

# Guide to Getting a Heat Pump Dryer Rebate

**NYSERDA**  
New York State Energy Research  
and Development Authority

## Get up to \$840 off a ENERGY STAR® Heat Pump Clothes Dryer

### Check Your Home For a 240V Outlet

ENERGY STAR® certified heat pump clothes dryers can generally be installed anywhere, in any home. Typically, all you need is a 240V outlet to plug it into, so if you already have an electric dryer you should be all set for your new dryer installation. If you do not currently have an available 240V outlet or if a participating contractor recommends other electrical upgrades, New York State offers rebates for that too.

### Shop For Your Dryer

Review our list of eligible models to find one that's right for you. There are over 50 models from 12 different brands including Samsung to choose from, including ventless heat pump combo units that wash and dry clothes all in one machine. Then, identify which participating retailer (either in-store\* or online) you plan to purchase your dryer from.

### Apply and Claim Your Custom Coupon Code

Once you've decided on a dryer model and retailer, simply claim your coupon prior to purchase by completing the application and providing income verification. You will then receive a custom code that will unlock your savings at checkout. Simply create a MyEnergy account to begin your application.

### Install Your New Dryer

Enjoy the cleanest way to dry your laundry that's gentler on fabrics too. Heat pump clothes dryers don't require any ventilation or gas hookups, just a method for draining the water at the end of the drying cycle (which is already included in the model). This setup makes installation simple and straightforward.

## Calculate Your Savings

The maximum rebate you may qualify for depends on your income, the cost of the heat pump clothes dryer, and any necessary electrical upgrades. [MyEnergy.ny.gov/DryerRebate](https://myenergy.ny.gov/DryerRebate).
