

KATHY HOCHUL
Governor

CHARLES BELL
Acting Chair

DOREEN M. HARRIS
President and CEO

December 1, 2025

Honorable Kathy Hochul
Governor
Executive Chamber
NYS Capitol
Albany, NY 12224

Dear Governor Hochul,

Pursuant to the Public Authority Law Section 1867(7), as amended in 2015, attached is NYSED's semi-annual report regarding specified contracting actions for the period from April 1, 2025, through September 30, 2025. The report is broken into sections to meet the statute's reporting requirements, summaries of which are provided below.

- **Requirement 1** is for the revenues collected by the Authority in the reporting period. A report that details the revenues collected during the period is attached.
- **Requirement 2** is a list of requests for proposals, program opportunity notices, or similar solicitations that have been issued in the reporting period. A report that details the solicitations issued is attached.
- **Requirement 3** is a description of the criteria and standards utilized for assessing proposals made in response requests for proposals, program opportunity notices, or similar solicitations. The criteria and standards utilized for award selection and project eligibility are included in each solicitation. Please note that requirements 2 and 3 are contained in one section of the report.
- **Requirement 4** is a report on all projects selected for funding by the Authority during the reporting period broken down by region, including the county and utility service territory in which the project is located and the total value of these projects statewide and by region. Both a summary by regional economic development council (REDC) and details for each REDC are provided. The region "Statewide" includes projects that do not have a distinct project location and provide benefits across New York State.
- **Requirement 5** is a report of all disbursements or expenditures of revenues pursuant to requests for proposals, program opportunity notices, or similar solicitations. A report that details these disbursements is included.
- **Requirement 6** is a list of all contracts executed and completed during the reporting period including a description of each project. A report that details the executed contracts is attached.

This semi-annual report for the reporting period is also currently available on NYSED's website at <https://www.nyserda.ny.gov/-/media/Files/Publications/Annual-Reports-and-Financial-Statements/2025-december-nyserda-semi-annual-report.pdf>

If you have any questions about this information, please contact me.

Sincerely,

A handwritten signature in dark ink that reads "Doreen M. Harris".

NYSERDA

Revenues Collected - April 1, 2025 through September 30, 2025

Revenue Source	Amount (\$000's)
State Appropriation	34,959
Utility Surcharge Assessments	341,716
Clean Energy Standard Proceeds	325,715
Allowance Proceeds	193,725
Third-party reimbursements	18,201
Federal grants	28,336
Interest subsidy	65
Project repayments	-
Rentals from leases	732
Fees and other income	15,535
Loans and financing receivables interest	29,175
Investment income	40,459
Total revenues	1,028,618

NYSERDA

Public Authority Law Report

April 1, 2025 to September 30, 2025

Section Break

Solicitation Summary April 1, 2025 - September 30, 2025							
#	Solicitation No.	Title of Solicitation	Solicitation Description	Issue Date	Due Date/Round	Funding Available	
1	BRRFI25-2	BESS Request for Information	Invites external stakeholders to review and comment on a series of questions related to NYSEERDA's Build-Ready Program's role in the energy storage market through Request for Information (RFI) BRRFI25-2. The Build-Ready Program advances renewable energy and energy storage projects on underutilized land, such as brownfields, landfills, and abandoned or existing commercial and industrial sites.	4/24/2025	5/21/2025	RFI	
2	BRRFP25-1	Build-Ready Program DG RFP	Enables qualified applicants to submit proposals for the purchase of three Distributed Generation Solar PV projects located in Niagara County, New York. Proposals will be reviewed in accordance with the criteria and processes described in NYSEERDA RFP BRRFP25-1. Transfer to the Awardee(s) would be through Membership Interest Purchase Agreement(s) (MIPA). The Awardee(s) would complete development, design and engineering, secure required interconnection and permitting approvals, state and federal incentives, and potentially finance, procure major equipment, construct, own and operate the Project(s) depending on the extent of proposed activities.	7/2/2025	8/27/2025	NA	
3	ISCRFP25-1	Long-Term Contracts to Purchase Index Storage Credits (ISCs)	Procures Index Storage Credits (ISCs) from bulk energy storage projects that meet the eligibility requirements described in NYSEERDA's Request for Proposals (RFP) ISCRFP25-1. This RFP will be implemented through a two-step process, Step One Eligibility Application and Step Two Bid Proposal.	7/28/2025	9/4/2025	NA	
4	ISCRFI25-1	Request for Comments - Draft Bulk Storage RFP	Invites external stakeholder review and comment on the Draft RFP, Draft Bulk Energy Storage Program Manual, Draft Standard Form Agreement, and Draft Appendix A: Incremental Economic Benefits Eligibility for the first NYSEERDA competitive solicitation for Index Storage Credits (ISCs), ISCRFP25-1.	5/13/2025	5/29/2025	NA	
5	RESRFP25-1	Purchase of New York Tier 1 Eligible Renewable Energy Certificates	Procures Tier 1 eligible Renewable Energy Certificates (RECs) from Bid Facilities that meet the eligibility requirements described in NYSEERDA's Request for Proposals (RFP) RESRFP25-1. This RFP will be implemented through a two-step process, Step One Eligibility Application, Step Two Bid Proposal.	9/26/2025	10/21/2025	NA	
6	RFP 23	Community Decarbonization Fund	NY Green Bank's RFP 23 for the Community Decarbonization Fund invites regulated and unregulated financial entities (including but not limited to community development financial institutions (CDFIs), insured credit unions and depository institutions, and not-for-profit corporations that perform lending activities) deploying capital into clean energy and sustainable infrastructure and related small businesses that benefit disadvantaged communities (DACs) in New York State to submit proposals for NY Green Bank capital at concessionary rates.	4/28/2023	12/31/2027	\$250,000,000.00	
7	RFP 3928 - Rd6	Buildings of Excellence Competition	The Buildings of Excellence Competition (the Competition) seeks proposals for multifamily demonstration projects that will be clean and resilient, beautiful, and functional, and will provide healthy, safe, comfortable, and resilient living spaces for their occupants. The Competition aims to accelerate the design, development, construction, and operation of multifamily buildings that will meet or exceed the minimum energy performance identified in this RFP and integrate co-benefits for occupants, such as controlled and healthy indoor air quality, as well as exceptional comfort. Successful proposers will demonstrate how their projects will be profitable for the developers and owners and demonstrate realistic cost reductions in the design and construction of clean and resilient buildings.	6/17/2025	9/17/2025	Up to \$15,000,000	
8	RFP 4120	Commercial & Industrial Carbon Challenge 2025	Selected projects are eligible to receive up to \$1,500,000 in direct funding as well as	5/19/2025	7/31/2025	Funding Available: Up to \$10 million available	
9	RFQL 4922	Disadvantaged Communities (DAC) Consultant Pool	NYSEERDA is seeking to expand the existing pool of qualified Community-Based Organizations (CBOs) and other entities, including Indigenous Nations and Indigenous-led Organizations, that represent New York State's disadvantaged communities (DAC), herein referred to "DAC Consultants." DAC Consultants participating in this pool will execute contracts with NYSEERDA to provide support across multiple programmatic areas, supporting teams with distinct, high-impact projects on an as needed basis.	8/21/2025	12/31/2030	No funding	

10	PON 5357	Building Operations and Maintenance Training	NYSERDA's Building Operations and Maintenance Workforce Training Program aims to reduce energy use and associated carbon emissions while saving building operators and owners money by developing and strengthening the skills of operations and maintenance (O&M) staff and managers across the state. The program is designed to equip building O&M workers with the skills to operate increasingly energy-efficient, grid-flexible, and electrified building systems that reduce buildings' contribution to climate change.	6/29/2023	12/31/2025	\$4,800,000 Available	
11	PON 5547 Cat 1, 2, 4	Heat Recovery Project Development - Categories 1,2,& 4	The NYSERDA Heat Recovery Project Development Program (the "Program") aims to animate the New York State (NYS) marketplace for heat recovery solutions by working with consulting engineers, heat recovery solution providers, building owners and operators, and other key stakeholders to develop a robust pipeline of heat recovery retrofits. To accelerate heat recovery retrofit project development, the Program provides cost-share to Applicants for four categories of activities	10/18/2023	11/17/2025	\$27,000,000 Available	
12	PON 5547 Cat 3 Demonstration	Heat Recovery Project Development - Category 3 Demonstration	The NYSERDA Heat Recovery Project Development Program (the "Program") aims to animate the New York State (NYS) marketplace for heat recovery solutions by working with consulting engineers, heat recovery solution providers, building owners and operators, and other key stakeholders to develop a robust pipeline of heat recovery retrofits. To accelerate heat recovery retrofit project development, the Program provides cost-share to Applicants for four categories of activities	8/12/2024	11/7/2024	\$27,000,000 Available	
13	RFQL 5548	New York State Flexible Energy Technical Analysis	This solicitation will establish a pool of consulting firms qualified to provide NYSERDA with diverse technical, energy, economic, and environmental analytical capacity, some of which may be requests for support services on short notice.	9/8/2023	12/31/2026	NA	
14	PON 5614	Large-Scale Thermal	The Large-Scale Thermal program ("the Program") supports the design of large single building and multiple building projects, including thermal energy networks, that serve as replicable examples for significantly reducing greenhouse gas emissions (GHG) from heating, cooling, and hot water in buildings, using approaches that are clean and resilient, minimize energy consumption, maximize energy recovery, and offer an equitable approach to building decarbonization. The Climate Action Council Scoping Plan identified large-scale thermal solutions, such as thermal energy networks, as an important pathway to scale up zero-emission heating and cooling in buildings.	6/12/2024	9/26/2024	Up to \$10 Million Available	
15	☐ PON 5739	Clean Mobility Program	Helps communities launch/expand innovative zero-emission transportation options that can help reduce reliance on personal vehicles. The New York State Clean Mobility Program (NYSERDA PON 5739) will fund projects that will help overcome persistent transportation challenges, especially in underserved communities, and improve access to affordable zero-emission transportation options. Under this PON, Planning and Demonstration Tracks will offer technical assistance and implementation funding to local governments, transit operators, community-based organizations/non-profits, and local employers or groups of employers in New York State.	6/21/2024	9/25/2025	\$21,600,000 Available	
16	PON 5765	Building Better Homes Program	The Building Better Homes Program is intended to expand the capacity of builders and developers to construct and market zero emissions (all-electric) single-family homes and townhomes, with enhanced support available for homes that will rely on geothermal systems to support space conditioning and domestic hot water production. For the purposes of this Program, zero emissions homes are defined as newly constructed and exceptionally energy-efficient homes that will not use fossil fuels for any purpose other than for emergency back-up electricity generation.	10/23/2024	12/31/2025	\$10,000,000 Available	
17	RFQL 5885	BOOST NY Business Consultant	Establishes a pool of qualified Business Consultants with expertise working with residential Trade Contractors. This program is seeking experienced consultants specializing in advertising, lead generation, workforce development, financial records management, sales training, customer relationship management, and operations to support residential Trade Contractors of HVAC and weatherization services in achieving their business growth goals.	6/17/2025	8/26/2025	NA	
18	RFQL 5906	Multifamily Residential Energy Pathways Participating Contactor Network	Establishes a network of highly qualified firms who work directly with developers, building owners, and their representatives to plan and implement energy efficiency and beneficial electrification projects for Multifamily Residential programs including forthcoming Inflation Reduction Act Home Energy Rebates.	11/26/2024	12/31/2029	No funding.	

19	PON 5907	Clean Heat for All: Packaged Terminal Heat Pump Program	Through this solicitation NYSEDA is seeking product development proposals from innovative heat pump equipment manufacturers. Up to \$1,250,000 is available per awarded product proposal. Funding will support product development and field demonstration of high-efficiency, cold climate rated Packaged Terminal Heat Pumps (PTHPs) designed to retrofit or replace Packaged Terminal Air Conditioners (PTACs), hydronic cabinet PTACs and through-the-wall air conditioners. These heat pumps will provide the New York State market with widely applicable, room-based heating and cooling decarbonization solutions.	11/27/2024	8/6/2025	Up to \$10,000,000 Available	
20	RFP 5913	Flexible Technical Assistance (FlexTech) Consultants Statewide Services	Seeking consultants with experience providing energy engineering technical support. Consultants capable of providing technical analysis, design, and other professional services such as commissioning, and construction management related to energy projects are encouraged to apply.	2/27/2025	5/5/2025	NA	
21	PON 5924	New York State Energy Efficiency and Conservation Block Grant Program	The New York State Energy Efficiency and Conservation Block Grant Program (EECBG) is designed to advance significant building decarbonization efforts and generate expanded knowledge on public retrofit projects to develop solutions to common problems in municipal-owned buildings. The goals of this program are to increase energy efficiency and to reduce energy costs of operating municipally owned buildings in New York State. Through a first-come first-served open application process, NYSEDA will award five municipalities \$603,273.60 per award.	6/26/2025	8/4/2025	\$3,016,368.00	
22	RFQL 5937	Through Wall Heat Pump Demonstration Program	The New York State Energy Research and Development Authority (NYSEDA) is accepting applications from multifamily building owners, managers, or operators for their buildings to become Qualified Demonstration Sites for the Clean Heat for All: Packaged Terminal Heat Pump Program. This RFQL is intended to qualify multifamily buildings of at least (5) apartment units located in New York State, with existing through-wall openings suitable for Packaged Terminal Heat Pump installation, who can host a demonstration project with a manufacturer awarded under PON 5907 by the 2026 Heating Season (December 2026).	7/18/2025	10/30/2025	No funding	
23	RFP 5942	Operations & Maintenance Support Services for the State Licensed Disposal Area	The New York State Energy Research and Development Authority seeks proposals for providing the West Valley Site Management Program (WVSMP) with a broad range of operational and maintenance services at the Western New York Nuclear Service Center (WNYNSC) including expertise, equipment, and materials needed to conduct operations, maintenance and emergency response support services at the State-Licensed Waste Disposal Area (SDA), and on the undeveloped areas of the WNYNSC.	4/30/2025	6/9/2025	NA	
24	RFI 5946	Advanced Nuclear Request for Information	This will be a five-year contract that is expected to start on or about January 1, 2026.	11/15/2024	12/31/2025	Solicitation	
25	RFQL 5959	Quality and Market Standards Services	The New York State Energy Research and Development Authority (NYSEDA) is re-issuing this solicitation to establish a pool of qualified service providers to develop and implement quality initiatives in support of several NYSEDA programs and clean energy technologies. Qualified Proposers will work with the NYSEDA Quality and Market Standards team to conduct field inspection and desk review services, implement existing and upcoming standards (technical, installation, data and quality standards) and deliver market-based quality assurance solutions.	2/18/2025	4/1/2025	\$7,475,000.00 Available	
26	PON 5963	Electric Vehicle (EV) Managed Charging	Helping to drive improvements to accommodate widespread adoption of clean energy resources across New York State, investments in Electric Vehicle Managed Charging are needed. Up to \$4 million is available in Program Opportunity Notice (PON) 5963 to promote product developments and demonstrations, as well as support innovative solutions specific to vehicle interoperability challenges.	7/8/2025	9/16/2025	Up to \$4,000,000 Available	
27	RFP 5965	Electric School Bus Transition Support Contractor	NYSEDA seeks one consultant or team of consultants to support NYSEDA with a range of work relating to electric school buses over a three-year period. The consultant(s) will be tasked with project management and helping NYSEDA collect market data, develop public-facing reports, and conduct stakeholder engagement to inform NYSEDA's work to increase the adoption of electric school buses in New York State.	3/27/2025	5/14/2025	\$1,000,000 Available	

28	PON 5982	Enabling Innovative Clean Energy Building Solutions	Funds demonstrations of innovative solutions for buildings in New York State that will address one of five innovation topic areas: Building Envelope, Clean Heating and Cooling, Intelligent Grid-interactive Building Controls, Low-GWP Refrigerant Applications and Leak Detection, and Thermal Storage . This funding targets solutions developed through prior government or foundation funding that advanced the solutions for demonstration.	3/12/2025	6/4/2025	Up to \$5 Million Available	
29	RFI 5985	Clean Fuels R&D and Pilot	Solicits information from entities either already pursuing, or interested in pursuing, a potential role in low-carbon fuels technology development in New York. The Request for Information (RFI 5985) will help to support considerations, such as focus areas, requirements, eligibility, for next steps New York State may take as it relates to releasing a competitive solicitation. Potential respondents include stakeholders interested in low-carbon fuel production technologies, including but not limited to those working on technology research and development, project developers, financing/funding entities and other supply chain entities.	3/28/2025	5/30/2025	No funding.	
30	PON 5989	Empire Building Challenge: Hospitals	Through this competitive solicitation, eligible hospitals can request up to \$5 million for the construction and installation of scalable, efficient, low-carbon solutions such as electrification of building systems, electrification readiness projects, and comprehensive energy efficiency projects that will achieve significant carbon and/or energy reduction.	3/10/2025	8/14/2025	NA	
31	RFP 6002	General Contractor Services	Seeks proposals to provide general contracting services for a tenant improvement commercial office space build out at 1333 Broadway, New York.	8/4/2025	8/26/2025	NA	
32	PON 6004	Residential and Retail Energy Storage Market Acceleration Incentives Program	The Residential and Retail Energy Storage Market Acceleration Incentives Program provides financial incentives for the installation of new grid-connected distributed energy storage systems by participating contractors. Incentives are structured as fixed-rate incentives per kWh of system energy capacity, and are available on a standard offer first-come, first-served basis.	4/22/2025	12/31/2030	\$675,000,000 Available for Retail Energy Storage Incentive Program \$100,000,000 Available for Residential Energy Storage Incentive Program	
33	RFP 6009	NYSERDA Building Cleaner Communities Competition	Program Description: The purpose of this program is to support the design and installation of commercial, light industrial, and institutional projects to operate at carbon neutral or net zero energy performance. The program is designed to target projects that align with the Region's or the State's economic development and energy priorities, and offers the customer phased incentive payments. The Building Cleaner Communities Competition is offered as a competitive program for exemplary, highly replicable, and resilient carbon neutral or net zero energy projects. Building Cleaner Communities Competition supports projects in two categories for facility-level or community-level carbon neutral or net zero energy performance. Eligible Types of Applicants: Commercial Facilities, Food Processing Facilities, Breweries, Distilleries, Public and Private K-12 schools, Colleges and Universities, Healthcare Facilities, Agricultural Facilities, Municipalities (Local Government), State Agencies & Other State Government, Not-for-profit Corporations, Private Developers, Mixed Use, Warehouse and Distribution Facilities	5/20/2025	7/31/2025	Funding Available: \$15 million	
34	RFP 6010	NYSERDA Evaluation Services	NYSERDA seeks a single contractor or a lead contractor with a team of subcontractors to conduct clean energy program evaluations for each of the following distinct categories of programs: Category A: Market Development and Deployment (MD&D) Evaluation Category B: Innovation and Research (I&R) Evaluation Anticipated evaluation activities include but are not limited to market characterization and market effects assessment, indirect and direct impact assessment, and process evaluation. While core evaluation methods and approaches may apply across both categories of programs, the evaluation of the MD&D and I&R categories of programs have notable differences and require specialized evaluation approaches.			*Maximum funding available: \$38 Million Category A: Market Development and Deployment: \$26.6 Million Category B: Innovation and Research: \$11.4 Million	

35	RFP 6013	Investment Banking and Underwriting Services	The New York State Energy Research and Development Authority (NYSERDA) requests proposals from firms interested in providing investment banking and underwriting services. The contract term is anticipated to be five years. NYSEDA will consider firms with an underwriting practice whose scope is either national and/or focused on the Northeast region. Firms must either be New York State (NYS)-certified minority-and women-owned business enterprises or must partner with a NYS-certified minority-and women-owned business enterprises as a Co-Senior Manager.	5/28/2025	7/30/2025	NA	
36	RFP 6015	Innovation Sponsorship	Provides sponsorship to organizations that strengthen New York State's energy innovation ecosystem through established programs that support product development and commercialization, industry collaboration, equitable access to energy and energy innovation, and accelerate market adoption.	5/22/2025	7/17/2025	\$ 1,000,000 Available	
37	RFI 6016	Residential and Retail Energy Storage Inclusive Storage Incentives	The purpose of this Request for Information is for the New York State Energy Research and Development Authority (NYSERDA) to share draft program rules with stakeholders for the Inclusive Storage Incentive and obtain responses on specific program design questions. These incentives support deployment of residential and on-site retail (distributed commercial-scale) energy storage projects benefiting disadvantaged communities.	5/13/2025	6/3/2025	No Funding is Associated with this RFI	
38	PON 6021	Developing Maritime Vessels to Transport Hydrogen at Scale	The New York State Energy Research and Development Authority (NYSERDA) announced that up to \$4.7 million is available through Program Opportunity Notice (PON) 6021 to support the development of innovative maritime vessels for bulk hydrogen transport. This funding will advance maritime vessel solutions optimized specifically for efficient and cost-effective short- to medium-distance maritime transport of hydrogen within New York State. The competitive solicitation, offered through NYSEDA's Hydrogen and Clean Fuels Program, seeks qualified proposers to design, develop, and validate maritime-based hydrogen transportation technologies.	7/9/2025	10/1/2025	Up to \$4.7 million Available	
39	☐ RFI 6024	☐ Inform Climate Change Impacts and Adaptation Research Planning	Solicits input from interested stakeholders across the State to inform the NYSEDA Environmental Research Program in developing a Research Plan for the topics of climate change impacts, adaptation, and resilience. This Request for Information (RFI 6024) will help NYSEDA gain information on research needs and information gaps that will inform the Research Plan and assist with local, county and state climate change planning and response.	6/2/2025	7/31/2025	NA	
40	RFP 6026	Statewide Commercial Building Stock Study (CBSS)	NYSEDA seeks a contractor or team of contractors to conduct a statewide assessment of commercial and institutional building stock in New York. Both on-site and virtual methods will be used to collect data related to building characteristics, energy use, and energy consuming equipment.	7/22/2025	8/27/2025	Maximum funding available: \$8,000,000	
41	RFP 6029	New York's Innovation Ecosystem Strategy	Seeks a contractor or team of contractors to assist NYSEDA with developing strategies and recommending future investments and programs to increase the effectiveness of New York State's energy innovation ecosystem. These strategies and recommendations will underpin the advancement of new technologies and the acceleration of market adoption.	6/25/2025	7/21/2025	Up to \$ 900,000	
42	RFP 6030	Atlantic Sturgeon Population & Habitat Use to Inform Infrastructure Improvement	Helps to determine a multi-year record of Atlantic sturgeon presence to inform regulatory decision making associated with energy projects within the greater New York City region. NYSEDA seeks proposals for RFP 6030 to support an effort to negotiate one contract for acoustic receiver deployment, Atlantic sturgeon tagging, vessel use, data collection and management, receiver loss and data integrity, and data sharing and communication to achieve this goal.	7/9/2025	9/30/2025	Up to \$ 1,000,000	
43	PON 6031	Waste to Low-Carbon Fuels Pilot and Demonstration	The New York State Energy Research and Development Authority (NYSEDA) announces the availability of up to \$7.8 million to support pilot and demo-scale projects that convert in-state waste into low-carbon fuels. This solicitation aims to identify viable waste-to-fuel pathways to decarbonize hard-to-electrify sectors such as aviation, maritime, heavy-duty transportation, industry, and low-capacity factor firm resources , and to support future scale-up and commercialization of these technologies.	8/20/2025	1/22/2026	Up to \$7.8 million Available	
			Revised Solicitations				

	Solicitation No.	Title of Solicitation	Solicitation Description	Issue Date	Due Date/Round	Funding Available	
44	NYT-VIP	The New York Truck-Voucher Incentive Program	Helps fleet owners in New York State afford clean vehicle technologies that are quiet, efficient and do not emit harmful pollutants or carbon. NYTVIP provides point-of-sale vouchers to fleet owners that purchase or lease zero emission Class 3-8 vehicles, non-road equipment, and transit buses. Information about how fleets, dealers, and manufacturers can participate in NYTVIP can be found in the Implementation Manual.	9/23/2019	12/31/2029	\$53 million is available	
45	PON 2112	NY-Sun Residential/Nonresidential Incentive Program	The NY-Sun Program provides cash incentives for the installation of new grid-connected electric photovoltaic (PV) systems for residential and nonresidential sites completed by Contractors and Builders. Incentives are granted on a first-come, first-served basis, and PV project applications will be accepted through December 31, 2030, or until funds are fully committed, whichever comes first. Total incentives available are subject to change.	4/24/2017	12/31/2030	NA	
46	PON 3082	NY-Sun Commercial / Industrial Incentive Program	The NY-Sun Program provides cash incentives for the installation by Contractors of new grid-connected electric photovoltaic (PV) systems that range from 750kW to 7.5MW in the Upstate region. Incentives are granted on a first-come, first-served basis and PV project applications will be accepted through December 31, 2030, or until funds are fully committed, whichever comes first. Total incentives available are subject to change.	4/21/2017	12/31/2030	NA	
47	PON 3298	Clean Energy Communities - Program	The Clean Energy Communities Program provides grants, direct technical support to communities, and recognition to local governments that demonstrate leadership in the area of clean energy. □ Local governments are critical partners in achieving a new energy vision for New York State.	6/2/2023	12/31/2025	\$25,000,000 Available	
48	PON 3701	On-Site Energy Manager Program	PON 3701 seeks applications from facilities interested in participating in the On-site Energy Manager Program to demonstrate how a dedicated On-site Energy Manager can improve a company's profitability by delivering energy, process, and operational improvements. The Program targets commercial, industrial, and multifamily facilities or campuses that do not have an existing, full-time or part-time, dedicated energy manager on-site.	11/9/2017	12/31/2025	40,976,072.00	
49	RFP 3928 - D	Buildings of Excellence - Early Design Support	Customers must show a desire to continue the role beyond the Program engagement and must be willing to share results and lessons learned to further the Program's objective of increasing the penetration of energy managers at commercial, industrial, and multifamily facilities.	8/18/2023	11/14/2025	\$1,000,000.00	
50	PON 3981	Energy Efficiency and Clean Technology Training	NYSERDA is seeking proposals for training initiatives focused on advancing skills and preparing workers for jobs in New York's energy efficiency and clean technology industry. Funding is available for proposals that meet the requirements of one or both of two categories: (1) Training for Existing Workers and Individuals in Formal Training Programs; (2) Career Pathways for New Workers/New Entrants in Clean Energy.	5/18/2023	11/18/2025	\$10,000,000.00	
51	RFQL 4145	Clean Energy Training Services	NYSERDA is looking to establish a pool of contractors qualified to deliver training, develop curriculum and/or training tools, and provide market expertise and/or other services related to clean energy workforce development and training. Qualified contractors will have experience in one or more of the following categories: energy efficiency, renewable electric power generation, grid modernization and energy storage, alternative transportation, renewable fuels, or other related areas. In addition, NYSERDA also seeks contractors with experience developing certifications/credentials and reaching underserved populations who encounter barriers to accessing training and jobs in the clean energy sector.	7/10/2019	10/31/2025	NA	
52	PON 4192	FlexTech Program	The Flexible Technical Assistance (FlexTech) Program supports New York State commercial, industrial, institutional, and multifamily customers who pay into the Systems Benefit Charge by providing a cost-share for credible, objective technical assistance services, such as energy audits, that help businesses make more informed energy decisions.	11/27/2019	12/31/2030	NA	

53	PON 4378	Loan Loss Reserve to Catalyze Clean Energy Financing in NYS Communities	The New York State Energy Research and Development Authority (NYSERDA) requests applications from entities for Loan Loss Reserve/Credit Enhancement support for financing products which support clean energy improvements in residential (1-4 unit) dwellings, small commercial (100 employees or less), not-for-profit and multifamily (5+ unit) buildings (Eligible Properties) located in New York State Communities. Coverage is also provided for support for electric vehicles including school bus, medium and heavy-duty truck via Terminal Rental Adjustment Clause (TRAC) leasing.	7/31/2020	12/31/2025	\$10,000,000.00	
54	PON 4701	Low Carbon Pathways for Multifamily Buildings	The New York State Energy Research and Development Authority (NYSERDA) Low Carbon Pathways for Multifamily Buildings program provides financial support to install low carbon energy efficiency upgrades. Through the program, affordable and market-rate multifamily building owners/property managers can take a step-by-step approach toward upgrades that achieve deep carbon reductions and electrification throughout a building over time by leveraging existing capital improvement milestones (e.g. equipment end of life, local law compliance, etc.).	7/9/2021	12/31/2025	Up to \$33.7M available	
55	RFP 4815	Outside Counsel Services	Provide outside legal services related to two new categories of legal issues -- Clean Energy Labor Law and Federal Energy Law. These new categories supplement and do not replace the categories under which proposals were solicited and awarded in the prior issuance of this RFP 4815.	7/2/2021	2/26/2025	NA	
56	RFQL 5312	Charge Ready NY 2.0 Equipment and Network Qualification Process	The New York State Energy Research and Development Authority (NYSERDA) is issuing this RFQL to establish a list of Level 2 electric vehicle (EV) charging equipment (EVSE) and networks that will be eligible for incentives under the upcoming revised Charge Ready NY 2.0 Program (Program). Under the Program, interested site owners will be able to receive incentives for the installation of eligible charging equipment. Charging station vendors will submit applications to determine eligibility of one or more models of charging equipment. Charging network operators will submit applications to have information about their network, and which charging equipment it is compatible with, listed as part of program materials. Information about eligible equipment models and network solutions will be listed on the NYSEDA webpage for prospective charging station owners to view. Eligible equipment must meet the program requirements described below.	2/27/2023	2/31/2025	No funding will be awarded through this RFQL	
57	PON 5367	Charge Ready NY 2.0	The Charge Ready NY 2.0 Program (Program) is an incentive program designed to accelerate the deployment of Level 2 electric vehicle charging equipment in New York State. By increasing the use of electric vehicles and electric vehicle charging stations, this program benefits New York State by reducing harmful emissions and the transportation sector's dependence on petroleum. The New York State Energy Research and Development Authority (NYSERDA) developed the Program to provide incentives that reduce the cost of purchasing and installing eligible Level 2 charging equipment for use in New York State.	7/19/2023	12/31/2026	The Program is offering \$12 million in funding for incentives. No summary document.	
58	PON 5456	Catalyze Clean Energy Financing for Decarbonization in New York State Communities	NYSERDA requests applications from financial companies applying under the Department of Energy (DOE), Loan Program Office (LPO) Title 17 Program for State Energy Financing Institution (SEFI) investment support for financing products which support clean energy improvements.	9/12/2023	12/30/2026	\$20,000,000.00	
59	PON 5552	New York School Bus Incentive Program	The New York School Bus Incentive Program (NYSBIP) is a voucher incentive program to accelerate the deployment of zero-emission school buses and associated charging infrastructure throughout New York State using funds allocated by the 2022 Clean Water, Clean Air, and Green Jobs Environmental Bond Act (Bond Act). More information about how fleets, dealers, and manufacturers can participate in NYSBIP can be found at the NYSBIP website.	11/29/2023	12/30/2030	No summary document.	

60	PON 5566	Climate Justice Fellowship Plus	NYSERDA, with support from U.S. Representative Alexandria Ocasio-Cortez, of New York's 14th congressional district, is pleased to announce the Climate Justice Fellowship Plus Program is now available and is fully funded by the U.S. Department of Labor. The Climate Justice Fellowship Plus Program (CJF Plus) is a \$3 million pilot program to advance climate justice in the Bronx and Queens. The CJF Plus Program will provide wage subsidies for eligible non-profit organizations to hire individuals for two-year climate justice Fellowships. The Program will also provide supportive services and/or professional development to Fellows throughout their employment.	7/1/2024	2/12/2025	\$2,100,000.00	
61	PON 5859	Appliance Upgrade Program- Application for Retailer Enrollment	NYSERDA is currently seeking approval from the DOE to administer the Appliance Upgrade Program (Program) under HEAR that will provide incentives to income-eligible owners and renters (Customers) of single- and multi-family residential buildings in New York State for a pre-defined list of measures supporting energy efficiency and electrification improvements (Qualified Electrification Projects, QEP). Subject to approval of the Program by the DOE, NYSERDA intends to offer these prescriptive rebates to Customers at or below 150% State's Area Median Income (AMI). The formula grant amount to NYS is \$158.4 Million through 2031, with a portion of the total formula grant used for the Program.	8/30/2024	12/31/2026	NA	
62	PON 5944	Hydrogen Fuel Cell-Based Firm Capacity and Industrial Application Design	The New York State Energy Research and Development Authority (NYSERDA) announced \$3.7 million is available to support hydrogen fuel cell-based power generation design in two phases. The funding will advance innovative hydrogen fuel cell-based solutions for dispatchable zero-emission peaking power plants or power generation to support industrial manufacturing processes in New York State. The competitive solicitation offered through NYSERDA's Advanced Fuels and Thermal Energy Storage Program seeks qualified proposers to design viable configurations for hydrogen-fuel based resources.	6/9/2025	10/6/2025	Up to \$3.7 million Available	
63	PON 5984	Energy Storage Technology and Product Development	Stimulating and growing energy storage solutions in New York State by making up to \$10.85 million available, NYSERDA has issued Program Opportunity Notice (PON) 5984. This funding will support innovative and under-utilized advanced, next-generation battery (all durations) and long duration energy storage solutions, devices, software, controls, and other complementary technologies that decrease energy storage total hardware and installation costs, improve performance, and demonstrate integration with the power grid.	5/22/2025	8/11/2025	UP TO \$10.85 MILLION AVAILABLE	
Note:		Only revised Solicitations with substantial changes/or monetary changes are listed.					

Responses Due: May 21, 2025, by 3:00 PM Eastern Prevailing Time

I. Background

NYSERDA's Build-Ready Program is developing renewable energy and energy storage projects on under-utilized land such as **existing or abandoned commercial sites, brownfields, landfills, former commercial or industrial sites and dormant electric generation**. NYSERDA identifies and de-risks difficult project sites to make them "build-ready" for private renewable energy developers to ultimately construct and operate.

By statute, Build-Ready has the authority to develop energy storage projects, is prohibited from competing with the private sector, and is prohibited from developing projects on agricultural lands.

For more information on the Build-Ready Program visit the program's webpage:

<https://www.nysERDA.ny.gov/All-Programs/Build-Ready-Program>

II. Purpose

Given the Program's mandate and restrictions, **the purpose of this Request for Information (RFI) is to invite external stakeholders to review and comment on a series of questions related to Build-Ready's potential role in the battery energy storage (BESS) market**. The RFI will help the program determine:

- What value the Build-Ready Program can bring to the energy storage market.
- Which sites and development tasks the Program should prioritize.
- How far the Program should take sites through development.
- When the program should auction the sites via a competitive Request for Proposals (RFP).

To help inform RFI responses, the Build-Ready Program is providing some ideas on the potential value it could bring to the energy storage market. This experience comes from several years of originating and developing solar PV projects in New York and could include:

- Identify, screen, and share viable sites with energy storage developers to review. In the Program's screening efforts, Build-Ready reviews the overall site characteristics (e.g., wetlands, slope, topography, etc.), estimated buildable area, injection and withdrawal capability, interconnection viability, the presence of BESS moratoria and permitting viability, and the potential project economics, among other factors.
- Based on feedback from the energy storage market, Build-Ready can prioritize sites to develop or not to develop and which development tasks to complete.
- Competitively auction sites that make it through Build-Ready's development process via an RFP to energy storage developers. Depending on how far Build-Ready develops the site(s), the Program could include an Index Storage Credit (ISC) contract as part of the RFP. Proposers would

bid to purchase the project(s) from Build-Ready and receive payment for ISCs once the project is operating. In this scenario Proposers would not be required to participate in a separate competitive ISC solicitation for their project(s).

III. Submission Instructions

Comments responding to this RFI are due by May 21, 2025, at 3 p.m. ET, and must be sent to build-readyauction@nyserda.ny.gov with the subject line “BRRFI25-2 Comments” and marked as confidential where applicable. NYSERDA may reach out to respondents to seek clarifications.

Any questions about this RFI or requests to discuss this RFI should be directed in writing to build-readyauction@nyserda.ny.gov. NYSERDA may at its sole discretion at any time also elect to engage in discussions with potential respondents and interested parties regarding the matters described in this RFI.

NYSERDA does not intend to publish responses to this RFI. **However, if you wish for your responses to remain confidential, please mark them “Confidential” or “Proprietary,” in accordance with the procedure described below.** If NYSERDA receives a request from a third party for responses received that have been marked “Confidential” or “Proprietary,” NYSERDA will process such request under the procedures provided by New York State’s Freedom of Information Law (FOIL), as detailed below. The FOIL provides exceptions to disclosure, including Section 87(2)(d), which provides for exceptions to disclosure of records or portions thereof that “are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise.” Information submitted to NYSERDA that the disclosing party wishes to have treated as proprietary and confidential trade secret information should be identified and labeled “Confidential” or “Proprietary” on each page at the time of disclosure. This information should include a written request to exempt it from disclosure, including a written statement of the reasons why the information should be exempted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501. Contact foil@nyserda.ny.gov for additional information.

IV. Questions for Stakeholder Feedback and Content of Response

Please see the [Appendix A. Build-Ready BESS RFI Response Template](#) to review the questions and provide responses.

Responses should be submitted on the [Appendix A. Build-Ready BESS RFI Response Template](#). Responses should be concise and focus on areas in which the respondent has a particular interest or expertise.

Responses need to include all the basic information requested in Part A of the response template. NYSERDA reserves the right not to review or consider responses that do not include all the basic details requested in Part A of the response template.

V. General Conditions

The information gathered by NYSERDA will be advisory only and is not binding on NYSERDA or any other state agency, office, commission, or public authority. Responses will become the property of NYSERDA. Any actions recommended by NYSERDA will be subject to all applicable laws, including procedural, regulatory, and environmental review requirements.

This RFI is neither a contract offer nor a request for proposals and does not commit NYSERDA to award a contract, pay any costs incurred in preparing a response, or to procure or contract for services or supplies. Respondents are encouraged to respond to this RFI; however, failure to submit a response will not impact a Respondent's ability to respond to any future competitive solicitation process (if any) for projects, influence the selection of a service provider going forward, or affect its rights and obligations under any applicable laws or in any legal proceeding. NYSERDA reserves the right to discontinue or modify the RFI process at any time, and makes no commitments, implied or otherwise, that this process will result in a business transaction or negotiation with one or more Respondents. All costs associated with responding to this RFI will be solely at Respondents' expense.

**Proposals Due:
August 27, 2025 at 3PM ET**

PART 1. RFP OVERVIEW

The New York State Energy Research and Development Authority (NYSERDA) Build-Ready (BR) Program is soliciting Proposals to competitively select one or more awardees to purchase three solar PV Projects listed below and further described in this Request for Proposals (RFP), all of which are located in Niagara County, NY:

- **BR Vincent Welch** (BR Project 9 LLC): A 5 MW AC solar PV project on the site of the former Griffin Manor housing complex in the City of Niagara Falls, NY adjacent to the historic Love Canal site. The housing complex was demolished during the Love Canal clean up and remediation. NYSERDA has been working closely with the City of Niagara Falls to develop the site for the solar PV project.
- **BR Witmer 1** (BR Project 11 LLC) & **BR Witmer 2** (BR Project 10 LLC): Two 5 MW AC solar PV projects co-located on the Niagara County Refuse Site bisecting the Town of Wheatfield and the City of North Tonawanda, NY. While operational from 1969-1976, the landfill took in municipal, industrial solid, and chemical waste, and is currently closed and capped.

Proposers can submit a Bid Price for each project that they wish to purchase. Note: this could include the entire portfolio, BR Vincent Welch only or BR Witmer 1 and BR Witmer 2 only. BR Witmer 1 & BR Witmer 2 must be purchased together and cannot be split.

BR Project 9 LLC, BR Project 10 LLC and BR Project 11 LLC (each a “Project Company” or collectively, the “Project Companies”) will ultimately be transferred to the awardee(s) through Membership Interest Purchase Agreements (MIPAs or Agreements). A MIPA will be required for each Project Company. The awardee(s) will complete development, design and engineering, secure required interconnection and permitting approvals, state and federal incentives, and potentially finance, procure major equipment, construct, own and operate the Project(s) depending on the extent of proposed activities.

Project specific factsheets and documents can be found in Appendix 4 & Appendix 5.

PART 2. SUBMISSION REQUIREMENTS & SCHEDULE

2.1 SUBMISSION REQUIREMENTS

Proposers should rely only on information provided in this RFP and any associated written updates posted on [NYSERDA’s Build-Ready Program DG RFP \(BRRFP25-1\) Funding Opportunity webpage](#) when preparing Proposals. Each Proposer shall be solely responsible for and shall bear all costs incurred in the preparation of its Proposal and/or participation in this RFP.

The submission of a Proposal will constitute a binding offer to contract under the terms of the Agreement(s); such offer must remain open for a period of at least one hundred and eighty (180) days from the Proposal deadline.

Proposals must be received by NYSERDA via electronic submission through Salesforce at the link included in this RFP by 3 p.m. Eastern Time on August 27, 2025. Late, faxed, hand delivered and emailed RFP responses will not be accepted. Incomplete proposals may be subject to disqualification. It is the Proposer's responsibility to ensure that all required forms and attachments have been completed and submitted. Proposers **will not** have an opportunity to refresh or restate submissions after the bid submission deadline. NYSERDA reserves the right to contact Proposers with questions or clarifications regarding the proposal.

Mailed packages containing paper submissions will be accepted with advance notice to NYSERDA. RFP responses will not be accepted by hand delivery at any NYSERDA location.

Each Proposer has sole responsibility for reviewing this RFP and all attachments hereto and for investigating and informing itself with respect to all matters pertinent to this RFP.

NYSERDA reserves the right, in its sole and absolute discretion, to: A) reject any or all Proposals; B) require another round of Proposals; C) cancel, modify or withdraw the entire RFP; amend the RFP specifications to correct errors or oversights, or to supply additional information, as it becomes available; D) waive minor technicalities/informalities; and E) request Best and Final Offers (BAFOs) from all Proposers. Proposers should not assume that NYSERDA will in fact request BAFOs.

Communication on procurements can be made only to designated contact persons. The Department's Designated Contacts for this Procurement are: Amanda Wyckoff at (518) 862-1090, ext. 3257 or by e-mail Amanda.Wyckoff@nyserda.ny.gov or Brian Gyory at (518) 862-1090, ext. 3455 or by e-mail Brian.Gyory@nyserda.ny.gov for technical questions and James Cowman at (518) 862-1090, ext. 3652 or jim.solicitations@nyserda.ny.gov for contractual questions. All Proposers should be familiar with the legal prohibitions against certain types of contacts during government procurements set forth in State Finance Law Section 139-j. In accordance with that law, contacting anyone other than the Designated Contacts (either directly by the Proposer or indirectly through a lobbyist or other person acting on the Proposer's behalf) in an attempt to influence the procurement: (1) may result in a Proposer being deemed a non-responsible offeror, and (2) may result in the Proposer not being awarded a contract.

2.2 QUESTIONS AND ANSWERS

Proposers may submit comments and questions on the RFP to build-readyauction@nyserda.ny.gov until Wednesday, July 23, 2025. Answers to comments and questions received will be posted on [NYSERDA's Build-Ready Program DG RFP \(BRRFP25-1\) Funding Opportunity webpage](#) on or before August 6, 2025.

2.3 MIPA COMMENTS

Proposers must submit comments on the MIPA using Appendix 6 to build-readyauction@nyserda.ny.gov by Wednesday, July 23, 2025. Comments submitted after July 23, 2025, will not be reviewed, or considered.

2.4 NOTIFICATIONS OF RFP CHANGES

Notifications of any changes in the RFP process or documents will be posted on [NYSERDA's Build-Ready Program DG RFP \(BRRFP25-1\) Funding Opportunity webpage](#). Prospective Proposers are encouraged to check the webpage frequently to be advised of any RFP changes or other news.

The terms and conditions of this RFP may, at any time, be changed, postponed, withdrawn, and/or canceled, including any requirement, term or condition of this RFP, without any liability to NYSERDA.

2.5 SCHEDULE

Activity	Date
RFP Release Date	July 2, 2025
Deadline for Submission of Questions & MIPA comments	July 23, 2025
RFP Addendum/Response to Questions Posted (if issued)	August 6, 2025
Deadline for Proposal Submission	August 27, 2025 at 3PM ET
Expected Award Notification	September 26, 2025
Deadline for Execution of Agreement (See Section 4.6)	60 calendar days from awardee receipt of project specific draft Agreements

PART 3. PROPOSAL REQUIRED DOCUMENTS

This section of the RFP describes the required proposal documents. Proposers can also use this section as an RFP checklist. Please note, when uploading the Proposal documents to Salesforce (see Appendix 7: Proposer Submission Guide), each required document is a separate upload slot. For ease of Proposal submission, Proposers may want to consider drafting each section in a separate word document. The name of each file must be less than 80 characters long. The character limit applies when files are compressed into a zip file as well.

3.1 BID PROPOSAL & APPENDIX 1

☐ Appendix 1 Part 1: Project Team

Proposer must fill out the worksheet labeled “Part 1” in the Appendix 1 Proposer Submission Form. Proposers must include the name of the firm, key contact information, address, website, relevant certifications or recognition, and identify their role in the Project(s).

Relevant examples of firm-wide certifications or recognitions should be included such as North American Board of Certified Energy Practitioners (NABCEP) Company Accreditation or an Approved NY-Sun Commercial & Industrial Contractor.

The Project Team roles could include: (i) develop, design and engineer the proposed Project(s), including completing required interconnection and permitting approvals, (ii) secure financing and

state and federal incentives, (iii) procure major equipment (e.g., main power transformers, PV modules, inverters, racking), (iv) construct, and (v) own and operate the Project(s).

In the case of a Proposer that focuses on earlier stage development and transfers Project(s) before completion, there should be a clear delineation of which roles they will complete, and which will become the responsibility of the future owner. Proposers that plan to complete early-stage development and transfer the Project(s) at any stage before operation must provide additional detail on their development and transfer process in the Execution Plan. Such Proposers may provide early-stage development work for their Project Experience & References and Project Team Description sections.

☐ Project Team Description

Proposers must provide a narrative description of the Project Team. This additional information is to be limited to no more than three (3) pages. If the Project Team is comprised of more than one entity, then the Proposer shall provide a clear description of the proposed Project Team's organization and specific roles each entity will play in the Project(s).

Note: if the Proposer intends to sell Project(s) prior to construction and operation and does not have Project Team members that will manage the construction and operation of the project, then this must be disclosed in the Project Team description.

Project Teams that can complete the development, design, engineering, and construction of the Project(s), as well as ownership and operation, including obtaining required interconnection and permitting approvals, securing financing and state and federal incentives, and procurement of major equipment will be scored more favorably.

☐ Organizational Chart and/or Partnership Structure

An Organizational Chart must be provided. If Proposers are partnering with multiple organizations a Partnership Structure must be provided. It should demonstrate the relationship among the various Project Team organizations responsible for each of the areas that they will complete: (i.) develop, design and engineer the proposed Project(s), including completing required interconnection and permitting approvals, (ii.) secure financing and state and federal incentives, (iii.) procure major equipment (e.g., main power transformers, PV modules, inverters, racking), (iv.) construct, and (v.) own and operate the Project(s).

The Organizational Chart and/or Partnership Structure must also show the corporate structure of each Project Team organization, including any subsidiaries and their intermediate and ultimate parents (this corporate structure can be shown on a separate chart for each organization if needed). It should be clear which organization is the primary organization responsible for the Proposal, and who will be the main point of contact with NYSERDA (the "Authorized Representative"), as identified in Appendix 1 Part 1.

☐ Letter of Intent to Team

Teaming is permitted under this solicitation. If teaming, a non-binding letter must be submitted by each organization within the project team. The letter should be on organizational letterhead, stating

each party's intent to team, the role of the project team member, and signed by an Authorized Representative of each respective organization.

☐ Key Personnel

This section should identify the Project Team's key personnel that will be primarily working on the Project(s), their respective role in the Project(s), and a short biography. This additional information is limited to no more than two (2) pages. Resumes are optional, will not be scored, and are not included in the Key Personnel page count. If resumes are included, please add them as an Appendix to the Proposal.

Key personnel should highlight any individual certifications or recognitions including, but not limited to NABCEP PV Installation Professional Certification, IBEW- NECA Electrical Journeyman & Apprentice Training, UL PV System Installer Certification, etc.

3.2 PAST PROJECT EXPERIENCE & REFERENCES

☐ Appendix 1 Part 2: Past Project Experience & References

Proposers must fill out the Appendix 1 worksheet labeled "Part 2-Proj Exp, Ref, HCB" Proposers must provide at least 3 past projects. The information provided should clearly demonstrate relevant experience in the roles filled within the project. This could include development, design and engineering, constructing, owning and operating distributed generation (DG) scale solar PV projects ideally greater than 1 MW, experience with obtaining interconnection and permitting approvals, securing financing and state and federal incentives, and procuring major equipment for such projects.

Proposers will be scored more favorably that demonstrate experience in:

- All areas of project development, bringing projects into operation, and owning projects.
- Projects similar to the those outlined in this RFP in terms of size, setting, and site characteristics.
- New York State.

Proposers must provide at least 3 references for projects that they have worked in the Appendix 1 "Part 2" worksheet. The references should be personnel within the local authority having jurisdiction (AHJ). AHJ references may be part of a project already provided in project experience or host community benefits, or they can be from different projects.

☐ Appendix 1. Part 2: Past Host Community Benefit Examples

Proposers must fill out the Appendix 1 worksheet labeled "Part 2-Proj Exp, Ref, HCB." Proposer must provide at least three past project host community benefit examples. Proposers must provide a description of the past host community benefits and the dollar value. Host community benefit examples may be part of a project already provided in project experience or may be for a different project. Proposers who demonstrate providing significant host community benefits in previous projects will be scored more favorably.

3.3 PROJECT EXECUTION PLAN

☐ Project Execution Plan

Proposals must include a step-by-step plan and schedule to complete development, design and engineering (including required interconnection and permitting approvals), secure financing and state and federal incentives, procure major equipment, and construct and operate the Project(s). If the Proposer intends to sell the Project(s) prior to construction and/or operation, the Proposer is required to explain their process for doing so and how they will ensure the successful construction and operation of the Project(s) by the new owner. Proposers should identify potential project risks and how they will be addressed in relation to each section below. The Project Execution Plan should include:

- **Development Plan:** Discuss the remaining development milestones and explain the steps the Proposer will take to secure all remaining regulatory approvals including interconnection, permitting, PILOT Agreement, and Host Community Benefit Agreement. Proposers should discuss how they plan to comply with the [Niagara County Solar Panel Recycling Local Law](#).
- **Preliminary Engineering, Procurement, and Construction Plan:** Discuss the Proposer's approach to Engineering, Procurement and Construction (EPC). If the Proposer intends to sell the Project(s) prior to construction, the Proposer is required to explain their process for doing so and how they will ensure the successful construction and operation of the Project(s) by the new owner. If the Proposer intends to subcontract the construction, the Proposer is required to explain their process for doing so and how they will ensure a high-quality EPC partner is selected.
- **Community Engagement & Host Community Benefits Approach:** Outline the Proposer's approach to community engagement and development of the eventual Host Community Benefit Agreement(s).
- **Financing and Incentive Plan:** Explain the Proposer's plan for securing financing for development, construction, and operation of the Project(s). Describe the Proposer's plan to secure state and federal incentives/adders. Proposers that have previously used the proposed financing approach and successfully secured state and federal incentives will be scored more favorably.
- **Schedule:** Provide a schedule that includes expected completion of development, design and engineering (including required interconnection and permitting approvals), secure financing and state and federal incentives, procure major equipment, and construct and operate the Project(s). If the Proposer intends to sell the Project(s) prior to construction and/or operation, the schedule shall include all items to be completed by the Proposer and a timeline for eventual transfer.
- **Decommissioning Plan:** Provide a plan for responsibly decommissioning the Project(s) at the end of its useful life, including identification of the party(ies) responsible for decommissioning. The plan should include defined conditions upon which decommissioning will be initiated (e.g., end of land lease, no operation for 12 months, prior written notice to facility owner, etc.) and the timeframe for completion of decommissioning activities. The plan should include a discussion of required steps to remove the system to

comply with the Niagara County Solar Recycling Local Law¹, and to restore the land to its original state. If the Proposer intends to sell the Project(s) the plan should discuss the Proposer's approach to disclosing the decommissioning requirements for the Project(s) to a new buyer.

3.4 BID PRICE & INTERCONNECTION COST REIMBURSEMENT

☐ Appendix 1 Part 3: Project Bid Price Form

Proposers must fill out the Appendix 1 worksheet labeled "Part 3-Project Bid Price Form". Proposers should submit prices on each project that they wish to purchase. Please note BR Witmer 1 (BR Project 11 LLC) & BR Witmer 2 (BR Project 10 LLC) must be purchased together and cannot be split. Proposers should note which Project(s) they would like to bid in the column next to the Project name.

If awarded, the Project(s) total bid price will be due at the time of closing. Please see Article 2, Sale of Interests and Closing, of the MIPA for more information.

Interconnection Cost Reimbursement

The awardee must reimburse NYSEDA for all interconnection costs NYSEDA has incurred as a condition of closing and transfer, in addition to payment of the Bid Price. Please see Article 5, Closing Obligations, of the MIPA for more information.

The estimated interconnection costs for each project are summarized in Table 1 below. Please see Appendix 4, BR Vincent Welch CESIR 1.0 and Appendix 5 BR Witmer 1 CESIR 1.0 and BR Witmer 2 CESIR 1.0 for more details on the estimated interconnection costs and requirements. Proposers should note that both distribution and substation upgrades are required to interconnect the proposed BR Vincent Welch solar project (see BR Vincent Welch CESIR 1.0 in Appendix 5). As discussed in the project's CESIR and New York's Standard Interconnection Requirements, DG interconnecting customers are required to fund in total or participate in a cost-share for major substation upgrades with the utility (e.g. 3VO).

NYSEDA has paid the 25% distribution system upgrade payments for the three projects including the required pro-rata share of the BR Vincent Welch substation cost share payment. It is expected that the remaining 75% distribution system upgrade payments for the three projects will be paid by NYSEDA on or near October 1, 2025. The remaining substation system upgrade cost for the BR Vincent Welch project will need to be paid by the awardee to National Grid should they choose to forego the cost share option and instead fund the balance of cost.

¹ https://www.niagaracounty.gov/Document_center/Department/S-Z/Solar/Solar-Law.pdf

Table 1. Project Interconnection Costs Estimates & Payments by NYSERDA

Project	CESIR Estimate	Payment 1 (25% Payment & Pro Rata Share of Substation Cost Share Upgrades for BR Vincent Welch; Paid by NYSERDA 6/10/25)	Payment 2 (75% due on or around 10/1/25)	Total Payments by NYSERDA to National Grid (Anticipated Amount to be Paid by Awardee to NYSERDA at Closing)	Remaining Payments due to National Grid (To be Paid by Awardee)
BR Vincent Welch*					
Distribution	\$939,534.00	\$234,883.50	\$704,650.50	\$939,534.00	\$0.00
Substation	\$850,087.00	\$133,665.68	\$0.00	\$133,665.68	\$716,421.32
BR Witmer 1					
Distribution	\$500,786.00	\$125,196.50	\$375,589.50	\$500,786.00	\$0.00
BR Witmer 2					
Distribution	\$874,725.00	\$218,681.25	\$656,043.75	\$874,725.00	\$0.00
Total	\$3,165,132.00	\$712,426.93	\$1,736,283.75	\$2,448,710.68	\$716,421.32

*BR Vincent Welch is subject to cost sharing for major substation upgrades based on the DG queued for this substation as of the date of the CESIR report. NYSEDA has opted to pay the pro rata share of the substation upgrades. Should the awardee choose to pay the full substation upgrades, additional funds would be due directly to National Grid (\$850,087 - \$133,665.68 = \$716,421.32).

3.5 PROPOSER CERTIFICATION FORM

☐ Appendix 2: Proposer Certification Form

The Proposer Certification Form must be signed by an authorized signatory for the Proposal to be considered complete.

3.6 FINANCIAL QUALIFICATIONS

☐ The financial information provided by the Proposer must include information on the company, any parent company or any subsidiaries that will be involved in the project or are part of the project team including: (i.) audited consolidated financial statements or audited financial statements for the most recently ended fiscal year and (ii.) draft unaudited consolidated financial statements or unaudited financial statements through the most recent fiscal year quarter.

Financial information must be prepared in accordance with Generally Accepted Accounting Principles (GAAP).

3.7 MEMBERSHIP INTEREST PURCHASE AGREEMENT (MIPA)

The form MIPA is provided in Appendix 3. Although each Project will have its own MIPA and Schedules, NYSEDA is providing one form MIPA with draft schedule information for each project.

For the actual executed MIPA for each project, only schedule information pertaining to such project will be included. NYSERDA recommends that Proposers review the MIPA and all associated Exhibits and Schedules prior to submitting a Proposal.

Except as specifically provided in the MIPA, the membership interests in the Project Company(ies) and associated assets will be sold “AS IS” without any representations or warranties. Proposers should have the required level of sophistication, knowledge, and experience in financial and business matters in order to evaluate the merits, risks, and suitability of entering into the MIPA, and consummating the acquisition of the membership interests in the Project Company(ies).

Note that NYSERDA has not made an Entity Classification Election under IRS Form 8832 for the Project Companies. In accordance with Treasury Regulations section 301.7701-2, each Project Company is automatically, without affirmative election by NYSERDA, treated as a corporation for U.S. federal income tax purposes. Proposers should consult with their legal and tax advisors concerning any requirement to make an Entity Classification Election after its acquisition of the membership interests of the Project Company(ies) should the Proposer’s Proposal be awarded under this RFP.

3.8 MIPA COMMENTS (OPTIONAL)

☐ Proposers may submit comments, which may include requested edits, to specific provisions of the MIPA. Comments to the MIPA must be submitted using the template provided in Appendix 6: MIPA Comments, by July 23, 2025 (the due date for questions and MIPA comments listed in Schedule of this solicitation). Depending on the comments received, NYSERDA may issue an RFP Addendum that will include a revised MIPA.

Competitive procurement rules and the Build-Ready Order limit NYSERDA’s ability to alter the terms of the Agreement(s). NYSERDA reserves the right to negotiate the MIPA after award, but no material changes will be considered.

3.9 REQUIRED STANDARD FORMS

Executive Order No. 16 Certification

☐ [Executive Order No. 16 Certification](#). This is a required upload in the Salesforce portal (Step 4 of 6) and applicants must upload the signed Executive Order No.16 before the Proposal can be submitted.

Pursuant to Executive Order No. 16 (EO 16) issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA’s sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to EO 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

A Certification Under EO 16, as published by the Office of General Services and available here: <https://ogs.ny.gov/EO-16>, must be submitted for the Proposer as part of the Proposal.² If the Proposer is a joint venture, all joint venture participants must submit an EO 16 Certification.

Executive Order No. 192 Certification

☐ Executive Order No. 192 Certification: NYSERDA's Vendor Responsibility Checklist. Disclosure of Prior Findings of Non-Responsibility questions will be asked as part of the standard checklist questions in the application portal. In the case of any yes response the Executive Order No. 192 Certification will be required. As per Executive Order 192, NYSERDA is required to do business only with responsible entities. As a result, a Vendor Responsibility Review will be conducted for all BRRFP25-1 Proposers. Proposers are required to complete NYSERDA's [Vendor Responsibility Checklist](#).³ The Vendor Responsibility Checklist requires that the Proposer answer a series of questions regarding the Proposer, and the directors, employees and agents of Proposer and any affiliate of Proposer with respect to: (i.) current investigation(s) by any governmental agency; (ii.) convictions or established liability for any act prohibited by State or Federal law in any jurisdiction involving conspiracy, collusion or other impropriety with respect to offering on any contract; or (iii.) any debarment action (detail any exceptions), within the last four (4) years.

All Proposers shall disclose any indictment for any felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a Proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment, investigation, enforcement proceeding, or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

The Vendor Responsibility Checklist will also include the Proposer's attestation regarding the accuracy and truthfulness of the information and documentation provided by the Proposer. The NYSERDA Build-Ready Program team will review the responses to the Vendor Responsibility

² Also available at: <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/FO/Standard-Forms-and-Agreements/Executive-Order-No-16-Certification.pdf>.

³ <https://portal.nyserda.ny.gov/servlet/servlet.FileDownload?file=00P8z000003EWOUA4>

Checklist and reserves the right to make a determination of vendor responsibility if a non-responsibility concern is noted.

PART 4.0 EVALUATION OF PROPOSALS

4.1 BID EVALUATION

Following submission, Proposals will first be examined for completeness and adherence to BRRFP25-1 requirements. NYSERDA may contact Proposers with questions or clarifications regarding the Proposal.

Proposals that are complete and meet the BRRFP25-1 requirements will be reviewed by a scoring committee using the evaluation criteria described below.

4.2 NON-PRICE EVALUATION

Proposals will first be evaluated on the non-price evaluation criteria presented below. Proposals must score at least 15 out of 30 points for the Proposer Qualifications and Experience and at least 15 out of 30 points for the Project Execution Plan to move on to price scoring. Proposals that meet this non-price score threshold will move on to price scoring, and the Bid Price will be opened and scored.

Proposer Qualifications & Experience (30 points)

Section	Evaluation Criteria
Appendix 1 Part 1: Project Team	Form completeness and clarity of roles. Team-wide certifications, recognitions, or accreditations.
Project Team Description	Narrative provided. Clarity of organizational description and roles. Clarity of roles that Proposer will be completing. Proposers that can complete all areas from the development to operation will be scored more favorably.
Organizational Chart and/or Partnership Structure (if applicable)	Organizational chart included. Clarity of relationships and responsibilities of project teams/organizations. Clarity of roles Proposer will provide from development to operation. Corporate structure included, clearly defined. Proposers that will complete all aspects of development to operation will be scored favorably.
Key Personnel	Key personnel provided with roles and short biographies. Individual certifications provided.
Project Experience	Form completeness, projects demonstrate Proposer experience. Areas with demonstrated experience from development through operation. DG scale solar projects represented. Project examples similar to the projects in this RFP. NY State DG scale project experience.
Project References	References from local AHJs provided.
Past Host Community Benefits	Form completeness. Significant community benefits provided on past projects will be scored more favorably.

Project Execution Plan (30 points)

Section	Evaluation Criteria
Development Plan	Quality and detail of plan. Clarity of milestones and steps. Identification of risks and mitigation strategies. Description of compliance with Niagara County Solar Recycling Law.
Preliminary EPC	Quality and detail of plan. Identification of risks and mitigation strategies. Defined roles for EPC or clear plan to subcontract EPC, or clear plan to sell project prior to construction.
Community Engagement and Host Community Benefit Approach	Quality of approach to engage the community and develop host community benefits.
Financing and Incentive Plan	Well defined plan to secure financing. Previous experience using the proposed financing approach and successfully securing state and federal incentives will be scored more favorably.
Schedule	Comprehensiveness of plan. Clearly defined milestones and or steps to transfer. Achievability. Support of Bid Proposal.
Decommissioning Plan	Clarity and level of responsibility demonstrated. Understanding of Niagara County Solar Recycling Local Law and land restoration requirements. In the case of sale, clarity of disclosure to a new owner.

During the non-price evaluation and at NYSERDA's discretion, the scoring committee may reach out to Proposers with clarifying questions or to request an interview to address any potential questions or clarifications. Proposers will be notified if they are requested to respond to clarifying questions or attend an interview.

PROPOSALS THAT DO NOT ULTIMATELY MEET THE NON-PRICE THRESHOLD WILL NOT MOVE INTO PRICE SCORING, AND THE PROPOSAL WILL BE REJECTED.

4.3 PRICE EVALUATION

Bid Price (40 Points)

Bid Prices will be evaluated using a formula that (1) awards more points for higher bid prices and (2) puts more weighting towards proposals that include the full portfolio of three projects. NYSERDA reserves the right to award projects as a portfolio or individually.

Bid Prices will be allocated price points in relation to the highest Bid Price on a pro rata basis and factored for the total number of projects included in the Proposer's Submittal. The following formula will be used for scoring Bid Prices:

$$\text{Bid Price Points} = 40 \text{ points} \times \left(\frac{\text{Proposer Bid Price}}{\text{Highest Bid Price}} \right) \times \left(\frac{\# \text{ of projects in the Proposer's Submittal}}{3} \right)$$

4.4 PROPOSER SELECTION

The Proposals will be ranked based on total scores from highest to lowest using the evaluation criteria presented above. The Proposal with the highest total score will be selected for initial award. If the Proposal with the highest total score includes all three projects in its Proposal (BR Vincent Welch, BR Witmer 1 and BR Witmer 2), the evaluation will conclude, and this Proposal will be selected for the initial award.

If the highest scoring Proposal does not include all three projects, NYSERDA may exercise its right to award the remaining project(s) individually. In this instance, NYSERDA would use the same process as discussed above. It will rank the remaining proposals for the individual projects from highest to lowest score and award the Proposal with the highest total score. NYSERDA will continue this process until all projects that were bid on are awarded.

NYSERDA will notify the awardee(s) of the award through the Proposer's Authorized Representative via email and may also provide notification via phone call or videoconference. The date upon which NYSERDA provides such email notification shall be the Award Notification Date. Once selected for an award, the awardee must negotiate a final version of the Agreement(s) with NYSERDA. NYSERDA will also inform Proposers who are not selected for award. Upon receipt of this notification, a Proposer may request to schedule a debrief on the selection process and the strengths and weaknesses of its Proposal by contacting build-readyauction@nyserda.ny.gov.

4.5 CONFIDENTIALITY OF AWARD

The awardee(s) shall not distribute any press release or contact the media until after the Agreement(s) are executed by all parties and any New York State and/or NYSERDA press releases regarding the award have been issued. Upon Award NYSERDA will require any awardee to execute a Non-Disclosure Agreement (NDA) covering the award notification and execution of the Agreement(s). If the awardee wishes to contact the press regarding the award, the awardee must do so in accordance with the terms of the NDA, with NYSERDA's written approval, and must collaborate with NYSERDA's Build Ready Team and the Director of Communications to prepare any press release and/or to plan for any announcement.

4.6 PROVISION OF AGREEMENTS FOR EXECUTION

After NYSERDA provides the awardee(s) with notice of award, NYSERDA will prepare a conformed draft of each project-specific Agreement ("Conformed Draft"), which will be delivered to each applicable awardees, in a manner to be agreed upon, for the awardee's execution and return. The awardee must execute the Agreement(s) within sixty (60) calendar days following the date on which NYSERDA provides the Conformed Draft to the awardee ("Execution Deadline"). If the awardee fails to execute the Agreement by the Execution Deadline, NYSERDA may rescind the award and may then issue an award to the next highest-scoring Proposer. If NYSERDA rescinds the award, the Proposer may be ineligible to participate in one or more future NYSERDA Build-Ready solicitations.

NYSERDA and the awardee will work together in good faith to expediently finalize the Agreement(s), making edits only to the extent reasonably necessary to clarify and properly implement the substance and intent of the RFP and form Agreement.

NYSERDA agrees to respond to any comments from the awardee within 5 business days of receipt, and to the extent NYSERDA exceeds this prescribed timing for response, the Execution Deadline will be extended day for day by the length of NYSERDA's lateness. Awardee is responsible for arranging any and all necessary approvals (e.g. board or investment committee approval) as necessary to meet the Execution Deadline.

In the event that NYSERDA provides an execution version of the Agreement less than 10 business days prior to the Execution Deadline, the Execution Deadline will automatically be extended to the date that is 10 business days following the date that NYSERDA provides the Proposer with the execution version.

NYSERDA reserves the right to publish the Agreement(s) executed with the awardee, including relevant terms within the Agreement(s). Prior to such publication, NYSERDA will redact any critical electric infrastructure information contained in the Agreement(s), if any, including in the exhibits thereto, and will consider requests to redact confidential business information; provided, however, that NYSERDA will not entertain any request to redact price information contained in the Agreement(s).

5.0 GENERAL CONDITIONS

NYSERDA may include conditions and/or contingencies to address matters concerning any issues NYSERDA deems relevant regarding the awardee's Proposal.

5.1 MATERIAL CHANGES TO PROPOSAL/AGREEMENT TERMS

NYSERDA will not make material adjustments to the Agreement(s) or accept any change to the bid price after the deadline for proposal submission. Any Proposer awarded under BRRFP25-1 that does not execute the Agreement(s) may be barred from future participation in Build-Ready Solicitations.

5.2 PROPRIETARY INFORMATION

Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the Proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

5.3 STATE FINANCIAL LAW SECTION 139-J AND 139-K

NYSERDA is required to comply with State Finance Law Sections 139-J and 139-K. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the Proposer has been found non-responsible under Section 139-J of the State Finance Law within the previous four years).

5.4 TAX LAW SECTION 5-A

NYSERDA is required to comply with the provisions of Tax Law Section 5-A, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department.

The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

5.5 OMNIBUS PROCUREMENT ACT OF 1992

It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

5.6 PUBLIC OFFICERS LAW

For any resulting awards, the awardee and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Joint Commission on Public Ethics, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any

state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

The awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Joint Commission on Public Ethics, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Joint Commission on Public Ethics. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

5.7 DUE DILIGENCE

NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an Proposal and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with Proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the scoring committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for Proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the Proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with Proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal.

5.8 LIMITATION

This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Agreement. NYSERDA reserves the right to disqualify Proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in making of the award.

5.9 DISCLOSURE REQUIREMENT

The Proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a Proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, but before execution of the MIPA, NYSERDA may cancel the award. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

5.10 VENDOR ASSURANCE OF NO CONFLICT OF INTEREST OR DETRIMENTAL EFFECT

The Proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the Proposer or former officers and employees of NYSERDA, in connection with Proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The Proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

6.0 APPENDICES

APPENDIX 1: PROPOSER SUBMISSION FORM

APPENDIX 2: PROPOSER CERTIFICATION FORM

APPENDIX 3: DRAFT MIPA

APPENDIX 4: BR VINCENT WELCH PROJECT INFORMATION AND DOCUMENTS

- Real Property. *Note: NYSERDA is currently working with the landowner to modify and assign the MOU. NYSERDA will update this RFP if this document is executed prior to the proposal due date.*
 - Letter of Intent (LOI)
 - Memorandum of Understanding (MOU)
 - Title Report

APPENDIX 6: MIPA COMMENTS

APPENDIX 7: PROPOSER SUBMISSION GUIDE

**Request for Proposals (RFP) No. ISCRFP25-1
Long-Term Contracts to Purchase Index Storage Credits (ISCs)
RFP Release Date: Monday, July 28, 2025**

Step One Eligibility Applications Due:

September 4, 2025, by 3:00 p.m. Eastern Time (ET)

Step Two Bid Proposals:

Non-Price Submission Due: December 11, 2025, by 3:00 p.m. ET

Price Submission Due: January 29, 2026, by 3:00 p.m. ET

The New York State Energy Research and Development Authority (NYSEDA) seeks to procure Index Storage Credits (ISCs) from Projects that meet the eligibility requirements described in this Request for Proposals (RFP or ISCRFP25-1).

ISCRFP25-1 will be implemented through a two-step process, consisting of:

1. Step One Eligibility Application: A qualifying step through which the Proposer must provide evidence that the Project is eligible to create ISCs and other general information about the Proposer and the Project.
2. Step Two Bid Proposal: A competitive Bid Proposal step, solicited in two Phases, through which NYSEDA will: (1) examine each Bid Proposal to determine that the Project and Proposer meet the Minimum Eligibility Thresholds; and (2) for Bid Proposals that meet those requirements, a competitive evaluation based on price and non-price evaluation.

Only those Projects found eligible under Step One will be permitted to submit a Step Two Bid Proposal. Only those Proposals found to have met all Minimum Eligibility Thresholds will be evaluated under Step Two.

Step One Application: Step One Applications must be **received by NYSEDA by 3:00 p.m. ET on Thursday, September 4, 2025, via electronic submission on the [solicitation website](#)**. NYSEDA uses Accion to solicit bids via the [solicitation website](#); all references to the [solicitation website](#) refer to the Accion application and bid submission portal. NYSEDA staff will be available to support Proposer inquiries regarding Step One Eligibility Applications prior to the deadline. Applications may be submitted electronically by following the link for electronic submissions found on [NYSEDA's Bulk Energy Storage webpage](#) or [NYSEDA's Current Funding Opportunities website](#), located in the "Current Funding Opportunities" section of NYSEDA's website at that time.

NYSEDA intends to notify all prospective Proposers who submitted a Step One Eligibility Application as to their eligibility status by **Thursday, September 18, 2025**. Eligible Proposers will receive a Notice of Qualification and will be provided with detailed instructions for submitting a Step Two Bid Proposal.

Step Two Bid Proposal: Step Two Bid Proposals will be solicited in two Phases: A Non-Price Phase and Price Phase. The Non-Price Submissions must be **received by NYSEDA by 3:00 p.m. ET on Thursday, December 11, 2025, via electronic submission on the [solicitation website](#)**. The Price Submissions must be **received by NYSEDA by 3:00 p.m. ET on Thursday, January 29, 2026, via electronic submission on**

the [solicitation website](#). Instructions for submitting electronically and the link for electronic submissions will be included in a Proposer's Notice of Qualification.

NYSERDA recommends that Proposers set aside ample time, well in advance of each deadline, to gather the required information and documentation and to understand the requirements to complete the above processes. NYSERDA recommends that Proposers mark any commercially sensitive materials as "Confidential" or "Proprietary" in any submission made to NYSERDA pursuant to this RFP. Further information regarding confidentiality is set forth in Section 8.1.

Each Proposer has sole responsibility for reviewing this RFP and all attachments hereto and for investigating and informing itself with respect to all matters pertinent to this RFP, including the NYISO's Open Access Transmission Tariff (OATT) and all applicable market rules.

All questions regarding ISCRFP25-1 must be directed to bulkstorage@nyserda.ny.gov.

NYSERDA reserves the right to conduct meetings with any Proposer, and any question posed to NYSERDA, as well as any response provided by NYSERDA to a Proposer, may be publicly posted on the [solicitation website](#). The Designated Contacts for ISCRFP25-1 are: Abigail Randall, Bram Peterson, Seth Dunn, Pawan Munshi, Ryan Hicks, Aaron Rudyan, Chris Miller, Alex Stein, Marci Brunner, and Georges Sassine.

All Proposers should be familiar with the legal prohibitions against certain types of contacts during government procurements set forth in State Finance Law section 139-j. In accordance with that law, contacting anyone other than the Designated Contacts (either directly by the Proposer or indirectly through a consultant or lobbyist or other person acting on the Proposer's behalf) to influence the procurement: (1) may result in a Proposer being deemed a non-responsible offeror, and (2) may result in the Proposer not receiving an award.

Proposers should rely only on information regarding ISCRFP25-1 provided in this RFP and any associated written updates posted on [NYSERDA's Bulk Energy Storage website](#) when preparing Bid Proposals. Each Proposer shall be solely responsible for and shall bear all costs incurred in the preparation of its Bid Proposal(s) and/or participation in this RFP.

Incomplete submissions will be subject to disqualification. It is the Proposer's responsibility to ensure that all required forms and attachments have been completed and submitted. Late Step One Eligibility Applications and Step Two Bid Proposals will not be accepted, and those lacking a completed and signed Step Two Bid Proposal may not be accepted. Faxed or e-mailed packages will not be accepted. Mailed packages containing paper submissions will be accepted with advance notice to NYSERDA. RFP responses will not be accepted by hand delivery at any NYSERDA location. Proposers will be notified by NYSERDA if any submitted Bid Proposals are deemed ineligible for failure to meet Minimum Eligibility Thresholds.

Bid Fees submitted for Bid Proposals deemed ineligible or for late or incomplete submittals will be returned to the Proposer, except in instances where a Bid Proposal is deemed ineligible after having undergone evaluation by the Scoring Committee. Proposers whose Bid Proposals are deemed ineligible on account of exceeding the Benchmark ISC cost, as described in Section 3.2.2, shall not be notified of such finding of ineligibility, nor will such Proposers be entitled to a return of their respective Bid Fees.

Acronyms and Definitions

Agreement – ISC Standard Form Agreement (SFA), provided in Attachment A, including Exhibits if applicable.

Alternate Bid Proposals – Option for Proposers to provide alternate information on the same Project. See Section 2.5 for more information on submitting Alternate Bid Proposals.

Applicable Law – All applicable provisions of all constitutions, treaties, statutes, laws (including the common law), rules, regulations, ordinances, and codes and any order, writ, injunction, decree, judgment, award, decision, or determination of any court of jurisdiction or any federal, state, municipal or other governmental department, commission, board, bureau, agency, authority or instrumentality, including the NYISO tariffs.

Applicable Zone – The NYISO load zone that includes the Delivery Point.

Authority Having Jurisdiction (AHJ) – The town(s) or city(ies) within which the Project is located.

Award Notification Date – The date upon which NYSERDA provides written confirmation to a Proposer indicating that a Project is the subject of a provisional award in the solicitation and has been selected for contract negotiations.

Base Proposal – The Bid Proposal submitted by a Proposer in response to this RFP, if submitted with Alternate Bid Proposal(s). The Base Proposal is equivalent to the Bid Proposal, and Alternate Bid Proposals provide specific and targeted changes from the Base Proposal. See Section 2.5 for more information on submitting Alternate and Base Bid Proposals.

Benchmark ISC Cost – The confidential maximum price levels for the ISC offers that will be applied for purposes of determining eligibility for award, as further described in Sections 2 and 3 of this RFP.

BESS – Battery Energy Storage System, including the container, battery cell pack, inverter, battery management system, power conversion system, energy management system, and cooling system.

Bid Energy Capacity – The energy capacity of the entire Project as bid into this RFP, measured in MWh. The Bid Energy Capacity must equal the product of Bid Power Capacity (MW) and Bid Storage Duration (hours).

Bid Power Capacity – The power capacity of the entire Project as bid into this RFP, measured in MW.

Bid Proposal – Documents submitted by Proposer in response to this RFP, also “Proposal.”

Bid Storage Duration – The ESS duration of the Project as bid into this RFP, in (integer) hours.

Capacity Accreditation Factor (CAF) – The Capacity Accreditation Factor for the CARC to which the Project has been assigned as determined by NYISO in accordance with the New Capacity Accreditation Rules.

Capacity Accreditation Resource Class (CARC) – The Capacity Accreditation Resource Class applicable to the Project as determined by the NYISO based on technology type and location under the New Capacity Accreditation Rules.

CES – Clean Energy Standard.

Climate Act – Climate Leadership and Community Protection Act.

COMD – Commercial Operation Milestone Date, as further defined in the Agreement.

Commercial Operation – A state of operational readiness of the Project under which (i) the Project has been mechanically constructed and interconnected, (ii) power capacity is available to physically store and discharge electric energy to the Delivery Point and qualify for the receipt of associated ISCs, and (iii) all rights, abilities, permits and approvals to schedule and deliver energy to the Delivery Point have been obtained.

Commercially Deployed – An energy storage technology that has been previously deployed beyond the pilot and demonstration stages and has entered and remained in commercial operation for at least 1 year.

Commission – The New York Public Service Commission.

Construction Activities – The physical activities associated with the construction of any on-site structure or civil site works including, but not limited to, the clearing, grubbing, grading, staging, installation, erection and placement of the Project and electrical interconnection, as well as start-up and commissioning of the Project.

Contract Delivery Term – The period commencing on the first day of the month after the month in which the Project commences Commercial Operation. The Contract Delivery Term shall extend for the term of the Contract Tenor.

Contract Security – Security delivered to NYSERDA by a Proposer for its provisionally awarded Project and its performance under the terms of the Agreement, in the form of cash, certified funds, or a Letter of Credit, as described in Section 15.01 of the Agreement.

Contract Tenor – The duration, in Contract Years, of the Contract Delivery Term, which will be set by the Proposer in its Bid Proposal, up to a maximum of 15 years for lithium-ion Projects and a maximum of 25 years for non-lithium-ion Projects.

Contract Year – A 12-month period commencing with the beginning of the Contract Delivery Term and each anniversary thereof during the Contract Delivery Term. The phrase “Contract Year” followed by a number shall refer to a discrete Contract Year within the Contract Delivery Term such that “Contract Year 1” refers to the first 12-month period commencing with the beginning of the Contract Delivery Term, “Contract Year 2” refers to the second such 12-month period, and so on.

DEC – New York State Department of Environmental Conservation.

Delivery Point – The generator bus or location where (a) the administrator of the wholesale power market or (b) the operator of the transmission/distribution utility, public authority or municipal electric company, measures or otherwise determines charging and discharging energy from the Project.

Disadvantaged Communities – Has the meaning established by the Climate Act in § 75-0101(5) of the New York Environmental Conservation Law. The Climate Act directs the [Climate Justice Working Group](#) (CJWG) to establish criteria for identifying disadvantaged communities. The CJWG finalized the disadvantaged communities criteria on March 27, 2023. Communities meeting the criteria can be identified with the map found on the [NYSERDA disadvantaged communities webpage](#) and a list of census tracts that meet the disadvantaged community criteria can be found on the [Climate Act Website](#) under the “Disadvantaged Communities Criteria Documents” section.

Disadvantaged Community Commitments – The commitments contained in the Proposer’s Bid Proposal and described in Section 6.10 of the Agreement.

DPS – New York State Department of Public Service.

Economic Benefits Start Date – December 28, 2022, the filing date of New York’s 6 GW Energy Storage Roadmap: Policy Options for Continued Growth in Energy Storage.

Effective Date – The date on which NYSERDA and the Seller enter into the Agreement, as defined in the Agreement.

EO 16 – Executive Order No. 16, Prohibiting State Agencies and Authorities from Contracting with Businesses Conducting Business in Russia, issued and effective March 17, 2022.

EO 192 – Executive Order No. 192, Imposing Continuing Vendor Integrity Requirements in State Contracts, issued and effective January 15, 2019.

ESS – Energy Storage System.

FDNY – New York City Fire Department.

FOIL – New York’s Freedom of Information Law, [Public Officers’ Law Article 6](#).

Full Notice to Proceed – An unequivocal authorization from the Seller, or its representative, to its general contractor (or in the event that there is no general contractor to all material third party contractors) to construct the entire Project (at a minimum of 80% of the Bid Power Capacity), as opposed to a limited notice to proceed with only a subset of the work such as site preparation and/or site civil work.

Incremental Economic Benefits – Incremental Economic Benefits are financial expenditures benefitting New York State within the categories specified in Section 4.4 that a Seller can demonstrate: (1) were incurred on or after the Economic Benefits Start Date, and (2) would not have accrued but for an award under a NYSERDA competitive solicitation to procure ISCs or in anticipation of the potential for such an award. Economic Benefits previously claimed with respect to a Project that are subject to a pending award under a previous solicitation or that are the subject of a current NYSERDA Agreement are not Incremental Economic Benefits.

ISCs – Index Storage Credits determined by the megawatt-hours (MWh) of a Project's Bid Energy Capacity deemed operational and available for discharge.

Key Permit – The key non-ministerial land use permit or approval by the applicable municipality for the development, construction, operation, and/or maintenance of the Project, which incorporates a determination under SEQRA. For Projects co-located with a renewable energy project proceeding seeking an ORES permit, the Key Permit is the ORES permit.

LDDES – Long-duration energy storage, defined as an 8- or more hour duration resource.

LSE – Load-Serving Entity.

Material Change – as defined in Section 5.4.

Monthly Availability Percentage – as defined in Section 3.2.1.iii.

MW – A megawatt of energy storage power capacity. The MW rating of an energy storage system reflects maximum power capacity or the maximum amount of power that the system can deliver instantaneously.

MWh – A megawatt-hour of electric energy. The MWh of an energy storage system reflects maximum energy capacity or the total amount of energy that the system can store over a period of time.

New Capacity Accreditation Rules – NYISO's tariff revisions to its Services Tariff to adopt a marginal capacity accreditation market design, approved by the Federal Energy Regulatory Commission (Docket No. ER22-772) on May 10, 2022.

New York Control Area (NYCA) – The control area that is under the control of the NYISO, which includes transmission facilities listed in the ISO/Transmission Owner Agreement Appendices A-1 and A-2, as may be amended from time to time.

New York Independent System Operator (NYISO) – Administrator of the wholesale power markets in New York and manager of the physical electrical operations of the NYCA.

NYGB – New York Green Bank.

NYS (or “the State”) – New York State.

OATT – NYISO’s Open Access Transmission Tariff.

OEM – Original Equipment Manufacturer.

Operational Certification – Verification by NYSERDA that the Project has been constructed and will operate in accordance with the Bid Proposal, as further defined in the Agreement.

Orders – December 13, 2018 Energy Storage Order (Case No. 18-E-0130, In the Matter of Energy Storage Deployment Program, “Order Establishing Energy Storage Goal and Deployment Policy,” issued and effective December 13, 2018), June 20, 2024 Energy Storage Order (Case No. 18-E-0130, In the Matter of Energy Storage Deployment Program, “Order Establishing Updated Energy Storage Goal and Deployment Policy,” issued and effective June 20, 2024), and March 21, 2025 Energy Storage Order (Case No. 18-E-0130, In the Matter of Energy Storage Deployment Program, “Order Approving Bulk Implementation Plan with Modifications,” issued and effective March 21, 2025).

ORES – New York State Office of Renewable Energy and Electric Transmission Siting, website is <https://dps.ny.gov/ores> and the regulations can be found at <https://dps.ny.gov/ores-regulatory-documents>.

Peaker Plant – or “Peaker,” combustion turbine that typically operates to maintain bulk power system reliability during the most stressful operation conditions, such as periods of peak electricity demand.

Peer Review – The peer review process as described in the Program Manual, whereby a Proposer or Seller’s proposed energy storage system will undergo a multi-step technical design review.

Prevailing Wage – Shall have the meaning set forth at, and be interpreted in accordance with, Section 18.09 of the Agreement.

Program Manual – NYSERDA’s Bulk Energy Storage Program Manual, available on the Bulk Energy Storage Program website.

Project – An electric storage facility that has been submitted by the Proposer for consideration in response to this RFP.

Proposer – The business entity that submits a Bid Proposal in response to this RFP.

Public Disclosure – As further described in Attachment J. Non-Disclosure Agreement, the date on which NYSERDA or its designee announces publicly that a Proposer’s proposal has been awarded.

QA Inspection – Quality assurance inspection in accordance with the Program Manual, which provides that after Peer Review approval is complete, QA Inspection will occur following the substantial completion of the energy storage project.

Reference Capacity Price – A price index used to approximate a Project’s capacity market revenues, based on NYISO Capacity Market prices for the Applicable Zone calculated as set forth in Section 4.01 of the Agreement. The RCP is calculated at the monthly level.

Reference Energy Arbitrage Price – A price index used to approximate a Project’s energy market revenues, based on NYISO hourly zonal day-ahead Locational-Based Market Prices, calculated as set forth in Section 4.01 of the Agreement. The REAP is calculated at both the daily and monthly level.

Reference Price – For any Settlement Period, the sum of the Reference Energy Arbitrage Price and the Reference Capacity Price for such period.

Roadmap – June 21, 2018, Energy Storage Roadmap (Case No. 18-E-0130, In the Matter of Energy Storage Deployment Program, “New York State Energy Storage Roadmap and Department of Public Service/New York State Energy Research and Development Authority Staff Recommendations”), and December 28, 2022 Energy Storage Roadmap (Case No. 18-E-0130, In the Matter of Energy Storage Deployment Program, “New York’s 6 GW Energy Storage Roadmap: Policy Options for Continued Growth in Energy Storage”).

Round-Trip Efficiency – The uniform round-trip efficiency assumption, reflected as a percentage, established in this RFP for the Project based on its technology and duration, as defined in Section 3.2.1.ii.

Scoring Committee (SC) – Members of NYSERDA staff, New York State Department of Public Service (DPS) Staff, and Independent Evaluators (outside reviewers who possess proficiency in the evaluation of energy storage projects) responsible for evaluating Bid Proposals received through this RFP.

Seller – The Proposer or other entity designated by an awarded Proposer that enters into the Agreement with NYSERDA to sell ISCs to NYSERDA pursuant to this RFP.

SEQRA – New York State Environmental Quality Review Act.

Settlement Period – A period of a calendar month for which a Monthly Settlement Payment is calculated.

Strike Price – The strike price per ISC offered by Proposer, from which the Reference Price is deducted as described in Section 3.2.1.i and as set forth in Schedule 1 of the Agreement.

Technology Readiness Level (TRL) – A measure of the maturity level of a technology. TRL8 indicates that the technology development is completed and qualified for commercial roll-out through pilot and demonstration projects. The technology has been proven to work in its final form and under expected conditions, and the full-scale system has been fully integrated into an operational environment.

1. Introduction: Energy Storage in New York

New York began establishing energy storage goals in 2018, with the State's first Energy Storage Roadmap¹, which developed recommendations for the New York State Energy Research and Development Authority (NYSERDA) and the Department of Public Service (DPS) to deploy 1,500 megawatts (MW) of energy storage by 2025. The Commission adopted many of the recommendations from the Roadmap in the *Order Establishing Energy Storage Goal and Deployment Policy*² in late 2018, including the expansion of the goal to deploy 3,000 MW of energy storage by 2030. This target was codified in the 2019 Climate Leadership and Community Protection Act ("Climate Act", "CLCPA").

In 2022, New York Governor Kathy Hochul announced a doubling of the 2030 energy storage deployment target in her *State of the State* address³. This nation-leading storage target, recommended in the Climate Action Council's Scoping Plan, called for deploying 6 gigawatts (GW) of energy storage by 2030, while maintaining the interim 1,500 MW by 2025 goal set by the 2018 Roadmap. To meet this accelerated timeline, Governor Hochul directed NYSERDA and DPS to update the State's Energy Storage Roadmap. In December of 2022, NYSERDA and DPS submitted the updated Energy Storage Roadmap⁴ with recommended policy actions to achieve the 6 GW energy storage goal. The 2022 Roadmap outlined a two-pronged approach to energy storage procurement. The first prong, addressed with this Request for Proposals (RFP), recommended to procure 3,000 MW of bulk energy storage projects with the creation of a new Index Storage Credit (ISC) mechanism. The second prong recommended that retail and residential storage programs also address the energy storage goal.

On June 20th, 2024, the Commission released the *Order Establishing Updated Energy Storage Goal and Deployment Policy*⁵. This Order adopted many of the recommendations from the updated Roadmap, including directing NYSERDA to conduct a minimum of three bulk energy storage procurements using the ISC mechanism. This RFP, ISCRFP25-1, is the first bulk energy storage procurement being released in accordance with the Commission's Orders and in pursuit of meeting New York's energy storage goals.

NYSERDA filed a Bulk Energy Storage Program Implementation Plan Proposal⁶ on October 18th, 2024, detailing NYSERDA's proposed approach to issuing bulk energy storage procurements. This plan was open for public comment and was ultimately approved with modifications⁷ by DPS on March 21, 2025. NYSERDA submitted the final Bulk Energy Storage Program Implementation Plan on April 18, 2025⁸. The final Bulk Energy Storage Program Manual, which details the technical requirements for quality assurance, measurement and verification, and fire safety that ISCRFP25-1 Awardees must follow, was filed with the Commission on June 12, 2025⁹.

1.1 Background on NYSERDA and NY Green Bank

NYSERDA was created in 1975 by the New York State Legislature as a public authority and public benefit corporation. As designated in the Energy Storage Order, NYSERDA must issue a minimum of three bulk energy storage solicitations. Through this RFP, NYSERDA intends to award long-term contracts that will purchase ISCs from energy storage projects when projects are operational and available for dispatch.

NY Green Bank (NYGB), a division of NYSERDA, is a specialized investment fund dedicated to bridging financial gaps in clean energy and renewable infrastructure markets in New York State (NYS). Working in collaboration with the private sector, its investments aim to advance the deployment of green technologies, accelerate energy efficiency, and mobilize private capital into key market sectors.

Where traditional lenders may see obstacles — such as unfamiliarity with asset classes, perceived uncertainty in revenue streams, and small transaction sizes — NY Green Bank identifies opportunities to propel the green economy in key sectors that include building decarbonization, clean transportation, and energy storage. By developing scalable, replicable financing models, NYGB aims to pave the way for increased private sector investment in NYS's energy market.

NY Green Bank is prepared to support project developers and investors with a range of credit products and structures through various project financing stages, including and not limited to:

- Development stage financing;
- Long lead equipment financing;
- Construction financing; and
- Term loans, including subordinated debt to increase tenor and leverage.

In the context of providing financing, NY Green Bank would evaluate contracted revenues, including various NYSERDA incentive payments/contracts, as well as wholesale power and capacity sales to support long-term financing. Applicants interested in applying for this financing are encouraged to submit an application to NY Green Bank RFP No. 1 which can be accessed [here](#).

Projects that execute an Agreement and subsequently receive US Department of Energy Loan Programs Office (LPO) financing will be subject to the Strike Price adjustment detailed in Section 3.2.3 due to the lower cost of LPO-backed financing compared with other, more traditional and expected financing sources.

1.2 The Index Storage Credit Mechanism

The Index Storage Credit (ISC) is a market-based mechanism modeled on the index Renewable Energy Certificate (REC) and index Offshore Wind Renewable Energy Certificate (OREC) approaches utilized in NYSERDA's Large-Scale Resources procurements. Similar to the index REC, the ISC, purchased by NYSERDA following commercial operation of the contracted project, is structured to provide project owners with greater revenue certainty by indexing the purchase price of the ISC to wholesale market energy and capacity prices. Under the ISC solicitations, one ISC is equivalent to one MWh of discharge capability per day (i.e., a 20 MW/80 MWh energy storage project will be capable of creating 80 ISCs per day if fully available).

Central to the ISC and the procurement evaluation process is the Strike Price that storage project developers bid under the ISC competitive solicitations. This Strike Price is intended to approximate the

revenue threshold needed to achieve project viability and proceed through project development to construction and commercial operation. The price paid by NYSERDA for each ISC will be calculated as the difference between the Strike Price and Reference Price. The Reference Price will be calculated based on wholesale energy and capacity market prices intended to reflect an approximation of the available market revenues that a Project could reasonably earn under typical operations. Projects are not required to participate in these markets and retain market incentives to optimize revenue. Payments will be made by NYSERDA to the developer when the Strike Price exceeds the Reference Price, and vice versa. Strike Price submission and evaluation, and the calculation of the monthly ISC price for evaluation and settlement, are detailed in Section 3.2.

1.3 Schedule

The schedule for ISCRFP25-1 is as follows (all times ET):

Table 1. ISCRFP25-1 Schedule

Milestone	Date
ISCRFP25-1 Issuance Date	Monday, July 28, 2025
Proposer's Webinar	Wednesday, August 13, 2025 at 3:00 p.m. ET
Step One Application Submission Deadline	Thursday, September 4, 2025, by 3:00 p.m. ET
NYSERDA advances eligible Proposers to Step Two	Thursday, September 18, 2025
Deadline to submit proposed material changes to the Attachment A. ISC Standard Form Agreement	Wednesday, October 1, 2025
Deadline to submit written questions to NYSERDA	Wednesday, October 1, 2025
Final question responses posted by NYSERDA	Wednesday, October 22, 2025
NYSERDA posts final Attachment A. ISC Standard Form Agreement	Wednesday, November 5, 2025
Bid Fee Deadline	Wednesday, December 10, 2025
Step Two Bid Proposal, Non-Price Submission Deadline	Thursday, December 11, 2025 by 3:00 p.m. ET
NYSERDA posts final Index ₈ values applicable to CCIA Alternate Bids	Thursday, December 18, 2025
Step Two Bid Proposal, Price Submission Deadline	Thursday, January 29, 2026 by 3:00 p.m. ET
NYSERDA notifies Proposers of provisional awards	Expected Q1 2026
Public Disclosure event	Expected Q2 2026

Proposers are advised that the above dates are subject to change. Notification of any changes to the solicitation schedule or documents will be posted on [NYSERDA's bulk storage website](#) and sent via email to those parties who have submitted an application and/or Bid Proposal to ISCRFP25-1 and parties that have submitted contact information to NYSERDA through the [Connect With Us page on the Bulk Energy Storage website](#).

2. Eligibility and Submission Requirements

All Proposers must submit all required documents (Table 2) as part of both the Step One Application and Step Two Bid Proposal submissions to be eligible for evaluation and award. All submission requirements must reflect the most accurate and up-to-date information known by the Proposer at each bid submission deadline. NYSERDA may ask for clarification on any of the content submitted in either Step One or Step Two, as detailed in Section 5.5. Step One and Step Two submissions must maintain all eligibility requirements, as detailed in Section 2.1, throughout evaluation and up until the time of agreement execution, if applicable, after which the executed agreement will be the governing

document. Evaluation of each submission requirement is further detailed in Sections 3 and 4. All submission requirements listed in Table 2 must be provided via the [solicitation website](#). Details on the contents of Step One submission requirements are included in Section 2.3, and Step Two submission requirements are included in Section 2.4, Section 3, and Section 4. Attachments are available to Proposers on [NYSERDA's bulk storage website](#) and on the [solicitation website](#).

Table 2. Submission Requirements

Step One Submission Requirements	Step Two Submission Requirements ¹⁰	
	Non-Price Phase	Price Phase
• Complete Step One Eligibility Application, submitted via the solicitation website • Signed EO 16 Form • Signed EO 192 Form • For Projects ≥8-hour Bid Storage Duration: Evidence of TRL8, as described in Section 2.1.2. • For non-lithium-ion CCIA Proposers: CCIA formula proposal, as described in Section 2.5.2.	• Complete Step Two Bid Proposal, submitted via the solicitation website • Attachment B. Public Project Summary • Attachment C. Executive Summary • Attachment D. Bid Data Form • Attachment E. Project Development Plan • Attachment F. Supply Chain and Procurement Plan • Attachment G. Safety and Security Screening • Attachment H. Stakeholder Engagement Plan • Attachment I. Creditworthiness and Financing Plan • Attachment J. ISCRFP25-1 Non-Disclosure Agreement • Shapefiles of the Project footprint and parcel boundaries • All applicable permitting documentation • Management Chart • Resumes of Key Personnel • Proof of Bid Fee payment	• Strike Price, submitted via the solicitation website

¹⁰ Submission requirements are further described in Section 4.

2.1 Eligibility and Contract Requirements

2.1.1 Program Eligibility

Proposers are eligible to apply for an award under this RFP if the proposed Project meets the following key eligibility criteria:

- Project must utilize storage technology that is electrical, chemical, mechanical, or thermo-electric.
- Project must store energy for electrical discharge to the grid at a later time.
- Project must have a minimum capacity of 5 megawatts alternating current (MWac) power.
- Project must be electrically interconnected in New York State to the transmission, sub-transmission, or distribution system (i.e. not behind-the-meter).

Projects that are co-located with an operating or under-development renewable energy project are eligible for an award if the renewable energy project does not have an awarded or executed Tier 1 REC or OREC contract that includes an energy storage component. Co-located Projects may have the same point of interconnection (POI) as the generator or can be located on the same site as the generator and connecting with a separate POI. If a bulk energy storage project is associated with an awarded or executed Tier 1 REC or OREC contract that includes an energy storage component, it may still be eligible to participate in the ISC program if the Tier 1 REC or OREC contract is appropriately adjusted prior to the Step Two Bid Proposal submission deadline in this RFP. To be eligible with an adjusted Tier 1 REC or OREC contract, the contract adjustment must be effectuated prior to the Step Two Bid Proposal submission deadline.

NYPA- and LIPA-proposed Projects have additional eligibility requirements, detailed in Section 2.1.6.

Projects are ineligible for an ISC award if they are receiving, have received, or plan to receive certain New York bulk energy storage incentives specific to the Project. These incentives include 1) a contract under NYSEERDA's Market Acceleration Bridge Program, 2) an awarded or executed Tier 1 REC or OREC contract that includes an Energy Storage component and has not been appropriately adjusted, or 3) a contract with the Utility Bulk Dispatch Rights Program. In the Step One Eligibility Application, Proposers must certify that they are not receiving the funding sources described here. Projects that receive funding from NYSEERDA's Residential and Retail Storage Incentives¹¹ or from the Value of Distributed Energy Resources (VDER) mechanism are not eligible for an award in ISCRFP25-1. Projects with active NYSEERDA Innovation funding, or seeking current or future NYSEERDA Innovation funding, are eligible to participate if they meet RFP eligibility requirements. Projects that receive financing from New York Green Bank are eligible to participate if they meet RFP eligibility requirements.

Projects proposed in communities with active energy storage moratoria are eligible to participate if they meet RFP eligibility requirements. Moratoria are an important consideration in Project development. NYSEERDA recognizes that moratoria represent a development timeline uncertainty outside the Proposer's control. Projects will be evaluated in part based on the requirement to describe any active moratoria and any impacts on the proposed Project development schedule submitted in the Project Development Plan (see Section 4.2.2 for details on submission requirements). Projects are required to

¹¹ <https://www.nyserda.ny.gov/All-Programs/Energy-Storage-Program/Developers-and-Contractors/Residential-and-Retail-Storage-Incentives>

abide by all Applicable Laws, which may include applicable local moratoria, and Proposers should plan their Project development timelines accordingly. Though local moratoria do not impact Project eligibility, Proposers must notify NYSERDA if the Project's moratorium status changes throughout the Bid Proposal evaluation period and, if provisionally awarded, up to the execution of the Agreement by the Proposer and NYSERDA.

Projects that are behind-the-meter or that represent aggregated behind-the-meter resources are not eligible for an award in ISCRFP25-1.

Operational projects or projects that issued a Full Notice to Proceed on or before the 2025 Bulk Energy Storage Approving Order issuance date (March 21, 2025) are not eligible for evaluation or award under this RFP. Proposers may add bulk energy storage to an existing or operational renewable energy facility so long as the Proposal follows the co-location Program Eligibility requirements.

All Proposers must maintain program eligibility throughout the application and, if awarded, the contracting process. It is incumbent on the Proposer to inform NYSERDA in a timely manner if any changes occur to a Project that may alter its eligibility during the application, evaluation, and/or contracting process.

2.1.2 Eligible Storage Technologies

NYSERDA will evaluate all eligible Proposals with a technology-neutral approach. This is not an innovation RFP; for Projects with less than 8 hours Bid Storage Duration, eligible Projects must propose a storage technology that has been previously Commercially Deployed and electrically interconnected to a transmission, sub-transmission, or distribution system, in compliance with the specific requirements set forth in Section 4.1 of this RFP. For Projects with 8 or more hours Bid Storage Duration, eligible Projects must demonstrate that the proposed storage technology has achieved a Technology Readiness Level 8 (TRL8), which generally indicates commercial readiness, and has an installed, working example that is technologically identical or near identical to the proposed development of 1 MWac or greater.

Proposers with Projects with 8 or more hours Bid Storage Duration are encouraged to use NYSERDA's Technology and Commercialization Readiness Level Calculator¹² to determine the proposed technology's TRL and are required to submit information supporting a TRL8 determination in the Step One Eligibility Application submission. Information supporting a TRL8 determination can include, but is not limited to, a completed NYSERDA Technology and Commercialization Readiness Level Calculator, a detailed description of how TRL8 has been achieved and a summary of any risks to reaching technology maturity beyond TRL8, documentation of other installations supporting the TRL8 determination, and performance metrics indicating that the technology has been fully integrated into an operational environment.

Storage technologies that have not been deployed under these conditions are not eligible for evaluation under this RFP. See Section 4.1 for more information on Minimum Eligibility Thresholds. As noted in Section 2.1.1, Projects must utilize storage technology that is electrical, chemical, mechanical, or thermo-electric to be eligible for award.

¹² https://portal.nyserdera.ny.gov/CORE_Solicitation_Document_Page?documentId=a0lcr000000WNO5AAO

In Step One, all Proposers must provide a written attestation that the Project can reasonably meet all Minimum Eligibility Thresholds in Section 4.1, Table 3 via the Step One application form. In Step Two, the Proposer must ensure that the proposed technology meets all Minimum Eligibility Thresholds. NYSERDA may ask clarifying questions about the proposed technology or request proof that the technology has been previously deployed and operational in order to determine Program Eligibility.

Proposers must disclose additional information about the storage technologies in their Step One application on the [solicitation website](#), including the specific storage technology used and its battery chemistry in the case of electrical or chemical storage technologies.

2.1.3 Safety and Security Requirements; Program Manual

Awarded Projects must maintain all safety and security requirements detailed in the Bulk Energy Storage Program Manual under Sections 4, 5, and 6. The Program Manual details requirements at multiple stages of project development, including the required Peer Review process, Quality Assurance (QA) Inspection, and development and execution of emergency response plans and first responder training. Proposers will be required to fully detail the current state of safety and security planning for the proposed Project in the Attachment G. Safety and Security Screening submitted with the Step Two Bid Proposal. Requirements for a complete Safety and Security Screening are described in Section 4.2.3. Once a Project is awarded and under contract, awardees must demonstrate compliance with all safety and security requirements in accordance with the Program Manual before commencing operations by completing all required Peer Review and QA Inspection requirements and completing the Operational Certification process with NYSERDA.

Awarded Projects must comply with the Program Manual. The Program Manual may be updated by NYSERDA at any time, and NYSERDA will provide notice of all such changes to Sellers in accordance with Agreement. Proposers should review Section 6.07 of the Agreement for further details on compliance with Program Manual updates.

2.1.4 Contract Tenor

The duration of ISC incentive payments to contracted Projects is set by the Contract Tenor submitted by the Proposer as part of the Step Two Bid Proposal.

For lithium-ion Projects, the maximum Contract Tenor length is 15 years. For non-lithium-ion Projects, the maximum Contract Tenor length is 25 years. Proposers must specify their Contract Tenor in their Step Two Bid Proposal via the [solicitation website](#).

2.1.5 In-Service Date

All Projects seeking an ISC award must be capable of completing construction and being placed in-service by December 31, 2030. As set forth in the Agreement, NYSERDA has the flexibility to adjust or extend the In-Service Date on a project-by-project basis if a developer provides evidence that the Project has been delayed due to conditions beyond the control of the developer and that the Project has commenced construction on or before December 31, 2030.

2.1.6 NYPA and LIPA Proposed Project Eligibility

The New York Power Authority (NYPA) has stated its intent to, under its expanded authority, develop bulk energy storage projects to compete in ISC solicitations and contract with NYSERDA. As established in the 2025 Bulk Energy Storage Approving Order, to the extent that revenue from such projects is

structured to directly benefit groups other than NYPA power customers (such as in NYPA's Renewable Energy Access and Community Help (REACH) program, or through other project-specific benefits), NYPA-developed projects are eligible to participate in ISC solicitations and receive ISC awards. However, the Approving Order also provides that to the extent that project revenues directly benefit NYPA customers, the applicable project(s) are only eligible to participate in ISC solicitations and receive ISC awards if NYPA is fully participating and accepting ISC obligations as an LSE.

Per the 2025 Bulk Energy Storage Approving Order and Final Implementation Plan, NYSERDA, NYPA, and DPS have identified two paths to project eligibility. The first path involves a project's commitment to making direct REACH program contributions. Each NYPA-proposed project shall, in its Step Two Bid Proposal, include any annual REACH program contributions that could be committed to at the time of bid in its Bid Data Form. REACH program contributions shall also be incorporated into Section 6.10 (and detailed in Appendix Exhibit H) of the ISC Standard Form Agreement. Contributions will be substantiated as with all economic benefits claims through the reporting required under Sections 6.04 and 6.10 of the ISC Agreement.

NYPA-developed projects will also be deemed eligible if the Proposer is the New York Renewable Energy Development Holdings Corporation (NYRED) or a NYRED-controlled entity. NYPA is committed to using all net revenue (after accounting for all Project expenses and potential REACH contributions) resulting from ISC-contracted NYRED Projects for further investment in the State's clean energy transition. The revenue will be used either to reinvest in renewable projects developed and owned by NYRED or to develop energy generation projects necessary to achieve legislative or State policy directives. This use of net revenue to support the State's clean energy transition provides direct benefits to groups other than NYPA power customers, and thus constitutes a basis for eligibility independent of REACH contributions. NYSERDA and DPS shall work with NYPA to determine the financial statements to be used to verify adherence to this commitment and shall describe this approach and required coordination with DPS Staff in the relevant ISC Agreement.

While LIPA is independently procuring bulk energy storage projects that will be credited against their LSE load-share obligations, nothing precludes Proposers from participating in ISC solicitations with Projects in the LIPA service territory, subject to meeting all other Program Eligibility requirements. For the avoidance of doubt, LIPA's voluntary participation as a non-jurisdictional LSE, with load-share obligations, also does not preclude broader eligibility of projects in its territory.

2.2 Storage Procurement Targets & Caps

Overall bulk energy storage program procurement targets related to bid storage duration and geographic distribution are described in Sections 2.2.1 and 2.2.2 below. These targets may not be met in any particular procurement or may be advanced by NYSERDA and DPS via the use of Portfolio Risk Factors (See Section 6.2). NYSERDA and/or DPS intend to release data on progress towards these targets following each completed solicitation.

2.2.1 Bid Storage Duration

ISCRFP25-1 is seeking to procure energy storage resources in two Bid Storage Duration categories: (1) less than eight hours and (2) eight or more hours. These two resource Bid Storage Duration categories will be referred to as <8 hour and 8+ hour. 2-hour resources and long-duration energy storage (LDES) resources have additional considerations.

2-hour resources are permitted to bid in the <8-hour category. However, NYSERDA will cap the amount of awarded 2-hour resources at 10% of the total 3 GW of planned bulk energy storage procurements.

NYSERDA has a target for the overall awardee group to include 20% LDES resources, which will be evaluated in the 8+-hour duration category. If ISCRFP25-1 does not attract at least 20% of viable LDES projects, NYSERDA may allocate the remaining procurement volume to the <8-hour duration category, and/or adjust future solicitation procurement targets. In consultation with DPS, NYSERDA would then adjust the 8+ hour duration target in subsequent solicitations in order to achieve an overall 20% LDES target across all three bulk energy storage solicitations.

2.2.2 Geographic Distribution

ISCRFP25-1 is also seeking to procure energy storage resources across geographic targets. Across all three bulk energy storage procurements, NYSERDA has a target of a minimum 35% of energy storage capacity procured in NYISO Zones G – K. Of this 35%, a minimum 30% target applies to Zone J and a minimum 5% target applies collectively to Zones G, H, I, and K. Energy storage resources deployed in these geographies have the greatest potential to benefit disadvantaged communities and/or reduce emissions from Peaker Plants. Additional evaluation criteria on Peaker Plant displacement and disadvantaged community benefits are detailed in Sections 4.3 and 4.4.

2.3 Step One Submission Requirements

Step One is an initial qualifying step through which the Proposer must provide documentation confirming that the Project is eligible for evaluation under ISCRFP25-1 and other key information about the Proposer and the Project. Step One Eligibility Applications will be examined for completeness and eligibility. NYSERDA will determine whether the Proposer and Project meet the eligibility requirements outlined in Section 2.1.

Step One requires a completed Step One Eligibility Application, a signed EO 16 Form, and a signed EO 192 Form to be submitted via the [solicitation website](#). The EO 16 Form and EO 192 Form can be found on the Documents tab of the [solicitation website](#).

Proposers must demonstrate in their Step One Eligibility Applications that the Project meets all program eligibility requirements. A complete Step One Eligibility Application will include:

- Project and site description.
- Written confirmation that ISCRFP25-1 program eligibility requirements have been met and written certification that Minimum Eligibility Thresholds have been met or will be achieved by the time of the Step Two Bid Proposal submission.
- Confirmation as to whether SEQRA review has been initiated for the Project (i.e., a lead agency has been designated) and, if so, a summary of the status of the environmental review.
- Proposer contact information.

Incomplete Step One Eligibility Applications will be subject to disqualification. It is the Proposer's responsibility to ensure that all required forms and attachments have been completed and submitted. If Proposals are deemed eligible after NYSERDA review, Proposers will receive a Notice of Qualification permitting the Proposal to move to Step Two.

Only those Proposers qualified through the Step One Eligibility Application process will be permitted to submit a Step Two Bid Proposal.

Proposers whose Step One Eligibility Applications are found not to satisfy the program eligibility requirements or to be deficient in some other respect will receive notification that they are not eligible to submit a Step Two Bid Proposal.

The complete Step One Eligibility Application package **must be received by NYSERDA no later than 3:00 p.m. ET on Thursday, September 4, 2025, via the [solicitation website](#). Late submissions will not be accepted.**

If after submission of the Step One Eligibility Application the Project is expected to undergo a change in control, the Proposer must contact NYSERDA to enable the appropriate entity to submit the Step Two Bid Proposal for the Project as the Proposer for Step Two Bid Proposal purposes. For clarity, in such situation the Proposer that takes over control of the Project or is expected to take over control following the Step One Eligibility Application will be eligible to submit the Step Two Bid Proposal even if it is a different entity from the Proposer whose Step One Eligibility Application was deemed qualified, subject to the new Proposer meeting all eligibility criteria.

2.4 Step Two Submission Requirements

After NYSERDA's review of Step One Eligibility Applications, eligible Proposers who receive a Notice of Qualification will be invited to submit a Step Two Bid Proposal which will require the Proposer to provide additional information, including a Strike Price, and more detailed information about the Project and the Proposer. All Step Two Bid Proposals must be submitted electronically via the [solicitation website](#). Instructions on how to submit a Step Two Bid Proposal will be provided to eligible Proposers that are issued a Notice of Qualification.

Step Two Bid Proposals will be solicited in two Phases: A Non-Price Phase and Price Phase. Soliciting price information as the final Phase in ISCRFP25-1 is intended to allow Proposers additional time and certainty prior to confirming and submitting the Price Submission. Proposers must submit all Step Two submission requirements, except for Strike Price, by December 11, 2025. After submitting the Non-Price Phase of the Step Two Bid Proposal, Proposers will be notified when the [solicitation website](#) is open for the Price Phase. In the Price Phase of the Step Two Bid Proposal, Proposers will **only** have the option to submit a Strike Price. Table 2 lists all submission requirements in Step Two. Once Proposers submit the Strike Price by January 29, 2026, their Step Two Bid Proposal submission is complete. Proposals that do not submit a Strike Price by the submission deadline will be deemed incomplete and rejected.

Should a Proposer wish to submit a Step Two Bid Proposal which 1) modifies the Bid Power Capacity, 2) modifies the Bid Storage Duration, and/or 3) utilizes the Component Cost Indices Adjustment, the Proposer should see Section 2.5 for additional instructions on submitting Alternate Bid Proposals.

Under Step Two, NYSERDA will: (1) examine each Step Two Bid Proposal to determine whether the Proposal demonstrates that the Project and Proposer meet all Minimum Eligibility Thresholds and the Strike Price does not exceed the Benchmark ISC Cost (maximum bid price metric); and (2) for Proposals that meet those minimum requirements, NYSERDA and the Scoring Committee will conduct a full competitive evaluation based on price and non-price factors. The information and supporting

documentation provided with the Step Two Bid Proposal will be evaluated by NYSERDA to determine whether the Minimum Eligibility Thresholds have been met and/or exceeded.

If a Proposal's Strike Price exceeds the Benchmark ISC Cost, it will be deemed ineligible and not evaluated further. See Section 3.2.2 for additional details on the Benchmark ISC Cost. Proposers that submit a Step Two Bid Proposal that does not meet all the Minimum Eligibility Thresholds will be removed from consideration and will not be eligible for an award.

NYSERDA will contact Proposers regarding any instances where it is unclear if a Minimum Eligibility Threshold has been achieved and may provide the Proposer with an opportunity to clarify whether the Project and/or Proposer had achieved the Minimum Eligibility Threshold at the time of the Step Two Bid Proposal submission. Proposers must maintain these Minimum Eligibility Thresholds throughout the Bid Proposal evaluation period and, if awarded, up to the execution of the Agreement by the Proposer and NYSERDA. Please see Section 5.4 for more information regarding changes that may occur during this period.

The Non-Price Phase Step Two Bid Proposal submission **must be received by NYSERDA no later than 3:00 p.m. ET on Thursday, December 11, 2025, via the [solicitation website](#)**. The Price Phase Step Two Bid Proposal submission **must be received by NYSERDA no later than 3:00 p.m. ET on Thursday, January 29, 2026, via the [solicitation website](#)**. NYSERDA strongly recommends that Proposers reserve ample time to address the requirements for each Project.

All electronic signatures must be provided as indicated. Failure to provide any attachments or information requested may result in the Step Two Bid Proposal package being declared incomplete and rejected. NYSERDA may request additional information and materials at any time. Step Two Bid Proposal packages become the property of NYSERDA. NYSERDA recommends that Proposers use Google Chrome when accessing the [solicitation website](#) to complete a Step One Eligibility Application and Step Two Bid Proposal. Unnecessary attachments or lengthy responses beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal. NYSERDA recommends that Proposers mark materials provided to NYSERDA as "Confidential" as needed (see Section 8.1).

2.4.1 Step Two Bid Proposal

Step Two requires a completed Step Two Bid Proposal package. A complete Step Two Bid Proposal package includes: (1) Non-Price and Price Step Two Bid Proposal Submissions, completed via the [solicitation website](#), (2) all required documents listed in Table 2, and (3) a Bid Fee payment. All documents listed in Table 2 must be submitted via the [solicitation website](#). All required fields in all Attachments and in the Step Two Bid Proposal must be populated for the Proposal package to be considered complete. All blank Attachments for submission can be found on the Documents tab of the [solicitation website](#). See Section 5.2 for instructions on submitting the Bid Fee. Proposers will have an opportunity to submit optional comments to the Agreement via the [solicitation website](#). See Section 2.6.1 for instructions on submitting comments to the Agreement.

Following the submission of Bid Proposals, NYSERDA and/or the Scoring Committee may request clarification and additional information from Proposers at any time throughout the duration of the evaluation process. Such information will be subject to protection of proprietary information as described in Section 8.1, consistent with other Bid Proposal submission materials. If the Proposer does

not respond promptly to such information requests or does not provide adequate information, the affected Bid Proposal(s) will be evaluated based on the information as originally submitted.

2.5 Alternate Bid Proposals

An “Alternate Bid Proposal” is a Proposal that 1) modifies the Bid Power Capacity of the Base Proposal, 2) modifies the Bid Storage Duration of the Base Proposal, and/or 3) utilizes the Component Cost Indices Adjustment (CCIA) mechanism. The Base Proposal is the Proposal with the greatest Bid Power Capacity (MW). Proposers may submit a maximum of three Alternate Bid Proposals in addition to the Base Proposal. Alternate Bid Proposals can opt into any combination of Alternate Bid Power Capacity, Alternate Bid Storage Duration, and/or CCIA.

To submit Alternate Bid Proposals, Proposers are encouraged to indicate in the Step One Eligibility Application the intent to submit one or more Alternate Bid Proposal(s). Proposers will have the opportunity to remove Alternate Bid Proposals and/or revise the previously submitted Alternate Bid Proposal information in Step Two. Proposers will have the opportunity to add Alternate Bid Proposals in Step Two, subject to any Alternate Bid Proposals maintaining eligibility under all ISCRFP25-1 requirements. A separate Step One Eligibility Application is not required for each Alternate Bid Proposal. The submission of Alternate Bid Proposals will require additional details to be entered in Attachment D. Bid Data Form. The submission of Alternate Bid Proposal(s) does not require multiple Bid Fee payments – only one Bid Fee is required for each Project. The Bid Fee will be calculated based on the Base Proposal. A Proposer may not condition the acceptance of one Step Two Bid Proposal based on the withdrawal or acceptance of other Alternate Bid Proposals. NYSERDA will award at most one Bid Proposal per Project.

2.5.1 Alternate Bid Power Capacity and Bid Storage Duration Proposals

Project configurations representing different Bid Power Capacities and/or Bid Storage Durations may be submitted as Alternate Bid Proposals. Proposers electing to submit with a different Bid Power Capacity and/or Bid Storage Duration for the same Project are encouraged to select the option for an Alternate Bid Proposal with a different Bid Power Capacity and/or Bid Storage Duration in the Step One Eligibility Application. Proposers will have an opportunity to revise, remove, or add Alternate Bid Proposals with Alternate Bid Power Capacity and/or Bid Storage Duration in the Step Two Bid Proposals, subject to any Alternate Bid Proposals maintaining eligibility under all ISCRFP25-1 requirements. Proposers must enter information representing both the Base Proposal and any Alternate Bid Proposal(s) in Attachment D. Bid Data Form submitted with the Step Two Bid Proposal.

2.5.2 Component Cost Indices Adjustment (CCIA)

Proposers whose Projects have not yet issued a Full Notice to Proceed may submit Alternate Bid Proposal(s) with a Component Cost Indices Adjustment (CCIA), a price structure where the Strike Price would be subject to a one-time adjustment to reflect changes in a pre-determined price index following the Price Submission deadline. Proposers interested in submitting Alternate Bid Proposals with a lithium-ion CCIA are encouraged to select the option for a CCIA Alternate Bid Proposal in the Step One Eligibility Application, as described in Section 2.5. In the Step Two Bid Proposal, Proposers will have the opportunity to add, remove, or revise Alternate Bid Proposals provided in the Step One Eligibility Application. Projects that have issued a Full Notice to Proceed are not eligible to submit an Alternate Bid Proposal with a CCIA.

For Alternate Bid Proposals in which Proposers opt into CCIA, the Strike Price will be adjusted to account for component cost changes between the Price Submission deadline ($Index_B$) and the issuance of a Full Notice to Proceed ($Index_T$) for the Project. This adjustment, governed by Section 5.03 and Exhibit G of the Agreement, will be based on multiple indices reflective of their share of energy storage costs. Strike Price adjustments will be subject to a 12% cap and floor, meaning that CCIA-adjusted Strike Prices will be adjusted up to 12% greater than the original Strike Price and will not be adjusted downwards more than 12% below the original Strike Price. The 12% cap and floor are intended to protect ratepayers and developers from excessive component cost volatility. $Index_B$ values will be issued by NYSERDA on the solicitation website and communicated to all Proposers by December 18, 2025, using the most recently available 6 months of data.

The CCIA formula included below is **only** available to Proposers submitting Projects with lithium-ion battery technology.

For Proposers whose Bid Proposals use energy storage technologies that are **not** lithium-ion batteries, there will be an opportunity for these Proposers to propose a technology-specific CCIA formula to NYSERDA. If non-lithium-ion Proposers are interested in pursuing a technology-specific CCIA formula, they **must** indicate in their Step One Eligibility Application that they intend to submit a CCIA Alternate Bid Proposal and provide a CCIA formula for NYSERDA's review. After receiving a Notice of Qualification to proceed to Step Two, NYSERDA will review the proposed CCIA formula and may follow up with Proposers to finalize the technology-specific non-lithium-ion CCIA formulas. NYSERDA may publish the approved CCIA formulas to the [solicitation website](#) before Non-Price Submissions are due. If NYSERDA chooses to publish non-lithium-ion CCIA formulas, they will be published by technology and will not indicate which Proposer(s) submitted the non-lithium-ion CCIA formula(s) to NYSERDA. NYSERDA, in its sole discretion, retains the right to approve or reject proposed CCIA formulas.

Non-lithium-ion Proposers cannot opt into the CCIA formula below. All other mechanisms of the CCIA Alternate Bid Proposal described in this Section, including the 12% cap and floor and timing of Strike Price adjustments, apply to both lithium-ion and non-lithium-ion CCIA Alternate Bid Proposals.

For lithium-ion Proposers that choose to opt into CCIA, the Strike Price will be calculated as:

$$ISC_{adj} = ISC_{orig} \times \left(0.80 \left(0.31 \left(\frac{Index_{T,Con}}{Index_{B,Con}} \right) + 0.09 \left(\frac{Index_{T,Steel}}{Index_{B,Steel}} \right) + 0.07 \left(\frac{Index_{T,EPSTM}}{Index_{B,EPSTM}} \right) + 0.21 \left(\frac{Index_{T,Cons Mat}}{Index_{B,Cons Mat}} \right) + 0.32 \left(\frac{Index_{T,Batt Man}}{Index_{B,Batt Man}} \right) \right) + 0.20 \left(\frac{Fixed}{Fixed} \right) \right)$$

Where:

ISC_{adj}	Strike Price after component cost adjustment, subject to a 12% cap and floor
ISC_{orig}	Original Strike Price submitted with the Proposal
T	Average of Index in the 6 months before Full Notice to Proceed
B	Average of Index of the most recently available 6 months of data published before the Price Submission deadline, which will be published by NYSERDA on the solicitation website
$Index_{Con}$	Construction value, using the Bureau of Labor Statistics' new nonresidential building construction in the Northeast Producer Price Index, Data Series PCU2365002365001

Index _{Steel}	Steel value, using the Bureau of Labor Statistics' steel product manufacturing from purchased steel Producer Price Index, Data Series PCU33123312
Index _{EPSTM}	Electric Power and Specialty Transformer Manufacturing value, using the Bureau of Labor Statistics' electric power and specialty transformer manufacturing Producer Price Index, Data Series PCU335311335311
Index _{Cons Mat}	Construction Materials value, using the Bureau of Labor Statistics' construction materials Producer Price Index, Data Series WPUSI012011
Index _{Batt Man}	Battery Manufacturing value, using the Bureau of Labor Statistics' storage battery manufacturing Producer Price Index, Data Series PCU3359133591
Fixed	Unchanged value reflective of the operating expense share of battery storage costs

For evaluation of CCIA Alternate Bid Proposals, a multiplier representing NYSERDA's expectation of cost changes for the identified indices between the Bid Proposal Submission Deadline and the estimated date of Full Notice to Proceed for a Project with a *COMDp* (as defined in Section 3.2.2) of 2027 will be applied to the ISC Price to determine the total price used in the evaluation.

2.6 ISC Standard Form Agreement

NYSERDA recommends that Proposers review the Attachment A. ISC Standard Form Agreement (Agreement), and all associated Exhibits prior to participating in ISCRFP25-1. The Agreement is a legally binding document; it is recommended that Proposers consult with an attorney prior to submitting a Step Two Bid Proposal.

2.6.1 Proposed Edits to the Agreement

NYSERDA cannot adjust the binding Strike Price or other settlement-related terms submitted by Proposers as part of a Step Two Bid Proposal.

Articles, Schedules and Exhibits of the Agreement to which NYSERDA also does not intend to entertain redlines or negotiate edits include but are not limited to:

- Article VIII: Assignment and Change of Control;
- Article IX: Seller's Representations, Warranties and Guarantees;
- Article X: NYSERDA's Representations, Warranties and Guarantees;
- Article XI: Indemnification;
- Article XV: Contract Security;
- Exhibit A: Standard Terms and Conditions for all NYSERDA Agreements;
- Exhibit B: Letter of Credit;
- Exhibit C: NYSERDA Prompt Payment Policy Statement;
- Exhibit D: Assignment of Agreement;
- Exhibit G: Component Cost Indices Adjustment;
- Exhibit I: NYSERDA'S Code of Conduct for Contractors, Consultants, And Vendors;
- Exhibit K: Project Labor Agreement Requirements.

If a Proposer wishes to propose any material change(s) to the Agreement, any such suggested change(s) should be submitted during the SFA feedback window, **no later than Wednesday, October 1, 2025, by 5:00 p.m. ET, via the [solicitation website](#)** Messages feature. Any such proposal must be in the form attached hereto as Attachment K. SFA Comment Template and should indicate why the change would be beneficial to New York State (e.g., it will enable lower Strike Prices, make it more likely for Projects to be timely completed, etc.) rather than merely how it would benefit the Proposer. NYSERDA will review

the feedback and determine in its sole discretion whether or not to make any changes to the Agreement. If NYSERDA determines to make any changes, NYSERDA will post the final updated Agreement by November 5, 2025.

Subject to Section 3.2.4 herein involving provisions similar to qualifying federal support, NYSERDA does not currently intend to make any material changes to the Agreement and does not currently intend to consider any proposed material changes after posting the final updated Agreement.

Proposers may submit other, non-material, requested changes to the Agreement at any time up until and including submission at the Step Two Price Submission deadline, but any requested change must be categorized as follows with a clear justification for the requested change:

- Fixing an error or ambiguity that could be problematic for the ability of the Project to proceed through financing and construction. NYSERDA will fix these errors or unwarranted ambiguities where NYSERDA determines in its sole discretion that a change is warranted.
- An improvement to the clarity or implementation of the Agreement to enable smoother financing or administration and/or to avoid unnecessary disputes. NYSERDA will consider any such proposed changes in good faith but reserves the right not to make any changes of this nature.

2.6.2 Conditions/Contingencies

NYSERDA may include conditions and/or contingencies to address matters concerning any issues regarding the viability or siting of a Project, or where the build environment is contingent or conditional on governmental rescission, modification or change in local law, temporary or permanent.

3. Price Evaluation

3.1 Introduction

Bids will be evaluated using both price and non-price factors. Price evaluation will constitute 60% of evaluation weighting, and non-price factors will constitute 40% of evaluation weighting. Price evaluation reflects the projected levelized net ISC cost based on NYISO Zonal energy and capacity market price forecasts based on the Project's Applicable Zone. NYSERDA will endeavor to incorporate industry best practices into its energy and capacity price forecasts and will assume an ongoing system mix shift from a primarily fossil fuel dependent to a primarily renewables and zero-emissions dependent system mix. NYSERDA will also endeavor to account for expected deployments and deactivations when accounting for energy and capacity price forecasts and for declining capacity accreditation factors as a result of future renewable and energy storage deployments. NYSERDA will not disclose the full datasets used to calculate projected levelized net ISC costs.

3.2 Strike Price Submission and Evaluation

A complete Strike Price submission consists of a complete Step Two Bid Proposal that details Bid Energy Capacity (MWh), Bid Storage Duration (hours), and Bid Power Capacity (MW) in the Non-Price Submission, and Strike Price (\$/ISC) in the Price Submission. Proposers must submit their cost assumptions in Attachment D. Bid Data Form. The Project will be evaluated on the information submitted in the Step Two Bid Proposal. NYSERDA will evaluate all Proposals based on an assumed 95% availability percentage.

Proposers must ensure that information provided in the Step Two Bid Proposal, submitted via the [solicitation website](#), is final and correct. If necessary, NYSERDA may request missing data so long as it is an irregularity amenable to correction or clarification.

NYSERDA reserves the right to solicit revised Strike Prices, as detailed in Section 6.1.

3.2.1 ISC Calculation

As described in Section 1.2, the Index Storage Credit (ISC) is a market-based mechanism designed to attract 3,000 MW of bulk energy storage development in New York State. The ISC balances the need for developers to have a degree of revenue certainty with protecting ratepayers if project revenues are higher than anticipated.

The ISC represents one MWh of energy storage capacity that is operational and available. As such, a storage project will be credited with ISCs in proportion to its operational availability during the monthly Settlement Period.

The following sections describe the elements of the ISC calculation.

3.2.1.i Index Storage Credit Price

The ISC Price is derived via a monthly settlement framework for the difference between the Strike Price bid into this solicitation and the Reference Price (RP), as described in the following sections and in accordance with the monthly settlement structure provided in the Agreement:

$$(1) \quad \text{ISC Price} = \text{Strike Price} - \text{Reference Price}$$

Where:

Strike Price: [\$/ISC]	The Strike Price under this competitive solicitation which approximates the revenue threshold needed to achieve project viability; and is the dollar value from which the reference price will be subtracted to result in the amount paid by NYSERDA for ISCs created.
Reference Price (RP): [\$/ISC]	The sum of the Reference Energy Arbitrage Price (REAP) and Reference Capacity Price (RCP).

3.2.1.ii Reference Price Components

The Reference Price components of the Index Storage Credit are intended to approximate the expected revenue of a bulk storage facility through energy arbitrage and capacity market participation. Energy arbitrage is achieved by charging during periods of low electricity prices and discharging during periods of high electricity prices. Storage facilities can also be compensated in the capacity market for being available to provide energy when needed.

The Reference Price (RP) in this solicitation applies these principles as the total of the Reference Capacity Price (RCP) and Reference Energy Arbitrage Price (REAP), on a monthly basis, subject to the duration of the number of hours in which the Project can discharge to the grid and the Round-Trip Efficiency (RTE) of the type of storage facility, as follows:

$$(2) \quad \text{Reference Price (RP)}_{\text{Monthly}} = \text{RCP}_{\text{Monthly}} + \text{REAP}_{\text{Monthly}}$$

$$(3) \quad \text{RCP}_{\text{Monthly}} = \frac{\text{RUP}_{\text{Monthly}} \times 1,000 \times \text{CAF}}{\text{Bid Storage Duration} \times k}$$

$$(4) \quad \text{REAP}_{\text{Monthly}} = \frac{\sum_{D=1}^k \text{REAP}_{\text{Daily}}}{k}$$

$$(5) \quad \text{REAP}_{\text{Daily}} = \frac{\sum_{n=1}^x \max \left(\left[T_n - \left(\frac{B_n}{\text{RTE}} \right) \right], 0 \right)}{x}$$

Where:

Reference Capacity Price (RCP): [\$/ISC]	The price index used to estimate monthly capacity revenues using the monthly Reference Unforced Capacity (UCAP) Price (RUP) and the NYISO's calculated Capacity Accreditation Factor (CAF) ¹³ .
Reference UCAP Price (RUP): [\$/kW-month]	The Unforced Capacity (UCAP) Price (RUP), equal to the spot auction prices in \$/kW-month for the Project's Applicable Zone as published by the NYISO. ¹⁴
Capacity Accreditation Factor (CAF): [%]	The Capacity Accreditation Factor for the Capacity Accreditation Resource Class (CARC) applicable to the Project as determined by NYISO in accordance with the New Capacity Accreditation Rules.
Reference Energy Arbitrage Price (REAP): [\$ /ISC]	The price index used to estimate expected daily or monthly energy revenue achieved by the Project based upon pricing differences between periods of charging and discharging electricity from/to the NYCA. The REAP is derived as the sum of spreads between top and bottom priced hours, excluding negative spreads, in the NYISO's Day-Ahead Energy Market over the total number of days within a settlement month. - For resources with a run-time less than eight-hours in duration, the number of top and bottom hours will equal the Bid Storage Duration. - For resources with a run-time greater than or equal to eight-hours in duration, Projects will use the top and bottom eight hours.
k	Number of days in Settlement Period
D	Day
n	Hour
T _n	nth highest priced (Top) hour
B _n	nth lowest priced (Bottom) hour
Round Trip Efficiency (RTE): [%]	In accordance with Commission Orders, the RTE is uniformly prescribed for Projects in this solicitation by technology: 85% for lithium-ion 65% for non-lithium-ion

¹³ <https://www.nyiso.com/documents/20142/34963268/4%20CA%20Capacity%20Accreditation%20pres.pdf>

¹⁴ Historical monthly capacity spot auction prices can be downloaded from the NYISO website at http://icap.nyiso.com/ucap/public/auc_view_spot_detail.do or <https://www.nyiso.com/installed-capacity-market>. NYISO UCAP prices are not reported by NYISO Zone, but instead by capacity locality, which include each Zone.

	• 45% for multi-day facilities
x: [hours]	Bid Storage Duration. In this solicitation, NYSERDA will solicit Proposals and monthly settlements in two categories: less than 8 hours and more than 8 hours, where: • For Projects with Bid Storage Duration less than 8 hours, x=Bid Storage Duration (i.e., x=2 for 2-hour battery duration, x=4 for 4-hour battery duration). • For Projects with Bid Storage Duration of 8 hours or longer, x=8.

For clarity, the conversion factor of MWh to ISC is 1:1.

3.2.1.iii Other ISC Components

The ISC Purchase and Sale Agreement will be settled monthly, with the monthly payment determined by the following equation:

$$(6) \text{ ISC Monthly Payment} = \text{ISC Price} \times \text{Bid Power Capacity} \times \text{Bid Storage Duration} \times k \times \text{Monthly Availability Percentage}$$

Where:

Bid Power Capacity: [MW]	Bid Power Capacity of the energy storage Project in MW
Total Hours: [hours]	Total hours in the settlement month
Monthly Availability Percentage: [%]	The percentage of a Project's operational availability during a settlement month, in MWh, as expressed in the below equation.

$$(7) \text{ Monthly Availability Percentage} = 1 - \frac{\text{Monthly Outage MWh}}{\text{Bid Power Capacity} \times \text{Total Monthly Hours}}$$

Where:

Bid Power Capacity: [MW]	Bid Power Capacity of the energy storage Project in MW
Total Monthly Hours: [hours]	Total number of hours in the Settlement Period
Monthly Outage MWh [MWhs]:	Sum of all Outages for the Settlement Period
Outage	The operational unavailability of the Project, either fully or partially, to deliver the Bid Power Capacity into the New York Control Area for any reason whatsoever in any hour during a Settlement Period.

ISC Monthly Payment can be positive or negative. A positive ISC signifies a payment to the Project from NYSERDA, whereas a negative ISC signifies a payment from the Project to NYSERDA. Payments from the Project to NYSERDA shall not exceed the product of the Strike Price, Bid Power Capacity, and Total Hours in a settlement month.

3.2.1.iv Operational Availability Requirement

As directed by the Commission, each ISC represents one MWh of energy storage capacity that is operational and available. As such, a storage project will only be credited with ISCs equivalent to its MWh storage discharge capacity in proportion to its operational availability over the course of a month.

Non-operational hours and/or days (due to outages or maintenance, for example) will not create credits.

Partial availability, in terms of both time and capacity, will proportionally condition the maximum potential monthly ISCs of awarded Projects via the Availability Percentage. Monthly ISC settlements made by NYSEDA will be determined based on Project operational availability data transmitted from an awarded Proposer to NYSEDA. This data may utilize outage or availability data provided to NYISO through its outage notification process or installed capacity market and may include Generating Availability Data Systems (GADS) data supplemented as needed to ensure calculation of partial availability.

In calculation of the monthly settlements, awardees will submit Monthly Availability Reports (as defined in the Agreement) to NYSEDA for the duration of the Contract Delivery Term including full accounting of non-operational days and partial availability to support the determination of the applicable Availability Percentage for the settlement period.

3.2.2 ISC Price Evaluation

Per the Commission's Orders, Price evaluation constitutes 60% of a Bid Proposal's total evaluation. Recognizing the challenging nature of estimating and submitting ISC Strike Price under changing market conditions, NYSEDA encourages Proposers to review and consider the option to submit Alternate Bid Proposals utilizing the CCIA mechanism described in Section 2.5.2 of this RFP. NYSEDA further encourages Proposers to review Section 4.05 (Changes in Law) of the Agreement to understand conditions under which changes may be made to the Agreement in response to changes in law. NYSEDA also encourages Proposers to review Section 18.12 (Material Adverse Change) of the Agreement, which addresses certain types of potential changes in federal policy and laws.

If a Proposal's ISC Strike Price exceeds the Benchmark ISC Cost, it will be deemed ineligible.

Accordingly, NYSEDA will apply two different Benchmark ISC Costs for each of the two targeted Bid Storage Duration categories: less than 8 hours, and 8 hours or more, and establish proposal rankings in its evaluation for each category (i.e. Benchmark ISC_{<8h} and Benchmark ISC_{≥8h}).

Separated by Bid Storage Duration as described, a quantitative method will be applied to all bids to screen and rank the Bid Proposals using a uniform cost metric. For the avoidance of doubt, the uniform cost metric methodology described below applies to both duration categories, but the submitted bids will be separated by duration (less than 8 hours, and 8 hours or more) and ranked separately in the evaluation process.

For evaluation purposes, Strike Prices will be converted to a Levelized Net ISC Cost (LNISCC) in base year dollars per ISC (\$/ISC). The LNISCC price measure allows for an equitable comparison among Proposals with different pricing structures, ISC quantities, and Contract Tenors. Strike prices will be converted into expected annual ISC values by subtracting a forecast of expected Reference Energy Arbitrage Prices and Reference Capacity Prices from the Strike Prices, based on NYSEDA's

forecasts of energy and capacity prices.

For evaluation purposes, regardless of the proposed Commercial Operation Date, Bid Proposals for Projects not yet under operation will be evaluated with a Contract Delivery Term commencement of January 2027 and therefore a $COMD_p$ of 2027.

The LNISCC for Proposal (p) using pricing form (f) is the quotient of the cumulative present value of the annual net ISC costs over the proposed Contract Tenor, divided by the cumulative present value of the projected annual number of ISCs created over the proposed Contract Tenor from the Project over the same period. The annual quantities are discounted at a real discount rate. The resulting quotient is expressed in base year dollars per ISC.

The levelized ISC price for Proposal p over the Contract Tenor is:

$$LNISCC_{p,f} = \frac{PVISCPMT_{p,f}}{PVISCCQ_p}$$

The present value of the ISC monthly payments over the Contract Tenor for Proposal p is:

$$PVISCPMT_p = \sum_{y=COMD_p}^{y=COMD_p+CT_p} \frac{\{\sum_{m=1}^{m=12} (Strike Price_p - REAP_{m,y} - RCP_{m,y}) \times BC_p \times Bid Storage Duration \times K_{m,y} \times 0.95\}}{(1 + NDR)^{(y-Y_b)}}$$

The present value of the number of ISCs over the Contract Tenor for Proposal p is:

$$PVISCCQ_p = \sum_{y=COMD_p}^{y=COMD_p+CT_p} \frac{\{\sum_{m=1}^{m=12} (BC_p \times Bid Storage Duration \times K_{m,y}) \times 0.95\}}{(1 + RDR)^{(y-Y_b)}}$$

Where:

LNISCC	Levelized Net ISC Cost
PVISCPMT _p	Present value of the monthly ISC payments for Proposal (p) over the Contract Tenor based on the Strike Price and forecast energy and capacity market prices for the zone in which the proposed Project will be located.
PVISCCQ _p	Present value of the monthly ISCs for Proposal (p) based on the Bid Power Capacity of a Proposal and total hours in a month for each month in the Contract Tenor.
COMD _p	Calendar year associated with the expected Contract Delivery Term commencement for Proposal (p).
CT _p	Contract Tenor for Proposal (p).
Strike Price _p	Strike Price for Proposal (p).
REAP _{m,y}	Reference Energy Arbitrage Price for month (m) in year (y) for the zone in which the proposed Project will be located.
RCP _{m,y}	Reference Capacity Price for month (m) in year (y) for the zone in which the proposed Project will be located.
BC _p	Bid Power Capacity in MW of Proposal (p).
K _{m,y}	Days in month (m) for year (y).

NDR	Nominal Discount Rate, set at 7.46% ¹⁵
RDR	Real Discount Rate equal to $\frac{(1+NDR)}{(1+INF)} - 1$
INF	Inflation Rate, set at 2.31% ¹⁶
Y _b	Base year

3.2.3 LPO Financing Adjustment

It is expected that Loan Program Office (LPO)-backed financing, if obtained, would provide incremental value to a Project that cannot be assumed and/or quantified at the time of submission of the Step Two Bid Proposal, due to the lower cost of LPO-backed financing compared with other, more traditional and expected financing sources. To ensure New York State ratepayers share in these benefits, a portion of this expected incremental value will be applied as a decrease in the Project's Strike Price.

The exact amount of this incremental value will likely differ somewhat from Project to Project based on a variety of factors, but to share a portion of this value with New York State ratepayers while seeking to avoid dis-incentivizing Projects from pursuing LPO-backed financing, Section 5.04 of the Agreement for ISCRFP25-1 provides that **the Strike Price will be reduced by 1%** in the event that the Project receives LPO-backed financing.

3.2.4 Other Adjustments

NYSERDA is monitoring federal tax policy and is considering incorporating provisions in the Agreement similar to the qualifying federal support adjustment mechanism employed in other NYSERDA solicitations for long-term contracts. These provisions would reduce the Strike Price in the event that a Seller receives support not contemplated in the original Bid Proposal. Any changes advanced in ISCRFP25-1 and the Agreement will be communicated to prospective Proposers in advance of the Step Two Bid Proposal submission deadline.

¹⁵ The Nominal Discount Rate for Bid Price evaluation was established by the DPS Office of Accounting, Audits & Finance, revised February 27, 2025.

¹⁶ The Inflation Rate for Bid Price evaluation was established by the DPS Office of Accounting, Audits & Finance, revised February 27, 2025.

4. Non-Price Evaluation

Figure 1. ISCRFP25-1 Bid Proposal Evaluation

Non-price evaluation accounts for 40% of Bid Proposal evaluation (Figure 1). Non-price evaluation includes three components: Project Viability and Maturity (20%), Electricity System Value (10%), and Economic Benefits (10%). Taken together, these categories describe the benefits of the Project to New Yorkers and to the electric grid, as well as identify the challenges and risks associated with developing the Project.

4.1 Minimum Eligibility Thresholds

All Proposers must demonstrate via a complete Step Two Bid Proposal submission and supporting documentation, listed in Table 2, that the Project and Proposer have achieved the Minimum Eligibility Thresholds as detailed in Table 3. Attachment C. Executive Summary must also note that all Minimum Eligibility Thresholds have been met and include a map of the Project site. A complete Step Two Bid Proposal consists of all required fields in the Step Two Application Form, filled in via the solicitation website, and all supporting documentation, listed in Table 2.

The Minimum Eligibility Thresholds, described in Table 3, are additional Step Two requirements to the program eligibility criteria (Section 2.1.1), which must be demonstrated in Step One. If a Proposer cannot demonstrate that the Project meets the Minimum Eligibility Thresholds, the Proposal will be deemed ineligible and will not be evaluated for an award. The submission requirements listed in Section 4.2 will be used to determine if a Project has met the Minimum Eligibility Thresholds.

Proposers must describe how they meet the Minimum Eligibility Thresholds in the Attachments listed in Table 4.

Table 3. Minimum Eligibility Thresholds for All Projects/Proposers

Eligibility Component	Minimum Eligibility Thresholds	
Storage Technology Commercial Maturity	Projects <8 hours Bid Storage Duration	Projects ≥8 hours Bid Storage Duration
	The proposed Project technology must have been previously Commercially Deployed: 1. With a power capacity of 2 MWac or greater, and 2. Electrically interconnected to a transmission, sub-transmission, or distribution system (See Section 2.1.2). The technology need not have been previously interconnected or Commercially Deployed in New York State to meet the Storage Technology Commercial Maturity Minimum Eligibility Threshold.	Consistent with the eligibility assessment criteria of a contemporaneous LDES program¹⁷, Project technology must be considered to have achieved Technology Readiness Level (TRL) 8, including having an installed, working example of 1 MWac or greater that is technologically identical or near identical to the proposed development.
Site Control	Proposer has secured the Project site via executed exclusive project development agreement, executed binding option, executed lease, and/or land purchase for the proposed Project footprint and a reasonable plan for interconnecting to the proposed Project's Point of Interconnection (POI).	
Interconnection (varies by duration)	Projects <8 hours Bid Storage Duration	Projects ≥8 hours Bid Storage Duration
	The proposed Project: 1. Is actively being studied in the 2024 NYISO Transitional Cluster Study (Cluster Study) or through the relevant utility process, or 2. Has accepted all cost allocations pursuant to a prior NYISO Class Year/Facilities Study and is negotiating or has executed an Interconnection Agreement for the project at the proposed Point of Interconnection. For all Projects in the Cluster Study, the Proposer will be required to evidence that the Phase 2 Study Deposit has been paid/posted and the Project has proceeded and is actively included in the Cluster Study Phase 2 Study prior to NYSERDA's execution of a provisionally awarded Agreement.	Proposer must submit a Project Development Plan that demonstrates a reasonable pathway to securing an interconnection agreement within the Project's proposed schedule.

¹⁷ UK Department for Energy Security and Net Zero and Ofgem, Long Duration Electricity Storage: Technical Decision Document, 11 March 2025.

Eligibility Component	Minimum Eligibility Thresholds
Permitting	Submission of a Project Development Plan, as well as a project schedule in Attachment D. Bid Data Form, that demonstrates the Project as proposed can secure all non-ministerial permits, commence construction, and enter operation by December 31, 2030.
Safety and Security	Submission of a Safety and Security Screening that demonstrates the Proposer currently has or has a viable pathway to finalize development, construction, inspection, and operation plans that will comply with the NYSEDA Bulk Energy Storage Program Manual and all Applicable Laws.
Stakeholder Engagement	Submission of a Stakeholder Engagement Plan that evidences the Proposer has been in contact with the host AHJ(s) and has informed the AHJ(s)'s local elected officials about the Project's participation in ISCRFP25-1.
Development and Operating Experience	Proposer or its principals have developed at least one grid-connected power generation or energy storage project to final investment decision/commencement of construction. The grid-connected power generation or energy storage project evidenced to satisfy this requirement must be at least 10% of the Bid Power Capacity of the proposed Project (e.g., if proposing a 100 MWac Project, the evidenced project must be equal to or greater than 10 MWac).

Table 4. Evidence of meeting Minimum Eligibility Thresholds

		Attachment D. Bid Data Form	Attachment E. Project Development Plan	Attachment G. Safety and Security Screening	Attachment H. Stakeholder Engagement
Eligibility Component	Storage Technology Commercial Maturity		X		
	Site Control	X	X		
	Interconnection		X		
	Permitting	X	X		
	Safety and Security			X	
	Stakeholder Engagement				X
	Development and Operating Experience	X	X		

4.2 Project Viability and Maturity Evaluation

Project Viability and Maturity accounts for 20% of Bid Proposal evaluation. The Scoring Committee will evaluate Step Two Bid Proposals based on Proposer-provided evidence included in the Bid Proposal, and verified with third-party information where applicable, that the Project has achieved key project development milestones and has a viable plan to complete development, financing, and construction, and enter commercial operation.

NYSEDA, the Scoring Committee, and Specialist Reviewers will review all eligible Step Two Bid Proposals, and the Scoring Committee will assign non-price points based on 1) Proposer-provided

and/or independent/third-party information included in the Bid Proposal that demonstrates the Project has achieved key project development milestones; and 2) Attachment B. Public Project Summaries, Attachment D. Bid Data Forms, Attachment E. Project Development Plans, Attachment F. Supply Chain and Procurement Plans, Attachment G. Safety and Security Screenings, Attachment H. Stakeholder Engagement Plans, and Attachment I. Creditworthiness and Financing Plans that demonstrate comprehensive and viable plans for completing project development, financing, and construction, and entering commercial operation.

Submission requirements, described in each section below, demonstrate to NYSERDA that the Project has met all Minimum Eligibility Thresholds and provide Project information for non-price evaluation. Projects will be evaluated on Project Viability and Maturity in each of the following categories.

4.2.1 Interconnection

Submission Requirements: All required Interconnection fields in the Step Two Application Form and an Attachment E. Project Development Plan that details the proposed Project's interconnection status. The Project Development Plan must include:

- 1) A summary and/or other evidentiary documentation from the Proposer or interconnecting entities that explain the status of interconnection activities, including copies of the Project's interconnection studies and Interconnection Agreement (if applicable). For Projects that are modifying an existing Interconnection Agreement, evidence of a Modification Request that has been deemed non-material by NYISO is sufficient, **and**
- 2) Known or forecasted interconnection costs for the Project, **and**
- 3) Project one-line diagram provided to the NYISO for interconnection.

Documentation provided to NYSERDA by the Proposer to demonstrate the Project's interconnection status must be consistent with the Project as proposed. Proposers are advised that Critical Energy/Electric Infrastructure Information (CEII)-confidential information may not be submitted to NYSERDA as part of the Step Two Bid Proposal and should be removed or redacted from any evidentiary documentation submitted to NYSERDA.

Evaluation: Eligible Projects will be preferentially evaluated based on the status and maturity of the Project's interconnection activities and/or Interconnection Agreement. Projects that have advanced to more mature stages of the NYISO interconnection process will be preferentially evaluated compared to earlier stage Projects. Proposers must include in their Project Development Plan summaries, excerpts, and/or copies of the Project's interconnection studies and Interconnection Agreement status at the time of bid submission.

4.2.2 Permitting

Submission Requirements: All required Permitting fields in the Step Two Application Form, an Attachment D. Bid Data Form, and an Attachment E. Project Development Plan that details the proposed Project's permitting status. The Project Development Plan must include:

- 1) Summaries and/or other evidentiary documentation from the Proposer or relevant AHJs that explain the Project's current permitting status, **and**

- 2) A summary how relevant local laws may impact Project development and/or the proposed Project development schedule, including any active moratoria and their effective and anticipated end dates, or otherwise restrictive local laws, **and**
- 3) A summary of the Project's current site control status, including any and all property and/or rights-of-way necessary for the Project's development, construction, and operation, **and**
- 4) A summary and/or other evidentiary documentation that explains the current status of any and all applicable desktop and field studies necessary for the Project's development, construction, and operation, **and**
- 5) An updated summary of the current status of SEQRA review for the Project, including all available SEQRA documents, **and**
- 6) If SEQRA review has not yet been initiated, a completed SEQRA Part 1 Environmental Assessment Form (EAF) for the Project and such supporting materials as may be available, **and**
- 7) A summary that explains any and all known and anticipated avoidance and/or minimization measures for sensitive habitats, protected species, **and**
- 8) A summary of any known and anticipated water-dependent uses¹⁸, **and**
- 9) A decommissioning plan for the Project site and Project's major equipment, **and**
- 10) Map(s) of the proposed Project site (PDFs and shapefiles), including:
 - a. A detailed map (PDF) of the site plan/layout indicating the Project and parcel boundaries, aligned with the site control information submitted in Attachment D. Bid Data Form. At a minimum, the map should include the preliminary layout of the Project within the parcel boundaries, including the storage equipment, inverters/chargers, pumps, management system disconnects, the security or perimeter fence(s), and limits of disturbance. The map should indicate the (anticipated) interconnection route and the (anticipated) interconnection point(s). If applicable, indicate the relationship of the site to other adjacent infrastructure, including planned or alternate points of interconnection and proximate generators or other existing infrastructure, particularly nearby Peaker Plants.
 - b. Shapefiles of the Project footprint and parcel boundaries that the Project will occupy. If applicable, provide shapefiles of co-located generation sites, like wind or solar facility areas. Shapefiles in the .shp format are strongly preferred but geographic data in the .kmz or .kml format will be accepted. Proposers must submit shapefiles of the Project via upload slots on the [solicitation website](#) as part of the Non-Price Submission.
 - c. If available, a more detailed concept site plan including the locations of the Project, all major equipment and facilities, access roads, site work and other project components, along with existing physical features of the site (e.g., wetlands, streams, topographical features, buildings, etc.).

The Bid Data Form must include:

- 1) Status of the Project's site control, including the Point of Interconnection and rights-of-way (if applicable), **and**

¹⁸ New York State Public Lands Law (Article 6 § 75(7)(f) and the implementing regulations (9 NYCRR § 270-3.2) definition of Water dependent nature of use. *"Water dependent activities include those which can only be conducted in, on, above or adjacent to a water body because such activity requires direct access to that water body and which involves, as an integral part of such activity, the use of the water."*

- 2) Status of all applicable permits and approvals, identifying both ministerial and non-ministerial permits, including, if applicable, FDNY reviews and approvals, including applicable expiration dates and any renewal requirements, and
- 3) A summary of the Project schedule, including all critical path milestones, that evidences the Proposer is capable of securing all applicable permits and approvals, commencing construction and entering commercial operation by December 31, 2030.

If applicable and/or available, the Proposer should provide the following documents/summaries:

- 1) Field studies (e.g., Environmental Site Assessment, Phase 1, Archaeological Phase 1, Geotechnical) and surveys (e.g., ALTA, topography, water bodies/wetlands, or other).
- 2) Documentation filed with or received from the local governmental authority confirming that a request for a zoning change or variance has been initiated and/or the local approval process is underway.
- 3) Description of the avoidance of anchorages and navigation channels for the proposed Project site and any potential routes used if the Project may be temporarily relocated, including designated, common practice and Recommended Vessel Routes using NOAA nautical charts, Federal civil works and resilience projects, and Aids to Navigation.
- 4) Applications for construction permit(s) and/or road use permit(s) that have been submitted to local authority(ies) with approval jurisdiction.
- 5) Applications and/or reviews that have been submitted to FDNY for the issuance of a building/fire code permit.
- 6) Schematics and/or comparable technical drawings of the Project's planned system configuration.

Proposers of Projects within the NYS Coastal Area are required to submit proof of consultation with the New York State Department of Environmental Conservation (DEC), the New York Department of State (DOS), and Office of General Services (OGS) regarding their proposed Project design as part of the Step Two Bid Proposal submission. Additionally, for any project that may impact DEC regulated resources, a pre-consultation meeting is recommended. Contacts for assistance in arranging such a meeting are as follows:

Karen Gaidasz, Director, Bureau of Energy Project Management
NYSDEC – Division of Environmental Permits
(518) 402-9153
karen.gaidasz@dec.ny.gov

Jennifer Street, Bureau Chief, Coastal Consistency
New York State Department of State
(518) 474-6000
Jennifer.Street@dos.ny.gov

Thomas LaLiberte, State Asset & Land Management, Underwater Lands Management
Office of General Services
(518) 402-1705
Thomas.LaLiberteJr@ogs.ny.gov

If the Project requires additional permitting reviews, insurance, and/or approvals that have not been contemplated in this Section, Proposers must include a description of these requirements and progress towards achieving them in the Project Development Plan.

Evaluation: Eligible Projects will be preferentially evaluated based on the maturity of the Project's permitting status, the volume of outstanding applicable studies, permits, and approvals, the degree of certainty of securing any outstanding permits relative to the Project's current status, and the zoning suitability of the occupied parcel(s), including any applicable special use permits or variances obtained by the Project, and the adjacent parcel(s). Evaluation will be based on the Project's demonstrable progress through its applicable permitting process and the completeness and credibility of the Proposer's schedule for successfully obtaining necessary permits within the proposed development schedule. Projects that are fully permitted or have secured relatively more permits needed to construct and operate, have performed more exhaustive permitting activities and/or Project site due diligence, and/or have more comprehensive plans to address required mitigation activities as evidenced in the Project Development Plan will be preferentially evaluated. Projects that have secured the site beyond the Project footprint (i.e. site control of POI if applicable and/or Right-of-Way to POI) will be preferentially evaluated.

NYSDORA may coordinate with the NYS DEC, NYS DOS, ORES, NYS OGS, and/or other permitting entities or subject matter experts acting as a Specialist Reviewer to inform the evaluation, under which Proposals that have not yet secured their Key Permit or other permits, but are identified as having a more feasible pathway to securing all necessary permits to construct the Project may be preferentially evaluated compared to Proposals that have more material challenges that have not yet been addressed with planned or approved mitigation measures.

4.2.3 Safety and Security

Submission Requirements: All required Safety and Security fields in the Step Two Application Form and Attachment G. Safety and Security Screening that explains site-specific safety and security factors relevant to the proposed Project's development, construction, and operation. The Safety and Security Screening must address all components of Sections 3, 4, and 6 of the Bulk Energy Storage Program Manual, including:

- 1) Plans to comply with all technical, Peer Review, QA Inspection, and Operational Certification requirements detailed in the Program Manual.
- 2) Plans to comply with all Applicable Laws during construction and operation.

The Safety and Security Screening must address as many components of the Program Manual as possible, based on the Project's status that are known at the time of Step Two Bid Proposal submission, including but not limited to:

- 1) Final, draft, or preliminary Project drawings, including as much detail as known at the time of bid submission.
- 2) Final, draft, or proposed technology fire protection system datasheets for the Project.
- 3) Plans to comply with the applicable Underwriters Laboratories (UL) equipment listings and certifications.

- 4) Final, draft, or plans to develop a Project site-specific Hazard Mitigation Analysis (HMA), addressing thermal runaway, mechanical failures, and other potential equipment failures.
- 5) Final, draft, or plans to develop a Project site-specific Emergency Response Plan (ERP).
- 6) Final, draft, or plans to develop Project site-specific safety training materials.
- 7) Final, draft, or plans to develop Project site-specific explosion control designs including plans to comply with the applicable UL test results standards and plans to comply with the applicable National Fire Protection Association (NFPA) requirements.

Proposers are strongly encouraged to provide as much detail as possible in response to the requirements of the Program Manual as part of their Safety and Security Screening, as well as throughout their Project Development Plan.

Evaluation: Eligible Projects will be preferentially evaluated based on how comprehensively the submitted Safety and Security Screening address all aspects of the Program Manual and Applicable Laws.

Safety and Security Screenings that provide more mature and complete HMA reports, more comprehensive ERPs, more comprehensively developed safety training materials and first responder plans, and/or demonstrate more comprehensive explosion control designs and fire safety measures incorporated into the proposed Project site, including recommendations from the Fire Code Recommendations Report¹⁹, will be preferentially evaluated. Energy storage technologies that have a demonstrably stronger track record of environmental and safety compliance will be preferentially evaluated by the Scoring Committee.

4.2.4 Supply Chain and Procurement

Submission Requirements: All required Supply Chain and Procurement fields in the Step Two Application Form and Attachment F. Supply Chain and Procurement Plan. A complete Supply Chain and Procurement Plan reflects the full expected procurement plan and anticipated supply chain for the Project's proposed energy storage technology, including risks to sourcing the storage components or materials to construct the Project site and plans to mitigate these risks. The Supply Chain and Procurement Plan should include:

1. Description of the type of energy storage technology. Energy storage technology descriptions must include:
 - a. An accounting of the major components of the technology to be sourced.
 - b. If applicable, a description of the battery energy storage system (BESS) cell chemistry (Examples: Lithium-ion battery with a lithium iron phosphate (LFP) cell chemistry, redox flow battery with an all-vanadium cell chemistry).
2. Status of the Proposer's current procurement plan, including plans to procure and deliver all necessary major equipment to construct the Project, including any major equipment that has

¹⁹ The New York State Interagency Fire Safety Working Group's report titled "Fire Code Recommendations," dated as of July 2024. On July 25, 2025, the State Fire Prevention and Building Code Council voted to approve the adoption of the updated Uniform Fire Prevention and Building Code (Uniform Code), reflecting key recommendations by the FSWG. NYSEDA is reviewing the updated Uniform Code and may issue revisions to this RFP and/or the Bulk Energy Storage Program Manual to ensure consistency. All Projects awarded under ISCRFP25-1 will be required to comply with the updated Uniform Code.

already been purchased or contracted for the Project. If applicable, list the selected OEM and the estimated lead time for purchased or contracted equipment that has not been delivered. Highlight any completed or proposed purchases from New York State suppliers.

- a. If major components have not been purchased or delivered to New York, Proposers should include a plan to procure all components, including any OEMs under consideration, including the level of communication with any OEMs conducted to date, estimated lead times for delivering components to the Project site, and/or any quotes or pricing received from the OEM for the Project's equipment.
 - b. Proposers should identify any risks or opportunities associated with sourcing the components from the considered OEMs. Risks and opportunities include, but are not limited to, tariff risk to the final storage product, tariff risk to the major components of or raw material inputs to the final storage product, any applicable exemptions to risks to sourcing the major components, risks associated with complying with federal tax credit foreign entity of concern (FEOC) rules, and opportunities to source major components within the United States and/or New York State.
 - c. If planning to secure the Investment Tax Credit domestic content bonus credit²⁰, Proposers must fully detail how they plan to secure major equipment to qualify for the bonus credit.
3. Status of the Proposers' current construction plan, including any existing relationships with engineering, procurement, and construction (EPC) firms and/or plans to partner with firms to construct the Project and required interconnection equipment, and/or self-build portions or all of the Project.
4. Expected terms of the proposed Project equipment manufacturer's warranty and long-term service agreement (LTSA) to cover the entire energy storage system, including ancillary equipment, pumps, thermal management, and power electronics.
5. If applicable, a description of any end-of-useful-life plans for the Project's major equipment. End-of-useful-life plans can include, but are not limited to, evidence of supporting a circular economy, such as using second-life batteries or pursuing recycling agreements, and/or other reuse plans.
6. Non-lithium-ion project technology requirements:
 - a. For thermo-electric storage, the nameplate information of existing chiller plant (chillers, pumps, tanks, cooling towers, etc.) is required.

Proposers are encouraged to reference existing resources for New York-based supply chains, such as the [Battery and Energy Storage Supply Chain Database](#).

Evaluation: Projects will be preferentially evaluated based on the maturity and comprehensiveness of the submitted Supply Chain and Procurement Plan, with the procurement or contract status of major equipment being the greatest indicator of maturity.

Projects with procurement plans that demonstrate relatively more major equipment procured or contracted for the proposed Project, that rely on supply chains that are relatively more insulated or de-risked from potential or expected price or cost changes due to tax or trade policy, and/or that present a stronger plan to procure all major equipment, commence construction, and enter operation by 2030 will

²⁰ <https://www.irs.gov/credits-deductions/domestic-content-bonus-credit>

be preferentially evaluated. Plans that commit to relatively more eligible New York State expenditures will be preferentially evaluated as detailed in Section 4.4 Economic Benefits.

4.2.5 Stakeholder Engagement

Submission Requirements: All required Stakeholder Engagement fields in the Step Two Application Form, Attachment B. Public Project Summary, and Attachment H. Stakeholder Engagement Plan. A complete Stakeholder Engagement Plan reflects an understanding of local interests and concerns, provides high-quality and well-timed public education opportunities, demonstrates a commitment to partnering with the elected officials in proposed host communities, respectfully responds to opposition, and elicits input from the public and affected agencies. The Stakeholder Engagement Plan must include:

- 1) Documentation²¹ that the Proposer has been in contact with the host AHJ(s) regarding the proposed Project and has informed the AHJ(s) local elected officials (restricted to primary executives e.g., Town Supervisor, City Mayor, Planning Board Chair, Zoning Board Chair, Code Enforcement Officer, Town Clerk) about the Project's participation in ISCRFP25-1.
- 2) Summary of planned and completed stakeholder engagement activities. Stakeholder engagement activities may include, but are not limited to: AHJ meetings, open houses, town planning or zoning board appearances or presentations, meetings or trainings with local fire department(s), and/or documentation of responsiveness to requests from participating landowners and other community residents.
- 3) Description of stakeholder interests and concerns, including strategies to mitigate concerns raised by the public regarding the Project. This description must also include methods for soliciting feedback and input from the public and affected agencies and the process for sharing feedback and responses publicly.

All Proposers must also provide:

- 1) A completed Attachment B. Public Project Summary. These Public Project Summaries will be published on NYSERDA's website following submission of Step Two Bid Proposals for all submitted Projects, subject to NYSERDA's verification that the Project has achieved all Minimum Eligibility Thresholds.

Proposers may provide letters of support as part of their Stakeholder Engagement submission.

In the event of an election within the host community or the AHJ, Proposers are responsible for informing current and elected local officials in a timely manner.

Evaluation: Eligible Projects will be preferentially evaluated based on the comprehensiveness and responsiveness of community engagement activities. Comprehensiveness and responsiveness will be assessed on clearly articulated community engagement and mitigation strategies, evidence of ongoing collaboration with relevant AHJ stakeholders, and evidence of addressing local interests and concerns. Letters of support are the strongest evidence of community support, collaboration, and addressing local

²¹ Documentation may include but is not limited to: Correspondence between the Proposer and host AHJ(s); Public records of Town/Planning/Zoning Board meeting minutes and/or presentations; Communications with local elected and/or administrative officials; and/or Letters of Support provided by representatives of the host AHJ(s).

interests and concerns. Projects that can demonstrate coordination to date with the local fire department will be preferentially evaluated.

NYSERDA may coordinate internally or with other State Agencies to act as Specialist Reviewers to inform evaluation.

4.2.6 Development and Operating Experience

Submission Requirements: All required Development and Operating Experience fields in the Step Two Application Form, Attachment D. Bid Data Form, and Attachment E. Project Development Plan that detail the Proposer's experience developing, financing, constructing, and/or operating energy storage projects. All Proposers must also provide:

- 1) **A management chart** that lists the key personnel dedicated to developing, financing, constructing, and/or operating the Project;
- 2) **Resumes of key personnel** that describe the Project team's experience with developing energy storage or other energy generator or infrastructure projects;
- 3) **A list of up to 25 specific projects** successfully developed, financed, constructed, and/or operated, submitted via Attachment D. Bid Data Form and/or summarized in the Project Development Plan, including at least one project that demonstrates achievement of the Development and Operating Experience Minimum Eligibility Threshold detailed in Section 4.1.

Evaluation: Proposers will be preferentially evaluated based on:

- 1) Demonstrative experience developing energy storage projects, including projects similar to the proposed Project.
- 2) Demonstrative experience operating energy storage projects, including projects similar to the proposed Project.

Step Two Bid Proposals for Projects that are similar to those projects provided and successfully brought to commercial operation by the Proposer will be preferentially evaluated by the Scoring Committee.

4.2.7 Creditworthiness and Financing

Submission Requirements: All required Creditworthiness and Financing fields in the Step Two Application Form and Attachment I. Creditworthiness and Financing Plan that detail the Proposer's plan to finance and procure all required equipment and labor to construct and operate the proposed Project. The Creditworthiness and Financing Plan must include:

- 1) **A detailed financing plan** that describes all key development milestones required to achieve final investment decision, commence construction, and enter commercial operation. The Financing Plan section of the Creditworthiness and Financing Plan must include:
 - a. A description of the anticipated financing arrangements, including equity, pre-construction and development expenditures, sources of expected contract security, construction debt, mezzanine/subordinated debt, and permanent debt;
 - b. A description of the evolution of the division between shareholder equity and debt from the development period through the construction period and any plans for adjusting to loss of shareholder equity;
 - c. A list of all committed and potential equity partners;

- d. The development and operating responsibilities of each equity partner of the Project, and their respective funding obligations, e.g., joint and several funding responsibilities, if applicable;
- e. A description of Proposer's intention to own and operate the Project, or sell the Project to another party to own and operate;
- f. A declaration of intent to use the Investment Tax Credit (ITC) and any available bonus credits made available as part of the Inflation Reduction Act of 2022. Proposers should include their assumption of the percentage of their project costs that will be compensated under the ITC and how the Project plans to qualify for ITC and bonuses, if applicable; including mitigation strategies in the event of changes to tax credit eligibility;
- g. A summary of any other available federal, state, and/or local available tax credits, subsidies, and financial incentives/instruments (e.g., NY Green Bank financing) sought by the Proposer to finance the Project, and how these will be utilized;
- h. Details of any events of default or other credit/financial issues associated with all projects in which the Proposer (and other equity partners), its parent company, its affiliates, and directors, officers, and senior managers of those entities, participated in over the past three years.

If applicable and available, the Creditworthiness and Financing Plan should also include or include references to:

- a. Written expressions of interest from potential debt lenders sufficient to fund the project development, construction and permanent debt capitalization to the fullest extent available, and any applicable expressions of interest from tax equity providers;
 - b. Details of the expected construction loan and permanent loan, including terms of repayment, (amount, tenor, interest rate, etc.), the amount each lending institution is prepared to commit (subject to credit committee approval), their debt service requirements (interest, rate swaps, letters of credit, guarantees, etc.), with all fees indicated;
 - c. If intending to own and operate the Project, the anticipated construction and long-term capital structure for the Project ownership entity, including the Project's projected balance sheet at year-end for every construction year and at the start of commercial operation.
- 2) **An organizational plan and/or chart** for the Project that lists the participants and identifies the corporate structure, including general and limited partners and financial arrangements to the Proposer's parent company or affiliate. The organizational chart must identify any partners, parent companies or affiliates that are owned in whole or in part by governments foreign to the United States.
- 3) **Evidence that the Proposer or its equity participant(s) possesses an investment grade credit rating.** If an equity participant does not have such credit rating, e.g., a subsidiary, it shall provide (i) written evidence of a corporate commitment, for example, a "comfort" letter or "keepwell" agreement, to support the development and financing from its parent company and (ii) evidence of an investment grade credit rating from that parent company. **If the Proposer or its equity participant(s) does not possess a credit rating, the Proposer must evidence that it has**

sufficient tangible net worth to develop the Project or provide other evidence that the Proposer can reasonably finance the development of the Project. The financing plan must also detail any credit alerts or rating upgrades/downgrades for the equity partners, or their parent companies, that occurred in the past three years.

- 4) **Links (preferred) and/or copies of the Proposer's recent financial statements**, if applicable and available, via PDF or summary documents with links to publicly available PDFs.
 - a. If available, audited financial statements for the Proposer or Proposer's parent company(ies) for the three most recent fiscal years.
 - b. If available, unaudited financial statements for the Proposer for the three most recent fiscal years with an attestation from the CEO or CFO that such information is materially accurate and complete.
 - c. If financial statements are not available, an explanation indicating why they cannot be provided, and provision of alternate information to demonstrate Proposer's financial capacity to develop and construct the proposed Project.
- 5) **Key credit ratios**, if available and applicable. Proposer must submit results for the following key financial ratios as calculated for each of the three most recent fiscal years. Proposers should further detail which financial statement items were used to calculate Earnings Before Interest, Taxes, Depreciation, and Amortization (EBITDA) and Funds From Operations (FFO) in each year.
 - a. FFO to debt
 - b. Debt to EBITDA
 - c. EBITDA to interest

Evaluation: Proposers will be evaluated based on the comprehensiveness of the financing plan components of the Creditworthiness and Financing Plan. Creditworthiness and Financing Plans that more comprehensively detail the expected financing structures and partners for the Project, provide greater evidence of mitigating risk through partnerships or parent company characteristics (key credit ratios), sufficient balance sheet financing capabilities, and/or detailed mitigation plans for changes to federal tax credits or trade policy will be preferentially evaluated.

4.2.8 Climate Resiliency

Submission Requirements: All required Climate Resiliency fields in the Step Two Application Form and Attachment E. Project Development Plan that detail the Proposer's efforts that have or can be undertaken to understand the climate resiliency aspects of the proposed Project's site, technology, and design considerations, and minimize the Project's risk of being impacted by future climate impacts over its useful life.

This includes evaluating the climate risk of the Project under both current climate conditions and projected future conditions due to climate change for the following hazards: coastal, riverine, and stormwater flooding, sea level rise, extreme heat and extreme cold events, increased average temperatures, and extreme storms (hurricanes, nor'easters, etc.) at a minimum. Proposers must include the results of this evaluation in the Project Development Plan. Proposers must include a site map in the Project Development Plan illustrating the results of this evaluation with an indication of proposed asset locations within the site.

Proposers are encouraged to utilize existing public datasets to understand current and future exposure, unless more comprehensive datasets are available, including the below. Suggested data layers for these

datasets are included below, but Proposers should use the time horizon that correlates to the Project's estimated useful life:

- Coastal and Riverine Flooding: [FEMA National Flood Hazard Maps](#)
 - For NYC Projects: [NYC Flood Hazard Mapper](#) (suggested exposure layer "Future Floodplain 2050s")
- Stormwater Flooding: (For NYC locations): [NYC Stormwater Flood Maps](#) (suggested exposure layer "Extreme Flood with 2080 Sea Level Rise")
- Sea Level Rise: [NYSERDA Sea Level Rise Viewer](#) (suggested exposure adjustment to 24" of sea level rise, recurrence interval 10 years)
 - For NYC Projects: [NYC Flood Hazard Mapper](#) (suggested exposure layer "High Tide 2050s")
- Extreme Heat: [NYS Department of Health Heat Vulnerability Index](#)
 - For NYC Projects: [NYC Heat Vulnerability Index](#)
- Extreme Wind: [ASCE Hazard Tool](#) (suggested exposure 'risk category II', load type 'wind')
- NYS climate projections and impacts by region: [NYS Climate Impacts Assessment](#)

Should climate hazard exposure be identified, the Proposer must explain how climate resiliency measures have been incorporated into the design of the Project and how these hazards could impact the reliability and performance of the Project. In addressing these points, the Proposer must address:

- **Reliability** (the extent to which the system provides outputs and avoids temporary disruptions): The Proposer must explain how climate change adaptation and resilience is incorporated into the Project's siting, design, technology selection, construction, and operation. The Proposer must identify the Project's climate hazard exposure and clearly describe the adaptation and resilience measures that will be incorporated to mitigate risk.
- **Performance** (the ability of the system to provide expected output of energy over its useful life): The Proposer must identify anticipated impacts, if any, on the Project's performance (e.g., charging/discharging capabilities, round-trip efficiency) that may result from climate impacts projected to occur within the Project's useful life (e.g., increased frequency of heat waves, higher ambient temperatures). Proposers should demonstrate how the Project will maintain its expected performance over the full useful life and identify, as needed, the design or operational measures incorporated beyond current codes and standards to achieve this performance.

Projects that may occupy waterways should incorporate in their Project Development Plan the ability to physically relocate. Proposers should identify and detail whether any unplanned outage(s) resulting from routine, temporary relocations would result in a violation of reliability criteria as determined by the New York Independent Systems Operator (NYISO).

If provisionally awarded, the Seller will be required to provide a Climate Resiliency Plan as further described in Section 6.08 of the Agreement.

Evaluation: Projects will be evaluated based on the comprehensiveness and responsiveness of describing climate risks to the Project, and if risks are identified, demonstrating the measures planned or taken to reduce such risks. Comprehensiveness and responsiveness will be assessed on clearly articulating the potential climate hazards to which the Project may be exposed over the Project's

expected useful life (including site maps demonstrating the location of the Project in relation to current and future climate hazards), describing any vulnerabilities posed by such hazards to the reliability and performance of the Project, and clearly demonstrating the measures taken to reduce such risks (including in siting, design, technology selection, construction, and/or operation as applicable).

4.3 Electricity System Value

10% of overall evaluation will be based on Electricity System Value considerations associated with the proposed Project. The Scoring Committee will evaluate Step Two Bid Proposals based on their potential or expected ability to maintain or improve current or future system reliability, displace the use of Peaker/non-zero-emission generation, integrate additional renewable energy project generation, and/or reduce current or forecasted renewable energy curtailment in New York.

The Scoring Committee and Specialist Reviewers will review all eligible Step Two Bid Proposals, and the Scoring Committee will assign non-price points based on the proposed Project's technology, capacity, point of interconnection, and independent/third-party information that demonstrates the Project can provide electric system value, including but not limited to the sources referenced in Sections 4.3.1 and 4.3.2. NYSDA, the Scoring Committee, and Specialist Reviewers may employ independent and/or third-party analyses or specialist reviews to estimate potential system impacts and benefits of the proposed Projects, including reviews of Step Two Bid Proposals by New York's transmission/distribution owners and/or other independent third parties. Evaluation may also be informed based on the optional submission categories described in Sections 4.3.1 and 4.3.2. Proposers are encouraged, but not expected or required, to provide Proposer-commissioned or independent sources evidencing Electric System Value benefits associated with the proposed Project.

4.3.1 System Reliability & Peaker Displacement Potential

Optional Submission: Proposers are encouraged, but not required, to address Project-specific system reliability and/or Peaker displacement potential characteristics as part of the Attachment E. Project Development Plan submitted with the Step Two Bid Proposal.

Evaluation: Projects will be preferentially evaluated based on:

- 1) Evidence based on independent/third-party and/or Proposer-provided information that demonstrates the proposed Project's equipment will be capable of demonstrating:
 - a. System reliability attributes, including but not limited to: Operating reserves (spinning and/or non-spinning reserves), frequency regulation, voltage support, inertial response, black start generation, and/or other system reliability-based grid attributes identified by NYSDA, DPS, NYISO, and/or the state's utilities as beneficial and/or necessary for the current or future states of the NYISO electric grid. Projects that demonstrate plans to deploy Project equipment with grid forming capabilities, which can provide significant reliability benefits to the NYISO grid with commercially available technology, will be preferentially evaluated.²²
 - b. Long-duration specific attributes, including but not limited to: Multiday system reliability, current or future eligibility to scale and serve as a Dispatchable Emission-Free Resource (DEFR), and/or other long-duration-specific grid services that are currently

²² [NYISO comments to NYSDA regarding the Draft Index Storage Credit Request for Proposals \(ISCRFP25-1\)](#)

available or under study to be available for the Project's energy storage technology in the NYISO market.

- 2) Evidence based on independent/third-party and/or Proposer-provided information that demonstrates the proposed Project will be capable of providing energy, capacity, and/or other market services that would demonstratively offset the current use of Peaker Plant fossil generation and other fossil fuel generation based on the current state and forecasted future states of the NYISO electric grid²³.

The Scoring Committee and Specialist Reviewers will account for Proposer-provided information to the extent that it can be verified with independent or Proposer-provided documentation, and will utilize third-party sources and/or independent studies to the extent possible, including but not limited to NYISO [Load and Capacity Data Report \("Gold Book"\)](#) data, Energy Information Agency (EIA) [emissions by plant and by region data](#), and/or U.S. Environmental Protection Agency (EPA) [Power Plants and Neighboring Communities Mapping Tool](#) data.

4.3.2 Renewables Integration & Curtailment Reduction Potential

Optional Submission: Proposers are encouraged, but not required, to address Project-specific renewables integration and/or curtailment reduction potential characteristics as part of the Attachment E. Project Development Plan submitted with the Step Two Bid Proposal.

Evaluation: Projects will be preferentially evaluated based on independent/third-party and/or Proposer-provided information that demonstrates the proposed Project would improve the deliverability of and/or reduce current or forecasted system curtailment of renewable generation.

The Scoring Committee and Specialist Reviewers will account for Proposed-provided information to the extent that it can be verified with independent or Proposer-provided documentation, and will utilize third-party sources and/or independent studies to the extent possible, including but not limited to the [NYISO System and Resource Outlook 2023-2042 Report](#) and associated appendices, the Joint Utilities Headroom Calculations data reported in [DPS Case 20-E-0197](#), and/or NYSERDA data produced in support of the [Climate Action Council Scoping Plan](#) and/or ongoing [New York State Energy Plan](#).

4.4 Economic Benefits

Economic Benefits expected to accrue to New York because of the development, construction, and operation of the Project will be evaluated as a non-price evaluation component. Non-price points assigned to Economic Benefits account for 10% of overall evaluation. Economic Benefits are those that a Proposer can demonstrate: (1) will accrue after December 28, 2022, and up to three years following the Project's Commercial Operation Date and (2) would not have accrued but for the issuance of the ISC solicitations or award of a contract under this RFP.

Submission: A complete Step Two Bid Proposal includes an Attachment D. Bid Data Form. Economic Benefits claims must be listed in the Bid Data Form to be considered for evaluation. A narrative summary associated with each claimed Economic Benefit commitment must be submitted in the Bid Data Form. Appendix A. Incremental Economic Benefits Eligibility details the instructions for submitting

²³ Examples of forecasted future states of the NYISO electric grid can be found in the [2023-2042 NYISO System and Resource Outlook](#) and the [NYS Climate Action Council Scoping Plan](#).

Economic Benefits claims, including guidance on eligible claims. Only eligible claims will be considered in evaluation.

Evaluation: The Scoring Committee will evaluate and award points based on the degree to which each Proposal demonstrates that Economic Benefits will accrue to New York because of the development, construction, and operation of the Project. Economic Benefits may be claimed in two categories:

- 1) Long-Term Economic Benefits to New York State; and
- 2) Short-Term Economic Benefits to New York State.

Long-Term Economic Benefits to New York State are payments that contribute to the development, construction, and operation of the Project, directly created (added) long-term jobs (jobs lasting more than 3 years), and/or accrued long-term payments to the New York State economy, its municipalities and/or residents. Short-Term Economic Benefits to New York State are economic activity (including local and statewide) that increased as a result of in-state purchases and short-term jobs (jobs lasting less than 3 years). Eligible claims in both categories are further defined in Appendix A. Incremental Economic Benefits Eligibility.

The Scoring Committee will award points between the two sub-categories. Within each category, points will be awarded in proportion to the level of eligible claims, normalized across all Projects by dividing each Project's eligible claims by that Project's Bid Energy Capacity (\$/MWh). Only direct Economic Benefits within these categories, as entered in Attachment D. Bid Data Form will be considered. In no instance will NYSERDA or its Scoring Committee consider any indirect benefits or those created by any "multiplier effect" or other attribution method under which the creation of peripheral spending and jobs might be credited to direct capital infused into the economy.

Claims associated with disadvantaged communities will receive greater weight in scoring, particularly to the extent that they are included in the Disadvantaged Community Commitments recorded in Section 6.10 of the Agreement.

All other Economic Benefits will receive a baseline scoring weight equal to the total value of eligible claims, normalized by dividing each Project's eligible claims by that Project's Bid Energy Capacity (\$/MWh).

4.5 Non-Viability Determination

NYSERDA reserves the right to reject a Proposal based upon a determination by the Scoring Committee that the project is not presently viable. NYSERDA may seek additional information from any Proposers deemed to have submitted a non-viable Proposal prior to removing the Proposal for consideration. If NYSERDA raises a potential non-viability concern for a Project, the Proposer will be given the opportunity to respond. The time to respond will depend on the nature of the potential non-viability determination but will not be less than five business days.

The process for assessing Proposals for non-viability is separate from NYSERDA's verification that all attachments and information required in the Step Two Bid Proposal package were submitted, which if not may result in the Proposal being declared incomplete and rejected (See Section 2.4). Non-viability determinations will only be recommended for a clear, objective case wherein the Step Two Bid Proposal

package is complete, but the Project is determined to be non-viable based upon the consensus of NYSERDA, Scoring Committee, and, if applicable, Specialist Reviewers' assessment of the Project.

If a Proposal is rejected based on a determination by the Scoring Committee that the project is not presently viable, NYSERDA will notify the Proposer of the determination and provide an explanation following the submission of the Step Two Bid Proposal and the receipt of responses to any clarifying questions. Proposers with Proposals that are rejected in this manner will remain eligible to re-apply in future solicitations and will be evaluated again without prejudice. Reasons for a determination of non-viability may include:

- 1) The Proposal is immature to such an extent that it would be impossible to ascertain whether it is viable;
- 2) The Proposal is predicated on unrealistic economic or regulatory assumptions; or
- 3) The Proposal is subject to serious economic, permitting and/or regulatory risks without a sufficient mitigation or net conservation benefit plan.

Examples of why a Proposal could be determined to be non-viable include, but are not limited to, failing to meet or maintain one or more Minimum Eligibility Thresholds, a Project with a Strike Price that is determined to be insufficient to cover Project costs, a lack of understanding of how settlement under an awarded Agreement would occur, an unfounded interconnection or permitting mitigation cost estimate, and/or a materially high risk of not receiving permits due to the Project's current permitting status.

5. Additional Application Submission Information

5.1 Proposer's Webinar and Inquiries

NYSERDA will hold a [webinar](#) for Proposers on August 13, 2025, at 3:00 - 4:30 p.m. ET. During the webinar, NYSERDA will review the Step One Eligibility Application and Step Two Bid Proposal requirements, the Agreement, and the Program Manual. Questions will be taken and, to the extent possible, responses will be provided during the webinar.²⁴

Proposers can register for the webinar at the [registration site](#).

Proposers are encouraged to submit questions prior to the webinar via email to bulkstorage@nyserda.ny.gov, and during the [Proposer's Webinar](#) using the built-in Q&A feature. Written responses will be posted to the [solicitation website](#) and will supersede any responses given by NYSERDA during the [Proposer's Webinar](#). Any submitted questions that NYSERDA posts publicly will be posted anonymously, along with NYSERDA's responses, on the [solicitation website](#) under the Q&A feature, which is accessible to all Proposers following the webinar. NYSERDA reserves the right to not post responses to questions that are specific to a Project. Any such questions should be directed to NYSERDA through the Messages feature of the [solicitation website](#) or bulkstorage@nyserda.ny.gov inbox.

Questions may not be submitted directly to any individual at NYSERDA other than the Designated Contacts listed in the initial pages of this RFP. Questions should not be submitted to DPS Staff, or to individuals working for or on behalf of NYSERDA that are not listed as Designated Contacts.

²⁴ To sign up for the Proposer's Webinar please register here:
<https://nyserdany.webex.com/weblink/register/r04709e40b230c14d97277dbd96c03d4c>

5.2 Bid Fee

The Non-Price Submission for a Project must be accompanied by a single Bid Fee, in the form of electronic wire (preferred) or certified funds, in an amount determined by the Bid Power Capacity in megawatts (MW) of the Project in accordance with Table 5. The Bid Fee is due by Wednesday, December 10, 2025. The submission of Alternate Bid Proposal(s) does not require multiple Bid Fee payments – Bid Fee payments are only submitted once for a Project. For Projects submitting Alternate Bid Proposals, the Bid Fee payment will be calculated from the Base Proposal. Proposers must indicate that they have submitted a Bid Fee with their Step Two Bid Proposal and attach proof of the provision of a Bid Fee, such as a receipt or transfer confirmation.

Table 5. Bid Fees by Project Bid Power Capacity

Bid Power Capacity (MW)	Bid Fee
5 – 99.9 MWac	\$100 per 1 MWac
≥100 MWac	\$10,000

Bid Fees will not be refunded to Proposers, except in instances of Bid Fees submitted for late or incomplete Bid Proposal submittals which are not evaluated, or for Bid Proposals that are ineligible under the Minimum Eligibility Thresholds (other than the Benchmark ISC Cost). Waivers will not be provided for Bid Fees. Funding received from or committed by an entity like the New York Green Bank will not suffice as an alternative to the Bid Fee payment.

Full Bid Fee submission instructions with account and routing information can be downloaded after registering as a Proposer on the [solicitation website](#). All Bid Fees must be clearly labeled with a unique identifier comprised of the Project Name, Proposer Name, and NYISO Queue number (if applicable). Bid Fees provided via electronic wire must have this unique identifier included within the Payment Details/Description. Bid Fees provided via cashier's check must have this unique identifier clearly labeled within the Memo or elsewhere on the check.

5.3 Modification or Cancellation of the RFP and Solicitation Process

Notification of any changes in RFP process or documents will be communicated to the Proposers via the [solicitation website](#), and any modified or reissued solicitation documents will be posted on the solicitation website and NYSERDA's [Bulk Energy Storage website](#). Prospective Proposers are encouraged to check the website frequently to be advised of any RFP changes or other news.

The terms and conditions of this RFP may, at any time, be changed, postponed, withdrawn, and/or canceled, including any requirement, term or condition of this RFP, without any liability to NYSERDA.

5.4 Updates to the Eligibility Application and/or Bid Proposal

Proposers will not have an opportunity to refresh or restate submissions after the corresponding submission deadline for each Step. If a Proposer wishes to modify an already submitted submission *before* the submission deadline for that Step, the Proposer should follow the posted instructions for editing a submission and may contact NYSERDA's Designated Contacts with questions or issues.

NYSERDA will contact Proposers regarding any instances where NYSERDA is seeking clarification regarding a potential error or misunderstanding reflected in the Bid Proposal, or if Bid Proposal materials were received in a corrupted or unusable format. NYSERDA will provide the Proposer with an

opportunity to cure the error or provide properly formatted materials. NYSERDA will not make material adjustments to any Proposal.

After the submission deadline, Proposers may provide information that was not available at the time of their submission at NYSERDA's request as described in Sections 2.4 and 3.2. These requests are for clarification and/or informational purposes and will not be treated by NYSERDA as a change or revision to the material terms of Bid Proposal submission (e.g., Strike Price, Incremental Economic Benefits).

If any event or change of circumstances occurs that affects the Project or the Bid Proposal in a manner that could reasonably be expected to have a material impact on the eligibility of the Bid Proposal or its evaluation in ISCRFP25-1 (a "Material Change"), Proposers must promptly notify NYSERDA in writing. Proposers and their Bid Proposals must maintain eligibility under the Minimum Eligibility Thresholds throughout the Bid Proposal evaluation period and, if provisionally awarded, up to the execution of the Agreement by the Proposer and NYSERDA.

In the event that a Material Change occurs that affects ISCRFP25-1 Proposers generally, NYSERDA may solicit updates to all eligible Step Two Bid Proposals to account for the Material Change. In accordance with this process for evaluating systemic Material Changes, Proposers' scores may be adjusted upwards or downwards as a result.

In the event of a Material Change that does not affect ISCRFP25-1 Proposers generally, the evaluation of the affected Bid Proposal(s) will be re-visited in the applicable category(ies). However, no scores may be increased as a result of this type of material change; scores may only be adjusted downwards.

If any information on Attachment B. Public Project Summary changes at any time following submission and prior to execution of the Agreement, Proposers are required to promptly submit an updated version of Attachment B so that NYSERDA can update its website accordingly.

5.5 Requests for Additional Information and/or Interview

Following the submission of Applications or Proposals, NYSERDA and/or the Scoring Committee may request clarification and additional information, including an interview, from Proposers at any time throughout the duration of the evaluation process. Such information will be subject to protection of proprietary information as described in Section 8.1, consistent with other Bid Proposal submission materials. If the Proposer does not respond promptly to such information requests or does not provide adequate information, the affected Bid Proposal(s) will be evaluated based on the information as originally submitted.

5.6 Contractual Commitments

5.6.1 Prevailing Wage Requirement

In accordance with the Energy Storage Order and NYSERDA's requirements as contained in the Agreement, and unless otherwise provided in a Project Labor Agreement (PLA) covering the construction of the Project that complies with the Agreement, all laborers, workmen and mechanics (within the meaning of those terms under New York State Labor Law Article 8) performing Construction Activities with respect to the Project, including, but not limited to, the staging, installation, erection, and placement of the Project and its electrical interconnection as well as related to start-up and commissioning of the Project, whether through long-term or short-term employment, must be paid wages and benefits in an amount not less than the Prevailing Wage applicable in the area where the

Project will be situated, erected and used, as published by the New York State Department of Labor or at least the equivalent Prevailing Wage requirements of the jurisdiction where the Project is located. Furthermore, in accordance with the Energy Storage Order and the Agreement, an awarded Project must provide quarterly certifications by a New York State licensed certified public account that the Prevailing Wage has been paid.

5.6.2 Project Labor Agreement

As referenced herein, a Project Labor Agreement (PLA) refers generally to a single collective bargaining agreement (including a pre-hire agreement) covering both contractors in the construction industry working on a Project and a bona fide building and construction trade labor organization representing the craft workers on that Project. Construction work performed under a PLA that meets the requirements of Exhibit J to the Agreement is not subject to the aforementioned prevailing wage requirements. For the specific applicable contractual provisions, please see Sections 18.09 and 18.11 of the Agreement and Exhibit J to the Agreement.

5.6.3 Disadvantaged Communities Economic Benefit Commitments

Proposers are encouraged to make elective commitments in their Step Two Bid Proposals that will commit the Proposer to a certain dollar amount of expenditures that will accrue to disadvantaged communities. Such commitments will be evaluated favorably and be incorporated into the Agreement as Disadvantaged Community Commitments. To the extent a Project falls short of the minimum dollar requirement set forth in the Agreement, any shortfall will be addressed through the remedy provided in Section 6.10 of the Agreement. See Appendix A for further instructions on Economic Benefits commitments.

6. Preliminary Ranking, Portfolio Evaluation, and Initial Award Group

6.1 Preliminary Rank Orders and Award Group

The preliminary rank ordering of Bid Proposals will be established based on the sum of the consensus Scoring Committee scores for each non-price evaluation category (Project Maturity & Viability, Electricity System Value, and Economic Benefits), and the points awarded for the Levelized Net ISC Cost as a result of the Strike Price evaluation. Bid Proposals will be ranked by points awarded in two separate rank orders, separated by duration (less than 8 hours, and 8 hours or more). NYSERDA reserves the right to provisionally award Bid Proposals from one or both preliminary rank ordered sets of proposals.

Following the development of the preliminary rank ordering, NYSERDA may recommend modifying either of the two rank orders, in consultation with DPS, based on the Portfolio Risk Factors detailed in Section 6.2. NYSERDA may consult with subject matter experts, including DPS Staff, the NYISO, and the distribution utilities to assess the portfolio of received bids to inform the potential employment of any Portfolio Risk Factor(s).

After the preliminary ranking of all eligible Bid Proposals and (if applicable) applying any Portfolio Risk Factors, NYSERDA and DPS will arrive at an initial award group.

The number of ISCs procured in the ISCRFP25-1 solicitation is subject to NYSERDA's discretion and the review and approval of the Department of Public Service. NYSERDA reserves the right to reject or accept any or all bids from either rank order. NYSERDA may consider information provided by a Proposer in response to requests for additional information in accordance with Section 8 or otherwise obtained by

NYSERDA as to indictments, convictions, enforcement proceedings, investigations, and significant character or ethical questions in accepting or rejecting a bid. NYSERDA also reserves the right to solicit revised Strike Prices and/or to make counteroffers as it deems appropriate. Notification of a re-bid, counteroffer or selection will be made by voice communication and via the [solicitation website](#) to the Proposer's Project Sponsor(s). Proposer's Project Sponsor(s) must be authorized to respond and to commit to counteroffers on behalf of the Proposer.

6.2 Portfolio Risk Factors

NYSERDA, in consultation with DPS, may recommend adjustments to the proposed award group rank orders to (1) remove Bid Proposals from the initial award group to avoid material risks to the portfolio (as described in factors 1-5 below), and/or (2) add Bid Proposals to the initial award group that provide material benefits to the portfolio (as described in factors 1-5 below). Any additions will be made in accordance with the order of the applicable rank order. NYSERDA, in consultation with DPS, may make such adjustments if the adjustments result in:

1. A portfolio that reduces the risk of geographic, technological, or developer concentration;
2. A portfolio that supports the ultimate achievement of the geographic targets described in the June 2024 Energy Storage Order;
3. A portfolio with a materially lesser risk of project attrition, including but not limited to projects/project configurations with relatively lower permitting feasibility risk and/or with relatively lower supply chain risk;
4. A portfolio that supports lesser estimated levels of current or future renewable energy curtailment;
5. A portfolio more capable of providing reliability services to the electricity grid.

These modifications may be made if comparable projects based on price and non-price factors are available in the applicable rank order of Bid Proposals and material benefits or avoidance of material risks to the initial award group are identified as described above.

6.3 Award Notice

After determining the initial award group, NYSERDA will then notify Proposers with Projects contained in the initial award group both by voice and written communication to Proposers' Project Sponsor(s) and Authorized Representative(s). The date upon which NYSERDA provides such written notification shall be the Award Notification Date. Selection for an initial award does not give the Proposer any legal right or entitlement. Once selected for initial award, Proposers must negotiate a final version of the Agreement with NYSERDA (See Section 7).

In accordance with the Non-Disclosure Agreement submitted by Proposers in the Step Two Bid Proposal, Proposers awarded an Agreement under ISCRFP25-1 will be required to maintain the confidential nature of the award prior to the public announcement of the ISCRFP25-1 final award group as part of the Public Disclosure. The date upon which NYSERDA provides such written notification shall be the Award Notification Date.

Following notification of initial awards and commencement of negotiations of Agreements, NYSERDA and DPS reserve the right to expand the award group and offer awards to one or more Projects ranked below those Projects initially offered an award, accounting for any Portfolio Risk Factors detailed in Section 6.2. The submission of a Step Two Bid Proposal will constitute a binding offer to contract under

the terms of the Agreement; such offer must remain open for a period of at least one hundred and eighty (180) days from the Step Two Bid Proposal Price Submission deadline.

See Section 7 for further instructions on the post-award contracting process.

7. Post-Award Contracting

7.1 Award Notifications and Confidentiality

Following the distribution of initial award notifications, the Proposer shall not distribute any press release or contact the media or other members of the public until after NYSERDA publicly discloses the award. This confidentiality requirement is further described in the Non-Disclosure Agreement Proposers are required to execute as part of the Step Two Bid Proposal. Following NYSERDA's Public Disclosure, if the Proposer wishes to contact the press regarding the awarded Agreement, the Proposer must collaborate with NYSERDA's Bulk Energy Storage Team and the NYSERDA Director of Communications prior to issuing any press release and/or holding an event or related announcement.

Once all provisional awards are confirmed by NYSERDA, NYSERDA will inform Proposers if they were not selected for award. Upon receipt of this notification, a Proposer may request to schedule a debrief on the selection process and the strengths and weaknesses of its Proposal by contacting bulkstorage@nyserda.ny.gov.

7.2 Provision of Contract Security

Unless otherwise agreed to by NYSERDA in writing, Contract Security in the amount of the product of the Bid Power Capacity (MWac) and \$20,000 will be required within thirty (30) days of the Award Notification Date. NYSERDA accepts Contract Security in the form of cash, certified funds, or a Letter of Credit (LOC).

If Contract Security is not provided by this deadline and the deadline is not extended by NYSERDA (which NYSERDA does not intend to do except in extenuating circumstances or if the deadline is extended for all provisionally awarded Proposers), the award will be rescinded.

The criterion for accepting a LOC includes:

1. The issuing bank is an owner bank of The Clearing House,²⁵ or
2. The issuing bank must have a credit rating of A or better by Standard and Poor's, A or better by Fitch, or A2 or better by Moody's; and
3. The issuing bank must be a United States bank, or a United States branch of a foreign bank, with a New York branch preferred.

NYSERDA has included a standard form of letter of credit in the Attachment A. ISC Standard Form Agreement. If the issuing bank seeks modification to these terms, NYSERDA recommends that a draft letter of credit should be sent to NYSERDA for review and consideration prior to issuance. **Please refer to Section 7.4 of the RFP for more information regarding Contract Security draw conditions prior to execution of the Agreement.**

²⁵ Please see the owner bank membership for The Clearing House available from <https://www.theclearinghouse.org/about/owner-banks>

7.3 Designation of Seller, Changes of Control, and Documents Required for Contracting Purposes

Awarded Proposers will be responsible for designating the legal entity that will serve as the Seller, which must be a subsidiary or affiliate of the Proposer unless otherwise agreed by NYSERDA. The Seller typically is the legal entity that owns the Project; if a Proposer wishes to designate a different legal entity as the Seller, Proposers should contact NYSERDA as early as feasible.

Any change in control of the Project that occurs prior to full execution of an awarded Agreement may affect evaluation including as described in ISCRFP25-1 Section 5.4, and accordingly, NYSERDA cannot guarantee that an initial award will remain valid if a change of control of the Project occurs prior to entry into the Agreement.

A Proposer that intends to effectuate a change of control of the Project after an initial award is granted but prior to full execution of an awarded Agreement may provide to NYSERDA as part of the Step 2 Bid Proposal submission package relevant materials regarding the proposed transferee ("Transferee"). A Proposer may elect to have NYSERDA evaluate such Transferee's materials as part of the Bid Proposal. The Transferee's materials must include the full set of submission requirements for Development and Operating Experience (Section 4.2.6) and Creditworthiness and Financing (Section 4.2.7). However, any award granted by NYSERDA that is based on evaluation of a Transferee's materials shall be conditioned upon (a) Proposer transferring the awarded project to Transferee no later than thirty (30) days after the award notification date, provided, that such thirty (30) day period may be extended by up to an additional thirty (30) days if Proposer provides reasonable evidence to NYSERDA that the consummation of the transfer to Transferee is delayed due to unforeseen circumstances and (b) Transferee providing NYSERDA with Contract Security pursuant to ISCRFP25-1 Section 7.2. If Proposer fails to transfer the awarded project to Transferee within thirty (30) days after the award notification (as may be extended by another thirty (30) days as set forth above), NYSERDA shall rescind the award and re-evaluate and re-score Proposer's bid without review of any Transferee materials. If such re-evaluation and re-score would result in Proposer receiving an award, NYSERDA shall provide Proposer an updated award. For the avoidance of doubt, NYSERDA shall not be required to execute an Agreement until the transfer to Transferee is consummated or the Proposer has received an updated award after re-evaluation and re-scoring.

After the Agreement with NYSERDA is executed, changes of control of the Seller will be governed by Article VIII of the Agreement. Any change of control to NYPA prior to full execution of an awarded Agreement must comply with the requirements set forth in Section 2.1.6.

NYSERDA requires the following documents from the Seller prior to contract execution:

1. Contracting Form, to be provided by NYSERDA to Seller, requesting information including Legal Business Name, State of Incorporation, Tax Identification Number (EIN), and other contractual information; Pursuant to Tax Law Section 5-a, if not previously filed for the Seller, form Tax Law ST-220-TD is required. Please consult Publication 223, Questions and Answers Concerning Tax Law Section 5-1. If filing for the first time, please indicate the "Seller" under "Contractor name" on the form. This form is filed first with the NYS Tax Department and NYSERDA does not need a copy. If not previously filed for the Seller, a completed form Tax Law ST-220-CA. Sellers will file this form after filing the ST-220-TD form. On the ST-220-CA form, Sellers will indicate to NYSERDA that they have filed the ST-220-TD form or the Seller previously filed ST-220-TD with

the Tax Department. As a reminder, please indicate the “Seller” under “Contractor name” on the form;

2. Certificate of Incorporation;
3. A certificate of an appropriate officer of the Seller, in form and substance certifying: (1) the names and signatures of the officers of the Seller authorized to sign any documents to be delivered to NYSERDA under the conformed Attachment A. ISC Standard Form Agreement, and (2) the accuracy and completeness of resolutions of the Seller, authorizing and approving all matters in connection with the transactions contemplated in the conformed Agreement. NYSERDA does not have a preferred standard;
4. A certificate of good standing, dated as of the most recent practicable date prior to the Effective Date, issued by the jurisdiction of Seller’s organization Secretary of State, confirming the corporate good standing of Seller;
5. Application for Authority, if applicable (if the Seller is a foreign business corporation that has not yet applied for authority to do business in the State of New York);²⁶
6. Updated EO 16 Certification and/or EO 192 Vendor Responsibility Questionnaire, if applicable.

7.4 Process for Agreement Finalization; Pre-Execution Contract Security Draw Conditions

NYSERDA will provide a first draft of the Agreement populated with all Project-specific inputs other than (i) any of the items listed in Section 7.3 (above) that have not yet been provided by Proposer and (ii) if not yet available, Exhibit H (Disadvantaged Community Commitments) (the “Conformed Draft”) reasonably promptly after provisional award. For further clarity, NYSERDA shall not be required to provide the Conformed Draft or to execute the Agreement prior to the deadline for provision of Contract Security.

For Proposers with multiple awards, unless otherwise agreed to by NYSERDA, one Conformed Draft will be provided to the Seller along with Project-specific Schedules 1 and 2 for each award, and, once the Agreement terms are finalized, that form Agreement will be used to populate the other awarded Agreements for the other awarded Projects.

Subject to the below terms and conditions, if the Seller fails to execute the Agreement on or prior to the date (“Execution Deadline”) that is 120 calendar days following the date on which NYSERDA provides the Conformed Draft to Proposer, the Contract Security will be forfeited to NYSERDA, the award will be rescinded, and the Project may not be eligible to participate in future NYSERDA bulk storage solicitations.

NYSERDA will provide any and all remaining Project-specific inputs that are not included in the Conformed Draft no later than the date that is 30 calendar days following the date on which NYSERDA has received from Proposer all required contracting information described in Section 7.3 (above). If NYSERDA fails to provide these inputs by such time, the Execution Deadline will be automatically extended day for day by the length of NYSERDA’s review.

NYSERDA and the Proposer will work together in good faith to expediently finalize the Agreement, making edits only to the extent reasonably necessary to clarify and properly implement the substance and intent of the RFP and form Agreement.

²⁶ <https://dos.ny.gov/application-authority-foreign-business-corporation>

Neither NYSERDA nor Proposer is required to agree to material changes to the form Agreement. NYSERDA also does not intend to make **any** changes to certain sections of the Agreement, as noted in Section 2.6.1.

NYSERDA agrees to respond to any comments from the Seller within 15 business days of receipt, and to the extent NYSERDA exceeds this prescribed timing for response, the Execution Deadline will be extended day for day by the length of NYSERDA's review.

Proposer is responsible for arranging any and all necessary approvals (e.g. board or investment committee approval) as necessary to meet the Execution Deadline.

In the event that NYSERDA provides an execution version of the Agreement less than 10 business days prior to the Execution Deadline, the Execution Deadline will automatically be extended to the date that is 10 business days following the date that NYSERDA provides the Proposer with the execution version. As noted in the Exhibit B (Letter of Credit) of the Agreement, NYSERDA will have the right to draw on the Contract Security if the Execution Deadline (as extended, if applicable, in accordance with the terms and conditions above) has passed and the Proposer has not executed the Agreement. In such circumstances, the Project may also not be eligible to participate in the next NYSERDA bulk storage solicitation. NYSERDA's ability to proceed with execution of the contract may depend on the status of the Project's SEQRA review. This topic will be further discussed with Proposers as needed depending on the Project's specific circumstances.

As noted in Exhibit B (Letter of Credit) of the Agreement, NYSERDA will not be entitled to draw on the Contract Security for the other reasons enumerated therein until the Agreement is executed by both parties.

NYSERDA may publish the Agreements, and/or relevant terms within the Agreements, executed with awardees. Prior to such publication, NYSERDA will redact any critical electric infrastructure information contained in the Agreements, if any, including in the exhibits thereto, and will consider requests to redact confidential business information; provided, however that NYSERDA will not entertain any request to redact price information contained in the Agreement.

7.5 Confidentiality Waiver for Interconnecting Authority

The Proposer shall waive confidentiality with the pertinent Interconnecting Authority after the Agreement has been executed.

7.6 Updated Project Schedule

If an awarded Project is under development, NYSERDA will request an updated Project Schedule six months after the Bid Proposal was submitted, revisiting key development milestones throughout that period. Awardees must update all project schedule details previously provided in the Bid Proposal via the Part VI - Schedule tab of Attachment D. Bid Data Form and provide an update to NYSERDA through the Salesforce Portal.

Proposers shall include a narrative that describes progress since the project schedule was submitted as part of the Step Two Bid Proposal.

7.7 NYISO Waiver for Project-Specific Capacity Accreditation Resource Class (CARC)

If awarded, the Seller will be required to waive confidentiality with the NYISO for the term of the Contract Tenor, as to NYSERDA, in order for NYSERDA to obtain the Project-specific CARC used in the settlement calculations.

7.8 Material Adverse Change

If a Material Adverse Change (as defined in the Agreement) may have occurred prior to execution of the Agreement, Proposer may provide NYSERDA with the evidence required by Section 18.12(a) of the Agreement prior to execution of the Agreement. NYSERDA shall use reasonable efforts to either accept or refute such evidence based on reasonable justification prior to execution of the Agreement.

8. General Conditions

8.1 Proprietary Information

Consideration should be given before confidential information is submitted to NYSERDA as part of any Proposal. Proposers should consider and review whether information is critical for evaluation, and whether general, non-confidential information may be adequate for review and evaluation purposes. The NYS Freedom of Information Law, Public Officers Law, Article 6, provides for public access to information NYSERDA possesses. The Public Officers Law includes exceptions to disclosure, including Section 87(2)(d) which provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Additional information submitted to NYSERDA that Proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501²⁷.

However, NYSERDA cannot guarantee the confidentiality of any information submitted. As noted in Section 7.5 above, NYSERDA reserves the right to make public the Agreement executed with any awarded Proposal.

8.2 State Finance Law Sections 139-j & 139-k

NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

²⁷ <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>

8.3 Tax Law Section 5-a

NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the Department) whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contacting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

8.4 Contract Award

NYSERDA anticipates making multiple awards under this solicitation. A contract may be awarded based on initial applications and Bid Proposals without discussion or following limited discussion or negotiations. Each Bid Proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations on the Agreement. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

8.5 Limitation

This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to disqualify Proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in extending an award to such Proposers.

8.6 Omnibus Procurement Act of 1992

It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as Proposers, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
30 South Pearl Street
Albany, NY 12245

A directory of certified minority- and women-owned business enterprises is available from:
Empire State Development
Minority and Women's Business Development Division
30 South Pearl Street
Albany, NY 12245

8.7 Disclosure Requirement

All Proposers shall disclose any indictment for any felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a Proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment, investigation, enforcement proceeding, or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

8.8 Press Releases and Media Contact

All Proposers shall not distribute any press release or contact the media until after any New York State press releases regarding the awards have been issued. If Proposer wishes to contact the press regarding the award, Proposer must collaborate with NYSERDA's Designated Contacts and Director of Communications to prepare any press release and/or to plan for any announcement.

8.9 Independent Entities/Limitation of Liability

Neither this RFP nor any other aspect of this solicitation shall create an agency, partnership, joint venture, or co-tenancy relationship among NYSERDA staff, the members of the Scoring Committee, or any other individuals or entities involved in the development or administration of this RFP (collectively, the "RFP Parties"), nor any other relationship or liability beyond those (if any) explicitly adopted in writing and executed by authorized representatives of the applicable RFP Parties. None of the RFP Parties shall be liable for any act or omission of any other RFP Party. Neither this RFP nor any other aspect of this solicitation creates or is intended to create third-party beneficiaries hereunder. In no event will an RFP Party be liable to any person for special, incidental, punitive, exemplary, indirect or consequential damages or lost profits, whether by statute, in tort or contract or otherwise.

8.10 Vendor Assurance of No Conflict of Interest or Detrimental Effect

The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any

investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, the “Commission on Public Integrity”), and if so, a brief description must be included indicating how any matter before the Commission on Public Integrity was resolved or whether it remains unresolved.

8.11 Public Officers Law

For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Joint Commission on Public Ethics, or its predecessors (collectively, the “Ethics Requirements”). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a “lifetime bar” from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person’s engagement, work cooperatively with the State to solicit advice from the New York State Joint Commission on Public Ethics, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Joint Commission on Public Ethics. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

8.12 Due Diligence

NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants’ prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA’s current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant’s proposal, including questions regarding applicant’s business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business

experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a portfolio risk factor.

8.13 Executive Order No. 16

Pursuant to Executive Order No. 16 (EO 16)²⁸ issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form noted in Section 3, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to EO 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

8.14 Executive Order No. 192

As per Executive Order 192²⁹, NYSERDA is required to do business only with responsible entities. As a result, a Vendor Responsibility Review will be conducted for all ISCRFP25-1 Step One Proposers. The Vendor Responsibility Checklist requires that the Proposer answer a series of questions regarding the Proposer, and the directors, employees and agents of Proposer and any affiliate of Proposer with respect to: (1) current investigation(s) by any governmental agency; (2) convictions or established liability for any act prohibited by State or Federal law in any jurisdiction involving conspiracy, collusion or other impropriety with respect to offering on any contract; or (3) any debarment action (detail any exceptions), within the last 4 years.

²⁸ <https://www.governor.ny.gov/executive-order/no-16-prohibiting-state-agencies-and-authorities-contracting-businesses-conducting>

²⁹ https://ogs.ny.gov/system/files/documents/2021/09/eo-192-vendor-integrity_0.pdf

The Vendor Responsibility Checklist will also include the Proposer's attestation regarding the accuracy and truthfulness of the information and documentation provided by the Proposer. The NYSERDA Bulk Energy Storage program team will review the responses to the Vendor Responsibility Checklist and reserves the right to make a determination of vendor responsibility if a non-responsibility concern is noted.

8.15 NYSERDA AI Policy

Proposers are required to state in their Proposals if they intend to use artificial intelligence ("AI") for reports or other deliverables associated with NYSERDA data or information. Approval for any Proposer/Seller to use any AI systems for such purposes must be expressly granted by NYSERDA. See [Doing Business with NYSERDA](#) on NYSERDA's website for more information on the use of AI at NYSERDA.

Introduction to the Draft ISCRFP25-1, Comment Submission Instructions, and Questions for Review

On March 21st, 2025, the New York State Public Service Commission released the *Order Approving Bulk Implementation Plan with Modifications*¹, which approved with modifications the 2024 Bulk Energy Storage Implementation Plan Proposal,² which was revised and filed as the program Implementation Plan on April 18th, 2025³. NYSEDA is now seeking feedback on a draft version of the State's first bulk energy storage solicitation (ISCRFP25-1).

The objective of ISCRFP25-1 is to establish a competitive solicitation for a range of eligible bulk energy storage technologies and to advance the timely progress towards procuring 3 gigawatts of bulk energy storage over three solicitations. The objective of releasing this Draft RFP is to invite external stakeholder feedback on the proposed contents and schedule of ISCRFP25-1. NYSEDA is seeking comments on specific elements in the Draft RFP, listed in the "Questions for Stakeholder Feedback" Section. NYSEDA is simultaneously releasing other associated documents and welcomes feedback on elements included in other documents. Feedback is primarily sought from potential ISCRFP25-1 Proposers but is welcomed from all interested stakeholders.

This is a Draft RFP. NYSEDA has been directed by the Public Service Commission to release the final ISCRFP25-1 by June 30, 2025. All aspects of this Draft RFP, including any features described or not described herein, may be altered, removed, or otherwise changed at the sole discretion of NYSEDA.

Content of Response

NYSEDA is releasing the following documents with this Draft RFP and welcomes feedback on any of them:

- Draft ISCRFP25-1
- Draft Standard Form Agreement (SFA)
- Draft Bulk Energy Storage Program Manual
- Draft ISCRFP25-1 Appendix A. Incremental Economic Benefits Eligibility

The Draft ISCRFP25-1 and the Draft SFA contain separate cover pages with questions to guide respondents' comments.

Recognizing that NYSEDA has been directed to release the final ISCRFP25-1 by June 30, 2025, responses on all documents, with the exception of feedback on the Draft SFA, must be consolidated and limited to 20-pages or less. Draft SFA feedback can be provided as redlines and/or as a document detailing the responses to the questions. Draft SFA feedback is not included in the 20-page limit.

Responses should be concise and focus on areas in which the respondent has a particular interest or expertise. Respondents do not need to respond to all questions.

¹ <https://documents.dps.ny.gov/public/Common/ViewDoc.aspx?DocRefId={10ACB995-0000-CC17-A62E-1F3CEDDE8A1F}>

² <https://documents.dps.ny.gov/public/Common/ViewDoc.aspx?DocRefId=%7bF099A092-0000-C938-98D5-9D3FB839557F%7d>

³ <https://documents.dps.ny.gov/public/Common/ViewDoc.aspx?DocRefId={F00F4A96-0000-CC25-8B35-AB070F5506AF}>

Responses should include the following information and items:

- Respondent's name, affiliation, title, and primary contact information.
- Identify and provide general background about your organization, noting whether your organization is a potential Proposer into ISCRFP25-1 and/or future NYSERDA ISCRFPs generally.
- Where applicable, comments should include the Draft RFP Section, Draft SFA Article, Draft Program Manual Section, and/or question number to which it refers.

NYSERDA reserves the right not to review or consider responses that do not include the details listed above. Submitted documents should be Word or PDF files named in the format: "[Respondent Name] Comments_Draft ISCRFP25-1".

Respondents must submit their responses to bulkstorage@nyserda.ny.gov by Thursday, May 29th, 2025, by 3:00 p.m. ET with the subject line "Draft ISCRFP25-1 Comments". NYSERDA reserves the right to disregard late responses.

Questions for Stakeholder Feedback

NYSERDA welcomes feedback on any content released with this Draft RFP. NYSERDA encourages respondents to respond to the following specific questions, but respondents are not required to answer all questions and may provide feedback not covered by these questions.

ISCRFP25-1 Section 1, Introduction

1. *Interest:* Do you intend to participate in ISCRFP25-1 as a Proposer? If yes, please describe the following attributes of any Project(s) you intend to or are considering bidding into the RFP:
 - a. Project(s) name
 - b. Energy storage technology
 - c. Location, proposed Point of Interconnection (with NYISO Queue Number, if applicable)
 - d. Bid Power Capacity (MW)
 - e. Bid Storage Duration (hours)
 - f. Standalone or co-located – if co-located, include the technology that the energy storage system is co-located with and the project name.
 - g. Proposed Commercial Operation Date, if known
2. *Schedule:* How does the proposed schedule, particularly the Step Two Bid Proposal submission deadline, in ISCRFP25-1 Section 1.3 align with project development schedules and other expected milestones in 2025?
3. *Schedule, Price Intake:* NYSERDA is considering intaking nonprice and price information separately in Step Two, with Strike Price being solicited at the end of Step Two evaluation. This would be intended to give Proposers more time and certainty when preparing their Strike Price. Please comment on this potential alternative Step Two Bid Proposal submission process that would intake nonprice information in Q4 of 2025 and intake Strike Price in Q1 of 2026. NYSERDA would still intend to release notices of provisional awards in Q1 of 2026 under this schedule.
4. *Schedule, Public Disclosure:* NYSERDA precedent is to hold the Public Disclosure event until after contracting for all awards is completed. Do you anticipate impacts to project development schedules or local relationships if Public Disclosure cannot occur until Q2 of 2026 (i.e., any

notice of provisional award would be required to remain confidential until Q2 2026)? Pursuant to the form Non-Disclosure Agreement in Attachment H (to be published with the final ISCRFP25-1), the developer, prior to Public Disclosure, will be permitted to disclose necessary information about the awarded Project to certain representatives of the developer, including affiliates, consultants and counsel.

ISCRFP25-1 Section 2, Eligibility and Submission Requirements

5. *Eligible Technologies*: Is the guidance in ISCRFP25-1 Sections 2.1.1 and 2.1.2 sufficient to ensure eligibility certainty for the technologies you intend on bidding in your Proposal(s)?
6. *Project Ineligibility*: What additional details on project ineligibility are necessary for you to plan your Proposal?
7. *Fire Safety*: Are the recommendations from New York's Interagency Fire Safety Working Group reasonable for implementation in ISCRFP25-1? Do you anticipate any challenges to remaining compliant with Applicable Laws, including Fire Codes, for the length of a NYSERDA contract?
8. *Inflation Risk Adjustment Proposal (IRAP)*: Is the lithium-ion IRAP formula representative of the major components expected to be used in/purchased for your project(s)? Are the weightings of these indices reasonable? What indices should be used for an IRAP formula applicable to non-lithium-ion battery storage technologies?
9. *Inflation Risk Adjustment Proposal (IRAP), 10% cap*: Is the proposed 10% positive cap a sufficient threshold to share inflation risk with Proposers, while also protecting ratepayers from excessive Strike Price increases?

ISCRFP25-1 Section 3, Price Evaluation

10. *Strike Price*: Is the proposed approach for submitting the price components of the Step Two Bid Proposal clear? Are any clarifications needed on the key components for price evaluation (Bid Power Capacity, Bid Energy Capacity, Bid Storage Duration, and Contract Tenor)? For long duration energy storage Projects, does this proposed approach to intaking Strike Price impact your ability to bid into future ISCRFPs?
11. *Availability Percentage for Evaluation*: Section 3.2 includes the following sentence: "NYSERDA will evaluate all Proposals based on an assumed [X]% availability percentage". Please provide feedback on a reasonable assumed availability percentage for Project evaluation.

ISCRFP25-1 Section 4, Non-Price Evaluation

12. *Minimum Eligibility Thresholds*: Are the minimum eligibility thresholds described in ISCRFP25-1 Section 4.1 prohibitive to submitting a Proposal? Is the documentation requested in ISCRFP25-1 Sections 4.2, 4.3, or 4.4 reasonable to provide on the schedule NYSERDA proposed and reasonable to provide at your Project's development phase?
13. *Non-Price Evaluation*: What further specifications to the non-price evaluation factors described in ISCRFP25-1 Sections 4.1, 4.2, 4.3, and 4.4 are necessary for you to plan your Proposal?
14. *Project Viability and Maturity for LDES*: If you plan to submit a long duration energy storage Proposal, are the project viability and maturity requirements described in ISCRFP25-1 Sections 4.1 and 4.2 prohibitive to submitting a bid in the first bulk storage procurement? Are these requirements prohibitive to submitting a Proposal in future bulk storage procurements?

15. *Non-Viable Bids*: Are the factors described in ISCRFP25-1 Section 4.5 reasonable for NYSERDA to use in its Non-Viability Determinations screening? Should other factors be assessed to potentially deem Proposals non-viable?
16. *Economic Benefits*: Section 4.4 includes language stating that Economic Benefits evaluation points will be awarded in proportion to the level of eligible claims, normalized across all Projects by dividing each Project's eligible claims by that Project's Bid [Power/Energy] Capacity [\$/MW or \$/MWh]. Should NYSERDA normalize Economic Benefits claims by Bid Power Capacity (\$/MW) or by Bid Energy Capacity (\$/MWh)? Please include rationale for your answer.

ISCRFP25-1 Section 5, Additional Application Submission Information

17. *Application Submittal and Contractual Commitments*: Are the details provided in ISCRFP25-1 Section 5 sufficient for you to plan your Proposal? If no, please describe the additional information you need to adequately plan your Proposal. Please note that NYSERDA will provide additional instructions and templates to inform the submission of Step One Applications and Step Two Bid Proposals as part of the full ISCRFP25-1 issuance.

ISCRFP25-1 Section 6, Preliminary Ranking, Portfolio Evaluation, and Initial Award Group

18. *Project Development Risks*: NYSERDA endeavors to understand the risks that potential projects bidding into ISCRFP25-1 are facing. NYSERDA is interested in understanding the following risks:
 - **Federal risk**: Given uncertainty in federal clean energy policy, NYSERDA is seeking comments on how developers are accounting for this uncertainty.
 - **Antidumping and Countervailing Duty risk**: Given the recent AD/CVD investigation into active anode materials from the People's Republic of China⁴, NYSERDA is seeking comments on how developers are accounting for risk to battery module prices.
 - **Tariff risk**: Given recent tariff actions, NYSERDA is seeking comments on how developers are accounting for and mitigating risk to supply chain/procurement plans and future project construction costs.
 - **Local risk**: Given recent moratoria for battery energy storage facilities in multiple New York localities, NYSERDA is seeking comments on how developers are accounting for moratoria risk in their permitting plans.
 - **Interconnection risk**: Given the schedule proposed here, NYSERDA is seeking comments on how developers with Projects in the NYISO Cluster Study are accounting for uncertainty in their interconnection costs and/or how this schedule impacts a developer's ability to estimate their Strike Price for their Proposal.

Please detail how you are accounting for the above risks, particularly in how these risks impact project development and cost. If you have a project currently under an active moratorium, please include that in your local risk response. Please include details on any other project risks that are not included here, but that NYSERDA should be aware of, including any mitigating factors that could be addressed by modifying the ISCRFP25-1 schedule.

ISCRFP25-1 Section 7, Post-Award Contracting

Please note that additional questions on this Section are included in the cover page of the Draft ISC Standard Form Agreement.

ISCRFP25-1 Section 8, General Conditions

19. *General Conditions:* Are the details provided in ISCRFP25-1 Section 8 sufficient for you to plan your Proposal? If no, please describe the additional information you need to adequately plan your Proposal.

Draft ISCRFP25-1 General Conditions

The information gathered by NYSERDA will be advisory only and is not binding on NYSERDA or any other state agency, office, commission, or public authority. Responses will become the property of NYSERDA. Any actions recommended by NYSERDA will be subject to all applicable laws, including procedural, regulatory and environmental review requirements.

This Draft RFP and associated documents are neither a contract offer, nor a request for proposals and does not commit NYSERDA to award a contract, pay any costs incurred in preparing a response, or to procure or contract for services or supplies. Respondents are encouraged to respond to this Draft RFP and associated documents; however, failure to submit a response will not impact a Respondent's ability to respond to any future competitive solicitation process (if any) for projects, or influence the selection of a service provider going forward or affect its rights and obligations under any applicable laws or in any legal proceeding. NYSERDA reserves the right to discontinue or modify the Draft RFP process at any time, and makes no commitments, implied or otherwise, that this process will result in a business transaction or negotiation with one or more Respondents. All costs associated with responding to this Draft RFP and associated documents will be solely at Respondents' expense.

Draft ISCRFP25-1

Request for Proposals (RFP) No. ISCRFP25-1
Long-Term Contracts to Purchase Index Storage Credits (ISCs)
Draft RFP Release Date: May 13, 2025

Step One Applications Due: August 12, 2025 by 3:00 p.m. Eastern Time (ET) Step Two Bid Proposals Due: November 12, 2025 by 3:00 p.m. ET

The New York State Energy Research and Development Authority (NYSERDA) seeks to procure Index Storage Credits (ISCs) from Projects that meet the eligibility requirements described in this Request for Proposals (RFP or ISCRFP25-1).

ISCRFP25-1 will be implemented through a two-step process, consisting of:

1. **Step One Application:** A qualifying step through which the Proposer must provide evidence that the Project is eligible to create ISCs and other general information about the Proposer and the Project.
2. **Step Two Bid Proposal:** A competitive Bid Proposal step, through which NYSERDA will: (1) examine each Bid Proposal to determine that the Project and Proposer meet the Minimum Threshold Requirements; and (2) for Bid Proposals that meet those requirements, a competitive evaluation based on price and non-price evaluation.

Only those Projects found eligible under Step One will be permitted to submit a Step Two Bid Proposal. Only those Proposals found to have met all Minimum Threshold Requirements will be evaluated under Step Two.

Step One Application: Step One Applications must be **received by NYSERDA by 3:00 p.m. ET on Tuesday, August 12, 2025, via electronic submission on the solicitation website**. NYSERDA uses Accion to solicit bids via the solicitation website; all references to the solicitation website refer to the Accion application and bid submission portal. NYSERDA staff will be available to support Proposer inquiries regarding Step One Eligibility Applications prior to the deadline. Applications may be submitted electronically by following the link for electronic submissions found on [NYSERDA's Bulk Energy Storage webpage](#) or [NYSERDA's Current Funding Opportunities website](#), located in the "Current Funding Opportunities" section of NYSERDA's website at that time.

NYSERDA intends to notify all prospective Proposers who submitted a Step One Eligibility Application as to their eligibility status by **Tuesday, August 26, 2025**. Eligible Proposers will receive a Notice of Qualification and will be provided with detailed instructions for submitting a Step Two Bid Proposal.

Step Two Bid Proposal: Step Two Bid Proposals must be **received by NYSERDA by 3:00 p.m. ET on Wednesday, November 12, 2025, via electronic submission on the solicitation website**. Instructions for submitting electronically and the link for electronic submissions will be included in a Proposer's Notice of Qualification.

NYSERDA recommends that Proposers set aside ample time, well in advance of each deadline, to gather the required information and documentation and to understand the requirements to complete the above processes. NYSERDA recommends that Proposers mark any commercially sensitive materials as “Confidential” or “Proprietary” in any submission made to NYSERDA pursuant to this RFP. Further information regarding confidentiality is set forth in Section 8.1.

Each Proposer has sole responsibility for reviewing this RFP and all attachments hereto and for investigating and informing itself with respect to all matters pertinent to this RFP, including the NYISO’s Open Access Transmission Tariff (OATT) and all applicable market rules.

All questions regarding Draft ISCRFP25-1 must be directed to bulkstorage@nyserda.ny.gov.

No communication intended to influence this procurement is permitted except by contacting the Designated Contacts. Questions about this solicitation should be directed to the ISCRFP25-1 Designated Contacts in writing through the options detailed above. NYSERDA reserves the right to conduct meetings with any Proposer, and any question posed to NYSERDA, as well as any response provided by NYSERDA to a Proposer, may be publicly posted on the solicitation website. The Designated Contacts for ISCRFP25-1 are: Abigail Randall, Bram Peterson, Seth Dunn, Pawan Munshi, Aaron Rudyan, Chris Miller, Nate Chumley, Marci Brunner, and Georges Sassine. Contacting anyone other than the Designated Contacts (either directly by the Proposer or indirectly through a consultant or lobbyist or other person acting on the Proposer’s behalf) to influence the procurement: (1) may result in a Proposer being deemed a non-responsible offeror, and (2) may result in the Proposer not receiving an award.

Proposers should rely only on information provided in this RFP and any associated written updates posted on [NYSERDA’s Bulk Energy Storage website](#) when preparing Bid Proposals. Each Proposer shall be solely responsible for and shall bear all costs incurred in the preparation of its Bid Proposal(s) and/or participation in this RFP.

Incomplete submissions will be subject to disqualification. It is the Proposer’s responsibility to ensure that all required forms and attachments have been completed and submitted. Late Step One Eligibility Applications and Step Two Bid Proposals will not be accepted and those lacking a completed and signed Step Two Bid Proposal may not be accepted. Faxed or e-mailed packages will not be accepted. Mailed packages containing paper submissions will be accepted. RFP responses will not be accepted by hand delivery at any NYSERDA location. Proposers will be notified by NYSERDA if any submitted Bid Proposals are deemed ineligible for failure to meet Minimum Threshold requirements.

Bid Fees submitted for Bid Proposals deemed ineligible or for late or incomplete submittals will be returned to the Proposer, except in instances where a Bid Proposal is deemed ineligible after having undergone evaluation by the Scoring Committee. Proposers whose Bid Proposals are deemed ineligible on account of exceeding the Benchmark ISC cost, as described in Section 2.4, shall not be notified of such finding of ineligibility, nor will such Proposers be entitled to a return of their respective Bid Fees.

Acronyms and Definitions

Agreement – ISC Standard Form Agreement including Exhibits if applicable.

Applicable Law - All applicable provisions of all constitutions, treaties, statutes, laws (including the common law), rules, regulations, ordinances, and codes and any order, writ, injunction, decree, judgment, award, decision, or determination of any court of jurisdiction or any federal, state, municipal or other governmental department, commission, board, bureau, agency, authority or instrumentality, including the NYISO tariffs.

Applicable Zone – The NYISO load zone that includes the Delivery Point.

Authority Having Jurisdiction (AHJ) – The town(s) or city(ies) within which the Project is located.

Award Notification Date – The date upon which NYSERDA provides written confirmation to a Proposer indicating that a Project is the subject of a provisional award in the solicitation and has been selected for contract negotiations.

Benchmark ISC Cost – The confidential maximum price levels for the ISC offers that NYSERDA will employ in its determination of potential award(s).

BESS – Battery Energy Storage System, including the container, battery cell pack, inverter, battery management system, and cooling system.

Bid Energy Capacity – The energy capacity of the entire Project as bid to NYSERDA measured in MWh. The Bid Energy Capacity must equal the product of Bid Power Capacity (MW) and Bid Storage Duration (hours).

Bid Power Capacity – The power capacity of the entire Project as bid to NYSERDA measured in MW.

Bid Proposal – Documents submitted by Proposer in response to this RFP, also “Proposal”.

Bid Storage Duration – The ESS duration of the Project as bid to NYSERDA in (integer) hours.

Capacity Accreditation Factor (CAF) – The Capacity Accreditation Factor for the CARC to which the Project has been assigned as determined by NYISO in accordance with the New Capacity Accreditation Rules.

Capacity Accreditation Resource Class (CARC) – The Capacity Accreditation Resource Class applicable to the Project as determined by the NYISO based on technology type and location under the New Capacity Accreditation Rules.

CES – Clean Energy Standard.

Climate Act – Climate Leadership and Community Protection Act.

COMD – Commercial Operation Milestone Date, as further defined in the Agreement.

Commercial Operation – A state of operational readiness of the Project under which (i) the Project has been mechanically constructed and interconnected, (ii) charging and generating capacity is available to physically store and discharge electric energy to the Delivery Point and qualify for the receipt of associated ISCs, and (iii) all rights, abilities, permits and approvals to schedule and deliver energy to the Delivery Point have been obtained.

Commercially Deployed – An energy storage technology that has been previously deployed beyond the pilot and demonstration stages and has entered and remained in commercial operation for at least 1 year.

Commission – The New York Public Service Commission.

Construction Activities – The physical activities associated with the construction of any on-site structure or civil site works including, but not limited to, the clearing, grubbing, grading, staging, installation, erection and placement of the Project and electrical interconnection, as well as start-up and commissioning of the Project.

Contract Delivery Term – The period commencing on the first day of the month after the month in which the Project commences Commercial Operation. The Contract Delivery Term shall extend for the term of the Contract Tenor.

Contract Security – Security delivered to NYSDERDA by a Proposer for its provisionally awarded Project and its performance under the terms of the Agreement, in the form of cash, certified funds, or a Letter of Credit, as described in Section 15.01 of the Agreement.

Contract Tenor – The duration, in Contract Years, of the Contract Delivery Term, which will be a maximum of 15 years for lithium-ion Projects and a maximum of 25 years for non-lithium-ion Projects

Contract Year – A 12-month period commencing with the beginning of the Contract Delivery Term and each anniversary thereof during the Contract Delivery Term. The phrase “Contract Year” followed by a number shall refer to a discrete Contract Year within the Contract Delivery Term such that “Contract Year 1” refers to the first 12-month period commencing with the beginning of the Contract Delivery Term, “Contract Year 2” refers to the second such 12-month period, and so on.

DEC – New York’s Department of Environmental Conservation.

Delivery Point – The generator bus or location where (a) the administrator of the wholesale power market or (b) the operator of the transmission/distribution utility, public authority or municipal electric company, measures or otherwise determines charging and discharging energy from the Project.

Disadvantaged Communities – Has the meaning established by the Climate Act in § 75-0101(5) of the New York Environmental Conservation Law. The Climate Act directs the [Climate Justice Working Group](#) (CJWG) to establish criteria for identifying disadvantaged communities. The CJWG finalized the disadvantaged communities criteria on March 27, 2023. Communities meeting the criteria can be identified with the map found on the [NYSERDA disadvantaged communities webpage](#) and a list of

census tracts that meet the disadvantaged community criteria can be found on the [Climate Act Website](#) under the “Disadvantaged Communities Criteria Documents” section.

Disadvantaged Community Commitments – The commitments contained in the Seller’s Bid Proposal and described in Section 6.10 of the Agreement.

DPS – New York’s Department of Public Service.

Economic Benefits Start Date – December 28, 2022, the filing date of New York’s 6 GW Energy Storage Roadmap: Policy Options for Continued Growth in Energy Storage.

Effective Date – The date on which NYSERDA and the Seller enter into the Agreement, as defined in the Agreement.

EO 16 – Executive Order No. 16, Prohibiting State Agencies and Authorities from Contracting with Businesses Conducting Business in Russia, issued and effective March 17, 2022.

ESS – Energy Storage System.

Expected Disadvantaged Communities (DAC) Dollars/MW – The total amount of Expected Dollars/MW, as presented in the Bid Proposal and accepted by NYSERDA, expected to accrue specifically to Disadvantaged Communities.

Expected Dollars/MW – The total dollar amount of Incremental Economic Benefits per MW of Bid Power Capacity, as presented in the Bid Proposal and accepted by NYSERDA, expected to accrue to New York as a result of the development, construction, modification and operation of the Project from the Economic Benefits Start Date through the end of the first three (3) Contract Years.

Expected MWBE and SDVOB Dollars/MW – The total amount of Expected Dollars/MW, as presented in the Bid Proposal and accepted by NYSERDA, expected to accrue specifically to New York State Certified Minority or Women-Owned Business Enterprises (MWBE) and Service-Disabled Veteran-Owned Businesses (SDVOB). MWBE businesses must be certified by the Division of MWBE and SDVOB businesses must be certified by NYS Office of General Services.

FDNY – New York City Fire Department.

Fire Code Recommendations Report – The New York State Interagency Fire Safety Working Group’s report titled “Fire Code Recommendations,” dated as of July 2024.

FOIL – New York’s Freedom of Information Law, [Public Officers’ Law Article 6](#).

Full Notice to Proceed – An unequivocal authorization from the Seller, or its representative, to its general contractor (or in the event that there is no general contractor to all material third party contractors) to construct the entire Project (at a minimum of 80% of the Bid Power Capacity), as opposed to a limited notice to proceed with only a subset of the work such as site preparation and/or site civil work.

Incremental Economic Benefits - Incremental Economic Benefits are financial expenditures benefitting New York State within the categories specified in Section 4.4 that a Seller can demonstrate: (1) were incurred on or after the Economic Benefits Start Date, and (2) would not have accrued but for an award under a NYSERDA competitive solicitation to procure ISCs or in anticipation of the potential for such an award. Economic Benefits previously claimed with respect to a Project that are subject to a pending award under a previous solicitation or that is the subject of a current NYSERDA Agreement are not Incremental Economic Benefits.

ISCs – Index Storage Credits determined by the Megawatt-hours (MWh) of a Project’s Bid Energy Capacity deemed operational and available for discharge on a given day.

Key Permit – The key non-ministerial land use permit or approval by the applicable municipality for the development, construction, operation, and/or maintenance of the Project, which incorporates a determination under SEQR. For Projects co-located with a renewable energy project proceeding seeking an Office of Renewable Energy Siting Permit, the Key Permit is the ORES Siting Permit.

LDDES – Long-duration energy storage, defined as an 8- or more hour duration resource.

LSE – Load-Serving Entity.

Material Change – as defined in Section 5.4.

Monthly Availability Percentage – as defined in Section 3.2.1.

MW – A megawatt of energy storage power capacity. The MW rating of an energy storage system reflects maximum power capacity or the maximum amount of power that the system can deliver instantaneously.

MWBE – Minority and/or Women-Owned Businesses Enterprises, as such term is as defined under New York State Executive Law Article 15-A.

MWh – A megawatt-hour of electric energy. The MWh of an energy storage system reflects maximum energy capacity or the total amount of energy that the system can store over a period of time.

New Capacity Accreditation Rules – NYISO’s tariff revisions to its Services Tariff to adopt a marginal capacity accreditation market design, approved by the federal Energy Regulatory Commission (Docket No. ER22-772) on May 10, 2022.

New York Control Area (NYCA) – The control area that is under the control of the NYISO, which includes transmission facilities listed in the ISO/Transmission Owner Agreement Appendices A-1 and A-2, as may be amended from time to time.

New York Independent System Operator (NYISO) – Administrator of the wholesale power markets in New York and manages the physical electrical operations of the NYCA.

NYGB – New York Green Bank.

NYS – New York State, or “the State”.

OATT: NYISO's Open Access Transmission Tariff.

OEM – Original Equipment Manufacturer.

Operational Certification — Verification by NYSERDA that the Project has been constructed and/or will operate in accordance with the Bid Proposal, as further defined in the Agreement.

Orders – December 13, 2018 Energy Storage Order (Case No. 18-E-0130, In the Matter of Energy Storage Deployment Program, “Order Establishing Energy Storage Goal and Deployment Policy,” issued and effective December 13, 2018), June 20, 2024 Energy Storage Order (Case No. 18-E-0130, In the Matter of Energy Storage Deployment Program, “Order Establishing Updated Energy Storage Goal and Deployment Policy,” issued and effective June 20, 2024).

ORES – New York State Office of Renewable Energy and Electric Transmission Siting, website is <https://dps.ny.gov/ores> and the regulations can be found at <https://dps.ny.gov/ores-regulatory-documents>.

Peaker Plant – or “Peaker”, combustion turbine that typically operates to maintain bulk power system reliability during the most stressful operation conditions, such as periods of peak electricity demand.

Peer Review – Following the execution of an ISC Agreement with NYSERDA and/or the receipt of an ISC provisional award, the awarded Seller will be required to undergo a peer review process whereby the design of the proposed energy storage system will undergo a multi-step technical design review.

Prevailing Wage – Shall have the meaning set forth at, and be interpreted in accordance with, Section 18.10 of the Agreement.

Program Manual – NYSERDA's Bulk Energy Storage Program Manual, available on the Bulk Energy Storage Program website.

Project – An electric storage facility that has been submitted by the Proposer for consideration in response to this RFP.

Proposer – The business entity that submits a Bid Proposal in response to this RFP.

Public Disclosure – As further described in Attachment H. Non-Disclosure Agreement, the date on which NYSERDA or its designee announces publicly that a Proposer's proposal has been selected for further negotiation.

QA Inspection - Quality Assurance inspection. After Peer Review approval is complete, QA inspection will occur following the substantial completion of the energy storage project.

Reference Capacity Price: A price index used to approximate a Project's capacity market revenues, based on NYISO Capacity Market prices for the Applicable Zone calculated as set forth in Section 4.01 of the Agreement. The RCP is calculated monthly.

Reference Energy Arbitrage Price – A price index used to approximate a Project’s energy market revenues, based on NYISO hourly zonal day-ahead Locational-Based Market Prices. The REAP is calculated at both the Daily and Monthly level.

Reference Price – For any Settlement Period, the sum of the Reference Energy Arbitrage Price and the Reference Capacity Price for such period.

Roadmap – June 21, 2018, Energy Storage Roadmap (Case No. 18-E-0130, In the Matter of Energy Storage Deployment Program, “New York State Energy Storage Roadmap and Department of Public Service/New York State Energy Research and Development Authority Staff Recommendations”), December 28, 2022 Energy Storage Roadmap (Case No. 18-E-0130, In the Matter of Energy Storage Deployment Program, “New York’s 6 GW Energy Storage Roadmap: Policy Options for Continued Growth in Energy Storage”).

Round-Trip Efficiency – The uniform round-trip efficiency assumption, reflected as a percentage, established by NYSERDA for the Project based on its technology and duration.

Scoring Committee (SC) – Members of NYSERDA staff, New York State Department of Public Service (DPS) Staff, and competitively-selected Independent Evaluators (outside reviewers who possess proficiency in the evaluation of energy storage projects) responsible for evaluating Bid Proposals received through this RFP.

SDVOB – Service-Disabled Veteran Owned Businesses as defined under the Service-Disabled Veteran Owned Business Act of New York State.

Seller – The Proposer or other entity designated by an awarded Proposer that enters into the Agreement with NYSERDA to sell ISCs to NYSERDA pursuant to this RFP.

SEQR – New York State Environmental Quality Review Act.

Settlement Period – A period of a calendar month for which a Monthly Settlement Payment is calculated.

Strike Price – The strike price per ISC offered by Proposer, from which the Reference Price is deducted as described in Section 3.2.1.

1. Introduction: Energy Storage in New York

In 2016, the Public Service Commission established the Clean Energy Standard (CES)⁵, which set ambitious targets for large-scale renewable deployment in New York State, including energy storage deployment. The CES has since been expanded to include requirements established by New York's Climate Leadership and Community Protection Act⁶, including the goal to achieve 70% renewably sourced electricity by 2030 and a zero-emission electric grid by 2040. As New York State progresses towards its CES goals, energy storage technologies will play an increasingly important role in integrating new renewable and zero-emission energy resources and decreasing New York's electric grid emissions.

New York began establishing energy storage goals in 2018, with the State's first Energy Storage Roadmap⁷, which developed recommendations for the New York State Energy Research and Development Authority (NYSERDA) and the Department of Public Service (DPS) to deploy 1,500 megawatts (MW) of energy storage by 2025. The Commission adopted many of the recommendations from the Roadmap in the *Order Establishing Energy Storage Goal and Deployment Policy*⁸ in late 2018, including the expansion of the goal to deploy 3,000 MW of energy storage by 2030.

In 2022, New York Governor Kathy Hochul announced a doubling of the 2030 energy storage deployment target in her *State of the State* address⁹. This nation-leading storage target set a goal to deploy 6 GW of energy storage by 2030, while maintaining the interim 1,500 MW by 2025 goal set by the 2018 Roadmap. To meet this accelerated timeline, Governor Hochul directed NYSERDA and DPS to update the State's Energy Storage Roadmap. In December of 2022, NYSERDA and DPS submitted the updated Energy Storage Roadmap¹⁰ with recommended policy actions to achieve the 6 GW energy storage goal. The Roadmap outlined a two-pronged approach to energy storage procurement. The first prong, addressed with this Request for Proposals (RFP), recommended that 3,000 MW of bulk energy storage projects are procured with the creation of a new Index Storage Credit (ISC) mechanism. The second prong recommended retail and residential storage programs to also address the energy storage goal.

On June 20th, 2024, the Commission released the *Order Establishing Updated Energy Storage Goal and Deployment Policy*¹¹. This Order adopted recommendations from the updated Roadmap, including directing NYSERDA to conduct three bulk energy storage procurements using the ISC mechanism. The Commission directed NYSERDA to issue the first RFP by June 30, 2025. This RFP, ISCRFP25-1, is the first bulk energy storage procurement being released in accordance with the Commission's Orders and in pursuit of meeting New York's energy storage goals.

NYSERDA filed an Implementation Plan Proposal¹² on October 18th, 2024, detailing NYSERDA's proposed approach to issuing bulk energy storage procurements. This plan was open for public comment and was ultimately approved with modifications¹³ by DPS on March 21, 2025. NYSERDA submitted the final implementation plan on April 18, 2025¹⁴.

1.1 Background on NYSERDA and NY Green Bank

NYSERDA was created in 1975 by the New York State Legislature as a public authority and public benefit corporation. As designated in the Energy Storage Order, NYSERDA must issue three bulk energy storage solicitations. These solicitations are designed to utilize an Index Storage Credit (ISC) mechanism for bulk storage, which is modeled after the Index Renewable Energy Credit (REC) for large-scale renewables procurements. Through this RFP, NYSERDA will credit energy storage projects with ISCs when the project is operational and available for dispatch.

NY Green Bank (NYGB), a division of NYSERDA, is a specialized investment fund dedicated to bridging financial gaps in clean energy and renewable infrastructure markets in New York State (NYS). Working in collaboration with the private sector, its investments aim to advance the deployment of green technologies, accelerate energy efficiency, and mobilize private capital into key market sectors.

Where traditional lenders may see obstacles — such as unfamiliarity with asset classes, perceived uncertainty in revenue streams, and small transaction sizes — NY Green Bank identifies opportunities to propel the green economy in key sectors that include building decarbonization, clean transportation, and energy storage. By developing scalable, replicable financing models, NYGB aims to pave the way for increased private sector investment in NYS's energy market.

NY Green Bank is prepared to support project developers and investors with a range of credit products and structures through various project financing stages, including and not limited to:

- Development stage financing;
- Long lead equipment financing;
- Construction financing; and
- Term loans, including subordinated debt to increase tenor and leverage.

In the context of providing financing, NY Green Bank would evaluate contracted revenues, including various NYSERDA incentive payments/contracts, as well as wholesale power and capacity sales to support long-term financing.

Applicants interested in applying for this financing are encouraged to submit an application to NY Green Bank RFP No. 1 which can be accessed [here](#).

Projects that execute an ISC Agreement and subsequently receive US Department of Energy Loan Programs Office (LPO) financing will be subject to the Strike Price adjustment detailed in Section 3.2.3

¹² <https://documents.dps.ny.gov/public/Common/ViewDoc.aspx?DocRefId=%7bF099A092-0000-C938-98D5-9D3FB839557F%7d>

¹³ <https://documents.dps.ny.gov/public/Common/ViewDoc.aspx?DocRefId={10ACB995-0000-CC17-A62E-1F3CEDDE8A1F}>

¹⁴ <https://documents.dps.ny.gov/public/Common/ViewDoc.aspx?DocRefId={F00F4A96-0000-CC25-8B35-AB070F5506AF}>

due to the lower cost of LPO-backed financing compared with other, more traditional and expected financing sources.

1.2 The Index Storage Credit Mechanism

The Index Storage Credit (ISC) is a market-based mechanism modeled on the Renewable Energy Credit (REC) and Offshore Wind Renewable Energy Credit (OREC) approaches utilized in NYSERDA's Large-Scale Resources procurements. In both cases the REC or ISC, purchased by NYSERDA following commercial operation of the contracted project, is structured to provide project owners with greater revenue certainty through indexing the purchase price of the ISC to wholesale market energy and capacity prices. Under the ISC solicitations, one ISC is equivalent to one MWh of discharge capability per day (i.e., a 20 MW/80 MWh energy storage project will be capable of creating 80 ISCs per day if fully available).

Central to the ISC and the procurement evaluation process is the Strike Price that storage project developers bid under the ISC competitive solicitations. This Strike Price is intended to approximate the revenue threshold needed to achieve project viability and proceed through project development to construction and commercial operation. The price paid by NYSERDA for each ISC will be calculated as the difference between the Strike Price and Reference Price. The Reference Price will be calculated based on wholesale energy and capacity market prices intended to reflect an approximation of the available wholesale market revenues that a Project could reasonably earn under typical operations. Projects are not required to participate in these markets but are incentivized to optimize revenue under this structure. Payments will be made by NYSERDA to the developer when the Strike Price exceeds the Reference Price, and vice versa. Strike Price submission and evaluation, and the calculation of the monthly ISC price for evaluation and settlement, are detailed in Section 3.2.

1.3 Schedule

The schedule for ISCRFP25-1 is as follows (all times ET):

Table 1. RFP Schedule

Milestone	Date
Draft RFP Issuance Date	Tuesday, May 13, 2025
Draft RFP Comments Due	Thursday, May 29, 2025, by 3:00 p.m. ET
Final RFP Issuance Date	By Monday, June 30, 2025
Proposer's Webinar	Tuesday, July 15, 2025, 1:00 – 2:30 p.m. ET
Step One Application Submission Deadline	Tuesday, August 12, 2025, by 3:00 p.m. ET
NYSERDA advances eligible Proposers to Step Two	Tuesday, August 26, 2025
Deadline to submit proposed material changes to the ISC Standard Form Agreement	Tuesday, September 9, 2025
Deadline to submit written questions to NYSERDA	Tuesday, September 9, 2025
Final question responses posted by NYSERDA	Tuesday, September 30, 2025
NYSERDA posts final ISC Standard Form Agreement	Wednesday, October 8, 2025
Bid Fee Deadline	Tuesday, November 11, 2025
Step Two Bid Proposal Submission Deadline	Wednesday, November 12, 2025, by 3:00 p.m. ET
NYSERDA notifies Proposers of provisional awards	Expected Q1 2026
Public Disclosure event	Expected Q2 2026

Proposers are advised that the above dates are subject to change. Notification of any changes to the solicitation schedule or documents will be posted on [NYSERDA's bulk storage website](#) and sent via email to those parties who have submitted an application and/or bid proposal to ISCRFP25-1 and parties that have submitted contact information to NYSERDA through the [Connect With Us, Bulk Energy Storage website](#).

2. Eligibility and Submission Requirements

All Proposers must submit all requirements (Table 2) as part of both the Step One Application and Step Two Bid Proposal submissions to be eligible for evaluation and award. All submission requirements must reflect the most accurate and up-to-date information known by the Proposer at each bid submission deadline. NYSERDA may ask for clarification on any of the content submitted in either Step One or Step Two, as detailed in Section 5.4. Step One and Step Two submissions must maintain all eligibility requirements, as detailed in Section 2, throughout evaluation and up until the time of provisional award execution, if applicable, after which the executed agreement will be the governing document. Evaluation of each submission requirement is further detailed in Sections 3 and 4. All submission requirements listed in Table 2 must be submitted via the solicitation website. Details on the contents of Step One submission requirements are included in Section 2.3, and Step Two submission requirements are included in Sections 2.4, 3, and 4.

Table 2. Submission Requirements

Step One Submission Requirements	Step Two Submission Requirements
• Complete Step One Eligibility Application, submitted via the solicitation website • Signed EO 16 Form • Signed EO 192 Form	• Complete Step Two Bid Proposal, submitted via the solicitation website • Attachment A. Executive Summary • Attachment B. Public Project Summary • Attachment C. Documentation of Eligibility Requirements • Attachment D. Bid Data Form • Attachment E. Project Development Plan • Attachment F. Procurement and Economic Benefits Plan • Attachment G. Safety and Security Plan • Attachment H. ISCRFP25-1 Non-Disclosure Agreement • Proof of Site Control • Maps of Project site • All applicable permitting documentation • Management Chart • Resumes of Key Personnel • Coastal assessment screen capture • Proof of Bid Fee payment

2.1 Eligibility and Contract Requirements

2.1.1 Program Eligibility

Proposers are eligible to apply for an award under this RFP if the proposed Project meets the following key eligibility criteria:

- Project must utilize storage technology that is electrical, chemical, mechanical, or thermo-electric.
- Project must store electrical energy for injection to the grid at a later time.
- Project must have a minimum capacity of 5 megawatts AC power.
- Project must be electrically interconnected in New York State to the transmission, sub-transmission, or distribution system.

Projects that are co-located with an operating or under-development renewable energy project are eligible for an award if the renewable energy project does not have a Tier 1 REC or OREC contract or provisional award with an energy storage component. If a bulk energy storage project is associated with a Tier 1 contract or provisional award with an energy storage component, it may still be eligible to participate in the ISC program if the REC contract is appropriately adjusted prior to the Step Two Bid Proposal submission deadline in this RFP. To be eligible with an adjusted REC contract, the contract adjustment must be effectuated prior to the Step Two Bid Proposal submission deadline.

NYPA- and LIPA-proposed Projects have additional eligibility requirements, detailed in Section 2.1.6.

Projects are ineligible for an ISC award if they are receiving, have received, or plan to receive certain New York bulk energy storage incentives specific to the Project. These incentives include 1) a contract under NYSERDA's Market Acceleration Bridge Program, 2) an active Tier 1 REC or OREC contract or provisional award that includes an Energy Storage component and has not been appropriately adjusted, or 3) a contract with the Utility Bulk Dispatch Rights Program. In the Step One Eligibility Application, Proposers must certify that they are not receiving the funding sources described here. Projects with active NYSERDA Innovation funding, or are seeking current or future NYSERDA Innovation funding, are eligible to participate.

Operational projects or projects under construction are not eligible for evaluation or award under this RFP. Under construction Projects are those that have issued a Full Notice to Proceed. Proposers may add bulk energy storage to an existing or operational renewable energy facility so long as the Proposal follows the co-location Program Eligibility requirements.

All Proposers must maintain program eligibility throughout the application and, if awarded, the contracting process. It is incumbent on the Proposer to inform NYSERDA in a timely manner if any changes that occur to a Project that may alter its eligibility during the application, evaluation, and/or contracting process.

2.1.2 Eligible Storage Technologies

NYSERDA will evaluate all Proposals with a technology-neutral approach, provided that the proposed technology meets the eligibility requirements. This is not an innovation RFP; NYSERDA will only award Projects for which the storage technology has been previously Commercially Deployed and electrically interconnected to a transmission, sub-transmission, or distribution system. Storage technologies that have not been Commercially Deployed under these conditions are not eligible for an award under this

RFP. For the avoidance of doubt, storage technologies that have only been deployed in a lab-environment, as a prototype, or as a demonstration or pilot¹⁵ project are not eligible for an award under this RFP. As noted in Section 2.1.1, Projects must utilize storage technology that is electrical, chemical, mechanical, or thermo-electric to be eligible for award.

In Step One, all Proposers must provide written attestation that the Project can reasonably meet all Minimum Threshold Requirements in Section 4.1, Table 3 via the Step One application form. In Step Two, the Proposer must ensure that the proposed technology meets all Minimum Threshold Requirements. NYSERDA may ask clarifying questions about the proposed technology or request proof that the technology has been previously deployed and operational in order to determine Program Eligibility.

Proposers must disclose additional information about the storage technologies in their Step One application on the solicitation website, including the specific storage technology used and its battery chemistry in the case of electrical or chemical storage technologies.

2.1.3 Safety and Security Requirements

To meet eligibility requirements, Proposers must maintain all safety and security requirements detailed in the Bulk Energy Storage Program Manual under Sections 4, 5, and 6. The Program Manual details requirements at multiple stages of project development, including the required Peer Review process, QA Inspection, and development and execution of emergency response plans and first responder training. Proposers will be required to fully detail the current state of safety and security planning for the proposed Project in the Attachment G. Safety and Security Plan submitted with the Step Two Bid Proposal. Requirements for a complete Safety and Security Plan are described in Section 4.2.3. Once a Project is awarded and under contract, awardees must demonstrate on a continued basis that they are in compliance all safety and security requirements in accordance with the Program Manual before commencing operations by completing all required Peer Review and QA Inspection requirements and completing the Operational Certification process with NYSERDA.

2.1.4 Contract Tenor

The duration of ISC incentive payments to contracted storage Projects is set by the Contract Tenor submitted by the Proposer as part of the Step Two Bid Proposal.

For lithium-ion Projects, the maximum Contract Tenor length is 15 years. For non-lithium-ion Projects, the maximum Contract Tenor length is 25 years. Proposers must specify their Contract Tenor in their Step Two Bid Proposal via the solicitation website.

2.1.5 In-Service Date

All Projects seeking an ISC award must be capable of completing construction and being placed in-service by December 31, 2030. As set forth in the Agreement, NYSERDA has the flexibility to adjust or extend the In-Service Date on a project-by-project basis if a developer provides evidence that the

¹⁵ Demonstration projects are those that are beyond the research and development phase and typically within 3 years of commercialization. Pilot projects are early commercial deployments intended to enhance market introduction and bring down costs. Definitions from <https://ww2.arb.ca.gov/our-work/programs/advanced-technology-demos-and-pilots>

Project has been delayed due to conditions beyond the control of the developer and that the Project has commenced construction on or before December 31, 2030.

2.1.6 NYPA and LIPA Proposed Project Eligibility

NYPA has stated its intent to, under its expanded authority, develop bulk energy storage projects to compete in ISC solicitations and contract with NYSERDA. To the extent that revenue from such projects is structured to directly benefit groups other than NYPA customers (such as in NYPA's Renewable Energy Access and Community Help (REACH) program), NYPA projects are eligible to participate in ISC solicitations and receive ISC awards. However, to the extent that project revenues directly benefit NYPA customers, the applicable project(s) are only eligible to participate in ISC solicitations and receive ISC awards if NYPA is fully participating and accepting ISC obligations as an LSE.

Per the 2025 Bulk Energy Storage Approving Order and Implementation Plan, NYSERDA and DPS Staff shall work with NYPA to identify the required information necessary to determine a project's eligibility to participate in an ISC solicitation.

While LIPA is independently procuring bulk energy storage projects that will be credited against their LSE load-share obligations, nothing precludes Proposers from participating in ISC solicitations with Projects in the LIPA service territory, subject to meeting all other Program Eligibility requirements. For the avoidance of doubt, LIPA's voluntary participation as a non-jurisdictional LSE, with load-share obligations, does not preclude broader eligibility of projects in its territory.

2.2 Storage Procurement Targets & Caps

NYSERDA will implement the following procurement targets across each bulk energy storage procurement, detailed in Sections 2.2.1, and 2.2.2. Targets may not be distributed evenly between each procurement and may be achieved by NYSERDA and DPS via the use of Portfolio Risk Factors (See Section 6.2). NYSERDA and/or DPS intends to release data on progress towards these targets following each completed solicitation.

2.2.1 Bid Storage Duration

ISCRFP25-1 is seeking to procure energy storage resources in two Bid Storage Duration categories: (1) up to eight hours and (2) eight or more hours. These two resource Bid Storage Duration categories will be referred to as <8 hour and 8+ hour. Each of these two categories has additional considerations for 2-hour resources and long-duration energy storage (LDES) resources.

2-hour resources are permitted to bid in the <8-hour category. However, NYSERDA will cap the amount of awarded 2-hour resources at 10% of the total 3 GW of planned bulk energy storage procurements.

NYSERDA has a target for the overall awardee group to include 20% LDES resources, which will be evaluated in the 8+ hour duration category. If ISCRFP25-1 does not attract at least 20% of viable LDES projects, NYSERDA may allocate the remaining volume to the <8-hour duration category and adjust future solicitation procurement targets. NYSERDA will make procurement target adjustments in consultation with DPS to achieve an overall 20% LDES target for all three bulk energy storage solicitations.

2.2.2 Geographic Distribution

ISCRFP25-1 is also seeking to procure energy storage resources across geographic targets. Across all 3 bulk energy storage procurements, NYSERDA has a target of a minimum 35% of energy storage capacity procured in NYISO Zones G – K. Of this 35%, a minimum 30% target applies to Zone J and a minimum 5% target applies to Zones G, H, I, and/or K. Energy storage resources deployed in these geographies have the greatest potential to benefit disadvantaged communities and/or reduce emissions from Peaker Plants. Additional evaluation criteria on disadvantaged community benefits and Peaker Plant displacement are detailed in Sections 4.3 and 4.4.

2.3 Step One Submission Requirements

Step One is an initial qualifying step through which the Proposer must provide documentation confirming that the Project is eligible for evaluation under ISCRFP25-1 and other key information about the Proposer and the Project. Step One Eligibility Applications will be examined for completeness and eligibility. NYSERDA will determine whether the Proposer and Project meet the eligibility requirements outlined in Section 2.1.

Step One requires a completed Step One Eligibility Application, a signed EO 16 Form, and a signed EO 192 Form to be submitted via the solicitation website. The EO 16 Form and EO 192 Form can be found on the Documents tab of the solicitation website.

Proposers must demonstrate in their Step One Eligibility Application that the Project meets all eligibility requirements detailed in Section 2.1. A complete Step One Eligibility Application will include:

- Written certification and confirmation that ISCRFP25-1 eligibility requirements have been met or will be achieved by the time of the Step Two Bid Proposal submission.
- Proposer contact information.
- Project and site description.

Incomplete Step One Eligibility Applications will be subject to disqualification. It is the Proposer's responsibility to ensure that all required forms and attachments have been completed and submitted. If Proposals are deemed eligible after NYSERDA review, Proposers will receive a Notice of Qualification permitting the Proposal to move to Step Two.

Only those Proposers qualified through the Step One Eligibility Application process will be permitted to submit a Step Two Bid Proposal.

Proposers whose Step One Eligibility Applications are found not to satisfy the eligibility requirements or to be deficient in some other respect will receive notification that they are not eligible to submit a Step Two Bid Proposal. NYSERDA will attempt to contact any Proposers with deficient Step One Applications prior to issuing a notice that the Project is not eligible to submit Step Two Bid Proposal.

The complete Step One Eligibility Application package **must be received by NYSERDA no later than 3:00 p.m. ET on Tuesday, August 12, 2025, via the solicitation website. Late submissions will not be accepted.**

If after submission of the Step One Eligibility Application the Project is expected to undergo a change in control, the Proposer must contact NYSERDA to enable the appropriate entity to submit the Step Two Bid Proposal for the Project as the Proposer for Step Two Bid Proposal purposes. For clarity, in such

situation the Proposer that takes over control of the Project or is expected to take over control following the Step One Eligibility Application will be eligible to submit the Step Two Bid Proposal even if it is a different entity from the Proposer whose Step One Eligibility Application was deemed qualified, subject to the new Proposer meeting all eligibility criteria.

2.4 Step Two Submission Requirements

After NYSERDA's review of Step One Eligibility Applications, eligible Proposers who receive a Notice of Qualification will be invited to submit a Step Two Bid Proposal which will require the Proposer to provide additional information, including a Strike Price, and more detailed information about the Project and the Proposer. All Step Two Bid Proposals must be submitted electronically via the solicitation website. Instructions on how to submit a Step Two Bid Proposal will be provided to eligible Proposers that are issued a Notice of Qualification.

Should a Proposer wish to submit a Step Two Bid Proposal which 1) modifies the Bid Power Capacity, 2) modifies the Bid Storage Duration, and/or 3) utilizes the Inflation Risk Adjusted Bid Proposal mechanism, the Proposer should see Section 5.8 for additional instructions on submitting Alternate Bid Proposals.

Under Step Two, NYSERDA will: (1) examine each Step Two Bid Proposal to determine whether the Proposal demonstrates that the Project and Proposer meet all Minimum Threshold Requirements and the Strike Price does not exceed the Benchmark ISC Cost (maximum bid price metric); and (2) for Proposals that meet those minimum requirements, NYSERDA and the Scoring Committee will conduct a full competitive evaluation based on price and non-price factors. The information and supporting documentation provided with the Step Two Bid Proposal will be evaluated by NYSERDA to determine whether the Minimum Threshold Requirements have been met and/or exceeded.

If a Proposal's Strike Price exceeds the Benchmark ISC Cost, it will be deemed ineligible and not evaluated further. See Section 3.2.2 for additional details on the Benchmark ISC Cost. Proposers that submit a Step Two Bid Proposal that does not meet all the Minimum Threshold Requirements will be removed from consideration and will not be eligible for an award.

NYSERDA will contact Proposers regarding any instances where it is unclear if a Minimum Threshold Requirement has been achieved and may provide the Proposer with an opportunity to clarify whether the Project and/or Proposer had achieved the Minimum Eligibility Threshold at the time of the Step Two Bid Proposal submission. Proposers must maintain these Minimum Threshold Eligibility requirements throughout the Bid Proposal evaluation period and, if awarded, up to the execution of the Agreement by the Proposer and NYSERDA. Please see Section 5.4 for more information regarding changes that may occur during this period.

The complete Step Two Bid Proposal package **must be received by NYSERDA no later than 3:00 p.m. ET on Wednesday, November 12, 2025, via the solicitation website. NYSERDA strongly recommends that Proposers reserve ample time to address the requirements for each Project.**

All electronic signatures must be provided as indicated. Failure to provide any attachments or information requested may result in the Step Two Bid Proposal package being declared incomplete and rejected. NYSERDA may request additional information and materials at any time. Step Two Bid Proposal packages become the property of NYSERDA. NYSERDA recommends that Proposers use Google Chrome when accessing the solicitation website to complete a Step One Eligibility Application and Step Two Bid

Proposal. Unnecessary attachments or lengthy responses beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal. NYSERDA recommends that Proposers mark materials provided to NYSERDA as “Confidential” as needed (see Section 8.1).

2.4.1 Step Two Bid Proposal

Step Two requires a completed Step Two Bid Proposal package. A complete Step Two Bid Proposal Package includes: (1) A Step Two Bid Proposal, completed via the solicitation website, (2) all required documents listed in Table 2, and (3) a Bid Fee payment. All documents listed in Table 2 must be submitted via the solicitation website. All required fields in all Attachments and in the Step Two Bid Proposal must be populated for the Proposal package to be considered complete. All blank Attachments for submission can be found on the Documents tab of the solicitation website. See Section 5.2 for instructions on submitting the Bid Fee. Proposers will have an opportunity to submit optional redlines to the Agreement in the Step Two Bid Proposal.

Following the submission of Bid Proposals, NYSERDA and the Scoring Committee may request clarification and additional information from Proposers at any time throughout the duration of the evaluation process. Such information will be subject to protection of proprietary information as described in Section 8.1, consistent with other Bid Proposal submission materials. If the Proposer does not respond promptly to such information requests or does not provide adequate information, the affected Bid Proposal(s) will be evaluated based on the information as originally submitted.

2.5 Alternate Bid Proposals

Proposers may submit an Alternate Bid Proposal, which is a Proposal that 1) modifies the Bid Power Capacity, 2) modifies the Bid Storage Duration, and/or 3) utilizes the Inflation Risk Adjusted Bid Proposal mechanism. To submit an Alternate Bid Proposal, Proposers must complete one Base Proposal in Step One and indicate in the Step Two Bid Proposal which of these Alternate Bid Proposals they would like to submit. A separate Step One Eligibility Application is not required for each Alternate Bid Proposal. Proposers may submit multiple Alternate Bid Proposals with one Base Proposal. The submission of Alternate Bid Proposals will require additional details to be entered in Attachment D. Bid Data Form. The submission of Alternate Bid Proposal(s) does not require multiple Bid Fee payments – only one Bid Fee is required for each Project. A Proposer may not condition the acceptance of one Step Two Bid Proposal based on the withdrawal or acceptance of other Alternate Bid Proposals. NYSERDA will award at most one Bid Proposal per Project.

2.5.1 Alternate Bid Power Capacity and Bid Storage Duration Proposals

Project configurations representing different Bid Power Capacities and/or Bid Storage Durations may be submitted as Alternate Bid Proposals under Step Two of ISCRFP25-1. Proposers electing to submit with a different Bid Power Capacity and/or Bid Storage Duration for the same Project must select the option for an Alternate Bid Proposal with a different Bid Power Capacity and/or Bid Storage Duration in the Step Two Bid Proposal. Proposers must enter information representing both the Base Bid Proposal and the Alternate Bid Proposal(s) with a different Bid Power Capacity and/or Bid Storage Duration in Attachment D. Bid Data Form.

2.5.2 Inflation Risk Adjusted Bid Proposal (IRAP)

Proposers may submit an Alternate Bid Proposal with a price structure where the Strike Price would be subject to a one-time adjustment to reflect changes in a pre-determined price index following the Step Two Deadline for Submission of Proposals. Proposers electing to submit with an Inflation Risk Adjusted Bid Proposal must select the option for an Inflation Risk Adjusted Bid Proposal in the Step Two Bid Proposal.

For Alternate Bid Proposals in which Proposers opt to include an Inflation Adjusted Bid Proposal, the Strike Price will be adjusted to account for inflation between the Bid Proposal Submission Deadline and the issuance of a Full Notice to Proceed for the Project. This adjustment, governed by the formula below and Exhibit L of the Agreement, will be based on multiple indices reflective of their share of battery storage costs. NYSDA intends to subject Strike Price adjustments to a 10% positive cap, meaning that inflation-adjusted Strike Prices will be adjusted up to 10% greater than the original Strike Price. The 10% cap intends to protect ratepayers from excessive inflation risk. The Strike Price for the Inflation Adjusted Bid Proposal will be calculated as:

$$\begin{aligned}
 ISC_{adj} = ISC_{orig} \times & \left(0.60 \left(0.31 \left(\frac{Index_{T, Con}}{Index_{B, Con}} \right) + 0.25 \left(\frac{Index_{T, Cons Mat}}{Index_{B, Cons Mat}} \right) + 0.23 \left(\frac{Index_{T, Batt Man}}{Index_{B, Batt Man}} \right) \right. \right. \\
 & + 0.09 \left(\frac{Index_{T, Steel}}{Index_{B, Steel}} \right) + 0.05 \left(\frac{Index_{T, EPSTM}}{Index_{B, EPSTM}} \right) + 0.03 \left(\frac{Index_{T, Li}}{Index_{B, Li}} \right) + 0.03 \left(\frac{Index_{T, Cu}}{Index_{B, Cu}} \right) \\
 & \left. + 0.01 \left(\frac{Index_{T, Gr}}{Index_{B, Gr}} \right) \right) + 0.20 \left(\frac{Index_{T, CPI}}{Index_{B, CPI}} \right) + 0.20 \left(\frac{Fixed}{Fixed} \right)
 \end{aligned}$$

Where:

ISC _{adj}	Strike Price after inflation adjustment, subject to a 10% cap
ISC _{orig}	Original Strike Price submitted with the Proposal
T	Average of Index in the 6 months before Full Notice to Proceed
B	Average of Index in the 6 months before Bid Date, which will be published by NYSERDA on the solicitation website
Index _{Con}	Construction value, using the Bureau of Labor Statistics' new nonresidential building construction in the Northeast Producer Price Index, Data Series PCU2365002365001
Index _{Cons Mat}	Construction Materials value, using the Bureau of Labor Statistics' construction materials Producer Price Index, Data Series WPUSI012011
Index _{Batt Man}	Battery Manufacturing value, using the Bureau of Labor Statistics' storage battery manufacturing Producer Price Index, Data Series PCU3359133591
Index _{Steel}	Steel value, using the Bureau of Labor Statistics' steel product manufacturing from purchased steel Producer Price Index, Data Series PCU33123312
Index _{EPSTM}	Electric Power and Specialty Transformer Manufacturing value, using the Bureau of Labor Statistics' electric power and specialty transformer manufacturing Producer Price Index, Data Series PCU335311335311
Index _{Li}	Lithium value, using S&P's GSCI Lithium Index
Index _{Cu}	Copper value, using the Bureau of Labor Statistics' copper and copper products Producer Price Index, Data Series WPUSI019011
Index _{Gr}	Graphite value, using the Bureau of Labor Statistics' carbon and graphite product manufacturing: primary products Producer Price Index, Data Series PCU335991335991P
Index _{CPI}	Consumer Price Index value, using the Bureau of Labor Statistics' all urban consumers Consumer Price Index, Data Series CUUR0000SA0
Fixed	Unchanged value reflective of the operating expense share of battery storage costs

For evaluation of Alternate Bid Proposals that include Inflation Adjustment, a multiplier representing NYSERDA's expectation of the inflation for the identified indices between the Bid Proposal Submission Deadline and the estimated date of Full Notice to Proceed for a Project with a *COMDP* of 2027 will be applied to the ISC Price to determine the total price used in the evaluation.

2.6 ISC Standard Form Agreement

NYSERDA recommends that Proposers review the Standard Form Agreement (Agreement), and all associated Exhibits prior to participating in ISCRFP25-1. The Agreement is a legally binding document; it is recommended that Proposers consult with an attorney prior to submitting a Step Two Bid Proposal.

2.6.1 Proposed Edits to the Agreement

NYSERDA cannot adjust the binding Strike Price or other settlement-related terms submitted by Proposers as part of a Step Two Bid Proposal.

Articles, Schedules and Exhibits of the Agreement to which NYSERDA also does not intend to entertain redlines or negotiate edits include but are not limited to:

- Article VIII: Assignment and Change of Control;
- Article IX: Seller's Representations, Warranties and Guarantees;

- Article X: NYSERDA's Representations, Warranties and Guarantees;
- Article XI: Indemnification;
- Article XV: Contract Security;
- Exhibit A: Standard Terms and Conditions for all NYSERDA Agreements;
- Exhibit B: Letter of Credit;
- Exhibit C: NYSERDA Prompt Payment Policy Statement;
- Exhibit D: Assignment of Agreement;
- Exhibit G: Inflation Adjustment;
- Exhibit I: NYSERDA'S Code of Conduct for Contractors, Consultants, And Vendors;
- Exhibit K: Project Labor Agreement Requirements.

NYSERDA does not intend to make any material changes to the Agreement.

If a Proposer wishes to propose any material change(s) to the Agreement that would result in a re-issuance, any such suggested change(s) should be submitted during the Draft RFP feedback window, **no later than Tuesday, September 9, 2025, by 5:00 p.m. ET, via email to bulkstorage@nyserdera.ny.gov**. Any such proposal should indicate why the change would be beneficial to New York State (e.g., it will enable lower Strike Prices, make it more likely for Projects to be timely completed, etc.) rather than merely how it would benefit the Proposer. As per the above, NYSERDA does not currently intend to make any material changes and will not consider any proposed material changes after this time.

Proposers may submit other, non-material, requested changes to the Agreement at any time up until and including submission at the Step Two Deadline, but any requested change must be categorized as follows with a clear justification for the requested change:

- Fixing an error or ambiguity that could be problematic for the ability of the Project to proceed through financing and construction. NYSERDA will fix these errors or unwarranted ambiguities where NYSERDA determines in its sole discretion that a change is warranted.
- An improvement to the clarity or implementation of the Agreement to enable smoother financing or administration and/or to avoid unnecessary disputes. NYSERDA will consider any such proposed changes in good faith but reserves the right not to make any changes of this nature.

2.6.2 Conditions/Contingencies

NYSERDA may include conditions and/or contingencies to address matters concerning any issues regarding the viability or siting of a Project, or where the build environment is contingent or conditional on governmental rescission, modification or change in local law, temporary or permanent.

3. Price Evaluation

3.1 Introduction

NYSERDA will evaluate bids using both price and non-price factors. Price evaluation will constitute 60% of evaluation weighting, and non-price factors will constitute 40% of evaluation weighting. Price evaluation reflects the projected levelized net ISC cost based on NYISO Zonal energy and capacity price forecasts. NYSERDA will share assumptions of the net ISC cost calculation. Assumptions will be shared with prospective Bidders via the solicitation website.

3.2 Strike Price Submission and Evaluation

A complete Strike Price submission consists of an Attachment D. Bid Data Form that details Strike Price (\$/ISC), Bid Energy Capacity (MWh), Bid Storage Duration (hours), and Bid Power Capacity (MW). The Project will be evaluated on the information submitted in the Bid Data Form. NYSERDA will evaluate all Proposals based on an assumed [X]% availability percentage.

Proposers must ensure that information provided in the Bid Data Form is final and correct. Information included in the Bid Data Form supersedes any conflicting information provided in other portions of the Proposal. If necessary, NYSERDA may request missing data so long as it is an irregularity amenable to correction or clarification.

NYSERDA reserves the right to solicit revised Strike Prices, as detailed in Section 6.1.

3.2.1 ISC Calculation

As described in Section 1.2, the Index Storage Credit (ISC) is a market-based mechanism designed to attract 3,000 MW of bulk energy storage development in New York State. The ISC balances the need for developers to have a degree of revenue certainty with protecting ratepayers if project revenues are higher than anticipated.

The ISC represents one MWh of energy storage capacity that is operational and available on a given day. As such, a storage project will be credited with ISCs in proportion to its operational availability during the monthly Settlement Period.

3.2.1.i Index Storage Credit Price

The ISC Price is derived via a monthly settlement framework for the difference between the Strike Price bid into this solicitation and the Reference Price (RP), as described in the following sections and in accordance with the monthly settlement structure provided in the ISC Agreement:

$$(1) \quad \text{ISC Price} = \text{Strike Price} - \text{Reference Price}$$

Where:

Strike Price: [\$/ISC]	The Strike Price under this competitive solicitation which approximates the revenue threshold needed to achieve project viability; and is the dollar value from which the reference price will be subtracted to result in the amount paid by NYSERDA for ISCs created.
Reference Price (RP): [\$/MWh]	The sum of the Reference Energy Arbitrage Price (REAP) and Reference Capacity Price (RCP).

3.2.1.ii Reference Price Components

Storage facilities offer important balancing attributes to the grid and their investment cost-recovery is achieved by storing energy at times when it is abundant, and discharging, or delivering energy to the grid, when energy availability is lower. This delta, between charging and discharging, and the respective

low and high electricity rates at each time, offers a revenue stream to storage facility operators referred to as energy arbitrage.

The Reference Price (RP) in this solicitation applies this principle as the total of the Reference Capacity Price (RCP) and Reference Energy Arbitrage Price (REAP), on a monthly basis, subject to the duration of the number of hours in which the Project can discharge to the grid and the Round-Trip Efficiency (RTE) of the type of storage facility, as follows:

$$(2) \quad \text{Reference Price (RP)}_{\text{Monthly}} = RCP_{\text{Monthly}} + REAP_{\text{Monthly}}$$

$$(3) \quad RCP_{\text{Monthly}} = \frac{RUP_{\text{Monthly}} \times 1,000 \times CAF}{\text{Total Monthly Hours}}$$

$$(4) \quad REAP_{\text{Monthly}} = \frac{\sum_{D=1}^k REAP_{\text{Daily}}}{k}$$

$$(5) \quad REAP_{\text{Daily}} = \frac{\sum_{n=1}^x \max\left(\left[T_n - \left(\frac{B_n}{RTE}\right)\right], 0\right)}{x}$$

Where:

Reference Capacity Price (RCP): [\$/MWh]	The RCP is the product of the monthly Reference UCAP Price (RUP) converted into \$/MW-month and the NYISO's calculated Capacity Accreditation Factor (CAF) ¹⁶ for the storage resource divided by the total number of hours in the settlement month.
Reference UCAP Price (RUP): [\$/MWh]	The Unforced Capacity (UCAP) Price (RUP), equal to the spot auction prices in \$/kW-month for the NYISO Zone in which the Project is located as published by the NYISO ¹⁷ and where UCAP is the Unforced Capacity representing the amount of capacity that a resource is qualified to offer to the New York Control Area (NYCA), considering its demonstrated output and taking into account historical availability and forced outages.
Capacity Accreditation Factor (CAF): [%]	The Capacity Accreditation Factor (CAF) for the CARC applicable to the Project as determined by NYISO in accordance with the New Capacity Accreditation Rules.
Reference Energy Arbitrage Price (REAP): [\$ /MWh]	The price index used to estimate expected monthly energy revenue achieved by the Project based upon pricing differences between periods of charging and discharging electricity from/to the NYCA. The REAP is derived as the sum of spreads between top and bottom four priced hours, excluding negative spreads, in the NYISO's Day-Ahead Energy Market over the total number of days within a settlement month. - For a four-hour resource, with six- and eight-hour resources using the top and bottom six and eight hours, respectively. - For resources with a run-time greater than eight-hours in duration, Projects will use the top and bottom eight hours.
K	Days in Settlement Period
D	Day
n	Hour
T _n	nth highest priced (Top) hour
B _n	nth lowest priced (Bottom) hour
Round Trip Efficiency (RTE): [%]	In accordance with PSC Orders, the RTE is uniformly prescribed for Projects in this solicitation by technology: 85% for lithium-ion 65% for non-lithium-ion 45% for multi-day facilities
x: [hours]	Bid Storage Duration. In this solicitation, NYISERDA will solicit Proposals and monthly settlements in two categories: less than 8 hours and more than 8 hours, where: - For Projects with Bid Storage Duration less than 8 hours, x=Bid Storage Duration (i.e., x=2 for 2-hour battery duration, x=4 for 4-hour battery duration). - For Projects with Bid Storage Duration of 8 hours or longer, x=8.

¹⁶ <https://www.nyiso.com/documents/20142/34963268/4%20CA%20Capacity%20Accreditation%20pres.pdf>

¹⁷ Historical monthly capacity spot auction prices can be downloaded from the NYISO website at http://icap.nyiso.com/ucap/public/auc_view_spot_detail.do or <https://www.nyiso.com/installed-capacity-market>. NYISO UCAP prices are not reported by NYISO Zone, but instead by capacity locality, which include each Zone.

3.2.1.iii Other ISC Components

The ISC Purchase and Sale Agreement will be settled monthly, with the monthly payment being the product of the ISC Price, Bid Power Capacity, Bid Storage Duration, days in the Settlement Period, and Monthly Availability Percentage of the Project.

$$(6) \text{ ISC Monthly Payment} = \text{ISC Price} \times \text{Bid Power Capacity} \times \text{Bid Storage Duration} \times K \times \text{Monthly Availability Percentage}$$

Bid Power Capacity: [MW]	Bid Power Capacity of the energy storage Project in MW
Total Hours: [hours]	Total hours in the settlement month
Availability: [%]	One minus the total planned and unplanned outage MWh during the settlement month divided by the product of the Bid Power Capacity and total hours during the settlement month.

(7)

$$\text{Monthly Availability Percentage} = 1 - \frac{\text{Monthly Outage MWh}}{\text{Bid Power Capacity} \times \text{Total Monthly Hours}}$$

Where:

Bid Power Capacity: [MW]	Bid Power Capacity of the energy storage Project in MW
Total Monthly Hours: [hours]	Total number of hours in the Settlement Period
Monthly Outage MWh [MWhs]:	Sum of all Outages for the Settlement Period
Outage	The inability of the Project, either fully or partially, to deliver the Bid Power Capacity into the New York Control Area for any reason whatsoever in any hour during a Settlement Period.

ISC Monthly Payment can be positive or negative. A positive ISC signifies a payment to the Project from NYSERDA, whereas a negative ISC signifies a payment from the Project to NYSERDA. Payments from the Project to NYSERDA shall not exceed the product of the Strike Price, Bid Power Capacity, and Total Hours in a settlement month.

3.2.1.iv Operational Availability Requirement

As directed by the Commission, ISCs represent one MWh of energy storage capacity that is operational and available on a given day. As such, a storage project will only be credited with ISCs equivalent to its MWh storage discharge capacity in proportion to its operational availability over the course of a month.

Non-operational hours and/or days (due to outages or maintenance, for example) will not create credits to incentivize storage to economically charge and discharge and more broadly participate in wholesale markets when operational.

Partial availability, in terms of both time and capacity, will proportionally condition the maximum potential monthly ISCs of awarded Projects via the Availability Percentage. Monthly ISC settlements

made by NYSERDA will be determined relying upon Generating Availability and Data Systems (GADS) that the NYISO relies upon.

In calculation of the monthly settlements, awardees will submit Monthly Availability Reports (as defined in the Agreement) to NYSERDA for the duration of the Contract Delivery Term including full accounting of non-operational days and partial availability to support the determination of the applicable Availability Percentage for the settlement period. NYSERDA will review and audit the Availability Reports to ensure ISCs created are correctly assessed in full compliance with the Commission's orders.

3.2.2 ISC Price Evaluation

Per the Commission's Orders, Price evaluation constitutes 60% of a Bid Proposal's total evaluation. Recognizing the challenging nature of estimating and submitting ISC Strike Price under changing federal trade and tax policy conditions, NYSERDA encourages Proposers to review and consider Section 2.5.2 of this RFP as an option to adjust the ISC Strike Price before the commencement of the Contract Delivery Term. NYSERDA encourages Proposers to review Section 4.07 (Changes in Law) of the Draft Agreement to understand the conditions under which NYSERDA would make changes to the Agreement in response to a Change in Law. NYSERDA also encourages Proposers to review Section 18.15 (Material Adverse Change) of the Draft Agreement as a mechanism to address changes in federal policy and laws.

Using future energy and capacity market forecast data, NYSERDA will apply the calculations described in the foregoing sections to derive the levelized net ISC cost over the Contract Delivery Term as their ISC Strike Price and provide a detailed narrative supporting their estimated Availability Percentage assumptions. If a Proposal's ISC Strike Price exceeds the Benchmark ISC Cost, it will be deemed ineligible.

As described in Section 2.2, NYSERDA will aim to implement a geographic and durational spread over its three authorized bulk procurements and reserves the right to pursue each of these goals in the aggregate, rather than as a strict interpretation within each individual RFP.

Accordingly, NYSERDA will apply two different Benchmark ISC Costs for each of the two targeted Bid Storage Duration categories: less than 8 hours, and 8 hours or more, and establish proposal rankings in its evaluation for each category (i.e. Benchmark ISC_{<8h} and Benchmark ISC_{≥8h}).

Separated by Bid Storage Duration as described, a quantitative method will be applied to all bids to screen and rank the Bid Proposals using a uniform cost metric. For the avoidance of doubt, the uniform cost metric methodology described below applies to both duration categories, but the submitted bids will be separated and stacked in the evaluation process.

For evaluation purposes, Strike Prices will be converted to a Levelized Net ISC Cost (LNISCC) in base year \$/MWh. The LNISCC price measure allows for an equitable comparison among Proposals with different pricing structures, ISC quantities, and Contract Tenors. Strike prices will be converted into expected annual ISC values by subtracting a forecast of expected Reference Energy Prices and Reference Capacity Prices from the strike prices, based on NYSERDA's forecasts of energy and capacity prices.

For evaluation purposes, regardless of the proposed Commercial Operation Date, Bid Proposals for Projects not yet under operation will be evaluated with a Contract Delivery Term commencement January 2027 therefore a *COMD_p* of January 2027.

The LNISCC for Proposal (p) using pricing form (f) is the quotient of the cumulative present value of the annual net ISC costs over the proposed Contract Tenor, divided by the cumulative present value of the projected annual number of ISCs produced from the Project over the same period. The annual quantities are discounted at a real discount rate. The resulting quotient is expressed in base year dollars per ISC or per MWh.

The levelized ISC price for Proposal p over the Contract Tenor is:

$$LNISCC_{p,f} = \frac{PVISCPMT_{p,f}}{PVISCQ_p}$$

The present value of the ISC monthly payments over the Contract Tenor for Proposal p is:

$$PVISCPMT_p = \sum_{y=COMD_p}^{y=COMD_p+CT_p} \frac{\{\sum_{m=1}^{m=12} (Strike Price_p - REAP_{m,y} - RCP_{m,y}) \times BC_p \times Bid Storage Duration \times K_{m,y}\}}{(1 + NDR)^{(y-Y_b)}}$$

The present value of the number of ISCs over the Contract Tenor for Proposal p is:

$$PVISCQ_p = \sum_{y=COMD_p}^{y=COMD_p+CT_p} \frac{\{\sum_{m=1}^{m=12} (BC_p \times Bid Storage Duration \times K_{m,y})\}}{(1 + RDR)^{(y-Y_b)}}$$

Where:

LNISCC	Levelized Net ISC Cost
PVISC _{PMT_p}	Present value of the monthly ISC payments for Proposal (p) over the Contract Tenor based on the Strike Price and forecast energy and capacity market prices for the zone in which the proposed Project will be located.
PVISC _{Q_p}	Present value of the monthly ISCs for Proposal (p) based on the Bid Power Capacity of a Proposal and total hours in a month for each month in the Contract Tenor.
COMD _p	Calendar year associated with the expected Contract Delivery Term commencement for Proposal (p).
CT _p	Contract Tenor for Proposal (p).
Strike Price _p	Strike Price for Proposal (p)
REAP _{m,y}	Reference Energy Arbitrage Price for month (m) in year (y) for the zone in which the proposed Project will be located.
RCP _{m,y}	Reference Capacity Price for month (m) in year (y) for the zone in which the proposed Project will be located.
BC _p	Bid Power Capacity in MW of Proposal (p)
Total Hours _{m,y}	The total number of hours in month (m) of year (y).
K _{m,y}	Days in month (m) for year (y).
NDR	Nominal Discount Rate, set at 7.46%
RDR	Real Discount Rate equal to $\frac{(1+NDR)}{(1+INF)} - 1$
INF	Inflation rate, set at 2.31%
Y _b	Base year

[These formulas would be adjusted to include assumed availability percentage if it is included in the price evaluation. See Section 3.2]

3.2.3 LPO-Backed Financing Adjustment

It is expected that Loan Program Office (LPO)-backed financing, if obtained, would provide incremental value to a Project that cannot be assumed and/or quantified at the time of submission of the Step Two Bid Proposal, due to the lower cost of LPO-backed financing compared with other, more traditional and expected financing sources. To ensure New York State ratepayers share in these benefits, a portion of this expected incremental value will be applied as a decrease in the Project's Strike Price.

The exact amount of this incremental value will likely differ somewhat from Project to Project based on a variety of factors, but NYSEDA has estimated the incremental value for a typical Project to be on the order of approximately 4% of levelized cost of energy. To share a portion of this value with New York State ratepayers while seeking to avoid dis-incentivizing Projects from pursuing LPO-backed financing, Section 5.04 of the ISC Agreement for ISCRFP25-1 provides that **the Strike Price will be reduced by 1%** in the event that the Project receives LPO-backed financing.

4. Non-Price Evaluation

Figure 1. ISCRFP25-1 Bid Proposal Evaluation

Non-price evaluation accounts for 40% of Proposal evaluation. Non-price evaluation includes three components: Project Viability and Maturity (20%), Electricity System Value (10%), and Societal and Economic Benefits (10%). Taken together, these categories describe the benefits of the Project to New Yorkers and to the electric grid, as well as identify the challenges and risks associated with developing the Project. The Minimum Eligibility Thresholds for non-price evaluation are described in Table 3, which are additional requirements to the Program Eligibility criteria defined in Section 2.1.1. All submission documents for non-price evaluation are listed in Table 2, Step Two Submission Requirements.

4.1 Minimum Eligibility Thresholds

All Proposers must demonstrate via submission of Attachment C. Documentation of Eligibility Requirements and supporting documentation that the Project and Proposer have achieved the Minimum Eligibility Thresholds as detailed in Table 3. Attachment A. Executive Summary must also note that all Minimum Eligibility Thresholds have been met.

Table 3. Minimum Eligibility Thresholds for All Projects/Proposers

Eligibility Component	Minimum Eligibility Threshold
Storage Technology Commercial Maturity	Proposed Project technology has been Commercially Deployed. The proposed technology must have been previously Commercially Deployed 1) with a power capacity of 2 MWac or greater, and 2) have been electrically interconnected to a transmission, sub-transmission, or distribution system (See Section 2.1.2).
Site Control	Proposer has secured full site via executed binding option, executed lease, and/or land purchase to 1) construct the Project as proposed and 2) interconnect to the proposed Point of Interconnection.
Interconnection (varies by duration)	For Projects with fewer than 8 hours Bid Storage Duration: Project is 1) actively being studied in the 2024 NYISO Transitional Cluster Study (Cluster Study) or through the relevant utility process, or 2) has accepted all cost allocations pursuant to a prior NYISO Class Year/Facilities Study and is negotiating or has executed an Interconnection Agreement for the Project at the proposed Point of Interconnection. For all Projects in the Cluster Study, the Proposer will be required to evidence that the Phase 2 Study Deposit has been paid/posted and the Project has proceeded and is actively included in the Cluster Study Phase 2 Study prior to NYSERDA's execution of a provisionally awarded Agreement. For Projects with 8 or more hours Bid Storage Duration: Proposer must submit a Project Development Plan that demonstrates a reasonable pathway to securing an interconnection agreement within the Project's proposed schedule.
Permitting	Submission of a Project Development Plan, including a project schedule, that demonstrates the Project as proposed can secure all non-ministerial permits, commence construction, and enter operation by December 31, 2030. The Permitting submission must also include 1) maps of the proposed Project site and 2) all applicable field studies and other relevant permitting documentation (See Section 4.2.2).
Safety and Security	Submission of Safety and Security Plan that demonstrates the Proposer has viable development, construction, inspection, and operation plans that will comply with the NYSERDA Bulk Storage Program Manual and all Applicable Laws.
Community Engagement	Submission of documentation evidencing the Proposer has been in contact with the host AHJ(s) and has informed the AHJ(s) local elected officials about the Project's participation in ISCRFP25-1.
Development and Operating Experience	Proposer, or its principals, have developed at least one grid-connected energy storage project with the same or similar energy storage technology as the proposed Project to final investment decision/commencement of construction. The commercial energy storage project evidenced to satisfy this requirement must be at least 20% of the Bid Power Capacity of the proposed Project (e.g., if proposing a 100 MWac Project, the evidenced commercial energy storage project must be equal to or greater than 20 MWac).

4.2 Project Viability and Maturity Evaluation

Project Viability and Maturity accounts for 20% of non-price evaluation. The Scoring Committee will evaluate Step Two Bid Proposals based on third-party and Proposer-provided evidence the Project has achieved key project development milestones and has a viable plan to complete development, financing, construction, and enter commercial operation.

NYSERDA, the Scoring Committee, and Specialist Reviewers will review all eligible Step Two Bid Proposals, and the Scoring Committee will assign non-price points based on 1) Proposer-provided and/or independent/third-party information that demonstrates the Project has achieved key project development milestones; and 2) Project Development Plans, Safety and Security Plans, Procurement and Economic Benefits Plans, and Public Project Summaries that demonstrate comprehensive and viable plans to completing project development, construction, and entering commercial operation.

4.2.1 Interconnection

Submission Requirements: A complete Step Two Bid Proposal and an Attachment E. Project Development Plan that details the proposed Project's interconnection status, including 1) a summary and/or other evidentiary documentation from the interconnecting entities confirming the extent of interconnection activities, and 2) known or forecasted interconnection costs for the Project. The Project Development Plan must include:

- 1) Summaries, excerpts, and/or copies of the Project's interconnection studies and Interconnection Agreement (if applicable);
- 2) A summary of known or forecasted Project interconnection costs;
- 3) Project one-line or three-line diagram, including the proposed Project equipment and any co-located/hybrid generation project(s) (if applicable). The diagram must include at minimum:
 - a. All energized (hot) conductors, neutral/grounded conductors, and ground conductors, with their size and insulation type indicated.
 - b. All raceways, conduits, and enclosures.
 - c. All switches, inverters/chargers, batteries, electrical panels, main service panel, main breaker, and other relevant equipment as applicable, including voltage and amperage ratings of all equipment.
 - d. For thermo-electric storage, the cooling system flow diagram.

Documentation provided to NYSERDA by the Proposer to demonstrate the Project's interconnection status must be consistent with the Project as proposed. Proposers are advised that CEII-confidential information may not be submitted to NYSERDA as part of the Step Two Bid Proposal.

Evaluation: Eligible Projects will be preferentially evaluated based on the status and maturity of the Project's interconnection activities and/or Interconnection Agreement. Projects that have advanced to more mature stages of the NYISO interconnection process will be preferentially evaluated compared to earlier stage Projects. Proposers must include in their Project Development Plan summaries, excerpts, and/or copies of the Project's interconnection studies and Interconnection Agreement status at the time of bid submission.

4.2.2 Permitting

Submission Requirements: A complete Step Two Bid Proposal and an Attachment E. Project Development Plan that details the proposed Project's permitting status. The Project Development Plan must include:

- 1) Summaries and/or other evidentiary documentation that detail the Project's current permitting status.
- 2) Status of the Project's site control, including the Point of Interconnection and rights-of-way (if applicable).
- 3) Status of all applicable desktop and field studies.
- 4) Status of all applicable non-ministerial permits and approvals, including, if applicable, FDNY reviews and approvals, including applicable expiration dates and any renewal requirements.
- 5) Summary of environmental impacts of construction and operation. If applicable, reference supporting documentation, like field studies and surveys.
- 6) Summary of identified impacts to resources at each Project development stage. This includes, but is not limited to, impacts on agricultural production and soil quality; impacts on ecosystems such as forests and grasslands; impacts to water bodies such as wetlands and streams; impacts to wildlife and degradation of wildlife habitat; and conflict with preserved land and open space.
- 7) A Project Schedule, including all critical path milestones, that evidences the Proposer is capable of securing all applicable permits and approvals and commencing construction and/or entering commercial operation by December 31, 2030.

All Proposers must also provide:

- 1) Map(s) of the proposed Project site (PDFs and Shapefiles), including:
 - a. A detailed map (PDF) of the site plan/layout indicating the Project and parcel boundaries, aligned with the site control information submitted in Attachment D. Bid Data Form. At a minimum, the map should include the preliminary layout of the Project within the parcel boundaries, including the storage equipment, inverters/chargers, pumps, management system disconnects, the security or perimeter fence(s), and limits of disturbance. The map should indicate the (anticipated) interconnection route and the (anticipated) interconnection point(s). If applicable, indicate the relationship of the site to other adjacent infrastructure, including planned or alternate points of interconnection and proximate generators or other existing infrastructure, particularly nearby Peaker Plants.
 - b. Shapefiles of the Project footprint and parcel boundaries that the Project will occupy. If applicable, provide shapefiles of co-located generation sites, like wind or solar facility areas. Shapefiles in the .shp format are strongly preferred but .kmz or .kml will be accepted.
 - c. If available, a more detailed concept site plan including the locations of the Project, all major equipment and facilities, access roads, site work and other project components, along with existing physical features of the site (e.g., wetlands, streams, topographical features, buildings, etc.).

If applicable and/or available, the Proposer should provide the following documents:

- 1) If available, any applicable field studies (e.g., Environmental Site Assessment, Phase 1, Archaeological Phase 1, Geotechnical) and surveys (e.g., ALTA, topography, water bodies/wetlands, or other), and/or the status of un-started/not yet commenced or ongoing field studies and surveys.
- 2) If applicable, documentation filed with or received from the local governmental authority confirming that a request for a zoning change or variance has been initiated and/or the local approval process is underway.
- 3) If applicable, evidence that the Lead Agency for the SEQ process has been designated.
- 4) If available, applications for construction permit(s) and/or road use permit(s) that have been submitted to local authority(ies) with approval jurisdiction.
- 5) If applicable, applications and/or submitted reviews that have been submitted to FDNY for the issuance of a building/fire code permit.
- 6) If applicable and available, schematics of the Project's planned system containerization.

Evaluation: Eligible Projects will be preferentially evaluated based on the maturity of the Project's permitting status and the volume of outstanding applicable studies, permits, and approvals. Evaluation will be based on the Project's demonstrable progress through its applicable permitting process and the completeness and credibility of the Proposer's schedule for successfully obtaining necessary permits within the proposed development schedule. Projects that are fully permitted or have secured relatively more permits needed to construct and operate, have performed more exhaustive permitting activities, and/or have greater knowledge of the Project site, its permitting requirements, and any planned and/or required mitigation activities as evidenced in the Project Development Plan will be preferentially evaluated.

NYSERDA may coordinate with the NYS DEC, ORES, FDNY, and/or other permitting entities or subject matter experts acting as a Specialist Reviewer to inform the evaluation, under which proposals for Proposals that have not yet secured their Key Permit or other permits, but are identified as having a more feasible pathway to securing all necessary permits to construct the Project may be preferentially evaluated compared to proposals that have more material challenges that have not yet been addressed with planned or approved mitigation measures.

4.2.3 Safety and Security

Submission Requirements: A complete Step Two Bid Proposal, an Attachment E. Project Development Plan, and Attachment G. Safety and Security Plan that detail the proposed Project's environmental and safety plans during development, construction, and operation. The Project Development Plan and Safety and Security Plan must address all components of Sections 3, 4, and 6 of the Bulk Storage Program Manual, including:

- 1) Plans to comply with all technical, Peer Review, Site Inspection, and Operational Certification requirements detailed in the NYSERDA Bulk Storage Program Manual.
- 2) Plans to comply with all Applicable Laws during construction and operation.

The Safety and Security Plan must address as many components of the Bulk Storage Program Manual as possible, based on the Project's status that are known at the time of bid submission, including but not limited to:

- 1) Final, draft, or preliminary Project drawings, including as much detail as known at the time of bid submission.
- 2) Final, draft, or proposed technology fire protection system datasheets for the Project.
- 3) Plans to comply with the applicable UL equipment listings and certifications.
- 4) Final, draft, or plans to develop a Project site-specific Hazard Mitigation Analysis (HMA), addressing thermal runaway, mechanical failures, and other potential equipment failures.
- 5) Final, draft, or plans to develop a Project site-specific Emergency Response Plan (ERP).
- 6) Final, draft, or plans to develop Project site-specific safety training materials.
- 7) Final, draft, or plans to develop Project site-specific explosion control designs including plans to comply with the applicable UL test results standards and plans to comply with the applicable NFPA requirements.
- 8) Final, draft, or plans to develop commissioning and decommissioning plans.

Proposers are strongly encouraged to provide as much detail as possible in response to the requirements of the Bulk Energy Storage Program Manual as part of their Project Development Plan and Safety and Security Plan.

Evaluation: Eligible Projects will be preferentially evaluated based on how comprehensively the submitted Project Development Plan and Safety and Security Plan address all aspects of the Program Manual and Applicable Laws.

Step Two Bid Proposals that address relatively more requirements of the Program Manual in more comprehensive detail and/or provide more draft or final plans and documentation detailed in the Bulk Storage Program Manual will be preferentially evaluated. Safety and Security Plans that provide more mature/complete HMA reports, more comprehensive ERPs, more comprehensively developed safety training materials and first responder plans, demonstrate more comprehensive explosion control designs and fire safety measures incorporated into the proposed Project site, and/or include more detailed commissioning and/or decommissioning plans will be preferentially evaluated. Energy storage technologies that have a demonstrably stronger track record of environmental and safety compliance may be preferentially evaluated by the Scoring Committee.

4.2.4 Supply Chain and Procurement

Submission Requirements: A complete Step Two Bid Proposal and Attachment F. Procurement and Economic Benefits Plan. A complete Procurement and Economic Benefits Plan reflects the full expected procurement plan and anticipated supply chain for the Project's proposed energy storage technology, including risks to sourcing the storage components or materials to construct the Project site and plans to mitigate these risks. The Procurement and Economic Benefits Plan should include:

1. Description of the type of energy storage technology. Energy storage technology descriptions must include:
 - a. A summary of the storage technology commercial maturity, as detailed in Table 4.
 - b. An accounting of the major components of the technology to be sourced.
 - c. If applicable, a description of battery cell chemistry (Examples: Lithium-ion battery with a lithium-iron-phosphate (LFP) cell chemistry, redox flow battery with an all-vanadium cell chemistry).

2. Status of the Proposer's current procurement plan, including plans to procure and deliver all necessary major equipment to construct the Project, including any major equipment that has already been purchased or contracted for the Project.
 - a. If major components have not been purchased or delivered to New York, Proposers should include a plan to procure all components, including any OEMs under consideration, including the level of communication with any OEMs conducted to date, estimated lead times for delivering components to the Project site, and/or any quotes or pricing received from the OEM for the Project's equipment.
 - b. Proposers should identify any risks or opportunities associated with sourcing the components from the considered OEMs. Risks and opportunities include, but are not limited to, tariff risk to the final storage product, tariff risk to the major components of or raw material inputs to the final storage product, any applicable exemptions to risks to sourcing the major components, and opportunities to source major components within the United States and/or New York State.
 - c. If planning to secure the Investment Tax Credit domestic content bonus credit¹⁸, Proposers must fully detail how they plan to secure major equipment to qualify for the bonus credit.
3. Status of the Proposers' current construction plan, including any existing relationships with engineering, procurement, and construction (EPC) firms and/or plans to partner with firms to construct the Project and required interconnection equipment, and/or self-build portions or all of the Project.
4. Expected terms of the proposed Project equipment manufacturer's warranty and long-term service agreement (LTSA) to cover the entire energy storage system, including ancillary equipment, pumps, thermal management, and power electronics.
5. A narrative summary associated with each claimed Economic Benefit commitment submitted in Attachment D. Bid Data Form, including the unique identifier in Attachment D., indicating how the claimed commitment qualifies as an eligible Economic Benefit.
6. A description of end-of-useful-life plan for the Project's major equipment. End-of-life plans can include, but are not limited to, evidence of supporting a circular economy, such as using second-life batteries or pursuing recycling agreements, and/or other decommissioning and reuse plans.
7. Non-lithium-ion project technology requirements:
 - a. For thermo-electric storage, the nameplate information of existing chiller plant (chillers, pumps, tanks, cooling towers, etc.) is required.

Proposers are encouraged to reference existing resources for New York-based supply chains, such as the [Battery and Energy Storage Supply Chain Database](#).

Evaluation: Projects will be preferentially evaluated based on the maturity and comprehensiveness of the submitted Procurement and Economic Benefits Plan, with the procurement or contract status of major equipment being the greatest indicator of maturity.

Projects with procurement plans that demonstrate relatively more major equipment procured or contracted for the proposed Project, that rely on supply chains that are relatively more insulated or de-risked from potential or expected price changes due to trade policy, and/or that present a stronger plan

¹⁸ <https://www.irs.gov/credits-deductions/domestic-content-bonus-credit>

to procure all major equipment, commence construction, and enter operation by 2030 will be preferentially evaluated. Economic benefit plans that commit to relatively more eligible New York State expenditures will be preferentially evaluated as detailed in Section 4.4 Societal and Economic Benefits.

4.2.5 Community Engagement

Submission Requirements: A complete Step Two Bid Proposal, Attachment E. Project Development Plan, and Attachment B. Public Project Summary. A complete Project Development Plan reflects an understanding of local interests and concerns, provides high-quality and well-timed public education opportunities, demonstrates a commitment to partnering with the elected officials in proposed host communities, respectfully responds to opposition, and elicits input from the public and affected agencies. The Project Development Plan must include:

- 1) Documentation¹⁹ that the Proposer has been in contact with the host AHJ(s) regarding the proposed Project and has informed the AHJ(s) local elected officials (restricted to primary executives e.g., Town Supervisor, City Mayor, Planning Board Chair, Zoning Board Chair, Code Enforcement Officer, Town Clerk) about the Project's participation in ISCRFP25-1.
- 2) Summary of planned and completed community engagement activities. Community engagement activities may include, but are not limited to: AHJ meetings, open houses, town planning or zoning board appearances or presentations, meetings or trainings with local fire department(s), and/or documentation of responsiveness to requests from participating landowners and other community residents.
- 3) Summary of local laws that may impact Project development, including a description of any active storage moratoria. The description of active moratoria must indicate the date the moratorium went into effect, as well as its anticipated end date. The Project must comply with all Applicable Laws, including local moratoria.
- 4) Description of local interests and concerns, including identifying strategies to mitigate concerns raised by the public regarding the Project. This description must also include methods for soliciting feedback and input from the public and affected agencies and the process for sharing feedback and responses publicly.

All Proposers must also provide:

- 1) A completed Attachment B. Public Project Summary. These Public Project Summaries will be published on NYSERDA's website following submission of Step Two Bid Proposals for all submitted Projects, subject to NYSERDA's verification that the Project has achieved all Minimum Threshold Requirements.

Proposers may provide letters of support as part of their Community Engagement submission.

In the event of an election within the Host Community or the AHJ, Proposers are responsible for informing current and subsequent local officials in a timely manner. Proposers must provide written

¹⁹ Documentation may include but is not limited to: Correspondence between the Proposer and host AHJ(s); Public records of Town/Planning/Zoning Board meeting minutes and/or presentations; Communications with local elected and/or administrative officials; and/or Letters of Support provided by representatives of the host AHJ(s).

verification that the current local official(s) are aware of the project's participation in this solicitation should an election occur within a Host Community or AHJ relevant to the Bid Proposal.

Evaluation: Eligible Projects will be preferentially evaluated based on the comprehensiveness and responsiveness of community engagement activities. Comprehensiveness and responsiveness will be assessed on clearly articulated community engagement and mitigation strategies, evidence of ongoing collaboration with relevant AHJ stakeholders, and evidence of addressing local interests and concerns. Letters of support are the strongest evidence of collaboration and addressing local interests and concerns. Projects that can demonstrate coordination to date with the local fire department will be preferentially evaluated.

NYSERDA may coordinate internally or with other State Agencies to act as Specialist Reviewers to inform evaluation.

4.2.6 Development and Operating Experience

Submission Requirements: A complete Step Two Bid Proposal and Attachment E. Project Development Plan that detail the Proposer's experience developing, financing, constructing, and/or operating energy storage projects. All Proposers must also provide:

- 1) **A management chart** that lists the key personnel dedicated to developing, financing, constructing, and/or operating the Project;
- 2) **Resumes of key personnel** that describe the Project team's experience with developing energy storage or other energy generator or infrastructure projects;
- 3) **A list of up to 25 specific projects** successfully developed, financed, constructed, and/or operated, submitted via Attachment D. Bid Data Form and/or summarized in the Project Development Plan, including at least one project that demonstrates achievement of the Development and Operating Experience Minimum Eligibility Threshold detailed in Section 4.1.

Evaluation: Proposers will be preferentially evaluated based on:

- 1) Demonstrative experience developing energy storage projects, including projects similar to the proposed Project.
- 2) Demonstrative experience operating energy storage projects, including projects similar to the proposed Project.

Step Two Bid Proposals for Projects that are similar to those projects provided and successfully brought to commercial operation by the Proposer will be preferentially evaluated by the Scoring Committee.

4.2.7 Creditworthiness and Financing

Submission Requirements: A complete Step Two Bid Proposal and Attachment E. Project Development Plan that detail the Proposer's plan to finance and procure all required equipment and labor to construct and operate the proposed Project. The Project Development Plan must include:

- 1) **A detailed financing plan** that describes all key development milestones required to achieve final investment decision, commence construction, and enter commercial operation. The Financing Plan section of the Project Development Plan must include:

- a. A description of the anticipated financing arrangements, including equity, pre-construction and development expenditures, Contract Security, construction debt, mezzanine/subordinated debt, and permanent debt;
- b. A description of the evolution of the division between shareholder equity and debt from the development period through the construction period and any plans for adjusting to loss of shareholder equity;
- c. A list of all committed and potential equity partners;
- d. The development and operating responsibilities of each equity partner of the Project, and their respective funding obligations, e.g., joint and several funding responsibilities, if applicable;
- e. A description of Proposer's intention to own and operate the Project, or sell the Project to another party to own and operate;
- f. A declaration of intent to use the Investment Tax Credit (ITC) and any available bonus credits made available as part of the Inflation Reduction Act of 2022. Proposers should include their assumption of the percentage of their project costs that will be compensated under the ITC and how the Project plans to qualify for ITC; including mitigation strategies in the event of changes to tax credit eligibility;
- g. A summary of any other available federal, state, and/or local available tax credits, financial incentives, and subsidies (e.g., NY Green Bank financing) sought by the Proposer to finance the Project, and how these will be utilized;
- h. Details of any events of default or other credit/financial issues associated with all projects (other than those under contract with NYSERDA) in which the Proposer (and other equity partners), its parent company, its affiliates, and directors, officers, and senior managers of those entities, participated in over the past three years;

If applicable and available, the Financing Plan should also include or include references to:

- a. Written expressions of interest from potential debt lenders sufficient to fund the project development, construction and permanent debt capitalization to the fullest extent available, and any applicable expressions of interest from tax equity providers;
- b. Details of the expected construction loan and permanent loan, including terms of repayment, (amount, tenor, interest rate, etc.), the amount each lending institution is prepared to commit (subject to credit committee approval), their debt service requirements (interest, rate swaps, letters of credit, guarantees, etc.), with all fees indicated;
- c. If intending to own and operate the Project, the anticipated construction and long-term capital structure for the Project ownership entity, including the Project's projected balance sheet at year-end for every construction year and at the start of commercial operation.

- 2) **An organizational plan** for the Project that lists the participants and identifies the corporate structure, including general and limited partners and financial arrangements to the Proposer's parent company or affiliate. The organizational chart must identify any partners, parent companies or affiliates that are owned in whole or in part by governments foreign to the United States.

- 3) **Evidence that the Proposer or its equity participant(s) possesses an investment grade credit rating.** If an equity participant does not have such Credit Rating, e.g., a subsidiary, it shall provide (i) written evidence of a corporate commitment, for example, a “comfort” letter or “keepwell” agreement, to support the development and financing from its parent company and (ii) evidence of an investment grade Credit Rating from that parent company. The financing plan must also detail any credit alerts or rating upgrades/downgrades for the equity partners, or their parent companies, that occurred in the past three years.
- 4) **Links (preferred) and/or copies of the Proposer’s recent financial statements,** if applicable and available, via PDF or summary documents with links to publicly available PDFs.
 - a. If available, audited financial statements for the Proposer or Proposer’s parent company(ies) for the three most recent fiscal years.
 - b. If available, unaudited financial statements for the Proposer for the three most recent fiscal years with an attestation from the CEO or CFO that such information is materially accurate and complete.
 - c. If financial statements are not available, an explanation indicating why they cannot be provided, and provision of alternate information to demonstrate Proposer’s financial capacity to develop and construct the proposed Project.
- 5) **Key credit ratios,** if available and applicable, Proposer must submit results for the following key financial ratios as calculated for each of the three most recent fiscal years. Proposers should further detail which financial statements items were used to calculate EBITDA and FFO in each year.
 - a. Funds from operations (FFO) to debt
 - b. Debt to EBITDA
 - c. EBITDA to interest

Evaluation: Proposers will be evaluated based on the comprehensiveness of the financing plan components of the Project Development Plan. Project Development Plans that more comprehensively detail the expected financing structures and partners for the Project, provide greater evidence of mitigating risk through partnerships or parent company characteristics (key credit ratios), sufficient balance sheet financing capabilities, and/or detailed mitigation plans for changes to federal tax credits or trade policy will be preferentially evaluated.

4.2.8 Climate Resiliency

Submission Requirements: A complete Step Two Bid Proposal and Attachment E. Project Development Plan that detail the Proposer’s efforts that have or can be undertaken to understand the climate resiliency aspects of the proposed Project’s site, technology, and design considerations, and minimize the Project’s risk of being impacted by future climate impacts. Climate Resiliency submissions include a coastal assessment to identify the Project’s proximity to coastal boundary areas and/or local waterfront revitalization zones. The Proposer should identify potential climate risks to the Project, adaptation and resilience measures that will be incorporated to mitigate risk, and the potential for climate risks to impact the Project’s performance over its useful life.

The Proposer must submit a coastal assessment, which consists of a screen capture from the [New York State Coastal Atlas](#) indicating whether the Project site is located in a New York State coastal boundary area and/or local waterfront revitalization program zone. If the Project is located in a New York State coastal boundary area, the Project Development Plan must identify resiliency measures to mitigate flood

risk. If the Project is located in a local waterfront revitalization program zone, the Project Development Plan must address how the Project supports local waterfront revitalization activities.

The Project Development Plan should address how the Proposer has considered the following climate resiliency considerations:

- **Reliability:** The Proposer must explain how climate change adaptation and resilience is incorporated into the Project's siting, design, technology selection, construction, and operation. The Proposer must identify the Project's climate hazard exposure and clearly describe the adaptation and resilience measures that will be incorporated to mitigate risk.
- **Performance:** The Proposer must identify anticipated impacts, if any, on the Project's performance (e.g., charging/discharging capabilities, round-trip efficiency) that may result from climate impacts projected to occur within the Project's useful life (e.g., increased frequency of heat waves, higher ambient temperatures). Proposers should demonstrate how the Project will maintain its expected performance over the full useful life and identify, as needed, the design or operational measures incorporated beyond current codes and standards to achieve this performance.

Beyond the coastal assessment, Proposers are encouraged to identify the level of climate exposure the Project may face based on its location and anticipated useful life. Main climate hazards in New York State include but are not limited to extreme storms, high winds, sea level rise, extreme heat and cold, increased temperature, and increased rainfall. Proposers can reference existing resources for climate risk and resiliency assessment and adaptation, including [NYS Climate Impacts Assessment](#), [NYS DEC Flood Risk Management Guidance](#), [NYS DOH Heat Vulnerability Index](#), [NYS Future Coastal Floodplain Mapper](#), [Northeast Regional Climate Center intensity-duration frequency curves for heavy precipitation](#), [Columbia's Hudson River Flood Map](#), [NYISO's Climate Change Impact and Resilience Study](#) and others.

If provisionally awarded, the Seller will be required to provide a Climate Resiliency Plan as further described in Section 6.08 of the ISC Agreement.

Evaluation: Projects that more comprehensively describe and mitigate expected Project-specific risk related to the coastal assessment and climate resiliency will be preferentially evaluated.

4.3 Electricity System Value

10% of non-price evaluation will be based on Electricity System Value considerations associated with the proposed Project. The Scoring Committee will evaluate Step Two Bid Proposals based on their potential or expected ability to maintain or improve current or future system reliability, displace the use of Peaker/non-zero-emission generation, integrate additional renewable energy project generation, and/or reduce current or forecasted renewable energy curtailment in New York.

The Scoring Committee and Specialist Reviewers will review all eligible Step Two Bid Proposals, and the Scoring Committee will assign non-price points based on independent/third-party information that demonstrates the Project can provide electric system value. NYSERDA, the Scoring Committee, and Specialist Reviewers may employ independent and/or third-party analyses or specialist reviews to estimate potential system impacts and benefits of the proposed Projects, including reviews of Step Two Bid Proposals by New York's transmission/distribution owners and/or other independent third parties.

Additional non-price points will be assigned based on the optional submission categories described in Sections 4.3.1 and 4.3.2.

4.3.1 System Reliability & Peaker Displacement Potential

Optional Submission: A complete Step Two Bid Proposal is required for all Proposers. Proposers are encouraged, but not required, to address Project-specific system reliability and/or Peaker displacement potential characteristics as part of the Attachment E. Project Development Plan submitted with the Step Two Bid Proposal.

Evaluation: Projects will be preferentially evaluated based on:

- 1) Evidence based on independent/third-party and/or Proposer-provided information that demonstrates the proposed Project will be capable of providing:
 - a. System reliability services, including but not limited to: Operating reserves (spinning and/or non-spinning reserves), frequency regulation, voltage support, black start generation, and/or other system reliability-based grid services that are currently available or under study to be available for the Project's energy technology in the NYISO market.
 - b. Long-duration specific services, including but not limited to: Multiday system reliability, current or future eligibility to scale and serve as a Dispatchable Emission-Free Resource (DEFR), and/or other long-duration-specific grid services that are currently available or under study to be available for the Project's energy storage technology in the NYISO market.
- 2) Evidence based on independent/third-party and/or Proposer-provided information that demonstrates the proposed Project will be capable of providing energy, capacity, and/or other market services that would demonstratively offset the current use of Peaker Plant fossil generation and other fossil fuel generation based on the current state and forecasted future states of the NYISO electric grid²⁰.

The Scoring Committee and Specialist Reviewers will account for Proposer-provided information to the extent that it can be verified with independent or Proposer-provided documentation, and will utilize third-party sources to the extent possible, including but not limited to NYISO [Load and Capacity Data Report \("Gold Book"\)](#) data, Energy Information Agency (EIA) [emissions by plant and by region data](#), and/or U.S. Environmental Protection Agency (EPA) [Power Plants and Neighboring Communities Mapping Tool](#) data.

4.3.2 Renewables Integration & Curtailment Reduction Potential

Optional Submission: A complete Step Two Bid Proposal is required for all Proposers. Proposers are encouraged, but not required, to address Project-specific renewables integration and/or curtailment reduction potential characteristics as part of the Attachment E. Project Development Plan submitted with the Step Two Bid Proposal.

²⁰ Examples of forecasted future states of the NYISO electric grid can be found in the [2023-2042 NYISO System and Resource Outlook](#) and the [NYS Climate Action Council Scoping Plan](#).

Evaluation: Projects will be preferentially evaluated based on independent/third-party and/or Proposer-provided information that demonstrates the proposed Project would improve the deliverability of and/or reduce current or forecasted system curtailment of renewable generation.

The Scoring Committee and Specialist Reviewers will account for Proposed-provided information to the extent that it can be verified with independent or Proposer-provided documentation, and will utilize third-party sources to the extent possible, including the [NYISO System and Resource Outlook 2023-2042 Report](#) and associated appendices, the Joint Utilities Headroom Calculations data reported in [DPS Case 20-E-0197](#), and/or NYSERDA data produced in support of the [Climate Action Council Scoping Plan](#) and/or ongoing [New York State Energy Plan](#).

4.4 Societal and Economic Benefits

Economic Benefits expected to accrue to New York because of the development, construction, and operation of the Project will be evaluated as a non-price evaluation component. Non-price points assigned to Economic Benefits account for 10% of overall evaluation. Economic Benefits are those that a Proposer can demonstrate: (1) will accrue after the December 28, 2022, and up to three years following the Project's Commercial Operation Date and (2) would not have accrued but for the issuance of the ISC solicitations or award of a contract under this RFP.

Submission: A complete Step Two Bid Proposal includes an Attachment D. Bid Data Form and an Attachment F. Procurement and Benefits Plan submission. A narrative of the ways in which this Project supports the energy storage supply chain in New York is required in the Procurement and Benefits Plan submission. Economic Benefits claims must be listed in the Bid Data Form to be considered for evaluation. Appendix A. Economic Benefits details the instructions for submitting Economic Benefits claims, including guidance on eligible claims. Only eligible claims will be considered in evaluation.

Evaluation: The SC will evaluate and award points to Proposals based on the degree to which each Proposal demonstrates that Economic Benefits will accrue to New York because of the development, construction, and operation of the Project. Economic Benefits may be claimed in two categories:

- 1) Long-Term Economic Benefits to New York State; and
- 2) Short-Term Economic Benefits to New York State.

The SC will award points between the two sub-categories. Within each category, points will be awarded in proportion to the level of eligible claims, normalized across all Projects by dividing each Project's eligible claims by that Project's Bid [Power/Energy] Capacity [\$/MW or \$/MWh]. Only direct Economic Benefits within these categories, as entered in Attachment D. Bid Data Form will be considered. In no instance will NYSERDA or its SC consider any indirect benefits or those created by any "multiplier effect" or other attribution method under which the creation of peripheral spending and jobs might be credited to direct capital infused into the economy.

Claims associated with MWBE and SDVOB will receive greater weight in scoring. Claims associated with disadvantaged communities will also receive greater weight in scoring, particularly to the extent that they are included in the Disadvantaged Community Commitments recorded in Section 6.10 of the Agreement.

All other Economic Benefits will receive a baseline scoring weight (total value of eligible claims, normalized by dividing each Project's eligible claims by that Project's Bid [Power/Energy] Capacity [\$/MW or \$/MWh]. If a specific claim falls under multiple criteria, such as a MWBE/SDVOB claim benefitting a Disadvantaged Community, both weights will be applied.

4.5 Non-Viability Determination

NYSERDA reserves the right to reject a Proposal based upon a unanimous determination by the SC that the project is not presently viable. NYSERDA may seek additional information from any Proposers deemed to have submitted a non-viable Proposal prior to removing the Proposal for consideration. If NYSERDA raises a potential non-viability concern for a Project, the Proposer will be given the opportunity to respond. The time to respond will depend on the nature of the potential non-viability determination but will not be less than five business days.

If a Proposal is rejected based on the evaluation of viability, NYSERDA will notify the Proposer of the determination and provide an explanation following the submission of the Step Two Bid Proposal and the receipt of responses to any clarifying questions. Proposers with Proposals that are rejected in this manner will remain eligible to re-apply in future solicitations and will be evaluated again without prejudice. Reasons for a determination of non-viability may include:

- 1) The Proposal is immature to such an extent that it would be impossible to ascertain whether it is viable;
- 2) The Proposal is predicated on unrealistic economic or regulatory assumptions; or
- 3) The Proposal is subject to serious economic, permitting and/or regulatory risks without a sufficient mitigation plan.

Examples of why a Proposal could be determined to be non-viable include, but are not limited to, failing to meet one or more Minimum Threshold Requirements, a Project with a Strike Price that is determined to be insufficient to cover Project costs, a lack of understanding of how settlement under an awarded ISC Agreement would occur, an unfounded interconnection or permitting mitigation cost estimate, and/or a materially high risk of not receiving permits due to the Project's current permitting status.

Non-viability determinations will only be recommended for a clear, objective case that the Project is non-viable based upon the consensus of NYSERDA, SC, and, if applicable, Specialist Reviewers' assessment of the Project.

5. Additional Application Submission Information

5.1 Proposers' Webinar and Inquiries

NYSERDA will hold a webinar for Proposers on July 15th, 2025, at 1:00 - 2:30 p.m. ET (Albany, NY time). During the webinar, NYSERDA will review the Step One Eligibility Application and Step Two Bid Proposal requirements, the Agreement, and the Program Manual. Questions will be taken and, to the extent possible, responses will be provided during the webinar.²¹

Proposers' can register for the webinar at the registration site, to be published with the final ISCRFP25-1.

²¹ To sign up for the Proposers' Webinar please register here:
<https://nyserdany.webex.com/weblink/register/r04709e40b230c14d97277dbd96c03d4c>

Proposers are encouraged to submit questions prior to the webinar via email to bulkstorage@nyserda.ny.gov, and during the Proposers' Webinar using the built-in Q&A feature. Written responses will be posted to solicitation website and will supersede any responses given by NYSERDA during the Proposers' Webinar. Any submitted questions that NYSERDA posts publicly will be posted anonymously, along with NYSERDA's responses, on the solicitation website under the Q&A feature, which is accessible to all Proposers following the webinar. NYSERDA reserves the right to not post responses to questions that are specific to a Project. Any such questions should be directed to NYSERDA through the Messages feature of the solicitation website or bulkstorage@nyserda.ny.gov inbox.

Questions may not be submitted directly to any individual at NYSERDA other than the Designated Contacts. Questions should not be submitted to DPS Staff, or to individuals working for or on behalf of NYSERDA that are not listed as Designated Contacts.

5.2 Bid Fee

The Step Two Bid Proposal for a Project must be accompanied by a single Bid Fee, in the form of electronic wire (preferred) or certified funds, in an amount determined by the Bid Power Capacity in megawatts (MW) of the Project in accordance with Table 4. The Bid Fee is due by Tuesday, November 11, 2025. The submission of Alternate Bid Proposal(s) does not require multiple Bid Fee payments – Bid Fee requirements are only submitted once for a Project. Proposers must indicate that they have submitted a Bid Fee with their Step Two Bid Proposal and attach proof of the provision of a Bid Fee, such as a receipt or transfer confirmation.

Table 4. Bid Fees by Project Bid Power Capacity

Bid Power Capacity (MW)	Bid Fee
5 – 99.9 MWac	\$100 per 1 MWac
>=100 MWac	\$10,000

Bid Fees will not be refunded to Proposers, except in instances of Bid Fees submitted for late or incomplete Bid Proposal submittals which are not evaluated, or for Bid Proposals that are ineligible under the Minimum Eligibility Thresholds. Waivers will not be provided for Bid Fees. Funding received from or committed by an entity like the New York Green Bank will not suffice as an alternative to the Bid Fee payment.

Full Bid Fee submission instructions with account and routing information can be downloaded after registering as a Proposer on the solicitation website. All Bid Fees must be clearly labeled with a unique identifier comprised of the Project Name, Proposer Name, and NYISO Queue number (if applicable). Bid Fees provided via electronic wire must have this unique identifier included within the Payment Details/Description. Bid Fees provided via cashier's check must have this unique identifier clearly labeled within the Memo or elsewhere on the check.

5.3 Modification or Cancellation of the RFP and Solicitation Process

Notification of any changes in RFP process or documents will be posted on NYSERDA's [Bulk Energy Storage website](#), on the solicitation website, and sent via email to parties that have submitted contact information to NYSERDA's Bulk Energy Storage updates via the [Bulk Energy Storage website](#). Prospective Proposers are encouraged to check the website frequently to be advised of any RFP changes or other news.

The terms and conditions of this RFP may, at any time, be changed, postponed, withdrawn, and/or canceled, including any requirement, term or condition of this RFP, without any liability to NYSERDA.

5.4 Updates to the Eligibility Application and/or Bid Proposal

Proposers will not have an opportunity to refresh or restate submissions after the corresponding submission deadline for each Step. If a Proposer wishes to modify an already submitted submission *before* the submission deadline for that Step, the Proposer should follow the posted instructions for editing a submission and may contact NYSERDA's Designated Contacts with questions or issues.

NYSERDA will contact Proposers regarding any instances where NYSERDA is seeking clarification regarding a potential error or misunderstanding reflected in the Bid Proposal, or if Bid Proposal materials were received in a corrupted or unusable format. NYSERDA will provide the Proposer with an opportunity to cure the error or provide properly formatted materials. NYSERDA will not make material adjustments to any Proposal.

After the submission deadline, Proposers may provide information that was not available at the time of their submission at NYSERDA's request as described in Sections 2 and 3.2. These requests are for clarification and/or informational purposes and will not be treated by NYSERDA as a change or revision to the material terms of Bid Proposal submission (e.g., Strike Price, Incremental Economic Benefits).

If any event or change of circumstances occurs that affects the Project or the Bid Proposal in a manner that could reasonably be expected to have a material impact on the eligibility of the Bid Proposal or its evaluation in ISCRFP25-1 (a "Material Change"), Proposers must promptly notify NYSERDA in writing. Proposers and their Bid Proposals must maintain eligibility under the Minimum Threshold Eligibility requirements throughout the Bid Proposal evaluation period and, if provisionally awarded, up to the execution of the Agreement by the Proposer and NYSERDA.

In the event that a Material Change occurs that affects ISCRFP25-1 Proposers generally, NYSERDA may solicit updates to all eligible Step Two Bid Proposals to account for the Material Change. In accordance with this process for evaluating systemic Material Changes, Proposers' scores may be adjusted upwards or downwards as a result.

In the event of a Material Change that does not affect ISCRFP25-1 Proposers generally, the evaluation of the affected Bid Proposal(s) will be re-visited in the applicable category(ies). However, no scores may be increased as a result of this type of material change; scores may only be adjusted downwards. If any information on Attachment B. Public Project Summary changes at any time following submission and prior to execution of the Agreement, Proposers are required to promptly submit an updated version of Attachment B so that NYSERDA can update its website accordingly.

5.5 Requests for Additional Information and/or Interview

Following the submission of Proposals, NYSERDA and the Scoring Committee may request clarification and additional information from Proposers at any time throughout the duration of the evaluation process. Such information will be subject to protection of proprietary information as described in Section 8.1, consistent with other Bid Proposal submission materials. If the Proposer does not respond promptly to such information requests or does not provide adequate information, the affected Bid Proposal(s) will be evaluated based on the information as originally submitted.

5.6 Contractual Commitments

5.6.1 Prevailing Wage Requirement

In accordance with the Energy Storage Order and NYSEDA's requirements as contained in the Agreement, and unless otherwise provided in a Project Labor Agreement (PLA) covering the construction of the Project that complies with the Agreement, all laborers, workmen and mechanics (within the meaning of those terms under New York State Labor Law Article 8) performing Construction Activities with respect to the Project, including, but not limited to, the staging, installation, erection, and placement of the Project and its electrical interconnection as well as related to start-up and commissioning of the Project, whether through long-term or short-term employment, must be paid wages and benefits in an amount not less than the Prevailing Wage applicable in the area where the Project will be situated, erected and used, as published by the New York State Department of Labor or at least the equivalent Prevailing Wage requirements of the jurisdiction where the Project is located. Furthermore, in accordance with the Energy Storage Order and the Agreement, an awarded Project must provide quarterly certifications by a New York State licensed certified public account that the Prevailing Wage has been paid.

5.6.2 Project Labor Agreement

As referenced herein, a Project Labor Agreement (PLA) refers generally to a single collective bargaining agreement (including a pre-hire agreement) covering both contractors in the construction industry working on a Project and a bona fide building and construction trade labor organization representing the craft workers on that Project. Construction work performed under a PLA that meets the requirements of Exhibit J to the Agreement is not subject to the aforementioned prevailing wage requirements. For the specific applicable contractual provisions, please see Sections 18.10 and 18.12 of the Agreement and Exhibit J to the Agreement.

5.6.3 Disadvantaged Communities Economic Benefit Commitments

Proposers are encouraged to make elective commitments in their Step Two Bid Proposals that will commit the Proposer to a certain dollar amount of expenditures that will accrue to disadvantaged communities. Such commitments will be evaluated favorably and be incorporated into the Agreement as Disadvantaged Community Commitments. To the extent a Project falls short of the minimum dollar requirement set forth in the Agreement, any shortfall will be addressed through the remedy provided in Section 6.10 of the Agreement. See Appendix A for further instructions on Economic Benefits commitments.

5.6.4 MWBE and SDVOB Economic Benefit Commitments

Proposers are also encouraged to make elective commitments in their Step Two Bid Proposals that will commit the Proposer to a certain dollar amount of expenditures per [MW or MWh] of Bid [Power/Energy] Capacity that will accrue to MWBE and SDVOB. Such commitments will be evaluated favorably and be incorporated into the Agreement as Expected MWBE and SDVOB Dollars/MW. To the extent a Project falls short of the minimum dollar requirement set forth in the Agreement, any shortfall will be addressed through the remedy provided in Section 5.02 (f) of the Agreement. See Appendix A for further instructions on Economic Benefits commitments.

6. Preliminary Ranking, Portfolio Evaluation, and Initial Award Group

6.1 Rank Order and Award Group

A preliminary rank order of Bid Proposals will be established based on the sum of the consensus Scoring Committee scores for each non-price category (Project Maturity & Viability, Electricity System Value, and Societal & Economic Benefits), and the points awarded for the Levelized Net ISC Cost as a result of the Strike Price evaluation.

Following the development of the preliminary rank order, NYSERDA may recommend modifying the preliminary rank order, in consultation with DPS, based on the Portfolio Risk Factors detailed in Section 6.2. NYSERDA may consult with subject matter experts, including DPS Staff, the NYISO, and the distribution utilities to assess the portfolio of received bids to inform the potential employment of any Portfolio Risk Factor(s).

After the preliminary ranking of all eligible Bid Proposals and (if applicable) applying any Portfolio Risk Factors, NYSERDA and DPS will arrive at an initial award group. NYSERDA and DPS also reserve the right to expand the initial award group to advance awards for Projects ranked below those Projects offered an initial award. The submission of a Step Two Bid Proposal will constitute a binding offer to contract under the terms of the Agreement; such offer must remain open for a period of at least one hundred and eighty (180) days from the Step Two Bid Proposal deadline.

The number of ISCs procured in the ISCRFP25-1 solicitation is subject to NYSERDA's discretion and the review and approval of the Department of Public Service. NYSERDA reserves the right to reject or accept any or all bids. NYSERDA may consider information provided by a Proposer in response to requests for additional information in accordance with Section 8 or otherwise obtained by NYSERDA as to indictments, convictions, enforcement proceedings, investigations, and significant character or ethical questions in accepting or rejecting a bid. NYSERDA also reserves the right to solicit revised Strike Prices and/or to make counteroffers as it deems appropriate. Notification of a re-bid, counteroffer or selection will be made by voice communication and via the solicitation website to the Proposer's Project Sponsor(s). Proposer's Project Sponsor(s) must be authorized to respond and to commit to counteroffers on behalf of Proposer.

6.2 Portfolio Risk Factors

NYSERDA, in consultation with DPS, may recommend adjustments to the preliminary rank order to (1) remove Bid Proposals from the initial award group to avoid material risks to the portfolio (as described in factors 1-6 below), and/or (2) add Bid Proposals to the initial award group that provide material benefits to the portfolio (as described in factors 1-6 below). Any additions will be made in accordance with the order of the preliminary rank order. NYSERDA, in consultation with DPS, may make such adjustments if the adjustments result in:

1. A portfolio that results in greater geographic diversity and/or developer diversity;
2. A portfolio that results in lesser estimated levels of current or future renewable energy curtailment;
3. A portfolio that results in a relatively greater decrease in future emissions from Peaker Plants, particularly in NYISO Zones G – K;
4. A portfolio that results in materially lesser risk of project attrition that includes projects/project configurations with relatively lower permitting feasibility risk;

5. A portfolio that provides increased non-energy and capacity services to the electricity grid;
6. A portfolio that delivers safer energy storage projects with more comprehensive fire safety plans and plans to comply with the Program Manual.

These modifications may be made if comparable projects based on price and non-price factors are available in the preliminary rank order of Bid Proposals and material benefits or avoidance of material risks to the initial award group are identified.

6.3 Award Notice

After determining the initial award group, NYSERDA will then notify Proposers with Projects contained in the initial award group both by voice and written communication to Proposers' Project Sponsor(s) and Authorized Representative(s). Selection for an initial award does not give the Proposer any legal right or entitlement. Once selected for initial award, Proposers must negotiate a final version of the Agreement with NYSERDA (See Section 7).

In accordance with the Non-Disclosure Agreement submitted by Proposers in the Step Two Bid Proposal, Proposers awarded an ISC Agreement under ISCRFP25-1 will be required to maintain the confidential nature of the award prior the public announcement of the ISCRFP25-1 final award group as part of the Public Disclosure. The date upon which NYSERDA provides such written notification shall be the Award Notification Date.

See Section 7 for further instructions on the post-award contracting process.

7. Post-Award Contracting

7.1 Award Notifications and Confidentiality

Following the distribution of initial award notifications, the Proposer shall not distribute any press release or contact the media or other members of the public until after the awarded Agreement is executed by both parties and NYSERDA publicly discloses the award. Proposers will be required to execute a Non-Disclosure Agreement as part of the Step Two Bid Proposal.

Following NYSERDA's Public Disclosure, if the Proposer wishes to contact the press regarding the awarded Agreement, the Proposer must collaborate with NYSERDA's Bulk Energy Storage Team and the NYSERDA Director of Communications prior to issuing any press release and/or holding an event or related announcement. Once all provisional awards are confirmed by NYSERDA, NYSERDA will inform Proposers if they were not selected for award. Upon receipt of this notification, a Proposer may request to schedule a debrief on the selection process and the strengths and weaknesses of its Proposal by contacting bulkstorage@nyserda.ny.gov.

7.2 Provision of Contract Security

Unless otherwise agreed to by NYSERDA in writing, Contract Security in the amount of the product of the Bid Power Capacity (MWac) and \$20,000 will be required within thirty (30) days of the Award Notification Date. NYSERDA accepts Contract Security in the form of cash, certified funds, or a Letter of Credit (LOC).

If contract security is not provided by this deadline and the deadline is not extended by NYSERDA (which NYSERDA does not intend to do except in extenuating circumstances or if the deadline is extended for all provisionally awarded Proposers), the award will be rescinded.

The criterion for accepting a LOC includes:

1. the issuing bank is an owner bank of The Clearing House,²² or
2. the issuing bank must have a credit rating of A or better by Standard and Poor's, A or better by Fitch, or A2 or better by Moody's; and
3. the issuing bank must be a United States bank, or a United States branch of a foreign bank, with a New York branch preferred.

NYSERDA has included a standard form of letter of credit in the ISC Standard Form Agreement. If the issuing bank seeks modification to these terms, NYSERDA recommends that a draft letter of credit should be sent to NYSERDA for review and consideration prior to issuance. **Please refer to Section 15.01 for more information regarding Contract Security draw conditions prior to execution of the Agreement.**

7.3 Designation of Seller, Changes of Control, and Documents Required for Contracting Purposes

Awarded Proposers will be responsible for designating the legal entity that will serve as the Seller, which must be a subsidiary or affiliate of the Proposer unless otherwise agreed by NYSERDA. The Seller typically is the legal entity that owns the Project; if a Proposer wishes to designate a different legal entity as the Seller, Proposers should contact NYSERDA as early as feasible.

Any change in control of the Project that occurs prior to full execution of an awarded Agreement may affect evaluation including as described in ISCRFP25-1 Section 5.4, and accordingly, NYSERDA cannot guarantee that an initial award will remain valid if a change of control of the Project occurs prior to entry into the Agreement. After the Agreement with NYSERDA is executed, changes of control of the Seller will be governed by Article VIII of the Agreement.

NYSERDA requires the following documents from the Seller prior to contract execution:

1. Contracting Form, to be provided by NYSERDA to Seller, requesting information including Legal Business Name, State of Incorporation, Tax Identification Number (EIN), and other contractual information; Pursuant to Tax Law Section 5-a, if not previously filed for the Seller, form Tax Law ST-220-TD is required. Please consult Publication 223, Questions and Answers Concerning Tax Law Section 5-1. If filing for the first time, please indicate the "Seller" under "Contractor name" on the form. This form is filed first with the NYS Tax Department and NYSERDA does not need a copy. If not previously filed for the Seller, a completed form Tax Law ST-220-CA. Sellers will file this form after filing the ST-220-TD form. On the ST-220-CA form, Sellers will indicate to NYSERDA that they have filed the ST-220-TD form or the Seller previously filed ST-220-TD with the Tax Department. As a reminder, please indicate the "Seller" under "Contractor name" on the form;
2. Certificate of Incorporation;
3. A certificate of an appropriate officer of the Seller, in form and substance certifying: (1) the names and signatures of the officers of the Seller authorized to sign any documents to be

²² Please see the owner bank membership for The Clearing House available from <https://www.theclearinghouse.org/about/owner-banks>

delivered to NYSEDA under the conformed ISC Standard Form Agreement, and (2) the accuracy and completeness of resolutions of the Seller, authorizing and approving all matters in connection with the transactions contemplated in the conformed Agreement. NYSEDA does not have a preferred standard;

4. A certificate of good standing, dated as of the most recent practicable date prior to the Effective Date, issued by the jurisdiction of Seller's organization Secretary of State, confirming the corporate good standing of Seller;
5. Application for Authority, if applicable (if the Seller is a foreign business corporation that has not yet applied for authority to do business in the State of New York);²³
6. Updated EO 16 Certification and/or EO 192 Vendor Responsibility Questionnaire, if applicable.

7.4 Process for Agreement Finalization; Pre-Execution Contract Security Draw Conditions

NYSEDA will provide a first draft of the Agreement populated with all Project-specific inputs other than (i) any of the items listed in Section 7.3 (above) that have not yet been provided by Proposer and (ii) if not yet available, Exhibits H and/or M (the "Conformed Draft") reasonably promptly after provisional award. For further clarity, NYSEDA shall not be required to provide the Conformed Draft or to execute the Agreement prior to the deadline for provision of contract security.

For Proposers with multiple awards, unless otherwise agreed to by NYSEDA, one Conformed Draft will be provided to the Seller along with Project-specific Schedules 1 and 2 for each award, and, once the Agreement terms are finalized, that form Agreement will be used to populate the other awarded Agreements for the other awarded Projects.

Subject to the below terms and conditions, if the Seller fails to execute the Agreement on or prior to the date ("Execution Deadline") that is 120 calendar days following the date on which NYSEDA provides the Conformed Draft to Proposer, the contract security will be forfeited to NYSEDA, the award will be rescinded, and the Project may not be eligible to participate in future NYSEDA bulk storage solicitations.

NYSEDA will provide any and all remaining Project-specific inputs that are not included in the Conformed Draft no later than the date that is 30 calendar days following the date on which NYSEDA has received from Proposer all required contracting information described in Section 7.3 (above). If NYSEDA fails to provide these inputs by such time, the Execution Deadline will be automatically extended day for day by the length of NYSEDA's lateness.

NYSEDA and the Proposer will work together in good faith to expediently finalize the Agreement, making edits only to the extent reasonably necessary to clarify and properly implement the substance and intent of the RFP and form Agreement.

Neither NYSEDA nor Proposer is required to agree to material changes to the form Agreement. NYSEDA also does not intend to make **any** changes to certain sections of the Agreement, as noted in Section 2.6.1.

NYSEDA agrees to respond to any comments from the Seller within 15 business days of receipt, and to the extent NYSEDA exceeds this prescribed timing for response, the Execution Deadline will be extended day for day by the length of NYSEDA's lateness.

²³ <https://dos.ny.gov/application-authority-foreign-business-corporation>

Proposer is responsible for arranging any and all necessary approvals (e.g. board or investment committee approval) as necessary to meet the Execution Deadline.

In the event that NYSERDA provides an execution version of the Agreement less than 10 business days prior to the Execution Deadline, the Execution Deadline will automatically be extended to the date that is 10 business days following the date that NYSERDA provides the Proposer with the execution version. As noted in the ISC Standard Form Agreement, NYSERDA will have the right to draw on the Contract Security if the Execution Deadline (as extended, if applicable, in accordance with the terms and conditions above) has passed and the Proposer has not executed the Agreement. In such circumstances, the Project may also not be eligible to participate in the next NYSERDA bulk storage solicitation.

As noted in the ISC Agreement, NYSERDA will not be entitled to draw on the Contract Security for the other reasons enumerated therein until the Agreement is executed by both parties.

NYSERDA may publish the executed Agreements, and/or relevant terms within the Agreements, executed with awardees. Prior to such publication, NYSERDA will redact any critical electric infrastructure information contained in the Agreements, if any, including in the exhibits thereto, and will consider requests to redact confidential business information; provided, however that NYSERDA will not entertain any request to redact price information contained in the Agreement, specifically the Bid Price.

7.5 Confidentiality Waiver for Interconnecting Authority

The Proposer shall waive confidentiality with the pertinent Interconnecting Authority after the ISC Agreement has been executed.

7.6 Updated Project Schedule

If an awarded Project is under development, NYSERDA will request an updated Project Schedule six months after the Bid Proposal was submitted, revisiting key development milestones throughout that period. Awardees must update all project schedule details previously provided in the Bid Proposal via the Project Schedule tab of Attachment D. Bid Data Form and provide an update to NYSERDA through the Salesforce Portal.

Proposers shall include a narrative that describes progress since the project schedule was submitted as part of the Step Two Bid Proposal.

7.7 NYISO Waiver for Project-Specific Capacity Accreditation Resource Class (CARC)

If awarded, the Seller will be required to waive confidentiality with the NYISO for the term of the Contract Tenor, as to NYSERDA, in order for NYSERDA to obtain the Project-specific CARC used in the settlement calculations.

8. General Conditions

8.1 Proprietary Information

Consideration should be given before confidential information is submitted to NYSERDA as part of any Proposal. Proposers should consider and review whether information is critical for evaluation, and

whether general, non-confidential information may be adequate for review and evaluation purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSEDA possesses. The Public Officers Law includes exceptions to disclosure, including Section 87(2)(d) which provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Additional information submitted to NYSEDA that Proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501²⁴.

However, NYSEDA cannot guarantee the confidentiality of any information submitted. NYSEDA reserves the right to make public, after the fifth anniversary of the award date, the Agreement executed with any awarded Proposal.

8.2 State Finance Law Sections 139-j & 139-k

NYSEDA is required to comply with State Finance Law Sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://ogs.ny.gov/acpl>.

Proposer must certify that he/she will comply with State Finance Law Sections 139-j and 139-k and a provide disclosure statement regarding whether Proposer has been found non-responsible under Section 139-j of the State Finance Law within the previous four years.

8.3 Tax Law Section 5-a

NYSEDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSEDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the Department) whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSEDA, the prospective contractor must also certify to NYSEDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contacting and filed with NYSEDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

8.4 Contract Award

NYSEDA anticipates making one (or multiple, as it applies to solicitation) award(s) under this solicitation. A contract may be awarded based on initial applications and Bid Proposals without discussion, or following limited discussion or negotiations. Each Bid Proposal should be submitted using the most favorable cost and technical terms. NYSEDA may request additional data or material to

²⁴ <https://www.nyserda.ny.gov/about/new-york-state-regulations>

support applications. NYSEDA will use the ISCRFP25-1 Agreement to contract successful proposals. NYSEDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSEDA reserves the right to limit any negotiations on the Agreement. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSEDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSEDA agreement.

8.5 Limitation

This solicitation does not commit NYSEDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSEDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSEDA's best interest. NYSEDA reserves the right to disqualify Proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in extending an award to such Proposers.

8.6 Omnibus Procurement Act of 1992

It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as Proposers, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
30 South Pearl Street
Albany, NY 12245

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
30 South Pearl Street
Albany, NY 12245

8.7 Disclosure Requirement

All Proposers shall disclose any indictment for any felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a Proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment, investigation, enforcement proceeding, or conviction should come to the attention of NYSEDA after the award of a contract, NYSEDA may exercise its stop-work right pending further investigation, or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

8.8 Press Releases and Media Contact

All Proposers shall not distribute any press release or contact the media until after the Agreement is executed by both parties and any New York State press releases regarding the awards have been issued. If Proposer wishes to contact the press regarding the award, Proposer must collaborate with NYSERDA's Designated Contacts and Director of Communications to prepare any press release and/or to plan for any announcement. NYSERDA reserves the right to make public, after the fifth anniversary of the Award Notification Date, the Agreement executed with any awarded Project.

8.9 Independent Entities/Limitation of Liability

Neither this RFP nor any other aspect of this solicitation shall create an agency, partnership, joint venture, or co-tenancy relationship among the members of the Evaluation Team, or any other individuals or entities involved in the development or administration of this RFP (collectively, the "RFP Parties"), nor any other relationship or liability beyond those (if any) explicitly adopted in writing and executed by authorized representatives of the applicable RFP Parties. None of the RFP Parties shall be liable for any act or omission of any other RFP Party. Neither this RFP nor any other aspect of this solicitation creates or is intended to create third-party beneficiaries hereunder. In no event will an RFP Party be liable to any person for special, incidental, punitive, exemplary, indirect or consequential damages or lost profits, whether by statute, in tort or contract or otherwise.

8.10 Vendor Assurance of No Conflict of Interest or Detrimental Effect

The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, the "Commission on Public Integrity"), and if so, a brief description must be included indicating how any matter before the Commission on Public Integrity was resolved or whether it remains unresolved.

8.11 Public Officers Law

For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Joint Commission on Public Ethics, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA

employees are subject to a “lifetime bar” from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person’s engagement, work cooperatively with the State to solicit advice from the New York State Joint Commission on Public Ethics, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Joint Commission on Public Ethics. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

8.12 Due Diligence

NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants’ prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA’s current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant’s proposal, including questions regarding applicant’s business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants’ target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers’ business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers’ business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers’ former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a portfolio risk factor.

8.13 Executive Order No. 16

Pursuant to Executive Order No. 16 (EO 16)²⁵ issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form noted in Section 3, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to EO 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

8.14 Executive Order No. 192

As per Executive Order 192²⁶, NYSERDA is required to do business only with responsible entities. As a result, a Vendor Responsibility Review will be conducted for all ISCRFP25-1 Step One Proposers. The Vendor Responsibility Checklist requires that the Proposer answer a series of questions regarding the Proposer, and the directors, employees and agents of Proposer and any affiliate of Proposer with respect to: (1) current investigation(s) by any governmental agency; (2) convictions or established liability for any act prohibited by State or Federal law in any jurisdiction involving conspiracy, collusion or other impropriety with respect to offering on any contract; or (3) any debarment action (detail any exceptions), within the last 4 years.

The Vendor Responsibility Checklist will also include the Proposer's attestation regarding the accuracy and truthfulness of the information and documentation provided by the Proposer. The NYSERDA Bulk Energy Storage program team will review the responses to the Vendor Responsibility Checklist and reserves the right to make a determination of vendor responsibility if a non-responsibility concern is noted.

**Update to Renewable Energy Standard Purchase of New York Tier 1 Eligible Renewable
Energy Certificates Request for Proposals (RFP) No. RESRFP25-1 RFP**

Original Release Date: September 26, 2025

UPDATE EFFECTIVE: October 10, 2025

Summary of Revisions

1. Correction to Section 4.3.1 Interconnection
2. Correction to Attachment F. Minimum Thresholds Narrative
3. Correction to Appendix 2. RESRFP25-1 Smart Solar Siting Scorecard
4. Correction to Appendix 2. Exhibit 1. Smart Solar Siting Scorecard Workbook
5. Correction to Appendix 2. Exhibit 3. Scorecard Resources

**Purchase of New York Tier 1 Eligible Renewable Energy Certificates (RECs)
Request for Proposals (RFP) No. RESRFP25-1
RFP Release Date: September 26, 2025
RFP Revision Date: October 10, 2025**

Step One Eligibility Applications Due: Tuesday, October 21, 2025, by 3:00 p.m. Eastern Time (ET) Step Two Bid Proposals Due: Thursday, December 4, 2025, by 3:00 p.m. ET

**NYSERDA SEEKS TO ACQUIRE APPROXIMATELY 5.6 MILLION NEW YORK TIER 1 ELIGIBLE
RENEWABLE ENERGY CERTIFICATES ANNUALLY**

The New York State Energy Research and Development Authority (NYSERDA) seeks to procure approximately 5.6 million Tier 1 eligible Renewable Energy Certificates (RECs) annually from Bid Facilities that meet the eligibility requirements described in this Request for Proposals (RFP or RESRFP25-1).

RESRFP25-1 will be implemented through a two-step process, consisting of:

1. **Step One Eligibility Application:** A qualifying step through which the Proposer must provide evidence that the Bid Facility is Tier 1 eligible and other general information about the Proposer and the Bid Facility.
2. **Step Two Bid Proposal:** A competitive Bid Proposal step, through which NYSERDA will: (1) examine each Bid Proposal to determine whether the Bid Price does not exceed the Benchmark Levelized Net REC Cost (LNRC) and it demonstrates that the Bid Facility and Proposer meet the Minimum Threshold Requirements; and (2) for Bid Proposals that meet those minimum requirements, a competitive evaluation based on price and non-price factors.

Only those Proposers found eligible under Step One will be permitted to submit a Step Two Bid Proposal. Only those Proposals found to have met all Minimum Threshold Requirements will be evaluated under Step Two.

Step One Eligibility Application: Step One Eligibility Applications must be **received by NYSERDA by 3:00 p.m. ET on Tuesday, October 21, 2025 via electronic submission on the [solicitation website](#)**. NYSERDA staff will be available to support Proposer inquiries regarding Step One Eligibility Applications prior to the deadline. Applications may be submitted electronically by following the link for electronic submissions found on [NYSERDA's Solicitations for Large-scale Renewables webpage](#)¹ or [NYSERDA's Current Funding Opportunities website](#),² located in the "Current Funding Opportunities" section of NYSERDA's website at that time.

NYSERDA intends to notify all prospective Proposers who submitted a Step One Eligibility Application as to their eligibility status by **Thursday, October 30, 2025**. Eligible Proposers will receive a Notice of Qualification and will be provided with detailed instructions for submitting a Step Two Bid Proposal.

¹ <https://www.nyserda.ny.gov/ces/rfp>

² <http://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>

Step Two Bid Proposal: Step Two Bid Proposals must be **received by NYSERDA by 3:00 p.m. ET on Thursday, December 4, 2025, via electronic submission.** Instructions for submitting electronically and the link for electronic submissions will be included in a Proposer’s Notice of Qualification. Additional information regarding NYSERDA’s Renewable Energy Solicitations can be found on [NYSERDA’s Renewable Energy Solicitations Standard \(RES\) Tier 1 website](#).³

NYSERDA recommends that Proposers set aside ample time, well in advance of each deadline, to gather the required information and documentation and to understand the requirements to complete the above processes. NYSERDA recommends that Proposers mark any commercially sensitive materials as “Confidential” or “Proprietary” in any submission made to NYSERDA pursuant to this RFP. Further information regarding confidentiality is set forth in Section 9.1.

Each Proposer has sole responsibility for reviewing this RFP and all attachments hereto and for investigating and informing itself with respect to all matters pertinent to this RFP, including the [NYGATS Operating Rules](#) and the NYISO’s Open Access Transmission Tariff (OATT) and market rules, or those of the control area into which the Bid Facility may interconnect. Each Proposer is solely responsible for informing itself regarding the External Facility Electricity Delivery Requirements in the RES Standard Form Agreement, and all transmission wheeling and scheduling provisions set forth in the OATT of relevance in any external control area, including Canada, the NYGATS rules as they apply to Tier 1 imports.⁴

Prior to the opening of the [solicitation website](#) and the Step One Eligibility Application, all questions regarding RESRFP25-1 must be directed to res@nyserda.ny.gov.

All general questions about this RFP may be submitted in writing via email to res@nyserda.ny.gov or via the Q&A feature of the solicitation website.⁵ Project-specific questions may be addressed to res@nyserda.ny.gov or submitted via the Messages feature on the solicitation website.

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Department’s primary Designated Contacts for this Procurement are:

Primary Designated Contacts for RESRFP25-1		
Name	Email	Phone Number
Mac Farrell	mac.farrell@nyserda.ny.gov	646-873-7930, ext. 06-3471
Bram Peterson	bram.peterson@nyserda.ny.gov	646-873-7913, ext. 3635
Mairead Milan	mairead.milan@nyserda.ny.gov	646-873-7963, ext. 06-7532
Aaron Rudyan	aaron.rudyan@nyserda.ny.gov	646-873-7968, ext. 3048
Beata Raczynska	beata.raczynska@nyserda.ny.gov	646-873-7934, ext. 3456

³ <https://www.nyserda.ny.gov/ces/rfp>

⁴ See Section 11 of the [NYGATS Operating Rules](#).

⁵ The Q&A page is intended for general questions which are suitable for public review.

Additional Designated Contacts for this Procurement are: Abigail Randall, Liz Hanna, Jenn Phelps, Jeremy Wyble, Nathalie Simoes, John Bernecker, Jenny Sing-Bock, Tyler Picard, Marci Brunner, Alex Stein, Nate Chumley, Abbey DeRocker, Georges Sassine, Anthony Fiore, Doreen Harris. Questions to these Designated Contacts regarding RESRFP25-1 should be directed to res@nyserda.ny.gov.

All Proposers should be familiar with the legal prohibitions against certain types of contacts during government procurements set forth in State Finance Law section 139-j. In accordance with that law, contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offerer, and (2) may result in the proposer not being awarded a contract.

Proposers should rely only on information provided in this RFP and any associated written updates posted on [NYSERDA's Renewable Energy Standard website](#) and the [solicitation website](#) when preparing Proposals. Each Proposer shall be solely responsible for and shall bear all costs incurred in the preparation of its Proposal and/or participation in this RFP.

Incomplete submittals will be subject to disqualification. It is the Proposer's responsibility to ensure that all required forms and attachments have been completed and submitted. Late Step One Eligibility Applications and Step Two Bid Proposals will not be accepted and those lacking a completed and signed Step Two Bid Proposal form may be returned.

Faxed, or e-mailed packages will not be accepted. Mailed packages containing paper submissions will be accepted.⁶ RFP responses will not be accepted by hand delivery at any NYSERDA location. Proposers will be notified by NYSERDA if any submitted Bid Proposals are deemed ineligible for failure to meet Minimum Threshold requirements. Bid Fees submitted for Bid Proposals deemed ineligible or for late or incomplete submittals will be returned to the Proposer, except in instances where a Bid Proposal is deemed ineligible after having undergone evaluation by the full Technical Evaluation Panel (TEP). Proposers whose Bid Proposals are deemed ineligible on account of exceeding the Benchmark LNRC, as described in Section 5.5, shall not be notified of such finding of ineligibility, nor will such Proposers be entitled to a return of their respective Bid Fees.

If changes are made to this solicitation, notification will be posted on [NYSERDA's Renewable Energy Standard website](#), the [solicitation website](#) under the Announcements tab, and provided to those that provide their email address to NYSERDA via the [solicitation website](#) or [NYSERDA's Large-Scale Renewables Email List Sign-Up Page](#).⁷ It is the Proposer's responsibility to check for, and conform to, any solicitation changes prior to submittal.

⁶ Proposers should notify NYSERDA in advance of the Step One Eligibility Application due date and/or the Step Two Bid Proposal due date if they plan to submit materials through the mail. Contact a Designated Contact for more information if needed.

ACRONYMS AND DEFINITIONS

Actual Annual Eligible Production – The amount, in MWh, of the Actual Eligible Production that (a) the new Bid Facility produces during a Contract Year or (b) the Upgrade or Repowering Bid Facility produces during a Contract Year after completion of the Upgrade/Repowering.

Actual Eligible Production – For new Bid Facilities, equal to the Actual Production. For Upgrade Bid Facilities, the product of (a) the Actual Production, multiplied by (b) the Incremental Upgrade Percentage. For Repowering Bid Facilities, the product of (a) the Actual Production multiplied by (b) the Tier-1 Percentage for the applicable period.

Actual Production – The amount, in MWh, of the total electric energy production of the Bid Facility during any period within the Contract Delivery Term as measured at the Injection Point.

AGM – New York State Department of Agriculture and Markets.

Agreement – RES Standard Form Agreement, provided as Attachment A, including Exhibits if applicable.

Agricultural Co-Utilization Plan – A plan developed by the Proposer (and described further in the Agreement) that proposes a viable co-utilization of a Bid Facility site with the agricultural production of “crops, livestock, or livestock products,” as that phrase is defined by New York State Agriculture and Markets Law (AML) § 301(2) for the duration of the Contract Delivery Term.

Agricultural Mitigation Payment – A one-time payment for a Bid Facility, as defined in and calculated as set forth in Attachment G. Agricultural Mitigation Payment Estimate Calculator, which amount for the Bid Facility will not exceed the estimated Mitigation Fund Payment in Proposer’s Bid Proposal, unless the Bid Facility layout is substantively revised or expanded to increase the Bid Facility area’s footprint in MSG 1-4 lands.

Agrivoltaics – A simultaneous use of land for solar photovoltaic power generation and agricultural production of “crops, livestock and livestock products,” as that phrase is defined by New York State Agriculture and Markets Law (AML) § 301(2).

Annual REC Cap – The maximum number of RECs that NYSDERDA is obligated to purchase from Seller in any Contract Year as defined in the Agreement.

Applicable Zone – The NYISO load zone that includes the Delivery Point.

Authority Having Jurisdiction (AHJ) – The town(s) or city(ies) within which the Bid Facility is located.

Applicable REC Price Method – The method employed by NYSDERDA in each month for determining the Monthly REC Price as determined in Article IV of the Agreement.

Award Notification Date – The date upon which NYSDERDA provides written confirmation to a Proposer indicating that a Bid Facility is the subject of a provisional award in the solicitation and has been selected for contract negotiations.

Benchmark LNRC – The confidential maximum price levels for the Fixed REC and Index REC offers that NYSDERDA will employ in its determination of potential award(s).

Bid Capacity – An amount equal to (i) the gross generating capacity of the entire Bid Facility as bid to NYSERDA (after completion of the Upgrade/Repowering, where applicable) in MWac multiplied by (ii) the Bid Quantity Percentage and (iii) (x) for Upgrades, further multiplied by the Incremental Upgrade Percentage and (y) for Repowerings, further multiplied by the applicable Tier 1 Percentage.

Bid Facility – An electric generating station that has been submitted by the Proposer for consideration in response to this RFP.

Bid Price – The price per REC offered by Proposer, offered either as a Fixed REC Price or an Index REC Price.

Bid Proposal – Documents submitted by Proposer in response to this RFP.

Bid Quantity – The amount stated in the Bid Proposal of Tier-1 RECs the Bid Facility expects to proffer as performance under the Agreement during each Contract Year during the Contract Delivery Term.

Bid Quantity Percentage – The percentage of the Bid Facility's Actual Annual Eligible Production that will be committed by the Proposer to performance under the Agreement. The Bid Quantity Percentage must be at least 15% and may not exceed 100% of the Annual Production.

Bid Storage Capacity – The energy capacity of the Energy Storage Component as bid to NYSERDA measured in MWh.

Capacity Accreditation Factor (CAF) – The Capacity Accreditation Factor for the CARC to which the Bid Facility has been assigned as determined by NYISO in accordance with the New Capacity Accreditation Rules.

Capacity Accreditation Resource Class (CARC) – The Capacity Accreditation Resource Class assigned to the Bid Facility as determined by the NYISO based on technology type and location under the New Capacity Accreditation Rules, or, should the Bid Facility not participate in the NYISO Capacity Market, the Capacity Accreditation Resource Class as determined by the NYISO for a project of the same technology type and location as the Bid Facility's under the New Capacity Accreditation Rules.

CES – Clean Energy Standard.

Climate Act – Climate Leadership and Community Protection Act.

Climate Justice Working Group (CJWG) – An advisory group in the Climate Action Council process, responsible for providing strategic advice for incorporating the needs of Disadvantaged Communities.

Co-located Storage Facility – An Energy Storage Component located onsite and charged by the renewable energy generator proposed in the Base Bid Proposal.

Commercial Operation – A state of operational readiness of the Bid Facility under which (i) the Bid Facility has been mechanically constructed and interconnected, (ii) generating capacity is available to physically produce and deliver electric energy to the Injection Point and associated Tier-1 RECs, and (iii) all rights, abilities, permits and approvals to schedule and deliver energy to the Injection Point have been obtained; provided, however, that for the avoidance of doubt, delivery of electric energy for

testing or other purposes prior to achievement of the foregoing clause (iii) shall not constitute Commercial Operation.

Commercially Deployed – An energy storage technology that has been previously deployed beyond the pilot and demonstration stages and has entered and remained in commercial operation for at least 1 year.

COMD – Commercial Operation Milestone Date, as further defined in the Agreement.

Construction Activities – The physical activities associated with the construction of any on-site structure or civil site works including, but not limited to, the clearing, grubbing, grading, staging, installation, erection and placement of the Bid Facility, the Energy Storage Component (if applicable), and electrical interconnection, as well as start-up and commissioning of the Bid Facility.

Contract Delivery Term – The period commencing on the first day of the month after the month in which the Bid Facility commences Commercial Operation (For Bid Facilities in Commercial Operation as of the Award Notification Date, unless otherwise agreed to in writing by NYSERDA, the Contract Delivery Term shall commence on the first day of the month after the Effective Date of the Agreement) and terminating on the last day of the Contract Tenor.

Contract Security – Security delivered to NYSERDA by a Proposer for its provisionally awarded Bid Facility and its performance under the terms of the Agreement, in the form of cash, certified funds, or a Letter of Credit, as described in Article XV of the Agreement.

Contract Tenor – The duration, in years, of the Contract Delivery Term.

Contract Year – A 12-month period commencing with the beginning of the Contract Delivery Term and each anniversary thereof during the Contract Delivery Term. The phrase “Contract Year” followed by a number shall refer to a discrete Contract Year within the Contract Delivery Term such that “Contract Year 1” refers to the first 12-month period commencing with the beginning of the Contract Delivery Term, “Contract Year 2” refers to the second such 12-month period, and so on.

Delivery Point – For Bid Facilities located within the NYCA, the generator bus or location where (a) the administrator of the wholesale power market or (b) the operator of the transmission/distribution utility, public authority or municipal electric company, measures or otherwise determines energy production from the Bid Facility. For Bid Facilities located outside of the NYCA, the generator bus or location where the NYISO measures energy delivery from the Bid Facility into the NYCA.

Disadvantaged Communities (also referred to as “disadvantaged communities”)– Has the meaning established by the Climate Act in § 75-0101(5) of the New York Environmental Conservation Law.

Disadvantaged Community Commitments – Shall be those commitments contained in the Seller’s Bid Proposal and described in Section 6.10 of the Agreement.

Economic Benefits Start Date – June 2, 2017.⁸

⁸ The date NYSERDA issued its 2017 Renewable Energy Standard Request for Proposals (RESRFP17-1).

End of Useful Life Bid Capacity – With respect to a Repowering, means the Bid Capacity of such Repowering after the end of the Existing Facility’s useful life.

End of Useful Life Installed Capacity – With respect to a Repowering, means the Installed Capacity of such Repowering after the end of the Existing Facility’s useful life.

Energy Storage Component – A commercially available resource capable of receiving electric energy and storing that energy or a portion of that energy for later injection of electricity to the grid.

Environmental Attributes – All environmental characteristics, claims, credits, benefits, emissions reductions, offsets, allowances, allocations, howsoever characterized, denominated, measured or entitled, attributable to the generation of Actual Production by a Bid Facility, consistent with the delineation of attributes set forth in the Agreement.

EO 16 – Executive Order No. 16, Prohibiting State Agencies and Authorities from Contracting with Businesses Conducting Business in Russia, issued and effective March 17, 2022.

Existing Facility – With respect to a Repowering, the facility prior to the implementation of such Repowering.

Expected Dollars/MW – The total dollar amount of Incremental Economic Benefits per MW of (a) for new Bid Facilities and Upgrades, Bid Capacity, or (b) for Repowerings, End of Useful Life Bid Capacity, as presented in the Bid Proposal and accepted by NYSEDA, expected to accrue to New York as a result of the development, construction, modification and operation of the Bid Facility from the Economic Benefits Start Date through the end of the first three (3) Contract Years.

Expected U.S. Iron and Steel Dollars/MW – The total dollar amount per MW of Bid Capacity associated with expected expenditures for U.S. Iron and Steel used or supplied in the construction of the Bid Facility through the date on which the Bid Facility achieves Commercial Operation.

Facility Area – All land occupied during the commercial operation of the generation facility, the associated interconnection equipment as verified through the Operational Certification process. Generally, this will include all areas within the facility’s perimeter security fence(s) and the applicable facility related improvements outside of fenced areas. The Facility Area shall include the area “inside the fence” of the project including all fencing enclosing the mechanical equipment such as the solar arrays, inverters, location of any combiner boxes, fuses, switches, meters, distribution boards, monitoring systems such as balance of systems components, interconnection equipment, and stormwater controls. The Facility Area shall additionally include improvements of the project “outside of the fence” including access roads, parking areas, stormwater controls and other permanent facilities, or structures installed at the Facility Area, except vegetative landscape screenings or appropriately buried utilities such as electrical conductors or conduit(s) that do not impact Forest Land during installation.

Fixed REC Price – An as-bid price in dollars per Tier-1 REC as described in Section 4.02(b) and Article V of the Agreement.

FOIL – New York’s Freedom of Information Law, [Public Officers’ Law Article 6](#).

Host Community Benefit Program – A Program providing benefits to utility customers in Host Communities in which future Major Renewable Energy Facilities are located, as further referenced in the

Agreement and as set out in the Order Adopting a Host Community Benefit Program issued by the New York State Public Service Commission on February 11, 2021 in Case 20-E-0249.

Incremental Economic Benefits – Incremental Economic Benefits are financial expenditures benefitting New York State within the categories specified in Appendix 4. “Incremental Economic Benefits Guidelines” of this RFP that a Seller can demonstrate: (1) were incurred on or after the Economic Benefits Start Date, and (2) would not have accrued but for an award under a NYSERDA competitive solicitation to procure Tier-1 RECs or in anticipation of the potential for such an award. Economic benefits previously claimed with respect to a Bid Facility that are subject to a pending award under a previous solicitation or that is the subject of a current NYSERDA Agreement are not Incremental Economic Benefits.

Incremental Upgrade Percentage – For Upgrade Bid Facilities, the percentage of the Actual Production that is Tier-1 eligible resulting from the Upgrade as initially established through the NYGATS Provisional Statement of Qualification process, and as may be updated through the submission of engineering documentation during the Statement of Qualification and Operational Certification processes, in accordance with NYSERDA’s New York State Clean Energy Standard RES Tier-1 Certification Submission Instructions and Eligibility Guidelines.

Index REC Price – An adjustable price in dollars per Tier-1 REC that nets the as-bid Index REC Strike Price monthly against the sum of the Reference Energy Price and the Reference Capacity Price, as set forth in Section 4.01 of the Agreement.

Index REC Strike Price – The as-bid value for each Contract Year as submitted in the Bid Proposal and as stated in the Agreement, subject to adjustment pursuant to Article V of the Agreement.

Injection Point – For Bid Facilities located within the New York Control Area, the Injection Point shall be the Delivery Point. For Bid Facilities located outside of the New York Control Area, the Injection Point shall be the generator bus or location where the administrator of the local control area measures energy delivery from the Bid Facility into the local market.

Installed Capacity – Shall equal (i) the gross generating capacity of (a) a new Bid Facility or, (b) for a Bid Facility that is the subject of an Upgrade or a Repowering, such Bid Facility, after completion of such Upgrade or Repowering, in MWac in accordance with its Statement of Qualification (SoQ) and Operational Certification, multiplied by (ii) the Bid Quantity Percentage, and (iii) (x) for Upgrades, further multiplied by the Incremental Upgrade Percentage, or (y) for Repowerings, further multiplied by the applicable Tier-1 Percentage.

Key Permit – For a Bid Facility located within the NYCA, “Key Permit” means (i) for Sellers seeking approval for the Bid Facility under Article 10 of the New York Public Service Law, a Certificate of Environmental Compatibility and Public Need, (ii) for Sellers seeking approval for the Bid Facility through the New York State Office of Renewable Energy Siting, a New York State Office of Renewable Energy Siting permit, or (iii) for all other Sellers, the required discretionary (non-ministerial) land use permit or approval by the applicable municipality for the development, construction, operation, and/or maintenance of the Bid Facility which permit or approval incorporates a determination under SEQRA. For a Bid Facility located outside of the NYCA, “Key Permit” means such required discretionary (non-ministerial) land use permit or approval reasonably analogous to those set forth in the foregoing

sentence issued by the state or local authority having jurisdiction over the Bid Facility. Notwithstanding the foregoing, for hydroelectric Bid Facilities, “Key Permit” means the Bid Facility’s FERC license.

Levelized Net REC Cost (LNRC) – A means of comparing Proposals with different Bid Prices, Bid Quantities, and Commercial Operation Dates, as described in Section 5.5.

Material Change – as defined in Section 1.5.

Major Renewable Energy Facility – Any renewable energy system with a nameplate generating capacity of twenty-five thousand kilowatts or more, and any co-located system storing energy generated from such a renewable energy system prior to delivering it to the bulk transmission system, including all associated appurtenances to electric plants as defined under Section 2 of the New York State Public Service Law, including electric transmission facilities less than ten (10) miles in length in order to provide access to load and to integrate such facilities into the state’s bulk electrical transmission system.

Mineral Soil Groups (MSG) 1-4 – Soils with a mineral soil group value of 1, 2, 3, or 4 as assigned by the New York State Department of Agriculture and Markets in the Agricultural Land Classification System for New York. For the purposes of this Agreement, MSG 1-4 have been established in “NYSERDA 2025 Soils Data for use in Large-Scale Renewables and NY-SUN Programs,” linked here: [NYSERDA 2025 Soils Data](#). A map of MSG 1-4 is available on NYSERDA’s Solicitations for Large-scale Renewables webpage.

Mitigation Fund Payment (Mitigation Payment) – The Mitigation Fund Payment acts as the estimated benchmark that the Proposer would expect to pay based on the proposed site configuration (Facility Area), knowledge of on-site conditions and before any other action to decrease this payment amount. Payment amounts may be adjusted through consultations with the New York State Department of Agriculture and Markets (AGM) regarding agricultural co-utilization opportunities, and based on the final site configuration (reduced or expanded facility occupied acreage).

Monthly REC Price – A price in dollars per REC determined by NYSERDA for each month of the Contract Delivery Term. If the Applicable REC Price Method is the Index REC Price, the Monthly REC Price shall be calculated pursuant to Section 4.01 of the Agreement. If the Bid Facility has been selected by NYSERDA on the basis of a Fixed REC Price bid, the Monthly REC Price shall be the as-bid Fixed REC Price, as may be adjusted pursuant to Section 4.02(b) and 5.02(e) of the Agreement.

MW or MWac – A megawatt of alternating current electric energy generating capacity.

MWdc – A megawatt of direct current electric energy generating capacity.

MWh – A megawatt-hour of electric energy.

Nameplate Capacity – The gross generating capacity of the entire Bid Facility in MW. For Upgrade and Repowering Bid Facilities, this value represents the gross generating capacity of the entire Bid Facility after completion of the Upgrade or Repowering.

New Capacity Accreditation Rules – NYISO’s tariff revisions to its Services Tariff to adopt a marginal capacity accreditation market design, approved by the federal Energy Regulatory Commission (Docket No. ER22-772) on May 10, 2022.

New Storage Technologies – Nonelectrical battery energy storage facilities such as electrolytic hydrogen or experimental energy storage technologies. These are differentiated from energy storage components in that they are not constructed and operated in accordance with Article VI and Article IX of the NYSERDA Bulk Energy Storage Incentive Program Manual (Exhibit F to the Agreement).

New York Control Area (NYCA) – The control area that is under the control of the NYISO, which includes transmission facilities listed in the ISO/Transmission Owner Agreement Appendices A-1 and A-2, as may be amended from time to time.

New York Generation Attribute Tracking System (NYGATS) – The tracking system that records electricity generation attribute information within New York State, and processes generation attribute information from energy imported and consumed within New York State, as a basis for creating generation attribute certificates, including Tier 1 RECs. NYGATS will create exactly one Tier 1 REC per MWh of RES eligible generation.

NYGATS Forward Certificate Transfer – An automated monthly transfer of Tier 1 RECs to NYSERDA as described in Section 9.3 of the [NYGATS Operating Rules](#).

New York Independent System Operator (NYISO) – Administrator of the wholesale power markets in New York and manager of the physical electrical operations of the NYCA.

OATT – NYISO’s Open Access Transmission Tariff.

Operating Rules – The NYGATS Operating Rules, the General Terms of Use and other guidelines posted to the NYGATS website at: <https://www.nyseda.ny.gov/All-Programs/nygats/registration-documents>.

Operational Certification — Verification by NYSERDA, as described in the Agreement, that the Bid Facility (including the Energy Storage Component, if applicable) has been constructed and/or will operate in accordance with the Bid Proposal, the Statement of Qualification (SoQ), and any modifications therefore consented to by NYSERDA in accordance with the Agreement.

Orders – August 1, 2016 CES Framework Order (Case No. 15-E-0302, Proceeding on Motion of the Commission to Implement a Large-Scale Renewable Program and a Clean Energy Standard, “Order Adopting a Clean Energy Standard,” issued and effective August 1, 2016), January 16, 2020 Tier 1 Modification Order (Case No. 15-E-0302, Proceeding on Motion of the Commission to Implement a Large-Scale Renewable Program and a Clean Energy Standard, “Order Modifying Tier 1 Renewable Procurements,” issued and effective January 16, 2020), October 15, 2020 CES Modification Order (Case No. 15-E-0302, Proceeding on Motion of the Commission to Implement a Large-Scale Renewable Program and a Clean Energy Standard, “Order Adopting Modifications to the Clean Energy Standard,” issued and effective October 15, 2020), January 20, 2022 PGS Order (Case No. 15-E-0302, Proceeding on Motion of the Commission to Implement a Large-Scale Renewable Program and a Clean Energy Standard, “Order on Power Grid Study Recommendations,” issued and effective January 20, 2022), November 20, 2023 Reference Capacity Price Order (Case No. 15-E-0302, Proceeding on Motion of the Commission to Implement a Large-Scale Renewable Program and a Clean Energy Standard, “Order Addressing Capacity Accreditation Rules,” issued and effective November 20, 2023), October 12, 2023 Order (Case No. 15-E-0302, Proceeding on Motion of the Commission to Implement a Large-Scale Renewable Program and a Clean Energy Standard, “Order Denying Petitions Seeking to Amend Contracts with Renewable Energy Projects,” issued and effective October 12, 2023), and May 15, 2025 Order (Case No. 15-E-0302, Proceeding on Motion of the Commission to Implement a Large-Scale Renewable

Program and a Clean Energy Standard, “Order Adopting Clean Energy Standard Biennial Review as Final and Making Other Findings,” issued and effective May 15, 2025.

ORES – New York State Office of Renewable Energy Siting and Electric Transmission, website is <https://dps.ny.gov/ores> and the regulations can be found at <https://dps.ny.gov/ores-regulatory-documents>.

Peer Review – The peer review process as described in the Bulk Energy Storage Program Manual, whereby a Proposer or Seller’s proposed Energy Storage Component will undergo a multi-step technical design review.

Prevailing Wage – Shall have the meaning set forth at and shall be interpreted in accordance with Section 18.10 of the Agreement.

Price Structure – Either a Fixed REC or Index REC price.

Proposer – The business entity that submits a Bid Proposal in response to this RFP.

PSoQ – NYGATS Provisional Statement of Qualification.

Quality Assurance Inspection – Quality assurance inspection in accordance with the Bulk Energy Storage Program Manual, which provides that after Peer Review approval is complete, Quality Assurance Inspection will occur following the substantial completion of the Energy Storage Component.

Quantity Obligation — Shall mean, for any period during the Contract Delivery Term, the number of Tier-1 RECs equal to the product of (a) the Bid Quantity Percentage multiplied by (b) the Actual Eligible Production; subject, however, to adjustments pursuant to Article V (Adjustments); and provided that the Quantity Obligation in any Contract Year shall not exceed the Annual REC Cap for such Contract Year; and provided, further, that in the event of a discrepancy in measurement between the amount of Tier-1 RECs generated by the Bid Facility for any period and the Actual Eligible Production (in MWh) for that period (for example, due to rounding or meter adjustments), the Quantity Obligation shall be calculated based upon the amount of Tier-1 RECs generated by the Bid Facility for that period rather than the Actual Eligible Production for such period.

Reference Capacity Price – An amount based on an index of NYISO Capacity Market prices for the Applicable Zone calculated as set forth in Section 4.01 of the Agreement.

Reference Energy Price – An amount based on an index of NYISO Energy Market prices for the Applicable Zone calculated as set forth in Section 4.01 of the Agreement.

Repowering – The physical improvements made to the existing Bid Facility that meet the repowering requirements of the 2020 CES Order, as proposed by Seller in the Application for Qualification and Bid Proposal in response to RESRFP25-1 and confirmed through the Statement of Qualification and the Operational Certification process.

Renewable Energy System – As defined in the Climate Act, and for purposes of this RFP, a system that generates electricity through use of the following technologies: solar thermal, photovoltaics, on land and offshore wind, hydroelectric, geothermal electric, geothermal ground source heat, tidal energy,

wave energy, ocean thermal, and fuel cells which do not utilize a fossil fuel resource in the process of generating electricity.

Seller – The Proposer or other entity (as further described in Section 7.3) designated by an awarded Proposer that enters into the Agreement with NYSERDA to sell Tier 1 RECs to NYSERDA pursuant to this RFP.

SEQRA – New York State Environmental Quality Review Act.

Short-Term Jobs – Jobs lasting less than three years.

SoQ – NYGATS Statement of Qualification. The SoQ is a confirmation by NYSERDA that the energy production of the Bid Facility is eligible for the creation by NYGATS of Tier-1 RECs in accordance with NYSERDA's New York State Clean Energy Standard RES Tier 1 Certification Submission Instructions and Eligibility Guidelines, specifically Section 7.2 (Demonstration of Commercial Operation). For NYGATS certificates associated with the Bid Facility to be flagged with Tier 1 RES eligibility, the associated energy must be delivered into the NYCA in accordance with the delivery requirements specified in the Clean Energy Standard Final Phase 1 Implementation Plan and the NYGATS Operating Rules.

Technical Evaluation Panel (TEP) – Members of NYSERDA staff, New York State Department of Public Service (DPS) Staff, and Independent Evaluators (outside reviewers who possess proficiency in the evaluation of energy generation projects) responsible for evaluating Bid Proposals received through this RFP.

Tier-1 Percentage – For a Repowering, the quantity of generation from the Bid Facility, expressed as a percentage associated with specific date ranges, that meets the Repowering requirements of the 2020 CES Order.

Tier-1 Renewable Energy Certificate (REC) or Tier-1 REC – The electronic record of generation data created by NYGATS and representing all of the attributes of one MWh of electricity generation from a RES Tier-1 Bid Facility registered with NYGATS. The attributes represented in each Tier-1 REC include all environmental characteristics, claims, credits, benefits, emissions reductions, offsets, allowances, and allocations, however characterized, denominated, measured or entitled, attributable to the generation of Actual Eligible Production by a Bid Facility, including but not limited to: (i) any direct emissions or any avoided emissions of pollutants to the air, soil or water including but not limited to sulfur oxides (SO_x), nitrogen oxides (NO_x), carbon monoxide (CO), particulate matter and other pollutants; (ii) any direct or avoided emissions of carbon dioxide (CO₂), methane (CH₄) and other greenhouse gases ("GHGs") that have been or may be determined by the United Nations Intergovernmental Panel on Climate Change to contribute to the actual or potential threat of altering the Earth's climate by trapping heat in the atmosphere; (iii) all set-aside allowances and/or allocations from emissions trading programs made unnecessary for compliance in such program as a result of performance under the Agreement, including but not limited to allocations available under 6 NYCRR §§ 204, 237 and 238; and (iv) all credits, certificates, registrations, recordations, or other memorializations of whatever type or sort, representing any of the above. For greater clarity, Tier-1 Renewable Energy Certificate attributes shall not include (i) federal, state, or local tax benefits, tax credits or tax incentives related to the Bid Facility or its generation of electricity (ii) any energy, capacity, reliability or other power products, such as ancillary services.

Upgrade – The physical improvements made to the existing Bid Facility that cause an increase in renewable generation incremental to a historical baseline level of generation by the Bid Facility, as proposed in the Application for Qualification and Bid Proposal in response to RESRFP25-1 and confirmed through the Statement of Qualification and the Operational Certification process.

U.S. Iron and Steel – Iron and steel components that are manufactured in the United States using iron or steel from steel mills located in the United States.

1 INTRODUCTION

1.1 The New York Clean Energy Standard and Renewable Energy Standard

On July 6, 2015, the New York State Energy Planning Board issued the 2015 State Energy Plan (SEP)⁹ which stated the goal to achieve 50% of the State's electricity generated from renewable resources by 2030 (50x30 goal).

The Public Service Commission's (PSC) [Order Adopting the Clean Energy Standard](#) (CES Framework Order) issued on August 1, 2016, along with additional orders and implementation plans¹⁰ issued under Case 15-E-0302, Proceeding on Motion of the Commission to Implement a Large-Scale Renewable Program and a Clean Energy Standard (Orders), established the Renewable Energy Standard (RES) as the State's principal means of achieving the 50x30 goal. A component of the RES consists of a Tier 1 obligation on load serving entities (LSE) to procure Renewable Energy Certificates (RECs)¹¹ associated with new renewable energy resources.

In furtherance of the Orders and targets established in the CES, on July 18, 2019, New York State adopted the Climate Leadership and Community Protection Act (Climate Act), which includes the goal for New York State to achieve 70% renewable energy generation by 2030, incremental to reducing 100% of the electricity sector's greenhouse gas emissions by 2040, among other clean energy targets.¹²

RES Tier 1 procurements were further amended on January 16, 2020 by the [Order Modifying Tier 1 Renewable Procurements](#) (Tier 1 Modification Order), whereby the PSC directed NYSERDA to offer bidders an Index REC price option in future RES solicitations, beginning with RESRFP20-1.

The Accelerated Renewables Act became law on April 2, 2020, and made major changes in the forum and permitting process for large-scale renewable projects¹³. Specifically, the bill established a new renewable siting structure to be managed by the new Office of Renewable Energy Siting (ORES).

On October 15, 2020, the PSC issued its [Order Adopting Modifications to the Clean Energy Standard](#) (CES Modification Order) in Case 15-E-0302. In the CES Modification Order, the PSC adopted several modifications to the CES to align it with the Climate Act mandates. Modifications affecting Tier 1 solicitations include setting annual procurement targets to achieve the 70 by 30 target, allowing rejection of projects that are not presently viable, combining of the Project Viability and Operational

⁹ 2015 New York State Energy Plan is available from <https://energyplan.ny.gov/Plans/2015-Energy-Plan>

¹⁰ As of the date of RESRFP25-1 issuance, NYSERDA has published 6 Final Implementation Plans under Case 15-E-0302. These include: Phase 1 Implementation Plan, Phase 2 Implementation Plan, Phase 3 Implementation Plan, Phase 4 Implementation Plan, Phase 5 Implementation Plan, and Phase 6 Implementation Plan. All Implementation Plans are available on NYSERDA Large Scale Renewables Filings, Orders, and Reports website: <https://www.nysenrda.ny.gov/All-Programs/Clean-Energy-Standard/Clean-Energy-Standard-Resources/Filings-Orders-and-Reports>

¹¹ While the PSC's August 1, 2016 Order references renewable energy "credits," NYGATS creates renewable energy certificates, and therefore that term is used in this RFP. The NYGATS certificates are created in one MWh denominations and are in all other ways consistent with the Order.

¹² [New York State Senate Bill S6599](#), <https://www.nysenate.gov/legislation/bills/2019/s6599>

¹³ A factsheet about the Accelerated Renewables Act is available from <https://www.nysenrda.ny.gov/-/media/Project/Nyserda/Files/Publications/Fact-Sheets/Accelerated-Renewables-Fact-Sheet.pdf>

Flexibility and Peak Coincidence evaluation factors, approving the development of portfolio risk factors, and clarifying the CES delivery requirements.

On January 13, 2021, NYSERDA issued T4RFP21-1, a solicitation to procure the unbundled environmental attributes in the form of Tier 4 RECs for renewable energy delivered into New York City (NYISO Zone J) pursuant to the CES Modification Order. On November 30, 2021, NYSERDA submitted contracts with the Clean Path NY and Champlain Hudson Power Express projects to the PSC for approval and public comment. The PSC approved the contracts on April 14, 2022, subject to limited contract clarification and similar requirements as laid out in its [Order Approving Contracts for the Purchase of Tier 4 Renewable Energy Certificates](#). The selected projects will deliver renewable energy sourced from wind, solar and hydropower to New York City. Information about the Tier 4 solicitation is available on [NYSERDA's Tier 4 website](#).¹⁴

On January 20, 2022, the PSC issued its [Order on Power Grid Study Recommendations](#) (PGS Order) in Case Nos. 20-E-0197, 18-E-0071, and 15-E-0302. The PGS Order concurs with the Power Grid Study finding that energy storage on Long Island and New York City will play an important role in integrating offshore wind generation. The coordinated planning process undertaken in the Power Grid Study proceeding will allow the PSC to anticipate system needs and respond to them in a timely manner, including implementation of local transmission upgrades and invocation of the NYISO's Order 1000 process where bulk solutions are necessary.

On September 9, 2021, the PSC addressed the Utilities' proposed policy recommendations in its Order on Local Transmission and Distribution Planning Process and Phase 2 Project Proposals (Phase 2 Order).¹⁵ Among other things, the Phase 2 Order found the Utilities' proposed investment criteria required certain modifications, and directed additional work to develop a coordinated grid planning process (which includes a revised benefit cost analysis framework, enhanced stakeholder engagement and a participant funding agreement to share CLCPA project costs across the state on a volumetric load ratio share basis). In addition, the Phase 2 Order adopted DPS Staff's recommended modifications to the calculation of headroom and directed the investor-owned utilities to provide updated headroom data to stakeholders.

On December 19, 2022, New York's Climate Action Council adopted a Final Scoping Plan to outline recommended policies and actions to help meet the climate action requirements of the Climate Act. The Scoping Plan indicated that 7 to 15 gigawatts of land-based wind energy and 32 to 43 gigawatts of solar energy in New York may be necessary by 2040 to achieve the Climate Act's greenhouse gas emission-reduction requirements and carbon neutrality goals.

On October 12, 2023, the PSC issued the [Order Denying Petitions Seeking to Amend Contracts With Renewable Energy Projects](#), which denied a Petition submitted by the Alliance for Clean Energy New York, Inc. seeking price adjustments to Tier 1 REC agreements with NYSERDA to address inflationary pressures and supply chain disruptions impacting project economics. The Order supported NYSERDA's continued efforts to meet the Climate Act mandates through subsequent competitive offshore wind solicitations, potentially on an expedited basis. The same day, New York State released a new [10-Point](#)

¹⁴ <https://www.nyserda.ny.gov/All-Programs/Clean-Energy-Standard/Renewable-Generators-and-Developers/Tier-Four>

¹⁵ LT&D Planning Proceeding, Order on Local Transmission and Distribution Planning Process and Phase 2 Project Proposals (September 9, 2021) (Phase 2 Order).

[Action Plan](#) to expand and support the growing large-scale renewable energy industry in the State, which included a plan to launch an accelerated procurement process for Tier 1 land-based renewables and offshore wind.

On November 20, 2023, the PSC issued its [Order Addressing Capacity Accreditation Rules](#) (Reference Capacity Price Order) in Case 15-E-0302 and Case 18-E-0071. In the Reference Capacity Price Order, the PSC addressed NYSERDA's petition to adjust the Reference Capacity Price formulas in index renewable energy certificate and offshore wind renewable energy certificate purchase and sales agreements. The PSC approved certain changes to the Reference Capacity Price formula to address the impact of the new NYISO Capacity Accreditation Rules.

The Orders authorize NYSERDA, as central procurement administrator, to offer long-term contracts to generators for the purchase of Tier 1-eligible RECs, in the form of Tier 1 NYGATS certificates. Pursuant to the Orders, NYSERDA seeks to accomplish the RES objective by contracting with suppliers, through a series of competitive RFPs, for only the RES Tier 1 RECs created by eligible generation resources.¹⁶ For the avoidance of doubt, NYSERDA seeks to acquire Tier 1-eligible RECs only, and will not have any claim to associated energy, capacity, or ancillary services associated with the RECs.¹⁷

The RECs generated from the Bid Facility offered to NYSERDA through this RFP, up to the Annual REC Cap (defined in the Agreement), may not be contractually committed or otherwise transferred or attempted to be transferred to any other entity over the duration of the Contract Tenor. In addition, please refer to Section 2.1 for a discussion of restrictions against submitting Tier-1 RECs already committed to NYSERDA or any other entity into the RESRFP25-1 solicitation. Awardees will retain ownership and all rights to RECs generated that exceed the Annual REC Cap.

On July 1, 2024, DPS Staff and NYSERDA filed the draft Clean Energy Standard Biennial Review (Biennial Review). The Biennial Review summarizes the progress made toward the renewable energy and zero emission goals set by the CLCPA since the establishment of New York State's CES, assesses what remains to be done to achieve those goals, presents policy options and proposals, and invites comments from stakeholders and the public on these or any other matters raised in the Biennial Review. The Biennial Review was open to public comment through October 7, 2024. Based on the contents of the report and comments filed by the public, on May 15, 2025, The Commission issued [an Order](#) adopting the Clean Energy Standard Biennial Review as final (Biennial Review Order). The Biennial Review Order made material modifications to the CES. As part of this Order, NYSERDA was authorized to expand the average annual procurement target for Tier 1 Solicitations from 4.5 terawatt hours (TWh) to 5.6 TWh. NYSERDA was also authorized to offer annual Tier 1 solicitations through 2029. In addition, the Commission

¹⁶ Directives pertaining to NYSERDA's RES Central Procurement role are contained in the February 22, 2017 [Order Approving the Phase 1 Implementation Plan](#) and the [Final Phase 1 Implementation Plan](#) filed by NYSERDA on March 24, 2017, the November 17, 2017 [Order Approving the Phase 2 Implementation Plan](#) and the [Final Phase 2 Implementation Plan](#) filed by NYSERDA on December 18, 2017, and the December 14, 2018 [Order Approving the Phase 3 Implementation Plan](#) and the [Final Phase 3 Implementation Plan](#) filed by NYSERDA on January 11, 2019. The March 9, 2017 [Order on the Value of Distributed Energy Resources](#) further clarifies the treatment of certain distributed energy resources (DERs) such resources under the CES and their eligibility to participate in NYSERDA's long term procurements for RECs.

¹⁷ RECs represent the environmental attributes, including but not limited to estimated avoided carbon dioxide emissions, associated with electricity generated by facilities that meet the Tier 1 eligibility criteria established in the CES Framework Order.

authorized NYSERDA with the ability to expand the maximum allowable contract tenor for Tier 1 Solicitation awards from 20 to 25 years. NYSERDA and DPS Staff have determined to offer a 20-year Contract Tenor under RESRFP25-1.

The Biennial Review Order introduced a new minimum threshold requirement that Proposers into Tier 1 Solicitations must have either satisfied the requirements for entry into Phase 2 of the active NYISO Cluster Study following completion of Phase 1, or a more mature stage of the NYISO interconnection process (or the equivalent stage of the applicable interconnection process for projects interconnecting in adjacent control areas).

As part of the portfolio risk factor assessment that is performed after NYSERDA and the Technical Evaluation Panel have produced a preliminary ranking of bids, the Biennial Review Order also authorized NYSERDA to revise the 80% capacity limit downward on any one technology type in the portfolio in any given solicitation, so long as those limits do not increase the generation-weighted average cost of the portfolio by more than 10%. For purposes of applying this portfolio risk factor, the Biennial Review Order directed NYSERDA to consider solar paired with battery storage that provides a different generation profile from stand-alone solar to be a different technology than stand-alone solar.

The Biennial Review Order also authorized NYSERDA to revise its approach to commercial operation deadlines in Tier 1 solicitations, which is further discussed in Section V.

RESRFP25-1 will preferentially evaluate projects that demonstrate a sufficient level of maturity in their development, thereby advancing progress towards meeting objectives of the Climate Act as incorporated into the CES. Accordingly, RESRFP25-1 will include appropriate threshold requirements that projects must fulfill in order to be eligible for evaluation and potential award.

The CES/RES Orders can be accessed from the [NYS Public Service Commission's website](#).¹⁸ All Proposers are strongly advised to review the Orders and Implementation Plans before participating in this RFP. Information regarding NYSERDA's implementation of the RES and prior solicitations under the RES, RESRFP17-1, RESRFP18-1, RESRFP19-1, RESRFP20-1, RESRFP21-1, RESRFP22-1, RESRFP23-1, and RESRFP24-1 can be found on [NYSERDA's RES Solicitation webpage](#).¹⁹

1.2 Background on NYSERDA and NY Green Bank

NYSERDA was created in 1975 by the New York State Legislature as a public authority and public benefit corporation. As designated in the CES Framework Order, NYSERDA acts as the Central Administrator of the RES program. Under the RES, each LSE is obligated to serve their retail customers by procuring new renewable resources, evidenced by the procurement of Tier 1 RECs from NYSERDA or other sources, or by making Alternative Compliance Payments (ACPs), in increasing quantities to satisfy the State's greenhouse gas emissions reduction goals. Through this RFP, NYSERDA will purchase RECs from the contracted Bid Facilities, on behalf of the LSEs in New York State, and will then sell the RECs to the LSEs for compliance with the LSEs' Tier 1 obligations.

NY Green Bank, a division of NYSERDA, is a specialized investment fund dedicated to bridging financial gaps in clean energy and renewable infrastructure markets. Working in collaboration with the private

¹⁸ <http://documents.dps.ny.gov/public/MatterManagement/CaseMaster.aspx?MatterCaseNo=15-e-0302>

¹⁹ <https://www.nyserda.ny.gov/ces/rfp>

sector, its investments advance the deployment of green technologies in order to reduce the State’s greenhouse gas emissions, accelerate energy efficiency, and mobilize private capital into key market sectors.

Where traditional lenders may see obstacles — such as unfamiliarity with asset classes, perceived uncertainty in revenue streams, and small transaction sizes — NY Green Bank identifies opportunities to propel the green economy in key sectors that include building decarbonization, clean transportation, and energy storage.

Supporting the expansion of large-scale renewables in New York is a strategic priority for NY Green Bank. NY Green Bank is prepared to support project developers and investors with a range of credit products and structures through various project financing stages, including and not limited to:

- Interconnection deposit financing;
- Long lead equipment financing;
- Construction financing; and
- Term loans, including subordinated debt to increase tenor and leverage.

In the context of providing financing, NY Green Bank would evaluate contracted revenues, including various NYSEDA incentive payments, as well as wholesale power and capacity sales to support long-term financing.

Applicants interested in applying for this financing are encouraged to submit an application to NY Green Bank RFP No. 1 which can be accessed [here](#).²⁰

1.3 Schedule

The schedule for RESRFP25-1 is as follows (all times ET):

Table 1. RFP Schedule

RFP Release Date	Friday, September 26, 2025
NYSEDA opens Step One Eligibility Application	Friday, September 26, 2025
Proposers’ Webinar	Thursday, October 2, 2025, 1 – 2:30 p.m.
Requested date to submit an application for a Resource Eligibility Determination (PSoQ/SoQ) in NYGATS	Thursday, October 9, 2025
Deadline for Step One Eligibility Application Submission (and to submit proposed material changes to the Agreement)	Tuesday, October 21, 2025 by 3:00 p.m.
NYSEDA responds with Notice of Qualifications to bid, opens Step Two Bid Proposal to eligible Proposers	Thursday, October 30, 2025
Deadline for Bid Fee Submission	Wednesday, December 3, 2025
Deadline for Step Two Bid Proposal Submission	Thursday, December 4, 2025 by 3:00 p.m.
NYSEDA notifies Proposers receiving initial Awards	Expected February 2026

²⁰ [NY Green Bank RFP 1: Clean Energy Financing Arrangements](#)

Please note that the above dates are subject to change. Notification of any changes to the solicitation schedule or documents will be posted on [NYSERDA's RES website](#) and sent via email to those parties who have submitted contact information to NYSERDA's RESRFP25-1 [solicitation website](#).

1.4 Modification or Cancellation of the RFP and Solicitation Process

Notification of any changes in RFP process or documents will be posted on [NYSERDA's RES Tier 1 website](#), the solicitation website under the Announcements tab, and sent via email to parties that have submitted contact information to NYSERDA's RESRFP25-1 solicitation via the solicitation website. Prospective Proposers are encouraged to check the website frequently to be advised of any RFP changes or other news.

The terms and conditions of this RFP may, at any time, be changed, postponed, withdrawn, and/or canceled, including any requirement, term or condition of this RFP, without any liability to NYSERDA.

1.5 Updates to the Eligibility Application and/or Bid Proposal

Proposers will not have an opportunity to refresh or restate submissions except in instances where NYSERDA is seeking clarification regarding a potential error or misunderstanding reflected in the Bid Proposal. NYSERDA may provide the Proposer with an opportunity to cure an error in the Bid Proposal where NYSERDA has determined the error to be an irregularity amenable to correction or clarification rather than a material non-compliance with RESRFP25-1. Where Bid Proposal materials were received by NYSERDA in a corrupted or unusable format, NYSERDA may provide Proposer with an opportunity to provide properly formatted materials after the corresponding submission deadline for each Step. NYSERDA will not make material adjustments to any Proposal, including the Index REC Strike Price or Fixed REC Price.

If a Proposer submits a Step One Eligibility Application or Step Two Bid Proposal *before* the submission deadline and wishes to modify their submission, the Proposer should follow the posted instructions for editing a submission before the submission deadline and may contact NYSERDA's Designated Contacts with questions or issues.

After the submission deadline, Proposers may provide information that was not available at the time of their submission at NYSERDA's request, as described in Section 1.6. Providing such information is for clarification and/or informational purposes and will not be treated by NYSERDA as a change or revision to the material terms of Bid Proposal submission (e.g., Bid Price, Incremental Economic Benefits).

If any event or change of circumstances occurs that affects the Bid Facility or the Bid Proposal in a manner that could reasonably be expected to have a material impact on the eligibility of the Bid Proposal or its evaluation in RESRFP25-1 (a "Material Change"), Proposers must promptly notify NYSERDA in writing. Proposers and their Bid Proposals must maintain eligibility under the Minimum Threshold Eligibility requirements throughout the Bid Proposal evaluation period and, if provisionally awarded, up to the execution of the Agreement by the Proposer and NYSERDA.

In the event that a Material Change occurs that affects RESRFP25-1 Proposers generally, NYSERDA may solicit updates to all eligible Step Two Bid Proposals to account for the Material Change. In accordance with this process for evaluating systemic Material Changes, Proposers' scores may be adjusted upwards or downwards as a result.

In the event of a Material Change that does not affect RESRFP25-1 Proposers generally, the evaluation of the affected Bid Proposal(s) will be re-visited in the applicable category(ies). However, no scores may be increased as a result of this type of material change; scores may only be adjusted downwards.

If any information on Attachment B. Public Release of Bid Facility Information and Community Engagement Plan changes at any time following submission and prior to execution of the Agreement, Proposers are required to promptly submit an updated version of Attachment B so that NYSERDA can update its website accordingly.

1.6 Requests for Additional Information and/or Interview

Following the submission of Proposals, NYSERDA and the Technical Evaluation Panel may request clarification and additional information from Proposers at any time throughout the duration of the evaluation process. Such information will be subject to protection of proprietary information as described in Section 9, consistent with other Bid Proposal submission materials. If the Proposer does not respond promptly to such information requests or does not provide adequate information, the affected Bid Proposal(s) will be evaluated based on the information as originally submitted. If the Proposer wishes for supplementary information or documentation to be included in the Bid Proposal for evaluation, it should be included in the Bid Proposal using the Supplementary Information field and should not be offered as “available upon request” or other similar language.

1.7 Coordination with Non-Jurisdictional Load-Serving Entities

The Order Adopting a Clean Energy Standard provides for NYSERDA to conduct regularly scheduled solicitations for the procurement of Tier 1 RECs on behalf of the State’s jurisdictional LSEs. The New York Power Authority (NYPA) and/or the Long Island Power Authority (LIPA) may choose to issue their own solicitations and/or contract with NYSERDA for a long-term commitment to purchase a percentage of the Tier 1 RECs that may be procured under this solicitation to fulfill their proportional shares of the statewide Tier 1 targets.

Under its expanded statutory authority pursuant to the Build Public Renewables Act (BPRA), the New York Power Authority (NYPA) is authorized to develop renewable energy generation projects in support of the state’s Climate Act. As part of the BPRA, Public Authorities Law (PAL) § 1005 (27-a) authorizes NYPA projects meeting certain requirements set forth therein to compete in Tier 1 REC solicitations and contract with NYSERDA. Consistent with BPRA requirements and to ensure that revenue received pursuant to an Agreement under this RFP is structured to directly benefit groups other than NYPA power customers, NYPA projects must satisfy one of the following two alternative eligibility criteria (in addition to the eligibility criteria set forth in Sections 2, 3 and 4 of this RFP).

First, NYPA may demonstrate project eligibility if the project commits to making direct Renewable Energy Access and Community Help (REACH) program contributions in accordance with PAL § 1005 (27-b). Each NYPA-proposed project shall, in its Step Two Bid Proposal, include any annual REACH program contributions that could be committed to at the time of bid in its Bid Data Form. REACH program contributions shall also be incorporated into Section 6.10 (and detailed in Exhibit M) of the relevant Agreement. Contributions will be substantiated as with all economic benefits claims through the reporting required under Sections 6.04 and 6.10 of the relevant Agreement.

Second, alternatively, NYPA-developed projects will be eligible to participate in this RFP and be awarded an Agreement if the Proposer is the New York Renewable Energy Development Holdings Corporation

(NYRED) or a NYRED-controlled entity and commits to cause NYPA or NYRED to use all net revenue (after accounting for all Project expenses and potential REACH contributions) that NYPA or NYRED receive from the project to either reinvest in renewable projects developed and owned by NYRED or to develop energy generation projects necessary to achieve legislative or state policy directives, including but not limited to Governor Hochul's directive for the Public Power for Public Entities initiative announced in the 2025 State of the State to help achieve the objectives of Executive Order No 22. NYSERDA and DPS shall work with NYPA to determine the financial statements to be used to verify adherence to this commitment and shall describe this approach and required coordination with DPS Staff in the relevant Agreement, which shall also appropriately account for potential changes in law that may affect NYPA's permitted use of revenues in the future.

1.8 Forced Labor Prevention

In order to ensure an ethical and sustainable supply chain for renewable energy, NYSERDA is requiring all RESRFP25-1 Proposers of Solar PV Bid Facilities to sign SEIA's [Forced Labor Prevention Pledge](#) (Pledge), opposing forced labor practices and heightening awareness of human rights abuses against Uighurs, an ethnic minority living in the Xinjiang region of China. Companies that sign the Pledge agree to conduct their business in an ethical manner. Proposers will be required to evidence that they have signed the Pledge as part of their Step Two Bid Proposal submission.

2 STEP ONE & STEP TWO COMPONENTS; ELIGIBILITY & EVALUATION

RESRFP25-1 will be implemented through a two-step process. Submissions for both steps are required for all participating Bid Facilities and must be made via the [solicitation website](#). The solicitation website will open for submissions on September 26, 2025. The requirements for each step are summarized in the table below, consisting of:

1. **Step One: A qualifying step** through which the Proposer submits an Eligibility Application providing evidence that the Bid Facility is Tier 1 eligible and other information regarding the Proposer and the Bid Facility. See **Section 3** for detailed instructions about how to prepare and submit a Step One Eligibility Application.
2. **Step Two: A competitive Bid Proposal step**, through which the Proposer submits a Bid Proposal. NYSERDA will: (1) examine each Bid Proposal to determine whether the Bid Price does not exceed the Benchmark LNRC, the Bid Proposal demonstrates that the Bid Facility and Proposer meet the Minimum Threshold Requirements; and (2) for Bid Proposals that meet those minimum requirements, perform a full competitive evaluation based on price and non-price factors. See **Section 4** for detailed instructions about how to prepare and submit a Step Two Bid Proposal.

Table 2. Submission Requirements

Step One Eligibility Application	Step Two Bid Proposal
Due Date: Tuesday, October 21, 2025 by 3:00 p.m.	Due Date: Thursday, December 4, 2025 by 3:00 p.m.
Requirements for Submission²¹: • Tier 1 eligibility certification (PSoQ or SoQ), obtained via NYGATS • Key Proposer and Bid Facility characteristics (location, point of interconnection, capacity, etc.) • Att. F Minimum Thresholds Narrative • Att. H Tax Credit and Permitting Data Form • Executive Order No. 16 certification forms • Competitive Solicitations Disclosure Statement • Vendor Responsibility Questionnaire	Requirements for Submission: • Bid Facility Information and Community Engagement Plan • Expanded project characteristics and details, interconnection and environmental mitigation cost estimates. • Binding Bid Price and Bid Quantity data. • Overview of how Bid Facility meets all Minimum Threshold Requirements • Minimum Threshold Requirements documentation (Interconnection, Permitting Viability, etc.) • Expected benefits and burdens to Disadvantaged Communities • Operational Flexibility and Peak Coincidence documentation [P(50) 8760, etc.] • If applicable, Incremental Economic Benefits claims, including identification of specific

²¹ As noted in Section 8.1 “Proposed Edits to the Agreement” and Table 1. RFP Schedule, if Proposer is submitting an Attachment M. SFA Comment Template, it must be submitted by the Deadline for Step One Eligibility Application Submission.

	claims that will benefit Disadvantaged Communities • Att. L Non-Disclosure Agreement • Proof of Bid Fee payment

Proposers submitting Step One Eligibility Applications that are determined to be qualified will be invited to submit a Step Two Bid Proposal. Step Two Bid Proposals whose Bid Price does not exceed the Benchmark LNRC and that are determined to meet the Minimum Threshold Requirements will be evaluated and scored based on:

- 1) The Fixed REC Bid Price or Index REC Bid Price, weighted at 70% of the overall score; and
- 2) Non-price factors, which have a combined weight equaling 30% of the overall score.

The 30% non-price evaluation component is divided into two categories:

- 1) 20% Project Viability, Operational Flexibility and Peak Coincidence (beyond the Minimum Threshold Requirements); and
- 2) 10% Incremental Economic Benefits to New York State.

Please note that the Minimum Threshold Requirements apply only to items within the Project Viability, Operational Flexibility and Peak Coincidence (Project Viability and OpFlex) category. There are no minimum requirements for Incremental Economic Benefits to New York State.

Pursuant to the February 22, 2017, PSC [Order Approving the Phase 1 Implementation Plan](#) and the subsequent Orders, a Technical Evaluation Panel (TEP), consisting of NYSERDA staff, DPS Staff, and Independent Evaluators, all of whom will execute a non-disclosure agreement, will evaluate and award points for the non-price evaluation components of each Bid Proposal.²² NYSERDA may also enlist other state agencies, authorities, and subject-matter experts to inform the non-price evaluation conducted by the TEP. The Bid Price evaluation will be conducted by NYSERDA.

Non-Price Minimum Threshold Requirements and determinations, and the Non-Price evaluation are detailed in Section 4. Price evaluation is detailed in Sections 5.4 and 5.5.

Eligibility & Evaluation

To be eligible, a Bid Facility must be a Tier 1 RES eligible resource technology type qualifying under the updated Clean Energy Standard Tier 1 eligibility requirements outlined in the CES Modification Order and described herein.²³ Pursuant to the CES Framework Order, to participate, an eligible Bid Facility must also:

²² The Order and subsequent Plans are available on NYSERDA's CES Orders, Reports, and Filings website: <https://www.nyserra.ny.gov/All-Programs/Programs/Clean-Energy-Standard/Important-Orders-Reports-and-Filings/Filings-Orders-and-Reports>

²³ Proposers should note that the Climate Act definition of renewable energy systems as adopted by the CES Modification Order excludes certain resources previously eligible under the CES Framework Order, including biomass, biogas, liquid biofuels, fuel cells using natural gas and anaerobic digesters, among others, and should review the RFP and Agreement prior to commencing a request for a Provisional Statement of Qualification.

(1) be located within the New York Control Area (NYCA) or in an adjacent control area and supply energy into New York State, in accordance with the RES Delivery Requirements in the Agreement, and

(2) have first commenced Commercial Operation on or after January 1, 2015, or

(3) must produce new, incremental energy and Tier 1 RECs from new Bid Capacity above a historical baseline. A Proposer may not condition the acceptance of one Proposal based on the withdrawal or acceptance of other Proposals. NYSERDA will not award more than one Bid Proposal for the same Bid Facility.

Proposers whose Step One Applications are found to be complete and that demonstrate eligibility will receive a Notice of Qualification, which will provide Proposers with a description of and access to the process and forms to be used to submit a Step Two Bid Proposal. The initial Commercial Operation Milestone Date (COMD) for RESRFP25-1, the date by which Bid Facilities must enter commercial operation, is November 30, 2030. See the Agreement for additional details.

Any project that was the subject of a provisional award under NYSERDA's RESRFP22-1, RESRFP23-1, or RESRFP24-1 solicitations is not eligible under this RFP. For greater clarity, this includes projects that failed to execute NYSERDA's RES Standard Form Agreement for an award in the prior three RES solicitations, or terminated their Agreement from the solicitations. However, a project whose award under RESRFP22-1, RESRFP23-1, or RESRFP24-1 was subsequently rescinded by NYSERDA, or that was ultimately found by NYSERDA to have been ineligible for the RFP under which it was originally purported to have been awarded, would not be affected by this requirement, and will be permitted to participate in RESRFP25-1. NYSERDA intends to revisit and potentially revise these eligibility requirements in RESRFP26-1. Projects awarded funding under NYSERDA's recent [Agrivoltaics Research and Demonstration RFP \(REFP 5752\)](#) are permitted to seek a NYSERDA Tier 1 REC Agreement.

Tier 1 RECs that are already committed to NYSERDA or any other entity pursuant to an existing award or contract (Encumbered Tier 1 RECs) are not eligible for award in RESRFP25-1. As such, a Bid Proposal in RESRFP25-1 should not include any Encumbered Tier 1 RECs in the Bid Quantity or Bid Quantity Percentage. For example, a Bid Proposal with a Bid Quantity Percentage of 100% should have 100% of the Tier 1 RECs to be produced by the Bid Facility free and unencumbered for purposes of sale to NYSERDA during the Contract Delivery Term of the NYSERDA Tier 1 REC Purchase and Sale Agreement. As a further example, if the RECs associated with 25% of the output of a Bid Facility are Encumbered Tier 1 RECs, the Bid Quantity Percentage of that Bid Facility should be no more than 75%.

NYSERDA reserves the right to adjust a Bid Proposal's Bid Quantity and Bid Quantity Percentage in a manner that will remove any Encumbered Tier 1 RECs from the Bid Quantity and Bid Quantity Percentage as a condition to eligibility and consideration for award.

Facilities that do not have a Tier 1 agreement and are included as a component of an awarded Tier 4 proposal (or subsequently added to an awarded Tier 4 project through modification of the Tier 4 Agreement) may participate in RESRFP25-1 and/or future Tier 1 solicitations subject to Tier 1 eligibility requirements.

2.1 Update to Mutual Termination Agreement Terms

For Bid Facilities with an Amended and Restated Mutual Termination Agreement (“ARMTA”), NYSERDA will maintain the approach taken therein and as previously set out in RESRFP24-1, as follows:

1. For Bid Facilities subject to the ARMTA, NYSERDA will not draw on ARMTA contract security until a pre-established but confidential amount of generation associated with Bid Facilities subject to the ARMTA is awarded and contracted with NYSERDA (the “Threshold Point”), at which point NYSERDA will draw on the contract security of the remaining Bid Facilities subject to ARMTAs that have not been provisionally awarded as of that time, other than Bid Facilities, if any, that have been ineligible to propose into any of the RES solicitations issued after the date of the ARMTA under which awards have been made as of such time (“Ineligible Bid Facilities”). **Please note that unlike the prior RESRFP23-1 policy that gave NYSERDA the right, but not the obligation to draw on the contract security of projects that proposed but were not awarded, consistent with RESRFP24-1 policy, NYSERDA is committing to draw on contract security if and when this confidential level of generation is under contract.** NYSERDA will provide notice to affected Bid Facilities prior to drawing on contract security in this event.
2. If a Bid Facility that is eligible for RESRFP25-1 or a subsequent RES solicitation does not participate in the first RES solicitation that it is eligible for, NYSERDA **will draw** its contract security at that time.
3. At the time the Threshold Point is reached, NYSERDA will not draw on the contract security of any Ineligible Bid Facilities (as defined above). However, after the Threshold Point is reached, NYSERDA **will draw** on the contract security of any Ineligible Bid Facility if and when it becomes eligible to propose into a RES solicitation if it either fails to propose or is not awarded in such solicitation.
4. Consistent with the existing terms of the ARMTA, if a Bid Facility that is subject to an ARMTA is awarded in RESRFP25-1 or any subsequent RES solicitation, its existing contract security will be added to the additional contract security due in the solicitation it is awarded under.

2.2 Upgrade and Repower Eligibility & Evaluation

Upgrade Bid Facilities are eligible to the extent that they produce incremental generation that exceeds the Bid Facility’s historical generation levels as verified by a third-party engineering report.

The full generation produced by a Repowering Bid Facility is eligible if the Bid Facility has reached the end of its useful life (e.g., 20 years for wind and Solar PV Bid Facilities, 50 years for hydroelectric Bid Facilities) and has met the requirements to (i) replace each prime mover,²⁴ resulting in an overall increase of 15% or more in the production of the generation unit, and (ii) make capital expenditures in excess of 80% of the Repowering Bid Facility’s tax basis (not including its property and tangible assets). Proposers are encouraged to reference Section 7.6 Repowering Project of the [New York State Clean](#)

²⁴ For purposes of this requirement, “prime mover” is defined as follows: for wind Bid Facilities, the wind turbine, including the generator, gearbox (if any), rotor and blades; and for solar PV Bid Facilities, the modules and inverters. Hydroelectric Bid Facilities are not subject to the requirement to replace the prime mover, but must meet the other Repowering eligibility requirements.

[Energy Standard RES Tier 1 Certification Submission Instructions and Eligibility Guidelines](#) to review the full scope of requirements for Tier 1-eligible Repowering Bid Facilities and the requirements for third-party engineering reports needed to demonstrate provisional Tier 1 eligibility.

A Bid Facility that has not reached the end of its useful life may be eligible for a portion of its generation to be Tier 1 eligible prior to the end of the useful life based on the results of the required third-party engineering report. Prior to the end of the Bid Facility's useful life, the percentage increase in generation attributable to the Repowering will be Tier 1 eligible. Once the useful life of the original project is met, all generation (100%) from the Repowering Bid Facility will be Tier 1 eligible. See Table 3 below for an illustrative example of a Repowering Bid Facility that will be partially Tier 1 eligible prior to the end of the 20-year useful life.

Table 3. Illustrative Example of Pre-End of Useful Life Tier 1 Eligible Generation

Calendar Date	Useful Life	Original Project (Projected Generation)	Repowering Bid Facility (Projected Generation)	% Increase in Generation	Tier 1 % Applicability	Non-Tier 1 % Applicability	Tier 1 Eligibility Applicable to Generation Dates
7/1/23-6/30/24	17	762,120	914,544	20%	20%	80%	
7/1/24-6/30/25	18	744,600	914,544	23%	23%	77%	4/1/25-6/30/25
7/1/25-6/30/26	19	727,080	914,544	26%	26%	74%	7/1/25-6/30/26
7/1/26-6/30/27	20	709,560	914,544	29%	29%	71%	7/1/26-6/30/27
7/1/27-6/30/28	21	n/a	914,544	n/a	100%	0%	7/1/27-6/30/28

2.3 Subsequent Tier 1 Eligibility Changes

Bid Facilities selected for an award under this RFP will not be subject to subsequent changes in RES eligibility rules; however, if the Bid Facility fails to maintain eligibility consistent with the RES requirements as they existed at the time of an award, such ineligibility will extend to the RECs associated with the Bid Facility's production throughout the entire period in which the Bid Facility fails to maintain eligibility.

Bid Facilities selected for an award under this RFP will be subject to any ongoing PSC proceedings related to Tier 1 eligibility, and awards may be made to Bid Facilities conditional upon confirmation from the PSC that the resource is Tier 1 eligible.

2.4 Conformance with NYGATS Operating Rules

If awarded under RESRFP25-1, Proposers must maintain a valid NYGATS ID, obtain a Statement of Qualification, achieve Operational Certification, and operate in conformance with the [NYGATS Operating Rules](#).²⁵ Proposers must implement a Forward Certificate Transfer of Tier 1 RECs in NYGATS, up to the Annual REC Cap, into NYSERDA's NYGATS Account. NYSERDA will make payment for Tier 1 RECs from the Bid Facility delivered to NYSERDA's NYGATS account.

For Bid Facilities located in adjacent control areas, Proposers must ensure that, if awarded under a Tier 1 solicitation, the electricity associated with their RECs is (1) scheduled, transmitted, delivered, and

²⁵ [New York Generation Attribute Tracking System \(NYGATS\)](#)

settled in the NYISO energy market on an hourly basis, and (2) accompanied by documentation of a unit-specific contract path between the injection point in the control area of origin to the delivery point in New York.

Documentation of a unit-specific contract path must indicate the provision of transmission rights for delivering the generation via the NYISO using the North American Electric Reliability Corporation (NERC) tag fields "Sending and Receiving Control Areas," "Purchasing/Selling Entity Name," and "Number." For imported RECs to be flagged as eligible for Tier 1, projects located in an adjacent control area will need to continuously demonstrate the delivery of energy and RECs into New York State through the requirements laid out in the Final Phase 1 Implementation Plan. Tier 1 eligible energy scheduled and delivered from external control areas must be accompanied by the NERC tag information from an outside organization such as the Open Access Technology International (OATI) System identifying the importing project as the source for the scheduled and transmitted electricity into the NYISO, which NYSEDA uses to ensure that the requirements set forth in the Final Phase 1 Implementation Plan have been satisfied.

All Bid Facilities located in adjacent control areas (known as Import projects or External Bid Facilities) must apply for Provisional Eligibility and provide a sample tag. Once approved as Operational, NERC tag information must be emailed to res@nyserda.ny.gov directly in its original unaltered form from OATI or a similar system.

2.5 Alternate Bid Proposals

Proposers may elect to submit Alternate Bid Proposals for a Bid Facility that includes a different Nameplate Capacity, Co-located Storage Facility, or Component Cost Indices adjustment. Step Two Bid Proposals may contain one or more of the components that comprise an Alternate Bid Proposal. In order to submit an Alternate Bid Proposal, Proposers should indicate this election in the Step One Eligibility Application and provide a populated Attachment D. Bid Data Form that includes data for the Alternate Bid Proposal(s) with the Step Two Bid Proposal. Each Bid Proposal must utilize only one price structure (Fixed REC or Index REC), however Alternate Bid Proposals for the same Bid Facility may utilize different price structures if the Bid Facility has material differences among the Bid Proposals, such as for a Bid Facility bid with and without an Energy Storage Component, and/or a Bid Facility bid with two different Bid Capacities (MW). Proposers may submit a maximum of three Alternate Bid Proposals in addition to the Base Bid Proposal. Alternate Bid Proposals can opt into any combination of the three Alternate Bid Proposals described below.

2.5.1 Alternate Nameplate Capacity Bid Proposal

Bid Facility configurations representing different Nameplate Capacities may be submitted as Alternate Bid Proposals under Step Two of RESRFP25-1. Proposers electing to submit with a different Nameplate Capacity for the same Bid Facility must select the option for an Alternate Bid Proposal with a different Nameplate Capacity in the Step Two Bid Proposal. Neither a separate Step One Eligibility Application in the solicitation website nor a separate PSoQ is required, but all Bid Facility Nameplate Capacities must be equal to or less than the Nameplate Capacity associated with the evidence provided that the Bid Facility has achieved the Minimum Threshold Criteria. Proposers must enter information representing both the Base Bid Proposal and the Alternate Bid Proposal(s) with a different Nameplate Capacity in Attachment D. Bid Data Form and provide a separate Attachment E. P(50) 8760 Template for the Alternate Bid Proposal(s) with a different Nameplate Capacity.

Proposers of Repowering Bid Proposals that are considering multiple repowering configurations may submit Alternate Bid Proposals as Alternate Nameplate Capacity Bid Proposals that capture alternative repowering configurations. These Alternate Bid Proposals will be evaluated in competition with the Base Bid Proposal, as well as the rest of the Bid Proposal cohort for RESRFP25-1.

2.5.2 Alternate Co-located Storage Bid Proposal

Proposals that wish to include configurations with a Co-located Storage Facility must submit an Alternate Bid Proposal that includes such Co-located Storage Facility. The Alternate Bid Proposal includes a requirement to submit additional information on the Energy Storage Component and the option to adjust the Strike Price from the Base Bid Proposal to account for the Energy Storage Component. Proposers must enter information representing both the Base Bid Proposal and the Alternate Bid Proposal(s) with the Co-located Storage Facility in Attachment D. Bid Data Form and provide a separate Attachment E. P(50) 8760 Template for the Alternate Bid Proposal(s) with the Co-located Storage Facility.

The Co-located Storage Facility eligibility requirements are:

1. The Energy Storage Component utilizes storage technology that is electrical, chemical, mechanical, or thermo-electric, and has been previously Commercially Deployed.
2. The Energy Storage Component must have a minimum capacity of 5 megawatts alternating current (MWac) power.
3. The Energy Storage Component must be either co-located with the generation behind a single wholesale or retail meter or co-located with the generation behind a separate wholesale or retail meter.

In addition:

1. The Energy Storage Component must be constructed consistent with the energy storage system requirements outlined in Section 2.1.2 of the Bulk Energy Storage Program Manual²⁶ filed by NYSDA on June 12, 2025.
2. The Energy Storage Component must complete Peer Review prior to commencement of construction, as described in Section 3 of the Bulk Energy Storage Program Manual. Proposers may request to start the Peer Review process at any time, regardless of REC Agreement execution status.
3. The Energy Storage Component must complete Quality Assurance prior to Operational Certification, as described in Section 4 of the Bulk Energy Storage Program Manual.
4. The Energy Storage Component systems must be permitted and installed as proposed and remain in place for the life of the Contract Tenor.

The following Energy Storage Components are not eligible for inclusion as a Co-located Storage Facility under this solicitation:

- An Energy Storage Component that is owned by a regulated utility or the Long Island Power Authority;

²⁶ <https://www.nyseda.ny.gov/-/media/Project/Nyserda/Files/Programs/Energy-Storage/Bulk-Energy-Storage-Program-Manual.pdf>

- An Energy Storage Component that has been awarded a Utility Bulk Dispatch Rights Contract;
- An Energy Storage Component that receives a NYSERDA Retail/Residential Energy Storage incentive, a NYSERDA Bulk Energy Storage incentive, including the Index Storage Credit Request for Proposals, at the time of Step Two bid submission;
- An Energy Storage Component with a point of interconnection outside of the NYCA;
- An Energy Storage Component subject to an active NYSERDA Tier 1 award or contract.

Co-located Storage Facilities may participate in both RESRFP25-1 and ISCRFP25-1, provided that such Co-located Storage Facility satisfies any applicable eligibility requirements. However, the Energy Storage Component will only be awarded under one of the two competitive solicitations. If a Proposer is awarded a contract for RECs or ISCs and provided a Bid Proposal for the same Bid Facility in both RFPs, the Proposer must withdraw its Bid Proposal from the non-awarded RFP. For example, if a Co-located Storage Facility is awarded an ISC contract under ISCRFP25-1, the Proposer must withdraw any corresponding Alternate Co-located Storage Bid Proposal submitted to RESRFP25-1. Alternatively, if a Co-located Storage Facility is awarded a REC contract under RESRFP25-1, the Proposer must withdraw the corresponding energy storage project submitted to ISCRFP25-1. The Base Bid Proposal for the renewable energy portion of the Bid Facility may continue to participate in RESRFP25-1.

Co-located Storage Facilities do not need to be registered in NYGATS. All Co-located Storage Facilities must be electrically interconnected with the NYCA.

Awarded Bid Proposals not including an Energy Storage Component may add an Energy Storage Component in the future, subject to fulfilling all existing terms of the Agreement, provided that such Energy Storage Component will not be used to re-price a Bid Facility that initially lacks an Energy Storage Component.

Energy Storage Components may participate in the NYSERDA Bulk Energy Storage program, so long as the Energy Storage Component (1) satisfies any applicable eligibility requirements of the NYSERDA Bulk Energy Storage program and (2) the contract for RECs for an awarded Alternate Co-located Storage Bid Proposal is adjusted if the Energy Storage Component is awarded an ISC contract.

Co-located Storage Facilities participating in a Utility Bulk Dispatch Rights solicitation or other NYPA/LIPA/utility-managed competitive offer are eligible to participate in RESRFP25-1, however no facility is eligible for award under RESRFP25-1 if the Energy Storage Component is selected by a utility-managed solicitation or other competitive offer. NYSERDA will coordinate with the manager of any other active solicitation prior to issuing final awards under RESRFP25-1 to ensure that projects participating in multiple offers are not prematurely deemed ineligible.

Note that, under the Agreement, NYSERDA will make payment only for Tier 1 RECs delivered to NYSERDA's NYGATS Account. If the Energy Storage Component is charged from the co-located renewable generation, the energy discharged from the Energy Storage Component will generate Tier 1 RECs that will be eligible for payment. Should the Co-located Storage Facility receive an award, the Proposer will be required, at the time of contracting, to demonstrate to NYSERDA's satisfaction that the project will be configured and metered in a way that will ensure that Tier 1 RECs are created only based on energy generated by the Tier 1 Bid Facility.²⁷ Energy Storage Components that are located separate

²⁷ See Intermittent Power Resources: Frequently Asked Questions and the FERC Order Accepting Co-located Storage Resources (CSR) Revisions for additional resources.

from the Bid Facility may store energy from the grid but will not create Tier 1 RECs and therefore the associated stored energy will not be eligible for payment under the Agreement.

Alternative energy storage applications not covered in the Energy Storage Component definition of this RFP may be considered under Incremental Economic Benefits to New York as decarbonization, clean energy industry or energy transition investments as further described in Appendix 4. Incremental Economic Benefits Guidelines.

For more on how the Index REC Strike Price will be adjusted in relation to Co-located Storage Facilities, please see Section 5.02 (e) of the Agreement.

2.5.3 Component Cost Indices Adjusted (CCIA) Bid Proposal

Proposers may submit an Alternate Bid Proposal with a price structure where the Index REC Strike Price or Fixed REC Price would be subject to a one-time adjustment to reflect changes in pre-determined price indices subsequent to the Step Two Deadline for Submission of Proposals. Proposers electing to submit with a CCIA Bid Proposal must select the option for a CCIA Bid Proposal in the Step Two Bid Proposal. Additional details on this adjustment mechanism are provided in Section 5.2.1 of this RFP and in Section 5.03 of the Agreement. Proposals that include this adjustment will be evaluated using a price adder reflecting NYSEDA's inflation expectation as further described in Section 5.5 of this RFP.

2.6 Contractual Commitments

2.6.1 Prevailing Wage Requirement

As set out in the Agreement, in accordance with New York State Labor Law § 224-d(2), and unless relieved of such requirements by entering into a duly executed pre-hire collective bargaining agreement covering the construction of the Bid Facility that complies with the requirements of New York State Labor Law § 224-d(3), all laborers, workmen and mechanics, within the meaning of New York State Labor Law Article 8, performing construction work with respect to the Bid Facility, whether through long-term or short-term employment, must be paid at least the minimum hourly wage and supplemental payments that are prevailing in the area where the Bid Facility will be situated, erected and used, in accordance with New York State Labor Law § 220 and as published by the New York State Department of Labor (DOL)²⁸, or at least the equivalent prevailing wage requirements of the jurisdiction where the Bid Facility is located (the "Prevailing Wage").

This requirement applies: (1) to all laborers, workmen and mechanics performing construction work, whether direct employees of the Seller or whether Seller's contractors or subcontractors, and (2) regardless of whether such employment was claimed as an Economic Benefit in Seller's Bid Proposal. Prior to entering any contract with contractors for construction work for the Bid Facility, Seller shall provide confirmation that it has received from DOL (or equivalent) a Prevailing Wage schedule for construction work for the Bid Facility, as will be updated from time to time. Unless relieved of such requirements by entering into a duly executed pre-hire collective bargaining agreement in accordance with New York State Labor Law §224-d(3), Seller will be responsible for complying with all prevailing wage requirements (including but not limited to reporting requirements and requirements to obtain and retain certifications of payroll from all contractor(s) and/or subcontractor(s)) under New York State

²⁸ For NYS DOL Prevailing Wage Schedules, please visit:
<https://labor.ny.gov/workerprotection/publicwork/PWContents.shtm>

Labor Law § 220, 220-b, and 224-d, as well as the registration and reporting requirements set out in New York State Labor Law §220-i and 220-j) (or other equivalent law).

For Bid Facilities with an Energy Storage Component, in addition to the requirements set out above in relation to payment of Prevailing Wage for Bid Facilities, pursuant to the terms of the Agreement, unless relieved of such requirements by entering into a duly executed pre-hire collective bargaining agreement covering the construction of the Energy Storage Component that complies with the requirements of New York State Labor Law § 224-d(3), Seller shall also pay Prevailing Wage for construction work for the Energy Storage Component in accordance with the requirements of Section 18.10(a) of the Agreement.

Further details on the Prevailing Wage requirements for RESRFP25-1 are found in Section 18.10 of the Agreement.

2.6.2 Labor Peace Agreement

New York State Public Service Law § 66-r (3) requires that the Agreement include a stipulation that the Seller, as owner of the Bid Facility, or a third party acting on the Seller's behalf, stipulate that it will enter into a Labor Peace Agreement (LPA) where a bona fide labor organization is actively representing, or attempting to represent, employees providing operations and maintenance services for the Bid Facility. As described more fully in Section 18.13 of the Agreement, pursuant to and to the extent legally required by New York State Public Service Law § 66-r (3), the maintenance of such an LPA shall be an ongoing material condition of any continuation of payments under the Agreement.

2.6.3 U. S. Iron and Steel (Buy-American)

New York State Public Service Law (PSL) § 66-r (4) (a) (the Buy-American Act) requires public entities to include within the terms and conditions of any covered contracts a contractual requirement that "iron and steel used or supplied in the performance of the Contract or any subcontract thereto[,] shall be produced or made in whole or substantial part in the United States, its territories or possessions." However, PSL § 66-r (4) (b) provides that the Buy-American requirement "shall not apply if the head of the department or agency constructing the public works, in his or her sole discretion, determines that the provisions would not be in the public interest, would result in unreasonable costs, or that obtaining such steel or iron in the United States would increase the cost of the contract by an unreasonable amount, or such iron or steel, including without limitation structural iron and structural steel cannot be produced or made in the United States in sufficient and reasonably available quantities and of satisfactory quality." The Buy-American Act requires the soliciting agency to make such determination in each RFP.

In accordance with the objectives of the Buy-American Act, NYSERDA has undertaken a study to examine the implications of the Buy-American Act as applied to the Large-Scale Renewables Facilities and associated Bid Facility components anticipated to be the subject of Proposals submitted in response to this RFP (RESRFP25-1). On the basis of this study, NYSERDA has determined that due to the potential for increased costs, schedule delay, current market dynamics, manufacturer availability, and steel availability, including the requirement in RESRFP25-1 would not be in the public interest.²⁹ Requiring all

²⁹ For more, see Appendix 3. RESRFI22-1 Preliminary Determination Memorandum, Public Service Law (PSL) § 66-r (the New York "Buy-American" law), revised September 2022, available at <https://nysesda.ny.gov/>

iron or steel to be sourced domestically would not be in the public interest, as it may result in unreasonable increased costs and schedule delays. The study also examined the feasibility of contractual requirements to use domestic iron and steel. The study found that a contractual requirement for a reasonable minimum amount of U.S. Iron and Steel to be used in each Bid Facility would align with New York State's policy goals to incentivize utilization and growth of the renewable energy supply chain, including the U.S. steel industry that supports it, and reduce embodied carbon. The study conducted for RESRFP25-1 evidenced that an increase in the minimum amount of U.S. Iron and Steel to be procured for each Bid Facility is warranted for this RFP, reflecting recent market dynamics including increased cost and greater domestic availability of major structural elements.

Accordingly, the President and CEO of NYSERDA hereby determines to not require all iron or steel to be produced in the United States for utility-scale solar PV and onshore wind energy generation systems; however, use of iron and steel that is produced in New York, and in the United States, is valued by NYSERDA. Accordingly, as a matter of procurement policy in promoting the intent of the New York Buy American Act, any onshore wind Bid Facility awarded a contract in RESRFP25-1 is required to establish that it expends a minimum of \$61,000 per MWac on U.S. Iron and Steel. Any Solar PV Bid Facility awarded a contract in RESRFP25-1 is required to establish that it expends a minimum of \$33,000 per MWdc on U.S. Iron and Steel. Any hydroelectric Bid Facility awarded a contract in RESRFP25-1 is required to establish that it expends a minimum of \$64,000 per MWac on U.S. Iron and Steel. The applicable minimums noted above for U.S. iron and Steel per MW of Bid Capacity will be entered in the Agreement as Expected U.S. Iron and Steel Dollars/MW.

To the extent a Bid Facility falls short of the minimum dollar requirement determined for the project, any shortfall will be addressed through the remedy provided in Section 5.02 (f) of the Agreement.

For Bid Facilities that utilize technology other than utility-scale solar PV, onshore wind, or hydroelectric repowering, and have yet to be constructed, or for Bid Facilities that qualify as an incremental upgrade or repowering facility, NYSERDA will determine the compliance obligation in cooperation with Proposers in advance of the Step Two Bid Proposal deadline.

2.6.4 Disadvantaged Communities Economic Benefit Commitments

Proposers are encouraged to make elective commitments in their Step Two Bid Proposals that will commit the Proposer to a certain dollar amount of expenditures that will accrue to disadvantaged communities. Such commitments will be evaluated favorably and be incorporated into the Agreement as Disadvantaged Community Commitments. To the extent a Bid Facility falls short of the minimum dollar requirement set forth in the Agreement, any shortfall will be addressed through the remedy provided in Section 6.10 of the Agreement.

Additionally, in order to support the direction of Incremental Economic Benefits to disadvantaged communities in New York, NYSERDA will allow Incremental Economic Benefits claims to include commitments to the [Renewable Energy Access and Community Help program](#) ("REACH"), which funds electric utility bill credits for low-income ratepayers in disadvantaged communities.

[/media/Project/Nyserda/Files/Programs/Clean-Energy-Standard/NYSERDA-Buy-American-Supplemental-Study-Onshore-Wind-UtilityScale-Solar.pdf](#). NYSERDA has determined that the domestic content provisions of the Buy American Act would not be in the public interest for RESRFP22-1, RESRFP23-1, RESRFP24-1, and RESRFP25-1.

Additional resources for identifying disadvantaged communities are located on the [New York Climate Act website](#), including an interactive map to identify areas throughout the state that meet the final criteria identified for a disadvantaged community. The [Climate Justice Working Group](#) has developed a [Disadvantaged Communities Reporting Data Collection Template](#) file, which includes a tab entitled “DAC %” that contains a percentage-based disadvantaged community designation for all New York villages, towns, cities, counties, and census tracts. NYSEDA would like to make Proposers aware of this document and encourages them to consult it while drafting bids for RESRFP25-1 in order to make more accurate incremental economic benefits claims to disadvantaged communities.

2.6.5 Host Community Benefit Program

In [Public Service Commission Case 20-E-0249](#), In the Matter of a Renewable Energy Facility Host Community Benefit Program, the [PSC ordered](#) that residential electric utility customers residing in a renewable Host Community receive an annual bill credit for each of the first ten years that a Major Renewable Energy Facility operates in that community. Funding for the bill credits will be provided by the owners of major solar and wind renewable energy facilities by paying an annual fee of \$500 per megawatt (MW) and \$1,000 per MW, respectively, of nameplate capacity. The fees paid by a Major Renewable Energy Facility would be distributed equally among the residential utility customers within the Host Community of the facility.

Therefore, NYSEDA directs Proposers submitting Bid Facilities of 25 MW and larger sited within New York State to RESRFP25-1 to include at least a \$500 per megawatt (MWac) Host Community Benefit Program Fee (“Program Fee”) for solar projects and \$1,000 per megawatt Program Fee for wind projects, for each of the first ten years once the Bid Facility reaches Commercial Operation.³⁰ Proposers are encouraged to include these Program Fees in their Incremental Economic Benefits submission.

³⁰ PSC February 11, 2021 Order Adopting a Host Community Benefit Program, <https://documents.dps.ny.gov/public/Common/ViewDoc.aspx?DocRefId={DFD69D2F-A16F-404F-9A7C-283F0C79D1DB}>

3 STEP ONE ELIGIBILITY APPLICATION AND DETERMINATION

Step One is an initial qualifying step through which the Proposer must provide documentation confirming that the Bid Facility is registered in NYGATS as Tier 1 eligible and other key information about the Proposer and the Bid Facility. Step One Eligibility Applications must be submitted via the [solicitation website](#) and will be examined for completeness and to determine whether the Proposer and Bid Facility meet the eligibility requirements outlined in Section 2. In order to meet the eligibility criteria, the Proposer must:

- Be located within NYCA or in an adjacent control area and deliver energy into New York State in accordance with the RES Delivery Requirements in the Agreement and NYGATS Operating Rules, and have first commenced Commercial Operation on or after January 1, 2015, or must produce new, incremental energy and Tier 1 RECs from new Bid Capacity above a historical baseline.

Proposers are advised that the Tier 1-eligible technology types have been amended per the CES Modification Order, and include the following technologies:

Table 4. Eligible Tier 1 Technology Types

Technology	Source	Other Requirements
Solar Photovoltaics and Thermal		
On-land and offshore wind	Wind turbines	
Hydroelectric	Low-Impact Run-of-River Hydroelectric; Upgrades	No new storage impoundments; eligibility for Upgrades limited to the incremental production associated with the upgrade.
Fuel Cells	Solid Oxide Fuel Cells (SOFC) Molten Carbonate Fuel Cells (MCFC) Proton Exchange Membrane Cells (PEM) Phosphoric Acid Fuel Cells (PAFC)	Must utilize a non-fossil fuel resource, such as hydrogen (or other fuel), that has been produced using a “renewable energy system” ³¹ as a primary source.
Tidal/Wave/Ocean	Tidal and Ocean Wave or Current (turbines and other rotary motion devices); Ocean Thermal Pumped Storage Hydro Powered by Tidal	
Geothermal Electric		
Geothermal Ground Source Heat		

Proposers are advised that the Tier 1 eligibility requirements regarding Repowering have also been updated pursuant to the CES Modification Order, as discussed in Section 3.3.

Proposers should ensure that each proposed Bid Facility meets the Tier 1 eligibility requirements to participate in RESRFP25-1, and each Bid Facility is registered in the New York Generation Attribute

³¹ A system that generates electricity through use of the following technologies: solar thermal, photovoltaics, on land and offshore wind, hydroelectric, geothermal electric, geothermal ground source heat, tidal energy, wave energy, ocean thermal, and fuel cells which do not utilize a fossil fuel resource in the process of generating electricity.

Tracking System (NYGATS) as early as possible to ensure that the facility is eligible to submit a Step One Eligibility Application.

Interested Proposers may access [the Tier 1 Certification Submission Instructions and Eligibility Guidelines here](#), and are strongly encouraged to register each Bid Facility in NYGATS by following the instructions posted on the Clean Energy Standard website: [RES Tier 1 Certification](#). Interested Proposers may register their facilities in NYGATS at any time (open, rolling enrollment), including prior to the issuance of RESRFP25-1, and are requested to apply for Tier 1 certification no later than Thursday, October 9, 2025.

A complete Step One Eligibility Application must include the following components:

- 1) The letter received in the Proposer's NYGATS account from NYSERDA confirming that the application for Tier 1 eligibility (SoQ or PSoQ) has been approved.
- 2) The Step One Eligibility Application electronic form on the solicitation website providing required information about the Proposer and the Bid Facility for which the SoQ/PSoQ was granted. This will include Proposer contact information, and Bid Facility name, nameplate capacity, expected annual generation, interconnection location (e.g., NYISO Zone), host community or communities, and intended pricing structure (Fixed REC or Index REC; not binding), and whether energy storage is to be included.
- 3) A completed Executive Order No. 16 certification form.
- 4) A completed Competitive Solicitations Disclosure Statement.
- 5) A completed Vendor Responsibility Certification Checklist.

Instructions on how to submit a full Step One Eligibility Application are available in the Attachment C. Step One Submission Instructions. Proposers whose Step One Eligibility Applications are found to be complete and that demonstrate eligibility will receive a Notice of Qualification, which will provide Proposers with a description of and access to the process and forms to be used to submit a Step Two Bid Proposal.

Proposers must submit the full Step One Eligibility Application, including an approved PSoQ or SoQ, via the [solicitation website](#) by **3:00 p.m. ET on Tuesday, October 21, 2025**.

Incomplete Step One Eligibility Applications will be subject to disqualification. It is the Proposer's responsibility to ensure that all required forms and attachments have been completed and submitted. Late submissions will not be accepted. Proposers deemed qualified to submit a Step Two Bid Proposal will be emailed a Notice of Qualification and notified via the solicitation website.

Proposers whose Step One Eligibility Applications are found not to satisfy the eligibility requirements or to be deficient in some other respect will receive notification that they are not eligible to submit a Step Two Bid Proposal. NYSERDA will attempt to contact any Proposers with deficient Step One Applications prior to issuing a notice that the Bid Facility is not eligible to submit Step Two Bid Proposal.

3.1 NYGATS Registration and Request for NYGATS Resource Eligibility Determination; Provisional Statement of Qualification (PSoQ) or Statement of Qualification (SoQ)

All Tier 1 eligibility applications to obtain a PSoQ/SoQ must be approved in the New York Generation Attribute Tracking System (NYGATS). Proposers can access the NYGATS system at the following links:

- New User Registration: <https://nygats.ny.gov/ng/Admin/Account>
- Existing User Sign-In: <https://nygats.ny.gov/>

Requests to obtain Tier 1 certification are completed in NYGATS. To complete a request, Proposers must create a NYGATS account, complete a project registration for the Bid Facility, and once registration is approved, complete an application requesting a Resource Eligibility Determination, in the form of either a Statement of Qualification (SoQ), for facilities in operation at the time of request, or a Provisional Statement of Qualification (PSoQ), for facilities not yet in operation at the time of request. The SoQ/PSoQ certifies that a Bid Facility has met or will meet the eligibility requirements under Tier 1 of the RES.³² NYSERDA will notify the Proposer of its eligibility determination by posting a letter in the Proposer's NYGATS account associated with the Bid Facility.

The Bid Facility characteristics submitted for the NYGATS project registration must align as closely as possible with the characteristics intended to be submitted as part of a Step Two Bid Proposal (*e.g.*, Nameplate Capacity, NYISO Zone). Alternate Applications and Bid Proposals do not require a separate PSoQ in NYGATS (*e.g.*, Bid Facilities seeking to submit the project as different Nameplate Capacities). Step One Eligibility Applications with a different Nameplate Capacity than the Bid Facility's PSoQ must be smaller than the Nameplate Capacity associated with the PSoQ.

The application requesting a new Resource Eligibility Determination is requested to be completed in NYGATS no later than Thursday, October 9, 2025. This will enable NYSERDA to complete the Tier 1 eligibility determination and issue the SoQ/PSoQ prior to the deadline for submitting the Step One Eligibility Application.

Any Bid Facilities that are not yet in operation with a PSoQ that is over two years old are requested to re-submit a Tier 1 certification request to NYGATS for verification **no later than Thursday, October 9, 2025**. This applies to Bid Facilities with a PSoQ issued on or before October 1, 2023. To re-submit a Tier 1 certification request to NYGATS please follow the [Tier 1 Certification process](#).

More information on the Resource Eligibility Determination process, including guidelines for documenting eligibility for certification, including the eligibility of distributed energy resources, Upgrades, relocated facilities and facilities returning to service and training materials for using NYGATS to apply can be found on [NYSERDA's RES Tier 1 Certification website](#).

3.2 Consistency with Existing PSoQ

For a Bid Facility with an existing PSoQ, a Step One Eligibility Application submitted for the Bid Facility under this RESRFP25-1 must be consistent with the existing PSoQ. Some resource changes, for example a change in the Technology Type, Nameplate Capacity, Control System Operator, New York Independent System Operator (NYISO) Zone, Electric Utility Company, Tariff Type, Vintage Type, Bid Facility address, or other key project components will require Proposers to submit a new PSoQ.

NYSERDA will work with the Proposer to rectify any discrepancies. If assistance is needed, please contact lsrops@nyserda.ny.gov by October 6, 2025 to allow adequate time for NYSERDA to respond to the requests, help cure any deficiencies or seek clarifications needed to issue an PSoQ with ample time prior

³² See <https://www.nyserda.ny.gov/All-Programs/Clean-Energy-Standard/Renewable-Generators-and-Developers/RES-Tier-One-Eligibility/Certification>

to the Step One Eligibility Application deadline. Emails seeking assistance should be sent with a subject line “PSoQ Assistance.”

Any requests to transfer an already approved PSoQ to a different NYGATS account must follow the [Transfer process](#). The transfer process must be completed prior to requesting an updated PSoQ. Do not request a transfer if the PSoQ is over two years old. Instead, register and apply for a new PSoQ.

Proposers are permitted to submit a Bid Facility at a Bid Capacity that is smaller than their PSoQ specifies without need for a PSoQ revision or resubmission.

Any projects with generation that will not be fully Tier 1 eligible, such as upgrade projects or repowered projects that have not reached the end of their useful life need to apply to NYGATS as early as is feasible such that NYSERDA can determine the amount of generation that the facility may produce to be Tier 1 eligible. NYSERDA will contact the Proposer and coordinate with them if additional information is needed to make this determination.

Any requests for new NYGATS applications or modifications to existing NYGATS applications are requested to be submitted by Proposers by October 9, 2025. to give sufficient time for review and approval of the PSoQ.

3.3 Incremental Upgrade and Repowering Bid Facilities

Prior to the end of an existing Bid Facility’s useful life (20 years for wind and Solar PV Bid Facilities, 50 years for hydroelectric Bid Facilities), only incremental generation can qualify for Tier 1 as an Upgrade Bid Facility, to the extent it exceeds the Bid Facility’s historical generation levels as verified by a third-party engineering report.

After the existing Bid Facility has reached the end of its useful life, the entire capacity can be eligible as a Repowering Bid Facility if the following requirements are met:

- The Repowering must include replacement of each prime mover, and result in an overall increase of 15% or more in the production of the generation unit compared to its projected future output. For purposes of this requirement, “prime mover” is defined as follows: for wind Bid Facilities, the wind turbine, including the generator, gearbox (if any), rotor and blades; and for solar PV Bid Facilities, the modules and inverters. Hydroelectric Bid Facilities are not subject to the prime mover replacement requirement but are subject to the 15% production increase requirement.
- The Repowering must have the result that 80% of the tax basis per Generally Accepted Accounting Principles (GAAP) from the completed Repowering Bid Facility (not including its property and tangible assets) is derived from capital expenditures made on or after October 15, 2020. An independent audit and verification will be required. Certification will be required and submitted at the time of the resource eligibility determination under Tier 1 of the RES.

Additionally, a generator that has not yet reached the end of their useful life can be repowered, and a portion of the generation from the Repowered Bid Facility may be Tier 1 eligible until the end of the useful life of the original generator is reached. NYSERDA would make this determination based on the results of a required third-party engineering report as described in the CES Tier 1 Eligibility Guidelines. If the generator is repowered prior to the end of the original generator’s useful life, and the Repowering

Bid Facility is eligible in all other respects, the percentage increase in generation attributable to the Repowering will be Tier 1 eligible. Once the useful life of the original generator is met, all generation (100%) from the Repowering Bid Facility will be Tier 1 eligible.

Proposers seeking to participate in RESRFP25-1 with an Upgrade or Repowering Bid Facility are strongly encouraged to contact the Large-Scale Renewables team at res@nyserda.ny.gov prior to starting a Tier 1 request in NYGATS. NYSERDA also strongly encourages submitting a Tier 1 request as soon as possible if seeking to participate in RESRFP25-1. Proposers must submit a Tier 1 request for a Provisional Statement of Qualification (PSoQ), if under development, or Statement of Qualification (SoQ), if operational.

Proposers seeking to submit a Step Two Bid Proposal for an Upgrade or Repowering Bid Facility must submit a Tier 1 request for PSoQ if the upgraded or repowered actions have not yet been constructed for the Bid Facility. In Attachment E. P(50) 8760 Template that will be submitted as part of the Step Two Bid Proposal, Proposers will enter the Bid Facility's full generation profile and annual Tier 1 Upgrade Percentage to calculate estimated Tier 1 RECs. Proposers should also re-submit the historical generation data submitted with the request for PSoQ with the Step Two Bid Proposal to verify the application of the Tier 1 eligibility percentage in Attachment E. The Tier 1 Upgrade Percentage will be used in both the Step One Eligibility Application and Step Two Bid Proposal to ultimately determine a Bid Facility's Bid Quantity.

3.3.1 Incremental Upgrades

Proposers that intend to submit bids for incremental Upgrades must utilize the Tier 1 Upgrade Percentage determined in the NYGATS SoQ or PSoQ. Upgrade Bid Facilities require a PSoQ, not an SoQ, if the proposed Upgrade Bid Facility is not yet in operation.

To obtain a PSoQ for a project already in commercial operation planning an Upgrade, the Proposer will need to register a new provisional project and submit a request for a PSoQ for the incremental Upgrade and associated production. The provisional Nameplate Capacity (MWac) entered by the Proposer should indicate the total capacity of the Bid Facility after the Upgrade. After the provisional project registration is approved, the applicant can submit a PSoQ request for the incremental production associated with the Upgrade. See Section 7.3 of the [New York State Clean Energy Standard RES Tier 1 Certification Submission Instructions and Eligibility Guidelines](#) for information on technology-specific PSoQ requirements for Upgrade Bid Facilities.

3.3.2 Repowering

Repowering Bid Facilities require a PSoQ, not an SoQ, if the proposed Repowering Bid Facility has not yet undergone the required capital improvements to qualify as Tier 1. Proposers are advised to consult the CES Modification Order for the full requirements to qualify a repowered facility as Tier 1 eligible.

For all technologies except Hydroelectric, the Repowering must include replacement of each prime mover. The Repowering must result in an overall increase of 15% or more in the production of the generation unit compared to its projected future output. A third-party engineering report will be required to verify the projected generation through the Tier 1 certification process. The third-party engineering report must include:

- For the original project:

- Commercial Operation date – Month/Year
- Description of age and useful life or prime mover, equipment, and other project specific details (Nameplate Capacity in MWac, Capacity Factor, etc.)
- Useful life end date of the original project – Month/Year
- All available historical generation associated with the original project – MWh/year
- If applicable, the projected generation for each year of remaining useful life of original project – MWh/year —
- For the Repowering Bid Facility:
 - Actual or anticipated Repowering Date – Month/Day/Year
 - Description of prime mover replacement, equipment, and other project specific details (Nameplate Capacity in MWac, Capacity Factor, etc.) as planned or completed
 - Projected generation for the repowered project for each year of remaining useful life (e.g., P(50) 8760, Resource Assessment and Energy Production Estimate in MWh)

The data provided in the third-party engineering report will assist NYSDERDA in determining Tier 1 Eligible generation associated with Repowering Bid Facilities on a 12-month basis, starting the first of the month after the actual or anticipated Repowering date. Generation beyond what has been projected in the engineering report for each year of remaining useful life will be Tier 1 eligible. Once the useful life of the original project is met, all generation (100%) from the Repowering Bid Facility will be Tier 1 Eligible.

Bid Facilities that have not reached the end of their useful life may be eligible for a portion of their generation to be Tier 1 eligible prior to the end of the useful life based on the results of the required third-party engineering report. Prior to the end of the Bid Facility's useful life, the percentage increase in generation attributable to the Repowering will be Tier 1 eligible. Once the useful life of the original project is met, all generation (100%) from the Repowering Bid Facility will be Tier 1 Eligible. The Repowering must have the result that 80% of the GAAP tax basis from the completed Repowering Bid Facility (not including its property and tangible assets) is derived from capital expenditures made on or after the October 15, 2020 issuance of the CES Modification Order. Proposers must submit a valuation identifying the total cost of the as-completed project and the disposed equipment value. An independent Agreed-Upon Procedures (AUP) attestation report or similar level of audit and verification will be required to support this requirement at the time of the SoQ application. The AUP attestation or equivalent is subject to DPS Staff approval. Certification will be required and submitted at the time of the resource eligibility determination under Tier 1 of the RES. Proposers are encouraged to reference Section 7.6 Repowering Project of the [New York State Clean Energy Standard RES Tier 1 Certification Submission Instructions and Eligibility Guidelines](#) to review the full scope of requirements for Tier 1-eligible Repowering Bid Facilities and the requirements for third-party engineering reports needed to demonstrate provisional Tier 1 eligibility.

3.3.3 Return to Service

The entire output of a Bid Facility that does not meet the Threshold Eligibility Date (TED) requirements (i.e., was placed into service prior to January 1, 2015) can qualify as a Return to Service generation unit and be eligible to submit a Proposal into RESRFP25-1 if the Proposer can demonstrate to NYSDERDA that the project had not been in commercial operation for at least 48 consecutive months prior to the return to service date noted in the PSoQ or SoQ request. The applicant must submit written documentation of the applicable dates in and out of service when submitting a PSoQ or SoQ application, such as an engineering report, formal letter, and/or data from the NYISO or the local utility.

3.4 Maximum Contract Tenor

Information provided with the Bid Facility's PSoQ/SoQ and Step One Eligibility Application will be used to determine the Maximum Contract Tenor available to the Bid Facility. The Contract Tenor offered in Step Two for a Bid Facility will be limited by the term of the Maximum Contract Tenor.

For all Bid Facilities not in Commercial Operation as of the RFP Release Date, the Maximum Contract Tenor will be calculated as the lesser of:

- 1) 20 years, or
- 2) the Bid Facility's Useful Life.

For all Bid Facilities that have already commenced Commercial Operation as of the RFP Release Date, the Maximum Contract Tenor applicable to the Bid Facility will be calculated as the lesser of:

- 1) 20 years (240 months) minus the number of years (months) between the year (month) of Commercial Operation and the RFP Release Date (rounded to the nearest full year), or
- 2) The Bid Facility's Useful Life minus the number of years (months) between the year (month) of Commercial Operation and the RFP Release Date (rounded to the nearest full year).

For a Relocated Facility, the date of Commercial Operation for purposes of calculating the Maximum Contract Tenor shall be the first date of Commercial Operation in the original control area. A relocated project is a generation project whose prime mover was used on or before the TED to generate electrical energy outside of the New York Control Area.

For a Repowering Bid Facility, the maximum contract tenor shall be the 20 years from the date at which the Repowering Bid Facility re-enters commercial operation (i.e., not 20 years following the end of the original facility's Useful Life).

For a Return to Service generation unit, the date of Commercial Operation for purposes of calculating the Maximum Contract Tenor shall be the Return to Service Commercial Operation date noted in the PSoQ or SoQ.

Illustrative Example of a Return to Service hydroelectric Bid Facility Maximum Contract Tenor:

- Original Commercial Operation date: 8/1/1987
- Return to Service Commercial Operation Date: 12/15/2019
- RESRFP25-1 Launch Date: 09/24/2025
- Useful Life: 50 years (600 months)

20 years: 240 months – (09/24/2025 – Return to Service Commercial Operation Date 12/15/2019 or 69 months rounding down) = 18 years rounded to the nearest full year (171 months)

Useful Life: 600 months – (09/24/2025 – Return to Service Commercial Operation Date 12/15/2019 or 69 months rounding down) = 47 years rounded to the nearest full year (573 months)

18 years is less than 47 years; therefore, the Maximum Contract Tenor is 18 years.

Proposers should consult the [New York State Clean Energy Standard RES Tier 1 Certification Submission Instructions and Eligibility Guidelines](#) for more information and detailed requirements regarding Upgrade, Return to Service, Relocated Facility, and Repowering Bid Facilities.

Table 5 lists the Useful Life by resource for use in the calculations of Maximum Contract Tenor for this RFP, as determined by the Public Service Commission. The Useful Life for Energy Storage is not included in any Maximum Contract calculation but is included for reference; the Step Two Bid Proposal should be consistent with the Resource's Useful Life both with and without Energy Storage, as applicable.

Table 5. Default Values for Useful Life used to determine Maximum Contract Tenor

Resource	Useful Life (years)
Fuel Cell (non-fossil fuel)	20
Hydroelectric (New or Upgrade)	50
Geothermal Electric	20
Geothermal Ground Source Heat	20
Solar PV	20
Tidal/Ocean	10
Wind	20
Energy Storage	20

4 STEP TWO BID PROPOSAL REQUIREMENTS AND NON-PRICE EVALUATION

Proposers who receive a Notice of Qualification will be invited to submit a Step Two Bid Proposal which will require the Proposer to provide additional information, including a Bid Price, and more detailed information about the Bid Facility and the Proposer. Only those Proposers qualified through the Step One Eligibility process will be permitted to submit a Step Two Bid Proposal. All Step Two Bid Proposals must be submitted electronically via the [solicitation website](#). Instructions on how to submit a Step Two Bid Proposal will be provided to eligible Proposers that are issued a Notice of Qualification. Proposers will also be required to provide a Bid Fee payment for each Bid Facility. See Section 4.2 for additional details and instructions for submitting the Bid Fee.

If, after submission of the Step One Eligibility Application, the Bid Facility is expected to undergo a change in control, the Proposer must contact NYSERDA to enable the appropriate entity to submit the Step Two Bid Proposal for the Bid Facility as the Proposer for Step Two Bid Proposal purposes. For clarity, in such a situation the Proposer that takes over control of the Bid Facility, or is expected to take over control following the Step One Eligibility Application, will be eligible to submit the Step Two Bid Proposal even if it is a different entity from the Proposer whose Step One Eligibility Application was deemed qualified.

Following the submission of a Step Two Bid Proposal, NYSERDA may request in-person and/or videoconference interviews with Proposers, to be scheduled at a mutually convenient time following the Step Two submission deadline. The submission of a Step Two Bid Proposal will constitute a binding offer to contract under the terms of the Agreement; such offer must remain open for a period of at least one hundred and eighty (180) days from the Step Two Bid Proposal deadline.

Under Step Two, NYSERDA will: (1) examine each Step Two Bid Proposal to determine whether the Proposal demonstrates that the Bid Facility and Proposer meet all Minimum Threshold Requirements and the Bid Price does not exceed the Benchmark LNRC; and (2) for Proposals that meet those minimum requirements, NYSERDA and the TEP will conduct a full competitive evaluation based on price and non-price factors. The information and supporting documentation provided with the Step Two Bid Proposal will be evaluated by NYSERDA to determine whether the Minimum Threshold Requirements have been met and/or exceeded.

NYSERDA will contact Proposers regarding any instances where it is unclear if a Minimum Threshold Requirement has been achieved and may provide the Proposer with a one-time opportunity to clarify whether the Bid Facility and/or Proposer had achieved the Minimum Eligibility Threshold at the time of the Step Two Bid Proposal submission. Proposers must maintain these Minimum Threshold Eligibility requirements throughout the Bid Proposal evaluation period and, if awarded, up to the execution of the Agreement by the Proposer and NYSERDA. Please see Section 1.5 of the RFP for more information regarding changes that may occur during this period. Proposers that submit a Step Two Bid Proposal that does not meet all the Minimum Threshold Requirements will be removed from consideration and will not be eligible for an award.

A Proposer may not condition the acceptance of one Step Two Bid Proposal based on the withdrawal or acceptance of other Proposals.³³ A Step Two Bid Proposal may not be contingent on the receipt of any federal tax credits or incentives.

RESRFP25-1 is a competitive procurement. The Agreement is a legally binding document; it is recommended that Proposers consult with an attorney. The CES Framework Order, subsequent Implementation Plans and Orders, and NYS competitive procurement rules limit NYSEDA's ability to alter the terms of the Agreement issued with this RFP. **Please see Section 8.1 for more information regarding proposed edits to the Agreement.** The indication by a Proposer that it wishes to negotiate the terms of the Agreement will have no impact on the scoring or evaluation of the Bid Proposal.

The complete Step Two Bid Proposal package must be **received** by NYSEDA no later than **3:00 p.m. ET on Thursday, December 4th, 2025**, via the [solicitation website](#). NYSEDA strongly recommends that **Proposers reserve ample time to address the requirements for each Bid Facility. The Step Two Bid Proposal package must be completed and submitted online, before the deadline.**

All electronic signatures must be provided as indicated. Failure to provide any attachments or information requested may result in the Step Two Bid Proposal package being declared incomplete and rejected. NYSEDA may request additional information and materials at any time. Step Two Bid Proposal packages become the property of NYSEDA. NYSEDA recommends that Proposers use Google Chrome when accessing the solicitation website to complete a Step One Eligibility Application and Step Two Bid Proposal. Unnecessary attachments or lengthy responses beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal.

NYSEDA recommends that Proposers mark materials provided to NYSEDA as "Confidential" as needed (see Section 9.1). All Proposers will be required to submit their Step Two Bid Proposals via the [solicitation website](#) and will be required to use the forms shared by NYSEDA following eligibility determinations that will be shared via the Notice of Qualification, such as Attachment D. Bid Data Form.

4.1 Step Two Bid Proposal Form

A completed Step Two Bid Proposal must include, but is not limited to, the information in the following sections, and must be submitted via the solicitation website prior to the Step Two Bid Proposal deadline. All required fields must be populated, and all required documents uploaded prior to submission. Documents required to be uploaded include:

- 1) Payment and proof of the provision of a Bid Fee, such as a receipt of transfer confirmation;
- 2) Non-Disclosure Agreement;
- 3) Binding Bid Price and Bid Quantity, submitted via Attachment D. Bid Data Form;
- 4) Step Two Bid Proposal Minimum Thresholds Narrative (Attachment F. Minimum Thresholds Narrative);
- 5) Supporting documentation associated with the Project Viability and OpFlex described in Section 4.3, including Attachment D. Bid Data Form;
- 6) Public-facing documents to be posted to NYSEDA's website following the receipt of bids, including:

³³ NYSEDA will award at most one Bid Proposal per Bid Facility.

- a. Attachment B. Public Release of Bid Facility Information and Community Engagement Plan;
- 7) If applicable, supporting documentation to substantiate claims of Incremental Economic Benefits to New York State; and
- 8) Other information required by NYSERDA as referenced in the Step Two Bid Proposal Form.

Bid Facility, Site, and Generating Equipment Descriptions

The Proposer must provide a complete description and overview of the Bid Facility, describing the area included in and surrounding the generation site, a description of the local zoning, and other applicable ordinances and municipal laws, existing land use (*e.g.*, woodlands, brownfield, agriculture, other) and setting (*e.g.*, rural, urban, suburban, other) and describe what the site(s) has been used for in the recent past. Include and describe the status and development stage of Bid Facility (development, construction, or operation). Include information about the specific technology or equipment considered or selected, major equipment to be used, manufacturer or vendors considered or selected, equipment acquisition status, and equipment contract/equipment agreement status. Certain non-binding resource-specific details may be requested by Proposers (*e.g.*, planned module and inverter, expected production increase from bifacial/tracking modules, *etc.*).

The Proposer must identify potential fatal flaws and most critical impacts for the Bid Facility. Risks should be ranked by priority and level of impact to the Bid Facility site viability to proceed under the proposed schedule.

Bid Quantity, Price, and Contract Tenor

The Bid Quantity, Bid Price, and Contract Tenor section includes fields for the Proposer to calculate the annual number of Tier 1 RECs (Bid Quantity) to be offered to NYSERDA and the Contract Tenor, subject to the following restrictions:

- 1) Proposers may submit bids for any Contract Tenor of a minimum of one year and a maximum of the Maximum Contract Tenor (see Section 3.4).
- 2) For wind, solar, and hydroelectric resource types, the Expected Annual Eligible Production and Bid Quantity shall not exceed the P(50) long-term Energy Production Estimate provided under the Step Two Bid Proposal. The P(50) Energy Production Estimate must align with the 8760 hourly profile provided that is representative of the production at the Bid Facility over the proposed Contract Tenor.
- 3) The Bid Quantity Percentage shall be no less than fifteen percent (15%) and no greater than one hundred percent (100%) of Expected Annual Eligible Production, which is equal to the P(50) Energy Production Estimate multiplied by the annual Tier 1 eligibility percentage as determined in the PSoQ and entered in Attachment E. A Tier 1 eligibility percentage has a default value of 100% except in the case of Upgrade and Repowering Bid Facilities. In the case of Upgrade and Repowering Bid Facilities, see Section 3.3 for applicable guidelines.
 - a. Proposers with existing offtake agreements for a portion of the Expected Annual Eligible Production may place a Bid Proposal for the Tier 1 RECs not otherwise under contract. Proposers may wish to adopt an approach where a certain percentage of the Expected Annual Eligible Production is bid to NYSERDA. For example, a 100 MW Bid Facility with an Expected Annual Eligible Production of 180,000 could specify a Bid Quantity Percentage of 50%, resulting in an eligible Bid Quantity of 90,000 annual Tier 1 RECs.

Nameplate Capacity (MWac)	Expected Annual Eligible Production (MWh)	Tier 1 eligibility percentage (100%)	Bid Quantity Percentage (%)	Bid Quantity (MWh)
100	180,000	100%	50%	90,000

Proposers will be responsible for submitting one Bid Price offer, using either the Fixed REC or Index REC structure, with each Bid Proposal.

- 1) For the Fixed REC structure, the Bid Price consists of a Fixed REC price for the term of the Contract Tenor.
- 2) For the Index REC structure, the Bid Price consists of a Strike Price that will be entered into the calculation outlined in Section 5.1.2.

Bid Facility Interconnection Description and Preliminary Cost Estimate

The Proposer must identify the proposed interconnection point(s) and provide a complete description and overview of the preferred interconnection route of the Bid Facility from the generation site, including what rights the Proposer has to the interconnection point(s), what type(s) of real property agreement(s) or land agreement(s) the Proposer has entered to gain interconnection site control, and any rights that must be obtained by the Proposer or interconnecting utility for the interconnection. The Proposer will be required to provide a thorough description of the interconnection assumptions for the Bid Facility and the rationale that lead to the proposed point of interconnection configuration (e.g., usage of a ‘single line tap’ vs. a ‘three-breaker station’ connection POI configuration).

Proposers must provide a preliminary estimate regarding the expected cost, pursuant to the applicable OATT Interconnection Procedure, to interconnect the Bid Facility. Estimated costs should be separated into the following categories: expected costs to obtain Energy Resource Interconnection Service (“ERIS”) rights, expected costs to obtain Capacity Resource Interconnection Service (“CRIS”), and any other associated interconnection costs (e.g., Headroom payments, elective system upgrade facilities, etc.) not captured in the previous categories and total aggregate of estimated interconnection costs.

Table 6 provides average interconnection costs by project types based on a non-exhaustive sample of estimated interconnection costs as published in publicly available NYISO studies and interconnection agreements for renewable energy facilities in NYISO zones A through G.³⁴

³⁴ Cost data was sourced from <https://www.nyiso.com/regulatory-viewer> and <https://www.nyiso.com/interconnections>. Interconnection costs are for benchmarking purposes only- individual project interconnection costs may vary significantly from these average costs based on project- and point-of-interconnection-specific characteristics. Proposers are strongly encouraged to consult with the NYISO and connecting transmission owner (CTO) prior to estimating a Bid Facility’s interconnection costs and submitting a bid to RESRFP25-1.

Table 6. Average Interconnection Costs by Project Type

Facility Type / kV Level of POI	Sample Size	Average Nameplate Capacity (MW)	Average Interconnection Cost per MW (\$000)³⁵
Small Generator, Local Low Voltage (13.8-46 kV)	9	19	\$109
Small Generator, Local High Voltage (69-115 kV)	23	20	\$173
Large Generator, Local High Voltage (69-115 kV)	35	110	146
Large Generator, Bulk Transmission (230-345 kV)	21	217	125
Total/ Average	88	103	144

If land needed to access the interconnection point(s) is not controlled, provide a detailed plan and timeline for the acquisition of any additional rights necessary for the right-of-way to the interconnection point(s). Identify and describe the individual land parcels associated with the interconnection and any rights of way needed. If applicable, fully describe the relationship of the site to other adjacent infrastructure, including preferred or alternate point(s) of interconnection (POI). Please indicate whether there are known risks or uncertainty associated with the preferred POI. If the Proposer is planning on using an adjacent parcel or if the right of way is controlled by or assignable to the interconnecting utility that will own the interconnection facilities, clearly explain this in the description. Proposers should specify and describe the current or new interconnection facilities (lines, transformers, switching equipment, system control protection, etc.) that the Proposer owns or is intending to construct or have constructed in order to deliver the proposed energy (including costs), and identify the closest Bulk Power Transmission Facility (BPTF) to the Bid Facility site.

Impacts on Disadvantaged Communities Description

All Proposers are required to fully detail the benefits and burdens associated with the impacts of the Bid Facility's development on any hosting and/or proximate Disadvantaged Communities, as identified through engagement with Disadvantaged Communities, and in accordance with the most recent relevant guidance per the [Climate Justice Working Group](#). Benefits of Bid Facility development may include establishment of education and training opportunities, the hiring of residents from Disadvantaged Communities, or other investments identified as priorities for the Disadvantaged Community.

Bid Facility Project Schedule

If the Bid Facility is under development, the Step Two Bid Proposal package must populate a complete Bid Facility Project Schedule, detailing key development milestones. Proposers must provide all project schedule details on Project Schedule tab, Section V of Attachment D. Bid Data Form.

Proposers shall include a narrative that describes each segment of the process, the required permit or approval, the status of the request or application and the basis for project success by the milestone date provided. If the Bid Facility is Operational, a completed Project Schedule is not required.

³⁵ Highly variable dependent upon the project location, electrical topology (e.g., single line tap, three breaker ring bus, five breaker ring bus), and voltage level of the POI. In addition to consulting with the NYISO and CTO, additional resources including each CTO's electrical service bulletin for the applicable generator type may be of service to Proposers.

Confidentiality

All Proposers will be required to submit an executed Attachment L. Non-Disclosure Agreement as part of the Step Two Bid Proposal. The Non-Disclosure Agreement will be provided to eligible Step Two Proposers and will require confidentiality during any pre-award contracting discussions commenced at NYSERDA's sole discretion during the period of time between the Step Two Bid Proposal submission and initial award notifications, during the period of time between award notification and contract execution, and as further stated in the Non-Disclosure Agreement. Redlines will not be accepted to Attachment L. Non-Disclosure Agreement; the Non-Disclosure Agreement must be executed as published.

The Step Two Bid Proposal allows the Proposer to indicate whether the Proposer wishes to have the information in the Bid Proposal package treated as proprietary or confidential trade secret information. NYSERDA is subject to and must comply with the requirements of New York's Freedom of Information Law ("FOIL" see Public Officers' Law Article 6). Information in any tangible form including any document that Proposer wishes to be protected from disclosure to third parties including any information provided as a part of a proposal must be marked "Confidential" or "Proprietary" at the time such information is provided to NYSERDA.

NYSERDA reserves the right to publish the Agreements executed with awardees, including relevant terms within the Agreements. Prior to such publication, NYSERDA will redact any critical electric infrastructure information (CEII) contained in the Agreements, if any, including in the exhibits thereto, and will consider requests to redact confidential business information. Prior to publication, NYSERDA reserves the right to redact trade secrets, commercially sensitive information, or other information in accordance with applicable law.

4.2 Bid Fee Instructions

Each Step Two Bid Proposal must be accompanied by a non-refundable Bid Fee, in the form of electronic wire (preferred) or certified funds, in an amount determined by the Nameplate Capacity of the Bid Facility. **The Bid Fee is due by Wednesday, December 3, 2025.** Proposers must indicate that they have submitted a Bid Fee with their Step Two Bid Proposal and attach proof of the provision of a Bid Fee, such as a receipt or transfer confirmation.

A separate Bid Fee is not required for each Step Two Bid Proposal in instances of Alternate proposals for the same Bid Facility. If a Proposer wishes to submit one or more Alternate Step Two Bid Proposals for the same Bid Facility (for example, with a different Bid Capacity), only one Bid Fee is required.

Bid Fees submitted for Bid Proposals deemed ineligible or for late or incomplete submittals will be returned to the Proposer, except in instances where a Bid Proposal is deemed ineligible after having undergone evaluation by the full Technical Evaluation Panel (TEP). Proposers whose Bid Proposals are deemed ineligible on account of exceeding the Benchmark LNRC, as described in Section 5.6, shall not be notified of such finding of ineligibility, nor will such Proposers be entitled to a return of their respective Bid Fees. Waivers will not be provided for Bid Fees. Funding received from an entity like New

York Green Bank will not suffice as a Bid Fee payment. Required Bid Fee amounts are shown in Table 7 based on the highest Nameplate Capacity in megawatts (MWac) submitted for the eligible generator.³⁶

Table 7. Bid Fees by Bid Facility Nameplate Capacity

Nameplate Capacity (MWac)	Bid Fee
Less than 5.00 MW or Operating Bid Facility	\$5,000
5.00 – 24.99 MW	\$20,000
25.00 – 99.99 MW	\$50,000
100.00 MW or more	\$100,000

Full Bid Fee submission instructions with account and routing information can be downloaded after registering as a Proposer on the solicitation website. All Bid Fees must be clearly labeled with a unique identifier comprised of the Bid Facility's NYGATS ID and the RFP Tracking Number, in the format: For operating projects: GENXXXXX_RESRFP25-1; for projects in development: PROXXXXX_RESRFP25-1; for external operating projects: IMPXXXXX_RESRFP25-1. Bid Fees provided via electronic wire must have this unique identifier included within the Payment Details/Description. Bid Fees provided via cashier's check must have this unique identifier clearly labeled within the Memo or elsewhere on the check.

4.3 Project Viability, Operational Flexibility and Peak Coincidence

This category is intended to preferentially evaluate Bid Facilities that are more advanced through project development, demonstrate high project viability/a high likelihood of bringing the project to commercial operation, provide grid services that contribute to cost minimization and/or grid reliability by addressing integration issues resulting from increased penetration of intermittent renewables, better match generation to load, and dispatchable resources to balance the electric system, optimize generation dispatch, minimize operating reserve requirements, and address grid congestion and constraints.³⁷

Using Attachment F. Minimum Thresholds Narrative, available on the solicitation website, the Proposer must provide narrative descriptions detailing how the Bid Facility meets and/or exceeds the Minimum Threshold Requirements in each applicable category as described in this section. In addition to providing narrative descriptions detailing how the Bid Proposal meets the Minimum Threshold Requirements, the Proposer should provide any additional information that supports the viability of the Bid Proposal, including, to the extent not described elsewhere in the Bid Proposal, justification for any economic or regulatory assumptions and identification of economic, permitting and/or regulatory risks and mitigation plans. Proposers should characterize their analysis of basis risk and shape risk to estimate what the Bid Facility will receive for energy revenue relative to the Reference Energy Price.

Bid Proposals that demonstrate progress exceeding the Minimum Threshold Requirements will be eligible to receive points under the 20% Project Viability, Operational Flexibility and Peak Coincidence

³⁶ Nameplate Capacity is submitted in the Step Two Bid Proposal on Accion and is measured in AC capacity (MWac). Nameplate Capacity cannot exceed the Tier-1 eligible generation in the NYGATS PSoQ or SoQ and does not include Energy Storage.

³⁷ See the CES Final Phase 1 Implementation Plan: <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/Programs/Clean-Energy-Standard/2017-03-24-Phase-1-Implementation-Plan.pdf>.

category (Viability & OpFlex), as shown in Table 8. Points will be awarded in the subcategories indicated as “Minimum Threshold and Evaluation”.

Table 8. Project Viability, Peak Coincidence and Operational Flexibility Subcategories

Subcategory	Use in Evaluation
Interconnection	Minimum Threshold and Evaluation
Permitting Viability	Minimum Threshold and Evaluation
Energy Deliverability	Minimum Threshold and Evaluation
Peak Coincidence	Minimum Threshold and Evaluation
Agricultural and Forested Land	Minimum Threshold and Evaluation
Project Development	Minimum Threshold and Evaluation
Financing and Creditworthiness	Minimum Threshold and Evaluation
Community Engagement	Minimum Threshold
Resource Assessment and Energy Production Estimate	Minimum Threshold
Emissions and Embodied Carbon	Minimum Threshold
Climate Resiliency	Minimum Threshold
Energy Storage ³⁸	Minimum Threshold and Evaluation

A full description of the Minimum Threshold Requirements and the considerations upon which the TEP may award evaluation points are detailed below by subcategory. The supporting documentation for each Minimum Threshold Requirement should be uploaded as attachments as described in detail below. **If a Bid Facility exceeds the Minimum Threshold Requirement in any category, documentation should be provided.**³⁹ The Bid Facility must meet the Minimum Threshold Requirements in all categories throughout the evaluation period and up to the execution of the Agreement to remain in contention for an award under RESRFP25-1.

Operating Facilities will only need to demonstrate that the Minimum Threshold Requirement for the Energy Deliverability, Peak Coincidence, Resource Assessment and Energy Production Estimate sub-categories have been met and will otherwise receive full non-price evaluation points for the remaining scored sub-categories.

4.3.1 Interconnection

Submission Requirements: The Proposer must demonstrate that the Bid Facility meets the Minimum Threshold Requirements for interconnection progress by providing a summary and other evidentiary documentation from the interconnecting entity confirming the extent of interconnection activities.

³⁸ Applicable only to Alternate Co-located Storage Bid Proposals. See Section 2.5.2 for information on Alternate Co-located Storage Bid Proposals evaluation.

³⁹ For example, for the Interconnection requirements for a 20 MW Bid Facility subject to NYISO jurisdiction, the documentation required to demonstrate achievement of the Minimum Threshold Requirement consists of a draft SRIS/SIS or equivalent in progress. If for example a Facilities Study has been executed, attach a copy and provide confirmation of associated fees paid. The study will satisfy the Minimum Threshold Requirement and will also be considered as a part of the evaluation conducted by the TEP.

For Bid Facilities proceeding through the FERC-jurisdictional NYISO interconnection process or an equivalent process, evidentiary documentation includes evidence that the interconnection study process for the Bid Facility is complete with the NYISO (or equivalent for adjacent control areas) and an Interconnection Agreement has been tendered or evidence that the Bid Facility notified the NYISO of its intent to continue to the Phase 2 Study and satisfied requirements for any deposit payments (or equivalent for adjacent control areas). Proposers are advised that CEII-confidential information may not be submitted to NYSERDA as part of the Step Two Bid Proposal to demonstrate that the Bid Facility has achieved the Interconnection Minimum Threshold Requirements.

Proposers must also provide the anticipated interconnection costs for the Bid Facility, including utility system improvements. An estimate must be provided for each Alternate Bid Proposal associated with the Bid Facility, if applicable.

If applicable and/or available, the Proposer should provide the following documents:

- Copies of associated study and/or interconnection agreements or other evidence supporting the claimed level of progress as listed above.
- A deliverability study or other analysis performed by the Proposer to demonstrate that the output of the Bid Facility is energy deliverable. See Section 4.3.3 Energy Deliverability.
- A one-line diagram.

Minimum Threshold: If proceeding through the interconnection process under the NYISO's prior interconnection rules (see NYISO OATT 22 Attachments X and Z) the Proposer must have completed the interconnection study process with the NYISO, or equivalent system operator, and been tendered an Interconnection Agreement for the Bid Facility.

If proceeding through the Cluster Study interconnection process (see NYISO OATT 40 Attachment HH) the Proposer must have satisfied the NYISO's requirements for entry into the Phase 2 study following completion of Phase 1, such as notifying the NYISO of its election to proceed to the Phase 2 Study, and, satisfying the Readiness Deposit 2 or any deposit payment that may then be due (or equivalent for adjacent control areas).

Documentation provided to NYSERDA by the Proposer to demonstrate the Bid Facility's interconnection status must be consistent with the Bid Facility as proposed. Documentation that does not reflect the Bid Facility as proposed may be rejected.⁴⁰ For Bid Facilities interconnecting to the NYISO, the NYISO Zone of the Bid Facility should align with the zone being studied by the NYISO as a planned point of interconnection.

Non-Price Evaluation Criteria: Evaluation will be based on the demonstration of progress in the relevant interconnection process beyond the Minimum Threshold Requirements, as evidenced through documentation from the NYISO, Utility or other applicable interconnection authority, such as a commencing construction or evidence that the Bid Facility is in service for testing under the NYISO's prior interconnection rules or entering the Phase 2 Study under the current process. Bid Proposals that have advanced to more mature stages of the applicable interconnection process will be preferentially evaluated compared to earlier stage Bid Proposals.

⁴⁰ The Bid Facility's Bid Capacity must be at maximum the capacity submitted with the Interconnection Request.

Proposals that can describe all interconnection and transmission upgrade costs required to ensure full energy dispatch, including transmission upgrades that may need to occur beyond the point of interconnection, will be preferentially evaluated by the TEP based on the reasonableness of the costs provided and modeled assumptions.

4.3.2 Permitting Viability

Submission Requirements: The Proposer must demonstrate that the Bid Facility meets the Minimum Threshold Requirements and submit other information for the Bid Facility that includes the following components:

- 1) For Solar PV Bid Facilities: If the Bid Facility is located within New York State certified agricultural district⁴¹ and overlaps with mineral soil groups (MSG classifications 1-4), the Proposer may be responsible for making an agricultural mitigation payment to a designated fund. Proposers of Solar PV Bid Facilities located in New York State must also detail how they plan to use best efforts to adopt and employ the provisions of the Guidelines for Solar Energy Projects - Construction Mitigation for Agricultural Lands (Revision 10/18/2019) document (Guidelines, Exhibit E to the Agreement) in all material aspects of the construction, post construction and decommissioning of this project. All Solar PV Bid Facilities seeking permits through the Office of Renewable Energy and Electric Transmission Siting (ORES) will be required to comply with all ORES requirements.
- 2) Detailed map of site plan/layout indicating the project and parcel boundaries, to scale, with parcel designation by owner. At a minimum, the map should include the preliminary layout of the Bid Facility within the parcel boundaries, including the major generating equipment, the security or perimeter fence(s) and limits of disturbance. The map should indicate the (anticipated) interconnection route and the (anticipated) interconnection point(s). If applicable, indicate the relationship of the site to other adjacent infrastructure, including planned or alternate points of interconnection and proximate generators or other existing infrastructure.
- 3) For all Bid Facilities, the Proposer must also provide a GIS Data Mapping File. Applications that do not provide complete GIS files for the Bid Facility will be deemed incomplete. The GIS data file must be in .shp or .kmz format, and .shp files are preferred. Please provide one file or separate and distinct files for each of the following:
 - a. The parcel boundaries that the Bid Facility will occupy; and
 - b. The Bid Facility Area boundary/impact area; and
 - c. The Bid Facility array footprint (solar), Bid Facility site plan (other technologies); and
 - d. The preliminary proposed site layout for any agricultural co-utilization measures (solar).

If applicable and/or available, the Proposer should provide the following documents:

- If available, a more detailed concept site plan including the locations of the generation unit, all major equipment and facilities, access roads, site work and other project components, along with existing physical features of the site (e.g., wetlands, streams, topographical features, buildings, etc.).

⁴¹ <https://agriculture.ny.gov/land-and-water/agricultural-districts>

- Documentation filed with or received from the local governmental authority confirming that a request for a zoning change or variance has been initiated and/or the local approval process is underway.
- If applicable, evidence that the Lead Agency for the SEQR process has been designated.
- If available, applications for construction permit(s) and/or road use permit(s) that have been submitted to local authority(ies) with approval jurisdiction.
- If available, any applicable field studies (*e.g.*, Environmental Site Assessment⁴² Phase 1, Archaeological Phase 1, Geotechnical) and surveys (*e.g.*, ALTA, topography, wetlands/water bodies, or other), and/or the status of un-started/not yet commenced or ongoing field studies and surveys.
- If applicable, include an initial review of any physical and economic impacts that the Bid Facility's development may have on disadvantaged communities.
- For hydroelectric facilities only, include the Bid Facility's FERC license expiry date or provide evidence that FERC licensing process has been initiated and notice of intent has been filed.⁴³

Minimum Threshold: Proposers must:

- 1) Submit a complete Permitting Plan that:
 - a. Demonstrates awareness of all applicable permitting requirements, includes a reasonable timeline for obtaining permits and authorizations that is consistent with the development plan; and
 - b. Adequately addresses other expected permitting obstacles and/or input from the Bid Facility's host community; and
- 2) Must have proposed a Bid Facility that does not have an unreasonably low probability of receiving required permits, based on NYSEDA's, the Technical Evaluation Panel's (TEP), and Specialist Reviewers' assessment of the permitting studies and Permitting Plan. The Wildlife Site Characterization Report and Phase 1A Archaeological Desktop Survey will no longer be required for projects proceeding through the ORES permitting process, nor the SEQRA process, but progress in completing them must be described as part of the Permitting Plan; and
- 3) Complete an on-site wetland and waterbody screening, as set out in Appendix 3. NYSEDA Guidance for Wetland and Stream Screenings for Large-Scale Renewable Energy Projects.

The on-site screening requirement should reflect the latest requirements from NY Department of Environmental Conservation (DEC) as detailed in its [revised Regulations](#) for Freshwater Wetlands. Proposers are permitted to provide more complete studies in lieu of the NYSEDA on-site wetland and waterbody screening in order to satisfy this requirement, such as wetland and surface water delineation report(s).

⁴² ASTM International, formerly known as American Society for Testing and Materials, published a standard for conducting Phase I Environmental Site Assessments. See ASTM E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM International, West Conshohocken, PA, 2013, <http://www.astm.org/cgi-bin/resolver.cgi?E1527-13>.

⁴³ If applicable, identify program eligibility under FERC minor environmental effects, *e.g.*, projects that involve little change to water flow and use and are unlikely to affect threatened and endangered species. If applicable, please identify the NYS Department of Environmental Conservation (DEC) classification for the dam associated with the Bid Facility, available online at the New York State Dams Inventory Database. See <https://www.dec.ny.gov/lands/4991.html> for a full dataset of NYS Dams, the NYS DEC Dams Inventory.

The minimum level of permitting due diligence needed to meet the Minimum Threshold Requirement, determined according to the Bid Facility's expected permitting process:

- Bid Facilities proceeding through the Office of Renewable Energy Siting and Electric Transmission (ORES) must substantiate as part of the Step Two Bid Proposal that a Draft Field Screening for Wetlands and Water Resources Delineation⁴⁴ has been completed for the Bid Facility site.
- Bid Facilities proceeding through the New York State Environmental Quality Review Act (SEQRA)⁴⁵ must substantiate as part of the Step Two Bid Proposal that a Full (or Short) Environmental Assessment Form (FEAF/SEAF)⁴⁶ has been completed and is prepared to be or has been submitted to the applicable lead agency and other involved agencies if undergoing a coordinated review (if applicable).
- For Bid Facilities in external control areas, the Proposer will be required to substantiate that an equivalent level of pre-development due diligence has been conducted for the Bid Facility site prior to the submission of a Step Two Bid Proposal. The documentation to be provided to substantiate the Permitting Minimum Threshold Requirements must be outlined by the Proposer in the Step One Eligibility Application such that NYSERDA can confirm or modify any proposed equivalent documentation prior to or as part of the Notice of Qualification.

A detailed description of permitting plan contents and other required narratives is included in Appendix 5. Permitting Plan Requirements and Guidelines.

In regards to project(s) permitted under SEQRA, please be aware of the following procedures managed by the NYS Department of Environmental Conservation (DEC) which may need your attention if your project does not have a Negative Declaration or Site Plan Approval prior to January 1, 2025. Please reach out to DEC or the pertinent Authority Having Jurisdiction proactively should you have concerns about any of the following.

- For projects that require and have not received a freshwater wetlands permit prior to January 1, 2025 or a letter from the DEC notifying them that their freshwater wetlands application is complete, please review the newly established [Article 24 Freshwater Wetland regulations](#) to ensure permits are obtained in accordance with the changes.
- Freshwater wetland jurisdictional determinations (JDs) issued by DEC prior to January 1, 2025 may no longer be valid if the project has not secured a Negative Declaration or Site Plan Approval before that date. Developers may be relying on outdated JDs issued by regulatory agencies, which could lead to compliance issues. Consequently, developers should proactively consult with DEC to obtain updated JDs in accordance with the newly established [Article 24 Freshwater Wetland regulations](#).

⁴⁴ [Regulations Implementing Article VIII of the Public Service Law](#). 16 NYCRR §1100-1.3(e-f) *Pre-application procedures for Wetland and Surface Water Delineations*. Implemented through a field effort which would involve preliminary identification and a general description of wetland and water resources, spot checking of soils, shallow hydrography and vegetation at selected locations, apparent functional status, and ground-truthing of various color tones and corresponding ecotones on aerial photographs and maps.

⁴⁵ [New York State Environmental Quality Review Act \(SEQRA\)](#) and [SEQR Handbook](#), Fourth Edition, 2020.

⁴⁶ [State Environmental Quality Review Act \(SEQRA\)](#). Please consult the SEQRA webpage for the latest Environmental Assessment Forms.

- In instances involving state Threatened and Endangered (T&E) jurisdictional letters, if these documents are over one year old, developers should re-engage with DEC to assess the potential presence of T&E species. *6 NYCRR 182.9(C)(4) If the department determines the proposed activity is not subject to regulation under this Part, the department's determination is valid for one year from date of issuance as long as there are no changes to the activities or locations proposed in the jurisdictional request and no federally listed species are confirmed within the project footprint prior to the expiration of one year.*
- If a new SEQRA determination is required (e.g., due to changes in project design, land use and/or environmental permitting requirements, etc.) developers should reach out to the lead agency and involved agencies to ensure compliance with the regulations. Developers can reach out to DEPEnergy@dec.ny.gov to initiate consultations and JDs.
- Blanket Water Quality Certifications typically remain valid for a period of two years. Given that some blanket Water Quality Certifications and new US Army Corps of Engineers (USACE) Nationwide 404 Permits are set to expire in 2026, developers are advised to reach out to DEC and/or USACE to confirm their coverage under these certifications and permits.

Non-Price Evaluation Criteria: Evaluation will be based on the Bid Facility's demonstrable progress through its applicable permitting process and the completeness and credibility of the Proposer's plan for successfully obtaining necessary permits within the proposed development schedule. Bid Facilities that have secured relatively more permits needed to construct and operate, have performed more exhaustive permitting activities, and/or have greater knowledge of the Bid Facility site, its permitting requirements, and any planned and/or required mitigation activities will be preferentially evaluated by the TEP. NYSEDA recognizes that certain permits are typically procured after a NYSEDA Tier 1 REC Award is received by a Bid Facility, which will be considered as part of evaluation.

Permitting Plans that respond more comprehensively to the considerations identified in Appendix 5. Permitting Plan Impacts and Guidelines, and that provide greater detail into how these impacts will be avoided or mitigated, will be preferentially evaluated by the TEP.

NYSEDA may coordinate with the NYS DEC, NYS AGM, and/or ORES, acting as a specialist reviewer to inform the evaluation, under which proposals for Bid Facilities may be identified as having a more feasible pathway to securing all necessary permits to construct the Bid Facility, and may be preferentially evaluated compared to proposals that have more material challenges that have not yet been addressed with planned mitigation measures.

4.3.3 Energy Deliverability

Submission Requirements: All Proposers must submit key proposed interconnection data for the Bid Facility and a P(50) 8760 delivered energy profile consistent with the contract tenor proposed in the form requested by NYSEDA for evaluation purposes. Proposers should indicate whether the P(50) 8760 delivered energy profile is normalized based on historical output from a given weather year.

Proposers are strongly encouraged to familiarize themselves with all ongoing work to identify areas of current and future congestion on the electric grid, including the DPS and NYSEDA [State Power Grid Study](#), inclusive of Distribution and Local Capital Plans and a Bulk Transmission Investment Plan, the

[NYISO 2021-2040 System & Resource Outlook Report study and outputs](#),⁴⁷ the [ongoing work supporting the next NYISO System & Resource Outlook Report](#),⁴⁸ the Final Climate Action Council Scoping Plan,⁴⁹ the Scoping Plan's [Appendix G. Resource Integration Technical Supplement](#),⁵⁰ utility resources such as [National Grid's Wholesale Interconnections](#) reference documents,⁵¹ and other similar studies conducted by the state, the NYISO, and/or the transmission owners. Proposers are encouraged to discuss this topic in meetings with the NYISO and/or the Connecting Transmission Operator during their interconnection process to understand the current and expected future state of the grid and the relevant impacts on the Bid Facility's local and regional transmission infrastructure.

NYSERDA and the TEP will use recent and pertinent available data and modelling assumptions for evaluation purposes to assess energy deliverability. Updated assumptions and outputs published by DPS, NYSERDA, the NYISO, and other parties may become available during the course of this solicitation, including outputs published under the proceeding on Motion of the Commission to Implement Transmission Planning Pursuant to the Accelerated Renewable Energy Growth and Community Benefit Act (AREGCBA).⁵²

Bid Facilities located outside of the NYCA or NYISO Market Zone (External Facilities) are not eligible for evaluation in this category.

Minimum Threshold: The Proposer must provide all required interconnection data as part of the Step Two Bid Proposal to enable NYSERDA to coordinate with the NYISO, Distribution Utilities, and other subject matter experts to assess each Bid Facility's estimated energy deliverability potential for the current grid and future states of the grid based on reasonable assumptions of a 70x30 electric grid. Required interconnection data to be provided via the electronic Step Two Bid Proposal form will include the Bid Facility's:

- Point of Interconnection (POI) name and voltage
- POI location, physical address (if available) and latitude/longitude
- Nameplate Capacity (MWac and MWdc)
- P(50) Long-term Energy Production Estimate (MWh)⁵³ and Bid Quantity (MWh)
- Net Capacity Factor (%)
- Maximum Net Export Capability at POI (MW)
- Assumed Operating Power Factor
- 8,760 hourly generation profile, provided via Attachment E. P(50) 8760 Template

⁴⁷ See the System & Resource Outlook documents: <https://www.nyiso.com/library#reports>

⁵⁰ <https://climate.ny.gov/-/media/Project/Climate/Files/Draft-Scoping-Plan-Appendix-G-Integration-Analysis-Technical-Supplement.pdf>

⁵¹ <https://www.nationalgridus.com/Wholesale-Interconnections/New-York/>

⁵² Matter 20-00905, Case Number 20-E-0197, Proceeding on Motion of the Commission to Implement Transmission Planning Pursuant to the Accelerated Renewable Energy Growth and Community Benefit Act; <http://documents.dps.ny.gov/public/MatterManagement/CaseMaster.aspx?MatterCaseNo=20-E-0197&submit=Search>

⁵³ Populated in Cell Y11 on Tab A of Attachment E. P(50) 8760 Template

As part of the Resource Assessment and Energy Production Estimate submitted with the Step Two Bid Proposal, any generation bid to NYSERDA under Step Two of RESRFP25-1 must be substantiated by the Proposer as deliverable. Proposers are encouraged to review the forthcoming Updated Headroom Calculations, which should be filed in NYPSC [Case No. 20-E-0197](#)⁵⁴ by the Joint Utilities by October 2025.⁵⁵ The latest [Updated Headroom Calculations](#)⁵⁶ were filed by the Utilities on October 1, 2024.

Non-Price Evaluation Criteria: In this category, the TEP will evaluate Bid Proposals based on the benefits afforded and risks avoided to the electric grid by the proposed Bid Facility in light of current and forecasted future states of the electric grid, including benefits to address grid congestion and delivery constraints, and the extent to which a Proposer can demonstrate that the Bid Facility can deliver firm power (e.g., Bid Quantity as proposed to NYSERDA) to the electrical system without adversely impacting the generation of large-scale renewable projects currently operating, at an advanced stage of development (i.e., meets the NYISO inclusion rules per the NYISO Reliability Planning Process), and/or under contract to deliver energy for end use in New York State.

Proposers should familiarize themselves with NYISO's proposed energy deliverability metric that has been approved by FERC in tariff updates to enhance the Economic Planning Process. The energy deliverability metric "will provide information about the ability of each Resources, individually and taken collectively with other Resources, to be able to deliver its fully energy capability to the system and the degree of, and the conditions that are expected to lead to, any curtailment thereof."⁵⁷

In consultation with subject matter experts, the TEP will evaluate Bid Proposals based on the estimated benefits to the grid and future estimated energy deliverability potential based on reasonable assumptions of future states of the electric grid (e.g. 2035, 2040). Bid Facilities that will interconnect to the electric grid in areas where congestion and curtailment is less likely to occur will be preferentially evaluated compared to Bid Facilities that plan to interconnect to the electric grid where congestion and curtailment of renewable generators is more likely to occur on a future electric grid. The TEP may also consider interconnection studies and/or any deliverability studies provided by Proposers as part of their Step Two Bid Proposals, if provided by the Proposer.

Analyses may be carried out to identify potential impacts that proposed Bid Facilities may create on the energy deliverability of renewable energy projects that are operating, at an advanced stage of development (i.e., meets the NYISO inclusion rules per the NYISO Reliability Planning Process), and/or under contract to deliver energy for end use in New York State, including curtailments or direction from the NYISO or Scheduling Coordinator that forces a renewable generator to reduce output. These potential impacts may be assessed in part based on current conditions and in part based on forecasted grid limitations that may materialize for future states of the grid. NYSERDA may coordinate with NYISO, the distribution/transmission owners, and/or third parties to employ relevant analyses to estimate potential congestion and curtailment impacts resultant from the portfolio of bids submitted to

⁵⁴ <https://documents.dps.ny.gov/public/MatterManagement/CaseMaster.aspx?MatterCaseNo=20-E-0197>

⁵⁵ On November 19th, 2024, the Public Service Commission Approved an annual filing process for headroom calculations at <https://documents.dps.ny.gov/public/Common/ViewDoc.aspx?DocRefId={20FC4593-0000-C71C-8C4A-C1E8F6BBA0B9}>

⁵⁶ <https://documents.dps.ny.gov/public/Common/ViewDoc.aspx?DocRefId={20924892-0000-C22D-A354-C7C4655D0890}>

⁵⁷ See NYISO tariff section 31.3.1.3.5.7 as filed and approved in FERC Docket No. ER21-1074-000.

RESRFP25-1 to inform the decision to employ Portfolio Risk Factors authorized under the CES Modification Order (See Section 6.2).

Proposers are encouraged to demonstrate with currently available knowledge that their proposed point of delivery into the NYCA, along with their proposed interconnection and transmission and/or distribution upgrades, is sufficient to ensure full energy dispatch of the Bid Facility's expected generation output to provide the binding Bid Quantity (in Megawatt-hours) bid to NYSERDA. Please note that this includes energy and is not limited to capacity. Proposers are also encouraged to submit a deliverability study or other third-party assessment of the Bid Facility's interconnection and deliverability potential as part of their Step Two Bid Proposal submission(s) to demonstrate the energy deliverability of a Bid Facility. Bid Facilities that can exhibit to NYSERDA that the project is energy-deliverable under clear and reasonable assumptions may be preferentially evaluated by the TEP.

4.3.4 Peak Coincidence

Submission Requirements: See Energy Deliverability submission requirements in Section 4.3.3.

Minimum Threshold: The Proposer must provide all required interconnection data as part of the Step Two Bid Proposal as noted for the Energy Deliverability Minimum Threshold Requirements.

Non-Price Evaluation Criteria: Bid Proposals will be evaluated based on how closely the Bid Facility's expected generation profile matches future estimates of the NYISO load net of the portfolio of already operating and contracted, under development renewable and zero-emissions generation in New York State. Future expected load shapes (e.g., 2035, 2040) for evaluation purposes will be based on the most recent available NYISO Resource & System Outlook Study. Bid Facilities that complement the existing portfolio of operating/under development projects more significantly will be preferentially evaluated compared to Bid Facilities that do not afford the same level of complementary generation compared to future load.

4.3.5 Agricultural and Forested Land (*Solar PV Bid Facilities in New York State Only*)

Submission Requirements:

Description: Proposers must include a description in their Bid Proposal of any agricultural land that the planned project footprint of their Bid Facility is sited on. This description should include owned, rented, or leased farmland. Proposers must also include a description of any recent agricultural activity occurring on the planned project footprint in the five years prior to the release of RESRFP25-1.

Agricultural Mitigation Payment Estimate: Proposers of Solar facilities physically located in New York State must complete and submit the Attachment G. Agricultural Mitigation Payment Estimate Calculator, which will calculate the estimated mitigation payment required for the Bid Facility based on the Facility Area overlap with Mineral Soil Groups 1 through 4 (MSG 1-4). An Agricultural Mitigation Payment will not be required if the Facility Area of the as-built Bid Facility overlap with MSG 1-4 is less than 30 acres.

Smart Solar Siting Scorecard: Proposers of Solar facilities must also complete and submit the Appendix 2 - Exhibit 1. RESRFP25-1 Smart Solar Siting Scorecard Workbook. Proposers should consult the Appendix 2 - RESRFP25-1 Smart Solar Siting Scorecard before completing this Excel-based workbook, which will score projects based on their expected impacts to active agricultural land and MSG 1-4 and additional

measures. NYSERDA is not intending to use the Scorecard as a screening tool to preclude Proposers from receiving a NYSERDA award based on agricultural impacts, nor contractually require avoidance and/or minimization measures submitted via the Scorecard, however NYSERDA will make the Scorecards for awarded projects publicly available such that the applicable permitting body may reference the Scorecard as part of the permitting process for the project.

The RESRFP25-1 Smart Solar Siting Scorecard has been modified to now require Proposers of most Solar PV Bid Facilities to complete, in addition to the Exhibit 1 Workbook, the Exhibit 4 In-Field Verification to assess and confirm the extent of Forested Lands within the Facility Area. Bid Facilities that have a submitted application to ORES, including Exhibits 11 and 15, can base the relevant Avoidance Flow Chart data inputs (Agroforestry and Forest Land) on these Exhibits and do not need to complete the Exhibit 4 In-Field Verification.

Maps of Bid Facility: Proposers are required to submit a map of the Bid Facility with their MSG 1-4 acreage calculations that shows the Facility Area overlaid on the MSG 1-4 data and the parcel boundaries hosting the Facility Area.

Maps should be provided in both PDF format and as GIS shapefiles. The shapefiles should contain polygons of the Forest Land and Agroforestry areas in the Facility Area boundary. Proposers should include separate shapefiles of the Facility Area boundary and security fences for the Bid Facility. Clearly identify any areas found to be misidentified during the desktop review via polygons both on the map and as a shapefile.

For Solar PV Bid Facilities inclusive of parcels located in a New York State Agricultural District, Proposers are also required to provide preliminary information to estimate an Agricultural Mitigation Payment based on the Bid Facility impacts described in the Scorecard.

To inform the submission of the required Agricultural and Forested Land documents and data, Proposers can take advantage of the following resources:

Agricultural Co-Utilization Plan: Proposers bidding a Solar PV Bid Facility are permitted to request to defer and potentially offset any required Agricultural Mitigation Payment by submitting an Agricultural Co-Utilization Plan (ACUP) with the Step Two Bid Proposal and receiving acceptance in advance of commencing Construction Activities. Proposers of Solar PV Bid Facilities are permitted to submit a draft Pre-Commercial Operation (Pre-CO) ACUP with their Step Two Bid Proposal. If awarded, the Seller will be required to submit an updated Pre-CO ACUP to NYSERDA for review and potential acceptance, no later than one hundred eighty (180) calendar days prior to commencement of Construction Activities for the Bid Facility. During Construction Activities, the Seller would need to implement the relevant Pre-CO ACUP components (e.g., agrivoltaic-specific design accommodations, soil protection plan, etc.). Upon project completion, and in conjunction with the Operational Certification process detailed in NYSERDA's Standard Form Agreement, the Seller will need to prepare and submit, for NYSERDA's review, a Post-Commercial Operation (Post-CO) ACUP reflecting the ACUP activities performed to date, as well as those planned for the operational period.

As is the current practice during Operational Certification, any applicable estimated Agricultural Mitigation Payment would be updated based on the project's final as-built Facility Area. Should NYSERDA accept the Post-CO ACUP, any required Agricultural Mitigation Payment would be deferred for 5 years pursuant to the Standard Form Agreement. Within ninety (90) days after the fifth anniversary of Commercial Operation, a final ACUP Implementation Report would be due to NYSERDA. The Agricultural

Mitigation Payment due at this time could be offset entirely if sufficient co-utilization expenses are evidenced. NYSERDA reserves the right to make the Post-CO ACUP publicly available, including Eligible Co-Agricultural Expense information.

Guidance for developing a Pre-CO and a Post-CO ACUP is available in the Appendix 6. Agricultural Co-utilization Plan Guidance. For avoidance of doubt, should a Proposer not submit a draft Pre-CO ACUP with the Step Two Bid Proposal, the option would still remain for the Seller to submit a Pre-CO ACUP no later than 180 days prior to Construction Activities if they are awarded. For more details on agricultural co-utilization practices and agricultural co-utilization plans, please see the Scorecard and Section 6.11 of the Agreement.

(Optional) Climate and Applied Forestry Research Institute Data Requests: Proposers of Solar PV Bid Facilities now have the option to request access to Climate and Applied Forestry Research Institute (CAFRI) data used by the State University of New York, College of Environmental Science and Forestry (SUNY-ESF) and by NYSERDA to assess the potential impacts of a Bid Facility(ies) on forested lands and to evaluate the Forested Lands Protection component of the Scorecard.

NYSERDA may coordinate with NYS AGM, acting as a specialist reviewer to inform the evaluation of Bid Facilities, under which proposals for Bid Facilities and supporting documentation may be shared on an interagency basis. NYSERDA may also coordinate with NYS AGM to support commencement of the notice of intent process for projects that submit a Step Two Bid Proposal and/or are provisionally awarded under RESRFP25-1.⁵⁸

Minimum Threshold: All Proposers of Solar facilities within New York State must include in their Bid Proposal a description of any agricultural land that the planned project footprint of their Bid Facility is sited on. This description should include owned, rented, or leased farmland. Proposers will also include a description of any recent agricultural activity occurring on the planned project footprint in the five years prior to the release of RESRFP25-1.

Proposers of Solar facilities within New York State will be required to complete and submit the Appendix 2. RESRFP25-1 Smart Solar Siting Scorecard Workbook, which will allow NYSERDA to score Bid Proposals based on the Bid Facility's expected impacts to active agricultural land and MSG 1-4, forested land, and additional measures.

Non-Price Evaluation Criteria: Non-Solar PV Bid Facilities will be awarded full points for the Agricultural and Forested Land category.

Proposed Solar PV Bid Facilities will be evaluated based on their verified Scorecard total score, with respect to expected impacts to active agricultural land, MSG 1-4, and forested lands, as well as any avoidance, mitigation, and/or co-utilization measures that the Proposer is willing to commit to in their Step Two Bid Proposal.

Projects that commit to co-utilization measures in their Scorecard, and if submitted, a draft ACUP, will be preferentially evaluated by the TEP. Project sites that demonstrate extensive forested land conversions as part of pre-development, such as clearing a portion of the proposed Facility Area while

⁵⁸ New York State Department of Agriculture and Markets, Notice of Intent Requirement:
<https://agriculture.ny.gov/land-and-water/notice-intent-requirement>

under site control prior to obtaining the appropriate permits, may be viewed less favorably in evaluation.

4.3.6 Project Development Experience

Submission Requirements: The Proposer must demonstrate it meets the Minimum Threshold Requirements for Project Development by providing the following documentation:

- **A management chart** that lists the key personnel dedicated to the Bid Facility.
- **A list of what equipment has already been procured, its manufacturing point of origin and/or for what equipment have quotes been obtained.**
 - For Solar PV Bid Facilities, the module unit price assumption, whether panels have been procured and how the Proposer plans to provide the panels at the pricing assumed.
 - For Wind Bid Facilities, the turbine price assumption, whether the turbine and major components have been procured and how the Proposer plans to provide the turbine at the pricing assumed.
 - For all Bid Facilities, price assumption and procurement status of any needed interconnection equipment, such as a transformer or switchgear.
- **A list of up to 15 specific projects successfully developed and/or financed**, specifying the nameplate capacity, technology⁵⁹, commercial operation date, and location using Attachment D Bid Data Form, including the largest project developed in general and the largest project developed in New York State using the same technology as the Bid Facility.
- **Disclosure** of any criminal and civil lawsuits, litigation, and settlements associated with the Proposer's prior project development and commercial efforts over the last three years prior to the release of RESRFP25-1.

Minimum Threshold: Proposers must demonstrate that they have experience in developing renewable generation facilities. Specifically, the Proposer or the principals in its development team must have developed at least one renewable generation facility to commercial operation that is of similar or larger scale than the Bid Facility. For the purposes of this criterion, similar scale is defined as follows:

- A project of at least 33% of the proposed Bid Facility capacity, in MWac; or
- A project of at least 10% of the proposed Bid Facility capacity, in MWac, if the Proposer has also successfully completed the interconnection process in the same interconnecting entity as the proposed Bid Facility.

Experience of vendors or contractors to the Proposer do not count towards this experience requirement. NYSEDA will not consider aggregated portfolios of generation facilities as a project under this criterion.

⁵⁹ Resource and prime mover, *e.g.*, solar or wind. Not meant to distinguish between different solar technologies, for example.

Non-Price Evaluation Criteria: Evaluation will be based on the relative level of project development experience demonstrated, particularly with respect to facilities of similar scale, similar technology⁶⁰ and similar location.⁶¹ Proposals for Bid Facilities that are similar to those projects provided and successfully brought to commercial operation by the Proposer will be preferentially evaluated by the TEP. Experience with successfully developing current and previously RPS Attribute or Tier 1-contracted NYSEDA projects may be accounted for when evaluated by the TEP.

Examples of projects developed by the Proposer or the principals in its development team that demonstrate innovative design or services to the surrounding community will be preferentially evaluated by the TEP. Examples of innovative design could include, but are not limited to, incorporation of agrivoltaics or use of brown fields and examples of community services could include, but are not limited to, educational partnerships or developing services to rural New York State residents and disadvantaged communities.

4.3.7 Financing and Creditworthiness

Submission Requirements: The Proposer must demonstrate it meets the Minimum Threshold Requirements for Financing and Creditworthiness by providing the following documentation:

- **An organizational chart** for the Bid Facility that lists the participants and identifies the corporate structure, including general and limited partners and financial arrangements to the Proposer's parent company or affiliate. The organizational chart must identify any partners, parent companies or affiliates that are owned in whole or in part by governments foreign to the United States.
- **Evidence that the Proposer or its equity participant(s) possess an investment grade Credit Rating.** If an equity participant does not have such Credit Rating, e.g., a subsidiary, it shall provide (i) written evidence of a corporate commitment, for example, a "comfort" letter or "keepwell" agreement, to support the development and financing from its parent company and (ii) evidence of an investment grade Credit Rating from that parent company. In addition, any credit alerts or rating upgrade or downgrade for the equity partners, or their parent companies in the past three years.
- **The following financial statements**, if applicable and available, via PDF or summary documents with links to publicly available PDFs (links to all publicly available SEC filings are preferred as opposed to the submission of full SEC filings):
 - Audited financial statements for the three most recent fiscal years;
 - Audited financial statements from Proposer's parent, if Proposer does not have such financial statements and the parent is providing a corporate funding commitment; or
 - Audited financial statements for its three most recent fiscal years if being provided for a private corporation, with an attestation from the CEO or CFO that such information is materially accurate and complete; or
 - An explanation if the information above cannot be provided, and provision of alternate information to demonstrate Proposer's financial capacity to develop and bring the proposed Bid Facility to commercial operation.

⁶⁰ Similar technology is the same resource and prime mover, e.g., solar, wind. It is not meant to distinguish between different solar technologies, for example.

⁶¹ Similar location is the same interconnecting entity.

• **Key Credit Ratios.** The Proposer should submit results for the following key financial ratios as calculated for each of the three most recent fiscal years:

- Funds from operations (FFO) to debt
- Debt to EBITDA
- EBITDA to interest

The Proposer should further provide detail of which financial statements items were used to calculate EBITDA and FFO in each year.

• **A detailed Financing Plan.** The Financing Plan should contain if available and applicable:

- A detailed description of the anticipated financing arrangements, including equity, pre-construction and development expenditures, Contract Security, construction debt, mezzanine / subordinated debt, and permanent debt;
- A list of all committed and potential equity partners;
- The Bid Facility development and operating responsibilities of each equity partner, and their respective funding obligations, *e.g.*, joint and several funding responsibilities, if applicable;
- If available, written expressions of interest from potential debt lenders sufficient to fund the project development, construction and permanent debt capitalization to the fullest extent available, and any applicable expressions of interest from tax equity providers;
- A description of Proposer's intention to own and operate the Bid Facility, or sell the Bid Facility to another party;
- If the Proposer intends to own and operate the Bid Facility: a description of the Proposer's plan to monetize RECs after the expiration of an awarded Tier 1 contract with NYSED;A;
- If the Bid Proposal does not include an Component Cost Indices Adjustment, provide inflation rate assumptions;
- The anticipated construction and long-term capital structure for the Bid Facility ownership entity, including the Bid Facility's projected balance sheet at year-end for every construction year and at COD;
- Description of the evolution of division between shareholder equity and debt from the development period through the construction period and any plans for adjusting to loss of shareholder equity;
- Details of the expected construction loan and permanent loan, including terms of repayment, (amount, tenor, interest rate, *etc.*), the amount each lending institution is prepared to commit (subject to credit committee approval), their debt service requirements (interest, rate swaps, letters of credit, guarantees, *etc.*), with all fees indicated clearly;
- A declaration of intent to use the Production Tax Credit (PTC) or Investment Tax Credit (ITC) and any available adders made available as part of the Inflation Reduction Act of 2022. Proposers should include their assumption of the percentage of their energy production or project costs that will be compensated under the PTC or ITC and a detailed description of how the Bid Facility will qualify for the PTC or ITC;
- Describe any other available federal, state, and local available tax credits, financial incentives, and subsidies, and how these will be utilized in the Financing Plan;

- Details of any events of default or other credit/financial issues associated with all projects (other than those under contract with NYSERDA) in which the Proposer (and other equity partners), its parent company, its affiliates, and directors, officers, and senior managers of those entities, participated over the past three years;
- Information concerning the Proposer's (and other equity partners) financial condition and evidence of creditworthiness; and
- If available, for the most recent accounting period and prepared in accordance with GAAP or IFRS: 1) A copy of its annual report containing audited consolidated financial statements (income statement, balance sheet, statement of cash flows and statement of retained earnings and all accompanying notes) for such fiscal year, setting forth in each case in comparative form the figures for the previous year, and 2a) for SEC reporting companies, access to financial statements certified in accordance with all applicable laws, including applicable SEC rules and regulations, or 2b) for non-SEC reporting companies, certification from the chief financial officer, controller, treasurer or any assistant treasurer of a Proposer/Seller or any employee of a Proposer/Seller designated by any of the foregoing, as being fairly stated in all material respects (subject to normal year-end audit adjustments). If a Party's financial statements are publicly available electronically on the website of that Party or the SEC, then the Party should provide links to these statements and shall be deemed to have met the requirements of this section.

Minimum Threshold: The requested financing and creditworthiness documents are provided and the Financing Plan demonstrates the financial capability to complete construction by the proposed commercial operation date and a sufficient degree of planning and due diligence on how the Bid Facility is to be financed.

Non-Price Evaluation Criteria: Proposers with relatively higher credit ratings or with relatively more assets (or higher asset/debt ratio) will be preferentially evaluated by the TEP.

4.3.8 Project Maturity

Submission Requirements: All Proposers must submit key proposed interconnection data, permitting progress, equipment procurement status and development status for the Bid Facility.

Minimum Threshold: Proposers must demonstrate that the Bid Facility can reasonably be permitted, developed, financed, and constructed within the proposed Project Schedule.

Non-Price Evaluation Criteria: Bid Facilities will be evaluated based on the reasonableness of the timeline for securing permits and approvals such that the proposed COD can be achieved. Bid Facilities with an earlier proposed COD for the Project will be preferentially evaluated, as long as the proposed COD is determined to be reasonable and is supported by the overall Bid Proposal, including the Project Schedule submitted by Proposers in Section V of the Attachment D. Bid Data Form. Projects that already have permits and approvals in hand or have applied for major permits or approvals or have otherwise begun the regulatory filings will be preferentially evaluated. Proposals that have a more advanced interconnection status or that have progressed detailed interconnection studies will be preferentially evaluated.

4.3.9 Community Engagement

The public and local governments play an important role in the process of evaluating and advancing renewable energy project siting in New York State, and in shaping developments that may be permitted in their communities. Proposers are responsible for planning and implementing a Community Engagement Plan that supports an open and inclusive public process and encourages feedback throughout the development and construction of the proposed Bid Facility. An effective Community Engagement Plan reflects an understanding of local interests and concerns, provides accessible and regularly timed public education opportunities, demonstrates a commitment to partnering with the elected officials in proposed host communities, respectfully responds to opposition, and elicits input from the public and affected agencies.

Prior to and following the submission of Step Two Bid Proposals, NYSDERDA's Clean Energy Siting team may contact or schedule and meet with local officials in the proposed host communities, in person and/or via teleconference. These meetings may be conducted without Proposer participation, but NYSDERDA will endeavor to notify the Proposer regarding the schedule for such meetings and provide a brief synopsis of such meetings after they conclude. NYSDERDA intends to share the submitted Attachment B. Public Release of Bid Facility Information and Community Engagement Plan with local officials interested in learning more about the project's development.

Submission Requirements: All Proposers will be required to complete and submit the Attachment B. Public Release of Bid Facility Information and Community Engagement Plan, which is to be published on NYSDERDA's website following submission of Step Two Bid Proposals. A blank version of Attachment B is available for download from the RES Solicitations webpage and the solicitation website.

Attachment B should include a description of the project as well as existing and planned engagement activities associated with the Bid Facility as described below:

- 1) Provide a general description of the project, including, but not limited to, technology characteristics, project location, project timing, approximate acreage, types of land being used/converted, any planned agrivoltaics components, overall local economic impact, etc.
- 2) Identify the Authority Having Jurisdiction (AHJ) and taxing School District, including local elected officials' names, titles, contact information and tenure, restricted to primary executive (e.g., Town Supervisor, City/Village Mayor), Planning Board Chair, Zoning Board Chair, Code Enforcement Officer, and Town Clerk.
- 3) Detail local outreach strategies, engagement activities, and public events the Proposer has implemented to date to engage stakeholders and interested parties, including affected agencies, and to encourage public involvement.
- 4) Detail planned local outreach strategies, engagement activities, and public events the Proposer will implement throughout the pre-award, development, construction, and operation phases (consistent with the Project Milestone Schedule), including methods of communication and specific channels the Proposer intends to use to disseminate Bid Facility information. Include planned frequency of public events and the anticipated duration, in years, of the public engagement events of community outreach, and strategies to ensure that public engagement events are widely attended by a representative cross section of host community residents.
- 5) Description of benefits to Disadvantaged Communities that would be realized with the development and construction of the Bid Facility, as applicable to Climate Act goals.

- 6) Details of the direct benefits to the community the Proposer will advance, which may include a local ownership stake in the facility, reduced energy bills for those with homes or businesses in the Bid Facility's vicinity, and/or other direct benefits.
- 7) Details on past or planned engagement regarding payments in lieu of taxes (PILOT) agreements or host community agreements (HCAs).
- 8) Describe local interests and concerns, including identifying plans to thoughtfully build support for the Bid Facility and respectfully respond to any opposition to the Bid Facility. Identify strategies the Proposer will use to mitigate concerns raised by the public regarding the Bid Facility. This may include visibility and viewshed impact mitigation efforts, accommodations to co-locate agricultural activities, or other issues of importance to the host communities. Include specific details on past or planned engagement with neighboring, non-participating landowners that may be impacted by the project, and anticipated steps (e.g., good neighbor agreements) that will be taken to address their concerns, if any.
- 9) Method for soliciting feedback and input from the public and affected agencies and the process for sharing feedback and responses publicly.

Minimum Threshold: The Proposer must complete and submit the Attachment B. Public Release of Bid Facility Information and Community Engagement Plan and provide documentation in the Step Two Bid Proposal that it has been in contact with the host AHJ(s) regarding the proposed Bid Facility and has informed the AHJ(s) local elected officials about the Bid Facility's participation in RESRFP25-1.

Documentation can include, but is not limited to:

- Correspondence between the Proposer and host AHJ(s);
- Communications with local elected and/or administrative officials.

Documentation provided by the Proposer must definitively demonstrate that the Proposer is communicating with the host AHJ(s) regarding the proposed Bid Facility. Proposers are encouraged to submit as much documentation as available to fulfill this eligibility requirement and are encouraged to work with all applicable stakeholders at the local level.

In the event of an election/retirement/other change of position within the Host Community or the AHJ, Proposers are responsible for informing current and subsequent local officials in a timely manner. NYSERDA may request written verification from a Proposer that the current local official(s) is aware of the project's participation in this solicitation should an election or other change of position occur within a Host Community or AHJ relevant to the Bid Proposal. Proposers will also be responsible for submitting a complete Community Engagement Plan as described above to be publicly posted following the receipt of Step Two Bid Proposal packages.

The Proposer must also provide documentation that it has conducted at least one public meeting for community members who may be impacted by the siting of the facility. Documentation can include, but is not limited to:

- Public records of Town/Planning/Zoning Board meeting minutes and/or presentations;
- Copies of transcripts (if any), presentation materials, and a summary of questions/issues raised and responses provided during the pre-application meeting(s).

In the event the Proposer is unable to secure a meeting with community members, the Bid Proposal shall contain a detailed explanation of all of the Proposer's best efforts and reasonable attempts to secure such a meeting, including, but not limited to, all written communications between the Proposer and the municipality and/or community groups.

4.3.10 Resource Assessment and Energy Production Estimate

Submission Requirements: The Proposer must provide a Resource Assessment and Energy Production Estimate that responds to all required information identified in Appendix 1. Resource Assessment and Energy Production Estimate Requirements. The Proposer must also provide a narrative description of any assumed level of curtailment built into the resource assessment and any projected impacts on the Bid Facility's energy and/or capacity deliverability. The Proposer will be required to detail the full extent of the curtailment assessments performed to demonstrate the deliverability of the Bid Facility and clarify explicitly what the curtailment and degradation assumptions are for the equipment proposed for the Bid Facility.

Detailed instructions regarding the supporting documentation required to meet the Minimum Threshold Requirements for a Resource Assessment and Energy Production Estimates, by technology, are provided in Appendix 1.

Minimum Threshold: Proposers are required to provide a Resource Assessment and an Energy Production Estimate for the Bid Facility. The Resource Assessment must approximate the renewable resource typically available on an annual basis to power the Bid Facility. The Energy Production Estimate must estimate the Bid Facility's ability to convert the renewable resource to electric power at the P(50)⁶² level. Detailed technology-specific requirements and evaluation criteria for the Resource Assessment and Energy Production Estimate are presented in Appendix 1.

The Resource Assessment and Energy Production Estimate must be consistent with and representative of the Bid Facility, long-term conditions at the site, and if applicable, Co-located Storage Facility, as proposed to NYSERDA. The Bid Quantity may not exceed the P(50) long-term Energy Production Estimate. The Resource Assessment and Energy Production Estimate must detail the full extent of the curtailment assessments performed to demonstrate the deliverability of the Bid Facility and clarify explicitly what the degradation assumptions are for the equipment proposed for the Bid Facility. System loss factors must be detailed, and include auxiliary and parasitic loss, availability loss, curtailment, and operational loss due to Utility or Transmission Operator requirements (e.g., deliverability limitations, VAR/Power Factor support, or other losses) and grid-mandated curtailments due to congestion or emergency. To the extent possible, incorporate into the Resource Assessment and Energy Production Estimate the effects of climate change impacts projected to occur within the Bid Facility's useful life, and any efforts undertaken to ensure the generation over the useful life of the Bid Facility will be maintained despite potential climate change impacts. If applicable, the expected efficiency as a result of bifacial panels must be detailed. For Eligible Upgrades, provision of the Resource Assessment and Energy

⁶² P(50) represents a level of resource projection or production estimate with a 50% likelihood of being exceeded in any future year. The P(50) value shall be the expected value (*i.e.*, the mean) based on the Proposer's Resource Assessment diligence in accordance with the minimum requirements listed in the section herein for the respective renewable technology.

Production Estimate submitted to obtain a PsoQ or SoQ and the associated Tier 1 certification is sufficient to meet the minimum requirements outlined in Appendix 1 based on the resource type.

4.3.11 Carbon Emissions and Embodied Carbon

Submission Requirements: The Proposer should describe the efforts that have or can be undertaken to understand the “embodied carbon” impact of renewable development and minimize the Bid Facility’s embodied carbon intensity. To the extent discernable at the current stage of development, Proposers should describe and explain the anticipated carbon intensity in Bid Facility design, sourcing, construction, operation, and maintenance.

Minimum Threshold: Proposers must describe how the Bid Facility will actively support the outcomes envisioned by the Climate Act, including a description of the efforts that have or can be undertaken, including any tools or methodologies used, to better understand and consider carbon intensity in design, sourcing and construction, and the steps that have been taken to minimize carbon emissions, including embodied carbon, from the Bid Facility. To the extent discernable at the current stage of development, Proposers should describe and explain the anticipated carbon intensity in Bid Facility design, sourcing, construction, operation, and maintenance.

The Proposer should also propose the methodology by which such reduction activities will be considered and integrated into the Bid Facility’s design as the project evolves. Proposers should describe and explain the proposed process by which the Proposer will account for embodied carbon on an ongoing basis through development, construction, and operation of the Bid Facility. This could include the sourcing and manufacturing of primary components such as modules, inverters, turbines, towers, other prime movers, cables, substations, energy storage facilities, and other electric equipment, but should also consider associated activities such as construction, Operation & Maintenance (O&M), and decommissioning. This could also include opportunities to support project component equipment recycling and/or carbon mitigation efforts in collaboration with New York State manufacturing sources.

The evaluation will not consider avoided emissions associated with the Bid Facility itself.

4.3.12 Climate Resiliency

Submission Requirements: The Proposer should identify potential climate risks to the Bid Facility, adaptation and resilience measures that will be incorporated to mitigate risk, and the potential for climate risks to impact the Bid Facility’s performance over its useful life.

Describe the efforts that have or can be undertaken to understand the climate resiliency of the Bid Facility and minimize the Bid Facility’s risk of being impacted by climate impacts.

Minimum Threshold: The Proposer must identify the Bid Facility’s climate hazard exposure over the Facility’s full useful life. This includes evaluating the climate risk of the project under both current climate conditions and projected future conditions due to climate change for the following hazards: coastal, riverine, and stormwater flooding, sea level rise, extreme heat and extreme cold events, increased average temperatures, and extreme storms (hurricanes, nor’easters, etc.) at a minimum. Proposers shall include the results of this hazard screening in the Bid Facility submission. Proposers shall include a site map illustrating the results of this exposure screening with an indication of proposed asset locations within the site.

Proposers are encouraged to utilize existing public datasets to understand current and future exposure, unless more comprehensive datasets are available, including the following:

- Coastal and Riverine Flooding: [FEMA National Flood Hazard Maps](#)
 - For NYC Projects: [NYC Flood Hazard Mapper](#) (suggested exposure layer “Future Floodplain 2050s”)
- Stormwater Flooding (for NYC locations): [NYC Stormwater Flood Maps](#) (suggested exposure layer “Extreme Flood with 2080 Sea Level Rise”)
- Sea Level Rise: [NYSERDA Sea Level Rise Viewer](#) (suggested exposure adjustment to 24” of sea level rise, recurrence interval 10 years)
 - For NYC Projects: [NYC Flood Hazard Mapper](#) (suggested exposure layer “High Tide 2050s”)
- Extreme Heat: [NYS Department of Health Heat Vulnerability Index](#)
 - For NYC Projects: [NYC Heat Vulnerability Index](#)
- Extreme Wind: [ASCE Hazard Tool](#) (suggested exposure ‘risk category II’, load type ‘wind’)
- NYS climate projections and impacts by region: [NYS Climate Impacts Assessment](#)

Should climate hazard exposure be identified, the Proposer shall explain how climate resiliency measures have been incorporated into the design of the Bid Facility and how these hazards could impact the reliability and performance of the Bid Facility. In addressing these points, the Proposer shall address:

- Reliability (the extent to which the system provides outputs and avoids temporary disruptions): The Proposer must explain how climate change adaptation and resilience is incorporated into the Bid Facility’s siting, design, technology selection, construction, and operation and the specific measures incorporated to mitigate risk. Proposers should show how they have avoided siting projects in current or future floodplains; if alternative siting is not possible, Proposers should show how they have designed the project with flood protection using climate-informed standards. Proposers should also show how they have avoided siting the Bid Facility in areas expected to experience regular tidal inundation due to sea level rise over the course of their useful life.
- Performance (the ability of the system to provide expected output of energy over its useful life): The Proposer will identify anticipated impact, if any, on the Bid Facility’s performance (energy output) that may result from climate impacts projected to occur within the Bid Facility’s useful life (for example, potential reduction in solar efficiency during anticipated increased number of heat waves and higher ambient temperatures in 2040). Proposers will demonstrate how the Bid Facility will maintain expected performance over the full useful life and identify, as needed, the design or operational measures incorporated beyond current codes and standards to achieve this performance.

If awarded, the Seller will be required to provide a Climate Resiliency Plan as further described in Section 6.08 of the Agreement.

4.3.13 Energy Storage

Submission Requirements: Proposers submitting an Alternate Co-located Storage Bid Proposal are required to indicate this in the Step One Application and complete a Step Two Bid Proposal for the Bid Facility with and without an Energy Storage Component.

Minimum Threshold (Applicable only to Alternate Bid Proposals Including Energy Storage Components):

- The Proposer must have at least an executed exclusivity agreement or letter of intent with the Co-located Storage Facility site owner(s). The full site needed for the Energy Storage Component must be covered by the exclusivity agreement(s) and/or letter(s) of intent.
- The Proposer must demonstrate that at least one team member or partner has experience in developing at least one energy storage system of similar or larger scale using the same technology as proposed. An explanation of this experience should be included in the Attachment F. Minimum Thresholds Narrative. To qualify, the previously developed energy storage facility does not yet need to be in commercial operation to meet this Minimum Threshold Requirement.
- The Proposer must have provided evidence that the Energy Storage Component is an active project undergoing the Phase 2 Study of the 2024 NYISO Cluster Study, either as part of the proposed Co-located Storage Facility or with a separate queue position specific to the Energy Storage Component. If the Cluster Study is not applicable, the Energy Storage Component may also meet this requirement through the relevant utility interconnection process. For Bid Facilities that are modifying an existing Interconnection Agreement, evidence of a Modification Request that has been deemed non-material by NYISO is sufficient to meet this eligibility requirement.
- In the Financing Plan, Proposers submitting a Co-located Storage Facility must separately declare whether and to what extent they intend to utilize the ITC for the Energy Storage Component.
- Co-located Storage Facilities shall include a P(50) Energy Production Estimate that considers the Energy Storage Component for the Bid Facility, including anticipated losses resulting from the addition of the Energy Storage Component. Co-located Storage Facilities with solar must specify if the Energy Storage Component is AC or DC coupled. Proposers will also be required to explain if and how their P(50) Energy Production Estimate differs from their generator-only bid.
 - The Energy Storage Component must be addressed in the carbon accounting and minimization plan and Climate Resiliency Plan to the extent possible. Co-located Storage Facilities may directly displace carbon emissions if sited in strategic grid locations which facilitate offsetting fossil fuel generation in downstate New York.

Non-Price Evaluation Criteria: In this category, the TEP will evaluate and award points to Bid Proposals based on the benefits afforded to the electric grid by the Co-located Storage Facility. Proposals are eligible for full points in this category if the Bid Storage Capacity (MWh) of the Energy Storage Component is equal to or greater than the Bid Facility Nameplate Capacity (MW). For example, a 25MW 4-hour battery Energy Storage Component (100MWh) paired with a 100MW renewable generator would receive full points in this category. Energy Storage Components with a Bid Storage Capacity that is not at least equal to the Bid Facility Nameplate Capacity will receive points as a ratio of the Bid Storage Capacity (MWh) to the generator's Nameplate Capacity (MW).

If a Bid Facility does not receive full points based on the size of the Energy Storage Component, the Bid Facility can still receive preferential evaluation through the evaluation of the benefits afforded by energy storage facilities to transmission-constrained areas of the state's electric grid. Bid Proposals that can be demonstrated to serve acute congestion and/or deliverability needs will receive more preferential evaluation by the TEP than Bid Proposals that do not afford similar benefits to the electric grid.

All Proposers are encouraged to explore the feasibility of pairing their Tier 1 Bid Facility with a Co-located Storage Facility. Co-located Storage Facilities located in NYISO Zones G,H,I, J, and K will be given

the greatest weighting increase due to the disproportionate presence of existing generators in disadvantaged communities in these regions and in accord with the June 2024 Public Service Commission Order on Energy Storage⁶³. Co-located Storage Facilities that are strategically sited to alleviate congestion or transmission bottlenecks are preferred and will receive greater weighting. Proposers should also consider the potential grid reliability implications of the energy storage siting and avoid adverse reliability impacts.

The TEP may also consider the potential benefits to deliverability that are afforded by repurposing existing or retired fossil fuel facilities. Proposers that can demonstrate material energy deliverability benefits as a result of interconnecting the Co-located Storage Facility at an existing or retired fossil fuel facility may be eligible for additional points in the evaluation of Energy Deliverability.

4.3.14 Non-Viability Determination

The CES Modification Order authorizes NYSERDA to reject a Bid Proposal based upon a unanimous determination by the TEP that the project is not presently viable. NYSERDA may seek additional information from any Proposers deemed to have submitted a non-viable Bid Proposal prior to removing the Bid Proposal for consideration. If NYSERDA raises a potential non-viability concern for a Bid Facility, the Proposer will be given the opportunity to respond. The time to respond will depend on the nature of the potential non-viability determination but will not be less than five business days.

If a Bid Proposal is rejected based on the evaluation of viability, NYSERDA will notify the Proposer of the determination and provide an explanation following the submission of the Step Two Bid Proposal and the receipt of responses to any clarifying questions. Proposers with Bid Proposals that are rejected in this manner will remain eligible to re-apply in future RES solicitations and will be evaluated again without prejudice. Reasons for a determination of non-viability may include:

- 1) The Bid Proposal is immature to such an extent that it would be impossible to ascertain whether it is viable;
- 2) The Bid Proposal is predicated on unrealistic economic or regulatory assumptions; or
- 3) The Bid Proposal is subject to serious economic, permitting and/or regulatory risks without a sufficient mitigation plan.

Examples of why a Bid Proposal could be determined to be non-viable include, but are not limited to, failing to meet one or more Minimum Threshold Requirements, a Bid Facility with a Bid Price that is determined to be insufficient to cover project costs, an unfounded interconnection or permitting mitigation cost estimate and/or a materially high risk of not receiving permits due to the Bid Facility's site impact on natural resources.

Non-viability determinations will only be recommended for a clear, objective case that the Bid Facility is non-viable based upon the consensus of NYSERDA, TEP, and, if applicable, Specialist Reviewers' assessment of the Bid Facility.

⁶³ <https://documents.dps.ny.gov/public/Common/ViewDoc.aspx?DocRefId=%7bf0ED3690-0000-CF12-BE4A-5B1CED3FF31F%7d>

5 PRICE EVALUATION & BID PRICE STRUCTURE

5.1 REC Pricing

Each Step Two Bid Proposal must conform to either the Index REC or Fixed REC pricing structure. Offer prices for each Bid Proposal are all-inclusive; that is, for all components of the Bid Facility.

For both forms of pricing, only level nominal dollar pricing will be accepted. Proposals will be accepted with Contract Tenors of a minimum of one year and a maximum of the Bid Facility's Maximum Contract Tenor, determined by the Bid Facility's technology and vintage.⁶⁴

While all Bid Proposals must employ a single pricing structure, Bid Proposals are permitted to employ a different pricing structure for a materially different Bid Proposal. For example, if a Proposer submits a Bid Proposal for a Bid Facility of a certain Bid Capacity and a Bid Proposal for the same Bid Facility with a different Bid Capacity, the two Step Two Bid Proposals may employ different pricing structures, either fixed or index.

NYSDA cannot adjust the binding Fixed or Index REC Bid Price submitted by awarded Proposers. Bid Proposals should be appropriately priced to reflect all interconnection and transmission upgrade costs required to ensure energy dispatch that is consistent with the Bid Proposal's proposed generation output profile, including transmission and/or distribution network upgrades that may need to occur beyond the point of interconnection.

5.1.1 Fixed REC Pricing

Under the Fixed REC pricing, the Monthly REC Price is equal to the Fixed REC Price.

$$\text{Monthly REC Price} = p^{\text{Fixed}}$$

where:

$$p^{\text{Fixed}} = \text{Fixed REC Price (\$/MWh)}$$

Each month's Fixed REC Price shall be as offered in the Bid Proposal for the relevant Contract Year, with the same Fixed REC Price applied for all months within the Contract Year. The Fixed REC Price shall also be the same for all Contract Years.

5.1.2 Index REC Pricing

Under the Index REC pricing, the Monthly REC Price varies monthly during the Contract Delivery Term and is calculated:

$$\text{Monthly REC Price} = SP^{\text{Index}} - REP - RCP$$

where:

⁶⁴ See Section 3.4.

SP^{Index} = Index REC Strike Price (\$/MWh)

REP = Reference Energy Price (\$/MWh)

RCP = Reference Capacity Price (\$/MWh)

Each month's Index REC Strike Price shall be as offered in the Bid Proposal for the relevant Contract Year, with the same Index REC Strike Price applied for every month of the Contract Tenor.

For Bid Facilities in New York State, each month's Reference Energy Price shall be a simple average of the hourly NYISO Day-Ahead Market (DAM) locational based marginal pricing (LBMP) for the NYISO Zone in which the Bid Facility's Delivery Point is physically located.⁶⁵ For Bid Facilities in external control areas, each month's Reference Energy Price shall be a simple average of the hourly NYISO Day-Ahead Market (DAM) locational based marginal pricing (LBMP) for the Proposer-identified NYISO Zone into which the Bid Facility will be injecting energy.

Each month's Reference Capacity Price will be based on the conversion of a Reference Unforced Capacity (UCAP) Price, equal to the spot auction price in \$/kW-month for the NYISO Zone in which the Bid Facility is located as published by the NYISO.⁶⁶ For Bid Facilities in external control areas, each month's Reference Capacity Price will be based on the conversion of a Reference Unforced Capacity (UCAP) Price, equal to the spot auction price in \$/kW-month for the Proposer-identified NYISO Zone into which the Bid Facility will be injecting energy.

The Reference Capacity Price is converted to its \$/MWh equivalent through the following equation:

$$RCP = \frac{RUP \times IC \times 1,000 \times CAF}{\text{Total RECs} \times BQP}$$

where:

RUP = Reference UCAP Price (\$/kW-month) as described above

IC = Installed Capacity (MW)

⁶⁵ Historical daily NYISO DAM LBMPs can be downloaded from the NYISO website at <http://mis.nyiso.com/public/> or <https://www.nyiso.com/custom-reports>.

⁶⁶ Historical monthly capacity spot auction prices can be downloaded from the NYISO website at http://icap.nyiso.com/ucap/public/auc_view_spot_detail.do or <https://www.nyiso.com/installed-capacity-market>. NYISO UCAP prices are not reported by Zone, but instead by capacity locality. Capacity localities include New York Control Area (NYCA), Southeast New York (or the G-J Locality), New York City (NYC) and Long Island (LI). Nested capacity localities, for example, New York City inside the G-J Locality, can have the same or a higher price as the capacity locality they are located within. For Zones A through F, refer to the NYCA UCAP price. For Zones G through I refer to the G-J Locality UCAP price. For Zone J, refer to the NYC UCAP price. For Zone K, refer to the LI UCAP price.

Total RECs = Total amount of Tier-1 RECs produced by the Bid Facility in the subject month

BQP = Bid Quantity Percentage

1,000 = kW to MW conversion factor

CAF = Capacity Accreditation Factor⁶⁷

5.2 Bid Proposals Price Adjustments

5.2.1 Component Cost Indices Adjustment (CCIA)

For Alternate Bid Proposals in which Proposers opt to include a CCIA, the Index REC Strike Price or Fixed REC Price will be adjusted to reflect changes in pre-determined price or indices between the Bid Proposal Submission Deadline and the Full Notice to Proceed (FNTF) with construction related to the Bid Facility. The REC_{adj} value will be subject to a 12% cap and floor, meaning that CCIA-adjusted Bid Prices will be adjusted up to 12% greater than the original Bid Price and will not be adjusted downwards more than 12% below the original Bid Price. The 12% cap and floor are intended to protect ratepayers and developers from excessive component cost volatility. Solar Bid Facilities with co-located storage would be considered separate technologies from standalone solar projects, in keeping with the Biennial Review Order, and the CCIA formula for “Other Technology Bid Facilities” seen below would apply to those projects.

This adjustment for different Tier 1 eligible technologies will be governed by the formulas and indices indicated below, which will be memorialized in Exhibit L of the Agreement. The Index REC Strike Price or Fixed REC Price for the CCIA Alternate Bid Proposal will be calculated as set out further below.

For each of the technology-specific formulas below:

REC_{adj} is the Index REC Strike Price or Fixed REC Price after indices adjustment

REC_{bid} is the Index REC Strike Price or Fixed REC Price as submitted with the Bid Proposal

$Index_B$ is the value of each index established and published by NYSDA prior to the Bid Proposal Submission Deadline, calculated as the average of the last six months or two quarters of published data available prior to the Bid Proposal Submission Deadline

$Index_T$ is the value of each index established at the date of Full Notice to Proceed (FNTF)⁶⁸, calculated as the average of the monthly or quarterly values for the six-month period preceding FNTF for a Bid Facility

⁶⁷ Capacity Accreditation Resource Class. For Incremental Upgrade Bid Facilities and Repowering Bid Facilities, the total amount of Tier-1 RECs produced by the Bid Facility, as used in this instance, is adjusted to reflect the Actual Eligible Production.

⁶⁸ An unequivocal authorization from the Seller, or its representative, to its general contractor (or in the event that there is no general contractor to all material third party contractors) to construct the entire Project (at a minimum

The Index REC Strike Price or Fixed REC Price for the Inflation Adjusted Bid Proposal will be calculated as:

Solar PV Bid Facilities:

$$REC_{adj} = REC_{bid} \times \left[0.60 \times \left(0.40 \times \frac{Index_{T,Module}}{Index_{B,Module}} + 0.17 \times \frac{Index_{T,EPSTM}}{Index_{B,EPSTM}} + 0.20 \times \frac{Index_{T,Steel}}{Index_{B,Steel}} + 0.23 \times \frac{Index_{T,Construction}}{Index_{B,Construction}} \right) + 0.20 \times \left(\frac{Index_{T,CPI}}{Index_{B,CPI}} \right) + 0.20 \times (Fixed) \right]$$

5.3 Qualifying Governmental Support⁶⁹

For all Proposals, the Index Strike Price or Fixed REC Price will be adjusted to account for Project Qualifying Governmental Support arising from a statute enacted after the Step Two Bid Proposal and received by the awarded project, as described in Section 5.05 of the Agreement.

Terms not defined below shall have the meaning ascribed to them in the Agreement.

The reduction to the Index Strike Price or the Fixed Index Price will be calculated as follows:

$$\begin{aligned} \text{QGSPR} &= \text{Qualifying Governmental Support Price Reduction (Nominal \$/MWh)} \\ &= \frac{QGSA \times NS \times RF(NDR, CT_{YR})}{\text{Bid Quantity}} \end{aligned}$$

⁶⁹ The “Qualifying Governmental Support” mechanic may be further adjusted to include other types of governmental funding. Any changes advanced in RESRFP25-1 and the Agreement will be communicated to prospective Proposers in advance of the Step Two Bid Proposal submission deadline.

QGSA	= Qualifying Governmental Support Amount (Nominal \$)
NS	= NYSERDA Share (via the QGSPR) of Qualifying Governmental Support Amount, as set forth in Schedule 4 and Section 5.05 of the Agreement
RF(NDR,CT _{YR})	= Annuity factor using the NDR (7.46%) for the number of full Contract Years remaining in the Contract Delivery Term, as noted in Section 5.05 of the Agreement

5.4 Settlement Mechanism

NYSERDA will calculate the Reference Energy Price and Reference Capacity Price for each month according to the calculation outlined in the Agreement. The Monthly REC Price will be calculated during a settlement period following the conclusion of each month. Proposers should reference Article IV. Pricing and Payment of the RESRFP25-1 Standard Form Agreement for the full settlement mechanism.

5.5 Bid Price Evaluation

A quantitative method will be applied to all bids in order to screen and rank the Bid Proposals using a uniform cost metric. For evaluation purposes, bid prices will be converted to a Levelized Net REC Cost (LNRC) in base year \$/MWh for both the Fixed REC Price and Index REC Strike Price bids. The LNRC price measure allows for an equitable comparison among Proposals with different pricing structures, REC quantities, and Contract Tenors. Strike prices will be converted into expected annual REC values by subtracting a forecast of expected Reference Energy Prices and Reference Capacity Prices from the strike prices, based on NYSERDA's forecasts of energy and capacity prices. Neither the price forecasts nor details of the modeling procedures will be disclosed to Proposers.

For evaluation purposes, regardless of the proposed Commercial Operation Date, Bid Proposals for all Bid Facilities, regardless of operational status, will be evaluated with a Contract Delivery Term commencement month of November 2028 therefore a CDT_p of November 2028.

The LNRC for Proposal p using pricing form f is the quotient of the cumulative present value of the annual net REC costs over the proposed Contract Tenor, divided by the cumulative present value of the projected annual number of RECs produced from Actual Eligible Production multiplied by the Bid Quantity Percentage over the same period. The annual quantities are discounted at a real discount rate. The resulting quotient is expressed in base year dollars per REC or MWh.

$$LNRC_{p,f} = PVNRC_{p,f} / PVRQ_p$$

where:

$PVNRC_{p,Fixed}$ = PV of Net REC Cost for Proposal p , pricing form Fixed (\$ PV)

$$= \sum_{y=CDT_p}^{y=CDT_p+CT_p} \left\{ \sum_{m=1}^{m=12} P_{p,m,y}^{Fixed} \times RQ_{p,m,y} \times BQP_p \right\} \div (1 + NDR)^{(y-Y_b)}$$

$PVNRC_{p,Index}$ = PV of Net REC Cost for Proposal p , pricing form Index (\$ PV)

$$= \sum_{y=CDT_p}^{y=CDT_p+CT_p} \left\{ \sum_{m=1}^{m=12} (SP_{p,m,y}^{Index} - RPE_{m,y}^{Pred} - RPC_{m,y}^{Pred}) \times RQ_{p,m,y} \times BQP_p \right\} \div (1 + NDR)^{(y-Y_b)}$$

$PVRQ_p$ = PV of REC delivery quantities for Proposal p (MWh)

$$= \sum_{y=CDT_p}^{y=CDT_p+CT_p} \left\{ \sum_{m=1}^{m=12} RQ_{p,m,y} \times BQP_p \right\} \div (1 + RDR)^{(y-Y_b)}$$

$RQ_{p,m,y}$ = REC delivery quantity for Proposal p applicable to month m of calendar year y (REC or MWh), as provided in Attachment E – P(50) 8760 Template

$RPE_{m,y}^{Pred}$ = Predicted Reference Energy Price index for month m in calendar year y (nominal \$/MWh)

$RPC_{m,y}^{Pred}$ = Predicted Reference Capacity Price index for month m in calendar year y (nominal \$/MWh)

BQP_p = Bid Quantity Percentage for Proposal p

CDT_p = Calendar month associated with the expected Contract Delivery Term commencement date for Proposal p

CT_p = Contract Tenor for Proposal p

NDR = Nominal Discount Rate (decimal)

INF = Inflation Rate (decimal)

$RDR = (1 + NDR) / (1 + INF) - 1$ = Real Discount Rate

Y_b = Base year for cost and PV

A nominal discount rate of 7.46% per year and a long-term inflation rate assumption of 2.31% per year will be used in the LNRC calculation procedure.⁷⁰

For the Index REC form of pricing, strike prices will be converted into expected annual REC values by subtracting a forecast of expected Reference Energy Prices and Reference Capacity Prices from the strike prices, based on NYSEDA's forecasts of energy and capacity prices. Neither the price forecasts nor details of the modeling procedures will be disclosed to Proposers.

For evaluation of Alternate Bid Proposals that include Inflation Adjustment, a multiplier representing NYSEDA's expectation of the inflation for the identified indices between the Bid Proposal Submission Deadline and the estimated date of Notice to Proceed for a Bid Facility with a CDT_p of 2030 will be

⁷⁰ The discount rate (DISCO Discount Rate or DDR) and inflation rate for Bid Price evaluation were established by the DPS Office of Accounting, Audits & Finance, revised February 27, 2025.

applied to the Index REC Strike Price or Fixed REC Price to determine the total price used in the evaluation.

5.6 Bid Price Scoring

For purposes of cost containment, Benchmark LNRCs will be derived for both the Index REC and the Fixed REC. Proposals that exceed the applicable Benchmark LNRC will be ineligible for further consideration for award in the solicitation. Use of the Benchmark LNRCs will support a reasonable balance between encouraging investment in new renewable projects and protecting ratepayer interests from the incurrence of any deadweight costs associated with accepting a Proposal at any price.

All bids, including both Index REC bids and Fixed REC bids, will be sorted in ascending order per LNRC. The lowest bid per the LNRC will receive the maximum points available for the Bid Price component (70 points). NYSERDA will implement a method designed to cause the scores of higher LNRCs to be sufficiently dispersed such that the final score aggregating Bid Price, Project Viability and OpFlex, and Incremental Economic Benefits retains the intended scoring emphasis on the LNRC to a reasonable extent.

6 PRELIMINARY RANKING, PORTFOLIO EVALUATION, AND INITIAL AWARD GROUP

6.1 Preliminary Rank Order

A preliminary final ranking of Bid Proposals will be established based on the sum of the consensus TEP scores for each non-price category (Project Viability & OpFlex and Incremental Economic Benefits), and the points awarded for the Levelized Net REC Cost as a result of the Bid Price evaluation.

6.2 Portfolio Risk Factors

Following the development of the preliminary rank order, NYSERDA may recommend modifying the initial award group, in consultation with DPS, to make adjustments to the final recommended award group. NYSERDA may consult with subject matter experts, including DPS Staff, the NYISO, and the distribution utilities to assess the portfolio of received bids to inform the potential employment of a Portfolio Risk Factor(s).

NYSERDA, in consultation with DPS, may recommend adjustments to the initial award group to (1) remove Bid Proposals from the initial award group to avoid material risks to the portfolio (as described in factors 1-7 below), and/or (2) add Bid Proposals to the initial award group that provide material benefits to the portfolio (as described in factors 1-7 below). Any additions will be made in accordance with the order of the initial preliminary ranking. NYSERDA, in consultation with DPS, may make such adjustments if the adjustments result in:

- 1) **Geographic Diversity:** A decrease in a heavy concentration of renewable generation in a location within the award group and/or among previously contracted projects;
- 2) **Deliverability:** A portfolio that results in lesser estimated levels of physical curtailment to itself and/or the existing portfolio of contracted renewable projects to New York State and/or to other proposed RESRFP25-1 awardees, and/or that includes projects/project configurations that reduce incremental curtailment and/or electric systemwide production costs;
- 3) **Portfolio Viability:** A portfolio that results in materially lesser risk of project attrition that includes projects/project configurations with low permitting feasibility risk;
- 4) **Portfolio Maturity:** A portfolio that results in a materially more mature award group that consists of late-stage, construction-ready projects;
- 5) **Diversity of Resources:** Any eligible technology will comprise no more than 80% of the award group on an annual generation basis;⁷¹
- 6) **Diversity of Owners:** Any owner or affiliate of an owner will comprise no more than 80% of the award group on an annual generation basis; and
- 7) **Developer Limitation:** A specific project owner will be awarded no more than five times the renewable capacity of the largest project that the owner has successfully brought to commercial operation in the past.

These modifications may be made if comparable projects based on price and non-price factors are available in the preliminary ranking of Bid Proposals and material benefits or avoidance of material risks

⁷¹ Per the Biennial Review Order, projects paired with energy storage will be assessed as a different technology than a stand-alone renewable generation Bid Facility for purposes of applying this Diversity of Resources Portfolio Risk Factor.

to the initial award group are identified. If considering whether to apply any of the limits, NYSERDA and DPS will consider the potential cost impact of such decision (relative to the generation portfolio that otherwise would have been selected), only exercising such a limit should the impact on the generation-weighted average cost of the portfolio increase by less than 10% with the application of the portfolio limits.

6.3 Initial and Final Award Group

After determining whether any of the Portfolio Risk Factors should be employed to modify the final rank order, NYSERDA and DPS will arrive at an initial award group. NYSERDA and DPS also reserve the right to expand the initial award group to advance awards for Bid Facilities ranked below those Bid Facilities offered an initial award. The submission of a Step Two Bid Proposal will constitute a binding offer to contract under the terms of the Agreement; such offer must remain open for a period of at least one hundred and eighty (180) days from the Step Two Bid Proposal deadline.

The number of Tier 1 RECs procured in the RESRFP25-1 solicitation is subject to NYSERDA's discretion and the review and approval of the Department of Public Service. NYSERDA reserves the right to reject or accept any or all bids. NYSERDA may consider information provided by a Proposer in response to requests for additional information in accordance with Section 9 or otherwise obtained by NYSERDA as to indictments, convictions, enforcement proceedings, investigations, and significant character or ethical questions in accepting or rejecting a bid. NYSERDA also reserves the right to solicit revised Bid Prices and/or to make counteroffers as it deems appropriate. Notification of a re-bid, counteroffer or selection will be made by voice communication and via the solicitation website to the Proposer's Project Sponsor(s). Proposer's Project Sponsor(s) must be authorized to respond and to commit to counteroffers on behalf of Proposer.

NYSERDA will then notify Proposers with Bid Facilities contained in the initial award group both by voice and written communication to Proposers' Project Sponsor(s) and Authorized Representative(s). Selection for an initial award does not give the Proposer any legal right or entitlement. Once selected for initial award, Proposers must negotiate a final version of the Agreement with NYSERDA (See Sections 7 and 8).

As mentioned in Section 4.1, Proposers will be required to execute a Non-Disclosure Agreement as part of the Step Two Bid Proposal. In accordance with the Non-Disclosure Agreement submitted by Proposers in the Step Two Bid Proposal, Proposers awarded a REC Agreement under RESRFP25-1 will be required to maintain the confidential nature of the award prior to the public announcement of the RESRFP25-1 final award group. The date upon which NYSERDA provides such written notification shall be the Award Notification Date. Once selected for an award, Proposers must execute a final version of the Agreement with NYSERDA as set out in Section 7.4- "Process for Agreement Finalization; Pre-Execution Contract Security Draw Conditions."

NYSERDA cannot adjust the Fixed or Index REC Bid Price, or other material/settlement-related terms submitted by Proposers following the notification of an award, either upon award or during the Contract Tenor, unless such adjustment is explicitly defined in the RESRFP25-1 Standard Form Agreement. (See Section 8.1 for further discussion of requests for material modifications to the Standard Form Agreement).

7 POST-AWARD AND CONTRACTING PROCESS

7.1 Award Notifications and Confidentiality

Following the distribution of initial award notifications, the Proposer shall not distribute any press release or contact the media or other members of the public until after the awarded Agreement is executed by both parties and NYSERDA publicly discloses the award. Proposers will be required to execute a Non-Disclosure Agreement as part of the Step Two Bid Proposal, as further described in Section 4.1, and will be required to adhere to the terms of this Agreement.

Once all provisional awards are confirmed by NYSERDA, NYSERDA will inform Proposers if they were not selected for award. Upon receipt of this notification, a Proposer may request to schedule a debrief on the selection process and the strengths and weaknesses of its Proposal by contacting res@nyserdera.ny.gov.

7.2 Provision of Contract Security

Unless otherwise agreed to by NYSERDA in writing, Contract Security in the amount of the product of the Bid Capacity (MWac) (or End of Useful Life Bid Capacity for Repowerings) and \$20,000 will be required within thirty (30) days of the Award Notification Date. NYSERDA accepts Contract Security in the form of cash, certified funds, or a Letter of Credit (LOC).

If contract security is not provided by this deadline and the deadline is not extended by NYSERDA (which NYSERDA does not intend to do except in extenuating circumstances or if the deadline is extended for all provisionally awarded Proposers), the award will be rescinded.

The criteria for accepting a LOC includes:

- 1) the issuing bank is an owner bank of The Clearing House,⁷² or
- 2) the issuing bank must have a credit rating of A or better by Standard and Poor's, A or better by Fitch, or A2 or better by Moody's; and
- 3) the issuing bank must be a United States bank, or a United States branch of a foreign bank, with a New York branch preferred.

NYSERDA has included a standard form of letter of credit in the Attachment A. RESRFP25-1 Standard Form Agreement. If the issuing bank seeks modification to these terms, NYSERDA recommends that a draft letter of credit should be sent to NYSERDA for review and consideration prior to issuance. **Please refer to Section 7.4 for more information regarding Contract Security draw conditions prior to execution of the Agreement.**

Contract security provided pursuant to a prior NYSERDA Agreement and held by NYSERDA pursuant to a termination agreement entered into by the Proposer and NYSERDA ("Posted Contract Security") (such agreement hereafter referred to as the "Mutual Termination Agreement") will, as permitted by the terms of the Mutual Termination Agreement and in accordance with its terms, temporarily **not** be

⁷² Please see the owner bank membership for The Clearing House available from <https://www.theclearinghouse.org/about/owner-banks>

drawn by NYSERDA pending the outcome of RESRFP25-1. **Please refer to Section 2.1 for more information regarding the Mutual Termination Agreement.**

For greater clarity, if the same Bid Facility that was subject to the Mutual Termination Agreement and whose Posted Contract Security is held pending the outcome of RESRFP25-1 is awarded in the RESRFP25-1 solicitation, the Posted Contract Security will be **added** to the amount of contract security required to be posted in connection with the RESRFP25-1 award and will be drawable in accordance with the same terms and conditions that apply to such award (including the resulting Tier-1 REC agreement).

7.3 Designation of Seller, Changes of Control and Documents Required for Contracting Purposes

Awarded Proposers will be responsible for designating the legal entity that will serve as the Seller, which must be a subsidiary or affiliate of the Proposer unless otherwise agreed by NYSERDA. The Seller typically is the legal entity that owns the Bid Facility; if a Proposer wishes to designate a different legal entity as the Seller, Proposers should contact NYSERDA as early as feasible.

Any change in control of the Bid Facility that occurs prior to full execution of an awarded Agreement may affect evaluation including as described in Section 4.3.6, and accordingly, NYSERDA cannot guarantee that an initial award will remain valid if a change of control of the Bid Facility occurs prior to entry into the Agreement. After the Agreement with NYSERDA is executed, changes of control of the Seller will be governed by Article VIII of the Agreement.

NYSERDA requires the following documents from the Seller prior to contract execution:

- 1) Contracting Form, to be provided by NYSERDA to Seller, requesting information including Legal Business Name, State of Incorporation, Tax Identification Number (EIN), and other contractual information;
- 2) Pursuant to Tax Law Section 5-a, if not previously filed for the Seller, form Tax Law ST-220-TD is required. Please consult Publication 223, Questions and Answers Concerning Tax Law Section 5-1. If filing for the first time, please indicate the "Seller" under "Contractor name" on the form. This form is filed first with the NYS Tax Department and NYSERDA does not need a copy. If not previously filed for the Seller, a completed form Tax Law ST-220-CA. Sellers will file this form after filing the ST-220-TD form. On the ST-220-CA form, Sellers will indicate to NYSERDA that they have filed the ST-220-TD form or the Seller previously filed ST-220-TD with the Tax Department. As a reminder, please indicate the "Seller" under "Contractor name" on the form;
- 3) Certificate of Incorporation;
- 4) Operating agreement of Seller, together with any and all amendments thereto currently in effect;
- 5) Resolutions of Seller, authorizing and approving all matters in connection with the transactions contemplated in the conformed Agreement. NYSERDA does not have a preferred standard.
- 6) A certificate of an appropriate officer of the Seller, in form and substance certifying the names and signatures of the officers of the Seller authorized to sign any documents to be delivered to NYSERDA under the conformed RES Standard Form Agreement;
- 7) A certificate of good standing, dated as of the most recent practicable date prior to the Effective Date, issued by the jurisdiction of Seller's organization Secretary of State, confirming the corporate good standing of Seller;

- 8) Application for Authority, if applicable (if the Seller is a foreign business corporation that has not yet applied for authority to do business in the State of New York);⁷³
- 9) Updated EO 16 Certification and/or Vendor Responsibility Questionnaire, if applicable.

7.4 Process for Agreement Finalization; Pre-Execution Contract Security Draw Conditions

NYSERDA will provide a first draft of the Agreement populated with all Bid Facility-specific inputs other than (i) any of the items listed in Section 7.3 of the RFP that have not yet been provided by Proposer and (ii) if not yet available, Exhibits H and/or M (the “Conformed Draft”) reasonably promptly after provisional award. For further clarity, NYSERDA shall not be required to provide the Conformed Draft or to execute the Agreement prior to the deadline for provision of contract security.

For Proposers with multiple awards that share the same technology and vintage type, unless otherwise agreed to by NYSERDA, one Conformed Draft will be provided to the Seller along with Bid-Facility-specific Schedules 1 and 2 for each award, and, once the Agreement terms are finalized, that form Agreement will be used to populate the other awarded Agreements for the other awarded Bid Facilities of the same technology and vintage type.

Subject to the below terms and conditions, if the Seller fails to execute the Agreement on or prior to the date (“Execution Deadline”) that is 120 calendar days following the date on which NYSERDA provides the Conformed Draft to Proposer, the contract security will be forfeited to NYSERDA, the award will be rescinded, and the Bid Facility may not be eligible to participate in future NYSERDA Tier 1 solicitations.

NYSERDA will provide any and all remaining Bid Facility-specific inputs that are not included in the Conformed Draft no later than the date that is 30 calendar days following the date on which NYSERDA has received from Proposer all required contracting information described in Section 7.3 of the RFP. If NYSERDA fails to provide these inputs by such time, the Execution Deadline will be automatically extended day for day by the length of NYSERDA’s lateness.

NYSERDA and the Proposer will work together in good faith to expediently finalize the Agreement, making edits only to the extent reasonably necessary to clarify and properly implement the substance and intent of the RFP and form Agreement.

Neither NYSERDA nor Proposer is required to agree to material changes to the form Agreement. NYSERDA also does not intend to make **any** changes to certain sections of the Agreement, as noted in Section 8.1 of the RFP.

NYSERDA agrees to respond to any comments from the Seller within 15 business days of receipt, and to the extent NYSERDA exceeds this prescribed timing for response, the Execution Deadline will be extended day for day by the length of NYSERDA’s lateness.

Proposer is responsible for arranging any and all necessary approvals (e.g. board or investment committee approval) as necessary to meet the Execution Deadline.

⁷³ <https://dos.ny.gov/application-authority-foreign-business-corporation>

In the event that NYSERDA provides an execution version of the Agreement less than 10 business days prior to the Execution Deadline, the Execution Deadline will automatically be extended to the date that is 10 business days following the date that NYSERDA provides the Proposer with the execution version.

As stated in this Section 7.4 and as further noted in the Annex B Payment Certificate to the Irrevocable Standby Letter of Credit attached as Exhibit B to the RES Standard Form Agreement, NYSERDA will have the right to draw on the Contract Security if the Execution Deadline (as extended, if applicable, in accordance with the terms and conditions above) has passed and the Proposer has not executed the Agreement. In such circumstances, the Bid Facility may also not be eligible to participate in the next NYSERDA Tier 1 solicitation.

The circumstances under which NYSERDA will be entitled to draw on Contract Security upon Agreement execution are enumerated in the Agreement.

NYSERDA reserves the right to publish the Agreements executed with awardees, including relevant terms within the Agreements. Prior to such publication, NYSERDA will redact any critical electric infrastructure information (CEII) contained in the Agreements, if any, including in the exhibits thereto, and will consider requests to redact confidential business information. Prior to publication, NYSERDA reserves the right to redact trade secrets, commercially sensitive information, or other information in accordance with applicable law.

7.5 Department of Agriculture and Markets Section 305 Notice Information (NOI)

For awarded Solar PV Bid Facilities with a Nameplate Capacity less than 25 megawatts and located in a New York State Agricultural District, Proposers may be required to provide to NYSERDA a report including all information listed in Section 305(4)(b) of the Agriculture and Markets Law. NYSERDA reserves the right to expand this requirement to Bid Facilities greater than 25 megawatts and/or Bid Facilities sited outside of Agricultural Districts to reflect the applicable permitting processes in place at the time of award and contracting.

A map of the agricultural districts, by county, is available from New York State Department Agriculture and Markets (AGM).⁷⁴

7.6 Confidentiality Waiver for Interconnecting Authority

The Proposer shall waive confidentiality with the pertinent Interconnecting Authority after the RES Agreement has been executed.

7.7 In the Matter of a Renewable Energy Facility Host Community Benefit Program (Case Number 20-E-0197)

Following the execution of awarded Agreements, NYSERDA is required to inform impacted Utilities serving residential customers proximate to the Bid Facility's location and file with the PSC in case 20-E-0249 pursuant to the PSC's Order in Case Number 20-E-0249. Prior to Agreement execution, Sellers will

⁷⁴ New York State Agriculture and Markets Agricultural Districts is available by county at <https://cugir.library.cornell.edu/?utf8=%E2%9C%93&q=nys+agriculture+districts>

confirm the Utility(ies) for residential customers in the project area (i.e., city(ies) and town(s)) where projects are located for the purpose of compliance with PSC Host Community Benefit Program in DPS DMM Case Number: 20-E-0249. NYSERDA will include the Bid Facility Name, Nameplate Capacity (MWac), Utility, NYISO Queue Position (if applicable), and Potential Host Community(ies) in the communication. Note that these towns are not AHJs, but the city(ies) and town(s) associated with the physical location of the project as bid to NYSERDA.

7.8 Updated Project Schedule

If an awarded Bid Facility is under development, NYSERDA will request an updated Bid Facility Project Schedule six months after the Bid Proposal was submitted, revisiting key development milestones throughout that period. Awardees must update all project schedule details previously provided in the Bid Proposal via the Project Schedule tab, Section V of Attachment D Bid Data Form and provide an update to NYSERDA through the Salesforce Portal.

Proposers shall include a narrative that describes progress since the project schedule was submitted as part of the Step Two Bid Proposal. If the awarded Bid Facility is Operational, an updated Project Schedule will not be required.

7.9 NYISO Waiver for Project-Specific Capacity Accreditation Resource Class (CARC)

If awarded under the Index REC Settlement methodology, the Seller will be required to waive confidentiality with the NYISO for the term of the Contract Tenor, as to NYSERDA, in order for NYSERDA to obtain the project-specific CARC used in the settlement calculations.

8 RES STANDARD FORM AGREEMENT

NYSERDA recommends that Proposers review the Standard Form Agreement (Agreement), attached hereto as Attachment A. RESRFP25-1 Standard Form Agreement and Exhibits, and all associated Exhibits prior to participating in RESRFP25-1. Proposers that were previously awarded a Tier 1 REC Agreement are also recommended to closely review Section 2.1 of RESRFP25-1. The Agreement is a legally binding document; it is recommended that Proposers consult with an attorney prior to submitting a Step Two Bid Proposal.

NYSERDA highly recommends that Proposers closely review the following updates to the Agreement for RESRFP25-1:⁷⁵

Commercial Operation Milestone Date (COMD) of November 30, 2030: Incremental contract security payments are no longer required to extend the COMD; rather, payments are required to be posted to demonstrate project development progress. Such milestone payments can be replaced with evidence of having entered into an interconnection agreement with the NYISO or relevant interconnection authority and/or with demonstration, to NYSERDA's satisfaction (in its sole discretion) of full mobilization for construction of the Bid Facility (as further set out in Section 15 of the Agreement).

Ability to Extend COMD: a new clause has been added to the Agreement whereby NYSERDA may grant a request from Seller to extend the COMD past November 30, 2030 where Seller has demonstrated (to NYSERDA's sole discretionary satisfaction) that Seller has met the prescribed circumstances for such extension (Section 15.02(e) of the Agreement).

Changes in Law (CIL): The CIL clause further details the process for Sellers to claim, and NYSERDA to address, a CIL in the Agreement. This Section of the Agreement has changed since RESRFP24-1 (Section 4.07 of the Agreement).

Material Adverse Change (MAC): This clause is a new addition to the Agreement, covering material adverse changes related to permitting, federal tariffs and/or federal tax policy (Section 18.17 of the Agreement).

Minimum Delivery Requirements: An annual minimum delivery requirement of 65% of the Bid Quantity has been reintroduced. A failure to meet such requirement shall constitute an Event of Default after the expiry of any applicable cure period (Section 13.01(q) of the Agreement).

Operation and Maintenance Requirements: A requirement has been introduced for the Bid Facility to be operated in accordance with prudent industry practices. Failure to meet such requirement shall constitute an Event of Default after the expiry of any applicable cure period (Section 13.01(r) of the Agreement).

Qualifying Governmental Support: A formula has been introduced to adjust the Bid Price in the event of any governmental financial support obtained through a new statute passed after the Bid Price submission date (Section 5.05 of the Agreement).

⁷⁵ Please note that the summaries provided here are for convenience only and do not supersede anything in the Agreement; all Proposers should consult the Agreement for the legally binding terms.

Other Remedies: This clause is a new addition to the Agreement which provides that, should Seller be ineligible for an extension of the COMD as set forth in Section 15.02(e), and upon an Event of Default caused by Seller's failure to achieve the COMD (Section 13.01(e) of the Agreement), NYSERDA may, as an alternative to terminating the Agreement, unilaterally determine that the Contract Delivery Term commences on the COMD, despite the Bid Facility's failure to achieve Commercial Operation by that time (Section 14.05 of the Agreement).

Proposers may propose changes to the abovementioned updates to the RESRFP25-1 Agreement, to be submitted through the Attachment M. SFA Comment Template as further described in Section 8.1.

For Upgrades, Repowerings, Return To Service generation units and other special circumstances, depending on the scope of such Proposals, NYSERDA may require additional modifications to the Standard Form Agreement to assure consistency among the basic commercial terms contained therein.

8.1 Proposed Edits to the Agreement

NYSERDA cannot adjust the binding Fixed or Index REC Bid Price or other settlement-related terms submitted by Proposers as part of a Step Two Bid Proposal except as explicitly set out in the Agreement.

NYSERDA does not intend to make any other material changes to the Agreement. However, if a Proposer wishes to propose any material change(s) to the Agreement, including to any of the new or changed sections enumerated in Section 8, any such suggested change(s) must be submitted to the solicitation website (using the Attachment M. SFA Comment Template) no later than the Deadline for Step One Eligibility Application Submission set out in Table 1. RFP Schedule. Any such proposal should indicate why the change would be beneficial to New York State (e.g., it will enable lower Bid Prices, make it more likely for Bid Facilities to be timely completed, etc.) rather than merely how it would benefit the Proposer. NYSERDA may, but is not required, to incorporate any such edits. NYSERDA does not intend to consider any proposed material changes submitted after this time.

Any material changes submitted by Proposers by the Deadline for Step One Eligibility Application Submission, if incorporated into the Agreement by NYSERDA in its sole discretion, would result in a re-issuance of the Agreement by NYSERDA to all Proposers in a timely manner prior to the Deadline for Step Two Bid Proposal Submission set out in Table 1. RFP Schedule. NYSERDA does not intend to make any proposed material changes to the Agreement after this time.

Articles, Schedules and Exhibits of the Agreement to which NYSERDA does not intend to entertain redlines or negotiate edits submitted after the Deadline for Step One Eligibility Application Submission include, but are not limited to:

- Article IV: Pricing and Payment;
- Article V: Adjustments;
- Article VIII: Assignment and Change of Control;
- Article IX: Seller's Representations, Warranties and Guarantees;
- Article X: NYSERDA's Representations, Warranties and Guarantees;
- Article XI: Indemnification;
- Article XII: Insurance;
- Article XIII: Events of Default;
- Article XIV: Termination

- Article XV: Contract Security;
- Article XVIII: Additional Provisions;
- Schedule 2;
- Exhibit A: Standard Terms and Conditions for all NYSERDA Agreements
- Exhibit C: NYSERDA Prompt Payment Policy Statement;
- Exhibit N: NYSERDA's Code of Conduct for Contractors, Consultants, and Vendors

Proposers may submit other, non-material, requested changes to the Agreement at any time up until and including the Deadline for Step Two Bid Proposal Submission, but any requested change must be categorized as follows with a clear justification for the requested change that aims to either:

- a) Fix an error or ambiguity that could be problematic for the ability of the Bid Facility to proceed through financing and construction. NYSERDA will fix these errors or unwarranted ambiguities where NYSERDA determines in its sole discretion that a change is warranted.
- b) Improve the clarity or implementation of the Agreement to enable smoother financing or administration and/or to avoid unnecessary disputes. NYSERDA will consider any such proposed changes in good faith but reserves the right not to make any changes of this nature.

8.2 Conditions/Contingencies

NYSERDA may include conditions and/or contingencies to address matters concerning any issues regarding the viability or siting of a Bid Facility, or where the build environment is contingent or conditional on governmental rescission, modification or change in local law, temporary or permanent.

9 GENERAL CONDITIONS

9.1 Proprietary Information

Consideration should be given before confidential information is submitted to NYSEDA as part of any Proposal. Proposers should consider and review whether information is critical for evaluation, and whether general, non-confidential information may be adequate for review and evaluation purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSEDA possesses. The Public Officers Law includes exceptions to disclosure, including Section 87(2)(d) which provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Additional information submitted to NYSEDA that Proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 (<https://www.nyserda.ny.gov/about/new-york-state-regulations>).

However, NYSEDA cannot guarantee the confidentiality of any information submitted. NYSEDA reserves the right to make public, after the fifth anniversary of the award date, the Agreement executed with any awarded Proposal.

9.2 State Finance Law Sections 139-j & 139-k

NYSEDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

9.3 Tax Law Section 5-a

NYSEDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSEDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the Department) whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at https://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSEDA, the prospective contractor must also certify to NYSEDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contacting and filed with NYSEDA. See, ST-220-CA (available at https://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <https://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

9.4 Contract Award

NYSERDA anticipates making multiple awards under this solicitation. A contract may be awarded based on initial applications and Bid Proposals without discussion, or following limited discussion or negotiations. Each Bid Proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Attachment A. RESRFP25-1 Standard Form Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations on the Agreement as set out in Section 8. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

9.5 Limitation

This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to disqualify Proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in extending an award to such Proposers. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Standard Form Agreement.

9.6 Reserved.

It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as Proposers, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
30 South Pearl Street
Albany, NY 12245

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
30 South Pearl Street
Albany, NY 12245

9.7 Disclosure Requirement

All Proposers shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a Proposer is an association, partnership, corporation, or

other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment, investigation, enforcement proceeding, or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation, or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

9.8 Press Releases and Media Contact

All Proposers shall not distribute any press release or contact the media until after the Agreement is executed by both parties and any New York State press releases regarding the awards have been issued. If Proposer wishes to contact the press regarding the award, Proposer must collaborate with NYSERDA's Designated Contacts and Director of Communications to prepare any press release and/or to plan for any announcement. NYSERDA reserves the right to make public, after the fifth anniversary of the Award Notification Date, the Agreement executed with any awarded Bid Facility.

9.9 Independent Entities/Limitation of Liability

Neither this RFP nor any other aspect of this solicitation shall create an agency, partnership, joint venture, or co-tenancy relationship among the members of the Evaluation Team, or any other individuals or entities involved in the development or administration of this RFP (collectively, the "RFP Parties"), nor any other relationship or liability beyond those (if any) explicitly adopted in writing and executed by authorized representatives of the applicable RFP Parties. None of the RFP Parties shall be liable for any act or omission of any other RFP Party. Neither this RFP nor any other aspect of this solicitation creates or is intended to create third-party beneficiaries hereunder. In no event will an RFP Party be liable to any person for special, incidental, punitive, exemplary, indirect or consequential damages or lost profits, whether by statute, in tort or contract or otherwise.

9.10 Vendor Assurance of No Conflict of Interest or Detrimental Effect

The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

9.11 Public Officers Law

For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the

New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Joint Commission on Public Ethics, or its predecessors (collectively, the “Ethics Requirements”). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a “lifetime bar” from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person’s engagement, work cooperatively with the State to solicit advice from the New York State Joint Commission on Public Ethics, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Joint Commission on Public Ethics. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

9.12 Due Diligence

NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants’ prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA’s current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant’s proposal, including questions regarding applicant’s business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants’ target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers’ business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers’ business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers’ former and current business partners,

employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

9.13 Executive Order No. 16

Pursuant to Executive Order No. 16 (EO 16) issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form noted in Section 3, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to EO 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

9.14 NYSERDA AI Policy

Proposers are required to state in their Proposals if they intend to use artificial intelligence ("AI") for the proposed work including reports or other deliverables. Approval for any Proposer/Seller to use any AI systems for such purposes must be expressly granted by NYSERDA. Any Proposer who submits materials to NYSERDA that are created with the assistance of AI must disclose such use to NYSERDA. See [Doing Business with NYSERDA](#) on NYSERDA's website for more information on the use of AI at NYSERDA.

1 Introduction

1.1 Community Decarbonization Fund Overview

NY Green Bank (“**NYGB**”), a division of the New York State Energy Research and Development Authority (“**NYSERDA**”), invites Eligible Applicants (See [Section 2.1](#)) actively working (or developing plans) to deploy capital into efficiency-first decarbonization projects that consider energy affordability and benefit disadvantaged communities (“**DACs**”)¹ and affordable housing in New York State (“**NYS**”) to submit proposals (each, a “**Proposal**”).

Under the Community Decarbonization Fund (“**CDF**”), NYGB expects to deploy \$250MM of concessionary capital from 2023 through 2027 by making loans to Eligible Applicants, starting at a minimum of \$2MM to maximum of the lesser of (i) \$25MM or 20% of an Eligible Applicant’s total capitalization. Illustrative terms and conditions of loans made pursuant to this RFP can be found in [Appendix 1](#).

NYGB is seeking to support lenders that demonstrate success and ongoing capabilities originating, underwriting, and managing: (i) project financings in DACs, (ii) affordable housing, and/or (iii) small businesses in DACs, and are looking to expand existing lending activity to clean energy and sustainable infrastructure projects and businesses with a focus toward efficient building decarbonization and energy affordability that both reduce greenhouse gas (“**GHG**”) emissions and deliver benefits to DACs in NYS. Expanding engagement with DACs and community access to building decarbonization are core to the intent of the CDF and are aligned with the equity goals and mandates of the Climate Act and Scoping Plan. Funding will be prioritized for programs and uses that follow an efficiency-first approach (e.g., weatherization, load reduction, etc.) that maximize bill savings, improve comfort, and result in healthy, clean, and resilient buildings communities with consideration to energy affordability. Lenders seeking financing outside the scope of this offering are encouraged to submit proposals under NYGB’s RFP 1.

This RFP will remain until the \$250MM capitalization has been fully allocated and responses will be evaluated on a rolling basis. See [Section 2](#) for eligibility requirements and [Section 4](#) for further detail on the proposal submission and evaluation process.

NYGB hosted a webinar about this solicitation on May 11, 2023. A link to the recording can be found on NYGB’s website [here](#).

1.2 NYGB Background

NYGB was initially capitalized with \$1 billion to accelerate clean energy and sustainable infrastructure deployment in NYS. NYGB steps in to fill gaps in the market where financing might not be available from conventional lenders potentially due to barriers such as limited precedent, small deal sizes, challenges in evaluating technology risk, asset structures and/or business models unfamiliar to banks and institutional investors, and/or deal structuring and underwriting complexities. NYGB collaborates with the private sector to develop transaction structures and methodologies that other capital providers can readily replicate and scale. As capital providers “crowd in” to an area within the sustainable infrastructure landscape, NYGB moves on to other areas where private sector interest and activity have yet to be spurred.

The Climate Leadership and Community Protection Act (“**CLCPA**”) requires state agencies, authorities, and entities, to the extent practical, to invest or direct resources in a manner designed to deliver no less than 40% of overall benefits from spending on clean energy and energy efficiency programs to DACs. In addition, DACs are required to receive no less than 35% of the overall benefits of such spending on clean energy and energy efficiency programs. As a division of NYSERDA and a key component of the State’s Clean Energy Fund (“**CEF**”), NYGB will contribute to the achievement of these targets by committing at least 35% of its capital on a go-forward basis from January 1, 2020, to projects that create benefits for DACs. NYGB’s DAC investment activity aims to deliver the best emission reduction and sustainable energy outcomes for historically marginalized communities in NYS. NYGB is expanding its investment approach to prioritize historically underserved New Yorkers with an initial focus on building electrification and affordable housing as demonstrated by its interim targets to invest \$100MM into the electrification of buildings (including non-residential facilities) that are located in DACs or used by DAC residents and to invest \$150MM into high-performance affordable housing properties.

This strategy for advancing DAC investments is heavily informed by the findings of a stakeholder engagement process conducted from December 2021 to April 2022 and summarized in its [Amended Annual Plan 2021 - 22](#). Many stakeholders recommended the creation of a dedicated funding pathway that would provide capital on concessionary terms to third party financial intermediaries experienced in working with DACs. NYGB has responded to this market need with the creation of the Community Decarbonization Fund.

¹ As defined under the final rules adopted pursuant to New York State’s Climate Leadership and Community Protection Act of 2019. For more information see: <https://climate.ny.gov/resources/disadvantaged-communities-criteria/>

2 Eligibility Requirements

The Proposal must demonstrate that the Proposing Entity meets the: a) eligible applicant criteria listed in [Section 2.1](#), and b) is lending to projects that satisfy the eligible project criteria listed in [Section 2.2](#).

2.1 Eligible Applicant Criteria

Eligible Applicants must be one of the following:

- A certified Community Development Financial Institution ("CDFI"), including:
 - Community Development Banks
 - Community Development Credit Unions
 - Community Development Loan Funds
 - Community Development Venture Capital Funds
- A specialty lender, defined as a 501(c)(3) non-profit organization or government-chartered institution or public housing agency with a mission that includes developing, managing, or investing in:
 - Affordable housing solutions;
 - Cooperatives;
 - Clean energy projects; and
 - Contractors
- A for-profit subsidiary of any of the categories listed above, provided that the for-profit subsidiary is operating exclusively in support of the tax-exempt or municipal mission of the parent entity.

2.2 Eligible Project Criteria

Eligible Applicants must be able to demonstrate that they lend to Eligible Projects which:

1 Provide DAC Benefits:

Eligible Projects are deemed to provide DAC Benefits if they satisfy one or more of the following requirements:

- (a) Located in a DAC census tract, as defined under the final rules adopted pursuant to New York State's Climate Leadership and Community Protection Act of 2019 ("CLCPA" or "Climate Act").
- (b) Not located in a DAC census tract but:
 - i. Project involves a residential building where at least 50% of the housing units are restricted upon initial occupancy to households making 80% AMI or less via a regulatory agreement with a public agency; or
 - ii. Project involves a building that has a demonstrable impact on households making 80% AMI or less or a vulnerable population (e.g., a facility that predominantly serves such households such as a Federally Qualified Health Center or a multi-service center operated by a non-profit organization).

2 Are located in NYS;

3 Are focused on interventions that follow an efficiency-first approach (e.g., weatherization, load reduction, etc.) that maximize bill savings, improve comfort, and result in healthy, clean, and resilient buildings and communities with consideration to energy affordability or otherwise contribute to GHG emissions reductions in support of NYS clean energy policies, including the CLCPA; and

4 Utilize an Eligible Technology (see [Appendix 2: Eligible Technologies](#))

Eligible Applicants can demonstrate that they lend to Eligible Projects by having:

- Either (i) a successful track record of delivering capital through the origination of successful, performing loans for buildings, businesses, and projects in DACs or (ii) a detailed and credible plan (consistent with the management team's experience and capabilities) to develop the capacity to participate in Eligible Project lending;
- Efficiency-first building decarbonization and energy affordability aligned offerings that utilize Eligible Technologies and lead to GHG emissions reductions supportive of CLCPA goals;
- Capacity to participate in Eligible Project lending in NYS; and
- Either (i) a pipeline of forward-looking opportunities of Eligible Projects in New York State or (ii) a detailed and credible plan (consistent with the management team's experience and capabilities) to develop such a pipeline.

3 Proposal Contents

Proposals must clearly and concisely address each of the topics of Sections 3.1 to 3.6. The failure to respond to a topic will render the Proposal incomplete and NYGB unable to proceed. Proposals tend to be 6 – 10 pages in length, excluding attachments. There is no requirement or constraint on Proposal length.

3.1 Required Disclosures

Please provide the following information labeled “Required Disclosures”:

Disclosure of whether any of the following instances are applicable, or confirmation that they do not apply. Failure to disclose an applicable Required Disclosure may render the Proposing Entity ineligible for NYGB investment. Disclose whether the Proposing Entity or any members of the Proposing Entity’s governing body (such as an officer, partner, or director):

- (a) Is the subject of an indictment for alleged felony or any conviction for a felony under federal or state laws in the last five years and the circumstances thereof; and/or
- (b) Has ever been disbarred or suspended by any agency of the United States Government or the NYS Department of Labor and the circumstances thereof.

3.2 Company and Management Team Credentials

Please provide the following information labeled “Company and Management Team Credentials”:

- (a) A brief overview of the Proposing Entity;
- (b) The identities of all parties to the Proposal
 - i. If Proposal includes a partnership of one or more entities – provide a description of the purpose and objectives of the partnership, the roles and deliverables of each entity, and all Proposal Contents requested in Section 3 for each entity;
- (c) Resumes, bios and/or LinkedIn profiles for the Proposing Entity’s management team;
- (d) As applicable, name(s) of agency/ies by which the Proposing Entity is regulated and/or insured;
- (e) A summary of the Proposing Entity’s underwriting, origination, and servicing process and experience;
- (f) Description of your business model/strategy (or attach a Business Plan); and,
- (g) Audited financial statements.

3.3 Portfolio

Please provide the following information labeled “Portfolio”:

- (a) Description of overall portfolio of loans/investments originated, including:
 - i. Portfolio loan loss rate over the past 1-, 3-, and 5-year periods and since inception; and
 - ii. Return on assets over past three years.
- (b) Description of the portfolio of projects that benefit DACs in NYS and elsewhere, including:
 - i. Volume and number of portfolio investments that benefit DACs;
 - ii. Description of DACs supported and benefits to DACs provided by portfolio investments; and
 - iii. DAC loan loss rate over the past 1-, 3-, and 5-year periods and since inception.
- (c) Description of experience investing in projects that reduce GHG emissions in NYS and elsewhere; and
- (d) Provide summaries of 2-5 relevant recent portfolio transactions. For each transaction, include:
 - i. Project scope;
 - ii. Technology type (if applicable);
 - iii. Transaction size;
 - iv. Borrower type; and
 - v. Estimated impact (potentially including GHG emission reductions and/or any of the benefits listed in [Section 3.6](#)).

3.4 Pipeline

Please provide the following information labeled “Pipeline”:

- (a) Describe Eligible Project investment activity currently underway. Include:
 - i. Volume and number of Eligible Project investments currently in pipeline. Specify the percentage (by both dollar volume and transaction count) of total pipeline that such transactions represent; and
 - ii. Redacted/abstracted summaries of 2-5 Eligible Project investments in pipeline. For each transaction, include:

1. Status of transaction process, and probability of closing based on prior track record;
 2. Project scope;
 3. Technology type;
 4. Transaction size;
 5. Borrower type; and
 6. Estimated impact (potentially including GHG emission reductions and/or any of the benefits listed in [Section 3.6](#)).
- (b) If the Proposing Entity does not have an active Pipeline of Eligible Projects, describe plans to expand investment Pipeline to include Eligible Projects. Identify and describe:
- i. Targeted origination strategy;
 - ii. Demonstrated demand for the Proposing Entity's capital; and
 - iii. Any existing relationships that are expected to support deal flow.

3.5 Capital Needs

Please provide the following information, labeled "Capital Needs":

- (a) Amount and source(s) of the Proposing Entity's initial capitalization and ongoing funding/income sources;
- (b) Value of current portfolio and pipeline;
- (c) Current liquidity situation and outlook;
- (d) Current debt and equity needs;
- (e) The Proposing Entity's reason for approaching NYGB rather than another capital provider for the proposed investment, including barriers that the Proposing Entity has faced in obtaining sufficient, appropriately priced capital;
- (f) Dollar amount the Proposing Entity is seeking from NYGB;
- (g) Description of how quickly the Proposing Entity could commit and deploy additional loans enabled by the proposed NYGB investment; and
- (h) Description of how proceeds from an NYGB investment would enable the Proposing Entity to expand its financing to interventions that follow an efficiency-first approach (e.g., weatherization, load reduction, etc.) that maximize bill savings, improve comfort, and result in healthy, clean and resilient buildings / communities with consideration to energy affordability or otherwise contribute to GHG emissions reductions in support of NYS clean energy policies, including the CLCPA specifically in or benefiting DACs.

3.6 Impact Measurement and Reporting Capability

NYGB collects and disseminates project and investment performance data (on an aggregated and anonymized basis) to facilitate improving investor confidence in addition to promoting standardization wherever possible to help drive down transaction costs. Proposing Entity will be required to assist with initial impact estimates and report on relevant metrics (such as those listed below) periodically during the term of the financing. Specific data reporting requirements will be determined prior to transaction execution.

Please provide the following information labeled "Impact Measurement and Reporting Capability":

- (a) Types of environmental or social data that the Proposing Entity collects from its borrowers.
- (b) Impact metrics that the Proposing Entity tracks for its investments, e.g.:
 - i. Bill savings or cost reductions for DAC residents
 - ii. Units of affordable housing created/preserved
 - iii. GHG emission reductions achieved and CO2-equivalent reductions
 - iv. Local air quality improvements
 - v. Jobs created
 - vi. Improved comfort or value for building occupants/users
 - vii. Improved health outcomes
 - viii. Capital commitments and mobilizations by sector/end-user
 - ix. Other
- (c) Data collection process and calculation methodologies that the Proposing Entity employs to regularly evaluate and track the metrics listed above.
- (d) Acknowledgement by the Proposing Entity that the Proposing Entity will be required to deliver the agreed-upon impact data to NYGB within 30 days after the end of every quarter in all cases for at least the term of the financing.

4 Proposal Process and Evaluation

Proposing Entities are encouraged to contact NYGB before the submission of a Proposal to ensure alignment with NYGB's mission, mandate, and broad investment criteria, as well as RFP 23's specific eligibility criteria. To this end, please email us at InvestmentRFPs@greenbank.ny.gov and include "RFP No. 23" in the subject line. As noted in Section 4.1 below, direct communication will be limited after a Proposal is submitted and while it is under consideration.

4.1 Proposal Submission Process

Proposals must be submitted electronically via the online proposal submission system portal. Faxed, mailed, or e-mailed proposals will not be accepted. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. For detailed instructions on how to submit a proposal online, follow the instructions on NYGB's website (www.greenbank.ny.gov) under "Work with Us;" "RFP Resources;" "Instructions to Submit Service Provider Proposals."

If changes are made to this solicitation, an e-mail will be sent to the proposer's contact as listed in the Proposer Contact Information section of the NY Green Bank portal as part of the online submission process, and any modified documents will be posted on NYGB's website (www.greenbank.ny.gov) under "Work with Us;" "Open Solicitations;" "RFP 23: Community Decarbonization Fund."

If you have technical questions concerning this solicitation, contact one of the Designated Contacts: (i) InvestmentRFPs@greenbank.ny.gov; or (ii) David Davenport at david.davenport@greenbank.ny.gov. If you have contractual questions concerning this solicitation, contact Venice Forbes at VeniceSolicitations@nyserda.ny.gov. Please include "NY Green Bank RFP 23" in the subject line of all e-mail communications.

No communication intended to influence this procurement is permitted except by contacting the Designated Contacts. Contacting anyone other than these Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement may result in a proposer: (1) being deemed a non-responsible offerer, and (2) not being awarded a contract.

4.2 Proposal Evaluation Process

Proposals will be processed and scored on a regular basis as they are received. Proposing Entities can generally expect an email response, including the result of Proposal scoring and any next steps if applicable, within two weeks after NYGB's receipt of Proposal. NYGB will close the solicitation at any point if it is determined that a satisfactory response has been received.

Proposals will be evaluated by a rotating committee of NYGB investment team members ("Scoring Committee"). Each Proposal will be reviewed to determine satisfaction of the Eligibility Requirements (Sections [2.1](#) and [2.2](#)), and if determined to be eligible, will be scored using the Evaluation Criteria in Section [4.3](#).

Scoring may result in one of three possible outcomes: Proposal is deemed "Passing" in which case NYGB will arrange for proposed transaction to move into NYGB's active pipeline; Proposal is deemed "Not Passing" because it is determined ineligible under RFP 23 or does not score highly across Evaluation Criteria, in which case Proposer may request further discussion of outcome and may resubmit Proposal at a later date should circumstances surrounding the transaction change; or "Additional Clarification/Information Required" if Scorers are unable to fully evaluate Proposal with the information provided, in which case NYGB will request additional information from Proposer, upon sufficient receipt of which the Scoring Committee will evaluate Proposal in full to reach a Passing or Non-Passing determination.

4.3 Evaluation Criteria

- a. Financial Strength, Portfolio & Performance; Does the applicant have acceptable financial strength (balance sheet), financial performance, portfolio performance, risk management policies and sound business model? Evaluation of:
 - i. Financial strength/standing;
 - ii. Overall investment performance;

- iii. Experience and volume of investment in projects that deliver benefits to DACs;
 - iv. Financial performance of DAC portfolio;
 - v. Describe experience and volume of investment in efficient building decarbonization, energy affordability, clean energy and sustainable infrastructure projects, with a preference for those located in NYS; and
 - vi. Impact of relevant portfolio investments indicated without limitation by:
 - o Types of energy improvements made, with a priority on energy efficiency, weatherization, electrification, and energy affordability, energy storage, and/or clean transportation;
 - o GHG emission reductions achieved/expected to be achieved; and
 - o Benefits delivered/expected to be delivered to members of DACs.
- b. Management & Experience: Evaluation of applicant's management team qualifications, both generally and specifically with respect to DAC and efficient building decarbonization and energy affordability, and clean energy/sustainable infrastructure lending experience and expertise.
- c. Readiness: Does the applicant have the resources or have a plan to develop the resources (e.g., staff, financial, partners, capital) needed to implement its strategy? Evaluation of:
- i. Readiness to launch underwriting Eligible Project lending and capacity to underwrite/close transactions and service them successfully.
 - ii. Impact- or sector-related mandates, mission, or other criteria that drive applicant's capital deployment decision-making.
- d. Renewable and Energy Efficiency Strategy: Does applicant have a *compelling strategy* to expand efficient building decarbonization financing products and services that benefit DACs, including but not limited to an affordable electrification strategy to mitigate energy cost shifting? Evaluation of the quality of the proposal including, but not limited to, its cohesiveness, conciseness, and clarity.
- e. Use of Funds: Does applicant have compelling proposed funding opportunities that will effectively advance its strategy in ways that otherwise would not be possible without CDF funding? Evaluation of the relative stage of strategy execution readiness, complexity to close, and monitoring and administrative intensity for Eligible Projects in the pipeline.
- f. Pipeline of Eligible Projects: Does applicant demonstrate a pipeline or a near-term plan to deliver a pipeline of Eligible Projects? Evaluation of:
- Total dollar value and number of Eligible Projects in the pipeline; and
 - Impact of pipeline indicated without limitation by:
 - o Types of Eligible Technologies utilized;
 - o GHG emission reductions expected to be achieved; and
 - o Benefits expected to be delivered to members of DACs
- g. Viability of plan to expand and grow the pipeline, including without limitation the strength of:
- Targeted origination strategy; and
 - Demonstrated demand for applicant's capital and existing relationships that support deal flow.

If applicant does not currently have a pipeline, how strong is its plan to build the organizational capacity to create a pipeline? Is this plan funded or are funding prospects identified? Is there a track record of the senior staff and/or organization building out new business line(s)?

- h. Impact Evaluation & Reporting: Does applicant have a solid track record of defining, evaluating, projecting, and tracking/reporting the impact of its investment activities? Evaluation of ability of applicant to track and record performance data against CLCPA targets and report that information to NYGB (at a minimum within 30 days after the end of every quarter) and in all cases for at least the term of the financing.
- i. Diversity Practices: Does applicant have the ability to meet NYSERDA goals with respect to deploying capital to minority- and women-owned business enterprises (MWBE) and service-disabled veteran-owned business enterprises (SDVOB)?

5 General Conditions

5.1 Costs & Expenses

Once a Proposal has been submitted to NYGB, satisfied the eligibility requirements under RFP 23, and scored favorably according to the evaluation criteria described above, the proposed transaction will move into NYGB's active pipeline. Then, if Proposing Entity and NYGB have preliminarily agreed upon general indicative transaction terms, they will execute an engagement letter providing that whether or not the proposed investment is closed, each party will be responsible for its own closing costs and expenses associated with preparation, due diligence, development, and administration of all investment-related documentation. Upon closing, Proposing Entities shall pay a \$5k closing fee, and a \$5k annual administration fee. There is no Commitment Fee on any undrawn amounts available under the CDF Loan during the first 12 months of the Availability Period, however a 0.50% per annum Commitment Fee shall apply to any undrawn amounts available under the CDF Loan during the second 12 months of the Availability Period.

5.2 Municipal Advisor Rules

NYGB is aware of the amendments to Section 15B of the Securities Exchange Act of 1934 effectuated by Section 975 of Title IX of the Dodd-Frank Act, as well as SEC Release No. 34-70462 (September 20, 2013). In this regard, please note that NYGB considers discussions with potential Proposing Entities and the review of Proposals, to be arm's-length negotiations. NYGB recognizes that Proposers have financial and other interests that differ from NYGB; as such, NYGB does not consider a fiduciary relationship to arise in this context. NYGB has engaged an independent registered municipal advisor ("**IRMA**") with the intent of relying (i.e., taking into careful consideration, along with any other information deemed relevant or appropriate) on that IRMA for advice related to any potential transactions (but not bound to follow that advice), and consequently allowing Proposing Entities to qualify for the exemption provided by 17 CFR §240.15Ba1-1(d)(3)(vi) (the "**IRMA exemption**"). The name and contact information of the IRMA is listed on the NYGB website at www.greenbank.ny.gov/IRMA, and the IRMA is available to respond to any questions a Proposing Entity may have with respect to the IRMA's independence.

5.3 Proprietary Information

Among NYGB's goals is the promotion of standardization of material contract terms and structures and the collection of project performance data across NYGB transactions. NYGB is keenly aware that commercial markets and their incumbents value non-disclosure extremely highly to protect confidential transaction terms and other competitive information, and NYGB remains highly sensitized to usual and customary confidentiality practices. Nevertheless, as a division of NYSERDA, certain State laws specifically apply to NYGB; and it is recommended that careful consideration be given before confidential information is submitted to NYGB as part of any Proposal. Review should include whether it is critical for evaluating a Proposal and whether more general, non-confidential information may be adequate for review purposes. New York's Freedom of Information Law, Public Officers Law, Article 6 provides for public access to information NYSERDA and its divisions possess. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYGB that the Proposing Entity wishes to have treated as proprietary and confidential trade secret information should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set out in 21 NYCRR Part 501. The confidentiality of any information submitted cannot be guaranteed.

5.4 Limitation

This RFP does not commit NYGB to agree to participate in any transaction, proceed to negotiate any terms or definitive documentation, pay any costs incurred in preparing a Proposal or to procure or contract for services or supplies. NYGB reserves the right to accept or reject any or all Proposals received, to evaluate any Proposal received under any other open NYGB solicitation, including but not limited to NYGB's RFP 1, to negotiate with all qualified parties or to cancel in part or in its entirety this RFP.

Appendix 1: Summary of Indicative Terms and Conditions

*This summary of indicative terms and conditions (the “**Term Sheet**”) summarizes the principal terms and conditions of potential loan facilities to be made available by NY Green Bank (“**NYGB**”), a division of the New York State Energy Research and Development Authority (“**NYSERDA**”), to lending entities that meet the criteria of an “**Eligible Applicant**” as defined in [Section 2.1](#) (any such entity, a “**Borrower**”). The Term Sheet does not constitute an offer, commitment, or agreement by NYGB to enter into any loan facility or other investment with any party. The closing of a loan facility described herein shall be subject to, without limitation, the completion of satisfactory due diligence by NYGB, the execution of definitive documents satisfactory to NYGB and final credit approval by NYGB. The terms of the definitive documents for NYGB’s loan facility may differ substantially from the terms set forth herein based on due diligence, credit considerations and prevailing market conditions.*

I. Transaction; Financing Parties	
CDF Loan	Multi-draw senior or subordinated loan facility for eligible Uses of Proceeds (as defined below) on terms that are satisfactory to the Lender
Lender	NYGB, a division of NYSERDA
Borrower	Eligible CDFIs and specialty lenders as described in the RFP
II. Principal Financing Terms	
CDF Loan Sizing	• Minimum: \$2,000,000 • Maximum: The lesser of (i) \$25,000,000 or (ii) 20% of a Borrower’s total capitalization
Security	CDF Loan will be fully recourse to the Borrower on a senior or subordinated basis, as the case may be.
Use of Proceeds	The Borrower shall use proceeds solely to finance loans made by the Borrower to Eligible Projects (“Eligible Loans”). “Eligible Projects” are defined as projects that meet the following requirements: 1. Support efficiency-first building decarbonization and energy affordability, energy storage, and/or clean transportation; 2. Contribute to greenhouse gas emissions reductions; 3. Benefit disadvantaged communities (“DACs”), as further described under “DAC Benefits” below; 4. Are physically located in New York State; and 5. Must use an Eligible Technology (see Appendix 2: Eligible Technologies)
DAC Benefits	Eligible Projects are deemed to provide DAC Benefits if they satisfy one or more of the following requirements: 1. Located in a DAC census tract, as defined under the final rules adopted pursuant to New York State’s Climate Leadership and Community Protection Act of 2019 (“CLCPA” or “Climate Act”). 2. Not located in a DAC census tract but: a. Project involves a residential building where at least 50% of the housing units are restricted upon initial occupancy to households making 80% AMI or less via a regulatory agreement with a public agency; or b. Project involves a building that has a demonstrable impact on households making 80% AMI or less or a vulnerable population (e.g., a facility that predominantly serves such households such as a Federally Qualified Health Center or a multi-service center operated by a non-profit organization).

Advances	- No more than one advance per quarter for one or more Eligible Loan. - Borrower must certify that advances are for Eligible Projects and provide basic project information. - After giving effect to the advance, at least 50% of cumulative CDF Loan advances must be allocated to Eligible Projects located in DAC census tracts as defined in item 1 of DAC Benefits.
Capital Recycling	Principal repayments from Eligible Loans will be tracked and accounted for in a restricted asset account (the " Principal Repayment Account "). The Borrower may draw on the Principal Repayment Account to fund new Eligible Loans associated with new Eligible Projects at any time (pursuant to the same certification and verification protocols governing advance requests), provided that after giving effect to the draw, at least 50% of cumulative CDF Loan advances must be allocated to Eligible Projects located in DAC census tracts as defined in item 1 of DAC Benefits
Availability Period	24 months from the closing date
Term / Maturity Date	12 years after the closing date
Interest Rate	1.50% per annum fixed interest rate on daily average balance, payable quarterly in arrears
Amortization	There will be no scheduled amortization and no prepayment penalty for prepaying the CDF Loan at any time. However, the CDF Loan is subject to a quarterly Principal Repayment Sweep (as defined below).
Principal Repayment Sweep	If the balance in the Principal Repayment Account is in excess of twenty percent [20%] of the then outstanding balance of the CDF Loan for two (2) consecutive quarters, the amount in the Principal Repayment Account that is greater than twenty [20%] percent of the outstanding balance of the CDF Loan will be used to repay the CDF Loan. ² The repaid Principal may not be reborrowed.
Reporting Requirements	The Principal Repayment Sweep test will be conducted on a quarterly basis. - Financial Reporting - Annual audited financial statements - Quarterly: - Compliance certificate - Unaudited financial statements - Summary report on the performance of the Borrower's Eligible Loan portfolio - Individual non-performing loan report on any non-performing Eligible Loans or Eligible Loans on Borrower's watch list, each prepared in accordance with the Borrower's portfolio, credit and risk management policies and procedures including standard rating policy - Covenant compliance reports for other senior lenders - Impact Reporting - Annual impact reporting on Eligible Projects funded with CDF Loan advances or Capital Recycling - Prompt delivery of notices of default, material litigation, and material adverse changes
Fees	- Closing Fee: \$5k - Commitment Fee: - None during the first 12 months of the Availability Period 0.50% per annum on any undrawn amounts available under the CDF Loan during the second 12 months of the Availability Period - Administration Fee: \$5k annually

² The percentage of the balance assessed in the Principal Repayment Sweep is negotiable based on business strategy.

III. Other Terms	
Conditions Precedent	Usual and customary for facilities of this type, or as deemed necessary or appropriate by the Lender.
Representations and Warranties	Usual and customary for facilities of this type, or as deemed necessary or appropriate by the Lender (subject to exceptions and materiality thresholds acceptable to the Lender).
Affirmative and Negative Covenants	Usual and customary for facilities of this type, or as deemed necessary or appropriate by the Lender (subject to exceptions and materiality thresholds acceptable to the Lender), including without limitation: • Lender's right to inspect books and records of the Borrower and meet with the Borrower's senior management upon reasonable notice • Maintenance of a Net Asset Ratio or similar liquidity covenant to be determined
Events of Default	Usual and customary for facilities of this type, or as deemed necessary or appropriate by the Lender (subject to exceptions and materiality thresholds acceptable to the Lender), including without limitation cross-default to any senior debt or other material indebtedness.
Cure Period	• Interest & Fees payment defaults: 3 calendar day cure period • All other financial covenant defaults: 15 calendar day cure period • All other covenant defaults: 30 calendar day cure period
Default Interest Rate	4.00% per annum above the interest rate otherwise payable
Confidentiality	Usual and customary for facilities of this type, subject to (a) the Lender's public disclosure obligations under the New York State Freedom of Information Law, and (b) the Lender's right to publicly disclose a general transaction description and aggregated or anonymized data.
Expenses	Each party will be responsible for its own closing costs and expenses.

Appendix 2: Eligible Technologies

1. Building Electrification and Supporting Measures³, examples including but not limited to:
 - a. Heating and Cooling Load Reduction
 - i. Weatherization
 - ii. Windows
 - iii. Heat recovery ventilation
 - b. Clean Heating Technologies⁴
 - i. Air Source Heat Pumps
 - ii. Water Source Heat Pumps
 - iii. Ground Source Heat Pumps
 - iv. District thermal interconnection
2. Electric Vehicle Infrastructure (including charging stations)
3. Thermal and Electric Energy Storage
4. On-site Solar serving customer load when combined with one or more of the above listed Eligible Technologies

NYGB will consider other technologies that reduce greenhouse emissions, beyond those listed above. The Scoring Committee will assess whether a given technology is supporting New York State climate policy goals.

³ NYGB expects borrowers to monitor and evaluate building performance using acceptable industry benchmarking tools.

⁴ Multifamily buildings with 5 or more units must obtain an EPA ENERGY STAR Score >50 prior to installing heating and cooling electrification to ensure comfortable heat pump operation or be coupled with building envelope improvements (e.g., weatherization, insulation, windows, etc.) that would reasonably be expected to result in an EPA ENERGY STAR Score >50 post project completion.

**Buildings of Excellence Competition
Demonstration Projects
Request for Proposal (RFP) 3928 Rd6
Up to \$15,000,000**

*NYSERDA reserves the right to extend or
add funding at its sole discretion.*

Proposals Due: September 17, 2025, by 3:00 p.m. Eastern Time (ET)*

The Buildings of Excellence Competition (the Competition) seeks proposals for multifamily demonstration projects that will be clean and resilient, beautiful, and functional, and will provide healthy, safe, comfortable, and resilient living spaces for their occupants. The Competition aims to accelerate the design, development, construction, and operation of multifamily buildings that will meet or exceed the minimum energy performance identified in this RFP and integrate co-benefits for occupants, such as controlled and healthy indoor air quality, as well as exceptional comfort. Successful proposers must demonstrate how their projects' energy use and per capita carbon emissions will be substantively reduced, while increasing building resiliency, including passive and active survivability, in a manner that can be replicated at scale. Successful proposers will also demonstrate how their projects will be profitable for the developers and owners and show realistic cost reductions in the design and construction of clean and resilient buildings. This sixth round of the Competition will consider multifamily projects that intend to serve all market sectors, at all building heights, while primarily focusing on projects that are at an early stage in their design and development cycle. Proposals for projects that are or will be located in disadvantaged communities, are in early schematic design or design development phases, and that involve the adaptive re-use of commercial office, institutional, or retail space to provide multifamily housing are considered in the scoring evaluation. Proposers must commit to publicly share information related to the project's design, costs, and performance relied on to support the decision-making processes employed to achieve the desired outcomes.

Selected projects may be eligible to receive up to \$1,500,000 in direct funding as well as support for initiatives focused on broad marketing and public awareness. The Competition will set aside \$10 million to support projects that will be eight (8) stories or greater in height and \$5 million to support projects less than or equal to seven (7) stories in height. The Competition will set aside a minimum of \$7.5 million of the total funding available to support affordable housing projects.

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link "[Application Instructions and Portal Training Guide](#) [PDF]" located in NYSERDA's [Current Solicitations and Funding Opportunities](#) website.

Informational Webinar: NYSERDA will deliver informational webinars on Wednesday July 16, 2025, starting at 10:00 AM and Wednesday September 3, 2025, starting at 10:00 AM. Participants will have the opportunity to submit written questions to the presenters in advance or during the webinars. NYSERDA will respond to questions during the webinars. [Fill out this form](#) to receive an invitation for the listed session and to be notified of additional informational webinars that may be scheduled. Submitting your contact information will ensure you will also be notified when the Competition is about to close, when winners are announced, and when a future round of the Competition is launched.

Contact Information: Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. For technical questions, contact Gwen McLaughlin (Designated Contact) at GwenNC@nyserdera.ny.gov or (518) 862-1090 ext. 3099 or Kristin Graham (Designated Contact) at KristinNC@nyserdera.ny.gov or (518) 862-1090 ext. 3069. For contractual questions concerning this solicitation, contact James Cowman (Designated Contact) at Jim.Solicitations@nyserdera.ny.gov or (518) 862-1090 ext. 3652.

All Proposers should be familiar with the legal prohibitions against certain types of contacts during government procurements set forth in State Finance Law section 139-j. In accordance with that law, contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) result in a proposer being deemed a non-responsible offeror, and (2) may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. (ET) on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all submission requirements have been met. Please note the following: for electronic submissions, there are required questions that need to be answered in addition to uploading attachments. Be sure to allot at least 60 minutes to enter and submit proposals. The electronic proposal system closes promptly, and files in process or attempted edits or submission after 3 p.m. (ET) on the date above will not be accepted.

If changes are made to this solicitation before the due date, notification specific to this solicitation will be posted on NYSERDA's [Current Solicitations and Funding Opportunities](#) website.

- VIII. NYSEDA Responsibilities**
- IX. GENERAL CONDITIONS**
- X. Attachments**

I. Introduction

The use of fossil fuels, such as natural gas, propane, oil, and coal, releases carbon dioxide and other emissions into the atmosphere that contribute to climate change and other environmental impacts. Climate change will put buildings, and their systems and occupants, at greater risk of hazards in the future, such as flooding, sea level rise, increased temperatures, and more frequent and more extreme storm events. Eliminating the use of fossil fuels to support building operations will decrease carbon dioxide and other emissions.

NYSEDA seeks proposals for demonstration projects that will be clean and resilient, while also being beautiful and functional; provide healthy, safe, comfortable, and resilient living spaces for their occupants; and be profitable for the projects' developers and owners.

Successful proposers will be expected to demonstrate how their project will achieve the competition's goals to:

- Address architectural design attributes, including aesthetics, project site and context, use of natural light, space functionality, acoustics, amenities, and the project's relationship to the larger community, among other design attributes.
- Be designed as clean and resilient buildings that will reduce energy use, eliminate use of fossil fuels to heat water and condition occupied areas, employ tactics that will reduce peak load and per capita carbon emissions; and increase the building's resilience through design interventions that address forward-looking climate conditions, as well as active resilience measures, passive survivability, and adaptation.
- Identify and propose alternative strategies that can achieve reductions in overall project costs, focusing on buildings that will be eight (8) stories or greater in height.
- Deliver co-benefits for occupants, such as healthy indoor air quality, while providing exceptional comfort and otherwise outstanding living environments for occupants.
- Reduce total carbon impacts, including reductions to embodied carbon in materials, processes, or other design attributes; propose use of materials that achieve carbon sequestration; and ensure reductions to the total volume of refrigerants, use of lower Global Warming Potential (GWP) refrigerants, and minimized risks associated with potential refrigerant leaks.

This Competition encourages proactive design and planning, providing access to recreation, building complete streets, improving the existing built environment, and encouraging compact, multiple-use development – all of which enhance age-friendly characteristics and community livability.

II. Eligibility Requirements

NYSDERDA, at its sole discretion, determines a proposal's eligibility for the Competition.

To support proposal evaluation, proposals must comply with **Section V Proposal Requirements and Format** of this RFP.

Proposers must commit to complying with **Section IX GENERAL CONDITIONS**, as well as **Section VII Subsequent Submissions for Proposals Selected for Award** of this RFP if selected for award.

Location

This Competition is available to projects located anywhere in New York State, regardless of whether the project will be located in an investor-owned electricity distribution company service territory.

Market Sector

Proposals intending to serve all market sectors will be evaluated and considered for award. Proposals for projects that are or will be located in [disadvantaged communities](#) are given additional consideration in the scoring evaluation.

Replicability

The Competition intends to identify and select proposals for projects that demonstrate the greatest potential for success and replication. Proposers must demonstrate that the design and construction strategies of their projects are replicable at scale and have the potential to achieve broad-based adoption by both developers and consumers. Proposers must also demonstrate how their projects provide superior financial benefits for owners and establish the project's viability.

Occupancy Type

For a proposal to be eligible for consideration, the project must incorporate multifamily occupancy as the primary use, and can include buildings that incorporate dwelling units, sleeping units, congregate living, or residence halls. Projects may contain non-residential space; however, the non-residential space must consist of less than 50% of the occupiable square footage of the entire project.

One- and two-family homes or townhomes as defined within the Definitions section of the International Building Code are not eligible for inclusion as part of a proposal's fundable project.

Buildings that are owned or operated by a municipality or by New York State are not eligible to participate, including buildings that provide student housing.

Hotels, motels, or other hospitality-related buildings are also not eligible to participate.

Construction Type

For a proposal to be eligible for consideration, the project must be new construction, adaptive re-use, or gut rehabilitation, as defined below:

New Construction: A new building, buildings, or an addition, where a licensed professional architect or engineer has prepared and certified the building plans.

Adaptive Re-use or Gut Rehabilitation: Substantial renovation for one of the following types of projects where a licensed professional architect or engineer has prepared and certified the building plans:

- Change of use and reconstruction of an existing building, buildings, or space within.
- Construction work of a nature requiring the building, buildings, or space(s) within to be out of service and unoccupied for a minimum of thirty days.
- Reconstruction of a vacant structure or structures, or space within.
- The addition to or expansion of a building, in combination with any of the above.

Adaptive Re-use of Commercial Office, Institutional, or Retail Buildings to Multifamily Use: To be eligible for consideration under this distinct category, the existing building must have been previously occupied and used as commercial office, institutional, or retail space. Additionally, substantially new mechanical systems required to support occupancy as housing must be necessary, including the installation of kitchen and bathroom waste and supply piping, balanced ventilation that meets requirements for residential occupancy, and other attributes required to support conversion of existing commercial office, institutional, or retail to multifamily use.

Project Status

Projects in the early schematic design through the design development phase, as of the date their proposal is submitted to NYSERDA, are considered in the scoring evaluation.

Projects that have received a municipal approval; a Building Department's final approval of the building's architectural, mechanical, and plumbing plans; or the permit that allows for construction of the building as of the date their proposal is submitted to NYSERDA will not be eligible for consideration.

Definition of a Project

A project can encompass one multifamily building, or a portfolio of similar and related multifamily buildings located on the same site or on adjacent sites. Proposals for multiple buildings that do not meet that criterion must be submitted by the proposer as separate and unique proposals.

NYSERDA, at its sole discretion, can elect to divide proposals with more than one building into separate proposals to be evaluated separately or select one or more building(s) from a proposal with multiple buildings to be evaluated separately.

Multiple, alternative proposals submitted for a single project will result in the disqualification of both proposals, as it is the responsibility of the proposer to determine the more appropriate set of solutions for their project.

A proposer may elect to submit more than one proposal to the Competition for different projects. Members of a proposer's team are welcome to participate in more than one proposal.

Proposer

The proposer must be the project's owner or developer and have the authority to select and direct all other members of the project team. The proposer must demonstrate their project team has the capabilities to perform and successfully complete the proposed project as a multidisciplinary and integrated project delivery team.

Design Team Lead

As part of their submission, the proposer must select and indicate who will serve as the design team lead (DTL) in support of their project. NYSERDA anticipates executing two separate agreements associated with each awarded project, one each with the developer and the DTL. Under this agreement, the DTL firm will receive a portion of the award, as indicated in **Section IV Schedule of Payments** of this RFP.

Funding Restrictions

Proposers to this Competition are not eligible for award if they have already been awarded funding for the proposed project under previous rounds of the Competition, or intend to seek or have already been awarded Clean Energy Initiative (CEI) funding distributed by the New York State Homes and Community Renewal (HCR), or funding distributed through the New York City Housing Preservation and Development (HPD) Future Housing Initiative or any of their sub-agencies that is provided by NYSERDA through the Clean Energy Fund and intended to support goals similar to those promoted through this Competition.

Proposers that have received funding from the Buildings of Excellence Early Design Support RFP are eligible for funding through the Competition. The funding provided through this Competition may be used in conjunction with transportation (e.g., electric vehicle charging station) and distributed energy resources (e.g., solar photovoltaics or battery storage) funding available from NYSERDA and utility service providers.

Proposers must review the rules and eligibility requirements of all other programs, including utility programs, to determine if those funds are accessible in combination with funds offered by this Competition

and clearly indicate duplicative funding is not being provided for the same scope of work. If incentives are being received from multiple programs, the incentive amount cannot exceed the design and implementation cost of the scope of work.

Energy Performance

For a proposal to be eligible for consideration, the proposer must rely on one of the following Standards to establish that the minimum projected source energy performance requirements for the project's residential-associated space will be met.

- ASHRAE Standard 90.1 Appendix G:** Proposers intending to rely on this standard to model and predict energy performance must commit to designing and constructing a project that will achieve a minimum modeled source (primary) energy savings of 20% when compared with a project design that complies with the relevant Energy Conservation Construction Code of New York State (ECCC of NYS), currently the 2020 version; excluding the impacts of any proposed renewable energy generation. For proposed projects that include renewable or distributed energy generation, energy performance must be established first by excluding any renewable or distributed energy generation, to confirm the energy efficiency performance threshold has been met, and then by including any renewable or distributed energy generation. Both results must be submitted by the proposer to support proposal evaluation. Proposers relying on this standard will apply a 2.55 source-to-site conversion factor to support the calculation of efficiency in comparison with the natural gas baseline relied on by this standard to confirm the minimum energy performance threshold will be met. Proposers must commit to use of the "90.1 Section 11 and Appendix G Compliance Form" to establish simulation inputs and complete internal quality control.
- Passive House:** Proposers intending to achieve certification requirements to either passive house standard are deemed as meeting the minimum modeled source energy performance requirements. Projects intending to meet certification requirements as published by Phius (Passive House Institute U.S.) must identify the building(s)' modeled source (primary) energy use in terms of source energy in kWh/person/year; and projects intending to meet certification requirements published by the Passive House Institute (PHI) must identify the building(s)' modeled source (primary) energy use in terms of source energy in kBtu/treated-floor-area/year. For proposed projects that include renewable or distributed energy generation, energy performance must be established first by excluding any renewable or distributed energy generation, to confirm the energy efficiency performance threshold has been met, and then by including any renewable or distributed energy generation. Both results must be submitted by the proposer to support proposal evaluation. Alternative energy modeling (e.g., modeling to the ASHRAE standard) will not be expected of proposers intending to achieve certification to either passive house standard to support their predicted energy performance. A commitment to achieving certification requirements of Phius Core REVIVE or EnerPHit will be accepted for adaptive re-use or gut rehabilitation projects.
- Energy Rating Index (ERI):** Proposers intending to rely on the Energy Rating Index (ERI) to model and predict energy performance must commit to designing and constructing a project that will achieve the relevant EPA ENERGY STAR Multifamily New Construction Program requirements and an average ERI that will, at minimum, achieve either the U.S. Department of Energy Zero Energy Ready Home Multifamily v2 ERI target or an $ERI \leq 0.75 \times MFNC\ v1.1\ ERI$ Target without inclusion of renewable energy generation. The average ERI for all residential dwelling units must be calculated in accordance with the relevant version of the ANSI / RESNET / ICC 301 standard, entitled "Standard for the Calculation and Labeling of the Energy Performance of Dwelling and Sleeping Units Using an Energy Rating Index," currently the 2022 version. To allow for comparison with other proposals, the proposers must also submit any external calculations supporting the site energy (kBtu/yr) provided in the Attachment A, including calculations of energy use in residential-associated spaces, as well as the average ERI calculated with the inclusion of renewable energy generation, as applicable. For proposed projects that include renewable or distributed energy generation, energy performance must be established first by excluding any renewable or distributed energy generation, to confirm the energy efficiency performance threshold has been met, and then by including any renewable or distributed energy generation. Both results must be submitted by the proposer to support proposal evaluation.

For proposed projects that include non-residential space, only the energy use associated with the residential space should be included when determining the predicted energy performance. The predicted energy performance shall incorporate the square footage used for residential occupancy, inclusive of all residential-associated space such as hallways, stairwells, elevators, trash, utility and exercise rooms, entrance lobbies, as well as shared laundry facilities exclusively available to the building's residential occupants.

Resiliency

Stormwater management and flood-mitigation measures must be incorporated into the design for buildings in New York City that are expected to be subject to tidal inundation by 2080 or are located in the 2080 future floodplain and for buildings outside of New York City that are located in the 500-year flood zone or that are otherwise at risk of current or future flooding. At a minimum, critical system components must be raised above the future tidal inundation or flood elevation, depending on location, unless an alternative flood-mitigation plan to protect those critical components is proposed, and ultimately determined to be acceptable during the awarded project's contracting process, at NYSERDA's sole discretion.

Proposers, regardless of project site location, may find the [NYC Climate Resiliency Design Guidelines](#) useful for resilience strategies and resources.

For guidance on managing future flood risk, proposers may refer to the [State Flood Risk Management Guidance](#) and [NYC Flood Hazard Mapper](#).

For guidance on climate change and building resilience, proposers may refer to [the ClimAID climate projections for New York State](#), the New York [Adapting Buildings for a Changing Climate](#) website, and the [New York State Climate Impacts Assessment: Understanding and Preparing for Our Changing Climate](#) website.

Reduction in Embodied Carbon

Proposers must conform to the [NYS Office of General Services Buy Clean Concrete Guidelines](#) when specifying concrete.

III. Funding and Award

Award Schedule

Proposers who have committed to installing geothermal systems for space conditioning may be eligible for an award of \$27 per square foot of gross floor area, up to \$1,500,000. All other proposers may be eligible for an award of \$24 per square foot of gross floor area, up to \$1,200,000.

Proposer committed to installing geothermal systems for space conditioning	Award Amount	
	\$ per square foot of gross floor area	Maximum Award
Yes	\$27	\$1,500,000
No	\$24	\$1,200,000

Proposers selected through this Competition that propose to install geothermal systems but determine that they cannot proceed with the installation will have their award reduced to the lower amount, but may retain 15% of the difference between the two award options, at NYSERDA's sole discretion, based upon NYSERDA's review of the project team's submission of additional energy modeling, geotechnical analysis, and cost analysis performed after proposal submission that led to the decision to remove geothermal, payable to the developer at Milestone 1.

Projects that have been awarded funding from NYSERDA's Community Heat Pump Systems Program PON 4614 Category B or Category C or funding from NYSERDA's Large-Scale Thermal Program PON 5614 will only be eligible for an award of \$24 per square foot of gross floor area, up to \$1,200,000 through this Competition.

Contract Period

The awarded funding will be available to contracted projects for five years from the date of award. If the project is making progress and funding is still available, the project team may request an extension to the project period. The funding may be extended at NYSERDA's sole discretion.

IV. Schedule of Payments

Milestone*		Payee	Percent of Total Award Paid at Each Milestone
1	At Approval of Building Permit	Developer	15%**
		DTL	10%
2	At 50% Completion of Construction	Developer	25%
3	At Completion of Construction	Developer	35%
		DTL	5%
4	Two Years after Occupancy	Developer	10%

* See **Section VII Subsequent Submissions for Proposals Selected for Award** of this RFP for details on Milestones and associated deliverables.

** See **Section III Funding and Award** of this RFP for criteria for additional funding that may be available to the developer at Milestone 1.

NYSERDA reserves the right to negotiate the amount or schedule of payments for a selected project. At its sole discretion, NYSERDA may reduce or withhold payments for a project that falls short of the proposed level of performance, or that has not met this solicitation's minimum submission requirements.

V. Proposal Requirements and Format¹

The quality, rigor, and organization of the proposal will impact its evaluation and scoring, in part as a reflection of the likelihood a selected proposer will be successful in reaching their stated goals. Inconsistencies within proposals (e.g., descriptions, drawings, or data across all proposal documents) will impact evaluation and scoring.

The proposal structure should follow the outline listed below. The proposer's name, the RFP number (3928 Rd6), and page number should be recorded on every page of the Project Description, as well as other proposal documents where possible.

¹ Submitted materials may be used for the presentation of awarded projects in various forums. Updates to the initially submitted materials will be requested for projects selected for award.

1. Project Description

All proposers must submit a Project Description (MS Word or PDF file) titled “[Proposing Entity’s Name]-Project Description”.

Executive Summaries:

The proposer must submit a brief description (~400 words) summarizing how the proposer’s approach will meet the stated goals of the Competition.

In addition, the proposer must submit an abbreviated description (~100 words) for use in the promotion of selected projects.

Narrative Description of the Project that Addresses the Scoring Criteria:

The proposer must provide a clear and concise narrative description of the project, consisting of a minimum of 10 and a maximum of 20 pages of written content (using 8.5” x 11” page size). These page limits refer exclusively to the text of the narrative description and do not include the cover page, table of contents, images, tables, charts, or other graphics, even if these are embedded within the narrative.

The narrative description should sequentially address each category detailed in the Scoring Criteria table in **Section VI Proposal Evaluation** of this RFP.

Proposals for projects with multiple buildings that meet the definition of a project detailed in **Section II Eligibility Requirements** must additionally provide separate narrative descriptions for each building consisting of a minimum of 1 page and a maximum of 5 pages, describing how the building’s unique attributes will address the Scoring Criteria.

The proposer is also encouraged to provide any additional information not identified in the Scoring Criteria or requested in the Attachment A - Data Collection Form that may provide a comprehensive overview of their project.

Proposers should incorporate the following into the narrative description to further support how the proposer’s approach will address the Scoring Criteria:

- How the design and construction strategies will be replicable at scale and have the potential to achieve broad-based adoption by both developers and consumers.
- How the decision-making approach during the design process will ensure the intended and successful outcome.

Clean Building Design Attributes and Energy Efficiency:

- Clean building design attributes, or combinations of attributes, that have been designed to reduce peak loads.
- Early-stage analysis of the geothermal system performed to date, if applicable, including energy modeling, geotechnical analysis, and/or cost analysis.
- Early-stage analysis of the battery storage system performed to date, if applicable, including cost analysis and permitting timeline.
- The method used to calculate the Project Annual Operational Energy Costs provided in the Attachment A – Data Collection Form.
- How energy performance validation (i.e., measurement and verification) has been integrated as a critical element of the project’s commissioning, operation, and maintenance.
- Whether commissioning of energy-using systems, including the envelope, will be performed; and then relied on to create as-built drawings and energy model(s) to reflect changes in design, including those made during construction.

Cost Reduction Strategies:

- Provide a table listing the project's funding sources:
 - To establish the project's viability, the proposer must identify and describe the known or expected sources of capital, including whether those sources have been secured or are anticipated.
 - If access to the necessary capital has not yet been secured, the proposer must identify the underwriting being sought and explain why the project's proposed underwriting approach is likely to be successful.
 - Any financial support that has been secured or is expected to be secured from regulatory or other funding agencies for low to moderate income occupancies must be identified.
 - Any incentives, awards, and tax credits anticipated or secured to support the project must be identified.
- Provide a table listing the project's total cost, which shall:
 - Include all hard costs associated with the construction of the building(s),
 - Include soft costs (e.g., design, engineering, cost of certification to third-party standards, and permitting fees),
 - Include the cost of building foundation excavation as a separate and clearly labeled line item, and
 - Exclude costs associated with site preparation (e.g., earthwork, environmental remediation, or demolition of existing building(s)).
- Describe how the project's high-performance attributes (e.g., clean building design attributes and energy efficiency strategies, resiliency strategies, and others) and the team's approach to following an integrated project delivery process are expected to affect total costs – include strategies that will reduce total and net costs, trade-offs, and avoidance of cost increases.
- Describe how known or expected sources of funding available from NYSERDA, utility service providers, housing regulatory agencies, or municipalities in the form of incentives, awards, and tax credits affect the proposal team's ability to investigate, advance and implement new technologies and creative solutions that are cost effective, replicable, and scalable.
- Describe the project's viability and replicability, as demonstrated by expected ease or efficiency of construction, economic viability for the market served, unique financing solutions, or other factors that would make the project a model for future projects.
- Describe how lower operating costs related to the project's energy performance will be leveraged as part of the underwriting; and how the proposed approach can ensure the project's ultimate success and replicability. Include whether energy savings and benefits will accrue to the project's owner, each apartment's owner, or tenants, and if any unique utility metering arrangements are expected to contribute to the underwriting approach.
- If applicable, discuss how costs associated with the project's high-performance attributes can be recouped in terms of higher rents or sales prices, and other factors that would make the project a model for future projects. Include the drivers for those increased values (e.g., improved living environment, thermal comfort, indoor air and environmental qualities, improved acoustics, building resilience), and how the project's value proposition and business model are intended to achieve the proposer's investment goals.

Resilience, Passive and Active Survivability:

- A resiliency plan that identifies and assesses each project-specific resilience risk, both current and anticipated throughout the project's useful life (e.g., more intense heat waves and increased frequency and severity of flooding) and describes in detail how the proposed strategy (or combination of strategies) will increase resilience of the building and its occupants by addressing that risk.

Project Promotion Plan

The Project Description must also include a Project Promotion Plan that the proposer will implement if the proposed project is selected for award.

The plan should explain how the team will generate public interest in and demand for advanced clean and resilient buildings, in addition to collaborating with NYSEERDA on promotional activities described in **Section VII Subsequent Submissions for Proposals Selected for Award** of this RFP. The plan should outline the proposed strategies to promote the project through the sharing of information that could be useful to the industry and better inform the public of building performance that supports the elimination or reduction in use of fossil fuels. The strategies identified in the plan can focus on promoting the proposed project's design and construction details, construction technologies and processes, strategies to reduce construction and operational costs, financing strategies, and lessons learned. Promotional strategies can include, but are not limited to social media posts, conference presentations or panel discussions, submissions to design competitions, collaboration with industry affiliates and other organizations, articles published in print or online media (including newsletters, press releases, magazines, journals, etc.), podcasts, tours, and other promotional materials. The quality of the proposer's Project Promotion Plan, as well as the extent to which the proposer commits to promoting the proposed project will be considered during evaluation of the proposal.

2. Attachment A – Data Collection Form

All proposers must submit the Attachment A – Data Collection Form (excel) titled "[Proposing Entity's Name]-Attachment A".

The proposer's submission of this Data Collection Form should comply with the Instructions tab included in the workbook template, which is available on the RFP website. All data provided in this Data Collection Form must be consistent with the Project Description, energy models, and supplementary documents. Inconsistencies may impact proposal evaluation and scoring.

To support the comprehensive evaluation and scoring of the proposal and comparison with other proposals:

- The Attachment A must be submitted as an Excel file with macros enabled.
- All data required of the proposer should be populated in the Attachment A, as indicated in the Instructions tab and throughout the workbook.
- Proposers can provide additional information to support any aspect of the Attachment A in the Project Description, as detailed in **Section V.1 Project Description** of this RFP.

3. Energy Modeling Files and Reports

Energy modeling files and report(s) summarizing energy performance-related design strategies should be submitted for all projects, if available.

Projects intending to rely on the Energy Rating Index to model and predict energy performance must additionally submit the calculations described in the Energy Performance portion of **Section II Eligibility Requirements** of this RFP.

Scorecard(s) or checklist(s) for proposed additional certifications should also be submitted for all projects, if applicable.

4. Supplementary Documents: Renderings, Diagrams, Drawings, and Plans

The proposer must submit all supplementary documents listed here (as available based on project status) to support proposal evaluation and scoring, titled "[Proposing Entity Name]-Supplementary Documents" (PDF):

- Project rendering(s), at least one and up to three.
- Design drawings, including wall sections of the building envelope and details that address clean building design attributes and resilience strategies.
- Architectural plans, including at least one section, elevation, and floor plan.
- Site plan.

Images may be submitted as .pdfs at time of proposal but must be provided as high-resolution image files at 24 inches wide and 300 dpi for projects selected for award and upon request.

5. Executive Order 16

All proposers must submit an executed EO 16 form titled "[Proposing Entity's Name]-EO16" (PDF). See the EO 16 Protocols portion of **Section X GENERAL CONDITIONS** of this RFP for more information.

VI. Proposal Evaluation

Prior to review by a scoring committee, proposals will be reviewed for completeness and to ensure they meet requirements as detailed in **Section II Eligibility Requirements** of this RFP. Proposals that do not meet the eligibility requirements will not be reviewed by the scoring committee.

Following the initial eligibility review, proposals to the Competition will be evaluated based on their overall response to **Section V Proposal Requirements and Format**, specifically based on the Categories and Category Descriptions as detailed in the Scoring Criteria table below. Evaluation and scoring of each proposal will ultimately be determined in comparison with and relative to the other proposals submitted to the Competition.

Scoring Criteria

Category	Category Description	Points
Quality of Architectural Design	Strategies that address architectural design attributes, including aesthetics, project site and context, use of natural light, space functionality, acoustics, amenities, and the project's relationship to the larger community, among other design attributes. Consideration will be given to how the project's design will be impacted by, accommodate, and integrate the energy performance, resilience, co-benefits, reductions to embodied carbon, and other proposed strategies.	25
Clean Building Design Attributes and Energy Efficiency	Strategies to achieve clean building design attributes, including but not limited to high performance building envelope, geothermal (ground-source or water-source) heat pump systems, grid interactivity, energy storage (thermal and electric), on-site renewable energy systems, measurement and verification or commissioning for a period of 2 years post-occupancy, and on-site electric vehicle charging. Points will only be awarded for projects that propose to achieve savings above the minimum performance thresholds detailed in the Energy Performance portion of Section II Eligibility Requirements of this RFP. Predicted impacts of the project as proposed can include Co2/person and Co2/SF. Strategies should be designed to be resilient for the lifespan of the strategy or system.	20
Cost Reduction Strategies	Strategies that have the capacity to substantively reduce the total cost of the project, and that will likely be replicated by other projects (for the definition of total cost, see the Cost Reduction Strategies portion of Section V Proposal Requirements and Format of this RFP. Cost reduction strategies may include methods to shorten the timeframe of on-site construction that reduce the costs associated with general conditions, or reduce the time and costs associated with construction loan underwriting. Scoring attribution in this category will reward buildings that will be located in disadvantaged communities.	20
Resilience, Passive and Active Survivability	Strategies that address forward-looking climate conditions, including a wider range of operating temperatures, increased incidences of flooding on site, extended power outages, and other extreme events. Resilient strategies must include raising living spaces and critical system components above the 2080 future floodplain for projects located in New York City and above the 500-year flood levels for all other projects. Strategies can also include, but are not limited to, mechanical systems that can accommodate future climate conditions; community resilience-enhancing strategies, such as connection to district systems and reduction of vulnerability of the area surrounding the site to extreme heat; areas of refuge that incorporate HVAC systems that remain operable during power outages; passive survivability during extended power outages; and active resiliency strategies, such as satisfying critical loads for an extended duration through use of energy storage solutions, potentially in combination with renewable energy generation.	20
Quality of Co-benefits	Strategies that increase occupant comfort, health, and safety, including but not limited to actions to safeguard against transmission of airborne contaminants, such as use of MERV 13 air filters or better, and use of durable materials that limit moisture intrusion; combined with a commitment to validation of co-benefits through certification to third-party standard(s) that incorporate health-related co-benefits.	10
Reduction in Embodied Carbon	Strategies that reduce embodied carbon in materials, processes, or other design attributes; use of materials that achieve carbon sequestration; as well as including reductions to the total volume of refrigerants, use of lower GWP refrigerants, and systems that require few or no refrigerant piping joints to be made on the construction site. Proposed use of larger commercial VRF ASHP systems serving the residential portion of the project that require long lengths of piping and multiple in-field connections will not be awarded any points in this category.	10
Bonus Categories	Proposals for the adaptive re-use of commercial office, institutional, or retail buildings to multifamily use as defined in Section II Eligibility Requirements of this RFP. To be eligible, the project must establish that the proposed solutions and attributes will be replicable at scale.	10

Program Policy Factors

NYSERDA reserves the right to accept or reject proposals based on the following program policy factors:

- The degree to which the proposed project, including proposed cost share(s), optimizes the use of available funding to achieve NYSERDA's overall programmatic and portfolio objectives, as specifically set forth in this Solicitation.
- Diversity of awards within multiple locations, climates, regions, or other geographically articulated criteria (for example, disadvantaged communities or Regional Economic Development Council regions).
- The degree to which there is portfolio diversity, including considerations as to funding duplicative efforts stemming from the Solicitation itself or similar, previously funded efforts and considerations as to development stage of the cohort of proposed projects (for example, permits or financing secured, shovel-ready, etc.)

VII. Subsequent Submissions for Proposals Selected for Award

Upon selection for award, NYSERDA will notify the proposer and initiate next steps via email.

Proposers selected through this Competition must agree to interact with NYSERDA as detailed in this solicitation and the agreement executed between the selected proposer and NYSERDA.

Collaboration with NYSERDA – Project Promotion

Selected proposers are required to assist NYSERDA in promoting their project and sharing information that will help the industry accelerate the design, construction, and operation of high-performance buildings, all of which may be shared publicly unless otherwise noted.

Proposers selected through this Competition must agree to:

- Allow their project to be part of NYSERDA's promotional efforts and to cooperate with NYSERDA in the creation and implementation of those efforts, including but not limited to exhibitions, articles, books, electronic media including a Competition website, and lectures promoting the Buildings of Excellence Competition and its outcomes.
- Cooperate with NYSERDA in the development of other promotional materials, such as but not limited to website and magazine articles, books, blogs, or videos.
- Participate in presentations.

NYSERDA credits the project name, developer, and DTL in all promotional material. NYSERDA reserves the right to brand and market the awarded projects as NYS Buildings of Excellence projects or a similar reference.

In accordance with the Proprietary provisions located in **Section IX GENERAL CONDITIONS** of this RFP, the proposer should indicate which aspects of the information provided in the proposal or subsequent submissions can be publicly shared by NYSERDA in its promotional activities and should stipulate if any portion or portions of the information should be reserved for NYSERDA's internal use and/or for anonymized analysis, and not publicly shared as project-specific information. NYSERDA may elect to disclose unprotected information, in whole or in part, on websites, in publications, in presentations, or other venues.

Contractual Agreement

Selected proposers are required to execute an agreement (see Attachment B – Sample Agreement Rd 6 on the solicitation website) with NYSERDA and deliver completed projects that meet the requirements detailed in this solicitation.

The project tasks and deliverables and associated payments will be as detailed in this solicitation and the agreement executed between the selected proposer and NYSERDA.

Steps to Contract Execution

Following selection and notification of award, and in support of NYSERDA's development of the project's contractual agreement, the selected project team will be required to provide:

- Updated Attachment A – Data Collection Form,
- Summary of Changes, if applicable, with a narrative that clearly outlines any proposed changes and provides explanations for the changes. Any design changes will be subject to NYSERDA's discretion as defined and detailed in the Deviations from Scope portion of **Section VII Subsequent Submissions for Proposals Selected for Award** of this RFP.
- State Environmental Quality Review (SEQR) form (a template will be provided to selected project teams), if available.

Deviations from Scope

At any point during the design or construction process, NYSERDA must be notified and provided associated details in writing if significant deviation from the original proposal is expected, including but not limited to whether the project is expected to fall short of the energy performance and related goals as detailed in the original proposal.

Projects selected through this Competition must ensure that the cumulative changes during design or construction will not increase the predicted source energy use or carbon emissions in comparison to the project as originally submitted.

Continuation of any project that deviates from the original proposal will be subject to NYSERDA's sole discretion.

NYSERDA reserves the right to reduce the award amount or terminate any project should it fall below the energy performance as originally committed.

Milestone Tasks and Deliverables

Once each Milestone is achieved, selected proposers will be expected to submit all deliverables as detailed in this solicitation and in the agreement executed between the selected proposer and NYSERDA.

The deliverables listed for each Milestone must be submitted, reviewed, and approved by NYSERDA to allow any payment to occur.

Proposers selected through this competition must agree to provide updated information related to the project's expected, evolving, and as-built design, costs, and price, in the Attachment A Data Collection Form, Cost Workbook, and other data collection templates provided by and requested by NYSERDA following project selection and prior to execution of the contractual agreement with NYSERDA and at each Milestone.

Following completion of construction, proposers selected through this Competition must agree to:

- Provide or secure Data Release Authorization Forms from building owners and a representative sample of tenants, as required for benchmarking of the whole building's energy use, generation, and related utility consumption, as well as to provide additional performance information obtained through monitoring and controls systems, utility metering or submetering systems, or Smart Building systems.
- Proposers must ensure the project owner agrees and authorizes their utility's sharing of the participant-customer's information and/or project-level information with New York State Department of Public Service Staff and NYSERDA, including its agents or authorized representatives, consistent with NYSERDA's New York State Public Service Commission and statutorily authorized responsibilities, including, but not limited to supporting market development initiatives, and other evaluation and measurement activities. (For clarity, the term project level includes the information based on the scope of the project, including, but not limited to, aggregated and anonymized whole building, building or subsets of the project.)

- Provide NYSERDA with actual monthly energy use and generation by fuel type for all fuels and from all meters for sixty months after project completion, for the residential portion of the building as well as for the whole building. Directly metered tenant use may be aggregated by fuel type.
- Populate the U.S. Environmental Protection Agency (EPA)'s ENERGY STAR® Portfolio Manager or equivalent, as accepted by NYSERDA, for a minimum of sixty months post-occupancy, providing NYSERDA with access to the benchmarking tool's output data. Disclosure of the benchmarking data on websites, in publications, in presentations or other venues may occur, in whole or in part, in a form attributable to their project.

Milestone 0

Milestone 0 deliverables can be submitted at any time after the project team has been notified of selection for award but must be submitted before Milestone 1 can be approved.

Deliverables:

- SEQRA Record and SEQRA determination. If a SEQRA is not required, written documentation from the municipality that SEQRA is not required,
- Proof of the Project's engagement with the New York State Historic Preservation Officers (SHPO).

Milestone 1

The Milestone 1 award amount will be available when the project has received of building permit and pre-certification or documentation of design review from third-party certification standard and the required deliverables have been reviewed and approved by NYSERDA.

Deliverables:

- Updates to original proposal descriptions and related documents, including Attachment A – Data Collection Form,
- Summary of changes from the previous submission as applicable, including a discussion of any reduction in projected performance in comparison to the previous submission,
- Copy of valid building permit, including all aspects of design,
- Pre-certification or design review documentation to the third-party certification standard(s) committed to by the proposer,
- As-designed energy models and associated verification reports,
- Project Promotion Plan that focuses on promotion of the project to the public,
- Cost-related documentation

Milestone 2

The Milestone 2 award amount will be available when the project has achieved 50% construction completion, and the required deliverables have been reviewed and approved by NYSERDA.

Deliverables:

- Updates to original proposal descriptions and related documents, including Attachment A – Data Collection Form,
- Summary of changes from the previous submission as applicable, including a discussion of any reduction in projected performance in comparison to the previous submission,
- Updates to the Project Promotion Plan,
- Updates to the Cost-related documentation

Milestone 3

The Milestone 3 award amount will be available following completion of construction and after the required deliverables have been reviewed and approved by NYSERDA.

Deliverables:

- Updates to original proposal descriptions and related documents, including Attachment A –Data Collection Form, to reflect any changes not yet documented to NYSERDA,
- Summary of changes from the previous submission as applicable, including a discussion of any reduction in projected performance in comparison to the previous submission,
- Copy of Certificate of Occupancy (C of O) or Temporary C of O,
- Updates to the Project Promotion Plan,
- Updates to the Cost-related documentation,
- Certification or as-built review documentation to the third-party certification standard(s) committed to by the proposer,
- As-built energy models and associated verification reports,
- Construction photos, suitable for presentation (minimum of 5),
- Photographs of final project, suitable for presentation (minimum of 5),
- Summary of lessons learned,
- Provide proof of the Project's compliance with SHPO if applicable.

Milestone 4

The Milestone 4 award amount will be available after year two of building occupancy and after the required deliverables have been reviewed and approved by NYSERDA.

- Documentation of energy data and related information:
 - Energy use following one year and again following two years of building occupancy, reflecting all energy used or produced on site, with energy use provided upon request for up to sixty months following building occupancy,
 - Whole building benchmarking through use of ENERGY STAR Portfolio Manager, or equivalent,
 - Additional data or updates to the original proposal to the Competition, including Attachment A – Data Collection Form, to reflect the as-built condition of the project,
 - Comparison between actual and predicted energy data,
 - One-page narrative discussing why project did or did not achieve predicted performance,
- Owner Data Release Acquisition Form,
- Report of Promotional Activities,
- Updates to the Cost-related documentation, if any,
- One-page summary of lessons learned.

VIII. NYSERDA Responsibilities

NYSERDA provides funding and support to projects in accordance with the Competition, as detailed in this solicitation.

IX. GENERAL CONDITIONS

Proprietary Information: Careful consideration should be given before confidential information is submitted to NYSERDA as part of the proposal. Review should include whether the information is critical for evaluation and whether general, non-confidential information would suffice for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure of records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which, if disclosed, would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary and confidential trade secret information should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to excluding it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in [21 NYCRR Part 501](#). However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992: It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement agreements.

Information on the availability of New York State subcontractors and suppliers is available from the following:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from the following:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k: NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found on the [Office of General Services' website](#). Proposers are required to answer questions during proposal submission, make required certification under the State Finance Law, and disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a: NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor with a monetary value in excess of \$100,000, prior to entering an agreement with NYSERDA, to certify to the Department of Taxation and Finance (DTF) whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the DTF to collect New York State and local sales and compensating use taxes. The DTF has created [ST-220-TD](#) to allow a prospective contractor to readily make such certification. Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA that such certification with the DTF has been filed. The DTF has created a second form, [ST-220-CA](#), that must be completed by a prospective contractor and filed with NYSERDA, prior to contracting. [Guidance for contractors](#) can found on the [DTF's website](#).

Contract Award: NYSERDA anticipates making multiple awards under this solicitation. A contract may be awarded based on initial applications without discussion, or following limited discussion, or following negotiations pertaining to the statement of work. Each offer should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA uses the sample agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to

standard terms and conditions in the Attachment B – Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions generally results in a more expedited contracting process. NYSERDA expects to notify proposers in approximately 12 weeks from the proposal due date whether the proposal has been selected to receive an award. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Accessibility Requirements: NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

Limitation: This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the sample agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making the award.

Disclosure Requirement: The proposer will disclose any indictment for any alleged felony or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and will describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement. The contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Joint Commission on Public Ethics, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before

any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Joint Commission on Public Ethics, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Joint Commission on Public Ethics. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Attachment B – Sample Agreement Rd6

NYSERDA Commercial and Industrial (C&I) Carbon Challenge

Funding Available: Up to \$10 million available

DESCRIPTION

The New York State Energy Research and Development Authority (NYSERDA) has \$10 million of incentives available to support decarbonization project portfolios for large Commercial and Industrial customers across New York State. All projects must demonstrate greenhouse gas emissions savings and be installed within a 3-year implementation period. Eligible projects include, but are not limited to, energy efficiency improvements, retrofits, clean heating and cooling, carbon capture, utilization and storage (CCUS), industrial process emission reduction, and on-site renewable energy systems.

The Commercial and Industrial (C&I) Carbon Challenge provides incentives for projects at eligible New York State commercial, industrial, and institutional entities on a competitive basis. Applicants are required to identify a carbon savings goal and the projects they will complete to meet that target. The carbon savings goal must be at least 25,000 mtCO₂e. Available awards range from \$500,000 to \$5 million. Award amounts are determined by the size of the carbon savings goal.

At least 30% of the applicant's greenhouse gas savings come from utilization of one of the following four categories: low-carbon fuels, onsite CCUS, industrial process emission reduction, and/or beneficial electrification projects

- Beneficial electrification is defined for the purposes of this program as the utilization of electricity for activities that would otherwise consume fossil fuels.
- Industrial process emissions are those generated from physical or chemical changes to materials in the manufacturing process, unrelated to the consumption of energy

Applicants will indicate on Attachment B whether a particular project falls into one the four required categories above, but the ultimate determination of whether a project fits this designation is at NYSERDA's sole discretion.

Proposals may qualify under one of the two following categories:

Category A – Applications submitted by a commercial or industrial entity for projects at a single site or multiple sites in New York State.

Category B – Applications submitted by a service or solutions provider that will implement greenhouse gas reduction projects at their customer's commercial or industrial sites in New York State. Category B applicants can propose a single greenhouse gas reduction solution or a diverse range of solutions. Scoring consideration will be given to the administrative and technical effort required to manage the portfolio of projects if selected for an award as described in the Selection Criteria, Category B, Project Plan.

If selected for an award, funding associated with a Category B proposal will be administered directly to the service or solutions provider.

APPLICATION SUBMISSION

In addition to the CFA Application, Applicants to this program will be required to complete, upload, or review the additional required attachments:

- Attachment A, Clean Energy Action Plan - The Clean Energy Action Plan serves as the keystone document for tracking the overall strategic approach of the Applicant throughout the C&I Carbon Challenge program. It will be used to document goals; track timelines and key metrics including costs, savings, and personnel requirements; provide high level overviews of project implementation planning and ongoing progress; and detail measurement and verification approaches as projects are finalized.
- Attachment B, Project Savings Tracker – This calculation and tracking tool is meant to assist Applicants in determining their carbon savings goal and the value of their award. Each project included in the Clean Energy Action Plan must be included on this spreadsheet.
- Attachment C (Category A only), Data Collection Form
- Attachment D, Letters of Support (Category B only) – Applicants must include letters of support from the commercial, industrial, or institutional entity or entities where the project(s) will take place, signed by an authorized signatory for the organization. The letter must be on official letterhead and include:
 - The name of the business or institution
 - A statement of support for the submission of the application
 - A statement of their intention to participate in the program if selected for funding
 - A list of the addresses for sites where projects will be implemented and a brief description of the solutions being pursued at each
- Attachment E, Climate Hazard Exposure Guidelines – The Climate Hazard Exposure Guidelines provide instructions for determining if project sites are exposed to climate hazards. This determination is required for completing questions in the CFA Application.

Attachment templates can be found at <https://www.nyserda.ny.gov/cicc>.

APPLICATION QUERIES

No communication intended to influence this procurement is permitted except by contacting Sean Mulderrig at (212)-971-5342, ext. 3804 or by e-mail carbonchallenge@nyserda.ny.gov (for technical questions). If you have contractual questions concerning this solicitation, contact Nancy Marucci (Designated Contact) at (518) 862-1090, ext. 3335 or nancy.solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offerer, and (2) may result in the proposer not being awarded a contract.

ELIGIBLE TYPES OF APPLICANTS

Eligible Applicants include, but are not limited to:

- Colleges and Universities
- Food and Beverage Processing
- Health Care Facilities
- Manufacturing
- Mining and Extraction
- Municipal Facilities
- Not-For-Profit and Private Institutions
- Office Buildings
- Public and Private K-12 Schools
- Retail
- State and Local Governments
- Warehouse and Distribution Facilities
- Wastewater Treatment Plants

While third party advisors or consultants are permitted to assist in preparing applications for Category A, they are not an eligible applicant type.

Decarbonization solutions providers implementing projects for customers are eligible to apply under Category B if they are providing services to eligible commercial, industrial, or institutional entities in New York State.

PRE-APPLICATION REQUIREMENTS

- Projects must save a minimum of 25,000 metric tons of CO₂ equivalent
- Work conducted prior to the execution of an Agreement between NYSERDA and the applicant is not eligible for cost-reimbursement;
- New construction and expansion projects are not eligible for this program; and
- Projects must be performed on systems with a remaining useful life of at least six years.

Work conducted prior to the execution of an Agreement between NYSERDA and the Applicant is not eligible for cost-reimbursement.

ELIGIBLE ACTIVITIES / PROGRAM BENEFIT REQUIREMENTS

Proposals that receive an award under the C&I Carbon Challenge program **will not be eligible** to receive any other incentives **from NYSERDA or the proposer's utility** for the project activities awarded in this proposal. However, Applicants that are not awarded incentives through this competitive selection process may be eligible to participate in other NYSERDA or utility programs as applicable.

Grant funds may be used for any energy or industrial-process related projects that can reduce carbon emissions. These actions include, but are not limited to:

- Energy Efficiency Improvements
- On-site Renewable Energy Systems (photovoltaics, wind, or solar thermal)
- Heat Pumps
- Electrification of Thermal Loads
- Carbon Capture, Utilization, and Storage
- Process Emission Reduction
- Low-Carbon Fuel Use
- Other efficiency or renewable energy technologies.

For certain carbon reduction measures, Category A awardees will be required to meet NYSERDA minimum quality standards and work with NYSERDA approved participating contractors, where applicable. More information on approved contractors can be found here:

<https://www.nyserderda.ny.gov/Contractors/Find-a-Contractor>.

Selected applicants will work with NYSERDA to develop a 4-year contract agreement commencing in 2025. All carbon reduction projects must be installed within 3 years of agreement execution. The final year will be used to complete any outstanding measurement and verification (M&V), if necessary, and determine final project results. This award is available for four years from the date of award. If the project is making progress and funding is still available, the grant may be extended for an additional period of time at NYSERDA's discretion.

NYSERDA will issue awards ranging from \$500,000 to \$5 million per applicant. Category A applicants who pay the electric System Benefits Charge (SBC) and Category B applicants providing solutions to customers who pay the SBC will be eligible for a maximum award of \$.5 million. Category A and B applications including sites that do not pay the electric SBC will be eligible for a maximum award of \$2 million.

Awards are determined by the size of the carbon savings goal. As the amount of carbon saved increases, the financial incentives increase. For each ton of carbon reduced, NYSERDA will provide funding according to a marginal rate schedule shown below.

Payment Structure	
mtCO2e	\$ per mt CO2e
0 - 25,000	\$20.00
25,000 - 60,000	\$22.00
60,000 - 125,000	\$24.00
125,000+	\$26.00

Here is an example of how the award size is calculated: an applicant submits a proposal that sets a target of reducing 130,000 tons of CO2 equivalent. The overall award equals

$$(25,000mt \times \$20) + (35,000mt \times \$22) + (65,000mt \times \$24) + (5,000mt \times \$26) = \$2,960,000^*$$

To provide Applicants with flexible funding, up to 70% of the overall award will be made available as project costs are incurred. NYSERDA and awardees will use the Clean Energy Action Plan and monthly meetings to document expected costs and determine funding requirements, ensuring disbursements are proportional to all project costs anticipated through the Clean Energy Action Plan and align with progress toward carbon savings goal. Participants will be required to provide NYSERDA with justification for incurred costs and remittance of payment will be at the discretion of the Project Manager.

All remaining funds will be awarded upon completion of M&V conducted by a third-party evaluator and will be subject to readjustment based on the participant's performance relative to their stated carbon savings goal according to the marginal rate schedule.

NYSERDA will have discretion to accept only a portion of the submitted portfolio of projects for funding. Any individual project(s) not selected for funding will still be eligible for alternative NYSERDA or utility incentive program funding.

SUCCESSFUL APPLICANT REQUIREMENTS

Selected C&I Carbon Challenge awardees will be expected to work closely with NYSERDA in updating, refining and implementing Clean Energy Actions Plans over the term of the program. Each program participant will receive the benefit of a dedicated NYSERDA Project Manager. The Project Manager will work with participants to track progress, provide feedback and guidance on measures to be implemented, and coordinate cross-collaboration with participants and NYSERDA external resources when necessary or requested.

* \$2,000,000 in the case of an application including entities that do not pay the SBC

Both the Clean Energy Action Plan and the Project Savings Tracker will be required to be updated on an annual basis, at a minimum. The originals of these documents submitted in this application will serve as the initial document to which all revisions will be applied. Updates will encompass the following:

- Indication of instances where estimates have been revised or implementation plans have been altered
- A brief summary of all Clean Energy Actions taken to date
- A detailed account of progress on completed measures, including:
 - Project Costs
 - Estimated Savings
 - Verified & Realized Savings
 - Upcoming Measurement and Verification actions
- Identification of new measures, if applicable

SELECTION CRITERIA

An application is eligible to receive a total final score of 100, of which 80 points are derived from the NYSERDA review criteria below and 20 points are allotted by the applicable Regional Economic Development Council (REDC). The REDC rates the degree to which the project aligns with the REDC's Strategic Plan.

Proposals that meet solicitation requirements will be reviewed by a Scoring Committee using the Evaluation Criteria for each Category below **listed in order of importance**. After proposals are reviewed, NYSERDA will issue a letter to each proposer indicating the proposal evaluation results. NYSERDA reserves the right to adjust awards and related carbon goals based on available funding.

Category A Proposals

1. Project Plan (20 points)

- Does the proposed plan and approach utilize well established means of implementing emissions reduction projects? Does the proposed approach utilize technologies or solutions that have proven themselves in the marketplace? How does the proposal help the applicant meet their long-term sustainability goals? Can projects feasibly be completed according to the proposed schedule? Does the personnel identified to work on projects possess the experience necessary to ensure success? Are adequate means of tracking project metrics and schedules in place? Have thorough responses been included for all required prompts related to the application's low-carbon fuels, CCUS, industrial process emission, and/or beneficial electrification projects?

2. Project Analysis (20 points)

- Does the proposer demonstrate a thorough investigation of potential measures and sound reasoning for selecting their proposed approach? How thoroughly have projects been scoped? What level of analysis has been completed? Is the methodology for determining energy savings or generation provided and well detailed? Are assumptions disclosed? Are project costs reasonable and based on customer experience and/or market intelligence? Have projects in the proposal been examined in a NYSERDA FlexTech study or an investment grade audit?

3. Experience (15 points)

- Does the proposer have a codified institutional or corporate social responsibility framework? Does the proposer have a demonstrated record of sustainable planning

and implementation? Has the proposer set a specific net-zero goal, science based target, or other industry-standard emission target? Are they on track to achieve the goal or target? Has the proposer traditionally undertaken energy efficiency or distributed energy resource projects? Are adequate personnel resources in place to deliver on sustainability goals?

4. Resiliency & Disadvantaged Community Impacts (15 points)

- Is the applicant located in a [disadvantaged community](#)? Will the proposal offer benefits to disadvantaged communities? Does the proposal outline a strategy to ensure that the projects are resilient to future climate change impacts?

5. Cost Share (10 points)

- Is the applicant contributing at least 50% cost-share?

Category B Proposals

1. Project Plan (25 points)

- Does the proposed plan and approach utilize well established means of implementing emissions reduction projects? Does the proposed approach utilize technologies or solutions that have proven themselves in the marketplace? How does the proposal help the applicant's customers meet their long-term sustainability goals? Can projects feasibly be completed according to the proposed schedule? Are adequate means of tracking project metrics and schedules in place? Have thorough responses been included for all required prompts related to the application's low-carbon fuels, CCUS, industrial process emission, and/or beneficial electrification projects? Has the applicant secured letters of support from their participating customers? Will the geographic dispersal of participating customers or the diversity of project types being pursued present challenges for controlling measurement and verification administrative costs?

2. Project Analysis (20 points)

- Does the proposer demonstrate a thorough investigation of potential measures and sound reasoning for selecting their proposed approach? How thoroughly have projects been scoped? What level of analysis has been completed? Is the methodology for determining energy savings or generation provided and well detailed? Are assumptions disclosed? Have projects in the proposal been examined in a NYSERDA FlexTech study or an investment grade audit?

3. Resiliency & Disadvantaged Community Impacts (15 points)

- Are the participating customers located in a [disadvantaged community](#)? Will the proposal offer benefits to disadvantaged communities? Does the proposal outline a strategy to ensure that the projects are resilient to future climate change impacts?

4. Experience (10 points)

- Does the proposer have a demonstrated record of implementing similar projects in similar operational environments? Do the participating customers have specific net-zero goals, science based targets, or other industry-standard emission targets?

5. Cost Share (10 points)

- Is the applicant contributing at least 50% cost-share?

In addition to the criteria noted above, NYSERDA shall have the discretion to consider additional factors in determining the relative merits of projects to illustrate innovative carbon-reducing strategies in New York State. NYSERDA may also consider the following program policy factors in making award decisions:

- Degree to which the proposed project exhibits technological diversity in technology and implementation approach when compared to the existing Commercial and Industrial Carbon Challenge project portfolio and other projects selected from this solicitation;
- Degree to which there is diversity among awardee sectors and industries;
- Degree to which the proposed project, or group of projects, represent a desired geographic distribution (considering past awards and current applications);

AWARD CRITERIA DETAILS

- An initial screening for eligibility will be conducted several weeks after the close of the CFA. Applicants that are determined to not meet basic eligibility criteria will be informed at that time that they are not eligible for further consideration of this program for this year.
- Notice of a funding award will be given in the form of a contract outlining the terms of the proposed assistance. Project funding may only be used for expenses incurred after the date of contract execution. Applicants are strongly encouraged to review and countersign NYSERDA's Agreement prior to starting the project.
- All Applicants will be required to certify and agree that any decrease in the scope of work described in the Applicant's final CFA submission including, but not limited to, total project costs, may result in NYSERDA's reduction of the award, in NYSERDA's sole discretion, in an amount proportionate to any such decrease.
- All Applicants will be requested to certify and agree that any expansion of the scope of work described in the Applicant's final CFA submission including, but not limited to, total project costs, may not result in an increase of the award, consideration of scope changes will be at the sole discretion of NYSERDA.
- Please note that awarded grants are transferable at the sole discretion of NYSERDA.
- NYSERDA expects projects to proceed in the time frame set forth by the Applicant. If the implementation of a project fails to proceed as planned and is delayed for a significant period of time and there is, in NYSERDA's exclusive judgment, doubt as to its viability, NYSERDA reserves the right to cancel its funding commitment to such project. NYSERDA reserves the right to require Recipient to provide any additional information and/or documentation NYSERDA deems necessary and terminate the project at any point if the applicant fails to provide such documentation in a timely manner.
- All required public approvals must be in place prior to the start of construction and installation of renewables, including State Environmental Quality Review (SEQRA) and working with the State Historical Preservation Office (SHPO). Physical work on a NYSERDA-funded project may not be started prior to the completion of any necessary environmental review.
- Grant funds originally awarded to projects that have since been cancelled or terminated may be repurposed for economic development projects by NYSERDA at its discretion in consultation with the REDCs.

ADDITIONAL RESOURCES

For more information, applicants should contact Sean Mulderrig at the New York State Energy Research and Development Authority, 17 Columbia Circle, Albany, New York 12203, call (518) 862-

1090 ext 3804, email carbonchallenge@nyserda.ny.gov or visit: <https://www.nyserda.ny.gov/All-Programs/Programs/CI-Carbon-Challenge>.

Disadvantaged Communities (DAC) Consultant Pool

Request for Qualifications RFQL 4922
No Funding is Associated with This Solicitation

Applications accepted on an open enrollment basis until December 31, 2030, by 3:00 p.m. Eastern Time*

Program Summary

The New York State Energy Research and Development Authority (NYSERDA) is reissuing this **Request for Qualifications (RFQL) 4922** as an open enrollment application to expand the pool, or group, of qualified Community-Based Organizations (CBOs) and other entities, including Indigenous Nations and Indigenous-led Organizations, that represent New York State's Disadvantaged Communities (DAC),¹ herein referred to "DAC Consultants", available to work as paid consultants to support NYSERDA across multiple programmatic areas and support program teams with distinct, time-sensitive projects, as needed. Paying for community time and contributions to NYSERDA's policies, programs, and planning is one of several initiatives designed to support, which advances best practices for equitable community engagement intended to support deeper, more coordinated consultation and collaboration with historically marginalized communities and Indigenous Peoples. Consulting with and compensating DAC Consultants in this pool helps deliver on the clean energy and climate goals outlined in the [Climate Leadership and Community Protection Act \(Climate Act\)](#), with the goal of 40% of clean energy benefits directed to disadvantaged communities. [NYSERDA's Climate Equity Strategy](#), which advances best practices for equitable community engagement intended to support deeper, more coordinated consultation and collaboration with historically marginalized communities and Indigenous Peoples.

NYSERDA is committed to ensuring that communities on the frontlines of the climate crisis can be at the forefront of shaping clean energy solutions. Through this RFQL, NYSERDA intends to compensate qualified DAC Consultants at pre-established compensation rates for their time and experience in delivering requested services to NYSERDA, while providing a continuous opportunity to increase the number of qualified contracted DAC Consultants. This helps ensure the experiences and inclusive engagement of New York State's historically marginalized communities remain centered in the development of NYSERDA initiative planning, resulting in better-informed and more equitable program designs, energy policies, and demonstrable impact on disadvantaged

¹ **Disadvantaged Communities** – The Climate Act charged the [Climate Justice Working Group](#) with the development of the criteria to identify disadvantaged communities based on geographic, negative public health effects, environmental pollution, impacts of climate change, socioeconomic criteria, or comprise high-concentrations of low- and moderate-income households. The Disadvantaged Communities Criteria was adopted by the Climate Justice Working Group on March 27, 2023. An interactive map and associated resources for the most recent version are available online at <https://climate.ny.gov/Resources/Disadvantaged-Communities-Criteria>. Additionally, for the purposes of this solicitation the term disadvantaged communities include hard to reach, underserved rural communities, Indigenous Peoples, and other areas of the State with high levels of poverty and limited access to resources.

community-driven priorities.

Access to the pool of DAC Consultants selected under this RFQL will improve NYSERDA's understanding of the barriers various DACs across the state face and will enable solutions, informed by and developed in consultation with representatives of New York State's historically marginalized and frontline communities. DAC Consultants would be expected to work on distinct projects with clear timelines, some of which may be requests for services on short notice and some of which may be longer-term incremental engagements.

Application Submission:

Electronic submission is required. For detailed instructions on how to submit an application including file attachment requirements, refer to the [NYSERDA Solicitations User Guide](#).

For online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to submit applications. The online application system closes promptly at 3pm daily, files in process or attempted edits or submission after 3pm Eastern Time daily or on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>)

It is the applicant's responsibility to review all information on the application to ensure it is accurate and fully completed, including uploading any required documentation, prior to submitting. Refer to the **Solicitation Proposal and Vendor Responsibility Questions** under the [Standards Forms & Agreements](#) section of NYSERDA's website for a list of the required questions applicants must answer as part of a submission.

Designated Contact(s):

Potential applicants are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Department's Designated Contacts for this Procurement are: Lori Clark, primary contact at (518) 738-2823 or by e-mail at PublicEngagement@nyserda.ny.gov. For technical questions, Lori Clark at (518) 738-2823 or by e-mail at PublicEngagement@nyserda.ny.gov or Lisa Romero at 518-738-2818 or by email at PublicEngagement@nyserda.ny.gov. If you have contractual questions concerning this solicitation, contact Nancy Marucci (Designated Contact) at (518) 362-0489 or Nancysolicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offeror, and (2) may result in the proposer not being awarded a contract.

I. Introduction

NYSERDA recognizes the role that public policy has played in perpetuating inequities faced by historically marginalized communities, and its critical role in addressing the climate crisis, energy injustice, and the legacy of environmental racism. Many of the solutions to fight the climate crisis already exist within the communities that bear the greatest adverse impacts from climate change, shoulder the highest energy burdens, experience broad disproportional institutional systemic inequities, and stand to benefit the most from an inclusive clean energy economy.

To address these historic inequities and marginalization in policy and program planning processes, New York is prioritizing climate justice by ensuring that historically marginalized communities directly participate in, and benefit from, the State's climate actions in advancing the State's clean energy economy. Through its Climate Equity Strategy, NYSEERDA is shifting investments to reduce burden and increase benefits to frontline and historically marginalized communities while designing more inclusive pathways for meaningful, paid community input for the contributions made to NYSEERDA's clean energy initiatives planning, policies and programs. This will help ensure the lived experiences and localized community knowledge are front and center in NYSEERDA's strategy and development of energy policies and program decisions that impact their everyday lives.

Additionally, NYSEERDA program teams are increasingly seeking DAC consultation on a wide range of programmatic, cross-technical areas, applied skills and populations served including input and feedback on reports, proceedings, and technical review analyses often with constrained time horizons. NYSEERDA also works collaboratively with other external State agency partners and decision-makers, in support of the work needed to help deliver on the State's clean energy and carbon reduction goals set forth in the [Climate Act](#).

Through this open-enrollment qualifying application, NYSEERDA is working to expand our reach statewide and continuously increase the pool of DAC Consultants representing and/or serving historically underserved and marginalized populations. Specifically, we are working to engage a vast and diverse range of New York State DAC Consultants including environmental and climate justice organizations, grassroots advocacy organizations, faith-based groups, and Indigenous-led Organizations as well as Indigenous Nations.

NYSEERDA recognizes the history of Indigenous Nations and Indigenous Peoples and the innumerable contributions as the original environmental stewards of New York and respects the distinct inherent sovereignty of the various Indigenous Nations throughout New York and their respective jurisdictions and territories, in accordance with their customs, participation and consent. We acknowledge and recognize the unique Government to Government relationships Indigenous Nations and Indigenous Peoples have with State and federal entities. Through this solicitation, NYSEERDA seeks to broaden our engagement and work cooperatively and effectively with Indigenous Nations and Indigenous Peoples including Indigenous-led Organizations, to serve as consultants on various state energy issues and will remain flexible and open to collaborating and using a mutually satisfactory established legal agreement wherever possible.

Interested organizations should be embedded in and/or predominantly serve historically underrepresented, vulnerable and marginalized disadvantaged communities, have the trust and historical context of their residents and businesses, and wish to use their lived experiences or learned experiences, as a DAC Consultant, in order to contribute meaningfully to New York State's energy policy development and program planning, working across sectors to help inform and support equitable solutions for all New Yorkers, towards a just, and inclusive clean energy future. All qualified DAC Consultants will be paid at pre-established, equitable compensation rates, outlined further below under Compensation.

Definitions

For purposes of this RFQL, the following terms and definitions are provided to ensure consistency

in the development of a response to this solicitation opportunity:

- **Applied Skills** – For the purposes of this solicitation, applied skills are practical abilities necessary for advancing the clean energy transition. A full list of self-select options is available in the application.
- **Community-Based Organization (CBO)** – For the purposes of this solicitation, a community-based organization refers to a private, nonprofit or for-profit organization, registered to do business in New York State, aimed at making desired improvements to a community's social health, well-being, and overall functioning, is representative of a community or significant segments of a community; and provides services to individuals in the community based on input from community members, such as grassroots, advocacy, faith-based groups, coalitions based in and/or serving Disadvantaged Communities (DACs), social welfare organizations, civic leagues, labor organizations, Indigenous-led Organizations, social community groups and chambers of commerce.
- **Cross-Sector Areas** – For the purposes of this solicitation, cross-sector areas are areas of knowledge that apply to multiple clean energy industry sectors or that require a holistic approach when developing clean energy solutions.
- **Disadvantaged Communities** – For the purposes of this solicitation, The Climate Act charged the [Climate Justice Working Group](https://climate.ny.gov/ClimateJusticeWorkingGroup) with the development of the criteria to identify disadvantaged communities based on geographic, negative public health effects, environmental pollution, impacts of climate change, socioeconomic criteria, or comprise high-concentrations of low- and moderate-income households. The Disadvantaged Communities Criteria was adopted by the Climate Justice Working Group on March 27, 2023. An interactive map and associated resources for the most recent version are available online at <https://climate.ny.gov/Resources/Disadvantaged-Communities-Criteria>. Additionally, for the purposes of this solicitation the term disadvantaged communities include hard to reach, underserved rural communities, Indigenous Peoples, and other areas of the State with high levels of poverty and limited access to resources.
- **Experience** – For the purposes of this solicitation, experience means demonstrating your organization's capacity, credibility, and relevant knowledge or proficiency in the fields this RFQL supports, showcasing past successes and ability to effectively implement the proposed potential work. This may include the lived and/or learned experience of team members, collected community experience, or other demonstration of capacity, credibility, and knowledge on relevant topics.
- **Indigenous Nation** – For the purposes of this solicitation- Indigenous Nations, otherwise known as Tribal Nations or Indian Nations, shall refer to State and federally recognized Nations as referenced in the NYS disadvantaged communities criteria including: Cayuga Nation, Oneida Indian Nation, Onondaga Nation, Poospatuck or Unkechaug Nation, Saint Regis Mohawk Tribe, Seneca Nation of Indians, Shinnecock Indian Nation, Tonawanda

Band of Seneca, and Tuscarora Nation.^{2, 3, 4} The NYS disadvantaged communities criteria automatically includes census tracts where State or federally recognized Indian Nation controlled territory (either sovereign territory or owned) exceeds 5% of the area of a census tract regardless of the tracts' criteria scores. For more information see the "Technical Documentation" in the "Disadvantaged Communities Criteria Materials" section on the [Climate Act Website](#).

- **Indigenous-led Organization** – For the purposes of this solicitation – refers to a community organization, nonprofit, for-profit corporation, or a limited liability company, registered to do business in New York State, that serves Indigenous communities, is primarily led by Indigenous Peoples, and whose governance reflects the composition of the community it serves. This organization will need to demonstrate that the majority of their leadership, governing body, or membership identifies as Indigenous.
- **Lived Experience** – For purposes of this solicitation, refers to living with the issues the community is focusing on and who may have the insight to offer about the system as it is experienced by its residents. These individuals will have:
 - experience that doesn't come from training or formal education.
 - knowledge from an experience with an issue or challenge.
 - direct experience with a system, process, or issue, or trying to engage with a resource; and awareness of what works, what doesn't work, and what resources (formal or informal) are available in the community.
- **Mini-Bid** - For the purposes of this solicitation, a process under which when NYSERDA already has an approved Contractor Pool through a Solicitation to provide services to NYSERDA. NYSERDA issues a mini-bid to select the contractor to deliver the requested work from the Contractor Pool. Mini-bids can only occur for work that fits into the original Solicitation and contracted statement of work (umbrella agreement).
- **Populations Served** – For the purposes of this solicitation, populations served are groups of people within a community who share a common characteristic that organizations focus on.
- **Technical Areas** – For the purposes of this solicitation, technical areas are clean energy industry sectors relevant to NYSERDA's mission. A full list of self-select options is available in the application.

II. Program Requirements

A. DAC Consultant Services

In response to NYSERDA program team needs and anticipated available DAC consultation services in a wide range of cross programmatic areas, the five distinct Service Area categories included in

² <https://parks.ny.gov/documents/shpo/environmental-review/IndianNationAreasofInterest.pdf>

³ <https://climate.ny.gov/resources/disadvantaged-communities-criteria/>

⁴ <https://dec.ny.gov/about/dei/indian-nation-affairs/consultation>

the first release of RFQL 4922 have been eliminated. This revised RFQL 4922 transitions to a general pool of qualified DAC Consultants that will be contracted to provide services and support NYSERDA's work across a range of program team needs, technical areas, cross-sector areas, and applied skills. When filling out the application form, applicants will self-select among the full set of options.

Qualified DAC Consultants may be asked to support work in topic areas including but not limited to:

- Clean Transportation
- Community Engagement
- Community-led Solar
- Energy Resilience
- Electrification of Affordable Housing
- Environmental/Climate Justice
- Energy Affordability and Efficiency
- Microgrid Development
- Large-scale Renewable Energy Sources, including on land and offshore
- Marketing/Outreach Strategy
- Workforce Development
- Other areas related to NYSERDA's work impacting DACs

Refer to NYSERDA's website for a list of all NYSERDA's programs at www.nyserda.ny.gov/All-Programs.

Examples of the types of services and support to NYSERDA's work that may be contracted to qualifying DAC Consultant organizations are listed below.

- Advising NYSERDA staff by providing input on how programs can impact disadvantaged communities and making recommendations related to strategy, program development, and practices that would benefit those communities. Example activities could include but are not limited to:
 - Serving as a consultant on an Advisory Board, Steering Committee, or Working Group.
 - Providing experience and ideas on NYSERDA initiatives, focusing on the impact programs have on historically marginalized and disadvantaged communities.
- Participating in a NYSERDA program co-design process that offers NYSERDA staff and representatives of disadvantaged communities an opportunity to jointly develop solutions that better meet the needs of historically marginalized communities and accelerate market transformation.
 - Participate in a community-engaged program design process hosted by NYSERDA or a third party to design or improve programs based on the priorities and concerns of historically marginalized communities, including active engagement in each session and completion of pre- or post-session work.
 - Collaborate with NYSERDA and potentially other groups to determine which topics should be the focus of sub-committees or deep-dive work as part of the community-engaged program development process.

- Assisting NYSERDA's engagement with frontline community members who are often underrepresented during energy planning discussions.
 - Recruit participants for, conduct, and facilitate focus groups, listening sessions, meetings, and interviews where historically marginalized people are represented, along with summarizing the learnings.
 - Provide culturally competent translation and interpretation services, as needed, for non-or limited-English speaking communities.
- Supporting NYSERDA teams to assess program messaging and marketing materials toward improved inclusivity.
 - Review written materials (program literature, fact sheets, website content, etc.), make recommendations and prepare guidelines for inclusive, culturally specific language, imagery, and messaging that will resonate with various disadvantaged communities.
 - Provide local community experience regarding best outreach channels, sources, additional languages, and literature formats that support more inclusive and accessible community outreach and awareness of NYSERDA's energy programs.
- Supporting NYSERDA teams in conducting assessments and collecting data intended to inform policy, strategy, and program development related to disadvantaged communities.
 - Identify barriers to access to existing programs by disadvantaged communities or assist in data collection to inform NYSERDA's understanding of market barriers.
 - Partner with local educational and research institutions to support community-based participatory research in disadvantaged communities and report results of community information gathered.

NYSERDA expects to keep increasing the number and diversity of qualified DAC Consultants participating and providing the requested services across a variety of identified program team and sector-based needs and in support of NYSERDA's equitable community engagement programs, which are designed to create more inclusive pathways for meaningful community input and shift NYSERDA investment.

The number and type of services requested will depend on many factors; the nature and complexity of the project, volume, and frequency of the services requested by NYSERDA, contractor's past performance and the absence of conflicts of interest.

NYSERDA does not guarantee that all types of services will be requested or that all selected contractors will receive work pursuant to executed Umbrella Agreements. In other words, there is no guarantee of work. Work is based on NYSERDA need and funding availability.

DAC Consultants that have experience in certain Technical Areas, Cross Sector Areas, Applied Skills and/or Population Served shall indicate those areas within their application.

B. Eligibility

Applicants must meet the eligibility criteria and possess the following qualifications:

- Be a New York State community-based organization (CBO), as defined in RFQL 4922.
- Be a State or federally recognized Indigenous Nation as defined in RFQL 4922 and in the NYS DAC criteria.
- Be an Indigenous-led Organization as defined in RFQL 4922.
- Have experience, including lived experiences of community members of disadvantaged communities, in areas such as energy equity and justice issues, climate change, housing, transportation, or energy-related issues that impact those communities.
- Represent and demonstrate accountability to residents of historically marginalized and underserved communities.
- Knowledgeable staff or team with relevant experience.
- Demonstrate ability to deliver services requested on schedule.
- Flexibility to respond to services requested.

Applicants that may have existing contracts with NYSERDA for distinct scopes of work are eligible to apply; however, no work included in a pre-existing contract with NYSERDA will be assigned or compensated under an agreement resulting from this RFQL.

C. Umbrella Agreements

NYSERDA will enter into zero-dollar Umbrella Agreements with the selected DAC Consultants, enabling NYSERDA to retain services as needs arise. Specific DAC consultant services will be assigned under the Umbrella Agreement using the Task Work Order (TWO) process described below. An Umbrella Agreement is not a guarantee for any specific amount of future work or funding.

There is currently no initial cap to the number of DAC Consultants to be qualified under this RFQL. However, NYSERDA may decide to subsequently institute a cap as a means of managing the number of resultant contracts and discontinue open enrollment. In this event, appropriate notification will be provided and posted to NYSERDA's website, accordingly.

D. Task Work Order (TWO)

Once selected into the DAC Consultant pool, work will be awarded through a written Task Work Order. A Task Work Order is a discrete project (typically, a series of tasks with deliverables) assigned to a qualified DAC Consultant under the terms of its executed Umbrella Agreement with NYSERDA. The amount of work assigned to each DAC Consultant will depend on multiple factors, primarily driven by NYSERDA's programmatic needs, the amount of work requested, past performance, current workload, actual or perceived conflicts of interest, due date requirements, and the ability of the DAC Consultant to provide quality and timely services.

When a discrete project is identified by a NYSERDA program team, the Task Work Order process options for retaining services include:

1. Issuing a mini-bid TWO request to all DAC Consultants in the pool. Each interested DAC Consultant shall provide a detailed response to the mini-bid request which typically includes experience and qualifications, staffing, hours, budget, and detailed scope of work. The DAC Consultant(s) will be selected by NYSERDA based on the responses received.
2. For a project with a cost of \$50,000 or less, issue a TWO directly to a DAC Consultant from the pool.

NYSERDA will assign Task Work Orders to DAC Consultants via the mini-bid process based on, but not limited to the following criteria:

- The degree to which the contractor has the experience needed for a given task.
- The degree to which the contractor can support the geographic location needed for a given task.
- The degree to which the contractor has successfully performed previously assigned tasks.
- The degree to which the contractor has the capacity to perform the workload for a given task.
- The degree to which the contractor is cost competitive for a given task.
- The ability of the contractor to provide high quality and timely services.
- The degree to which the contractor has successfully performed previously assigned tasks.

Once a DAC Consultant has been selected for a project per the above process, a Task Work Order will be prepared by the DAC Consultant in cooperation with NYSERDA. Task Work Orders shall include but is not limited to

- project goals and objectives
- the strategy and approach outlined by task
- any relevant background information
- defined deliverables
- project timeframe
- names, titles, and positions of individuals to work on the project
- the total not-to-exceed cost of the project, including all milestones and timeframe
- the identification of measures to assess project success

Following execution of the TWO, the DAC Consultant shall:

1. Perform the required tasks within the required timeframe;
2. Submit requested deliverables to NYSERDA for review and approval according to schedule outlined, and;
3. Provide the required invoice and documentation of expenditures by task, based on the TWO, when seeking payment from NYSERDA.

This solicitation is not requiring applicants to estimate travel or other direct costs as part of the application process; activities that may necessitate such costs will be reflected and outlined in each respective TWO, as needed. DAC Consultants will not be compensated for time spent on the preparation of a response to TWOs. DAC Consultants who accrue billable hours beyond the ceiling in the TWO, without approval in writing by NYSERDA, will do so at their own risk.

No new Task Work Orders will be issued after December 31, 2030. TWOs initiated prior to December 31, 2030, are intended to remain in effect until all tasks are completed, final work products are delivered to NYSERDA, and payment is issued.

NYSERDA reserves the right to add additional terms and conditions applicable to individual TWOs commensurate with the type of work scope solicited in such TWOs. For example, a particular TWO may warrant changes such as additional insurance to reflect risk assessment and industry standards, data protection or cyber security, confidentiality, among other things.

Depending on the nature of the work product that is developed or results from any TWO with NYSERDA, DAC Consultants may be required to execute additional Non-Disclosure Agreements (NDAs) or other TWO specific agreement prior to engaging in the specified work effort.

NYSERDA may require qualified DAC Consultants producing content for individual TWOs intended to be posted to the Web to adhere to New York State's Accessibility Policy under General Conditions.

E. Compensation

DAC Consultants will be compensated based on pre-established milestone-based payments through specific TWOs using an equitable rate structure. Rates are based on the length of time in meeting participation, hourly non-meeting activities, plus other allowable expenses, as outlined in the TWO:

Meeting Reimbursement Rate	Non-Meeting Activity Rate
Up to 2.5 hours = \$300	Approximates at an average of \$120/per hour
3 to 5 hours = \$600	
5.5+ hours = \$800	

NYSERDA, at its discretion, may adjust the compensation rates.

At its discretion, NYSERDA may provide an initial milestone as an advance payment to assist with capacity constraints. In such an event, the DAC Consultant shall account for repayment of the advance milestone payment in its invoicing. After the advanced payment is executed, subsequent milestone payments will be adjusted to recapture the advanced amount.

Payment will be based on the services provided as defined in each specific TWO scope of work and budget, documented by approved deliverable(s), invoices and other documentation deemed necessary by NYSERDA. NYSERDA reserves the right to withhold payment in cases where program deliverables are not being met.

F. Subcontractors

Applicants are permitted, but not required, to identify in their application submittal other

community organization partners (subcontractors) they consider would offer complementary services and/or relevant experience. NYSERDA program teams may also request teaming arrangements at the time of mini-bid issuance or TWO contracting processes. TWOs are only awarded to organizations with an Umbrella Agreement with NYSERDA, not directly to subcontractors. Any subcontracted relationship is the sole responsibility of the primary applicant and not an additional contractor that NYSERDA will manage.

G. Corrective Measures

DAC Consultants in the pool, including its organizational representatives, and any subcontractors, involved in projects that repeatedly fail to deliver or resolve scopes of work to the satisfaction of NYSERDA, may be subject to the following corrective measures:

1. Limited to one (1) open TWO at a time until the DAC Consultant can demonstrate improvement.
2. If the DAC Consultant cannot demonstrate improvement to the satisfaction of NYSERDA, the DAC Consultant may be prohibited from participating in the Pool, its status will be reviewed and may be revoked resulting in termination of the DAC Consultant Pool Umbrella Agreement.

H. Budgets & Project Timelines

Budgets and project timelines will be identified in the TWO on a project-specific basis, and will be determined, in part, on the scope of the requested service and subject matter of the TWOs as they are developed, according to needs expressed by NYSERDA. NYSERDA cannot anticipate whether the need will arise or if funding will be available.

Cost-sharing is not required under RFQL 4922.

IV. Application Requirements

This open enrollment allows potential applicants to submit applications up to a defined due date as set forth on page one of this RFQL. NYSERDA reserves the right to accept or reject any or all applications received, to negotiate with all qualified DAC Consultants, or to cancel RFQL 4922 in part or in its entirety, as NYSERDA deems necessary.

Applicants are invited to submit applications describing their skills, experience, including lived experience of community members of disadvantaged communities, in areas such as energy equity and environmental justice issues, climate change, housing, transportation or energy-related issues that impact those communities. Within the application form in Salesforce, applicants are required to self-select their total annual operating revenue category, for the previous year, from a list of ranges. In addition, applicants will self-select their organization's experience from a list of NYSERDA's Technical Areas, Cross-Sector Areas, and Applied Skills as well as Populations Served. The self-selection areas are explained below. This information will assist NYSERDA in understanding an organization's areas of knowledge and service to identify best-fit opportunities for DAC Consultants.

- **Technical Areas** are clean energy industry sectors relevant to NYSERDA's mission. A full list of self-select options is available in the application. Examples include, but are not limited to:
 - Building codes
 - Single family residential building energy upgrades

- Clean transportation and mobility
- **Cross-Sector Areas** are areas of knowledge that apply to multiple clean energy industry sectors or that require a holistic approach when developing clean energy solutions. A full list of self-select options is available in the application. Examples include, but are not limited to:
 - Climate adaptation
 - Environmental and climate justice
 - Workforce training
- **Applied Skills** are practical abilities necessary for advancing the clean energy transition. A full list of self-select options is available in the application. Examples include, but are not limited to:
 - Energy education
 - Marketing and program outreach to DACs
 - Meeting facilitation
- **Populations Served** are groups of people within a community who share a common characteristic that organizations focus on. A full list of self-select options is available in the application. Examples include, but are not limited to:
 - Incumbent or unemployed fossil fuel workers
 - Individuals with limited-English proficiency
 - Low-income households

Submission Outline

Each application shall be submitted using NYSERDA's Salesforce Portal. A complete application package shall address all the information requested throughout the application process, including acknowledgement of the acceptance of the terms and conditions of RFQL 4922, and upload the **required documents** listed below as attachments:

1. Copy of IRS W-9 Taxpayer Identification Number (TIN)
2. Certification Under Executive Order No. 16 (signed form)
3. Application Attachments

Application Materials & Effort

All materials submitted as part of this application process becomes the property of NYSERDA. Applicants will not be reimbursed by NYSERDA for any time or costs associated in the preparation of submissions.

V. Evaluation Process

NYSERDA will review applications quarterly. Applications received by the end of the third month of every quarter will be reviewed during the following month. NYSERDA intends to notify applicants of the results of the evaluation within 30 business days of the scheduled review via the primary applicant's e-mail address provided. At NYSERDA's discretion, applicants may be requested to interview with members of NYSERDA's Energy and Climate Equity Team to address questions or clarify information presented in their application. NYSERDA may request additional data or material to support applications.

Applicants receiving favorable evaluations may be asked to address specific recommendations or contingencies before being awarded an Agreement. Successful applications awarded under this RFQL will result in Umbrella Contract agreements. NYSERDA may award an Umbrella

Contract based on applications, without discussion or following discussion.

Evaluation Criteria

Completed applications will be evaluated based on the pre-established qualitative criteria below, as well as other programmatic and management factors deemed appropriate by NYSERDA; and reviewed by a Scoring Committee consisting of internal NYSERDA staff. Occasionally, NYSERDA may invite interagency staff or external subject matter experts to participate in Scoring Committee reviews, as deemed appropriate by NYSERDA.

Denied Applications:

Applicants whose submissions are denied may request a debriefing from the Primary Designated Contact listed above, via email at PublicEngagement@nyserda.ny.gov, and may reapply for qualification.

Accountability to and Representation of Disadvantaged Communities

- Organizational Alignment with the Objectives of the RFQL: Does the DAC Consultant's mission and/or objectives align with the stated objective of the RFQL?
- Decision-Making Processes: Does the DAC Consultant practice inclusive organizational decision-making as demonstrated by the adoption of bylaws, through consensus building, or through other democratic practices and how it centers the perspectives of disadvantaged communities and/or Indigenous Peoples?
- Community Engagement Models: Does the DAC Consultant practice inclusive community engagement as demonstrated by direct collaboration with community residents, businesses and/or Indigenous Peoples?
- Effective Communication: Does the DAC Consultant demonstrate frequent, high-quality, effective, and sustained communication with the disadvantaged communities and/or Indigenous Peoples it serves as demonstrated by three (3) examples of concise communication?

Overall Experience & Capabilities

- Previous experience in the conduct and delivery of similar or related services.
- Demonstrated ability to complete projects on schedule.
- Quality and relevance of previous work as evidenced by two (2) sample projects.
- Applicant's prior performance under NYSERDA contracts, if applicable.

Personnel and Qualifications

- List of organizational team members in leadership roles, including titles.
- Resume for each team member listed (no more than 2 pages for each individual); or description of relevant lived experience (no more than 300 words for each individual).

Demonstrated Impact on Communities Served

- Demonstration of Successful Solutions: Does the DAC Consultant demonstrate how the organization determined the disadvantaged communities' and/or Indigenous People, how the priorities were addressed, and the continued success of them.

GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes.

The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a – As applicable, NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. NYSERDA anticipates a contract duration of five (5) years, with options to renew if applicable), unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Statement of Work. Each application should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful applications. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify applicants in approximately eight (8) weeks from the convening of the scoring committee whether your application has been selected to receive an award. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Accessibility Requirements - NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify applicants based upon the results of a background check into publicly available

information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The applicant shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When an applicant is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Applicants must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Insurance Requirements – Contract awardees shall be required to provide and maintain the following NYSERDA required insurance for the duration of the Agreement term: Please note that participating in the DAC Consultant Pool does not require a waiver of sovereign immunity from Indigenous Nation applicants.

- (a) Commercial general liability insurance for bodily injury liability, including death, and property damage liability, incurred in connection with the performance of this Agreement, with minimum limits of \$1,000,000 in respect of claims arising out of personal injury or sickness or death of any one person, \$1,000,000 in respect of claims arising out of personal injury, sickness or death in any one accident or disaster, and \$1,000,000 in respect of claims arising out of property damage in any one accident or disaster; and
- (b) Must show evidence of Worker's Compensation, Employer's Liability, and Disability Benefits insurance, as required by New York State statutory limits;

The New York State Energy Research and Development Authority (NYSERDA) must be named as additional insured on a primary and non-contributory basis on all policies except for Workers Compensation and Professional. All policies above should include a waiver of subrogation in favor of NYSERDA.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Due Diligence (NYSERDA may conduct further research into your organization as part of the application process) – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess an application relative to any of the topics listed in evaluation criteria, or whether or not such topic is explicitly addressed in the application. NYSERDA may conduct due diligence on some or all applications based on NYSERDA's current guidelines at the time of a review. NYSERDA may follow up with applicants to request additional information or clarification regarding the applicant's submission, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any application raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member listed in the application; research on intellectual property claims; customer and partner reference checks; market research on the organization's target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for organizations' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of an application, or the prospects for commercial success of the applicant's business (whether directly related to, or unrelated to the specific elements in an application). Due diligence may include discussions with the organization's former and current business partners, employees, investors, customers, and competitors. Due diligence may also be conducted by NYSERDA personnel or contractors including members of the Scoring Committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score an application or apply a program policy factor.

**Workforce Training: Building Operations and Maintenance (BOM)
Program Opportunity Notice (PON) 5357
\$2,800,000 Available**

Applications accepted on a first-come, first-serve basis dependent on funding availability until October 31, 2025 by 3:00 PM Eastern Time.

PROGRAM SUMMARY

Overview

NYSERDA's Building Operations and Maintenance Workforce Training Program aims to reduce energy use and associated carbon emissions while saving building operators and owners money by developing and strengthening the skills of operations and maintenance (O&M) staff and managers across the state. The program is designed to equip building O&M workers with the skills to operate increasingly energy-efficient, grid- flexible, and electrified building systems that reduce buildings' contribution to climate change.

The goal is to support building owners, facility managers, property management companies, business associations/trade groups, and organized labor associations in creating the talent development strategy, corporate culture, on-site training framework, and tools needed to advance building O&M workers beyond classroom training.

While a training organization or trade association may be the applicant, it must partner with a specified entity or entities employing building O&M workers. Applications must be for training activities connected with specific buildings or portfolios/campuses of buildings named in the application. This can include partnerships of businesses with common training needs and skills gaps that have total annual energy expenditures of \$1 million or more (all fuels and uses).

NYSERDA will support eligible projects by providing funding for programs and activities such as, but not limited to, creation of on-site training laboratories, curriculum development, in-person and virtual training, coaching/mentorships, and training trainers within a company.

NYSERDA will provide funding of up to 90% with a cap of \$500,000 per application when 75% or more of the buildings employing O&M workers are located in a [Disadvantaged Community](#), or when the application is for a qualifying union-led project or qualifying pre-apprenticeship program. For all other applications, NYSERDA will provide funding of up to 70% with a cap of \$500,000 per application. Additional funding of up to \$500,000 may be awarded to successful projects after the original contract award if funding is available. The minimum funding request is \$50,000. In all applications, the majority of the cost share must be provided by the employer(s) of building O&M workers. Examples of eligible

cost share include the training provider/facility's employees' wages while working on tasks defined in the Statement of Work, the training provider/facility's employees' wages during training hours, equipment that will be used exclusively for training purposes, and training fees offset by a third party.

NYSERDA reserves the right to extend and/or add funding to the solicitation should other program funding sources become available.

Application Submission

Applications must be submitted online. For detailed instructions on how to submit a proposal including file requirements, click the link "[Application Instructions and Portal Training Guide \[PDF\]](#)" located on the [PON 5357 solicitation page](#). Should any changes be made to this solicitation, notification will be posted on the "Funding Opportunities" section of NYSERDA's website.

Contact Information

For contractual questions regarding this solicitation, please contact Nancy Marucci at (518) 362-0489 or NancySolicitations@nyserda.ny.gov.

For program questions, please contact Kerry Hogan, primary contact (Designated Contact) at (518) 738-2822 or Laura Giannini, secondary contact (Designated Contact) at (518) 362-0432 or by e-mail to BOM@nyserda.ny.gov.

I. INTRODUCTION

NYSERDA seeks applications for comprehensive O&M training initiatives designed to help build O&M staff technical skills and reduce facility energy use, while realizing other benefits such as reduced equipment downtimes, increased occupant comfort, reduced occupant complaints and tenant turnover, increased numbers of staff with national certifications, and greater opportunities for employee retention, promotion, and career advancement.

Building O&M occupations or job titles that are targeted for training under this program may include, but are not limited to, the following: facility and property managers; operating and stationary engineers; technicians; building superintendents; repairpersons; maintenance workers; porters; mechanics and supervisors; electricians; plumbers; HVAC technicians; procurement staff; facility coordinators; and energy/sustainability managers.

Applications should be aimed at delivering comprehensive initiatives to train workers involved in the operations and maintenance of specific buildings listed in the application. It is anticipated that eligible training initiatives funded under this PON will be equipment-based or O&M-based.

Equipment-based skills training can target categories such as, but not limited to, the following:

- Lighting and lighting controls
- Heating and hot water electrification systems
- Domestic hot water
- Air and ground-source heat pump systems
- Boilers and hot water/steam distribution systems
- Chillers and chilled water distribution systems
- Cooling towers
- Economizer/Ventilation and controls
- HVAC control systems
- Motors and drives
- Water and other fluid pumps
- Pneumatic system and controls
- Building envelope
- Solar water heating
- Photovoltaics
- Energy storage (chemical, thermal or mechanical)
- Digital monitoring and control
- Building diagnostics
- Energy management systems
- Demand management and demand response

O&M-based skills training can target general or very specific areas such as, but not limited to, the following:

- Cleaning heat exchangers and coils
- Optimizing supply air temperatures
- Equipment scheduling (boilers, pumps, fans, etc.)
- Tuning-up boilers
- Matching boiler capacity to loads
- System commissioning, recommissioning and continuous commissioning
- Chiller system optimization
- Utilizing natural ventilation
- Measuring and optimizing HVAC system performance
- Setback temperatures
- Optimizing pump performance
- Heat recovery
- Fan optimization and air distribution, including measures to mitigate viral and bacterial transmission
- Water conservation
- Environmental health and safety
- Energy accounting

Applications should be aimed at continuously advancing the skills of building O&M workers beyond training that is currently available within the facilities and beyond training readily available in the market.

Following are examples of areas eligible for funding:

- Developing and delivering customized building O&M training to facility staff to improve their knowledge and skills in operating and maintaining the buildings in which they work.
- Developing and implementing a new New York State-registered apprenticeship program or modifying an existing registered apprenticeship program, including developing or modifying curriculum and training trainers.
- Developing and constructing a hands-on training lab at a building site, supported by other training elements like those mentioned below.
- Using a learning management system to provide engaging and interactive, synchronous and/or asynchronous on-line trainings.
- Customizing an app-based system or learning management system for tracking O&M activities in real-time, providing training on the system, and integrating the system into on- going building operations.
- Development and implementation of a job mentoring program that includes training mentors, classroom training, on-the-job field training with a defined training plan, and/or developing O&M manuals or on-line training tools.
- Partnerships between employers with job openings and technical high schools, community colleges, or community-based organizations to allow students with basic skills training to work as apprentices or receive on-the-job training at buildings included in the application.
- Initiatives from business associations/trade groups and organized labor associations to support advanced training of their memberships, resulting in improved operation and maintenance of the facilities in which their members work. (Because formal facility commitments for their workers to be trained must be included in a PON 5357 application, business associations/trade groups and organized labor associations wishing to offer training to members independent of the facilities in which they work can submit proposals to the Energy Efficiency and Clean Technology Training Program, [PON 3981](#).)

The following are examples that are not eligible for training funds under this solicitation:

- Training of contractors or other individuals outside of those employed by the facility.
- Work focused on the new construction of buildings.
- Projects that train on system installation techniques.
- Partnerships with manufacturers to develop customized training modules or O&M manuals that would normally be a service or resource offered by the manufacturer.
- Training for commercial tenants that do not have ownership of and/or the ability to maintain space conditioning equipment in their leased space.
- O&M training for processes associated with product manufacturing.

Projects will be required to provide energy data and/or utility energy data release authorizations for all buildings participating in the project.

II. PROGRAM REQUIREMENTS

Eligibility Requirements

- While a training organization, a business association/trade group or an organized labor association may be the applicant, it must partner with a specified entity or entities that employ building O&M workers. Such entities may include, but are not limited to, building owners, facility managers, and property management companies.
- Qualifying union-led and pre-apprenticeship projects must:
 - Integrate clean energy training into existing New York State registered apprenticeship program(s) or journey worker training,
 - Develop a new clean energy apprenticeship program registered with the New York State Department of Labor, or
 - Be a direct entry pre-apprenticeship workforce training program recognized by the New York State Department of Labor that incorporates clean energy content.
- Buildings employing O&M workers participating in the project must be New York State electricity customers of an investor-owned utility company that are paying into the System Benefits Charge (SBC)/Clean Energy Fund (CEF).
- Eligible buildings may be in the following sectors: multi-family, commercial office, commercial retail, mixed-use, colleges and universities, hospitals and health care, New York State and local government, industrial, hospitality, data centers, public and private schools, and not-for-profit and private institutions. Other building types will be evaluated on a case-by-case basis.
- Participating employers of building O&M workers must have specific buildings or portfolios/campuses of buildings, including partnerships of businesses with common training needs and skills gaps.
- The identified buildings must have total annual energy expenditures of \$1 million or more (all fuels and uses). For multi-family buildings, the energy expenditures of the buildings to meet the threshold must be through accounts impacted by building O&M staff (i.e., common area accounts).

Program Budget

Total funding currently available for this solicitation is \$2,800,000. Additional funds may be added to the PON if funds become available, and it is anticipated that the PON could be re-issued with or without modifications. If changes are made to this solicitation, notification will be posted on [NYSERDA's website](#).

NYSERDA anticipates awarding multiple contracts under this solicitation with a maximum initial award of \$500,000 and a minimum award of \$50,000 per contract. NYSERDA may modify/extend contracts and add funds at its sole discretion provided that additional funds are available. NYSERDA may partially fund applications.

NYSERDA will provide funding of up to 90% with a cap of \$500,000 per application when 75% or more of the buildings employing O&M workers are located in a [Disadvantaged Community](#), or

when the application is for a qualifying union-led project or qualifying pre-apprenticeship program. For all other applications, NYSERDA will provide funding of up to 70% with a cap of \$500,000 per application.

Situations where the total number of buildings within [Disadvantaged Communities](#) is less than 75% may qualify for the 10% minimum cost share if applicants can show that 75% of the O&M workers in those buildings reside in a Disadvantaged Community. Please reach out to the [Primary Contact](#) if this is your situation.

Cost share may include cash or in-kind services. The majority of the cost share must be provided by the employer of the O&M staff. Cost sharing by task may vary between the trainer, the employer of the O&M staff, and NYSERDA.

Examples of eligible cost share include the training provider/facility's employees' wages while working on tasks defined in the Statement of Work, the training provider/facility's employees' wages during training hours, equipment that will be used exclusively for training purposes, and training fees offset by a third party. Should the project require the purchase of desktop computers, servers, laptops, tablets, cell phones, or similar electronics equipment, these should be designated as applicant cost share.

Funding requests should be in line with the project's potential impact, including the number of staff trained, number of buildings impacted, energy saved, and tangible non-energy benefits.

Work completed or costs incurred prior to NYSERDA's execution of a contract are ineligible for funding or for consideration as cost share.

If a project is selected for funding, the entity entering into the contract with NYSERDA can be either the lead training provider or the facility employing O&M staff.

Program Policy Factors

Additionally, NYSERDA reserves the right to accept or reject applications based on the following factors:

- The degree to which the proposed project, including proposed cost share(s), optimizes the use of available funding to achieve NYSERDA's overall programmatic and portfolio objectives, as specifically set forth in the Solicitation.
- The degree to which the proposed project directly addresses NYSERDA's mission and strategic goals.
- Diversity of awards within multiple locations, climates, regions, or other geographically articulated criteria (for example, Regional Economic Development Regions, NYISO zones, or other geospatially described areas, etc.) to ensure that projects selected for funding optimize the use of available funding to achieve programmatic objectives.
- Distribution of training projects across multiple sectors.
- The degree to which there is portfolio diversity, including considerations as to funding duplicative efforts stemming from the Solicitation itself or similar, previously funded efforts.
- Consideration of the impact on just transition and equity goals.

- Consideration of the impact on, and benefits to, a diversity of communities, including low-income and rural communities.
- The degree to which the training provider and/or the employer of the O&M staff have the resources (human and financial) to be able to complete the project.
- Number of awards previously made to the trainer and/or building owners.
- The applicant's performance on current and/or past NYSERDA contracts.
- Types of training NYSERDA has funded in the past at the facilities or with the training provider.

III. APPLICATION REQUIREMENTS

Applicants must complete each section of Attachment A, Project Application Form, and include all required components in the application submission.

Statement of Work Requirements

Applicants must include a detailed Statement of Work for their proposed training project with their submission. The Statement of Work must include project goals, objectives, tasks, and deliverables. Applicants are encouraged to submit a Statement of Work that is innovative and shows the best potential for sustainable energy savings.

Attachment B contains a **Template** Statement of Work, which outlines both required and optional tasks. Applicants should use this document as a template when crafting their Statements of Work. Failure to provide all required information may result in NYSERDA rejecting the Statements of Work. Final approval of a Statement of Work or section thereof is subject to NYSERDA's discretion.

Schedule Requirements

Applicants are required to provide an anticipated schedule for completing tasks. This schedule should be in months from date of contract execution, using the format *Month 1, Month 2...Month 24* instead of *January, February...December*. Training activities should be completed within 24 months or less from contract execution.

Example Schedule:

Task No.	Title or Description	Month 1	Month 2	...	Month 23	Month 24
1	Establish Partnerships / Subcontracts					
2	Modify/Develop Curriculum					
3						
4						
5						

Budget (Attachment D) Requirements

Applicants must complete and submit a budget with their application, including all information requested on Attachment D, which has tabs for the Budget Form and the Per-Task Summary

Form. The budget must be reasonable and must show the funding requested from NYSERDA and the cost share that is the responsibility of (1) the trainer and/or (2) the employer of the O&M workers. Applicants must also complete one Attachment D Budget Form for each subcontractor/consultant identified in cost element 5 whose share of the project is \$50,000 or greater in value. This subcontractor Budget Form must these include costs related to labor, direct materials and travel.

Based on the costs calculated in the Budget Form(s), applicants must complete the Per-Task Summary, which shows the cost breakdown for both the NYSERDA funding and the applicant's cost share.

IV. APPLICATION EVALUATION

Evaluation Process

NYSERDA will review applications monthly. All applications received by the last day of a month will be reviewed during the first two weeks of the following month. At NYSERDA's discretion, applicants may be requested to interview with members of NYSERDA's Workforce Development Team to address questions or clarify information presented in their application. NYSERDA may request additional data or material to support applications.

NYSERDA intends to inform applicants of the results of the evaluation before the end of the month following their submission. NYSERDA reserves the right to accept or reject any or all applications received, to negotiate with all qualified sources, or to cancel the PON in part or in its entirety when it is in NYSERDA's best interest.

Applicants receiving favorable evaluations may be asked to address specific recommendations or contingencies or make modifications to the Statement of Work, Schedule, or Budget before being awarded funding. An award under this PON will result in a contract. NYSERDA may award a contract based on applications without discussion or following discussion.

Denied Applications:

Applicants whose submissions are denied may request a debriefing from the Designated Contact and may reapply for program funding.

GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your application. Review should include whether it is critical for evaluating a application, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the applicant wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written

statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501
<https://www.nyserda.ny.gov/About/-/media/Files/About/Contact/NYSERDA-Regulations.ashx>.
However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development
Division 625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at

<https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Applicants are required to answer questions during application submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the applicant has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contacting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Statement of Work. Each offer should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or

material to support applications. NYSERDA will use the Sample Agreement to contract successful applications. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Applicants should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify Applicants in approximately four (4) weeks from the receipt of an application whether your application has been selected to receive an award. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Accessibility Requirements - If awardees from this solicitation will be posting anything on the web, or if the awardee will produce a final report that NYSERDA will post to the web, the following language must be included. NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see [NYSERDA's Accessibility Requirements](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a application, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all applications received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject applications based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify applicants based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The applicant shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a applicant is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop- work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Applicants must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The applicant shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the applicant or former officers and employees of NYSERDA, in connection with applicant's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The applicant must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, “Commission”), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Joint Commission on Public Ethics, or its predecessors (collectively, the “Ethics Requirements”). Applicants are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a “lifetime bar” from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person’s engagement, work cooperatively with the State to solicit advice from the New York State Joint Commission on Public Ethics, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Joint Commission on Public Ethics. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants’ prospects of success, including gathering information to assess a application relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a application. NYSERDA may conduct due diligence on some or all applications based on NYSERDA’s current guidelines at the time of a review. NYSERDA staff may follow up with applicants to request additional information or clarification regarding applicant’s application, including questions regarding applicant’s business prospects and resources, whether or not those questions are specifically related to the elements of the application. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any application raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a application; research on intellectual property

claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for applicants' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a application, or the prospects for commercial success of the applicants' business (whether directly related to, or unrelated to the specific elements in a application). Due diligence may include discussions with applicants' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a application or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued.

Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionsearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list. The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Heat Recovery Project Development
Program Opportunity Notice (PON) 5547

\$27,000,000 Available

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

- Categories 1, 2, and 4: Applications accepted on a first-come, first-served basis dependent on funding availability until November 17, 2025 by 3:00 PM Eastern Time (ET).
- Category 3:
 - Round 1 Proposals due November 7, 2024 by 3:00 PM ET.
 - Round 2 Proposals due June 3, 2025 by 3:00 PM ET.
 - Further rounds will be announced based on available funding.

Program Summary

The NYSERDA Heat Recovery Project Development Program (the “Program”) aims to animate the New York State (NYS) marketplace for heat recovery solutions by working with consulting engineers, heat recovery solution providers, building owners and operators, and other key stakeholders to develop a robust pipeline of heat recovery retrofits. To accelerate heat recovery retrofit project development, the Program provides cost-share to Applicants for four categories of activities:

- Category 1: Heat Recovery Opportunity Assessment provides cost-share for Consultants to assess a Property’s heat recovery opportunity by quantifying the heat that is currently rejected and analyzing its potential to be repurposed. The goal of the assessment is to inform the building owner’s decision on whether to move forward with heat recovery project design. Applications will be accepted on a first come, first served basis.
- Category 2: Heat Recovery Project Design provides cost-share for Consultants to develop an implementation-ready, technically, and economically viable design of a heat recovery system for an existing Property. Applications will be accepted on a first come, first served basis.
- Category 3: Heat Recovery Demonstration provides cost-share for the implementation of innovative and effective heat recovery systems in an existing Property. Category 3 will accept multiple rounds of Proposals, as listed above. Proposals will be evaluated based on the Proposal Evaluation Criteria outlined on page 11.
- Category 4: Manufacturer Growth Initiative provides cost-share to solution providers qualified by NYSERDA’s [RFQL 5217 - Heat Recovery Solutions](#) for business development services. Applications from eligible Applicants will be accepted on a first come, first served basis.

Eligibility: Existing multifamily, commercial, institutional, industrial, and manufacturing buildings and facilities are eligible for Categories 1-3. Solution providers qualified through NYSERDA’s RFQL 5217 are eligible for Category 4.

Funding: The funding is broken down into four categories according to the below table:

Category	NYSERDA Cost-Share	Maximum NYSERDA Funding Per Award
Category 1: Heat Recovery Opportunity Assessment	Up to 75%	\$40,000
Category 2: Heat Recovery Project Design	Up to 75%	\$80,000
Category 3: Heat Recovery Demonstration	Up to 50% OR Up to 75% for Projects located in disadvantaged communities or consisting of Affordable Multifamily Housing	\$2,000,000
Category 4: Manufacturer Growth Initiative	Up to 75%	\$100,000

Resources: Visit the [Heat Recovery Solicitation Page](#) for template documents and the [Heat Recovery webpage](#) for other current resources.

Application and/or Proposal Submission

Categories 1, 2 and 4

Completed applications for Categories 1, 2 and 4 will be accepted via [JotForm](#) through November 17, 2025, or until funds are fully committed. Applicants will receive a confirmation email of application receipt.

Category 3

Completed proposals for Category 3 will be accepted via the “apply online” link on the [Heat Recovery Project Development Program - Category 3 Demonstration funding opportunity](#) listed on the [Current Funding Opportunities](#) page.

For detailed instructions on how to submit a proposal (online or paper submission), click the link [“Application Instructions and Portal Training Guide \[PDF\]”](#) located in the [“Current Funding Opportunities”](#) section of NYSERDA’s website.

Informational Webinar: NYSERDA will host an informational webinar on Wednesday, February 19, 2025 at 11:00 AM ET. [Register for the webinar here.](#) Questions may be submitted until 5 PM ET the day before the webinar by emailing questions to HeatRecovery@nyserda.ny.gov.

Questions: No communication intended to influence this procurement is permitted except by email at HeatRecovery@nyserda.ny.gov. for technical questions. If you have contractual questions concerning this solicitation, contact Lori Armstrong at Lori.Solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer’s behalf) in an attempt to influence the procurement: (1) may result in a

proposer being deemed a non-responsible offeror, and (2) may result in the proposer not being awarded a contract.

*** All applications must be received by 3 PM ET on the dates noted above. Late or faxed applications will not be accepted.** Incomplete applications may be subject to disqualification. It is the Applicant's responsibility to ensure that all pages have been included in the application.

Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit applications. The online application system closes promptly at 3 PM ET. Attempted edits or submission after 3 PM ET on the date above, will not be accepted.

For ease of identification, all electronic files should be named using the Project name in the title of the document.

Online submission is preferable. Applicants may submit Word, Excel, or PDF files (file formats include csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible.

If changes are made to this solicitation, notification will be posted on the "Current Funding Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

I. Program Definitions

Affordable Multifamily Housing – Projects in which at least 25% of the units are, or are expected to be, occupied by households earning not more than 80% of the Area or State median income, whichever is higher. Multifamily buildings are buildings with 5 or more dwelling units. Refer to the affordability criteria detailed in the [Affordable Multifamily Building Guidelines](#) available on the [Heat Recovery webpage](#).

Applicant – The individual or firm applying to this solicitation. In most cases the Applicant will be the Consultant performing work on behalf of the Customer, though any member of the Project Team is eligible to act as the Applicant. NYSERDA will contract with the Applicant to manage the defined scope of work for the defined budget.

Customer – The eligible New York State building owner requesting the Program funding for their Property.

Consultant – The individual or firm providing expert advice and technical services. The Consultant will be performing the engineering analysis and feasibility of the Project and provide expert, objective, and customized technical services.

Heat Recovery Design – A thermal system designed to save energy at a Property by capturing waste heat for reuse, consisting of four key components: a waste heat source, heat transfer technology, a transfer medium, and a heat sink (the end-use of the recovered energy). The recovered energy may be stored for later use within the Project boundary.

Project – The set of proposed activities and tasks to be completed as described in the Scope of Work or Proposal submitted to the Program.

Property – The building(s) and/or facility(ies) within the scope and boundary of the Project.

Project Team – The Customer, Consultant(s) providing engineering analysis and design services, and any project facilitators or subcontractors engaged to support the Project.

II. Introduction

The goal of the Heat Recovery Program is to jumpstart the nascent market for heat recovery solutions as an economical approach to decarbonization for a broad swath of existing buildings in NYS.

According to [Lawrence Livermore National Lab \(LLNL\)](#), 68% of all U.S. energy consumed in 2021 was rejected or wasted through various system inefficiencies. NYS's building infrastructure contributes to this problem by rejecting heat through a variety of processes including ventilation, cooling, and wastewater systems. Heat recovery solutions can turn this problem into an opportunity by recovering and reusing energy that would otherwise be rejected. This is an essential step in most building decarbonization pathways.

Recent projects, including the [demonstration projects advanced through NYSEDA's Empire Building Challenge](#) (EBC), have shown that heat recovery is a key component of the decarbonization strategy for many of New York's existing building stock. All the projects awarded by EBC have featured heat recovery

in some form as part of [a phased decarbonization strategy](#). By increasing adoption of heat recovery solutions amongst a larger share of NYS buildings, more building owners will reduce costs by recapturing energy they have already paid for.

To accelerate the growth from 10 to 100 successful heat recovery projects in NYS, the Program will:

- Support projects demonstrating the technical and economic feasibility of heat recovery solutions that are replicable across the State's existing building stock, reducing energy use and enabling deeper decarbonization.
- Provide cost-share for engineering analysis, design services, and implementation to support the inclusion of heat recovery energy conservation measures within a wider existing building retrofit and decarbonization plan.
- Attract best-in-class equipment manufacturers, solution providers, and other businesses to invest in innovation, product development, and technology transfer to bring forward the most beneficial heat recovery solutions for New York's building stock.
- Engage Consultants to provide engineering expertise and experience necessary to identify and implement heat recovery projects, while developing deeper industry expertise and experience with heat recovery projects in different building typologies.
- Gather real world insights on the shift from linear to circular approaches to energy management to identify opportunities and overcome barriers to building decarbonization, and share best practices and lessons learned.

These activities aim to accelerate confidence in heat recovery as a promising approach to decarbonization and to increase the number of building retrofit projects incorporating heat recovery energy conservation measures to reduce energy use and emissions.

III. Program Requirements

Program Eligibility

To qualify for Program Categories 1, 2, and 3, a Project Team must include an eligible Consultant and a Customer representing an eligible building.

Eligible Buildings

An existing Property of any size that is located in New York State and that falls under the classification of commercial, industrial, institutional, manufacturing and/or multifamily is eligible. New construction projects and single-family buildings are not eligible for this Program. This solicitation has funding to support end-use Customers who pay the System Benefits Charge (SBC) and end-use Customers who do not pay the System Benefits Charge. Clean Energy Fund (CEF) funding may only be awarded to Projects that serve end-use Customers who pay the SBC on either a portion of or on their entire electric bill at the Property. \$4,500,000 in Regional Greenhouse Gas Initiative (RGGI) funding may be awarded to Projects that serve end-use Customers who do not pay the SBC on their electric bill at the Property.

The boundary of a Project under this Program pertains to either a single building or multiple buildings that share energy services. When the Project boundary encompasses a single building, any rejected energy should be reused within that building's boundaries. When the Project boundary spans multiple buildings, it is still necessary to reuse the rejected energy within the defined boundary but not necessarily in the same building that rejected it.

Eligible Consultants

Eligible Consultants are the engineering or sustainability Consultant working on behalf of the eligible Customer. The Consultant must demonstrate experience and expertise in clean energy services delivery to commercial, industrial, institutional, manufacturing and/or multifamily Customers in NYS and provide expert, objective, and customized technical services to inform on the capability for heat recovery in the proposed Property.

NYSERDA reserves the right to limit the number of active Projects a Consultant can have within the Program at any given time.

While it is not required for a Project to include a FlexTech Consultant, Customers in need of a Consultant may choose from NYSERDA's [FlexTech Consultant list](#).

Eligible Manufacturers

To be eligible for Category 4, the Applicant must be a qualified solution provider through [RFQL 5217 – Heat Recovery Solutions](#).

Category 1: Heat Recovery Opportunity Assessment Requirements

Please see Attachment C - Category 1 Scope of Work Template for full details on expected tasks and deliverables for the opportunity assessment.

Category 1 provides funding to document current building infrastructure, quantify and diagram rejected heat from current operations (see examples of Energy Flow Diagrams on the [Heat Recovery webpage](#)), and explore the feasibility of potential cost-effective measures to recover and reuse heat to reduce total energy consumption and emissions. Rejected heat from existing building ventilation, cooling, wastewater and internal processes should be considered in the opportunity assessment, as well as the potential to incorporate thermal storage. The goal of the opportunity assessment is to provide the Customer with actionable information to inform their decision-making to move forward with a heat recovery project design.

Applicants can receive funding for up to 75% of total Project cost, capped at \$40,000, to create and deliver opportunity assessments.

Category 2: Heat Recovery Project Design Requirements

Please see Attachment D - Category 2 Scope of Work Template for full details on expected tasks and deliverables for the project design.

Category 2 provides funding to develop an implementation-ready, technically, and economically viable design of a heat recovery system for an existing Property. Energy recovery from ventilation, cooling, wastewater systems and other internal processes are eligible, as is the inclusion of thermal storage measures to maximize the usefulness of recovered energy.

Applicants can receive funding for up to 75% of total Project cost, capped at \$80,000, to create and deliver designs for an existing Property. These designs should have the potential to significantly improve the heat recovery performance of the Property.

Participation in Category 1 is not a requirement to participate in Category 2.

Category 2 Eligible Projects

Eligible Project designs must improve the energy performance of existing Properties by identifying and capturing rejected heat from an existing building system or process, then reusing the energy to reduce total energy consumption. The captured energy can be stored before being reused for one or more purposes, i.e., heat sinks, within the Project boundary.

To qualify for funding under Category 2, Project Teams must have identified a waste heat source and propose a Heat Recovery Design concept consisting of the following four (4) components:

1. Waste Heat Source
2. Heat Transfer Technology
3. Transfer Medium
4. Heat Sink

Examples of these components are listed below:

Some examples of design concepts include, but are not limited to the following:

- Ventilation Exhaust Heat Recovery, including:
 - Integrating an energy recovery ventilator (ERV) into existing or modified building ventilation systems
 - Installing “run around coils” to building ventilation exhaust
- Cooling and Dehumidification Process Heat Recovery, including:

- Condenser water heat recovery, using heat recovery chillers or water source heat pumps (WSHP) to extract heat from the condenser water loop before exhausting heat into the atmosphere with cooling towers or dry coolers
- Distributed WSHPs on ambient/condenser water loops, enabling heat sharing across the building
- Other refrigeration, data center, or cooling heat recovery through variable refrigerant flow (VRF) systems or hydronic system heat extraction
- Wastewater Heat Recovery, including:
 - Wastewater heat pump, recovering heat from wastewater at building scale before it exits to the municipality's sanitary sewer main
 - Drain water heat recovery coil: preheat fresh makeup water by coiling it around a primary drainpipe to recover waste heat before going into the water heater
 - Steam condensate heat recovery prior to rejecting condensate into the sanitary sewer
- Process Waste Heat Recovery, including:
 - Capturing the waste heat generated by industrial or other processes to be reused within a plant's process streams or to produce electricity on-site
- Thermal Storage Technology incorporated into eligible Heat Recovery Designs, including:
 - Ice tanks, phase change material (PCM), water tanks, condenser water storage, molten salt, geothermal, etc.

Where applicable, Consultants incorporating heat recovery products should first consider equipment qualified through NYSERDA's [RFQL 5217 - Heat Recovery Solutions](#).

NYSERDA seeks a diverse range of Project types including various building typologies, existing HVAC configurations, occupancy types, and geographies.

Category 3: Heat Recovery Demonstration Requirements

Category 3 introduces implementation funding for Projects to demonstrate the technical and economic feasibility of innovative heat recovery solutions in an existing Property. Through Category 3, NYSERDA seeks Projects that:

- 1) Use innovative heat recovery solutions to deliver significant energy and emissions savings.
- 2) Can be a model for replication across the State's existing building stock.

The Program will accept multiple rounds of proposals, as listed on page 1. Proposals will be evaluated based on the Proposal Evaluation Criteria outlined below. Proposers should take care to address all the evaluation criteria described in the Proposal Evaluation Criteria.

Proposals may receive up to \$2,000,000 to implement eligible heat recovery Projects. Cost-share from the Project Team is a requirement for Category 3 Projects. For Projects located in [disadvantaged communities](#) or consisting of [Affordable Multifamily Housing](#), the Project Team must contribute a minimum of 25% of the total Project cost. For all other Projects, the Project Team must contribute a minimum of 50% of the total Project cost.

Category 3 Eligible Projects

A Project must improve the energy performance of the Property by capturing rejected energy from an existing building system or process and reusing the energy to reduce total energy consumption. The captured energy can be stored before being reused within the Project boundary. The Project must propose a Heat Recovery Design consisting of the following four (4) components: waste heat source, heat transfer technology, transfer medium, and heat sink (the end-use of the recovered waste heat).

A Project must propose an innovative heat recovery solution. An innovative solution is a method or technology that challenges or outperforms conventional approaches, prioritizing forward-thinking designs over standard, code-compliant, and widely adopted practices in NYS. An example of a standard code-compliant practice is the installation of Dedicated Outdoor Air Systems (DOAS) as Makeup Air Units (MAUs). Proposals should include technologies that are not already widely adopted in NYS, well-known to engineers and building operators, or mandated by existing codes. The technologies proposed should achieve a level of heat recovery efficacy that exceeds commonly available solutions. The Program encourages proposals that demonstrate a wide variety of heat recovery technologies, sources of waste heat, and end uses for the recovered waste heat.

Below are four examples of innovative heat recovery solutions with the potential for impact and replicability in existing buildings in NYS. Eligible Category 3 Projects include, but are not limited to, the following:

Data Center Heat Recovery: A solution that recovers and reuses waste heat from data center operations, resulting in lower utility energy demands, such as using heat exchange systems or novel waste heat-to-power conversion methods.

High Temperature Heat Pumps: A solution that leverages waste heat recovery with commercially available high-temperature heat pumps to meet process heating requirements of up to 150°C/302°F, which results in improved process energy efficiency.

Packaged Exhaust Heat Recovery: A high-efficacy packaged wastewater or ventilation heat recovery solution without the complexity and costs of onsite stick-built heat exchangers.

Thermal Storage: A solution that allows heat to be recovered at one point in time and used at another, helping to downsize heating and cooling load and provide grid services. Targeted solutions, such as phase change material (PCM) will provide a higher energy density than water and ice.

Supporting Documentation

The proposal must include a Basis of Design (BOD) narrative and/or one-line concept diagrams with essential details to reasonably validate feasibility, procurement budgeting and construction timeline. Proposers must have completed due diligence, such as an opportunity assessment or equivalent study, prior to submitting a proposal.

Timeline

Projects must begin construction within 1 year of the contract execution date. Exceptions may be made on a case-by-case basis. Projects that have already begun construction prior to NYSERDA's award announcement are ineligible.

Selected proposals will work with the NYSERDA team to qualify their proposed solutions through [RFQL 5217 - Heat Recovery Solutions](#).

Proposal Evaluation Criteria

Proposals that meet solicitation requirements, as outlined in IV. Application Requirements, will be reviewed by a Scoring Committee using the Proposal Evaluation Criteria below **listed in order of importance**.

1. Impact

- The proposed heat recovery solution represents a method or technology that goes beyond conventional approaches, prioritizing forward-thinking designs over standard, code-compliant, and widely adopted practices in NYS.
- The GHG emissions reduction and energy savings from this Project are significant and credible. In terms of energy savings, the proposal examines the Project's impact on the grid and explains that the impact will be beneficial.
- The reuse of waste heat from the Project is significant and credible.
- The proposal explains the non-energy benefits resulting from the Project, such as improved indoor air quality, better occupant comfort, job creation, enhanced resilience, etc.
- The Project Team has the capacity and expertise needed to implement the proposed Project.
- The Project design is well defined and comprehensive. The proposal includes a well-articulated Basis of Design that is accompanied by comprehensive schematic design drawings or detailed concept diagrams.
- The proposal integrates the heat recovery solution seamlessly into the overall Project design, demonstrating that the solution is a core component rather than an add-on.

2. Scalability

- The proposal explains that the heat recovery solution has strong potential for widespread adoption within the proposer’s NYS portfolio or by the broader NYS market. The proposal provides the square footage or count of existing buildings within the proposer’s NYS portfolio, and/or in NYS in general, that are similar to the proposed building and have potential to replicate the proposal’s approach.
- The proposal explains other factors that could positively impact the Project's replication potential, such as ease of implementation, commitment from the building owner to replicate this solution across their portfolio or lead time of equipment and its impact on adoption.
- All aspects of the proposed solution are readily deployable for future sites. The proposal explains the commercial readiness of proposed solution, such as if the solution has AHRI certification.

3. Cost Effectiveness

- The Project Team demonstrates commitment by providing significant private investment. The level of private investment is appropriate for the building ownership and building type.
- The proposal identifies funding sources or a financing strategy for implementation.
- The Project cost is reasonable, and a detailed budget is provided that shows hours and dollars allocated to each task.
- The proposal examines the costs and benefits of the Project in terms of total investment relative to the energy and carbon intensity improvements, using metrics such as cost per MMBtu reduction and cost per ton of CO2e reduction.

Program Policy Factors

A Scoring Committee will review and rank all Category 3 proposals. NYSERDA will review this evaluation and ranking and may consider the following program policy factors in making award selections.

- Benefits of Project funding to [disadvantaged communities as defined by the Climate Justice Working Group](#), particularly Projects involving affordable housing, industrial, institutional, manufacturing facilities or P-12 schools.
- Diversity of awards by solution, geography, building typology, or market sectors – including affordable housing, commercial, industrial, institutional, manufacturing and/or multifamily.
- Whether or not the end-use Customer pays the SBC on their electric bill at the Property, which determines the source of NYSERDA funding (CEF or RGGI) to be awarded.

At NYSERDA’s discretion, proposers may be requested to interview with all or part of the Scoring Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview.

Category 4: Manufacturer Growth Initiative Requirements

Through [RFQL 5217 - Heat Recovery Solutions](#), NYSERDA promotes innovative, scalable, and cost-effective heat recovery products to make them more attractive for New York Property owners and design and consulting engineers to implement in their projects. Recognizing that many of these products may be developed and more commonly used outside of New York State, NYSERDA offers RFQL 5217 to qualify manufacturers to bring their heat recovery knowledge and products to New York State and implement them in NYS buildings and processes.

Qualified [Heat Recovery Solutions](#) manufacturers of novel and effective heat recovery products may face several risky and expensive work items when bringing their offerings to New York State. NYSERDA has identified five (5) categories of growth initiatives that qualified manufacturers can submit a proposal to seek direct funding for up to 75% of associated costs with a maximum total incentive of \$100,000. No more than \$1.5 Million of Program funds will be made available for Category 4 awards.

These focused growth initiatives will help qualified manufacturers access the New York market, receive support for knowledge, technology transfer and participate in exchanges with key market stakeholders.

Growth Initiative Tasks [1 - 5]:

1. **Market Research and Adaptation** — Reimbursement of up to 75% of the costs up to \$20,000 of conducting market research or developing a product adaptation and localization plan specific to the New York market. For instance, to develop and test heat recovery products in actual buildings and processes in New York, where manufacturers can assess their suitability for integration with existing building equipment and automation systems. This could allow manufacturers to demonstrate the effectiveness of their product during day-to-day operations and overcome any challenges that may arise.

Eligible activities include but are not limited to:

- Conducting thorough market research to understand the New York market, consumer preferences, and competitive landscape.
- Adapting product features and installations to meet local regulations, standards, and building needs.
- Investing in localization efforts, such as translating user interfaces, packaging, instructions, and marketing materials.
- Converting the Product to be compatible with North American electrical systems and codes.
- Establishing local product installation, testing, maintenance, repair, and customer support resources.

2. **Regulatory Compliance** — Reimbursement of up to 75% of the costs up to \$30,000 of hiring consultants to help manufacturers navigate the landscape in New York, obtain necessary certifications, licenses, and permits, and assist the manufacturers through the compliance process. Engaging Nationally Recognized Testing Laboratories (NRTL) to ensure that the product conforms to North American or New York State's safety, quality, and environmental standards, such as UL (Underwriters Laboratories) and CSA (Canadian Standards Association) certifications.

Eligible activities include but are not limited to:

- Navigating federal, state, and local regulations, which may differ from the company's home country.
- Obtaining necessary certifications, licenses, and permits to sell products in New York.
- Ensuring products meet North American and New York State market's safety, quality, and environmental standards.
- Registering trademarks, patents, and copyrights in the United States to protect intellectual property.

3. ***Supply Chain and Logistics*** — Reimbursement of up to 75% of the costs up to \$20,000 to establish or optimize the local supply chain and logistics networks to be compatible with New York deployments (e.g., operable by the U.S. electrical power grid) and to secure product warehousing, distribution, and transportation and connect with reliable New York State partners and service providers.

Eligible activities include but are not limited to:

- Establishing reliable local supply chain networks to localize products for the United States and distribute them within New York State.
- Dealing with import regulations to New York State. Securing warehousing and distribution facilities in New York.
- Securing partners in New York for product testing, assembly, or manufacturing.

4. ***Sales and Marketing*** — Up to 75% of the costs up to \$10,000 for targeted customer engagement and promotional activities in New York and securing New York-based sales channels, distributors, and partners. This is often a critical requirement for many New York owners and engineers before considering a foreign product that is new to the NYS market.

Eligible activities include but are not limited to:

- Building brand awareness and credibility in a new market.
- Developing effective marketing strategies tailored to New York consumers.
- Establishing sales channels, partnerships, representatives, and distribution networks.

5. ***Business Development Assistance*** — Reimbursement of up to 75% of the costs or \$20,000 of recruiting and hiring key New York-based employees and to support existing employee relocation to New York.

Eligible activities include but are not limited to:

- Hiring costs for local staff or relocating key personnel to manage New York operations (staff salaries are not eligible).
- Ensuring compliance with U.S. and New York labor laws and regulations.
- Adapting to cultural differences in business practices, communication styles, and consumer expectations.
- Building training opportunities in specific trades, technology, methods.
- Building relationships with local partners, suppliers, and customers.

Deliverable Submission

Project deliverables will be submitted through the [NYSERDA Partner Portal](#). For ease of identification, all electronic files should be named using the Project name in the title of the document. NYSERDA reserves the right to perform technical review on all submittals. Deliverables found by NYSERDA to not fulfill the approved Scope of Work, proposal and/or deliverable requirements may receive a reduced cost-share or may not be reimbursed by NYSERDA.

NYSERDA is interested in sharing best practices, lessons learned and showcasing final Projects and will work with Applicants to accomplish this.

Payment, Procurement, and Schedule

Program funding will be distributed to the Applicant according to milestone-based payments as defined in the Scope of Work.

The Applicant must submit a copy of all invoice(s) indicating the total billed cost of cost-shared activities or items. The invoice(s) will include labor and non-labor costs, staff titles, hourly rates, dates, and hours for each task. All required cost-share documentation must be submitted through the [NYSERDA Partner Portal](#).

Funding Caps

Categories 1, 2, and 4

The Program will fund Category 1, Category 2, and Category 4 activities at a cost-share for up to 75% of eligible costs, with funding for Category 1 capped at \$40,000, for Category 2 at \$80,000, and Category 4 at \$100,000. Projects must include cost-sharing in the form of matching cash support from the Customer.

Category 3

The Program will allocate up to \$2,000,000 in total funding for the implementation of approved Projects. For Projects located in [disadvantaged communities \(as defined by the Climate Justice Working Group\)](#) or consisting of Affordable Multifamily Housing (see [Affordable Multifamily Building Guidelines](#)), NYSERDA will provide cost-share for up to 75% of eligible costs (the Project Team must contribute a minimum of 25% of the total Project cost). For all other Projects, the Program will provide cost-share for up to 50% of eligible costs (the Project Team must contribute a minimum of 50% of the total Project cost). Cost-share is evaluated as a part of Proposal Evaluation Criteria.

Additional Considerations

When reviewing and negotiating the Scopes of Work and Budgets, NYSERDA reserves the right to:

- Disqualify specific Project costs that are not integral to the Heat Recovery Design and adjust the amount of the funding award accordingly.
- Review and request additional information to support proposed staffing titles and their associated hourly rates to ensure appropriate alignment of staff-to-task complexity.

- Utilize comparable NYSERDA-funded projects and contracts to confirm reasonableness of hourly rates commensurate with geographical location, staff titles, and the individual tasks proposed.
- Provide less than the maximum NYSERDA cost-share on a Project scope if the scope includes ineligible expenses.

NYSERDA reserves the right, for any reason, to stop approving incentive applications and limit or stop making incentive payments at any time without notice.

For Categories 1 and 2, Projects that include qualified Affordable Multifamily Housing may qualify for additional cost-share, up to 100% of Project costs, by demonstrating availability of capital and/or financing to fund Project implementation. Description of the ability to fund implementation of heat recovery measures may be included in the Scope of Work. The Property must meet affordability criteria detailed in [Affordable Multifamily Building Guidelines](#) available on the [Heat Recovery webpage](#) to be eligible for the additional cost-share.

Eligible Expenses

Projects that have received or plan to receive incentives from other programs in the [Clean Energy Fund](#) or utility administered incentives are not eligible to receive funding for the same measures and activities within the Heat Recovery Program. For example, Projects receiving installation funding to install an exhaust heat recovery solution through the [Clean Heat Program](#) will not be eligible for an award for a Category 3 Demonstration through the Heat Recovery Program. Receipt of funding from federally funded programs will not impact eligibility for Heat Recovery Program funding, but all planned incentives and grants should be documented within the Project proposal.

NYSERDA's funds may be applied toward the following eligible expenses:

- The fees for both primary and subcontracted architects, consultants and engineers.
- Expenses related to data acquisition devices (capped at 40% of total Category 1 incentives).
- Expenses related to labor and services.
- Expenses related to creating data graphics for the Sankey diagrams and any other visualizations included in final deliverables.
- Expenses related to energy modeling services.
- Expenses related to implementation of a Heat Recovery Design for an eligible Category 3 Project, including construction labor and material costs.

NYSERDA's funds may **not** be applied toward the following ineligible expenses:

- Work completed prior to NYSERDA's receipt of an application.

IV. Application Requirements

NYSERDA evaluates Projects based on the below submitted information.

Categories 1 and 2

All applications will be reviewed on a first-come, first-served basis until funds are fully committed. It is at NYSERDA's discretion to accept Projects, dependent on Project applications meeting all Program requirements.

Following submission, NYSERDA will review and may suggest edits to finalize Scope of Work before approval and contract award.

Applicants may submit complete Category 1 and Category 2 application packages via [JotForm](#). A complete application package shall include the following:

- Application (via [JotForm](#))
- Budget (Attachment B) – The Applicant must provide a Budget broken down by individual line-items by task for materials, labor (personnel title and hourly rate), and other costs.
- Scope of Work (Category 1: Attachment C; Category 2: Attachment D) – The Scope of Work must provide justification for the funding request based on tasks and deliverables included in the Project. Multiple sites, studies, and activities may be included in one Scope of Work if objectives and site similarities and/or differences are clearly accounted for. The Scope of Work must follow the requirements for the Program, which includes the Project description, tasks and deliverables, and schedule. If the Applicant is the Consultant, then the Scope of Work must be signed by the Customer.

Category 3

Proposals will be submitted electronically via the “apply online” link on the [Heat Recovery Project Development Program - Category 3 Demonstration funding opportunity](#) listed on the [Current Funding Opportunities](#) page. Proposals will be submitted by 3:00 PM ET on the applicable Round due date. Applicants must not have started construction on a Category 3 Project prior to contract execution.

A complete proposal consists of the following:

- Budget (Attachment B) – The Applicant must provide a Budget broken down by individual line-items by task for materials, labor (personnel title and hourly rate), and other costs.
- Category 3 Proposal (Attachment C-1)
 - Proposal Cover Page
 - Executive Summary
 - Project Objectives
 - Proposed Measures Description
 - Project Impact and Benefits
 - Qualifications
 - Timeline for Implementation
 - Cost Share Table
- Either a Basis of Design (BOD) narrative, one-line concept diagrams and/or schematic design drawings, if available
- Completed Heat Recovery Opportunity Assessment or equivalent study

Unnecessary attachments beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal. Proposals that fail to meet all requirements and format guidelines may be rejected as non-responsive.

Category 4

All applications will be reviewed on a first-come, first-served basis until funds are fully committed. It is at NYSERDA's discretion to accept Projects, dependent on Project applications meeting all Program requirements.

Following submission, NYSERDA will review and may suggest edits to finalize Scope of Work before approval and contract award.

Applicants may submit complete Category 4 application packages via [JotForm](#). A complete application package shall include the following:

- Application (via [JotForm](#))
- Scope of Work (Attachment G) – Complete a detailed Scope of Work based on the template provided in Attachment G, specifying the Growth Initiative Tasks being pursued, along with an itemized list of eligible activities. This Scope must include an explanation of why the work performed was necessary and eligible under Category 4.
- Budget (Attachment B) - The Applicant must provide a Budget broken down by individual line-items by task for materials, labor (personnel title and hourly rate), and other costs.

V. General Conditions

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes.

The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/About/-/media/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx> . Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department.

The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. NYSERDA anticipates a contract duration of two years, unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Scope of Work. Each application should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify Applicants in approximately 6 weeks from the receipt of an application whether your application has been selected to receive an award. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they

personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess Applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding Applicant's proposal, including questions regarding Applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the Applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided ([Standard Forms and Agreements](#), Executive Order No. 16 Certification), their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to

encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionsearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Heat Recovery Project Development
Program Opportunity Notice (PON) 5547

\$27,000,000 Available

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

- Categories 1, 2, and 4: Applications accepted on a first-come, first-served basis dependent on funding availability until November 17, 2025 by 3:00 PM Eastern Time (ET).
- Category 3:
 - Round 1 Proposals due November 7, 2024 by 3:00 PM ET.
 - Round 2 Proposals due June 3, 2025 by 3:00 PM ET.
 - Further rounds will be announced based on available funding.

Program Summary

The NYSERDA Heat Recovery Project Development Program (the “Program”) aims to animate the New York State (NYS) marketplace for heat recovery solutions by working with consulting engineers, heat recovery solution providers, building owners and operators, and other key stakeholders to develop a robust pipeline of heat recovery retrofits. To accelerate heat recovery retrofit project development, the Program provides cost-share to Applicants for four categories of activities:

- Category 1: Heat Recovery Opportunity Assessment provides cost-share for Consultants to assess a Property’s heat recovery opportunity by quantifying the heat that is currently rejected and analyzing its potential to be repurposed. The goal of the assessment is to inform the building owner’s decision on whether to move forward with heat recovery project design. Applications will be accepted on a first come, first served basis.
- Category 2: Heat Recovery Project Design provides cost-share for Consultants to develop an implementation-ready, technically, and economically viable design of a heat recovery system for an existing Property. Applications will be accepted on a first come, first served basis.
- Category 3: Heat Recovery Demonstration provides cost-share for the implementation of innovative and effective heat recovery systems in an existing Property. Category 3 will accept multiple rounds of Proposals, as listed above. Proposals will be evaluated based on the Proposal Evaluation Criteria outlined on page 11.
- Category 4: Manufacturer Growth Initiative provides cost-share to solution providers qualified by NYSERDA’s [RFQL 5217 - Heat Recovery Solutions](#) for business development services. Applications from eligible Applicants will be accepted on a first come, first served basis.

Eligibility: Existing multifamily, commercial, institutional, industrial, and manufacturing buildings and facilities are eligible for Categories 1-3. Solution providers qualified through NYSERDA’s RFQL 5217 are eligible for Category 4.

Funding: The funding is broken down into four categories according to the below table:

Category	NYSERDA Cost-Share	Maximum NYSERDA Funding Per Award
Category 1: Heat Recovery Opportunity Assessment	Up to 75%	\$40,000
Category 2: Heat Recovery Project Design	Up to 75%	\$80,000
Category 3: Heat Recovery Demonstration	Up to 50% OR Up to 75% for Projects located in disadvantaged communities or consisting of Affordable Multifamily Housing	\$2,000,000
Category 4: Manufacturer Growth Initiative	Up to 75%	\$100,000

Resources: Visit the [Heat Recovery Solicitation Page](#) for template documents and the [Heat Recovery webpage](#) for other current resources.

Application and/or Proposal Submission

Categories 1, 2 and 4

Completed applications for Categories 1, 2 and 4 will be accepted via [JotForm](#) through November 17, 2025, or until funds are fully committed. Applicants will receive a confirmation email of application receipt.

Category 3

Completed proposals for Category 3 will be accepted via the “apply online” link on the [Heat Recovery Project Development Program - Category 3 Demonstration funding opportunity](#) listed on the [Current Funding Opportunities](#) page.

For detailed instructions on how to submit a proposal (online or paper submission), click the link [“Application Instructions and Portal Training Guide \[PDF\]”](#) located in the [“Current Funding Opportunities”](#) section of NYSERDA’s website.

Informational Webinar: NYSERDA will host an informational webinar on Wednesday, February 19, 2025 at 11:00 AM ET. [Register for the webinar here.](#) Questions may be submitted until 5 PM ET the day before the webinar by emailing questions to HeatRecovery@nyserda.ny.gov.

Questions: No communication intended to influence this procurement is permitted except by email at HeatRecovery@nyserda.ny.gov. for technical questions. If you have contractual questions concerning this solicitation, contact Lori Armstrong at Lori.Solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer’s behalf) in an attempt to influence the procurement: (1) may result in a

proposer being deemed a non-responsible offeror, and (2) may result in the proposer not being awarded a contract.

*** All applications must be received by 3 PM ET on the dates noted above. Late or faxed applications will not be accepted.** Incomplete applications may be subject to disqualification. It is the Applicant's responsibility to ensure that all pages have been included in the application.

Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit applications. The online application system closes promptly at 3 PM ET. Attempted edits or submission after 3 PM ET on the date above, will not be accepted.

For ease of identification, all electronic files should be named using the Project name in the title of the document.

Online submission is preferable. Applicants may submit Word, Excel, or PDF files (file formats include csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible.

If changes are made to this solicitation, notification will be posted on the "Current Funding Opportunities" section of NYSERDA's website (<https://www.nyserra.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

I. Program Definitions

Affordable Multifamily Housing – Projects in which at least 25% of the units are, or are expected to be, occupied by households earning not more than 80% of the Area or State median income, whichever is higher. Multifamily buildings are buildings with 5 or more dwelling units. Refer to the affordability criteria detailed in the [Affordable Multifamily Building Guidelines](#) available on the [Heat Recovery webpage](#).

Applicant – The individual or firm applying to this solicitation. In most cases the Applicant will be the Consultant performing work on behalf of the Customer, though any member of the Project Team is eligible to act as the Applicant. NYSERDA will contract with the Applicant to manage the defined scope of work for the defined budget.

Customer – The eligible New York State building owner requesting the Program funding for their Property.

Consultant – The individual or firm providing expert advice and technical services. The Consultant will be performing the engineering analysis and feasibility of the Project and provide expert, objective, and customized technical services.

Heat Recovery Design – A thermal system designed to save energy at a Property by capturing waste heat for reuse, consisting of four key components: a waste heat source, heat transfer technology, a transfer medium, and a heat sink (the end-use of the recovered energy). The recovered energy may be stored for later use within the Project boundary.

Project – The set of proposed activities and tasks to be completed as described in the Scope of Work or Proposal submitted to the Program.

Property – The building(s) and/or facility(ies) within the scope and boundary of the Project.

Project Team – The Customer, Consultant(s) providing engineering analysis and design services, and any project facilitators or subcontractors engaged to support the Project.

II. Introduction

The goal of the Heat Recovery Program is to jumpstart the nascent market for heat recovery solutions as an economical approach to decarbonization for a broad swath of existing buildings in NYS.

According to [Lawrence Livermore National Lab \(LLNL\)](#), 68% of all U.S. energy consumed in 2021 was rejected or wasted through various system inefficiencies. NYS's building infrastructure contributes to this problem by rejecting heat through a variety of processes including ventilation, cooling, and wastewater systems. Heat recovery solutions can turn this problem into an opportunity by recovering and reusing energy that would otherwise be rejected. This is an essential step in most building decarbonization pathways.

Recent projects, including the [demonstration projects advanced through NYSERDA's Empire Building Challenge](#) (EBC), have shown that heat recovery is a key component of the decarbonization strategy for many of New York's existing building stock. All the projects awarded by EBC have featured heat recovery

in some form as part of [a phased decarbonization strategy](#). By increasing adoption of heat recovery solutions amongst a larger share of NYS buildings, more building owners will reduce costs by recapturing energy they have already paid for.

To accelerate the growth from 10 to 100 successful heat recovery projects in NYS, the Program will:

- Support projects demonstrating the technical and economic feasibility of heat recovery solutions that are replicable across the State's existing building stock, reducing energy use and enabling deeper decarbonization.
- Provide cost-share for engineering analysis, design services, and implementation to support the inclusion of heat recovery energy conservation measures within a wider existing building retrofit and decarbonization plan.
- Attract best-in-class equipment manufacturers, solution providers, and other businesses to invest in innovation, product development, and technology transfer to bring forward the most beneficial heat recovery solutions for New York's building stock.
- Engage Consultants to provide engineering expertise and experience necessary to identify and implement heat recovery projects, while developing deeper industry expertise and experience with heat recovery projects in different building typologies.
- Gather real world insights on the shift from linear to circular approaches to energy management to identify opportunities and overcome barriers to building decarbonization, and share best practices and lessons learned.

These activities aim to accelerate confidence in heat recovery as a promising approach to decarbonization and to increase the number of building retrofit projects incorporating heat recovery energy conservation measures to reduce energy use and emissions.

III. Program Requirements

Program Eligibility

To qualify for Program Categories 1, 2, and 3, a Project Team must include an eligible Consultant and a Customer representing an eligible building.

Eligible Buildings

An existing Property of any size that is located in New York State and that falls under the classification of commercial, industrial, institutional, manufacturing and/or multifamily is eligible. New construction projects and single-family buildings are not eligible for this Program. This solicitation has funding to support end-use Customers who pay the System Benefits Charge (SBC) and end-use Customers who do not pay the System Benefits Charge. Clean Energy Fund (CEF) funding may only be awarded to Projects that serve end-use Customers who pay the SBC on either a portion of or on their entire electric bill at the Property. \$4,500,000 in Regional Greenhouse Gas Initiative (RGGI) funding may be awarded to Projects that serve end-use Customers who do not pay the SBC on their electric bill at the Property.

The boundary of a Project under this Program pertains to either a single building or multiple buildings that share energy services. When the Project boundary encompasses a single building, any rejected energy should be reused within that building's boundaries. When the Project boundary spans multiple buildings, it is still necessary to reuse the rejected energy within the defined boundary but not necessarily in the same building that rejected it.

Eligible Consultants

Eligible Consultants are the engineering or sustainability Consultant working on behalf of the eligible Customer. The Consultant must demonstrate experience and expertise in clean energy services delivery to commercial, industrial, institutional, manufacturing and/or multifamily Customers in NYS and provide expert, objective, and customized technical services to inform on the capability for heat recovery in the proposed Property.

NYSERDA reserves the right to limit the number of active Projects a Consultant can have within the Program at any given time.

While it is not required for a Project to include a FlexTech Consultant, Customers in need of a Consultant may choose from NYSERDA's [FlexTech Consultant list](#).

Eligible Manufacturers

To be eligible for Category 4, the Applicant must be a qualified solution provider through [RFQL 5217 – Heat Recovery Solutions](#).

Category 1: Heat Recovery Opportunity Assessment Requirements

Please see Attachment C - Category 1 Scope of Work Template for full details on expected tasks and deliverables for the opportunity assessment.

Category 1 provides funding to document current building infrastructure, quantify and diagram rejected heat from current operations (see examples of Energy Flow Diagrams on the [Heat Recovery webpage](#)), and explore the feasibility of potential cost-effective measures to recover and reuse heat to reduce total energy consumption and emissions. Rejected heat from existing building ventilation, cooling, wastewater and internal processes should be considered in the opportunity assessment, as well as the potential to incorporate thermal storage. The goal of the opportunity assessment is to provide the Customer with actionable information to inform their decision-making to move forward with a heat recovery project design.

Applicants can receive funding for up to 75% of total Project cost, capped at \$40,000, to create and deliver opportunity assessments.

Category 2: Heat Recovery Project Design Requirements

Please see Attachment D - Category 2 Scope of Work Template for full details on expected tasks and deliverables for the project design.

Category 2 provides funding to develop an implementation-ready, technically, and economically viable design of a heat recovery system for an existing Property. Energy recovery from ventilation, cooling, wastewater systems and other internal processes are eligible, as is the inclusion of thermal storage measures to maximize the usefulness of recovered energy.

Applicants can receive funding for up to 75% of total Project cost, capped at \$80,000, to create and deliver designs for an existing Property. These designs should have the potential to significantly improve the heat recovery performance of the Property.

Participation in Category 1 is not a requirement to participate in Category 2.

Category 2 Eligible Projects

Eligible Project designs must improve the energy performance of existing Properties by identifying and capturing rejected heat from an existing building system or process, then reusing the energy to reduce total energy consumption. The captured energy can be stored before being reused for one or more purposes, i.e., heat sinks, within the Project boundary.

To qualify for funding under Category 2, Project Teams must have identified a waste heat source and propose a Heat Recovery Design concept consisting of the following four (4) components:

1. Waste Heat Source
2. Heat Transfer Technology
3. Transfer Medium
4. Heat Sink

Examples of these components are listed below:

Some examples of design concepts include, but are not limited to the following:

- Ventilation Exhaust Heat Recovery, including:
 - Integrating an energy recovery ventilator (ERV) into existing or modified building ventilation systems
 - Installing “run around coils” to building ventilation exhaust
- Cooling and Dehumidification Process Heat Recovery, including:

- Condenser water heat recovery, using heat recovery chillers or water source heat pumps (WSHP) to extract heat from the condenser water loop before exhausting heat into the atmosphere with cooling towers or dry coolers
- Distributed WSHPs on ambient/condenser water loops, enabling heat sharing across the building
- Other refrigeration, data center, or cooling heat recovery through variable refrigerant flow (VRF) systems or hydronic system heat extraction
- Wastewater Heat Recovery, including:
 - Wastewater heat pump, recovering heat from wastewater at building scale before it exits to the municipality's sanitary sewer main
 - Drain water heat recovery coil: preheat fresh makeup water by coiling it around a primary drainpipe to recover waste heat before going into the water heater
 - Steam condensate heat recovery prior to rejecting condensate into the sanitary sewer
- Process Waste Heat Recovery, including:
 - Capturing the waste heat generated by industrial or other processes to be reused within a plant's process streams or to produce electricity on-site
- Thermal Storage Technology incorporated into eligible Heat Recovery Designs, including:
 - Ice tanks, phase change material (PCM), water tanks, condenser water storage, molten salt, geothermal, etc.

Where applicable, Consultants incorporating heat recovery products should first consider equipment qualified through NYSERDA's [RFQL 5217 - Heat Recovery Solutions](#).

NYSERDA seeks a diverse range of Project types including various building typologies, existing HVAC configurations, occupancy types, and geographies.

Category 3: Heat Recovery Demonstration Requirements

Category 3 introduces implementation funding for Projects to demonstrate the technical and economic feasibility of innovative heat recovery solutions in an existing Property. Through Category 3, NYSERDA seeks Projects that:

- 1) Use innovative heat recovery solutions to deliver significant energy and emissions savings.
- 2) Can be a model for replication across the State's existing building stock.

The Program will accept multiple rounds of proposals, as listed on page 1. Proposals will be evaluated based on the Proposal Evaluation Criteria outlined below. Proposers should take care to address all the evaluation criteria described in the Proposal Evaluation Criteria.

Proposals may receive up to \$2,000,000 to implement eligible heat recovery Projects. Cost-share from the Project Team is a requirement for Category 3 Projects. For Projects located in [disadvantaged communities](#) or consisting of [Affordable Multifamily Housing](#), the Project Team must contribute a minimum of 25% of the total Project cost. For all other Projects, the Project Team must contribute a minimum of 50% of the total Project cost.

Category 3 Eligible Projects

A Project must improve the energy performance of the Property by capturing rejected energy from an existing building system or process and reusing the energy to reduce total energy consumption. The captured energy can be stored before being reused within the Project boundary. The Project must propose a Heat Recovery Design consisting of the following four (4) components: waste heat source, heat transfer technology, transfer medium, and heat sink (the end-use of the recovered waste heat).

A Project must propose an innovative heat recovery solution. An innovative solution is a method or technology that challenges or outperforms conventional approaches, prioritizing forward-thinking designs over standard, code-compliant, and widely adopted practices in NYS. An example of a standard code-compliant practice is the installation of Dedicated Outdoor Air Systems (DOAS) as Makeup Air Units (MAUs). Proposals should include technologies that are not already widely adopted in NYS, well-known to engineers and building operators, or mandated by existing codes. The technologies proposed should achieve a level of heat recovery efficacy that exceeds commonly available solutions. The Program encourages proposals that demonstrate a wide variety of heat recovery technologies, sources of waste heat, and end uses for the recovered waste heat.

Below are four examples of innovative heat recovery solutions with the potential for impact and replicability in existing buildings in NYS. Eligible Category 3 Projects include, but are not limited to, the following:

Data Center Heat Recovery: A solution that recovers and reuses waste heat from data center operations, resulting in lower utility energy demands, such as using heat exchange systems or novel waste heat-to-power conversion methods.

High Temperature Heat Pumps: A solution that leverages waste heat recovery with commercially available high-temperature heat pumps to meet process heating requirements of up to 150°C/302°F, which results in improved process energy efficiency.

Packaged Exhaust Heat Recovery: A high-efficacy packaged wastewater or ventilation heat recovery solution without the complexity and costs of onsite stick-built heat exchangers.

Thermal Storage: A solution that allows heat to be recovered at one point in time and used at another, helping to downsize heating and cooling load and provide grid services. Targeted solutions, such as phase change material (PCM) will provide a higher energy density than water and ice.

Supporting Documentation

The proposal must include a Basis of Design (BOD) narrative and/or one-line concept diagrams with essential details to reasonably validate feasibility, procurement budgeting and construction timeline. Proposers must have completed due diligence, such as an opportunity assessment or equivalent study, prior to submitting a proposal.

Timeline

Projects must begin construction within 1 year of the contract execution date. Exceptions may be made on a case-by-case basis. Projects that have already begun construction prior to NYSERDA's award announcement are ineligible.

Selected proposals will work with the NYSERDA team to qualify their proposed solutions through [RFQL 5217 - Heat Recovery Solutions](#).

Proposal Evaluation Criteria

Proposals that meet solicitation requirements, as outlined in IV. Application Requirements, will be reviewed by a Scoring Committee using the Proposal Evaluation Criteria below **listed in order of importance**.

1. Impact

- The proposed heat recovery solution represents a method or technology that goes beyond conventional approaches, prioritizing forward-thinking designs over standard, code-compliant, and widely adopted practices in NYS.
- The GHG emissions reduction and energy savings from this Project are significant and credible. In terms of energy savings, the proposal examines the Project's impact on the grid and explains that the impact will be beneficial.
- The reuse of waste heat from the Project is significant and credible.
- The proposal explains the non-energy benefits resulting from the Project, such as improved indoor air quality, better occupant comfort, job creation, enhanced resilience, etc.
- The Project Team has the capacity and expertise needed to implement the proposed Project.
- The Project design is well defined and comprehensive. The proposal includes a well-articulated Basis of Design that is accompanied by comprehensive schematic design drawings or detailed concept diagrams.
- The proposal integrates the heat recovery solution seamlessly into the overall Project design, demonstrating that the solution is a core component rather than an add-on.

2. Scalability

- The proposal explains that the heat recovery solution has strong potential for widespread adoption within the proposer’s NYS portfolio or by the broader NYS market. The proposal provides the square footage or count of existing buildings within the proposer’s NYS portfolio, and/or in NYS in general, that are similar to the proposed building and have potential to replicate the proposal’s approach.
- The proposal explains other factors that could positively impact the Project's replication potential, such as ease of implementation, commitment from the building owner to replicate this solution across their portfolio or lead time of equipment and its impact on adoption.
- All aspects of the proposed solution are readily deployable for future sites. The proposal explains the commercial readiness of proposed solution, such as if the solution has AHRI certification.

3. Cost Effectiveness

- The Project Team demonstrates commitment by providing significant private investment. The level of private investment is appropriate for the building ownership and building type.
- The proposal identifies funding sources or a financing strategy for implementation.
- The Project cost is reasonable, and a detailed budget is provided that shows hours and dollars allocated to each task.
- The proposal examines the costs and benefits of the Project in terms of total investment relative to the energy and carbon intensity improvements, using metrics such as cost per MMBtu reduction and cost per ton of CO2e reduction.

Program Policy Factors

A Scoring Committee will review and rank all Category 3 proposals. NYSERDA will review this evaluation and ranking and may consider the following program policy factors in making award selections.

- Benefits of Project funding to [disadvantaged communities as defined by the Climate Justice Working Group](#), particularly Projects involving affordable housing, industrial, institutional, manufacturing facilities or P-12 schools.
- Diversity of awards by solution, geography, building typology, or market sectors – including affordable housing, commercial, industrial, institutional, manufacturing and/or multifamily.
- Whether or not the end-use Customer pays the SBC on their electric bill at the Property, which determines the source of NYSERDA funding (CEF or RGGI) to be awarded.

At NYSERDA’s discretion, proposers may be requested to interview with all or part of the Scoring Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview.

Category 4: Manufacturer Growth Initiative Requirements

Through [RFQL 5217 - Heat Recovery Solutions](#), NYSERDA promotes innovative, scalable, and cost-effective heat recovery products to make them more attractive for New York Property owners and design and consulting engineers to implement in their projects. Recognizing that many of these products may be developed and more commonly used outside of New York State, NYSERDA offers RFQL 5217 to qualify manufacturers to bring their heat recovery knowledge and products to New York State and implement them in NYS buildings and processes.

Qualified [Heat Recovery Solutions](#) manufacturers of novel and effective heat recovery products may face several risky and expensive work items when bringing their offerings to New York State. NYSERDA has identified five (5) categories of growth initiatives that qualified manufacturers can submit a proposal to seek direct funding for up to 75% of associated costs with a maximum total incentive of \$100,000. No more than \$1.5 Million of Program funds will be made available for Category 4 awards.

These focused growth initiatives will help qualified manufacturers access the New York market, receive support for knowledge, technology transfer and participate in exchanges with key market stakeholders.

Growth Initiative Tasks [1 - 5]:

1. **Market Research and Adaptation** — Reimbursement of up to 75% of the costs up to \$20,000 of conducting market research or developing a product adaptation and localization plan specific to the New York market. For instance, to develop and test heat recovery products in actual buildings and processes in New York, where manufacturers can assess their suitability for integration with existing building equipment and automation systems. This could allow manufacturers to demonstrate the effectiveness of their product during day-to-day operations and overcome any challenges that may arise.

Eligible activities include but are not limited to:

- Conducting thorough market research to understand the New York market, consumer preferences, and competitive landscape.
- Adapting product features and installations to meet local regulations, standards, and building needs.
- Investing in localization efforts, such as translating user interfaces, packaging, instructions, and marketing materials.
- Converting the Product to be compatible with North American electrical systems and codes.
- Establishing local product installation, testing, maintenance, repair, and customer support resources.

2. **Regulatory Compliance** — Reimbursement of up to 75% of the costs up to \$30,000 of hiring consultants to help manufacturers navigate the landscape in New York, obtain necessary certifications, licenses, and permits, and assist the manufacturers through the compliance process. Engaging Nationally Recognized Testing Laboratories (NRTL) to ensure that the product conforms to North American or New York State's safety, quality, and environmental standards, such as UL (Underwriters Laboratories) and CSA (Canadian Standards Association) certifications.

Eligible activities include but are not limited to:

- Navigating federal, state, and local regulations, which may differ from the company's home country.
- Obtaining necessary certifications, licenses, and permits to sell products in New York.
- Ensuring products meet North American and New York State market's safety, quality, and environmental standards.
- Registering trademarks, patents, and copyrights in the United States to protect intellectual property.

3. ***Supply Chain and Logistics*** — Reimbursement of up to 75% of the costs up to \$20,000 to establish or optimize the local supply chain and logistics networks to be compatible with New York deployments (e.g., operable by the U.S. electrical power grid) and to secure product warehousing, distribution, and transportation and connect with reliable New York State partners and service providers.

Eligible activities include but are not limited to:

- Establishing reliable local supply chain networks to localize products for the United States and distribute them within New York State.
- Dealing with import regulations to New York State. Securing warehousing and distribution facilities in New York.
- Securing partners in New York for product testing, assembly, or manufacturing.

4. ***Sales and Marketing***— Up to 75% of the costs up to \$10,000 for targeted customer engagement and promotional activities in New York and securing New York-based sales channels, distributors, and partners. This is often a critical requirement for many New York owners and engineers before considering a foreign product that is new to the NYS market.

Eligible activities include but are not limited to:

- Building brand awareness and credibility in a new market.
- Developing effective marketing strategies tailored to New York consumers.
- Establishing sales channels, partnerships, representatives, and distribution networks.

5. ***Business Development Assistance*** — Reimbursement of up to 75% of the costs or \$20,000 of recruiting and hiring key New York-based employees and to support existing employee relocation to New York.

Eligible activities include but are not limited to:

- Hiring costs for local staff or relocating key personnel to manage New York operations (staff salaries are not eligible).
- Ensuring compliance with U.S. and New York labor laws and regulations.
- Adapting to cultural differences in business practices, communication styles, and consumer expectations.
- Building training opportunities in specific trades, technology, methods.
- Building relationships with local partners, suppliers, and customers.

Deliverable Submission

Project deliverables will be submitted through the [NYSERDA Partner Portal](#). For ease of identification, all electronic files should be named using the Project name in the title of the document. NYSERDA reserves the right to perform technical review on all submittals. Deliverables found by NYSERDA to not fulfill the approved Scope of Work, proposal and/or deliverable requirements may receive a reduced cost-share or may not be reimbursed by NYSERDA.

NYSERDA is interested in sharing best practices, lessons learned and showcasing final Projects and will work with Applicants to accomplish this.

Payment, Procurement, and Schedule

Program funding will be distributed to the Applicant according to milestone-based payments as defined in the Scope of Work.

The Applicant must submit a copy of all invoice(s) indicating the total billed cost of cost-shared activities or items. The invoice(s) will include labor and non-labor costs, staff titles, hourly rates, dates, and hours for each task. All required cost-share documentation must be submitted through the [NYSERDA Partner Portal](#).

Funding Caps

Categories 1, 2, and 4

The Program will fund Category 1, Category 2, and Category 4 activities at a cost-share for up to 75% of eligible costs, with funding for Category 1 capped at \$40,000, for Category 2 at \$80,000, and Category 4 at \$100,000. Projects must include cost-sharing in the form of matching cash support from the Customer.

Category 3

The Program will allocate up to \$2,000,000 in total funding for the implementation of approved Projects. For Projects located in [disadvantaged communities \(as defined by the Climate Justice Working Group\)](#) or consisting of Affordable Multifamily Housing (see [Affordable Multifamily Building Guidelines](#)), NYSERDA will provide cost-share for up to 75% of eligible costs (the Project Team must contribute a minimum of 25% of the total Project cost). For all other Projects, the Program will provide cost-share for up to 50% of eligible costs (the Project Team must contribute a minimum of 50% of the total Project cost). Cost-share is evaluated as a part of Proposal Evaluation Criteria.

Additional Considerations

When reviewing and negotiating the Scopes of Work and Budgets, NYSERDA reserves the right to:

- Disqualify specific Project costs that are not integral to the Heat Recovery Design and adjust the amount of the funding award accordingly.
- Review and request additional information to support proposed staffing titles and their associated hourly rates to ensure appropriate alignment of staff-to-task complexity.

- Utilize comparable NYSERDA-funded projects and contracts to confirm reasonableness of hourly rates commensurate with geographical location, staff titles, and the individual tasks proposed.
- Provide less than the maximum NYSERDA cost-share on a Project scope if the scope includes ineligible expenses.

NYSERDA reserves the right, for any reason, to stop approving incentive applications and limit or stop making incentive payments at any time without notice.

For Categories 1 and 2, Projects that include qualified Affordable Multifamily Housing may qualify for additional cost-share, up to 100% of Project costs, by demonstrating availability of capital and/or financing to fund Project implementation. Description of the ability to fund implementation of heat recovery measures may be included in the Scope of Work. The Property must meet affordability criteria detailed in [Affordable Multifamily Building Guidelines](#) available on the [Heat Recovery webpage](#) to be eligible for the additional cost-share.

Eligible Expenses

Projects that have received or plan to receive incentives from other programs in the [Clean Energy Fund](#) or utility administered incentives are not eligible to receive funding for the same measures and activities within the Heat Recovery Program. For example, Projects receiving installation funding to install an exhaust heat recovery solution through the [Clean Heat Program](#) will not be eligible for an award for a Category 3 Demonstration through the Heat Recovery Program. Receipt of funding from federally funded programs will not impact eligibility for Heat Recovery Program funding, but all planned incentives and grants should be documented within the Project proposal.

NYSERDA's funds may be applied toward the following eligible expenses:

- The fees for both primary and subcontracted architects, consultants and engineers.
- Expenses related to data acquisition devices (capped at 40% of total Category 1 incentives).
- Expenses related to labor and services.
- Expenses related to creating data graphics for the Sankey diagrams and any other visualizations included in final deliverables.
- Expenses related to energy modeling services.
- Expenses related to implementation of a Heat Recovery Design for an eligible Category 3 Project, including construction labor and material costs.

NYSERDA's funds may **not** be applied toward the following ineligible expenses:

- Work completed prior to NYSERDA's receipt of an application.

IV. Application Requirements

NYSERDA evaluates Projects based on the below submitted information.

Categories 1 and 2

All applications will be reviewed on a first-come, first-served basis until funds are fully committed. It is at NYSERDA's discretion to accept Projects, dependent on Project applications meeting all Program requirements.

Following submission, NYSDERDA will review and may suggest edits to finalize Scope of Work before approval and contract award.

Applicants may submit complete Category 1 and Category 2 application packages via [JotForm](#). A complete application package shall include the following:

- Application (via [JotForm](#))
- Budget (Attachment B) – The Applicant must provide a Budget broken down by individual line-items by task for materials, labor (personnel title and hourly rate), and other costs.
- Scope of Work (Category 1: Attachment C; Category 2: Attachment D) – The Scope of Work must provide justification for the funding request based on tasks and deliverables included in the Project. Multiple sites, studies, and activities may be included in one Scope of Work if objectives and site similarities and/or differences are clearly accounted for. The Scope of Work must follow the requirements for the Program, which includes the Project description, tasks and deliverables, and schedule. If the Applicant is the Consultant, then the Scope of Work must be signed by the Customer.

Category 3

Proposals will be submitted electronically via the “apply online” link on the [Heat Recovery Project Development Program - Category 3 Demonstration funding opportunity](#) listed on the [Current Funding Opportunities](#) page. Proposals will be submitted by 3:00 PM ET on the applicable Round due date. Applicants must not have started construction on a Category 3 Project prior to contract execution.

A complete proposal consists of the following:

- Budget (Attachment B) – The Applicant must provide a Budget broken down by individual line-items by task for materials, labor (personnel title and hourly rate), and other costs.
- Category 3 Proposal (Attachment C-1)
 - Proposal Cover Page
 - Executive Summary
 - Project Objectives
 - Proposed Measures Description
 - Project Impact and Benefits
 - Qualifications
 - Timeline for Implementation
 - Cost Share Table
- Either a Basis of Design (BOD) narrative, one-line concept diagrams and/or schematic design drawings, if available
- Completed Heat Recovery Opportunity Assessment or equivalent study

Unnecessary attachments beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal. Proposals that fail to meet all requirements and format guidelines may be rejected as non-responsive.

Category 4

All applications will be reviewed on a first-come, first-served basis until funds are fully committed. It is at NYSERDA's discretion to accept Projects, dependent on Project applications meeting all Program requirements.

Following submission, NYSERDA will review and may suggest edits to finalize Scope of Work before approval and contract award.

Applicants may submit complete Category 4 application packages via [JotForm](#). A complete application package shall include the following:

- Application (via [JotForm](#))
- Scope of Work (Attachment G) – Complete a detailed Scope of Work based on the template provided in Attachment G, specifying the Growth Initiative Tasks being pursued, along with an itemized list of eligible activities. This Scope must include an explanation of why the work performed was necessary and eligible under Category 4.
- Budget (Attachment B) - The Applicant must provide a Budget broken down by individual line-items by task for materials, labor (personnel title and hourly rate), and other costs.

V. General Conditions

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes.

The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/About/-/media/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx> . Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department.

The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. NYSERDA anticipates a contract duration of two years, unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Scope of Work. Each application should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify Applicants in approximately 6 weeks from the receipt of an application whether your application has been selected to receive an award. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they

personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess Applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding Applicant's proposal, including questions regarding Applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the Applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided ([Standard Forms and Agreements](#), Executive Order No. 16 Certification), their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to

encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionsearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

New York State Flexible Energy Technical Analysis
Request for Qualifications (RFQL) 5548

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Proposals will be reviewed on the following due dates:

Round 6 December 31, 2025; Round 7 June 30, 2026; Round 8 (final)
December 31, 2026.

Due dates are subject to change depending upon the volume of proposals
received.

The New York State Energy Research and Development Authority (NYSERDA) is issuing solicitation RFQL 5548 to establish a pool of consulting firms qualified to provide NYSERDA with diverse technical, energy, economic, and environmental analytical capacity, some of which may be requests for services on short notice (with exceptions, short notice is typically considered to be three to six months). NYSERDA's mission includes the provision of research, analytic and modeling support on a range of topics, often with finite time horizons. Access to a pool of consultants with wide-ranging high-quality technical expertise established through this solicitation will augment and enhance NYSERDA's expertise when undertaking individual, discrete projects with firm timelines. These retained resources will be made available to all NYSERDA Programs, providing technical expertise when such services are needed and appropriate.

NYSERDA anticipates entering into zero-dollar Umbrella Agreements with successful proposers. As needs arise, individual Task Work Orders will emanate from these Agreements and will clearly define the Contractors' required obligations that, if fulfilled, would result in payment. Work issued under this solicitation will vary in scope and budget. The earliest expected start date for any potential work under this effort is January 2024, and January 31, 2029 is the anticipated end date. RFQL 5548 will also allow for an "open enrollment" mechanism whereby potential contractors may submit additional proposals until December 31, 2026. Further information regarding the process for participation in the open enrollment mechanism is provided in this document. NYSERDA has broadly defined potential needs across the following Support Areas, which are described in greater detail in this solicitation document:

A. Electric System Analysis	K. Facilitation Services
B. Life-Cycle Assessment	L. Workforce Assessment and Labor Economics
C. Macroeconomic Analysis and Modeling	M. Climate Change Impacts and Adaptation Analysis
D. Forecasting of Energy Use, Energy Prices, and Greenhouse Gas & Co-Pollutant Emissions	N. Large Scale Renewables Technical Analysis and Review
E. Benefit Cost Analysis	O. Agriculture, Forestry, and Other Land Use
F. Transportation Systems Analysis	P. Multi-sectoral Analysis and Research
G. Health and Environmental Impacts Analysis and Research	Q. Environmental Market Analysis and Research
H. Fuel Delivery Infrastructure	R. Energy Equity Policy Analysis and Research
I. Nuclear Energy	S. Building Sector Analysis
J. Policy Analysis and Technology Assessment	T. Social Dimensions of Energy Systems and the Clean Energy Economy Analysis and Research

Proposers may submit a proposal to provide services in one, multiple, or all of the above Support Areas. **Proposers should clearly identify which of the Support Areas the proposal is intended to address.**

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link "[Application Instructions and Portal Training Guide \[PDF\]](#)" located in the "Current Opportunities" section of NYSERDA's website (<https://www.nyserdera.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>). No communication intended to influence this procurement is permitted except by contacting Elaine Chau (518) 362-0348 or by e-mail Flexergy@nyserdera.ny.gov or Sarah Rambacher (Designated Contact) at (646) 873-7921 or by e-mail Flexergy@nyserdera.ny.gov. If you have contractual questions concerning this solicitation, contact James Cowman (Designated Contact) at (518) 362-0487 or james.cowman@nyserdera.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offeror, and (2) may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. Please see [Solicitation Proposal and Vendor Responsibility Questions.pdf](#) for a complete list of the questions proposers must answer as part of a submission. The online proposal system closes promptly at 3 p.m. Eastern Time, files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserdera.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

I. Introduction

NYSERDA offers objective information and analysis, innovative programs, technical expertise, and support to help New Yorkers increase energy efficiency, save money, use renewable energy, and reduce reliance on fossil fuels. A public benefit corporation, NYSERDA has been advancing energy solutions and working to protect the environment since 1975. Visit www.nyserdera.ny.gov to learn more about NYSERDA's offerings.

NYSERDA Program areas engage in policy and technical analysis support to groups within NYSERDA and to other external State energy policy and decision-makers. NYSERDA also routinely works collaboratively with other State agencies and entities to develop, implement, and evaluate energy policies and programs to support the State's clean energy and carbon reduction goals. Moreover, NYSERDA seeks to address the needs of disadvantaged communities¹ or otherwise underserved communities in the creation of an inclusive clean energy economy. Often, NYSERDA is called upon to support these efforts by undertaking research and analytic work to advance deliberations on general or specific energy and environmental proposals. RFQL 5548 establishes a pool of consulting firms qualified to support NYSERDA's program areas, with diverse technical, energy, economic, and environmental analytical capacity, and which can provide some services on short notice. NYSERDA frequently provides research, analytic, and modeling support on a range of topics, often with constrained time horizons. Access to the pool of consultants, with wide-ranging, high-quality technical expertise, established through this RFQL will augment and enhance NYSERDA's ability to undertake individual, time-sensitive projects. These retained resources will also be available to all NYSERDA Programs, providing technical expertise, as needed. The Support Areas described in this solicitation illustrate NYSERDA's current and anticipated mission.

II. Program Requirements

A. Services Requested

¹ **Disadvantaged Communities** – New York's Climate Act recognizes that climate change doesn't affect all communities equally. The Climate Act charged the Climate Justice Working Group (CJWG) with the development of criteria to identify disadvantaged communities to ensure that frontline and otherwise underserved communities benefit from the state's historic transition to cleaner, greener sources of energy, reduced pollution and cleaner air, and economic opportunities. On March 27, 2023, the CJWG finalized the disadvantaged communities criteria. An interactive map and associated resources are available online: <https://climate.ny.gov/Resources/Disadvantaged-Communities-Criteria>

As a result of RFQL 5548, NYSERDA expects to retain qualified contractors to provide services in each of the specified Support Areas. The number and type of services requested from the selected contractors will depend on the nature and complexity of the project, the contractor's expertise, the volume and frequency of the services requested by NYSERDA, the contractor's past performance and the absence of conflicts of interest. NYSERDA does not guarantee that all types of services will be requested or that all selected contractors will receive work pursuant to executed Umbrella Agreements. Upon a successful demonstration within a proposal, NYSERDA may designate contractors that have demonstrated "specialized capabilities" in specific areas. For example, a contractor may be designated as having specialized capabilities for a particular type of service requested if it demonstrates that it possesses exceptionally scarce qualifications or experience; specialized equipment or facilities not readily available from other sources; or proprietary data or methods. Submitted proposals must clearly articulate any proposed specialized capabilities, supported by a justification as to why these attributes may be exceptionally scarce, specialized, or proprietary. NYSERDA reserves the right to make all decisions regarding a successful demonstration of a specialized capability. Proposers are permitted, but not required, to team with partners (subcontractors) they consider would offer complementary expertise in the identified Support Areas.

B. Support Areas

Proposers are invited to submit a proposal describing their qualifications, skills, expertise with documented references, and personnel rates in one, multiple or all of the support areas described below.

- A. **Electric System Analysis:** Assistance may be requested for analysis and modeling of the electric power system. Assessments may include the economic and physical impacts of changes to elements of the electricity system such as generation, energy storage, transmission, and distribution, including new technologies and deactivation of existing fossil fuel infrastructure. Analyses may include capacity expansion, resource adequacy, and production cost modeling as well as thermal, voltage, and stability power flow analyses, production cost modeling and any other similar activities, and may include analysis of associated greenhouse gas and co-pollutant emissions.
- B. **Life-Cycle Assessment:** Assistance may be requested to perform life cycle and/or energy cycle assessments for clean technologies, and materials and/or products as well as life cycle analysis, including total fuel cycle analysis, for all relevant fuel pathways and energy end-uses in New York. Fuels of interest may include, but not be limited to, fossil fuels, nuclear power, renewable and alternative fuels, and energy carriers (e.g., electricity and hydrogen). Fuel cycle analysis may include, but not be limited to, the following processes: energy feedstock production; feedstock transportation and storage; fuel production; fuel transportation, storage and distribution; provision of energy service involving a conversion process (e.g., combustion in an engine or boiler), and disposal and/or recycling of resulting residual materials. The primary analytic outputs of interest may include: embodied energy by fuel type, energy required to produce a fuel, energy required to perform a service (e.g., miles of travel or space heating), fossil fuel energy requirements, emission levels of the various greenhouse gases, other pollutants, and other environmental indicators (e.g., water). Assistance may also be requested for evaluating the relative embedded emissions of various materials and products, applying or developing systems and databases for product and material metrics and/or the effects of policies or strategies related to materials and products.
- C. **Macroeconomic Analysis and Modeling:** Assistance may be requested to assess the impacts of energy and environmental policies on New York State's employment, income, output, disadvantaged communities² and mobility levels, and other global level parameters and social indicators. Analyses may be required to account for changes in investment and incremental costs of new technologies, energy savings from use of new technologies, changes in the price of electricity and other fuels, changes in energy expenditures and revenue to energy providers, opportunity costs, and changes from consumer and business expenditure patterns due to revenue that may be collected to cover the costs of the policies. Analyses may be conducted on a net impact basis; and any other similar activities. The Contractor may also be requested to conduct BCA analysis for NYSERDA.

² See Section I. Introduction of this RFQL for details on disadvantaged communities.

- D. Forecasting of Energy Use, Energy Prices, and Greenhouse Gas & Co-pollutant Emissions: Assistance may be requested to model New York State's energy system or components of the system on a "bottom-up" or "top-down" basis and produce long-term scenarios and forecasts. Outputs may include projections of energy demand by sector, subsector, technology, and fuel/energy carrier; projections of energy supply by technology and fuel; projections of fuel and electricity prices; and projections of greenhouse gas and co-pollutant emissions. Fuels may include but are not limited to natural gas; distillate and residual oil with varying sulfur content; various types and grades of coal; renewable or partly renewable resources including hydro, land-based and offshore wind, biomass, landfill gas, hydrogen from different feedstocks and processes, various bio-and renewable liquid fuels, photovoltaic systems, battery storage, and nuclear power. Sectors may include electricity, commercial, industrial, residential, and transportation. Prices for each fuel and customer sector may include commodity prices (e.g., the price at Henry Hub for natural gas or the price of crude oil for petroleum products), electricity capacity prices, retail prices (i.e., gas, electric, fuel oil), and transportation costs to various New York delivery points; and any other similar activities.
- E. Benefit Cost Analysis (BCA): Assistance may be requested to develop inputs necessary to conduct BCA of NYSERDA's public benefits programs including programs that target electric energy efficiency, natural gas and fuel oil efficiency, demand response, renewable electricity and fuels, distributed generation, and transportation efficiency. Inputs to BCA include estimation of benefits such as avoided energy and capacity costs, avoided distribution and transmission costs, wholesale price suppression, system reliability benefits, options benefits, macroeconomic impacts, and monetization of non-market goods such as comfort, health, and environmental impacts. In addition, the proposer must have experience with monetizing impacts of innovative building technologies as well as experience with estimating positive and negative impacts on operations and maintenance (O&M), water use, waste, and labor costs associated with the energy efficiency and other programs. Proposers must also have experience in identifying appropriate baselines, development of incremental measure costs, use of appropriate discount rates and time horizons, and life cycle analysis. Specific types of benefit-cost analyses may follow those in the New York State BCA Handbook for Total Resource Cost Test and/or other methods employed by NYSERDA and may also include Societal Cost Test, Utility Cost Test, Participant Cost Test, and Ratepayer Impact Measure; and any other similar activities.
- F. Transportation Systems Analysis: Assistance may be requested to analyze the effects of transportation programs and policies on energy efficiency and use and the effects of energy policies and pricing on transportation demand and use, and on ensuing greenhouse gas and co-pollutant emission. The proposer should be knowledgeable about and have expertise to analyze some or all of the following: alternative fuels and vehicle technologies; transit systems; on- and non-road systems and vehicles in all transportation subsectors; urban planning, mixed use developments and integrated transport systems; transportation demand; advanced transportation technologies, such as intelligent transportation systems; transportation systems management and operations; and travel demand modeling. Examples of possible requests could include: evaluation of investment strategies for electric vehicle infrastructure deployment; comparative assessment of transportation demand reduction policies and strategies; analysis of state fleet electrification options; modeling of timing, scale, and locational needs of electric truck deployment; development of plans for addressing barriers to hydrogen fuel cell vehicle and infrastructure adoption; analysis of benefits and costs of utility investments in transportation electrification; and any other similar activities.
- G. Health and Environmental Impacts Analysis and Research: Assistance may be requested to perform environmental and health assessments related to energy policy options in support of a multi-pollutant policy analysis framework. This may include but not be limited to emissions measurements for different purposes and scale, emission inventory estimates, regional or micro-scale air quality measurements, modeling, and/or health impacts analysis, or retrospective studies to evaluate air quality trends and whether past policies have achieved anticipated environmental benefits. Activities may include compiling and analyzing best practices for energy technology deployment; measuring or modeling air quality with high time resolutions or performing health impact assessments due to emissions from existing and emerging energy technologies. Successful proposers may be requested to conduct analyses of environmental issues associated with energy policy and planning and development including but not limited to:

- Technology operational duty-cycle characterization;
- Development of realistic duty-cycle test-methods of characteristics energy efficiency and emissions performance of energy technologies;
- Emissions measurements (laboratory or field) or estimates (e.g., PM2.5 and precursors, SO₂, CO, NO_x, CO₂, CH₄ and other greenhouse gases or tracers, NH₃, mercury, particulate number, size, and composition, volatile organic compounds, particulate matter, ozone precursors, and air toxics);
- Development of representative emissions inventories through laboratory and field studies to improve emission factors or activity information. Studies may inform New York State's Greenhouse Gas Inventory, the National Emissions Inventory, or develop a grided inventory for top-down and bottom-up reconciliation;
- Air quality monitoring or modeling using various existing and emerging tools for the pollutants listed above;
- Development of integrated energy systems, air quality, and health impact models;
- Estimates of the direct and indirect effects of energy production, use, transport, and storage on:
 - i. local, regional, national, or global air quality including climate
 - ii. human exposure health effects, and public health impacts
 - iii. wildlife,
 - iv. performance and costs of technologies,
 - v. water quality,
 - vi. changes in ecosystems, and
 - vii. economic impacts of ecosystem degradation and recovery
- Health and environmental impacts of climate change;
- Costs and benefits of mitigation of environmental impacts; and
- Costs and benefits of incumbent and emerging energy technologies on health impacts.

Activities could also include reviewing and commenting on draft environmental or energy regulations; draft environmental impact assessments and statements, as well as State and federal licensing and permitting actions; providing technical analysis to support the review and development of studies related to such actions; and identifying viable alternatives to proposed activities addressed in the assessments and categorizing and developing responses to public comments; and any other similar activities.

- H. Fuel Delivery Infrastructure: Assistance may be requested to undertake projects (1) evaluating changes in domestic gas supply and pipeline projects on the cost, reliability and capabilities of the natural gas infrastructure serving New York and the Northeast, (2) using modeling software to simulate pipeline operating conditions, (3) customizing and running models to produce simulations of day-to-day operations, (4) using transient hydraulic modeling software to look at changing system conditions following contingency events, (5) using the database of gas pipelines operating in New York to analyze the effects of increasing demand, new supply sources, and limited transportation capacity, and (6) identifying the potential natural gas system impact from emerging end-use applications such as, but not limited to, compressed natural gas (CNG) and liquefied natural gas (LNG) for transportation related uses.

Assistance may also be requested to analyze fuel supply and associated infrastructure in New York. This may include assessment of current and possible future supply and demand of petroleum products, coal, natural gas, renewable fuels (e.g., gaseous and liquid biofuels as well as solid biomass), and alternative energy carriers such as hydrogen. Such assessment may include fuel specific analysis of production costs, characterization of technological change (i.e., extraction or conversion technologies), and market dynamics affecting supply, demand, and prices. Analyses may also include an assessment of the current and future required infrastructure to develop, produce, process, refine, transport, and deliver these fuels to end-users in New York. The contractor may be requested to identify possible energy assurance issues such as supply disruption scenarios and strategies to respond to such events; and any other similar activities.

- I. Nuclear Energy: Assistance may be requested related to current, new, and advanced nuclear reactors, nuclear power plants, and other nuclear technology applications. Assistance may be requested regarding design, fuel cycle, materials, construction, operation, or decommissioning. Assistance may be requested for: (1) review, evaluation, and response to reports, initiatives, rulemakings, and guidance from industry and the state and federal government pertaining to safety, design, cost, security, or environmental impact of nuclear generating and other nuclear fuel cycle facilities; (2) materials, design, and technology

applications research; ; (3) review, evaluation, and response to license amendment, exemption, and relief requests, as they relate to safety, design, security, and engineering issues; (4) review and evaluation of decommissioning reports, submittals, and activities; (5) decommissioning fund evaluation and analysis including sufficiency of funds and appropriate use; and (6) providing technical expertise and advice on nuclear matters as they may relate to potential health, radiological, economic, emergency preparedness, and environmental risks and impacts; and any other similar activities.

- J. Policy Analysis and Technology Assessment: Assistance may be requested to perform analyses and assessments of energy-related public policy initiatives and novel technologies. Analyses sought may be qualitative or quantitative and could include, but not limited to: assessments of best practices regarding regulatory and market-based policies to promote clean energy goals and objectives; analysis of proposed and/or enacted policy initiatives in regards to energy supply and costs and project siting guidelines/restrictions in New York and/or other regions, estimated effects on businesses in the State, impacts on consumers (i.e., ratepayers, taxpayers, or disadvantaged communities³), direct job impacts, and fiscal and tax implications for the State's general fund; technical and economic feasibility assessments of zero emissions technologies; and penetration studies including analysis of market activity of specific energy technologies, relative to other technologies, and changes over time, including historic information and forecasting of future activity; and any other similar activities.
- K. Facilitation Services: Assistance may be requested to develop strategic engagement plans, create collaborative processes for problem solving, moderate, mediate, and/or facilitate meetings or workshops. Proposers may be asked to support identifying stakeholders to invite to meetings, draft meeting agendas and briefing documents, conduct issue-specific research and interviews, as well as summarize meeting outcomes. Proposers must have experience in strategic facilitation, project management and planning, and encouraging dialogue to advance common understanding and problem solving among diverse groups of stakeholders. These stakeholder groups commonly include, but are not limited to, project developers, economic development organizations, the public, labor and workforce development organizations, non-governmental organizations, and local, state, and federal government entities.
- L. Workforce Development and Labor Economics: Assistance may be requested to estimate and characterize features of New York State's existing and future energy economy and workforce. Estimates might include but are not limited to: numbers of firms and workers engaged in activity directly or indirectly related to the energy sector, both statewide and for smaller geographies within the State; levels of investment and spending by firms, workers, and supply chains; levels of activity by firms and workers on different types of energy-related projects and training in different regions. Characterization might include: the skills, certifications, and educational backgrounds of workers by occupation, technology, and intra-state region; the size of firms and their connections with educational and governmental institutions; workers' levels of compensation and benefits by firm size, occupation, technology, disadvantaged community⁴ residents, or region; and worker demographics and affiliations, including but not limited to race, gender, income, veteran status, and union membership. Contractors may be requested to conduct analysis on equity and inclusion dimensions of workforce development and labor economics from a worker-centered perspective. Contracts may be asked to assess the effects of policies focused directly or indirectly on workforce outcomes and develop recommendations for programmatic changes or novel interventions in the energy sector and related labor markets. In addition, contractors may be asked to support implementing various workforce strategies and programs across a wide range of areas including but not limited to offshore wind, energy storage, energy efficiency, etc.
- M. Climate Change Impacts and Adaptation Analysis: Assistance may be requested to analyze the impacts of climate change in New York State, as well as adaptation and resilience strategies. Requests could be either quantitative (e.g., modeling) or qualitative (e.g., literature review and synthesis). Proposers should be knowledgeable about climate change in New York and demonstrate climate-related experience in one or more of the following sectors: agriculture, buildings, coastal zones, ecosystems, energy, health, telecommunications, transportation, or water resources. Proposers should note if they have experience with climate-related equity issues. Examples of types of requests could include: climate impacts to

³ See Section I. Introduction of this RFQL for details on disadvantaged communities.

⁴ See Section I. Introduction of this RFQL for details on disadvantaged communities.

vulnerable populations or disadvantaged communities⁵; impacts to the physical systems; financial or economic impacts various sectors, benefit-cost analysis of adaptation or resilience measures; case studies of adaptation implementation; and any other similar activities.

- N. Large Scale Renewables Technical Analysis and Review: To strengthen NYSERDA's engagement in advancing clean energy projects and industry development in New York, assistance may be requested to support services relating to offshore wind, large distributed (~5 MW AC), and utility-scale land-based wind and PV solar, and bulk energy storage systems (BESS), as well as the combination of renewable energy with storage and other dispatchable "Power-to- X" complementary technologies. Such support and review services are subdivided into the following categories⁶:
- Environmental, Ocean Users and Regulatory: Support or develop environmental impact studies, permitting analysis, planning studies and risk assessment studies, site characterization campaigns, resource assessments such as historic or cultural, spatial mapping exercises, geotechnical and geophysical, marine, aviation, and safety/security risk assessments and cumulative effects assessments, Support with filings to regulatory proceedings, carbon accounting and life-cycle assessment and other related workstreams.
 - Technology, Industry and Costs: Analyze and provide estimates for potential project costs, including transmission, the impact of new and emerging technologies on cost, construction and construction operations cost estimates by major components or activity, costs associated with various wildlife mitigation options and requirements, maintenance costs, and the benefits of potential State actions on these costs. Synthesize and analyze national and international industry intelligence, new and emerging technology assessments and integration, resource assessments, forecasting, planning and other related workstreams.
 - Transmission and Interconnection: Support with grid transmission and interconnection tracking, transmission and/or interconnection analysis and planning, analyzing options and costs of injecting renewable energy into various interconnection points, cumulative regional/inter-regional impact analysis, needs assessments. Evaluate existing and potential local load and congestion points, support with filings to regulatory proceedings and other related workstreams.
 - Supply Chain and Workforce: Workstream to support understanding and enhancement of the supply chain and work force to maximize the economic benefits of renewable energy development. Development of supply chain tracking and analysis, cost benefit analysis, cross-regional supply chain cost comparisons, supply chain intelligence, supply chain investment monitoring, workforce development, workforce training need and opportunities, labor engagement, disadvantaged community⁷ support and engagement, work to identify or develop recommendations for training or advanced degree programs to fill any identified gaps, and related workstreams.
 - Procurement and Financial Analysis: Designing and supporting the implementation of Clean Energy Standard-compatible procurement and contracting to support renewable energy in a manner that fully considers ratepayer costs and benefits as well as potential legal implications of various approaches. Financial modeling or benchmarking studies, O/REC procurement support, Index Storage Credit (ISC) procurement support, project schedules and timelines, and other related workstreams.
- O. Agriculture, Forestry and Other Land Use: Assistance may be requested for assessing carbon sequestration, storage, and greenhouse gas (GHG) emissions at a landscape scale through field measurements, aggregating literature-based GHG emission/removal factors, analysis of Landsat and other satellite-based imaging metrics of land cover and land use, lidar, field measurements of GHG emissions and removals, surveys of landowners/renters and facility owners, and facility inventories. Proposers should be familiar with the tiered methods identified by the Intergovernmental Panel on Climate Change (IPCC) for creating national GHG inventories.
- P. Multi-sectoral Analysis and Research: Assistance may be requested in evaluating (1) cross-sectoral emissions reduction pathways, (2) cross-cutting policies and programs, (3) the interactive impacts of various decisions, and (4) other initiatives and topics that span multiple sectors or involve interactions between

sectors. Sample work activities may include but are not limited to: (a) assessing the impact of varying levels of electrification on fuel use, fuel supply chains, and electricity demand across multiple sectors; and (b) assessing the balance between use of alternative fuels and electricity across multiple sectors, including impacts on demand, emissions generation, cost, reliability, and other factors. *In their response, proposers are asked to explain the specific sectors in which they offer high levels of expertise.*

- Q. Environmental Market Analysis and Research: Assistance may be requested in analyzing and developing market-based environmental policies and initiatives. This assistance may encompass both (1) analyzing and developing individual market-based environmental policies and (2) considering the interaction of multiple such policies within and across sectors. Such policies could include but are not limited to cap and trade, clean transportation standards (also known as low carbon fuel standards or clean fuel standards), clean heat standards, and other market-based regulations designed to deliver on emissions reductions and/or advance alternative energy deployment in one or more sectors. Sample work activities may include but are not limited to: (a) developing emissions, cost, and price projections for such policies; (b) supporting air quality analysis associated with such policies; (c) assessing economic development and other impacts associated with such policies; and (d) providing specific recommendations for policy development. *In their response, proposers are asked to explain any existing tools that they have relevant to this support area and/or their ability to develop such tools.*
- R. Energy Equity Policy Analysis and Research: Assistance may be requested in undertaking research into various policy topics from an energy equity and climate justice perspective that centers the lived experiences of New York's historically marginalized communities, frontline communities, and low- and moderate-income households (or disadvantaged communities as identified by the [criteria adopted by New York's Climate Justice Working Group](#)). Sample work activities may include but are not limited to: (a) evaluating energy vulnerability and energy burden; (b) assessing energy system impacts as they intersect with social determinants of health; (c) assessing energy system impacts as they interact with access to energy services, access to transportation and mobility, and access to economic development opportunities and jobs associated with an inclusive clean energy transition; and (d) characterizing relevant quantitative and qualitative household and community metrics, conditions, and perspectives under current and potential future scenarios in a spatially granular manner. Proposers in this support area may be requested to conduct research that incorporates substantial engagement with community-based organizations and representatives of disadvantaged communities. *In their response, proposers are asked to explain and demonstrate their deep understanding of underlying root causes of inequitable historical patterns of investment and disinvestment, their technical expertise in characterizing (both qualitatively and quantitatively) the resulting sociodemographic stratification of energy system impacts, as relevant to a variety of metrics, effects, outcomes, and topics, and the expertise, training, and skills their proposed team offer with regard to facilitating meaningful engagement with community-based organizations and representatives of disadvantaged communities.*
- S. Building Sector Analysis: Assistance may be requested to evaluate across a broad range of building types (1) decarbonization potential, pathways, and options; (2) energy demand dynamics; (3) efficiency, affordability, reliability, and resilience considerations; (4) best practices, planning and strategic support focused on policies, regulations, programs and interventions supporting building decarbonization, (5) market insights/market context for retrofit and decarbonization technologies and markets relevant to the building sector in NY State. Sample work activities may include but are not limited to: (a) analyzing a broad range of decarbonization options / pathways relevant to different building types and typologies, such as energy efficiency, demand management, electrification, alternative fuel use/low carbon fuels, fuel cells, load flexibility/grid integration, thermal energy networks, and other; (b) developing, planning and supporting evaluation of implementation options for buildings-focused policies, regulations and initiatives, including but not limited to regulated and unregulated affordable housing, nonprofit-owned properties, and others targeting LMI communities; and (c) evaluating the impacts of buildings-focused interventions, including but not limited to impacts to energy systems, air quality and carbon emissions, consumer and wholesale costs, air pollution, and other. *In their response, proposers are asked to explain their experience with decarbonization, energy transition and planning for the building sector.*
- T. Social Dimensions of Energy Systems and the Clean Energy Economy Analysis and Research: Assistance may be requested to undertake research into the social and institutional dimensions of an equitable, inclusive,

and rapid energy transition across all sectors of New York's energy system and clean energy economy. Proposers in this support area may be requested to use their expertise in energy-related social sciences and humanities fields to produce inter- and multi-disciplinary research and analysis that effectively maps relationships between energy systems and social systems. Sample work activities may include but are not limited to: socio-spatial and socio-demographic analysis, ethnographic research, participatory action research, and other forms of inquiry that situate energy systems topics and issues within the lived experiences of people and communities. Research may involve a variety of objectives, scales, and scopes, ranging from developing data and approaches to center household- and community-scale analysis and narratives within the context of macro energy systems modeling to conducting ethnographic or participatory action research at various field sites in collaboration with communities. Resulting analysis and research may leverage existing contributions from the fields of behavioral sciences, economics, energy systems analysis, and design to offer interdisciplinary breadth where appropriate. However, proposals that incorporate perspectives from diverse disciplines and conceptual frameworks in the social sciences and humanities, such as but not necessarily limited to sociotechnical systems, sociology/anthropology, political science, geography, and history, without overreliance on behavioral science and economic frames of inquiry are specifically and strongly encouraged. *In their response, proposers are asked to explain the tools, approaches, methodologies, and disciplinary perspectives they utilize and demonstrate their experience conducting social and institutional research that is both rigorous and policy relevant.*

Proposers may submit a proposal to provide services in one, multiple, or all of the above Support Areas. Proposers should clearly identify which of the Support Areas the proposal is intended to address.

⁵ See Section I. Introduction of this RFQL for details on disadvantaged communities.

⁶ Proposers should note subcategories listed are for reference only. Subcategories will be established as qualifications when NYSERDA issues mini-bids.

⁷ See Section I. Introduction of this RFQL for details on disadvantaged communities.

NYSERDA reserves the right to create new Support Areas to address any needs that arise outside of the defined support areas included in the issuance of this RFQL. In this instance, all existing firms in the Umbrella Agreement pool, along with any new proposers will be eligible to submit a proposal for the new Support Area(s).

C. Umbrella Agreements

A pool of qualified proposers will be selected through this RFQL to fulfill the needs of each of the identified Support Areas. NYSERDA will enter into zero-dollar Umbrella Agreements with the qualified contractor(s) for each Support Area, enabling NYSERDA to retain services as needs arise. An Umbrella Agreement is used because no estimate can be made in advance as to the type, amount, and complexity of the work each contractor will be requested to perform. An Umbrella Agreement is not a guarantee for any specific amount of future work.

There will be no initial cap to the number of proposers in any one subject matter area. However, NYSERDA may subsequently institute a cap for any or all Support Areas as a means of managing the number of resultant contracts. NYSERDA anticipates the Scoring Committee to convene periodically, no less than twice per year, to review and evaluate new proposals on a schedule depending on NYSERDA's needs and on the number of new proposals that are received. Upon appropriate notice, NYSERDA may forego or discontinue the rolling open enrollments to manage the number of resultant contracts. In deference to the established end of the contract period of January 31, 2029, the open enrollment mechanism will be active through December 31, 2026. No new Umbrella Agreements will be awarded after December 31, 2026.

D. Assignment of Work

When NYSERDA identifies a specific need under any of the Support Areas, the process options for retaining services include: 1) issuing a mini-bid to all of the qualified and contracted firms within the Support Area; 2) selecting any qualified and contracted firm in the Support Area for projects with a funding amount of \$50,000 or less; or 3) selecting a qualified and contracted firm that has successfully demonstrated specialized capabilities, as determined by NYSERDA.

The amount of work assigned to each contractor will depend on the contractor's particular expertise, the amount of work requested in the contractor's support area, past performance, current workload, actual or perceived conflicts of interest, references, deadline requirements, and the ability of the contractor to fulfill a Support Area, provide high quality, cost-effective, and timely services.

Compensation will be based on the contractor's direct and indirect personal services costs (included in the proposal and approved in the Umbrella Agreement) plus allowable expenses. Fees will be based on the contractor's hourly rates for the appropriate level of staff as well as for any subcontractors listed in the proposal and approved in the Umbrella Agreement. NYSERDA will negotiate each Task Work Order on the basis of demonstrated competence and qualifications, at fair and reasonable fees. Fee schedules shall be included in each proposal that identify rates for each member of the team by title, including subcontractors. Proposers are asked to consider the length of the Umbrella Agreement in proposing their fee schedules and annual escalation rates. Budgets for all work conducted will be included in the Task Work Order and approved by NYSERDA. The Task Work Order will also place a ceiling, or not-to-exceed amount, for each project.

Contractors who accrue billable hours beyond the ceiling in the Task Work Order, without approval in writing by NYSERDA, will do so at their own risk. Contractors will not be compensated for time spent in the preparation of any Task Work Order. Preparation of the Task Work Order is considered to be covered by the contractor's overhead expense.

If a Task Work Order includes a final report, a payment based on the final deliverable will be reserved until project completion. If awarded, NYSERDA may choose to negotiate the amount of such payment.

E. Task Work Orders

The Task Work Order is representative of a discrete project (typically, a series of tasks) which requires external support and is assigned to a qualified contractor under the terms of the executed Umbrella Agreement between NYSERDA and that contractor. A direct contract or mini-bid process may be employed, at NYSERDA's discretion, to select the appropriate contractor(s) within a given support area. In response to a Task Work Order Request issued by NYSERDA, respondents provide a detailed response to the request, including staffing, hours, budget, and scope of work. A Task Work Order will not guarantee any specific amount of work but may contain a maximum dollar amount.

NYSERDA expects to issue, to selected contractors, requests for services, in the form of a mini-bid, in one or more of the Support Areas. For each such request, the selected contractor shall be required to:

- Prepare a draft Task Work Order with budget, for each project, for review and approval by NYSERDA;
- Negotiate the scope and cost of the technical assistance with NYSERDA;
- Upon agreement by all parties to the Task Work Order, provide the required assistance within the required time frame;
- Submit any deliverables to NYSERDA for review and approval; NYSERDA's review will ensure that the deliverable conforms to the Task Work Order, and;
- Provide required documentation of expenditures by Task, based on the Task Work Order, when seeking reimbursement from NYSERDA.

At the time of mini-bid issuance, NYSERDA may request and allow teaming arrangements between firms beyond those that were submitted for initial qualification under this RFQL.

Task Work Orders issued may either be milestone-based or time and materials (T&M), however any payments based on the final deliverable will be reserved until project completion. If awarded, NYSERDA may choose to negotiate the amount of such payment.

NYSERDA reserves the right to add additional terms and conditions applicable to individual Task Work Orders commensurate with the type of work scope solicited in such Task Work Orders. For example, a particular Task Work Order scope may warrant changes such as additional insurance to reflect risk assessment and industry standards, data protection or cyber security, confidentiality, among other things.

NYSERDA may request qualified Contractors to propose Cost Sharing for individual Task Work Orders. Cost sharing can be from the qualified Contractor, other team members, and other government or private sources. Contributions of direct labor (for which the laborer is paid as an employee) and purchased materials may be considered "cash" contributions. Unpaid labor, indirect labor, or other general overhead may be considered "in-kind" contributions. NYSERDA will not pay for efforts which have already been undertaken. The qualified Contractor cannot claim as cost-share any expenses that have already been incurred.

NYSERDA may require qualified Contractors producing content for individual Task Work Orders intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

F. Funding & Schedule

Funding will be identified on a project-specific basis, and will be determined, in part, on the scope and subject matter of the Umbrella Agreements as they are developed according to needs expressed by NYSERDA. NYSERDA cannot anticipate whether the need will arise or if funding will be available for any, or all, of the Support Areas listed above.

The general Umbrella Agreements that result from this RFQL will remain in effect until January 31, 2029, and no new Task Work Orders will be issued after this date. Task Work Orders initiated prior to January 31, 2029 are intended to remain in effect until all tasks are completed, final work products are delivered to NYSERDA, and payment is issued.

III. Proposal Requirements

Identified Support Areas

Proposers are invited to submit, in the format described in this solicitation, proposals describing their skills, expertise, qualifications, and personnel rates in one, multiple or all of the Support Areas listed in this solicitation. Proposers must clearly identify Support Area(s) to which the proposal responds. Proposers are permitted, but not required, to team with partners (subcontractors) they consider would offer complementary expertise in the Support Areas:

- A. Electric System Analysis
- B. Life-Cycle Assessment
- C. Macroeconomic Analysis and Modeling
- D. Forecasting of Energy Use, Energy Prices, and Greenhouse Gas, & Co-Pollutant Emissions
- E. Benefit Cost Analysis
- F. Transportation Systems Analysis
- G. Health and Environmental Impacts Analysis and Research
- H. Fuel Delivery Infrastructure
- I. Nuclear Energy
- J. Policy Analysis and Technology Assessment
- K. Facilitation Services
- L. Workforce Assessment and Labor Economics
- M. Climate Change Impacts and Adaptation Analysis
- N. Large Scale Renewables Technical Analysis and Review
- O. Agriculture, Forestry, and Other Land Use
- P. Multi-sectoral Analysis and Research
- Q. Environmental Market Analysis and Research
- R. Energy Equity Policy Analysis and Research
- S. Building Sector Analysis
- T. Social Dimensions of Energy Systems and the Clean Energy Economy Analysis and Research

This RFQL allows for new support areas to be created when unforeseen and ongoing needs are desired by NYSERDA. The ability to create new support areas will be restricted to the first three years of the solicitation, until December 31, 2026, however NYSERDA reserves the right to extend the solicitation. Firms may submit up to two proposals to new and existing support areas over the course of the open enrollment period to accommodate any changes of in-house capabilities. This open enrollment allows contractors to submit proposals up to a defined due date of December 31, 2026 to reflect the planned end date of the anticipated term of the Umbrella Agreements of January 31, 2029.

Length & Format

Proposals should not be excessively long or submitted in an elaborate format that includes expensive binders or graphics. Unnecessary attachments beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal. Each page of the proposal should state the name of the proposer, RFQL 5548, and the page number.

Outline

Each separate Support Area proposal shall be uploaded into Salesforce as four separate documents: (1) Proposal and Supporting Documents; (2) Attachment A: Project Personnel and Rates Form; (3) Attachment B: Sample Agreement; and (4) Subcontractor Declaration. These four documents should contain, at a minimum, the following:

Document 1: Cover Letter and Main Body of Proposal

Cover Letter(s) (1 page suggested)

Proposers shall submit a cover letter on company letterhead that:

- References RFQL 5548
- Specifies the Support Area, by name and letter, where services are being offered
- Summarizes the proposer's ability to perform such services
- Is signed by a person with authority to enter into a contract with NYSERDA

Letters from subcontractors included in the proposal must be included in each Support Area proposal and include the same information included in the proposer's cover letter.

Table of Contents (1 page)

Proposers should present a comprehensive table of contents that outlines the proposal format. For each Support Area offered, the items listed below must be provided, regardless of whether they have been presented in another proposal:

- a) Overall Experience, Capabilities, and References
- b) Personnel and Qualifications
- c) Conflicts
- d) Résumés

Support Area Proposal(s)

Proposals will be evaluated independently for each Support Area. Salesforce requires each proposer to submit a separate proposal for each Support Area with distinct language for each. Salesforce allows proposers to save and restart solicitations to allow for ample time to complete before the deadline.

Each Support Area proposal must include the following subsections:

- a) Overall Experience, Capabilities, and References (2-4 pages)** Proposers must describe their expertise and ability as a team/firm to deliver services in the proposed Support Area(s). This should include the aggregate number of years working in this Support Area(s) and a brief summary of at least one, and no more than three, similar projects. The project descriptions should specify the level of involvement of the proposing firm and subcontractors and the results/deliverables of the project. For at least one of the projects mentioned, proposers must include customer contact names and phone numbers. Proposers with specialized capabilities must articulate those capabilities in the proposal to assist NYSERDA's understanding of them and the capabilities that may be available to address specific needs identified among broader support areas. Proposers can reference Section II. Program Requirements Section A. Services Requested of this RFQL for further explanation.
- b) Personnel and Qualifications Summary (2 pages)** Proposers must identify and describe the company or organization that will be the prime contractor under this RFQL and identify all staff members, teams, and subcontractors that are to be involved in providing services in the Support Area(s), with descriptions of qualifications and past working relationships among team members and subcontractors. Proposals should include an organizational chart, if necessary. Proposers must identify the project manager who will serve as the single point of contact under this RFQL. Proposals must describe the accomplishments, experiences, and expertise of the individuals comprising the proposing team relevant to the Support Area and reference one-page résumés (provided as an attachment) that highlight recent experiences of all individuals who would be directly involved in providing services.
- c) Conflicts (1 page)** The firm, its principals, subcontractors, and any personnel of the firm must be free from any financial or similar interest in any product or service which may conflict with or appear to conflict with the objectivity of the services provided to NYSERDA. Proposers must submit a statement of conflict of interest and on a yearly basis if a TWO is assigned following the previous year's conflict of interest form. If any affiliations exist, a statement must be provided verifying these affiliations do not conflict with or appear to conflict with the objectivity of providing services to NYSERDA and its customers. Non-disclosure of any affiliation can result in the termination of a contract, if awarded.
- d) Résumés** Include one-page résumés that highlight recent experiences of all individuals (proposer and any subcontractors) who would be directly involved in providing services. For ease of reference, organize the résumés in alphabetical order by last name of the individuals providing services, referencing in each résumé header the Support Area(s) they will be directly involved with. Individual résumés shall not exceed one (1) page each.

Document 2: Attachment A: Project Personnel and Rates Form

Proposers must provide a Project Personnel and Rate form (Attachment A) and submit the name, job title, and fully-burdened hourly salary for each individual in the proposal and all subcontractors who would perform the work under an Umbrella Agreement with NYSERDA. Note: Any escalation rates must be identified for the full five-year contract term.

Indirect Cost

With the Project Personnel and Rates Form, include supporting documentation to describe indirect cost (overhead) rate(s) included in your proposal as follows:

- a) Describe the basis for the rates proposed (i.e., based on prior period actual results; projections; federal government or other independently approved rates).
- b) If rate(s) is approved by an independent organization, such as the federal government, provide a copy of such approval.
- c) If rate(s) is based on estimated costs or prior period actual results, include calculations to support proposed rate(s). Calculation should provide enough information for NYSERDA to evaluate and confirm that the rate(s) are consistent with generally accepted accounting principles for indirect costs.

NYSERDA reserves the right to audit any indirect rate presented in the proposal and to make adjustment for such difference. Requests for financial statements or other needed financial information may be made if deemed necessary.

NYSERDA is not requiring proposers to estimate travel or other direct costs as part of proposals, but reasonable costs for these may be included as an element of TWOs, as appropriate.

Document 3: Attachment B: Sample Agreement

Please upload a page stating that the terms are acceptable. If a firm does not accept the terms as written, a redline version of those terms and conditions that are unacceptable should be uploaded. Providing alternative terms does not guarantee NYSERDA's acceptance of those alternative terms.

Document 4: Attachment C: Subcontractor Declaration

Proposers must provide a completed Subcontractor Declaration form (Attachment C), regardless of if subcontractor(s) are included in the proposal. Should subcontractor(s) be included in the proposal, proposers must list all subcontractor(s).

Proposal Materials & Effort

All material submitted as part of this RFQL process becomes the property of NYSERDA. Proposers will not be reimbursed by NYSERDA for any costs associated with the preparation of their proposals.

IV. Proposal Evaluation

Whether submitted in accordance with the initial due date as provided in this document or in response to the open enrollment period that allows new prospective contractors to submit proposals beyond the first RFQL deadline, all proposals that meet the submission requirements will be reviewed by a Scoring Committee. The Scoring Committee will consist of NYSERDA staff and external subject matter experts, if deemed appropriate by NYSERDA. NYSERDA Staff and external subject matter experts (as deemed appropriate by NYSERDA) will evaluate all proposals based on the same pre-established evaluation criteria of the initial RFQL.

Proposals will be evaluated based on the pre-established qualitative criteria that will require a minimum score in order to be accepted as a successful proposer in any one Support Area. Firms may apply to any number of Support Areas. The criterion for firms to successfully demonstrate a specialized capability will be determined by the evaluation criteria, the Scoring Committee recommendation, and NYSERDA's discretion. At NYSERDA's discretion, as part of the evaluation process, proposers may be asked to have appropriate representatives participate in an in-person interview in Albany, New York, through a webinar, or by conference call prior to final selection. Proposers will be notified if they are requested to participate in an interview.

Responses to this RFQL will be reviewed and assigned scores based on the criteria highlighted below, as well as other programmatic and management factors deemed appropriate by NYSERDA.

Overall Experience, Capabilities, and References

- Previous experience in the conduct and delivery of similar or related services.
- Demonstrated ability to complete projects on schedule.
- Quality and relevance of previous work as evidenced by sample projects.
- References substantiating with evidence the contractor's abilities and past performance.
- Responsiveness to NYSERDA's request as specified in this RFQL, including overall clarity and organization of the proposal.

Personnel and Qualifications

- Adequacy/depth of corporate resources to provide requested services.
- Qualifications and expertise of the personnel/team in relevant Support Areas
- Clear identification of staff that will be assigned to various project types.

Other Considerations

- Past experiences with contractor, notable position within the firm's industry, accomplishments on similar projects.
- Combination of contractors needed to deliver all services needed in a timely and professional manner.
- Demonstrated specialized unique capability that is considered a priority to a specific TWO which cannot be predetermined. Therefore, contractors must articulate specialized capabilities (e.g., unique or exceptionally scarce qualifications or experience, specialized equipment, or facilities).

Fee Schedule

- Reasonableness and relative competitiveness of labor rates, associated fees, escalation rates and overhead.

State Finance Law sections 139-j and 139-k - In compliance with §139-j and §139-k of the State Finance Law (see Section V, General Conditions below for additional information), proposers will be required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility.

V. GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserdanyny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. NYSERDA anticipates a contract duration of 5 years, unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify proposers in approximately NYSERDA expects to notify proposers following a convening of the Scoring Committee (approximately no less than twice per year). Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting Elaine Chau by e-mail Flexergv@nyserdanyny.gov. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate

the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer

and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Information Security: The NYS Office of Information Technology Services (ITS) establishes and regularly updates policies, standards, and guidelines for information security (collectively referred to as "ITS Security Policies") for State Entities, including NYSERDA. Contractors, vendors, and solution providers conducting work on behalf of NYSERDA including, but not limited to, application development, web development, hosting, or managing NYSERDA's sensitive data are required to comply with the NYS requirements. These requirements include, but are not limited to, the NYS Information Security Policy NYS-P03-002 which sets forth the minimum requirements, responsibilities, and accepted behaviors to establish and maintain a secure environment and achieve the State's information security objectives. Contractors that manage NYSERDA's data outside of NYSERDA's systems with a High or Moderate rating as per the NYS ITS Information Asset Identification Worksheet must comply with the following requirements.

High Rating	Moderate Rating
Maintain up-to-date SOC 2 Type 2 Assessment Report and provide to NYSERDA upon request. Maintain Cyber Security Insurance Provide a signed self-attestation on an annual basis for multiyear contracts	Maintain Cyber Security Insurance Provide a signed self-attestation on an annual basis for multiyear contracts

NYSERDA

Large-Scale Thermal
Program Opportunity Notice (PON) 5614
Up to \$10 Million Available

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Proposal Due Dates*: 9/26/2024 (Round 1); 1/30/2025 (Round 2); 7/31/25 (Round 3)

***by 3:00 PM Eastern Time**

Program Summary

The Large-Scale Thermal program (“the Program”) supports the design of large single building and multiple building projects, including thermal energy networks, that serve as replicable examples for significantly reducing greenhouse gas emissions (GHG) from heating, cooling, and hot water in buildings, using approaches that are clean and resilient, minimize energy consumption, maximize energy recovery, and offer an equitable approach to building decarbonization. The Climate Action Council Scoping Plan identified large-scale thermal solutions, such as thermal energy networks, as an important pathway to scale up zero-emission heating and cooling in buildings.

For the purposes of this solicitation, a large-scale thermal system uses heat pumps to move thermal energy from sources, such as the ground, air, surface water, wastewater, and waste heat, to provide heating and hot water to one or more buildings and to move thermal energy to sinks, such as the ground, air, and surface water, to provide cooling to one or more buildings.

Designs for multiple buildings, collocated on a single property or contiguous properties, may address the heating, cooling, and hot water of each building on a standalone basis or may use a configuration known as a thermal energy network. A thermal energy network includes distribution pipes that connect multiple buildings together and to thermal energy sources and sinks. There are many technical and economic factors that affect the optimal design of a system that serves the heating, cooling, and hot water of multiple collocated buildings. Proposals to this solicitation must demonstrate that the system configuration proposed for design funding represents the optimal technical and economic solution.

On July 5, 2022, the Utility Thermal Energy Networks and Jobs Act¹ was signed into law, that requires the seven largest utilities to submit to the Public Service Commission (PSC) for review and approval at least one and as many as five proposed thermal energy network pilot projects. Pursuant to the law, on September 15, 2022, the PSC issued an order (Case 22-M-0429) on developing utility thermal energy networks that directs the seven utilities to submit pilot projects for PSC consideration. Utilities required to comply with the PSC order are ineligible to receive funds through this solicitation. Projects approved as utility pilots by the PSC are ineligible to receive funds through this solicitation.

Under this solicitation, NYSERDA is seeking proposals for large-scale thermal design projects in New York State. See the table below for information about funding limits.

¹ Utility Thermal Energy Networks and Jobs Act, S.9422/A.10493 (2022). <https://www.nysenate.gov/legislation/bills/2021/S9422>

Single or Multiple Buildings*	Minimum Conditioned Space (SF)**	Maximum NYSERDA Funding Per Award***	Required Proposer Cost Share****
Multiple	250,000	Up to \$750,000 (Existing Buildings)	50% of total project cost
Single	100,000	Up to \$300,000 (New Construction)	

**To qualify as a Multiple Building, the project must provide heating, cooling, and hot water to at least 2 buildings collocated on a single property or contiguous properties. The buildings may be connected in any configuration and are not required to be connected to a common distribution network. Thermal energy networks are eligible in the Multiple Buildings category. The definition of a thermal energy network in this solicitation is consistent with the following definition in the Utility Thermal Energy Networks and Jobs Act: “all real estate, fixtures and personal property operated, owned, used or to be used for or in connection with or to facilitate a utility-scale distribution infrastructure project that supplies thermal energy”. As noted above, utilities required to comply with the Utility Thermal Energy Networks and Jobs Act, are ineligible to receive funds through this solicitation.*

***Projects awarded funding through PON 4614 (Community Heat Pump Systems) Category A to perform a feasibility study that are below 250,000 SF of conditioned space are eligible to apply to this solicitation. All other Multiple Buildings projects must be at least 250,000 SF of conditioned space.*

****‘Existing Buildings’ is defined as a project where the total conditioned space served by the large-scale thermal system or thermal energy network contains less than 50% new construction. The maximum award amount may not exceed 50% of the design costs. Projects will be limited to one award per round. Projects with multiple phases may only receive one award per round but may request a second award for a subsequent project phase in a subsequent round. Projects may not receive more than two awards, regardless of the number of phases. The project scope of work proposed must not be otherwise funded by NYSERDA nor funded using ratepayer funds administered by the utility. Projects receiving funding through PON 5614, may apply to other NYSERDA programs. However, NYSERDA programs providing funding for the design and construction of beneficial electrification (i.e. heat pumps, thermal energy networks, etc) as part of a retrofit or new construction project, may reduce the award based upon the amount of funding received through PON 5614.*

******Cost share is a requirement for this solicitation. NYSERDA will contribute its share of the actual project cost, not to exceed the amount awarded. The proposer shall provide the remaining amount as cost share. Such cost share may include direct labor (for which the laborer is a paid employee), purchased materials, or cash contributions from a co-funder. Contributions of unpaid labor or contributions of labor for which the laborer is a municipal official or employee do not qualify as proposer cost-share. Awarded proposers shall be responsible for providing adequate cost documentation for all project cost share and the cost share requirement in the budget shall be reasonably commensurate with the NYSERDA payment amount. NYSERDA will not pay for efforts that have already been undertaken and the proposer or proposing team cannot claim any expenses that have already been incurred as cost-share.**

Customer agrees and authorizes their utility’s sharing of the participant-customer’s information and/or project-level information with New York State Department of Public Service Staff and NYSERDA, including its agents or authorized representatives, consistent with NYSERDA’s New York State Public Service Commission and statutorily authorized responsibilities, including, but not limited to supporting market development initiatives, and other evaluation and measurement activities. (For clarity, the term project level includes the information based on the scope of the project, including, but not limited to, aggregated and anonymized whole building, building or subsets of the project.)

Participant agrees to and authorizes the sharing of the participant-customer's information and/or project- level information with New York State Department of Public Service Staff and appropriate local utility, including its agents or authorized representatives, in carrying out its responsibilities under New York State Public Service Commission orders. (For clarity, the term project level includes the information based on the scope of the project, including, but not limited to, whole building, building or subsets of the project.). To the extent the prime proposer is not the customer, the proposer will need to secure such authorization from the customer. Please see Exhibit A, Statement of Work of the Sample Agreement (Attachment D).

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link "[Application Instructions and Portal Training Guide \[PDF\]](https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx)" located in the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

No communication intended to influence this procurement is permitted except (for technical questions) by contacting Sue Dougherty (Designated Contact) at (518) 862-1090, ext. 3127 or by e-mail District.Thermal@nyserda.ny.gov or Donovan Gordon (Designated Contact) at (518) 862-1090, ext. 3119 or by e-mail District.Thermal@nyserda.ny.gov. If you have contractual questions concerning this solicitation, contact Nancy Marucci (Designated Contact) at (518) 862-1090, ext. 3335 or by e-mail Nancy.Solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offerer, and (2) may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. Eastern Time on the dates noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. The online proposal system closes promptly at 3 p.m. Eastern Time, files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

I. INTRODUCTION

The Climate Leadership and Community Protection Act (“Climate Act”) set a goal to reduce economywide GHG emissions 40% by 2030 and 85% by 2050 from 1990 levels while ensuring equity, system reliability, and a just transition from a fossil fuel economy to a clean energy economy. The Climate Act called for the issuance of a Scoping Plan that includes recommendations to meet the requirements and goals in the Climate Act. The Scoping Plan, issued on December 19, 2022, notes that energy efficiency and managed electrification in buildings will be critical to meet the State’s GHG emissions goal. The buildings sector is responsible for approximately a third of the emissions statewide, primarily due to combustion of fossil fuels for space and water heating. The Scoping Plan identified key strategies to decarbonize the building sector, including support for the development of thermal energy networks, which can provide efficient heating, cooling, and hot water while mitigating impact to the electric grid and providing lower energy costs to customers. In addition to thermal energy networks, other large-scale thermal systems that address one or more standalone buildings will help scale building decarbonization. Projects proposed to this solicitation must demonstrate that the proposed system configuration represents the optimal technical and economic solution.

The Climate Leadership and Community Protection Act (Climate Act) also requires that state agencies, authorities, and entities direct a minimum of 35% with a goal of 40% of the overall benefits on clean energy and energy efficiency programs, projects, or investments in the areas of housing, workforce development, pollution reduction, low-income energy assistance, energy, transportation, and economic development to disadvantaged communities² (DACs) as identified by implementing criteria finalized by the Climate Justice Working Group (CJWG)³. Cost-effective decarbonization solutions are necessary to support the millions of households statewide that are low-income (i.e. households with incomes less than 60% state median income).⁴

A large-scale thermal system uses heat pumps to move thermal energy from sources, such as the ground, air, surface water, wastewater, and waste heat, to provide heating and hot water to one or more buildings and to move thermal energy to sinks, such as the ground, air, and surface water, to provide cooling to one or more buildings. The building(s) served by a large-scale thermal system may be standalone and are not required to be connected to a network of distribution pipes, such as those in a thermal energy network.

A thermal energy network, a type of large-scale thermal system, uses distribution pipes and heat pumps to move thermal energy from sources such as those listed above to provide heat and hot water to connected buildings and moves thermal energy to sinks, such as those listed above to provide cooling to connected buildings. A thermal energy network can be arranged in a centralized configuration or distributed configuration. A centralized configuration uses heat pumps to produce heated and chilled water in a central energy plant, which is then distributed to buildings connected to the network for heating, cooling, and hot water. A distributed configuration distributes low or ambient temperature water to buildings connected to the network and heat pumps at the building-level provide heating, cooling, and hot water.

This solicitation seeks proposals for projects that demonstrate replicable approaches to scale building decarbonization through deployment of large-scale thermal systems in New York City and New York State with a preference for systems that are located in disadvantaged communities and/or serve low-income housing. NYSEDA is actively seeking to further workforce development in disadvantaged communities through large-scale thermal system projects.

This solicitation seeks proposals for designs that primarily include existing buildings. The conditioned space served by the proposed design must be less than or equal to 50% new construction to be considered an existing building project, and is eligible for up to the maximum award for existing building projects defined

² <https://www.nyserda.ny.gov/ny/Disadvantaged-Communities>

³ <https://climate.ny.gov/Resources/Disadvantaged-Communities-Criteria/Investments-and-Benefits-Reporting-Guidance#:~:text=The%20Climate%20Leadership%20and%20Community,of%20housing%2C%20workforce%20development%2C%20pollution>

⁴ <https://www.nyserda.ny.gov/About/Publications/Evaluation-Reports/Low-to-Moderate-Income/LMI-Census-Population-Tool>

above. If the conditioned space served by the proposed design is greater than 50% new construction, the project is considered new construction, and is eligible for up to the maximum award for new construction projects defined above. This solicitation seeks proposals for projects that minimize energy use and maximize energy recovery to the extent practical, by considering/including building thermal efficiency, waste heat recovery, and thermal energy storage. Additionally, this solicitation seeks proposals for projects that minimize impact to the electric grid by considering/including on-site renewables and battery electric storage.

This solicitation has funding to support project sites statewide, including end-use customers who pay the System Benefits Charge (SBC) and project sites with end-use customers who do not pay the System Benefits Charge. Clean Energy Fund (CEF) funding can only be awarded to projects that serve end-use customers who pay the SBC on either a portion of or on their entire electric bill at the thermal usage site (existing sites that can demonstrate they currently pay SBC, existing sites that can demonstrate they will connect to the utility grid and will pay SBC, and new construction sites that can demonstrate they will pay SBC when they begin occupancy of the new building).

To assist interested parties in fostering business-to-business connections for teaming arrangements, as well as to foster customer-to-business explorations, NYSERDA has invited solution providers to opt-in to being identified on a list (the list is not an “eligible proposer” list – customers are free to team with solution providers who are not on the list – NYSERDA has not vetted the solution providers on the list and presence on the list does not constitute endorsement by NYSERDA – interested parties are strongly cautioned to perform their own due diligence). NYSERDA has updated the list several times and will periodically further update the list as NYSERDA continues to invite solution providers to opt-in to being identified on a list. The list is available at this NYSERDA webpage www.nyserdera.ny.gov/district-thermal-systems.

II. PROPOSER ELIGIBILITY

Proposers must meet the following minimum qualifications to be eligible for funding under this solicitation:

- Team consists of members who served as the lead technical designer in at least one (1) large-scale thermal system design, thermal energy network design, and/or community-style microgrid design of comparable size (i.e., not smaller size-and-scope or order-of-magnitude) as the one being proposed to this solicitation and will serve as lead (or co-lead) technical designer in this project.
- Team must include the following:
 - A NYS-licensed Professional Engineer or NYS-licensed Registered Architect who intends to stamp the final report deliverable that will result from the project.
 - For projects that include geothermal, a Certified Geothermal Designer (or equivalent) or a team member that meets one or more of the following sets of criteria:
 - Be an engineering graduate and/or Professional Engineer or Registered Architect with three years combined experience in commercial geothermal heat pump design and/or heating, ventilation, and air-conditioning.
 - Have a four-year, non-technical degree with five years combined experience in commercial geothermal heat pump design and/or heating, ventilation and air-conditioning.
 - Have a two-year technical degree with eight years of combined experience in commercial geothermal heat pump design and/or heating, ventilation and air-conditioning.
 - Have ten years or more of combined experience in commercial geothermal heat pump design and/or heating, ventilation, and air-conditioning.
- For projects that address buildings with multiple owners, the team should consider including an organization experienced in direct outreach to customers/building owners such as a community-based organization, climate justice advocacy organization, etc.

NYSERDA has a preference for projects that include the following types of team members: Minority-Owned and Women-Owned Business Enterprises (MWBs), Service-Disabled Veteran-Owned Businesses (SDVOBs), and Benefit Corporations, as defined within Article 17 of NYS Business Corporation Law.

Utilities that are required to comply with the PSC order (Case 22-M-0429) issued on September 15, 2022, to propose thermal energy network pilot projects, are ineligible to propose to or receive funds through this solicitation.

A proposer not selected for award under a due date round may request a debriefing and may be eligible to revise their project and re-propose to a subsequent due date round.

III. PROJECT ELIGIBILITY

Prior to proposing to this solicitation for design funding, a completed feasibility study must demonstrate the technical and economic feasibility of the proposed design at the subject project site. Prior participation in Category A of PON 4614 (Community Heat Pump Systems) or FlexTech to perform a feasibility study is not a prerequisite to participate in this solicitation. However, this solicitation requires the proposer to submit a completed feasibility study that sufficiently addresses the requirements in Attachment C. Examples of previously completed feasibility studies can be found on NYSERDA's website (<https://www.nyserdera.ny.gov/All-Programs/Community-Heat-Pump-Systems/Winners>).

Design projects must meet the following minimum qualifications to be eligible for funding under this solicitation. A proposal that demonstrates that the project meets the minimum eligibility will be reviewed by a Scoring Committee and scored/ranked in accordance with the Proposal Evaluation criteria defined herein:

- The project must be focused on decarbonization of heating, cooling, and hot water of occupied spaces.
- The project must serve a single building comprising at least 100,000 square feet of conditioned space or at least 2 buildings comprising at least 250,000 square feet of conditioned space.

The project should demonstrate replicability by presenting a use case similar to many others in New York State or New York City. For example, a campus facility with sufficient land space to install geothermal boreholes that connect to a network loop or a dense urban environment that uses the network loop to share thermal energy among neighboring buildings with diverse thermal loads.

The project should demonstrate adherence to existing codes and standards, as applicable, including, but not limited to: ANSI/CSA C448 and the Uniform Mechanical Code 2024, Chapter 17.

The scope of work proposed must not have been partially or fully commenced prior to proposal submission.

The project scope of work proposed must not be otherwise funded by NYSERDA nor funded using ratepayer funds administered by the utility.

Projects receiving funding through PON 5614, may apply to other NYSERDA programs. However, NYSERDA programs providing funding for the design and construction of beneficial electrification (i.e. heat pumps, thermal energy networks, etc) as part of a retrofit or new construction project, may reduce the award based upon the amount of funding received through PON 5614

Projects approved by the PSC as utility pilots through the Utility Thermal Energy Network (UTEN) filing pursuant to the PSC order (Case 22-M-0429) issued on September 15, 2022 are ineligible to receive funds through this solicitation.

The proposer must provide evidence that the thermal resource(s) being considered will be an adequate source of thermal energy for the buildings that are being considered for the design. If a project is considering geothermal, then evidence may include results of a test borehole or previously completed geotechnical test at or near the project site. Similarly, if a project is considering wastewater heat exchange, then evidence may include a summary of flow and temperature data. If insufficient data exists at the time of the proposal, then the proposed scope of work and budget must include test borehole(s) or other data acquisition, as applicable to the system design. For awards to projects that intend to install test boreholes, borefields, or other systems that prompt a State Environmental Quality Review Act (SEQRA) Analysis, NYSERDA will require a Site Owner Agreement and Support for State Environmental Quality Review Act (SEQRA) Analysis as an initial task in the Statement of Work.

Preference will be given to projects that include adjunct systems that help with decarbonization, such as on-site solar PV and/or on-site electrical battery energy storage (thus exploring “district energy” not just “district thermal”) where inclusion of these additional district energy solutions helps improve the overall value proposition of the project without detracting from the primary focus of decarbonizing heating, cooling, and hot water.

Preference will be given to projects that support disadvantaged communities and/or low-income housing. Preference will be given where project teams include low-income tenants associations, NYS certified-MWBEs (registry found [here](#)), NYS certified-SDVOBs (registry found [here](#)), Benefit Corporations, Priority Populations (as defined here: <https://www.nyserdera.ny.gov/All-Programs/Clean-Energy-Workforce-Development/Definitions>), community-based organizations, particularly those that focus on climate justice issues. The project should consider the impact on disadvantaged communities, including but not limited to, incorporating project-based workforce development activities as needed that focus on hiring individuals in the aforementioned communities and populations.

Please see Evaluation Criteria defined herein for other project preferences.

Projects selected for award will be required to provide milestone deliverable reports and a final report that address the requirements in Attachment A.

IV. PROPOSAL REQUIREMENTS

Proposals should concisely address the following Proposal Requirements and ensure the Evaluation Criteria have been adequately addressed.

NYSERDA reserves the right to negotiate the statement of work, budget, and funding levels on all awarded projects. Unnecessary attachments beyond those sufficient to present a complete, comprehensive, and effective response will not favorably influence the evaluation of the proposal.

The proposal must be in the following format and may be deemed non-responsive if it fails to comply with the requirements of this solicitation.

1. Proposal Technical Content

- i. **Executive Summary (two page maximum)**
 - State the title of the proposed project and briefly summarize the team members, the buildings to be served by the large-scale thermal system, the proof-points from a completed feasibility study that demonstrate the proposed approach is an optimal solution to decarbonize the heating and cooling of the buildings, how the project demonstrates a replicable approach, and proximity of the project site to disadvantaged communities in New York State. Describe the efforts so far to explore regulatory issues/permitting/franchising, and how the project would be financed.

ii. **Proposer Information (two page maximum)**

- Provide the *legal name(s)*, title(s), mailing address(es), phone number(s), and e-mail address(es) of the proposer (please be sure to have this company name match the “proposer” name entered into the online proposal submittal portal). Phone number(s) must be a number where the proposer can be reached during business hours. Provide the name(s), title(s), mailing address(es), phone number(s), and e-mail address(es) of the project contact only if different from the proposer. Phone number(s) must be a number where the contact can be reached during business hours.
- Identify the team member who is a NYS-licensed Professional Engineer or NYS-licensed Registered Architect who intends to stamp the final report deliverable that will result from the project.
- State the name and title of the representative who would be legally authorized to sign a contract with NYSERDA, if awarded.
- Provide evidence that the Proposer has financial resources to share the costs of conducting the project.
- Identify public interests/organizations/customers involved in the Project Team and describe their respective roles in and relationship to the project:
 - a. Local electric distribution company,
 - b. Local fuel (e.g., gas) distribution company,
 - c. Low-income tenants/associations,
 - d. Climate justice advocacy organizations,
 - e. Commercial/institutional/Multifamily building owners
 - f. Non-profit organizations,
 - g. Third party implementers/project developers,
 - h. Vendors,
 - i. Financiers/investors,
 - j. Others.

iii. **Project Description and Benefits (eight page maximum)**

- Objectives and Benefits
 - a. Describe any energy efficiency projects that have been or will be implemented to reduce the thermal demands of the buildings that will be served by the system. Explain how existing efficiency programs for residential and non-residential buildings and/or other funding sources will be leveraged for buildings that require upgrades to the envelope and/or HVAC distribution system to realize and maximize the potential energy and cost savings benefits of connecting to the system.
 - b. Discuss the basis for an expectation that the proposed design approach is the optimal solution (including assumptions that have been made). As applicable, discuss how the thermal energy network approach reduces the peak thermal load requirement and/or annual thermal energy use of the connected buildings, compared to serving each building individually with a heat pump, by exploiting waste heat recovery, sharing thermal energy through a network loop, using shared thermal infrastructure, etc.
 - c. Describe how the project can support thermal resiliency and reliability, particularly during heat waves and extreme heat events. Proposers, regardless of project site location, should refer to the NYC Climate Resiliency Design Guidelines⁵.
 - d. Describe how the project will be designed to operate within and withstand climate conditions anticipated to occur during the project’s full useful life, identify the relevant current and future climate risks to the project (for example, extreme heat, higher average temperatures, flooding), and describe adaptation strategies that will be

⁵ NYC Climate Resiliency Guidelines. https://www.nyc.gov/assets/orr/pdf/NYC_Climate_Resiliency_Design_Guidelines_v4-0.pdf

incorporated into the project design. For guidance on managing future flood risk, refer to the State Flood Risk Management Guidance⁶ and NYC Flood Hazard Mapper⁷.

- e. Describe any other benefits/reasons why the proposing team is interested in pursuing this project, including but not limited to safety and reducing the impact to the electric grid.
 - f. Describe the proximity of the project site to a disadvantaged community and how the project will benefit the disadvantaged community, if applicable. Provide an image showing whether or not the site is located in a disadvantaged community. To complete this requirement, enter a representative site address into the map of disadvantaged communities available on NYSERDA's website (<https://www.nyserdera.ny.gov/ny/Disadvantaged-Communities>) and provide a screen capture showing whether or not the site (or group of sites) is fully or partially located within a disadvantaged community.
 - g. Describe how the project will benefit low-income housing, if applicable. If applicable, ensure that income documentation is provided in the appendix as described below.
 - h. Describe the involvement and role of the following groups in the planning and decision-making on the project:
 1. Climate Justice organizations
 2. MWBEs
 3. SDVOBs
 4. Benefit Corporations
 5. Community-based organizations
 6. Low-income housing advocates
 - i. Describe how the project team will assess and document workforce needs for the project for both the installation and operations and maintenances phases. Indicate planned opportunities for including and preparing local, historically disadvantaged community members for roles related to system installation, operation, and/or maintenance and repairs.
 - j. Describe how the proposing team plans to incentivize or require education and training of residents in the local community.
 - k. Describe how likely the proposed system, if built as anticipated, will demonstrate a replicable approach for building decarbonization at scale.
 - l. Describe anticipated learning that would be of benefit to the broader marketplace.
- Project Site and Building Characteristics
 - a. Describe the project site and rationale for selecting that site and group of buildings.
 - b. Provide a brief history of project development, including how the project progressed to the feasibility and design phases.
 - c. Describe the buildings to be connected to the system including approximate ages of buildings and thermal systems, and historic preservation or other complicating status.
 1. Provide a table with the following data for each building:
 - *Building Type* (residential, commercial, industrial, mixed-used, educational, medical, other)
 - *Number of Housing Units Per Building* (each single-family home or apartment within a multi-family building is a single housing unit, this includes both market rate and low-income)
 - *Number of Low-Income Housing Units Per Building* (housing units qualify as low income by being at or below 60% of the state median income)
 - *Construction Type* (existing, new construction, gut rehab)

⁶ Community Risk and Resiliency Act. <https://dec.ny.gov/environmental-protection/climate-change/new-york-response/crra>

⁷ NYC Flood Hazard Mapper. <https://dcp.maps.arcgis.com/apps/webappviewer/index.html?id=1c37d271fba14163bbb520517153d6d5>

- *Conditioned Space* (square feet)
- *Total Annual Heating Load* (MMBtu) as the sum of space heating, domestic hot water, and process heating
- *Total Annual Cooling Load* (MMBtu) as the sum of space cooling and process cooling
- *Peak Heating Demand* (MMBtu/h) as the sum of space heating, domestic hot water, and process heating
- *Peak Cooling Demand* (MMBtu/h) as the sum of space cooling and process cooling
- *Existing Primary Fuel Type* for heating (natural gas, oil, propane, electricity, other)
- d. Describe the existing thermal production and distribution systems used to serve the existing buildings (e.g., campus centralized natural gas boiler with steam distribution pipes and radiators in each building, individual natural gas furnaces in each building with forced hot air plenums, etc.).
- e. Describe the relative proximity of buildings to each other and thermal energy density of the buildings connected to the system. Provide a plot plan or aerial image scaling the distances between buildings.
- f. Describe the climate hazard exposure of the buildings and site. Provide a site plan or aerial image illustrating location of the buildings within riverine and/or coastal floodplains, areas of high heat vulnerability, sea level rise exposure, or other climate hazards as applicable.
- **System Design**
 - a. Describe the proposed system configuration, such as centralized or distributed, including types of heat pumps (e.g., ground source heat pumps, water source heat pumps, multi-source heat pumps, adjunct/supplemental/redundancy systems, etc.), types of thermal resources (ground, surface water, wastewater, waste heat), and network distribution temperatures (ambient, low, or high temperature), as applicable.
 - b. Describe the system configurations analyzed in the feasibility study (e.g., business as usual, standalone heat pumps, centralized thermal energy network, distributed thermal energy network) and the rationale for further pursuing a design and/or construction of the preferred configuration.
 - c. Describe how waste heat recovery and thermal energy storage were evaluated and/or incorporated to minimize peak electricity demand and annual energy consumption and GHG emissions.
 - d. Describe the existing infrastructure expected to remain (indicate whether it will be used routinely, or whether it will be used for peaking and/or backup heat), and existing infrastructure expected to be demolished, as applicable.
 - e. Describe how the system was designed to minimize use of fossil fuel equipment for heating to the extent practical. If applicable, provide the rationale for including/retaining fossil fuel equipment to supply thermal energy to the system.
 - f. Describe measures such as on-site renewables (e.g., solar PV), electric storage, and other technologies included in the system design that will minimize impact to the electric grid and improve the safety, reliability, and resiliency of the electric and thermal utilities that support the operation of the system.
 - g. Describe other climate resiliency considerations, including location of project site relative to flood plains, flood-proofing considerations for system interconnection points or locations of critical infrastructure, considerations for operational performance during black outs as applicable, and other approaches for addressing resiliency in the system design.
 - h. Describe how the system adheres to relevant codes, standards, and industry best practices, available at the time of the proposal, including, but not limited to CSA/ANSI

448, International Association of Plumbing and Mechanical Officials (IAPMO) Uniform Mechanical Code Chapter 17, as well as applicable ASHRAE manuals.

- **Business Model**
 - a. Describe building end-uses, occupancy patterns, ownership and tenancies (e.g., low-income residential), number of residents served, and how the proposed project would ease Climate Justice issues within the disadvantaged communities it would serve.
 - b. Describe the preliminary commercial terms/contractual relationships between project participants and roles of each party in financing, constructing, owning, operating, and maintaining the system.
 - 1. Describe the preliminary financing approach for construction, including federal, state, and/or local funding; tax credits; and other funding sources. Demonstrate evaluation of the Investment Tax Credit and other potential subsidies, tax abatements, depreciation schedules of equipment, etc.
 - 2. Describe the business plan and how the system owner/operator will measure and charge for thermal energy delivered to connected building owners. The business plan should discuss how thermal energy will be monetized and how to compensate prosumers who provide thermal energy to the network (ex: waste heat rejection into the network piping loop).
 - 3. Describe who is expected to own/maintain/operate thermal production, distribution piping, and other assets of the system.
 - c. Describe the anticipated regulatory/legal/environmental suitability, including permitting and franchising and indicate whether regulatory compliance appears feasible, based on the ownership structure for the system.
- **Customer Engagement and Protections**
 - a. Describe how customers and stakeholders will be engaged and educated about the potential system.
 - b. Describe how customers will be recruited to connect to the system and the customers' rights and responsibilities, including the equipment customers will be responsible for owning and maintaining.
 - c. Describe how customers will be informed about potential building upgrades needed to make their buildings' heating and cooling systems compatible with the system, as well as incentive and financing programs available to help offset the upgrade costs.
 - d. Describe how customers will be metered and billed, including customer participation/withdrawal options.
- **Challenges and Lessons Learned**
 - a. Describe hurdles to project success and plans to overcome them. What does the project team envision will be the single-biggest challenge to project implementation?
 - b. Describe regulatory hurdles expected and any preliminary approaches for resolving either on an exception-basis for this one project, or on a precedent-setting basis to be of benefit to subsequent projects.
 - c. Describe impacts by the planning, development, installation, operation, and ownership of the project on nearby disadvantaged communities.

iv. **Proposer Qualifications (three page maximum)**

- **Proposing Organization(s):** Include a brief description of organization(s) involved in the proposing team, including prime proposer and major subcontractors. Include year founded, status (private/publicly-held), number of employees, product/services portfolio, and location of offices. Also include an explanation of why the proposed organization or team is the best qualified to perform/implement the project from a technical and business perspective. Identify any other organizational qualifications relevant to the proposed work. (Note: Subcontracts of \$50,000 or more are subject to competitive bid procedures except where the proposal identifies a specific

subcontractor as an integral participant in the proposed work; see Section 5.02 of Exhibit B in Attachment D Sample Agreement).

- Organizational Chart: Prepare an organizational chart listing all team members, including the project manager and any subcontractors and other sponsors involved in the project, showing their roles and responsibilities and reporting relationships.
- Qualifications of Key Individuals: Identify key individuals that will be involved in the project and its success. Provide one- to two-paragraph summaries of relevant technical and business expertise of these individuals, and comment on the extent to which their time is already burdened versus the amount of time they would be expected to work on the project. Submit resumes (as appendix) of all key project team members. Include in the resumes, education and experience that are relevant to the proposed work.
- Previous Experience: Demonstrate compliance (i.e., describe team member's role/responsibilities, summary of project scope, and project budget) with the proposer eligibility minimum qualifications requirement specified in the Proposer Eligibility section which says "Team consists of members who served as the lead technical designer in at least one (1) large-scale thermal system design, thermal energy network design, and/or community-style microgrid design of comparable size (i.e., not smaller size-and-scope or order-of-magnitude) as the one being proposed to this solicitation and will serve as lead (or co-lead) technical designer in this project.". Describe any additional experience of the proposing team that is relevant to the proposed effort. List NYSERDA contracts awarded to the proposer and/or subcontractors, if any, in the past five years.

2. Work Plan, Schedule, and Milestones

- Work Plan: Use the Template Statement of Work provided in Attachment A on the solicitation website and update with project specific information. Indicate how these efforts will be new work above-and-beyond information already compiled in the previous project stages. The Work Plan shall describe each step or procedure required to accomplish the project objectives, including resource characterization (e.g., drilling exploratory boreholes for ground source configuration if that would be part of the project at this stage), the use of analytical tools and/or software, and quantifying the energy/environment/economic benefits. Therefore, each action shall be identified, indicating who will perform it, how it will be performed and its intended result. Be clear and specific: concentrate on how and not why. Use active voice sentence structure to make clear who is responsible for specific actions (for example, use the following phrase to start the description of every task and subtask: "The Contractor shall ..."). Additionally, the following items shall be infused into the Work Plan:
- Schedule: Present a work schedule with a starting point and duration for each task and subtask contained in the Work Plan. Presentation of the schedule in a bar chart is preferred starting with "Month 1", "Month 2", etc. The schedule should include timing of major milestones such as equipment sizing, equipment placement and layout, showing progress toward project objectives and goals. Identify any seasonal constraints or specific requirements for work scheduling. For example, work times may need to be coordinated with a school year calendar, observation of environmentally sensitive seasons, or the receipt of required authorizations.
- Milestone Payments: Provide a list of deliverables associated with each task with proposed milestone payments assigned to major deliverables. The magnitude of the milestone payments should be based on the amount of effort required to reach the deliverable.

3. Budget

Use Attachment B to this solicitation and complete all four tabs within the spreadsheet.

- First Tab (Budget Form): Complete the Budget Form. Put a mark at the check-box where proposers must certify, via an attestation statement, that hourly rates included in the proposal budget are the

same or less than the hourly rates charged to other government or commercial entities for similar work performed.

- **Second Tab (Funding Source Table including Cost Sharing):** Complete the funding source table showing the total cost of project and proposer cost-share (describe sources of funding). The proposal should show any non-NYSERDA funding being contributed to the project and demonstrate whether 50% or more of the total project costs will be from non-ratepayer sources. Cost sharing for the proposed statement of work can be from the proposer, other team members, and other government or private sources. Proposals offering above the minimum required proposer cost-sharing are strongly preferred. Contributions of direct labor (for which the laborer is a paid employee) and purchased materials are considered “cash” contributions and do qualify as proposer cost-share. Contributions of labor for which the laborer is a municipal official or employee do not qualify as cost-share. Contributions of unpaid labor, indirect labor, or other general overhead are considered “in-kind” contributions and do not qualify as proposer cost-share. NYSERDA will not pay for efforts that have already been undertaken and the proposer or proposing team cannot claim any expenses that have already been incurred as cost-share.
- **Third Tab (Budget by Milestones):** Include a detailed budget cross-reference to the proposed Work Plan, showing for each task the hours and costs for labor and the costs for materials.
- **Fourth Tab (Prior/Current/Competing Proposals):** Is other public funding pending/awarded on this and/or very-similar topic, or does the proposing team (or a portion thereof) intend to seek other public funding on this and/or very-similar topic during the proposed effort? If yes, please explain.

4. Appendix

Include any supplementary documentation needed to support the proposal, including but not limited to:

- **Letters of Support or Commitment:** If the proposer is relying on any other organization to do some of the work, provide services or equipment, or share in contributing the non-NYSERDA cost, include a letter from that organization describing their planned participation. Provide evidence (signed letters of commitments) from Project team members signifying their participation in the proposed project and their commitment to providing any resources they will be responsible for. Absence of letters of support or commitment will be interpreted as the proposer not having support from the identified parties.
- **Resumes:** Provide resumes of all key project team members. Include in the resumes education and experience that are relevant to the proposed work.
- **Project Site Ownership Documentation:** Provide documentation of ownership, site control and/or permission of the property owner for proposed sites that will be the subject of design activity.
- **Housing Income Documentation:** As applicable, provide documentation that the project qualifies as low-income housing. Examples of documentation that demonstrate eligibility of housing as low-income are available here in the [Affordable Multifamily Buildings Verification Guidelines](#).
- **Thermal Resource Testing/Data:** Provide evidence that the thermal resource(s) being considered will be an adequate source of thermal energy for the buildings that are being considered for connection to the system. If a project is considering geothermal, then evidence may include results of a test borehole or previously completed geotechnical test at the project site. Similarly, if a project is considering wastewater heat exchange, then evidence may include a summary of flow and temperature data.

5. Completed Feasibility Study Report

This item must be submitted otherwise the proposal shall be deemed non-responsive. The feasibility study must address the requirements defined in Attachment C.

V. PROPOSAL SUBMISSION INSTRUCTIONS

1. Proposal Technical Content (15 page maximum)

The Proposal Technical Content should address all of the items below:

- Executive Summary (two page maximum)
- Proposer Information (two page maximum)
- Project Description and Benefits (eight page maximum)
- Proposer Qualifications (three page maximum)
 - Do not include resumes here. Include resumes in the Appendix.

Save as a Word file or as a searchable PDF file, which can be created by direct conversion from MS Word, or other conversion utility. Name the file using the following naming convention:
"ProjectName_TechnicalContent".

2. Work Plan, Schedule, and Milestones

Update the Template Statement of Work that is available as Attachment A to this solicitation with the proposer and project information. Save as a Word file or PDF file. Name the file using the following naming convention:
"ProjectName_WorkPlan".

3. Budget

Complete all four of the tabs of the budget spreadsheet that is available as Attachment B to this solicitation. Save as an Excel file (.xls or .xlm format). Name the file using the following naming convention:
"ProjectName_Budget".

4. Appendix

Combine the supporting documentation as a Word file or PDF file. Name the file using the following naming convention: "ProjectName_Appendix".

5. Completed Feasibility Study Report

The requirements of Feasibility Study report are defined in Attachment C to this solicitation. Save as a Word file or PDF file. Name the file using the following naming convention: "ProjectName_FeasibilityStudyReport".

VI. PROPOSAL EVALUTION CRITERIA

Proposals that meet the solicitation requirements will be reviewed by a Scoring Committee. Detailed evaluation criteria are defined below.

Proposals will first undergo a pass/fail review regarding proposer eligibility minimum qualifications and project eligibility minimum qualifications as provided in the Proposer Eligibility and Project Eligibility sections. Proposals that meet these requirements will then be reviewed by a Scoring Committee using the Evaluation Criteria below **listed in order of importance**. At NYSERDA's discretion, proposers may be requested to interview with all or part of the Scoring Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview. After the proposals are reviewed, NYSERDA will issue a letter to each proposer indicating whether the proposal will be considered for an award. Proposers receiving favorable evaluations will be invited to enter into contract negotiations with NYSERDA for the selected project. During negotiations the proposer shall assist NYSERDA with completion of duties associated with the SEQRA, as applicable, including but not limited to discerning if any other governmental agency with jurisdiction over the project seeks to fulfill Lead Agency role. The proposer may also be asked to address specific questions or recommendations of the Scoring Committee before contract award.

Marketplace Benefits/Impact

- How scalable and replicable is this project?
- How likely will the proposed system if built as anticipated help to demonstrate highly efficient low carbon heating and cooling solutions that significantly reduce energy use and GHG emissions?
- Has the proposal adequately described any energy efficiency projects that have been or will be implemented to reduce the thermal demands of the buildings that will be served by the system?

- Does the proposal describe a strong approach to adhere to relevant codes, standards, and industry best practices?
- Does the project meaningfully account for relevant climate conditions anticipated over the full useful life, and intentionally mitigate risks from and/or adapt to changing conditions? Does the project provide thermal resiliency benefits and minimize grid impacts, including during extreme heat events?
- Is the project located in a disadvantaged community? To what extent would the project lessen Climate Justice issues in disadvantaged communities (<https://www.nyserda.ny.gov/ny/Disadvantaged-Communities>) enveloping the site?
- How much low-income housing, with household incomes less than 60% state median income, will benefit from the project? Did the proposer include documentation (see [Affordable Multifamily Buildings Verification Guidelines](#)) on income eligibility?
- To what extent does the project provide considerations for low-income housing, MWBEs, SDVOBs, , and/or Priority Populations (as defined here: <https://www.nyserda.ny.gov/All-Programs/Clean-Energy-Workforce-Development/Definitions>)?
- To what extent does the project team demonstrate they have an effective approach for outlining the workforce needs associated with the construction and operation of the project? Has the project team identified opportunities to include and prepare local, historically disadvantaged community members for roles related to system installation, operation and/or maintenance and repairs?
- For thermal energy network projects, does the proposed project incorporate a diverse mix of end-use customer facilities which would have diverse space heating thermal load profiles (such that aggregating the thermal loads will achieve significant load smoothing as a mechanism to reduce costs)?

Project Economics

- Is the project cost reasonable? Is there a good match between the budget and scope? Is a detailed budget provided? Does it include a budget breakdown by project task that shows hours and dollars allocated to each task? Does the proposing team offer sufficient cost-share for the project (extra preference will be given to higher proposer contribution levels)?
- Is there compelling indication that the amount of funds being requested is the minimum amount necessary to cause the project to proceed?
- Does the proposed project intend to demonstrate techniques and methods which would help subsequent projects perform their designs faster/better/cheaper?
- Have financing mechanisms or sources for construction of this project been identified and/or secured? Does the project proposal demonstrate/incorporate how effective financing strategies and business models will be used to construct, own, operate, and maintain the system?

Organization, Participation and Commitment

- To what extent has the proposing team demonstrated applicable competencies beyond the proposer eligibility minimum qualifications specified in this solicitation?
- Do letters of commitment confirm active participation in applicable aspects of the project and commit the letter writer to providing the resources necessary to successfully carry out the duties assigned to their role as a project team member?
- Does the proposal identify a team member who is a NYS-licensed Professional Engineer or NYS-licensed Registered Architect who intends to stamp the final report deliverable or Certified Geothermal Designer (that meets the Proposer Eligibility requirements defined above) that will result from the project?
- What is the likelihood of the project to be implemented once the design is completed?
- Is this part of a larger plan/project and if so, has the larger project been adequately described?
- Has the proposer described the labor requirements plan in adequate detail to demonstrate they are prepared to comply with the requirements?

- Are any low-income tenants associations, MWBEs, SDVOBs, Community-based organizations, Benefit Corporations, and/or Climate Justice advocacy organizations participating on the project team?
- Are staff allocations and schedule reasonable and realistic? Can the project team competently handle this extra workload at this time?

Other

- Has the proposer provided other reasons for building the system? To what extent does the proposer describe other ancillary benefits (e.g., customer education and engagement processes), or demonstrate a greater degree of project planning and execution strategies (e.g., technology vendor commitments/participation, greater development of business plans and ownership options, plans to implement energy efficiency, leveraging existing incentive programs)?
- Does the proposal consider measurable benefits by the planning, development, installation, operation, and ownership of the project on nearby disadvantaged communities?
- If applicable, has the proposer described a strong plan for customer engagement and protection?
- Is the proposal well written? Are the concepts clear and complete? Does the proposal differentiate between relevant efforts that have already been accomplished, and proposed efforts that have not yet commenced?
- Can the major assumptions adequately be defended?
- Will the proposed effort utilize high-quality data (e.g., recent data, trending data of duration covering a statistically-significant time period, accurate and precise data), and how certain is it that such data will be available?

Additional Considerations (to be considered by NYSERDA regarding Program Policy Factors)

- The degree to which the project reflects the overall objectives of NYSERDA to complete projects with a variety of technologies and end-use sectors and geographic distributions and sizes so as to facilitate NYSERDA's stated interests in learning about the breadth of prime opportunities to grow the large-scale thermal market to scale.
- The degree to which pricing and hourly rates are in line with the rest of the market.
- Whether the proposed project will accelerate transformational market advances in areas that industry by itself is not likely to undertake because of technical, financial, and/or regulatory uncertainty.
- The potential for complementing similar ongoing or completed projects.
- The potential for appropriate leveraging of other sources of public/ratepayer funds (as opposed to displacing those other sources).
- Consideration of the impact on, and benefits to communities that include low-to-moderate income housing
- Project budget is commensurate with GHG reductions.

VII. GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be

excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/About/-/media/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contacting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. A contract may be awarded based on initial applications without discussion, or following limited discussion, or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the applicable Sample Agreement to contract successful proposals. Funding for projects awarded through this solicitation is available for four years from the date of award. If the project is making progress and funding is still available, the schedule may be extended for an additional period of time at NYSERDA's discretion. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the

Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify proposers in approximately sixteen (16) weeks from the proposal due date whether your proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting Sue Dougherty at (518) 862-1090, ext. 3127 or by e-mail at District.Thermal@nyserda.ny.gov. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

This is a competitive solicitation, and the credentials of the proposing team is a key evaluation criterion. If a proposal is selected for award, and if key elements of the project subsequently are changed (including but not limited to the proposing team being subsequently revised by replacement of strategic members), NYSERDA reserves the right (at NYSERDA's sole discretion) to rescind the award and advise the reconstituted project/reconstituted team to re-propose at a subsequent due date and undergo competitive review where the re-awarding of a contract will not be a foregone conclusion.

Accessibility Requirements - Every awardee from this solicitation will produce a final report that NYSERDA will post to the web. NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see [NYSERDA's Accessibility Requirements](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a

proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionsearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Clean Mobility Program
Program Opportunity Notice (PON) 5739
\$21,600,000 Available

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Round 2 Proposals (Demonstration Track only):
Due September 25, 2025 by 3:00 pm ET

Program Summary: The New York State Energy Research and Development Authority (NYSERDA) seeks to implement a Clean Mobility Program (the Program). The Program is designed to help communities launch/expand innovative zero-emission transportation options that can help reduce reliance on personal vehicles. The Program will fund projects that will help overcome persistent transportation challenges, especially in underserved communities, and improve access to affordable zero-emission transportation options. The Program includes a now closed Planning Track that offered technical assistance, and the currently open Demonstration Track, that offers implementation funding. The Program is open to local governments, transit operators, and community-based organizations/nonprofits that propose transportation options for community members and local employers, or groups of employers, with at least 1,000 employees in a community that propose projects that would provide innovative zero-emission transportation services for their employees in New York State (collectively referred to as “Eligible Entities”). Note: projects may span multiple municipalities. Dedicated funding is allocated to Demonstration projects in the Bronx (minimum \$3 million) and electric micromobility Demonstration projects in the areas served by Central Hudson, National Grid, New York State Electric & Gas, and Rochester Electric & Gas (minimum \$5 million).

This is Round 2 of PON 5739 and is only for Demonstration proposals. Round 1, released in June 2024, included both Planning and Demonstration proposals.

Proposal Category	Total Funding Available	Anticipated Number and Size of Awards
Planning Track (Completed in Round 1)	Up to \$4 million	Up to 40 at up to \$100,000 each
Demonstration Track (Note: this is the only category available for funding in Round 2)	Up to \$21.6 million, including \$3 million dedicated to projects in the Bronx and \$5 million dedicated to electric micromobility projects upstate	Around 8 at up to \$3 million each

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link "[Application Instructions and Portal Training Guide](#) [PDF]" located in the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Authority's Designated Contacts for this Procurement are: Richard Mai (Designated Contact) at (212) 971-5342, ext. 3476 or by e-mail cleanmobility@nyserda.ny.gov or Alexia Heinrich (Designated Contact) at (518) 362-0251 or by e-mail cleanmobility@nyserda.ny.gov (for technical questions). If you have contractual questions concerning this solicitation, contact James Cowman (Designated Contact) jim.solicitations@nyserda.ny.gov. All Proposers should be familiar with the legal prohibitions against certain types of contacts during government procurements set forth in State Finance Law section 139-j. In accordance with that law, contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offerer, and (2) may result in the proposer not being awarded a contract. .

*** All proposals must be received by 3 p.m. Eastern Time on the dates noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. Please see [Solicitation Proposal and Vendor Responsibility Questions.pdf](#) for a complete list of the questions proposers must answer as part of a submission. The online proposal system closes promptly at 3 p.m. Eastern Time, files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

NYSERDA will host an informational webinar on August 7, 2025 from 3:00 to 4:00 p.m. Eastern Time during which NYSERDA will review the requirements of this solicitation and answer questions. The link to the webinar can be found here: <https://nyserdany.webex.com/weblink/register/r552d5a2cb042ea7291b1fae1a6de2d7d>.

I. INTRODUCTION

Transportation accounts for roughly 30 percent of New York State's greenhouse gas (GHG) emissions, more than any other sector. In order to meet the ambitious GHG reduction targets laid out in the Climate Leadership and Community Protection Act (Climate Act), NYSERDA will encourage transportation options that reduce vehicle miles traveled. The Clean Mobility Program (the Program) is designed to support this goal by: 1) improving zero-emission first mile/last mile connections to public transportation, 2) demonstrating innovative public and shared transportation options at a community scale and 3) providing viable options for those who do not own personal vehicles but live in areas with limited public transportation. The focus will be on underserved and disadvantaged communities.

Eligible projects include, but are not limited to:

- Bike share/scooter share and bike libraries
- Electric vehicle (EV) rideshare and on-demand services

- EV carshare
- EV microtransit and shuttles
- Micromobility charging hubs
- Programs to support bike/scooter ownership

Note: Electric bikes or scooters funded by NYSERDA's Clean Mobility Program must meet industry safety standards such as being UL-certified.

Program funding is available to help Eligible Entities implement projects. Demonstration funds are only available to Eligible Entities that have already completed the necessary planning criteria. Infrastructure costs directly related to the proposed mobility option are eligible before funding. Infrastructure costs are capped at 20% of the NYSERDA funding amount.

Round 2 applicants may have participated in the NYSERDA Clean Mobility Program Round 1 planning program or may have completed their planning efforts outside of the Program.

NYSERDA will support demonstration projects of innovative, zero-emission transportation solutions. To be considered for Demonstration funding, projects must meet NYSERDA's criteria for completed planning projects: 1) community engagement, 2) site identification and operations, 3) project partner identification, 4) technical feasibility assessment, and 5) policy and regulatory feasibility assessment (see Attachment A: Planning Track Statement of Work). In the case of a local employer applicant seeking to provide mobility solutions for its own staff, staff engagement should be included in the applicant's community engagement, but the broader community should also be engaged to ensure that solutions for staff are developed in coordination with local stakeholders.

Eligible Entities applying for Demonstration funding must submit their completed mobility plan, showing that they have done planning work that meets NYSERDA's planning project criteria. Demonstration proposals that are nearly complete with their planning tasks (for example, they only need design refinements) are eligible for Demonstration funding. Applicants must note in the Proposal Narrative (Attachment B) and Statement of Work (Attachment C) which additional planning tasks would need to be completed before commencing Demonstration work. Demonstration funding cannot be used for planning tasks, any remaining planning actions required to meet NYSERDA's criteria for planning projects must be completed prior to NYSERDA's release of demonstration funds. All proposals will be evaluated against the evaluation criteria in Section IV.

While solution providers may be a part of a proposing team, proposals must be led by Eligible Entities as defined above. The Program is intended for mobility solutions that are technologically mature and commercially available. In addition, all applicants should demonstrate sufficient resources and organizational capacity to carry out the proposed project and to appropriately manage any award.

Demonstration projects should be able to be completed in three (3) years and may request up to \$3,000,000 per project.

II. PROGRAM REQUIREMENTS

Applicant Eligibility:

- Applicant must be a local government entity (e.g. County, City, Town or Village), transit operator or public transportation provider, community-based organization/nonprofit, or local employer. Note: applicants may span multiple municipal jurisdictions. "Local employers" refers to employers or groups of employers with a total of at least 1,000

employees in a community that provide or would like to provide transportation services for their employees.

- Applicants that are close to completion of a plan (for example, they only need design refinements) can apply for Demonstration funding. Applicants must note which additional planning tasks must be completed before commencing Demonstration work. Any planning work required to meet NYSERDA's criteria must be completed prior to the release of NYSERDA funds for Demonstration activities. Planning work may be completed by applicant staff or consultants and should include all of the tasks outlined in Attachment A: Planning Track Statement of Work (SOW).
- Applicants may include mobility solution providers on their proposing team for Demonstration proposals. **If an applicant received planning funds from this Program, they may not include any of the firms that developed the plan as their mobility solution provider. Such firms may participate in a subsequent Demonstration Track proposal in a planning capacity only.** A mobility solution provider is an entity that manufactures, supplies, develops, installs, operates and/or maintains a transportation or mobility service including:
 - EVs and/or micromobility devices
 - Charging equipment for EVs and/or micromobility devices
 - Programs to support Clean Mobility Program-eligible mobility technologies (e.g., bikes, scooters, e-bikes, EV rideshare and on-demand services, charging hubs for micromobility and EVs)

Applicant Requirements and Responsibilities:

- Applicant must identify and commit a qualified staff resource to serve as the Project Liaison for the duration of the project. The Project Liaison will be responsible for providing deliverables to NYSERDA in a timely fashion.
- See Section VI for list of relevant required documents.

Funding:

- Demonstration projects are efforts that will demonstrate zero-emission transportation options. This includes hardware, software, policies, and market development initiatives. This may include one or more commercially available products or the integration of multiple commercially viable products. Projects should require only minor additional planning work, such as necessary design refinements prior to implementation, but should not include any tasks contained in the Planning SOW (Attachment A) or technology or product development tasks. NYSERDA will not fund any planning work required to meet NYSERDA's criteria for planning projects.

Please note:

- NYSERDA's share of funding for Demonstration projects will be limited to a minimum of \$500,000 and a maximum of \$3,000,000 per project.
- All Demonstration project applicants are required to provide at least 20% of total project costs in non-NYSERDA cost share.
- NYSERDA funds may be used for the purchase of zero-emission vehicles (ZEVs) and/or installation of EV charging infrastructure. NYSERDA funds may also be used for the purchase of micromobility devices and/or micromobility charging infrastructure. Electric bikes or scooters funded by NYSERDA need to meet industry safety standards such as being UL-certified. While there is no cap on the total percentage of NYSERDA funds that can be used to purchase equipment, Applicants should present a plan for how any program will be successfully staffed and operated. Project Value will be an important criterion during the proposal evaluation process.
- Other infrastructure costs related to the built environment (e.g. bike/bus lanes, street safety improvements, etc.) may be eligible but must be directly related to

the proposed mobility option and are capped at 20% of the NYSERDA funding amount.

Proposers may only submit one (1) proposal to this Round of the Program. No applicant will be awarded more than one (1) Planning grant and one (1) Demonstration grant across all rounds.

As outlined in Attachment C: Demonstration SOW Template, Demonstration projects are required to include tasks and allocate budget in the Demonstration SOW for community engagement, as well as tasks and budget for data collection that can be used to support data analysis work by the NYSERDA support contractor.

NYSERDA reserves the right to modify a project's Statement of Work, budget and funding levels and may offer to fund any of the proposal's phases therein at a lower level than requested.

Project Requirements:

At a minimum, all proposed projects must:

- Reduce vehicle miles travelled and transportation emissions.
- Expand access to zero-emission transportation options.
- Demonstrate a clear potential to be successfully sustained after the end of the trial period.

Proposed projects may not include any of the following elements:

- A sole focus on vehicle or fleet purchase or replacement, without providing a new or expanded service.
- Projects that do not ensure long-term reductions in GHG emissions and air pollution.
- Projects that have significant technology risk.

Proposal Submission Limits:

In Round 2, a lead applicant may only submit one (1) Demonstration proposal. No lead applicant may be awarded more than one (1) Planning and one (1) Demonstration grant across all rounds. Subcontractors may participate in multiple awarded proposals/projects provided that each has a separate, distinct solution. Different municipal agencies can be considered separate entities for the purpose of either a lead applicant or subcontractor role.

Priority Project Areas:

Upstate NY: Five million dollars (\$5,000,000) of Program funding is exclusively available for demonstration projects for electric micromobility solutions serving low-to-moderate income (LMI) individuals and disadvantaged communities (DACs) in the areas served by the upstate investor-owned utilities (Central Hudson, National Grid, New York State Electric & Gas, and Rochester Electric & Gas).

Bronx: Three million dollars (\$3,000,000) of Program funding is exclusively available for demonstration projects located in the Bronx.

NYSERDA will evaluate all proposals based on the PON evaluation criteria. When determining awards, NYSERDA will first consider funding availability for proposals with sites located in the two priority project areas noted above (Upstate NY and the Bronx). NYSERDA will make awards based on rank evaluation order to meritorious proposals within each of the two priority project areas as dedicated funding availability allows. If the dedicated program funding for a priority project area is exhausted but additional meritorious proposals remain, then those priority project area proposals will be considered for funding among the proposals outside of the priority project areas based on rank evaluation order, subject to funding availability.

III. PROPOSAL REQUIREMENTS

The proposal should concisely present the information needed to fully address the requirements stated in the PON, as enumerated below. Proposals may not exceed the page limits specified. Incomplete proposals or those that fail to meet eligibility requirements may be rejected as non-responsive. Unnecessary attachments beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal. The proposal must be in the following format:

Demonstration application requirements

The following documents are required for demonstration project, with instructions included in the Attachments unless otherwise noted:

- 1) Completed Mobility Plan
 - i. Applicants will upload a copy of their completed mobility plan, whether done independently or with an RFQL 5625 Consultant, that meets the established criteria set forth in the Planning Statement of Work Template (Attachment A). The file type should be in Word or PDF, however there is no standard format or attachment.
- 2) Demonstration Proposal Narrative (Attachment B) with the following sections (30-page limit, excluding appendices):
 - i. Cover Letter
 - ii. Executive Summary
 - iii. Team
 - iv. Problem
 - v. Solution
 - vi. Projected Impact/Benefits
 - vii. Community Engagement
 - viii. Sustainability, Scalability, Replicability
 - ix. Budget Summary
- 3) Demonstration Statement of Work and Schedule (Attachment C)
- 4) Demonstration Budget Form (Attachment D)

In compliance with §139-j and §139-k of the State Finance Law (see Section V, General Conditions below for additional information), proposers will be required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility.

Cost Sharing –The Demonstration proposals should show non-NYSERDA funding of at least **20%** of the total cost of the project. Cost sharing can be from the proposer, other team members, and other government or private sources. Contributions of direct labor (for which the laborer is paid as an employee) and purchased materials may be considered "cash" contributions. Unpaid labor, indirect labor, or other general overhead may be considered "in-kind" contributions. NYSERDA will not pay for efforts which have already been undertaken. The proposer or proposing team cannot claim as cost-share any expenses already incurred or any expenses associated with work that was required at time of submission, including any planning work required to meet the requirements of a complete plan. Show the cost-sharing plan in the following format (expand table as needed):

	Cash	In-Kind Contribution	Total
NYSERDA	\$	\$	\$
Proposer	\$	\$	\$
Others (list individually)	\$	\$	\$
Total	\$	\$	\$

A final report is required for all Demonstration projects. A payment based on the final deliverable will be reserved until project completion. If awarded, NYSERDA may choose to negotiate the amount of such payment.

Annual Metrics Reports – If awarded, the proposer will be required to submit, on an annual basis, a prepared analysis and summary of metrics that are realized by the project. Reporting shall commence the first calendar year after the contract is executed. Reports shall be submitted by January 31st for the previous calendar years' activities (i.e. reporting period). Awardees will be expected to provide metrics in accordance with a web-based form, which will be provided by NYSERDA. NYSERDA may decline to contract with awardees that are delinquent with respect to metrics reporting for any previous or active NYSERDA agreement.

Measurement & Evaluation – If awarded, proposers will be required to work with a NYSERDA Support Contractor to establish data collection plans for measurement by the awardee and analysis by the Support Contractor. This ongoing coordination will help NYSERDA assess quantitative and qualitative key performance indicators and outcomes across all Program projects.

Community Engagement – If awarded, proposers will be required to work with a NYSERDA Support Contractor to establish a community engagement plan to be conducted by the awardee. This ongoing coordination will help NYSERDA assess outreach across all Program projects.

IV. PROPOSAL EVALUATION

Proposals that meet solicitation requirements will be reviewed by a Scoring Committee using the Evaluation Criteria below. At NYSERDA's discretion, proposers may be requested to interview with all or part of the Scoring Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview.

Demonstration Track

- Projected Impact
 - How likely is the proposed project to provide needed clean transportation options?
 - How severe is the transportation need?
 - Approximately how many people would benefit from the development of a transportation project in this area?
 - How transformative is the solution for the impacted communities, both in the short and long term?
 - Will [disadvantaged](#) or underserved communities benefit?
 - Will the proposed project provide environmental benefits to the impacted community?
- Community Alignment and Engagement
 - To what degree has the community been engaged in the proposal development process? In the case of a local employer applicant seeking to provide mobility solutions for its own staff, staff engagement should be included in the applicant's community engagement, but the broader community should also be engaged to ensure that solutions for staff are developed in coordination with local stakeholders.
 - How durable are the existing partnerships and plans for successfully implementing ongoing, long-term community engagement that is aligned with, responsive to, and informed by proven community needs?
- Feasibility
 - To what degree is there a clear understanding of challenges and barriers?
 - Is there a sound approach, thorough plan, sufficient resources, community buy-in, and necessary approvals (or plans for approval) to execute their solution?

- Is there a credible team with the experience, capacity, and existing (or planned) relationships needed to mitigate risk and succeed where other solutions have not?
- Sustainability
 - Is there a vision and roadmap to sustain the project beyond NYSERDA funding?
 - Is the team positioned to adapt and meet changing community needs?
- Project Value
 - Is the overall project cost justified and reasonable based on the level of effort proposed and the expected outcome and benefits?
 - Is the value proposition and benefits sufficient that the concept or technology will likely be successful and adopted by the market?
 - How appropriate are the proposer's co-funding contributions (sources and amounts) with respect to the degree of risk and potential benefits from the work?
 - Are the labor rates and equipment costs reasonable based on market conditions?

NYSERDA reserves the right to accept or reject proposals based on the following program policy factor(s):

- The degree to which pricing and hourly rates are in line with the rest of the market.
- The degree to which the proposed project will advance the goals of the Climate Act
- The degree to which there are technical, market, organizational and/or environmental risks associated with the projects that outweigh the potential benefits
- The degree of NYSERDA portfolio balance/optimization. The project(s) balance(s) and enhances the NYSERDA portfolio in one or more of the following areas: technological, organizational, or geographic diversity.
- Diversity of awards within multiple locations, climates, regions, or other geographically articulated criteria (for example, Regional Economic Development Regions, NYISO zones, or other geospatially described areas, etc.)
- The degree to which there is portfolio diversity, including considerations as to funding duplicative efforts stemming from the Solicitation itself or similar, previously funded efforts and considerations as to development stage of the cohort of proposed projects (for example, secured permits or financing, shovel-ready, etc.).
- The degree of ongoing leverage; ability to attract other funding sources to successfully facilitate technology transfer, leading to subsequent scaling and market adoption.

V. GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department.

The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. NYSERDA anticipates a contract duration of up to 3 years for Demonstration Projects, unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify proposers in approximately eight (8) weeks from the proposal due date whether your proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting (cleanmobility@nyserda.ny.gov). NYSERDA may decline to

contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Accessibility Requirements - NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In

addition, former NYSERDA employees are subject to a “lifetime bar” from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person’s engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants’ prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA’s current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant’s proposal, including questions regarding applicant’s business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants’ target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers’ business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers’ business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers’ former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA’s sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Information Security: The NYS Office of Information Technology Services (ITS) establishes and regularly updates policies, standards, and guidelines for information security (collectively referred to as “ITS Security Policies”) for State Entities, including NYSERDA. Contractors, vendors, and solution providers conducting work on behalf of NYSERDA including, but not limited to, application development, web development, hosting, or managing NYSERDA’s sensitive data are required to comply with the NYS requirements. These requirements include, but are not limited to, the NYS Information Security Policy NYS-P03-002 which sets forth the minimum requirements, responsibilities, and accepted behaviors to establish and maintain a secure environment and achieve the State’s information security objectives. Contractors that manage NYSERDA’s data outside of NYSERDA’s systems with a High or Moderate rating as per the NYS ITS Information Asset Identification Worksheet must comply with the following requirements.

High Rating	Moderate Rating
• Maintain up-to-date SOC 2 Type 2 Assessment Report and provide to NYSERDA upon request. • Maintain Cyber Security Insurance • Provide a signed self-attestation on an annual basis for multiyear contracts	• Maintain Cyber Security Insurance • Provide a signed self-attestation on an annual basis for multiyear contracts

Building Better Homes Program
Zero Emissions Homes for Healthier Communities

Program Opportunity Notice (PON) 5765

\$1,264,640 Available

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Applications accepted continuously through August 15, 2025, by 3:00 PM Eastern Time

New York State Energy Research and Development Authority (NYSERDA) is accepting applications from home builders and developers to support the design and new construction of zero emissions (all-electric) homes through the Building Better Homes Program (Program). The goal of this Program is to reduce overall greenhouse gas emissions associated with the operation of newly constructed homes that will provide healthy, comfortable, and safe living environments for each home's occupants. Home builders and developers (Applicants) can request financial support for the design and construction of zero emissions new single-family, two-family homes and townhomes located in New York State, as well as for the training of staff and subcontractors as necessary to achieve those goals. Through their voluntary participation in this Program, home builders and developers will be empowered to deliver newly constructed homes that will not use fossil fuels. Once accepted, Applicants will be expected to promote those attributes as a part of their sales presentation to prospective home buyers, and to the broader marketplace.

To expand capacity of home builders and developers to design, construct, and market zero emissions single-family, two-family homes and townhomes, financial incentives and access to technical support and expertise are offered for the following:

- Zero Emissions Home Design or Re-design,
- Passive House-focused training for the Applicant's staff and their subcontractors,
- The new construction of homes that meet the requirements as detailed throughout this PON,
- Publicity and promotion, independently and through NYSERDA's website at www.nyserda.ny.gov,

Applicants should apply for support through the NYSERDA portal. Once their application is accepted, NYSERDA will issue an Award Letter to the Applicant that summarizes the agreement and identifies all committed funding. All agreements will end no later than two years following the date the application was submitted to NYSERDA or when all work assigned under the agreement has been completed, whichever occurs first. Applicants must provide their organization's experience with their target markets as part of their engagement with NYSERDA, including historic production and demographics associated.

Application Submission: To access the support available through the Building Better Homes program, an application must be submitted through the NYSERDA portal as detailed in the Application section of PON 5765. Electronic submission is preferable. NYSERDA will also accept proposals by mail or hand-delivery if electronic submission is not possible. First-time Applicants should select [Apply Online](#) to complete a registration form. Once you have established a NYSERDA New Construction Program portal account, please log in directly at <https://nyserda-portal.force.com/login>.

No communication intended to influence this procurement is permitted except by contacting Michael Schmidt (Designated Contact) e-mail to MichaelNC@nyserda.ny.gov (for technical questions). If you have contractual questions concerning this solicitation, contact James Cowman (Designated Contact) at (518) 862-1090, ext. 3652 or by email at Jim.Solicitations@nyserda.ny.gov. All Applicants should be familiar with the legal prohibitions against certain types of contacts during government procurements set forth in State Finance Law section 139-j. In accordance with that law, contacting anyone other than the Designated Contacts (either directly by the Applicant or indirectly through a lobbyist or other person acting on the Applicant's behalf) in an attempt to influence the procurement: (1) may result in an Applicant being deemed a non-responsible offerer, and (2) may result in the Applicant not being awarded a contract.

All Applications must be received by 3pm Eastern Time on the date noted above. Late, faxed, or emailed Applications will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

I. Introduction

The Building Better Homes Program is intended to expand the capacity of home builders and developers to construct and market zero emissions (all-electric) single-family, two-family homes and townhomes, with enhanced support available for homes that will rely on geothermal systems to support space conditioning and domestic hot water production. For the purposes of this Program, zero emissions homes are defined as newly constructed and exceptionally energy-efficient homes that will not use fossil fuels for any purpose other than for emergency back-up electricity generation.

Financial incentives are offered for the following activities:

- Zero Emissions Home Design or Re-design,
- Passive House-focused training for the Applicant's staff and their subcontractors,
- The new construction of single-family, two-family homes and townhomes that meet the requirements as detailed throughout this program summary will be eligible to request a Zero Emissions Home incentive and Passive House Certification incentive,
- Support for the marketing and promotion of the zero emissions new homes that are being designed and constructed by the Applicant,

Based on the Applicant's commitment and NYSERDA's approval, an Award Letter will be issued to the Applicant to confirm the requested incentives will be available to the Applicant once the Program requirements have been met, and for the specified period. The date of the Award Letter is the start of the Applicant's participation in the Building Better Homes Program. All cost incurred by the Applicant prior to the date of the Award Letters issuance are the sole responsibility to the Applicant. Payment of those incentives will be available once the Applicant's Award Letter has been issued, all deliverables associated with that incentive have been submitted, and NYSERDA has reviewed and approved those submissions.

Sectional Outline:

- [Section II. Glossary of Terms](#)
- [Section III. Eligibility, Activities, and Categories available for support](#)
- [Section IV. Application Process](#)
- [Section V. General Conditions](#)
- [Section VI. Attachments for Reference](#)

II. Glossary of Terms

Applicant – The home builder or developer who is responsible for the management and construction of a project seeking access to NYSERDA's support and incentives.

Home Builder and/or Developer – An organization or entity in the profession of building and developing homes for sale.

Zero Emissions Home – A home that excludes all fossil fuels from the building systems and equipment qualifies as a Zero Emissions Home. Building systems and equipment at a minimum refers to building heating, ventilating, and air conditioning (HVAC), domestic hot water (DHW), kitchen, laundry, and all other appliances. Projects that rely on a fossil fuel-fired generator solely for emergency use may qualify as a Zero Emissions Home if fossil fuel use is excluded from all other building systems and equipment, at NYSERDA's sole discretion.

Dwelling Unit – A single dwelling unit provides completely independent living facilities for one or more persons, including permanent provisions for living, sleeping, eating, cooking, and sanitation.

Production Home Design – A home or townhome design with standard architectural and high-performance features intended to be replicated and built multiple times.

US Environmental Protection Agency (EPA), Department of Energy (DOE), Phius (Passive House Institute US), Passive House Institute (PHI), National Green Buildings Standard (NGBS), International Living Futures Institute (ILFI) – These organizations publish and administer programs and standards that Applicants select and rely on to confirm the required the design, re-design, or new construction of single-family, two-family homes or townhomes will meet Building Better Homes Program requirements.

Certified Rater, Home Energy Rater, Phius Rater (Rater), Phius Verifier, PHI Verifier – The Applicant hires one or more of these qualified parties to provide the design review, energy modeling, verification and testing necessary to ensure certification of individual dwelling units will be achieved by the Applicant, based on their chosen third-party performance standard.

Approved Rating Provider (Provider) – Providers are recognized by the EPA as qualified to perform oversight of Raters because they represent an EPA-recognized Home Certification Organization (HCO). Raters must be affiliated with a Provider, and the Provider is responsible for oversight, training, certification, quality assurance, quality control services, and other reporting requirements in support of their affiliated Raters.

Home Certification Organization (HCO) – The HCO must be recognized by the EPA as qualified to complete the review and approval of energy modeling and related documentation when the Applicant has elected to meet a relevant EPA ENERGY STAR program. RESNET is recognized by the EPA as a qualified HCO, and RESNET-accredited Providers represent RESNET as their Approved Rating Provider.

Certified Passive House Consultant/Designer (CPHC/D) – The Applicant hires the CPHC/D to provide modeling, verification and testing as necessary to verify the project is completed in accordance with the Applicant's chosen Passive House performance standard, with support of the Phius Rater, Phius Verifier, or PHI Verifier.

III. Eligibility Requirements:

To be eligible to receive the financial incentives available, Applicants must apply with a new construction zero emissions single-family, two-family home or townhome. Approvable applications must include a minimum of one project site address that is pursuing Category C Zero Emissions Home Incentives to be eligible for the financial incentives available in this program. The home's systems and appliances must be all-electric, meeting the Zero Emissions Home definition provided in Section II of this program summary. The home(s) must be designed and constructed to be clean and resilient, reducing energy use, eliminating fossil fuels, and addressing forward-looking climate conditions. Additionally, to participate in this program, the (approvable) application must be submitted prior to the issuance of the building permit. The newly constructed home(s) or townhome(s) must be in New York State, be certified to one of the following listed third-party standards that has been selected by the Applicant, and the criteria as noted throughout this program summary.

- EPA ENERGY STAR Single Family New Homes (SFNH) National v3.2,
- EPA ENERGY STAR NextGen Certified Homes and Apartments National v1.0,
- Department of Energy (DOE) Zero Energy Ready Home (ZERH) Single Family Version 2.1,
- National Green Buildings Standard (NGBS) at Emerald level,
- Phius (Prescriptive, CORE, or ZERO),
- Passive House Institute (Low Energy Building, Classic, Plus, or Premium),
- International Living Futures Zero Energy at the 'Ready Audit' stage of certification,
- International Living Futures Zero Carbon at the 'Ready Audit' stage of certification.

Applicants who previously applied to the previous version of PON 5765, dated October 2024, but have not yet received an incentive payment from NYSEERDA may request their application and participation be transferred into this updated version of PON 5765. To be eligible for NYSEERDA's consideration, all such requests must be

submitted to NYSEERDA in writing, email preferred, prior to August 1, 2025, 3pm. NYSEERDA has the sole discretion for determining an Applicant's eligibility to transfer an application from a previous program version to this program for participation, and all such requests will be considered on a case-by-case basis.

NYSEERDA, at its sole discretion, determines an Applicant's eligibility to participate in the Building Better Homes Program support and financial incentives.

A. Zero Emissions Design and Re-design Support

Home builders and developers who maintain production home designs they intend to construct multiple times may access up to \$4,000 to offset the incurred cost for securing the design(s) of zero emissions homes, or to offset the incurred cost for securing the re-design(s) of their existing production home design(s) to ensure the new homes they intend to construct will meet the zero emissions goal. To be eligible for this support, the design(s) or re-design(s) must be for a home that will be zero emissions (all-electric); and must also be design-certified or reviewed as necessary to ensure that at least one of the listed third-party standards will be met for any new homes that will be constructed based on the design. The Applicant must confirm the design or re-design is intended to support the repetitive production building of homes, not simply to support the construction of a single custom-built home.

Deliverables required to secure the Design or Re-design Support incentive:

- PDF copies of all completed design or re-design documents,
- Documentation to confirm the hours worked, bill rate(s), and associated costs incurred by the Architect or designer needed to complete the design or re-design associated with these deliverables; with a copy of the contract, if applicable, and the invoice submitted by the Architect or designer to the Applicant.
- Attestation from the Registered Architect of record confirming:
 - The date range when the design or re-design work was completed,
 - That the design or re-design meets Building Better Homes performance requirements,
 - That the home design or re-design supports the repetitive, production building of homes,
 - If applicable, approval as Design Certified by the third-party standards organization (in these cases, include a copy of the Design Certification letter) or for third-party standards without a design certification include a written description of compliance with the selected standard.

B. Passive House Training

The Applicant may request support for training associated with Passive House standards for their own staff, as well as for their subcontractors. The intent is to increase the understanding and knowledge of construction practices and technical solutions needed to deliver highly efficient zero emissions homes that feature high-performing envelopes, which will contribute to maintaining indoor spaces that are comfortable, survivable, and less prone to freezing pipes or other property damage than a code compliant building in the event of a power outage during extreme temperatures. Projects designed to Passive House standards include passive and active resiliency measures; are more likely to have been designed and be built in a manner that will adapt to future climate conditions; and will be better able to withstand and recover from climate-change related shocks.

Incentives are available to offset the incurred costs for New York State (NYS) residents to attend NYSEERDA-approved training, up to a maximum of \$2,000 per person with a per Applicant lifetime cap of \$30,000. Passive House Training incentives may be paid incrementally per trainee upon review and approval of all deliverables. The Applicant may submit requests for support of alternative training for consideration if they are focused on Passive House-levels of performance and will achieve similar outcomes in comparison to one of the listed trainings. The Applicant may submit a request for training support of staff or subcontractors who do not reside in NYS but who perform work on projects located in NYS. NYSEERDA, at its sole discretion, will determine eligibility to receive financial incentives for those alternative trainings or for non-NYS residents based on the information submitted to NYSEERDA by the Applicant. The approved training list includes estimated training cost per person at the time of writing, NYSEERDA is not responsible for fluctuations in training fees from third-party organizations.

Approved Trainings and Certifications include:

- Phius Certified Consultant Training and Exam, \$2,100 per person,
- Phius Certified Builder Training and Exam, \$2,100 per person,

- Phius Certified Trades Professional - \$2,100 per person,
- Phius CORE Prescriptive Path Training, \$250 per person,
- WUFI Passive - Single Family Training, \$450 per person,
- Phius Intro to THERM Workshop, \$450 per person,
- Phius Certified Rater Training & Exam, \$900 per person,
- Passive House Institute Passive House Fundamentals, \$200 per person,
- Passive House Institute Navigating Building Certification, \$200 per person,
- Passive House Institute Passive House Planning Package Online Course, \$400 per person
- Passive House Institute Certified Passive House Tradesperson \$3,000 per person,
- PH-Designer Training, \$2,295 per person,
- PHPP Modeler, \$495 per person,
- Thermal Bridging Calculations, \$395 per person.

Deliverables required to secure the Passive House Training per person incentive:

- Completion Certificate for each eligible person who has completed an approved training,
- Exam results and related documentation, if applicable.

C. Zero Emission Home Incentives

NYSERDA offers an incentive of up to \$15,000 per dwelling unit in single-family or two-family homes, and up to \$7,000 per dwelling unit in townhomes to support the construction of homes that meet the Building Better Homes performance requirements, including certification to one of the third-party standards listed in the Eligibility Requirements section of this document and verification by the relevant third-party consultant or verifier. Homes pursuing Passive House Certification (PHI or Phius) are eligible for an additional Passive House Certification incentive of up to \$2,000 per dwelling unit to offset the incurred cost of certification fees. Additionally, the permit must be secured prior to the effective date of the proposed changes to 19 NYCRR Part 1240 published by the Department of State in a [Notice of Rule in Development](#) codifying the zero emissions new construction requirements established in Energy Law section 11-104(6)(b). Homes located in a [disadvantaged community](#) (DAC) and, homes implementing ground source heat pump (GSHP) for space conditioning and domestic hot water production are eligible for a higher incentive from the Zero Emission Home Incentive Schedule below.

Zero Emission Home Incentive Schedule		
Construction Type	Per Dwelling Unit Incentive Non-DAC location	Per Dwelling Unit Incentive Located in a DAC
Single-family or Two-family	\$7,000	\$10,000
Single-family or Two-family with GSHP*	\$10,000	\$15,000
Townhome	\$4,000	\$5,000
Townhome with GSHP*	\$6,000	\$7,000
Passive House Certification Incentive		
Up to \$2,000 per certified Passive House design		

*Ground source heat pump (GSHP)

To be eligible to request and to receive the Zero Emissions Home Incentive, the home's design must employ strategies that address forward-looking climate conditions, including a wider range of operating temperatures, increased incidences of flooding on site, extended power outages, and other extreme events. Resilient strategies must include raising living spaces and critical system components above the 2080 future floodplain for projects located in New York City and above the 500-year flood levels for all other projects. Strategies can also include, but are not limited to, mechanical systems that can accommodate future climate conditions; community resilience-enhancing strategies, such as connection to district systems and reduction of vulnerability of the area surrounding

the site to extreme heat; areas of refuge that incorporate HVAC systems that remain operable during power outages; passive survivability during extended power outages; and active resiliency strategies, such as satisfying critical loads for an extended duration through use of energy storage solutions, potentially in combination with renewable energy generation. The home should support passive survivability for an extended period under extreme wind loads and temperatures and ensure the home's mechanical systems will not be subject to freezing temperatures for that same duration. The Applicant should work with their design team to document how these additional resiliency strategies have been implemented on the home(s) and property(s).

Deliverables required to secure the Zero Emissions Home Incentive:

- Building Permit,
- Certificate of Occupancy,
- Description of the resiliency strategies implemented on the home(s) and property(s).
 - Provide a minimum of one page explanation summarizing how the project designed and implemented resiliency strategies as described in Section C. Zero Emissions Home Incentives.
- Proof of certification to the listed third-party standard selected by the Applicant for each completed home.
- Executed Data Release Authorization Form for each completed home.
- Provide proof of the Project's engagement with SHPO or compliance with SHPO if applicable.
- Provide SEQRA Record and SEQRA determination. If a SEQRA is not required, written documentation from the municipality that SEQRA is not required.

Projects pursuing the Passive House Certification incentive must provide the following deliverables per certified Passive House design:

- Passive House design certification letter from the respective organization or certifying body, PHI or Phius, including the project address, passive house standard achieved and the performance results.
- Copy of the Passive House design certification contract and invoice with the respective organization or certifying body, PHI or Phius indicating the total cost of certification fees and project address.

This Program relies on the design review, quality assurance, quality control, and verification protocols that are required by the listed third-party standards and performed by their qualified representatives who are responsible for verification and certification.

NYSERDA or NYSERDA-designated staff may elect to complete additional reviews of the project, including technical review of the project documents or site visit(s). NYSERDA may elect to request and review the energy model, certification reports, and checklists to verify the project has met the minimum performance threshold associated with the third-party standard selected by the Applicant. If NYSERDA determines the submitted deliverables are incomplete or missing information, the deliverables will be rejected and returned to the Applicant for appropriate corrective action. Failure to meet the minimum required performance threshold and all requirements of the certification may result in termination of the project and its associated funding commitment.

Site visits may be requested by NYSERDA or a NYSERDA-designated staff, at NYSERDA's option. If NYSERDA elects to attend a site visit, the following requirements will apply:

- The Applicant and their technical representative(s) are required to attend the site visit. These representatives must have detailed knowledge of the project and must be prepared to answer any project-related questions that arise.
- NYSERDA or a NYSERDA-designated staff may ask to see the construction drawings while on site to verify the planned installation of any components that cannot be visually inspected because either it has been covered or installation has not commenced.
- If severe violations of the Building Better Homes program requirements are discovered during the site visit, NYSERDA reserves the right to withhold payment of the incentives for the number of homes of which the performance cannot be verified.

Failure to meet these requirements may result in termination of the project.

D. Incentives to support the sale of Zero Emissions Homes

Home builders and developers who intend to construct Zero Emissions Homes that will meet the requirements as needed to receive the Zero Emissions Home Incentives offered through this PON may also request financial incentives to support the marketing and sale of those Zero Emissions Homes. To be eligible for this support, the Applicant must market and promote the zero emissions attributes of their homes and comply with the marketing requirements or guidance associated with their chosen third-party standard (as described earlier in Section III) that will confirm their home(s) will meet the requirements associated with this PON. NYSERDA will provide an incentive to offset 50% of the incurred cost for the marketing and promotion of sales or rentals of those homes. The maximum allowable incentive payment available to an Applicant (inclusive of any sub-entity where they hold controlling interest) to support the marketing and sale of Zero Emissions Homes will be \$50,000 annually, with a \$100,000 lifetime cap. Incentives to support the marketing and sale of zero emissions homes may be paid in 25% increments as costs are incurred by the Applicant upon NYSERDA's review and approval of deliverables.

Schedule of Payment			
Milestone Payment 1	Milestone Payment 2	Milestone Payment 3	Milestone Payment 4
25%	25%	25%	25%

Deliverables required to support payment of the incentives to support the sale of Zero Emissions Homes:

- PDF copies of all completed marketing materials, screen shots of social media posts, or any other documents that effectively convey the marketing activities associated with incurred costs for the marketing identified by the Applicant,
- Documentation identifying the invoiced billing rate(s), associated costs incurred by the Applicant to execute their marketing strategy, or copies of invoices that confirm the incurred costs associated with social media or other marketing strategies,
- Attestation from the Registered Architect of record confirming:
 - The date range when the design or re-design work was completed,
 - That the design or re-design meets Building Better Homes performance requirements,
 - That the home design or re-design supports the repetitive, production building of homes,
 - If applicable, approval of the marketing materials by the third-party standards organization.

IV. Application Process

Online submission of an application is preferable, via NYSERDA's online portal at https://portal.nyserda.ny.gov/Core_Registration_Page?programName=New_Construction. Applicants are invited to request Zero Emissions Design or Re-design Support, Passive House Training, Zero Emissions Homes Incentives, and Incentives to support the sale of Zero Emissions Homes, for homes located within a single development. Applicants may submit multiple applications for multiple projects or subdivisions that are unrelated to another application. Requests for the *Zero Emissions Homes Incentives* for additional homes within a subdivision that are associated with a previously submitted and approved application can be submitted as a new application or a modification to the existing application can be requested.

The Application will require the following information to be provided and steps to be completed:

- Online submission of company information, including the officer or representative who has the authority to execute contracts on behalf of the company, the Applicant's primary point of contact for project management, and the point of contact(s) for the energy consultant or designer who will support the project's certification to the chosen third-party standard.
- The Applicant should identify the requested incentives for each Incentive Category (including but not limited to number of designs and applicable certifications, training courses and number of trainees, marketing requested incentives, and site information for all requested home incentives).
- Review and accept the Building Better Homes Terms and Conditions.

The Applicant should submit their application, monitor status of their application, submit documentation and deliverables associated with their project, and perform other program-related activities through the NYSERDA portal. Applicants must select and identify the energy and design consultants who will be supporting their project at the time the application is submitted. The Applicant may assign access to their project in the portal once they have initiated the application by identifying additional Project Roles (contacts) on the project application, and by designating read-only access or read-write access. The Applicant must identify their third-party quality assurance provider at the time of application, or no later than during the scoping session.

A team of individuals reviews each application and responds to inquiries related to applications, eligibility, and intake. Applicants are encouraged to electronically sign their application in the portal. Alternatively, they may print the Certification Statement, sign it, then scan and upload the signed document to the portal as an attachment. Applicants that are unable to submit a project application electronically may request a hard copy application. Inquiries regarding submission of an application or requests for assistance should be directed to NYSERDA at NewConstructionProgram@nyserda.ny.gov or by calling 1-800-284-9069. After receiving emailed confirmation that the Application has been received, all project-related correspondence between the Applicant and NYSERDA should occur through the NYSERDA portal, unless otherwise directed.

The project application will progress through each status shown below:

3. Under Review Status

Upon receipt of a project application, program staff will move the application to under review status. At this time, the application will move into the queue for technical review.

3.1 Technical Review

Once the project application has been received, the project will undergo an administrative and technical review, inclusive of a scoping session with the Applicant and their project team. NYSERDA or its designee will schedule a scoping session with the Applicant and their project team, including their chosen third-party and design consultants. The intent of the scoping session is to discuss general project information, and to review program requirements and responsibilities for each party, and to confirm that the project can achieve all Program requirements. The scoping session may also identify additional documents required to allow the project to be established in NYSERDA's financial systems. Knowledgeable representatives from both the Applicant and their project team are required to attend the Scoping Session. If a project application has missing or inaccurate information or documents, the Applicant will be asked to provide the correct information in the portal.

3.2 State Historical Preservation Act Compliance and State Environmental Quality Review Act Compliance (SEQR)

Applicants requesting incentives to support the construction of a zero emissions home will be required to work with NYSERDA to ensure compliance with the State Historical Preservation Act.

When the incentives being requested target whole building performance, incorporating several design attributes (measures) that contribute to that whole building performance, the potential environmental impacts associated with those single-family, two-family homes and townhomes are limited due to their project size.

Program rules require that systems installed in single-family, two-family homes and townhome projects be within the SEQR Type II thresholds as further defined below:

- Heat Pump Systems completed with program support must not exceed 5 million Btu's per hour,
- Heat Recovery systems completed with program support must not exceed 10 million Btu's per hour,
- Closed-cycle earth heat exchange systems completed with program support must not exceed 1 million Btu's per hour.

Applicants requesting incentives to support the construction of zero emission homes that will be constructed in New York City shall:

- Confirm that the Applicant has filed a City Environmental Quality Review (CEQR) or that the project was included on a CEQR that was created by another entity.
- If the Applicant has the CEQR number, the Applicant or PEC can submit it through the NYSERDA portal, allowing the CEQR documentation to be located on the city portal.
- If the CEQR number is not available, the Applicant or PEC must submit a copy of the CEQR documentation through the NYSERDA portal.
- If neither is available, the Applicant must provide a letter confirming the CEQR was not required by New York City.

4. Pending Approval Status

When the project application has passed the administrative and technical review, the application will be moved to pending approval status. In this status, the purchase order is finalized and funding for the application is set aside. Final approval of the project application is at NYSERDA's sole discretion.

5. Approved Status

When the project application has been approved by NYSERDA, the Applicant will receive their project Award Letter via email notification and saved to the portal. While in approved status, the Applicant may submit a project cancellation request, project extension request, project modification request, or project incentive payment request.

5.1 Project Cancellation Requests

Requests to cancel a project must be done through the portal by submitting a request for cancellation to NYSERDA. Should an Applicant decide to move forward with a project after cancellation, a new application must be submitted, and the incentives and requirements in effect at the time the new application is submitted will apply.

5.2 Project Extension Requests

To request an extension, the Applicant must submit a project extension request through the NYSERDA portal. NYSERDA will approve extensions on a limited case-by-case basis. Project extensions may be granted for legitimate and verifiable reasons which are beyond the control of the Applicant.

5.3 Project Modification Requests

To request a modification to an approved project, the Applicant must submit a project modification request through the NYSERDA portal. A project modification request must state the original project award amount, the proposed certification standard, and the unit count, as well as the reason for the change. NYSERDA will review the request, and may elect to calculate, apply, and approve the modification and any applicable adjustment to the project award amount at NYSERDA's sole discretion. If NYSERDA approves any modification to the initial commitment of funding, a modified Award Letter will be provided.

5.4 Project Incentive Payment Requests

Payment of incentives will be available based on the Applicant's submission of the required deliverables. When the complete set of deliverables have been submitted, the Applicant must provide emailed notification through the NYSERDA portal directed to NewConstructionProgram@nyserda.ny.gov, the Shared Services contact, and the Primary NYSERDA Project Manager as listed in the Project Roles section of the portal. The deliverables will be reviewed by NYSERDA and when all deliverables have been approved, the payment will be processed. Applicants and their consultants are expected to complete quality control reviews of their work and submit high-quality deliverables and associated work products. If NYSERDA determines the submitted deliverables are incomplete or missing information, the deliverables will be rejected and returned to the Applicant for appropriate corrective action. Failure to meet the requirements of the Program may result in termination of the project.

6. Authorization to Access and Share Utility Use and Related Data

The Applicant agrees and authorizes their utility's sharing of the Applicant or customer's information and/or project-level information with New York State Department of Public Service Staff and NYSERDA, including its agents or authorized representatives, consistent with NYSERDA's New York State Public Service Commission and statutorily authorized responsibilities, including, but not limited to supporting market development initiatives, and other evaluation and measurement activities. (For clarity, the term project level includes the information based on the scope of the project, including, but not limited to, aggregated and anonymized whole building, building or subsets of the project.)

The Applicant agrees and authorizes the sharing of the Applicant or customer's information and/or project-level information with New York State Department of Public Service Staff and appropriate local utility, including its agents or authorized representatives, in carrying out its responsibilities under New York State Public Service Commission orders. (For clarity, the term project level includes the information based on the scope of the project, including, but not limited to, whole building, building or subsets of the project.) The Applicant shall commit to a good faith effort to secure a signed Data Release Authorization Form from the homebuyer at the time of closing.

7. Completed Status

The project has achieved completed status once construction is complete, all deliverables have been accepted, and final payment has been approved by NYSERDA.

V. General Conditions

GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your application. Review should include whether it is critical for evaluating an application, and whether general, non-confidential information, may be adequate for review purposes.

The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the Applicant wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Applicants are required to answer questions during application submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the Applicant has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York

State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. NYSERDA anticipates a contract duration of two years from the time of application, unless NYSERDA management determines a different structure is more efficient based upon Applications received. A contract may be awarded based on initial applications without discussion or following limited discussion or negotiations pertaining to the Statement of Work. Each application should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions. Applicants should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify Applicants in approximately four weeks from receipt of an application whether your application has been selected to receive an award. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Accessibility Requirements - NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing an application, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all applications received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject applications based on the nature and number of any exceptions taken to the standard terms and conditions of the Attachment A - Building Better Homes Program - Terms & Conditions. NYSERDA reserves the right to disqualify Applicants based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The Applicant shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When an Applicant is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Applicants must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The Applicant shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the Applicant or former officers and employees of NYSERDA, in connection with Applicant's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The Applicant must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Applicants are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSEERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSEERDA may neither appear nor practice before NYSEERDA, nor receive compensation for services rendered on a matter before NYSEERDA, for a period of two years following their separation from NYSEERDA service. In addition, former NYSEERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSEERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSEERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSEERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSEERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSEERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess Applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSEERDA may conduct due diligence on some or all proposals based on NYSEERDA's current guidelines at the time of a review. NYSEERDA staff may follow up with Applicants to request additional information or clarification regarding Applicant's proposal, including questions regarding Applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSEERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the Applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for Applicant's business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the Applicant's business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with Applicant's former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSEERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

BOOST NY (Business Opportunities and Operations for Skilled Trades)

Business Consultant

Request for Qualifications (RFQL) 5885

\$0 Available

NYSERDA reserves the right to extend the Solicitation.

Proposals Due: Round 1, July 21, 2025 by 3:00 p.m. Eastern Time*
Round 2, September 29, 2025 by 3:00 p.m. Eastern Time*

Program Summary: The New York State Energy Research and Development Authority (“NYSERDA”) requests proposals from consultants, vendors, and service providers of professional business consulting services. NYSEDA is seeking to award contracts to multiple business consultants to provide capacity building consulting to residential Trade Contractors. Proposers can choose to apply to deliver consulting services designed to build Trade Contractors’ capabilities in one or more of the following service areas:

- Advertising and lead generation
- Financial planning and records management
- Leadership in business management
- Operations and business management
- Sales training and customer relationship management
- Technology in operations management
- Workforce recruitment, hiring, and retention practices

Business consultants must demonstrate experience and a thorough understanding of business consulting services in one or more of the above service areas and a track record of working with trades contractors.

This solicitation will consist of two submission rounds whereby potential vendors may submit proposals through September 29, 2025, by 3:00 p.m. Eastern Time.

NYSERDA anticipates: (1) making multiple awards under this RFQL; and (2) retaining vendors through April 2027. Qualified companies, individuals, or organizations (including teaming arrangements) will be evaluated and scored according to a scoring rubric (see Section IV). Proposers should indicate which service areas they want to be considered for. Proposers are not required to have offices located in New York State to respond to this RFQL.

NYSERDA anticipates entering into zero-dollar Umbrella Agreements with the successful proposers to provide business consulting services to residential Trade Contractors. The term will be through April 30, 2027. The agreement does not guarantee work from NYSEDA. NYSEDA plans to issue a solicitation in Q3 2025 to identify residential Trade Contractors to receive business consulting services. Business Consultants selected as a result of RFQL 5885 will be encouraged to identify and recruit Trade Contractors to apply to the proposed solicitation. Participating business consultants are primarily responsible for creating and maintaining their own workload. Task Work Orders will be issued to the firms that qualify, following the process described in Section II below.

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer’s entity name in the title of the document. NYSEDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link “[Application Instructions and Portal Training Guide \[PDF\]](https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx)” also located in the “Current Opportunities” section of NYSEDA’s website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Department's Designated Contacts for this Procurement are: Lucinda Gilman (BOOSTNY.inquiries@nyserda.ny.gov) for technical questions. If you have contractual questions concerning this solicitation, contact Nancy Marucci (NancySolicitations@nyserda.ny.gov). Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. The online proposal system closes promptly at 3 p.m. Eastern Time, files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

Informational Webinar

NYSERDA will conduct an [Informational Webinar](#) on **Tuesday, 07/01/2025 at 2:00 pm** Eastern Time during which NYSERDA will review the requirements of this solicitation and answer questions.

Proposers interested in attending can find the Webinar information below. Please register ahead of time. Questions can be submitted by emailing BOOSTNY.inquiries@nyserda.ny.gov prior to the Webinar or using the web platform during the Webinar. Following the conclusion of the Webinar, NYSERDA will post questions and responses on the NYSERDA Current Funding Opportunities web page. All questions will be posted anonymously, and NYSERDA's written responses will supersede any responses given during the Webinar.

Date: Tuesday, 07/01/2025

Time: 2:00 PM | (UTC-04:00) Eastern Time (US & Canada) | 1 hr

Link: <https://nyserdany.webex.com/weblink/register/rcdcaca01cd5eeb75e9ca0b2fdef64595>

I. Introduction

Achieving New York State's ambitious goals of developing a carbon-neutral economy and decarbonizing 2 million homes by 2030 represents a significant scaling challenge, especially for residential installer companies for heating and cooling (HVAC) and energy efficiency services. Estimates indicate that to meet this target, approximately 200,000 residential properties need to be upgraded annually by 2030. This necessitates significant increase in the number of energy efficiency and electrification projects undertaken by HVAC and weatherization contractor companies (collectively referred to as "Trade Contractors") compared to the current rate.

To achieve this magnitude of scaling, market challenges critical to the home performance industry must be addressed, including:

- Limited Trade Contractor to deliver services at increased scale (e.g., time, staff, resources, etc.)
- Gaps in business acumen and business management skills that limit Trade Contractors' ability to expand services and market share while maintaining current work volume
- Lack of capital investment and staff resources to seek and retain business consultant services

To accelerate capacity, growth, and resilience among residential Trade Contractor businesses, NYSERDA is soliciting proposals to build a competitively selected pool of professional Business Consultants with the expertise to advise, mentor, and upskill Trade Contractor businesses operating within New York State's existing homes industry. Consulting intended to be offered by business consultants includes the areas of:

- Advertising and lead generation
- Financial planning and records management
- Leadership in business management
- Operations and business management

- Sales training and customer relationship management
- Technology in operations management
- Workforce recruitment, hiring, and retention practices

The Business Consultants approved and selected under this RFQL will be authorized to participate in a proposed BOOST NY Incentive program offered to residential sector Trade Contractors serving New York State homeowners with heat pump and/or weatherization services. Applicants to the proposed incentive program will be required to demonstrate interest in building business resilience, expanding, or adding residential weatherization and/or heat pump installations to their current service offerings in New York State. Eligible Trade Contractors will be able to apply to a planned Program Opportunity Notice (PON), to be released in the third quarter of 2025, to seek access to BOOST NY Authorized Business Consultant services with a 50% cost share, up to and not to exceed \$50,000.

Definitions

- **Trade Contractor** – The residential sector installers serving New York State homeowners with heat pump and/or weatherization services and are seeking professional business consulting services to support their interest in capacity growth
- **Business Consultant** – The BOOST NY authorized company, selected as a result of this RFQL, giving professional business advice to the Trade Contractor
- **Business Consulting Services Task Work Order** – the NYSERDA reviewed and approved scope of work that describes the terms of business consulting services between the BOOST NY Authorized Business Consultant and the Trade Contractor
- **Consulting Engagement** – The activity/delivery of business consulting services between the Trade Contractor, business consultant and NYSERDA

II. Program Requirements

Entities that have expertise building business capacity in one or more of the areas listed below and experience with trades contractors are eligible to propose. Preference may be given to entities with experience specifically with residential HVAC and building envelope contractors. Eligible entities include, but are not limited to, private consulting firms, business service organizations, training groups and business schools. If Proposer has a BBB rating, it must be B or better.

Services Requested: NYSERDA seeks eligible business consultants who can develop and strengthen Trade Contractor capacity in one or more service areas listed below. Consultants need not offer all specialties in a particular service area to submit a proposal. Proposers may propose qualifications for additional relevant specialties to expand Trade Contractors' business capacity beyond the examples listed below.

Consulting Service Area	Specialties to Expand Business Capacity, including but not limited to
Advertising and lead generation	• Digital advertising • Target audience and market segmentation • Competitive positioning • Ad copywriting and creative strategy • Local networking and referral programs • Community-based marketing • Direct mail and print advertising • Service-based promotions and offers • Home shows and local events • Reputation and review management • Measuring the impact of marketing initiatives, calculating ROI • Lead generation and referrals management
Financial planning and records management	• Managing revenue and expenses (balance sheets, profit and loss statements) • Financial analysis and decision making • Resource allocation strategy • Risk management, assessment and compliance • Bookkeeping and accounting • Cash flow, payroll and taxes

	Tracking and understanding financial key performance indicators (KPIs)
Leadership in business management	- Moving from an operational focus to managing the business - Delegation - Vision and goal-setting - Mentoring, training & development - Setting priorities and time management
Operations and business management	- Business planning and research - Business operating models - Business expansion - Quality control - Project management - Scheduling and dispatching - Inventory management - Project and job costing - Fleet management - Tracking and understanding business operations key performance indicators (KPIs)
Sales training and customer relationship management	- Sales process development - Consultative selling skills - Negotiation and persuasion - Sales metrics and key performance indicators (KPIs) - Customer relationship management (CRM) software proficiency - Lead nurturing and follow-up strategies - Customer retention and loyalty - Account management - Sales strategy development - Pricing and value proposition
Technology in operations management	Identifying and utilizing software/hardware solutions for sales, operations, project management, inventory management, etc.
Workforce recruitment, hiring, and retention practices	- Methods to attract and retain employees - Hiring processes - Employee benefits - Apprenticeships, on the job training - Tracking and understanding staffing key performance indicators (KPIs)

Proposers should clearly articulate each of the consulting service areas they propose to offer and describe their qualifications for each of their selected areas of expertise. It is not required to be able to fulfill all the bullet points in each service area, but proposers must clearly explain which bullet points they have expertise in within each service area. Proposers should submit one proposal that covers all the service areas they want to offer services for under the BOOST NY Program.

Umbrella Agreement

All Proposers qualified through this RFQL will enter into a zero-dollar value Umbrella Agreement enabling NYSERDA to retain their services. This Umbrella Agreement will not guarantee any specific amount of work and funding will subsequently be assigned as a result of a proposed PON on a Task Work Order basis and will be reimbursed on a time and materials basis with a not-to-exceed cost per task. Successful proposers under the Umbrella Agreement will be eligible to support business consulting engagements under a new proposed PON through which NYSERDA will offer eligible residential Trade Contractors interested in improved business practices, growing (expanded capacity and/or revenue) existing business lines and/or adding a business line access to a 50% cost-share, up to and not to exceed \$50,000 per consulting engagement. The proposed PON will focus on building Trade Contractors' capabilities for growth in business capacity, rather than simply providing professional services.

Task Work Order Assignments and Funding

Consulting engagements awarded under the proposed PON will form the basis for potential BOOST NY Consulting Engagement Task Work Orders supplied under the awarded Umbrella Agreement for RFQL 5885. Under the proposed PON, interested and eligible Trade Contractors will apply and include in the application their selected

authorized Business Consultant and their associated services for access to a 50% cost-share, up to and not to exceed \$50,000.

The amount of work and funding will subsequently be assigned to the authorized Business Consultant by NYSERDA on a Task Work Order basis and will be reimbursed on a time and materials basis with a not-to-exceed cost per task. NYSERDA reserves the right to limit progress payments. Generally, progress payments shall not exceed 75% of the total until approval of final deliverable(s).

NYSERDA anticipates that authorized Business Consultants will utilize the draft standardized Task Work Order template (see Attachment B) which outlines the expected general elements of the BOOST NY Consulting Engagement, specific to each of the consulting service areas.

NYSERDA anticipates that under the proposed BOOST NY Incentive program, NYSERDA will contribute its share of the actual consulting engagement project cost, not to exceed the amount agreed upon in the approved Scope of Work, towards the allowable Business Consultant fees, directly to contracted Business Consultant. NYSERDA expects the participating Trade Contractor applicant to pay their share of the Business Consultant fees directly to their Business Consultant, as applicable, under the terms and conditions to be negotiated by the Applicant and Business Consultant.

NYSERDA anticipates Task Work Order payments may not be released prior to a participating Trade Contractor's contribution. NYSERDA expects that payment will be based on services provided as defined in the approved Scope of Work and Budget. NYSERDA foresees that payment may be contingent upon receipt of approved deliverable(s), Trade Contractor invoice receipts and other documentation deemed necessary by NYSERDA. NYSERDA may reserve the right to withhold payment in cases where program deliverables are not being met.

NYSERDA expects that the details of any Task Work Order under the proposed BOOST NY Incentive Program will be consistent with the level of complexity of the proposed project or activity. Hourly rates shall be those established in the general Umbrella Agreement. NYSERDA must review and approve all Task Work Orders under the Umbrella Agreement to be eligible for any cost share.

Multi-Round Enrollment

Proposers that are not accepted in the first round may re-apply in the second round. Each submission will be reviewed independently from prior submissions.

Business Consultant Responsibilities

Authorized Business Consultants are responsible for abiding by the terms and conditions in this RFQL. When selected for business consulting engagement, the selected Business Consultant shall be required to:

- Prepare a Task Work Order, utilizing the draft template provided in Attachment B, with budget, for each project for review and approval by NYSERDA
- Negotiate the scope and cost-shared portion of the work with NYSERDA
- Provide documentation of the authorized Business Consultant's contract or agreement with the participating Trade Contractor
- Provide the requested assistance within the required time frame
- Submit any deliverables to NYSERDA for review and approval
- Provide required documentation of expenditures by task, based on the Task Work Order, when seeking reimbursement from NYSERDA

Becoming a participating business consultant is completely voluntary and NYSERDA can remove a vendor from the list at any time for any reason. NYSERDA may revoke the status of the participating business consultant and remove them from the website if the vendor does not meet all program requirements. Participating business consultants may also request to be removed from authorized Business Consultant list.

NYSERDA's Responsibility

NYSERDA will assign a NYSERDA staff person or designee to support managing services undertaken by authorized Business Consultants, including but not limited to:

- Promoting authorized Business Consultant qualified for each service area seeking to establish business consulting engagements
- Reviewing, commenting, and approving tasks and subsequent deliverables
- Assisting in the presentation and dissemination of findings on the impact of the BOOST NY program
- Reviewing and approving invoices promptly

Compensation

Compensation will be based on the authorized Business Consultant's – and subcontractors, as applicable – fully-burdened hourly rates included in the proposal, plus allowable expenses. NYSERDA will negotiate each Umbrella Agreement based on demonstrated competence and qualification, at fair and reasonable fees. Fee schedules shall be included in each proposal that identify rates for each member of the team by title. Please note, proposers cannot charge more than two percent overhead for work done by a subcontractor. Annual escalation rates, if applicable, must be identified through 2027 and cannot exceed three percent annually.

Budgets for all work conducted will be included in the Task Work Order and approved by NYSERDA. The Task Work Order may also place a ceiling or not-to-exceed amount for each project. Authorized Business Consultants who accrue billable hours beyond the ceiling in the Task Work Order, without approval in writing by NYSERDA, will do so at their own risk. Authorized Business Consultants will not be compensated for time spent in the preparation of any Task Work Order Plan. Preparation of the Task Work Order Plan is considered to be covered by the authorized Business Consultant's overhead expense.

III. Proposal Requirements

To be eligible for selections under this RFQL, proposers must submit a complete bid package and agree to the requirements of this RFQL. Proposers may submit to any or all service areas; proposers should submit one proposal that covers all service areas in which they wish to provide services.

Each proposal shall contain, at minimum, the components listed below and shall be uploaded into Salesforce.

Proposals should not be excessively long. Unnecessary attachments beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal.

The proposal shall be in the following format:

1. Executive Summary (1 to 2 pages). Proposers shall submit an executive summary on company letterhead that:

- Includes the firm name, address, telephone/fax, email address, contact person, year the firm was established, company size (e.g., number of employees) and the type of firm (e.g., partnership, corporation, not-for-profit)
- Specifies the proposed service area by name and identifies any specific specialties to expand Trade Contractor business capacity
- Summarizes proposer's ability to fulfill and support the services requested in the service areas proposed
- Exhibits a thorough understanding of this RFQL and directly addresses NYSERDA's mission and goals
- Identifies all collaborating entities participating in the proposal, including a brief summary of the subcontractors and the services they provide, as well as past working relationships among team members and subcontractors if applicable
- Discusses the approach which will guarantee the proposer's ability to deliver services in New York State in a cost-effective manner
- A link to the proposer's BBB rating, or to a search on the proposing organization's name, showing no results.
- Is signed by a person with authority to enter into a contract with NYSERDA

2. Narrative (up to 10 pages, not including supporting attachments). A narrative describing the Proposer's approach(es) to help NYSERDA achieve the objectives of the RFQL and related experience. This should include:

- Experience and qualifications: clear articulation of proposer's expertise by sector, geographies and sizes of business served, and experience working with residential trades contractors. Proposers should indicate the specific trades with whom they have experience. As relevant, proposers should indicate the specific trades for whom they solely focus their services. Proposers should provide specific examples of past engagements. Proposers should describe their core competencies in the selected business consulting service area and any specific specialties to expand trade contractor business capacity. If appropriate, include any industry-specific certifications or affiliations relevant to either trades businesses or your core competencies. As relevant, proposers should cite qualifications or experience in serving clientele who deliver services to vulnerable populations (e.g. low- income, rural, and/or ethnically diverse communities). Proposers may attach up to 2 pages of supporting documentation to showcase their experience and qualifications (e.g., examples of successful projects, client testimonials, additional case studies, etc.).

- Approach and Methodology: Outline proposer's process for assessing a Trade Contractor's business and identifying areas for improvement. Detail the process or method of how your team tailors recommendations, relevant to the business consulting service area, to the specific needs of trades contractors rather than using a one-size-fits-all approach. Based on your experience, particularly with residential Trade Contractors, describe what factors tend to be common across companies and what factors tend to be unique to each business; include examples of how your team provides specific, actionable advice tuned to the needs of your clients.
- Case Studies and Results: Provide at least two case studies, with references, from past clients who can speak to the tangible impact of your advice. Include name, title, company, email and phone number. Describe their business challenge and what solutions your team provided. Identify the key performance indicators (KPIs) used to measure success for these example consulting engagements.
- Engagement and Deliverables: Describe the types of key deliverables you provide in a consulting engagement, according to the service area and specific specialties to expand Trade Contractor business capacity for which you are proposing. Describe how your team tracks and reports progress throughout an engagement.
- Transition to Operations: Describe how your team ensures clients can execute and sustain your recommendations after your engagement ends. Describe how your team addresses resistance to change from business owners and employees.

3. Staffing Plan (Up to 2 pages, not including resumes). Proposers shall identify and describe the qualifications of key staff members, teams, and subcontractors that are to be involved in providing services in the service area(s) proposed, including:

- Key personnel's education, experience, and relevant qualifications for the specific specialties to expand Trade Contractor business capacity for which you are proposing; attach resumes
- Potential roles (e.g., technical, operations, outreach, administrative) and responsibilities of key individuals comprising the proposing team relevant to the service area(s) proposed, including the identification of the project manager who will serve as the single point of contact under this RFQL
- Organization chart demonstrating the relationship among key personnel and, if applicable, subcontractors.

4. Cost proposal (1 worksheet per service area being proposed). For each proposed service area, proposers must complete and provide a Project Personnel and Rate Form (Attachment A) and submit the name (if known), job title, and fully burdened hourly salary range for each individual in the proposal and all subcontractors who will perform the work under an agreement with NYSERDA. Proposers shall identify annual escalation rates through 2027 not to exceed three percent annually. Proposers shall also include any multipliers or other fees applied to work.

NYSERDA is not requiring proposers to estimate travel or other direct costs as part of the proposals, but reasonable costs for these may be part of the Task Work Orders on an as needed basis to provide in person services. NYSERDA envisions contracting with both individual firms and teaming or subcontracting arrangements as appropriate; however, proposers cannot charge more than two percent overhead for work done by a subcontractor.

Proposal Materials and Effort - All material submitted as part of this RFQL process becomes the property of NYSERDA. Proposers will not be reimbursed by NYSERDA for any costs associated with the preparation of their proposals.

NYSERDA may request additional materials as reasonably necessary to facilitate review.

IV. Proposal Evaluation (Set forth evaluation criteria).

Proposals that meet solicitation requirements will be reviewed by a Scoring Committee using the Evaluation Criteria below (describe criteria) **listed in order of importance**. At NYSERDA's discretion, proposers may be requested to interview with all or part of the Scoring Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview. Responses to the RFQL will be reviewed and assigned scores based on the criteria highlighted below.

Proposals that meet solicitation requirements will be reviewed by a Scoring Committee and scored using the evaluation criteria below. At NYSERDA's discretion, proposers may be requested to interview with all or part of the Scoring Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview; interviews, if requested, will all follow the same agenda and list

of clarifying questions. Proposers are not permitted to change their proposal during or after this presentation. Proposals should be clear and complete and not rely on a possible interview to demonstrate the merits of the proposal.

Evaluation Criteria

BBB rating	If proposer has a BBB rating, it must be B or better. Include a link to the rating or to search indicating no rating.
Overall relevant experience and impact	- Previous experience in the conduct and delivery of similar or related services (especially for residential Trade Contractors providing HVAC and/or energy efficiency weatherization services) - Demonstrated ability to complete projects on schedule - Quality and relevance of previous work in strengthening clients' business acumen - References substantiating evidence of the proposer's abilities and past performance - Ability to serve New York State is clearly articulated and, if applicable, specific geographic areas of coverage are defined
Responsiveness to the RFQL and capabilities to deliver services	- Proposal is well written, complete, clear, organized, free from typos, and addresses all requested information - The proposal demonstrates a clear understanding of the goals and objectives of this RFQL and directly addresses NYSERDA's mission and strategic goals - Proposal includes a complete, comprehensive, and effective response related to Proposer's approach for providing services related to each of the business consulting service areas proposed - Proposal follows the required format specified in the RFQL
Cost	- Reasonableness and relative competitiveness of labor rates associated fees, escalation rates and overhead - Pricing and hourly rates are in line with the rest of the market and consistent when compared to expertise and qualifications - Clear budget proposal, free of errors
Qualifications and expertise of the personnel/team	- Adequacy/depth of corporate resources to provide requested services - Qualifications and expertise of the personnel/team in relevant business consulting service areas and specialties - Certifications, certificates, and relevant professional trainings completed by key personnel, if applicable - Clear identification of staff that will be assigned to various project types - If applicable, clear explanation of subcontractors with letters of commitment included
Market awareness/insights and effect	The degree in which the proposer identifies: - Approaches and methodologies for assessing client's business consulting needs and tactics to tailor recommendations to the client's specific needs - Challenges and/or barriers relevant to the proposed business consulting service area(s) including applicability for residential Trade Contractors - Evidence of sustained impact from consulting engagements
Program Policy Factors	- Proposer's prior experience working with NYSERDA - Consideration of the impact on, and benefits to, a diversity of communities, including low-income and rural communities - Developing a diversity of technologies, approaches, methods, geographies and institutions across the BOOST NY consultant pool

V. GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from

a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making one multiple awards under this solicitation. NYSERDA anticipates a contract duration through April 2027, unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify proposers in approximately six weeks from the proposal due date whether your proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to

schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting BOOSTNY.inquiries@nyserda.ny.gov. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or

withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSEDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSEDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSEDA may conduct due diligence on some or all proposals based on NYSEDA's current guidelines at the time of a review. NYSEDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSEDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSEDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSEDA's sole discretion and are final decisions. NYSEDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Multifamily Residential Energy Pathways Qualified Contactor Network

Request for Qualifications (RFQL) 5906

(This is an ongoing solicitation. No Funding is Associated with this Solicitation)

Summary: The New York State Energy Research and Development Authority (NYSERDA) is issuing this RFQL to establish a network of highly qualified firms and organizations (Participating Contractors) who work directly with developers, building owners, and their representatives (Customers) to plan and implement energy efficiency projects for NYSERDA's Multifamily Residential Energy Pathways (MREP) program. MREP will be an umbrella multifamily offering that will encompass other multifamily programs including programs that are funded by the Inflation Reduction Act Home Energy Rebates. For a full list of current service categories eligible to apply for this network, please see [Section IV](#). Joining the Network offers an exclusive opportunity to participate as a Network Participating Contractor supporting multifamily programs under MREP. A full list of active programs can be found on the [Network Webpage](#). Each program requires or recommends that participants work with Participating Contractors. The NYSERDA Multifamily Team will continually explore new opportunities to expand the impact of the Network including leveraging this network to service program offerings outside of MREP.

Submissions will be accepted on a rolling basis unless the network is notified otherwise via written communication. Applicants may submit applications for as many different service categories as they choose.

Application Submission: All application and program materials should be submitted through the Salesforce Application Process. For any question on the application process please reference the [Multifamily Participating Contractor Application User Guide](#) or contact us at mrepnetwork@nyserda.ny.gov. Proposers may submit attachments as Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 25MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. Please contact us at mrepnetwork@nyserda.ny.gov to submit proposals by mail or hand-delivery.

Program Questions: Customers, Service Participating Contractors, or Consultants with Network questions should contact mrepnetwork@nyserda.ny.gov. No communication intended to influence this procurement is permitted except by contacting the Designated Contact at mrepnetwork@nyserda.ny.gov. All contractual questions should be directed to James Cowman at Jim.Solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offeror, and (2) may result in the proposer not being awarded a contract.

Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been completed/included in the application. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>.)

I. Introduction

The Multifamily Residential Energy Pathways Participating Contractor Network (Network) is a roster of highly qualified firms and organizations (Participating Contractors) who work directly with developers, building owners, and their representatives (Customers) to plan and implement energy efficiency projects. Addressing the energy needs of a property can be a daunting task for even the most motivated of building owners. At its core, an energy efficiency project is typically a capital improvement project and can be just as complex. The best way to reduce this complexity and simplify the experience is to work with qualified, trained professionals.

Participating Contractors are seasoned experts in building science, energy efficiency and installation that perform energy use analyses, building performance assessments, whole building software modeling, work scope development, design document review, installation verification, implementation of energy efficiency or electrical upgrades, and oversight of project progress. NYSERDA qualifies and approves applicants to the Network to serve multifamily building owners, managers, and developers. Approved Network Participating Contractors have demonstrated their ability to provide multifamily building performance services by meeting the requirements of this application in one or more of the service categories.

Joining the Network offers an exclusive opportunity to participate as a Network Participating Contractor supporting multifamily programs. A full list of active programs can be found on the [Network Webpage](#). Each program requires or recommends that participants work with Participating Contractors. The NYSERDA Multifamily Team will continually explore new opportunities to expand the impact of the Network.

II. Program Requirements

A. Service Requested

Using RFQL 5906, NYSERDA expects to qualify contractors to provide services in each of the specified Service categories.

B. Service Categories

Applicants may submit applications for as many different service categories as they choose. The full list of current service categories eligible to apply for this network, is in the table below.

Service Categories	Service Subcategories
Technical Assistance	Energy Assessor
Installer	ASHP Installer
	GSHP Installer
	Direct Exchange GSHP Installer
	Electricians
	Plumbers
	General Contractors
	Insulators – Shell/Envelope
	Insulators - Window/Insulated Panel/Storm Window

NYSERDA reserves the right to create new Service Categories to address any needs that arise outside of the defined support areas included in the issuance of this RFQL. In this instance, all existing firms approved under an existing service category along with any new proposers will be eligible to submit an application for the new Service Category if they choose.

C. Contractor Role:

Contractors must maintain the capacity to provide the following services to the NYS multifamily marketplace:

- For Energy Assessors:
 - Utility bill analysis and benchmarking per the Building Performance Institute’s Technical Standards for the Multifamily Building Analyst Professional. At a minimum, Contractors shall be familiar with the U.S. Environmental Protection Agency’s Portfolio Manager and be able to advise their customers on making use of this resource to benchmark their building’s energy performance.
 - Energy assessment in accordance with the Building Performance Institute’s current Technical Standards for the Multifamily Building Analyst and/or ASHRAE’s Procedures for Commercial Building Energy Audits – Level II.
 - Whole building modeling to calculate and provide for the interaction between multiple building modifications.
- For all Contractors:
 - Construction oversight of energy improvement projects, including tracking and verification.

- Financing assistance to refer customers to relevant and applicable energy efficiency financing opportunities in their regions. Contractors are expected to understand the opportunities available to their customers through the entire Clean Energy Fund Portfolio and by other programs administered by NYSERDA and local utilities. Contractors should act as ambassadors to those programs in order to make sure their customers have all of the resources they need to improve the energy performance of their properties.

D. Participation Agreements

A pool of Participating Contractors will be selected through this RFQL to fulfill the needs of each of the identified Service Categories. Participating Contractors will be required to complete Participation Agreements.

There will be no initial cap to the number of Participating Contractors in any one Service Category. However, NYSERDA reserves the right to subsequently institute a cap for any or all Service Categories as a means of managing the number of resultant Participating Contractors. NYSERDA anticipates the Scoring Committee to convene on a rolling basis, to review and evaluate new applications on a schedule depending on NYSERDA's needs and on the number of new applications that are received. Upon appropriate notice, NYSERDA may forego or discontinue the open solicitation to manage the number of Participating Contractors.

E. Assignment of Work

The full list of Participating Contractors will be public facing. Customers will select Participating Contractors from that list to apply to one of the active eligible programs identified on the [Network webpage](#). Approved applications will be eligible to receive incentives according to the rules of that respective program.

F. Funding & Schedule

Funding will be identified on a project-specific basis. NYSERDA cannot anticipate whether the need will arise or if funding will be available for the MREP or other programs that will leverage this Participating Contractor network.

The Programs described in this solicitation may be funded, in whole or in part, with funds provided by the federal government. As such, NYSERDA may be required to comply with Department of Energy (DOE) and other federal regulations and procedures governing financial awards as outlined in the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards, 2 CFR Part 200 as amended by 2 CFR Part 910 and other procedures applicable to this regulation as DOE may, from time-to-time, prescribe for the administration of financial assistance. NYSERDA reserves the right to flow down requirements to Contractors to the extent necessary to meet its obligations under the federal regulations referenced herein. In particular, any entity that wishes to do business with the federal government and who will receive federal funds or a subaward must have a UEI number issued via <https://sam.gov/content/duns-uei> as well as a valid registration on www.SAM.gov.

III. Application Requirements

A. Service Categories

Proposers are invited to submit, in the format described in this solicitation, applications in one, multiple or all of the Service Categories listed on the [Network Webpage](#) and identified above in the [Service Categories](#) section.

This RFQL allows for new Service Categories to be created when unforeseen and ongoing needs are desired by NYSERDA.

B. Application Details and Evaluation Criteria

Application approval is based on how well the applicant meets the criteria indicated in this document. Points are awarded for each section of the Application Package. A minimum score of 80 is required for approval. An overview of how points are awarded for each section can be found in the Application Details Table below.

Scoring Details for the Standard Application	
Available Points	Evaluation Criteria
0	Profile and Minimum Requirements • Certifications, Accreditations and Licenses • Insurance • W-9 Form • Signed Participation Agreement
30	Case Studies
23	Business Qualifications • MWBE, SDVOB Certifications • Work Experience • Business Stability • Geographic Coverage • Staffing Plan
15	Customer References • Three separate relevant customer references provided
12	Management Plan • Customer Service Plan • Quality Control Plan
30	Category Specific Technical Documents • Technical Assistance - Energy Audit - Must be ASHRAE Level II or III • Installers – Sample Bid Package
<u>110 Total Points Available</u>	

The shortened application has a reduced evaluation criteria compared to the standard application. In the shortened application, applicants will need to complete minimum requirements, overview of geographic coverage, list of services they offer, and a management plan. The management plan will be scored. There are 20 points available for the shortened application and a minimum of 16 points is required to be approved.

Scoring Details for the Shortened Application	
Available Points	Evaluation Criteria
0	Profile and Minimum Requirements • Certifications, Accreditations and Licenses • Insurance • W-9 Form • Proof of Existing Network Membership or Completed Project • Signed Participation Agreement
8	Business Qualifications • M/WBE, SDVOB Certifications • Industry Experience • Geographic Coverage • Staffing Plan
12	Management Plan • Customer Service Plan • Quality Control Plan
<u>20 Total Points Available</u>	

If an application is rejected, applicants may resubmit an updated application for consideration. However, applicants are limited to three application submissions in a one year timeframe. If after the third submission the application is again rejected, the applicant will not be able to reapply for one year.

IV. Minimum Requirements

A. Certifications, Accreditations, and Licenses

Applicants must include a minimum of one of the following designations on their teams based on the category applied for. Applicants that do not show at least one of these designations are ineligible to become a Participating Contractor in the specified category:

	Sub-service Category	Designator Entity	Title/Certificate
Technical Assistance	Energy Assessor	AEE	Certified Energy Auditor (CEA™)
		AEE	Certified Energy Manager (CEM®)
		BPI	Multifamily Building Analyst (MFBA)
		State Licensing Board	Licensed Architect (RA)
		State Licensing Board	Professional Engineer (PE)
Installer*	Air Source Heat Pumps (ASHP)**	Manufacturer	Certificate of ASHP Manufacturer-sponsored installation training
		Manufacturer	Certificate of Manufacturer-sponsored sizing/design training
	Ground Source Heat Pumps (GSHP)	IGSHPA	IGSHPA accredited installer
	Direct Exchange Ground Source Heat Pump	Manufacturer	Direct Exchange Ground Source Heat Pump Manufacturer certificate
	Electricians	Local Municipality	Licensed – Electrician
	Plumbers	Local Municipality	Licensed – Plumber
	General Contactors	Local Municipality	Licensed – General Contractor
	Insulators – Shell/Envelope	BPI	Building Analyst Technician (BA-T)
			Crew Leader
			Energy Auditor
			Envelope Professional
			Quality Control Inspector
			Retrofit Installer Technician
	Insulators – Window/Insulated Panel/Storm Window	Manufacturer	Manufacturers’ Certified Training

*Note, if an applicant does not have the required license because their local municipality does not require it, the applicant must identify that in their application.

**Note, Installers of Air to Water Heat Pumps must also hold the necessary plumbing licenses for their installation location.

Use the Salesforce Application section to identify the individual(s) on the team, including subconsultant(s), who hold the required designations. Include documentation of the certification, accreditation and/or licenses in the Salesforce Application. For more detailed instructions on how to do this please reference the [Multifamily Participating Contractor Application User Guide](#).

B. Insurance

Applicants must hold the following types and levels of insurance (NYSERDA must be listed as a certificate holder):

- Commercial general liability insurance for bodily injury liability, including death, and property damage liability, incurred in connection with the performance of this Agreement, with minimum limits of \$1,000,000 in respect of claims arising out of personal injury or sickness or death of any one person, \$1,000,000 in respect of claims arising out of personal injury, sickness or death in any one accident or disaster, and \$1,000,000 in respect of claims arising out of property damage in any one accident or disaster.
- Workers Compensation, Employers Liability, and disability benefits as required by New York State. The Participating Contractor shall maintain Workers' Compensation covering the obligations of the Participating Contractor as required under the provisions of the Workers' Compensation Law, Employers Liability, and Disability Benefits. If a Participating Contractor is identified as a Sole Proprietor, the contractor must complete and submit form CE-200: <https://ce-200-form.com/>. The Participating Contract must provide proof of Workers' Compensation upon request by NYSERDA; and/or
- Professional Liability Insurance. Applicable for Participating Contractors that only provide Energy Assessment services and do not complete installation work. For these business models, the Participating Contractor shall carry professional liability insurance (errors and omissions) with a minimum limit of \$1,000,000.

Applicants must provide an insurance certificate demonstrating proof of one of the insurances listed above. Please upload this form in the Salesforce Application. For more detailed instructions on how to do this please reference the [Multifamily Participating Contractor Application User Guide](#).

C. IRS W-9 Form

A copy of completed US IRS "Request for Taxpayer Identification Number and Certification" W-9 is required to be provided for NYSERDA's records. A W-9 form can be accessed on this [IRS W-9 Webpage](#). Please upload this form in the Salesforce Application. For more detailed instructions on how to do this please reference the [Multifamily Participating Contractor Application User Guide](#).

D. Proof of Existing Network Membership or Completed Project

A copy of confirmation of membership in an applicable network or confirmation that a project was completed in an applicable program is needed to qualify for the shortened application and must be provided for **each** intended service category. To qualify for the shortened application, the applicant should have either joined a network in the last three years or completed a project in the last three years from the date they submit the MREP Participating Contractor application and be in "good standing" meaning that they are not subject to corrective actions or disciplinary procedures. Applicants who do not provide proof of membership or project

completion for **each service category** will be ineligible for the shortened application. The proof may be emails or letters from the program or contractor network.

V. Technical Requirements

A. Case Studies

Applicants must submit three case studies that demonstrate experience with performing work specific to their respective application category in multifamily, single-family or commercial properties. For technical assistance category, at least one case study must demonstrate the completed installation of recommended measures in a multifamily building. For installers category, at least one case study must demonstrate a completed installation in the largest building size category selected for service. These case studies will be added through the Salesforce Application. For more detailed instructions on how to add this content please reference the [Multifamily Participating Contractor Application User Guide](#).

Case studies will be evaluated on the following metrics:

- Applicability to multifamily or residential properties
- Completeness of case study
- Demonstration of experience performing applicable energy related work
- Installation oversight

In addition to filling out the “Case Studies” portion of the application, Energy Assessors who are not eligible for the shortened application process will be prompted to upload case study summaries that should consist of a 1-3 page narrative report describing the applicant’s work for each case study. For the case study that demonstrates the completed installation of recommended measures this narrative must also include a full work scope of the recommended measures. For more detailed instructions on how to do this please reference the [Multifamily Participating Contractor Application User Guide](#).

B. Energy Audit

Energy Assessors must provide an ASHRAE Level II or III energy audit for a multifamily property as a part of their application package. The audit should be provided in PDF format and should include appendices showing applicable calculations. The submitted energy audit will be evaluated on the following items:

- Whole building analysis
- Utility bill analysis
- Existing conditions and operations
- Measure descriptions
- Supporting calculations

Energy audit documentation should include details about which building systems were evaluated and how the building analysis was performed. The utility bill analysis should show clear data and baseline usage information

for all utility accounts in the building. Existing conditions, building operations, and recommended improvement measures should be described accurately and thoroughly. All supporting calculations should be complete and clear. If modeling software was used both input and output data should be provided.

Please upload this report in the Salesforce Application. For more detailed instructions on how to do this please reference the [Multifamily Participating Contractor Application User Guide](#).

C. Bid Package

Installers are required to upload a historically submitted bid package that relates back to one of the case studies. The submitted Bid Package should contain the following documents:

- Narrative of Project Scope
- Project Cost Estimate
- Estimated Hours of Work
- Premium Time
- Shop Drawings (where applicable)
- Cutsheets
- Commissioning/Testing & Balancing - pre and post functional check list or TAP (where applicable)

Please upload this package as a ZIP file in the Salesforce Application. For more detailed instructions on how to do this please reference the [Multifamily Participating Contractor Application User Guide](#).

VI. Business Qualifications

A. M/WBE, SDVOBE Certifications

Participating Contractors who have a M/WBE or SDVOBE certification will not be awarded any points for that designation but they are encouraged to include their certification number in their application package to demonstrate their M/WBE or SDVOBE status.

B. Industry Experience

Due to ASHP Installers, GSHP Installers and Direct Exchange GSHP Installers being relatively new fields, applicants to these categories can include experience in other energy efficiency installation fields, such as HVAC installation, to count towards the five-year industry experience requirement. Scores will be rated on a scale where applicants with more years of experience will be given points for each year of experience up to a max of 10 points. All other applicants must have a minimum of five years' industry experience. Applicants must provide documentation to demonstrate this experience, such as, a certificate of incorporation, leadership resumes or training certifications. Please upload these items in the Salesforce Application. For more detailed instructions on how to do this please reference the [Multifamily Participating Contractor Application User Guide](#).

C. Business Stability

Customers should have confidence that the Participating Contractors are established organizations capable of long-term relationships. Therefore, contractors should be stable, financially sound businesses or non-for-profit organizations.

If the applicant is a for-profit business, provide a current version of one of the following (mark any proprietary information as “confidential” on each page) as a required document attachments in Salesforce:

- Dunn & Bradstreet Business Information Report
- Dunn & Bradstreet Credit Report
- Dunn & Bradstreet Credit Evaluator Plus Report
- Equifax Small Business Credit Report
- Experian Business Profile Report

If the applicant is a non-for-profit organization and does not have access to one of these reports, provide a current version of one of the following items (mark any proprietary information as “confidential” on each page):

- IRS Form 990 (latest year available)
- GuideStar Financial SCANSM report
- Latest available audited annual financial statement

Please upload this information in the Salesforce Application. For more detailed instructions on how to do this please reference the [Multifamily Participating Contractor Application User Guide](#).

D. Customer References

Applicants must submit three customer references. References should include a minimum of one multifamily property. Multifamily references are eligible for more points than non-multifamily customer references. References will be contacted by the application evaluators and scores will be based on the information provided by the references. Customer References will be evaluated on the following metrics:

- Multifamily applicability
- Customer grade of performance
- Customers’ willingness to rehire

If the applicant is applying for multiple service categories, the applicant should provide references to speak to work done in all categories applied for. References will be input into the salesforce application. For more detailed instructions on this process please reference the [Multifamily Participating Contractor Application User Guide](#).

E. Geographic Coverage

Applicants must detail which geographic coverage regions they wish to provide services to and provide at least one project address served in each listed region within the last three years. Applicants must also describe their proof of their capacity to provide services to customers in the regions selected. If the applicant proposes to serve customers in regions outside of their home region, the applicant must describe the approach to handling leads and referrals from customers in regions outside their home region as part of their management plan. Geographic coverage will be input as a part of the salesforce application, for more detailed instructions on this process please reference the [Multifamily Participating Contractor Application User Guide](#).

F. Staffing Plan

The applicant must have a qualified staff capable of providing all services indicated in the application. As part of the salesforce application the applicant will be asked to add all relevant staff that will be providing these services. In addition to this list of staff the applicant must also attach the following documents:

- Company & Subconsultant Organization Chart
- Staff Resumes

Please upload these documents in the Salesforce Application. For more detailed instructions on how to do this please reference the [Multifamily Participating Contractor Application User Guide](#).

Staffing Plans will be evaluated based on how well the applicant addressed the following items:

- Ability to support services indicated
- Relevance of staff experience

VII. Management Plan

A. Customer Service Plan

Once applicants are accepted as Participating Contractors, they are eligible to receive qualified leads and referrals from NYSERDA. With this in mind, applicants must have the capacity to receive referrals during standard business hours. Applicants can build on the [sample customer service plan](#) to develop their own plan or provide an approach to Customer Service by addressing the following items:

- Lead and Referral Handling:
 - Describe your proposed methodology in detail for receiving leads and referrals from NYSERDA. Please specify how you organize leads and customer acquisition (ie. Excel Spreadsheet, a CRM, other software).
 - Describe your established policy to return calls or inquiries from prospective customers.
- Feedback Mechanisms:

- Describe how you solicit feedback from your customers.
- Indicate how this feedback is used to improve business operations and customer service.
- Customer Dispute Resolution Policy:
 - Describe your company's process for handling customer complaints and/or disputes.

The Customer Service Plan will be evaluated based on how well the applicant addressed the items above. All items listed above must be included in the customer service plan to receive full points.

B. Quality Control Plan

Participating Contractors are expected to be able to identify, quantify, and implement energy efficiency projects. This may include whole building modeling, stand-alone calculations, application of engineering principles, and/or installation of energy efficiency projects. Describe your approach to quality control to ensure that technical work, deliverables, and installations are done correctly and performed according to best practices. A complete Quality Control Plan will contain the following items:

- Knowledge of Industry Standards: Describe how you incorporate relevant and required industry standards (including but not limited to ASHRAE, BPI, Codes) to project analysis, development, implementation, and installation.
- Internal Review Protocols: Describe your process for performing internal review of analyses, deliverables, and installation.
- Staff Training and Development: Describe your approach to staff development and list the training that the staff take part in annually.

The Quality Control Plan will be evaluated based on how well the applicant addressed the items above. All items listed above must be included in the Customer Service Plan to receive full points.

C. Subconsultants

Applicants may team with subconsultants to complement the lead applicant's abilities. If subconsultants are used, the applicant will need to include subconsultant staff as part of the staffing matrix. In addition to this list of staff the applicant must also attach the following documents:

- Subcontract Signed Letter of Intent (required for each subconsultant)
 - The letter of commitment must be on subconsultant letterhead and signed to indicate their intent to team with the lead applicant
- Subcontractor Staff Resumes
 - Must show the required training, education, and experience for their role

VIII. General Conditions

GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes.

The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See [Public Officers Law, Section 89\(5\) and the procedures set forth in 21 NYCRR Part 501](#). However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found [here](#). Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Accessibility Requirements - NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their Russian business operations status. Any such business operations in Russia conducted by, or on behalf of, the vendor must be permitted under the allowable exemptions listed by the Order. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the [federal sanctions list](#). There is no waiver or exemption process for vendors appearing on the federal sanctions list. The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

NYSERDA

Clean Heat for All: Packaged Terminal Heat Pump Program

Program Opportunity Notice (PON) 5907

Up to \$10,000,000 Available

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Proposals accepted until August 06, 2025 by 3:00 p.m. Eastern Time

Program Summary

The New York State Energy Research and Development Authority's (NYSERDA) Clean Heat for All: Packaged Terminal Heat Pump Program ("Program") supports the development and demonstration of unitary Packaged Terminal Heat Pumps (PTHPs) to provide New York State buildings with innovative, room-based heating and cooling solutions. The Program consists of four (4) core components:

1. Manufacturer Partnerships (This solicitation – PON 5907)

Collaborating with innovative manufacturers and entrepreneurs to bring to market high-performance, cold-climate rated PTHP equipment that is simple to install, reliable, cost-effective and meets NYSERDA's rigorous technical requirements and the performance specifications of NYS building owners, operators and occupants.

2. Demonstration Site Recruitment (RFQL 5937 – Expected mid-2025)

Collaborating with NYS building owners and operators to become qualified Demonstration Partners through RFQL 5937 and host field demonstrations of new PTHP products.

3. Field Demonstrations (PON 5907 awardees + RFQL participants)

Conducting comprehensive, real-world evaluations of the developed PTHPs in Demonstration Partner buildings to validate their performance, efficiency and effectiveness as decarbonization solutions.

4. PTHP Market Adoption Incentives

Upon successful field demonstration, eligible manufacturers may potentially have access to additional incentives to accelerate market adoption of these new products.

Eligibility

Through this solicitation, NYSERDA invites proposals from innovative heat pump equipment manufacturers to develop, demonstrate and scale production of advanced packaged terminal heat pumps that meet or exceed the Market and Site Requirements detailed in [Attachment A – Product Specifications](#).

NYSERDA is seeking solutions designed to retrofit or replace existing room conditioning products in the following three (3) categories:

1. Standard Size Packaged Terminal Air Conditioning (PTAC)

The proposed heat pumps must be compatible with wall sleeves designed for standard size PTACs with integrated electric resistance or gas heat as defined in 10 CFR 431.92.

2. PTAC in Hydronic Cabinets

The proposed heat pumps must fit within the space occupied by current PTAC equipment in hydronic cabinets and not require the removal of existing hydronic heating coils, allowing for retrofit while maintaining compatibility with current hydronic heating.

3. Through-the-Wall Air Conditioning (TTWAC)

The proposed heat pumps must be compatible with common through-the-wall AC sleeve sizes, allowing for these existing through-wall openings to provide both heating and cooling.

Manufacturer Proposal Limits

Proposing manufacturers are limited to one (1) proposal per PTHP category above and only one product is permitted per proposal. Proposers are encouraged to propose to one, two or all three applicable categories demonstrating how their proposed PTHP(s) can serve as superior, energy-efficient replacements for existing units while leveraging the existing building infrastructure.

Proposal Template & Budget Worksheet

Proposers who wish to be considered for an award under this PON must ensure their submissions include all required information as outlined in the [Proposal Requirements](#) section. Proposers are required to submit a completed proposal and budget using [Attachment C - Proposal Template](#) and [Attachment D – Budget Worksheet](#).

Available Funding

Up to \$1,250,000 **per awarded proposal**, is available for product development and field demonstration support:

- Product development grant of up to \$250,000 per proposal, to support development of new, or modification of existing PTHP equipment.
- Up to \$1,000,000 per proposal, to fund field demonstration of the proposed PTHP products in NYS buildings qualified as eligible demonstration sites through RFQL 5937.

Informational Webinar: NYSERDA will host an informational webinar on Tuesday, June 17 at 2 p.m. ET. Register for the webinar [here](#). Questions may be submitted until 5 p.m. ET the day before the webinar by emailing questions to PTHPprogram@nyserda.ny.gov.

Proposal Submission: [Online submission](#) is preferable. Proposers must submit using the provided templates in the [Attachments](#) section and must submit files in their given format (i.e., Word, Excel) except Word documents may be delivered in PDF format if desired. Support documents may be submitted as Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. PDFs must be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link "[Application Instructions and Portal Training Guide](#) [PDF]"

located in the “Current Opportunities” section of NYSERDA’s website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Department’s Designated Contacts for this procurement are: Brett Wieland (Designated Contact) at (518) 862-1090, ext. 3609 or Cody Glavey-Weiss (Secondary Contact) at (518) 862-1090, ext. 3621 or by e-mail at PTHPprogram@nyserda.ny.gov. If you have contractual questions concerning this solicitation, contact Nancy Marucci at (518) 862-1090, ext. 3335 or Nancy.Solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer’s behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offerer, and (2) may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer’s responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. Please see [Solicitation Proposal and Vendor Responsibility Questions.pdf](#) for a complete list of the questions proposers must answer as part of a submission. The online proposal system closes promptly at 3 p.m. Eastern Time, files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the “Current Opportunities” section of NYSERDA’s website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

Abbreviations and Terminology

BACnet – Building Automation and Control Networks

BMS – Building Management System

COP – Coefficient of Performance

DU – Dwelling Unit

GHG – Greenhouse Gas

HVAC – Heating, Ventilation and Air Conditioning

M&V – Measurement and Verification

NYC – New York City

NYS – New York State

O&M – Operations and Management

Open ADR – Open Automated Demand Response

PTAC – Packaged Terminal Air Conditioner

PTHP – Packaged Terminal Heat Pump

sCOP – Seasonal Coefficient of Performance

SOW – Scope of Work

TTWAC – Through-the-Wall Air Conditioner

Term	Definition
Proposer	The individuals or firms responding to this solicitation
Demonstration Partner	Building owner qualified through RFQL 5937 who will provide building sites for PTHP demonstration and evaluation. List of Demonstration Partners will be hosted on the Program webpage
Heat Pump Manufacturer / Manufacturer	The entity that will develop and provide advanced cold-climate, high efficiency packaged terminal heat pump prototypes for demonstration
Multifamily Building	A residential or mixed-use building with no fewer than five (5) residential dwelling units
Program	The Packaged Terminal Heat Pump Program and all related activities including but not limited to solicitation issuance, awarding, fund distribution, project management and reporting

Overview

Background

New York State’s Climate Leadership and Community Protection Act calls for a 40% reduction in greenhouse gas emissions by 2030 and an 80% reduction by 2050. The building sector accounts for 70% of NYC emissions and a third of NYS emissions, with HVAC equipment responsible for 25% of total energy use and 36% of GHG emissions in New York State. The heat pumps developed through the Program will help address these challenges by providing a high-performance, room-based heating and cooling solution that can be installed in existing through-wall openings and provide an easy retrofit option for New York buildings.

Market Opportunity

High-performance, cold-climate PTHPs that can serve as retrofit solutions for existing packaged terminal air conditioners, and through-the-wall air conditioners, represent a large market opportunity for heat pump manufacturers. In the NYS multifamily sector, there are roughly 3 million dwelling units, in 1.6 million multifamily buildings,¹ nearly half of which were built after 1940 and may possess through-wall openings suitable for PTHP installation.² Beyond the existing building retrofit market, nearly 40% of all multifamily new construction projects in NYS are built with through-wall PTAC openings.³ In the NYS hospitality sector, there is an estimated 210,000 hotel rooms and 125,000 PTACs.³ The Department of Energy estimates that approximately 515,000 PTAC and PTHPs were shipped Nationally in 2018.⁴

Packaged Terminal Heat Pump Overview

NYSERDA has conducted in-depth market engagement with NYS building owners and operators, co-ops, hospitality franchise owners and service providers to identify the technical specifications critical to the success of packaged terminal heat pumps in the NYS market. In collaboration with manufacturers, building owners and industry experts, NYSERDA developed product specifications to guide the development of feasible yet ambitious PTHP equipment. Proposals will be evaluated based on the level at which they meet or exceed the technical requirements outlined in [Attachment A – Product Specifications](#). See [Evaluation Criteria](#) for more details.

⁴ Department of Energy. “Frequently Asked Questions: Request for Information Pertaining to Test Procedures for Packaged Terminal Air Conditioners and Packaged Terminal Heat Pumps,” Office of Energy Efficiency and Renewable Energy. Accessed October 16, 2024. <https://www.energy.gov/eere/buildings/articles/ptac-tp-rfi-faq>

NYSERDA expects submitted PTHP proposals to address the following criteria:

- High-efficiency, cold climate operation
- Simplified installation in existing wall openings or hydronic cabinets
- Compatible with the existing electrical service
- Effective dehumidification
- Individual zonal control for improved comfort and energy efficiency
- Improved indoor air quality by delivering outdoor air with energy recovery capability

Key Program Dates

- August 2025: Manufacturer Proposals Due
- Q4 2025: Selected Manufacturers Announced
- Q4 2025 – Q3 2026: Product Development
- Q3 2026 – Q2 2027: Field Demonstrations

Funding

Up to \$1,250,000 **per awarded proposal** is available to manufacturers to support product development and field demonstration of high-efficiency, cold-climate PTHPs in qualified NYS buildings.

- **Product Development Support** - One time product development grant of up to \$250,000 **per awarded proposal**:
 - For example, a manufacturer selected for all three PTHP product categories (standard PTAC, hydronic cabinet PTAC and TTWAC) is eligible to receive up to \$750,000 (\$250,000 x 3) in product development grants.
 - Manufacturers proposing development of new, or modification of existing PTHPs are eligible for product development grants.
 - Manufacturers proposing an existing product, with no modifications are not eligible for product development grants. (These products are eligible for field demonstration funding only, see below.)
 - Product development grants will be distributed on a milestone-basis. 25% of awarded funds will be distributed upon successful contract execution, 50% at final prototype specification release to NYSERDA and 25% upon NYSERDA receipt and approval of testing report of laboratory testing conducted on a minimum of three (3) PTHP prototypes confirming performance in alignment with specifications outlined in the awarded proposal.
- **Field Demonstration Support** - Up to \$1,000,000 **per awarded proposal**:
 - For example, a manufacturer selected to demonstrate all three PTHP products (standard PTAC, hydronic cabinet PTAC and TTWAC) is eligible to receive up to \$3,000,000 (\$1,000,000 x 3) in field demonstration support.
 - Manufacturers proposing field demonstrations of new or modified PTHPs developed with Program support, or existing PTHP products without modifications, are eligible for field demonstration support.

- Manufacturers are only eligible for field demonstration funding upon NYSERDA receipt and approval of testing report of laboratory testing conducted on a minimum of three (3) PTHP prototypes or commercial products confirming performance in alignment with specifications outlined in the awarded proposal.
- Field demonstration funding will support demonstration project planning, implementation & management costs, prototype costs and support for building owner-led make-ready work.
- Awarded manufacturers **will not** be responsible for NYSERDA's Measurement and Verification (M&V) costs. NYSERDA will contract with a 3rd party M&V contractor to conduct thorough M&V and deliver performance reports at set intervals throughout the demonstration.
- Demonstration funding will be distributed on a cost reimbursable schedule as determined by the contract between NYSERDA and the awarded manufacturer.
- NYSERDA reserves the right to approve final prototype costs and demonstration plans including budget, Demonstration Partner(s) and site agreement(s).

Proposal Requirements

Market Engagement

Manufacturers are encouraged to engage with interested building owners, including site visits to multifamily buildings with existing through-wall openings, prior to submitting a proposal in order to refine their response to the Site Requirements outlined in [Attachment A](#), as well as develop relationships with potential Demonstration Partners. NYSERDA will issue RFQL 5937 to qualify demonstration partners in mid-2025. Teaming between proposing manufacturers and qualified Demonstration Partners will be included in awarded manufacturers' contracted scope of work (SOW) and is not intended to take place prior to submitting a proposal to this solicitation.

Proposal Clarifications

- Proposing manufacturers are limited to one (1) proposal per PTHP category (standard PTAC, hydronic cabinet PTAC, TTWAC) and only one product is permitted per proposal. Proposers are encouraged to propose to one, two or all three categories. **A separate proposal is required for each PTHP category.**
 - Do not submit more than one (1) proposal per category. Only the first proposal submitted in each category will be scored.
 - Proposers should indicate if program-funded product development will lead to multiple PTHP models.
 - NYSERDA intends for manufacturers to utilize their industry knowledge, manufacturing expertise and market engagement to make decisions and prioritize specifications that represent their best PTHP proposal in response to the Product Specifications.

- Where the proposed PTHP equipment omits or does not meet Product Specifications, proposers shall thoroughly explain the reasoning and outline how the proposed product will serve the needs of the market.
- Proposers must clarify their technical approach to meeting the proposed product specifications or explain how NYSERDA's specifications are already satisfied in their current PTHP or related products.

Required Information

Proposals must be complete and include the following information to be eligible for funding. Please ensure all required information is included such that otherwise strong proposals are not penalized due to missing information. To be considered complete, a proposal must include:

1. A fully completed proposal ([Attachment C – Proposal Template](#))
2. A completed budget ([Attachment D – Budget Worksheet](#))
3. Resumes of key project personnel
4. Existing commercialized product specification sheets (if applicable)
5. Letters of support (optional, but recommended)

Manufacturer proposals shall include the information below and strive to be no longer than 20 pages in length. Additional items which the Proposer deems appropriate or necessary to best outline the merits of their proposal may be included but shall be no longer than 3 additional pages.

1. Manufacturer Qualifications

- a. Company information and background.
- b. Track record of successful product development and commercialization, including any relevant PTAC/PTHP and related cold-climate heat pump development and manufacturing history.
- c. Demonstration of manufacturing capacity and financial resources necessary to scale PTHP production to meet potential NYS market demand.
- d. Describe how the proposer will provide customer support, troubleshooting, and ongoing maintenance and repair services, including the supply of regular consumables (e.g., filters) to customers in New York State.

2. Proposed PTHP

- a. Detailed technical proposal responsive to the product specifications outlined in [Attachment A - Product Specifications](#).
 - i. Outline which category of PTHP equipment is being proposed.
 - ii. Identify whether the proposed product is a new product, modification of an existing product or is an existing product with no modifications.
 - If proposing a modification or commercially available product, provide model numbers and product specification sheets of current product, or products, to be modified as supporting documents. (Specification sheets do not count towards proposal page limits.)
 - iii. Proposers should clearly state whether the proposed product meets, exceeds or falls short of the technical requirements outlined in Attachment A. See [Proposal Clarifications](#) above.

- iv. Description of additional product specifications not expressly outlined in Attachment A and a thorough explanation of their additional value.
 - v. Describe a comprehensive testing strategy for the PTHP product(s) to represent real world operations in NYS climates and building installations.
 - b. Description of demand-side market engagement and research that informed the Proposer's technical proposal.
- 3. Project Team & Timeline**
- a. Identify primary point of contact.
 - b. Identify key experience and qualifications of personnel that will be directly involved in the work outlined in this proposal.
 - i. Include resumes of key personnel as supporting documents. (Resumes do not count toward proposal page limits.)
 - c. Project timeline and milestones for product development and field demonstration.
- 4. Market Scaling & Benefits to New York State**
- a. Outline the predicted size of the addressable market for proposed PTHP product in NYS and nationally and describe how this market was identified.
 - b. Describe the strategy to serve the identified market and scale adoption of proposed PTHP product.
 - c. Outline any existing presence in NYS, including corporate offices, design and engineering facilities, manufacturing, distribution or sales and service providers.
 - d. Describe any economic benefit for NYS that will be created through commercialization of the proposed product in the form of subsequent manufacturing or technical service activity, intellectual property creation, revenue generation or job creation.
- 5. Budget**
- a. Utilize [Attachment D – Budget Worksheet](#) to submit a budget containing the following:
 - i. Budget breakdown for each product development stage, including any factory or third-party laboratory testing.
 - ii. Forecasted cost for prototype and production PTHP units.
 - iii. Estimate of manufacturer planned private investment for product development, field demonstration and scaling market adoption.
 - iv. Estimated total number of PTHP units to be supplied for field demonstration.
 - NYSERDA encourages proposers to estimate PTHP numbers based on field demonstrations in at least 30-50 dwelling units (DUs), with greater numbers preferred, to thoroughly validate the real-world performance of the proposed PTHP product.
 - Please note that a final demonstration plan is not expected prior to submitting a proposal and will be built in collaboration with the selected Demonstration Partner and approved by NYSERDA.
 - v. Include estimated all-in cost for field demonstration on a per-dwelling unit basis assuming three (3) PTHP per DU.
 - b. Funding requests in US dollars (USD).
 - i. **Proposals that do not include product development and/or field demonstration funding requests at the time of proposal submission will be ineligible to receive correlated funding from this PON.**

- ii. **Requested product development funding**, with a breakdown of how funding will be utilized. Maximum of \$250,000 per proposal.
 - Manufacturers proposing existing products without additional design or engineering changes are not eligible for product development grants.
- iii. **Requested field demonstration funding**, with a breakdown of how funding will be utilized. Maximum of \$1,000,000 per proposal.
 - Cost-effectiveness of field demonstration funding request will be evaluated on per-dwelling unit demonstration cost basis, **not on total funding requested**.
 - Proposers may request up to, but not exceeding, a 100% cost-share of NYSERDA funding for anticipated eligible field demonstration project costs including: owner-led make-ready work, demonstration design and engineering, PTHP equipment, labor and integration, tenant/occupant training materials and workshops, ongoing maintenance parts and services.
 - Do not include M&V in your field demonstration funding request, NYSERDA will select a 3rd party M&V contractor.

Evaluation Criteria

NYSERDA will evaluate proposals based on the criteria listed below and may request additional information or clarification as needed. Proposals will be evaluated by PTHP category (standard PTAC, hydronic cabinet PTAC and TTWAC).

The following criteria will be used in selecting proposals for funding. All proposals must include a detailed explanation of how the proposer intends to address NYSERDA's product requirements.

Any unmet product specifications will be evaluated on a sliding scale according to their significance in meeting market needs. For instance, proposals that include product dimensions that could be incompatible with retrofitting into existing equipment, wall sleeves, wall openings, or available interior or exterior space will receive a lower score.

Evaluation Criteria
Manufacturer Qualifications • Does the proposing manufacturer possess the experience, qualifications and resources to successfully develop, demonstrate and scale production of the proposed PTHP equipment? • Does the proposer have the ability to maintain adequate service and support to customers as demand for units increases over time?
Proposed PTHP • Do the proposed PTHP equipment specifications successfully address the technical requirements outlined in Attachment A and/or does the proposal clearly outline the reasoning for all unmet technical requirements? • Is the proposed PTHP equipment compatible with one or more existing through-wall opening dimensions as defined in Attachment A?

- Is the proposed PTHP equipment compatible with existing PTAC and/or through-the-wall AC electrical infrastructure and capable of being installed without electric service upgrades or rewiring?
- Will the proposed PTHP equipment offer high-efficiency, cold-climate performance for all NYS climate zones as outlined by the projected seasonal coefficient of performance and ability to maintain 100% heating capacity at low outdoor air temperatures without electric resistance heating?
- Is the proposed approach to condensate management flexible enough to accommodate the diverse needs and constraints of NYS's building stock?
- Does the proposed PTHP equipment include features that will increase tenant satisfaction, including but not limited to improved indoor air quality and quiet operation?
- Does the Proposer include a comprehensive testing strategy that identifies any limitations of the current performance ratings (e.g. SEER, HSPF, CEE, COP) to better represent real-world operations in NYS climates and building installations?

Project Team & Timeline

- Does the Proposer's team have the necessary expertise and resources to carry out the proposed work?
- Is the project plan comprehensive with detailed milestones?
- Is the timeline to deliver PTHP prototypes and begin field demonstrations expedient?
- Can the prototype development and delivery be reasonably accomplished on the proposed timeline?

Market Scaling & Benefits to New York State

- Does the proposed PTHP product address a significant market segment in NYS and nationally and is the Proposer's strategy to serve this market sound?
- Does proposer have a clear long-term strategy to serve the identified market and scale adoption of the proposed product in NYS?
- Does the proposer have an existing presence in NYS, or the surrounding geographic region, including corporate offices, design and engineering facilities, manufacturing, distribution or sales and service providers?
- Will there be significant economic benefits in NYS, in the form of subsequent manufacturing or technical service activity, intellectual property creation, revenue generation or job creation?

Budget

- Will the proposed PTHP production model provide a cost-effective solution for NYS building owners?
- Is the proposer's planned private investment for product development, demonstration and scaling market adoption appropriate in view of the proposer's resources and potential benefit from the resulting PTHP product?
- Is the requested amount of NYSERDA funding for product development proportionally appropriate to the level of effort required for development for a new product as opposed to modification of an existing product?
- Is the proposed demonstration budget thoughtfully allocated and represent a cost-effective approach to demonstrating a sufficient quantity of PTHP prototypes to thoroughly validate the real-world performance of the PTHP products?

NYSERDA reserves the right to select as many or as few manufacturers in each category as deemed appropriate to achieve the goals of the Program and to accept or reject an application, at its sole discretion, based on the following program policy factors:

- The degree to which the awarded proposals will create a diverse and impactful portfolio of manufacturers and PTHP products that will best serve the Program objectives, including considerations as to funding duplicative efforts stemming from the solicitation itself or similar, previously funded efforts.

Proposal Submission

Online submission is strongly encouraged. Proposals are due by 3 p.m. ET on August 6, 2025. Submit your completed proposal(s) [here](#)*.

To be considered complete, a proposal must include:

1. A fully completed proposal ([Attachment C](#))
2. A completed budget ([Attachment D](#))
3. Resumes of key project personnel
4. Existing product specification sheets (if appropriate)
5. Letters of support (optional, but recommended)

General Conditions

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your Proposal. Review should include whether it is critical for evaluating a Proposal, and whether general, non-confidential information, may be adequate for review purposes.

The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise."

Information submitted to NYSERDA that the Proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted.

See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501

<https://www.nyserdanyny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>.

However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during Proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the Proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department.

The Department has created a second form that must be completed by a prospective contractor prior to contacting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. NYSERDA anticipates a contract duration of three years, unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Scope of Work. Each application should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify proposers in approximately 6 weeks from the proposal due date whether your

proposal has been selected to receive an award. NYSEDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSEDA agreement.

Accessibility Requirements - If awardees from this solicitation will be posting anything on the web, or if the awardee will produce a final report that NYSEDA will post to the web, the following language must be included. NYSEDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see [NYSEDA's Accessibility Requirements](#).

Limitation - This solicitation does not commit NYSEDA to award a contract, pay any costs incurred in preparing a Proposal, or to procure or contract for services or supplies. NYSEDA reserves the right to accept or reject any or all Proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSEDA's best interest. NYSEDA reserves the right to reject Proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Attachment B - Sample Agreement. NYSEDA reserves the right to disqualify Proposers based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The Proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States, and shall describe circumstances for each. When a Proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSEDA after the award of a contract, NYSEDA may exercise its stop-work right pending further investigation, or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The Proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the Proposer or former officers and employees of NYSEDA, in connection with Proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSEDA of, and resolve any such conflicts.

The Proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of

the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Joint Commission on Public Ethics, or its predecessors (collectively, the “Ethics Requirements”). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a “lifetime bar” from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person’s engagement, work cooperatively with the State to solicit advice from the New York State Joint Commission on Public Ethics, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Joint Commission on Public Ethics. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of a Proposal and to assess Proposers’ prospects of success, including gathering information to assess a Proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a Proposal. NYSERDA may conduct due diligence on some or all Proposals based on NYSERDA’s current guidelines at the time of a review. NYSERDA staff may follow up with Proposers to request additional information or clarification regarding Proposer’s Proposal, including questions regarding Proposer’s business prospects and resources, whether or not those questions are specifically related to the elements of the Proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any Proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with an Proposal; research on intellectual property claims; customer and partner reference checks; market research on the Proposers’ target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for Proposers’ business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of an Proposal, or the prospects for commercial success of the Proposers’ business (whether directly related to, or unrelated to the specific elements in a

Proposal). Due diligence may include discussions with Proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a Proposal or apply a program policy factor.

**Flexible Technical Assistance (FlexTech) Consultants
Statewide Services**

Request for Proposal (RFP) 5913

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Proposals Due: May 5th, 2025, by 3:00 p.m. Eastern Time*

The New York State Energy Research and Development Authority (NYSERDA) requests proposals from firms interested in becoming FlexTech Consultants. The first FlexTech Consultant pool was assembled in 1991 under the New York State Energy Office and has continued in various forms through 2024. This RFP will result in a list of qualified FlexTech Consultants that support NYSERDA initiatives with particular focus on achieving the goals outlined in [The Climate Leadership and Community Protection Act](#) (Climate Act). NYSERDA is seeking proposers who can demonstrate technical assistance capabilities across the areas of expertise listed in Section II, which include, energy and/or decarbonization analysis, design, professional services, and climate resiliency. NYSERDA technical assistance offerings provide valuable insights and recommendations to New Yorkers, particularly those who are in disadvantaged communities (DAC), to reduce greenhouse gas (GHG) emissions and energy use as well as improve resiliency and quality of life.

Proposers awarded through this RFP will receive an agreement that will remain in effect until December 31, 2031, with an option for a two (2) year renewal. The agreement does not guarantee work from NYSERDA.

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link "[Application Instructions and Portal Training Guide \[PDF\]](#)" located in the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

No communication intended to influence this procurement is permitted except by contacting Matthew Christopher at (518) 862-1090, ext. 3064 or by e-mail RFP5913@nyserda.ny.gov or Joanna Moore at (518) 862-1090, ext.3220 or by e-mail RFP5913@nyserda.ny.gov. If you have contractual questions concerning this solicitation, contact James Cowman at (518) 862-1090, ext. 3652 or Jim.solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offerer, and (2) may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. Please see [Solicitation Proposal and Vendor Responsibility Questions.pdf](#) for a complete list of the questions proposers must answer as part of a submission. The online proposal system closes promptly at 3 p.m. Eastern Time, files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

I. Introduction

The goal of this RFP is to build a network of NYSERDA FlexTech Consultants who have experience providing technical assistance to commercial, industrial, institutional, and agriculture customers across the state of New York. As New Yorkers continue to feel the increased effects of climate change, challenges in the energy sector evolve, the technical assistance that consultants provide and the programs that support them, must evolve as well. In addition to traditional energy and decarbonization projects, the need for resiliency, redundancy, and safety planning is becoming increasingly important. NYSERDA will contract with the most technically meritorious proposers who demonstrate experience analyzing complex problems, developing cost effective solutions, and presenting tangible next steps to the appropriate stakeholders.

Proposers should demonstrate expertise providing energy efficiency, electrification, and emissions reduction technical assistance services across some, or all the sectors listed above. NYSERDA is particularly interested in proposers who demonstrate work that focuses on heat pump, heat pump readiness (e.g. thermal and electric load reduction, thermal load reshaping via heat recovery and thermal storage, electric infrastructure and service capacity analysis, and other feasibility considerations) and system resiliency in existing buildings, through the analysis and design stages of a project.

Work through this RFP will not be limited to technical assistance for end users, proposers may be asked to aid NYSERDA in program development, technical review, program implementation, and guidance on various NYSERDA projects and programs.

Examples of technical assistance work awarded to FlexTech Consultants through past solicitations, such as RFP 3628, include but are not limited to:

- Indoor Air Quality Pilot program
- Energy to Lead Competition
- Higher Education Playbook development
- Green Jobs Green New York Energy Audit program
- RetroFit Electrification Pilot
- Technical Support for Geothermal and Thermal Energy Networks

The following government entities may access the selected proposers that result from this RFP to provide services consistent with the areas of expertise identified in this RFP, if that entity determines that this procurement met its own internal procurement requirements:

1. Any state agency, authority, or other state entity under the Governor's authority;
2. Any other branch of government or other political subdivision of New York State not under the Executive authority of the Governor;
3. Any local government or other municipal government entity, such as but not limited to:
 - a. Counties
 - b. Cities
 - c. Towns
 - d. Villages
 - e. Hamlets
 - f. Water or electric districts
 - g. Fire districts
 - h. Library districts

II. Services Requested

As a result of this RFP, NYSERDA expects to contract with multiple qualified consultants who demonstrate competency providing technical assistance related to the four (4) areas of expertise listed below. Proposals that demonstrate experience across multiple areas of expertise will be scored favorably, although it is not required to demonstrate competency in all areas. For more detailed

descriptions of each area of expertise and examples of services that may be included in case studies to demonstrate competency, refer to Attachment B – Sector Experience and Areas of Expertise. NYSEERDA encourages all consultants that can demonstrate the qualifications and skill sets described within this solicitation to propose.

The types of services requested from awarded FlexTech Consultants will depend on the nature and complexity of the project, NYSEERDA's need for services, and the FlexTech Consultants performance. For more information on funding, refer to Section IV.

Proposers may be a single company or team of companies but must, in their response, clearly identify the key employees, subcontractors, or relevant affiliates of all entities who are proposed to fulfill the requirements of this RFP. If a proposer includes a partnering arrangement with third parties in their proposal, the proposal must indicate the lead entity that will contract with NYSEERDA and retain sole responsibility for successful completion of the work under a resulting contract.

This list of consultants may be used to support new construction and multifamily work but is not the sole focus of the RFP. The FlexTech Consultants awarded through this solicitation should be prepared to focus on technical assistance for commercial, industrial, institutional, and agricultural, customers within existing buildings. If your intention is to solely focus on new construction and/or multifamily work, you are strongly encouraged not to propose.

When performing future work under this agreement, proposers will not be limited to the example services listed in Attachment B – Sector Experience and Areas of Expertise so long as the services requested are related to energy and/or decarbonization technical assistance. The examples are only intended to provide a basis for proposers to develop case studies per the instructions in Section V.

Areas of expertise:

1. Energy and/or Decarbonization Analysis
2. Design
3. Professional Services
4. Climate Resiliency

III. Proposer Eligibility

Minimum eligibility criteria for this solicitation includes:

- Proposers must employ a minimum of one licensed Professional Engineer (PE).

IV. Funding Mechanisms and Length of Agreement

A. Umbrella Agreements

Proposers selected through this solicitation will enter a zero-dollar value umbrella agreement with NYSEERDA. This umbrella agreement does not guarantee work from NYSEERDA but enables NYSEERDA to retain FlexTech Consultants to conduct work that aligns with the areas of expertise and broader services included in this RFP and attachments.

NYSEERDA will allocate funding via Task Work Orders (TWOs), the amount of work and funding assigned will depend on NYSEERDA's needs, FlexTech Consultant expertise, the amount of available work, FlexTech Consultant past performance, current FlexTech Consultant workload, deadline requirements, and the ability of the FlexTech Consultant to provide high quality, cost-effective, and timely services.

Umbrella Agreements awarded through this solicitation will remain in place for up to six (6) years, with the option to renew for up to another two (2) years. Agreements will be negotiated soon after the notification of selection is delivered to successful proposers.

In addition to the termination rights stated in Attachment D – FlexTech Consultant Sample Agreement, NYSERDA reserves the right to cancel umbrella agreements should Consultants fail to adhere to:

- FlexTech Consultant Responsibilities included in Attachment D – FlexTech Consultant Sample Agreement
- Any performance criteria included in NYSERDA solicitations and/or TWOs.

B. Task Work Orders

TWOs may be issued to awarded FlexTech Consultants using the following sourcing options, in no specific order:

1. FlexTech Consultants may apply to open enrollment technical assistance programs, such as, Flexible Technical Assistance (FlexTech), and On-Site Energy Manager (OsEM). NYSERDA will negotiate a scope of work and budget with the FlexTech consultant and issue a TWO based on the agreed upon scope of work and budget.
2. NYSERDA may issue mini bid requests to all FlexTech Consultants who are awarded an umbrella agreement. Mini bid responses will be reviewed by NYSERDA and awarded FlexTech Consultants will be issued a TWO outlining the work to be conducted.
3. NYSERDA may issue direct TWOs, not-to-exceed \$200,000, to the highest ranked FlexTech Consultant.
4. NYSERDA may issue direct TWOs, not-to-exceed \$50,000, to any FlexTech Consultant.

For additional information on Task Work Orders, refer to Section 3 of Attachment D - FlexTech Consultant Sample Agreement.

v. Proposal Requirements

Proposers must complete the following sections and provide all required supporting documentation. Please structure the proposal to clearly reflect each section. The proposal must be in the following format:

1. Introduction

In three (3) pages or less, describe how your firm's technical expertise will support NYSERDA's efforts in the following areas:

- Achieving GHG emissions reduction goals established in the NYS Climate Act.
- Incorporation of climate resiliency into recommendations for customers.

AND

Discuss your firm's ability to balance multiple projects across multiple disciplines while maintaining timeliness and quality of work.

Subcontractor arrangements only:

Describe in one (1) page or less how having a subcontractor on the proposing team provides added value for your customers and NYSERDA.

2. Organizational Chart and Resumes (Attachment A)

Populate Attachment A - Organizational Chart. List the staff who will comprise your core team conducting work under this umbrella agreement. Awarded FlexTech Consultants will have the opportunity to update organizational charts with additional staff in the future.

Please include individual resumes for all team members included in the Attachment A – Organizational Chart.

3. Sector Experience and Areas of Expertise (Attachment B):

Populate Attachment B – Sector Experience and Areas of Expertise by checking all that apply. Proposers who demonstrate competency across multiple sectors and areas of expertise will be scored favorably.

4. Licenses and Certifications:

Proposers must identify a current staff member that is a Licensed Professional Engineer (P.E.) registered in the State of New York by providing a copy of the staff members P.E. license. The license should not be expired.

Additional relevant licenses and/or certifications will be viewed as favorable. Consultants should document individual staff certifications in the individuals resume. Preferred certifications include:

Association of Energy Engineers (AEE):

- Certified Energy Auditor (CEA)
- Certified Energy Manager (CEM)
- Certified Building Commissioning Professional (CBCP)
- Existing Building Commissioning Professional (EBCP)
- Performance Contracting & Funding (PCF)
- Carbon Auditing Professional (CAP)
- Certified GeoExchange Designer (CGD)
- Certified Measurement & Verification Professional (CMVP)

The American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):

- Building Commissioning Professional (BCxP)
- Building Energy Assessment Professional (BEAP)
- Certified Decarbonization Professional (CDP)
- Building Energy Modeling Professional (BEMP)
- Certified HVAC Designer (CHD)
- High-Performance Building Design Professional (HBDP)

5. Case Studies:

Case studies and the required one (1) page document referenced in the 5th bullet below will be used to determine technical expertise, team cohesion, and a proposers' ability to present technical information in a succinct manner to stakeholders and will be heavily weighted to reflect this.

Case studies should include examples of recently completed work at existing buildings. Case studies focused solely on new construction or multifamily buildings will not be scored favorably.

Ensure that case studies adequately demonstrate experience across the sectors and areas of expertise selected in Attachment B – Sector Experience and Areas of Expertise. Case studies that demonstrate competency conducting heat pump and heat pump readiness work will be scored more favorably.

Instructions:

- *Provide a minimum of one (1) case study for each area of expertise checked on Attachment B – Sector Experience and Areas of Expertise. (Case studies can include multiple areas of expertise)*
- *Proposals should not exceed six (6) total case studies.*
- *Individual case studies should not exceed three (3) full pages.*
- *Number each case study.*
- *Provide a table that includes the case study name, number, applicable sector, and area(s) of expertise.*
- *Each case study must be accompanied by a one (1) page document that includes the bullets listed below, with direct responses to each bullet in the order that they are presented.*
 - List the areas of expertise and sector(s) that apply to the case study.
 - Describe your customers' goals and describe your process for identifying them.
 - How did you incorporate the customers' goals into your project?
 - List the recommendations and next steps that were identified during your project.
 - Include the qualified personnel who performed work on the project.
 - List individuals that are included in the organizational chart.
 - Briefly describe the individual's role in the project.
 - Clearly articulate what work was done by your firm if multiple teams contributed to the project.
 - Provide customer reference with contact information.
 - **If the case study includes heat pump design services:**
 - Describe lessons learned from your design. Have you implemented those lessons learned on future technical analysis and/or designs and if not, how would you?
 - Was your design used during construction?

6. Project Personnel and Billing Rates form (Attachment C)

Proposers must clearly indicate the hourly salary range for each title expected to perform services under an Agreement with NYSERDA. Subcontractor rates and titles must also be included as independent tabs in the Attachment C spreadsheet. Hourly salary ranges should **NOT** include overhead, profit, and other costs. You must fill out rates and titles for all 7 years of the Contract period. Rates are not allowed to be adjusted during the Contract period from what is in the proposal submittal.

Attachment C must also itemize your proposed multiplier, profit (%), and average annual rate escalation (%) expected to be used in all future invoices for the duration of the awarded Contract. Please also include the justification for the proposed annual rate escalation in Attachment C.

Please ensure that the not to exceed hourly rate, minimum and maximum dollar values are wide enough to cover analysis and design services for titles that may have overlapping responsibilities.

FlexTech Consultants selected under this solicitation shall be awarded an Agreement that is valid until December 31, 2031 with an option for a two (2) year renewal.

NYSERDA reserves the right to conduct a rate comparison amongst awarded FlexTech consultants and request changes to rate schedules as applicable. Please note, multipliers over 3 and profit % over 15% will not be accepted.

Once awarded, NYSERDA also reserves the right to allow up to an additional 5% escalation on the relevant hourly rate ranges to accommodate nonroutine and/or innovative Task Work Orders issued under an awarded umbrella agreement.

7. Acceptance of Standard Agreement Terms and Conditions (Attachment D)

Provide a statement that the applicant accepts all terms and conditions in the FlexTech Consultant Sample Agreement – Attachment D. If certain terms and conditions are not accepted, the firm must define these exceptions within the proposal. A redlined agreement should be submitted for such purposes. Please note NYSERDA will only consider exceptions specifically listed in the proposal during contract negotiations. Also, NYSERDA cannot accept any changes to Section 10 – Indemnification; there are no exceptions to this rule.

In compliance with §139-j and §139-k of the State Finance Law (see Section V, General Conditions below for additional information), proposers will be required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility.

VI. Proposal Evaluation (Set forth evaluation criteria).

Proposals that meet solicitation requirements will be reviewed by a Scoring Committee using the Evaluation Criteria listed below. Within each evaluation criteria below, the sub-bullets are listed in order of importance.

Evaluation Criteria

1. Introduction (15 points)

- a. Introduction adequately demonstrates proposers' ability to align with the following NYSERDA goals:
 - i. Achieving greenhouse gas emissions reduction goals established in the NYS Climate Act.
 - ii. Incorporation of climate resiliency into recommendations for customers.
- b. Proposers' ability to balance multiple projects across multiple disciplines while maintaining timeliness and quality of work.
- c. Introduction adequately demonstrates proposers' ability to provide quality technical assistance.
- d. If applicable, teaming arrangements between the proposer and sub-consultants/contractor(s) are identified; Proposer demonstrates the need for such arrangements and why it was favorable for the proposal.

2. Case Studies (40 points)

- a. Portfolio of case studies adequately demonstrate experience across areas of expertise and sectors checked on Attachment B.
- b. Case studies were recently completed and demonstrate work conducted at existing commercial, industrial, institutional, and agriculture buildings.
- c. One page summary associated with each case study is satisfactorily completed.

- d. Case studies showcase proposer's ability to conduct heat pump and heat pump readiness technical assistance.
- e. Number of case studies provided.
- f. It is clear what work described in the case study was completed by the proposer.
- g. Each case study is concise, well organized, and does not exceed three pages. No more than six (6) case studies were submitted.
- h. Proposer included a table that lists the case study name, number, applicable sector, and area(s) of expertise.

3. Organizational Chart/Resumes (25 points)

- a. Resumes adequately demonstrate the ability to conduct the areas of expertise described in Attachment B.
- b. There is alignment between staff on organizational chart (Attachment A) and the case studies submitted.
- c. Organizational chart includes members from multiple disciplines or teams.
- d. One-page resumes are provided for all personnel included in the organizational chart.
- e. Organizational chart demonstrates design experience.

4. Licenses and Certifications (10 points)

- a. Number and diversity of relevant licenses/certifications held by team members.
- b. At least one staff member has a Certified Geo-Exchange Designer certification.

5. Rates Schedule (5 points)

- a. Rate schedule (Attachment C) is complete and reasonable compared to other proposers, based on regions served.

6. Proposal Responsiveness (5 points)

- a. Proposal submitted is well organized, complete, comprehensive, and concise.

Program Policy Factors

NYSERDA reserves the right to accept or reject proposals based on the following program policy factor(s):

- The degree to which the fundable proposers provide full coverage for each area of expertise, as described in Section II, to NYSERDA and the customers of New York State.
- There is diversity amongst the sectors served.
- The degree to which there is diversity in geographic location served to best achieve the overall goals and objectives of the Program.

VII. GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are

trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. NYSERDA anticipates a contract duration through December 31, 2031, with an option for a two (2) year renewal, unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions.

Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify proposers in approximately 12 weeks from the proposal due date whether your proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting Matthew.Christopher@nyserda.ny.gov. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Accessibility Requirements - NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in

which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

NYSERDA

“New York State Energy Efficiency and Conservation Block Grant Program”

Program Opportunity Notice (PON) 5924

\$ 3,016,368.00

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Applications Due: August 4th, 2025, by 3:00 p.m. Eastern Time*

The New York State Energy Research and Development Authority (NYSERDA) announces the availability of \$3,016,368.00 in funding to support energy audits that utilize passive house principles and energy efficiency and electrification upgrades at eligible municipal facilities. NYSERDA will make five awards, one to each of five eligible municipalities, on a **first-come first-served basis** for \$603,273.60 per award. Proposers should propose one building site that is expected to exhaust the allotted funding through the audit and implementation phases of this program. Proposers may only submit one site for funding consideration. The reference to “passive house” does not mean that project sites are limited to residential buildings; the proposer may submit a building used for local government operation for consideration. Through this program, NYSERDA will advance significant building decarbonization efforts and generate expanded knowledge on public retrofit projects to develop solutions to common problems.

Eligibility for funding is reserved for New York State municipalities that were not eligible to receive a direct allocation from the Department of Energy’s (DOE) Energy Efficiency and Conservation Block Grant funds. No cost share is required for participation in this program. **Awarded municipalities must complete audit work by December 31, 2025, and all implementation work by September 30, 2026. NYSERDA reserves the right to modify due dates.** Successful awardees will be subject to DOE approval and federal terms and conditions as discussed below and in Attachment A - Sample Agreement, Exhibit E.

Funding for this program is contingent upon the continued availability of federal funds to NYSERDA.

Attachment A - Sample Agreement contains the terms and conditions of the federal award, including subgrantee requirements and deadlines for these projects. As such, many of the terms are not negotiable. Proposers are advised to review Attachment A - Sample Agreement with their counsel before submitting an application.

Application Submission: Online submission is preferable. Proposals shall submit the online application form made available with this solicitation. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link “[Application Instructions and Portal Training Guide](#) [PDF]” located in the “Current Opportunities” section of NYSERDA’s website (<https://www.nyserdera.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Department’s Designated Contact for this Procurement is: Jeff Scharl (Designated Contact) at (518) 362-0253 or by e-mail LocalGovernment@nyserdera.ny.gov. If you have contractual questions concerning this solicitation, contact Nancy Marucci (Designated Contact) at (518) 862-1090, ext. 3335 or Nancysolicitations@nyserdera.ny.gov. Contacting anyone other than the Designated Contacts (either

directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offerer, and (2) may result in the proposer not being awarded a contract.

*** All applications must be received by 3 p.m. Eastern Time on the date noted above. Late or faxed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals.

I. Introduction

- a) **Background:** The Bipartisan Infrastructure Law (BIL)¹, passed in November 2021, provided funding for the Department of Energy (DOE) to administer the Energy Efficiency and Conservation Block (EECBG) Grant program. This federal funding will accelerate and expand the number of energy efficient and low emission municipal-owned buildings in New York State.
- b) **Goals and Objectives:** The New York State Energy Efficiency Conservation Block Grant Program (the Program) is designed to increase the number of efficient municipal buildings and reduce energy costs of operating those buildings. The goals of this funding under this Program include:
1. Identification of cost-effective energy efficiency and electrification options that utilize passive house principles.
 2. Advancement of ongoing efforts to reduce energy consumption and thereby reduce pollution and energy costs related to operations of municipal buildings that align with state law.
 3. Strengthening the passive resilience of municipal buildings.
 4. Deployment of tools and best practices that other municipalities can use.
 5. Increasing the skilled clean energy workforce.

The benefits from these awards shall support a state 40% target for disadvantaged communities.

- c) **Eligibility:** Eligible proposers are limited to municipalities incorporated in the State of New York that were not eligible to receive a direct EECBG allocation from the U.S. Department of Energy.

The facility submitted as the site of the proposed project must be an existing municipally-owned building of at least 5,000 square feet in size. The proposed project must be for audit costs and eligible implementation measures (defined in section III, below) made in accordance with the Implementation Stage (defined in section II, below) and should be used for work in conditioned space, unless otherwise approved by NYSERDA. Implementation funding must be used for costs for work performed after the completion and acceptance of the audit by NYSERDA ("New Work"); costs for work performed before the completion and acceptance of the audit by NYSERDA are not eligible.

Proposers must commit to meeting the schedule requirements for completion of audit and implementation as outline above in the Program Summary. To be eligible for funding, Proposers must agree to comply with all federal terms and conditions (see Exhibit E to Attachment A - Sample

¹ The BIL is Public Law 117-58, Infrastructure Investment and Jobs Act (IIJA)

Agreement) and must agree to meet all other schedule and reporting requirements described in Attachment A - Sample Agreement in a timely manner.

A Proposer may only submit an application for a project upgrading a single building. Applications identifying multiple sites are not permitted.

- d) **Award Conditions:** All awards made under this Program shall comply with applicable laws and regulations referenced in Exhibit E to Attachment A - Sample Agreement, including, but not limited to, 2 CFR Part 200 as amended by 2 CFR Part 910 and Section 40552 of the Infrastructure Investment and Jobs Act (IIJA) (PL 117-58). Notably, this award is subject to Davis Bacon Act and Buy America Build America requirements as discussed in further detail below.

II. Program Requirements

- a) **Available Funds:** \$3,016,368.00 in funding is available in total for awards under this Program.
- b) **Cost Share:** Cost share is not required for participation in this Program.
- c) **Award Amount:** NYSERDA will award five (5) eligible projects \$603,273.60 each on a first-come first-served basis, which awarded municipalities can use to fund the audit and resulting implementation measures. Proposers may only submit an application for a project upgrading a single building for funding consideration. NYSERDA shall reimburse awardees for allowable direct and indirect costs incurred as part of awarded projects. Contracts will have a Go/No-Go provision after the audit stage to confirm the municipality's ability to perform audit-identified measures within available timeframes.
- d) **Audit Stage:** The first stage of funding will support an energy audit and design review that utilizes passive house principles as outlined below. An eligible audit must be conducted by a certified Passive House Institute auditor² and include analysis of the following along with recommendations for implementation detailing projected cost and energy savings:
 - 1. Super-insulated envelopes: Insulation levels in walls, foundations, roofs (recommended measures must include thickness, U and R values)
 - 2. Airtight construction: Identifying and quantifying heat loss or gain, ensuring air tightness and suggest air sealing as needed to remediate, and looking for air leaks
 - 3. High-performance glazing: Identifying insufficient or inefficient windows (including U-value, solar heat gain coefficient, and airtightness information of recommended replacements or upgrades)
 - 4. Thermal-bridge-free detailing: Examine areas of high heat transfer through the building envelope
 - 5. Heat Recovery Ventilation: Assess ventilation system design (sized to provide fresh air while minimizing energy loss), look at the heat recovery performance.

Should a Proposer have an existing audit that meets the criteria described above and was completed no more than last five years prior to the date of submission to NYSERDA, the Proposer may submit that audit to NYSERDA for consideration to advance to the Implementation Stage. NYSERDA reserves the right to reject any energy audit that fails to meet the criteria outlined in this solicitation or otherwise fails to meet a requirement of the Program.

² Should successful Proposers be unable to secure a qualified Passive House Institute-certified auditor with availability to perform needed services within the timeframe available for this funding or for other reasons, NYSERDA reserves the right to alter this requirement.

Project Audit reports must be submitted to NYSERDA by December 31, 2025 to maintain eligibility for Project Implementation funding. NYSERDA reserves the right to adjust due dates in alignment with federal terms.

- e) **Implementation Stage:** Prior to starting work on the Implementation Stage, the Proposer must receive a “Go/No Go approval” of the NYSERDA project manager to proceed and access the Implementation Stage funding. Consideration for the Implementation stage will be determined by the Proposer’s ability to complete the Audit Stage in accordance with the due date above. **To receive Implementation funding, the municipality must commit to installing, and having operational, all work as well as having all allowable costs incurred by September 30, 2026. NYSERDA reserves the right to adjust due dates.** Failure to make sufficient progress toward project milestones may, at NYSERDA’s discretion and subject to DOE approval, result in reduced funding or cancelation of the award. NYSERDA reserves the right to award withdrawn funding to other approved projects that demonstrate the ability to complete eligible work within the time requirements of this Program.

The Proposer is responsible for procuring qualified contractor(s) for performance of work for both the Audit and/or Implementation stages and shall ensure that all applicable terms and conditions, both NYSERDA and Federal, are passed down as specified in Attachment A - Sample Agreement. NYSERDA reserves the right to identify a pool of qualified contractors from which awarded municipalities may select subcontractors.

III. Eligible Implementation Measure Types

The following is a list of measures eligible for grant funding for the project implementation phase. Equipment and installation costs for eligible measures are both covered at this stage. Measures other than those listed here, may be ineligible for funding. NYSERDA reserves the right to approve additional implementation measures on a case-by-case basis.

- a) **Energy efficiency measures:** building envelope and weatherization upgrades, lighting, installation of energy efficient appliances, efficient heating and cooling systems, cool roofs, and water efficiency measures.
- b) **Home and building energy management systems measures:** electric grid interactive equipment such as smart thermostats, energy storage systems, and building energy management systems.
- c) **Building electrification measures:** the installation of heat pumps, heat pump water heaters, residential or commercial cooking equipment, and associated wiring and panel upgrades.

The following is a partial list of ineligible measures (see below), that are not eligible for grant funding.

- Geothermal Heat Pumps
- Wind Generation
- Photovoltaic Systems and Solar Thermal Systems
- Fuel Cells
- Electric Vehicle Charging Equipment
- Electric Vehicles
- Office equipment and other plug load equipment
- Payment/reimbursement for municipal employees’ time
- Building condition remediation measures (asbestos, lead, mold remediation, etc.)

Additional measures may be determined to be ineligible upon NYSERDA review, in particular where the timeline for completion of the measure may not or will not be possible within the federally-required timeline. NYSERDA, at its sole discretion, reserves the right to determine measure eligibility.

IV. Required Federal Terms

Proposers will be required to meet all EECBG terms and conditions, including those found in NYSERDA's agreement with DOE attached to Attachment A - Sample Agreement, which includes those found at 2 C.F.R. Part 200 and affiliated regulations.

a) Build America, Buy America (BABA):

BABA applies a domestic content procurement preference requirement to federally funded infrastructure projects such as these, and those requirements will flow down to all awardees of this program ("Subrecipients"). These requirements include:

- i. All iron and steel used in the project is produced in the United States—this means all manufacturing processes, from the initial melting stage through the application of coatings, occurred in the United States;
- ii. All manufactured products used in the project are produced in the United States—this means the manufactured product was manufactured in the United States; and the cost of the components of the manufactured product that are mined, produced, or manufactured in the United States is greater than 55 percent of the total cost of all components of the manufactured product, unless another standard for determining the minimum amount of domestic content of the manufactured product has been established under applicable law or regulation; and
- iii. All construction materials are manufactured in the United States— this means that all manufacturing processes for the construction material occurred in the United States.

*All eligible projects subject to this grant funding are considered "infrastructure" within the Buy America provision of BIL based on implementation guidance from the Office of Management and Budget. Waivers for this provision are available under certain circumstances such as public interest, non-availability of goods, or unreasonable costs. Please see the [BABA website](#) for more information.

b) Davis Bacon Act:

The Davis Bacon Act mandates the payment of local prevailing wages on federal public works projects of \$2,000 or more. Davis-Bacon Wage Determinations specify the prevailing wages, including fringe benefits, that prevail for the described classes of laborers and mechanics employed on construction projects of a similar character in the locality. Awardees of this program must prepare, certify, and submit to DOE weekly payroll reports for all the laborers and mechanics engaged in construction on the site of the work. Awardees may also be required to submit related documentation in order to demonstrate compliance. The DBA requirements apply to the construction phase of the project, but not to the audit phase. Recipients will be required to undergo Davis-Bacon Act compliance training and to maintain competency in Davis-Bacon Act compliance. NYSERDA will work with proposers to help understand DBA requirements and reporting via the new Federal LCP tracker to ensure compliance. Please see the [DBA website](#) for more information.

c) National Environmental Policy Act (NEPA):

DOE's Office of State and Community Energy Program has made a NEPA determination by issuing a categorical exclusion (CX) for all activities listed for funding in NYSERDA's award, approved by the Contracting Officer and the DOE NEPA Determination. As such, no further environmental review of measures listed in NYSERDA's contract with DOE (restated in this solicitation) will likely be needed if such activities do not go outside the bounded conditions of the categorical exclusion. Awarded municipalities will be required to report certain information to NYSERDA to ascertain compliance with these terms. NYSERDA will provide more information on this during award negotiations.

d) Historic Preservation:

Similarly, NYSERDA and DOE have entered into a Programmatic Agreement that covers EECGB-funded energy efficiency measures that should limit the need for further approvals of certain actions taken on historic properties. That list is found in Attachment A - Sample Agreement, Exhibit G, Appendix A. More information on this will be provided during award negotiations.

V. Additional, Potential Requirements (Post-Selection)

Prior to formal award of funding, proposers selected by NYSERDA may be required to submit additional information or forms as part of a sub-award notification that NYSERDA must submit to DOE for award approval. The following reporting types of information may be required:

a) Recipient Information

b) Project Information

c) Project Cost Information

d) Project Impact Metrics

e) Environmental Questionnaire (NEPA):

Projects or activities that go outside the bounded conditions of the DOE's categorical exclusion for NYSERDA's grant may be required to comply with NEPA. If so, then an environmental assessment or environmental impact statement will be required. NYSERDA will provide further guidance. If DOE determines certain studies or records must be prepared to complete the NEPA review process, the costs to prepare the necessary records may be included as part of the project costs. The application of NEPA cannot be determined until the scope of Stage 2 projects are known.

f) SF- 424 Budget Justification Workbook

g) Foreign National Participation (if applicable)

h) SF-LLL:

A form certifying that no federal grant money may be used to influence or attempt to influence congressional action on any legislative or appropriation matters.

i) Quarterly Progress Reports and Annual Metrics Reports:

If awarded, the proposer will be required to submit to NYSERDA's Project Manager all information, data or reports necessary to satisfy DOE reporting requirements (see Attachment A - Sample Agreement, Ex. E) including federal reporting requirements.

VI. Proposal Requirements

The online Application Form provided with this solicitation must be filled out and submitted by a municipal official bearing the legal authority to speak for and bind the municipality. Proposers must attest that they:

1. Are a municipality incorporated in the State of New York that was not eligible to receive a direct EECBG allocation from the DOE;
2. Are applying for funding for a project that will upgrade one existing building owned by the municipality that is 5,000 square feet or greater and will only include New Work as that term is defined in this PON;
3. Are committed to completing all tasks within the available schedule and are able to meet all conditions of the award (see Attachment A - Sample Agreement, Ex. E) including federal reporting requirements;
4. Whether the municipality has obtained an existing energy audit and design review that utilizes passive house principles conducted with a Certified Passive House Institute auditor completed in the last five years; and
5. Acknowledge that this is a reimbursement-based program and confirm that they have the financial means to participate.

VII. General Conditions

a) Proprietary Information:

Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/>

</media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

b) Omnibus Procurement Act of 1992:

It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

c) State Finance Law sections 139-j and 139-k:

NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

d) Tax Law Section 5-a:

NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department.

The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

e) Contract Award:

NYSERDA anticipates making multiple awards under this solicitation. NYSERDA anticipates a contract duration of one year, unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial

applications without discussion or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSEERDA may request additional data or material to support applications. NYSEERDA will use Attachment A - Sample Agreement to contract successful proposals. NYSEERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSEERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in Attachment A - Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSEERDA expects to notify proposers in approximately twelve (12) weeks from the proposal whether your proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting LocalGovernment@nyserda.ny.gov NYSEERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSEERDA agreement.

f) Accessibility Requirements:

NYSEERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSEERDA's Accessibility Requirements on the [Doing Business with NYSEERDA page](#) or download [NYSEERDA's Accessibility Requirements \[PDF\]](#).

g) Limitation:

This solicitation does not commit NYSEERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSEERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSEERDA's best interest. NYSEERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of Attachment A - Sample Agreement. NYSEERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in making of the award.

h) Disclosure Requirement:

The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSEERDA after the award of a contract, NYSEERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

i) Vendor Assurance of No Conflict of Interest or Detrimental Effect:

The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and

employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts. The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

j) Public Officers Law:

For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

k) Due Diligence:

NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess Proposers' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding Proposer's proposal, including questions regarding Proposer's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of

team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the Proposers' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

I) EO 16 Protocols:

Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions.

There is no NYSERDA funding associated with this RFQL
Open Enrollment Applications accepted through October 30th, 2025 at 3:00 P.M. ET

Program Summary

New York State Energy Research and Development Authority (“NYSERDA”) is accepting applications from multifamily building owners, managers, or operators for their buildings to become Qualified Demonstration Sites for the [Clean Heat for All: Packaged Terminal Heat Pump Program](#) (hereafter referred to as the “Program”). This RFQL is intended to qualify multifamily buildings of at least (5) dwelling units located in New York State (NYS), with existing through-wall openings suitable for Packaged Terminal Heat Pump (PTHP) installation, who can host PTHP field demonstration projects.

This RFQL works in conjunction with Clean Heat for All: Packaged Terminal Heat Pump Program PON 5907, and allows manufacturers awarded through PON 5907 to select Qualified Demonstration Sites to partner with in planning and implementing PTHP field demonstration projects beginning by the 2025 Heating Season (October/November 2025).

Selected Qualified Demonstration Sites are eligible to receive the following:

- A no-cost PTHP demonstration project including PTHP equipment, owner-led make-ready work, project design and engineering, installation and commissioning and ongoing service and performance monitoring (subject to funding availability and caps).
- High-efficiency heating and cooling, increased temperature control, and improved indoor air quality in demonstration site dwelling units.
- Real-world performance data on PTHP equipment to inform future implementation decisions in demonstration site buildings and other buildings within the owner’s portfolio.
Potential emissions reduction to help building owner reach LL97 targets.

Eligibility

Multifamily buildings of at least (5) apartment units located in NYS with existing through-wall openings suitable for PTHP installation are eligible to submit to become a Qualified Demonstration Site. Suitable through-wall openings include those currently housing, or designed to accommodate, room conditioning products in the following three (3) categories:

1. Standard Size Packaged Terminal Air Conditioners (PTACs)

PTHPs compatible with wall sleeves designed for standard size PTACs with integrated electric resistance or gas heat as defined in 10 CFR 431.92.

2. PTACs in Hydronic Cabinets

PTHPs that fit within the space occupied by current PTAC equipment in hydronic cabinets and not require the removal of existing hydronic heating coils, allowing for retrofit while maintaining compatibility with current hydronic heating.

3. Through-the-Wall Air Conditioner (TTWAC)

PTHPs compatible with common through-the-wall AC sleeve sizes, allowing for these existing through-wall openings to provide both heating and cooling.

Additional details on the three (3) categories can be found in [Attachment A – Product Specifications](#).

How this Application Works

1. Building owner, owner representative, operator or manager complete an [online application](#).
2. NYSERDA reviews submitted application document and issues an approval or rejection within 5-10 business days.

If Approved:

3. Within 5-10 business days of application approval, NYSERDA will schedule a kick-off call to provide an onboarding to qualified participants on program mechanics and next steps.
4. Approved applications will be added to the Qualified Demonstration Site Pool made available to Awarded Manufacturers.

Informational Webinar: NYSERDA will host an informational webinar on August 7th at 11 a.m. ET. Register for the webinar [here](#). Questions may be submitted until 5 p.m. ET the day before the webinar by emailing questions to PTHPprogram@nyserda.ny.gov.

Application Submission: Building owners, operators, or managers may submit an [online application](#) through October 30th, 2025 at 3:00 p.m. ET*.

Field demonstration participation requirements can be found in the [Application Requirements](#) section below.

Application Submission: Online submission is preferable. Applicants may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the applicant's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible.

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Department's Designated Contacts for this Procurement are: Brett Wieland (Designated Contact) at (518) 862-1090, ext. 3609 or by e-mail PTHPprogram@nyserda.ny.gov or Cody Glavey-Weiss (Secondary Contact) at (518) 862-1090, ext. 3621. If you have contractual questions concerning this solicitation, contact Nancy Marucci at (518) 862-1090, ext. 3335 or Nancy.Solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the applicant or indirectly through a lobbyist or other person acting on the applicant's behalf) in an attempt to influence the procurement: (1) may result in a

applicant being deemed a non-responsible offerer, and (2) may result in the applicant not being awarded a contract.

* All applications must be received by 3pm Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted. Incomplete proposals may be subject to disqualification. It is the applicant's responsibility to ensure that all pages have been completed/included in the application. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit applications. The online application system closes promptly at 3pm, files in process or attempted edits or submission after 3pm Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

Abbreviations and Terminology

BACnet – Building Automation and Control Networks

BMS – Building Management System

COP – Coefficient of Performance

DU – Dwelling Unit

GHG – Greenhouse Gas

HVAC – Heating, Ventilation and Air Conditioning

M&V – Maintenance and Verification

NYC – New York City

NYS – New York State

O&M – Operations and Management

Open ADR – Open Automated Demand Response

PTAC – Packaged Terminal Air Conditioner

PTHP – Packaged Terminal Heat Pump

sCOP – Seasonal Coefficient of Performance

TTWAC – Through-the-Wall Air Conditioner

Term	Definition
Awarded Manufacturer	Manufacturers awarded funding for product development and field demonstration of cold-climate PTHP products through PON 5907
Applicant	The individuals or firms responding to this solicitation
Demonstration Partner	Building owner qualified through RFQL 5937 providing building sites for PTHP demonstration and evaluation
Demonstration Team	Team consisting of Awarded Manufacturer and Demonstration Partner for the purpose of planning and implementing PTHP field demonstration projects
Heat Pump Manufacturer / Manufacturer	The entity that will develop and provide advanced cold-climate, high efficiency packaged terminal heat pump prototypes for demonstration
Multifamily Building	A residential or mixed-use building with no fewer than five (5) residential dwelling units
Program	The Packaged Terminal Heat Pump Program and all related activities including but not limited to solicitation issuance, awarding, fund distribution, project management and reporting
Qualified Demonstration Site	Building and dwelling units qualified by NYSERDA to host PTHP field demonstrations
Qualified Demonstration Site Pool	List of Qualified Demonstration Sites regularly updated by NYSERDA and made available to Awarded Manufacturers for the purpose of identifying preferred demonstration sites and partners

Overview

Background

New York State's Climate Leadership and Community Protection Act calls for a 40% reduction in greenhouse gas emissions by 2030 and an 80% reduction by 2050. The building sector accounts for 70% of NYC emissions and a third of NYS emissions, with HVAC equipment responsible for 25% of total energy use and 36% of GHG emissions in New York State. The heat pumps developed through the [Clean Heat for All: Packaged Terminal Heat Pump Program](#) will help address these challenges by providing a high-performance, room-based heating and cooling solution that can be installed in existing through-wall openings and provide an easy retrofit option for New York buildings.

Packaged Terminal Heat Pump Overview

The New York State Energy Research and Development Authority (NYSERDA) launched the Clean Heat for All: Packaged Terminal Heat Pump Program in November 2024 to support the development and demonstration of packaged terminal heat pumps and provide New York State (NYS) building owners with innovative, room-based heating and cooling solutions. To date, the Program consists of the following components:

1. **Manufacturer Partnerships:** Support innovative manufacturers and entrepreneurs with funding provided through PON 5907 to bring to market high-performance, cold-climate rated PTHP equipment that is simple to install, reliable, cost-effective and meets NYSEDA's rigorous technical requirements.
2. **Demonstration Site Recruitment:** Collaborating with NYS multifamily building owners and operators to become qualified Demonstration Partners by responding to this RFQL. Qualified demonstration sites will be eligible to host field demonstrations of new PTHP products.
3. **Field Demonstrations, Q3 2025 – Q2 2027:** Conducting comprehensive, real-world evaluations of the developed PTHPs in Demonstration Partner buildings to validate their performance, efficiency and effectiveness as decarbonization solutions.

NYSERDA has conducted in-depth market engagement with NYS building owners and operators, co-ops, hospitality franchise owners and service providers to identify technical and product specifications which create feasible, yet ambitious, PTHP equipment capable of serving the New York market.

Heat pump manufacturers awarded under PON 5907, or Awarded Manufacturers, are developing PTHP products designed to meet NYSEDA technical requirements, as well as respond to building owner's needs and requirements.

Key criteria of the products awarded under PON 5907 are:

- High-efficiency, cold climate operation
- Simplified installation in existing through-wall openings or hydronic cabinets
- Compatible with the existing building electrical service
- Individual zonal control for improved comfort and energy efficiency
- Improved indoor air quality by delivering outdoor air with energy recovery capability

A full list of the NYSEDA issued PTHP technical requirements can be found in [Attachment A – Product Specifications](#).

Impacts of Participation

Participation may result in the following:

- PTHP equipment, installation, and ongoing performance monitoring at no cost to the owner. Supplied units may be manufacturing samples, advanced prototypes or production level PTHP equipment depending on manufacturer and product development status. Costs may be incurred to prepare site for PTHP installation as well as time and expenses for staff and tenant training and other Operations & Maintenance (O&M) incidentals over the course of the field demonstration.
- High-efficiency heating and cooling and increased temperature control and indoor air quality in demonstration site dwelling units.
- Real-world performance data on PTHP equipment to inform future implementation decisions in demonstration site buildings and other buildings within the owner's portfolio.
- Potential emissions reduction to help building owner reach LL97 targets.
- Publicity and marketing benefits through connection to the Clean Heat for All Program including NYSERDA issued program press release(s) and social media announcements, demonstration reports and case studies and inclusion in potential public events and announcement ceremonies.

Key Program Dates

- August 2025: PON 5907 Manufacturer Proposals Due
- Q3 2025: Selected Manufacturers Announced
- Q3 2025 – Q2 2026: Product Development & Demonstration Teams Established
- October 2025: RFQL 5937 Closes
- Q3 2025 – Q2 2027: Field Demonstrations

Field Demonstration Overview

Qualified Demonstration Site Pool

All buildings submitted for qualification that meet the [Minimum Demonstration Site Criteria](#) to be field demonstration sites, and are approved by NYSERDA, will be entered into the Qualified Demonstration Site Pool, which will be shared with awarded manufacturers; this pool will be regularly updated with newly qualified sites.

Qualification as a potential demonstration site does not guarantee that a building will host a PTHP demonstration or be selected as a Demonstration Partner by manufacturers awarded field demonstration funding.

NYSERDA will review requests for contact with qualified building owners from Awarded Manufacturers and will facilitate connection as appropriate. By submitting a site to the pool, the building owner consents to be contacted by Awarded Manufacturers for reasons including, but not limited to:

- Inquiry into specific PTHP needs and building retrofit project timelines
- Inquiry into short-term and long-term PTHP equipment needs
- Coordination of building site visits

- Discussion of Demonstration Team formation

Demonstration Teams

Awarded Manufacturers through PON 5907 are required to conduct field demonstrations exclusively within Qualified Demonstration Sites from RFQL 5937. The process in which Awarded Manufacturers and qualified building owners form Demonstration Teams will proceed as follows:

1. Awarded Manufacturers will submit proposals to the NYSERDA project manager outlining preferred partnership(s) with building owners qualified through RFQL 5937.
2. NYSERDA will vet these proposals and, pending approval, submit the proposals to the qualified building owners.
3. Qualified building owners will review partnership proposals and form Demonstration Teams upon acceptance.
4. Demonstration Teams will collaborate with each other and NYSERDA to plan and implement field demonstrations of PTHP equipment developed through the Program.

Field demonstrations will last no less than 12 months, spanning at least 1 heating and 1 cooling season. The final duration and design of the demonstrations will be determined in collaboration between Awarded Manufacturers, Demonstration Partners and NYSERDA.

Field Demonstration Funding

NYSERDA will not provide funding directly to building owners hosting PTHP field demonstrations through this RFQL. All field demonstration funding provided by NYSERDA will be distributed to Awarded Manufacturers through PON 5907.

The field demonstration funding awarded to manufacturers may support manufacturer field demonstration project planning, implementation & management costs, prototype costs and support for Demonstration Partner(s), including building owner-led make-ready work and demonstration design and engineering.

Application Requirements

One application is required for each building under consideration to become a Qualified Demonstration Site. Submit a separate application for each building under consideration.

The below categories are illustrative of required application information, the full RFQL application includes additional information requests.

Building Owner Portfolio information

- Owner Information
- Overview of building portfolio
- Total number of buildings with existing through-wall openings
- Estimate of total dwelling units in portfolio with existing through-wall openings

Demonstration Site Information

- Building information (for each building an owner wishes to be qualified)
 - Address
 - Age (year constructed)

- Gross square footage
- Number of floors
- Number of dwelling units
- Façade Type
- Current HVAC systems
- Electric Utility
- Electric metering type
- Rental type (market rate, affordable housing, mixed)
- Proposed demonstration site information
 - Number of dwelling units available for demonstration
 - Breakdown by market-rate or affordable housing dwelling units
 - Number of rooms per dwelling unit
 - Square footage of conditioned space per dwelling unit
 - Current PTAC category/through wall opening type
- Description of any planned or recent completed energy efficiency upgrades (per building)

Minimum Demonstration Site Criteria

- Multifamily or Mixed-Use buildings in New York State with 5 or more permanently occupied dwelling units
- Through-wall openings suitable for PTHP installation
 - Must meet the dimension constraints defined in either Category 1, 2, or 3 of PON 5907.
- Available for field demonstration projects to begin no later than Winter (December) 2026
- For dwellings that meet NYSERDA's definition of Affordable Housing, the implementation of a PTHP demonstration **will not** result in the shifting of heating costs from landlord to tenant.
 - If field demonstration will result in heating cost shifting, please outline your plan to offset this cost shift for affected tenants.

Application Approval

All buildings submitted for qualification that meet the Minimum Demonstration Site Criteria defined above, and are approved by NYSERDA, will be included in the Qualified Demonstration Site Pool made available to Awarded Manufacturers.

There is no pre-determined minimum or maximum number of Demonstration Partners or demonstration sites to be qualified under this RFQL.

Application Submission

Application Submission: Building owners, operators or managers may submit buildings via [online application](#) prior to solicitation close on October 30th, 2025 at 3.00 p.m. ET.

Additional requirements can be found in the [Application Requirements](#) section above.

General Conditions

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSEDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes.

The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSEDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise."

Information submitted to NYSEDA that the applicant wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501

<https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSEDA-Regulations.ashx>.

However, NYSEDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSEDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx> . Applicants are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the applicant has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSEDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSEDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The

Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department.

The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award – No contracts will be awarded as a result of this solicitation. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. . NYSERDA expects to notify applicants in approximately 2 weeks from the receipt of an application whether your application has been approved. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Accessibility Requirements - If awardees from this solicitation will be posting anything on the web, or if the awardee will produce a final report that NYSERDA will post to the web, the following language must be included. NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify applicants based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The applicant shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a applicant is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Applicants must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Work with your program attorney to determine if the following section is applicable:

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such

business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Attachment A – Product Specification

**Operations and Maintenance Support Services for the
State Licensed Disposal Area and the
Retained Premises of the
Western New York Nuclear Services Center
Request for Proposal (RFP 5942)**

*NYSERDA reserves the right to extend and/or add funding to the Solicitation
should other program funding sources become available.*

Proposals Due: June 9, 2025, by 3:00 p.m. Eastern Time*

The New York State Energy Research and Development Authority (NYSERDA) seeks proposals for providing its West Valley Site Management Program (WVSMP) with a broad range of operation and maintenance services at the Western New York Nuclear Service Center (WNYNSC) including expertise, equipment and materials needed to conduct operations, maintenance and emergency response support services at the State-Licensed Disposal Area (SDA), and on the undeveloped areas of the WNYNSC.

This RFP seeks to secure the services of a highly qualified, professional general maintenance company or individual with experience in performing a variety of operational and maintenance tasks in a highly regulated environment to support activities at the SDA as well as to maintain the WNYNSC Retained Premises and facilities.

NYSERDA anticipates awarding one (1) contract for five years that is expected to start on or about January 1, 2026.

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link "[Application Instructions and Portal Training Guide \[PDF\]](https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx)" located in the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. No communication intended to influence this procurement is permitted except by contacting Christopher Andrzejewski P.E. (primary and technical contact) at (716) 942-9600, ext. 4319 or by e-mail at Chris.RFP5942@nyserda.ny.gov or Peter Vlad (secondary contact) at (716) 942-9600, ext. 4522 or by e-mail at PeterRFP5942@nyserda.ny.gov. If you have contractual questions concerning this solicitation, contact James Cowman - Assistant Contract Manager at (518) 862-1090, ext. 3652 or Jim.solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offeror, and (2) may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. The online proposal system closes promptly at 3 p.m. Eastern Time, files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be

accepted. If changes are made to this solicitation, notification will be posted on the “Current Opportunities” section of NYSERDA’s website: <https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx> .

I. Introduction

The New York State Energy Research and Development Authority (NYSERDA) is seeking proposals for Operations and Maintenance Support Services for the West Valley Site Management Program (WVSMP) at its New York State-Licensed Disposal Area and the Western New York Nuclear Service Center (WNYNSC) near West Valley, New York.

The Western New York Nuclear Service Center (WNYNSC) is located near West Valley, New York, approximately 30 miles south of Buffalo, in the towns of Ashford and Concord (see Figure 1-1, Statement of Work). The WNYNSC was established in the early 1960s as a commercial nuclear fuel reprocessing facility which conducted operations there from 1966 to 1972. After the passage of the West Valley Demonstration Project (WVDP) Act in 1980, the United States Department of Energy (DOE) assumed exclusive use and possession of 170 acres of the WNYNSC to manage and perform cleanup actions resulting from the reprocessing operations. The New York State Energy Research and Development Authority (NYSERDA) holds title to the WNYNSC on behalf of the people of the State of New York and is responsible for the maintenance and management of the 3,100-acre facility known as the Retained Premises, excluding the 170 acres that is currently under the control of DOE in its completion of the WVDP.

The New York State-Licensed Radioactive Waste Disposal Area (SDA) occupies 15 acres of the WNYNSC (see also Figure 1-2). From 1963 through 1975, the SDA operated as a commercial low-level radioactive waste disposal facility, receiving approximately 2.4 million cubic feet of waste from government facilities, commercial power reactors, nuclear fuel cycle facilities, and other institutions and industries. The SDA ceased operations in 1975; and since 1983, NYSERDA has safely managed the SDA. In October of 2009, NYSERDA assumed control of an additional 15.7 acres to the north and east of the SDA (previously under the control of the DOE) to monitor and maintain erosion prone areas around the SDA.

Located southeast of the SDA on Buttermilk Road, in a relatively undeveloped area of the Retained Premises (RP), is the Bulk Storage Warehouse (BSW) (see Figure 1). The BSW was used in the late 1960’s and early 1970’s to store plutonium nitrate in a nitric acid solution which was recovered from fuel reprocessing activities at the WNYNSC. Currently the BSW is unoccupied, non-contaminated, and does not contain hazardous or radioactive wastes.

NYSERDA’s West Valley Site Management Program (WVSMP) is responsible for monitoring and maintaining the SDA, the BSW and the Retained Premises. Our mission is to be responsible stewards of the WNYNSC by using objective analysis and soliciting multiple perspectives to identify, assess and implement effective, enduring approaches to protect the environment, our workers, and neighbors. In carrying out this mission, the WVSMP is responsible for performing a variety of operational and maintenance work activities, most of which are detailed below in this SOW. Most of these work activities are implemented by NYSERDA’s Operations and Maintenance Contractor. The Contractor will work under NYSERDA’s procedures for routine services and will work in conjunction with NYSERDA to develop plans for non-routine services.

II. Program Requirements

A. Range/Scope of Services to be Provided

The specifics of the operations and maintenance services to be performed by the awarded firm (the “contractor”) under this RFP are described in the attached Scope of Work (Attachment A, Sample Agreement Statement of Work). The contractor shall designate a 24 hour a day, seven day a week, 365 day per year contact point that can respond to off-normal calls and requests. The activities covered under this Scope of Work shall be performed in accordance with Attachment B, *Safety, Training, and Handling of Chemicals and Waste* and all other applicable plans and procedures listed in Attachment C, *Applicable Operations and Maintenance Plans and Procedures* including Attachment C includes the following: *Geomembrane Cover System Inspection Procedure (OPS007)*

- *Vegetation Control Procedure (OPS 009)*
- *WNYNSC Perimeter Fence Maintenance Procedure and Deer Hunting Procedure (OPS010)*
- *Snow Removal Procedure (OPS011)*

- *SDA Electrical System Inspection and Maintenance Procedure (OPS013)*
- *Reference Elevation Surveys (ENV 508)*

Other Services that may be required include:

- On-Demand Maintenance and Support Services
- Emergency Response Services
- Large Construction Projects

Services will be agreed upon in either On-Demand Job Orders or Task Work Orders as needed. The contractor shall place and manage subcontracts as needed to complete the activities included in each task work order. The contractor will provide Hazardous Waste Operations (HAZWOPER) qualified workers (including subcontractors) as necessary to perform work. All other health and safety training required by the WVSMP (Radiation Worker I or II, General Employee Training, NYSERDA SDA and Retained Premises Site Specific) will be provided, and will be coordinated by the cognizant NYSERDA Project Manager.

B. Proposer Qualifications

NYSERDA seeks proposals from individuals or firms with operations and maintenance expertise that have:

- Relevant skills and training for contractor leadership and field staff including, but not limited to, relevant degrees, training certificates, and other accredited education and experience focused on, but not limited to, project management, general contracting, heavy equipment use and general maintenance or property management. Relevant experience may also include previous general contracting and property maintenance including activities such as landscaping, snow removal, fence maintenance and general building maintenance.
- Relevant skills also include administrative experience including strong organizational skills, data entry, time management, customer service, and similar skills relevant to administering a contract of this nature.
- Quality, availability, and depth of the resources and support systems identified and necessary to perform maintenance and construction services in a timely manner.
- Soundness of the approach to provide the required services and equipment needed to provide required services.
- Breadth of prior and current experience in providing site maintenance and construction services appropriate to this solicitation.
- Ability to provide the necessary resources to conduct high quality work in a timely manner.

Resources necessary to provide the full breadth of services would include sufficient organizational resources to provide the services described in the Scope of Work.

C. Division of Responsibilities

NYSERDA shall provide the following:

- Radiation safety support for all applicable on-site field work.
- Site-specific training for all contractor employees to allow unescorted access to the SDA.

The Contractor shall provide the following:

- 24-Hour Hazardous Waste Operations and Emergency Response trained personnel for all on-site field work
- Task-Specific Safety Documentation meeting the requirements of the WVSMP safety program for each on-site task not covered by an existing procedure
- Equipment needed to perform tasks outlined in the attached Scope of Services
- Experienced supervisory and field staff

III. Proposal Requirements

A. Proposal Content

Proposals should not be excessively long and shall adhere to the page limits identified below. Unnecessary attachments beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal. Each page of the proposal should state the name of the proposer, the RFP number and the page number.

Proposals shall confirm the proposer's ability to perform the operation and maintenance services described in this solicitation, including identification of relevant staff (leadership and field staff as appropriate), relevant experience and/or educational credentials including any relevant certifications, and shall include labor grade utilization, rates, overhead (including a description of items included as overhead, including on equipment and materials), and profit. The proposal must identify how the contractor will provide all the required services and, if applicable, may suggest ways to improve or enhance the means by which the tasks are completed. The means shall include staffing, equipment and scheduling.

A complete response to this Request for Proposals shall include two parts:

Part I - Technical and Management, addressing all elements identified above in the below format:

- Background/Objectives (one-page maximum).
- Services to be provided (three-page maximum).
- Management Plan and Schedule for the Work (eight-page maximum).
- Current Qualifications Statement that clearly presents the proposer's education, training and experience relevant to the Scope of Work and pertinent references.
- Plan for meeting the contract participation goals for minority and women-owned business enterprises as identified in Exhibit A, the Sample Agreement (one-page maximum).
- Letters of commitment from all participating sub-contractors (if applicable).

Part II - Cost and Disclosures, addressing all elements identified above in the below format:

- :
- Cost proposal including hourly rates, rental fees, and any other applicable costs or rates as described above.

All proposers will also be required to fill out the Proposal Checklist, provided in the Salesforce application portal, including vendor responsibility questions and information on past engagements with NYSERDA.

Proposing firms shall identify if they are a New York State-certified Minority- or Women-Owned Business.

In compliance with §139-j and §139-k of the State Finance Law (see Section V, General Conditions below for additional information), proposers will be required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility.

IV. Proposal Evaluation

Proposals that meet solicitation requirements will be reviewed by a Scoring Committee using the Evaluation Criteria below, listed in order of importance. At NYSERDA's discretion, proposers may be requested to interview with all or part of the Scoring Committee to address any potential questions or clarifications indicated by the proposals. Proposers will be notified if they are requested to attend an interview. NYSERDA reserves the right to accept or reject proposals based on the following factor(s):

- The degree in which pricing and hourly rates are in line with the rest of the market
- The geographic location of the resources identified or potentially involved with the work
- Previous experience at the WNYNSC

Proposals will be reviewed by a Scoring Committee using the following Evaluation Criteria:

1. Technical and Management Criteria:
 - Quality and depth of the resources and support systems necessary to perform services.

- Qualifications of the firm including the educational background, training and experience of key personnel. Key personnel include field, technical, and supervisory and/or project management staff.
 - Ability to provide the necessary resources to conduct high quality work in a timely manner.
 - Breadth of prior and current experience in providing operational and maintenance program support services.
 - Approach to provide the required services
 - References pertinent to the Statement of Work
2. Cost Criteria:
- The reasonableness of the proposed hourly rates, overhead, profit, and rental rates
 - Efficiencies and cost savings identified by proposer

Interviews may be scheduled to further assess the qualifications of the proposers.

V. GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

New York Executive Law Article 15-A - NYSERDA is required under the law to promote opportunities for maximum feasible participation of certified minority-and women-owned business enterprises and the employment of minority group members and women in the performance of NYSERDA contracts. The MWBE participation goals and obligations of the selected Contractor are set forth in Attachment E.

Diversity Practices - NYSEERDA has determined, pursuant to New York State Executive Law Article 15-A, that the assessment of the diversity practice of respondents to this procurement is practical, feasible, and appropriate. Accordingly, respondents to this procurement shall be required to include as part of their response, as described in Section III herein, Attachment D, Diversity Practices Questionnaire.

New York State Executive Law Article 17-B, NYSEERDA recognizes its obligation under the law to promote opportunities for maximum feasible participation of certified service-disabled veteran-owned business enterprises (SDVOB) in the performance of NYSEERDA contracts. Executive Law Article 17-B and its associated regulations require, among other things, that NYSEERDA establish goals for maximum feasible participation of New York State Certified SDVOBs in the performance of New York State contracts. The SDVOB participations goals and obligations of the selected Contractor are set forth Attachment F, SDVOB Solicitation Documents.

State Finance Law sections 139-j and 139-k - NYSEERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSEERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSEERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSEERDA, the prospective contractor must also certify to NYSEERDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSEERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Heavy Duty Diesel-Powered Vehicles – NYSEERDA is required to comply with 6NYCRR Part 248, Best Available Retrofit Technology (BART) for Heavy Duty Diesel-Powered Vehicles (HDDVs). HDDVs owned, operated, or leased by prime contractors, working on behalf of regulated entities, are also subject to BART. A prime contractor is one that contracts directly with the regulated entity (i.e. does not apply to subcontractors). All agencies will be requiring prime contractor compliance with 6 NYCRR Part 248 within their contracts.

Contract Award - NYSEERDA anticipates making one award under this solicitation. NYSEERDA anticipates a contract duration of five years, unless NYSEERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSEERDA may request additional data or material to support applications. NYSEERDA will use the Sample Agreement to contract successful proposals. NYSEERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSEERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSEERDA expects to notify proposers in approximately eight weeks from the proposal due date whether their proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting the primary contact for this solicitation. NYSEERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSEERDA agreement.

Accessibility Requirements - If awardees from this solicitation will be posting anything on the web, or if the awardee will produce a final report that NYSEERDA will post to the web, the following language must be included. NYSEERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF,

Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see [NYSERDA's Accessibility Requirements](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Joint Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw

or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSEDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSEDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSEDA may conduct due diligence on some or all proposals based on NYSEDA's current guidelines at the time of a review. NYSEDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSEDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSEDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSEDA's sole discretion and are final decisions. NYSEDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Advanced Nuclear Request for Information (RFI 5946)

Responses Preferred by: December 16, 2024

The purpose of this Request for Information (RFI) is to identify entities either already pursuing, or interested in, a potential role in advanced nuclear energy technology development in New York, and to request details on such roles. This will help to support consideration of any next steps New York State may take in this regard.

Potential Respondents: Stakeholders interested in using advanced nuclear solutions to serve their energy needs, supply chain entities, (potential) host communities, workforce entities, project developers, financing/funding entities and those working on research and development. This RFI is not aimed at input regarding nuclear power and its role in New York as such. NYSERDA has commenced a process to collect that feedback, as well as views on a range of issues related to nuclear energy, separately through a public comment process relating to the Draft Blueprint for Consideration of Advanced Nuclear Energy Technologies.¹

As regards advanced nuclear generation projects, consideration in this RFI is restricted to New York Independent System Operator (NYSISO) Control Area Load Zones A-F.² Consideration of all other aspects addressed here (such as energy consumers, supply chain, workforce) extends to all parts of New York State.

We encourage responses to this RFI by **December 16, 2024** through NYSERDA's [Online Portal](#). We will accept submissions thereafter as well.

I. Introduction

The Climate Leadership and Community Protection Act (Climate Act) has set out the key targets and timeline for decarbonization in New York. In September 2024, the Future Energy Economy Summit put forward actions and needs associated with advancement of a decarbonized grid in New York State, acceleration of renewable energy development, as well as advancement of the technologies that will be necessary to enable a deeply renewable grid. Additionally, new economic development opportunities in the State in high tech manufacturing and Artificial Intelligence (AI) as a result of federal laws and policies are increasing the need to look at new technologies that can supplement renewable energy while

¹ The Draft Blueprint is available here: <https://www.nyserderda.ny.gov/ny/Future-Energy-Economy-Summit>. The comment period for the Draft Blueprint closed on November 8, 2024. Further opportunities for public comment on matters raised in the Draft Blueprint will be made available in due course.

² See https://www.nyiso.com/documents/20142/1397960/nyca_zonemaps.pdf/8c3807e1-5bab-ab44-3c71-2c8e61b5748b

providing the power quality and density necessary to support that economic growth and advancing New York's energy and environmental goals. New York is already well along the path to unlock the contribution from a wider range of energy efficiency and renewable energy solutions towards achieving these targets. Consideration of action in respect of other clean energy technologies, including advanced nuclear energy technologies, has now commenced at multiple levels, including through:

- New York's State Energy Plan, which commenced in September 2024 and will address all parts of the New York energy sector;³<https://energyplan.ny.gov/>
- The Public Service Commission proceeding CASE 15-E-0302 – Proceeding on Motion of the Commission to Implement a Large-Scale Renewable Program and a Clean Energy Standard,⁴ which includes consideration of the target of zero emissions in the electricity sector by 2040, as set out in the Climate Act; and
- The Draft Blueprint for Consideration of Advanced Nuclear Energy Technologies (as referenced above), published by NYSERDA in September 2024.

These processes will take time, and require – in particular as regards new nuclear energy – careful assessment not only of the opportunity for advanced nuclear technologies to make a potentially significant contribution towards New York decarbonization needs while at the same time boosting economic development, but also of the risks and challenges, ensuring that any new nuclear development would responsibly manage and address concerns such as around siting, safety, community interests, and waste.

At the same time, important developments are also underway outside New York. Other states and jurisdictions are already starting to develop new nuclear development projects. The federal government is developing programs that offer potentially significant levels of support in particular to states that act quickly. Market forces are teaming large power and industrial heat users with dedicated nuclear generation development. New York must be ready to leverage and respond to these opportunities as soon as possible where they make sense.

Within this context, this RFI invites any entities considering developing projects related to nuclear energy in New York or with a direct potential interest in such projects to identify themselves and provide initial information on their expected or potential level and type of involvement. This includes energy consumers seeking advanced nuclear solutions (users of large electric load, industrial heat, hydrogen, etc.), (potential) host communities, financing/funding entities, nuclear generation project developers, those operating in the supply chain and workforce development sectors that would contribute to the development and operation of nuclear projects, and those interested in advancing the nuclear industry through various research and development areas.

As regards nuclear power generation projects, consideration in this RFI is restricted to NYISO Zones A-F,⁵ though consideration of all other aspects addressed here (e.g., energy consumers, supply chain, workforce) extends to all parts of New York State.

II. Responding to this RFI

This RFI will remain open, and responses may be submitted, until further notice. However, **responses are preferred and encouraged by December 16, 2024**, in order to support timely consideration and appropriate follow-up.

The RFI is also posted on this website for public access: [Current NYSERDA Opportunities](#). Any updates or modifications will be posted at this website.

Responses to the RFI should provide the information listed in Section IV below and should be submitted through NYSERDA's [Online Portal](#). The portal enables responses to be submitted as files in .docx or .pdf format. Responses may alternatively be submitted by regular mail to: Alyse Peterson, NYSERDA, 17 Columbia Circle, Albany, NY 12203.

NYSERDA may reach out to respondents to seek clarifications as well as to pursue follow-up dialogue on the issues raised in responses.

If you have technical questions regarding this RFI, please contact NuclearRFI@nyserda.ny.gov.

III. Content of Response

Responses should be concise and only address the areas/ questions below where the respondent has a particular interest. Please limit your response to 10 pages at most.

The following information and items should be included in every response to this RFI:

- Respondent's name, affiliation, title, and primary contact information.
- Identify and provide general background about your organization, as relevant to this RFI.
- The RFI question number(s) to which responses are provided.

Confidentiality Note: NYSERDA does not intend to publish responses. However, if you believe that portions of your submission meet the exceptions for disclosure set forth in the Freedom of Information Law (FOIL), specifically, NY Public Officers Law section 87(2), please mark them "Confidential" or "Proprietary" and provide the justification required by law with your submission. NYSERDA will process such requests under the procedures included in FOIL (NY Public Officers Law Article 6) and NYSERDA's FOIL regulations as detailed below. FOIL includes an exception from disclosure under section 87(2)(d) for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." see NY Public Officers Law section 89(5) and the procedures set forth in 21 NYCRR Part 501.

IV. Information Requested

Below are a series of questions for consideration. Respondents are not required to address all questions or subject areas. Respondents should focus on questions relevant to them. To the extent respondents have already engaged with NYSERDA on any of the issues raised below, while responses may be concise as appropriate, responses are still requested to enable NYSERDA to consider a consistent level of initial input from all respondents. To the extent a respondent has already responded to any of the below questions in response to the draft Blueprint for Consideration of Advanced Nuclear Technologies

published on September 5, 2024, feel free to refer to such response. Please see the note in section III above regarding marking of submissions as confidential.

Electric Load Energy Consumers Seeking Advanced Nuclear Solutions

1. Are you an entity (i) considering establishing or expanding operations in New York that would imply significant levels of new load, for which you are considering using advanced nuclear energy technologies, or (ii) considering transitioning current operational load in New York to advanced nuclear energy technologies? If so:
 - Please summarize your (expected) needs as regards load/capacity and timeline;
 - Please summarize the factors that influence your choice of technology option between advanced nuclear energy technologies or other potential sources of power;
 - Please summarize any steps you may have already taken to pursue the option of advanced nuclear energy technologies to serve your load needs in New York, such as establishing links with advanced nuclear power plant developers or narrowing down a preferred nuclear technology option;
 - Please indicate what role New York State should play, including facilitating partnerships with developers and other relevant partners;
 - Please indicate the extent to which your entity currently operates or is based in New York or in other states/ overseas. To the extent you are not currently (fully) based in New York, please indicate what potential you see for your company to expand your operation in, or move your operation to New York, depending on the level of nuclear deployment that New York might decide to pursue. Please indicate whether this is a conversation your company would be interested in pursuing in more detail with New York State.

Consumers of Other Energy Applications Seeking Advanced Nuclear Solutions

2. Are you an entity considering establishing, transitioning, or expanding operations in New York for which you are considering using nuclear energy to produce industrial heat, hydrogen, or other applications? If so:
 - Please summarize your (expected) project, use case and timeline;
 - Please summarize the factors that influence your choice of nuclear energy for this project;
 - Please summarize any steps you may have already taken to pursue the option of nuclear energy to serve your needs in New York, such as establishing links with nuclear energy developers or narrowing down a preferred nuclear technology option;
 - Please indicate what role New York State should play, including facilitating partnerships with developers and other relevant partners.
 - Please indicate the extent to which your entity currently operates or is based in New York or in other states/ overseas. To the extent you are not currently (fully) based in New York, please indicate what potential you see for your company to expand your operation in, or move your operation to New York, depending on the level of advanced nuclear energy technology deployment that New York might decide to pursue. Please indicate whether this is a conversation your company would be interested in pursuing in more detail with New York State.

Supply Chain

3. Are you an entity that either produces or supplies products, services, or components that would be needed for the advanced nuclear energy industry and/or design, development, fabrication, construction, operation or maintenance of advanced nuclear energy projects in New York? If so:
- Please briefly describe the aspect of the supply chain your company operates in, the products/services provided, level of current activity/sales in the market, number of employees, key supply chain partners, and any other relevant information.
 - Please indicate the extent to which your entity currently operates or is based in New York or in other states/ overseas. To the extent you are not currently (fully) based in New York, please indicate what potential you see for your company to expand your operation in, or move your operation to New York, depending on the level of nuclear deployment that New York might decide to pursue. Please indicate whether this is a conversation your company would be interested in pursuing in more detail with New York State.

Host Communities (for Nuclear Reactor or Supply Chain Project)

4. Are you a municipality, economic development organization, or community organization either (i) serving a community potentially interested in hosting a new advanced nuclear reactor or supply chain project, or (ii) serving a community that you believe is or could be under consideration by developers as a potential host site for a new advanced nuclear reactor or supply chain project? If so:
- Please provide a summary describing your organization and identify the community (town or otherwise) with regard to which you are responding.
 - Please summarize the view of your organization and the spectrum of views you believe exists in the community you are serving with regard to new advanced nuclear development in the community in question. Please indicate in particular:
 - o What potential benefits for your community you see, or what benefits you believe the community would require in order to be supportive;
 - o Any concerns your organization or the community it serves has, as well as what it would take to address such concerns.
 - Please identify and describe any potential properties or sites in the community in question, including brownfield sites, that may be suitable for hosting a new advanced reactor project or supply chain project. Please include acreage, proximity to power infrastructure, proximity to any existing thermal load or manufacturer, and any other information you feel will be useful in this context.
 - Please indicate what type of engagement, information or other support New York State should offer to your organization and the community it serves in taking forward nuclear development.
 - If you know or believe that a specific new advanced nuclear energy technology project may be under consideration for a specific host community, please provide any details that you are aware of in regard to such project, including the site and the parties involved in developing it, and add any more specific views with regard to such project.

Workforce

5. Are you an entity (union, trade school, 2 or 4-year college, university, etc.) that represents or trains (or is interested in training) workforces relevant to design, licensing, construction, operation, or

maintenance of new advanced nuclear energy projects in New York? This can include, but is not limited to trades, STEM fields, and management/administration. If so:

- Please briefly describe the workforce and your role.
- Please describe education, certification, training and apprenticeship programs you provide or are interested in providing. Please include the timeline associated with workforce readiness.
- Please indicate what level of ability or capacity you have to supply this workforce. Please indicate what it would take to create or expand workforce development capacity, and what role New York State should play in this.
- If you are based or are currently providing services only outside New York, please indicate to what extent your services could contribute to a workforce in New York.

Nuclear Energy Generation Projects

6. Consideration of advanced nuclear energy generation projects in this RFI is limited to NYISO Zones A-F. Are you a company / organization / EPC provider / utility / financing entity that is developing, or considering developing (as applicable in partnership with others) one or more new advanced nuclear energy generation project(s) in the area of NYISO zones A-F in New York? If so, please summarize:

- The potential project (size, location, technology, use case, etc., to the extent known) and its stage of development and expected next steps/ timeline;
- Your interest/ involvement/ role;
- Other key partners involved (to the extent known);
- Any role you see for NYSERDA and New York State government as a whole in supporting or working with you on this project, both in the near term and subsequently;
- Please indicate the extent to which your entity currently operates or is based in New York or in other states/ overseas. To the extent you are not currently (fully) based in New York, please indicate what potential you see for your company to expand your operation in, or move your operation to New York, depending on the level of nuclear deployment that New York might decide to pursue. Please indicate whether this is a conversation your company would be interested in pursuing in more detail with New York State.

Research & Development

7. Are you a laboratory, university, or private entity that is either currently performing or interested in performing R&D in the nuclear industry? This can include, but is not limited to materials testing, innovative ways to obtain uranium, or advancing fusion technology. If so, please summarize:

- The R&D being done or planned to be done;
- Any key partners involved (to the extent known);
- Any R&D areas in the nuclear industry that you believe are not being pursued to a sufficient extent.

Disclaimer

The information gathered by NYSERDA will be advisory only and is not binding on any state agency, office, commission, or public authority. Any actions recommended by NYSERDA will be subject to all applicable laws, including procedural, regulatory, and environmental review requirements. This RFI is neither a contract offer nor a request for proposals and does not commit NYSERDA to award a contract, pay any costs incurred in preparing a response, or to procure or contract for services or supplies. Respondents are encouraged to respond to this RFI; however, failure to submit a response will not impact a Respondent's ability to respond to any future competitive solicitation process (if any) for projects, or influence the selection of a service provider going forward or affect its rights and obligations under any applicable laws or in any legal proceeding. NYSERDA reserves the right to discontinue or modify the RFI process at any time, and makes no commitments, implied or otherwise, that this process will result in a business transaction or negotiation with one or more Respondents. All costs associated with responding to this RFI will be solely at Respondents' expense.

Quality and Market Standards Services

Request for Qualifications (RFQL) 5959

\$7,475,000.00 Available

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Proposals Due: April 1, 2025, by **3:00 p.m.** Eastern Time*

The New York State Energy Research and Development Authority (NYSERDA) issued a prior version of this solicitation to establish a pool of qualified service providers to develop and implement quality initiatives in support of several NYSERDA programs and Clean Energy Technologies including:

- The NY-Sun Solar Program
- The Floating PV Adder
- The Energy Storage Program
- The Appliance Upgrade Program
- Other: Broad experience across Renewable Energy, Energy Efficiency and Demand Reduction

NYSERDA is re-issuing this RFQL. The RFQL is not fundamentally changing and applicants who originally applied are welcome to re-submit their original proposal or can submit a new proposal.

Qualified proposers will work with the NYSERDA Quality and Market Standards, (QMS) team to conduct field inspections, photo inspections and desk review services, implement existing and upcoming standards (technical, installation, data, and quality standards) and deliver market-based quality assurance solutions. Proposers qualified under this solicitation will be established as a “Quality Service Provider” (QSP), will be instrumental in helping NYSERDA make quality a competitive determinant to drive contractor performance, build consumer and investor confidence and accelerate adoption of clean energy solutions in New York.

Interested proposers may submit their qualifications to support either one or a combination of all Service Categories and may submit bids for multiple program/technology areas:

Service Category 1: Field Inspections, Photo Inspections and Desk Review Services

Service Category 2: Technical Assistance and Standards Development Support Services

Service Category 3: Data Collection and Management System Support Services

NYSERDA anticipates the qualification of one or more proposers for each Service Category. Awards for each Service Category, except NY-Sun Solar Program, are anticipated to be for five (5) years. Awards for the NY-Sun Solar Program is for one (1) year with anticipation that the contract will be extended each year for four (4) additional years. Individual Task Work Orders (TWOs) will be assigned with a specified period of performance determined by NYSERDA based on the task requirements and final scope of work for the program/technologies listed and as new programs are approved. Qualified QSPs will initially be awarded zero-dollar umbrella contracts for all Service Categories.

Service Category 1: Inspection Services will be awarded by program and technology area(s) identified in this solicitation and will be contracted to support one (1) or more geographical regions or statewide.

Service Category 2: NYSERDA will qualify a pool of contractors to provide NYSERDA with diverse technical Quality Assurance (QA) and Quality Control (QC) experience, quality standards and method development and non-standard inspection service experience within the technology area(s) listed in the solicitation.

Service Category 3: NYSERDA will qualify a pool of contractors to provide NYSERDA with diverse technical experience of collecting and performing data management within the technology area(s) listed in the solicitation.

NYSERDA reserves the right to extend and/or add funding should other program funding sources become available. NYSERDA intends to periodically re-evaluate its qualified consultant pool and may reissue this RFQL in whole or in part to expand its qualified consultant pool on an annual or more frequent basis.

Informational Webinar

NYSERDA conducted an **Informational Webinar** on **Tuesday January 7th, 2024, at 11:00 AM** Eastern Time during which NYSERDA reviewed the requirements of this solicitation and answered questions:

Quality and Market Standards RFQL 5959 Solicitation Webinar

To access a recording of the webinar, click on the following link: [Quality and Market Standards RFQL 5959 Solicitation Webinar](#). The Bidders Conference Questions and Answers document can be found on the funding page, under Associated Documents.

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link "[Application Instructions and Portal Training Guide](#) [PDF]" located in the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

No communication intended to influence this procurement is permitted. Technical questions may be submitted by contacting the following:

Amy Kasson-Muzio or Lindsey Miller by email at QMS.Solicitation2025@nyserda.ny.gov

If you have contractual questions concerning this solicitation, contact James Cowman at (518) 862-1090 ext. 3652 or by email jim.solicitations@nyserda.ny.gov

Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsive offeror, and (2) may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal, please refer

to [Section VIII. Proposal Requirements](#). **Please note:** for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. The online proposal system closes promptly at 3 p.m. Eastern Time, files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the “Current Opportunities” section of NYSERDA’s website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

I. INTRODUCTION

NYSERDA's Clean Energy Fund (CEF)¹ is a core component of the State's energy policy designed to achieve a clean, resilient and affordable energy system for all New Yorkers. The CEF reduces the cost of clean energy by accelerating adoption of energy efficiency to reduce load while increasing renewable energy to meet demand. NYSERDA's filings² are designed to complement the related initiatives championed by New York State, including the New York State Public Service Commission's REV regulatory proceeding³ and its Clean Energy Standard proceeding.⁴

NYSERDA has designed the CEF to pursue three long-term outcomes: thriving and self-sustaining clean energy industries able to operate without subsidies; greater levels of private capital invested in energy and jobs in New York; and significant reductions in greenhouse gas (GHG) emissions from the state's energy sector.

NYSERDA's new program approaches are intended to enable NYSERDA to achieve the high-level state policy goals identified in the Climate Leadership and Community Protection Act, CLCPA, which targets net zero carbon emissions. The historic Climate Leadership and Community Protection Act (CLCPA) enacted in July 2019 requires the State to achieve a carbon free electricity system by 2040 and reduce greenhouse gas emissions 85% below 1990 levels by 2050, setting a new standard for states and the nation to expedite the transition to a clean energy economy. The CLCPA will drive investment in clean energy solutions such as wind, solar, energy efficiency and energy storage. Importantly, implementation of the CLCPA will target investments to benefit disadvantaged communities, create tens of thousands of new jobs, improve public health and quality of life and provide all New Yorkers with more robust clean energy choices.

NYSERDA's quality services are designed to help ensure the integrity of the programs funded by NYSERDA. NYSERDA has supported, and will continue to support, third-party field and/or photo inspections and desk review services necessary to assess contractor performance and identify corrective action needed to ensure projected performance and longevity of clean energy technologies and services. These inspection services are currently provided at no cost to New York participants for several legacy programs including, but not limited to, NY-Sun Residential and Nonresidential Program, NY-Sun Commercial / Industrial Program, Retail Energy Storage Program, Large Scale Renewables Bulk Energy Storage Program, Floating PV Adder, and the Appliance Upgrade Program.

¹ Case 14-M-0094 - Proceeding on Motion of the Commission to Consider a Clean Energy Fund; Case 10-M0457 – In the Matter of the System Benefits Charge IV; Case 07-M-0548 – Proceeding on Motion of the Commission Regarding an Energy Efficiency Portfolio Standard; Case 03-E-0188 – Proceeding on Motion of the Commission Regarding a Retail Renewable Portfolio Standard; Case 13-M-0412 – Petition of the New York State Energy Research and Development Authority to Provide Initial Capitalization for the New York Green Bank. Order Authorizing the Clean Energy Fund Framework, issued and effective January 21, 2016.

² As of January 22, 2017, NYSERDA had launched several programs outlined in earlier filing of the Resource Acquisition Transition Chapter of its Clean Energy Fund Investment Plan; additional chapters describing further interventions will follow during 2017.

³ Case 14-M-0101 – Proceeding on Motion of the Commission in Regard to Reforming the Energy Vision. Order Adopting Regulatory Policy Framework and Implementation Plan, issued and effective February 25, 2015.

⁴ Case 15-E-0302, Proceeding on Motion of the Commission to Implement a Large-Scale Renewable Program and a Clean Energy Standard.

II. QUALITY OVERVIEW

NYSERDA seeks to competitively select Quality Service Providers to provide quality services to the technology areas identified in Category 1. NYSERDA intends to establish an additional pool of companies with expertise in the technology areas identified in Category 2 and Category 3, to provide quality services on a Task Work Order basis as new Programs are implemented and as services are needed.

1. **Category 1: Field Inspection, Photo Inspection and Desk Review Services:**

NYSERDA seeks to competitively select qualified service providers to continue inspection services or commence new field and/or photo inspection and desk review services for the following programs:

- [NY-Sun Solar Incentive Programs](#)
 - [Residential and Nonresidential](#)
 - [Commercial / Industrial](#)
 - Floating PV Adder
- [Energy Storage Technologies](#)
 - [Retail Storage](#)
 - [Large Scale Renewable Bulk Storage](#)
- [Appliance Upgrade Program](#)
- Other: Broad Experience across Renewable Energy, Energy Efficiency and Demand Reduction.

Data Systems: Quality Service Providers qualified under Category 1 will use NYSERDA's quality data systems, training will be provided. Current data systems include Salesforce, SharePoint, Site Capture, Tableau and Excel Spreadsheets. These data systems are used to manage inspection related activities including, but not limited to, scheduling, field data collection, photo review data collection, corrective action tracking and reporting functions. Other lower volume Programs will be managed by the Qualified Services Provider using other formats acceptable to NYSERDA.

NYSERDA reserves the right to modify the data systems which the Quality Service Providers will have to comply to the modification.

Anticipated Volume of Work and Geographic Coverage for Service Category 1: There are two (2) geographic regions outlined in *Appendix 1: [Regional Map and Inspection Estimates](#)*.

Field Inspection and Photo Inspection Checklists: Work conducted under Service Category 1 will require the use of inspection checklists which outline the qualitative and quantitative data to be collected for each Program and technology area outlined in *Appendix 2: [Technology Descriptions](#)*. The time to complete field, photo and desk reviews varies by technology area and comprehensiveness of work-scope. Potential bidders should carefully consider the total amount of time required to schedule, travel to inspections, complete inspections and produce reports. Proposers should review *Appendix 3: [Inspection Checklists](#)*, giving attention to each program/technology area of interest.

Reporting: NYSERDA has developed report templates and standard scoring criteria to assist in the creation and issuance of reports to participating contractors. The NY-Sun Residential and Nonresidential and Commercial / Industrial Programs, Energy Storage Programs, Floating PV and Appliance Upgrade Program will use NYSERDA's centralized QA module and reports will be automatically generated based on inspection data recorded. The QSP will be responsible for

producing field and photo inspection reports for all other program/technology areas which are not in a current NYSERDA database, see *Appendix 4-1: Sample Inspection Report – Fail* and *Appendix 4-2: Sample Inspection Report – Pass*. NYSERDA reserves the right to modify the report templates which the quality service providers will have to comply to the modification.

2. Category 2: Technical Assistance and Standards Development Support Services:

NYSERDA seeks to qualify one or more companies who have expertise in the following technology areas to assist with quality standard development, quality assurance and quality control method development, and non-standard inspection services.

- [NY-Sun Solar Incentive Programs](#)
 - [Residential and Nonresidential](#)
 - [Commercial / Industrial](#)
 - Floating PV Adder
- [Energy Storage Technologies](#)
 - [Retail Storage](#)
 - [Large Scale Renewable Bulk Storage](#)
- [Appliance Upgrade Program](#)
- Other: Broad Experience across Renewable Energy, Energy Efficiency and Demand Reduction.

Services funded under Category 2 may include, but not be limited to, successfully implementing quality assurance methods, data standards, technical and installation standards, professional certifications, company accreditation, curriculum development and training as needed to build customer and investor confidence. Specific tasks may include, but not limited to, research current and upcoming standards and methods applicable to the clean energy sector, recommend quality strategies for specific markets, in-field measurement, and verification of applied technical and installation standards, development and deployment of contractor performance ratings, development of quality score cards, and overall support for new market-based quality assurance strategies

3. Category 3: Data Collection and Management System:

NYSERDA seeks to qualify one or more companies who have expertise in the following technology area to assist with maintaining, further development and operating a web-based system; to acquire, store, analyze, and present Performance Data and results from NYSERDA's distributed generation, combined heat and power, and battery electric storage projects.

- [Energy Storage Technologies](#)
 - Data Collection and Management System Support Service

III. RANGE OF SERVICES

NYSERDA seeks qualified proposers for the following three Service Categories requested under this solicitation. Further details regarding requested services are outlined below.

1. Service Category 1: Field Inspection, Photo Inspection and Desk Review

Proposers with expertise in delivering field inspections, photo inspections and desk reviews, and who possess required professional credentials, knowledge of energy efficiency, renewable energy, building science, applicable New York State code, and industry-recognized quality protocols will be

considered for qualification as a “Quality Service Provider” to conduct field and photo inspection and desk review services.

Field inspections are in-person visual inspections of an in-process project or a completed project. Photo inspections are inspections of the photographs used to record the physical conditions of a project. Desk reviews are assessing the project by collecting, organizing and synthesizing the available information of a project.

Inspection services may include non-standard inspections involving post inspection follow-up, administrative or field inspections of flagged projects, and other requested activities at NYSERDA’s discretion. All potential non-standard inspections will be identified by NYSERDA. NYSERDA will approve the preliminary work scope and notify the Quality Service Provider. NYSERDA will then work with the provider to revise the work scope, if necessary, determine the budget, and schedule the specified work. The Quality Services Provider and NYSERDA shall agree to a final work scope and total cost in writing, and no work shall commence without written approval from the NYSERDA Project Manager.

2. Service Category 2: Technical Assistance and Standards Development Support Services

NYSERDA seeks firms to assist NYSERDA in transitioning toward market-based Quality Assurance and Quality Control strategies, researching and recommending the application of existing standards and quality methods to help accelerate market adoption of energy storage, on-site power, energy efficiency and renewable energy technologies. This transition will focus on understanding the needs of prospective consumers, implementing standards for the design, installation and operation of clean energy technologies, workforce credentialing, company accreditation, and sharing quality and performance data with stakeholders. It is anticipated that market-based strategies will highlight the work of high-performing providers, promote competition, increase consumer confidence, encourage investment in high impact practices and technologies and encourage growth in the clean energy sector.

3. Service Category 3: Data Collection and Management System Support Services

NYSERDA seeks firms to assist NYSERDA in performing an analysis of the current Distributed Generation (DG) Integrated Data System and identify areas of possible upgrade and improvement with a goal of improving the system’s functionality and usefulness. The firm will also maintain, further develop, improve integration with other NYSERDA databases and operate a web-based system to acquire, store, analyze, and present Performance Data and results from NYSERDA’s battery electric storage projects.

IV. ANTICIPATED AWARDS UNDER THIS SOLICITATION

NYSERDA anticipates qualifying one or more proposers for each program/technology area. These services may be separately awarded for one or more geographical regions, or statewide (see *Appendix 1: Regional Map and Inspection Estimates*). If the top ranked qualified proposer for a given Region (or statewide) is unable or unwilling to cost-effectively fulfill the requirements of the TWO within the required timeframe, NYSERDA will issue, in whole or in part, at NYSERDA’s discretion, a TWO to the next ranked qualified proposer for the Region (or statewide) and designated program/technology area. NYSERDA strongly encourages proposals from firms with employees located within the identified geographic regions that have the requisite technical skill set and field experience. Proposals that do not include regionally located staff must demonstrate the ability to deliver cost-effective and responsive services to the region (or statewide).

NYSERDA will sign zero-dollar umbrella agreements with all qualified proposers for a period of 5 (five) years and may issue a Task Work Order (TWO) needed under any of the support areas using

the following sourcing options:

- Selecting the highest ranked firm in the support area NYSERDA is seeking services for.
- Issuing a mini bid to all the firms in the support area using evaluation criteria as established for the specific set of services requested.
- Selecting any contractor in the support area – for projects with a funding amount of \$50,000 or less.

When a TWO is assigned in the case of a mini-bid or assigned to a firm with distinguished specialized capabilities, the project manager and the Scoring Committee will include appropriate, articulate and detailed justification for the TWO assignments.

Award Considerations and Restrictions

NYSERDA intends to re-evaluate its qualified consultant pool on an annual or more frequent basis and may reissue this RFQL in whole or in part to expand support as needed.

The specific services and service period awarded to a qualified proposer will depend on NYSERDA needs and the proposer's expertise, rates, staff availability, responsiveness, and overall performance during the service period. Depending on the scope of work and period of planned performance, NYSERDA may issue a TWO directly to a specific qualified proposer or use a mini-bid process to select one from the qualified pool. Deliverables and schedule for each TWO will be established at the time of issuance.

NYSERDA reserves the right to extend and/or add funding should other program funding sources become available.

Anticipated Awards	
<i>Technology</i>	<i>Service Category</i>
NY-Sun	1, 2
Energy Storage	1, 2, 3
Appliance Upgrade Program	1, 2
Other: Broad Experience across Renewable Energy, Energy Efficiency, Building Electrification and Demand Reduction	1, 2
Service Category 1: Field Inspection, Photo Inspection and Desk Review Services Service Category 2: Technical Assistance and Standards Development Support Services Service Category 3: Data Collection and Management System Support Services	

V. SERVICES REQUESTED

1. Service Category 1: Field Inspection, Photo Inspection and Desk Review Services

It is anticipated that field inspections, photo inspections and desk reviews for the NY-Sun Programs, Energy Storage Programs and Appliance Upgrade Program will begin transitioning to the newly qualified proposer under this RFQL beginning summer 2025, with full responsibility beginning July 1st, 2025.

The projected number of inspections required by region are presented in *Appendix 1: Regional Map and Inspection Estimates*.

Successful Proposals. It is anticipated that awards under this Service Category will result in measurable reductions in energy use and carbon emissions in relevant Programs. A successful

proposal will include qualifications and experience that will:

- Promote quality resulting in measurable reductions in energy use and carbon emissions.
- Drive down the amount of Program expenditures needed to achieve a unit of energy savings or carbon reduction.
- Increase consumer confidence in clean energy projects and equipment purchases.

Preference will be given to proposals that include qualifications and experience aligned with one or more of the three bullets above. Specific areas subject to proposer qualifications by technology area outlined in *Appendix 2: Technology Descriptions*.

2. Service Category 2: Technical Assistance and Standards Development Support Services

Successful Proposals. It is anticipated that awards under this Service Category will result in quality initiatives that quantitatively drive consumer and investor confidence in clean energy technologies. A successful proposal will include qualifications and experience that will:

- Demonstrate the knowledge and skills necessary to leverage quality interventions to advance the goals of the State Energy Plan / Clean Energy Fund / REV and the Climate Leadership and Community Protection Act improving resilience and reducing greenhouse gas emissions.
- Demonstrate how the market-based quality strategy can be replicated in New York State to achieve goals of the Clean Energy Fund, REV and Climate Leadership and Community Protection Act.
- Have the resources (human and financial) to involve industry, regional and national stakeholders, and consumers to achieve quality goals.
- Promote quality protocols resulting in measurable reductions in energy use and carbon emissions. Support the growth of renewable energy technologies.

Preference will be given to proposals that include qualifications and experience aligned with one or more of the four bullets above. Specific areas subject to proposer qualifications by technology area as outlined in *Appendix 2: Technology Descriptions*.

3. Service Category 3: Data Collection and Management System

Successful Proposals. It is anticipated that awards under this Service Category will result in quality initiatives that quantitatively drive consumer and investor confidence in clean energy technologies. A successful proposal will include qualifications and experience that will:

- Provide an automated means for receipt, processing, and storage of 15-minute interval data from data collection systems at DG Sites, through Data Collectors.
- Allow NYSEERDA to enter DG Site specific project characterization data and information using an easy to use, ADA compliant, secure password protected, web-based interface over the internet.
- Demonstrate how the website shall be constructed so that it is accessible to users with disabilities and/or impairments and conforms to the guidelines outlined in NYS policy “NYS-PO8-OO5 Accessibility of Web-Based Information and Applications Compliance Reporting”, found at: <https://www.its.ny.gov/document/accessibility-web-based-information-and-applications-compliance-reporting>.
- Demonstrate how automated data validity checking and flagging of questionable data will be provided.

- Demonstrate how the website server, databases, and applications shall be constructed so that it is secured against unauthorized threats and complies with guidelines outlined in NYS policy “NYS-S15-OO2 Enterprise Vulnerability Scanning”, found at: <https://www.its.ny.gov/document/vulnerability-scanning-standard>. The website will be scanned for vulnerabilities by the NYSERDA Information Security Officer (ISO) prior to publishing. The website will not be published until the vulnerability scan has been approved by the NYSERDA ISO. The Contractor will be responsible for applying security patches as they become available. The Contractor will notify the NYSERDA Project Manager in the event new software features/functionality have been added to the website so that it may be scanned for vulnerabilities. The Contractor will be responsible for remediating any vulnerabilities. Provide automatically generated DG system performance reports as web pages; The Contractor will include the use of a web analytics package, such as Google Analytics, or an equivalent web analytics package. Monthly high-level web traffic reports will be provided to the NYSERDA Project Manager, which will at a minimum, include User-sessions, Most visited pages, Least visited pages, Top entrance pages, Top Exit pages, Top Traffic Sources, Top Search Terms leading visitors to the website.
- The website is required to meet New York State and/or NYSERDA branding guidelines, including the addition of the NYS Global Navigation, NYS Universal Navigation, NYS Global Footer, and NYS Universal Footer. Resources for these common elements can be found on the GitHub website at: <https://github.com/ny>. Access to some features will require elevated permission, which can be requested by the Contractor to the NYSERDA Project Manager who will work in conjunction with NYSERDA Web Operations and New York State Information Technology Services (ITS) to establish credentials.
- The contractor will create the website using current best practices in both semantic HTML creation and search engine optimization, utilizing a “responsive” design that allows the website to gracefully scale to high-definition smart television, desktop computers, tablets, and smart phones. The website will be compatible with the current and two-previous versions of mainstream web browsers including, but not limited to: Microsoft Internet Explorer, Microsoft Edge, Google Chrome, Apple Safari, and Mozilla Firefox.
- Since data collected, analyzed and presented by the DG Integrated Data System may be used as the basis of production payments for many of the DG projects, the Contractor shall implement a data quality assurance/quality control (QA/QC) protocol. This protocol shall include automated and manual inspection of received data and data posted to the database and website for completeness and reasonableness; procedures for contacting appropriate persons and/or entities to inform them of identified problem(s); and follow-up procedures to verify timely resolution.
- The Contractor shall develop and implement an automated backup system which shall, at a minimum, provide for daily incremental backups of Database Files, weekly full backups of Database Files, monthly full backups of all DG Integrated Data System files, and the automated storage of all backup files in at least two (2) different physical locations.
- The Contractor shall provide access to a copy of the most recent full backup of the DG Integrated Data System Files to NYSERDA’s project manager.
- The Contractor shall make improvements to the Hardware and Software Environments as required to accommodate growth in data storage needs and DG Integrated Data System user loads.
- The web and database server(s) shall be hosted, for the period of this Agreement, at secure location(s) with redundant power supplies and redundant Internet access. The database server shall utilize a fault tolerant disk configuration (RAID or other functional equivalent) to ensure data integrity. It will be the Contractor’s responsibility to acquire secure and reliable website hosting, which will be available to users at a minimum of

99.9% of the time during the contract period, exclusive of a scheduled maintenance window (during an agreed-upon window of low-volume traffic, typically between 2am and 5am).

- Have the resources (human and financial) to achieve quality goals.

Preference will be given to proposals that include qualifications and experience aligned with the bullets above. Specific areas subject to proposer qualifications by technology area as outlined in *Appendix 2: Technology Descriptions*.

Proposers qualified under this solicitation will serve this market sector by performing an analysis of the current Distributed Generation, DG, Integrated Data System and identify areas of possible upgrade and improvement with a goal of improving the system's functionality and usefulness. The firm will also maintain, further develop and operate a web-based system to acquire, store, analyze, and present Performance Data and results from NYSERDA's battery electric storage projects.

VI. QUALIFICATIONS

1. General Eligibility Requirements

All proposers, regardless of the Service Category being proposed, must possess the following minimum, basic qualifications:

- Understanding of goals and objectives of the Clean Energy Fund and NYSERDA's mission.
- Exceptional communication skills and ability to manage conflict.
- Demonstrated expertise in appropriate energy efficiency and renewable energy technologies.
- Computer software proficiency in MS Excel, MS Access, MS PowerPoint, MS Word, etc.

2. Eligibility Requirements by Program/Technology Area

The required professional credentials by program/technology area are listed below. Proposers may highlight staff with preferred additional professional qualifications to enhance the proposal.

Service Category 1: Field Inspection, Photo Inspection and Desk Review.

In addition to the minimum general eligibility requirements listed above, proposers responding to Service Category 1 must possess the specified required professional credentials outlined below by program/ technology area and identify such credentials held by proposed staff in *Attachment A: Qualifications Matrix*.

Proposals that do not include staff that collectively meet the general eligibility requirements and required professional credentials for the proposed technology/program area as outlined below must state the timeline for any additional staff to gain the required professional certifications within a three, 3, month period from time starting on July 1, 2025.

NY-Sun Solar Incentive Program

Residential/Nonresidential and Large Commercial / Industrial

Required Professional Credentials

- NABCEP Certified PV Installer, * OR IBEW Journeyman, * OR UL PV Installer Certification
- Three (3) or more years of combined experience installing, designing or inspecting solar PV systems.

Preferred Additional Professional Qualifications

- Professional Engineer (PE)
- Licensed Electrician in region proposed.

Floating PV

Required Professional Credentials

- NABCEP Certified PV Installer, * OR IBEW Journeyman, * OR UL PV Installer Certification
- Three (3) or more years of combined experience installing, designing, or inspecting PV systems

Preferred Additional Professional Qualifications

- Three (3) or more years of combined experience installing, designing, or inspecting floating PV systems
- Professional Engineer (PE)
- Licensed Electrician in region proposed

Energy Storage Technologies

Required Professional Credentials

- Three (3) or more years of combined experience installing, designing or inspecting energy storage systems.

Preferred additional Professional Qualifications

- Professional Engineer (PE)
- Licensed Electrician in region proposed.

Appliance Upgrade Program

Required Professional Credentials

- Three (3) or more years of combined experience installing, designing, or inspecting residential electric equipment (heat pumps, induction cooktops, etc).

Preferred additional Professional Qualifications

- BPI Heating Professional (Heat)
- BPI Air Conditioning and Heat Pump (AC)Professional Engineer (PE)
- Licensed Electrician in region proposed.

Service Category 2: Technical Assistance and Standards Development Support Services

In addition to the minimum General Eligibility Requirements listed above in section VI.1, proposers responding to Service Category 2 are encouraged to identify professional credentials for proposed staff in *Attachment A: Qualifications Matrix* and are required only to describe relevant staff experience in the Personnel Qualifications section of the Proposal. Several broad areas of NYSERDA interest regarding proposer qualifications are generally defined below:

- **Quality Methods:** Quality practices and methods recognized by the industry and make recommendations to promote efficient markets by increasing confidence in clean energy technologies and services in New York State.
- **Market-Based QA Strategies:** Market-based quality assurance strategies will be developed, deployed, and supported through awards under this solicitation in partnership with NYSERDA.

Activities may include researching consumer needs, implementing standards and workforce credentialing, standardizing data sets to share performance data, promoting competition more readily among clean energy providers by publicly sharing key quality and performance attributes (energy saved per square foot, realization rate (actual savings/estimated savings), health and safety, responsiveness, customer satisfaction) anticipated to help drive consumer choice and build customer confidence.

- **Technical Standards:** Building science and technology-specific technical standards, including, but not limited to, standards developed by the following entities listed in alphabetical order: Air Conditioning Contractors of America (ACCA), Association of Energy Engineers (AEE), American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE), Building Commissioning Association (BCxA), Building Performance Institute (BPI), International Ground Source Heat Pump Association (IGSHPA), Passive House, Residential Energy Services Network (RESNET), U.S. Green Building Council (USGBC) Leadership in Energy and Environmental Design (LEED), and others.
- **Installation Standards:** Technology-specific standards for the design, installation and operation of energy efficiency and renewable energy technologies including, but not limited to air-source heat pumps, ground source heat pumps, thermal energy networks, small wind, fuel cells, combined heat and power, anaerobic digesters, home energy monitoring, electric vehicle charging stations and real-time energy management systems.

Service Category 3: Data Collection and Management System

Proposers responding to Service Category 3 must possess the following minimum, basic qualifications:

For any data collected on behalf of NYSERDA, ability to provide clean, coded data in a manner satisfactory to NYSERDA and in a manner consistent with the Open NY Handbook and Open NY Submission Guidelines.

- Ability to apply expert technical report writing and editing skills to all project deliverables.
- Demonstrated expertise in appropriate statistical sampling, analyses and interpretation of various statistical tests associated with survey or other data.
- Ability to quickly develop tactical and cost-effective approaches to evaluation and market research.
- Ability to quickly implement evaluation and market research to assist in planning future activities, as specified by NYSERDA.
- Ability to work with data provided by others (e.g., survey contractor, industry data sources – open and commercially available).
- Statistical software and data visualization expertise with SAS and Tableau are strongly preferred and are currently in use by NYSERDA; other tools for analysis may be considered on an as needed basis where appropriate.
- Web-enabled primary data collection experience with Qualtrics is strongly preferred and is currently in use by NYSERDA.
- Solid understanding and ability to engage in advisement or development of evaluation approaches to meet NYSERDA's evolving needs, as evidenced by current and cited protocols and standards.
- Computer software proficiency in the suite of Microsoft products (Excel, Access, PowerPoint, Word, Teams) and SharePoint is required.

In addition to the minimum general eligibility requirements listed above, proposers responding to Service Category 3 are encouraged to identify professional credentials for proposed staff in *Attachment A: Qualifications Matrix* and are required only to describe relevant staff experience in the Personnel Qualifications section of the Proposal.

VII. CONTRACTUAL ARRANGEMENT AND RESPONSIBILITY

1. Umbrella Agreement

All proposers qualified through this RFQL will enter into zero-dollar value Umbrella Agreements enabling NYSERDA to retain their services for the technology area(s), service category(ies) and service area(s) in which they have been qualified. This Umbrella Agreement will not guarantee any specific amount of work. The amount of work and funding subsequently assigned to each Quality Assurance Service Provider via separate TWO(s) will depend on expertise, the amount of work required, past performance, current workload, and deadline requirements.

The term of retention for each qualified Quality Assurance Service Provider is up to five (5) years at NYSERDA's discretion. From time to time and at NYSERDA's discretion, NYSERDA may reassess its needs with regard to extending or adding additional funding or expanding the qualified consultant pool. should additional program funding become available.

2. Task Work Orders

At NYSERDA's discretion, mini-bid requests may be issued to all qualified providers in a specified program/technology area. These requests will likely include the outline of the scope and deliverables, regional considerations, and other pertinent information needed to develop a sound proposal. Each mini-bid request will require a detailed response from the qualified providers. Mini bids will be reviewed by NYSERDA and a provider will be selected to implement the TWO.

If, following proposal review, but before implementing the TWO, the selected provider is unable to implement the work due to workload, expertise or other similar factor, NYSERDA may select the next-ranked provider to implement the work.

The details of these TWO responses will be consistent with the level of complexity of the proposed project or activity and determined in consultation with NYSERDA but are anticipated to be one - five pages in length. In limited circumstances, during the development of a work scope, NYSERDA may consider partnering and teaming arrangements between qualified consultants and other expert entities as necessary. NYSERDA will not reimburse providers for the cost of preparing TWOs.

In all cases, hourly rates to implement any TWO shall be consistent with those in the general Umbrella Agreement. NYSERDA must review and approve all TWO(s) before implementation.

Service Category 1: Field Inspections, Photo Inspections and Desk Reviews

Proposers qualified through this RFQL to conduct field inspections, photo inspections and desk reviews may be assigned work by technology/program area and Region through separate written TWO(s) as outlined in *Attachment C: Scope of Work for Field and Photo Inspection Services* (Required for Category 1), which will become part of the binding Umbrella agreement between NYSERDA and the Quality Assurance Service Provider.

These TWO(s) may be revised to include a more recent estimated number of projects subject to inspection, regional considerations, and other pertinent information needed to manage inspection activities.

In all cases, standard inspection rates and hourly rates to implement any TWO shall be consistent

with those in the general Umbrella Agreement and must be reviewed and approved by NYSERDA before implementation.

****Please Note: NYSERDA will not reimburse the purchase or rental of tools and equipment or training and certification of staff.***

Service Category 2: Technical Assistance and Standards Development Support Services

Proposers qualified through this RFQL to support quality methods, standards and technical assistance will be assigned work only for the program/technology area for which they are qualified. Projects will be assigned through separate written TWO(s), which will become binding agreements between NYSERDA, and the consultant qualified to perform the work. TWO(s) will either be assigned to the top ranked proposer or may be competitively bid through mini-bid requests within the qualified pools of consultants in the relevant program/technology area.

TWO requests issued by NYSERDA may be fully developed by NYSERDA or may require the qualified consultant(s) to develop a proposed work scope and other key components of the TWO. Fully developed TWO requests issued by NYSERDA shall include a detailed work scope, description of the deliverables required, schedule and budget. Typically, these TWOs will be implemented according to the TWO requests as defined by NYSERDA.

In other cases, TWO requests shall include a description of NYSERDA's needs, but will require a response from the qualified consultant(s) on the specific methods, deliverables, schedule and budget to implement the work. Consultant responses to these types of TWO requests may include, but not be limited to:

- Goals and objectives of the project.
 - Approach that will be taken outlined by tasks.
 - Identification of measures and ability to track project success.
 - Any relevant background information.
 - Defined deliverables.
 - Communication plan to facilitate information sharing with NYSERDA (e.g., weekly meetings, status reports, etc.).
 - Project schedule.
 - Names and titles of individuals to work on the project.
- Total not-to-exceed cost of the project, including a breakout by task and by title, hourly rate, hours, and non-labor costs.

****Please Note: NYSERDA will not reimburse the purchase or rental of tools and equipment or training and certification of staff.***

Service Category 3: Data Collection and Management System

Proposers qualified through this RFQL will support maintaining, further development and operating a web-based system; to acquire, store, analyze, and present Performance Data and results from NYSERDA's distributed generation, combined heat and power, and battery electric storage projects program/technology area and Region through separate written TWO(s). Proposers will be assigned work only for the program/technology area for which they are qualified.

Projects will be assigned through separate written TWO(s), which will become binding agreements between NYSERDA, and the consultant qualified to perform the work. TWO(s) will either be assigned to the top ranked proposer or may be competitively bid through mini-bid requests within the qualified pools of consultants in the relevant program/technology area.

TWO requests issued by NYSERDA may be fully developed by NYSERDA or may require the qualified consultant(s) to develop a proposed work scope and other key components of the TWO. Fully developed TWO requests issued by NYSERDA shall include a detailed work scope, description of the deliverables required, schedule and budget. Typically, these TWOs will be implemented according to the TWO requests as defined by NYSERDA.

In other cases, TWO requests shall include a description of NYSERDA's needs, but will require a response from the qualified consultant(s) on the specific methods, deliverables, schedule and budget to implement the work. Consultant responses to these types of TWO requests may include, but not be limited to:

- Goals and objectives of the project.
- Approach that will be taken outlined by tasks.
- Identification of measures and ability to track project success.
- Any relevant background information.
- Defined deliverables.
- Communication plan to facilitate information sharing with NYSERDA (e.g., weekly meetings, status reports, etc.).
- Project schedule.
- Names and titles of individuals to work on the project.
- Total not-to-exceed cost of the project, including a breakout by task and by title, hourly rate, hours, and non-labor costs.

****Please Note: NYSERDA will not reimburse the purchase or rental of tools and equipment or training and certification of staff.***

3. Contractor Responsibility

Upon selection through this RFQL and upon agreement and approval of any TWO(s), the qualified proposer shall be responsible for the following:

- Demonstrating value-added, timely completion of TWOs that align with the requirements and qualifications described in **Section III: Range of Services** and **Section V: Services Requested**.
- Keeping NYSERDA informed regularly on the progress of assigned work, including meeting with NYSERDA staff on a periodic basis, as needed.
- Submitting deliverables to NYSERDA for review and approval in accordance with the timeline outlined in the TWO.
- Providing required documentation of expenditures by task when seeking reimbursement.
- Ensuring the effort is based on the following principles:
 - Objectivity, fairness, and balance in terms of the types of data collected; only those data deemed necessary for quality assessment shall be collected and reported.
 - Sound methodology, credible data and analysis, adherence to professional standards.

4. NYSERDA's Responsibility

Designated NYSERDA project managers will be responsible for overseeing and managing TWOs

undertaken by qualified proposers, including but not limited to reviewing, commenting and approving tasks and subsequent deliverables; coordinating with program staff and interested external stakeholders; promoting coordination among service providers qualified for each Service Area and across all program/Technology areas, as appropriate; assisting in the presentation and dissemination of findings; and reviewing and approving invoices promptly.

VIII. Proposal Requirements

All Proposals should be responsive to the range of services presented in **Section III: Range of Services** and **Section V: Specific Services Requested** as relevant to the program/technology area proposed. If proposers are responding to more than one Service Category and/or technology area and submitting a single proposal; the proposal must be organized with a separate section for each Service Category and/or technology area.

Unnecessary attachments beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal.

1) Cover Letter (1 page)

Proposers shall submit a cover letter on company letterhead that:

- References RFQL 5959
- Identify each specific Service Category(ies) and technology area(s) proposed
- Summarizes the proposer's ability to perform such services
- Is signed by a person with authority to enter into a contract with NYSERDA

2) Table of Contents (1 page)

Proposers shall present a table of contents that outlines the section and page number for each Service Category and technology area proposed. Proposals will be evaluated and scored separately for each Service Category and technology area; therefore, they must be organized with a separate section for each Service Category and technology area.

A. Service Category 1 Proposals: Field and/or Photo Inspections and Desk Review shall be organized with a separate section for each technology area (i.e. Proposers may respond to one or more technology areas). Each section must include the items listed below, regardless of whether they have been presented in another section:

- Attachment A: Qualifications Matrix
- Attachment B-1: Bid and Rate Sheet (Required for Category 1)
- Attachment C: Scope of Work for Field and Photo Inspection Services (Required for Category 1)
- Overall Experience and Capabilities
- Personnel Qualifications
- Cost Proposal

B. Service Category 2 Proposals: Technical Assistance and Standards Development Support Services shall be organized by the technology area outlined in Section II – Category 2 of the solicitation (i.e. proposers may respond to one or more technology areas). Each section must include the items listed below, regardless of whether they have been presented in another section:

- Attachment A – Qualifications Matrix
- Attachment B-2: Project Personnel and Rates Form (Required for Category 2 and 3)
- Overall Experience and Capabilities
- Personnel Qualifications

- Cost Proposal

C. Service Category 3 Proposals: Data Collection and Management System Support

Services shall be organized by the technology area outlined in Section II – Category 2 of the solicitation (i.e. proposers may respond to one or more technology areas). Each section must include the items listed below, regardless of whether they have been presented in another section:

- Attachment A – Qualifications Matrix
- Attachment B-2: Project Personnel and Rates Form (Required for Category 2 and 3)
- Overall Experience and Capabilities
- Personnel Qualifications
- Cost Proposal

3) Overall Experience and Capabilities (2-4 pages)

For each proposed technology area, proposers must describe their expertise and ability to deliver services. This should include the aggregate number of years working in this area and a summary of at least one, and no more than three, similar award(s). These summaries must also include the amount of the award, description of the deliverables, project references and should be no more than one page in length. Firms with NYSERDA experience must identify a NYSERDA staff reference for those projects.

4) Personnel Qualifications (1-3 pages; résumés may be placed in an appendix and are not included in this page limit)

For each proposed technology area, proposers must indicate the relevant qualifications for proposed personnel listed in *Attachment A: Qualifications Matrix*. Proposers must also identify the project manager within their firm who will serve as the single point of contact as well as all personnel to be involved with providing services under this RFQL and their roles. Proposers must describe the accomplishments, experiences, and expertise of all individuals comprising the proposal. Proposers must include one-page résumés that highlight recent experience of all individuals who will be directly involved in providing services. These may be compiled in an appendix to the proposal.

5) Cost Proposal (1 page) Proposers must provide a cost proposal per the requirements for Service Categories 1, 2 and 3.

- A. Service Category 1: Field and/or Photo Inspections and Desk Review** – Proposers must complete *Attachment B-1: Bid and Rate Sheet (Required for Category 1)* for each proposed technology area. The worksheet requires submission of a total cost per Inspection Type. To aid in determining total cost per inspection, NYSERDA has provided a list of qualitative and quantitative data collected during a standard field inspection for various technology areas in *Appendix 3: Inspection Checklists*.

The cost proposal section for Service Category 1 should include all assumptions and calculations (detailed cost breakdown) for all bids entered by Inspection Type. The total bid price shall include all administrative, travel and other expenses incurred in carrying out the standard inspection requirements of this solicitation. It is expected that all inspection costs including scheduling, project information gathering, project documentation analysis, travel, field data collection, inspection reporting, management oversight and approvals and routine contract status meetings with NYSERDA are included in the proposed total cost per inspection.

Proposers must agree to the tasks defined in *Attachment C: Scope of Work for Field and Photo Inspection Services (Required for Category 1)* as these requirements will serve as the Statement of awards granted under the field and/or photo inspection and desk review services. Any exception

must be stated clearly in the Proposal. Electronic submission of redlined version of Attachment C is acceptable.

Please Note: Any annual escalation rates must be identified in the proposal for up to a five-year contract term.

- B. **Service Category 2: Technical Assistance and Standards Development Support Services** - Proposers must complete *Attachment B-2: Project Personnel and Rates Form (Required for Category 2 and 3)* for each proposed technology area. Proposers must submit the name, title, and fully burdened hourly salary range for everyone in the proposal who will perform the work as outlined in the respective section of this solicitation (**Section III: Range of Services** and **Section V: Services Requested**).
- C. **Service Category 3: Data Collection and Management System Support Services** - Proposers must complete *Attachment B-2: Project Personnel and Rates Form (Required for Category 2 and 3)* for each proposed technology area. Proposers must submit the name, title, and fully burdened hourly salary range for everyone in the proposal who will perform the work as outlined in the respective section of this solicitation (**Section III: Range of Services** and **Section V: Services Requested**).

NYSERDA is not requiring proposers to estimate travel or other direct costs as part of proposals for Service Categories 2 and 3 but will allow for reasonable cost reimbursement for these direct costs as defined in the TWOs on an as needed basis. However, NYSERDA will not reimburse the purchase or rental of measurement tools and equipment or training and certification of staff.

Please Note: Any annual escalation rates must be identified in the proposal for up to a five-year contract term. As NYSERDA is employing a competitive process for this selection, any additional adjustments for inflation, or otherwise, will not be entertained after proposal submission for purposes of the successful proposer(s) selected for a zero-dollar Umbrella Agreement, for the term of the Agreement.

6.) Submittal

To be eligible for selection under this RFQL, proposers must submit a complete bid package and agree to the terms and requirements of this RFQL. Proposers will not be reimbursed by NYSERDA for costs associated with the preparation of their proposals. All Proposals submitted under this solicitation become the property of NYSERDA.

Proposers may submit electronically per the requirements outlined on page 2 of this RFQL and described in the NYSERDA Solicitation User Guide.

IX. Proposal Evaluation

1. Evaluation Process

Proposals that meet the requirements described in Section VIII: Proposal Requirements of this RFQL, and where proposed staff meet the general eligibility requirements described in Section VI: Qualifications, Section A will be reviewed by a scoring committee consisting of NYSERDA staff and selected outside reviewer(s).

2. Evaluation of Category 1: Field and/or Photo Inspection and Desk Review

Proposals for this Service Category must include staff that collectively hold the required professional credentials for the proposed technology area as outlined in Section VI: Qualifications, Section B. Proposals that do not meet these requirements will be deemed non-responsive and will not be considered.

The scoring committee will evaluate all qualified Proposals for Service Category 1 separate from those proposed under Service Category 2 and Service Category 3. Each proposal section (by technology area) will be scored and ranked independent from other technology areas. Proposals that meet solicitation requirements will be reviewed by a Scoring Committee using the Evaluation Criteria below. At NYSERDA's discretion, proposers may be requested to interview with all or part of the Scoring Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview.

Evaluation Criteria

A. Responsiveness to the Solicitation (Total Points – 25)

- 1) The proposer clearly demonstrated an understanding of the major objectives of the RFQL.
- 2) Proposer executed all Proposal Requirements fully.
- 3) Proposal itself was well written and comprehensive.
- 4) Proposal included a detailed cost break-down for inspection bid.
- 5) Indicates agreement with *Attachment C: Scope of Work for Field and Photo. Inspection Services (Required for Category 1)*, or clearly indicates any exceptions.

B. Ability to Serve New York State (Total Points – 25)

- 1) Staff are regionally located to support the region(s) proposed, or a plan has been provided to ensure qualified staff by commencement of an award.
- 2) Excellent individual and combined experience, qualifications, and expertise.
- 3) A well-developed staffing plan including a clear description of the roles and responsibilities of each staff member.
- 4) Skills and experience of the project manager well-aligned with RFQL.

C. Relevant Experience and Qualifications (Total Points – 50)

- 1) Examples demonstrate experience conducting project inspections in Technology area proposed.
- 2) Examples demonstrate operational excellence and industry expertise.
- 3) Examples are consistent with the proposed execution strategy.
- 4) Project personnel has the experience, expertise, skill and credentials (as applicable) to deliver required services.
- 5) The project personnel involved in the example(s) are included in the proposed staffing plan.
- 6) Resounding Testimonials

3. Evaluation of Category 2: Technical Assistance and Standards Development Support Services

Proposals for this Service Category must include staff that collectively hold the required professional credentials for the proposed technology area as outlined in Section VI: Qualifications. Proposals that do not meet these requirements will be deemed non-responsive and will not be considered.

The scoring committee will evaluate all Proposals for Service Category 2 separate from those proposed under Service Category 1 and Service Category 3. Each proposal Section (by technology

area) will be scored and ranked independent from other technology areas.

Proposals that meet solicitation requirements will be reviewed by a Scoring Committee using the Evaluation Criteria below. At NYSERDA's discretion, proposers may be requested to interview with all or part of the Scoring Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview.

Evaluation Criteria

A. Responsiveness to the Solicitation (Total Points – 25)

- 1) The proposer clearly demonstrated an understanding of the major objectives of the RFQL.
- 2) The proposer demonstrated an understanding of the potential impact and benefit of implementing appropriate standards and market-based quality solutions to achieve goals.
- 3) Proposer executed all Proposal Requirements fully.
- 4) Proposal itself was well written and comprehensive.

B. Ability to Serve New York State (Total Points – 25)

- 1) Staff plan and organizational chart is clear, well defined, and demonstrates an ability to be responsive to the needs of the solicitation.
- 2) Proposed staff are located to support NYS, or there is a clear plan to ensure qualified staff by commencement of an award.
- 3) Excellent individual and combined experience, qualifications, and expertise.
- 4) Skills and experience of the primary contact/team manager well-aligned with RFQL.

C. Relevant Experience and Qualifications (Total Points – 25)

- 1) Examples demonstrate experience working in Technology area proposed.
- 2) Examples demonstrate operational excellence and industry expertise.
- 3) Project personnel has the experience, expertise, skill and credentials (as applicable) to deliver required services.
- 4) The project personnel involved in the example(s) are included in the proposed staffing plan.
- 5) Resounding testimonials.

D. Cost (Total Points – 25)

- 1) Proposed compensation demonstrated excellent cost-effectiveness while providing high quality services.
- 2) Relative competitiveness of fully-burdened rates and proposed escalation rates (if any).
- 3) Relative value of the proposed experience and benefit to the programs was excellent.

NYSERDA reserves the right to accept or reject proposals based on the following factor(s): The degree to which pricing and hourly rates are in line with the rest of the market.

4. Evaluation of Service Category 3: Data Collection and Management System Support Services

The scoring committee will evaluate all Proposals for Service Category 3 separate from those proposed under Service Category 1 and Service Category 2. Each proposal Section (by technology area) will be scored and ranked independent from other technology areas. Proposals that meet solicitation requirements will be reviewed by a Scoring Committee using the Evaluation Criteria below. At NYSERDA's discretion, proposers may be requested to interview with all or part of the Scoring

Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview.

Evaluation Criteria

A. Responsiveness to the Solicitation (Total Points – 25)

- 1) The proposer clearly demonstrated an understanding of the major objectives of the RFQL.
- 2) The proposer demonstrated an understanding of the potential impact and benefit of implementing appropriate standards and market-based quality solutions to achieve goals.
- 3) Proposer executed all Proposal Requirements fully.
- 4) Proposal itself was well written and comprehensive.

B. Ability to Serve New York State (Total Points – 25)

- 1) Staff plan and organizational chart is clear, well defined, and demonstrates an ability to be responsive to the needs of the solicitation.
- 2) Proposed staff are located to support NYS, or there is a clear plan to ensure qualified staff by commencement of an award.
- 3) Excellent individual and combined experience, qualifications, and expertise.
- 4) Skills and experience of the primary contact/team manager well-aligned with RFQL.

C. Relevant Experience and Qualifications (Total Points – 25)

- 1) Examples demonstrate experience working in Technology area proposed.
- 2) Examples demonstrate operational excellence and industry expertise.
- 3) Project personnel has the experience, expertise, skill and credentials (as applicable) to deliver required services.
- 4) The project personnel involved in the example(s) are included in the proposed staffing plan.
- 5) Resounding testimonials.

D. Cost (Total Points – 25)

- 1) Proposed compensation demonstrated excellent cost-effectiveness while providing high quality services.
- 2) Relative competitiveness of fully-burdened rates and proposed escalation rates (if any).
- 3) Relative value of the proposed experience and benefit to the programs was excellent.

NYSERDA reserves the right to accept or reject proposals based on the following factor(s): The degree to which pricing and hourly rates are in line with the rest of the market.

E. Conflicts

The firm and any personnel of the firm must be free from any financial or similar interest in any product or service which may conflict with or appear to conflict with the objectivity of the services provided to NYSERDA. Please describe all product, manufacturer, or service-related affiliations. If any affiliations exist, you must provide a statement verifying that these affiliations do not conflict with or appear to conflict with the objectivity of providing services to NYSERDA and its customers. Non-disclosure of any affiliation can result in the termination of a contract, if awarded.

Proposers may not act as both the Program Implementer and Quality Service Provider for a given

Technology area but shall not be precluded from bidding on other Technology areas described within this RFQL or on future Quality and Market Standards solicitations. However, Proposers should describe within their proposals how conflicts of interest, both actual and perceived, will be resolved should you choose to bid on other NYSERDA solicitations.

F. Program Policy Factors

NYSERDA may consider the following program policy factors in making award selection decisions:

- The degree to which there is statewide coverage for field inspection services to best achieve the overall goals and objectives of the Program.

The award selection process contains multiple phases including an initial eligibility review, ranking by a Scoring Committee of subject matter experts, considerations such as program policy factors and the amount of funds available to make the selection decisions.

V. GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to

certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making one or multiple award(s) under this solicitation. NYSERDA anticipates a contract duration of five, 5, years unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify proposers in approximately eight, 8, weeks from the proposal due date whether your proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting QMS.Solicitation2025@nyserda.ny.gov, NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Federal Funding – The Program described in this solicitation may be funded, in whole or in part, with funds provided by the federal government. As such, NYSERDA is required to comply with Department of Energy (DOE) and other federal regulations and procedures governing financial awards as outlined in the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards, 2 CFR Part 200 as amended by 2 CFR Part 910 and other procedures applicable to this regulation as DOE may, from time-to-time, prescribe for the administration of financial assistance. NYSERDA reserves the right to flow down requirements to Contractors to the extent necessary to meet its obligations under the federal regulations referenced herein. In particular, any entity that wishes to do business with the federal government and who will receive federal funds or a subaward must have a UEI number issued via www.SAM.gov as well as a valid registration on www.SAM.gov.

Additionally, an award under this Program shall not be made to parties listed on the government wide exclusions in the System for Award Management (SAM), in accordance with the OMB guidelines at [2 CFR 180](#) that implement Executive Orders 12549 (3 CFR part 1986 Comp., p. 189) and 12689 (3 CFR part 1989 Comp., p. 235), "Debarment and Suspension." SAM Exclusions contains the names of parties debarred, suspended, or otherwise excluded by agencies, as well as parties declared ineligible under statutory or regulatory authority other than [Executive Order 12549](#).

NYSERDA expects that records related to work sought under this solicitation will need to be kept for up to seven, 7, years after completion of the work.

Information Security: The NYS Office of Information Technology Services (ITS) establishes and regularly updates policies, standards, and guidelines for information security (collectively referred to as "ITS Security Policies") for State Entities, including NYSERDA. Contractors, vendors, and solution providers conducting work on behalf of NYSERDA including, but not limited to, application development, web development, hosting, or managing NYSERDA's sensitive data are required to comply with the NYS requirements. These requirements include, but are not limited to, the NYS Information Security Policy NYS-P03-002 which sets forth the minimum requirements, responsibilities, and accepted behaviors to establish and maintain a secure environment and achieve the State's information security objectives. Contractors that manage NYSERDA's data outside of NYSERDA's systems with a High or Moderate rating as per the NYS ITS Information Asset Identification Worksheet must comply with the following requirements.

High Rating	Moderate Rating
- Maintain up-to-date SOC 2 Type 2 Assessment Report and provide to NYSERDA upon request. - Maintain Cyber Security Insurance - Provide a signed self-attestation on an annual basis for multiyear contracts	- Maintain Cyber Security Insurance - Provide a signed self-attestation on an annual basis for multiyear contracts

Accessibility Requirements - NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from

appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

IX. Appendices

- Appendix 1 – Regional Map and Inspection Estimates
- Appendix 2 – Technology Descriptions
- Appendix 3 – Inspection Checklists
- Appendix 4-1– Sample Inspection Report - Fail
- Appendix 4-2 – Sample Inspection Report – Pass

X. Attachments

- Attachment A – Qualifications Matrix
- Attachment B-1 – Bid and Rate Sheet (Required for Category 1)
- Attachment B-2 – Project Personnel and Rates Form (Required for Category 2 and 3)
- Attachment C – Scope of Work for Field and Photo Inspection Services (Required for Category 1)
- Attachment D -Sample Agreement

NYSERDA

EV Managed Charging Innovation Challenge Program

Program Opportunity Notice (PON) 5963

Up to \$4,000,000 Available

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Proposals Due: September 16, 2025 by 3:00 p.m. Eastern Time*

The New York State Energy Research and Development Authority (NYSERDA) announces the availability of \$4 million in funds for the Electric Vehicle Managed Charging utility challenge that has been defined in collaboration with Avangrid of New York. This Program Opportunity Notice (PON) challenge presents an opportunity to improve upon the interoperability of managed electric vehicle charging. These projects help establish a pathway for products and services to gain market entry by addressing existing technical and economic barriers. This PON will focus on product development and demonstration projects defined by Avangrid that improve upon interoperability challenges in support of achieving New York State's goals associated with the Proceeding on Motion of the Commission Regarding Electric Vehicle Supply Equipment and Infrastructure (Case 18-E-0138) as it relates to supporting the electric vehicles mandates associated with the Climate Leadership and Community Protection Act (Climate Act).

Submissions must demonstrate significant improvements over the current state as described within the challenge area. As electric vehicle (EV) penetration increases, utilities face growing challenges in maintaining grid reliability and efficiency. The cumulative effect of EV charging has the potential to strain local distribution systems and drive up system-wide peak demand. Managed charging, which enables utilities or aggregators to control the timing and rate of electric vehicle charging, offers a critical solution. The primary objective of this program, is to help shift demand to off-peak periods, align charging with renewable generation, and defer costly infrastructure upgrades in New York State.

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link "[Application Instructions and Portal Training Guide \[PDF\]](https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx)" located in the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

NYSERDA will also accept proposals by mail or hand-delivery if electronic submission is not possible. If mailing or hand-delivering, proposers must submit (2) paper copies of their Proposals, along with either a PDF or MS Word digital copy of the Proposals, following the above guidelines. Mailed or hand-delivered proposals must be clearly labeled and submitted to:

Jillina Baxter, Proposals, PON 5354 NYS Energy Research and Development Authority 17 Columbia Circle Albany, NY 12203-6399

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Designated Contacts for this Procurement are:

Jim Hastings – primary contact at (518) 862-1090, ext. 3492 or by e-mail smartgrid@nyserda.ny.gov or Mike Razanousky – secondary contact at (518) 862-1090, ext. 3245 or by e-mail smartgrid@nyserda.ny.gov. If you have contractual questions concerning this solicitation, contact Nancy Marucci (Designated Contact) at (518) 862-1090, ext. 3335 or nancysolicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offerer, and (2) may result in the proposer not being awarded a contract.

Proposal teams are NOT permitted to contact Avangrid regarding this solicitation. All solicitation questions are required to be directed to the Designated Contacts. Proposers that do not follow this instruction may be disqualified.

*** All proposals must be received by 3 p.m. Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. Please see [Solicitation Proposal and Vendor Responsibility Questions.pdf](#) for a complete list of the questions proposers must answer as part of a submission. The online proposal system closes promptly at 3 p.m. Eastern Time, files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

I. INTRODUCTION

The State of New York has committed, through legislation, to reduce greenhouse gas emissions 85% below 1990 levels by 2050. The transportation sector is one of the two largest contributors to greenhouse gas emissions in the State and reducing emissions from this sector is critical to meeting the State's broader goals set forth in the Climate Leadership and Community Protection Act (Climate Act).

Major barriers to achieving the Climate Act goals lie within the limitations with EV charging interoperability. Investments in innovative solutions to address challenges associated with multiple integration methods and capabilities will help support the market by also addressing other barriers such as: a lack of standard specifications, certifications, and requirements; limited availability of integrated system controls; a lack of validation and standardization for advanced EV and EVSE technologies; potentially conflicting incentives to achieving managed charging benefits with customer participation in EV charging programs; and a limited understanding of suitable metrics to define costs and benefits to guide future investments and new or existing programs.

EV charging infrastructure interoperability occurs when the software and hardware components, such as charging networks and their mobile apps, charging stations, power grid, payment options, connectors, charging levels, and the EVs themselves, can operate cohesively and seamlessly. To help the EV market become broadly viable, the economics and impacts associated with interoperability need to be explored. There is a need for new policies and technologies to reduce the strain on the electric grid from EVSE and keep the cost of charging EVs down. The technologies are relatively new and the EV charging market remains fragmented, with a number of competing charging station manufacturers, network providers, and software systems.

There is a consistent need for projects that develop novel solutions and demonstrate innovative approaches related to EV interoperability. With the pace of transportation electrification accelerating dramatically, New York State needs the tools in place to manage the charging demands for EVs and help introduce managed charging concepts to EV owners while improving the visibility in additional use cases.

II. EV MANAGED CHARGING CHALLENGE AREA

Projects **MUST** address the following Challenge Area. Proposers may address all or a single component of the Challenge Area (as described in Attachment G). Proposer Teaming is encouraged, but not required. Proposals that do not address the Challenge Area may be considered unresponsive.

EV Managed Charging Data Integration and Integrity

- a. **Expand Integration Capabilities.** This includes ways to:
 - Increase the number and diversity of EVs and EVSEs that can be included in managed charging programs by enabling behind the meter (BTM) connectivity. Solutions should reduce reliance on proprietary or telematics-only integrations and expand program eligibility to a wider customer base.
- b. **Enable Bi-Directional Data and Control.** This includes ways to:
 - Provide a reliable method for collecting accurate, high-resolution charging data and issuing near real-time control signals. Solutions must support bi-directional communication between the solution and the EV and/or EVSE to enable active managed charging strategies.

Proposals are required to propose a strategy for enrolling participants, installing or activating equipment, and maintaining participant engagement through integration with existing program platforms. The proposal should outline how the solutions will integrate with current workflows and support scalable deployment across diverse customer segments. In addition, proposals should include detailed descriptions of any necessary user interfaces that are required to deploy the solution and are outside of existing user interfaces already in place.

Proposed solutions must integrate directly with the existing utility program administration (e.g. DERMS) platform, allowing utilities or administrators to send active control signals through the platform. Solutions should not require a standalone DERMS operated by the utility. The solution must include a data collection framework that aligns with and integrates into (i.e. delivered in a usable format) the existing program data reporting structure.

III. PROJECT CATEGORIES

This solicitation includes two project categories. **Proposers must indicate under which category they are proposing.** Proposers should give careful consideration under which category to propose, as Proposal requirements differ, so inappropriate choices could negatively affect project selection results. Proposers are encouraged to contact NYSEDA (see cover page for instructions) with technical questions to promote complete understanding of the project categories as described below. One or all project categories may be utilized in a single proposal.

Cost Sharing - The proposal should show non-NYSEDA funding that meets the minimum requirement of the total project cost. Cost sharing can be from the proposer, other team members, and other government or private sources. Contributions of direct labor (for which the laborer is paid as an employee) and purchased materials may be considered "cash" contributions. Unpaid labor, indirect labor, or other general overhead may be considered "in-kind" contributions. NYSEDA will not pay for efforts which have already been undertaken. The proposer or proposing team cannot claim as cost-share any expenses that have already been incurred.

Category	Maximum NYSEDA Funding	Total Project Cost Share (Minimum Required)
Category A: Product Development	\$4,000,000	25%
Category B: Demonstration		

Category A: Product Development

- Includes efforts to bring a new or improved product to market including business case development, product design, scale, and field testing, but not including earlier stage technical feasibility or proof of concept development. Technologies with a Technology Readiness Level (TRL) exceeding 3 are to be considered Product Development. Field testing or pilot deployments of a non-commercial, non-warranted technology are considered Product Development. **Note: Product Development projects are subject to NYSEERDA's recoupment terms described in Section VII.**

Category B: Demonstration

A project intended to increase sales or usage of a commercialized product already in the marketplace, with results used to generate objective performance information for customers or policymakers. At this stage, the product is available for commercial sale and warranted. While incremental improvements may be incorporated based on the demonstration results, the final product design is essentially complete. Pilot deployments or other field demonstrations that will inform additional product development are considered Product Development and therefore subject to recoupment.

Proposers must select only one (1) funding category per proposal, which must be indicated in the proposal. Proposals that do not identify a funding category or include multiple funding categories may not be reviewed by NYSEERDA.

Proposers may include technical feasibility studies as a first stage of product or service development and demonstration projects. For example, the proposer may propose a feasibility study as an early task if it intends to demonstrate its technology but requires a feasibility study to identify the optimal project site for demonstration or to finalize specific design elements before embarking on the full demonstration. Technical feasibility studies under this PON are not intended to focus on conceptual designs, technology and market assessments, or similar early-stage studies. Technical feasibility studies under this PON must be necessary precursors to ultimate product development or demonstration activities under Category A or B.

Proposers may submit more than one proposal. Proposers applying under Category A should allocate 10-25% of the project budget for commercialization related tasks, such as customer discovery and market research, Intellectual Property protection, business plan development, and design for manufacturing tasks. Category A proposals are subject to NYSEERDA's recoupment requirements, as outlined in Section VII. Proposers applying under Category B are required to allocate project budget for measurement and evaluations tasks, such as data collection and analysis performed by an independent third party for measurement and evaluation tasks. NYSEERDA may change a proposal to a more appropriate funding category if the category the proposer selects does not match the scope of the project; if this is the case and the proposal receives an award, it will be subject to the requirements of the funding category to which NYSEERDA has assigned it.

NYSEERDA reserves the right to modify a project's Statement of Work, project category, budget and funding levels and may offer to fund any of the proposal's phases therein at a lower level than that requested, such as by offering to fund a feasibility study rather than a proposed prototype development effort. Funding requests exceeding \$250,000 from NYSEERDA shall be funded in phases separated by Go/No-Go decision points that will be evaluated by NYSEERDA staff.

IV. PROGRAM REQUIREMENTS

Projects proposed for funding must:

1. Address an innovative technology or product that improves EV and EVSE interoperability as described within Section II: EV Managed Charging Challenge Area and Attachment G.
2. Provide direct and quantifiable energy, environmental, and/or economic benefits to New York State such as emissions reductions (such as greenhouse gases and criteria air pollutants), job creation, product manufacturing and sales, increased EV adoption and integration costs and EV market impacts.

3. Include a project budget using the Attachment D, Budget Form, showing total project cost and proposer cost share. Include a cost-sharing breakdown by project task in the Statement of Work (Sample Statement of Work included as Attachment B).
4. Satisfy recoupment obligations to NYSERDA upon product commercialization for any new projects exceeding \$100,000 in NYSERDA funding that involve product development (see terms and conditions in Attachment E, Sample Agreement). exceeding \$100,000 in NYSERDA funding that involve product development.
5. Demonstrate that the proposer and/or team of proposers are qualified to carry out the submitted project proposal.
6. Provide a strong rationale as to how the project will overcome barriers impeding the implementation or adoption of any new or under-utilized technology.
7. Provide products or strategies that minimize excessive customization tailored to a single host entity.
8. Identify a clear value chain and provide products or strategies that can be easily inserted into a range of EV owner/operator value chains or operating/capital processes.
9. For projects that develop technologies or products, emphasize development and/or applications of marketable products for near-term commercialization, rather than basic research, provide an assessment of the addressable market, and discuss an appropriate commercialization path and potential for manufacturing in New York State. Note that even in early-stage projects, initial activities focusing on commercialization (or technology deployment) paths and challenges are essential to assessing benefits, risks, and future resource requirements.
10. For demonstration projects, clearly identify how this project will increase sales or usage of a commercialized product already in the marketplace, generate objective performance information for customers or policymakers, and how such demonstration will lead to increased use of the product in New York State. Demonstration projects must be installed within the New York State Avangrid service area and pay into SBC or CEF funds. Demonstrations must take place at a site that pays into the Clean Energy Fund.
11. Provide a letter of commitment from all funding sources and partners.
12. Demonstrate that the project and funding request addresses the challenge with technology advancements that are not being addressed adequately by current industry practices and/or federal and/or other state research priorities and funding. Include a cost and New York statewide public benefit analysis to justify allocation of funds.
13. Conduct technology transfer meetings to the stakeholders in the state including the Joint Utilities of New York and the Department of Public Service Staff, industry and other stakeholders without disclosing trade-secrets and/or intellectual property.
14. Develop and implement the commercialization activities that include an assessment of non-technical, commercialization risks and barriers to market adoption, as well as a clear plan to execute tasks that 1) drive adoption readiness towards commercial deployment in NYS and 2) proactively address external market risks and regulatory and policy uncertainties. A guide for commercialization plan can be found in Attachment F.

Other considerations. The following guidelines should be considered when developing proposals:

- A proposal may be considered non-responsive if it fails to comply with the requirements of this solicitation.
- Prior to an award being made, potential contractors may be required to demonstrate access to financial resources sufficient to perform the proposed work, technical experience and adequate facilities (or the ability to access them), a good performance record, and the ability to qualify for an award under applicable laws and regulations.
- Preference will be given to proposers that provide higher cash contributions towards project costs.
- External funding partnerships are encouraged to leverage limited New York State resources. Proposers are encouraged to develop projects that leverage funding with external resources partners such as other research and development organizations.
- Proposers may be required to make an in-person presentation, at any time during the open solicitation period, to NYSERDA and/or the host utility prior to a final decision being made.

ADDITIONAL PROGRAM REQUIREMENTS FOR PROJECTS THAT INSTALL EQUIPMENT IN THE FIELD, CATEGORY A PRODUCT DEVELOPMENT OR CATEGORY B DEMONSTRATION

Projects selected for funding **must**:

1. Be installed within an appropriate timeframe that aligns with the challenge's schedule, but no longer than 24 months after contract execution unless a longer period is approved by the NYSERDA Project Manager.
2. Address safety issues, including public safety, that are applicable to the demonstration project.
3. Comply with all applicable building, fire, electrical, and interconnection codes, standards, and requirements.
4. Provide equipment sensors, instrumentation, and a complete data acquisition system for remote monitoring and reporting as specified below.
5. Demonstrate the technology viability and monitor the performance, characteristics, and benefits for a period adequate to meet project goals. If the period is under 18 months, the proposer must discuss why the proposed time is adequate. Unless the proposer demonstrates a compelling reason otherwise, at least 365 operating days of data will be required after commissioning.
6. Present an economic analysis of the proposed technology demonstration including an estimated benefit/cost analysis (BCA), and a plan to measure the actual BCA during the demonstration based on the host utility's BCA handbook. The ability to translate the results to other utilities' BCA handbooks. Commercially available proof of technology and its warranty is required.

Data Acquisition Requirements

NYSERDA intends to provide system level operation and performance information, including economic performance information, to all interested stakeholders (ex. New York electric utilities) and the general public on each of the demonstration projects funded under this solicitation. In order to meet this objective, each demonstration project must provide sufficient instrumentation and data transmittal, and analytical capabilities to allow the collection and analysis of technical and economic performance data.

The demonstration project proposal should include system operating data to be used for evaluation and generation of reports on the overall performance of the technology being demonstrated. Data acquisition sampling rates must be adequate to characterize the benefits and the value proposition of the proposed application. In the event that the demonstration system performs multiple activities, the system must provide for the collection of data for all activities. All raw and summary data collected at the project sites must be archived and protected from loss on permanent media.

Benefits Data Tracking and Reporting

Data sufficient to demonstrate the energy, environmental, and/or economic benefits defined in the proposal must be measured, collected, analyzed, and recorded. For applications that claim multiple benefits, the proposed data and analysis methods must adequately support the claimed benefit for each of the benefits specified in the proposal.

Reporting Requirements

The proposal must identify the project team member who will be responsible for the preparation and delivery of periodic written project reports. System operational summary information must be generated regularly and be included in progress reports. At a minimum, the system operational summary information must include the following:

- Raw data.
- System performance summary.
- Summary of system reliability and failure rates.
- A written summary of the economic benefit derived for the time period.
- A written summary of all operations and maintenance activities for the time period.
- System dispatch information and use patterns associated with the project, as appropriate.
- Energy consumption breakdown of parasitic loads introduced by the demonstration system, as appropriate.
- System performance under user fault conditions (connectivity loss), as appropriate.
- System performance under Utility fault conditions (weather related outages), as appropriate.

Reports must be generated that consolidate all the information from the reports and summarize demonstration system performance for the preceding year.

Historical Performance Data Reporting

Where appropriate to document project benefits, historical utility system operational data prior to the installation of the demonstration system is required in order to provide credible baseline data on electrical system performance before and after the installation of the demonstration system. Information concerning load profiles, peaks, overloads, faults, power quality events, and any other information required to fully characterize the operation of the electrical utility at the demonstration site prior to installation of the demonstration system must be collected by the proposer for a reasonable period of time. Comparison information must be made part of the progress reports.

V. PROPOSAL REQUIREMENTS

Prior to Submission

Prior to submitting a Proposal to this solicitation, any proposers may communicate with NYSERDA's Designated Contact to discuss a concept and its potential responsiveness to this solicitation. Communication with NYSERDA staff prior to submission is entirely optional and is not required prior to submission.

Submissions and Review

Proposals determined to be compliant with application procedures and responsive to the solicitation will be subject to review by a scoring committee comprising NYSERDA, the host utility (for utility challenges), and external technical experts in accordance with Section VI, Proposal Scoring Criteria. Only the most technically meritorious Proposals will be awarded an invitation from NYSERDA to enter into a contract. Proposals not meriting an award for contracting may be debriefed.

To submit a Proposal, complete the Proposal Narrative form-fillable document (Attachment A). The Funding Category must be clearly indicated. The Proposal Narrative contains the following sections:

- Executive Summary
- Problem Statement and Proposed Solution
- State of Research and Technology Targets
- Commercialization Potential of Proposed Product (Attachment F)
- Demonstration Project Information (Category B)
- Statement of Work (Attachment B) and Schedule
- Project Benefits
- Budget Form (Attachment D)
- Proposer Qualifications
- Letters of Support
- Attachments

Proposers must carefully review the Proposal Narrative to ensure that all required sections are completed. Failure to do so may result in the proposal being rejected as non-responsive.

Note: The proposer's goal should be to concisely present the information needed to fully address the scoring criteria (see Section VI). Proposals that grossly exceed the word limits or fail to follow the format guidelines may be rejected as non-responsive. Proposals deemed non-responsive will not be eligible for awards. If you believe proprietary information must be submitted to provide an adequate proposal, you must comply with the Section VIII instructions for submitting proprietary material. Unnecessary attachments beyond those sufficient to present a complete, comprehensive, and effective proposal may reduce, rather than increase, a proposal's standing per the scoring criteria. Each page of the proposal should state the name of the proposer, the PON number (PON 5963), and the page number.

VI. PROPOSAL SCORING CRITERIA

Proposals will be reviewed by a Scoring Committee and will be scored and ranked according to the following criteria. After the submissions are reviewed, NYSERDA will issue a letter to each proposer indicating its Proposal evaluation results. Proposers receiving favorable evaluations will be invited to enter into contract negotiations with NYSERDA. After initial review of the Proposal, the Proposer, at NYSERDA's sole discretion, may be asked to address specific questions or provide additional information, either in writing or through an interview, as part of the Proposal scoring process. The Proposer will be required to submit a detailed Statement of Work, Budget, and Schedule, and may also be asked to address specific recommendations of the Scoring Committee before contract award.

PROPOSAL SCORING CRITERIA:

Proposed Solution –

- Does the proposed project specifically address the problem or opportunity identified in the challenge area (Attachment G) and does it show potential to make significant progress towards the goals?
- Is the proposed work technically feasible, innovative, and superior to alternatives?
- Is the solution likely to be effective in advancing the technology to market?
- How appropriate are the cost, technical, performance and commercialization goals for the proposed technology or product?
- Does the proposer exhibit an understanding of the state-of-the-art, competing products and alternative designs?
- Does the proposed solution have a high potential for commercialization, addressing demonstrated customer needs and significant markets?
- Is an appropriate performance monitoring and data analysis effort included in the proposal?
- How much of a commitment (cost-share, letters of commitment) has been made for the field demonstration, if applicable?

Proposer / Team Qualifications –

- Has the proposer provided evidence of being qualified to perform the proposed work based on the qualifications of the organization(s) and the involved individual(s)?
- To what degree does the proposer and team have the necessary technical and business background and experience?
- Has the proposer's team previously commercialized any products?
- How firm are the commitments and support from essential participants: hardware/software vendors, end users/customers, developers etc.?
- Has the proposer provided evidence of good past performance on other relevant projects and quantified benefits to end-users?
- Are the team member's roles and responsibilities defined and reasonable?

Statement of Work and Schedule –

- Are the proposed tasks reasonable and complete in details to fully understand the execution plan and how they will achieve the goals of the challenge?
- Does the Statement of Work include a benefit cost analysis (BCA) of the technology based on the sponsor utility's approved handbook?
- Is the Statement of Work well organized, complete, and appropriate for the technical performance identified?
- How realistic is the schedule for achieving the goals of the proposed project?
- Are Go/No-Go decision points incorporated between logical task/phase completion and funding requests.

The following criteria apply to Category B projects only:

- Are the data acquisition, monitoring, and reporting plans reasonable and do they meet the requirements in Section IV, ADDITIONAL PROGRAM REQUIREMENTS FOR CATEGORY B DEMONSTRATION PROJECTS ONLY?
- Is the benefits tracking plan reasonable and does it meet the requirements in Section IV, ADDITIONAL PROGRAM REQUIREMENTS FOR CATEGORY B DEMONSTRATION PROJECTS ONLY?

- If monitoring baseline utility system operation is necessary to document system benefits, does the Statement of Work include a provision to adequately gather baseline utility operational data and economics?

New York State Impact and Project Benefits –

- To what extent does the project support Climate Leadership and Community Protection Act and grid modernization in general for New York State?
- Will there be economic benefits in New York State in the form of subsequent manufacturing or technical service activity, intellectual property creation, revenue-generation, or job creation?
- How well are the potential benefits to New York State quantified?
- How likely is it that the projected benefits will be realized?
- Will the benefits be realized by disadvantaged communities in New York State?
- How significant are the potential reductions in GHG emissions or energy use resulting from the project?
- Are the technical risks identified, appropriately addressed, and balanced by project benefits?
- Does the proposal address an innovative technology that improves performance, quality or reliability / resiliency of managed charging?

Project Cost and Value –

- Is the overall project cost justified and reasonable based on the level of effort proposed and the expected outcome and benefits?
- How significant is the potential market opportunity relative to the project cost?
- How appropriate are the proposer's co-funding contributions (sources and amounts) with respect to the degree of risk, potential to benefit from the work, and financial status of the organization?
- How firm are the commitments and support from essential participants, co-funders, and related businesses and other organizations?
- Are the overhead rates reasonable and supported with appropriate documentation?
- Are equipment, facility, material, and travel costs based on reasonable estimates?
- Are the labor rates reflective of the industry?

Business/Commercialization Plan –

- Does the proposed project scope show a clear path to widescale adoption by New York utilities, including development of rate cases for additional investment or other appropriate actions?
- How widely deployed can the technology be, both in New York and globally if successfully demonstrated? Does the plan address scaling production and manufacturing, or validating supply chain readiness?
- Does the proposed project address demand across different customer segments or regulatory/policy environments?
- Does the proposer demonstrate a clear understanding of the barriers to adoption and how to overcome them, including economic, regulatory, permitting challenges, or public perception?
- Does the proposal identify competing and alternate solutions, and clearly show why the solution is superior to, price competitive with, or provides value compared to alternative solutions or the current status quo? Does the proposed solution show a viable path for cost reduction or business model innovation that would improve adoption feasibility?
- Is this the first application of the proposer's solution or is it expanding upon previous experience?

Other Program Policy Factors – In addition to considering how project Proposals satisfy the Scoring Criteria listed above, NYSERDA reserves the right to make funding decisions on the basis of other Program Policy Factors, including but not limited to:

New York State Energy Mission Alignment

- The degree to which the proposed project will advance the goals of the State Energy Plan / Clean Energy Fund / REV.
 - The State Energy Plan / Clean Energy Fund / REV goals include improving resilience and reducing greenhouse gas emissions. <https://rev.ny.gov/>
 - Project continues to contribute to one or more of NYSERDA's key statutory goals. <https://www.nyserdera.ny.gov/About>

Program Portfolio Value and Optimization

- The degree to which NYSERDA ongoing funding, (incl. cost shares), will make a difference in the technology impact, acceleration of transformational advances, and project success.
- The degree of overlap with other state and federal programs.
- The degree to which there are technical, market, organizational and/or environmental risks associated with the projects that outweigh the potential benefits.
- The past performance of the proposer on other technical and business endeavors, including NYSERDA and DOE, ARPA-E, NSF, (if the performance history is available).
- The degree of NYSERDA portfolio balance/optimization. The project(s) balance(s) and enhances the NYSERDA portfolio in one or more of the following areas:
 - Technological diversity
 - Organizational diversity
 - Geographic diversity
 - Technical or commercialization risk
 - Stage of technology development
 - Complimentary efforts to balance risk.

Project Diversity, Leverage and Collaboration

- The consideration of the impact on, and benefits to, a diversity of communities/locations, including low-income and rural communities, partnerships with minority serving and/or owned businesses.
- The degree of ongoing leverage; attracting other funding sources: building on the NYS capabilities: linking technologies and/or companies.
- The degree to which the applicant has enabled the resources (human, financial and physical) to be able to complete the project.
- The degree to which the project enables collaboration with nongovernmental and industry entities for demonstration of technologies and research applications to successfully facilitate technology transfer, leading to robust technology development and subsequent scaling and market adoption.
- The degree to which a proposer could attract investor funding as the project progresses, including seed, Series A, high net worth individuals and beyond.

VII. RECOUPMENT AND METRICS

Recoupment - For any new projects exceeding \$100,000 in NYSERDA funding that involve product development, including business development, NYSERDA will require a royalty based on sales and/or licensing of the new product developed (Please see Attachment E, Sample Agreement for specific recoupment obligations). Recoupment is not required for demonstration projects. Please see the definitions below to determine if your project will be subject to recoupment. Please note that NYSERDA will make final determinations as to whether proposals fit within the demonstration or product development categories.

- Product Development: Efforts to bring a new or improved product to market including business case development, product design, scale, and field testing, but not including earlier stage technical feasibility or proof of concept development. Technologies with a Technology Readiness Level (TRL) exceeding 3 are to be considered Product Development. Field testing or pilot deployments of a non-commercial, non-warranted technology are considered Product Development.
- Demonstration: A project intended to increase sales or usage of a commercialized product already in the marketplace, with results used to generate objective performance information for customers or policymakers. At this stage, the product is available for commercial sale and warranted. While incremental improvements may be incorporated based on the demonstration results, the final product design is essentially complete. Pilot deployments or other field demonstrations that will inform additional product development are considered Product Development and therefore subject to recoupment.

Projects where NYSERDA's share of funding is \$100,000 or less will generally not require recoupment. Please note: NYSERDA may decline to contract with awardees that are delinquent with respect to recoupment payments or sales reporting for any previous NYSERDA agreement.

Annual Metrics Reports – If awarded, the proposer will be required to submit to NYSERDA's Project Manager on an annual basis, a prepared analysis and summary of metrics addressing the anticipated energy, environmental and economic benefits that are realized by the project. All estimates shall reference credible sources and estimating procedures, and all assumptions shall be documented. Reporting shall commence the first calendar year after the contract is executed. Reports shall be submitted by January 31st for the previous calendar years' activities (i.e., reporting period). NYSERDA may decline to contract with awardees that are delinquent with respect to metrics reporting for any previous or active NYSERDA agreement.

VIII. GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor

to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. NYSERDA anticipates a contract duration of up to three (3) years, unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Attachment E, Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Attachment E, Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify proposers in approximately six (6) weeks from the proposal due date whether your proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting Jim Hastings at jim.hastings@nyserda.ny.gov. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Recoupment - For any new product research and/or development, NYSERDA will generally require a royalty based on sales of the new product developed. NYSERDA's standard royalty terms are 1% of sales and of all license revenue accruing to the Contractor for products produced for a period of fifteen years or until the Contractor pays NYSERDA an amount equal to the amount of funds paid by NYSERDA to the Contractor, whichever comes first.

Accessibility Requirements - If awardees from this solicitation will be posting anything on the web, or if the awardee will produce a final report that NYSERDA will post to the web, the following language must be included. NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Attachment E, Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSErDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSErDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSErDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSErDA may neither appear nor practice before NYSErDA, nor receive compensation for services rendered on a matter before NYSErDA, for a period of two years following their separation from NYSErDA service. In addition, former NYSErDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSErDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSErDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSErDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSErDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSErDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSErDA may conduct due diligence on some or all proposals based on NYSErDA's current guidelines at the time of a review. NYSErDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSErDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due

diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Electric School Bus Transition Support Contractor

Request for Proposal (RFP) 5965

\$1,000,000 Available

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Proposals Due: May 14, 2025 by 3:00 p.m. Eastern Time*

Program Summary: The New York State Energy Research and Development Authority (NYSERDA) seeks a contractor or a team of contractors (Support Contractor) to assist NYSERDA with electric school bus work, including technical analysis, project management and stakeholder engagement for a three-year period. The Support Contractor will be tasked with assisting NYSERDA with 1) research, analysis, and data reporting, 2) school bus fleet electrification plan review and tracking, 3) stakeholder outreach and engagement, 4) real world technology testing, 5) Electric School Bus Roadmap support, and 6) on-call support. Proposers will be expected to begin work within two months of notification of award and will work closely with the NYSERDA team across a wide range of electric school bus initiatives.

Only one (1) award will be made by NYSERDA. If the prime contractor is unable to provide all requested elements, teaming arrangements are required.

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link "[Application Instructions and Portal Training Guide](#) [PDF]."

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Department's Designated Contacts for this Procurement are: Designated Contacts are Nina Haiman at 212-971-5342 x3125, Alok Disa at 518-862-1090, Hannah Abdoo at 518-862-1090 or by e-mail schoolbus@nyserda.ny.gov. If you have contractual questions concerning this solicitation, contact (James Cowman) (Designated Contact) at (518) 862-1090, ext. 3652 or Jim.Solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offerer, and (2) may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. Please see [Solicitation Proposal and Vendor Responsibility Questions.pdf](#) for a complete list of the questions proposers must

answer as part of a submission. The online proposal system closes promptly at 3 p.m. Eastern Time. Files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above will not be accepted. If changes are made to this solicitation, notification will be posted on the “Current Opportunities” section of NYSERDA’s website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

NYSERDA will host an informational webinar on Thursday, April 10th at 3:00pm Eastern Time during which NYSERDA will review the requirements of this solicitation and answer questions. Proposers interested in attending can join the webinar at the following link:

<https://nyserdany.webex.com/weblink/register/r90e101035d5e10d0d9d44b7e1fac7acd>

Questions may be submitted via the same e-mail address prior to the Webinar, or during the Webinar using the web platform. Following the conclusion of the Webinar, NYSERDA will post questions and responses on the NYSERDA website. All questions will be posted anonymously, and NYSERDA’s written responses will supersede any responses given during the Webinar.

I. Introduction

NYSERDA is working with the New York State Education Department (NYSED), the Department of Public Service (DPS), and other key utility and public stakeholders to facilitate the transition to zero-emission school buses across public school districts in New York State, in compliance with Education Law 3638. To support the development and implementation of strategies to transition school buses in New York State to zero-emission, NYSERDA is providing statewide and district-specific guidance, tracking progress, and engaging with key stakeholders in the electric school bus industry.

NYSERDA seeks to engage a consultant, or team of consultants, over a three-year period to provide technical analysis, project management and stakeholder engagement support to NYSERDA, including:

- Support to update the [Electric School Bus \(ESB\) Roadmap](#) and maintain and add to the [ESB Guidebook](#), including the completion of additional analysis and reporting that will support NYSERDA’s ongoing requirement to update the ESB Roadmap every 3 years.
- Research, analysis, and reporting on ESBs across the state, which may include surveys of school districts and bus contractors to update the survey done in the last ESB Roadmap. In addition work may be required around web-mapping, data-reporting, tracking, and benchmarking associated with [Fleet Electrification Plan](#) (FEP) key indicators, and ESB market and pricing research.
- ESB Stakeholder outreach and engagement.
- Fuel economy and range testing of ESBs in real world conditions.
- As-needed, on-call support for ESB-related efforts that may emerge, including periodic technical review of FEPs.

II. Program Requirements

A. Services Requested

NYSERDA seeks to contract with one consultant or a team of consultants to provide ESB support.

Proposers should pay careful attention to the skills, qualifications and services required for the specific role(s) they propose to serve. Teaming arrangements are strongly encouraged as a way for proposers to address all the requirements of the services requested.

Research, Analysis, and Data Reporting

Electric School Bus Market Research

As the state of the ESB market evolves, NYSEERDA needs to understand the state of vehicle adoption, performance, energy availability, ESB impacts, and many other market components. In addition, Education Law 3638 requires NYSEERDA to track and report on the availability of ESBs and associated charging infrastructure that are produced, made, or assembled in the United States. Therefore, NYSEERDA intends to track and report on a variety of metrics, market conditions, and adoption trends over time. The selected Proposer will support NYSEERDA by conducting research on these topics.

The selected Proposer will provide research, analysis, and reporting, including surveys, web-mapping, data-reporting, and ESB market and pricing research to cover topics including, but not limited to, the following:

- Availability of domestically produced, made, and assembled buses and chargers;
- Vehicle pricing and procurement mechanisms in-state and out-of-state with the goal of reducing costs;
- Residual value of buses and batteries, which can be used to inform total cost of ownership (TCO) analysis
- Number of schools buses on the road in New York State;
- Fuel type of school buses on the road in New York State;
- Number of bus depots serving school buses in New York State;

The selected Proposer will support NYSEERDA in the annual reporting of collected data.

Ongoing ESB Guidebook and Education Support

The selected Proposer will support NYSEERDA in developing public-facing data information, resources, and webinars to communicate key information, best practices, and guidance related to the adoption of ESBs in NYS. Information will be delivered to NYSEERDA and hosted on NYSEERDA webpages. NYSEERDA will provide feedback on the technical information. Once NYSEERDA is satisfied, the selected Proposer will engage with NYSEERDA's Marketing Team to prepare deliverables for public consumption.

The selected Proposer will assist NYSEERDA in the review and update of the existing ESB Guidebook series. The selected Proposer will review the eleven (11) guides currently available online and provide suggested updates related to each Guide. For example, the 'Financial Incentives' guide may need to be updated to include new funding opportunities. NYSEERDA may request additional updates throughout the contract. The selected Proposer will also lead the development of no fewer than five (5) and up to ten (10) additional guides that reflect newly identified best practices or additional aspects of bus electrification that have not yet been covered in previous guidebooks where NYSEERDA feels school bus operators could benefit from further information.

The selected Proposer may be asked to prepare additional public-facing information, such as "ESB Adoption Success Stories" that profile existing districts that have begun the transition to ESBs.

The selected Proposer will support ESB-related webinars, including developing PowerPoint slides, producing talking points, organizing speakers, preparing marketing and communication materials to engage stakeholders, and organizing the logistics of the webinar. The selected Proposer will support the development and execution of up to 18 webinars.

Fleet Electrification Plan (FEP) Review and Tracking

NYSEERDA administers Environmental Bond Act funding to help school bus fleet owners develop FEPs. These FEPs are designed to provide tailored zero-emission roadmaps specific to each District's school

bus fleet. The selected Proposer will support NYSERDA in its efforts to analyze the findings from FEPs to identify common themes and best practices for school bus electrification. This may include, but is not limited to, the following:

- Creation of best practice assumptions for:
 - Battery degradation
 - Battery performance in varying weather conditions
 - Charger performance
 - Impacts of regenerative braking on battery charge
 - Deadhead assumptions
 - Emissions calculations for buses
 - Impact of charge management systems
 - Rate estimation
 - Daily charging practices
 - Battery longevity
 - Utility related infrastructure upgrades
 - Additional assumptions for addressing typical data gaps

The selected Proposer will be expected to review FEPs to identify the range of values used and compare them to real-world data available from ESBs on the road to identify these best practice assumptions.

The selected Proposer will also support NYSERDA by benchmarking outputs from FEPs. This will include reviewing a sampling of FEPs and developing a list of metrics to gather and analyze annually. This may include, but is not limited to, the following:

- Understanding ranges of ESB transition costs for varying fleet segmentations (i.e., small vs large, urban vs rural, owned vs contracted)
- Understanding the efficacy of charge management systems in reducing demand on the grid
- Understanding the adequacy of current school bus technology for meeting school bus route needs
- Understanding the adequacy of current electrical capacity to meet short- and long-term ESB charging needs
- Determining the upper range limits of current electric school bus technology (where schools completing FEPs already operate ESBs)
- Determining the impact of school bus electrification on the grid
- Reporting on the potential for school districts to meet the 2027 and 2035 zero-emission bus deadlines
- Reporting on the key obstacles to achieving the 2027 and 2035 zero-emission bus deadlines

Real-World Technology Testing

The selected Proposer will work with NYSERDA to identify and select up to three (3) school bus operators from which to collect very detailed ESB operational data under controlled circumstances (test courses, etc). These will be districts that have already purchased and operated electric school buses for at least 6 months. The selected Proposer will work with the bus operators to collect data from drivers, buses, and telematics devices. The selected Proposer will also work with NYSERDA to purchase telematic data collection units and have them installed on electric school buses in these fleets (if needed). The selected Proposer will develop and implement a plan for testing protocols and courses, and conduct tests in representative winter and summer months (i.e., January and June). The selected Proposer will analyze the results and compare the results against diesel buses and ESB manufacturer reported range estimates. The selected Proposer will repeat testing and deliver results to NYSERDA for up to three (3) years. The selected Proposer will conduct the repeated studies with both new buses and buses that have been tested in previous years to assess how ESB range changes overtime and how new technologies or larger battery sizes perform.

In addition, the Proposer will work with NYSERDA to gather operational data from a broader swath of NYS electric school bus fleets under real world conditions to better understand how these vehicles are operating.

ESB Roadmap

In 2023, NYSERDA released the *New York State Electric School Bus Roadmap* (“ESB Roadmap”), which is designed to help school districts, school bus fleet owners, and operators navigate the complex set of decisions, programs, and considerations associated with transitioning to ESBs in NYS. NYSERDA is required to update the ESB Roadmap every three years.

The selected Proposer will leverage information collected during the FEP evaluations, the stakeholder engagement process and the ESB Advisory Group described below, real-world testing, and in current demonstrations and studies by external entities to draft an updated Roadmap that includes assumptions and recommendations regarding the following, and possibly additional, topics:

- Evolution of the ESB market and policy landscape since the initial Roadmap
- Bus characteristics and operational data from school districts across the state.
- Current and future bus and charging technology
- Purchasing, leasing, and financing options.
- Total Cost of Ownership (TCO) inputs, methodologies, assumptions, and results.
- Expected ESB adoption curves under different funding and market scenarios.
- Successes and challenges of existing electric school bus pilot projects across the state
- Recommended actions to support ESB adoption.

ESB Stakeholder Outreach and Engagement

Convene, Coordinate, and Facilitate a Stakeholder Advisory Group

The ESB Advisory Group is a stakeholder group that will inform the ESB Roadmap and help NYSERDA, and the selected Proposer, identify real-world challenges, risks, perceptions of risk, equity considerations, case studies, and technological barriers associated with the school bus fleet transition. Advisory Group members include stakeholders representing a cross-section of the school bus industry, advocacy community, utility-provider community, and other entities that will be directly involved with the school bus electrification process. The selected Proposer will review the existing ESB Advisory Group membership and make recommendations on how to refine it. The selected Proposer will then develop a concise mission statement that informs participants of the group's purpose and terms of their expected commitment and a letter inviting potential advisory group members to join, or rejoin, the group. The selected Proposer will then facilitate the formation and maintenance of the ESB Advisory Group.

The selected Proposer will provide recommendations on the ESB Advisory Group membership and approaches to Stakeholder Engagement. The selected Proposer will convene and engage the Advisory Group at least quarterly, (e.g., up to twelve (12) times) throughout the life of the project to capture perspectives, concerns, and insights. The selected Proposer will hold stakeholder meetings in-person, via video conference, or using a hybrid format depending on schedules, travel logistics, and cost. After each advisory meeting, the selected Proposer will submit a memo summarizing key takeaways, a list of attendees, and action items. The selected Proposer may choose to convene subgroups of the advisory group as needed.

In addition, the Selected Proposer will help inform NYSERDA ESB Outreach efforts.

On-Call Support

Throughout the duration of the project, NYSERDA may require additional support in areas that are not yet defined. This may include, but is not limited to, additional stakeholder outreach with NYS agency partners, additional technical support, support reviewing FEPs for technical accuracy, case study development, or deep dive analyses on specific ESB-related topics such as best practices in fire prevention, detection, and suppression. The selected Proposer should be available to provide support in these areas as needed. The NYSERDA PM will raise these items during project briefings and the selected Proposer and NYSERDA shall agree to the approach, budget, and schedule for each On-Call Support task as identified. This task is expected to amount to approximately 10 percent of the total budget.

B. Proposer Eligibility and Qualifications

NYSERDA anticipates awarding one contract to one contractor, or a team of contractors, through this RFP. If forming teams, proposers must clearly identify the primary contractor, key employees, subcontractors, and relevant affiliates of all entities who are proposed to fulfil the requirements of this RFP. Even if a proposer includes a teaming arrangement with third parties in its proposal, the proposer will retain sole responsibility for successful completion of the work under the resulting contract. Proposers must demonstrate that they have a clear understanding of the services described in this RFP. Proposers must also demonstrate the ability to provide all of the required services as outlined in this RFP. Proposers must provide all of the support services requested above. NYSERDA aims to award a single contract to one proposer or one team of proposers (with one serving as prime).

Proposers must be available to start work **no later than September 8, 2025**.

Experienced Team

Proposers must clearly demonstrate their ability to provide the necessary technical expertise and administrative support described in this RFP. The selected contractor or team of contractors will provide NYSERDA with a dedicated team of high-level professionals who will support the school bus electrification work.

Dedicated Personnel

Proposers must identify one qualified team member who will be responsible for leading the work in this RFP and additional personnel who will support the team lead. The identified personnel must have previous experience in the services requested under this RFP.

C. NYSERDA Responsibilities

The NYSERDA Project Manager will be responsible for overseeing and managing all tasks undertaken by the selected contractor or team of contractors. The major responsibilities of NYSERDA are to:

- Provide timely feedback on draft documents and plans.
- Provide timely response to contractor's issues.
- Provide timely review and approval of invoices.

D. Contract Term

The contract term is anticipated to be approximately 36 months (3 years). At its sole discretion, NYSERDA may elect to add funding and/or extend the term of the contract.

NYSERDA has the right to:

- Incorporate necessary program changes by modifying or adding to the services required for successful support of the program, consistent with the terms of this RFP;
- Tailor the services as needed within the scope of the contract; and,
- Add necessary additional funds and time to the contract at any time.

III. Proposal Requirements

Proposers must submit their proposal(s) by the due date in accordance with the instructions described on the front of this RFP. Proposals should not be excessively long.

Unnecessary attachments beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal. Suggested page limits for each section are provided below in parentheses. Proposals that grossly exceed the page limits or fail to follow the format guidelines may be rejected as nonresponsive. Proposals should concisely present the information needed to fully address the evaluation criteria (see Section IV). Each page of the proposal should state the name of the proposer, the RFP number, and the page number. If you believe proprietary information must be submitted to present an adequate proposal, please contact the Designated Contact listed at the beginning of this RFP, indicate as such on the proposal, and comply with the Section V instructions for submitting proprietary material.

The proposal must be a **single file**, unless otherwise noted, with the items in the format and sequence indicated below:

Section 1: Introduction and Proposal Narrative

Section 2: Statement of Work (separate Attachment A)

Section 3: Staffing Plan

Section 4: Qualifications

Section 5: Cost Proposal (separate Attachment B)

Section 6: Schedule/Work Plan

Section 7: Letters of Commitment (if applicable)

Section 8: Appendices

Section 1. Introduction and Proposal Narrative (4-6 pages): Proposers should summarize their understanding of the goals, objectives and requirements of the services described in this RFP. This section must include a narrative of how the proposer intends to complete the required services described under Section II.A. Proposers should briefly identify key information about their organization and any proposed subcontractors. Describe any other additional resources the proposer can bring to the project, such as cost-sharing funds or materials already developed, and how they would be used to advance the project goals. Proposers should describe why they believe that they are qualified to perform and complete the services requested under this RFP.

Proposers should include the following:

- How the proposer intends to complete the required elements described above, including a detailed project plan describing tasks and resources needed to complete the deliverables
- References to examples of existing technical reports, public-facing reports, and other materials that provide evidence of similar past experience
- Examples of non-technical materials previously developed that were targeted to end users, especially fleet operators
- List of key stakeholders that may be included in an advisory group
- Any other additional resources the proposer can bring to the project, such as cost sharing funds or tools already developed, and how they would be used to advance the project

Section 2. Statement of Work (4-8 pages): Submit a proposed Statement of Work delineating each step required to accomplish the project objectives. The Statement of Work (SOW) is the primary contractual document that outlines work activities and specifies deliverables. Therefore, each action

needs to be identified, indicating who will perform it, how it will be performed and its intended result. At the end of each task description, specific task deliverable(s) must be listed. Deliverables are documentation that the contractor will submit to NYSERDA as evidence that the work in the task has been completed.

The SOW should highlight how the proposer will deliver services. If a proposal is selected, NYSERDA may choose to move forward with some tasks but not others, based on in-house capabilities, timing, and available budget. Because of this, proposals should be constructed as a menu of tasks, with clearly assigned budget estimates for each task.

NYSERDA has provided a sample Statement of Work (Attachment A). The proposer is strongly encouraged to use this template and may adapt it as needed; however, significant departures from the provided template may result in delays in the negotiation process and the start date of work. NYSERDA reserves the right to make changes to the proposed Statement of Work to meet the needs of the program. The Statement of Work must:

- Read as a stand-alone document that identifies assumptions and detailed descriptions of tasks, ideally in chronological order. This must also be included in the single file submission and may not be provided in a separate file.
- Be clear and specific: concentrate on “how” and not “why.” Use “active voice” sentence structure to make clear who is responsible for specific actions. Use the following phrase to start the description of every task and subtask: “The Contractor shall....”, and “The Contractor shall ensure that [Subcontractor Name] ...”
- Include information regarding responsible staff for each task, including any subcontractors.
- Include a timeline and connect to the requested work plan.

Section 3. Staffing Plan (2-3 pages): Provide an organizational structure that facilitates effective leadership and quality staff services. Identify the main point of contact for NYSERDA and key participants in the project. Describe their individual expertise and explain how each will contribute to the work. If a project team member is participating in multiple proposals, each proposal must clearly identify any overlap between separate roles assigned to one team member. Describe the team’s management and technical expertise and relevant experience with the work described under Section II.A. Please include an organization chart showing the relationship between all personnel and subcontractors.

Resumes of key personnel highlighting relevant experience should be included as appendices. (resumes are not included in the page total)

Section 4. Qualifications (2-3 pages): Describe how the Proposer’s staff and other team members meet the required experience, skills, and abilities to perform the services described under Section II.A of this RFP. State the individual and combined expertise that would enable successful completion of the objectives outlined in this solicitation. Provide relevant background information demonstrating the ability to successfully provide the required services, including prior experience with this type of work and any tools and templates that may already be developed. Cite specific examples of previous relevant projects. Include the name and telephone number of at least three (3) references for whom your organization has completed relevant projects. Prior NYSERDA projects may be used as an additional reference but may not serve as one of the three required references.

Proposers or proposing teams should cite specific examples of the following types of previous work:

- Data collection and analysis, including in-service vehicle data collection

- Public-facing materials development
- Stakeholder engagement
- Policy/strategic planning studies

Proposers must provide all of the support services requested above. NYSERDA will award a single contract to one proposer or one team of proposers (with one serving as prime).

Section 5. Cost Proposal (1-2 pages): Submit a proposed total project budget, itemized by task, including cost elements and subcontractor costs (if applicable) using the attached Budget Form (see Attachment B). Labor rates should be inclusive of any overhead. In the case of subcontractors, explain in the Supporting Schedule of the Budget any administrative hours needed to manage subcontractors and include those hours in the direct labor category. NYSERDA does not accept a percentage-based mark-up on subcontractors (see the Instructions tab of Attachment B).

Cost Share

Cost-sharing is encouraged but not required. Cost-sharing can be from the proposer, other team members, and other government or private sources. Contributions of direct labor (for which the laborer is paid as an employee) and purchased materials may be considered “cash” contributions. Unpaid labor, may be considered “in-kind” contributions. NYSERDA will not pay for efforts which have already been undertaken. The proposer or proposing team cannot claim as cost-share any expenses that have already been incurred. Show the cost-sharing plan in the following format:

	Cash	In-Kind Contribution	Total
NYSERDA	\$	\$	\$
Proposer	\$	\$	\$
Others (list individually)	\$	\$	\$
Total	\$	\$	\$

Section 6. Schedule/Work Plan (1-2 pages): Submit a schedule for conducting the work proposed in the SOW in a Gantt chart or similar format in terms of weeks and months. Specifically address the plan for commencing work no later than September 8, 2025. Proposers should allow time for correspondence with and approval of tasks by NYSERDA. Note that hours allocated in the work schedule must be consistent with those in the budget and Statement of Work.

Section 7. Letters of Commitment: If proposers are relying on any other organization to do some of the work or provide services or resources, include a letter from that organization describing its planned participation. Absence of letters of commitment may be interpreted as meaning that the proposer has not secured a firm commitment from the subject parties.

Section 8. Appendices: Include resumes, company qualifications, sample work products, or ancillary information which is deemed necessary to support your proposal. Keep appendices to a reasonable length.

In compliance with §139-j and §139-k of the State Finance Law (see Section V, General Conditions below for additional information), proposers will be required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility.

IV. Proposal Evaluation

Proposals that meet solicitation requirements will be reviewed by a Scoring Committee using the Evaluation Criteria listed below. At NYSERDA’s discretion, proposers may be requested to interview

with all or part of the Scoring Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview.

Proposer Qualifications:

- Ability of team to bring relevant expertise and tools to the project in both its understanding of and experience with electric school bus markets and with appropriate quantitative/qualitative research, analysis, and stakeholder engagement techniques.
- Ability to develop user-friendly documents for fleet operators.
- Experience of the team at conducting projects similar to the project described, including for NYSERDA. For those proposers who have worked in any capacity with NYSERDA, the quality of work on those transactions may be considered.

Services Requested:

- Demonstrates an understanding of the range of services requested and presents a workplan that responds to the requested services.
- Presents a credible explanation of its ability to successfully deliver these services.
- Provides appropriate and creative ideas for approaching the project.
- Demonstrates an understanding of the desired final deliverables.

Proposal Quality:

- Demonstrates the ability to communicate in a clear and concise manner.
- Demonstrates the ability to address NYSERDA program needs and deliver high-quality work on tight deadlines.
- Commits and shows a demonstrated ability to starting work no later than September 8, 2025.

Proposal Value:

- Allocates an appropriate proportion of project cost dedicated to project completion (versus travel, administration, or other expenses).
- Provides experienced staff performing appropriate tasks at industry-comparable rates.
- Demonstrates the level of service provided is in line with the proposal cost.
- While not a required element of the RFP, voluntary cost share will be evaluated under this component of the evaluation criteria.

NYSERDA reserves the right to accept or reject proposals based on the following program policy factor(s):

- a. The degree to which pricing and hourly rates are in line with the rest of the market.

V. GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department.

The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making one (1) award under this solicitation. NYSERDA anticipates a contract duration of 36 months (3 years), unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify proposers in approximately 8-12 weeks from the proposal due date whether your proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting transit@nyserda.ny.gov. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Information Security: The NYS Office of Information Technology Services (ITS) establishes and regularly updates policies, standards, and guidelines for information security (collectively referred to as "ITS Security Policies") for State Entities, including NYSERDA. Contractors, vendors, and solution providers conducting work on behalf of NYSERDA including, but not limited to, application development, web development, hosting, or managing NYSERDA's sensitive data are required to comply with the NYS requirements. These requirements include, but are not limited to, the NYS Information Security Policy NYS-P03-002 which sets forth the minimum requirements, responsibilities, and accepted behaviors to establish and maintain a secure environment and achieve the State's information security objectives. Contractors that manage NYSERDA's data outside of NYSERDA's systems with a High or Moderate rating as per the NYS ITS Information Asset Identification Worksheet must comply with the following requirements.

High Rating	Moderate Rating
• Maintain up-to-date SOC 2 Type 2 Assessment Report and provide to NYSERDA upon request. • Maintain Cyber Security Insurance • Provide a signed self-attestation on an annual basis for multiyear contracts	• Maintain Cyber Security Insurance • Provide a signed self-attestation on an annual basis for multiyear contracts

Accessibility Requirements - NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships

with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any

other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Attachment C – Sample Agreement

NYSERDA

“Enabling Innovative Clean Energy Building Solutions”
Program Opportunity Notice (PON) 5982

Up to \$5 Million Available

All, some, or none, of the available funds may be awarded.

NYSERDA reserves the right to extend, and/or add or reduce funding to this solicitation.

Proposals accepted unit June 11, 2025, by 3:00 p.m. Eastern Time

The New York State Energy Research and Development Authority (NYSERDA) seeks demonstration projects at a New York State site that 1) address one of the following Innovation Topic Areas and 2) have received government or foundation funding that advanced and readied the solution for demonstration. NYSERDA anticipates making five \$1 million awards under this solicitation to support the advancement of solutions in the five following Innovation Topic Areas:

1. Building Envelope
2. Clean Heating and Cooling
3. Intelligent Grid-interactive Building Controls
4. Low-GWP Refrigerant Applications and Leak Detection
5. Thermal Storage

NYSERDA has no predefined funding amount or number of awards based on topic area. NYSERDA may elect to fund one or more, or none, of the proposals in any category. Eligible solutions must show strong potential to advance one or more of NYSERDA's core mission outcomes¹ in the buildings sector in New York State (NYS) through reducing GHG emissions, improving energy efficiency, building decarbonization, and/or resiliency in existing buildings in the residential, multi-family, and small/medium commercial market. Proposals must be submitted before the due date given above and must meet all requirements, including minimum cost share, given in the Program Requirements of Section III below.

Letter of Intent to Propose. Though not required, proposers are strongly encouraged to submit a Letter of Intent using this [Letter of Intent link](#). If submitting a Letter of Intent to Propose, please submit it as early as possible. If submitted no later than two weeks prior to the full proposal due date given above, NYSERDA staff will respond as to the eligibility of the project under this PON, specifically whether the project falls within a topic area and meets the other funding requirement. Final determination of responsiveness and proposal merit will be determined based on the review of the full proposal.

Proposal Submission: Online submission is preferable. Proposers must submit using the provided templates in Section VIII: Attachment Checklist and must submit the files in their given format (i.e. Word, Excel) except Word documents may be delivered in PDF format if desired. PDFs must be searchable and should be created by direct conversion from MS Word, or other conversion utility. Individual files should be no larger than 100MB in file size. Submitted files cannot be images from scanning. For ease of identification, all electronic files must be named using the proposer's entity name in the prepending each submitted file, see examples below. NYSERDA will also accept Letters of Intent, and Proposals with all attachments by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link [Application Instructions and Portal Training Guide](#).

CompanyXYZ – TRL/CRL Calculator.xlsx (DO NOT convert to PDF)

Questions? Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Department's Designated Contacts for this Procurement are: Bob Carver for Building Envelopes and Low-GWP Refrigerant Applications and Leak Detection (518) 862-1090, ext. 3242 or by email RobertNextGen@nyserda.ny.gov, Mike Genovese for Clean Heating and Cooling and Thermal Energy Storage at (518) 862-1090, ext. 3103 or by email MichaelNextGen@nyserda.ny.gov, Jerone Gagliano for Intelligent Buildings by email JeroneNextGen@nyserda.ny.gov, Joe Borowiec for all categories at (518) 862-1090 ext. 3381 or by email JoeNextGen@nyserda.gov. If you have contractual questions concerning this solicitation, contact James Cowman at (518) 862-1090, ext. 3652 or jim.solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offerer, and (2) may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. Please see [Solicitation Proposal and Vendor Responsibility Questions.pdf](#) for a complete list of the questions proposers must answer as part of a submission. The online proposal system closes promptly at 3 p.m. Eastern Time, files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

I. Introduction

The New York State Energy Research and Development Authority (NYSERDA) works to promote energy efficiency, renewable energy, and emissions reduction across New York's economy and energy system. NYSERDA's mission is to "advance clean energy innovation and investments to combat climate change, improving the health, resiliency, and prosperity of New Yorkers and delivering benefits equitably to all."

Buildings are a large user of energy, a major contributor to greenhouse gas emissions (GHG) and system peak demand, and an important critical infrastructure for NYS. Heating, ventilation, and air conditioning (HVAC) equipment consumes approximately 40% of the energy used by residential and commercial buildings, making this end use responsible for approximately 25% of the total energy used and 36% of the GHG emissions in NYS. The cooling requirement for buildings is the primary contributor to the difference between statewide peak electric system demand (>32 GW) and average base-load system demand (<18 GW). A recent New York Independent System Operator (NYISO) report² states "Our models show that by 2030, New York City (Zone J) could have a reliability margin of only 200 MW to serve a peak load of more than 10,000 MW."

The large capital investment and long asset life of existing building equipment requires new technologies to have compelling value propositions to achieve market adoption. Some innovations have been technically compelling but not commercially successful. Additionally, solutions on the market today do not address NYS's diverse climate or dense urban population and are not sufficient to meet New York's aggressive energy and GHG reduction goals.

² <https://www.nyiso.com/-/grid-reliability-requires-a-careful-transition-from-fossil-fuels>

Program Summary

NYSERDA's End-Use Energy Applications program seeks to accelerate the commercialization of innovative solutions that enable electrification and decarbonization of the building stock in NYS. Through successful demonstration projects, this program will validate the technical performance and advance the commercial readiness of these new solutions in New York State to enable cleaner, more energy efficient, load flexible, and resilient buildings. Additionally, as many building innovations have the additional benefit of improved indoor air quality and quality of life for consumers, this program will evaluate the potential for delivering cost savings while also enhancing occupant comfort and health benefits. This solicitation seeks to attract solutions that can directly benefit low- to moderate-income (LMI) households and disadvantaged communities (DACs) across NYS. These solutions should address real-world adoption barriers like affordability, regulatory constraints, and/or community acceptance.

In addition to articulating the technical innovation, proposers must describe their commercialization strategy, including, but not limited to: customer discovery and channel strategy, market entry barriers, regulatory considerations, workforce and supply chain readiness, financing mechanisms for adoption, manufacturing and scale-up, key partners, and team qualifications.

II. Innovation Topic Areas

1. Building Envelope
2. Clean Heating and Cooling
3. Intelligent Grid-interactive Building Controls
4. Low-GWP Refrigerant Applications and Leak Detection
5. Thermal Storage

Innovation Topic Areas

All submissions must detail how their proposed project addresses the Desired Outcomes and Requirements of one of the following Innovation Topic Areas. The innovation should improve the installed cost, ease of installation, operating cost, and/or ease of maintenance over existing commercially available solutions.

1. Innovation Topic Area 1: Building Envelope

This topic area covers innovations that address the demonstration of building envelope solutions for improving existing residential buildings. Proposals for this topic area may demonstrate components or materials that support high performance building assemblies; construction approaches that achieve higher R-values and lower air leakage; new manufacturing methods for fabricating high performing components, materials, and assemblies; and digital tools and robotic technologies for reducing design and installation times.

Desired Outcomes:

- The demonstration of the installed solution should show a significant improvement in the thermal and air leakage performance of at least 30% over current market solutions.
- The work should determine the impact to heating and cooling expenses for the building due to the installed solution.
- The demonstration should determine the material and labor expenses for the installation, level of disruption to occupants during installation, and improvements to indoor comfort.
- Demonstrated solutions should reduce retrofit costs to the building owner by at least 30% compared to conventional measures providing the same level of building envelope improvement.

Topic Area Requirements:

1. Hydrofluorocarbons cannot be used in production or installation of materials included in a proposed solution responding to this topic area.

2. Digital and robotic technologies must reduce building envelope retrofit costs.

2. **Innovation Topic Area 2: Clean Heating and Cooling**

This topic area covers innovations that address building space conditioning through the use of clean heating and cooling technologies, including, but not limited to: air- or water-source heat pumps, packaged terminal heat pumps, and ground-source (geothermal) heat pumps. Potential heat pump solutions could use either a traditional vapor compression cycle or an alternative, non-vapor compression cycle.

Desired Outcomes:

- The clean heating and cooling solutions should improve overall system performance, efficiency, and indoor air quality over existing commercially available solutions.
- If the solution uses a refrigerant, it should use a low-GWP refrigerant and meet known and expected future refrigerant regulatory requirements.
- The system architecture should allow for smart control integration and/or intelligent control integration.

Topic Area Requirements:

1. Must use only electricity or renewable forms of energy as the primary energy inputs (i.e., non-fossil fuel-based inputs).
2. For air source heat pump solutions targeting the residential market, it must be listed, or eligible to be listed, on Northeast Energy Efficiency Partnerships' (NEEPs') Cold Climate Air-Source Heat Pump (ccASHP) [Specification Listing](#).

3. **Innovation Topic Area 3: Intelligent Grid-interactive Building Controls**

This topic area covers innovations that address energy and building management systems, smart electric panels, smart circuit splitters, distributed sensors and controls, and other smart grid devices.

These solutions should connect and integrate with the building's energy assets and autonomously manage the timing and/or setpoints of the building's major electric loads to meet the building owner's objectives such as: reducing upfront electrification costs, overall lowest utility cost, greatest demand reductions, lowest carbon footprint, and/or resiliency.

Desired Outcomes:

- The control solution should enable or greatly improve the energy and electric load flexibility performance, value proposition, and grid-interactive readiness of buildings.
- The demonstration should determine the maximum daily load flexibility potential within the building during the heating and cooling seasons while maintaining occupant comfort and energy asset priority.
- While the solution does not need to control all energy assets of the targeted building type, it is encouraged that most large energy assets are controlled for greater load flexibility capacity.

Topic Area Requirements:

1. Must allow the building operator or occupants to prioritize the controlled energy assets (e.g., HVAC having a higher priority than EV charging, etc.), and set limits to comfort setpoints (e.g., thermostat settings, delivered hot water temperature).
2. Must demonstrate a clear reduction in energy usage and maximum power draw through optimization of load shifting and shedding.
3. Must use industry standard protocols for device and grid communication.
4. Must be automated but still provide temporary override.
5. Must be minimally disruptive to the building occupants and services, and maintain comfort within allowable tolerances.

4. **Innovation Topic Area 4: Low-GWP Refrigerant Applications and Leak Detection**

This topic area covers innovations that address the use of low-GWP refrigerants. Practical and safe solutions are being sought that do not compromise HVAC equipment efficiency or reliability. NYSERDA is seeking innovative solutions in the following areas to accelerate the mitigation and phase-out of high global warming refrigerants:

- Refrigerant monitoring and leak detection;
- Novel compressors;
- In-field leak repair; and
- Other emerging low-GWP refrigerant technologies.

Desired Outcomes:

- Quantify the impact a low-GWP refrigerant technology has on a building's direct and indirect GHG emissions.
- Demonstrate the viability of using low-GWP refrigerant in common HVAC applications.
- Establish practices and protocols that minimize refrigerant leakage from HVAC equipment.

Topic Area Requirements:

1. Supported technologies must be applicable to heat pump applications.
2. Supported refrigerants' 100-year GWP values must not exceed 500.

5. **Innovation Topic Area 5: Thermal Energy Storage**

This topic area covers innovations that address integration of Thermal Energy Storage (TES) into an HVAC appliance, stand-alone thermal storage products that integrate with HVAC appliances through a control system, improvement of the capacity or runtime of HVAC appliances during periods of extreme temperature and/or electrical grid blackout, and district TES solutions that integrate with a district/community thermal distribution network.

Desired Outcomes:

- Demonstrations of integration of thermal storage with HVAC should show a significant improvement in the building HVAC system's capacity, flexibility, reliability, overall seasonal efficiency, and/or operating costs.
- Demonstrate a clear improvement over existing solutions in at least one of the following areas:
 - Installed Cost (\$/kWh or \$/Btu),
 - Energy storage density (Btu/ft³, Btu/lb depending on application),
 - Full cycle efficiency (Btu_{out}/Btu_{in}), or
 - Degradation lifespan (# of cycles).

Topic area Requirements:

1. All proposed solutions must be capable of storing thermal energy for heating, or heating and cooling applications.
2. If integrated with an ASHP and targeting the residential market, the ASHP must be commercially available and listed, or eligible to be listed, on [NEEPs' ccASHP Specification Listing](#).
3. Allow for grid interaction and have the potential for demand response implementation.

III. Program Requirements

Projects selected for funding must:

1. Show potential to reduce GHG emissions from the building sector in New York State.
2. Demonstrate benefits to electric System Benefits Charge (SBC) ratepayers as described under [Clean Energy Fund description on NYSERDA's website](#).

3. Have an active or previous government (non-NYSERDA) or foundation funded contract(s) for the development of the solution being proposed to this PON that addresses one of the five Innovation Topic Areas in Section II with a minimum funding amount of \$250,000 from the contract or aggregation of contracts for the same solution. Past or current NYSEDA funding cannot be counted toward this requirement. Some examples include: ARPA-E, DOE, CEC, MassCEC, etc. For past funded work to be considered, the end date of the contract period of performance must not be prior to January 1, 2023.
4. Detail how the proposed demonstration project, as defined below, addresses the Desired Outcomes and Requirements of one of the Innovation Topic Areas given in Section II, and will advance the energy performance, and/or reduce/shift electrical demand in existing buildings in the residential single family, multi-family, or small/medium commercial building sector.
5. Provide direct and quantifiable energy, environmental, and economic benefits to NYS (including benefits to low- to moderate-income and disadvantaged communities), such as energy savings, demand savings, emissions reductions, job creation, product manufacturing and sales, and/or reduced energy costs.
6. Conduct the evaluation of the demonstration project by a recognized and independent third-party evaluator (i.e., evaluator has no financial interest in the outcome of the demonstration).
7. Articulate a plan to take the solution from the demonstration to commercial deployment.
8. Be near commercial ready – the vast majority of the development work already completed and the start of the demonstration monitoring and validation beginning no later than 12 months from the date of contracting. No project schedule shall exceed a total of 30 months.
9. Satisfy the Proposal requirements of Section IV submitting all necessary attachments, and sufficiently address the evaluation criteria given in Section V.
10. Adhere to the Annual Metrics Reporting terms (see Section VI) and General Conditions (see Section VII).
11. Limit any product development activities, as defined below, to no more than \$100,000 of the NYSEDA funding, and these activities may not prevent meeting the schedule requirements given in #8 above.
12. Provide a budget detailing that the project meets the minimum cost share of 20%.
13. Provide a letter of support and commitment from all funding sources.
14. Project demonstrations must take place within New York State and include at least one letter of interest or support from the host site owner(s)/decision maker(s).
15. Project demonstration site(s) must pay into the [Clean Energy Fund](#) through the electric Systems Benefit Charge (SBC) unless significant statewide benefits are demonstrated, and must demonstrate benefits to electric SBC ratepayers.

Product Development is defined as efforts to bring a new or improved product to market including business case development, product design, scale, and field testing, but not including earlier stage technical feasibility or proof of concept development. Technologies with a Technology Readiness Level (TRL) exceeding 3 are to be considered Product Development (see Attachment D – TRL/CRL Calculator for additional guidance on TRLs). Field testing or pilot deployments of a non-commercial, non-warranted technology are considered Product Development.

Demonstration is defined as a project intended to increase sales or usage of a commercialized product, with results used to generate objective performance information for customers or policymakers. At this point, the product is available and warranted. While incremental improvements may be incorporated based on the demonstration results, the final product design is essentially complete.

Commercialization Activities

Proposers should allocate no more than 25% of the requested NYSEDA funding to develop and implement the commercialization activities that include an assessment of non-technical, commercialization risks and barriers to market adoption, as well as a clear plan to execute tasks that (1) drive adoption readiness towards commercial deployment in NYS; and (2) proactively address external market risks and regulatory and policy uncertainties.

After completing this demonstration project, the team should have a strong, market-validated commercialization strategy plan to deploy a fully functional and scalable solution that is cost- and feature-competitive and de-risked with a sustainable business model that is well-positioned for scale-up and growth in NYS.

This real-market demonstration application should be used to test and demonstrate the value proposition of the proposed solution while addressing commercialization risks and/or barriers, including market acceptance, resource maturity, license to operate, and especially economic viability. The commercialization strategy plan must specify how the proposer will validate the solution's performance in real-world conditions, including a clear pathway to operate the system in NYS at a competitive cost. See the Commercialization Strategy Plan Criteria and Outline in the Attachment A – Proposal Narrative.

Additional Considerations: All proposers should consider the following guidelines when developing their submissions:

- NYSERDA reserves the right to modify a project's Statement of Work and may offer to fund part of the proposal at a level lower than that requested.
- Prior to an award being made, proposers may be required to demonstrate confirmation of cost share, participation of key individuals and team, commitment from demonstration site(s), and the ability to qualify for an award under applicable laws and regulations.
- A proposal may be considered non-responsive if it fails to comply with the requirements of this Section III, the requirements of Section IV, or the General Conditions of Section VII.
- Preference will be given to proposers that provide attractive leverage (cash co-funding, partnerships) opportunities for NYSERDA, and proposers who have a strong path to commercialization.
- A payment based on the final deliverable will be reserved until project completion. If awarded, NYSERDA may choose to negotiate the amount of such payment.

NYSERDA seeks teaming arrangements that increase probability of success and commercialization of technologies that yield NYS benefits. Teams may include commercial firms, manufacturers, large original equipment manufacturers (OEM), industry associations, research organizations, universities, government agencies, corporate strategic partners, strategic investors, end-users, and other stakeholders.

Letters of Commitment or Support: Include letters of commitment or support from each identified team member in the appendix to the proposal. If you are relying on any other organization to do some of the work, provide services or equipment, or share in the non-NYSERDA cost, include a letter from that organization describing its planned participation. Also include letters of support or commitment from businesses or other organizations critical to the future commercialization, demonstration, or implementation and sales of the solution in the market. Absence of letters of commitment or support may be interpreted as meaning that the proposer does not have support from the subject parties. Letters should not be solicited from NYSERDA personnel.

IV. Proposal Requirements

Note: Submission of a Letter of Intent is recommended but not required for submitting a Proposal.

Proposal: Proposals must include the following:

1. Documentation of past or current awarded grants that meet #3 of the Section III. Program Requirements including the following:
 - a. Copy of the executed contract(s) and the associated proposal(s).
 - b. Copies of final report from completed past contract(s) or interim progress reports if it is a current contract.
 - c. A summary given in the Proposal Narrative (Attachment A) highlighting:
 - i. Alignment with the NYSERDA Innovation Topic Area, its Desired Outcomes, and its Requirements.
 - ii. For completed award(s), provide the results and findings

- iii. For open award(s), provide the progress as compared to the planned activities
2. The Proposal Narrative (Attachment A) form-fillable document must be complete. The Innovation Topic Area the proposal addresses must be clearly indicated. The proposal must adhere to all requirements listed in the specific Innovation Topic Area. **The Proposal Narrative must have all the required questions/sections answered. If a required question is not answered, the proposal could be deemed non-responsive.**
3. The Statement of Work (Attachment B), Budget Form (Attachment C), and TRL/CRL Calculator (Attachment D) must be completed.
4. Proposers must state if the proposal will need to include any development activity as constrained by the Section III Program Requirements, and whether it will include manufacturing activities. Proposed projects should be demonstration ready, however, there are circumstances where some development is still required to meet the requirements of the demonstration site.
 - a. If product development activities are required, the proposal should also include separate tasks, show these activities in the schedule, and fill in the development column in the budget for these activities.
5. Proposals should not be submitted in an elaborate format. Unnecessary appendices beyond those sufficient to present a complete, comprehensive, and effective response will not influence the evaluation of the proposal. Each page of the proposal should state the name of the proposer, the PON number, and the page number.

Cost Sharing: The proposal should show non-NYSERDA funding of at least 20% of the total project cost. Cost sharing can be from the proposer, other team members, and other government or private sources. Contributions of direct labor (for which the laborer is paid as an employee) and purchased materials may be considered "cash" contributions. Unpaid labor, indirect labor, or other general overhead may be considered "in-kind" contributions. NYSEDA will not pay for efforts which have already been undertaken. The proposer or proposing team cannot claim as cost-share any expenses that have already been incurred.

In compliance with §139-j and §139-k of the State Finance Law (see Section VII, General Conditions below for additional information), proposers will be required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility.

V. Proposal Evaluation

1. Proposals that meet solicitation requirements will be reviewed by one or more Scoring Committees (SC) using the Evaluation Criteria below which are listed in the order of importance. At NYSEDA's discretion, proposers may be requested to interview with all or part of the Scoring Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview. Proposers receiving favorable evaluations may be invited to enter into contract negotiations with NYSEDA. The proposer may be required to submit additional details for the Statement of Work, budget, and schedule, and may also be asked to address specific questions or recommendations of the SC before contract award.

Evaluation Criteria:

- **Strategic Fit**
 - How well does the proposed project address the Innovation Topic Area, its Requirements, and Desired Outcomes?
 - How strong is/was the past project performance (e.g., how solution was advanced, cost overruns, what was achieved, funding agency feedback) in the current or previous contract(s)?

- Is the proposed solution demonstration ready similar to having a TRL of 7, or if not, how reasonable is the required product development needed as part of this proposed project?
- **Demonstration Scope:**
 - How well will the demonstration plan validate the performance and benefits of the solution for the targeted building type(s)?
 - How well does the scope of work identify the activities needed to conduct the successful demonstration of the solution?
 - Does the proposed project have NYS host site commitment(s) or letter(s) of support?
 - Has the proposer included an independent third-party evaluator with recognized expertise completing M&V actions for the proposed solution?
- **Adoption Readiness & Market Potential:**
 - Has the proposer adequately described the target customer(s) and the obtainable market size, validated the value proposition with customer discovery, as well as identified policy and regulatory adoption risks for the proposed solution?
 - Does the proposer understand the competition and identify the advantage of their proposed solution?
 - Is there a well-defined verifiable commercialization and scale up plan that is market-based and likely to be successful?
 - Is the current cost structure and revenue business model well understood that will lead to a sustainable and scale-able growth business?
 - Has the proposer demonstrated support from necessary market actors and potential customers, including any letters of interest, letters of support, and/or letters of commitment?
 - Does the commercialization plan have robust partnerships and supply chain plans?
- **Solution Impact:**
 - Relative to current technologies, how significant are the potential reductions in GHG emissions, energy use/demand, and building owner utility bills assuming solution is fully commercialized?
 - Are there additional significant benefits such as improvements in the building sector's resiliency to disasters or electrical outage, reduced liability, improved health benefits, improved occupant comfort, or improved safety?
 - How likely will there be subsequent economic benefits in New York State after the completed project in the form of: manufacturing, installation and technical service activity, intellectual property creation, revenue-generation, or job creation?
 - How likely will the in-market solution directly benefit disadvantaged low- and moderate-income communities?
- **Project Value:**
 - Is the overall project cost justified based on the schedule and the expected benefits?
 - How appropriate and reliable are the proposer's co-funding contributions (sources and amounts) in view of the proposer's overall financial resources, degree of risk exposure, and potential to benefit from the work?
 - Does the proposer have a reasonable plan for pursuing, or justification for not pursuing, any additional funding (if necessary) for full commercialization, scale up, and successful market entry?
- **Project Team and Support:**
 - To what degree does the team (including active advisors) have relevant and necessary technical and commercial background and experience?
 - How firm are the commitments and support from essential participants, co-funders, and other organizations?

- How strong is the proposer's fundraising track record?
- Does the proposer demonstrate the ability to deliver NYS-oriented solutions, have the organizational capacity and/or demonstrated commitment to work or manufacture in NYS.

Other Considerations. Proposals will be reviewed to determine if they meet all Program Requirements, and fit well within the Innovation Topic Areas. NYSERDA reserves the right to accept or reject proposals based on the following program policy factor(s):

- overall project value, accounting for both project risk and benefits versus NYSERDA investment;
- the general distribution of awards among technologies, approaches, methods, time-to-market, building sectors, and other organizations and geographic locations in New York State;
- the degree to which there is a diversity of technologies, approaches, time-to-market, geographic locations, methods, and institutions in the existing portfolio of projects funded by NYSERDA;
- the degree to which the proposed project, including proposed cost share(s), optimizes the use of available funding to achieve NYSERDA's overall programmatic and portfolio objectives, as such are specifically set forth in the Solicitation; and
- the degree to which pricing and hourly rates are in line with the rest of the market.

VI. Metrics

Annual Metrics Reports – If awarded, the proposer will be required to submit to NYSERDA's Project Manager on an annual basis, a prepared analysis and summary of metrics addressing the anticipated energy, environmental and economic benefits that are realized by the project. All estimates shall reference credible sources and estimating procedures, and all assumptions shall be documented. Reporting shall commence the first calendar year after the contract is executed. Reports shall be submitted by January 31st for the previous calendar years' activities (i.e. reporting period). Metrics will be provided in accordance with a web-based form, which will be provided by NYSERDA. NYSERDA reserves the right to add or remove metrics during the course of the project. NYSERDA may decline to contract with awardees that are delinquent with respect to metrics reporting for any previous or active NYSERDA agreement.

VII. General Conditions

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department.

The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making one or multiple awards under this solicitation. NYSERDA anticipates a contract duration of a maximum of 30 months, unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify proposers in approximately 7 weeks from the full proposal due date whether your proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting Michael Genovese (MichaelNextGen@nyserda.ny.gov). NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Information Security: The NYS Office of Information Technology Services (ITS) establishes and regularly updates policies, standards, and guidelines for information security (collectively referred to as "ITS Security Policies") for State Entities, including NYSERDA. Contractors, vendors, and solution providers conducting work on behalf of NYSERDA including, but not limited to, application development, web development,

hosting, or managing NYSERDA's sensitive data are required to comply with the NYS requirements. These requirements include, but are not limited to, the NYS Information Security Policy NYS-P03-002 which sets forth the minimum requirements, responsibilities, and accepted behaviors to establish and maintain a secure environment and achieve the State's information security objectives. Contractors that manage NYSERDA's data outside of NYSERDA's systems with a High or Moderate rating as per the NYS ITS Information Asset Identification Worksheet must comply with the following requirements.

High Rating	Moderate Rating
• Maintain up-to-date SOC 2 Type 2 Assessment Report and provide to NYSERDA upon request. • Maintain Cyber Security Insurance • Provide a signed self-attestation on an annual basis for multiyear contracts	• Maintain Cyber Security Insurance • Provide a signed self-attestation on an annual basis for multiyear contracts

Accessibility Requirements NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see [NYSERDA's Accessibility Requirements](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or

contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

Clean Fuels R&D and Pilot Request for Information (RFI) 5985

Responses Due: May 30th, 2025, by 3:00 PM Eastern Time

The purpose of this Request for Information (RFI) is to acquire feedback that will assist the New York State Energy Research and Development Authority (NYSERDA) in developing a competitive solicitation (PON) for clean fuels pilot projects (TRL 5 or 6), as well as associated R&D efforts (TRL 3-4), to advance clean fuel production opportunities within New York State. The PON will focus on projects that utilize in-state waste feedstocks, including landfill gas, municipal solid waste (MSW), wastewater sludge, agricultural residues, and waste CO₂, to support the development of scalable, low-carbon fuel pathways.

Responses to this RFI should provide the information listed in Section IV below and should be submitted through the online response portal by including the attached response form in .docx or .pdf format. If you have technical questions regarding this RFI, please contact RFI5985@nyserda.ny.gov with the subject line "RFI-5985 Inquiry".

I. Introduction

NYSERDA seeks input to develop a competitive solicitation aimed at advancing clean fuels production in New York State from waste resources available within the state. Figure 1 below shows the clean fuels supply chain with examples. NYSERDA is particularly focused on supporting technologies in the fuel conversion stage. However, proposed projects must demonstrate integration with upstream processes and clearly illustrate the utilization of eligible waste feedstocks, as described below with examples

Figure 1. Clean fuels supply chain with non-exhaustive list of examples

The planned solicitation will be of two parts:

1. Scale up of projects that have successfully demonstrated core components or critical process steps at laboratory scale and are ready to advance to initial pilot or engineering scale testing. Projects in this category would involve operating in realistic conditions – such as dealing with scalable feedstock sources that have variable carbon content, on-off cycling of reactors, conducting continuous operation trials and integrating with parts of an existing clean fuels supply chain.
 - Successful outcomes would de-risk the technology to be ready for system level demonstration project that would mimic commercial operations more closely.
 - Intended activities to support will include site selection, engineering design, construction and measuring performance during a period of operations.
2. Validating earlier-stage technology components or key process steps that have shown promising results through experimental testing in a laboratory scale setting under conditions that simulate realistic operating environments.
 - Successful outcomes would enable the technology to be ready for pilot/engineering scale testing.
 - Intended activities to support will include laboratory scale set up and testing of core components for the fuel conversion step such as improved catalyst design.

This initiative is designed to support in-state clean fuel production opportunities by leveraging waste-derived and biogenic feedstocks to create sustainable fuel alternatives. The feedstock focus for this solicitation will be on waste-derived, biogenic resources generated within New York State, including but not limited to:

- Biogenic components of municipal solid waste (MSW)
- Landfill gas
- Forest and agricultural residues
- Waste CO₂ preferably from biogenic sources (ethanol plants, pulp & paper industry). Other sources that are anthropogenic could be considered
- Wastewater sludge
- Other biogenic and waste-based feedstocks that align with clean fuel production goals

The final products produced through the pathway being tested should be primarily a transportation fuel, meaning more than 50% of the final carbon should be in the form of a transportation fuel. Co-products that help add value to the process could be applicable for other industries. Transportation fuel broadly covers the sectors of interest below:

- Aviation (Sustainable Aviation Fuel - SAF)
- On-road transportation (Hydrogen, Renewable Diesel, Renewable Gasoline, Renewable Natural Gas - RNG)
- Marine transportation (Clean Methanol, Hydrogen, RNG)

In addition to technical validation at the pilot scale, activities would also include supply chain development activities to ensure fuel production aligns with end-use pathways within New York State. This includes planning for the logistics, distribution, and market adoption of the produced fuels, appropriate to a pilot scale project. Final fuel productions should also have a reasonable chance of achieving ASTM approval. Through this RFI, NYSERDA aims to gather stakeholder input on key aspects of the upcoming solicitation, including research focus areas, proposal timelines, project execution strategies, and risk considerations.

II.Responding to this RFI

Responses to this RFI should provide the information listed in Section IV below and should be submitted through the online response portal by including the attached response form in .docx or .pdf format. An additional space will be provided in the online response portal for additional attachments that the responder deems relevant. Files should not be scanned. For ease of identification, all electronic files must be named using the responder's entity name in the title of the document.

Responses to this RFI are due on May 30th, 2025, by 3:00 PM Eastern Time.

Respondents are not required to address all questions or subject areas. Respondents should focus on questions relevant to them.

NYSERDA may reach out to respondents to seek clarifications as well as to pursue follow-up dialogue on the issues raised in responses. If you have technical questions regarding this RFI, please contact the designated contacts for this RFI: Ajay Jagdish or Haiyan Sun by email at RFI5985@nyserda.ny.gov with the subject line "RFI-5985 Inquiry". Inquiries from respondents will not be entertained except by email to RFI5985@nyserda.ny.gov.

III.Content of Response

Responses should be concise and focus on areas in which the respondent has a particular interest or expertise.

The following information and items must be included in every response to this RFI:

- Respondent's name, affiliation, title, and primary contact information.
- General background about your organization, including a summary of any previous experience that could be relevant to this RFI.

Confidentiality Note: NYSERDA does not intend to publish responses. However, if you believe that portions of your submission meet the exceptions for disclosure set forth in the Freedom of Information Law (FOIL, NY Public Officers Law Article 6), specifically, NY Public Officers Law section 87(2), please mark them "Confidential" or "Proprietary" and provide the justification required by law with your submission. NYSERDA will process such requests under the procedures included in FOIL and NYSERDA's FOIL regulations (21 NYCRR Part 501). FOIL includes an exception from disclosure under section 87(2)(d) for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." see NY Public Officers Law section 89(5) and the procedures set forth in 21 NYCRR Part 501. More information is available at <https://www.nyserdera.ny.gov/Contacts/FOIL>.

IV. Information Requested

Each of the subject areas listed below includes a series of questions for consideration. It is not required for respondents to address all questions in a given subject area, or even to address all subject areas. Respondents should focus on questions relevant to their field of expertise.

Section 1: General questions about pathways being considered

- a. Which clean fuel conversion pathways do you consider viable in New York State, given the variability in feedstock availability such as landfill gas, municipal solid waste (MSW), waste CO₂, wastewater sludge, and agricultural residues?
- b. What are the research and development challenges for the pathway of interest to the responder as it relates to lowering cost, managing feedstock variability, reducing harmful co-pollutants, reducing carbon intensity of the process, etc.?

Section 2: Proposal & Procurement Considerations

- a. How long do you need to prepare and submit a proposal for a clean fuels production pilot project? This would involve preliminary identification of the testing site, preliminary LCA and TEA projections for the process, providing results from prior development stage to validate readiness for moving to a pilot project, identification of a feedstock source and identification of partners to execute the project.
 - i. What timeframe would be needed in days? Define length by each activity not limited to the steps mentioned here.
 - ii. What main factors influence the time required for proposal development (e.g., engineering documents, feedstock sourcing, financing, partnerships)?

- iii. What information can NSYERDA provide (either in the solicitation or through other method, such as webinar) that can help speed up the proposal development process?
- b. How long would site considerations and cost projects remain valid while proposals are being evaluated and awarded?
 - i. What factors influence how long proposals can remain valid?
 - ii. How does this affect the structure of proposals?

Section 3: Project Execution, Scale & Period of Performance

- a. What is a reasonable timeframe for pilot project execution? That is, from site selection, to engineering design and validation to construction, and then testing performance during operation? Define length by each step of the project execution not limited to the steps mentioned here.
- b. What are success metrics during period of performance such as continuous operation time, on-off cycling times, etc., for pilot projects needed to de-risk technology for demonstration scale facilities? What are success metrics for component testing at the laboratory scale to enable technology scale up for pilot projects?
- c. For the pathway of interest to the responder, what is the typical scale at the pilot project level? Define in terms of ton of feedstock processed per day and/or gallon of fuel produced per day.
- d. What factors determine if the technology is suitable for a pilot project focused on component testing (or key process step testing) or an integrated system in real world conditions. Component testing here refers to optimization of the single process such as a fuel conversion reactor. System level testing would refer to optimization of the Balance of Plant (BOP) which would include feedstock integration, BOP energy management (such as heat exchangers), as well as the core reactor.
- e. What are engineering package requirements at the pilot project stage (e.g., FEL1, FEL2, FEL3, FEED)?
- f. How does the supply chain need to evolve as it relates to offtake of final product at the pilot stage to demonstrate viability of the pathway to move to later commercial stages? Example activities include evaluating existing fuel storage and distribution infrastructure, establishing end-user partnerships, etc.

Section 4: Feedstock sourcing

- a. How is feedstock typically sourced at different scales of development, particularly for pilot projects?
 - i. What challenges exist in ensuring feedstock purity, availability, and cost control at this stage?
 - ii. Will these challenges related to the feedstock vary based on the size of the pilot project? If yes, please explain.
 - iii. Will these challenges related to feedstock be affected when limited to New York state resources only? If yes, please explain as well as explaining impact on scalability to follow-on larger facilities.

- iv. Is transport distance a critical factor in project site selection?
- v. How would proposers provide verification regarding the utilization of in-state feedstock only?

Section 5: Infrastructure

- a. What infrastructure elements are most critical for clean fuel pilot and demonstration projects?

Infrastructure here refers to the supply chain elements that fall outside boundary of “Fuel conversion” step in figure 1, which are necessary to support the development of clean fuel conversion plants. Provide as detailed a list as necessary, while also addressing the specific questions below:

- i. What are the inputs required for the conversion process such as electricity, water, thermal energy, and any other utilities?
- ii. Are there any specialized on-site transport deliverability and storage that might be needed for feedstock handling?
- iii. What Final product storage (final fuel) tanks and types of quality control testing stations would be needed for this scale – for example, to validate ASTM compliance?
- iv. What the safety related equipment is needed?

Section 6: Partnerships & Collaboration

- a. What types of partnerships are most critical for successful clean fuels pilot projects?
 - i. What types of organizations typically collaborate on these projects?

V. General Conditions

Outcome

The information gathered by NYSERDA will be advisory only and is not binding on any state agency, office, commission, or public authority. Any actions recommended by NYSERDA will be subject to all applicable laws, including procedural, regulatory, and environmental review requirements.

Disclaimers

This RFI is neither a contract offer nor a request for proposals and does not commit NYSERDA to award a contract, pay any costs incurred in preparing a response, or to procure or contract for services or supplies. Respondents are encouraged to respond to this RFI; however, failure to submit a response will not impact a Respondent's ability to respond to any future competitive solicitation process (if any) for projects or influence the selection of a service provider going forward or affect its rights and obligations under any applicable laws or in any legal proceeding. NYSERDA reserves the right to discontinue or modify the RFI process at any time, and makes no commitments, implied or otherwise, that this process will result in a business transaction or negotiation with one or more Respondents. All costs associated with responding to this RFI will be solely at Respondents' expense.

NYSERDA

Empire Building Challenge: Hospitals

Program Opportunity Notice (PON) 5989

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Proposals are due August 14, 2025, by 3:00 p.m. Eastern Time.

Description:

Through the Empire Building Challenge: Hospitals program (“the Program”), New York State Energy Research and Development Authority (NYSERDA) seeks to fund demonstration projects that showcase innovative approaches to achieving meaningful energy reductions that can be replicated and scaled in existing hospital buildings across New York State. Through this competitive solicitation, NYSERDA will award up to \$5 million to selected hospitals for the construction and installation of scalable, efficient, low-carbon solutions such as electrification of building systems, electrification readiness projects, and comprehensive energy efficiency projects that will achieve significant carbon and/or energy reduction.

Funding: Awards of up to \$5 million per project. The total award cannot exceed 75% of total project costs. Funding is available to support project sites statewide, including sites that pay the System Benefits Charge (SBC) on their electric utility bill, and sites that do not pay the SBC. If awarded, projects may be eligible for an additional \$50,000 to support operation and maintenance training on new equipment and building systems installed as a result of the awarded project.

Eligibility: Hospitals located in New York State are eligible to submit proposals. Refer to Section VIII for how the Program defines hospitals. All buildings included in the proposal must be existing hospital buildings located in New York State. Projects must meet requirements outlined in Section III of this solicitation.

Informational Webinar: NYSERDA will host an informational webinar on March 18, 2025, starting at 2:00 p.m. ET. Questions may be submitted ahead of the webinar by emailing EBChospitals@nyserda.ny.gov. Register for the webinar by following [this link](#).

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer’s entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link “[Application Instructions and Portal Training Guide \[PDF\]](#)” located in the “Current Opportunities” section of NYSERDA’s website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Department’s Designated Contacts for this Procurement are: Adam DeSio – Primary Contact (Designated Contact) at (212) 971-5342, ext. [3009](#) or by e-mail EBChospitals@nyserda.ny.gov or Tiffany Nowak – Secondary Contact (Designated Contact) at (518) 862-1090, ext. [3548](#) or by e-mail EBChospitals@nyserda.ny.gov for technical questions. If you have contractual questions concerning this solicitation, contact James Cowman (Designated Contact) at (518) 862-1090, ext. [3652](#) or Jim.Solicitations@nyserda.ny.gov.

Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result in a proposer being deemed a non-responsible offeror, and (2) may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. Please see [Solicitation Proposal and Vendor Responsibility Questions.pdf](#) for a complete list of the questions proposers must answer as part of a submission. The online proposal system closes promptly at 3 p.m. Eastern Time, files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserdera.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

Section I: Introduction

History of Empire Building Challenge

Announced by New York State in early 2020, The Empire Building Challenge is an initiative that supports replicable and scalable low carbon retrofit approaches in large existing buildings. Empire Building Challenge has established partnerships between NYSERDA and leading real estate owners with the ability to publicly commit to decarbonization for buildings in their portfolios. The program has since expanded to fund projects that demonstrate different decarbonization pathways for multifamily and commercial buildings. More information on the success of the Empire Building Challenge and its resources can be found on [NYSERDA's website](#).

Empire Building Challenge: Hospitals

As an extension to the State's \$50 million Empire Building Challenge initiative, Empire Building Challenge: Hospitals will fund demonstration projects that showcase innovative pathways to achieving meaningful energy reductions that can be replicated and scaled in existing hospitals across New York State. Projects funded through this solicitation will advance low-carbon solutions that reduce emissions, increase energy efficiency, and help make existing hospitals cleaner and healthier.

Section II: Program Documents

Below is a summary of this solicitation's Attachments and their intended use.

- *Attachment A – Proposal Template*
 - The Proposal Template includes a series of questions Proposers are required to respond to.
 - Responses to questions in the Proposal Template serve as the Proposer's opportunity to address the evaluation criteria set out in Section VI (Proposal Evaluation Criteria).
 - Proposers may respond to the instructions and questions directly within the Attachment A – Proposal Template document **OR**
 - Proposers may respond to the instructions and questions in a separate document, but the format must match Attachment A – Proposal Template.
- *Attachment B – Proposal Workbook*
 - The Proposal Workbook includes the following tabs:

- Project Impact & Measure Costs – Proposers must enter the annual baseline energy use for all buildings included in the project. Proposers must also enter the project's measures to be installed, associated energy savings, and costs.
- Project Budget – Proposers must enter the NYSERDA funding request amount and other known or anticipated funding sources.
- Project Schedule – Proposers must enter start and end dates for project construction and installation phases, tasks, and/or milestones.
- *Attachment C – Climate Hazard Exposure Guidelines*
 - The Climate Hazard Exposure Guidelines provide instructions for determining if project sites are exposed to climate hazards. This determination is required for completing Attachment A - Proposal Template.
- *Attachment D – Sample Agreement*
 - The Sample Agreement is an example NYSERDA agreement with NYSERDA's standard terms and conditions. This document is solely for informational purposes and not required for a proposal submission.

Refer to Section V for an overview of this solicitation's proposal requirements.

Section III: Eligibility

Proposer Eligibility

- Proposer must be a hospital or representative authorized to act on behalf of a hospital located in New York State. Refer to Section VIII for how the Program defines hospitals.

Project Requirements

- Projects must only include existing hospital buildings located in New York State.
- Proposers must utilize a third-party independent contractor to complete the project's Scope of Work.
- A feasibility study or equivalent analysis must be completed for the proposed project prior to submitting a proposal. The feasibility study should demonstrate verifiable project costs, energy savings, and carbon reduction potential using standard engineering principles.
- Construction and installation of proposed measures must be completed within three years of the date of award.
- Projects must complete one year of measurement and verification (M&V) post-construction completion and measure installation.
- Projects must utilize replicable and commercially viable products and solutions that have already been accepted by the market.
- Projects must consider the inclusion of relevant and feasible resiliency measures to protect project sites and measures against climate hazards. Proposers shall determine if the project is exposed to flood hazards using the guidance within Attachment C: Climate Hazard Exposure Guidelines. If the project is exposed to any climate hazards, the project must consider relevant resiliency measures to protect project measures against climate hazards.
- In addition to these requirements, the project must meet the Project Eligibility criteria below.

Project Eligibility

The Program seeks projects focused on innovative, scalable solutions for existing hospital buildings that will achieve significant carbon and/or energy reduction. Example eligible project types are listed below. NYSERDA, at its sole discretion, will consider additional project types on a case-by-case basis. In all cases, projects must comply with the Contingent and Ineligible Activities in this section.

- Electrification of building heating and cooling systems, meeting the following requirements:
 - Installation of clean heating and cooling technologies that provide space heating and/or cooling, including but not limited to Ground Source Heat Pumps (GSHP), Air Source Heat Pumps (ASHP) or Variable Refrigerant Flow (VRF) systems.
 - Fossil fuel (heating oil, natural gas, steam generated by fossil fuel, etc.) energy consumption must be reduced by the new electric technology or application.
 - The electric technology or application shall be market ready.
 - It is highly recommended that projects including geothermal consider ground source heat pump borehole testing prior to submitting a proposal to ensure that the project location is suitable for the proposed technology.
 - If this testing still needs to be completed, [NYSERDA's FlexTech program](#) cost-shares feasibility studies for GSHP and geothermal systems, including bore hole and thermal conductivity analysis.
- Building electrification readiness projects, including but not limited to a combination of the following:
 - Conversion of distribution systems (e.g., steam to hot water)
 - High performance building envelope improvements and other upgrades to reduce building thermal load and demand.
 - Electrification of building systems such as domestic hot water heating equipment.
- Comprehensive building energy efficiency improvements that impact energy consumption, greenhouse gas emissions, and overall building load.
 - System conversions to natural gas or other fossil fuels are ineligible.
 - Full system replacements to new fossil fuel-based systems are ineligible.

Contingent Activities

The following upgrades can only be funded when completed in combination with an eligible activity listed above:

- Energy efficient medical equipment upgrades
- Operational improvements for medical equipment resulting in energy savings (e.g. scheduling, implementing standby modes, etc.)
- Upgrading existing electrical infrastructure (e.g., electrical panel upgrades & equipment service infrastructure)
- Energy storage systems
- Renewable energy technologies

Ineligible Activities

- Lighting upgrades
- System conversion to natural gas or other fossil fuel
- Full system replacements to new fossil fuel-based systems
- Clean transportation, including electric vehicles or fleets and electric vehicle charging stations

- New construction and expansion projects
- Work conducted prior to the execution of an Agreement between NYSERDA and the Proposer.

Section IV: Funding

- A Proposer may receive up to \$5 million in total for the implementation of an awarded project. The total award cannot exceed 75% of total project costs.
- If awarded, projects may be eligible for an additional \$50,000 to support operation and maintenance training on new equipment and building systems installed as a result of the awarded project. Funding amount awarded for training may be based on number of trainees. To be eligible for the maximum of \$50,000, a minimum of 8 building operators must be trained.
- Work conducted prior to the execution of an Agreement between NYSERDA and the Proposer is not eligible for cost-reimbursement.
- Proposals can layer funding awarded through this solicitation with funding from utility incentive programs, federal funding, and IRA incentives. However, NYSERDA funding cannot go toward the same measure as a utility incentive.
- Projects awarded under this program will not be eligible to apply for any other incentives from NYSERDA for the same work. Participation in this program does not impact eligibility for NYSERDA Technical Assistance Programs, such as FlexTech.

Section V: Proposal Requirements

Required Documentation

A complete proposal package includes the following:

1. Completion of the series of questions presented in NYSERDA's online portal submission platform.
2. Completion of Attachment A – Proposal Template.
 - Proposers may respond to the instructions and questions directly within the Attachment A – Proposal Template document **OR**
 - Proposers may respond to the instructions and questions in a separate document, but the format must match Attachment A – Proposal Template.
3. Completion of Attachment B – Proposal Workbook, entering information into the Project Impact & Measure Costs, Project Budget, and Project Schedule tabs.
4. A copy of the report for the completed feasibility study (or equivalent analysis) on the project's proposed solutions, including supporting calculations for energy savings and cost effectiveness.
5. Supporting Documentation (optional): Proposer may submit supporting documentation that supports the overall proposal. This may include items like letters of support, schematic design drawings, product cut sheets, supporting detail on installation costs (e.g. contractor quote), system diagrams, performance or financial charts or graphs. Providing supporting documentation is entirely at the Proposer's discretion and not required.

Unnecessary attachments beyond those sufficient to present a complete, comprehensive, and effective response will not positively influence the proposal evaluation. Proposals that grossly exceed what is necessary to describe the project or fail to meet all requirements and format guidelines may be rejected as non-responsive.

In compliance with §139-j and §139-k of the State Finance Law (see Section V, General Conditions below for additional information), proposers will be required to answer questions during proposal submission,

which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility.

Section VI: Proposal Evaluation Criteria

Proposals will be evaluated on a competitive basis. In addition to eligibility, quality, and completeness, NYSERDA will evaluate proposals based on the criteria below. Proposers should address all evaluation criteria in their proposal package. NYSERDA reserves the right to accept or reject a proposal at its sole discretion.

Project Impact (65 Points)

- Project's estimated energy reduction compared to other proposals submitted through this solicitation.
- Project's estimated carbon reduction compared to other proposals submitted through this solicitation.
- Project eliminates, significantly reduces, and/or leads to reduced long-term dependence on fossil fuels.
- Proposal demonstrates the project is innovative and has potential to be replicated by other hospitals.
- Project is located in a Disadvantaged Community.
- Proposing hospital is considered Safety-Net.
- Proposal demonstrates the project is innovative, scalable, and can be replicated by other hospitals.
- Proposal demonstrates the project includes additional benefits to the hospital and/or surrounding community (e.g., enabling additional future decarbonization projects, achieving carbon reduction goals, life safety benefits, improved occupant comfort).
- Relevant resilience measures are integrated into the project, which will help the hospital and surrounding community adapt to climate-related risks.

Project Viability & Approach (40 Points)

- Proposal demonstrates a well-thought-out path to implementation by comprehensively describing how the project will be successfully implemented.
- Proposal and supporting documentation demonstrate a feasibility study (or equivalent analysis) was completed for solutions and measures included in the proposal. Methodology to quantify energy impacts is clear, well-defined, and sound. If project includes geothermal, bore hole testing has been completed.
- Project design documents and/or construction documents are complete.
- Proposal demonstrates secured funding and/or financing mechanisms for project. This does not include NYSERDA funding.
- Proposal demonstrates Proposer's history of successfully completing clean energy projects.
- Proposal demonstrates approval from the Proposer's CEO/CFO/COO, board, and/or other decision-making body.
- Proposal demonstrates a well-thought-out approach for collecting project performance data and completing M&V for the project.

Project Budget & Schedule (25 Points)

- Funding request is reasonable in cost and commensurate with proposal's estimated carbon/energy reduction.
- Detailed measure and project costs are provided. Budget includes a breakdown of external funding sources (e.g. utility funding, IRA funding, etc.).
- Project schedule is detailed and realistic, demonstrating how the project will proceed through implementation within three years and complete one year of M&V.
- Project construction and installation is expected to be completed in three years or less.

Section VII: Program Policy Factors

Proposal Evaluation

A Scoring Committee will review and rank all proposals based on the Evaluation Criteria outlined in Section VI. NYSERDA may consider the following program policy factors in making award selections:

The degree to which:

- A proposal optimizes the use of available funding to achieve programmatic and [Climate Act](#) objectives.
- There is diversity in geographic location, Safety-Net/DAC status, size, and type of awarded hospitals.
- There is diversity of project types, technologies, approaches, and methods.

NYSERDA reserves the right to accept or reject a proposal, or fund only a portion of a proposal, at its sole discretion. NYSERDA reserves the right to share rejected proposals with the Proposer's utility. NYSERDA reserves the right to extend and/or add funding to the Solicitation should other funding be available.

Awarded Projects

- Awarded Proposers (Awardees) will work with NYSERDA to develop a contractual Scope of Work with Tasks and Deliverables following Attachment D – Sample Agreement, and a Budget.
- NYSERDA plans to issue milestone-based contracts, meaning that structured lump sum payments will be made by NYSERDA upon completion and approval of a Task(s) and Deliverable(s), as defined in the contractual Scope of Work. At minimum, 10% of the overall award will be held as retainage until sufficient completion of the contractual Scope of Work, including one year of M&V.
- When reviewing and negotiating Scopes of Work and Budgets, NYSERDA reserves the right to:
 - Request additional information on the proposed project team to ensure appropriate alignment of qualifications to Task complexity.
 - Utilize comparable NYSERDA-funded projects and contracts to confirm reasonableness of costs for proposed Tasks.
 - Reduce committed funding on a project scope if the scope includes ineligible Tasks or if the overall budget exceeds the Program's funding cap.
- Awardees are required to complete one year of M&V. The contractual Scope of Work will include a Task for developing a detailed M&V plan, including data to be collected, measured, and verified to report project performance and savings. Data and reported savings must be submitted to NYSERDA and are subject to third-party technical review.

- Awardees pursuing additional funding for building operations and maintenance training are responsible for identifying and securing training providers. Awardees will include task(s) and associated deliverables for training-related activities within the contractual Scope of Work. A detailed budget breakdown for training activities must be included with the contractual budget or provided as a deliverable. Funding amount for training may be based on number of trainees. To be eligible for the maximum \$50,000, a minimum of 8 building operators must be trained. NYSERDA funding cannot be used for training that would typically be provided by equipment vendors as part of installation of that equipment.
- NYSERDA requires awarded projects to consider the inclusion of relevant and feasible resiliency measures to protect project sites and measures against climate hazards. Refer to Attachment C: Climate Hazard Exposure Guidelines for information on determining your site's exposure to climate hazards.
- NYSERDA reserves the right to perform technical review on all deliverables. Deliverables found by NYSERDA to not fulfill the agreed upon Scope of Work and/or deliverable requirements may receive reduced funding or may not be reimbursed by NYSERDA.
- Awardees must commit to marketing and public awareness efforts regarding the carbon reduction attributes of their project. Awardees are expected to collaborate with NYSERDA in the development of promotional materials, which may include case studies, presentations, webinars, etc. NYSERDA credits the project name and project team in all promotional material. Awardees are expected to participate in presentations. NYSERDA reserves the right to brand and market awarded projects.

Section VII: Program Definitions

- **Proposer** – The Proposer is the hospital, or representative authorized to act on behalf of the hospital, submitting the proposal to this solicitation. The Proposer will enter into contract with NYSERDA, if awarded.
- **Clean Energy** – Energy efficiency, energy conservation and renewable energy.
- **Clean Heating and Cooling Technologies** – Clean heating and cooling technologies can co-produce space and/or water heating or cooling without the use of fossil fuels and include, but are not limited to:
 - **Ground Source Heat Pump System (GSHP)** – Ground-source heat pump systems (also referred to as geothermal heat pumps) provide space heating and cooling, as well as domestic hot water in some cases. The indoor heat pump unit and underground (or underwater) heat exchanging loop transfers thermal energy between and amongst the ground and the building.
 - **Air Source Heat Pump System (ASHP)** – Air source heat pumps provide space heating and cooling, as well as domestic hot water in some cases. These systems transfer heat between inside and outside air while creating a more comfortable indoor environment.
 - **Variable Refrigerant Flow System (VRF)** – Variable refrigerant flow heat pump systems modulate refrigerant flow as needed to maximize compressor efficiency. Where an ASHP systems requires separate refrigerant lines for each indoor unit, VRF systems allows multiple indoor units to connect to a single compressor.
- **Decarbonization** – Reducing or eliminating carbon dioxide emissions from buildings through Electrification, Energy Load Reduction, and/or other means, such as:
 - Energy efficiency and conservation (e.g., improved building controls, more efficient building shell and insulation)
 - Installation of renewable technologies (e.g., solar)

- **Disadvantaged Community (DAC)** – The Climate Leadership and Community Protection Act (Climate Act) sets a goal for New York State to direct clean energy and energy efficiency investments in a manner for disadvantaged communities to receive 40% of the benefit of those investments. New York State has identified interim criteria for disadvantaged communities, which includes communities:
 - Located within census block groups that meet the HUD 50% AMI threshold, that are also located within the DEC Potential Environmental Justice Areas; or
 - Located within New York State Opportunity Zones
 - For the most up-to-date definition and to determine if your facility is located within a DAC, see the “Disadvantaged Communities” page on the [NYSERDA website](#).
- **Electrification** – The process of shifting from fossil-fuel-based to electric-based systems and equipment to reduce emissions, improve efficiency, and enable the use of renewable energy sources. A core component of decarbonization is a widespread shift to electrification in buildings. Please also see “Clean Heating and Cooling Technologies” listed above.
- **Energy Load Reduction** – Energy load reduction refers to reducing the base amount of energy required for regular operation of a facility to meet occupant needs. A focus on energy load reduction serves as a precursor to cost-effective decarbonization.
- **Hospital** - A licensed institution that is primarily focused on the provision of acute, short-term medical and surgical care for patients, including diagnosis, treatment, and inpatient housing. Healthcare facilities such as nursing homes, psychiatric hospitals, rehabilitation centers, urgent care facilities, etc. do not meet the Program’s definition of a hospital.
- **Resilience Measures** - Strategies to improve the resiliency of the project, the facility itself, and its occupants to future climate impacts and weather extremes; including strategies to ensure continuity of operations under future conditions and to improve passive survivability. For example, designing new heating and cooling systems for both current and future loads, protecting critical systems from climate hazards; designing renewable energy and storage systems for use as back-up power, creating areas of refuge within the building for occupants to shelter in place, or other resilience-enhancing strategies.
- **Safety-Net Hospital** - A hospital that provides essential medical services to underserved, low-income, and uninsured populations, often regardless of a patient's ability to pay. A list of Safety Net hospitals can be found on [NYSERDA's website](#).

Section VIII: General Conditions

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses. Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserdanyny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSERDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSERDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSERDA, the prospective contractor must also certify to NYSERDA whether it has filed such certification with the Department.

The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSERDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSERDA anticipates making multiple awards under this solicitation. NYSERDA anticipates a contract duration of up to four (4) years unless NYSERDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSERDA may request additional data or material to support applications. NYSERDA will use the Sample Agreement to contract successful proposals. NYSERDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSERDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSERDA expects to notify proposers in approximately twelve (12) weeks from the proposal due date whether your proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting EBChospitals@nyserda.ny.gov. NYSERDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSERDA agreement.

Accessibility Requirements - NYSERDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see NYSERDA's Accessibility Requirements on the [Doing Business with NYSERDA page](#) or download [NYSERDA's Accessibility Requirements \[PDF\]](#).

Limitation - This solicitation does not commit NYSERDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSERDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSERDA's best interest. NYSERDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSERDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information or the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSERDA after the award of a contract, NYSERDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSEDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSEDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSEDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSEDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSEDA may conduct due diligence on some or all proposals based on NYSEDA's current guidelines at the time of a review. NYSEDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSEDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSEDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSEDA's sole discretion and are final decisions. NYSEDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia

are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

NYSERDA

General Contractor Services

Request for Proposals ("RFP") 6002

NYSERDA reserves the right to extend and/or add funding to the Solicitation should other program funding sources become available.

Proposals Due: **26 August 2025** by 3:00 p.m. Eastern Time*

The New York State Energy and Research Development Authority ("NYSERDA") is seeking proposals to enter into a contract with a General Contractor (GC) to provide general contracting services for a tenant improvement buildout in a commercial office space as outlined in the scope of services. NYSERDA intends to award one (1) contract for the duration of one (1) year with one (1) one-year optional renewals. NYSERDA will utilize a "Best Value" selection process to ensure optimum quality, cost, and efficiency among responsive and responsible firms with knowledge and experience working with NYS Governmental agencies in the NYC Area. For purposes of this Request for Proposals (RFP), the term "Owner" refers to Empire State Realty Trust or ESRT. The GC shall act as an adviser to NYSERDA during the Design Phase of various projects, and as the partner of NYSERDA in a collaborative relationship with NYSERDA staff, the Architect (Spacesmith, LLC) and MEP (DM Engineers) during the Design and Construction Phases to review the documents, organize and direct the timely completion of various projects and assure compliance with the contract documents.

NYSERDA has entered into a lease for office space at 1333 Broadway, New York, NY of approximately 45,000 sq. ft. across two contiguous floors (hereinafter referred to as "1333 Broadway"). Under the direction and oversight of NYSERDA, and in coordination with the building Owner and NYSERDA's selected architect and engineer, the GC will be responsible for the execution and overall management of NYSERDA's office build out at 1333 Broadway. Work will include but is not limited to architectural and structural replacements, renovations, and repairs to conference rooms, office spaces, workstations, showers, restrooms, stairways, break rooms, windows, flooring, ceiling systems, interior finishes as well as upgrades and modifications to fire alarm systems, elevators, and new and existing mechanical, electrical equipment/services, security and data/communications systems. Services will include, but not be limited to, constructability review, field check, value engineering, bid package review, scheduling (both during design and construction phase) and general contractor services. The GC is expected to deliver quality, code-compliant work on time, within budget, per specifications.

Proposal Submission: Online submission is preferable. Proposers may submit Word, Excel, or PDF files (file formats include: csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. Proposal PDFs should be searchable and should be created by direct conversion from MS Word, or other conversion utility. Files should not be scanned. For ease of identification, all electronic files must be named using the proposer's entity name in the title of the document. NYSERDA will also accept proposals by mail or hand-delivery if online submission is not possible. For detailed instructions on how to submit a proposal (online or paper submission), click the link "[Application Instructions and Portal Training Guide \[PDF\]](https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx)" located in the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Department's Designated Contacts for this Procurement are Gene Doane (Designated Contact) at (518) 862-1090, ext. 3230 or by e-mail facilitiesmanagement@nyserda.ny.gov or Melissa Winfield (Designated Contact) at (518) 862-1090, ext. 3660 or by e-mail facilitiesmanagement@nyserda.ny.gov. If you have contractual questions concerning this solicitation, contact Jim Cowman (Designated Contact) at (518) 862-1090, ext. 3652 or jim.solicitations@nyserda.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the proposer or indirectly through a lobbyist or other person acting on the proposer's behalf) in an attempt to influence the procurement: (1) may result

in a proposer being deemed a non-responsible offerer, and (2) may result in the proposer not being awarded a contract.

*** All proposals must be received by 3 p.m. Eastern Time on the date noted above. Late, faxed, or emailed proposals will not be accepted.** Incomplete proposals may be subject to disqualification. It is the proposer's responsibility to ensure that all pages have been included in the proposal. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments and you should allot at least 60 minutes to enter/submit proposals. The online proposal system closes promptly at 3 p.m. Eastern Time. Files in process or attempted edits or submission after 3 p.m. Eastern Time on the date above, will not be accepted. If changes are made to this solicitation, notification will be posted on the "Current Opportunities" section of NYSERDA's website (<https://www.nyserda.ny.gov/Funding-Opportunities/Current-Funding-Opportunities.aspx>).

This RFP will have two phases:

1. Phase 1 Proposal Submission: Proposers will submit proposals, in a form as described below, to be reviewed by the Scoring Committee who will select finalists. This RFP includes Design Drawings at the 50% stage. This should be kept in mind when preparing the cost proposals for responses.
2. Phase 2 Interview and Best and Final Cost Proposal: Finalists from Phase 2 will be sent an email which will include:
 - a. 100% Design Drawings
 - b. An invitation to walk through the site on a date selected by NYSERDA.
 - c. The Scoring Committee for this RFP may elect to hold in-person interviews at NYSERDA's NYC office, located at 1359 Broadway in mid-September. Whether to hold interviews and the number of proposers selected for interviews. is at NYSERDA's discretion.

Upon receipt of this email, Finalists will have 10 business days to provide their best and final cost proposal in form as described below.

Questions regarding this RFP submitted by email to Melissa Winfield melissa.winfield@nyserda.ny.gov by 12 August 2025 will be available for viewing in Contract Reporter as an FAQ Page by 19 August 2025.

I. Introduction

The New York State Energy Research and Development Authority (NYSERDA) is a public-benefit corporation established by the State Legislature in 1975 to address the State's energy and environmental challenges, pursuant to Title 9 of Article 8 of the Public Authorities Law of the State of New York. NYSERDA's principal mission is to develop innovative energy solutions to some of the State's most difficult energy and environmental problems in ways that improve the State's economy. NYSERDA seeks to empower the use of clean energy by individuals and businesses and strives to reflect this vision in the operation of NYSERDA's building.

To accommodate NYSERDA's staffing needs and growing programmatic obligations, the office space needs have been assessed in conjunction with Cresa, our competitively selected Real Estate Strategy provider and determined the space in 1333 Broadway will allow our staff to collaborate with greater efficiency and lead to advanced mission goals.

Sustainability is important to NYSERDA. NYSERDA's buildings have earned a US EPA Energy Star Building Label each year for well over a decade, and further efficiency and clean energy upgrades are planned consistent with New York's BuildSmart2025 Initiative and Guidelines. The General Contractor will play an important role in helping NYSERDA achieve State and Authority-wide sustainability goals in the new building design, as well as adherence to Local Law 97 (LL97). NYSERDA is proud to model and comply with various energy and sustainability-related Executive Orders (EOs) issued by the Governor. NYSERDA's expectation is that the firm selected will help NYSERDA comply with all current and future sustainability directives and goals, as well as other relevant mandates and policies that may be issued.

II. Program Requirements

NYSERDA seeks a broad range of proposers with the following experience including, but not limited to, operational, technical, and equipment management, capital expense procedure, contracting procedure, construction management, and management of subcontractors for a commercial property. Proposers should have a deep understanding of building construction, with respect to sustainable building practices and achieving compliance with applicable federal, state, and NYC building and energy codes. Proposers should also have considerable experience with NYS governmental entities, their contracting and procurement policies, and project timeline requirements.

The Proposer will be required to provide full service, professional general contracting services necessary to build out NYSERDA's newly leased office space at 1333 Broadway. The Proposer shall be responsible for regularly assessing documents, organizing and directing the timely completion of various projects, and assuring compliance with the contract documents. The Proposer shall also be responsible for constructing/installing to architect and engineer specifications various architectural and structural replacements, renovations, and repairs to conference rooms, office spaces, workstations, showers, restrooms, stairways, break rooms, windows, flooring, ceiling systems, and interior finishes, as well as upgrades and modifications to fire alarm systems, 6th floor elevator lobby, and coordinating installation and commissioning of mechanical, electrical equipment/services, security, and data/communications. Furniture acquisition is not in scope for this RFP but Proposer is expected to coordinate with NYSERDA-designated furniture vendor to allow timely installation of all furniture items per project plans.

All work shall be conducted in accordance with defined scope and specifications, schedule, quality, and budget requirements to achieve the maximum benefit to NYSERDA. The GC will need to comply with applicable Minority-Owned Business Enterprise (M/WBE) criteria, Service-Disabled Veteran-Owned Business (SDVOB) criteria, use of organized labor, and sustainability related goals, as discussed below.

The Proposer shall provide services of scope and quality generally performed by professional General Contractors, in a reasonable, diligent and careful manner. Its services include, but not be limited to, constructability review, field check, value engineering, bid package review, scheduling, and general contractor services. Furthermore, all work and services must comply with all applicable federal, state, and local laws, codes, and regulations, and wherever practicable will be conducted with environmentally sustainable and zero-emission products and machinery. All relevant work and services shall be consistent with, and support NYSERDA's compliance with, applicable

Executive Orders. The Proposer is expected to stay apprised of major public health developments pertinent to its work and be ready to quickly and prudently update products and practices as needed to foster safe, secure workspaces even in the face of dynamic operating environments that could include pandemics, climate issues, and social unrest, among other factors.

Please use the attached drawings ("Attachment F") as a reference for the proposal response and attached scope of work.

All services must be performed to any standards set by the NYC DOB where applicable standards exist.

The Proposer shall submit as part of the required budget, proof that prevailing wage is paid to the GC's staff and all subcontractors/consultants, including the cost for the use of organized labor.

III. Proposal Requirements

Each page of the proposal should state the name of the proposer, the RFP number, and the page number.

All Proposals must be submitted using the standardized Bid Form attached to this RFP, formatted according to the Construction Specifications Institute (CSI) MasterFormat Divisions. The Bid Form shall be modified to reflect the specific cost categories identified in the project's detailed Cost Estimate. Bidders are required to input their pricing under the exact headings and divisions provided. Proposers shall include a separate section detailing any clarifications, inclusions, or exclusions associated with their bid. These should not modify the format of the main bid cost summary.

To be considered for award under this RFP, the Proposer must be able to demonstrate to the satisfaction of NYSERDA's Scoring Committee that it has successfully managed:

- Build out of at least three (3) commercial office spaces (at least 30,000 square feet) in the last five years.
- Incorporation of sustainable design practices, such as those as set forth by [Executive Order #22](#) (EO22), [Local Law #97](#), in the above-referenced designs.

The Proposer must have, at a minimum, demonstrated experience in the following:

- Building out commercial spaces in ENERGY STAR certified buildings in a manner to preserve or increase efficiency
- Successfully installing commercial building mechanical, Heating Ventilation and Cooling (HVAC), and control systems, including zero-emissions equipment such as heat pumps
- Successfully troubleshooting and/or performing mitigation implementation to keep a project on time, and on budget
- Successful collaboration with other project partners, such as the Architect, MEP Engineer, and subcontractors
- Successful collaboration with Building Landlords
- Successful collaboration with relevant organized labor unions
- Efficient processes that reduce the need for change work orders and ensure inspections are passed on the initial round
- Timely mitigation of punch list items
- Implementing cost control and savings measures to ensure the building is operated effectively, efficiently and within budget.

The Proposal shall, at a minimum, provide information on and address the following:

- Company Information as further detailed below.

- Description of Qualifications as further detailed below.
- Five client references, with relevant contact information, including client's company name, contact name, title, email address, and phone number. References may be contacted, and if so feedback provided will be used as part of the RFP scoring criteria.
- Acknowledgement of the acceptance of the Scope of Services enclosed in this Request for Proposals. If any exception is taken to the services requested or terms and conditions, identify exceptions and provide a detailed explanation of each.
- A high-level Schedule of Services based on the project dates indicated in this RFP.
- Project Team and Project Organizational Chart as further detailed below.
- Descriptions of any services your firm must subcontract out, with a list of pricing for those services.
- A List of all Subcontractors proposed for the project. For each subcontractor, include the firm name, trade, contact information, and a summary of relevant experience, particularly as it relates to sustainability-focused projects and public sector work in New York State.
- A Table identifying lead times for all materials, equipment, and systems required for the project. A list of all identified long-lead items shall be incorporated into the construction schedule submitted with the bid. The GC shall also provide a detailed procurement plan indicating when and how each long-lead item will be ordered to ensure that project completion aligns with the established schedule and occupancy milestones.
- Description and applicable pricing for additional services not requested under this RFP that the Proposer recommends. In addition, discuss the method that your firm proposes for pricing and proceeding with the additional services.

Successful proposals will include, in detail, the following:

- ***Company Information***

- Name of agency/company (including any "doing business as" names)
- Headquarters/parent company locations
- History of firm, including culture and business philosophy
- Details of entity business structure (corporation, partnership, LLC)
- Date founded
- High-level organization chart of business entity
- Project management approach and project management systems
- Office locations and total number of employees at each
- Current number of clients and ratio of employees to clients
- Home office address and telephone number and local address and phone number
- List of any outstanding litigation that would threaten the viability of the firm or the performance of this contract
- Latest audited financial statements
- Proof of insurance as specified in the attached Sample Agreement, Article 11, as may be amended or updated by NYSERDA

- ***Qualifications***

- A detailed list of tenant improvement commercial office building spaces built out in the last five years, their respective rentable square feet, and the name of the client for whom the office space was built.
 - Include work for any public sector entities in the NYC area.
 - Include any experience working with NYSERDA's landlord, Empire State Realty Trust (ESRT).
- An explanation of why the Proposer is the best qualified to perform the contract including an item-by-item description of how the Proposer meets or exceeds the requirements of this RFP.

- A history of successful customer service approach. Include detailed examples of a collaborative approach to client relations, as well as subcontractors and other external project stakeholders (Architect, MEP, Landlord).
- Documentation demonstrating experience with EO22-compliant and/or LEED Interior Design & Construction (ID+C) or comparable renovation projects completed within New York State in the past five (5) years. The submission shall identify the proposed project team members who have participated in those relevant projects.
- A business plan, schedule of proposed deliverables, and description of project management system for this scope of work using methodologies that have been successfully employed in other engagements of similar size and complexity. The plan should include, in the Proposer's own words, their understanding of the issues and tasks of the work at hand. Proposers are required to present a detailed description of the methodology to be used by it in achieving the objectives of the engagement and accomplishing the tasks described in the Scope of Services with separate and specific reference to each subsection.
- A description of any specific experience and qualifications in general contracting and any specific experience in each of the particular building construction disciplines (i.e.: mechanical systems, electrical systems, fire alarms, energy management systems, plumbing systems, or green building operations, etc.) along with an indication of what areas will be performed directly and what will be sub-contracted.
- Describe how your firm will best be able to complete the project, with the following timeline, on-time and on-budget. Include how your firm will best utilize channels of communication to alert project stakeholders to potential delays or conflicts with the timeline to avoid change orders and increased charges.

Timeline

Task 5B – Construction Admin – Construction (Schedule subject to GC)	91 Days	Mon 10/27/25	Mon 3/2/2026
Construction of 6 th Flor and partial 7 th floor	86 Days	Mon 10/27/25	Mon 2/23/26
Furniture Installation	15 Days	Mon 2/2/26	Fri 2/20/26
IT/AV Install and Testing	15 Days	Mon 2/9/26	Fri 2/27/26
Substantial Completion	0 Days	Fri 2/27/26	Fri 2/27/26
NYSERDA Move-in	2 Days	Fri 2/27/26	Mon 3/2/26
Task 6 – Final Report	110 Days	Mon 3/2/26	Fri 7/31/26
Prepare Draft Version of Final Report	20 Days	Mon 3/2/26	Fri 3/27/26
Issue Draft Version	0 Days	Fri 3/27/26	Fri 27/26
NYSERDA review of report	60 Days	Mon 3/30/26	Fri 6/19/26

• **Project Team**

- Proposed Project Organizational Chart
- Identification of lead project roles including names and professional experience for at least the following:
 - GC relationship manager/client liaison
 - Proposed GC project manager for this job
 - Proposed Architect liaison
 - Dedicated Sustainability Coordinator responsible for ensuring compliance with [NYS GreenNY guidelines](#) and [EO22](#) initiatives.
 - Qualified on-site Waste Manager to oversee waste diversion and recycling efforts in accordance with the project's Waste Management Plan. The Waste Manager shall be responsible for tracking, documentation, and reporting of all construction waste and recycling activities.

- Staffing Matrix listing each proposed team member's projected weekly time commitment in hours for the duration of the project, indicating which team members will be assigned to the project site and the anticipated schedule for their on-site presence.
- **References**
 - Each Proposer must submit a list of at least five (5) references documenting its experience, including the following information for all general contracting services provided over the last three years, or currently in process:
 - A listing of all buildings where the Proposer provided General Contractor services, highlighting those buildings where work was done for State of New York entities or other public sector organizations
 - Firm's list of notable accomplishments including name of entity or company serviced, transaction size, level of difficulty, and dates from onset to conclusion
 - Description and outcomes of major building improvement, office consolidation, sustainability initiative, and/or cost savings initiative undertaken
 - Team personnel assigned to the project
 - Name and Title of Reference
 - Email Address
 - Telephone number(s)

Individuals identified as references will be assured of anonymity to the fullest degree possible under applicable law.

NYSERDA retains the right to request any additional information pertaining to the Proposer's ability, qualifications, and procedures used to accomplish all work under the contract as it deems necessary to ensure safe and satisfactory work.

- **Cost Proposal**

All Proposers must submit their fee proposal for required services necessary to provide NYSERDA with the required deliverables. Proposers must use the attached Bid Form and provide a detailed cost breakdown for each applicable CSI Division. This format will be used to facilitate a side-by-side bid leveling analysis. Failure to submit a bid using the prescribed CSI-based form may result in disqualification or deeming the bid non-responsive. Each Cost Proposal must include:

- Basic Services Fee that encompasses the tasks outlined in the attached Scope of Work.
- A sample operating budget. A detailed listing of any other expenses or fees to be paid directly to the Proposer (excluding those additional services provided below)
 - These expenses shall be based on the actual costs incurred with no mark-up allowed. These items should include a list of any of the Proposer's employee(s) proposed to work on this project, their role, their proposed/estimated average weekly hours on this project, their title, and their respective hourly rate, together with a list of any other items and their respective cost to be charged by the Proposer as part of this agreement.
 - If periodic building-related services (e.g., electricians, plumbers) are to be provided by employees or contractors of the Proposer, the listing should include those titles, and their respective hourly rates proposed to be charged to NYSERDA. Unless otherwise agreed to by NYSERDA, reimbursement for these items will be limited to the amount contained in the Proposer's proposal. Any expenses not specifically included will not be eligible for reimbursement and must be covered by the Basic Services Fee.

- Where applicable, bidders shall provide pricing for alternates and unit prices in the designated section of the Bid Form. Alternates must be clearly labeled and correspond to any scope clarifications approved by NYSERDA.
- A description of at least three projects where you have used value engineering to manage cost with the novel approaches to manage costs, while maintaining a quality, collaborative engagement with NYSERDA. Indicate a plan to include value engineering and a consistent orientation to the relative cost benefit of elements in the project.
- A fee proposal and detailed explanation for supplemental work that may be performed in addition to the foregoing such as to supervise or secure renovation or construction services. The proposal must clearly identify what types of services will be separately billed to NYSERDA other than those already described under number 1 and 2 immediately above.
- If construction-related services are provided by other employees of the Proposer (e.g., engineers, electricians, plumbers), the listing should include those titles and their respective hourly rates. Unless otherwise agreed to by NYSERDA, payment for these items will be limited to the hourly rates contained in the Proposer's proposal
- The pricing proposal will be evaluated for reasonableness of cost for the total effort. It may also serve as the basis for subsequent negotiations of price if necessary.

Cost proposals must reflect prevailing wages for the County in which the work is being performed, as well as the use of organized labor.

Should a Proposer be selected as a Finalist, the form and substance of the Phase 2 Best and Final Cost Proposal must be in the same form as the Cost Proposal described above.

A payment based on the final deliverable will be reserved until project completion. If awarded, NYSERDA may choose to negotiate the amount of such payment.

IV. Proposal Evaluation

Proposals that meet solicitation requirements will be reviewed by a Scoring Committee using the Evaluation Criteria below (describe criteria) **listed in order of importance**. At NYSERDA's discretion, proposers may be requested to interview with all or part of the Scoring Committee to address any potential questions or clarifications outlined in the proposals. Proposers will be notified if they are requested to attend an interview.

- **Demonstrated Experience in General Contractor Tenant Improvement Build Out (20 points)**
 - Clear understanding of SOW and RFP requirements
 - Describes clear process for overall construction management, pre-construction, construction phase, post-construction and close out
 - Sufficient experience working with public sector entities
 - Included Required References from Similar Projects
- **Record of On-Time Project Delivery that Meets Customer Expectations (20 Points)**
 - Timeline meets NYSERDA targets
 - Similar projects completed in the last 3-5 years (COVID consideration)
 - Quality & Completeness of Proposed Deliverables

- **Budget (20 points)**
 - Complete Cost Proposal
 - Submitted in CSI (Construction Specifications Institute) format
 - Base Fee for Services
 - Sample Operating Budget
 - Hourly fees or other fees not included in the Base Fee for Services
 - Clarification of inclusions/exclusions associated with their response
 - Proposed substitutions and alternates
 - Procurement plan for all long-lead items.
 - Value engineering and budget sensitivity
 - Ability to pursue novel approaches to manage costs, while maintaining a quality, collaborative engagement with NYSERDA
 - Ability to show what services are not handled in-house and pricing for those subcontractors
 - Detailed reasonableness of costs, including prevailing wage
- **Sustainable Design/Construction Practices (10 points)**
 - EO22-compliant and/ or LEED Interior Design & Construction (ID+C) renovation projects completed within New York State in the past five (5) years, with list of team members who have participated in those projects
 - Familiarity and experience/projects with [Executive Order 22](#) & [NYS Green Procurement Policies](#) –
 - Familiarity and experience/projects for [Local Law 97](#)
- **Project Team (10 Points)**
 - Staffing matrix listing each proposed team member's weekly time commitment (in hours per week) for the duration of the project. The matrix shall also indicate which team members will be assigned to the project site, including the anticipated schedule for their on-site presence.
 - Organizational Chart
 - Quality of Project Management approach, including project management software systems
- **Company Strength (10 Points)**
 - Sufficient information on firm history, culture, and business philosophy
 - Detailed assessment of financial health and creditworthiness
- **Local Permitting Authority/Building Management Connections (5 points)**
 - Familiarity with local permitting entities and scheduling
 - Experience with ESRT/NYC Building Owners
- **Customer Service Approach (5 Points)**
 - Provided track record of collaborative approach to client relations
 - Provided track record of collaborative approach to subcontractors and other external project stakeholders (Landlord, Architect, MEP, etc.)

NYSERDA reserves the right to accept or reject proposals based on the degree to which pricing and hourly rates are in line with the rest of the market.

V. GENERAL CONDITIONS

Proprietary Information - Careful consideration should be given before confidential information is submitted to NYSERDA as part of your proposal. Review should include whether it is critical for evaluating a proposal, and whether general, non-confidential information, may be adequate for review purposes. The NYS Freedom of Information Law, Public Officers law, Article 6, provides for public access to information NYSERDA possesses.

Public Officers Law, Section 87(2)(d) provides for exceptions to disclosure for records or portions thereof that "are trade secrets or are submitted to an agency by a commercial enterprise or derived from information obtained from a commercial enterprise and which if disclosed would cause substantial injury to the competitive position of the subject enterprise." Information submitted to NYSERDA that the proposer wishes to have treated as proprietary, and confidential trade secret information, should be identified and labeled "Confidential" or "Proprietary" on each page at the time of disclosure. This information should include a written request to except it from disclosure, including a written statement of the reasons why the information should be excepted. See Public Officers Law, Section 89(5) and the procedures set forth in 21 NYCRR Part 501 <https://www.nyserda.ny.gov/-/media/Project/Nyserda/Files/About/Contact/NYSERDA-Regulations.ashx>. However, NYSERDA cannot guarantee the confidentiality of any information submitted.

Omnibus Procurement Act of 1992 - It is the policy of New York State to maximize opportunities for the participation of New York State business enterprises, including minority- and women-owned business enterprises, as bidders, subcontractors, and suppliers on its procurement Agreements.

Information on the availability of New York subcontractors and suppliers is available from:

Empire State Development
Division for Small Business
625 Broadway
Albany, NY 12207

A directory of certified minority- and women-owned business enterprises is available from:

Empire State Development
Minority and Women's Business Development Division
625 Broadway
Albany, NY 12207

New York Executive Law Article 15-A - NYSERDA is required under the law to promote opportunities for maximum feasible participation of certified minority- and women-owned business enterprises and the employment of minority group members and women in the performance of NYSERDA contracts. The MWBE participation goals and obligations of the selected Contractor are set forth in the Sample Agreement.

Diversity Practices - NYSERDA has determined, pursuant to New York State Executive Law Article 15-A, that the assessment of the diversity practice of respondents to this procurement is practical, feasible, and appropriate. Accordingly, respondents to this procurement shall be required to include as part of their response, as described in Section III herein, Attachment C, Diversity Practices Questionnaire.

New York State Executive Law Article 17-B, NYSERDA recognizes its obligation under the law to promote opportunities for maximum feasible participation of certified service-disabled veteran-owned business enterprises (SDVOB) in the performance of NYSERDA contracts. Executive Law Article 17-B and its associated regulations require, among other things, that NYSERDA establish goals for maximum feasible participation of New York State Certified SDVOBs in the performance of New York State contracts. The SDVOB participations goals and obligations of the selected Contractor are set forth in the Sample Agreement.

State Finance Law sections 139-j and 139-k - NYSERDA is required to comply with State Finance Law sections 139-j and 139-k. These provisions contain procurement lobbying requirements which can be found at <https://online.ogs.ny.gov/legal/lobbyinglawfaq/default.aspx>. Proposers are required to answer questions during proposal submission, which will include making required certification under the State Finance Law and to disclose any Prior Findings of Non-Responsibility (this includes a disclosure statement regarding whether the proposer has been found non-responsible under section 139-j of the State Finance Law within the previous four years).

Tax Law Section 5-a - NYSEDA is required to comply with the provisions of Tax Law Section 5-a, which requires a prospective contractor, prior to entering an agreement with NYSEDA having a value in excess of \$100,000, to certify to the Department of Taxation and Finance (the "Department") whether the contractor, its affiliates, its subcontractors and the affiliates of its subcontractors have registered with the Department to collect New York State and local sales and compensating use taxes. The Department has created a form to allow a prospective contractor to readily make such certification. See, ST-220-TD (available at http://www.tax.ny.gov/pdf/current_forms/st/st220td_fill_in.pdf). Prior to contracting with NYSEDA, the prospective contractor must also certify to NYSEDA whether it has filed such certification with the Department. The Department has created a second form that must be completed by a prospective contractor prior to contracting and filed with NYSEDA. See, ST-220-CA (available at http://www.tax.ny.gov/pdf/current_forms/st/st220ca_fill_in.pdf). The Department has developed guidance for contractors which is available at <http://www.tax.ny.gov/pdf/publications/sales/pub223.pdf>.

Contract Award - NYSEDA anticipates making one award under this solicitation. NYSEDA anticipates a contract duration of one year, with one one-year option to renew, unless NYSEDA management determines a different structure is more efficient based upon proposals received. A contract may be awarded based on initial applications without discussion, or following limited discussion or negotiations pertaining to the Statement of Work. Each proposal should be submitted using the most favorable cost and technical terms. NYSEDA may request additional data or material to support applications. NYSEDA will use the Sample Agreement to contract successful proposals. NYSEDA may at its discretion elect to extend and/or add funds to any project funded through this solicitation. NYSEDA reserves the right to limit any negotiations to exceptions to standard terms and conditions in the Sample Agreement to those specifically identified in the checklist questions. Proposers should keep in mind that acceptance of all standard terms and conditions will generally result in a more expedited contracting process. NYSEDA expects to notify proposers in approximately 3 weeks from the proposal due date whether your proposal has been selected to receive an award. Upon receipt of this notification, a proposer can request to schedule a debrief on the selection process and the strengths and weaknesses of its proposal by contacting [Melissa Winfield melissa.winfield@nyserda.ny.gov](mailto:Melissa.Winfield@nyserda.ny.gov). NYSEDA may decline to contract with awardees that are delinquent with respect to any obligation under any previous or active NYSEDA agreement.

Accessibility Requirements - NYSEDA requires contractors producing content intended to be posted to the Web to adhere to New York State's Accessibility Policy. This includes, but is not limited to, deliverables such as: documents (PDF, Microsoft Word, Microsoft Excel, etc.), audio (.mp3, .wav, etc.), video (.mp4, .mpg, .avi, etc.), graphics (.jpg, .png, etc.), web pages (.html, .aspx, etc.), and other multimedia and streaming media content. For more information, see [NYSEDA's Accessibility Requirements](#).

Limitation - This solicitation does not commit NYSEDA to award a contract, pay any costs incurred in preparing a proposal, or to procure or contract for services or supplies. NYSEDA reserves the right to accept or reject any or all proposals received, to negotiate with all qualified sources, or to cancel in part or in its entirety the solicitation when it is in NYSEDA's best interest. NYSEDA reserves the right to reject proposals based on the nature and number of any exceptions taken to the standard terms and conditions of the Sample Agreement. NYSEDA reserves the right to disqualify proposers based upon the results of a background check into publicly available information and the presence of a material possibility of any reputational or legal risk in making of the award.

Disclosure Requirement - The proposer shall disclose any indictment for any alleged felony, or any conviction for a felony within the past five years, under the laws of the United States or any state or territory of the United States and shall describe circumstances for each. When a proposer is an association, partnership, corporation, or other organization, this disclosure requirement includes the organization and its officers, partners, and directors or members of any similarly governing body. If an indictment or conviction should come to the attention of NYSEDA after the award of a contract, NYSEDA may exercise its stop-work right pending further investigation or terminate the agreement; the contractor may be subject to penalties for violation of any law which may apply in the particular circumstances. Proposers must also disclose if they have ever been debarred or suspended by any agency of the U.S. Government or the New York State Department of Labor.

Vendor Assurance of No Conflict of Interest or Detrimental Effect - The proposer shall disclose any existing or contemplated relationship with any other person or entity, including any known relationships with any member, shareholders of 5% or more, parent, subsidiary, or affiliated firm, which would constitute an actual or potential conflict of interest or appearance of impropriety, relating to other clients/customers of the proposer or former officers and employees of NYSERDA, in connection with proposer's rendering services as proposed. If a conflict does or might exist, please describe how your company would eliminate or prevent it. Indicate what procedures will be followed to detect, notify NYSERDA of, and resolve any such conflicts.

The proposer must disclose whether it, or any of its members, or, to the best of its knowledge, shareholders of 5% or more, parents, affiliates, or subsidiaries, have been the subject of any investigation or disciplinary action by the New York State Commission on Public Integrity or its predecessor State entities (collectively, "Commission"), and if so, a brief description must be included indicating how any matter before the Commission was resolved or whether it remains unresolved.

Public Officers Law – For any resulting awards, the Contractor and its subcontractors shall not engage any person who is, or has been at any time, in the employ of the State to perform services in violation of the provisions of the New York Public Officers Law, other laws applicable to the service of State employees, and the rules, regulations, opinions, guidelines or policies promulgated or issued by the New York State Commission on Ethics and Lobbying in Government, or its predecessors (collectively, the "Ethics Requirements"). Proposers are reminded of the following Public Officers Law provision: contractors, consultants, vendors, and subcontractors may hire former NYSERDA employees. However, as a general rule and in accordance with New York Public Officers Law, former employees of NYSERDA may neither appear nor practice before NYSERDA, nor receive compensation for services rendered on a matter before NYSERDA, for a period of two years following their separation from NYSERDA service. In addition, former NYSERDA employees are subject to a "lifetime bar" from appearing before any state agency or authority or receiving compensation for services regarding any transaction in which they personally participated, or which was under their active consideration during their tenure with NYSERDA.

Any awardee will be required to certify that all of its employees, as well as employees of any subcontractor, whose subcontract is valued at \$100,000 or more who are former employees of the State and who are assigned to perform services under the resulting contract, shall be assigned in accordance with all Ethics Requirements. During the term of any agreement, no person who is employed by the contractor or its subcontractors and who is disqualified from providing services under the contract pursuant to any Ethics Requirements may share in any net revenues of the contractor or its subcontractors derived from the contract. NYSERDA may request that contractors provide it with whatever information the State deems appropriate about each such person's engagement, work cooperatively with the State to solicit advice from the New York State Commission on Ethics and Lobbying in Government, and, if deemed appropriate by the State, instruct any such person to seek the opinion of the New York State Commission on Ethics and Lobbying in Government. NYSERDA shall have the right to withdraw or withhold approval of any subcontractor if utilizing such subcontractor for any work performed would be in conflict with any of the Ethics Requirements. NYSERDA shall have the right to terminate any contract at any time if any work performed is in conflict with any of the Ethics Requirements.

Due Diligence – NYSERDA, at its discretion, may conduct broad due diligence to validate any or all elements of an application and to assess applicants' prospects of success, including gathering information to assess a proposal relative to any of the topics listed in evaluation criteria, whether or not such topic is explicitly addressed in a proposal. NYSERDA may conduct due diligence on some or all proposals based on NYSERDA's current guidelines at the time of a review. NYSERDA staff may follow up with proposers to request additional information or clarification regarding applicant's proposal, including questions regarding applicant's business prospects and resources, whether or not those questions are specifically related to the elements of the proposal. Additionally, customized due diligence may be conducted by internal or external staff or contractors based on questions on any proposal raised by NYSERDA staff and/or the Scoring Committee. Due diligence may include (but is not limited to): interviews of independent references and background checks of team members; assessment of prior business experience of any team member associated with a proposal; research on intellectual property claims; customer and partner reference checks; market research on the applicants' target market and any other related or possibly

competitive technology or market area; research to validate any assumptions on current or future revenues, costs, capital needs, and financing prospects for proposers' business, including similar (or unrelated) technologies, processes, or competitive solutions; or any other research that could reasonably inform the evaluation of a proposal, or the prospects for commercial success of the proposers' business (whether directly related to, or unrelated to the specific elements in a proposal). Due diligence may include discussions with proposers' former and current business partners, employees, investors, customers, and competitors. Due diligence may be conducted by NYSERDA personnel or contractors including members of the scoring committee, before, during, or after a scoring process, and prior to finalization of a contract award, any information gleaned in diligence may be used to score or re-score a proposal or apply a program policy factor.

EO 16 Protocols – Pursuant to Executive Order No. 16 issued on March 17, 2022, all vendors responding to bids or contracting with New York State must certify, using the form provided as part of this solicitation, their status with regard to conducting business operations in Russia, and that any such business operations in Russia conducted on behalf of the vendor are determined to be permitted under any of the allowable exemptions. The term vendor is intended to encompass bidders prior to contract award, contractors who have received a contract award, contract assignees, or contractors for whom an extension to an existing contract is being pursued. Exemption decisions are in NYSERDA's sole discretion and are final decisions. NYSERDA reserves the right to solicit additional materials or information regarding the responses or materials provided by a vendor.

Pursuant to Executive Order No. 16, all vendors will be vetted to ensure that they are not on the federal sanctions list at <https://sanctionssearch.ofac.treas.gov/>. There is no waiver or exemption process for vendors appearing on the federal sanctions list.

The Executive Order remains in effect while sanctions imposed by the federal government are in effect. Accordingly, vendors who may be excluded from award because of current business operations in Russia are nevertheless encouraged to respond to solicitations to preserve their contracting opportunities in case sanctions are lifted during a solicitation, or after award in the case of some solicitations.

NYSERDA

**Residential and Retail Energy Storage Market Acceleration
Incentives Programs**

Program Opportunity Notice (PON) 6004

\$675,000,000 Available for Retail Energy Storage Incentive Program
\$100,000,000 Available for Residential Energy Storage Incentive Program

*NYSERDA reserves the right to extend and/or add funding to the
Solicitation should other program funding sources become available.*

Contractor and Builder applications currently being accepted.

Funding for Retail Energy Storage incentives will be available May 20, 2025

Funding for Residential Energy Storage incentives will be available June 10, 2025

Applications accepted through December 31, 2030, by 3:00 PM Eastern Time, or
until funds are fully committed, whichever is earlier*

Program Summary: The Residential Energy Storage Incentive Program (hereafter “Residential Program”) and the Retail Energy Storage Incentive Program (hereafter “Retail Program”) are incentive-based programs that award Participating Contractors for eligible energy storage systems. The Programs are designed to accelerate the energy storage market in New York State to reach 6 gigawatts of energy storage capacity statewide.

The Residential Program offers incentives to smaller energy storage systems, while the Retail Program offers incentives to larger energy storage systems, up to 5 megawatts in capacity. In order to submit a project application to either Program, those interested in submitting project applications must already be Participating Contractor under the respective Program.

Application Submission: Online submission is strongly encouraged. The preferred file format for any document upload is PDF (file formats include csv, doc, docx, gif, jpeg, jpg, pdf, png, ppt, pptx, pps, ppsx, tif, txt, xls, xlsx, and zip). Individual files should be 100MB or less in file size. NYSERDA will also accept applications by mail or hand-delivery if online submission is not possible. Instructions on how to submit an application can be found online at <https://www.nyserdera.ny.gov/all-programs/energy-storage-program>.

Potential responders are advised that under New York State Finance Law Section 139-j, communication on procurements can be made only to designated contact persons. The Department’s Designated Contact for this Procurement is the Energy Storage Team at energystorage@nyserdera.ny.gov. If you have contractual questions concerning this solicitation, contact Jim Cowman at Jim.Solicitations@nyserdera.ny.gov. Contacting anyone other than the Designated Contacts (either directly by the applicant or indirectly through a lobbyist or other person acting on the applicant’s behalf) in an attempt to influence the procurement: (1) may result in an applicant being deemed a non-responsible offerer, and (2) may result in the applicant not being awarded a contract.

*** All applications must be received by 3pm Eastern Time on the date noted above. Late, faxed, or emailed applications will not be accepted.** Incomplete applications may be subject to disqualification. It is the applicant’s responsibility to ensure that all pages have been completed and included in the application. Please note: for online submission, there are required questions that you will have to answer in addition to uploading attachments. The
