'Energy Trading portfolio'.

Currency exposure 2019-2023, DKKbn

Our currency exposure for 2019-2023 totalled DKK 64.7 billion before hedging and DKK 19.1 billion after hedging at the end of 2018. We do not deem EUR to constitute a risk, as we expect that Denmark will maintain its fixed exchange-rate policy.

Energy exposure 2019-2023, DKKbn

Our energy exposures for 2019-2023 totalled DKK 24.0 billion before hedging and DKK 9.1 billion after hedging at the end of 2018.

5 years

We hedge prices for up to five years to reduce cash flow fluctuations.

+0.4bn

In 2018, business performance EBITDA was positively impacted by DKK 368 million from hedging instruments against a positive impact by DKK 1,665 million in 2017.

-3.0bn

The value of our energy and currency hedging instruments at 31 December 2018 was negative at DKK 3,032 million, which will reduce business performance EBITDA in a future period, against DKK -812 million at 31 December 2017.

7.1 Market risks

Market risks and market risk management

Our most significant market risks relate to:

- energy prices
- foreign exchange rates
- inflation rates and
- interest rates.

We manage market risks to protect Ørsted against market price volatility and ensure stable and robust financial ratios that support our growth strategy.

In the first five years, we primarily hedge future prices using derivatives to reduce cash flow fluctuations. We are almost fully hedged in the first two years. At longer durations, we also manage our market risks; our power exposure is partly mitigated through long term power purchasing agreements (PPA), and debt is used to manage currency, interest rate and inflation risk. Our long-term risk picture is determined by our strategic asset portfolio.

Minimum hedging levels are determined by the Board of Directors. In the first two years, a high degree of hedging is wanted to ensure stable cash flows after tax. The degree of hedging is declining in subsequent years.

This is due to:

- reduced certainty about long-term production volumes and
- increasing hedging costs in the medium to long term; both spread costs and cost of collateral.

Energy price risks

Our consolidated energy exposure after hedging for the years 2019-2023 can be summarised as shown in the table.

Risk after hedging DKKbn	Effect of price change	
	+10%	-10%
Power: 7.1 sales position	+0.7	-0.7
Gas: 0.1 sales position	+0.0	-0.0
Oil: 0.1 purchase position	-0.0	+0.0
Spread: 1.6 sales position	+0.2	-0.2

A 10% increase in the power price in 2019-2023 will therefore result in a gain of DKK 0.7 billion in the period, all else remaining unchanged.

Currency risks

Our consolidated currency exposure after hedging for the years 2019-2023 can be summarised as shown in the table.

Risk after hedging DKKbn	Effect of price change	
	+10%	-10%
GBP: 16.6 sales position	+1.7	-1.7
USD: 2.5 purchase position	-0.3	+0.3

Our largest currency exposure relates to GBP due to our investments in offshore wind farms in the UK. During 2018, we have experienced a substantial increase in long-term USD exposure, due to acquisition of both onshore and offshore companies in the US. Our exposure towards New Taiwan Dollar will increase if we

take final investment decision for the awarded offshore capacity in Taiwan.

In general, highly certain cash flows in foreign currencies are hedged within the first five years.

This means that exchange rates related to energy prices in foreign currency are not hedged until the energy price is hedged. Hence, GBP exchange rates associated with power generation in the UK is not hedged until the GBP power price is hedged.

Cash flows that relate to fixed tariffs and guaranteed minimum prices from offshore wind farms in the UK deviate from the main principle. Hedging of these, less operating expenses, is based on a declining level of

hedging over the five-year risk management horizon. The target is to hedge 100% of the risk in year 1, declining by 20 percentage points each year, to 20% in year 5.

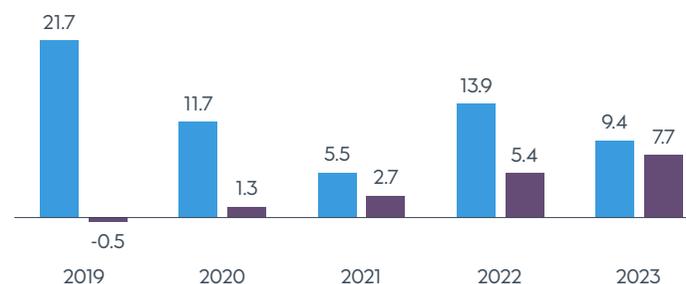

Our GBP exposure amounted to DKK 16.6 billion after hedging for the years 2019-2023. This unhedged GBP exposure stems from subsidised GBP income less operational expenditures.

The GBP exchange rate for hedges impacting EBITDA in 2019 and 2020 is hedged at an average exchange rate of DKK/GBP 8.4 and 8.4.

Our EUR risk is subject to continuous assessment, but is generally not hedged as we believe that Denmark will maintain its fixed exchange-rate policy.

GBP exposures, DKKbn

- Before hedging
- After hedging

The graph shows our GBP exposure before and after hedges from:

- divestment and investment
- green certificates
- hedged energy.

Interest rate and inflation risk

We manage interest rate and inflation risk by matching the sensitivity of our assets with the sensitivity of our debt.

The majority of our inflation risk relates to revenue from offshore wind farms. Subsidy regimes for offshore wind varies from country to country:

- In the UK, the fixed tariff is adjusted with inflation
- In Denmark, Germany and the Netherlands, the fixed tariff is not adjusted.

This results in an inflation risk for earnings from tariff-based wind farms in Denmark, Germany and the Netherlands. The share of our debt which is fixed in nominal terms partially offsets this inflation risk. We have fixed the inflation for part of the future revenue from our UK offshore wind farms at an average of 3.5% for the period 2024-2037 to create a better match with our fixed rate UK debt.

Fixed tariffs for future projects in the US and potentially Taiwan will also not be adjusted with inflation.

Offshore

Earnings from offshore wind farms mainly comprise:

- fixed tariffs in Denmark, Germany, the Netherlands, UK (CfD farms) and in the future also US and Taiwan
- guaranteed minimum prices for green certificates in the UK (ROC farms)
- sale of power at market prices from our out-of-subsidy farms or ROC farms in the UK.

At the end of 2018, such fixed tariffs and guaranteed minimum prices cover 81% of the

expected income from offshore wind farms over the next five years. The remaining price exposure concerns sales of power at market price in the UK and Denmark.

Onshore

Earnings from the generation of power from our onshore wind farms in the US comprise tax incentives, such as PTCs or ITCs and power. The tax incentives have a fixed value. But there is a price risk associated with the power which is reduced by entering into PPAs. The current PPAs cover approx. 78% of the expected generation, spanning 12-15 years from the commissioning of the wind farm. The PPAs are entered into with large corporates or financial institutions.

Bioenergy

Our CHP plant portfolio consists of biomass- and coal-fired plants in Denmark and a Renaissance plant in the UK. The CHP plants generate both heat and power.

Concurrently with the biomass conversion of our CHP plants, a larger share of our earnings will be coming from our heat generation. Heat generation does not give rise to price risk as the associated costs are covered by the heat customers. However, heat generation often entails a price risk for power, as heat and power to a large extend are generated simultaneously.

The profitability of power generation is determined by the difference between the selling price of power and the purchase price of fuel and carbon emissions allowances. For our coal-based power generation, we secure profitability by selling power and buying fuel and carbon emissions allowances, while for biomass-based power generation, we secure profitability by

buying biomass at fixed prices and hedging the associated power generation. At the end of 2018, 52% of the power generation expected in 2019 from our power stations was hedged. The total net risk associated with the power stations' power generation for the 2019-2023 period is DKK 1.6 billion after hedging.

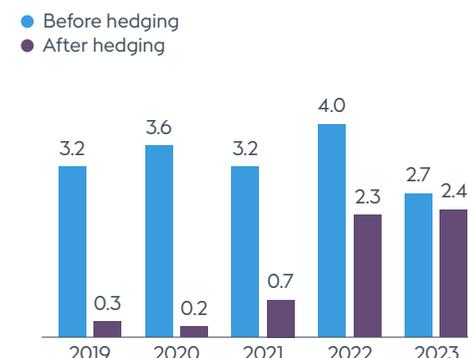

Customer Solutions

Our price risk in Customer Solutions arises from the purchase and sale of power and gas. The price risks associated with the purchase and sale of gas result from differences in the indexing of sales and purchase prices. Our largest gas purchase contracts include the option of renegotiating the contract price if it no longer reflects market conditions. We have completed most of these renegotiations in recent years; as a result, the contract prices have largely been indexed to pure gas prices and not to oil prices, as was previously the case. We are therefore less sensitive to differences in the oil and gas price development than before. Going forward, our oil price risk may rise again, as we conclude new LNG purchase agreements, which are typically oil-indexed. The price risks associated with power purchases and sales are given by the difference between the purchase and sales prices. The price risk relates primarily to timing differences between purchases and sales and the related hedges and is therefore considered to be limited.

Principles for estimating exposures

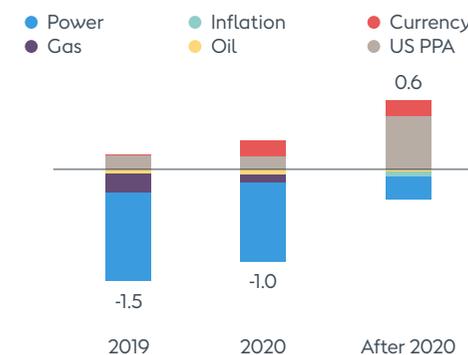

Exposure is calculated as the expected production (or net purchase/sale) times the forward price for the respective years. In addition, the exposure is determined on the basis of the expected exposure after renegotiations of oil-indexed gas purchase contracts.

Offshore's power price exposure, DKKbn

The table shows the exposure from Offshore's generation of power before and after hedges.

Expected value for recognition in business performance EBITDA, DKKbn

The table shows the time of the transfer of the value of hedging contracts in business performance EBITDA for both business performance and IFRS hedges together with deferred revenue from US power purchase agreements; see note 1.6 'Business performance'.

The table shows the Group's derivatives and commercial contracts according to the type of accounting treatment and the items affected. The accounting treatment and classification of hedging contracts depend on the purpose of the hedging:

- Economic hedging comprises hedging of energy-related risks and related currency risks. These hedging contracts are treated as hedge accounting in accordance with the business performance principle (see note 1.6 'Business performance' for a detailed description), whereby the value adjustment (loss/gain) is deferred and only recognised during the period in which the hedged transaction materialises. Under IFRS, the value adjustment of this type of hedging is recognised directly in the income statement.
- Hedging of cash flows concerning interest rates, inflation and currencies comprises hedging of future interest payments and currency risks on future income. When hedging cash flows, the effective portion of the market value is temporarily recognised in equity until the hedged transaction materialises.
- Hedging of the market value of securities or currencies comprises hedging of recognised assets or liabilities. By hedging the market value, the effective portion of the market value is recognised in profit (loss) for the year together with changes in the market value of the hedged asset or the hedged liability.
- Hedging of net investments comprises hedging of the currency risk associated with investments in assets located in foreign countries. By hedging net investments, the effective portion of the market value is recognised in equity until the hedged net investment is divested.
- The trading portfolio and other interest and currency derivatives are recognised at market value in the income statement.

Note 1.1 'Significant changes in the current reporting period' provides further details on economic hedging, including information about the underlying products traded.

7.2 Hedge accounting and economic hedging

Hedge accounting 2018, DKKm	Contractual principal amount	Maturity analysis			Market value		Recognised in compre- hensive income	Expected transfers to income statement

USD	150	-	-	150	1	-				

Accounting policies

We primarily use hedge accounting for currency and interest where it is possible to use hedging instruments which hedge the desired risk one-to-one. The GBP exposure, for example, is hedged using GBP forward exchange contracts, GBP swaps or GBP loans. There are thus no significant sources of ineffectiveness. For currency swaps, the basic spread is accounted for according to the cost of the hedging model.

To the extent that a risk needs to be hedged, and if there is no fully effective instrument available in the market, analyses are performed of the expected effectiveness of the hedging instrument before the hedging transaction is concluded. In this case, the ratio between the hedged risk and the hedging instrument may deviate from the one-to-one principle and will be determined as the ratio which most effectively hedges the desired risk.

We recognise changes to the market value of hedging instruments that qualify for recognition as a hedge of future cash flows in other comprehensive income in the hedging reserve. On realisation of the hedged cash flow, the resulting gains or losses are transferred from equity and recognised in the same item as the hedged item. However, on hedging of proceeds from future loans, the resulting gain or loss is transferred from equity over the term of the loan.

When we conclude a hedging transaction, and each time we present financial statements thereafter, we assess whether the hedged exposure and the hedging instrument are still financially correlated. If the hedged cash flows are no longer expected to be realised, the accumulated value change is transferred to profit (loss) for the year.

Cash flow hedging

We have entered into forward exchange contracts for the purpose of hedging the currency risk associated with the construction of offshore wind farms which are expected to be divested.

Ineffectiveness of currency hedging totalled DKK 0 million (2017: DKK 0 million). Forward exchange contracts have also been concluded for the purpose of hedging the currency risk associated with interest payments on loans in GBP.

All hedges take place using an instrument with the same price risk as the exposure. The GBP exposure, for example, is hedged using GBP derivatives or GBP loans. Therefore, the hedging ratio for all IFRS hedges is one-to-one.

Changes in the market value of derivatives that are classified as hedges of the fair value of a recognised asset or liability are recognised in profit (loss) for the year together with changes in the value of the hedged asset or liability to the extent of the hedged risk.

Economic hedging and commercial contracts

The purpose of economic hedging is to reduce our risk from generation and sale of energy. Fluctuations in value are expected to be offset by the underlying exposure.

When the market value of contracts classified as economic hedging, commercial contracts and partly cash flow hedging (currency) is recognised in the income statement, we present them in the hedging item which is included in EBITDA.

We have entered into a number of commercial contracts under which physical delivery is made, and which are managed together with the financial contracts, for which reason they are recognised at market value in accordance with IFRS.

Under the business performance principle, the market value adjustment of contracts concluded for the purpose of economic hedging and commercial contracts is deferred to the period during which the hedged transaction affects results. See note 1.6 'Business performance'.

Our hedging of energy prices and commercial contracts recognised at market value is specified in the table below.

Hedging of net investments in foreign subsidiaries

Our foreign activities entail currency risk.

We hedge this currency risk by raising loans in foreign currencies, entering into forward exchange contracts and investing in currency swaps and options.

	2018		2017	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Economic hedging and commercial contracts, DKKm				
Energy				
Oil swaps	2,442	(182)	3,595	374
Gas swaps	5,717	(412)	6,939	(626)
Power swaps	16,543	(3,267)	7,745	(1,009)
Power options	2,900	48	2,941	280
Coal	325	7	176	41
Currency				
Forward exchange contracts	29,684	712	25,303	592
Total	57,611	(3,094)	46,699	(348)

Under the business performance principle, economic hedging is accounted for as effective hedging. The resulting market value adjustment is consequently deferred to the period in which the hedged transaction affects results.

The contractual principal amount has been determined as the net position per derivative type.

On 31 December 2018, the accumulated exchange rate adjustments totalled DKK -1,660 million divided between the exchange rate adjustment of the net investment of DKK -2,329 million and the hedging thereof of DKK 669 million.

Accounting policies

Economic hedging and commercial contracts

Market value adjustments of financial contracts offered to customers with a view to price hedging and financial instruments that have been entered into to hedge the Group's principal operating activities are recognised as revenue or cost of sales.

Under the business performance principle, economic hedging is accounted for as effective hedging. The resulting market value adjustment is consequently deferred to the period in which the hedged

ineffectiveness relating to hedging of net investments in foreign subsidiaries totalled DKK 0 million (2017: DKK 0 million).

transaction affects results. See note 1.6 'Business performance' for further information.

The contractual principal amount has been determined as net position per derivative type.

Hedging of net investments in foreign subsidiaries

Changes in the market value of derivatives and loans that are used to hedge net investments in foreign subsidiaries or associates are recognised in the consolidated financial statements directly in equity within a separate foreign currency translation reserve.

Hedging of net investments in foreign subsidiaries, DKKm

2018	Net investment ¹	Of which non-controlling interests	Hedged amount in currency	Net position	Accumulated exchange rate adjustment in equity
Currency					
GBP	46,468	(3,377)	(23,281)	19,810	(1,583)
EUR	23,871	-	(4,477)	19,394	14
USD	9,060	-	(81)	8,979	(48)
Other	237	-	-	237	(43)
Total	79,636	(3,377)	(27,839)	48,420	(1,660)
2017					
Currency					
GBP	35,991	(3,777)	(23,868)	8,346	(1,527)
EUR	13,784	-	(5,668)	8,116	(15)
USD	152	-	(150)	2	(18)
Other	134	-	-	134	(46)
Total	50,061	(3,777)	(29,686)	16,598	(1,606)

The table shows our hedging of investments in foreign subsidiaries. The table also shows the exchange rate adjustment of the investment as well as the associated hedging value.

The net position expresses the accounting exposure. If, for example, the GBP/DKK exchange rate increased with 10% on 31 December 2018, equity would have increased by DKK 1,981 million, corresponding to 10% of DKK 19,810 million.

7.3 Energy trading portfolio

Trading portfolio

The purpose of our trading portfolio is to:

- optimise hedging contracts
- contribute to increased market insight and
- profit from short-term fluctuations in energy prices.

The trading portfolio consists primarily of positions in power and gas.

The trading portfolio constitutes a smaller part of our total portfolio of derivatives, and the associated risk is limited. Also, earnings from the trading portfolio constitute a limited share of our total earnings.

When an economic hedging instrument (business performance hedge) does not fully correspond to the hedged risk, any difference between the hedging contract entered into and the hedged exposure is recognised in the income statement as part of the gain (loss) from the trading portfolio.

Overview of the Group's trading portfolio, DKKm	2018		2017	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Oil swaps	184	182	287	(361)
Gas swaps and options	1,126	308	2,772	170
Power swaps and options	5,142	(127)	5,566	363
Carbon emissions allowances	7	(43)	44	(14)
Coal	50	(7)	51	(40)
Total	6,509	313	8,720	118

↶ The contractual principal amount has been determined as the net position per derivative type. The table shows the market value of our derivatives which are included in the trading portfolio at 31 December.

Market trading mandates

VaR limit in 2018: DKK 70 million	Stress limit in 2018: DKK 400 million	Maximum open positions in trading portfolio
VaR indicates the largest loss in one trading day to a probability of 95%. VaR is based on data for the past 60 trading days with the heaviest weighting being assigned to the most recent trading days.	Stress indicates the largest daily loss we risk sustaining with the given portfolio. Stress is based on data from 1 January 2006 to the present day.	<ul style="list-style-type: none"> – Max. 15TWh of, gas – Max. 4 million boe of oil – Max. 8TWh of power – Max. 3 million tonnes of CO₂ – Max. 2 million tonnes of coal

↶ Trading activities are carried out within mandates approved by the Board of Directors. The mandates comprise a value-at-risk (VaR) mandate and a stress mandate as well as a limit for the maximum positions measured in energy units per product (oil, gas, etc.).

Daily position in the trading portfolio, market trading mandates, DKKm

Accounting policies

Market value adjustments of physical and financial contracts relating to energy that are entered into with the purpose of generating gains from short-term price changes are recognised as revenue.

↶ The graph shows the daily value at risk position for the period 2017-2018. The mandates from the Board of Directors and Group Executive Management have not been breached during the period.

7.4 Sensitivity analysis of financial instruments

The sensitivity analysis in the table shows the effect of market value changes assuming a relative price change at 31 December 2018.

The effect on profit (loss) before tax comprises financial instruments that remained open at the balance sheet date, and which have an effect on profit (loss) in the current financial year. The effect is broken down by:

- trading portfolio; these contracts will affect profit
- other financial instruments, including economic hedging and commercial contracts; the market value changes of contracts allocated as economic hedges will be offset, in full or in part, by a change in the hedged risk.

Effect on equity before tax comprises financial instruments that remained open at the balance sheet date, and which are value-adjusted directly in equity.

Financial instruments include derivatives as well as receivables and payables in foreign currencies.

The illustrated sensitivities only comprise our financial instruments and therefore omit the effect from contracts concluded under which physical delivery of the underlying assets is made, as these are not recognised as financial instruments.

Sensitivity analysis of financial instruments DKKm

Risk	Price change	31 December 2018			31 December 2017		
		Effect on profit (loss) before tax		Effect on equity before tax	Effect on profit (loss) before tax		Effect on equity before tax
		Trading portfolio	Other financial instruments ¹		Trading portfolio	Other financial instruments ¹	
Oil	10%	(220)	230	-	10	134	-
	-10%	220	(230)	-	(10)	(134)	-
Gas	10%	12	(511)	-	(81)	(607)	-
	-10%	(12)	511	-	75	607	-
Power	10%	73	(2,385)	-	86	(952)	-
	-10%	(53)	2,365	-	(81)	959	-
Coal	10%	(33)	(5)	-	(6)	(43)	-
	-10%	33	5	-	6	43	-
USD	10%	(16)	(301)	(115)	91	131	(132)
	-10%	16	301	115	(91)	(131)	132
GBP	10%	51	(2,905)	(856)	31	(2,312)	(1,534)
	-10%	(51)	2,905	856	(31)	2,312	1,942
EUR	10%	(228)	(1,353)	420	419	(1,304)	522
	-10%	228	1,353	(420)	(419)	1,304	(522)
Interest	100 basis points	(454)	-	161	(565)	-	-
Inflation	100 basis points	-	-	(1,770)	-	-	-

¹ Other financial instruments, including derivatives classified as economic hedging, comprise derivatives entered into to hedge future financial risks. The market value changes of these contracts will be offset, in full or in part, by a change in the hedged risk. Also included are commercial contracts recognised at market value.

If the hedged exposure had been included in the sensitivity analysis, the effect of a price change would have been reduced or offset entirely.

Net investments and associated hedging of net investments in foreign subsidiaries are

not included in the table, as the effect of the sum of the investment and the hedging are considered to be neutral to price changes.

A 10% increase in the currencies hedged in connection with net investments would reduce equity by DKK -2,784 million (2017: DKK -2,969

million), arising from the hedging instruments. All other conditions being equal, a decrease in the exchange rate would have had a corresponding opposite effect.

7.5 Credit risks

We are exposed to credit risks from our trading partners and customers. A large part of our counterparty risks concerns major international energy companies and banks. Such trading is regulated under standard agreements, such as EFET and ISDA agreements, which feature, for instance, credit rating and netting provisions. Our credit exposure is mainly concentrated on counterparties in Denmark, the UK, Germany and Sweden.

We limit our credit risks by:

- systematically rating significant counterparties
- granting credit limits or
- demanding that collateral be furnished or credit insurance put in place.

Credit quality of the Group's counterparties, DKKm

	2018	2017
AAA/Aaa	20,949	23,329
AA/Aa	3,078	5,197
A/A	6,428	4,969
BBB/Baa	3,817	1,712
Non-rated	11,638	11,072
Total credit exposure	45,910	46,279

The table shows the credit quality of our counterparties, distributed by category. In addition, we have receivables and construction agreements related to the construction of offshore wind farms amounting to DKK 6,951 million (2017: DKK 13,349 million) where we have collateral in the offshore wind farm under construction.

Offsetting of financial assets, DKKm	Derivatives	Trade receivables	2018	Derivatives	Trade receivables	2017
Financial assets	12,173	23,173	35,346	9,743	33,270	43,013
Financial liabilities, offset	(7,435)	(20,060)	(27,495)	(5,000)	(29,480)	(34,480)
Financial assets in the balance sheet	4,738	3,113	7,851	4,743	3,790	8,533
Amounts not offset in the balance sheet:						
Liabilities with set-off rights	(1,485)	-	(1,485)	(1,611)	-	(1,611)
Collateral received in the form of bonds	(614)	-	(614)	(787)	-	(787)
Net	2,639	3,113	5,752	2,345	3,790	6,135

The table shows our financial assets and liabilities where a share is offset and is therefore presented net. Offsetting is typically limited within specific products.

Offsetting of financial liabilities, DKKm	Derivatives	Trade payables	2018	Derivatives	Trade payables	2017
Financial liabilities	13,410	23,085	36,495	8,700	32,327	41,027
Financial assets, offset	(7,435)	(20,060)	(27,495)	(5,000)	(29,480)	(34,480)
Financial liabilities in the balance sheet	5,975	3,025	9,000	3,700	2,847	6,547
Amounts not offset in the balance sheet:						
Assets with set-off rights	(1,485)	-	(1,485)	(1,611)	-	(1,611)
Collateral provided in the form of bonds	(713)	-	(713)	(40)	-	(40)
Net	3,777	3,025	6,802	2,049	2,847	4,896

The counterparties and credit limits granted are monitored on an ongoing basis. The monitoring is based on the framework established by our Board of Directors and Group Executive Management. For the most significant counterparties, an internal credit rating is required to determine the internal rating and the granting of credit limits. The rating is based on information from external credit rating agencies, publicly available information and own analyses.

We suffered no losses from any single major counterparty in 2018 or 2017.

The credit risk from our financial assets primarily concerns derivatives, cash and bond portfolios as well as receivables. The assessment is based on the individual counterparty's ratings with Standard & Poor's, Moody's and Fitch. The figures do not reflect our actual credit exposure as the positions are calculated before offsetting our debt to such counterparties.

The AAA/Aaa category covers our position in Danish AAA-rated government and mortgage bonds. The non-rated category primarily consists of trade receivables from customers, such as end-users.

Accounting policies

We only offset positive and negative values if we are entitled to and intend to settle several financial instruments net.

7.6 Categories of financial instruments

Financial instruments are used for various purposes. The purpose determines the category, and whether the value adjustment of the instrument should be recognised in the profit (loss) for the year or as part of the hedging reserve in equity.

The fair value of financial instruments measured at amortised cost is identical to the carrying amount with the exception of bank loans and issued bonds where the market value is stated in note 6.1 'Interest-bearing debt'.

Categories of financial instruments, DKKm	2018	2017
Energy and currency derivatives	4,096	2,589
Securities	25,501	25,280
Financial assets measured at fair value via the income statement	29,597	27,869
Interest and inflation derivatives	90	-
Currency derivatives	1,282	2,281
Derivatives (assets) used as hedging instruments	1,372	2,281
Trade receivables	10,741	9,170
Other accounts receivable	8,896	8,812
Financial assets measured at amortised cost	19,637	17,982
Energy and currency derivatives	6,480	2,214
Financial liabilities measured at fair value via the income statement	6,480	2,214
Interest and inflation derivatives	103	-
Currency derivatives	1,511	2,160
Derivatives (liabilities) used as hedging instruments	1,614	2,160
Bank loans and issued bonds	27,296	29,636
Trade payables	13,082	11,499
Other accounts payable	3,207	2,767
Financial liabilities measured at amortised cost	43,585	43,902

The table shows our financial instruments divided into categories. The categories indicate how the financial instruments are recognised in the financial statement.

7.7 Fair value measurement

During 2018 we have entered into a number of power purchase agreements (PPAs) in the US accounted for at fair value. The duration of these PPAs are 13-15 year. Since power prices are only available in five to sixth years we have classified these agreements as based on non-observable input.

Valuation principles and key assumptions

In order to minimise the use of subjective estimates or modifications of parameters and calculation models, it is our policy to determine fair values based on the external information that most accurately reflects the market values. We use pricing services and benchmark services to increase the data

quality. Market values are determined by the Treasury & Risk Management function, which reports to the CFO. The development in market values is monitored on a continuing basis and reported to the Group Executive Management.

Deferred revenue from US power purchase agreements

The deferred revenue from US PPAs consist of losses not recognised at initial recognition since the market value is based on non-observable inputs. The US PPAs were taken over as part of the purchase of Lincoln Clean Energy in the US. The PPAs lock in the power price of the expected power generation over

a period of 13 to 15 years. These contracts are accounted for at fair value. Due to the long duration of these PPAs, power prices are not observable for a large part of the duration, whereby the estimated fair value is categorised as based on non-observable input.

The deferred revenue is recognised in profit or loss in the future period where the market value relate. In 2018, we have recognised an income of DKK 12 million related to the deferred fair value of PPAs not recognised in profit or loss at initial recognition. The total amount of deferred revenue as of 31 December 2018 amounts to DKK 1,183 million (2017: DKK 0 million).

Significant non-observable inputs

Market values based on non-observable input comprise primarily long-term contracts on the purchase/sale of, in particular power and to a less extent gas, coal, USD, EUR. Since there are no active markets for the long-term prices of power and gas, the market values have been determined through an estimate of the future prices. Normally, the price can be observed for a maximum of four to sixth years in the power market, after which an active market no longer exists. When market prices are no longer available, the price is projected by extending the observable forward curve, only adjusted for the expected development in inflation.

Part of the purchase price of Deepwater Wind is a contingent consideration of DKK 657 million that we will pay upon Deepwater Wind successfully entering into two specific PPAs. The maximum payable consideration is DKK 657 million which we have also estimated to be the fair value, due to our strong expectation of successfully signing the agreements. In connection with the divestment of our Oil & Gas business, we will receive USD 100 million if the Rosebank field is developed. This payment is recognised at market value under other receivables.

Fair value hierarchy DKKm	Assets			Liabilities	
	Securities	Derivatives	Other receivables	Derivatives	Other payables
2018					
Quoted prices	-	3	-	9	-
Observable input	25,501	5,206	-	7,179	-
Non-observable input	-	259	109	906	657

Deferred loss at initial recognition	1,811
Market value at 31 December	(647)

	2017
Market value at 1 January	(157)
Net changes in market value	-
Market value at 31 December	(157)

The table shows the movements during the year in the total market value (assets and liabilities) of derivatives valued on the basis of non-observable inputs.

Non-observable inputs, US power prices

● SPP North RT ● Ercot North RT ● Ercot West DA ● Ercot West RT ● Ercot North DA

Non-observable inputs per commodity price input, DKKm	2018	2017
US power prices	(2,533)	-
Other power prices	(52)	(157)
Gas prices	127	-
Total	(2,458)	(157)

US power prices are the most significant non-observable input. The non-observable US power prices used as basis for the market values as of 31 December 2018 are illustrated in the graph below.

Sensitivity of non-observable inputs, DKKm

Non-observable inputs	Market value	Sensitivity	
		+10%	-10%
ERCOT North real time, 2024-2033	(194)	(105)	105
ERCOT North day ahead, 2024-2033	(388)	(275)	275
ERCOT West day ahead, 2023-2033	(90)	(33)	33
ERCOT West real time, 2025-2033	(132)	(34)	34
SPP North real time, 2023-2033	(288)	(68)	68
Total	(1,092)	(515)	515

The table shows the market value related to the non-observable input for the stated period and sensitivity per power price index. The sensitivity illustrates the impact on the market value as of 31 December 2018 if the non-observable price increases/decreases by 10%. The most critical non-observable input is US power prices in the period 2023-2033. If power prices as of 31 December 2018 increased/decreased by 10%, the market value would decrease/increase by DKK 515 million. The sensitivity analysis is presented on the different US power price areas in the table above.

Accounting policies

Market values based on quoted prices comprise quoted securities and derivatives that are traded in active markets. The market value of derivatives traded in an active market are often settled on a daily basis, thereby minimising the market value presented on the balance sheet.

Market values based on observable inputs comprise derivatives where valuation models with observable inputs are used to measure fair value.

All assets and liabilities measured at market value are measured on a recurring basis.

In business combinations, gain (loss) at initial recognition on derivatives whose values are based on non-observable inputs are deferred and recognised in the period to which the value relate.

The graph shows the US power prices in the period where prices are not observable, and which we have used as basis for calculating market value as of 31 December 2018.

Related-party transactions	159
Operating lease obligations	160
Auditor's fees	161
Contractual obligations	161
Company overview	162

8.1 Related-party transactions

Related parties that have control over the Group comprise the Danish State, represented by the Danish Ministry of Finance.

Related parties with a significant influence included Goldman Sachs until 2 March 2017, when Martin Hintze from Goldman Sachs stepped down from the Ørsted A/S Board of Directors.

Other related parties are the Group's associates and joint ventures, members of the Board of Directors and the Executive Board as well as other senior executives.

See note 8.5 'Company overview' for an overview of our joint ventures and associates.

Related-party transactions are made on arm's length terms. Intra-group transactions have been eliminated in the consolidated financial statements.

The remuneration and share programme for Group Executive Management and the Board of Directors are described in notes 2.6 'Employee costs' and 2.7 'Share-based payment'.

Through a directly owned company, Peter Korsholm, board member, has had ordinary transactions with Danish Oil Pipe A/S, a wholly owned subsidiary in the Ørsted Group.

We use the exemption set out in IAS 24.25 concerning entities in which the Danish State is a related party, and transactions with government-related companies are therefore not disclosed.

Transactions with owners consist solely of transactions with Goldman Sachs until 2 March 2017.

There were no other related-party transactions during the period.

8.2 Operating lease obligations

Our total operating lease obligations decreased by DKK 1,300 million relative to last year. The decrease in the obligations is primarily due to the farm-down of the Hornsea 1 and run-off of existing leases. The acquisition of Lincoln Clean Energy (Onshore) and Deepwater Wind (Offshore) added DKK 635 million to the obligations (per 31 December 2018), which partly off-sets the first mentioned effects on the operating lease obligations.

Offshore's assets held under operating leases mainly comprise seabeds relating to the offshore wind farms in the UK and service vessels.

Onshore's leases comprise plots of land relating to onshore wind farms.

Customer Solutions mainly lease gas storage facilities in Germany.

Leased assets recognised under 'Other activities' mainly comprise our two office premises in Gentofte and London. The premises are used by employees in most of our segments.

Seabed leases include variable lease payments which depend on the number of megawatt hours generated. However, we have typically agreed on minimum lease payments for the seabeds.

Lease payments recognised in profit (loss) for the year amounted to DKK 778 million (2017: DKK 885 million).

For the purpose of calculating the FFO/adjusted interest-bearing net debt credit metric, the present value and interest expenses of the lease obligations are calculated. The results and the discount rate are shown in the table with supplementary information for operating lease obligations.

We reduced the discount rate in 2017 due to the continued low interest rate environment.

Accounting policies

We recognise operating lease payments in profit (loss) for the year over the term of the lease on a straight-line basis. When using assets held under operating leases in respect of construction of offshore wind farms or other assets, we recognise lease payments in the cost of the asset in step with the construction of the asset.

We will implement the new lease accounting rules in IFRS 16 'Leases' on 1 January 2019. See note 1.4 'Implementation of new or changed accounting standards and interpretations'.

Discount rate applied	3.5%	3.5%

The present value is calculated by discounting the individual obligations each year using our internal discount rate of 3.5% (2017: 3.5%).

8.3 Auditor's fees

PwC is Ørsted's auditor appointed by the annual general meeting. PwC audits the consolidated financial statements of Ørsted and our subsidiaries' financial statements in all the countries where we are represented.

It is our policy that the annual fee for non-audit services provided by our statutory auditor cannot exceed the annual fee for statutory audit services measured at Group level. The cap may be exceeded subject to approval by the Audit and Risk Committee.

Other assurance engagements primarily included reviews of ESG data and reviews of regulatory financial statements.

Tax and VAT advice primarily included advice in connection with the divestment of assets and enterprises and advice in connection with the preparation of tax returns and the calculation of the income subject to Danish joint taxation.

Other services include other consultancy services from PwC, including advice in connection with due diligence and the divestment of assets and enterprises.

Fees for services other than statutory audit supplied by PwC Denmark to Ørsted amounted to DKK 9 million (2017: DKK 8 million) and consisted of accounting and tax advice in connection with both acquisition and divestment of assets and enterprises, review of ESG data and other general accounting and tax advice.

Auditor's fees, DKKm	2018	2017
Audit and audit-related fees		
Statutory audit	11	11
Other assurance engagements	2	2
Non-audit services		
Tax and VAT advice	3	4
Other services	7	7
Total fees to PwC	23	24
Fee for non-audit services in percent of statutory audit fee	94%	100%

In 2017, PwC provided advisory services totalling DKK 1.8 million concerning acquisition and divestment activities, which are not included in our limit for the use of PwC for non-audit services.

8.4 Contractual obligations

At 31 December 2018, contractual obligations in Offshore mainly related to offshore wind turbines, foundations and cables, etc., for the construction of offshore wind farms. The obligations in Onshore mainly related to purchases of onshore wind

turbines. In Bioenergy, the obligations mainly related to the biomass conversion of Asnæs Power Station, while the obligations of Customer Solutions related to the roll-out of smart meters.

¹ S = subsidiary
 A = associate
 JO = joint operation
 JV = joint venture
 NC = non-consolidated entity

² The company is owned through a company which is not owned 100% by Ørsted. The disclosed ownership interest is Ørsted's ultimate ownership interest in the company.

³ The company applies the provision in section 5 or section 6 of the Danish Financial Statements Act to omit presenting a separate annual report.

⁴ Subsidiaries owned directly by Ørsted A/S.

⁵ One or more tax equity partners own an insignificant share of the company. See note 4.5 'Tax equity liabilities'. The company is fully consolidated.

Consolidated ESG statements (additional information)

Basis of reporting	168
Environment	169
Social	171
Governance	172

Basis of reporting

Consolidated environmental, social and governance (ESG) statements

In the consolidated ESG statements, we give an account of our results, objectives and accounting policies for the ESG data included in the management's review in this report.

Our full ESG data set can be seen in the independent publication '[ESG performance report 2018](#)'. The ESG performance report also includes additional information, such as selected ESG indicators by country and all ESG accounting policies, including a list of references for conversion factors used in calculations.

Scope and consolidation

Unless otherwise stated, ESG data is reported on the basis of the same principles as the financial statements. Thus, the consolidated ESG statements include consolidated data from the parent company, Ørsted A/S, and subsidiaries controlled by Ørsted A/S. Data from associates and joint ventures are not included.

The consolidation of safety data deviates from the above described principles. Safety data is collected using an operational scope. This means that we, irrespective of our ownership share, include 100% of injuries and hours worked etc., from all operations where Ørsted is responsible for safety, including safety for external suppliers.

Data from acquisitions and divestments are included/excluded from the date of acquisition/divestment.

Danish Financial Statements Act, sections 99a and 99b

Pursuant to section 99a of the Danish Financial Statements Act, Ørsted is obliged to account for the company's CSR activities and report on business strategies and activities with regard to human rights, labour rights, anti-corruption, the environment and the climate. By publishing our sustainability report ([orsted.com/sustainability2018](#)), Ørsted complies with section 99a of the Danish Financial Statements Act.

Ørsted's work for greater gender diversity at management level is reported in accordance with section 99b of the Danish Financial Statements Act. The reporting of gender diversity can be seen in our ESG performance report 2018.

Business changes in 2018 affecting ESG data

Acquisition of:

- Lincoln Clean Energy (onshore wind power)
- Deepwater Wind (offshore wind power).

Divestment of:

- 50% of Hornsea 1 (offshore wind farm)
- Encogen (thermal power plant, fossil).

Commissioning of:

- Race Bank (offshore wind farm)
- Walney Extension (offshore wind farm)
- Borkum Riffgrund 2 (offshore wind farm)
- Tahoka (onshore wind farm).

New ESG indicators in 2018

- Installed renewable capacity.
- Awarded and contracted capacity.
- Onshore wind generation indicators.
- Solar power generation.
- Avoided carbon emissions (was reported in the 2017 ESG performance report).
- Job creation from offshore wind.
- People powered from offshore wind.
- Additional Board of Directors and Group Executive Management information.

Discontinued ESG indicators

- Wind energy content (replaced by wind speed).
- Employee loyalty (refer to the ESG performance report 2018).

Our full ESG data set can be seen in the ESG performance report 2018. ([orsted.com/ESGperformance2018](#))

8.3GW

Our installed renewable capacity increased by 44% from 2017 to 2018. We have a target of 30GW installed renewable capacity in 2030.

75%

The green share of our heat and power generation increased from 64% in 2017 to 75% in 2018. We have a target of 99% in 2025.

131g

Our greenhouse gas intensity was reduced by 13% to 131g CO₂/kWh in 2018. Our target is to reach 10g CO₂/kWh in 2025.

4.7

Total recordable injury rate (TRIR) has been reduced from 6.4 in 2017 to 4.7 in 2018. Our target is to reach 3.3 or below in 2025.

Environment

Strategic target	Business driver	Indicator	Unit	Target	2018	2017
●		Green share of heat and power generation	%	99 (2025)¹	75	64
●		Greenhouse gas intensity	g CO₂e/kWh	≤ 10 (2025)²	131	151
●		Installed renewable capacity	MW	30GW (2030)	8,303	5,763
●		– Offshore wind	MW	15GW (2025)	5,602	3,875
	●	– Onshore wind	MW		803	-
	●	– Onshore, solar	MW		10	-
	●	– Thermal heat, biomass	MW		1,888	1,888
●		Decided (FID) renewable capacity (not yet installed)	MW		3,665	5,178
●		– Offshore wind	MW		3,356	5,053
●		– Onshore wind	MW		184	-
●		– Thermal heat, biomass	MW		125	125
●		Awarded and contracted renewable capacity (no FID yet)	MW		4,796	590
●		– Offshore wind	MW		3,916	590
●		– Onshore wind	MW		530	-
●		– Onshore, solar	MW		350	-
●		Sum of installed and FID renewable capacity	MW		11,968	10,941
●		Sum of installed, FID, awarded and contracted renewable capacity	MW		16,764	11,531

¹ additional target is >95% (2023)

² additional target is ≤ 100 (2020) and ≤ 20 (2023)

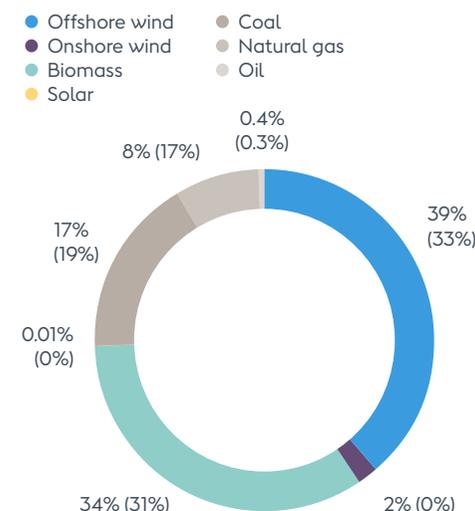

In 2018, we defined an ambition of installing more than 30GW of green capacity by 2030 across offshore wind, onshore wind, bioenergy and solar PV technologies. In addition, our ambition is to have installed 15GW of offshore wind capacity by 2025, up from our previous target of 11-12GW.

The installed renewable capacity increased by 44% in 2018 due to the new offshore wind farms Race Bank, Walney Extension and Borkum Riffgrund 2. In addition, we acquired a small offshore wind farm Block Island, two onshore wind farms Williw Springs and Amazon and commissioned Tahoka.

Our greenhouse gas intensity was reduced by 13% for the same reasons as for the renewable energy share (described to the right). We are well on track to meet our target of a greenhouse gas emission intensity of no more than 20g CO₂e/ kWh in 2023 and 10g CO₂e/ kWh in 2025.

Total heat and power generation 2018 (2017) by energy source

The green (renewable) share of our heat and power generation amounted to 75% in 2018, up 11 percentage points relative to 2017. The increase was due to higher generation from offshore wind farms, new onshore wind farms, a larger share of biomass-based generation as a result of the conversion of Skærbæk Power Station as well as lower use of gas following the divestment of the Enecogen power plant.

Our target is 99% green energy generation in 2025.

Strategic target	Business driver	Indicator	Unit	Target	2018	2017	
		Generation, power and heat total	TWh		26.0	25.7	
	●	Power generation	TWh		17.2	16.7	
	●	– Offshore wind	TWh		10.0	8.5	↶ Offshore generation capacity increased by 20% to 3.0GW in 2018 following commissioning of Race Bank, Walney Extension and Borkum Riffgrund 2 and acquisition of Deepwater Wind.
	●	– Onshore wind	TWh		0.5	-	The acquisition of Lincoln Clean Energy added 0.8GW onshore capacity in 2018.
	●	– Solar	TWh		0.003	-	
	●	– Thermal	TWh		6.7	8.2	The higher wind capacity contributed to a 24% increase in wind-based generation in 2018.
	●	Heat generation, thermal	TWh		8.8	9.0	
		Offshore wind indicators					
	●	Generation capacity	GW		3.0	2.5	Thermal power generation decreased by 18% in 2018, mainly due to the divestment of the Dutch power plant Enecogen. Power generation from Danish power plants increased by 4%, while thermal heat generation decreased by 2%.
	●	Wind speed	m/s		9.1	9.3	
	●	Load factor	%		42	44	
	●	Availability	%		93	93	
		Onshore wind indicators					
		Generation capacity	GW		0.8	-	The coal share of fuels increased in 2018 as we experienced a higher demand for power in periods where we were not generating heat. In these periods, fossil fuels are normally used. This was offset by a reduction in the use of natural gas and an increase in the use of biomass, resulting in an 11 percentage points higher biomass share of our thermal energy generation.
	●	Wind speed	m/s		7.3	-	
	●	Load factor	%		41	-	
	●	Availability	%		92	-	
		Thermal heat and power generation indicators					
		Power generation capacity	GW		2.8	3.4	The certified share of renewable woody biomass increased from 72% in 2017 to 83% in 2018. The suppliers are still in the process of introducing certifications in their production and supply chains, and only a few suppliers have certified their entire production. We expect the suppliers to continually increase their share of certification. Our target is to source all woody forest-based biomass as certified sustainable biomass by 2020.
		Heat generation capacity	GW		3.4	3.4	
	●	Degree days, Denmark	Number		2,526	2,705	
		Coal share of fuels	%	0 (2023)	38	30	
		Sourcing of certified biomass	%	100% (2020)	83	72	
		Biomass share of thermal heat and power generation	%		58	47	
		Avoided carbon emissions	Million tonnes CO₂e		8.1	6.7	
		– Offshore wind	Million tonnes CO ₂ e		6.3	5.3	Due to the increase in renewable energy generation, the amount of avoided carbon emissions increased by 21% from 2017 to 2018. In 2018, our renewable energy generation avoided 8.1 million tonnes carbon dioxide.
		– Onshore wind	Million tonnes CO ₂ e		0.4	-	
		– Biomass-converted generation	Million tonnes CO ₂ e		1.4	1.4	

Social

Strategic target	Business driver	Indicator	Unit	Target	2018	2017
		Employees				
		Total number of employees at 31 December	Number of FTEs		6,080	5,638
		Average number of employees for the year	Number of FTEs		5,796	5,738
●		Employee satisfaction	Scale 0-100	≥ 77 (2020)	76	76
		Safety				
		Fatalities	Number	0	0	0
		LTIF (lost-time injury frequency)	Per million working hours		1.5	1.6
●		TRIR (total recordable injury rate)	Per million working hours	≤ 3.3 (2025)	4.7	6.4
		Sales and distribution				
	●	Gas sales	TWh		131.1	129.0
	●	Power sales	TWh		35.2	37.5
	●	Power distribution	TWh		8.4	8.4
		Reliability of supply				
		Reliability of supply (power cuts per customer, SAIFI)	Number		0.65	0.42
		Customer satisfaction

●		Customer satisfaction, B2C in Denmark	Scale 1-100	≥ 80 (2020)	74	76
●		Customer satisfaction, distribution customers in Denmark	Scale 1-100	≥ 80 (2020)	81	82
		Job year creation from offshore wind power value chain				
		Total job years over asset lifespans (based on installed and FID capacity)	1,000 FTE years		179	179
		– Based on installed capacity	1,000 FTE years		112	78
		– Based on decided capacity (FID), not yet installed	1,000 FTE years		67	101
		People powered from offshore wind farms				
		Based on installed capacity	Million people		12.5	8.6

The number of employees increased by 8% from 2017 to 2018.

Employee satisfaction continued to be high. With an employee satisfaction score of 76 in this year's employee satisfaction survey, we are close to achieving our target of 77 in 2020.

Safety KPIs showed good progress again in 2018. Our total recordable injury rate (TRIR) declined from 6.4 in 2017 to 4.7 in 2018. We registered 98 total recordable injuries (TRIs), 61 of which involved employees working for our suppliers. LTIF decreased from 1.6 in 2017 to 1.5 in 2018. There were no fatal accidents in 2018. We have set a new ambitious target for TRIR of 3.3 or lower by 2025.

The increase in power cuts per customer (SAIFI) was a result of more interruptions from cable cuts from excavation activities and a higher fault rate on our high voltage grids.

In a lifecycle perspective, our and our partners' investments in deploying green offshore energy have created 179,000 job years.

Our 2025 target of 15GW offshore wind capacity corresponds to more than 30 million people powered. Our 2030 target of 30GW renewable energy corresponds to more than 50 million people powered.

Governance

Strategic target	Business driver	Indicator	Unit	Target	2018	2017
		Board of Directors, Ørsted A/S

		– Cases transferred to the police	Number		1	0

The Board of Directors is responsible for the overall management of the company and appoints the Executive Board. The Board of Directors lays down the company's strategy and makes decisions concerning major investments and divestments, the capital base, key policies, controls and audit matters, risk management and significant operational issues.

Since climate change is fundamental to Ørsted's business strategy and all our investments, climate-related issues are directly or indirectly an agenda item at all board meetings. As such, climate-related issues are integrated in reviewing and guiding strategy, performance and in all aspects of decision-making.

The Board of Directors monitors progress against Ørsted's strategic goals and targets for addressing climate-related issues.

Our employees and other associates may report serious offences, such as cases of bribery, fraud and other criminal offences, through our whistleblower scheme or through our management system. In 2018, two substantiated cases of inappropriate or unlawful behavior were reported through our whistleblower scheme. One case concerned violation of procure-to-pay policies, and one case concerned misappropriation of assets. The cases had consequences for the individuals involved. None of the reported cases were critical to our business or impacted our financial results.

Whistleblower cases are taken very seriously, and we conducted an awareness campaign to avoid similar cases.

Accounting policies – Environment

Green share of heat and power generation

The green (renewable energy) share of our heat and power generation and the distribution of the generation on the individual energy sources and fuels are calculated on the basis of the energy sources used and the energy generated at the different energy plants.

Wind and solar-based generation is computed as the input from the individual plant (wind and solar), as there is only one source of power for each plant.

For CHP plants, the share of the specific fuel (e.g. biomass) is calculated relative to the total fuel consumption for a given plant/unit within a given time period. The specific fuel share is then multiplied with the total heat and power generation for the specific plant/unit in the specific period. The result is the fuel-based generation for the individual unit – for example the biomass-based generation of heat and power in the CHP plant unit within a given time period.

Energy generation based on fuel, wind and solar is added up to a total which tallies with total generation. The percentage share of the individual energy sources is calculated by dividing generation from individual energy source with the total generation.

The following energy sources and fuels are considered renewable energy: wind, solar and biomass. The following energy sources are considered fossil energy sources: coal, natural gas and oil.

Greenhouse gas intensity

Greenhouse gas intensity is defined as the greenhouse gas emissions from the CHP plants divided by the total heat and power generation.

Greenhouse gases comprise greenhouse gas emissions in accordance with the GHG Protocol from the combustion of fuels in thermal heat and power generation. Greenhouse gases thus comprise carbon dioxide (CO₂), nitrous oxide (N₂O) and methane (CH₄).

Installed renewable energy capacity

The installed renewable energy capacity is calculated as the cumulative renewable gross capacity installed by Ørsted before divestments.

For installed renewable thermal capacity, we use the heat capacity, as heat is the primary thermal energy generation, and as bioconversions of the thermal power stations are driven by heat contracts.

Decided (FID) capacity

Decided (FID) capacity is the renewable capacity for which a final investment decision (FID) has been made.

Awarded and contracted renewable capacity

The awarded renewable capacity is based on the capacities which have been awarded to Ørsted in auctions and tenders. The contracted capacity is the capacity for which Ørsted has signed a contract or power purchase agreement (PPA) concerning a new renewable energy plant. Typically, offshore wind farms are awarded, whereas onshore wind farms are contracted. We include the full capacity if more than 50% of PPAs/offtake is secured.

Generation

Power generation from wind is calculated as sold generation. The Gunfleet Sands and Walney 1 and 2 offshore wind farms have been consolidated according to ownership interest. The other wind farms are financially consolidated.

Thermal power generation is determined as net generation sold based on settlements from the official Danish production database. Data for generation from foreign facilities are provided by the operators.

Thermal heat (including steam) generation is measured as net output sold to heat customers.

Heat and power generation capacity

Power generation capacity from wind farms is calculated and included from the time when the individual wind turbine has passed a 240-hour test.

The Gunfleet Sands and Walney 1 and 2 offshore wind farms have been consolidated according to ownership interest. Other wind farms and CHP plants are financially consolidated.

The thermal heat and power generation capacity is a measure of the maximum capability to generate heat and power. The capacity can change over time with plant modifications. For each power station, the

capacity is given for generation with the primary fuel mix. Overload is not included.

Availability and load factor

The time-based availability factor (availability) is calculated as the ratio of the number of hours the wind farms are available for power generation to the total number of hours in a given period. Total availability is determined by weighting the individual wind farm's availability against the capacity of the offshore wind farm. Availability is commercially adjusted.

The load factor is calculated as the ratio between actual generation over a period relative to potential generation which is possible by continuously exploiting the maximum capacity over the same period. The load factor is commercially adjusted.

Commercially adjusted means that, for Danish and German offshore wind farms, availability and load factor, respectively, are adjusted if the offshore wind farm has been financially compensated by the transmission system operators in situations where the offshore wind farm is available for generation, but the output cannot be supplied to the grid due to maintenance or grid interruptions. Wind farms in other countries are not compensated for non-access to the grid. New wind turbines are included in the calculation of availability and load factor once they have passed a 240-hour test.

Wind speed

Offshore wind speed shows the wind speeds of the areas for Ørsted's offshore wind farms. The wind speeds where the individual offshore wind farms are located are provided to Ørsted by an external supplier. Wind speeds are weighted on the basis of the capacity of the individual offshore wind farms and consolidated to an Ørsted total.

Onshore wind speed is based on wind speed measurements from anemometers on the wind turbines.

Degree days

Degree days are a measure of how cold it has been and thus indicate the amount of energy needed to heat a building. The number of degree days helps to compare the heat demand for a given year with a

normal year. The number of degree days expresses the difference between an average indoor temperature of 17°C and the outside mean temperature for a given period. The need for heat increases with the number of degree days.

Coal share of fuels used for thermal heat and power generation

The coal share is calculated as the coal consumption in GJ relative to the total fuel volume in GJ.

Sourcing of certified biomass

Certified biomass is defined as forest-based woody biomass, i.e. wood pellets and wood chips. Biomass is measured as sourced woody biomass delivered to the individual combined heat and power plants within the reporting period.

Certified sustainable woody biomass sourced must be certified within at least one of the claim categories accepted by the Danish industry agreement on certified biomass. Accepted claim categories are: FSC 100%, FSC Mix, PEFC 100%, SBP compliant.

Certified biomass is calculated as the amount of sourced woody biomass compared to the total amount of sourced woody biomass delivered to individual power stations within the reporting period.

Biomass share of thermal heat and power generation

This is calculated as the green share of heat and power generation, but is only shown for thermal generation, i.e. for the business unit Bioenergy.

Avoided carbon emissions

The avoided carbon emissions due to generation from offshore and onshore wind farms are calculated assuming that the generation from wind farms replace an equal quantity of electricity generated using fossil fuels.

The avoided carbon emission due to conversion of combined heat and power plants and subsequent switch of fuel from fossil to biomass (i.e. biomass from dedicated plantations or biomass residues) is calculated from the energy content of the fuel used at power plants. It is assumed that the use of 1GJ of biomass fuel avoids the use of 1GJ of fossil fuels. The upstream emissions from biomass fuel production and transportation are included.

Accounting policies – Social

Employees

Our reporting covers contractually employed employees in all Ørsted companies in which Ørsted holds an ownership interest of more than 50%. Employees in associates are not included.

Employee data are recognised based on records from the Group's ordinary registration systems. The number of employees is determined as the number of employees at the end of each month converted to full-time equivalents (FTEs).

Employees who have been made redundant are recognised until the expiry of their notice period, regardless of whether they have been released from all or some of their duties during their notice period.

Employee satisfaction

Ørsted conducts a comprehensive employee satisfaction survey once a year. All Ørsted employees with a few exceptions are invited to participate in the survey.

The following employees are not invited to participate: Employees who joined the company shortly before the employee satisfaction survey, employees who resigned shortly after the employee satisfaction survey, interns, consultants/advisers and external temporary workers who do not have an employment contract with Ørsted.

In the survey, a number of questions are asked. The answers are given on a scale from 1 to 10 and are subsequently converted to index figures on a scale from 0 to 100.

Safety

Occupational injuries are calculated according to operational scope. Data from companies wholly or partly owned by Ørsted, and where Ørsted is responsible for safety, is included. Occupational injuries and lost-time injuries are calculated for both our own employees and suppliers. Data from all Ørsted locations is recognised.

The lost-time injury frequency (LTIF) is calculated as the number of lost-time injuries per one million hours worked. The number of hours worked is based on 1,667 working hours annually per full-time employee

and monthly records of the number of employees converted into full-time employees. For suppliers, the actual number of hours worked is recognised on the basis of data provided by the supplier, access control systems at locations or estimates.

LTIF includes lost-time injuries defined as injuries that result in incapacity to work for one or more calendar days in addition to the day of the incident.

In addition to lost-time injuries, TRIR also includes injuries where the injured person is able to perform restricted work the day after the accident as well as accidents where the injured person has received medical treatment.

Fatalities are the number of employees who lost their lives as a result of a work-related incident.

Sales and distribution

Sales of power and natural gas are calculated as physical sales to retail and wholesale customers and exchanges. Sales of power and gas are based on readings from Ørsted's trading systems. Internal sales to Bioenergy are not included in the statement.

Power distribution is determined on the basis of data from the official system in Denmark, which measures and calculates total area consumption.

Reliability of supply

System average interruption frequency index (SAIFI) covers the frequency of announced and unannounced power outages for the customer. SAIFI is calculated as the average number of power outages per customer per year. SAIFI is presented here without the transmission grids, as these grids are operated by Energinet and therefore do not lie within the responsibility of Radius.

Customer satisfaction

Customer satisfaction for residential customers (B2C) in Denmark is measured according to interaction between the customer and Ørsted. The score is therefore not an expression of customers' overall satisfaction with Ørsted, but is rather related to a given situation. The score is calculated as a weighted score based on a number of different types of touch points. The current touch points are customer service for gas and power, outbound sales and web. An external supplier conducts interviews.

Customer satisfaction for business customers (B2B) is determined on the basis of customer satisfaction surveys among Ørsted's business customers in the countries where we have B2B customers. Customer satisfaction is determined on the basis of interviews about customers' satisfaction with Ørsted as a whole. The survey only comprises active customers with whom Ørsted has been in touch in connection with contracts for the supply of power or gas in the previous month. So-called sleeping customers are therefore not included in the statement. The method follows the ACSI model based on the European customer satisfaction index (EPSI) scale. External agencies conduct the interviews and report absolute and weighted results.

Customer satisfaction for distribution customers in Denmark is determined on the basis of different types of interactions with distribution customers: disruption of supply, replacement of meters as well as customer and market support. Customer satisfaction is measured as the customer's satisfaction in a specific context. Respondents are randomly selected, and the survey is carried out by an external supplier.

Customer satisfaction for residential and distribution customers thus relates to a specific situation, whereas customer satisfaction for business customers is an expression of the customer satisfaction with Ørsted as a whole. We have a number of very large business customers. In respect of these, it is important for us to assess the customer relationship in general and not just the experience of a specific situation.

Job creation

The number of job years is calculated based on a factor for job years per MW installed from the International Renewable Energy Agency, IRENA. The job year creation factor is based on a 500MW offshore wind farm. The factor is not adjusted for other details, such as when the wind farm was constructed (wind turbine size and other parameters), wind farm size-specific parameters beyond a simple scaling of capacity size, geographical position (i.e. water depths and distance to shore).

The number of job years created relates only to the value chain from procurement and manufacturing, over installation, operation and maintenance, to decommissioning.

This means that job years related to for example mining and manufacturing of steel and concrete as well as local jobs, such as hotels and dining for people working on local sites, are not included. A lifetime of 25 years for all wind farms is used.

The number of job years relates to the installed capacity and not Ørsted's ownership share of the wind farm. The number of job years varies during the lifespan, and most of the jobs are created in the beginning during construction and installation.

People powered

The number of people powered is calculated on the basis of capacity, a fixed industrial load factor for offshore wind farms and country-specific power consumption per person. The indicator is calculated based on the full capacities of the wind farms and not Ørsted's ownership share.

Accounting policies – Governance

Board of Directors of Ørsted A/S

The employee representatives on the Board of Directors are not included in the data for the Board of Directors.

Substantiated whistleblower cases

Ørsted's whistleblower hotline is available for internal and external reporting of suspected cases of inappropriate or illegal behaviour. Whistleblower cases are received and handled by the Internal Audit function, which also receives similar reports through the management system and from compliance officers.

All reports are managed in accordance with the guidelines for the handling of whistleblower reports approved by the Audit and Risk Committee, which is ultimately responsible for the whistleblower scheme.

Only cases, which are closed during the financial year, and which have been reported to the Audit and Risk Committee as fully or partially substantiated, are reported in the ESG statement.

Cases transferred to the police

Cases transferred to the police are defined as the number of cases reported in accordance with the above which are transferred to the police.

Share capital composition and dividends are disclosed in note 6.2 to the consolidated financial statements. You can also find information on treasury shares.

1. Basis of reporting

Accounting policies

The parent company financial statements have been prepared in accordance with the provisions of the Danish Financial Statements Act (reporting class D).

The accounting policies remain unchanged from the previous year.

Unless otherwise stated, the financial statements are presented in Danish kroner (DKK) rounded to the nearest million.

The parent company accounting policies are consistent with the accounting policies described for the consolidated financial statements, with the following exceptions.

Foreign currency translation

We recognise exchange rate adjustments of receivables from and payables to subsidiaries as financial income and expenses in the income statement when the balances are accounted for as part of the total net investment in foreign enterprises. Likewise, we recognise foreign exchange gains and losses on loans and derivatives in the income statement as financial income and expenses when they have been entered into to hedge the net investment in the foreign enterprises.

Revenue

Rental income comprises income from commercial leases and is recognised over the term of the lease. Income from services is recognised when delivery has taken place.

Dividends from investments

Dividends from subsidiaries and associates are recognised in the income statement for the financial year in which the dividends are approved at the annual general meeting. If the dividends exceed the total income after the time of takeover, the dividends are recognised as a reduction of the cost of the investment under assets.

Investments

We measure our investments in subsidiaries and associates at cost. If there is any indication that the value of a company is lower than our future earnings in the company, impairment testing of the company is carried out as described in the consolidated financial statements. The carrying amount is written down to the recoverable amount whenever the carrying amount exceeds the future earnings in the company (recoverable amount).

If we have a legal or constructive obligation to cover a deficit in subsidiaries and associates, we recognise a provision for this.

Tax

Ørsted A/S is taxed jointly with its Danish subsidiaries. The jointly taxed companies are part of joint taxation with the parent company as the management company.

Subsidiaries are included in the joint taxation from the date they are consolidated in the consolidated financial statements and up to the date on which they are no longer consolidated.

Current tax for 2018 is recognised by the individual jointly taxed companies.

Statement of cash flows

We do not prepare a separate statement of cash flows for the parent company. Reference is made to the consolidated statement of cash flows on page 77.

New legislation

The Danish Financial Statements Act has been changed, and it is now possible to use certain IFRS standards to interpret the act. For Ørsted A/S, it will be relevant to use IFRS 16 'Leases', and we expect to implement it from 1 January 2019.

Key accounting estimates

In connection with the preparation of the financial statements, a number of accounting estimates have been made that affect the profit (loss) and balance sheet. Estimates are regularly reassessed by management on the basis of historical experience and other relevant factors.

Impairment test

If there is any indication that the carrying amount is lower than our future earnings in a company, we test for impairment as described in the consolidated financial statements. The future earnings of the company (recoverable amount) are calculated based on assumptions concerning significant estimates.

2. Employee costs

Employee costs, DKKm	2018	2017
Wages and salaries	24	24
Share-based payment	4	2
Remuneration for the Board of Directors	5	5
Total employee costs	33	31

Remuneration for the Executive Board, DKK '000	Henrik Poulsen		Marianne Wiinholt		Executive Board, total	
	2018	2017	2018	2017	2018	2017
Fixed salary	10,500	9,700	5,900	5,061	16,400	14,761

Capital losses on securities at market value	(292)	(217)
Foreign exchange losses	(1,169)	(1,549)
Value adjustments of derivatives	(2,330)	(7,106)
Other financial expenses	(30)	(21)
Total financial expenses	(6,732)	(10,486)
Net financial income and expenses	3,282	3,181

4. Tax on profit (loss) for the year and deferred tax

Income tax, DKKm	2018	2017
Tax on profit (loss) for the year	(69)	(76)
Tax on changes in equity	(86)	132
Total tax for the year	(155)	56
Tax on profit (loss) for the year can be broken down as follows:		
Current tax	(88)	(1,379)
Adjustments to deferred tax	(18)	1,298
Adjustments to current tax in respect of prior years	35	(360)
Adjustments to deferred tax in respect of prior years	2	365
Tax on profit (loss) for the year	(69)	(76)

Development in deferred tax, DKKm	2018	2017
Deferred tax at 1 January	81	1,744
Adjustment for the year recognised in profit (loss) for the year	18	(1,298)
Adjustments to deferred tax in respect of prior years	(2)	(365)
Deferred tax at 31 December	97	81

Specification of deferred tax, DKKm	2018	2017
Non-current liabilities	97	81
Deferred tax	97	81

5. Distribution of net profit

Distribution of net profit, DKKm	2018	2017
Profit (loss) for the year is attributable to:		
Shareholders of Ørsted A/S, proposed dividends for the financial year	4,099	3,783
Shareholders of Ørsted A/S, retained earnings	(1,512)	(5,718)
Coupon and bond discount after tax, hybrid capital owners of Ørsted A/S	425	716
Profit (loss) for the year	3,012	(1,219)

6. Investments in subsidiaries

Investments in subsidiaries, DKKm	2018	2017
Cost at 1 January	41,762	70,436
Additions	63	2,333
Disposals	-	(31,007)
Cost at 31 December	41,825	41,762
Value adjustments at 1 January	-	(15,681)
Impairment losses	(1,400)	-
Disposals	-	15,681
Value adjustments at 31 December	(1,400)	-
Carrying amount at 31 December	40,425	41,762

Note 8.5 of the consolidated financial statements contains a complete overview of subsidiaries, etc.

We have tested investments in subsidiaries for impairment by comparing the expected future income from the individual subsidiaries with their carrying amounts.

The impairment test in 2018 gave rise to an impairment of DKK 1,400 million which is mainly attributable to the shortening of the green power subsidy time period in Denmark announced in 2018. Also, we no longer see a viable business case for a new CHP plant in the Esbjerg and Varde areas when the current district heating agreement ends in 2022. Both elements relate to our Bioenergy business.

The 2017 disposal for the year primarily concern the divestment of our Oil & Gas business, which was closed on 29 September 2017. The divestment resulted in a loss of DKK 4,179 million in the parent company financial statements. The sale resulted in a gain of DKK 2,179 million in the consolidated financial statements. The difference occurs due to different accounting policies.

7. Receivables from subsidiaries

Non-current receivables from subsidiaries, DKKm	2018	2017
Cost at 1 January	48,706	50,402
Additions	17,641	18,552
Disposals	(11,216)	(20,248)
Cost at 31 December	55,131	48,706

8. Derivatives

Ørsted A/S has assumed the subsidiaries' currency risks via forward exchange contracts, which have subsequently been hedged in the market. Furthermore, hedging contracts have been concluded to hedge the currency risk associated with investments in subsidiaries in foreign currencies.

We have also entered into a number of interest rate swaps to manage our interest rate risk.

The company has fair value hedged loans and receivables in GBP, USD and EUR. The value of the fair value hedge offset in the income statement amounted to DKK 263 million (2017: DKK 289 million).

Derivatives at the end of December 2018 mature as follows: 2019: DKK -99 million, 2020: DKK -268 million, after 2020: DKK 147 million (2017: 2018: DKK -24 million, 2019: DKK -76 million, after 2019: DKK -324 million).

Overview of derivative positions, DKKm	2018		2017	
	Contractual principal amount	Market value	Contractual principal amount	Market value
Interest derivatives	6,588	(39)	550	-
Currency derivatives	17,623	(181)	36,665	(424)
Total	24,211	(220)	37,215	(424)
Assets		3,102		3,596
Equity and liabilities		(3,322)		(4,020)

See note 7.1 to the consolidated financial statements and the management's review on pages 66-69 for more details on risk and risk management.

9. Securities

Securities are primarily liquid AAA-rated Danish mortgage bonds that qualify for repo transactions in the Danish central bank,

'Danmarks Nationalbank'. Repo transactions are transactions where securities are provided as collateral for a loan.

Securities, DKKm	2018	2017
Securities, available	24,407	24,766
Securities, not available for use	333	40
Total securities	24,740	24,806

Securities not available for use are used as collateral for repo loans and trading in financial instruments.

10. Loans and borrowings

At 31 December 2018, we had issued hybrid capital with a total notional amount of DKK 13,432 million (2017: DKK 17,125 million). The hybrid bonds have a 1,000-year term and expires as follows: DKK 5,224 million in 3013, DKK 4,477 million in 3015 and DKK 3,731 million in 3017, respectively.

The long-term portion of bank loans and issued bonds amounted to DKK 23,482 million at 31 December 2018 (2017: DKK 25,715 million), of which DKK 16,376 million (2017: DKK 16,528 million) fall due in more than five years.

The long-term portion of other payables amounted to DKK 0 million at 31 December 2018 (2017: DKK 27 million) falls due in 1-5 years.

11. Other provisions

We have made provisions for non-current liabilities totalling DKK 794 million (2017: DKK 775) which fall due in 1-5 years. The liabilities concern the divestment of our Oil & Gas business, which was closed in 2017.

12. Contingent liabilities

Contingent liabilities

Guarantees

Ørsted A/S has provided guarantees in connection with participation by subsidiaries and subsidiaries' joint operations and joint ventures in the construction and operation of offshore wind farms and natural gas installations as well as guarantees in respect of leases, decommissioning obligations and purchase, sale and supply agreements, etc.

Ørsted A/S also acts as guarantor with primary liability for bank balances in certain subsidiaries.

Indemnities

Ørsted is a member of the reinsurance company Oil Insurance Ltd. In the event of an exit, an exit premium will be payable, which has been calculated at USD 10.3 million at 31 December 2018 (2017: USD 6.8 million).

Ørsted A/S is taxed jointly with other companies in the Ørsted Group. As management company, the company has unlimited as well as joint and several liability together with the other jointly taxed companies for Danish income taxes and withholding taxes on dividends, interest and royalties related to the jointly taxed companies.

Litigation

Ørsted A/S is not a party to any litigation proceedings or legal disputes that could have an effect on the company's financial position, either individually or collectively.

13. Related-party transactions

Related parties are the Board of Directors, the Executive Board, Ørsted A/S's subsidiaries and the Danish State.

Remuneration of the Board of Directors and the Executive Board is disclosed in notes 2.6 'Employee costs' and 2.7 'Share-based

payment' and the remuneration report in the management's review in the consolidated financial statements.

Our related-party transactions are made on arm's length terms.

14. Operating lease obligations

We have entered into leases for office premises, primarily in Gentofte (expiring in 2028) and Virum (expiring in 2027). In 2018, an amount of DKK 148 million was recognised (2017: DKK 153 million) in profit (loss) for the year in respect of operating lease payments.

We have entered into leases with subsidiaries for subleasing of office premises.

In 2018, an amount of DKK 97 million was recognised (2017: DKK 123 million) in profit (loss) for the year in respect of rental income.

We have minimum payments of DKK 1,688 million (2017: DKK 1,816 million), most of which concerns subleasing via subleasing agreements.

15. Auditor's fees

Auditor's fees, DKKm	2018	2017

Statement by the Executive Board and the Board of Directors

The Board of Directors and the Executive Board have today considered and approved the annual report of Ørsted A/S for the financial year 1 January - 31 December 2018.

The consolidated financial statements have been prepared in accordance with International Financial Reporting Standards as adopted by the EU and additional requirements in the Danish Financial Statements Act. The financial statements of the parent company, Ørsted A/S, have been prepared in accordance with the provisions of the Danish Financial Statements Act.

In our opinion, the consolidated financial statements and the parent company financial statements provide a fair presentation of the Group's and the parent company's assets, liabilities and financial position at 31 December 2018 and of the results of the Group's and the parent company's operations and the Group's cash flows for the financial year 1 January - 31 December 2018.

In our opinion, the management's review provides a fair presentation of the development in the Group's and the parent company's operations and financial circumstances, of the results for the year and of the overall financial position of the Group and the parent company as well as a description of the most significant

risks and elements of uncertainty facing the Group and the parent company.

In our opinion, the consolidated ESG statements ('Additional information') represent a reasonable, fair and balanced representation of the Group's social responsibility and sustainability performance and are presented in accordance with the stated accounting policies.

We recommend that the annual report be adopted at the annual general meeting.

Independent auditors' report

To the shareholders of Ørsted A/S

Our opinion

In our opinion, the consolidated financial statements give a true and fair view of the Group's financial position at 31 December 2018 and of the results of the Group's operations and cash flows for the financial year 1 January to 31 December 2018 in accordance with International Financial Reporting Standards as adopted by the EU ('IFRS') and further requirements in the Danish Financial Statements Act.

Moreover, in our opinion, the parent company financial statements give a true and fair view of the parent company's financial position at 31 December 2018 and of the results of the parent company's operations for the financial year 1 January to 31 December 2018 in accordance with the Danish Financial Statements Act.

Our opinion is consistent with our auditor's long-form report to the Audit and Risk Committee and the Board of Directors.

What we have audited

The Consolidated Financial Statements of Ørsted A/S for the financial year 1 January to 31 December 2018, pp. 72-166 and 186, comprise the consolidated income statement, the consolidated statement of comprehensive

income, the consolidated balance sheet, the consolidated statement of changes in equity, the consolidated cash flow statement and the notes to the consolidated financial statements, including summary of significant accounting policies.

The parent company financial statements of Ørsted A/S for the financial year 1 January to 31 December 2018, pp. 175-184, comprise the income statement, the balance sheet, the statement of changes in equity and the notes to the parent financial statements, including summary of significant accounting policies.

Collectively referred to as the 'Financial Statements'.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs) and the additional requirements applicable in Denmark. Our responsibilities under those standards and requirements are further described in the auditor's responsibilities for the audit of the financial statements section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence

We are independent of the Group in accordance with the International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants (IESBA Code) and the additional ethical requirements applicable in Denmark. We have also fulfilled our other ethical responsibilities in accordance with the IESBA Code.

To the best of our knowledge and belief, prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No. 537/2014 were not provided.

Appointment

We were first appointed auditors of Ørsted A/S on 19 April 2010 for the financial year 2010. We have been reappointed annually by shareholder resolution for a total period of uninterrupted engagement of 9 years, including the financial year 2018.

Key audit matters

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the financial statements for 2018. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Key audit matter

Divestments of partnership interests

In connection with divestments of partnership interests (often 50%) in offshore wind farms under construction, estimates and judgement are required in respect of the sales price for accounting purpose for the divestment and the subsequent construction agreement, respectively, and in calculating the divestment gain, including any provisions recognised to cover guarantees, indemnities, etc. Furthermore, judgement is required in respect of classifying the divested interest as either divestment of assets (gain recognised as part of Other income) or divestment of an enterprise (gain recognised as part of gain/loss from divestment of enterprises). Finally, judgement is required in respect of whether the Group's retained share in the partnership is a joint operation or a joint venture.

We focused on this area because the calculation of the divestment gain is dependent on complex and subjective judgements and estimates by management and because the presentation in the income statement is dependent on judgement about the partnership interest disposed, and whether the partnership interest retained is a joint operation or a joint venture.

Refer to note 2.5 in the consolidated financial statements.

How our audit addressed the key audit matter

We evaluated whether management had appropriately determined the divestment gain, the presentation hereof and the subsequent treatment of the partnership interest by for example:

- Reading the share purchase agreements.
- Reading the shareholders agreements.
- Reading the construction and other related agreements.
- Consider the sales price for accounting purpose for the divestment and the construction agreement, respectively.
- Testing the gain statement on the divestment of the partnership interest, including the provisions recognised to cover guarantees, indemnities, etc., in the share purchase agreement.
- Consider whether the disclosures of the divestment gain and the subsequent recognition and presentation of the partnership were in compliance with IFRS.

Key audit matter

Construction contracts

The Group has adopted the accounting standard IFRS 15 'Revenue from Contracts with Customers' from 1 January 2018, using the modified retrospective method. The adoption has affected the timing of when income and costs are recognised in respect of offshore transmission assets and the presentation of construction agreements in the balance sheet.

The accuracy of the revenue recognition related to work in progress of large construction agreements and its presentation in the consolidated income statement is dependent on complex estimation methodologies, including estimates, such as the forecasted costs related to the constructions and the degree of completion for construction agreements.

We focused on this area because the revenue recognised with reference to the degree of completion both requires complex and subjective judgements and estimates by management.

Refer to notes 1.4, 2.2 and 4.2 in the consolidated financial statements.

How our audit addressed the key audit matter

On a sample basis, we tested whether revenue is accurately recorded and challenged the forecasted costs related to the constructions, including the assumptions used, and by evaluating the outcome of previous estimates by agreeing the actual costs incurred post-year end to the forecasted costs for the period.

We also assessed how the project managers determined that the degree of completion was correctly determined through obtaining their calculations and agreeing the inputs to documentary evidence or our independently formed expectation, as appropriate.

We evaluated management's assessment of the transition from IAS 11 and IAS 18 to IFRS 15 applying the modified retrospective method, including the impact on the on-going construction of the offshore transmission assets as well as the changed presentation made by management in respect of the transition.

Key audit matter

Business combinations

When acquiring businesses, the Group performed a purchase price allocation ('PPA') exercise for each acquisition separately, resulting in various assets and liabilities being separately valued. The Group used projected financial information in the PPA exercise.

Management uses their best knowledge to make estimates when utilising the Group's valuation methodologies. In order to determine the fair value of the separately identified assets and liabilities in a business combination, the valuation methodologies require input based on assumptions about the future and use discounted cash flow forecasts. The significant judgements and estimates involved in the PPA exercise mainly relate to assessing the fair value of production assets, assets under construction, tax equity partner balances and derivatives.

We focused on this area because the PPA exercises, which involves the identification of the acquired assets and liabilities and their respective fair values, require complex and subjective judgements and estimates by management.

Refer to note 3.3 in the consolidated financial statements.

How our audit addressed the key audit matter

We assessed whether the acquisitions during the period met the criteria of a business combination.

We verified the assets and liabilities recorded in the opening balance, by performing procedures, including, amongst others, obtaining statements of cash and bank balances acquired, agreeing the opening balance to the trial balance and the tax equity liabilities to underlying contracts and specifications.

We involved our internal specialists in assessing the valuation methodologies used by management and the fair valuation of the acquired assets and liabilities. We challenged the key assumptions used to determine the fair value of production assets, assets under construction, tax equity partner balances, derivatives, etc.

Finally, we assessed the adequacy of disclosures relating to the business combinations.

Statement on management's review

Management is responsible for the management's review, pp. 4-71.

Our opinion on the financial statements does not cover management's review, and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read management's review and, in doing so, consider whether management's review is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

Moreover, we considered whether management's review includes the disclosures required by the Danish Financial Statements Act.

Based on the work we have performed, in our view, management's review is in accordance with the consolidated financial statements and the parent company financial statements and has been prepared in accordance with the requirements of the Danish Financial Statement Act. We did not identify any material misstatement in management's review.

Management's responsibilities for the financial statements

Management is responsible for the preparation of consolidated financial statements that give a true and fair view in accordance with International Financial Reporting Standards as adopted by the EU and further requirements in the Danish Financial Statements Act and for the preparation of parent company

financial statements that give a true and fair view in accordance with the Danish Financial Statements Act, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Group's and the parent company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Group or the parent company or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial Statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs and the additional requirements applicable in Denmark will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with ISAs and additional requirements applicable in

Denmark, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's and the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management.
- Conclude on the appropriateness of management's use of the going concern basis of

accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's and the parent company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group or the parent company to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit

and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Limited assurance report of the independent auditor

To the stakeholders of Ørsted A/S

Ørsted A/S engaged us to provide limited assurance on the data described below and set out in the consolidated environment, social and governance (ESG) statements of the Ørsted A/S annual report for the year ended 31 December 2018.

Our conclusion

Based on the procedures we have performed and the evidence we have obtained, nothing has come to our attention that causes us not to believe that data in the 2018 Consolidated ESG Statements on pages 167-174 of the Annual Report for the year ended 31 December 2018 are free of material misstatements and has been prepared, in all material respects, in accordance with the accounting policies as stated on pages 167-174 of the 2018 Ørsted A/S Annual Report.

This conclusion is to be read in the context of what we say in the remainder of our report.

What we are assuring

The scope of our work was limited to assurance over data in the Consolidated ESG Statements on pages 167-174 of the Ørsted A/S Annual Report for the year ended 31 December 2018.

Professional standards applied and level of assurance

We performed a limited assurance engagement in accordance with International Standard on Assurance Engagements 3000 (Revised) 'Assurance Engagements other than Audits and Reviews of Historical Financial Information'. A limited assurance engagement is substantially less in scope than a reasonable assurance

engagement in relation to both the risk assessment procedures, including an understanding of internal control, and the procedures performed in response to the assessed risks; consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

Our independence and quality control

We have complied with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which includes independence and other ethical requirements founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour. The firm applies International Standard on Quality Control 1 and accordingly maintains a comprehensive system of quality control, including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements. Our work was carried out by an independent multidisciplinary team with experience in sustainability reporting and assurance.

Understanding reporting and measurement methodologies

Data and information need to be read and understood together with the accounting policies (pages 167-174 of the 2018 Ørsted A/S Annual Report), which management are solely responsible for selecting and applying. The absence of a significant body of established practice on which to draw to evaluate and measure

non-financial information allows for different, but acceptable, measurement techniques and can affect comparability between entities and over time.

Work performed

We are required to plan and perform our work in order to consider the risk of material misstatement of the data. In doing so and based on our professional judgement, we:

- Conducted interviews with Group functions to assess consolidation processes, use of company-wide systems and controls performed at Group level;
- Performed an assessment of materiality and the selection of topics for the 2018 Ørsted A/S consolidated ESG statements;
- Conducted analytical review of the data and trend explanations submitted by all business units for consolidation at Group level;
- Evaluated internal and external documentation to determine whether information in the 2018 Ørsted A/S consolidated ESG statements is supported by sufficient evidence.

Management's responsibilities

Management of Ørsted A/S is responsible for:

- Designing, implementing and maintaining internal control over information relevant to the preparation of data in the 2018 consolidated ESG statements on pages 167-174 in the annual report that are free from material misstatement, whether due to fraud or error;
- Establishing objective accounting policies for preparing data;
- Measuring and reporting data in the 2018 consolidated ESG statements based on the accounting policies; and

- The content of the 2018 consolidated ESG statements.

Our responsibility

We are responsible for:

- Planning and performing the engagement to obtain limited assurance about whether data in the 2018 Ørsted A/S consolidated ESG statements on pages 167-174 of the 2018 Annual Report are free of material misstatements and has been prepared, in all material respects, in accordance with the accounting policies;
- Forming an independent conclusion, based on the procedures we have performed and the evidence we have obtained; and
- Reporting our conclusion to the stakeholders of Ørsted A/S.

Glossary

Availability: Time-based availability is the ratio of the number of hours in a given period the offshore wind farms are available for power generation to the total number of hours in the same period. Total availability is weighted on the basis of the size of the individual wind farms. Availability is adjusted for breakdowns if compensation is received from the transmission owner.

Awarded capacity: Offshore capacity that we have been awarded in auctions and tenders, but where we need to sign a PPA and take final investment decision.

Biomass conversion: When a CHP plant is converted from using fossil fuels to using biomass, such as wood pellets, wood chips and straw. After the conversion, the CHP plant will typically be able to use biomass along with the original fuel types.

Carbon emissions allowances: Carbon emissions allowances subject to the European Union Emissions Trading Scheme (EU ETS).

CfD: A contract for difference is a subsidy that guarantees the difference between the market reference price and the exercise price won.

CHP plant: A combined heat and power (CHP) plant generates both heat and power in the same process.

Commissioning/COD: When our assets are in operation, and the legal liability has been transferred from the supplier to us.

Contracted capacity: Onshore capacity where we have signed a PPA, but where we need to take final investment decision.

Cost of electricity: Average cost measured as present value per megawatt hour (MWh) generated from offshore wind power, covering costs for development and construction as well as subsequent operation and maintenance of the offshore wind farm.

Decided (FID) and installed capacity: Installed offshore wind capacity plus capacity for wind farms where a final investment decision has been made.

Degree days: Number of degrees in absolute figures in difference between the average temperature and the official Danish indoor temperature of 17 degrees Celsius.

EEX: European Energy Exchange, German power exchange.

EPC: Engineering, procurement and construction. The part of our business which handles the construction and installation of our offshore wind farms.

FTE: Employees (full-time equivalent). The number of full-time employees during a fixed time period.

Generation capacity: Ørsted's ownership of the wind turbines. The wind turbines are included when each wind turbine has passed the 240-hour test.

Green certificates: Certificate awarded to producers of environment-friendly power as a supplement to the market price of power in the given price area.

Green dark spread (GDS): Green dark spread represents the contribution margin per MWh of power generated at a coal-fired CHP plant of a given efficiency. It is determined as the difference between the market price of power and the cost of the coal (including associated freight costs) and carbon emissions allowances used to generate the power.

Green spark spread (GSS): Green spark spread represents the contribution margin per MWh generated at a gas-fired power station of a given efficiency. It is determined as the difference between the market price of power and the costs of the gas and carbon emissions allowances used to generate the power.

Hedging instruments: Financial and physical instruments that can be used to guarantee a specific price for the purchase or sale of, for example, commodities and currency.

Installed capacity: Installed capacity where the offshore wind farm has been completed and has passed the 200-hour test.

Investment tax credits (ITCs): Federal tax credit based on qualifying renewable investment costs.

LNG: Liquefied natural gas. Gas that has been liquefied by cooling to minus 161 degrees Celsius. LNG takes up 600 times less space than conventional gas.

Load factor: The ratio between the actual power generation in a given period relative to the potential generation which is possible by continuously exploiting the maximum capacity over the same period.

NBP: National Balancing Points, UK gas hub.

Nord Pool: The Norwegian-based Nordic power exchange, which facilitates power trading in Norway, Sweden, Finland and Denmark.

Offshore transmission assets: Offshore transmission assets connect offshore generation to the onshore grid and typically include the offshore power transmission infrastructure, an onshore substation and the electrical equipment relating to the operation of the substation.

O&M: Operation and maintenance. The part of our business that operates and maintains our offshore wind farms after installation.

Partnership income: Income originating from our partners' purchase of ownership interests in the offshore wind farms. Includes both the gain in connection with the farm-down and the subsequent construction of the wind farm.

Production tax credit (PTC): Federal tax credit based on eligible power generation in the US.

PSO: Indirect taxes regarding the public service obligation (PSO) which are used to finance research and green energy and are charged to power customers along with other tariff elements.

Public obligation: A company with a public obligation is bound by law to deliver power or natural gas to a certain geographic area at prices approved by the Danish Energy Regulatory Authority.

QHSE: Quality, health, safety and environment.

Ramp-up: Generation until an offshore wind farm has been completed and commissioned.

ROCs: Renewable obligation certificates issued by Ofgem in the UK to operators of accredited generating stations for the eligible renewable energy they generate. Operators can trade ROCs with other parties.

Stress: Method of measuring the market trading risk of loss on a portfolio from day to day, calculated on a fair-value basis.

Tax equity: An arrangement where an investor obtains rights to federal tax credits and other tax attributes in exchange for a cash contribution.

Thermal generation: Power and heat generated through the combustion of fossil fuels, biomass or waste.

TRIR: In addition to lost-time injuries, total recordable injury rate (TRIR) also includes injuries where the injured person is able to perform restricted work the day after the accident as well as accidents where the injured person has received medical treatment.

TTF: Title Transfer Facility, Dutch gas hub.

TWh: Terawatt hour. The amount of energy generated in one hour with the effect of ITWh. ITWh is equivalent to 1,000GWh or 1,000,000MWh.

Value at risk (VaR): A financial term used for measuring the loss that may occur in connection with a risk position, assuming a certain volatility, and that the position is held for a certain period of time.

Wind speed: Shows the wind speed for Ørsted's offshore wind farms. The wind measurements are weighted on the basis of our generation capacity and can be compared to a normal wind period, based on 20 years' historical wind observations.

The aggregate market value of Eversource Energy's Common Shares, \$5.00 par value, held by non-affiliates, computed by reference to the price at which the common equity was last sold, or the average bid and asked price of such common equity, as of the last business day of Eversource Energy's most recently completed second fiscal quarter (June 30, 2015) was \$14,345,789,335 based on a closing market price of \$45.41 per share for the 315,916,964 common shares outstanding on June 30, 2015.

Indicate the number of shares outstanding of each of the issuers' classes of common stock, as of the latest practicable date:

<u>Company - Class of Stock</u>	<u>Outstanding as of January 31, 2016</u>
Eversource Energy Common shares, \$5.00 par value	317,191,249 shares
The Connecticut Light and Power Company Common stock, \$10.00 par value	6,035,205 shares
NSTAR Electric Company Common Stock, \$1.00 par value	100 shares
Public Service Company of New Hampshire Common stock, \$1.00 par value	301 shares
Western Massachusetts Electric Company Common stock, \$25.00 par value	434,653 shares

Eversource Energy holds all of the 6,035,205 shares, 100 shares, 301 shares, and 434,653 shares of the outstanding common stock of The Connecticut Light and Power Company, NSTAR Electric Company, Public Service Company of New Hampshire and Western Massachusetts Electric Company, respectively.

Eversource Energy, The Connecticut Light and Power Company, NSTAR Electric Company, Public Service Company of New Hampshire, and Western Massachusetts Electric Company each separately file this combined Form 10-K. Information contained herein relating to any individual registrant is filed by such registrant on its own behalf. Each registrant makes no representation as to information relating to the other registrants.

GLOSSARY OF TERMS

The following is a glossary of abbreviations or acronyms that are found in this report:

Current or former Eversource Energy companies, segments or investments:

Eversource, ES or the Company	Eversource Energy and subsidiaries
Eversource parent or ES parent	Eversource Energy, a public utility holding company
ES parent and other companies	ES parent and other companies are comprised of Eversource parent, Eversource Service and other subsidiaries, which primarily includes our unregulated businesses, HWP Company, The Rocky River Realty Company (a real estate subsidiary), and the consolidated operations of CYAPC and YAEC
CL&P	The Connecticut Light and Power Company
NSTAR Electric	NSTAR Electric Company
PSNH	Public Service Company of New Hampshire
WMECO	Western Massachusetts Electric Company
NSTAR Gas	NSTAR Gas Company
Yankee Gas	Yankee Gas Services Company
NPT	Northern Pass Transmission LLC
Eversource Service	Eversource Energy Service Company (effective January 1, 2014 includes the operations of NSTAR Electric & Gas)
NSTAR Electric & Gas	NSTAR Electric & Gas Corporation, a former Eversource Energy service company (effective January 1, 2014 merged into Eversource Energy Service Company)
CYAPC	Connecticut Yankee Atomic Power Company
MYAPC	Maine Yankee Atomic Power Company
YAEC	Yankee Atomic Electric Company
Yankee Companies	CYAPC, YAEC and MYAPC
Regulated companies	The Eversource Regulated companies are comprised of the electric distribution and transmission businesses of CL&P, NSTAR Electric, PSNH, and WMECO, the natural gas distribution businesses of Yankee Gas and NSTAR Gas, the generation activities of PSNH and WMECO, and NPT

Regulators:

DEEP	Connecticut Department of Energy and Environmental Protection
DOE	U.S. Department of Energy
DOER	Massachusetts Department of Energy Resources
DPU	Massachusetts Department of Public Utilities
EPA	U.S. Environmental Protection Agency
FERC	Federal Energy Regulatory Commission
ISO-NE	ISO New England, Inc., the New England Independent System Operator
MA DEP	Massachusetts Department of Environmental Protection
NHPUC	New Hampshire Public Utilities Commission
PURA	Connecticut Public Utilities Regulatory Authority
SEC	U.S. Securities and Exchange Commission
SJC	Supreme Judicial Court of Massachusetts

Other Terms and Abbreviations:

AFUDC	Allowance For Funds Used During Construction
AOCI	Accumulated Other Comprehensive Income/(Loss)
ARO	Asset Retirement Obligation
C&LM	Conservation and Load Management
CfD	Contract for Differences
Clean Air Project	The construction of a wet flue gas desulphurization system, known as "scrubber technology," to reduce mercury emissions of the Merrimack coal-fired generation station in Bow, New Hampshire
CO ₂	Carbon dioxide
CPSL	Capital Projects Scheduling List
CTA	Competitive Transition Assessment
CWIP	Construction Work in Progress
EPS	Earnings Per Share
ERISA	Employee Retirement Income Security Act of 1974
ES 2014 Form 10-K	The Eversource Energy and Subsidiaries 2014 combined Annual Report on Form 10-K as filed with the SEC
ESOP	Employee Stock Ownership Plan
ESPP	Employee Share Purchase Plan
FERC ALJ	FERC Administrative Law Judge
Fitch	Fitch Ratings
FMCC	Federally Mandated Congestion Charge
FTR	Financial Transmission Rights
GAAP	Accounting principles generally accepted in the United States of America
GSC	Generation Service Charge
GSRP	Greater Springfield Reliability Project

GWh	Gigawatt-Hours
HQ	Hydro-Québec, a corporation wholly owned by the Québec government, including its divisions that produce, transmit and distribute electricity in Québec, Canada
HVDC	High voltage direct current
Hydro Renewable Energy	Hydro Renewable Energy, Inc., a wholly owned subsidiary of Hydro-Québec
IPP	Independent Power Producers
ISO-NE Tariff	ISO-NE FERC Transmission, Markets and Services Tariff
kV	Kilovolt
kVa	Kilovolt-ampere
kW	Kilowatt (equal to one thousand watts)
kWh	Kilowatt-Hours (the basic unit of electricity energy equal to one kilowatt of power supplied for one hour)
LBR	Lost Base Revenue
LNG	Liquefied natural gas
LRS	Supplier of last resort service
MGP	Manufactured Gas Plant
MMBtu	One million British thermal units
Moody's	Moody's Investors Services, Inc.
MW	Megawatt
MWh	Megawatt-Hours
NEEWS	New England East-West Solution
Northern Pass	The high voltage direct current transmission line project from Canada into New Hampshire
NO _x	Nitrogen oxides
PAM	Pension and PBOP Rate Adjustment Mechanism
PBOP	Postretirement Benefits Other Than Pension
PBOP Plan	Postretirement Benefits Other Than Pension Plan that provides certain retiree benefits, primarily medical, dental and life insurance
PCRBs	Pollution Control Revenue Bonds
Pension Plan	Single uniform noncontributory defined benefit retirement plan
PPA	Pension Protection Act
RECs	Renewable Energy Certificates
Regulatory ROE	The average cost of capital method for calculating the return on equity related to the distribution and generation business segment excluding the wholesale transmission segment
ROE	Return on Equity
RRB	Rate Reduction Bond or Rate Reduction Certificate
RSUs	Restricted share units
S&P	Standard & Poor's Financial Services LLC
SBC	Systems Benefits Charge
SCRC	Stranded Cost Recovery Charge
SERP	Supplemental Executive Retirement Plans and non-qualified defined benefit retirement plans
SIP	Simplified Incentive Plan
SO ₂	Sulfur dioxide
SS	Standard service
TCAM	Transmission Cost Adjustment Mechanism
TSA	Transmission Service Agreement
UI	The United Illuminating Company

**SAFE HARBOR STATEMENT UNDER THE PRIVATE SECURITIES
LITIGATION REFORM ACT OF 1995**

References in this Annual Report on Form 10-K to "Eversource," "the Company," "we," "our," and "us" refer to Eversource and its consolidated subsidiaries. On April 30, 2015, the Company's legal name was changed from Northeast Utilities to Eversource Energy. CL&P, NSTAR Electric, PSNH and WMECO are each doing business as Eversource Energy.

From time to time we make statements concerning our expectations, beliefs, plans, objectives, goals, strategies, assumptions of future events, future financial performance or growth and other statements that are not historical facts. These statements are "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. You can generally identify our forward-looking statements through the use of words or phrases such as "estimate," "expect," "anticipate," "intend," "plan," "project," "believe," "forecast," "should," "could," and other similar expressions. Forward-looking statements are based on the current expectations, estimates, assumptions or projections of management and are not guarantees of future performance. These expectations, estimates, assumptions or projections may vary materially from actual results. Accordingly, any such statements are qualified in their entirety by reference to, and are accompanied by, the following important factors that could cause our actual results to differ materially from those contained in our forward-looking statements, including, but not limited to:

- cyber breaches, acts of war or terrorism, or grid disturbances,
- actions or inaction of local, state and federal regulatory, public policy and taxing bodies,
- changes in business conditions, which could include disruptive technology related to our current or future business model,
- changes in economic conditions, including impact on interest rates, tax policies, and customer demand and payment ability,
- fluctuations in weather patterns,
- changes in laws, regulations or regulatory policy,
- changes in levels or timing of capital expenditures,
- disruptions in the capital markets or other events that make our access to necessary capital more difficult or costly,
- developments in legal or public policy doctrines,
- technological developments,
- changes in accounting standards and financial reporting regulations,
- actions of rating agencies, and
- other presently unknown or unforeseen factors.

Other risk factors are detailed in our reports filed with the SEC and updated as necessary, and we encourage you to consult such disclosures.

All such factors are difficult to predict, contain uncertainties that may materially affect our actual results and are beyond our control. You should not place undue reliance on the forward-looking statements, each speaks only as of the date on which such statement is made, and we undertake no obligation to update any forward-looking statement or statements to reflect events or circumstances after the date on which such statement is made or to reflect the occurrence of unanticipated events. New factors emerge from time to time and it is not possible for us to predict all of such factors, nor can we assess the impact of each such factor on the business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statements. For more information, see Item 1A, *Risk Factors*, included in this combined Annual Report on Form 10-K. This Annual Report on Form 10-K also describes material contingencies and critical accounting policies in the accompanying *Management's Discussion and Analysis of Financial Condition and Results of Operations* and *Combined Notes to Consolidated Financial Statements*. We encourage you to review these items.

PART I

Item 1. Business

Please refer to the Glossary of Terms for definitions of defined terms and abbreviations used in this combined Annual Report on Form 10-K.

Eversource Energy, headquartered in Boston, Massachusetts and Hartford, Connecticut, is a public utility holding company subject to regulation by the FERC under the Public Utility Holding Company Act of 2005. We are engaged primarily in the energy delivery business through the following wholly owned utility subsidiaries:

- The Connecticut Light and Power Company (CL&P), a regulated electric utility that serves residential, commercial and industrial customers in parts of Connecticut;
- NSTAR Electric Company (NSTAR Electric), a regulated electric utility that serves residential, commercial and industrial customers in parts of eastern Massachusetts;
- Public Service Company of New Hampshire (PSNH), a regulated electric utility that serves residential, commercial and industrial customers in parts of New Hampshire and owns generation assets used to serve customers;
- Western Massachusetts Electric Company (WMECO), a regulated electric utility that serves residential, commercial and industrial customers in parts of western Massachusetts and owns solar generating assets;
- NSTAR Gas Company (NSTAR Gas), a regulated natural gas utility that serves residential, commercial and industrial customers in parts of Massachusetts; and
- Yankee Gas Services Company (Yankee Gas), a regulated natural gas utility that serves residential, commercial and industrial customers in parts of Connecticut.

CL&P, NSTAR Electric, PSNH and WMECO also serve New England customers through Eversource Energy's electric transmission business.

On April 30, 2015, the Company's legal name was changed from Northeast Utilities to Eversource Energy. CL&P, NSTAR Electric, PSNH and WMECO are each doing business as Eversource Energy.

Eversource Energy, CL&P, NSTAR Electric, PSNH and WMECO each report their financial results separately. We also include information in this report on a segment basis for Eversource Energy. Eversource Energy recognizes three reportable segments: electric distribution, electric transmission and natural gas distribution. Eversource Energy's electric distribution segment includes the generation businesses of PSNH and WMECO. These three segments represented substantially all of Eversource Energy's total consolidated revenues for the years ended December 31, 2015 and 2014. CL&P, NSTAR Electric, PSNH and WMECO do not report separate business segments.

ELECTRIC DISTRIBUTION SEGMENT

General

Eversource Energy's electric distribution segment consists of the distribution businesses of CL&P, NSTAR Electric, PSNH and WMECO, which are engaged in the distribution of electricity to retail customers in Connecticut, eastern Massachusetts, New Hampshire and western Massachusetts, respectively, plus the regulated electric generation businesses of PSNH and WMECO.

The following table shows the sources of 2015 electric franchise retail revenues for Eversource Energy's electric distribution companies, collectively, based on categories of customers:

<i>(Thousands of Dollars, except percentages)</i>	2015	% of Total
Residential	\$ 3,608,155	55
Commercial	2,476,686	38
Industrial	326,564	5
Other	151,195	2
Total Retail Electric Revenues	\$ 6,562,600	100%

A summary of our distribution companies' retail electric GWh sales volumes and percentage changes for 2015, as compared to 2014, is as follows:

	2015	2014	Percentage Change
Residential	21,441	21,317	0.6 %
Commercial	27,598	27,449	0.5 %
Industrial	5,577	5,676	(1.7)%
Total	54,616	54,442	0.3 %

Our 2015 consolidated retail electric sales volumes were slightly higher, as compared to 2014, due primarily to the impact of colder winter weather experienced in the first quarter of 2015 and warmer weather in the third quarter of 2015, partially offset by milder winter weather in the fourth quarter of 2015 throughout our service territories as well as an increase in customer conservation efforts, including the impact of energy efficiency programs sponsored by CL&P, NSTAR Electric, PSNH and WMECO.

Fluctuations in retail electric sales volumes at NSTAR Electric and PSNH impact earnings. For CL&P (effective December 1, 2014) and WMECO, fluctuations in retail electric sales volumes do not impact earnings due to their respective regulatory commission approved revenue decoupling mechanisms. These distribution revenues are decoupled from their customer sales volumes, which breaks the relationship between sales volumes and revenues recognized. CL&P and WMECO reconcile their annual base distribution rate recovery amounts to their respective pre-established levels of baseline distribution delivery service revenues. Any difference between the allowed level of distribution revenue and the actual amount incurred during a 12-month period is adjusted through rates in the following period.

ELECTRIC DISTRIBUTION – CONNECTICUT

THE CONNECTICUT LIGHT AND POWER COMPANY

CL&P's distribution business consists primarily of the purchase, delivery and sale of electricity to its residential, commercial and industrial customers.

As of December 31, 2015, CL&P furnished retail franchise electric service to approximately 1.2 million customers in 149 cities and towns in Connecticut, covering an area of 4,400 square miles. CL&P does not own any electric generation facilities.

The following table shows the sources of CL&P's 2015 electric franchise retail revenues based on categories of customers:

	CL&P	
(Thousands of Dollars, except percentages)	2015	% of Total
Residential	\$ 1,641,165	61
Commercial	841,093	31
Industrial	129,544	5
Other	62,704	3
Total Retail Electric Revenues	\$ 2,674,506	100%

A summary of CL&P's retail electric GWh sales volumes and percentage changes for 2015, as compared to 2014, is as follows:

	2015	2014	Percentage Change
Residential	10,094	10,026	0.7 %
Commercial	9,635	9,643	(0.1)%
Industrial	2,342	2,377	(1.5)%
Total	22,071	22,046	0.1 %

Rates

CL&P is subject to regulation by the PURA, which, among other things, has jurisdiction over rates, certain dispositions of property and plant, mergers and consolidations, issuances of long-term securities, standards of service and construction and operation of facilities. CL&P's present general rate structure consists of various rate and service classifications covering residential, commercial and industrial services. CL&P's retail rates include a delivery service component, which includes distribution, transmission, conservation, renewables, CTA, SBC and other charges that are assessed on all customers. Connecticut utilities are entitled under state law to charge rates that are sufficient to allow them an opportunity to recover their reasonable operating and capital costs, in order to attract needed capital and maintain their financial integrity, while also protecting relevant public interests.

Under Connecticut law, all of CL&P's customers are entitled to choose their energy suppliers, while CL&P remains their electric distribution company.

For those customers who do not choose a competitive energy supplier, under SS rates for customers with less than 500 kilowatts of demand, and LRS rates for customers with 500 kilowatts or more of demand, CL&P purchases power under standard offer contracts and passes the cost of the power to customers through a combined GSC and FMCC charge on customers' bills.

CL&P continues to supply approximately 40 percent of its customer load at SS or LRS rates while the other 60 percent of its customer load has migrated to competitive energy suppliers. Because this customer migration is only for energy supply service, it has no impact on CL&P's electric distribution business or its operating income.

The rates established by the PURA for CL&P are comprised of the following:

- An electric generation services charge (GSC), which recovers energy-related costs incurred as a result of providing electric generation service supply to all customers that have not migrated to competitive energy suppliers. The GSC is adjusted periodically and reconciled semi-annually in accordance with the policies and procedures of the PURA, with any differences refunded to, or recovered from, customers.
- A revenue decoupling adjustment (effective December 1, 2014) that reconciles the amounts recovered from customers, on an annual basis, to the distribution revenue requirement approved by the PURA in its last rate case, which currently is an annual amount of \$1.059 billion.
- A distribution charge, which includes a fixed customer charge and a demand and/or energy charge to collect the costs of building and expanding the infrastructure to deliver power to customers, as well as ongoing operating costs to maintain the infrastructure.
- A federally-mandated congestion charge (FMCC), which recovers any costs imposed by the FERC as part of the New England Standard Market Design, including locational marginal pricing, locational installed capacity payments, and any costs approved by the PURA to reduce these charges. The FMCC also recovers costs associated with CL&P's system resiliency program. The FMCC is adjusted periodically and reconciled semi-annually in accordance with the policies and procedures of the PURA, with any differences refunded to, or recovered from, customers.
- A transmission charge that recovers the cost of transporting electricity over high voltage lines from generating plants to substations, including costs allocated by ISO-NE to maintain the wholesale electric market.
- A competitive transition assessment charge (CTA), assessed to recover stranded costs associated with electric industry restructuring such as various IPP contracts. The CTA is reconciled annually to actual costs incurred and reviewed by the PURA, with any difference refunded to, or recovered from, customers.
- A systems benefits charge (SBC), established to fund expenses associated with: various hardship and low income programs; a program to compensate municipalities for losses in property tax revenue due to decreases in the value of electric generating facilities resulting directly from electric industry restructuring. The SBC is reconciled annually to actual costs incurred and reviewed by the PURA, with any difference refunded to, or recovered from, customers.
- A Clean Energy Fund charge, which is used to promote investment in renewable energy sources. Amounts collected by this charge are deposited into the Clean Energy Fund and administered by the Clean Energy Finance and Investment Authority. The Clean Energy Fund charge is set by statute and is currently 0.1 cent per kWh.
- A conservation charge, comprised of a statutory rate established to implement cost-effective energy conservation programs and market transformation initiatives, plus a conservation adjustment mechanism charge to recover the residual energy efficiency spending associated with the expanded energy efficiency costs directed by the Comprehensive Energy Strategy Plan for Connecticut.

As required by regulation, CL&P, jointly with UI, entered into the following contracts whereby UI will share 20 percent and CL&P will share 80 percent of the costs and benefits (CL&P's portion of these costs are either recovered from, or refunded to, customers through the FMCC charge):

- Four CfDs (totaling approximately 787 MW of capacity) with three electric generation units and one demand response project, which extend through 2026 and have terms of up to 15 years beginning in 2009. The capacity CfDs obligate both CL&P and UI to make or receive payments on a monthly basis to or from the project and generation owners based on the difference between a contractually set capacity price and the capacity market prices that the project and generation owners receive in the ISO-NE capacity markets.
- Three CfDs (totaling approximately 500 MW of peaking capacity) with three peaking generation units. The three peaker CfDs pay the generation owners the difference between capacity, forward reserve and energy market revenues and a cost-of-service payment stream for 30 years beginning in 2008 (including costs of plant operation and the prices that the generation owners receive for capacity and other products in the ISO-NE markets).
- Long-term commitments to purchase approximately 250 MW of wind power from a Maine wind farm and 20 MW of solar power from a multi-site project in Connecticut. Both of these projects are expected to be operational by the end of 2016.

On December 17, 2014 the PURA approved CL&P's application to amend customer rates, effective December 1, 2014, for a total base distribution rate increase of \$152 million, which includes an authorized ROE of 9.02 percent for the first twelve month period and 9.17 percent thereafter. The distribution rate increase included a revenue decoupling mechanism effective December 1, 2014, and the recovery of 2011 and 2012 storm restoration costs and system resiliency costs. Also in December 2014, the PURA granted a re-opener request to CL&P's base distribution rate application for further review of the appropriate balance of ADIT utilized in the calculation of rate base. On July 2, 2015, the PURA issued a final order that approved a settlement agreement filed on May 19, 2015 between CL&P and the PURA Prosecutorial Staff, and which included an increase to total allowed annual revenue requirements of \$18.4 million beginning December 1, 2014.

Sources and Availability of Electric Power Supply

As noted above, CL&P does not own any generation assets and purchases energy supply to serve its SS and LRS loads from a variety of competitive sources through requests for proposals. CL&P periodically enters into full requirements contracts for the majority of SS loads for periods of up to one year for its residential customers and small and medium commercial and industrial customers. CL&P is authorized to supply the remainder of the SS loads through a self-managed process that includes bilateral purchases and spot market purchases. CL&P typically enters into full requirements contracts for LRS for larger commercial and industrial customers every three months. Currently, CL&P has full requirements contracts in place for 80 percent of its SS loads for the first half of 2016 and has bilateral purchases in place to self-manage the remaining 20 percent. For the second half of 2016, CL&P has 50 percent of its SS load under full requirements contracts, intends to purchase an additional 30 percent of full requirements and will self-manage the remainder as needed. None of the SS load for 2017 has been procured. CL&P has full requirements contracts in place for its LRS loads through the second quarter of 2016 and intends to purchase 100 percent of full requirements for the third and fourth quarters of 2016.

ELECTRIC DISTRIBUTION – MASSACHUSETTS

NSTAR ELECTRIC COMPANY WESTERN MASSACHUSETTS ELECTRIC COMPANY

The electric distribution businesses of NSTAR Electric and WMECO consist primarily of the purchase, delivery and sale of electricity to residential, commercial and industrial customers within their respective franchise service territories. As of December 31, 2015, NSTAR Electric furnished retail franchise electric service to approximately 1.2 million customers in Boston and 80 surrounding cities and towns in Massachusetts, including Cape Cod and Martha's Vineyard, covering an area of approximately 1,700 square miles. WMECO provides retail franchise electric service to approximately 209,000 customers in 59 cities and towns in the western region of Massachusetts, covering an area of approximately 1,500 square miles. Neither NSTAR Electric nor WMECO owns any generating facilities used to supply customers, and each purchases its respective energy requirements from competitive energy suppliers.

In 2009, WMECO was authorized by the DPU to install solar energy generation in its service territory. From 2010 through 2014, WMECO completed development of a total of 8 MW solar generation facilities on sites in Pittsfield, Springfield, and East Springfield, Massachusetts. WMECO will sell all energy and other products from its solar generation facilities into the ISO-NE market. NSTAR Electric does not own any solar generation facilities.

The following table shows the sources of the 2015 electric franchise retail revenues of NSTAR Electric and WMECO based on categories of customers:

<i>(Thousands of Dollars, except percentages)</i>	NSTAR Electric		WMECO	
	2015	% of Total	2015	% of Total
Residential	\$ 1,205,387	48	\$ 255,797	59
Commercial	1,187,452	47	135,222	31
Industrial	84,667	3	35,439	8
Other	47,610	2	5,778	2
Total Retail Electric Revenues	\$ 2,525,116	100%	\$ 432,236	100%

A summary of NSTAR Electric's and WMECO's retail electric GWh sales volumes and percentage changes for 2015, as compared to 2014, is as follows:

	NSTAR Electric			WMECO		
	2015	2014	Percentage Change	2015	2014	Percentage Change
Residential	6,687	6,625	0.9 %	1,465	1,494	(2.0)%
Commercial	13,120	13,009	0.9 %	1,478	1,466	0.8 %
Industrial	1,248	1,291	(3.3)%	620	626	(0.9)%
Total	21,055	20,925	0.6 %	3,563	3,586	(0.6)%

Rates

NSTAR Electric and WMECO are each subject to regulation by the DPU, which, among other things, has jurisdiction over rates, certain dispositions of property and plant, mergers and consolidations, issuances of long-term securities, acquisition of securities, standards of service and construction and operation of facilities. The present general rate structure for both NSTAR Electric and WMECO consists of various rate and service classifications covering residential, commercial and industrial services. Massachusetts utilities are entitled under state law to charge rates that are sufficient to allow them an opportunity to recover their reasonable operating and capital costs, in order to attract needed capital and maintain their financial integrity, while also protecting relevant public interests.

Under Massachusetts law, all customers of each of NSTAR Electric and WMECO are entitled to choose their energy suppliers, while NSTAR Electric or WMECO remains their electric distribution company. Both NSTAR Electric and WMECO purchase power from competitive suppliers on behalf of, and pass the related cost through to, their respective customers who do not choose a competitive energy supplier (basic service). Most of the residential customers of NSTAR Electric and WMECO have continued to buy their power from NSTAR Electric or WMECO at basic service rates. Most commercial and industrial customers have switched to a competitive energy supplier.

The Cape Light Compact, an inter-governmental organization consisting of the 21 towns and two counties on Cape Cod and Martha's Vineyard, serves 200,000 customers through the delivery of energy efficiency programs, effective consumer advocacy, competitive electricity supply and green power options. NSTAR Electric continues to provide electric service to these customers including the delivery of power, maintenance of infrastructure, capital investment, meter reading, billing, and customer service.

NSTAR Electric continues to supply approximately 39 percent of its customer load at basic service rates while the other 61 percent of its customer load has migrated to competitive energy suppliers. WMECO continues to supply approximately 41 percent of its customer load at basic service rates while the other 59 percent of its customer load has migrated to competitive energy suppliers. Because customer migration is limited to energy supply service, it has no impact on the delivery business or operating income of NSTAR Electric and WMECO.

The rates established by the DPU for NSTAR Electric and WMECO are comprised of the following:

- A basic service charge that represents the collection of energy costs, including costs related to charge-offs of uncollectible energy costs from customers. Electric distribution companies in Massachusetts are required to obtain and resell power to retail customers through basic service for those who choose not to buy energy from a competitive energy supplier. Basic service rates are reset every six months (every three months for large commercial and industrial customers). Additionally, the DPU has authorized NSTAR Electric to recover the cost of its Dynamic Pricing Smart Grid Pilot Program and NSTAR Green wind contracts through the basic service charge. Basic service costs are reconciled annually, with any differences refunded to, or recovered from, customers.
- A distribution charge, which includes a fixed customer charge and a demand and/or energy charge to collect the costs of building and expanding the infrastructure to deliver power to its destination, as well as ongoing operating costs.
- For WMECO, a revenue decoupling adjustment that reconciles distribution revenue, on an annual basis, to the amount of distribution revenue approved by the DPU in its last rate case in 2011. Currently, WMECO is allowed to collect \$132.4 million annually.
- A transmission charge that recovers the cost of transporting electricity over high voltage lines from generating plants to substations, including costs allocated by ISO-NE to maintain the wholesale electric market.
- A transition charge that represents costs to be collected primarily from previously held investments in generating plants, costs related to existing above-market power contracts, and contract costs related to long-term power contract buy-outs.
- An energy efficiency charge that represents a legislatively-mandated charge to collect costs for energy efficiency programs.
- Reconciling adjustment charges that recover certain DPU-approved costs as follows: pension and PBOP benefits, low income customer discounts, lost revenue and credits associated with net-metering facilities installed by customers, storms, consultants retained by the attorney general, long-term renewable contracts and energy efficiency programs and lost base revenue associated with energy efficiency measures. In addition to these adjustments common to both NSTAR Electric and WMECO, NSTAR Electric has reconciling adjustment charges that collect costs associated with certain safety and reliability projects and a Smart Grid pilot program. WMECO has a reconciling adjustment charge that recovers costs associated with certain solar projects owned and operated by WMECO.

As required by regulation, NSTAR Electric and WMECO, along with two other Massachusetts electric utilities, signed long-term commitments to purchase a combined estimated generating capacity of approximately 334 MW of wind power from two wind farms in Maine over 15 years. The projects are in various stages of permitting, development, or operation. One unit began operating in late 2015, and the other unit is expected to be in operation by December 2016. In addition, WMECO previously signed a long-term commitment to purchase an estimated generating capacity of approximately 37.5 MW of wind power from a wind farm in Maine over 15 years that is expected to be in operation in 2016.

Pursuant to a 2008 DPU order, Massachusetts electric utilities must adopt rate structures that decouple the volume of energy sales from the utility's revenues in their next rate case. WMECO is currently decoupled and NSTAR Electric will propose decoupling in its next rate case.

NSTAR Electric and WMECO are each subject to service quality (SQ) metrics that measure safety, reliability and customer service, and could be required to pay to customers a SQ charge of up to 2.5 percent of annual transmission and distribution revenues for failing to meet such metrics. Neither NSTAR Electric nor WMECO will be required to pay a SQ charge for its 2015 performance as each company achieved results at or above target for all of its respective SQ metrics in 2015.

Sources and Availability of Electric Power Supply

As noted above, neither NSTAR Electric nor WMECO owns any generation assets (other than WMECO's solar generation), and both companies purchase their respective energy requirements from a variety of competitive sources through requests for proposals issued periodically, consistent with DPU regulations. NSTAR Electric and WMECO enter into supply contracts for basic service for 50 percent of their respective residential and small commercial and industrial customers twice per year for twelve month terms. Both NSTAR Electric and WMECO enter into supply contracts for basic service for 100 percent of large commercial and industrial customers every three months.

ELECTRIC DISTRIBUTION – NEW HAMPSHIRE

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE

PSNH's distribution business consists primarily of the generation, delivery and sale of electricity to its residential, commercial and industrial customers.

As of December 31, 2015, PSNH furnished retail franchise electric service to approximately 503,000 retail customers in 211 cities and towns in New Hampshire, covering an area of approximately 5,630 square miles. PSNH currently owns and operates approximately 1,200 MW of primarily coal-, natural gas-, and oil-fired electricity generation plants. PSNH's distribution business includes the activities of its generation business.

The Clean Air Project, a wet flue gas desulphurization system (Scrubber), was constructed and placed in service by PSNH at its Merrimack Station in 2011. The Scrubber reduces emissions of SO2 and mercury from Merrimack Station by over 90 percent, which is well in excess of state and federal requirements. PSNH is permitted to recover prudent Scrubber costs through its default energy service rates under New Hampshire law. Effective January 1, 2016, PSNH is recovering all Scrubber costs in rates charged to customers. For further information, see "Regulatory Developments and Rate Matters – New Hampshire – Clean Air Project Prudence Proceeding" in the accompanying Item 7, *Management's Discussion and Analysis of Financial Condition and Results of Operations*.

The following table shows the sources of PSNH's 2015 electric franchise retail revenues based on categories of customers:

	PSNH	
	2015	% of Total
<i>(Thousands of Dollars, except percentages)</i>		
Residential	\$ 505,806	54
Commercial	312,918	34
Industrial	76,914	8
Other	35,103	4
Total Retail Electric Revenues	\$ 930,741	100%

A summary of PSNH's retail electric GWh sales volumes and percentage changes for 2015, as compared to 2014, is as follows:

	2015	2014	Percentage Change
Residential	3,195	3,172	0.7 %
Commercial	3,365	3,332	1.0 %
Industrial	1,367	1,382	(1.1)%
Total	<u>7,927</u>	<u>7,886</u>	<u>0.5 %</u>

Rates

PSNH is subject to regulation by the NHPUC, which, among other things, has jurisdiction over rates, certain dispositions of property and plant, mergers and consolidations, issuances of securities, standards of service and construction and operation of facilities. New Hampshire utilities are entitled under state law to charge rates that are sufficient to allow them an opportunity to recover their reasonable operating and capital costs, in order to attract needed capital and maintain their financial integrity, while also protecting relevant public interests.

Under New Hampshire law, all of PSNH's customers are entitled to choose competitive energy suppliers, with PSNH providing default energy service under its ES rate for those customers who do not choose a competitive energy supplier. At the end of 2015, approximately 21 percent of all of PSNH's customers (approximately 53 percent of load) were taking service from competitive energy suppliers, compared to 21 percent of customers (approximately 46 percent of load) at the end of 2014.

The rates established by the NHPUC for PSNH are comprised of the following:

- A default energy service charge which recovers energy-related costs incurred as a result of providing electric generation service supply to all customers that have not migrated to competitive energy suppliers. These charges recover the costs of PSNH's generation, as well as purchased power, and include an allowed ROE of 9.81 percent.
- A distribution charge, which includes an energy and/or demand-based charge to recover costs related to the maintenance and operation of PSNH's infrastructure to deliver power to its destination, as well as power restoration and service costs. This includes a customer charge to collect the cost of providing service to a customer; such as the installation, maintenance, reading and replacement of meters and maintaining accounts and records.
- A transmission charge that recovers the cost of transporting electricity over high voltage lines from generating plants to substations, including costs allocated by ISO-NE to maintain the wholesale electric market.
- A stranded cost recovery charge (SCRC), which allows PSNH to recover its stranded costs, including above-market expenses incurred under mandated power purchase obligations and other long-term investments and obligations.
- A system benefits charge (SBC), which funds energy efficiency programs for all customers as well as assistance programs for residential customers within certain income guidelines.

- An electricity consumption tax, which is a state mandated tax on electric energy consumption.

The energy charge and SCRC rates change semi-annually and are reconciled annually and differences between actual costs incurred versus current rates are either refunded or recovered in subsequent rates charged to customers.

PSNH distribution rates were set in a 2010 NHPUC rate case settlement, which expired on June 30, 2015. In the 2015 PSNH Settlement Agreement, the Company agreed that its present distribution rates will stay in effect until at least July 1, 2017. However, certain aspects of the 2010 rate case settlement will continue, including funding for reliability enhancement program activities, adjustment of distribution rates for certain exogenous events that in the aggregate exceed \$1 million, and major storm reserve funding.

Generation Divestiture

In 2013, the NHPUC opened a docket to investigate market conditions affecting PSNH's default energy service rate, how PSNH will maintain just and reasonable rates in light of those conditions, and any impact of PSNH's generation ownership on the New Hampshire competitive electric market. In April 2014, the NHPUC staff issued a "Preliminary Status Report Addressing the Economic Interest of PSNH's Retail Customers as it Relates to the Potential Divestiture of PSNH's Generating Plants," which included a consultant's analysis of the fair market value of PSNH generating assets and long-term power purchase contracts. The consultant's analysis estimated the fair market value of PSNH's generation assets to be \$225 million as of December 31, 2013 and compared that amount to a stated net book value of \$660 million, implying potential "stranded costs" of approximately \$435 million. An abbreviated draft update by the consultant dated August 17, 2015, increased the estimated fair market value of PSNH's generation assets to \$235 million.

In 2014, the Legislature enacted changes to the laws governing divestiture of PSNH's generation assets, effective September 30, 2014. The new law required the NHPUC to initiate a proceeding to determine whether all or some of PSNH's generation assets should be divested. The law gives the NHPUC express authority to order the divestiture of all or some of PSNH's generation assets if the NHPUC finds it is in the economic interest of customers to do so. The law also clarified the definition of "stranded costs" to include costs approved for recovery by the NHPUC in connection with the divestiture or retirement of PSNH's generation assets.

On June 10, 2015, Eversource and PSNH entered into the 2015 Public Service Company of New Hampshire Restructuring and Rate Stabilization Agreement (the Agreement) with the New Hampshire Office of Energy and Planning, certain members of the NHPUC staff, the Office of Consumer Advocate, two state senators, and several other parties. The Agreement was filed with the NHPUC on the same day. Under the terms of the Agreement, PSNH has agreed to divest its generation assets upon NHPUC approval. The Agreement is designed to provide a resolution of issues pertaining to PSNH's generation assets in pending regulatory proceedings before the NHPUC. The Agreement provided for the Clean Air Project prudence proceeding to be resolved and all remaining Clean Air Project costs to be included in rates effective January 1, 2016. As part of the Agreement, PSNH has agreed to forego recovery of \$25 million of the deferred equity return related to the Clean Air Project. In addition, PSNH will not seek a general distribution rate increase effective before July 1, 2017 and will contribute \$5 million to create a clean energy fund, which will not be recoverable from its customers.

In 2015, the Legislature enacted changes to law to allow the use of securitization financing to recover any stranded costs resulting from the divestiture of PSNH's generating assets. If the Agreement is approved, following divestiture of PSNH's generating assets, bonds will be issued to recover resulting stranded costs.

On January 26, 2016, Advisory Staff of the NHPUC and the parties to the Agreement filed a stipulation with the NHPUC agreeing that near-term divestiture of PSNH's generation was in the public interest and that the Agreement should be approved. Implementation of the Agreement is subject to NHPUC approval, which is expected in early 2016.
