Part 1—Public Feedback Summary

CONSORTIUM MEMBERS – Finger Lakes Regional Sustainability Plan

| NAME | ORGANIZATION/AFFILIATION |
|--------------------|--|
| Tony LaFountain | Town of Penfield |
| Joyce Lobene | Village of Spencerport |
| Tom West | Village of Spencerport |
| Carol Nellis-Ewell | Village of Spencerport |
| Mike Guyon | Town of Brighton |
| Tom Beck | Town of Perinton |
| Brenda Donohue | Town of Conesus; Livingston County Board Supervisors |
| Larry Heining | Town of Irondequoit |
| Corrine Kleisle | Village of Lyons |
| Paul D'Amato | NYSDEC Region 8 |
| Ray Yacuzzo | NYSDEC Region 8 |
| Vincent Esposito | Empire State Development and FLEDC |
| Dave Seeley | Office of Governor Andrew M. Cuomo, Finger Lakes Region |
| Mary Pat Hancock | Genesee County Legislature |
| Felipe Oltramari | Genesee County Department of Planning |
| Esther Leadley | Genesee County Legislature and G/FLRPC |
| Jay Gsell | Genesee County Manager |
| Angela Ellis | Livingston County Planning Department |
| Tom Goodwin | Monroe County Department of Planning & Development |
| Rochelle Bell | Monroe County Department of Planning & Development |
| Justin Roj | Monroe County Department of Environmental Services |
| Anne Spaulding | City of Rochester |
| Mark Gregor | City of Rochester, Division of Environmental Quality |
| Wayne Hale | Orleans County Planning & Development |
| David Callard | Orleans County Legislature |
| Mitchell Rowe | Seneca County |
| Bill Bordeau | Seneca County Planning & Community Development |
| Ora Rothfuss | Wayne County Planning |
| Peg Churchill | Wayne County IDA |
| Robert McNary | Wayne County Planning & Economic Development |
| James Hoffman | Wayne County Board of Supervisors; Town of Williamson |
| Richard Perrin | Genesee Transportation Council |
| Tony Favro | Genesee Transportation Council |
| David Zorn | Genesee/Finger Lakes Regional Planning Council |
| Greg Albert | Genesee/Finger Lakes Regional Planning Council |
| Shawna Bonshak | Yates County Planning |
| Art Buckley | Wyoming County Planning |
| Maggie Brooks | Monroe County |
| Thomas Richards | City of Rochester |
| Dorothy Huber | Ontario County Board of Supervisors; Town of East Bloomfield |
| Thomas Harvey | Ontario County Planning |
| Bob Hayssen | Seneca County Board of Supervisors |
| Douglas Berwanger | Wyoming County Board of Supervisors |
| H. Taylor Fitch | Yates County Legislature |
| Nicole Landers | Yates County Cornell Cooperative Extension |

PLANNING TEAM LISTING – Finger Lakes Regional Sustainability Plan

| NAME | ORGANIZATION/AFFILIATION |
|----------------|---|
| Richard Perrin | Genesee Transportation Council |
| Tony Favro | Genesee Transportation Council |
| Tom Goodwin | Monroe County Department of Planning & Development |
| Rochelle Bell | Monroe County Department of Planning & Development |
| Justin Roj | Monroe County Department of Environmental Services |
| Anne Spaulding | City of Rochester |
| Angela Ellis | Livingston County and the 8 Counties outside of Monroe County |
| Jason Kennedy | Monroe County Department of Environmental Services |
| David Zorn | Genesee/Finger Lakes Regional Planning Council |
| Gregory Albert | Genesee/Finger Lakes Regional Planning Council |
| Aileen Maguire | C&S Companies, Consultant Team |
| Tara Boggio | T.Y. Lin International, Consultant Team |

APPENDIX A: PUBLIC FEEDBACK SUMMARY

1. Introduction

Public and stakeholder involvement has been a key element to the development of the Finger Lakes Regional Sustainability Plan. The outreach has been comprehensive, involved, and very integrated into the overall plan development. This document outlines the various ways the public has been engaged, and also summarizes the input received throughout the project.

2. Outreach Methods

A variety of methods were employed to reach out to, and engage, the public. A Public Relations firm, QUINNtessence, was used to complete project marketing and Public Relations throughout the project. QUINNtessence is a woman-owned firm based in Rochester, NY with established local connections to various media outlets. They created and distributed press kits, wrote press releases, and connected with the local media to ensure coverage throughout the project. Complete reports on media coverage are provided in **Sub-Appendix A**.

2.1. Project Logo

The Consultant Team developed a series of project logos that reflect the Region and the project objective to develop a Regional Sustainability Plan. These logos were reviewed with the Planning Team and the Consortium and the adjacent logo was chosen by the Executive Committee. The logo was used on all project related outreach materials and deliverables to help people identify with this project better.

Representative icons for each of the 9 subject areas were also developed to help graphically orient people to various subject areas throughout the project.

| | |
|---|---|
|  | Agriculture & Forestry |
|  | Economic Development |
|  | Energy |
|  | Materials & Waste Management |
|  | Transportation, Land Use, & Livable Communities |
|  | Water Management |
|  | Climate Change Adaptation |
|  | Green House Gas Inventory |
|  | Governance |

2.2. Project Website

A project website – www.sustainable-fingerlakes.org - was created to inform the public of meetings, provide access to documents for review and comments and submit comments and strategies for incorporation in the planning effort. It was updated consistently to provide the public with new information as it became available. Many of the municipalities within the study area provided links from their websites as well. The following shows some of the major site components.

The screenshot shows the project website interface with several key components highlighted by callout boxes:

- Stakeholder Groups:** All meeting presentations and minutes for stakeholder groups. This callout points to the 'Stakeholder Groups' link in the navigation menu.
- Project Schedule & Status:** Overall project schedule and updates. This callout points to the 'Project Schedule & Status' link in the navigation menu.
- Project Consortium:** All meeting presentations and minutes for the Consortium. This callout points to the 'Project Consortium' link in the navigation menu.
- News:** Latest news such as upcoming meetings, and opportunities for input. This callout points to the 'News' link in the navigation menu.
- Documents & Links:** Downloadable documents and links to news articles. This callout points to the 'Documents & Links' link in the navigation menu.
- Strategies Capture Form:** A link to the online strategy capture form. This callout points to the 'Strategies Capture Form' button on the page.

Other visible elements on the website include the Finger Lakes Regional Sustainability Plan logo, the CLEANER GREENER COMMUNITIES logo, contact information (Call Now: 585-512-2000, Email: tara.boggio@tyfln.com), and a main content area with a solar panel image and text about the program overview and public meetings.

The website went live on October 25, 2012, and as of March 8, 2013, it had over 1,300 unique visitors, 2,347 total views and over 100 strategy capture forms were submitted through the website. As depicted in the graphic below, which summarizes the number of visits by week, there was a significant peak in website activity after the media attention given to the first round of public meetings during mid-January. Note cards with the web address were also handed out at each of the first public meetings, again resulting in more activity to the site. The website activity remained relatively consistent during the month of February as people went to download meeting summaries, to watch for upcoming meetings, and to submit strategy capture forms.

2.3. Public Relations/Media

Throughout the project, the media was kept informed and was provided a variety of information including:

- Press kits – information on the project, contact information, background pieces on the stakeholder groups, and press releases for upcoming meeting
- Interview access – David Zorn, project manager, and Aileen Maguire, consultant team manager, were involved in TV and radio interviews during the course of the project.
- Press releases – notices for all public meetings including locations, dates and times.

In addition, follow up calls were made to reinforce the story, and push for coverage at the meetings.

The following is a summary of the media outlets that covered the project. A full list with links to the articles and copies of print articles is provided in **Sub-Appendix A**.

Final public meeting February 28 for Finger Lakes Sustainability Plan

The second and final public meeting in Rochester on the Cleaner, Greener Finger Lakes Regional Sustainability Plan is scheduled from 5 to 7 p.m. on Thursday, February 28 at the Rochester Museum and Science Center, 657 East Avenue, Rochester. The public is invited to attend.

A Coalition, which includes representatives from the nine counties in the region, the City of Rochester, local municipalities, the Genesee Regional Transportation Council and the Genesee/Finger Lakes Regional Planning Council, has been meeting since August and are in the final stages of developing a Regional Sustainability Plan that will be submitted to the New York State Energy Research and Development Authority (NYSERDA) for consideration. This study is part of Governor Cuomo's Cleaner Greener Communities Program. Ten regions across the state have been invited to submit plans and are competing for a portion of \$90 million in funding to implement specific projects identified in their plans. The Finger Lakes Regional Sustainability Planning Consortium must submit the most comprehensive plan possible to secure a portion of this funding for the nine County Genesee-Finger Lakes Region.

The Finger Lakes Regional Sustainability Plan will outline tangible methods to improve the long-term sustainability of the region's natural resources. Viable strategies to reduce greenhouse gas emissions, coupled with recommendations on specific energy improvements, renewable energy sources, water and waste management initiatives, transportation and land use, agricultural improvements, housing and economic development will be included. The plan also makes recommendations on ways local stakeholders can collaborate to achieve realistic goals, sets milestones for key projects, and identifies completion dates for all actions recommended in the plan.

"This public meeting will really be a great opportunity for the public to review and comment on draft strategies while also providing new ones, and talk one-on-one with the consultant team before the Sustainability Plan is fully drafted," explains David Zorn, Executive Director of the Genesee/Finger Lakes Regional Planning Council and spokesperson for the Consortium.

The upcoming Public Meeting on the Sustainability Plan will be held "Open House Style." This means people can come any time between 5 and 7 p.m. and stay as long as they like within that timeframe. There will be no formal presentation at this meeting. Instead participants can review a series of boards that will be on display throughout the meeting room. These boards explain the draft goals and the current strategies under consideration for submission to New York State. Attendees can then discuss the content with consultant team members who will be on hand to answer questions and document their input. The public is encouraged to voice its opinions on the topics under discussion and to provide new insights and ideas whenever possible.

For information on the Finger Lakes Regional Sustainability Plan please contact David Zorn at G/FLRPC, 555-454-0190 x14 or dave.zorn@gflrpc.org or visit the Finger Lakes Regional Sustainability Plan website at www.sustainable-fingerlakes.org.

For further information on the Cleaner Greener Communities program, please contact Lindsay Robbins at NYSERDA, 212-971-5342 ext. 3008 or lrr@nyserda.org.

2.3.1. Media details

The news coverage ranged from small mentions about upcoming meetings, to full articles about the plan as well as it's connect with the Finger Lakes Economic Development Council's strategic plan. There was a concerted effort to ensure that as public meetings approached, that coverage existed both in Monroe County and the more rural counties.

There were two interviews with Bob Smith from WXXI. The first interview with Bob Smith was conducted with David Zorn, project manager for the Finger Lakes Sustainability Plan on January 31, 2013. The following topics were discussed:

- Introducing the CGC program and the Finger Lakes Regional Sustainability Plan
- Summarized work completed to that point – baseline assessment, indicators/targets
- Structure of the project including the Consortium, Stakeholder Groups, and public meetings
- Q&A

The second interview was held on February 26th, 2013 and both David Zorn and Aileen Maguire, consultant team project manager, were present. The following topics were discussed:

- Promoted the two remaining public meetings in Batavia and Rochester
- Discussed the public comments from the first meeting in Lyons
- Encouraged the use of strategy capture forms
- Q&A focused on:
 - Transportation alternative modes and alternative fuels
 - Recycling
 - Challenges of changing consumer behavior and the need for education/outreach

Channel 10 also did an interview with David Zorn, conducted by Ray Levato that aired on their newscast on January 14th, 2013 in advance of the first round of public meetings. The interview focused on a few main points:

- General overview of the funding source (Phase 1 and Phase 2)
- What the Phase 1 money is being used for
- What sustainability is and what it means to the general public
- Upcoming public meeting dates and locations

The interview and story was also posted on the Channel 10 website, and a link was provided on the project website under “News”.

For \$100 million, what are we getting for our money?

It's called sustainability and Monroe County is in line to get a lot of money to study it. It promises to create jobs, but at what cost?

Sustainability is a new buzz word that many people may not be familiar with. Sustainability is using our resources more wisely and efficiently to sustain them for future generations.

But for \$100 million, what are we getting for our money?

Sustainability is part of Gov. Cuomo's Cleaner, Greener Communities Initiative. The goal is to

As part of the “Go Green” series that local news station Channel 8 conducts, and reported on their website rochesterhomepage.net, reporter Katrina Irwin also did a overview interview with David Zorn that broadly discussed the focus of the plan. This interview, which aired on January 11, 2013, was well timed as it was a week before the first round of public meetings.

The Democrat and Chronicle had a feature article in advance of the first public meeting, with a second

abbreviated piece in advance of the second public meeting.

2.4. Social Media

As part of the Public Relations/media campaign, the consultant team sent out emails to the stakeholder groups asking for the help in getting the word out about upcoming meetings and involvement opportunities. As part of those emails, potential social media blurbs were included that would work for Facebook and Twitter, and many groups such as the Genesee Transportation Council, Friends of the Garden Aerial, Rochester Cycling Alliance, and the City of Rochester did tweet the meetings, and/or provide the information on their Facebook pages, increasing the awareness among the community.

Rochester Cycling Alliance shared a link.

3. Outreach Groups

At the onset of the project the Project Execution Plan (PEP) set forth the plan for public outreach, which has been closely followed. A few additional meetings and outreach efforts were added as a result of some needs identified through the stakeholder groups. Various groups have been consulted with concurrently throughout the process including:

- Interviews associated with the Story of Place™
- Consortium
- Stakeholder Groups
- Regional Leaders Forum
- Coordination with Regional Organizations
- Public Outreach/Meetings

The involvement and feedback from each of these groups is summarized below. The presentations given to these groups and the meeting minutes are provided in **Sub-Appendix B**.

3.1. Story of Place Interviews

To support the development of the integral assessment and Story of Place, representatives of the Consultant Team conducted a series of phone and in-person interviews. The interviews engaged a variety of stakeholders with knowledge of the Region and expertise in the following areas:

Naturalists, environmental scientists, and scholars who are knowledgeable about the Region in terms of:

- Geologic history and morphology
- Hydrology: Seasonal, Historical and Morphology including local sub-watersheds
- Natural history of plant and animal communities
- Climate and weather history averages and extremes

Archeologists, anthropologists and cultural historians who are knowledgeable about the cultural history of the Region, in terms of:

- Indigenous tribes and their historical settlement patterns
- How land-use shifted over time, from early European settlers to the present
- Major historical (including pre-Columbian) events and conflicts
- Land use patterns in relationship to watershed
- Migration patterns
- Economic patterns-Trade, Taxation/tribute, Stratification of Society

Planning and Economic Development professionals knowledgeable about:

- Reasons people and businesses locate here
- Current business trends and performance

3.2. Consortium

The Finger Lakes Regional Sustainability Consortium (“Consortium”) was established to serve as the Steering Committee for the Project. The founding members of the Consortium include:

- Genesee County
- Livingston County
- Monroe County
- Ontario County
- Orleans County
- Seneca County
- Wayne County
- Wyoming County
- Yates County
- City of Rochester
- Genesee/Finger Lakes Regional Planning Council (G/FLRPC)
- Genesee Transportation Council (GTC).

In addition to these founding members, the Consortium includes state agencies and local governments who will contribute to the Plan development. Additional municipal members were encouraged to join the Consortium throughout the development of the Plan to expand awareness of it, increase support for its recommendations, and establish an ongoing mechanism for advancing sustainability throughout the Region.

The Consortium met six times during the planning process to provide project direction and approve key deliverables. Many of the Consortium members also served on Stakeholder Groups to provide additional input into draft deliverables.

The meeting minutes from each Consortium meeting are provided in **Sub-Appendix B**, but the meeting agenda and outcome are provided below.

Meeting 1: August 30, 2012

The first meeting provided an introduction to the Cleaner Greener Communities Program, which was given by NYSERDA representatives. Lindsay Robbins from NYSERDA gave an overview of the funding source, the project intent and the scope of work. Ms. Robbins made a point to reiterate to the Consortium that the project was intended to be economic drivers and not just a plan that is done to get Phase 2 funding. She was also asked if each county would be expected to adopt the plan to which she responded that there is not enough time within this project to expect that, however it is the hope that at the end of this counties and municipalities would endorse the plan and look to adopt portions locally.

The Genesee Finger Lakes Regional Planning Council representative, Greg Albert, then provided the Consortium a snapshot look at the Finger Lakes Region, focusing on demographics, economic clusters, and key issues that came out of the Comprehensive Economic Development Strategy that the Council prepares.

Each Consortium representative then took a few minutes to share with the group what sustainability initiatives were going on in their individual county, municipality or agency.

The consultant team representatives Aileen Maguire from C&S, and Tara Boggio from T.Y. Lin International then went through the basic schedule for the project, including noting approximate dates for Consortium meetings, and public meetings. They then took the group through a discussion of the stakeholder groups, discussing how the working groups would be broken down. The Consortium agreed to the following breakdown:

- Energy
- Transportation, Land Use & Livable Communities
- Materials/Waste Management
- Water Management
- Economic Development
- Agriculture & Forestry

And agreed that governance, green house gas and climate change should be discussed within each of the other 6 groups. Many other regions had separated out Transportation from Land Use, however this Consortium saw value in keeping them combined, recognizing the interrelatedness of those discussions.

Lastly, the Consortium brainstormed what agencies, organizations, etc. should be invited to each of the working groups. An interactive process was followed to add categories for each of the working group. This list of categories was then sent out to Consortium members after the meeting to help identify specific contacts for those groups, who were then invited to sit on one or more stakeholder group.

Meeting 2: October 9, 2012

The second meeting of the Consortium was focused on the Project Execution Plan. During this meeting the following items were presented and discussed:

- Project schedule - including meetings, deliverables and submission dates
- Public engagement strategy – overview of the groups being formed (stakeholder groups), public meetings, Consortium
- Presentation and adoption of a project logo
- General plan for public relations and marketing

Decision making structure for the group – consensus based approach, but an affirmative vote by not less than four voting members that combined represent more than fifty percent (50) of the population of the region provided a quorum is

present if deemed necessary. The group was shown a full list of stakeholder invitees based on the last meeting and names collected to date and members were asked to fill in any holes or add any additional suggested members.

Lastly, the status of the Baseline Assessment was given, noting that the interviews for the Story of Place had begun, as well as the existing greenhouse gas emissions inventory.

Meeting 3: November 15, 2012

The November meeting of the Consortium was the third meeting, and had a full agenda. The first topic discussed was the results of the first round of stakeholder meetings including general attendance, input received on the scope items and schedule for the next meetings. The website that was created was shown to the Consortium and they were directed where to find documents, meeting announcements, and meeting minutes.

The next agenda item focused on the Story of Place (SoP), with first an explanation from Carol Sanford from the consultant team, who noted that the rationale for doing the Story of Place is based on the following belief:

Communities that maintain their vitality, their ability to attract investment and resources and are able to evolve through time, have three things in common:

- 1. They know who they are – their uniqueness*
- 2. They develop a narrative to convey who they uniquely are*
- 3. They embed this narrative and uniqueness into everything they do*

Joel Glanzberg from the consultant team then walked the Consortium through the draft Story of Place presentation. The Story covers the history of the Region and the unique features and stories of what makes us the region we are. In general the Story identifies 3 major themes:

- Democratizing – making participation in the benefits of society available to all
- Eddying – a place where collecting, settling, nurturing and enriching can occur
- Continuous Innovation – finding solutions for local problems that are relevant for a larger world

The Consortium was then split into breakout groups to discuss the relevance of the Story of Place, to look at how the Story is evident in their current roles within the Region.

The following application of the Story of Place and Guiding Principles were developed:

Applying Story of Place

- Collaboration across Region
- Taking things to the next level
- Organized around identity
- Innovations and changes taking place here
- Keeping the Story alive
- Allow continued innovation
- Move away from linear thinking
- Process exporters
- Innovation
- Home of innovation

Guiding Principles

- Thinking systemically
- Makes us model (not linear)
- Brings back environment that supports innovation
- Creates/supports think tank mentality and function
- A change in self image and reflection

Meeting 4: January 16, 2013

The January meeting of the Consortium was an exercise in working with the Story of Place, which had been presented at the last meeting, and looking at how it influences and shapes strategies that the Sustainability Plan can advance. A brief overview of the Story of Place was given for those who had missed the previous meeting and synthesized it with democratizing, eddying, and innovating, the three major themes from the Story. “Straw dog” strategies were then offered for economic development, energy, water, land use/livable cities/transportation, agriculture and forestry, waste management, and climate change as seed ideas. Attendees then broke out to discuss each of the strategies and help enrich it, focus it, refine it, and replace it if needed. The four questions to consider were:

- Is it reflective of the Story of Place?
- Does it increase the value of the five capitals?
- Can we benefit beyond the subject area?
- Does it create benefit throughout the Region?

The groups came back and reported to the group what they had discussed. The consultant team then went through the six subject areas and the proposed strategies and indicated that they tried to take all of the past discussions and extract key ideas starting with what is the strategy that is starting to bubble up. The consultant team indicated that some will be hard to grapple with. Some of them will be disagreed with but they can serve as a seed to a conversation. After

another breakout group where they worked to improve the strategies, a discussion was had about each focus area. In general, each group was able to make improvements, or suggest additional strategies that would be brought forward to the afternoon discussion with the Stakeholder Groups.

Meeting 5: February 13, 2013

Meeting 5 with the Consortium first was focused on the Baseline Assessment, which was in draft form and available for Consortium review on the website. The consultant team then discussed the Indicator/Target document, which identifies short, mid, and long-term targets for each indicator, noting that there has been an effort to strike a balance between stretch goals and realism. The group then discussed the implementation strategy, which, among other things, evaluates strategies. The Consortium was given draft evaluation criteria for review. The proposed evaluation criteria included:

- Benefits to multiple subject areas
- Benefits to multiple capitals
- Benefits to multiple communities defined as more than one county (or Replicable to other communities easily)
- Implementation feasibility
- Consistency with planning efforts
- Financial feasibility

A question was asked on how progress will be measured. It was suggested that progress be based on the targets. A question was asked on who makes assessment of the strategies. The process is consultants, then Planning Team, and then the Consortium.

Lastly, the consultant team provided an update of public consultation efforts. First, there was an update on the website, including the number of unique visitors, the number of strategy capture forms submitted, and documents now available for review. The next round of public meetings was then discussed. It was explained that the next round would be the final round of public meetings and would be focused on the strategies to ensure the public has an opportunity to provide input on them. The format, dates, and location of the meetings were presented. Lastly the Consortium was presented the idea of the Leaders Forum meeting, discussing the intent, potential invitees, and meeting details.

Meeting 6: March 12, 2013

The last meeting of the Consortium was focused on reviewing the deliverable schedule, and a final review of the broad strategies that had been modified to reflect public comments gained through the recent public meetings. The sub

strategies and specific projects were also briefly discussed; however the consultant team reminded the Consortium that NYSERDA has put priority on ensuring the broad strategies capture any potential future projects. The Consortium also had a discussion of the future of the plan, how it would be carried forward and implemented and what level of involvement the various municipalities would like to have. David Zorn suggested that the Consortium meet again in late April/early May to have input on Representative Projects, once the full plan has been completed and submitted to formally endorse the plan, and to begin discussion of how the Consortium would continue their work.

3.3. Stakeholder Groups

To provide critical input and feedback into the Sustainability Plan, six Stakeholder Groups were established. These groups provided data, technical expertise and knowledge of the region to guide the development of the plan. These groups were developed around the following NYSERDA defined focus areas, with the topics of Climate Change Adaptation, Governance and GHG Emissions addressed in each Group:

- Energy
- Transportation, Land Use & Livable Communities
- Materials/Waste Management
- Water Management
- Economic Development
- Agriculture & Forestry

The Stakeholder Groups had broad representation including subject area experts, representatives from municipal, county and state agencies, academic institutions, businesses, and non-profit organizations. The composition of the groups were guided through the Consortium, with that group making recommendations first on the types of agencies, organizations, and businesses that should be invited, and then also by providing names of appropriate representatives. For each group, some members declined to be involved and were removed from the list, some attended every meeting, and others were not able to make any meetings but remained on the list, getting email updates throughout the project.

In total, almost 500 people made up the Stakeholder groups, with the following breakdown by Group:

- Agriculture – 91
- Economic Development – 107
- Energy – 65
- Materials Management – 35
- Transportation and Land Use – 125
- Water Management – 75

Not all invitees attended even one meeting, and some individuals were on multiple groups, and therefore would show up counted as one person in each group. In general at most rounds of Stakeholder meetings, we saw about 100-140 people total between the 6 groups.

The Stakeholder Groups met four times to identify their vision for a sustainable region, share their knowledge on baseline conditions and potential challenges, and provide input into the develop of indicators, targets and strategies.

A summary of each of the stakeholder meetings is provided below with the full meeting minutes and copy of the presentation provided in **Sub-Appendix B**.

3.3.1. Stakeholder Meeting #1

The first round of stakeholder meetings occurred during the second and third weeks of October, 2012. Each of the six groups met individually at different times, and with various members of the consultant team present. For each of the six groups, they followed the same agenda:

1. Welcome and Introductions
2. Introduction to the project

The consultant team provided an overview of the Cleaner-Greener Communities Program including the funding source, the scope of work for Phase 1, anticipated schedule and funding for Phase 2, and a draft schedule for project deliverables and completion.

3. Stakeholder Group

Each of the stakeholder groups were presented a draft mission statement for discussion regarding what they will study within the confines of the Sustainability Plan.

The consultant team then outlined the role of the stakeholders as follows:

- Input into indicators and identifying data sources (meeting 1)
- Discussion of targets (meeting 2)
- Implementation strategies (meeting 3)
- Review draft report/finalize broad strategies (became content of additional meeting - meeting 4)

Discussions were also had with each group regarding any gaps in representation within the group so additional invitations could be made.

4. Visioning

Each group was asked what their vision was for the future of their subject area in this region. The consultant team recorded thoughts from the groups and facilitated discussions on how people would know if they were heading in the right direction.

5. Sustainability Indicators

The consultant team provided guidance to the Stakeholder Groups regarding NYSERDA indicators as follows:

1. Choose at least one common indicator for each focus area for inclusion in your sustainability plan
2. There are five indicators that all of the regions are required to use. These indicators allow some information to be tracked across the state and to ensure that the CGC program is doing its part to support larger national efforts. Regions will not be required to choose additional indicators in these focus areas. These indicators will count as your required common indicator in each of the focus areas that they cover.
3. Regions may also choose to add other indicators that they feel are appropriate to establish baselines and targets for improvements in their region.

Applicable NYSERDA indicators that were provided in guidance documents to the consultant team were then presented to each group for consideration and discussion. The groups discussed if they thought it was a valid indicator as is, if it should be modified, or deleted (unless required). In addition, the groups discussed the need to add any new indicators provided the indicators have data available and can have targets associated with them.

6. Next steps

Discussion of the next meeting timeframe and general agenda

3.3.2. Stakeholder Meeting #2

The second round of Stakeholder meetings were held the second week of November, with each group meeting separately. For each of the six groups, they followed the same agenda:

1. Welcome and Introductions

As part of the opening remarks, the consultant team shared with the Stakeholders a summary of the Regional Themes and Goals that were heard throughout the first round of stakeholder meetings. The draft ideas were:

- Improve accessibility, connectivity and mobility
- Preserve, protect and improve natural resources
 - air quality
 - water quality
 - prime farmland
 - forests
 - open space
- Maintain, protect and improve the functionality and disaster resiliency of existing infrastructure systems and acknowledge the links between systems
 - transportation
 - water
 - energy
 - communication
 - solid waste
- Improve public health
- Respect local planning efforts and retain individual community character
- Build partnerships between local governments, the private sector, regional institutions and the public
- Build sustainability capacity and understanding through outreach and education

Each group made suggestions for additions and edits.

2. Story of Place Framework and Exercise

The consultant team presented the rationale for doing the Story of Place before actually presenting it which is based on the following belief:

Communities that maintain their vitality, their ability to attract investment and resources and are able to evolve through time, have three things in common:

1. They know who they are – their uniqueness
2. They develop a narrative to convey who they uniquely are
3. They embed this narrative and uniqueness into everything they do

Joel Glanzberg from the consultant team then walked the stakeholders through the draft Story of Place presentation. The Story covers the history of the Region and the unique features and stories of what makes us the region we are. In general the Story identifies 3 major themes:

- Democratizing – making participation in the benefits of society available to all
- Eddying – a place where collecting, settling, nurturing and enriching can occur
- Continuous Innovation/Incubator for ideas – finding solutions for local problems that are relevant for a larger world

3. Place Sourced Indicators

After the Story of Place presentation it was explained that the consultant team is taking the Story of Place, and using it to create “Place-Sourced Indicators” which may or may not be in line with the NYSERDA ones. Each stakeholder group was lead through a discussion of potential “Place-Sourced Indicators” and captured ideas for further consideration. The consultant team reminded stakeholders that utilizing the indicators would be tied to the availability of data.

4. Guiding Principles

The group had a discussion around the emerging patterns of the Story of Place, focusing on the eddying, and the incubating that has occurred over time. The groups each discussed the following questions:

- Where’s the growth opportunity?
- What is our expertise?
- What are the strengths of our natural and built environment?
- Where are our passions headed?

5. Next steps

Discussed next stakeholder meeting and upcoming public meeting.

3.3.3. Stakeholder Meeting #3

The third meeting of the Stakeholder groups was a joint meeting of all 6 groups together. This meeting was held as an all day workshop on January 17, 2013. Over 100 Stakeholders were in attendance throughout the day. There were times when information was presented to everyone at once, and then times when groups broke out separately.

A brief overview of the Story of Place was given for those who had missed the previous meeting and synthesized it with democratizing, eddying, and innovating, the three major themes from the Story of Place. Then, for each subject area, a “straw dog strategy” was put out to the group based on some of the feedback from the first 2 meetings. After they were presented, people were separated into groups to discuss the strategy, and supporting goal. However, they were selected randomly and therefore did not necessarily wind up in their natural stakeholder group. Instead, to comment on a goal and strategy for another subject area, giving it a unique perspective. The groups were asked to consider the following:

1. How do we make sure it creates benefit throughout the region and reflect the uniqueness of this region as reflected in the Story of Place?
2. Strategies should impact all subject areas so as to benefit the system as a whole subject, giving it a unique perspective.
3. Can we think about the strategy so that it strengthens all 5 capitals (human, ecological, fixed/built, financial, social)?

The feedback was collected in all groups and brought back to the full group and summarized by one representative of each group. After this summary, the groups then separated by their actual stakeholder group that they primarily associate themselves with and they took the comments from the morning and continued to work with them.

In the afternoon sessions, each Stakeholder group worked to more fully refine their “straw dog” strategy, adding more strategies, and working on overarching subject area goals and challenges. Lastly, while still in breakout groups, the subject areas discussed their indicators and began discussions of targets for each one.

The day ended with report outs from each group so that the consultant team could look for commonalities, and sometimes conflicts, between the groups outcomes. The Stakeholders then asked general questions about the remaining process and next steps.

3.3.4. Stakeholder Meeting #4

The last meeting of the Stakeholder groups was done with all 6 groups together on March 12, 2013. This meeting was a summary of the public feedback gained through the public meetings and a presentation of the refined broad strategies to ensure that what had been captured reflected the stakeholders’ ideas and input throughout the process.

3.4. Regional Leaders Forum

Despite efforts to engage major business leaders and representatives through the Stakeholder process, there was a lack of representation from many of the Region’s largest employers and therefore a special meeting was created to bring this group together. On February 21, 2013 a forum of regional leaders was conducted to engage government, institutional and industry leaders in a discussion of existing sustainability initiatives, goals, and challenges, in an effort to understand how the Plan can support their implementation efforts. A concentrated effort was made to ensure regional representation from a variety of businesses. The following businesses and municipalities were represented:

Business Representation

Bausch & Lomb, Inc.
 Garlock Sealing Technology
 Barilla Pasta
 Kraft Foods
 Xerox Corporation
 Wegman's Food Market
 O-AT-KA Milk Products
 Goulds Pump
 McCormick Farms
 Rochester Institute of Technology

Municipal/Agency Representation

Wayne County
 Monroe County
 Genesee County
 City of Rochester
 Livingston County
 Genesee Transportation Council
 Genesee Finger Lakes Regional
 Planning Council

The general meeting intent was:

1. Ensure the community leadership and major regional employers understood the importance of this project.
2. Supplement the vast public input with more targeted private input.
3. Ensure existing sustainability plans/projects by major regional employers are incorporated to allow for future funding.
4. Explain how to provide input before plan is finalized.
5. Get reaction from high level thinkers on project direction to date.

Through the course of the meeting, the business representatives and municipal leaders provided report outs on their current efforts and goals on sustainability, and also shared insights into strategies and projects that would help further their sustainability goals.

Common themes on challenges that were heard repeatedly during this meeting include the following:

- Difficulty recycling industrial waste water within the production process. The desire/mandate to reduce or eliminate organics that go to landfills
- Cost-benefit of some energy efficiency projects not there to warrant investment

Opportunities noted by many of the representatives included:

- Benefits that have been seen from partnering with institutions such as the Golisano Institute for Sustainability and the Pollution Prevention Institute.
- Technological advances in the way they manufacture products – leading to energy reduction
- Opportunities for on-site alternative energy generation

Strategy ideas that came from the group, which were summarized and incorporated into the planning process included:

- support waste to energy
 - example, Epiphery, a start-up company –used by Wegmans, Kraft, Barilla
 - need to take technology to areas of waste – no transportation which reduced GHG emissions but no NYSERDA funding
 - need technology for a small commercial, viable process
- seed funding for energy efficiency projects that currently do not make the cost/benefit tipping point
- technology and policies for water conservation
- municipalities need better guidance/policies that guide renewable/alternative energy projects – currently difficult process to navigate
- share ideas and resources across the region – leverage knowledge and experience of businesses who have implemented projects and institutions conducting research

3.5. Coordination with Regional Organizations

Presentations were made to the following organizations to inform them of the progress of the plan and to solicit their input on its content and direction.

Finger Lakes Regional Economic Development Council (REDC)

Given the inter-related nature of the Sustainability Plan and the REDC Plan, the project consultant team met with members of the REDC at two of their meetings during the plan, in addition to many members of the REDC being part of the Economic Development Stakeholder Group. The meetings were held on July 23, 2012 and December 12, 2012. The first meeting provided the REDC members an overview of the Sustainability Plan intent, scope and schedule and discuss how the REDC will be incorporated. The second meeting focused on the project definition of sustainability, CGC program background, public consultation, major components of the Plan, Baseline Assessment, next steps, and question and answers.

Genesee/Finger Lakes Regional Planning Council

David Zorn, Director of the Genesee/Finger Lakes Regional Planning Council, provided quarterly updates to the Regional Planning Council during the project to keep them informed. Many of the Regional Planning Council members are part of the Consortium and/or stakeholder groups. Tara Boggio from the Consultant team also provided a comprehensive presentation at the March 14th 2013 meeting of the G/FLRPC, providing information on the process and the findings as well as answering questions.

Genesee Transportation Council

Rich Perrin, Director of the Genesee Transportation Council (GTC), made presentations and gave updates to the GTC throughout the project to ensure the leadership knew the project status and the findings and recommendations coming out of the study.

3.6. Public Outreach

There were two times during the course of the project where public meetings were held to engage the public, gain input and gauge community response. Each time the meeting was held in 3 locations, geographically distributed across the region. A summary of each of the two rounds of public meetings are summarized below. Full presentations and meeting minutes are provided in **Sub-Appendix B**.

3.6.1. Public Meeting 1

The first round of meetings were held during mid-January. On January 15th, 2013 from 6-8PM, concurrent meetings were held in Batavia, NY and in Geneva, NY. The next evening, January 16th, a meeting was held in Monroe County at Rochester Institute of

Technology. Between the three meetings approximately 95 people attended. All three meetings followed the same agenda as summarized below.

1. Welcome and Opening Remarks
2. Introduction to the project

The consultant team provided an overview of the Cleaner-Greener Communities Program including the funding source, the scope of work for Phase 1, anticipated schedule and funding for Phase 2, and a draft schedule for project deliverables and completion.

The public was also shown a list of the established Stakeholder groups and given an overview of their role in the project.

3. Themes and Goals
The definition of sustainability that had been developed for the project was shared with the public and asked for input. Similarly, the project Themes/Goals were presented and discussed with each group.
4. Story of Place
The consultant team then walked the stakeholders through the draft Story of Place presentation. The Story covers the history of the Region and the unique features and stories of what makes us the region we are. In general the Story identifies 3 major themes:
 - Democratizing – making participation in the benefits of society available to all
 - Eddying – a place where collecting, settling, nurturing and enriching can occur
 - Continuous Innovation/Incubator for ideas – finding solutions for local problems that are relevant for a larger world

After the Story of Place presentation, the public was asked to comment on the Story, asked if anything was missing, what they thought of the concept, and how/if they could see if relevant to their business, place of residence, etc..

5. Sustainability Indicators

Summary tables for each subject area with NYSERDA and Place-Sourced indicators were presented to the public and explained by the consultant team. The method for generating the place-sourced indicators from the Story of Place was explained, as was the criteria used to add new indicators on top of the NYSERDA required/suggested indicators.

| Sustainability Indicators | | |
|---|---|--|
| Transportation, Land Use, & Livable Communities | | |
| | NYSERDA | PLACE-SOURCED |
|  | Total percentage of people commuting via walking, biking, transit, and carpooling | Transportation energy consumption per capita |
| | Vehicle miles travelled per capita | % income spent on transportation |
| | Per capita land consumption | Infrastructure within flood zones (100 year) <ul style="list-style-type: none"> • Miles of principal arterials • Bridges |
| | | Freight tonnage moved <ul style="list-style-type: none"> • By truck • By train |
| | | Rate of poverty |
| | | Proportion of residents living in existing population centers |

6. Next steps

The next steps presented included uploading documents for public review to the website, developing targets and strategies with the Stakeholder Groups, and another round of public meetings in February.

7. Q&A

Each location hosted a question and answer session until all questions had been addressed.

3.6.2. Public Meeting 2

The second round of public meetings took place on February 25 (East – County Courthouse, Lyons), February 26 (West – Genesee County Cornell Cooperative Extension, Batavia) and February 28 (Central – Rochester Museum and Science Center) in 2013 to solicit input on strategies. Between the three locations approximately 75 people were in attendance.

The set up for the public meeting was open house style, with display boards showing subject area goals, opportunities, challenges, variables and draft strategies for each of the subject areas as well as boards that documented public involvement to date. A video capturing the Story of Place was also showing during each meeting for people who had an interest.

Around the room were a series of notepads for people to write comments and place on boards to note their support, concern or comment on the content. In addition, strategy capture forms were available and laptops with the online version of the forms were available for the public to submit at the meetings.

The consultant team assisted the public in capturing their comments and then summarized all the comments received for incorporation into the draft plan.

Land Use and Livability

Subject Area Goal
Increase the sustainability and livability of the Finger Lakes region by revitalizing the region's traditional centers, concentrating development in areas with existing infrastructure and services, and protecting undeveloped lands from urban encroachment.

Opportunities

- Protection of farmland and rural/scenic character
- Revitalization of cities, villages, and rural hamlets
- Cost savings on infrastructure and service delivery
- Reverse disinvestment in existing neighborhoods, infrastructure
- Pendulum beginning to swing back to desire for authentic, close-knit, walkable communities
- Human-scaled design supports local/small businesses, diversity of housing and cultural amenities, transportation options
- More equitable/efficient/sustainable tax structures
- Educating policy makers and the public about transportation-land use connection

Challenges

- Home rule limits effectiveness of regional planning
- Inefficient land use patterns results in high energy consumption and high cost of maintaining infrastructure/services
- Land use policies that promote auto-oriented, single-use development
- Competing priorities of adjacent communities
- Struggling urban areas discourage people from locating in walkable/bikable neighborhoods
- Access to funding for comprehensive plans, zoning codes, design standards, etc.
- Conventional development costs are largely externalized and thus overlooked in favor of short-term benefits
- Development pressure threatens long-term viability of farms needed for sustainable food system

Variables

- Fuel costs
- Land values based on evolving housing demand and tax structures
- State/federal funding dedicated to local/regional planning initiatives

Comments (place sticky notes below)

Land Use and Livability

Subject Area Goal
Increase the sustainability and livability of the Finger Lakes region by revitalizing the region's traditional centers, concentrating development in areas with existing infrastructure and services, and protecting undeveloped lands from urban encroachment.

| Description with criteria | Evaluation Criteria | | | | | |
|---|-----------------------------|---------------------------|-----------------|------------------|-----------------------|---------------------|
| | Health/Habitat/Scenic Value | Resilience/Climate Change | Public Capacity | Equity/Community | Environmental Quality | Financial Viability |
| <p>Broad Strategy Revitalize existing centers and prioritize the value of placemaking</p> <p>Representative Sub-Strategies / Project Ideas</p> <ul style="list-style-type: none"> Adopt design standards or other flexible zoning techniques to promote placemaking Incentivize the adaptive reuse of vacant existing buildings Encourage "one-half" campaigns to help support local businesses Invest in improvements to the public realm (streetscapes, plazas, parks) in strategic areas to promote pedestrian-oriented environments | ● | ● | ● | ● | ● | ● |
| <p>Broad Strategy Support and preserve rural centers and the character of rural areas</p> <p>Representative Sub-Strategies / Project Ideas</p> <ul style="list-style-type: none"> Implement land use tools such as purchase of development rights (PDR) transfer of development rights (TDR), conservation easements and other incentives to preserve agricultural lands and open spaces in perpetuity Encourage consolidation of seven farm into rural areas Incentivize lands and parcels of significant ecological and/or scenic value coordinate with local land conservation to protect higher value lands | ● | ● | ● | ● | ● | ● |
| <p>Broad Strategy Encourage diversity of uses/communities to bring about a greater mixture of uses, people, ages and incomes</p> <p>Representative Sub-Strategies / Project Ideas</p> <ul style="list-style-type: none"> Eliminate zoning and regulatory barriers that constrain the ability to do mixed use development In making land use decisions, consider residential access to parks, transportation choices, cultural assets, jobs and services to develop "complete communities" Encourage "formal design" for new residential development and redevelopment, which accommodates a range of abilities | ● | ● | ● | ● | ● | ● |
| <p>Broad Strategy Create healthy, safe and sustainable communities</p> <p>Representative Sub-Strategies / Project Ideas</p> <ul style="list-style-type: none"> Utilize local academic institutions to raise public awareness of the value and importance of sustainability and embed it into local culture Encourage development practices and projects that help establish connected networks, particularly in centers, to make them more walkable Encourage creative strategies, such as farmers' markets and small local markets, to provide access to affordable, healthy foods in areas without convenient access to grocery stores | ● | ● | ● | ● | ● | ● |
| <p>Broad Strategy Encourage regional cooperation and coordination</p> <p>Representative Sub-Strategies / Project Ideas</p> <ul style="list-style-type: none"> Encourage more funding and recommendations from this Plan into decisions including on the part of the Regional Economic Development Council Regional authorities (e.g. county water districts) should adopt policies where decision-making incorporates sustainability considerations, and not just revenue generation Encourage cooperation and better coordination of planning and zoning across municipal boundaries to achieve consistent development patterns | ● | ● | ● | ● | ● | ● |

NYSEEDA Indicators and Targets

| NYSEEDA Indicator | Baseline Value (2005) | Short-Term Target (2010) | Mid-Term Target (2015) | Long-Term Target (2020) |
|-----------------------------|-----------------------|--------------------------|------------------------|-------------------------|
| Per capita land consumption | 0.25 acres | no change | 7% reduction | 9% reduction |

HIGHLIGHTS OF PR COVERAGE FOR PUBLIC MEETINGS

- Feature article in the Democrat & Chronicle Newspaper by Steve Orr
- Go Green Report on both WROC-TV and FOX News plus continuing mentions in the Community Calendar listings associated with the Go Green segments
- Interview with Ray Levato on WHEC-TV Channel 10
- Two Interviews on the Bob Smith Show on WXXI Radio
- Feature article in the Canandaigua Daily Messenger

SYNOPSIS OF COVERAGE FOR BOTH ROUNDS OF PUBLIC MEETINGS FOR THE FINGER LAKES SUSTAINABILITY PLAN

Overall, the Finger Lakes Sustainability Public Meeting Announcements received coverage in major media outlets in all three target areas --- Central, East and West. This included a combination of daily newspapers, weekly newspapers with distribution in many towns in the region, newspapers that reach special audiences, television, radio, and online coverage. We also received coverage in some specialty publications, such as an environmental blog and college press. The information was widely disbursed and available on many sources. Here are the highlights of the press coverage:

| <u>Medium</u> | <u>First Round</u> | <u>Second Round</u> |
|-----------------------------------|---------------------------|---|
| Democrat & Chronicle | Yes, feature article | Yes |
| Democrat & Chronicle Finger Lakes | Yes | Yes |
| Empire State Weeklies | Yes | No |
| Messenger Newspapers (MPN) | Yes | Yes |
| MPN Monroe County | Yes | Yes, Online |

Potential Coverage We Did Not Secure:

For the most part, the coverage we did not secure was confined to very small pennysaver chains and radio stations that do not maintain news staffs for interviewing purposes.

Rochester Media

| | | |
|----------------------------|----|----|
| Rochester Business Journal | No | No |
| Minority Reporter/La Voz | No | No |
| Rochester Radio Stations | No | No |

Small Pennysavers & Regional Media

| | | |

Press Release

FOR IMMEDIATE RELEASE: **January 4, 2013**

Finger Lakes Regional Sustainability Plan Coalition Announces First Round of Public Meetings

*Plan is Expected to Reduce Carbon Emissions, Increase Energy Savings,
Enhance Economic Development*

The first round of public meetings associated with the Cleaner, Greener Communities Finger Lakes Regional Sustainability Plan are slated for the middle of January. The meetings will focus on providing interested parties with an overview of the process, plan goals and themes, and the draft indicators. We will also begin discussions on strategies for implementation.

The first round of Public Meetings for the Cleaner Greener Communities Finger Lakes Regional Sustainability Plan will be Tuesday January 15, 2013 from 6:00-8:00 PM at the Genesee County Building 2 located at 3837 West Main Street Road, Batavia, NY and also from 6:00PM-8:00PM on January 15th at the Sanford Room at the Hobart & William Smith Collages Library in Geneva, New York. On Wednesday January 16, 2013 at the Rochester Institute of Technology Golisano Institute for Sustainability in Rochester, New York, the last of the three public meetings will be held from 6:00PM to 8:00 PM. For directions and more information please visit the project website at www.sustainable-fingerlakes.org.

The Coalition, including the nine counties in the region, the City of Rochester, municipalities, Genesee Transportation Council and Genesee/Finger Lakes Regional Planning Council are developing a Regional Sustainability Plan that encompasses the Finger Lakes Regional Economic Development Council (REDC) area. The development of a comprehensive regional sustainability plan is the first stage of the Cleaner, Greener Communities program and is intended to develop a vision, goals and objectives for a sustainable future, identify actions needed to achieve that future and outline metrics to measure success.

"Monroe County is proud to partner with NYSERDA as we form a state-of-the-art plan to protect the environment, while fostering future economic growth and job creation," said Monroe County Executive Maggie Brooks. "The Cleaner, Greener Communities program is an innovative way for communities across the Finger Lakes Region to develop strong, collaborative solutions for sustainability."

The Finger Lakes Regional Sustainability Plan will outline tangible actions for improving the long-term sustainability of our communities and natural resources. Specifically, the Plan will identify current greenhouse gas emissions and energy use along with available natural resources and economic assets, liabilities and opportunities; strategies for greenhouse gas emissions reduction, energy improvements, and the deployment of renewable energy sources; long-term and short-term sustainability goals for energy supply, transportation, water management, waste management, land use, open space, agriculture, housing and economic development; and actions to achieve these goals and barriers to implementation.

Development of the sustainability plan includes stakeholder involvement and is incorporating existing planning efforts. Components of the plan will include the assessment, target establishment, the implementation strategy, public consultation, and the sustainability plan. The Plan also will include an implementation strategy that describes how local stakeholders will collaborate, provides a timetable for targeted milestones, and identifies completion dates for the actions identified.

Finger Lakes Regional Sustainability Plan Funded by: NYSERDA – Cleaner, Greener Communities Program

Stakeholder groups have been formed and have met twice around the key areas of the plan. They include energy; economic development; transportation, land use and livable communities; materials/waste management; water

management; and agriculture and forestry. Two additional topic areas of governance and climate change adaptation will overlay into each of the other six groups.

The coalition of Genesee-Finger Lakes Region counties, municipalities and organizations has received \$900,000 from the New York State Energy Research and Development Authority (NYSERDA) to create a Regional Sustainability Plan as part of the Cleaner, Green Communities program announced by Governor Andrew M. Cuomo in his 2011 State of the State address.

“Governor Cuomo’s Cleaner Greener Communities Programs empowers each of the State’s ten regions to take the lead in the development of sustainability plans that improve the environmental well-being of their local communities,” said Francis J. Murray Jr., President and CEO of NYSERDA. “This award will help support a sustainability plan that will build upon the inherent strengths and assets of the Finger Lakes region.”

Phase II of the Cleaner, Greener Communities program will provide up to \$90 million in additional funding on a competitive basis to implement projects that support the goals of the plan. Projects must create opportunities for achieving carbon reductions, energy efficiency savings and/or renewable energy deployment while enhancing job creation, economic investment and development consistent with the region’s sustainability and REDC strategic plan, entitled *Accelerating Our Transformation*.

“This award by Governor Cuomo will enable the Finger Lakes Region to fully utilize its high level of technical expertise in sustainability and strong relationships among private, public, and academic stakeholders,” said Richard Perrin, Executive Director of the Genesee Transportation Council. “Identifying opportunities to improve the economy and protect the environment in an equitable manner will ensure that our region continues to increase its standing as a world-class community.”

The Finger Lakes Regional Sustainability Planning Consortium has been established and serves as the Steering Committee for the plan. The Consortium currently consists of the nine counties of the region, City of Rochester, and other local governments, representatives from the Finger Lakes Office of Empire State Development, the Finger Lakes Regional Economic Development Council, and the regional office of the New York State Department of Environmental Conservation, along with the Genesee/Finger Lakes Regional Planning Council (G/FLRPC), and Genesee Transportation Council (GTC). Other entities from the private, public, and not-for-profit sectors will be encouraged to be involved throughout the development of this plan to offer input, expand awareness of it, increase support for its recommendations, and establish an ongoing mechanism for advancing sustainability throughout the region.

“We look forward to continue to work with our partners and stakeholders to plan and implement for our region’s future,” said David Zorn, Executive Director of the Genesee/Finger Lakes Regional Planning Council.

For further information on the Finger Lakes regional sustainability plan please contact David Zorn at G/FLRPC, 585-454-0190 x14 or dave.zorn@gflrpc.org or visit the Finger Lakes Regional Sustainability Plan website at www.sustainable-fingerlakes.org.

For further information on the Cleaner Greener Communities program, please contact Lindsay Robbins at NYSERDA, 212-971-5342 ext. 3008 or lrr@nyserda.org.

STAKEHOLDER GROUPS

Development of the sustainability plan includes stakeholder involvement and is incorporating existing planning efforts. Six stakeholder groups have been formed and have met twice around the key areas of the plan. They include energy; economic development; transportation, land use and livable communities; materials/waste management; water management; and agriculture and forestry. Two additional topic areas of governance and climate change adaptation overlay into each of the other six groups.

The mission of each of these groups is summarized below:

- The **Agriculture and Forestry** Stakeholder Group is addressing agricultural businesses and lands, forest lands, and the multiple economic and ecological roles fulfilled by those enterprises and lands as they relate to social, economic, and ecological sustainability.
- The **Economic Development** Stakeholder Group is tasked to coordinate activities with the Finger Lakes Regional Economic Development Council (FLREDC) and clearly address how the goals of the sustainability plan intersect with and support those of the REDP.
- The **Energy** Stakeholder Group is tasked to address energy and Greenhouse Gas (GHG) emissions associated with its use and generation. The Plan will evaluate electric generation, electric use, and on-site combustion in the Finger Lakes region by building type (residential, commercial, industrial, and institutional).
- The **Materials and Waste Management** Stakeholder Group is tasked to evaluate representative waste and materials management practices throughout the Finger Lakes region and determine strategies to reduce the waste produced and stored; and to reduce GHG emissions associated with waste management.
- The **Transportation and Land Use** Stakeholder Group is tasked to evaluate existing transportation networks within the Finger Lakes region and consider improvements that would provide more efficient system operation, alternative fuel vehicles and the infrastructure to fuel them, and additional/enhanced travel choices such as public transportation, ridesharing, complete streets, and bicycle and pedestrian pathways. At the same time, this group is looking at the land-use planning components, which are interrelated, and interdependent on transportation.

SUSTAINABILITY

The project consortium and stakeholder groups have developed the following working definition of sustainability for the purposes of this plan:

Sustainability involves three interrelated components: environment, economy and society. These pillars are linked – the stability of one reinforces the strength of the other two. Sustainability planning for a community, local government or region integrates the three pillars of sustainability through collaborative work within a framework that supports long-term considerations, fosters innovation, and results in a healthy, safe and affordable place to live, work and play for all residents.

DRAFT GOALS/THEMES

- Improve accessibility, connectivity and mobility
- Preserve, protect and improve natural resources and acknowledge the link between natural systems
 - air quality (reduce GHG emissions)
 - water quality
 - prime farmland
 - forests
 - open space
- Maintain, protect and improve the functionality and climate change/disaster resiliency of existing infrastructure systems and acknowledge the links between systems
 - transportation
 - water
 - energy
 - communication
 - solid waste
- Improve public health
- Promote an equitable distribution of cost and benefit
- Respect local planning efforts and retain individual community character
- Build partnerships between local governments, the private sector, regional institutions and the public
- Build sustainability capacity and understanding through outreach and education
- Promote robust, high quality economic growth
- Bring the Finger Lakes Region together through a shared identity and common goals

Press Release

FOR IMMEDIATE RELEASE: February 18, 2013

FINAL PUBLIC MEETING SET FOR FINGER LAKES SUSTAINABILITY PLAN

Public Is Encouraged To Voice Opinions On Specific Initiatives Under Discussion

The second and final Public Meeting in Rochester on the Cleaner, Greener Finger Lakes Regional Sustainability Plan is scheduled from 5:00P.M. - 7:00P.M. on Thurs., Feb. 28 at the Rochester Museum and Science Center, located at 657 East Ave., Rochester. The public is invited to attend.

A Coalition, which includes representatives from the nine counties in the region, the City of Rochester, local municipalities, the Genesee Regional Transportation Council and the Genesee/Finger Lakes Regional Planning Council has been meeting since August and are in the final stages of developing a Regional Sustainability Plan that will be submitted to the New York State Energy Research and Development Authority (NYSERDA) for consideration. This study is part of Governor Cuomo's Cleaner Greener Communities Program. Ten regions across the state have been invited to submit plans and are competing for a portion of \$90 million in funding to implement specific projects identified in their plans. The Finger Lakes Regional Sustainability Planning Consortium must submit the most comprehensive plan possible to secure a portion of this funding for the nine County Genesee-Finger Lakes Region.

The Finger Lakes Regional Sustainability Plan will outline tangible methods to improve the long-term sustainability of the region's natural resources. Viable strategies to reduce greenhouse gas emissions, coupled with recommendations on specific energy improvements, renewable energy sources, water and waste management initiatives, transportation and land use, agricultural improvements, housing and economic development will be included. The plan also makes recommendations on ways local stakeholders can collaborate to achieve realistic goals, sets milestones for key projects, and identifies completion dates for all actions recommended in the plan.

"This public meeting will really be a great opportunity for the public to review and comment on draft strategies while also providing new ones, and talk one-on-one with the consultant team before the Sustainability Plan is fully drafted," explains David Zorn, Executive Director of the Genesee/Finger Lakes Regional Planning Council and spokesperson for the Consortium.

The upcoming Public Meeting on the Sustainability Plan will be held "Open House Style." This means people can come any time between 5:00P.M. and 7:00P.M. and stay as long as they like within that timeframe. There will be no formal presentation at this meeting. Instead participants can review a series of boards that will be on display throughout the meeting room. These boards explain the draft goals and the current strategies under consideration for submission to New York State. Attendees can then discuss the content with consultant team members who will be on hand to answer questions and document their input. The public is encouraged to voice its opinions on the topics under discussion and to provide new insights and ideas whenever possible.

For further information on the Finger Lakes Regional Sustainability Plan please contact David Zorn at G/FLRPC, 585-454-0190 x14 or dave.zorn@gflrpc.org or visit the Finger Lakes Regional Sustainability Plan website at www.sustainable-fingerlakes.org.

For further information on the Cleaner Greener Communities program, please contact Lindsay Robbins at NYSERDA, 212-971-5342 ext. 3008 or lrr@nyserdera.org.

Press Release

FOR IMMEDIATE RELEASE: February 18, 2013

BATAVIA HOSTS FINAL PUBLIC MEETING FOR FINGER LAKES SUSTAINABILITY PLAN

Public Is Encouraged To Voice Opinions On Specific Initiatives Under Discussion

The second and final Public Meeting on the Cleaner, Greener Finger Lakes Regional Sustainability Plan is scheduled from 5:00P.M. - 7:00P.M. on Tues., Feb. 26 at the Cornell Cooperative Extension, 420 East Main St., Batavia. The public is invited to attend.

A Coalition, which includes representatives from the nine counties in the region, the City of Rochester, local municipalities, the Genesee Regional Transportation Council and the Genesee/Finger Lakes Regional Planning Council has been meeting since August and are in the final stages of developing a Regional Sustainability Plan that will be submitted to the New York State Energy Research and Development Authority (NYSERDA) for consideration. This study is part of Governor Cuomo's Cleaner Greener Communities Program. Ten regions across the state have been invited to submit plans and are competing for a portion of \$90 million in funding to implement specific projects identified in their plans. The Finger Lakes Regional Sustainability Planning Consortium must submit the most comprehensive plan possible to secure a portion of this funding for the nine County Genesee-Finger Lakes Region.

The Finger Lakes Regional Sustainability Plan will outline tangible methods to improve the long-term sustainability of the region's natural resources. Viable strategies to reduce greenhouse gas emissions, coupled with recommendations on specific energy improvements, renewable energy sources, water and waste management initiatives, transportation and land use, agricultural improvements, housing and economic development will be included. The plan also makes recommendations on ways local stakeholders can collaborate to achieve realistic goals, sets milestones for key projects, and identifies completion dates for all actions recommended in the plan.

"This public meeting will really be a great opportunity for the public to review and comment on draft strategies while also providing new ones, and talk one-on-one with the consultant team before the Sustainability Plan is fully drafted," explains David Zorn, Executive Director of the Genesee/Finger Lakes Regional Planning Council and spokesperson for the Consortium.

The upcoming Public Meeting on the Sustainability Plan will be held "Open House Style." This means people can come any time between 5:00P.M. and 7:00P.M. and stay as long as they like within that timeframe. There will be no formal presentation at this meeting. Instead participants can review a series of boards that will be on display throughout the meeting room. These boards explain the draft goals and the current strategies under consideration for submission to New York State. Finger Lakes Regional Sustainability Plan

Funded by NYSERDA - Cleaner, Greener Communities Program

Consortium Meeting Minutes

**Finger Lakes Regional Sustainability Plan
Cleaner Greener Communities
Consortium
Kickoff Meeting
August 30, 2012
Ebenezer Watts Conference Center
49 South Fitzhugh Street
Rochester, NY 14614**

Meeting Notes

In attendance:

Mary Pat Hancock, Chair, Genesee County Legislature
Esther Leadley, Legislator, Genesee County Legislature and Vice Chair, Genesee/Finger Lakes Regional Planning Council
Felipe A. Oltramari, Senior Planner, Genesee County Department of Planning
Brenda Donohue, Supervisor, Town of Conesus and Livingston County Board of Supervisors
Angela Ellis, Planning Director, Livingston County Planning Department
Tom Goodwin, Planning Manager, Monroe County Department of Planning and Development
Rochelle Bell, Senior Environmental Planner, Monroe County Department of Planning and Development
Jason R. Kennedy, Chief of Engineering & Facilities Management, Monroe County Department of Environmental Services
Anne E. Spaulding, Energy and Environmental Sustainability Manager, City of Rochester
Mark Gregor, Manager, Division of Environmental Quality, City of Rochester
Kristen Mark Hughes, Director, Ontario County Planning Department
David B. Callard, Chair, Orleans County Legislature
Wayne Hale, Director, Orleans County Planning and Development
Bill Bordeau, Director, Seneca County Planning and Community Development
James Hoffman, Chair, Wayne County Board of Supervisors and Supervisor, Town of Williamson
Ora Rothfuss, Interim Director, Wayne County Planning
Peg Churchill, Executive Director/CEO, Wayne County IDA and Wayne Industrial Sustainability Development Corporation
Arthur Buckley, County Planner, Wyoming County Planning
Shawna E. Bonshak, Planner, Yates County Planning Department
Nicole Landers, Director, Cornell Cooperative Extension of Yates County
Richard Perrin, Executive Director, Genesee Transportation Council
Tony Favro, Program Manager, Genesee Transportation Council
David Zorn, Executive Director, Genesee/Finger Lakes Regional Planning Council

Greg Albert, Senior Planner, Genesee/Finger Lakes Regional Planning Council
Kathryn Zilka, TRC
Lindsay Robbins, NYSERDA
Aileen Maguire Meyer, Manager, Planning Department, C&S Companies
Tara Boggio, Associate Vice President, T.Y. Lin International
Mark Lowery, NYSDEC, Office of Climate Change
Tim Hughes, Sustainability Leader, C&S Companies
Ellen Parker, Planner, Wendel Companies

Introductions

David Zorn called the meeting to order and all attendees introduced themselves.

Cleaner Greener Communities Overview (NYSERDA)

Lindsay Robins presented an overview of the Cleaner Greener Communities program and background on NYSERDA (presentation attached):

Lindsay discussed the background of NYSERDA, which was started in 1973 and served mainly a research and development focus until deregulation in 1996. Since 1996 NYSERDA has focused efforts on efficiency and renewable programs. The Cleaner Greener Communities program was discussed by Governor Cuomo at his State of the State speech in 2011. The program is structured in two phases. Phase I included \$10 million in funding for the completion of sustainability plans in each of the ten regions of the State. The regions are the same as the ten Regional Economic Development Council (REDC) regions. Phase II of the program includes \$90 million in competitive grants for implementation of projects identified in the sustainability plans. Phase I is currently underway with seven regions scheduled for completion in December, 2012 and the remaining three regions scheduled for completion in March, 2013.

The Cleaner Greener Communities program is funded from RGGI (Regional Greenhouse Gas Initiative) funds, which is the first mandatory cap and trade program in North America and includes nine states (CT, DE, MD, ME, NY, MA, NH, VT, RI).

The Cleaner Greener Communities program is part of the NYS Open for Business effort and is aligned with the Regional Economic Development Councils and the regional sustainability plans should be consistent with the completed Regional Economic Development Council strategic plans. The Cleaner Greener Communities aims to address climate change through identifying strategies to reduce the greenhouse gas emissions by 80% below 1990 levels by 2050.

The scope of the plan is to provide a baseline assessment of the Region including a greenhouse gas inventory; to identify long-term and short-term sustainability goals and develop an implementation strategy. Development of the sustainability plan will include stakeholder involvement and incorporate existing planning efforts.

Phase II of the program will launch in the spring of 2013. The \$90 million in implementation funding will likely be released over three years with \$30 million in 2013; \$30 million in 2014; and \$30 million in 2015. Projects selected for implementation funding will reduce greenhouse gas emissions; support the achievement of goals identified in the sustainability plan; are not currently eligible for funding under current NYSERDA programs; and are prioritized within the regional sustainability plan.

It is important to remember that the plan is not a bid for Phase II funds and that this is a unique opportunity. NYSERDA is looking for a truly comprehensive planning process resulting in a realistically implementable strategy. This is your plan and should be tailored to the Finger Lakes Region.

Rich Perrin asked about the future funding of the program and if RGGI money had already been set aside for the program or if it was anticipating funds. Mark Lowery from the NYSDEC Climate Change Office responded and stated that the RGGI program is still strong and still has support of 9 states even after NJ dropped out. New York is also large enough of a state that it could keep the program alive on its own if needed. While program funding has not been as strong as anticipated the environmental goals of the program are positive and funding is likely to continue.

Rich Perrin asked if inter-regional projects were encouraged, such as a New York State Thruway corridor fuel cell hub or similar multi-regional projects. Lindsay Robbins responded and stated that NYSERDA would accommodate those projects and encourage Regions to work with one another despite the challenges of the CFA and REDC process with regards to multi-regional project submittals.

Ora Rothfuss asked if it was expected that each County endorse or adopt the plan. Lindsay stated that they are not requiring official adoption as there is not enough time in the process, but hope to see endorsements from counties/municipalities and the plan to be completed with as much support as possible.

Kris Hughes stated that it is important not to forget that support is mixed for the project amongst legislatures in the Region and that we should not lose site of leadership who need to be convinced of the process. He indicated that many people are only involved in the project for the potential \$90 million in funding in the implementation stage. It is also important to note the actual costs and opportunity costs of each Consortium meeting in the Region and that the process needs to be worth while based on the investment. Lindsay responded that it is an important point and that we should consider the plans to be economic drivers rather than just designed to receive implementation funding. This is the Finger Lakes Region's plan and the connection to economic development can be emphasized for leadership.

A Snapshot of the Finger Lakes

Greg Albert provided a Regional Snapshot overview of the Finger Lakes Region (presentation attached):

There are 9 counties in the Finger Lakes Region with 190 municipalities. Population as of 2010 was 1,217,156, which was approximately a 1.5% growth since 2000 and an 8% growth since 1980. Between 1980-2010 New York State grew by 10.4% and the US grew by 36.3%. The under 18 age cohort within the Region is smaller than both New York State and the US, while the percentage of people over the age of 65 is higher within the Region, approximately 14.3% compared to 13.5% in NYS and 13.0% in the US. The Region has a high quality of life as well.

Housing is affordable with the highest median home values in the Region found in Ontario County (\$133,700) compared to the US median home value of \$191,900 and the New York State median home value of \$310,100. There are 18 colleges and universities within the Region, 15 major hospitals, and over 170 municipal, county, state and federal parks with over 63,000 acres of parkland. There are also a variety of cultural and tourist attractions in the Region including Blue Cross Arena, Frontier Field, Darien Lake, Seneca Park Zoo, Erie Canal, Finger Lakes, Montezuma National Wildlife Refuge, Letchworth State Park, the Finger Lakes Wineries, and others.

The identified Regional Industry Clusters, which the Region has expertise and experience in, include Optics and Imaging (Kodak, Bausch and Lomb), Higher Education (RIT, UR), Energy Innovation, Advanced Manufacturing, Agriculture and Food Processing, Biotech and Life Sciences, Tourism and the Arts, and Business Services/Software/Telecommunications. Agriculture is a huge component of the Regional economy with over 1 billion in agricultural cash receipts from the Region in 2009. This represented almost 30% of the entire state agricultural cash receipts.

Greg discussed the resource use within the Region and stated that the gasoline use per vehicle per year was similar to the national average. Electrical use, non-recycled waste generated, and domestic water consumption was lower within the Finger Lakes Region compared to both New York State and the nation.

Greg identified issues and opportunities that have been brought up at the Comprehensive Economic Development Strategy stakeholder sessions, along with the development of the Finger Lakes Economic Development Council strategic plan, and during the development of other regional plans. The identified opportunities included: quality of life, smart growth, brownfield redevelopment, energy, entrepreneurship and innovation, agricultural economic development, colleges and universities, tourism, and workforce development. Identified issues included funding, short-term thinking, declining school district enrollment, mismatch between education/training and available jobs, infrastructure, suburban/rural public transportation, business climate, access to capital, and urban/rural poverty.

Felipe Oltramari provided a brief update on Genesee County sustainability initiatives:

Genesee County has completed a comprehensive plan that is tied to the budget with 10 focus groups. A Smart Growth Plan has also been completed and identifies areas where infrastructure is in place with the goals and aligning investment into these areas. The County has an Agriculture & Farmland Protection Plan. Agriculture is the number one industry within the County and is a focus. From the sustainability planning process Genesee County hopes to have a back and forth discussion and to identify methods in which they can improve their own sustainability efforts.

Angela Ellis provided an update on the Livingston County sustainability initiatives.

Livingston County is currently working with GTC on a county-wide multi-modal connectivity plan. The County and municipalities are involved in a limited number of energy projects including NYSERDA programs. A geothermal system project at the Opera House in Avon is in complete. There are two Finger Lakes within the County and aggressive watershed management plans are in place, one of which won an APA award. The County has an Agriculture & Farmland Protection Plan and an annual work plan for implementing it along with an Agricultural District program. Methane alternative energy is being investigated. A farm to school program is also ongoing. The County participates in a purchase of development rights program with 75 acres under permanent conservation easement and up to 8,500 acres possible soon. SUNY Geneseo has a sustainability initiative/partnership with the County. Worm Power-warm farm utilizes over 500,000 worms for composting. Avon has set the goal to be fully walkable by 2020. Goals of the sustainability plan are to create a regional framework, identification of projects, active leveraging and how county and municipalities might leverage each other, identification of opportunities for county, community and regional sustainability, and to improve quality of life goals and livability.

Jason Kennedy, Tom Goodwin and Rochelle Bell provided an overview of the Monroe County sustainability initiatives:

Water quality initiatives include the Pure Waters sewage program, two treatment plants, and stormwater quality initiatives. Regular water quality meetings are held. Stormwater quality initiatives are underway as well including the Stormwater Coalition of Monroe County. Solid waste management programs are in place including the Mill-Seat Landfill (methane to electric) and a comprehensive recycling program with a goal of recycling/reuse/waste diversion. Eco park has been launched to improve recycling efforts for unique materials and items. The fleet of Monroe County vehicles emphasizes alternative fuels including ethanol. The County partners with DOT on improving lighting costs in the County and implementing ITS throughout county roads. A green building policy is in place. Co-generation facilities, hospitals, airport, energy procurement, photovoltaic, wind farms, etc. are all being used for green buildings in the County. Agriculture is important to Monroe County and a Agriculture & Farmland Protection Plan is in place. Economic development is a key County focus with creation and retaining of jobs a critical goal. Rochelle Bell discussed the County health collaborative and a recent article which identified it as a potential national model.

Anne Spaulding discussed the City of Rochester sustainability initiatives:

City has a GHG inventory. The City is developing a climate action plan. Bike lanes are a focus in the City with the completion of a bicycle master plan. The City audited all facilities to help reduce building energy consumption. The City has retrofitted lighting in parking garages to be more efficient. There are 200 vehicles in the City fleet, and the City partners with Monroe County for alternative fuel for these vehicles. A goal of 24 charging stations within the City has been outlined. A solar panel is in place on the Library. DEC initiatives are also underway with green infrastructure (green roof and permeable pavement) being implemented. Brownfield redevelopment is also a key urban issue with Brownfield Opportunity Area projects to address many vacant lots. Eastman Business Park is also very important to the City and the impact of the decline of Kodak should not be lost on the Region.

Kris Hughes provided an overview of the Ontario County sustainability initiatives:

NYSERDA funding is being invested into the County. An energy analysis of County government has been completed. ARRA money (\$1 Million) was received to improve facilities to be energy efficient and helped to significantly reduce energy consumption. An energy efficient transit center is targeted. Water treatment/septic is also a focus with pumps having been upgraded to save energy. Trail projects are encouraged within the County and multimodal connectivity projects are being advanced. Agriculture is a focus in the County with a diverse base of products. Grapes/wineries are the largest agricultural sector in the County. The County is exploring private industry/recycling efforts. A viticulture center is being completed with the partnership of Finger Lakes Community College in Geneva and FLCC has been undergoing college-wide improvements that follow LEED design principals.. Watershed planning and management is another key area. Fleet upgrades to natural gas and other alternative fuels are also being completed. The public transit system is looking for ways to be more efficient with the CATS system looking for flexible scheduling as a way to achieve this. Potential needs to be addressed by the Plan include water budgets including groundwater and surface water use, fleet upgrades including considering opportunities, agricultural planning, and public transit including analysis and how to make it more efficient and responsive.

Wayne Hale provided an update on the Orleans County sustainability initiatives:

An energy audit has been completed looking at improvements to facilities. Orleans and Niagara Counties have partnered to form NORA (Niagara Orleans Regional Alliance) to address lake shore protection, economic development, and tourism. Sport fishing is a \$12 million industry annually for the County. A project is in place to grow fish under supervision before introducing them into the wild to improve their ability to survive. The County holds an event to collect household waste including pharmaceuticals every two years. The County is home to the Western New York Energy ethanol plant in Shelby. A brownfield inventory and prioritization is underway. There are three consolidated agricultural districts in the County. The County does not have an Agriculture & Farmland Protection Plan. Another focus is on the 2nd floor spaces within the downtowns for reuse. Needs of the plan include brownfields, efficient freight/goods movement, public transit, and inclusion of rural areas/issues.

Bill Bordeau provided an overview of Seneca County sustainability initiatives:

Seneca County is a rural County. The County is one of the few to see an increase in farm land recently. Wineries in the County are expanding. Agriculture is a large employer. The County faces issues with the Lake with regards to run off of pesticides and other agricultural chemicals. Buy in of the regional sustainability plan is a concern locally. Farmland prices are increasing in the County as land limits are being reached. A portion of the Army Depot is focused on alternative energy with Seneca Bio (biodiesel). Methane usage at the landfill is in place. Potable water is a concern in the County. Water is a county-wide goal. The impact of hydrofracking on water is also a concern.

Jim Hoffman briefly discussed some of the Town of Williamson initiatives within Wayne County:

The Town is the second largest apple producer. There are two solar panel projects. There is a citizen action committee. Wind turbines are within the Town. A new alternative energy project is beginning with the hopes of addressing all of the Town's energy needs via renewable energy. Also a power batter project is underway to reduce idling and the waste of gasoline.

Peg Churchill expanded on Jim's comments to discuss Wayne County as a whole:

About nine years ago Harbec Plastics completed development of their building to LEED design standards. The Wayne Industrial Sustainability Park is in the Town of Ontario with land owned by the IDA. The County partners with NYSERDA and RIT on energy initiatives. A second Wayne Industrial Sustainability Park is planned in Newark in conjunction with the Finger Lakes Community College campus there. An 800 kw turbine is in place east of Harbec Plastics. A freight village concept is proposed for the Village of Lyons along the Erie Canal to establish a multi-modal shipping facility. A tax summit has been completed in the County. Water studies have been completed in the SE and NE quadrants of the County. Water quality and water levels are a concern. Methane energy is being captured from the manure pond from area farms. The Village of Lyons completed a 2009 study and established a green roof and improved efficiency of police cars. A strategic plan for economic development has been completed by the County. A lighting project is underway as well to improve the lighting efficiency at municipal buildings with the help of NYSERDA. Considerations of the Planning process is to have the recommendations doable and realistic.

Art Buckley provided an update of Wyoming County sustainability initiatives:

Agriculture, especially livestock is big the County – some of the leading farms in the world. County is producing wind energy. There is strong Agriculture & Farmland Protection planning. Farms are expanding. The County has large CAFO operations and associated nutrient management programs. Biodigestion is an opportunity. County has the Center for Dairy Excellence. Town farmland protection plans are in place with asset analysis tied to comprehensive plans in the Towns of Arcade and Perry. The Perry Main Street Association is redeveloping a section of downtown Perry to LEED standards at market rate. Water and sewer improvements are underway in the County. The County is considering a county water authority. Silver Lake is the source of drinking water with dredging needing to occur. The Lake is unique because the inlet and outlet are at the

same end of the lake. The Walker Road Bridge is scheduled to be updated. The former A&A Metal Fabricating site is a brownfield and in the BOA program; a total of six transformers are scheduled to be removed in September from the site. Power allocation is a challenge within the County and a reason why Arcade has been successful with industry as Arcade is a municipal electrical supplier of low cost power. Aging in place is an issue. Start up dollars for entrepreneurship is needed.

Shawna Bonshak provided an update of the Yates County sustainability initiatives:

Agriculture and tourism are key areas of focus for the County. There is a significant Mennonite population in the County. An Agriculture & Farmland Protection Plan is in place with 1100 acres currently protected. Yates County is the future home to the Finger Lakes Museum with many of the buildings being built to LEED standards. The Windmill market uses renewable energy throughout the facility. The Town of Jerusalem is the host of home and farm energy tour of 4 homes/farms with renewable energy sources. Organic farming is large industry in the County. The County is hoping to gain ideas on how to grow initiatives and regional efforts from the sustainability planning process.

Rich Perrin provided an overview of the Genesee Transportation Council sustainability projects:

Emphasis is on multiple goals: to improve the efficiency of operation and maintenance; preservation; intelligent transportation systems; reduce incidents and delays; improve public transit; and work to establish more alternative fueling stations. GTC allocates funds for studies and implementation. The Region has an aging population and active transportation is a focus. The CAP program looks at circulation, accessibility, and parking. GTC is hoping to gain a list of indicators and target goals out of development of the sustainability plan.

Dave Zorn discussed the sustainability projects from the Genesee/Finger Lakes Regional Planning Council:

G/FLRPC itself along with its two advisory committees – the Planning Coordination Committee (Planning Directors of the 9 counties, City of Rochester, and the MPO) and the Economic Development Advisory Committee – the Economic Development or IDA Directors of the 9 counties, City of Rochester and the regional office of Empire State Development - provide forums for and coordination of regional efforts. The Planning Coordination Committee has been involved with the regional sustainability planning project. Regional Roundtables are a series of meetings put together in an ongoing attempt on the part of G/FLRPC staff to bring experts together to discuss issues of regional importance. The Regional Local Government Workshop series supports and advocates for the importance of local government training and education. G/FLRPC in association with our nine counties, has presented the Regional Local Government Workshop series two times per year beginning in 1996. Through the Economic Development program area G/FLRPC serves as the District Organization for the federal Economic Development District and develops and implements the Comprehensive Economic Development Strategy. Examples of specific projects that are being worked on or have recently been completed include a impervious surface scan; historic preservation and main street revitalization planning including the development of *Historic Preservation Guidebook for the Western Erie Canal Alliance's Main Street Program*

Communities, Creating Residential, Commercial and Municipal Upper Floors: A Guidebook for Regional Revitalization and a *Genesee-Finger Lakes Regional Historic Waterfront Planning* program guidebook; and water resources planning projects include green infrastructure planning, stormwater and floodplain management planning, and watershed management planning. We are hoping the Planning effort helps us chart the way forward for both the Region and the Council; can help bring more people around the table with regard to regional sustainability issues, opportunities, planning and implementation including energy, economic development, land use and livable communities, water management, agriculture, and governance; consideration of GHG reduction; develop a regional plan and an implementation strategy; and integration of regional planning projects, programs, issues and opportunities and an integration of the regional sustainability plan into the planning and implementation work of the region and the Regional Planning Council

Project Execution Plan and Stakeholder Engagement Strategy Overview

Aileen Maguire Meyer, , C&S Companies and Tara Boggio, T.Y. Lin International presented an overview of the project execution plan (attached):

A breakdown of the project consultant structure was discussed with the various individuals who will lead each working group. The project will be completed in 7 months to meet NYSERDA's goal. A dual project management structure is in place with C&S as lead and Aileen Maguire Meyer and Tara Boggio each leading portions of the plan. Wendel will be working on governance, land use, and livability components. EDR will be working on agriculture and forestry. Ecology and Environment is leading the Greenhouse Gas Emissions portion of the project. A Story of Place component will be completed by Alliance for Regeneration to identify the unique nature of the Finger Lakes Region. The project schedule includes 4-5 Consortium meetings; Planning Team Meetings with Sharepoint file access in place; 3 rounds of working group meetings; and 2 rounds of 3 public meetings (6 total public meetings). A website is proposed for www.sustainable-fingerlakes.org and will launch soon. The website will contain materials/presentation/notes from all the meetings throughout the development of the plan.

Working groups are proposed for the following groups: energy; economic development; transportation, land use and livable communities; materials/waste management; water management; agriculture and forestry. Two additional topic areas (governance; and climate change adaptation) will overlay into each of the six groups. Art Buckley asked if it would be a good idea to also split out land use into each individual group as an overlay area. Rich Perrin stated that he thought land use should be a part of each group, but that it should remain within the transportation group as well. The group decided to acknowledge land use as a part of the governance component that is overlaying into each group.

The Climate Change report that has been completed by New York State will be distributed out to the Consortium for review.

The consultants provided an overview into each of the working groups and the proposed member participants. The consortium brainstormed and added additional potential

participants into each of the 6 working groups (attached). Lindsay Robbins stated that the focus of the working groups should be on areas and topics that can be addressed within the Region and not to worry about areas the Region has little control over such as state or federal regulations.

The next steps of the plan are to complete and finalize the work plan, initiate the Story of Place component, begin the baseline assessment, and set up the project web site. The consultants asked if branding of the project should be done and if the Consortium is ok with the consultants completing the task. The group determined that the consultant will complete the branding process with an emphasis on the Finger Lakes Region as a whole.

Wrap Up

Mark Lowery provided an update on the DEC Office of Climate Change programs and discussed the Climate Smart Communities program. The Climate Smart Communities program is a voluntary program that currently has 107 communities including the City of Rochester and the Town of Irondequoit. It provides on the ground technical support. Everyone is also welcome to join the list serve on the DEC website for additional program updates.

Mary Pat Hancock asked about the final products of the working groups. Lindsay Robbins stated that the group can frame the conversations, do the baseline assessments, set target goals within each working area, develop an implementation strategy, and identify implementation projects. Lindsay also discussed the question of governance structure/voting and stated that the group can decide on the metrics and the best strategy to identify projects within the plan.

Dave Collard asked who will decide on the projects and if they will be determined by voting. Rich thoughts that the Sustainability Planning Team and stakeholders could work to vet the projects.

Mary Pat asked if notes will be available from the meeting. David stated that meeting notes and materials will be distributed. It was also mentioned that any municipal representatives are welcome to join the Consortium and can be approached through the county planning departments, and it is important for continuity that the same representatives attend each meeting.

**Finger Lakes Regional Sustainability Plan
Cleaner Greener Communities
Consortium
Meeting
October 9, 2012
Ebenezer Watts Conference Center
49 South Fitzhugh Street
Rochester, NY 14614**

Meeting Notes

In attendance:

Mary Pat Hancock, Chair, Genesee County Legislature
Felipe A. Oltramari, Senior Planner, Genesee County Department of Planning
Angela Ellis, Planning Director, Livingston County Planning Department
Tom Goodwin, Planning Manager, Monroe County Department of Planning and Development
Rochelle Bell, Senior Environmental Planner, Monroe County Department of Planning and Development
Justin Roj, Deputy Director, Monroe County Department of Environmental Services
Tony LaFountain, Supervisor, Town of Penfield
Mike Guyon, Town Engineer, Town of Brighton
Larry Heininger, Director, Town of Irondequoit Department of Development Services
Thomas Beck, Town of Perinton
Anne E. Spaulding, Energy and Environmental Sustainability Manager, City of Rochester
Mark Gregor, Manager, Division of Environmental Quality, City of Rochester
Wayne Hale, Director, Orleans County Planning and Development
Mitchell Rowe, County Manager, Seneca County
Bill Bordeau, Director, Seneca County Planning and Community Development
Ora Rothfuss, Interim Director, Wayne County Planning
Robert McNary, Director, Wayne County Planning & Economic Development
Richard Perrin, Executive Director, Genesee Transportation Council
Tony Favro, Program Manager, Genesee Transportation Council
David Zorn, Executive Director, Genesee/Finger Lakes Regional Planning Council
Greg Albert, Senior Planner, Genesee/Finger Lakes Regional Planning Council

Paul D'Amato, Director, New York State Department of Environmental Conservation Region 8
 Ray Yacuzzo, New York State Department of Environmental Conservation Region 8
 Dave Seeley, Governor's Office
 Aileen Maguire Meyer, Manager, Planning Department, C&S Companies
 Tara Boggio, Associate Vice President, T.Y. Lin International

Introductions

David Zorn called the meeting to order and all attendees introduced themselves. Aileen Maguire Meyer, C&S Companies and Tara Boggio, T.Y. Lin International, proceeded to go over the agenda and associated presentation.

Work Plan

The Work Plan items include discussion of the Project Execution Plan, Participants/Roles, Communications/Meeting Schedule, Deliverable Review Process/Schedule, Decision Making Structure, Stakeholder and Public Engagement, Branding/Logo, Website, and Stakeholder/Public Engagement Schedule.

Aileen discussed the various participants and their roles. The consortium will be responsible for review and approval of key documents. The executive committee will provide guidance/direction and review documents. The stakeholder groups will contribute their knowledge of the Region and help identify indicators, criteria, and strategies.

Three more consortium meetings will be held during the following times: mid-November, mid-January, and mid-February. Executive committee meetings dates have already been identified.

Draft and final deliverable dates have been identified for the following tasks:

| Task | Deliverable | Submission Schedule |
|----------------------------------|---|-----------------------------|
| Task 1 – Work Plan | <ul style="list-style-type: none"> • <i>Project Execution Plan</i> | 11/9/12 |
| Task 2 – Baseline Assessment | <ul style="list-style-type: none"> • Tier II GHG Inventory • Sustainability Indicator Memo/Inventory | 11/23/12 12/7/12 |
| Task 3 – Target Establishment | <ul style="list-style-type: none"> • Draft Sustainability Targets Outline | 12/20/12 |
| Task 4 – Implementation Strategy | <ul style="list-style-type: none"> • Draft Sustainability Targets Implementation Strategy | 1/31/12 |
| Task 5 – Public Consultation | <ul style="list-style-type: none"> • Final Sustainability Targets Outline • Final Sustainability Targets Implementation Strategy • Public Feedback Summary | 1/18/13 3/6/13 3/7/13 |
| Task 6 – Sustainability Plan | <ul style="list-style-type: none"> • <i>Draft Sustainability Plan Report</i> • Final Sustainability Plan Report | 3/22/13 3/29/13 |

Tara indicated that the first Workgroup meeting will be after the Consortium meeting. Four of the remaining five Workgroup meetings will be October 10 and the last Workgroup meeting will be October 17.

Aileen indicated that the Project Execution Plan and the Baseline Assessment would be discussed today and that two deliverables would go to the Consortium first for review and approval – the Project Execution Plan on October 30 and the draft Sustainability Plan. All reviews will be five days.

Aileen discussed the Decision Making Structure indicating that there would be development of an evaluation criteria working with the Stakeholder Groups. Examples of types of potential evaluation criteria would be low, medium and high and may establish weighted criteria. Potential criteria could include does the project benefit multiple counties, does the project benefit multiple focus areas, is the project feasible, is the cost reasonable, and does the project reduce greenhouse gas emissions. The consultant team will help develop the strategy and criterion and establish an initial rating. The consortium will review the projects and comment on the rankings and help to prioritize projects.

A discussion of the Consortium decision making structure included the use of consensus and then a vote if consensus of voting members of the Consortium (nine counties and City of Rochester) could not be reached. It was suggested that voting be weighted by population of the voting members and that email voting be allowed if necessary. It was suggested that a draft of the Decision Making Structure be sent out by the end of the week. There would also be an additional chance for review before the project execution plan was submitted to NYSERDA. If there is disagreement from the other counties then it could be brought back to the consortium for additional discussion to agree upon a voting structure.

Tara continued the presentation and discussed the logo that has been selected for the project. The website has been submitted to NYSERDA for approval and will go live as soon as NYSERDA approves. The website address will be www.sustainable-fingerlakes.org. The website will contain information on meetings, public meetings, working groups, materials, team members, consortium members, and planning team members. Mary Pat Hancock stated that it is helpful for presentations to be put up on the website. Meeting minutes can be distributed via email. Tara stated that presentations will be put on the website in PDF format. Information for the general public will be posted on the front page to be easily accessible. A notice will be sent out to everyone when the site goes live, after NYSERDA approval.

Baseline Assessment

Baseline Assessment items include Story of Place interviews, Indicators, Data Inventory, and Tier II GHG Inventory. Aileen discussed the Story of Place and indicated that interviews had started and will continue for the next few weeks. Indicators will include the five NYSERDA specific indicators including energy, transportation (2), land use, and economic development. Other indicators can be identified and used if approved by NYSERDA. The Tier II GHG Inventory is being done with NYSERDA guidance.

Public Consultation

Tara discussed the upcoming Stakeholder meetings including Transportation, Land Use and Livable Communities on October 9, Materials/Waste Management, Agriculture and Forestry,

Water/Wastewater Management, and Energy on October 10, and Economic Development on October 17 and are still flexible if anyone has any additional names to be added to the groups. Approximately 300 invitations were sent out for the stakeholder groups. Tara stated that copies were available of the final list of invitations that were sent out for each group as well as the current list of RSVPs. The first round of Stakeholder meetings will include an introduction to the project, roles/responsibilities of stakeholders, and indicators and targets.

The first public meeting will take place between December 11th and December 13th, 2012. The second round of Stakeholder meetings will take place between November 13 and 15. The third round of Stakeholder meetings will take place between January 15th and January 17th, 2013. The second public meeting will take place between February 5th and February 7th, 2013.

Wrap Up and Next Steps

David indicated that a doodle poll would go out for the next three Consortium meetings for November 14, 2012, January 16, 2013 and February 13, 2013. The doodle poll will help varify the times for these meetings and if there are conflicts with these dates they can be re-visited. Aileen indicated that the draft Project Execution Plan would go to the Consortium on October 30 and be due back November 5. Revisions will be made and then submitted to NYSERDA.

Tim Hughes, Sustainability Leader, C&S Companies
Nate Quinn, Communications – Public Outreach, Quinntossence
Joel Glanzberg

Introductions

David Zorn called the meeting to order and everyone introduced themselves.

Work Plan/Project Execution Plan

David indicated that NYSERDA had approved the Project Execution Plan and thanked everyone for their review and approval. He circulated the Decision Making Structure from the Project Execution Plan.

Public Consultation

Tara Bogio indicated that the first round of Stakeholder groups were done in October and that right now is the middle of the second round, with the third round scheduled for January. There has been good involvement with the Stakeholder Groups thus far. She indicated that the plan for the first round of public meetings was the middle of December but now, given the schedule and the holidays it looks like they will be the second week of January with a draft of the indicators. There will be a plan for notification for the public meetings. Three will be done in the region – east, west and central. The last round of Stakeholder groups meetings will likely take place two weeks later. The website is up and has received a few hundred hits with some e-mail feedback coming in as well. Aileen Maguire Meyer encouraged each County to establish a link from their county home page to the Regional Sustainability project website. Tara said that they will put up as many documents as they can on the website as soon as possible to allow for additional review and feedback.

Baseline Assessment

The Powerpoint presentation is attached in Adobe Acrobat format and has been posted to <http://sustainable-fingerlakes.org/wp-content/uploads/2012/11/Finger-Lakes-Regional-Sustainability-Plan-consortium-11-15.pptx>. Tara provided a working definition of sustainability, which covers the economy, society, and the environment, and reviewed the regional themes and goals.

Carol provided an introduction to the Story of Place, which was compiled from conversations with those who know the Region. Knowing who we are will help the Region have less volatility. There are three core strengths to the Story of Place:

1. Region knows who it is
2. Focus uniqueness into narrative
3. Make sure story is integrated into everything community does

Joel presented the draft Story of Place, covering the history of the Region and the unique features and stories that make us who we are. After the presentation Ben led a discussion and asked for feedback and provided additional context. General discussion took place with individuals stating that the presentation made them feel proud and fortunate and enlightened. There was also a comment that the cell towers have also followed the transportation routes with the transportation corridor also serving as an information node and one aspect missing from the presentation was the connection to colleges and universities such as University of Rochester and RIT.

The room was split into breakout groups to continue the discussion. Comments from the groups included discussion of the need for regional collaboration; the regional identity is organized around innovations to the world; we need to brand this identity as we are not an extension of NYC. Felipe Oltramari asked how we can continue the trend of innovation while maintaining a focus on sustainability. Peg Churchill stated that our linear thinking needs to change and we need to sharpen our opinion of ourselves, part of which can be the wide distribution of the Story of Place. Two principles that can be focused on include: 1) organize as a think tank and 2) affective place to work.

Ben stated that we are good at starting new businesses (e.g. Jello, Champion, Kodak) and have been doing it for centuries. Can we brand ourselves as innovation cluster? innovation pioneers? innovation synergy? innovation mash-up? innovation accelerator? Comments included the Region has devalued middle skills jobs and are we thinkers without being doers?

The guiding principles developed by some of the work groups were posted for review and feedback. It was asked what gaps are present. One thought was that venture capital is not what we need. We need working capital to help businesses pay bills in advance.

The following application of the Story of Place and Guiding Principles were developed:

Applying Story of Place

- Collaboration across Region
- Taking things to the next level
- Organized around identity
- Innovations and changes taking place here
- Keeping the story alive
- Allow continued innovation
- Move away from linear thinking
- Process exporters
- Innovation

- Synergy
- Cluster
- Collectors
- Pioneers
- Celebration
- Accelerator
- Fountain
- Well spring
- Home of innovation

Guiding Principles

- Thinking systemically
- Makes us model (not linear)
- Brings back environment that supports innovation
- Creates/supports think tank mentality and function
- A change in self image and reflection

Wrap Up and Next Steps

Aileen suggested that the next round of Stakeholder meetings be done all in one day with a plenary session followed by break outs of the individual Stakeholder groups. The public meetings will likely be held January 8th, 9th, and 10th. February 13th is still the tentative target date for the final stakeholder meeting. It was agreed that interim documents should be posted to the website. The next meeting is January 16, 2013 at the M&T Conference Room.

Greg Albert, Senior Planner, Genesee/Finger Lakes Regional Planning Council
Aileen Maguire Meyer, Manager, Planning Department, C&S Companies
Tara Boggio, Associate Vice President, T.Y. Lin International
Ben Haggard, Regenesiis
Carol Sanford, DEGI
Joel Glanzberg, Regenesiis

Introductions

David Zorn called the meeting to order. Ben Haggard asked that everyone spend a minute and talk to the person next them and discuss what they have carried with them from the last meeting and how things have changed with the Story of Place in our mind now. Brenda Donohue suggested that topography is an overall tapestry. Angela Ellis stated that it was like an “aha” moment and she has since tried to take it back to the County and local communities in terms of service provisions, etc. and it is a great way to bring everything together. David Callard suggested the possible development of a historic heritage corridor that could include Routes 104, 98 and 31 in Orleans County and the development of an Orleans County Museum. He also is intrigued by the work done on the Village of Mt. Morris and would like to replicate it in Orleans County.

The question was brought up by the consortium of “how do you localize vision?” Ben and Joel Glanzberg discussed the establishment of common linkages and building upon those commonalities. Felipe stated that the presentation worked because we heard about what we did well. Typically our view of ourselves is skewed because of where we are viewing things from; we see and focus on the negatives. It has helped to reinforce the trend of problem solving that we have seen over history in the Region. Felipe Oltramari suggested that an outside look is valuable and would like to see the Story of Place videoed for use in future presentations. Mary Pat Hancock stated that the Story of Place can be embraced and presented to municipalities and other stakeholders in the Region that have not yet seen it. Joel stated that it is valuable to have outsiders put the presentation together, but local nuances and details can continue to be added as the presentation evolves.

Workplan

This is a living document and is evolving with project. Schedule has been updated to incorporate consolidation of interim documents, and additional meetings including Regional Leaders Forum on February 14, additional Stakeholder meeting to review strategies, and an additional Consortium meeting.

Baseline Assessment

The Baseline Assessment has been submitted to NYSERDA.

Indicators/Target Establishment/Implementation Strategies

Joel did a brief summary of the Story of Place information/presentation and synthesized it with democratizing, eddying, and innovating. “Straw dog” strategies were then offered for economic development, energy, water, land use/livable cities/transportation, agriculture and forestry, waste management, and climate change as seed ideas. Attendees then broke out to discuss each of the strategies and help enrich it, focus it, refine it, and replace it if needed. The four questions to consider were:

- Is it reflective of the Story of Place?
- Does it increase the value of the five capitals?
- Can we benefit beyond the subject area?
- Does it create benefit throughout the Region?

Target establishment and strategies will be the focus of next round Stakeholder Meetings with a draft of Targets in February.

Ben then went through the six subject areas and the proposed strategies and indicated that they tried to take all of the past discussions and extract key ideas starting with what is the strategy that’s starting to bubble up. He indicated that some will be hard to grapple with. Some of them will be disagreed with but they can serve as a seed to a conversation. He suggested that they can be improved on during breakout groups. Joel indicated that even though they’re under a specific category, they’re probably addressing another category as well. Ben suggested that it is an attempt to have the Consortium and the stakeholders make every strategy systemic and holistic. Aileen suggested using the Story of Place when working through the strategies. She also suggested that the when the Consortium goes into breakout groups they may want to modify or add to the strategies.

The first one is in economic development. The proposed strategy is as follows:

- In General: Increase investment into “Innovation Acceleration,” decrease disinvestment (such as “brain drain,” poverty, and abandoned infrastructure.)
- Strategy: Innovation Investment Consortium that convenes multiple stakeholders to find and address regional challenges that have potential for global enterprise opportunities, and then support business ventures to carry them out.

In general, the groups have been looking at how to increase investment in innovation acceleration while decreasing disinvestment, which is brain drain, poverty, and abandoned infrastructure. The strategy is an innovation investment consortium that convenes multiple stakeholders to find and address regional challenges that have potential for global enterprise opportunities, and then supports new ventures to carry them out. One of the key issues being discussed is venture capital and the commitment of customers.

The proposed strategy for energy is as follows:

- In General: Increase production from renewable sources, decrease overall consumption.
- Strategy: Micro-grid technologies

Ben suggested for energy, the idea is to increase production from renewal sources, while decreasing overall consumption. The strategy is to have micro-grid technologies. This region is very vulnerable to getting cut off from the grid in extreme weather. How do you create redundancy in the system to keep it up and running? One idea is putting solar panels on buildings.

The proposed strategy for water is as follows:

- In General: Increase water quality, decrease the destructive potential of run-off especially in extreme events
- Strategy: Reduce built infrastructure costs (construction, maintenance) through rewarding ecosystem services (tax valuation or credits, utilities, etc.)

Ben suggested for water, the idea is increasing water quality, while decreasing the destructive potential of run-off especially in extreme events. Water is one of the region's strengths and there seems to be agreement there. The suggested strategy is reducing built infrastructure and its associated cost by rewarding ecosystem services. These services reduce run off and pollution of the water. For example, they get rewarded by reducing taxes on things that you do want, like preserving wet lands. Or you can do this through utilities.

The proposed strategy for land use, livable communities and transportation is a follows:

- In General: Increase development or re-development around existing infrastructure, decrease dependence on automobiles and fossil fuels for transportation.
- Strategy: Create nodal development (e.g. along Erie Canal corridor)

For land use, livable cities and transportation, this group is pointing to increasing development around existing infrastructure, while decreasing dependence on automobiles and fossil fuels for transportation. The strategy is to create nodal development. An example is the Erie Canal corridor.

The proposed strategy for agriculture and forestry is as follows:

- In General: Increase the viability and ecological contribution of Ag and Forestry, decrease waste and dependence on outside inputs.
- Strategy: Plug and Play biological energy production for farms (or forests, or municipalities.)

For agriculture and forestry, a strong need is to increase the viability and ecological contribution of agriculture and forestry, while decreasing waste and dependence on outside inputs. The strategy idea is a plug and play biological energy production for farms taking waste and creating a system that's small enough and portable enough so that a farmer could go down to the feed store, buy one, plug it in and immediately create energy for storage or for the grid.

The proposed strategy for waste management is as follows:

- In General: Increase the recovery and re-use of all materials that are currently going into the waste stream, decrease the generation of waste in the first place.
- Strategy: Regional method for brokering materials: “Garbage Craigslist”

Ben suggested that waste is connected to water quality and seems to be a real issue in this region. There may be a missed opportunity to turn it into real economic development by linking it to energy production. The waste management group is working to increase the recovery and reuse of all materials that are currently going into the waste stream, while decreasing the generation of waste in the first place. The strategy is to create a self-organizing garbage “craigslist” to let someone know you have a waste product that someone else wants. Felipe indicated that there is something like that started that can be improved. It’s the materials exchange. It’s inter-county. Also suggested: the region has RIT and other places that are working on packaging; food waste and waste from farms could be part of this strategy; and there is currently a regional winery that uses waste and turns it into high quality grape seed oil.

The proposed strategy for climate change is as follows:

- In General: Increase resiliency, redundancy, and adaptability, decrease infrastructure vulnerabilities.
- Strategy: Self-Sufficient Community Disaster Refuge Centers

Ben suggested for climate change there seems to be a need to increase resiliency, redundancy and adaptability, while decreasing infrastructure vulnerabilities. The strategy is a self-sufficient community disaster refuge center. Have refuges that have food and energy that can weather power outages for several days. This connects to several of the other strategies that have been talked about.

The Consortium then went into breakout groups based on interest to work on the proposed strategy, upgrade it, deepen it, and/or refine it. Ben indicated four sets of criteria that can be used when considering the strategies. The first is can we get them to be reflective of who we are uniquely. How do we enrich the strategy to reflect who we are in terms of the Story of Place? The second is that we increase the value of 5 natures of capital (human, social, ecological, built and financial capital). The third is can we have a beneficial influence in more than the subject area we’re working on? Finally, we want to be sure that the strategies we’re pursuing benefit the entire region.

Each group discussed and tweaked the strategy in some cases. The groups then reported out. No consortium members choose to focus on waste management or energy.

The land use/livable cities/transportation group came up with the following strategies: regional inventory-priority areas for reinvestment, aging in place-develop strategies, incentivize best use-properties for reuse, form based zoning-scalable model and incentives, create a regional toolbox, integrating transportation funding with land use funding (ROI), and identify jump start examples. The agriculture and forestry group suggested: a need for interim measures, which would become the strategy, and then implementing those measures; and the use of technology that could lead to

this as a goal. It was suggested that there is an impact to water and other areas like economic development and needs to be tied in as well and there should be an emphasis on eating local.

The water group suggested: it is not just about surface water but ground water quality as well; consider uses such as drinking, habitat and recreational; run off is a consideration; watersheds tend to start in the rural areas and the cities may not be the places that have the biggest impact on water quality; common themes are aging infrastructure in terms of water treatment and the expansion of the Water Authority, and sprawl as you expand good water quality to other areas which gets to smart growth and governance. There was then a discussion of storm water districts, aging water treatment plants, taxing and maintaining the quality of watersheds, and sewer systems.

The economic development group suggested: the main problem with economic development is that it's primarily private in nature; it is influenced less in the public side of things, compared to the other areas; integration with the Regional Economic Development Council and sharing the information from the Regional Sustainability Plan with them; sometimes this doesn't always match up with the needs in the geographies of the region and the outlying areas don't always have their industries satisfied by the state and parsing out money; and a way to share successes and opportunities. Discussion included the government in the business of picking winners and losers, the government bringing expertise together as a convener, working bottom up vs. top down, and the outlying counties.

Public Consultation

Aileen and Tara discussed the January 15 public meetings in Batavia and Geneva, the upcoming January 16 public meeting at RIT, the use of the on-line or hard copy Strategy Capture Form, and the January 17 Stakeholder meetings. A Regional Leaders meeting has been added for February 14th at RIT. The website has received 500 unique visitors and the Strategy Capture Form has been posted on the website to capture existing or new strategies that can fit into the plan. Scheduling of the second round of public meetings has also begun.

Michael Philipson discussed Greentopia. He indicated that Greentopia started 3 years ago. Last year there was a one day associated conference with 30 presenters, 30 exhibitors and 150 attendees. This year the plan is to do a 2 day Greentopia Futures Summit at MCC focusing on the region's future. There are already some confirmed speakers. A thought is to weave the Finger Lakes Regional Sustainability Plan into the summit to help keep the Plan alive, check with the status of the Plan and implementation, provide more resources for implementers, and potentially provide a competitive advantage for the region. He indicated that this could be ongoing. Mark Gregor suggested it was a great idea. Felipe suggested that it could help keep the Regional Sustainability Plan conversation going and celebrate its successes. Michael asked what the Consortium would like to get out of the potential Regional Sustainability Plan Summit sessions. Some suggestions were an introductory session with an overview of the Regional Sustainability Plan and sessions that could help tweak the strategies.

Wrap Up and Next Steps

The next Regional Sustainability Plan meeting is February 13 at 9:00 AM at the Watts Center. A doddle poll will be circulated to find a preferred date for the additional March meeting for either March 12 or 13.

**Finger Lakes Regional Sustainability Plan
Cleaner Greener Communities
Consortium
Meeting
February 13, 2013
Ebenezer Watts Conference Center
49 South Fitzhugh Street
Rochester, NY 14614
Meeting Notes**

In attendance:

Mary Pat Hancock, Chair, Genesee County Legislature
Esther Leadley, Genesee County Legislature and G/FLRPC
Jay Gsell, County Manager, Genesee County
Felipe A. Oltramari, Senior Planner, Genesee County Department of Planning
Brenda Donohue, Supervisor, Town of Conesus and Livingston County Board of Supervisors
Angela Ellis, Planning Director, Livingston County Planning Department
Justin Roj, Monroe County Department of Environmental Services
Rochelle Bell, Senior Environmental Planner, Monroe County Department of Planning and Development
Tony LaFountain, Supervisor, Town of Penfield
Carol Nellis-Ewell Trustee, Village of Spencerport
Anne E. Spaulding, Energy and Environmental Sustainability Manager, City of Rochester
Mark Gregor, Manager, Division of Environmental Quality, City of Rochester
Bill Bordeau, Director, Seneca County Planning & Community Development
James Hoffman, Supervisor, Town of Williamson and Chair, Wayne County Board of Supervisors
Robert McNary, Director, Wayne County Planning & Economic Development
Peg Churchill, Executive Director/CEO, Wayne County IDA and Wayne Industrial Sustainability Development Corporation
Art Buckley, County Planner, Wyoming County
Richard Perrin, Executive Director, Genesee Transportation Council
Tony Favro, Program Manager, Genesee Transportation Council
David Zorn, Executive Director, Genesee/Finger Lakes Regional Planning Council

Greg Albert, Senior Planner, Genesee/Finger Lakes Regional Planning Council
Aileen Maguire Meyer, Manager, Planning Department, C&S Companies
Tara Boggio, Associate Vice President, T.Y. Lin International

Introductions

David Zorn called the meeting to order and the Consortium did introductions. The meeting was then turned over to Aileen Maguire Meyer, and Tara Boggio. Tara directed everyone's attention to the PowerPoint presentation (available at <http://sustainable-fingerlakes.org/wp-content/uploads/2012/11/consortium-feb13.pdf>) and indicated that the meeting was primarily an update.

Baseline Assessment

The Baseline Assessment was submitted to NYSERDA on January 11 and is available on the project website. Approval is expected soon. Additional comments should be submitted to David Zorn. The final version will be part of the draft Plan in late March.

Indicators/Target Establishment

A draft target outline document is being developed and will identify short; mid; and long-term targets for each indicator. The goal is to strike a balance between stretch goals and realism. The draft will be posted in late February for review and comments from the Consortium. Dave Zorn will send out an e-mail to Consortium members when the document is posted on the website. The final document will be completed in late March.

Aileen provided an overview of the GHG emission targets. Art Buckley asked if we are taking advantage of existing projects such as the wind farms with regards to GHG emissions. Aileen stated that the baseline for NYSERDA is from the year 2010 and we cannot capture projects completed in the last couple of years (because they were completed before the plan).

Aileen stated that the current categories with the highest GHG emissions were transportation and energy generation consumption which together account for approximately 70% of current GHG. Jay Gsell pointed out that it is really difficult to address these areas since it is hard to restrict travel. Art Buckley stated that we can take advantage of some projects such as bio-digesters that are taking waste streams out of the system. Art also stated that we should make sure to capture all of the on-going green energy projects in our calculations.

Implementation Strategy

The capture mechanisms for the strategies are stakeholder meetings, existing regional plans, public meetings, and the project website using the Strategy Capture form. The draft Implementation Strategy Document will include broad mechanisms to achieve goals, broad strategies, substrategies/project ideas, and specific projects. The appendix will include all captured strategies with an evaluation and ranking, a specific plan that includes financial and

implementation, and a structure to implement. The Consortium will be asked to provide input on proposed priorities.

Aileen handed out a draft of the strategies evaluation criteria. The proposed evaluation criteria includes benefits to multiple subject areas, benefits to multiple capitals, benefits to multiple communities defined as more than one county, implementation feasibility, consistency with planning efforts and financial feasibility. A question was asked on how progress will be measured. It was suggested that progress be based on the targets. A question was asked on who makes assessment of the strategies. The process is consultants, then Planning Team, and then the Consortium. The strategies document is scheduled for early March and will be one of the subjects of the next meeting.

The draft Plan is due in late March with an Executive Summary and a Technical Document. Documents will have a two week Consortium review period. The Consortium asked if they would have any material in advance for review before the draft is complete. Aileen stated that some material will be together by the end of February that can be reviewed in advance of the next Consortium meeting.

There is also a chance for review of the final document and depending how quickly NYSEDA is able to turn the document around with their comments it may allow the Consortium additional time to review at the end of March.

Public Consultation

Tara outlined the website and indicated that there have been approximately 600 unique visitors, there is documents and links, along with minutes and meeting announcements and the video of the Story of Place.

There is a Regional Leaders Forum on March 21 targeted to chief elected officials and major employers. A list of invitees was circulated and it was requested that Consortium members follow up with individuals that got an invitation.

The second round of public meetings will be open house format and will take place 5:00-7:00 PM February 25 (East – County Courthouse, Lyons), February 26 (West – Cornell Cooperative Extension, Batavia) and February 28 (Central – RMSC) to solicit input on strategies. All strategies that are received by February 22 will be part of the public meetings. All strategies for the draft documents must be submitted by March 4. At this point we are no longer adding people to stakeholder groups and if anyone is not involved we have encouraged them to attend the public meetings and to visit the website. The set up for the public meeting will be display boards either on easels or utilizing wall space with limited chairs. It was asked that any images of existing sustainability projects as well as concept plans for future projects be submitted for use at the public meetings. The Public Feedback document will be completed in mid-March and will summarize all of the public outreach efforts, as well as the ideas and outcomes of the public outreach process.

Wrap Up and Next Steps

The next Regional Sustainability Plan Consortium meeting is March 12 at 9:00 AM at the Watts Center. The last round of Stakeholder Group meetings will be that afternoon at 1:00 at RIT.

Bob McNary asked about the timing of the completed plan and its relationship to the CFA process and REDC. We have been coordinating with REDC to keep them updated on the Sustainability Planning process including two presentations and David indicated that he met with Vincent Esposito, FLEDC, to give an update of the Regional Sustainability Plan. It is anticipated that Phase II implementation funding will be wrapped into the CFA process and CFA applications would be developed based on the Sustainability Plan project list, REDC would still be providing 20% of the total scores on each application. Bob stated that the REDC workgroups are taking priority projects, for the REDC plan, until May 3rd and that some of these projects may come out of the Sustainability Plan.

Dave Zorn stated that we have yet to see any guidance from NYSERDA on the Phase II implementation funding. Justin Roj stated that from what we know now it appears that any application will be able to apply for CFA funding regardless of the ranking of the project within the Sustainability Plan. By identifying broad strategies within the plan it will allow for flexibility with future applications for implementation.

Art Buckley brought up the strategy of Town Energy Policies that have been rolled into comprehensive plans within the Town of Perry and the Town of Arcade. This will be submitted as a strategy through the Strategy Capture Form. Jim Hoffman talked about an award by EPA that includes a two day workshop that will be held in Williamson in April/May sponsored by the EPA that will address smart growth and renewable energy. The press release will be sent in to be posted to the sustainability plan website.

The next Consortium meeting is scheduled for March 12th, Watts Center.

Tara Boggio, Associate Vice President, T.Y. Lin International

Introductions

Dave Zorn opened the meeting and turned it over to Aileen and Tara who provided an update on the schedule.

Baseline Assessment, Indicators/Target Establishment, and Implementation Strategy

At this point the Baseline Assessment and Targets have been approved by NYSERDA. The Implementation Strategy and the NYSERDA added executive summary have all been completed in draft format and submitted to NYSERDA. All of the documents completed to this point are posted on the website.

Public Consultation

The Public Feedback Summary is currently in draft form and will be finalized and submitted to NYSERDA next week.

The Regional Leaders Forum was held in February with good representation by business and municipal leaders and detailed feedback on the challenges they are facing with sustainability initiatives. Discussions focused on water (waste-water and water quality) and on-site renewables and great connections were made amongst businesses. The strategy capture form was also discussed and attendees were encouraged to submit their projects and strategies.

The second round of public meetings were held the last week of February with lower turnout than the first round, but better feedback from attendees. In total 75 people attended the 3 meetings. There was also an increase in strategies submitted through the strategy capture form afterwards. These three open house meetings concluded the public involvement of the plan.

The project website has received 1200 unique visitors with a spike in visits around the public meeting dates.

All meeting minutes will be included within the appendix of the final plan.

All of the background data and material that was submitted along with the strategy capture forms will be delivered to G/FLRPC with the final materials as well.

Regional Sustainability Plan

The comments received from the 2nd round of public meetings and from NYSERDA will be incorporated into the draft. The draft plan is coming together this week and will be sent to the Planning Team for review and then onto NYSERDA.

NYSERDA has had positive feedback of the deliverables so far. Two comments that were received from NYSERDA was to soften the language regarding G/FLRPC carrying the strategy forward in the implementation section and to work with the REDC to determine where the plan is moving next.

The draft plan includes broad strategies within each subject area page and the indicators have been merged together and no longer identified as “NYSERDA Required” or “Placed-Based” indicators. The representative projects that are displayed are a sampling of projects and not a list of all of the projects associated with the strategy. There are also some strategies which do not have projects listed.

Mary Pat Hancock asked if the fact that a project was not included limit opportunities for that project in the future. Aileen stated that at this point we do not have enough guidance from NYSERDA to know for sure. It is anticipated that all projects would go through the CFA process and need to be consistent with the identified broad strategies. All of the strategies/projects that were submitted are listed in the appendix. The representative projects are a selection from the entire project list.

NYSERDA has asked us to focus on broad strategies and not specific projects. NYSERDA directed that specific projects be included in an appendix. It appears from NYSERDA guidance that if a project supports a broad strategy than it would be considered consistent with the Sustainability Plan. However, even given this late date we do not have enough guidance from NYSERDA to know how the Plan will be used to evaluate projects but that it is anticipated that they would go through the CFA process.

Rich Perrin asked if it would be valuable to have the counties each identify 2-3 projects to ensure that they are represented. Peg Churchill stated that over time there seemed to be a shift from broad strategies to projects and they became muddled together. Now it seems we are trying to fit projects to align them to funding which limits the impact of the plan. Do we want long-term strategies or just 5-year projects? Bob McNary asked if NYSERDA required this format. Aileen stated that as opposed to initially, NYSERDA has now indicated that they want strategies rather than projects.

Tara Boggio stated that they are capturing projects for future outside funding opportunities as well and that each of the projects are ranked on sustainability measures and that some projects have scored low as they are not sustainable. Art Buckley asked if the projects needed the 20% scoring from the REDC to be funded. Dave Seeley stated that the sustainability plan in his eyes will guide the 80% scoring from the funding agency and the REDC will have their own criteria.

Mary Pat Hancock stated that she had been waiting to submit Genesee County projects and did not know that they needed to be in already. Aileen stated that some projects were captured from existing plans and strategies even if they were not submitted through a strategy capture form. Dave Zorn stated that some of the projects that Mary Pat is thinking of may have already been submitted and may be part of the appendix. Art Buckley asked if the Wyoming County projects that were submitted were a part of the Plan. Aileen stated that these projects (wind/solar) are a

part of the broad strategies and the individual projects are in the appendix even if they are not listed as a representative project.

Jay Gsell stated that we have lost site of the large picture with this discussion. Dave Callard asked if the best approach may be to simply eliminate the project names. Justin Roj stated that without the representative projects we add confusion to what each strategy is about.

Dave Seeley was asked about the next steps with the REDC and stated that there is no formal outline yet on how the plan will be accepted and utilized.

It was determined that each county's chief elected official and planning director would be copied on an e-mail requesting each county to submit 3-4 representative projects around sustainability. These projects will be submitted to Dave Zorn by the close of business on Friday, March 15th. The one-page example completed by Monroe County will be sent out in the e-mail for reference. Projects should be submitted in Microsoft Word format, reference the document or plan that it is within (if applicable), and state the broad strategy that it is aligned with.

Mark Gregor asked how the project scores will be illustrated. Aileen stated that the project scores would not be shown in the main document or executive summary, only the appendix. The consortium agreed that the representative projects will remain in the document and that any newly submitted priority projects would be in addition to the projects listed and that they would not replace them.

Justin Roj made a motion that the Consortium endorse the broad strategies of the draft plan. Seconded by Jay Gsell. The motion was unanimously approved.

Wrap Up and Next Steps

The next consortium meeting will take place at the end of April. A doodle poll will be sent out to select a date. A tentative agenda for the meeting will be a formal approval of the completed plan, the future of the Consortium, and a discussion of Phase II.

Dave Zorn reminded everyone that a stakeholder meeting was scheduled for later this afternoon.

The meeting was adjourned at 10:45 a.m.

Finger Lakes Regional Sustainability Plan

Funded by NYSERDA - Cleaner, Greener Communities Program

Overall Stakeholder Meeting #1 - Meeting Minutes & Presentation

Welcome & Introductions

- Consultant team members – C&S, edr, Wendel, Genesis, TYLI

Introduction to the project

- See power point presentation from October 10th

Stakeholder Group

- See power point presentation from October 10th
- Website now live at www.sustainable-fingerlakes.org
- Members can join more than one stakeholder group.

Indicators & Targets

- 3-5 indicators are required to be approved by NYSERDA
- Attendees were asked to engage in a visioning exercise to think about their vision for agriculture and forestry in the future.
- Visioning: (Agriculture)
 - Recognition for role in food system
 - Agriculture as the best use of the land
 - Increase of farm profit
 - Economic viability for all farm operations, large & small
 - Made and distributed locally – same qualities for all size of operations (closed system)
 - Good future uses of our water sources
 - Water quality –nutrient-management (water shed), food processing, and agriculture
 - Other products, not food related, come from agriculture
 - Connectivity between agriculture and forestry – credit trading
 - Applications of innovative technology for the Finger Lakes region

- Synergy – agriculture, forestry, and tourism
 - Managing vs. implementation of agricultural goods
 - Closed system for exporting goods
 - How what we produce affects the end users
 - Supply and demand
 - Artisan/branding – develop program for specialties, taking advantage of niches
 - New generation of farmers/producers – new ideas and innovation
 - Farm competition – stronger beginning farmer programs and increasing entry for non-farmers
 - Changing the image of farming – opportunities
 - Careers in agriculture – awareness/education
 - Public awareness – farming is evolving
 - Urban agriculture
 - Lack of economic equipment in smaller farms/areas – need more opportunities, possible link with Rochester’s history of innovative manufacturing
 - Renewable energy – bi products/primary products
 - Labor shortage in agriculture operations
 - Diversity
 - Agricultural watering – Erie Canal
 - Logistics for smaller producers (sustainability)
 - Dairy producers – state’s vision – yogurt producing state
 - Improved efficiency, energy, and otherwise, particularly for small farmers
 - Overcoming current lack of processing capabilities would encourage import substitution
 - Use current assets in a more creative way
 - Economic and social sustainability
 - End point capacity – additional costs
 - Small and medium farmers have lower ROI than with larger farmers – lower ROI
 - Agriculture sometimes viewed in an industrial manner to feed people and sustain food suppliers
 - Better access to quality food
 - Farm to school programs
 - Less reliance on property taxes to provide services to general public
 - Preservation of farmland
 - Higher value added crops
 - Branding
 - Education program to diversify products
 - Rethink system to reduce waste and manage by-products
 - Diversified agriculture base, based on location and soils
- Visioning: (Forestry)
 - Save trees – do not allow to make into products
 - Forest intact
 - Parcel size/zoning issues
 - Where are the best soils located
 - Purchase development rights

- Farmers own farm land
- More or less forestry
- What happens to vacant/abandoned lots?
- Sustainable forest does not need to be harvested
- Preserve farm land and forests – great need (strategy)
- Incentives to generate new forests
- Counting existing carbon sinks
- Eco-system – beneficial values
- Property taxes
- Inheritance taxes
- Renewable energy

- Measurements
 - Increase in gross receipts
 - Product vs. market price
 - Season/market change (averages based on an extended period of time)
 - Income production
 - Environmental quality (water and air)
 - Better access to local food
 - Track/monitor agricultural products – how is this beneficial/valuable and how to implement
 - Purchase develop rights (PDR)
 - How do we measure success? Preservation of land, conservation easement
 - Measure acres of prime farmland with exemption
 - Decrease in species added to endangered species list
 - Municipal farmland plants – develop to protect
 - Assessment of agencies who view agriculture as an important economic sector
 - Importance of the agriculture industry – new recognition
 - More of a distribution center
 - Processes
 - Collaboration with other regions
 - Percentage of overall purchases
 - Percentage of sales of local products to local institutions
 - Decrease in non-point source pollution
 - Track industrial codes for support service
 - Acres in agricultural property tax exemption

- Indicators
 - Reduction of non-point source pollution
 - Each type of farm, crop, product, etc.
 - Yield comparison – large topic, needs qualifier: e.g. yield compared with off-farm inputs
 - Net value to farmers
 - Conservation area (State Parks)
 - Linkages
 - Regeneration (cover mix)
 - Urban canopy coverage (measurement)
 - Air/soil quality – chemical uses (airborne, fertilizers, etc.)

- Water quality
- Percent diversion of bi-products
- Number of farms – encompass in yield
 - Farms vs. farm land
 - Total acreage
 - Farm size
 - Number of farms
- Diversity of crops
- Urban forestry: percentage of tree cover/percentage of canopy cover
- Invasive species
- Change in groundwater and surface water defined as impaired by NYSDEC
- Turnover of farm income in local economy and service businesses

Subject Area Lead Contact Information

- If you have specific question for the technical lead for Agriculture and Forestry, please contact:

Charlie Greene, edr Companies
cgreene@edrcompanies.com

Next Steps

- Next Stakeholder meeting is Wednesday, November 14th from 1-4pm.
 - Discussion on 'Story of Place', indicators and targets
 - Location TBD
 - Agenda will be sent out at least one week prior.

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

Finger Lakes Regional Sustainability Plan

FUNDED BY: NYSERDA – CLEANER, GREENER COMMUNITIES PROGRAM

Agenda

- 1. Welcome and Introductions**
- 2. Introduction to the project**
- 3. Stakeholder Group**
- 4. Visioning**
- 5. Sustainability Indicators**
- 6. Next steps**

PROJECT INTRODUCTION

Project Introduction

Background: Cleaner-Greener Communities Program:

- Announced by Governor Cuomo in his 2011 State of the State Address
- CGC supports the creation/implementation of regional sustainability plans
- Two phase program:
 - Phase I: Regional Sustainability Planning Grants (\$10 million)
 - Phase II: Regional Sustainability Plan Implementation Grants (\$90 million)
- Phase I is currently underway in all regions and Phase II is expected to launch in early 2013

Climate Change Commitment:

“reduce greenhouse gas emissions to 80% below 1990 levels by 2050”

Project Introduction

Sustainability Plan Scope (Phase 1):

- **Baseline assessment of the region including Green House Gas (GHG) Inventory for the Region**
- **Incorporation of existing local planning efforts**
- **Long-term and short-term sustainability goals**
- **Climate change adaptation**
- **Identification of necessary actions**
- **Implementation strategy**
- **Stakeholder involvement**

Project Introduction

Phase II:

- Launches early 2013
- Three annual rounds of ~\$30 million
- Will fund projects that
 - Reduce GHG emissions
 - Support the achievement of the region's sustainability goals as identified in their plans
 - Are not eligible for current NYSERDA offerings
 - Prioritized by their regional planning team

Project Introduction

Things to Remember:

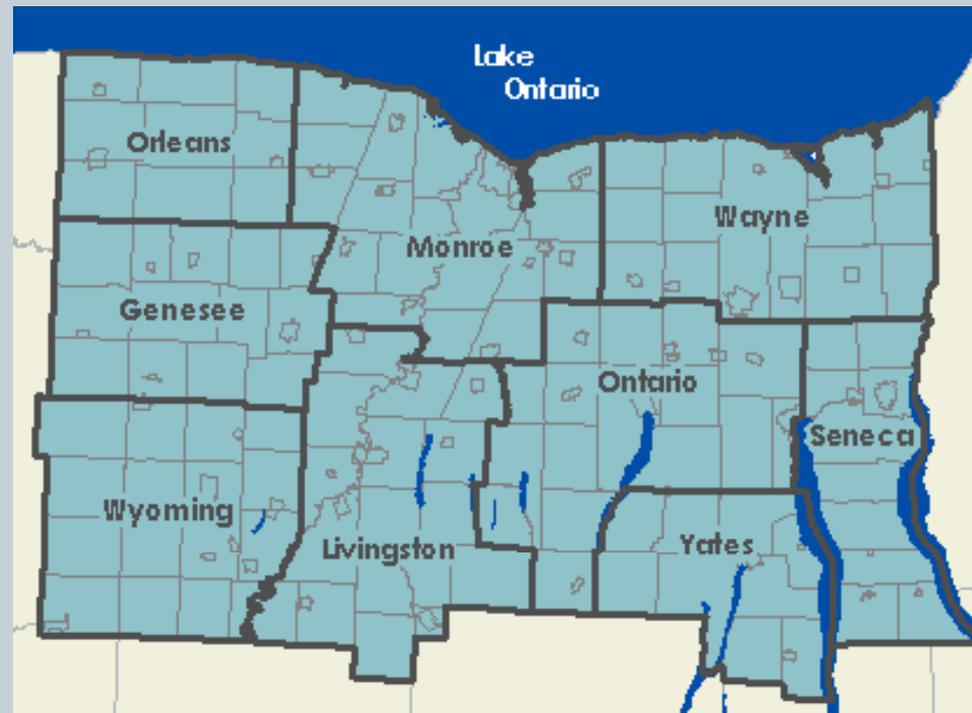

- The plan is not a bid for Phase II funds
- Unique opportunity
- Looking for a truly comprehensive planning process
- Must be realistically implementable
- Alignment with Regional Economic Development Plan
- This is your plan

Project Introduction

Finger Lakes Region:

- Monroe
- Orleans
- Genesee
- Wyoming
- Livingston
- Ontario
- Yates
- Seneca
- Wayne

Project Introduction

Schedule:

| TASK | 2012 | | | 2013 | | |

| Draft Sustainability Plan | | | | | | |
| Final Sustainability Plan | | | | | | |

STAKEHOLDER GROUP

Agriculture & Forestry Stakeholder Group

Mission Statement:

The **Agriculture and Forestry** Stakeholder Group will address agricultural businesses and lands, forest lands, and the multiple economic and ecological roles fulfilled by those enterprises and lands as they relate to social, economic, and ecological sustainability.

The agriculture and forestry implementation strategy will be carefully coordinated with the Land Use and Economic Development Focus Area plans.

Strategies and practices for consideration will include:

- Strengthening the economic viability of agricultural and forestry enterprises and communities that are supported by those enterprises;
- Fostering more efficient uses of energy inputs and the natural resources produced on the land of the region;
- Utilizing agricultural and forest industry by-products for energy production;

Agriculture & Forestry Stakeholder Group

Mission Statement:

- Reducing the energy cost of providing food and fiber to the WNY region through local processing and marketing;
- Encouraging continued agricultural use of productive farmland;
- Identifying farmlands at greatest risk of being developed; and
- Encouraging patterns of land use that support viable agricultural communities and discourage residential sprawl.

The Stakeholder Group will consider opportunities to improve surface water quality through land management changes designed to improve energy efficiency or energy production.

Energy Stakeholder Group

Role:

- Input into indicators and identifying data sources (meeting 1)
- Discussion of targets (meeting 2)
- Implementation strategies (meeting 3)
- Review draft report

Other Members? Have them email me at tara.boggio@tylin.com or can find link through project website.

VISIONING

Visioning

What is your vision for Agriculture and Forestry for this region for the future?

Visioning

How would you know if we are heading there?

SUSTAINABILITY INDICATORS

Sustainability Indicators

Direction from NYSERDA regarding indicators:

1. Choose at least one common indicator for each focus area for inclusion in your sustainability plan
2. There are five indicators that all of the regions are required to use. These indicators allow some information to be tracked across the state and to ensure that the CGC program is doing its part to support larger national efforts. Regions will not be required to choose additional indicators in these focus areas. These indicators will count as your required common indicator in each of the focus areas that they cover.
3. Regions may also choose to add other indicators that they feel are appropriate to establish a baseline and targets for improvements in their region.

Sustainability Indicators

Direction from NYSERDA including common indicators:

A. Common Indicators

6E: Economic Development – Farms: acreage / production of farms

This indicator provides a macro level view to economic development a major industry in New York State.

Sustainability Indicators

Criterion: Issue influencing agricultural sustainability

Indicator: Measurable relationships between variables that help to describe the state of that criterion

Discussion: List of preliminary considerations regarding the indicators and criteria

These are not exclusive lists- your input is welcome and valued

Agricultural Indicators

Criterion: Diversity of vegetation and agricultural production

Indicator(s): *Yield*
Land cover
Crop cover

Discussion: Diversity as a hedge against economic and climate fluctuation;
Economic and environmental impacts of biodiversity and monoculture- *both* positive and negative

Agricultural Indicators

Criterion: Use of external and purchased inputs

Indicator(s): *Amount of external and purchased inputs*
Amount of land in production, or yield volume

Discussion: Benefits of closed-system agriculture;
Potential loss of economic opportunities
within agricultural services sector

Agricultural Indicators

Criterion: Community economic interdependence

Indicator(s): *Input-output inter-industry multipliers*

Discussion: Availability of longitudinal data is unknown

Forestry Indicators

Criterion: Biophysical condition of forest resources

Indicator(s): *Area and percent of forest by type*
Fragmentation of forests
Area and percent of forest affected by biotic processes and abiotic agents
Area and percent of forest available for wood production
Total growing stock and annual increment available for wood production

Forestry Indicators

Criterion: Ecological biodiversity

Indicator(s): *Area and percent of forest in protected areas*
Number of native forest-associated species
Number and status of native forest-associated species at risk
Management activities that meet best management practices to protect soil and water

Discussion: Difficulty in measuring management activities?

Sustainability Indicators

OTHER Indicators?

- Consideration of constraints of the data – is data available (historical, current, future)?
- Can targets be established and met with projects?

NEXT STEPS

Next Steps

Next stakeholders meeting:

WHEN: Week of Nov 13-15th (Tues-Thurs)

WHAT: Discussion on “Story of Place” and targets

Meeting minutes and agenda for next meeting within next 2 weeks

THANK YOU

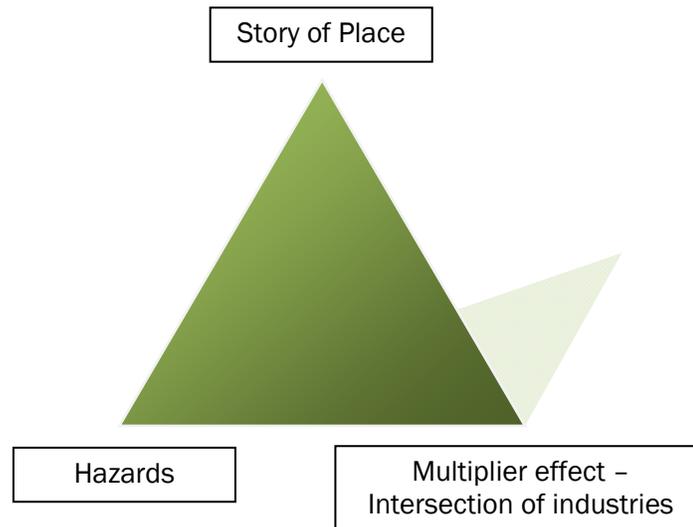

| | | |

| ORGANIZED BY | Tara Boggio, T.Y. Lin International (TYLI) | |

Welcome & Introductions

- Consultant team members – C&S, TYLI
- Healthy Regional Economy
 - Need a foundation – federal and other grants
 - Strong team base
 - Place Base – Place Space
 - How do we use the story of place to get funding – next meeting
 - Hazards
 - Climate change/mitigation
 - Rainfall
 - how to integrate into ‘Plan’
 - Strengthen position
 - No going backwards
 - Building on the plan already in place in the Finger Lakes region
 - NYSERDA funding
 - Housing Patterns, Economic Development Patterns (activities), Cultural Patterns – weave together to find similarities

- Introduction
 - Introduce yourself regarding your contribution to Regional Economic Health and how you are connected in being here today

Group Exercise

- 5 Categories in which introduce a way to understand the working of our Economy
 1. Event or period that changed this region based on our response to it
 2. Favorite story of history of this place
 3. Interesting uniqueness in Natural history
 4. Thread through all industries in the region
 5. Unique physical feature(s) that depicts this place – why is it symbolic
- Group responses:
 - Category 1
 - Kodak(Past and Present)
 - Grow economy through small businesses, new developments
 - Job growth
 - Decrease in risk taking
 - Educated force in Rochester
 - Most giving community – George Eastman’s legacy
 - Rural areas have smaller business after Kodak’s downsizing; employment levels stable in more areas than other
 - Erie Canal
 - Business growth, industrial era, marketplace
 - Boom town
 - Monopoly
 - Transportation of goods
 - Agriculture
 - Advanced Transportation
 - Where people work vs. where they live
 - Telecommunication usage – more people able to work from home

- Advanced Technology
 - Green Nature; sustainability, Greentopia
 - Lost population in cities
 - Agricultural resources
- Festivals
 - Strong intellectual force
 - Parks
 - Creative class – underground classification
 - Attractor and retainer
- George Eastman
 - Created jobs/businesses
 - Culture of generosity
 - Cultural assets
 - Higher education system
- Category 2
 - Canal Industrial Era – made villages moved out, scared of the idea of change (technology)
 - Sense of place – more city
 - 80-90% of forestry transformed to agricultural uses for the canal, over time, we gained it all back (Green technologies)
- Category 3
 - Ice Age
 - Helped create path for canal from glaciers
 - Disconnection between Finger Lakes and Lake Ontario
 - Waterways – Finger Lakes, Lake Ontario, Genesee River
 - Sediment patterns
 - Industries centered around areas; center for food processing, changes, community issues, empty storefronts (Main Streets)
- Category 4
 - Water
 - Microclimates
 - Power
 - Technology (education)
 - Transportation
- Category 5
 -

Hazards

- Amplitude and frequency of rainfall
- Railroads running along the Canal/waterways – surface chemicals being forced into the water
- Telecommunications
- Energy corridors
- Interchange of lock system – communication issues, agencies working independently
- Logs moving next to bridges – could potentially destroy bridges
- Opportunities – funding through federal grants
- Sewer issues due to the high intensity of water flow

Introduction to the project

- See power point presentation from October 17th

Stakeholder Group

- See power point presentation from October 17th
- Website now live at www.sustainable-fingerlakes.org
- Members can join more than one stakeholder group.

Indicators & Targets

- 3-5 indicators are required to be approved by NYSEDA
- Attendees were asked to engage in a visioning exercise to think about their vision for economic development in the future.
- Visioning:
 - Tourism – attract more visitors
 - Measure of success – lower Green House Gas Emissions over time
 - Reduction in emissions
 - Private sector growth against sustainability measurements
 - Increase eco energy park and industrial parks – based on symbiotic relationships
 - Number of new businesses – time frame depends on industry, min. of 5 years
 - Increase capture of graduate
 - Sufficient infrastructure investments
 - Sense of pride/ownership (Wegmans) – how do people feel that live here
 - Younger workforce – people staying in the community after school or moving for jobs from other areas
 - Maintaining our Main Streets
 - Corporate vs. industry vs. communities
 - Move towards entrepreneurial city – risk taking (High Tech Rochester)
 - New ideas vs. patents
 - Where are young people employed – measure by sector
 - Poverty levels are more so in rural areas
 - Use of farm acreage
 - Improved racial diversity/equality
 - Pockets of poverty – how to improve over time (how to measure)
 - Develop areas of poverty
 - Where are people graduating from
 - Education + training + graduate location of employment
 - More vocational education – BOCES – connections with higher education programs
 - Personal sense of place – educational and industry
 - School to work – shadowing programs
 - Education at all levels
 - Funding opportunities
 - Spending mandates – how they affect businesses, education, training, tourism, etc. – customize based on unique needs
 - Protection of key elements/infrastructure for economic development
 - Lake levels – economic development infrastructure and tax base
 - Disaster prevention
 - Natural resources – protection only for this region
 - Academic technologies – promote within schools – commercialize

- Raise rating of education on a state/global level
- Government investment in research for institutions
- Venture capital – increase in education
- Social venture network/investor

- Indicators
 - Required: Housing + Transportation Index : Transportation/Housing affordability
 - Net advocate score
 - Tourism spending (REDC)
 - Age distribution of workers
 - Money spent on infrastructure
 - Measuring sense of pride, quality of life, connection to place
 - Maintaining our Main Streets
 - Measure disposable income
 - Number of people receiving social services
 - Job training programs
 - Number of firms and employees (types of businesses) – 10+ employees – impact on region based on employment (net formation and survival)
 - Use of farm acreage by type of crop/end use
 - Business locations where infrastructure already exists
 - Measure of diversity
 - Number of vocational graduates
 - Stem programs – partnership with industries
 - Funding opportunities
 - Water quality – ISO measurement (net-zero)
 - Track number of flood events – loss of property value
 - Where visitors are coming from
 - Infrastructure development vs. re-development funding – land use, planning, ROI
 - Water resource protection – imports and exports (invasive species)
 - Investment in research
 - Venture capital

Ending Remarks, Comments, Statements

- Story of Place
 1. Stakeholder engagement
 2. Project Design/Presentation
 3. Evaluation of Story of Place
- Value – what are we walking away with
 - Context – what we are focusing on
 - Finding your own voice – uniqueness
 - Connections with people, place – moving forward
 - More of the right players attending meetings

Subject Area Lead Contact Information

- If you have specific question for the technical lead for Economic Development, please contact:

Carol Sanford, DEGI
interoctave@comcast.net

Next Steps

- Next Stakeholder meeting is Thursday, November 15th from 1-5pm.
 - Discussion on 'Story of Place', indicators and targets
 - Location TBD
 - Agenda will be sent out at least one week prior

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

Finger Lakes Regional Sustainability Plan

FUNDED BY: NYSERDA – CLEANER, GREENER COMMUNITIES PROGRAM

PROJECT INTRODUCTION

Project Introduction

Background: Cleaner-Greener Communities Program:

- Announced by Governor Cuomo in his 2011 State of the State Address
- CGC supports the creation/implementation of regional sustainability plans
- Two phase program:
 - Phase I: Regional Sustainability Planning Grants (\$10 million)
 - Phase II: Regional Sustainability Plan Implementation Grants (\$90 million)
- Phase I is currently underway in all regions and Phase II is expected to launch in early 2013

Climate Change Commitment:

“reduce greenhouse gas emissions to 80% below 1990 levels by 2050”

Project Introduction

Sustainability Plan Scope (Phase 1):

- **Baseline assessment of the region including Green House Gas (GHG) Inventory for the Region**
- **Incorporation of existing local planning efforts**
- **Long-term and short-term sustainability goals**
- **Climate change adaptation**
- **Identification of necessary actions**
- **Implementation strategy**
- **Stakeholder involvement**

Project Introduction

Phase II:

- Launches early 2013
- Three annual rounds of ~\$30 million
- Will fund projects that
 - Reduce GHG emissions
 - Support the achievement of the region's sustainability goals as identified in their plans
 - Are not eligible for current NYSERDA offerings
 - Prioritized by their regional planning team

Project Introduction

Things to Remember:

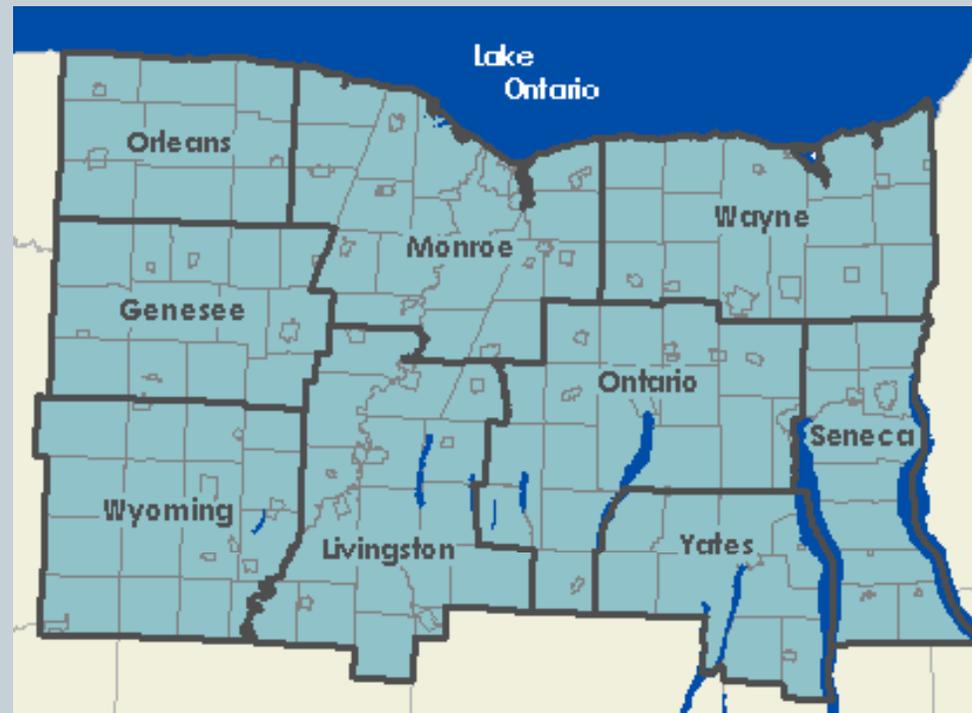

- The plan is not a bid for Phase II funds
- Unique opportunity
- Looking for a truly comprehensive planning process
- Must be realistically implementable
- Alignment with Regional Economic Development Plan
- This is your plan

Project Introduction

Finger Lakes Region:

- Monroe
- Orleans
- Genesee
- Wyoming
- Livingston
- Ontario
- Yates
- Seneca
- Wayne

Project Introduction

Schedule:

| TASK | 2012 | | | 2013 | | |
|---------------------------------------|---------|----------|----------|---------|----------|-------|
| | October | November | December | January | February | March |
| Baseline Assessment | | | | | | |
| Stakeholder Meeting #1 | X | | | | | |
| Sustainability Indicators / Inventory | | | | | | |
| Target Establishment | | | | | | |
| Stakeholder Meeting #2 | | X | | | | |
| Public Meeting #1 | | | X | | | |
| Implementation Strategy | | | | | | |
| Stakeholder Meeting #3 | | | | X | | |
| Public Meeting #2 | | | | | X | |
| Draft Sustainability Plan | | | | | | |
| Final Sustainability Plan | | | | | | |

STAKEHOLDER GROUP

Economic Development Stakeholder Group

Mission Statement:

The **Economic Development** Stakeholder Group is tasked to coordinate activities with the Finger Lakes Regional Economic Development Council (FLREDC) and clearly address how the goals of the sustainability plan intersect with and support those of the REDP.

The Plan will describe and quantify the economic development benefits of the implementation strategies identified in the Sustainability Plan. The Planning Team and Stakeholder Group will work closely with the Regional Economic Development Council and its working groups throughout the planning process to ensure that the strategies identified by the two plans support both the economic development and sustainability goals of the Finger Lakes region.

Economic Development Stakeholder Group

Role:

- Input into indicators and identifying data sources (meeting 1)
- Discussion of targets (meeting 2)
- Implementation strategies (meeting 3)
- Review draft report

Other Members? Have them email me at tara.boggio@tylin.com or can find link through project website.

SUSTAINABILITY INDICATORS

Sustainability Indicators

Direction from NYSERDA regarding indicators:

1. Choose at least one common indicator for each focus area for inclusion in your sustainability plan
2. There are five indicators that all of the regions are required to use. These indicators allow some information to be tracked across the state and to ensure that the CGC program is doing its part to support larger national efforts. Regions will not be required to choose additional indicators in these focus areas. These indicators will count as your required common indicator in each of the focus areas that they cover.
3. Regions may also choose to add other indicators that they feel are appropriate to establish a baseline and targets for improvements in their region.

Sustainability Indicators

REDC Strategic Plan Indicators

Sustainability Indicators

OTHER Indicators?

- Consideration of constraints of the data – is data available (historical, current, future)?
- Can targets be established and met with projects?
- REDC Strategic Plan Indicators

NEXT STEPS

Next Steps

Next stakeholders meeting:

WHEN: Week of Nov 13-15th (Tues-Thurs)

WHAT: Discussion on “Story of Place” and targets

Meeting minutes and agenda for next meeting within next 2 weeks

THANK YOU

Welcome & Introductions

- Consultant team members – C&S, Genesis, TYLI

Stakeholders in attendance were shown a slide presentation illustrating the basic goals of the project, the timeline for project milestones, after which an open discussion ensued giving each stakeholder an opportunity to voice their opinions, goals and vision for energy as a component of a sustainable future for the Finger Lakes Region. The goal of this exercise is to collect and share the values and visions of the stakeholders, in order to advance the goals of the overall sustainability study.

Introduction to the project

- See power point presentation from October 10th

Stakeholder Group

- See power point presentation from October 10th
- Website now live at www.sustainable-fingerlakes.org
- Members can join more than one stakeholder group.

The Energy Stakeholders Group will contribute to the development of the indicators and the portion of the final Genesee Regional Finger Lakes Sustainability Plan that addresses energy.

The language shown below contains the scope of work for the Energy component of the Sustainability Plan.

Energy - The Plan shall thoroughly address energy and the GHG emissions associated with its use and generation and evaluate electric generation, electric use, and on-site combustion in the Region by building type (e.g., residential, commercial, industrial, institutional, etc.). Recommendations shall be identified on near-, medium-, and long term bases to address the energy efficiency of existing buildings; energy building standards for new construction; financing tools that support energy efficiency and renewable energy investment; innovative ownership, financing, or leasing mechanisms for renewable energy systems; and community-scale energy systems (e.g. district heating and cooling). Cost, potential energy savings, and related GHG emission reductions shall be evaluated for each potential strategy.

Indicators & Targets

- 3-5 indicators are required to be approved by NYSERDA
- Attendees were asked to engage in a visioning exercise to think about their vision for energy in the future.

The topics introduced at this first stakeholders meeting are captured below by category. Each Stakeholder, whether present or absent at the first meeting, is asked to review these categories to get buy-in from the group and to establish a baseline for going forward, within the parameters of the program goals.

RENEWABLE ENERGY

- Adoption of renewable energies
- Access to and affordability of renewable energy

ALTERNATIVE ENERGY

- Alternative fueling stations
- Net metering
- Bio gas
- Wind energy
- Solar energy
- Ethanol production

ENERGY REDUCTION

- Net zero/neutral from a carbon footprint point of view (power)
- Reduction in the amount of energy necessary to condition spaces
- Reduction in amount of energy we need/consume
- Increase in simple energy controls
- Changes in operational procedures
- Up to 75% of energy is wasted

REGIONAL IMPACTS

- Reward by reduction of energy use
- Economic growth and development
- Site specific
- Farmers can be self-sufficient
- Communities look at waste as renewable energy
- Incentive programs
- Promote green energy
- Pay back on green power
- Power over long distances
- Benefits of NYSERDA's funding – giving back to tax payers
- Regional capture of funding from NYSERDA
- All municipalities in the region need to follow the same set of rules
- Increase desirability to live in NY – Energy resources/usage
- Increase reliability of power grid system
- Local offset market
- Collaborative – regional natural resources
- Keeping energy costs low, affordable
- Attract larger business by natural resources
- Local governments want cheaper energy to attract development
- Fossil fuel/utilities – request surcharge to fund green energy programs
- Public Service Commission
- Energy generators to return money to region
- Regulate use within region (not town to town, bad for competition)
- Find ways to share excess energy between companies/communities, avoid waste
- More cooperatives for energy and natural resources
- Potential tax break for more energy efficient structures

BASELINE MEASUREMENTS

- Industries moving back to the area
- Carbon intensity received by user
- Efficiency of products consumers use – point of use
- Sustain profits
- Number of degree days (heating/cooling) goes down
- Generating only heat – combine heat and power
- Net zero club – identify achievers of next zero
- Key market indicators – green distribution generation
- Residential, commercial, industrial sectors
- Affordability index – consumption levels
- Agricultural bi-products converted into energy
- Energy professionals in the area = more activity
- Energy star projects/products
- Education facilities creating programs to learn about sustainability issues, concerns, and solutions
- Number of collaborating school systems
- Education programs – students and graduates

- Gross domestic products from green thoughts/technologies
- Pre green initiatives (current vs. past)
- Green fueling stations – some already in City of Rochester
- Advanced energy technologies
- Community involvement
- School #46 – Pencil Program – green awareness
- Changing cultures – sustainability
 - Not experimental anymore – implement solutions
- Reduction in energy use – create own energy - sustainable
- No GHGE
- Calculating how much green technologies are being used per capita
- Green systems and products

GREEN HOUSE GAS REDUCTION

- Green House Gas inventory/reduction – ‘primary goal’
- How to quantify GHG – measurements
- Some goals unattainable without changes in State Policies
- Restrictions – Regional/State mandates – set rules
- Putting power where we need it
- Selling power – locally or globally
- Least carbon weighted energy – direct and indirect
- Look at alternatives to carbon
- Utility companies count data and waste resources
- How to measure energy waste
- Long term effects
- Energy independent
- Is the Greenest energy is one that is conserved, captured, net-metered?
- Affect on supply and demand – reduce demand (self-generation)
- 75% of energy is wasted

INDICATORS

1A: Regional energy consumption per capita (MMBtu) - REQUIRED INDICATOR

Energy consumption per capita is an indicator that encompasses all of the energy use within a 4 region on a scale that is highly relatable. Understanding how much energy is consumed per capita can be very effective in illuminating the need to reduce overall energy consumption regardless of its source. To calculate the value for this indicator, the calculations for several other indicators are needed and should include all sources of energy consumption (fuel combustion, electricity, renewables, etc).

This is a Mandatory Indicator

1B: Energy – Renewable Energy – Total installed renewable energy capacity

Renewable capacity provides an understanding of the willingness of the population to adopt newer, cleaner source of energy generation on their own. Monitoring this indicator over time can help the region understand any trends resulting from improvements in technology or changes in energy policy.

This Indicator was selected for consideration by the Stakeholders Group.

1C: Energy – Energy Efficiency – On-site building fuel consumptions per end use (residential, commercial, and industrial)

Stationary energy combustion can be significant at a regional level. Reducing fossil fuel combustion is achieved by reducing the amount of fuel consumed for heating in any one of the markets sectors.

This Indicator was selected for consideration by the Stakeholders Group. One significant factor to consider here is how much of the energy actually generated get consumed, vs. how much is lost, wasted, or simply un-used.

1D: Energy – Regional electricity grid fuel mix

Indicates the penetration of non-fossil fuel-based electricity sources.

This Indicator was selected for consideration by the Stakeholders Group, which is primarily a measure of current or potential alternative energy sources within the region.

Ultimately, each category will need to fit into one or more of the indicators, or re-focused into another category / indicator.

Subject Area Lead Contact Information

- If you have specific question for the technical lead for Energy, please contact:

James Burton, T.Y. Lin International (TYLI)
james.burton@tylin.com

Next Steps

- Next Stakeholder meeting is Wednesday, November 14th from 9am-noon.
 - Discussion on 'Story of Place', indicators and targets
 - Location TBD
 - Agenda will be sent out at least one week prior

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

Finger Lakes Regional Sustainability Plan

FUNDED BY: NYSERDA – CLEANER, GREENER COMMUNITIES PROGRAM

Agenda

- 1. Welcome and Introductions**
- 2. Introduction to the project**
- 3. Stakeholder Group**
- 4. Visioning**
- 5. Sustainability Indicators**
- 6. Next steps**

PROJECT INTRODUCTION

Project Introduction

Background: Cleaner-Greener Communities Program:

- Announced by Governor Cuomo in his 2011 State of the State Address
- CGC supports the creation/implementation of regional sustainability plans
- Two phase program:
 - Phase I: Regional Sustainability Planning Grants (\$10 million)
 - Phase II: Regional Sustainability Plan Implementation Grants (\$90 million)
- Phase I is currently underway in all regions and Phase II is expected to launch in early 2013

Climate Change Commitment:

“reduce greenhouse gas emissions to 80% below 1990 levels by 2050”

Project Introduction

Sustainability Plan Scope (Phase 1):

- **Baseline assessment of the region including Green House Gas (GHG) Inventory for the Region**
- **Incorporation of existing local planning efforts**
- **Long-term and short-term sustainability goals**
- **Climate change adaptation**
- **Identification of necessary actions**
- **Implementation strategy**
- **Stakeholder involvement**

Project Introduction

Phase II:

- Launches early 2013
- Three annual rounds of ~\$30 million
- Will fund projects that
 - Reduce GHG emissions
 - Support the achievement of the region's sustainability goals as identified in their plans
 - Are not eligible for current NYSERDA offerings
 - Prioritized by their regional planning team

Project Introduction

Things to Remember:

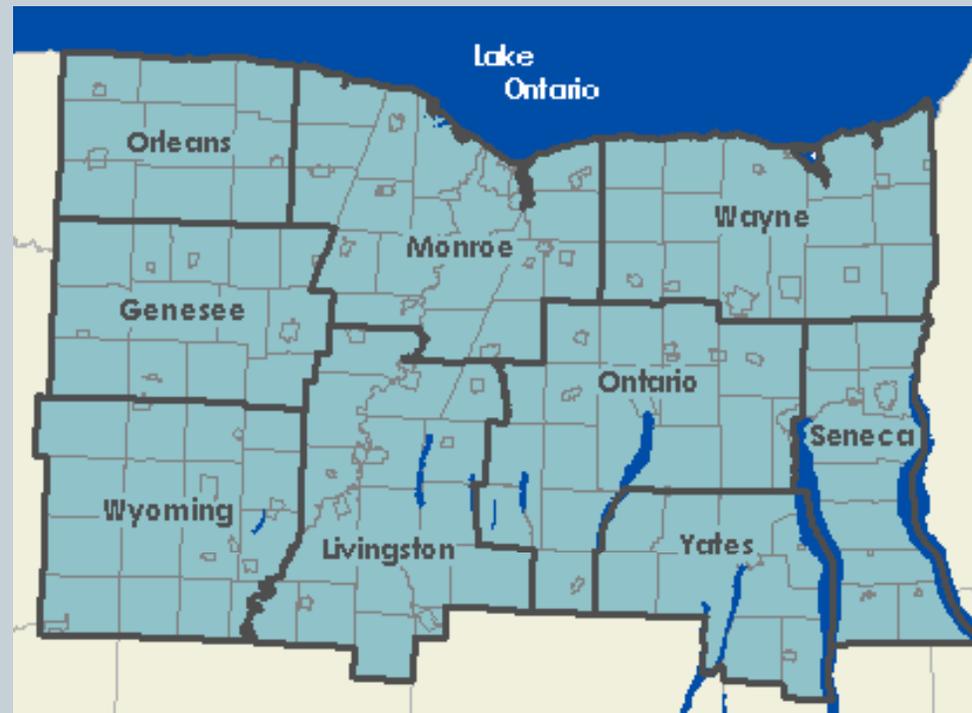

- The plan is not a bid for Phase II funds
- Unique opportunity
- Looking for a truly comprehensive planning process
- Must be realistically implementable
- Alignment with Regional Economic Development Plan
- This is your plan

Project Introduction

Finger Lakes Region:

- Monroe
- Orleans
- Genesee

STAKEHOLDER GROUP

Energy Stakeholder Group

Mission Statement:

The **Energy** Stakeholder Group is tasked to address energy and Greenhouse Gas (GHG) emissions associated with its use and generation. The Plan will evaluate electric generation, electric use, and on-site combustion in the Finger Lakes region by building type (residential, commercial, industrial, and institutional). The Plan will consider short-, medium- and long-term strategies that will address:

- The energy efficiency of existing buildings;
- Energy building standards for new construction;
- Financing tools that support energy efficiency and renewable energy investment;
- Innovative ownership, financing, or leasing mechanisms for renewable energy systems; and
- Community-scale energy systems.

The Plan also will evaluate cost, potential energy savings and related GHG emission reductions for each strategy.

Energy Stakeholder Group

Role:

- Input into indicators and identifying data sources (meeting 1)
- Discussion of targets (meeting 2)
- Implementation strategies (meeting 3)
- Review draft report

Other Members? Have them email me at tara.boggio@tylin.com or can find link through project website.

VISIONING

Visioning

**What is your vision for Energy for this region
for the future?**

Visioning

How would you know if we are heading there?

SUSTAINABILITY INDICATORS

Sustainability Indicators

Direction from NYSERDA regarding indicators:

1. Choose at least one common indicator for each focus area for inclusion in your sustainability plan
2. There are five indicators that all of the regions are required to use. These indicators allow some information to be tracked across the state and to ensure that the CGC program is doing its part to support larger national efforts. Regions will not be required to choose additional indicators in these focus areas. These indicators will count as your required common indicator in each of the focus areas that they cover.
3. Regions may also choose to add other indicators that they feel are appropriate to establish a baseline and targets for improvements in their region.

Sustainability Indicators

Direction from NYSERDA including common indicators:

A. Common Indicators

1A: Regional energy consumption per capita (MMBtu) - REQUIRED INDICATOR

Energy consumption per capita is an indicator that encompasses all of the energy use within a region on a scale that is highly relatable. Understanding how much energy is consumed per capita can be very effective in illuminating the need to reduce overall energy consumption regardless of its source. To calculate the value for this indicator, the calculations for several other indicators are needed and should include all sources of energy consumption (fuel combustion, electricity, renewables, etc.).

1B: Energy – Renewable Energy – Total installed renewable energy capacity

Renewable capacity provides an understanding of the willingness of the population to adopt newer, cleaner source of energy generation on their own. Monitoring this indicator over time can help the region understand any trends resulting from improvements in technology or changes in energy policy.

Sustainability Indicators

Direction from NYSERDA including common indicators:

B. Secondary Indicators

1C: Energy – Energy Efficiency – On-site building fuel consumptions per end use (residential, commercial, and industrial)

Stationary energy combustion can be significant at a regional level. Reducing fossil fuel combustion is achieved by reducing the amount of fuel consumed for heating in the residential sector or reducing the amount of fuel consumed in industrial production.

1D: Energy – Regional electricity grid fuel mix

Indicates the penetration of non-fossil fuel-based electricity sources.

1E: Energy – Reduction in annual energy use per end use

Sustainability Indicators

OTHER Indicators?

- Consideration of constraints of the data – is data available (historical, current, future)?
- Can targets be established and met with projects?

NEXT STEPS

Next Steps

Next stakeholders meeting:

WHEN: Week of Nov 13-15th (Tues-Thurs)

WHAT: Discussion on “Story of Place” and targets

Meeting minutes and agenda for next meeting within next 2 weeks

Welcome & Introductions

- Consultant team members – C&S, Syracuse Center of Excellence, Genesis, TYLI

Introduction to the project

- See power point presentation from October 10th

Stakeholder Group

- See power point presentation from October 10th
- Website now live at www.sustainable-fingerlakes.org
- Members can join more than one stakeholder group.

Indicators & Targets

- 3-5 indicators are required to be approved by NYSERDA
- Attendees were asked to engage in a visioning exercise to think about their vision for material and waste management in the future.
- Visioning:
 - Managed by county agencies – take away from government and give to agencies which will create fewer barriers.
 - Waste management authority for the region – region vs. county
 - Cradle to cradle environment – no such thing as waste
 - Material science – incentives – more innovative aspect of how to remove waste
 - Taxes on packages that are not recyclable
 - Incentives for reusable products
 - Product stewardship
 - Out of sight, out of mind and how the product is transported
 - Deconstruction capabilities – reuse materials vs. demolition

- Link between economic development and material use (recycling)
 - Inventories in regions where jobs have been created by material reuse
 - Conservation of natural resources – long term vs. short term goals
 - Waste landfill costs/economics
 - Higher value on land
 - New economic system
 - Landfills = potential resources
 - Synergy between economics, agriculture development and recycling of materials/landfills
 - Water resources
 - Design for reconstruction/reuse – new buildings reuse materials from previous structures
 - Understand waste characteristics from each region
 - Involving younger adults/children
 - Invest more in education or build policies first?
 - More institutional expertise
 - Articulate and value externalities
 - True cost of ownership (packaging and products)
 - Incentives for reusable products
 - Product stewardship
 - Landfill economics → value on disposal, land
 - New economic system
 - Seeing example of landfills as resource (e.g. mining)
 - Connecting agriculture with materials management
 - Food waste as energy
 - Whey management
 - Bold enforcement and policy decisions with policy actions
 - More efficient waste collection
 - More focus on education → sustainability / green technologies
 - Use schools as examples
 - Develop local markets for recyclables → self reliance by regions
 - Eliminating middleman in recycling
 - Knowing what we have and what we are capturing → data/knowledge
 - Learn from other places (e.g. Europe)
 - Understand waste characteristics from each region
- Measurements
 - Landfills stop expanding
 - Baseline data → understand what we're measuring
 - Recycling revenue > recycling costs
 - Increase in private sector recycling
 - Generating tonnage – Finger Lakes region baseline data
 - Growth in private sector industries that use recycling feed stocks
 - Haulers hauling less; less money spent
 - Recycling done under the radar – scrap trucks
 - Consumer choices change through marketing → balance between marketing and policy
 - New learning outcomes around sustainability
 - Total waste material decreasing

- 2009 EPA MSW report
- Total volume of solid waste decreasing
- Rate of recycling increasing in economically distressed areas
- Job creation in this field

- Indicators – Transportation
 - 4a hybrid → reduction in materials use
 - 4a / 4b
 - 4d: no need for “per vehicle” → overall
 - Policy on importing waste → feedstock to local supply chain
 - 4a: total and per capita
 - 4b: solid waste diverted per capita
 - Generating P&L for region → business plan
 - 4f = important
 - Look at waste categorically
 - Build on existing businesses (e.g. packaging)
 - How much materials waste is sent out of the region
 - Timeline of reduction (DEC)
 - Future costs

Subject Area Lead Contact Information

- If you have specific question for the technical lead for Materials and Waste Management, please contact:

Mark Lichtenstein, Syracuse COE
mlichenstein@syracusecoe.org

Next Steps

- Next Stakeholder meeting is Monday, November 19th from 1-4pm.
 - Discussion on ‘Story of Place’, indicators and targets
 - Location TBD
 - Agenda will be sent out at least one week prior.

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

Finger Lakes Regional Sustainability Plan

FUNDED BY: NYSERDA – CLEANER, GREENER COMMUNITIES PROGRAM

Agenda

- 1. Welcome and Introductions**
- 2. Introduction to the project**
- 3. Stakeholder Group**
- 4. Visioning**
- 5. Sustainability Indicators**
- 6. Next steps**

PROJECT INTRODUCTION

Project Introduction

Background: Cleaner-Greener Communities Program:

- Announced by Governor Cuomo in his 2011 State of the State Address
- CGC supports the creation/implementation of regional sustainability plans
- Two phase program:
 - Phase I: Regional Sustainability Planning Grants (\$10 million)
 - Phase II: Regional Sustainability Plan Implementation Grants (\$90 million)
- Phase I is currently underway in all regions and Phase II is expected to launch in early 2013

Climate Change Commitment:

“reduce greenhouse gas emissions to 80% below 1990 levels by 2050”

Project Introduction

Sustainability Plan Scope (Phase 1):

- **Baseline assessment of the region including Green House Gas (GHG) Inventory for the Region**
- **Incorporation of existing local planning efforts**
- **Long-term and short-term sustainability goals**
- **Climate change adaptation**
- **Identification of necessary actions**
- **Implementation strategy**
- **Stakeholder involvement**

Project Introduction

Phase II:

- Launches early 2013
- Three annual rounds of ~\$30 million
- Will fund projects that
 - Reduce GHG emissions
 - Support the achievement of the region's sustainability goals as identified in their plans
 - Are not eligible for current NYSERDA offerings
 - Prioritized by their regional planning team

Project Introduction

Things to Remember:

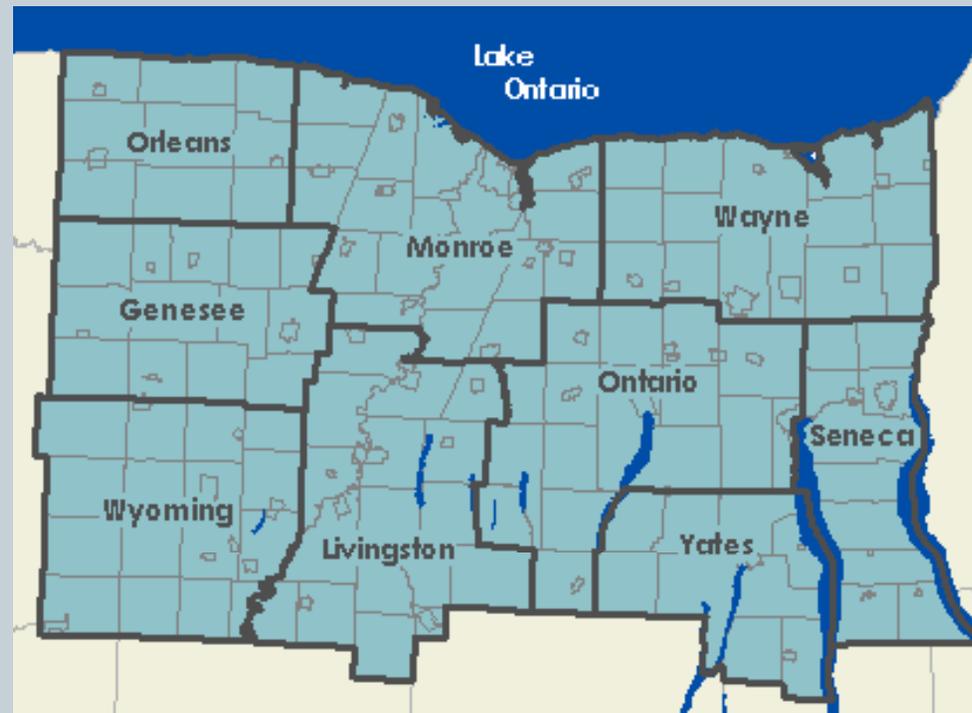

- The plan is not a bid for Phase II funds
- Unique opportunity
- Looking for a truly comprehensive planning process
- Must be realistically implementable
- Alignment with Regional Economic Development Plan
- This is your plan

Project Introduction

Finger Lakes Region:

- Monroe
- Orleans
- Genesee
- Wyoming
- Livingston
- Ontario
- Yates
- Seneca
- Wayne

Project Introduction

Schedule:

| TASK | 2012 | | | 2013 | | |
|---------------------------------------|---------|----------|----------|---------|----------|-------|
| | October | November | December | January | February | March |
| Baseline Assessment | | | | | | |
| Stakeholder Meeting #1 | X | | | | | |
| Sustainability Indicators / Inventory | | | | | | |
| Target Establishment | | | | | | |
| Stakeholder Meeting #2 | | X | | | | |
| Public Meeting #1 | | | X | | | |
| Implementation Strategy | | | | | | |
| Stakeholder Meeting #3 | | | | X | | |
| Public Meeting #2 | | | | | X | |
| Draft Sustainability Plan | | | | | | |
| Final Sustainability Plan | | | | | | |

STAKEHOLDER GROUP

Materials and Waste Management Stakeholder Group

Mission Statement:

The **Materials and Waste Management** Stakeholder Group is tasked to evaluate representative waste and materials management practices throughout the Finger Lakes region and determine strategies to reduce the waste produced and stored; and to reduce GHG emissions associated with waste management. The Plan will assess things such as:

- A representative set of local recycling policies;
- Landfill methane capture and disposal;
- Energy recovery from accumulated waste;
- Composting programs;
- Strategies for decreasing the amount of waste incinerated; and
- Programs that incentivize the reuse of construction waste.

Materials and Waste Management Stakeholder Group

Role:

- Input into indicators and identifying data sources (meeting 1)
- Discussion of targets (meeting 2)
- Implementation strategies (meeting 3)
- Review draft report

Other Members? Have them email me at tara.boggio@tylin.com or can find link through project website.

VISIONING

Visioning

What is your vision for Materials and Waste Management for this region for the future?

Visioning

How would you know if we are heading there?

SUSTAINABILITY INDICATORS

Sustainability Indicators

Direction from NYSERDA regarding indicators

Sustainability Indicators

A. Common Indicators

4A: Waste Management – Total Solid waste generated per capita

.

4B: Waste Management – Solid waste diverted (i.e. not landfilled or exported) per capita

Sustainability Indicators

B. Secondary Indicators

4C: Waste Management – Percentage of total municipal solid waste generated that is landfilled, combusted, or exported.

4D: Waste Management – Annual energy use of waste collection fleet per vehicle – by fuel type.

4E: Waste Management - Public participation in waste management plans and actions

Sustainability Indicators

B. Secondary Indicators cont.

4F: Waste Management - Cost of waste management method per metric ton of waste

Sustainability Indicators

OTHER Indicators? Such as:

- **Job creation potential of options**
- **Highest and best use data availability**
- **Policy development and enforcement capability**
- **Etc.**

NEXT STEPS

Next Steps

Next stakeholders meeting:

WHEN: Week of Nov 13-15th (Tues-Thurs)

WHAT: Discussion on “Story of Place” and targets

Meeting minutes and agenda for next meeting within next 2 weeks

THANK YOU

| | | |

Welcome & Introductions

- Consultant team members – C&S, Wendel, TYLI

Introduction to the project

- See power point presentation from October 9th for introductory comments on the project.

Stakeholder Group

- See power point presentation from October 9th
- Website now live at www.sustainable-fingerlakes.org
- Members can join more than one stakeholder group.

Indicators & Targets

- 3-5 indicators are required to be approved by NYSERDA
- Attendees were asked to engage in a visioning exercise to think about their issues and needs as well as a vision for transportation, land use, and livability in the future to help inform discussion on potential indicators.

- Issues, needs, & future considerations
 - Accessibility – in your area, convenience to transit
 - Access to fresh produce – calculate in miles
 - Safety
 - Emissions
 - Public health
 - Access for senior citizens
 - Re-envisioning public transportation
 - Economic development – equity, health
 - Air quality – Green House Gas (GHG) Emissions (People, Places, Prosperity)
 - Car ownership not necessary
 - Options in mobility
 - Improve housing quality/availability of housing
 - Invest in developed areas – prioritize existing developed areas; avoid greenfields
 - Redevelopment of existing structures (commercial, industrial, residential)
 - Encourage employment and entertainment opportunities closer to populated areas
 - Lower vacancies
 - Expansion of alternate fueling stations
 - Identify and target GHGE sources
 - Multi-modal
 - Airports in greater demand for corporate business travel (more so in smaller airports)
 - Travel corridors – investments in transportation and land use infrastructure
 - Enhancement of greenspace corridors
 - Linkages
 - Renewable energy systems
 - Wind development – fracking, road construction, and land use issues/concerns
 - Regional growth and transparency through zoning requirements
 - Means to correlate/coordinate municipal land use regulation, plans, and policies (better regional planning)
 - Green technologies
 - Soils – protect prime farm soils(need for successful agriculture growth)
 - Definition of Liability
 - Quality of life
 - Walkability
 - Affordability
 - Safety
 - Diverse communities (people)
 - Bio diversity
 - Community
 - Green space
 - Air quality

- Access to recreation
 - Quality of education
 - Access to services and needs
 - Connectivity
 - Definition of Access – Convenience, Affordability, Ease and Utilization. Transportation options
 - Development is commensurate with infrastructure; acknowledgement of constraints of current infrastructure
 - Recognize difference between needs/issues in urban areas vs. rural areas
 - Energy costs/needs – energy efficiency of buildings and affordability
 - Limit of negative impacts on current infrastructures
 - Awareness and outreach– education people in communities with resources available to them
 - Communication technology
 - Efficient use of water ways – shipping sector
 - Maintenance of all forms of infrastructure
 - Planning for cumulative impacts (assessment)
 - Land use impacts of water and sewer (growth incentives)
 - Framework – investment decisions
 - Drainage – older system; upgrades?
 - Inventories of GHGE - contribution of various land uses and modes of transport
 - Intelligent transportation systems
 - Make better use of technology
 - Non-structural infrastructure solutions
 - System efficiency
 - Tree protection – carbon sinks
 - Brownfield redevelopment
- Things to consider when evaluating indicators:
 - Required indicators
 - Sustainable solutions
 - Protect environment
 - Influenced by government and climate
 - Ways to measure/achieve goals
 - NYSERDA's common and secondary indicators – those not on these lists will need to be pre-approved by NYSERDA
 - How to track/monitor indicators
 - Can we replicate each indicator in every region?
 - Consistent in all counties/regions
 - Is data available to measure? ie. Existing data – data collection not part of this effort
 - Selection of indicators: needs/issues per group, importance, clear and informative information that would indicate changes or improvements that would not be seen through the required indicators
- Indicators – Transportation
 - Percentage of commuters by alternative modes (required)*
 - VMT per capita (required)*
 - Travel time/length (miles) per capita

Finger Lakes Regional Sustainability Plan
Funded by: NYSERDA – Cleaner, Greener Communities Program

- Fuel consumption/capita (gasoline vs. diesel)*

- Transportation cost per household income

- Indicators - Land Use
 - Land-use Patterns (3A –required)*
 - Percentage of redevelopment (3B)
 - Percentage of jobs and housing occurring inside municipal centers (3C)

Subject Area Lead Contact Information

- If you have specific question for the technical lead for Transportation, Land Use, and Livability, please contact:

Wendy Salvati, Wendel-AE
wsalvati@wd-ae.com

Next Steps

- Next Stakeholder meeting is Wednesday, November 14th from 9am-noon.
 - Discussion on ‘Story of Place’, indicators and targets
 - Location TBD
 - Agenda will be sent out at least one week prior.

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

STAKEHOLDER GROUP

Transportation, Land Use, and Livability Stakeholder Group

Mission Statement:

The **Transportation and Land Use** Stakeholder Group is tasked to evaluate existing transportation networks within the Finger Lakes region and consider improvements that would provide more efficient system operation, alternative fuel vehicles and the infrastructure to fuel them, and additional/enhanced travel choices such as public transportation, ridesharing, complete streets, and bicycle and pedestrian pathways. At the same time, this group is looking at the land-use planning components, which are interrelated, and interdependent on transportation. The Plan will:

- Evaluate potential programs to encourage the use of more efficient fuels, vehicles, and modes of transportation, as well as alternatives to driving alone;
- Address the necessary investments in street, highway, transit, and fueling infrastructure that would support and complement the expansion of transportation choices; and
- Identify potential transportation solutions that would improve air quality, reduce vehicle miles traveled, reduce travel times, support transit-oriented development, reduce runoff from roads, and improve service for historically marginalized populations.

Transportation, Land Use, and Livability Stakeholder Group

Mission Statement:

- Align infrastructure investments to support equitable land-use development;
- Encourage the expansion of location-efficient housing that increases access to employment centers and transportation options;
- Stimulate investment in mixed-use development and redevelopment of land in existing communities;
- Protect natural ecosystems; and
- Prevent unsustainable use of natural resources.

Strategies will be addressed for urban, suburban, and rural communities to use land and transportation systems efficiently and sustainably while providing economic growth and quality of life for their residents.

Transportation, Land Use, and Livability Stakeholder Group

Role:

- Input into indicators and identifying data sources (meeting 1)
- Discussion of targets (meeting 2)
- Implementation strategies (meeting 3)
- Review draft report

Other Members? Have them email me at tara.boggio@tylin.com or can find link through project website.

SUSTAINABILITY INDICATORS

Indicators and Targets

Direction from NYSERDA regarding indicators:

1. Choose at least one common indicator for each focus area for inclusion in your sustainability plan
2. There are five indicators that all of the regions are required to use. These indicators allow some information to be tracked across the state and to ensure that the CGC program is doing its part to support larger national efforts. Regions will not be required to choose additional indicators in these focus areas. These indicators will count as your required common indicator in each of the focus areas that they cover.
3. Regions may also choose to add other indicators that they feel are appropriate to establish a baselines and targets for improvements in their region.

Sustainability Indicators

Direction from NYSERDA:

Required Indicators

2A: Transportation – Overall – Total percentage of people commuting via walking, biking, transit, and carpooling

This indicator provides a view to access to alternative modes of transportation.

2B: Transportation – Overall – Vehicle miles traveled per capita

This indicator provides a view to automobile usage in a region.

3A: Land Use & Livable Communities – Land-use Patterns – Per capita land consumption

This indicator correlates to environmental consumption .

Sustainability Indicators

OTHER Indicators

- Consideration of constraints of the data – is data available (historical, current, future)?
- Based on needs and issues relevant to the region
- Can targets be established and met with projects?

NEXT STEPS

Next Steps

Next stakeholders meeting:

WHEN: Week of Nov 13-15th (Tues-Thurs)

WHAT: Discussion on “Story of Place” and targets

Meeting minutes and agenda for next meeting within next 2 weeks

THANK YOU

Welcome & Introductions

- Consultant team members – C&S, Genesis, TYLI

Introduction to the project

- See power point presentation from October 10th

Stakeholder Group

- See power point presentation from October 10th
- Website now live at www.sustainable-fingerlakes.org
- Members can join more than one stakeholder group.

Indicators & Targets

- 3-5 indicators are required to be approved by NYSERDA
- Attendees were asked to engage in a visioning exercise to think about their vision for water management in the future.
- Visioning:
 - Eco-system viability
 - Natural resource conservation
 - Identify green network – natural water bodies and storm water systems, piping systems – cleaner water, habitats, operating in a natural way so we can conserve
 - Natural approaches

- Change the way we think about municipal facilities
- Move towards reducing energy to net zero
- Promote Green infrastructure – storm water systems
- Stream bank stabilization – upland/hill management
- Reduce erosion and pesticides into water ways along the region (sediment particles, pollutants, etc.)
- Promote Regional coordination between water shed municipalities – land use ordinances
- Maintain quality and sustainability of inflow into major water bodies
- Be aware of surface water quality
- Promote recharge of clean water ground water
- Centralized treatments – infrastructure
- Increase quality/performance of on-site waste water treatment (uniform)
- Be aware of water quality and nutrient loadings
- Be aware of surface pollution – top of list of pollutants
- Test soils before fertilizing to see if needed
- Reduce waste water from facilities
- Promote good water management as part of economic development
- Enforce all policies
- Promote reasonable scale of community, neighborhood, homes, etc. within water shed (diversity)
- Develop a baseline – gather data, information sharing
- Genesee River watershed
- Innovation to food processing systems – overlapping issue
- Control invasive species
- Support public education/outreach – green job creation, sustainable products
- Promote access to resources – public
- Support Green infrastructure – residential (retrofit)
- Monitor rain fall, storm runoff, etc.
- Supply/demand
- Examine/quantify the regional water balance
- Promote awareness of our freshwater resources
- Can we accommodate new construction needs
- Water protection
- Conserve water – be more efficient
- Educate people about the value of water
- Land use policies – enforce
- Dedicate funding for data collection
- Replace old water systems
- Discourage building in flood plains – leave alone and let them do their jobs
- Promote water quality
- Measurable change, reporting stream corridor
- Local level involvement
- Surveys
- Be aware of how water is being use - consumption vs. non-consumption

- Measurements
 - Teaching awareness between agencies and institutions
 - Communities learning on their own or by an education campaign
 - Data base clearing house
 - Volume and quality being distributed to communities

- Indicators
 - Residential use per capita
 - Industrial use per capita
 - Agriculture use vs. irrigation/acre
 - Crop vs. animal
 - Quantity vs. quality
 - Water withdrawal survey/data
 - 5A – only use some sectors, modify description
 - Public distribution
 - Stream improvements – higher standards
 - 5B – percentage of impaired water with number of TMDL implements/in place
 - 5D - Natural resource consideration
 - Biology elements vs. chemical elements
 - Recharge vs. runoff – base flows
 - 5J – include waste water tracking and how it makes its way to the treatment plant
 - Hydro power (strategy – not funded by NYSERDA)
 - 5C – track towards energy self-sufficiency
 - Number of water shed plans – tracking
 - Peak demands
 - Metering – up to date
 - Accounting for inaccessible water
 - Public/private supply – downstate issue

Subject Area Lead Contact Information

- If you have specific question for the technical lead for Water Management, please contact:

John Camp, C&S
icamp@cscos.com

Next Steps

- Next Stakeholder meeting is Tuesday, November 13th from 11am-2pm.
 - Discussion on 'Story of Place', indicators and targets
 - Location TBD
 - Agenda will be sent out at least one week prior.

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

STAKEHOLDER GROUP

Water Management Stakeholder Group

Mission Statement:

The **Water Management** Stakeholder Group is tasked to evaluate water infrastructure needs, especially those associated with investment in other sectors including transportation, housing and land use/livable communities.

The Plan will evaluate the surface water quality impacts of water, transportation, and housing infrastructure projects to ensure that investments in water management systems support the sustainability of the community and can be sustained over the long term.

The Plan will consider programs and practices to improve water use efficiency or appropriately reuse water, and will address the preservation of the region's water resources, and reduction of energy use and GHG emissions associated with movement of water.

Water Management Stakeholder Group

Role:

- Input into indicators and identifying data sources (meeting 1)
- Discussion of targets (meeting 2)
- Implementation strategies (meeting 3)
- Review draft report

Other Members? Have them email me at tara.boggio@tylin.com or can find link through project website.

VISIONING

Visioning

**What is your vision for Water Management
for this region for the future?**

Visioning

How would you know if we are heading there?

SUSTAINABILITY INDICATORS

Indicators and Targets

Direction from NYSERDA regarding indicators:

1. Choose at least one common indicator for each focus area for inclusion in your sustainability plan
2. There are five indicators that all of the regions are required to use. These indicators allow some information to be tracked across the state and to ensure that the CGC program is doing its part to support larger national efforts. Regions will not be required to choose additional indicators in these focus areas. These indicators will count as your required common indicator in each of the focus areas that they cover.
3. Regions may also choose to add other indicators that they feel are appropriate to establish a baseline and targets for improvements in their region.

Indicators and Targets

Direction from NYSERDA including common indicators:

A. Common Indicators

5A: Water Management - Water demand per capita, by sector

This indicator provides a breakdown of water usage with respect to the population as well as each sector of use.

5B: Water management - Total Number of Impaired Waters

This indicator quantifies those waters that do not support appropriate uses and that may require development of a Total Maximum Daily Load (TMDL)

Indicators and Targets

Direction from NYSERDA including common indicators:

B. Secondary Indicators

5C: Energy use by water and sewer utilities per million gallons supplied or treated

This indicator is correlated to water usage.

5D: Water management - Total area under conservation agreement per watershed unit-area

This indicator provides an overall view of watershed conservation efforts.

5E: Water management - Ratio or water withdrawn to renewable supply

This indicator examines the regional water balance – measure of renewable water supply versus consumption.

5F: Water management - Surface and ground water quality

This indicator tracks the overall quality of drinking water sources in the region.

Indicators and Targets

Direction from NYSERDA including common indicators:

B. Secondary Indicators

5G: Water management - Percentage of wastewater effluents with tertiary treatment

This indicator measures efforts to remove nutrients from wastewater effluents.

5H: Water management - Improvement in Waterbody Inventory/ Priority Waterbody List (WI/PWL) rating that is developed through Rotating Integrated Basin Studies (RIBS)

5I: Water management - Percent impervious surface area relative to total developed and hardscaped surface

This indicator measures the percentage of impervious (built and hardscaped) surfaces in the region, which is correlated with stormwater runoff generation.

Indicators and Targets

Direction from NYSERDA including common indicators:

B. Secondary Indicators

5J: Water management - Infrastructure reliability and efficiency

This indicator looks at the proportion of water that is produced but not delivered due to of leaks, broken infiltration and inflow, or otherwise inefficient infrastructure.

5L: Water management- % of customers that are metered

This indicator would address the ability of the region to measure the water used by its residents.

Indicators and Targets

OTHER Indicators?

- Consideration of constraints of the data – is data available (historical, current, future)?
- Can targets be established and met with projects?

NEXT STEPS

Next Steps

Next stakeholders meeting:

WHEN: Week of Nov 13-15th (Tues-Thurs)

WHAT: Discussion on “Story of Place” and targets

Meeting minutes and agenda for next meeting within next 2 weeks

THANK YOU

Finger Lakes Regional Sustainability Plan

Funded by NYSERDA - Cleaner, Greener Communities Program

Welcome & Introductions

- Consultant team members – C&S (Tim Hughes & Aileen Maguire), edr (Andy & Charlie Greene), Regenesys (Joel Glanzberg & Ben Haggard), TYLI (Tara Boggio & Sarah Yap), Erin Henry (Harvard Business School)

Story of Place Framework and Exercise

- See power point presentation from November 14th.
- Sustainability Definition:
 - **Sustainability** involves three interrelated components: environment, economy and society.
These pillars are linked – the stability of one reinforces the strength of the other two. Sustainability planning for a community, local government or region integrates the three pillars of sustainability through collaborative work within a framework that supports long-term considerations, fosters innovation, and results in a healthy, safe and affordable place to live, work and play for all residents.
- 5 Capitals:
 - Natural, Social, Human, Built/manufactured, and Financial Capital
- Regional Themes/Goals:
 - Improve accessibility, connectivity and mobility
 - Preserve, protect and improve natural resources
 - air quality
 - water quality
 - prime farmland
 - forests
 - open space
 - Maintain, protect and improve the functionality and disaster resiliency of existing infrastructure systems and acknowledge the links between systems
 - transportation
 - water
 - energy

- communication
- solid waste
- Improve public health
- Respect local planning efforts and retain individual community character
- Build partnerships between local governments, the private sector, regional institutions and the public
- Build sustainability capacity and understanding through outreach and education

***Additions to Themes/Goals:**

- Access to food services
- Environmental sensitivity
- Interconnection between natural resources
- Quality of life to public health

Story of Place

Joel Glanzberg from Regenesys presented the draft Story of Place for the Finger Lakes Region. He noted that the story is generated from several sources: extensive historical research, dozens of phone interviews with a variety of people from the Finger Lakes area, several site visits and targeted input from the consultant team. The following is a summary of this presentation.

General Comments on why we look at the Story of Place:

- Places have reoccurring patterns (socially, economically, culturally) – and identifying these patterns is helpful to knowing who we are as a region
- Seeing region as a whole helps to develop unique attributes and find our natural strengths – something to build from
- Finger Lakes Observations are as follows:
- Watersheds – natural boundaries (Lake Ontario, Finger Lakes, Great Lakes) are different than political boundaries.
- Lake Ontario is unique versus the other Great Lakes
 - Lower water level due to Niagara Falls
 - All Great Lakes drain into Lake Ontario
- Shale and limestone help geological elements for our Region – prime farmland
- Glacier movements created Lake Ontario and land carved by 5,000 ft of ice
- Great Lakes Plain – how things moved
 - Rail and vehicle routes (straight through mountains) = roadway across the state
 - Animal trails
 - A place where people and products grew and adapted – enrichments
- Eco-Region – plants and animals (low lands)
- Region is like an eddy – or a wetland in a watershed - place where things filter in, take root, adapt, and transform before being release back out
- UN/FAO soil map of the US – our Region (-1) very good soil, rich soils – all due to climate and water, first large open space accessible to people, crops, and animals, also is a good source of agriculture

- Native trees – black spruce, burnt oak, white cedar, eastern white pine, chestnut – mild soil climate – good
- 'People of the Longhouse' settlers in NY
- Gateway to mid-west
- In-between waterways
- Many people and industries populated our Region – people, towns/villages, agriculture, industries
- Connections – built NY as a port and NYC as an international port
- Erie Canal built on top of Mohawk Trail – Civil Engineering was developed and learned in England – developed technologies for future uses
- Brought art and education to the region
- Flour city – produced grain (wheat) – water power source
- First industrial city to be fed by water access/connections
- Pioneer in agriculture
- Religious movements – Spiritualism, 7th Day Baptist, Mormon, Methodists (Shakers, Quakers) taught morals, circuit riders to churches
- Birth of democracy – formed the 'Great Law of Peace', Peace Makers
- 5 Nations of the Iroquois – lead to our Constitution (Franklin and Jefferson both learned and used the system)
- Large movements happened here – Women's Rights, Abolition, etc.
- Industries – Seneca Falls – technology developed for pumps – water source – pump capital of the World – Fire Engines
- Wegman's, Kodak, Jell-o, Bausch & Lomb, Gannett, Western Union, Xerox, French's, Champion, Genesee Brewing Company
 - Wegman's – local foods, informative about food, community ties
 - Kodak – film, digital cameras
 - Xerox – printers
 - Champion – first hooded sweatshirt, reversible t-shirt, mesh fabric
 - Genesee Brewing Company – wheat industry , Whiskey Rebellion
 - Bausch & Lomb - contacts
- Many of the companies here acted as that eddy – they took ideas, developed them further, than sent them out to the country/world as products.
- Discussion:
 - How would this way of understanding the region change how you talk about and work on your subject area?
 - If you were to make this change, what new possibilities show up?
- Reflections/Feedback:
 - Pertains to geological, economical, and cultural events
 - Compelling story
 - Seeing the forest through the trees
 - Fertile growth and innovation
 - Rise of Kodak as an aspiration (also decrease)
 - High risk takers move West
 - Small and Medium size farms (scale)
 - Climate change/mitigation/adaption

- Shifts in industry, residential, and business
- Innovation Incubator:
 - **'NATURAL INCUBATOR'**
 - Not unique for this region – everyone wants to be innovative
 - Local agriculture supplying larger population, not just families
 - Resource base higher than the standard
 - Prime farmland (soils), water, agriculture, infrastructure = resources
 - How do we sustain ourselves now
 - Natural innovators – land part of our history and culture; community based
 - Long living businesses
 - Venture capital as a community
 - Innovation the same as Sustainability?
 - Adaption – build resilience; how do we do this, circumstances?
 - What factors allow businesses to flourish
 - Economic development – diversity in thoughts/ideas
 - Mix of people/skills – uniqueness
 - Sustainable economy – business sizes for the area/population
 - Transitioning
 - Underground activity of small business - not recognized but has always been there
 - Lack of respect for manual labor – recognized strengths
 - Recognition of land worth
 - How to stimulate and engage young people
 - Do we want to become a benchmark? Needs to be different everywhere, uniqueness
 - Economic development – socially help adapt, technology, methodology, education building values/ethics
 - Education
 - Understanding values
 - Creating networks
 - Challenges – byproducts, raw material inputs – better way to manage – do not use up all our resources – stainable ways
 - Impacts
 - Who is responsible?
 - Re-discovering ourselves
 - Land based vs. animal
 - Nourish to level out the region
 - Waste runoff – be aware of (clean water)
 - Be part of the solution not the problem
 - Commitments

Place Sourced Indicators: End State

- Agriculture is the producer of clean water, habitat, and maintaining corridors
- Resources available for innovation
- Integrity of our needs coming from within regional food shed
- Food cluster that is integrated and sustainable
- Policy issues
- Regional product our focus
- Organic products – price comparisons

- Place a value on our eco system services – mechanism of measurement
- True value of cost identified
- Net exporter of increasingly good products
- Access of food in our area
- No urban farms due to city policies
- Local entrepreneurial infrastructure supports sustainable agriculture and forestry (Cornell University)

Indicators

- No net loss of agriculture land (net gain?)
- Inputs go down while soil health goes up
- Increased number of food crops and farmer markets
- Increase in viability of farms
- Increase in urban farms and gardens

Guiding Principles

- Regionally produced takes priority
- Support self-reliance of land based enterprises
- Restorative/regenerative practices
- Valuation and fostering of critical diversity (scale/bio) in small and medium farms
- Encourages responsible farming/stewardship
- Local needs and resources are in sync
- Builds capacity to monitor, guide, and change
- Reinforces idea of community identity
- Balances incentives/regulation in appropriate way to drive change

General Discussion

- Regional producers take priority
- Better thinking, better designed projects
- Increasingly self-sufficient land based enterprises
- Addressing GHGE
- Restoration/regeneration of practices
- Valuing the scale of farms – diversity
- Encourage the return/viability of all size farms
- Critical diversity of scale and value of farms
- Evaluation of small and medium farms
- Large farms not sought out to be as important to focus on – how to make this better
- Natural system encompassed into the 5 Capitals
- Encourage responsible farming – good stewardship
- Self-reliant system – change in technology uses
- Investments – re-ensuring reinvestments from small and medium farms
- Technologies
- Management skills increase when farms grow
- Local needs and resources are in sync
- Builds capacity to monitor, guide, and change

- Building a community/identity (re-enforces goals)
- Regulation and using them correctly
- Best management practices
- Rationalize system to use incentives and polices to work together

Subject Area Lead Contact Information

- If you have specific questions for the technical lead for Agriculture and Forestry, please contact:

Charlie Greene, edr Companies
cgreene@edrcompanies.com

Next Steps

- Next Stakeholder meeting is January 17th (Thursday) – it will be an all day workshop with all 6 stakeholder groups coming together during portions of the day, and breaking out into the specific groups at other times. Location TBD. Likely timeframe will be 9am-4pm. More details forthcoming.
- Email with draft indicators summarized and potential evaluation criteria outlined expected to be sent week of Dec. 17th for your review and comment.
- Public meeting early January. Help get people excited and involved by encouraging them to attend the public meeting. Check the website www.sustainable-fingerlakes.org for more information on dates and locations in the coming weeks.

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

Finger Lakes Regional Sustainability Plan

Stakeholder Meeting #2

FUNDED BY: NYSERDA – CLEANER, GREENER COMMUNITIES PROGRAM

Meeting Agenda

- 1. Welcome and Introductions**
- 2. Story of Place Framework and Exercise**
- 3. Place Sourced Indicators**
- 4. Guiding Principles**
- 5. Next steps**

INTRODUCTORY ITEMS

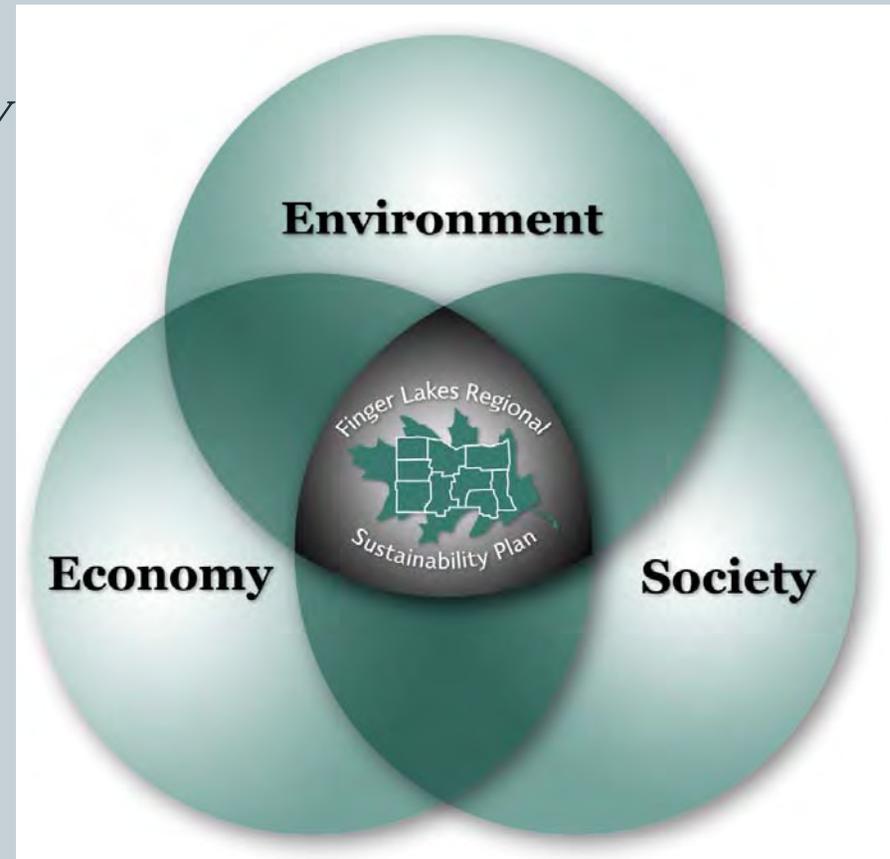

Sustainability Definition

Sustainability *involves three interrelated components: environment, economy and society.*

These pillars are linked – the stability of one reinforces the strength of the other two. Sustainability planning for a community, local government or region integrates the three pillars of sustainability through collaborative work within a framework that supports long-term considerations, fosters innovation, and results in a healthy, safe and affordable place to live, work and play for all residents.

Project Framework

5 Capitals

1. Natural capital
2. Social capital
3. Human capital
4. Built/manufactured capital
5. Financial capital

Project Framework

NYSERDA Plan Purpose

The Plan, aligned with the Finger Lakes Regional Economic Development Council (REDC) Strategic Plan – Accelerating Our Transformation, will improve the economic and environmental health of the region and thereby improve the quality of life in the Finger Lakes.

NYSERDA Plan Objectives

- build upon existing and planned sustainability efforts in the Genesee-Finger Lakes Region (Region) by establishing a framework for infrastructure investment decision making,
- outline specific and tangible actions to reduce greenhouse gas (GHG) emissions by 80 percent from 1990 levels by the year 2050,
- inform municipal policies and plans, and
- identify recommendations for adapting to the effects of climate change in a manner that promotes robust, high quality economic growth.

Project Framework

Regional Themes/Goals

- Improve accessibility, connectivity and mobility
- Preserve, protect and improve natural resources
 - ✓ air quality
 - ✓ water quality
 - ✓ prime farmland
 - ✓ forests
 - ✓ open space
- Maintain, protect and improve the functionality and disaster resiliency of existing infrastructure systems and acknowledge the links between systems
 - ✓ transportation
 - ✓ water
 - ✓ energy
 - ✓ communication
 - ✓ solid waste

Project Framework

Regional Themes/Goals (cont')

- Improve public health
- Respect local planning efforts and retain individual community character
- Build partnerships between local governments, the private sector, regional institutions and the public
- Build sustainability capacity and understanding through outreach and education

The Six Nations Confederacy was and is likened to a longhouse.

We the People
Amich

WOMEN'S RIGHTS

The equality of Haudenosaunee women was assured from the formation of the Confederacy. The first person to accept the Peacemaker's message was a woman, *Jikonhsaseh*. She secured the rights, responsibilities, and roles Haudenosaunee women continue to enjoy. Matrilineal heritage in Haudenosaunee society, where clan and nation are inherited through mothers, establishes great respect for women's contributions to society.

The freedom of Haudenosaunee women and the power they wielded in their political life influenced the women's suffrage movement through leaders such as Elizabeth Cady Stanton, Matilda Joslyn Gage, and Lucretia Mott. Their personal relationships with people from the Haudenosaunee nation were a great inspiration to them in their suffrage campaign.

A BALANCE OF POWER

Haudenosaunee women and men have complementary roles. By sharing and checking one another's responsibilities, the clan mother and the chief achieve a balance of power. Through their entwined civil roles, they work to preserve peace for the clan, the nation, and ultimately for the Confederacy of the Six Nations.

- Build sustainability capacity and understanding through outreach and education

Story of Place

Joel Glanzberg from Regenesys presented the draft Story of Place for the Finger Lakes Region. He noted that the story is generated from several sources: extensive historical research, dozens of phone interviews with a variety of people from the Finger Lakes area, several site visits and targeted input from the consultant team. The following is a summary of this presentation.

General Comments on why we look at the Story of Place:

- Places have reoccurring patterns (socially, economically, culturally) – and identifying these patterns is helpful to knowing who we are as a region
- Seeing region as a whole helps to develop unique attributes and find our natural strengths – something to build from

- Finger Lakes Observations are as follows:
- Watersheds – natural boundaries (Lake Ontario, Finger Lakes, Great Lakes) are different than political boundaries.
- Lake Ontario is unique versus the other Great Lakes
 - Lower water level due to Niagara Falls
 - All Great Lakes drain into Lake Ontario
- Shale and limestone help geological elements for our Region – prime farmland
- Glacier movements created Lake Ontario and land carved by 5,000 ft of ice
- Great Lakes Plain – how things moved
 - Rail and vehicle routes (straight through mountains) = roadway across the state
 - Animal trails
 - A place where people and products grew and adapted – enrichments
- Eco-Region – plants and animals (low lands)
- Region is like an eddy – or a wetland in a watershed - place where things filter in, take root, adapt, and transform before being release back out
- UN/FAO soil map of the US – our Region (-1) very good soil, rich soils – all due to climate and water, first large open space accessible to people, crops, and animals, also is a good source of agriculture
- Native trees – black spruce, burnt oak, white cedar, eastern white pine, chestnut – mild soil climate – good
- ‘People of the Longhouse’ settlers in NY
- Gateway to mid-west
- In-between waterways

- Many people and industries populated our Region – people, towns/villages, agriculture, industries
- Connections – built NY as a port and NYC as an international port
- Erie Canal built on top of Mohawk Trail – Civil Engineering was developed and learned in England – developed technologies for future uses
- Brought art and education to the region
- Flour city – produced grain (wheat) – water power source
- First industrial city to be fed by water access/connections
- Pioneer in agriculture
- Religious movements – Spiritualism, 7th Day Baptist, Mormon, Methodists (Shakers, Quakers) taught morals, circuit riders to churches
- Birth of democracy – formed the ‘Great Law of Peace’, Peace Makers
- 5 Nations of the Iroquois – lead to our Constitution (Franklin and Jefferson both learned and used the system)
- Large movements happened here – Women’s Rights, Abolition, etc.
- Industries – Seneca Falls – technology developed for pumps – water source – pump capital of the World – Fire Engines
- Wegman’s, Kodak, Jell-o, Bausch & Lomb, Gannett, Western Union, Xerox, French’s, Champion, Genesee Brewing Company
 - Wegman’s – local foods, informative about food, community ties
 - Kodak – film, digital cameras
 - Xerox – printers
 - Champion – first hooded sweatshirt, reversible t-shirt, mesh fabric
 - Genesee Brewing Company – wheat industry , Whiskey Rebellion
 - Bausch & Lomb - contacts
- Many of the companies here acted as that eddy – they took ideas, developed them further, than sent them out to the country/world as products.
- Why it’s important, biggest challenges
 - Strategic direction
 - Apathy
 - Resources
 - Boom and bust
 - Critical things that are important
 - Knew who they were distinctively – revealed who they are
 - Develop narrative for what our distinctive is (messaging)
 - Embed narrative into everything you do (the story of place)
 - Aligned process
 - Uniqueness
- Discussion:
 - How would this way of understanding the region change how you talk about and work on your subject area?
 - If you were to make this change, what new possibilities show up?
- Reflections/Feedback:
 - Interesting – glaciers and their impacts
 - Proud of the region

- Diversity of business levels and people
- Geography ties to economic development – social and sediment patterns
- Legacy of Indian Nation into Women’s Rights and democracy
- Simplicity of eddy in description of the region
 - East to west movements
 - 2 ventures – flow increase, velocity decreased
 - Continuous innovation – better yourself every time
 - Eddy’s to great educational opportunities
 - Evokes conversation - purpose

Group Exercise

- Local needs for the region to rise to improve/innovate, how to spread the seed, what are the real needs, and how it applies to eddy to current needs
 - What are the projects we can enrich from hearing ‘Story of Place’ (benefits and how to do this)

Projects:

- Eastman Business Park
- Health Science Center
- Golisano Institute of Sustainability (GIS)
- Palace Stone Finger Lakes Enterprise Fund
- Rochester Midtown Tower
- College Town (University of Rochester)
- Multiple Pathways to Middle Skill Jobs
- Finger Lakes Business Acceleration Cooperatives
- Western New York Science Technology Advancement Manufacturing Park (STAMP)
- Seneca Agriculture Green Bio-Park
- Finger Lakes Clinical Quality Incentive Improvement
- Finger Lakes Small Business Accelerator Cooperative

STORY OF PLACE

Pathways to Middle Skill Jobs

Story of place: The Indians had many middle skill jobs. If you weren’t a good middle skill worker, it would be difficult for you to survive. You needed to be skilled with finding plants and medicine. The

first settlers had a great need for middle skill workers with the responsibility of building their own home and grow their food.

We determined a base that traditionally has been resilient and very innovative. Over the last couple of generations, we have devalued middle skills. When we say stop, we need to change the way we talk about those jobs and how we view those apprenticeships. We need to tie them into this continuum in the eddy. You have the ability to get a certificate for a trade and get a great job.

The Region still has a great deal of innovation and commercializing but we need the engineers as well as the middle skill workers to have everything work in unison. The Region has always responded to that and has always integrated innovation with agriculture. Advanced manufactures would love to get someone from agriculture who can fix something.

The continuum in the eddy; we have it running through grade school and beyond college into post-graduate work. Children who have the ability to work with their hands and are more interested in building Lego's. Those kids will not be demeaned. They will be helped and facilitated into areas where they will shine. That way we'll end up with the right people who are able to make these things we need commercialized. We need to make this multigenerational. We have parents and grandparents that had those jobs in large companies or a small company. They were able to make a great living and put kids through college. We need them to talk about why this was important to these kids. We need to have consortiums of industries that are open to taking on apprentices and to spark interest of elementary kids. We need to work with groups like the Finger Lakes Advanced Manufacturing. We want other people coming to those consortiums asking how they do this. We need to develop these pods in all of our regions so when we have opportunities from site selectors or businesses that are expanding.

Western New York Science Technology Advancement Manufacturing Park (STAMP)

We're talking to site selectors looking for mega sites. It doesn't happen every day that you create a mega site. The site that we've designed is a green site. It's utilizing the area well. We're minimizing the wetlands. It's aimed at developing the creative class. It's transformational. There's going to create 10,000 jobs and a 3x with suppliers, so 30,000 jobs. The regional supply chain effect is multiple counties wide. Mega sites want to locate next to R&D sites. We have that. It can create a New York tech, the I-90 tech corridor.

The project will be able to capture the next generation of manufacturing job. They're high skill and high education. We have the educational institutions so we can train them. We can build on the success on the old manufacturing to the new manufacturing. We need to stop thinking in municipal silos. We need to see the benefits throughout the region and western New York.

It is not one of the priorities, it IS the priority.

Stop talking about the death of manufacturing and the loss of those jobs. The past is the past and we need to start thinking of the future.

The economic impact model when you bring in a new company is so significant. We want to leverage the new yogurt companies. We had over 200 direct jobs to Genesee County.

We need to make a transition to being not afraid to fail. Take a risk. We can solve it along the way, just like during the creation of the Erie Canal.

Finger Lakes Business Accelerator Cooperative

This is an original plan is to create a hub and node of incubators, focused on a new incubator. It's combining with the tech incubator and RIT incubator. Then reaching out beyond to create nodes in the counties for people who don't want to come to Rochester or have a hard time getting here. We'll provide them with mentoring and capital. So, not just incubate and provide capital. Now, here's what needs to be modified.

The name is really long. Accelerate was used rather than incubate. But it might be both. The eddying is the incubating part. The accelerate part is leaving the eddy and heading out to the world. One thought was to make this less Rochester centric and less politically definition centric. If you start looking at the history and story of place, the 9 counties is not the story of place, it's the geography, the transportation. We talked about looking to a map of economic influence. Is the economic place really the 9 counties? We can evolve to a geographic area that's based on economic sphere of influence, rather than geographic. One of the things we talked about was describing it as a hub and node concept. We want to see more emphasis on the nodes, rather than the hubs. We're not talking about investing in office space; we're talking about economic development. It opens up for us to be more comprehensive of the industries the accelerator serves, rather than having a single location. Focus on the nodes and diversify of what the accelerator does. One thing we'd like to do is create more community to be the accelerator. An idea is to hold an annual pilgrimage to bring people together for ideas and information sharing. Create a community around the region and entrepreneurship. It is to become more regional and focused.

Democratization would be that the nodes would reach out to the disadvantaged areas. The rural counties could tap into resources they don't have connection to now.

Underline the two way aspect. In one direction, you allow the universities to find out what's needed and have places to build test beds for some of the technology. The second is to use the innovator in different counties, that person would be able to have a means to get into the technology development centers to explore and refine the ideas they have. It becomes a multi-directional network, rather than a purely Rochester centered operation.

One great role the accelerator can play is to inspire entrepreneurship. Have more outreach and marketing to sell the history of entrepreneurship in the region. It can drive people to the resources the accelerator provides.

Golisano Institute of Sustainability (GIS)

The project is to create a new part of the Sustainability Institute. GIS is working on a food processing cluster. One effort is they are trying to provide new technology to reduce waste streams in the cluster. They're trying to help all elements of the industry. There are a couple of partners involved. The point is GIS is very diverse in their capacities. They need equipment to build capacities into the infrastructure and the business community. We have an innovation environment at RIT. When you're designing new businesses, we need middle skills. The local educational facilities can help.

Water was touched on. This region has water. Other regions in the country don't.

Water was just one resources of this area. It's hard to talk about GIS because they touch so many areas. If you take a resource you're concerned about like water, it touches many of the GIS projects.

There was an article about GIS's history being connected to the military. For evolving, you are touching all of these things. Maybe the message is getting mixed. GIS is a resource to farmers, Kodak and manufacturing.

The marketing side, add to the way we talk about it.

They have the technical aspects, but not the marketing side to get it out to the people.

Add an easier way for community members to get involved with these processes.

We have a new building. We need to be purposeful in introducing the LEED building to the community.

Indicators

- Successful commercialization of technologies and association of jobs
- Water quality
- Cost avoidance to natural systems and businesses
- Trained workforce available for diverse employment openings
- New mechanisms for training in education
- Internal guidelines, certifications, and aspiration meets/exceeds third party standards and intentions
- Supply chain leads in sustainability and ties into education system which meets/exceed third party standards and intentions
- Define and mitigate GHG inventories (scoping)

Guiding Principles

- More sustainable educational system by creating partnerships with industries, businesses, and higher educational industries – putting people into right areas of interest. This makes the educational system more robust, resilient, and effective at delivering values to those who rely on it.
- Move towards manifestation and/or evolution of real value – 5 Capitals

Reflections

- Value of Story of Place and connection with economic development
 - Will this last; build on what is already there
 - Ownership
 - Tell the story – connection to the project
 - Characteristics of the area and how it connects
 - No longer a gathering place – how do we get back to that
 - Helps economic development to be sustainable
 - Can this work everywhere?

Subject Area Lead Contact Information

- If you have specific question for the technical lead for Economic Development, please contact:

Carol Sanford, DEGI
interoctave@comcast.net

Next Steps

- Next Stakeholder meeting is January 17th (Thursday) – it will be an all day workshop with all 6 stakeholder groups coming together during portions of the day, and breaking out into the specific groups at other times. Location TBD. Likely timeframe will be 9am-4pm. More details forthcoming.
- Email with draft indicators summarized and potential evaluation criteria outlined expected to be sent week of Dec. 17th for your review and comment.
- Public meeting early January. Help get people excited and involved by encouraging them to attend the public meeting. Check the website www.sustainable-fingerlakes.org for more information on dates and locations in the coming weeks.

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

Welcome & Introductions

- Consultant team members – C&S (Tim Hughes & Aileen Maguire), Regenesis (Joel Glanzberg & Ben Haggard), TYLI (Tara Boggio, W. Scott Copp, & Sarah Yap), Erin Henry (Harvard Business School)

Story of Place Framework and Exercise

- See power point presentation from November 13th.
- Sustainability Definition:
 - ***Sustainability*** involves three interrelated components: environment, economy and society.
These pillars are linked – the stability of one reinforces the strength of the other two. Sustainability planning for a community, local government or region integrates the three pillars of sustainability through collaborative work within a framework that supports long-term considerations, fosters innovation, and results in a healthy, safe and affordable place to live, work and play for all residents.
- 5 Capitals:
 - Natural, Social, Human, Built/manufactured, and Financial Capital
- Regional Themes/Goals:
 - Improve accessibility, connectivity and mobility
 - Preserve, protect and improve natural resources
 - air quality
 - water quality
 - prime farmland
 - forests
 - open space

- Maintain, protect and improve the functionality and disaster resiliency of existing infrastructure systems and acknowledge the links between systems
 - transportation
 - water
 - energy
 - communication
 - solid waste
- Improve public health
- Respect local planning efforts and retain individual community character
- Build partnerships between local governments, the private sector, regional institutions and the public

***Additions to Themes/Goals:**

- Affordability
- Status-quo
- Building small companies up – infrastructure, economics (providing support, base has diversity)
- Economics and diversity
- Build relationship with predecessor

Story of Place

Joel Glanzberg from Regenesi presented the draft Story of Place for the Finger Lakes Region. He noted that the story is generated from several sources: extensive historical research, dozens of phone interviews with a variety of people from the Finger Lakes area, several site visits and targeted input from the consultant team. The following is a summary of this presentation.

General Comments on why we look at the Story of Place:

- Places have reoccurring patterns (socially, economically, culturally) – and identifying these patterns is helpful to knowing who we are as a region
- Seeing region as a whole helps to develop unique attributes and find our natural strengths – something to build from

- Finger Lakes Observations are as follows:
- Watersheds – natural boundaries (Lake Ontario, Finger Lakes, Great Lakes) are different than political boundaries.
- Lake Ontario is unique versus the other Great Lakes
 - Lower water level due to Niagara Falls
 - All Great Lakes drain into Lake Ontario
- Shale and limestone help geological elements for our Region – prime farmland
- Glacier movements created Lake Ontario and land carved by 5,000 ft of ice
- Great Lakes Plain – how things moved
 - Rail and vehicle routes (straight through mountains) = roadway across the state
 - Animal trails
 - A place where people and products grew and adapted – enrichments
- Eco-Region – plants and animals (low lands)
- Region is like an eddy – or a wetland in a watershed - place where things filter in, take root, adapt, and transform before being release back out

- UN/FAO soil map of the US – our Region (-1) very good soil, rich soils – all due to climate and water, first large open space accessible to people, crops, and animals, also is a good source of agriculture
- Native trees – black spruce, burnt oak, white cedar, eastern white pine, chestnut – mild soil climate – good
- ‘People of the Longhouse’ settlers in NY
- Gateway to mid-west
- In-between waterways
- Many people and industries populated our Region – people, towns/villages, agriculture, industries
- Connections – built NY as a port and NYC as an international port
- Erie Canal built on top of Mohawk Trail – Civil Engineering was developed and learned in England – developed technologies for future uses
- Brought art and education to the region
- Flour city – produced grain (wheat) – water power source
- First industrial city to be fed by water access/connections
- Pioneer in agriculture
- Religious movements – Spiritualism, 7th Day Baptist, Mormon, Methodists (Shakers, Quakers) taught morals, circuit riders to churches
- Birth of democracy – formed the ‘Great Law of Peace’, Peace Makers
- 5 Nations of the Iroquois – lead to our Constitution (Franklin and Jefferson both learned and used the system)
- Large movements happened here – Women’s Rights, Abolition, etc.
- Industries – Seneca Falls – technology developed for pumps – water source – pump capital of the World – Fire Engines
- Wegman’s, Kodak, Jell-o, Bausch & Lomb, Gannett, Western Union, Xerox, French’s, Champion, Genesee Brewing Company
 - Wegman’s – local foods, informative about food, community ties
 - Kodak – film, digital cameras
 - Xerox – printers
 - Champion – first hooded sweatshirt, reversible t-shirt, mesh fabric
 - Genesee Brewing Company – wheat industry , Whiskey Rebellion
 - Bausch & Lomb - contacts
- Many of the companies here acted as that eddy – they took ideas, developed them further, than sent them out to the country/world as products.
- Discussion:
 - How would this way of understanding the region change how you talk about and work on your subject area?
 - If you were to make this change, what new possibilities show up?
- Reflections/Feedback:
 - Energy = Character of place
 - Regional resources – secure, recognized, and developed
 - Water – historical use and impact
 - Creation of ideas
 - Energy sources now and future
 - Water energy not just hydro

- Innovation Incubator:
 - Wants to be a leader in Sustainability
 - Expression of the character of place
 - New energy technology ideas
 - Aging grid – micro grids moving forwards, growth in infrastructure
 - Takes a catastrophe to improve technologies – Hurricane Sandy as an example
 - Alternate energy sources – manure, solar, wind, water, etc (spin-off companies to support ideas/technologies)
 - Alternate fuel sources for tractors
 - Energy requirements vs. operations (Farms)
 - Whole cycle – capturing value on the farm or nearby
 - Scale
 - Reduce build costs
 - On-farm processing
 - Costs – less waste due to costs of resources (strengths of ‘home rule’)
 - Educational infrastructure
 - Goals – accomplishments
 - Vulnerability – will cause people to think differently about how to move forward (technology based) – what is the goal? How to protect if something happens
 - Embrace long term
 - Funding power companies – user pays for power
 - Climate cloud cover – how to generate power
 - Public power companies – growth in communities, did not sustain, cost increases, need to buy more at higher rates, has not created something to replace
 - Centralize common uses for power not decentralize like what is going on now
 - Energy conserved always goes to new uses vs. actually conserving

Place Sourced Indicators: End State

- Renewable energies produced – percentage depending on the areas. Energy independence from an increasingly centralized network
- Breakthrough in energy technologies/infrastructure
- Ethics in policies and regulations in Energy – residential financing through mortgages for green technologies/energy (community choices)

Indicators

- Decrease in total energy consumption
- Employment/unemployment number increase/decrease in innovation based businesses
- Affordability
- Education – more hands on innovation

General Discussion

- Resistance based on culture and acceptable alternatives – we have not decided on it - fracking
- Shale levels within the state – how far do we want to dig
- Consistency in moving forward on energy technologies
- Hydro-fracking is ‘innovative’
- More community participation to talk through ideas

- Political boundaries
- Impacts on the whole Region
- Benefits – named based on history of the Region (Albany innovation corridor)

Guiding Principles (Stimulus to Creativity)

- Equal access to innovation and infrastructure in regions
- Thinking long term
- Energy that is reliable, affordable, and environmentally benign
- Our actions enrich rather than impoverish the Region (Cover all 5 capitals)
- Actively support innovation and the products it enables
- Policies allow collaborations (financing)
- Multiple benefits for multiple communities (more than one town, along barriers) allow for partnerships and governance issues
- Reduce, reuse, recycle, regenerate energies
- Energy survival plan – communities, companies, schools, colleges, industries, etc.

Subject Area Lead Contact Information

- If you have specific questions for the technical lead for Energy, please contact:

James Burton, T.Y. Lin International (TYLI)
james.burton@tylin.com

Next Steps

- Next Stakeholder meeting is January 17th (Thursday) – it will be an all day workshop with all 6 stakeholder groups coming together during portions of the day, and breaking out into the specific groups at other times. Location TBD. Likely timeframe will be 9am-4pm. More details forthcoming.

- Consultant team members – C&S (Tim Hughes & Aileen Maguire), Regenesys (Joel Glanzberg & Ben Haggard), TYLI (Tara Boggio & Sarah Yap), Erin Henry (Harvard Business School) Syracuse Center of Excellence (Mark Lichtenstein)

Story of Place Framework and Exercise

- See power point presentation from November 19th.
- Sustainability Definition:
 - **Sustainability** involves three interrelated components: environment, economy and society.
These pillars are linked – the stability of one reinforces the strength of the other two. Sustainability planning for a community, local government or region integrates the three pillars of sustainability through collaborative work within a framework that supports long-term considerations, fosters innovation, and results in a healthy, safe and affordable place to live, work and play for all residents.
- 5 Capitals:
 - Natural, Social, Human, Built/manufactured, and Financial Capital
- Regional Themes/Goals:
 - Improve accessibility, connectivity and mobility
 - Preserve, protect and improve natural resources
 - air quality
 - water quality
 - prime farmland
 - forests
 - open space
 - Maintain, protect and improve the functionality and disaster resiliency of existing infrastructure systems and acknowledge the links between systems
 - transportation
 - water
 - energy

- communication
- solid waste
- Improve public health
- Respect local planning efforts and retain individual community character
- Build partnerships between local governments, the private sector, regional institutions and the public

***Additions to Themes/Goals:**

- Improve climate change adaption
- Add mitigation to the process
- Resiliency

Story of Place

Joel Glanzberg from Regenesys presented the draft Story of Place for the Finger Lakes Region. He noted that the story is generated from several sources: extensive historical research, dozens of phone interviews with a variety of people from the Finger Lakes area, several site visits and targeted input from the consultant team. The following is a summary of this presentation.

General Comments on why we look at the Story of Place:

- Places have reoccurring patterns (socially, economically, culturally) – and identifying these patterns is helpful to knowing who we are as a region
- Seeing region as a whole helps to develop unique attributes and find our natural strengths – something to build from

- Finger Lakes Observations are as follows:
- Watersheds – natural boundaries (Lake Ontario, Finger Lakes, Great Lakes) are different than political boundaries.
- Lake Ontario is unique versus the other Great Lakes
 - Lower water level due to Niagara Falls
 - All Great Lakes drain into Lake Ontario
- Shale and limestone help geological elements for our Region – prime farmland
- Glacier movements created Lake Ontario and land carved by 5,000 ft of ice
- Great Lakes Plain – how things moved
 - Rail and vehicle routes (straight through mountains) = roadway across the state
 - Animal trails
 - A place where people and products grew and adapted – enrichments
- Eco-Region – plants and animals (low lands)
- Region is like an eddy – or a wetland in a watershed - place where things filter in, take root, adapt, and transform before being release back out
- UN/FAO soil map of the US – our Region (-1) very good soil, rich soils – all due to climate and water, first large open space accessible to people, crops, and animals, also is a good source of agriculture
- Native trees – black spruce, burnt oak, white cedar, eastern white pine, chestnut – mild soil climate – good
- ‘People of the Longhouse’ settlers in NY
- Gateway to mid-west

- In-between waterways
- Many people and industries populated our Region – people, towns/villages, agriculture, industries
- Connections – built NY as a port and NYC as an international port
- Erie Canal built on top of Mohawk Trail – Civil Engineering was developed and learned in England – developed technologies for future uses
- Brought art and education to the region
- Flour city – produced grain (wheat) – water power source
- First industrial city to be fed by water access/connections
- Pioneer in agriculture
- Religious movements – Spiritualism, 7th Day Baptist, Mormon, Methodists (Shakers, Quakers) taught morals, circuit riders to churches
- Birth of democracy – formed the ‘Great Law of Peace’, Peace Makers
- 5 Nations of the Iroquois – lead to our Constitution (Franklin and Jefferson both learned and used the system)
- Large movements happened here – Women’s Rights, Abolition, etc.
- Industries – Seneca Falls – technology developed for pumps – water source – pump capital of the World – Fire Engines
- Wegman’s, Kodak, Jell-o, Bausch & Lomb, Gannett, Western Union, Xerox, French’s, Champion, Genesee Brewing Company
 - Wegman’s – local foods, informative about food, community ties
 - Kodak – film, digital cameras
 - Xerox – printers
 - Champion – first hooded sweatshirt, reversible t-shirt, mesh fabric
 - Genesee Brewing Company – wheat industry , Whiskey Rebellion
 - Bausch & Lomb - contacts
- Many of the companies here acted as that eddy – they took ideas, developed them further, than sent them out to the country/world as products.
- Discussion:
 - How would this way of understanding the region change how you talk about and work on your subject area?
 - If you were to make this change, what new possibilities show up?
- Reflections/Feedback:
 - Theme of reoccurrence (eddy concept)
 - Companies spun off from Kodak (Carestream)
 - Kodak – guaranteed employment
 - Kodak – did not respond positively/actively towards digital vs. Bausch and Lomb who saw change and embraced it
 - Serve the Regions needs but was also able to spread to other areas
 - Missing education (knowledge base, innovation)
 - Missing supply of fresh water
 - Waves of immigration – needs to be told
- Group exercise: How does Story of Place change how we should be talking about and working on waste and materials management in this Region?

Finger Lakes Regional Sustainability Plan
Funded by: NYSDERDA – Cleaner, Greener Communities Program

- Innovation of the process – yogurt in the Region and how to deal with food waste (landfill space – many areas in the Region) – digesters
- Landfills
- GHGR (Greenhouse Gas Reduction) – limitations/constraints of the economic issues, goals, objectives, ideas – requirements of how we think of solutions/achievements
- Solid waste management plan, landfills (not in our control), organic by-products related to agriculture (manure) = opportunities
- Address waste coming into the Region
- Determine waste generation – no new regulations and state policies/barriers
- Better utilized landfills and how to get out of there, not getting any benefits from now, thinking process on how to deal with, and understanding of policies
- Sustainable wastes – technologies of transport of waste, how we design and manufacture, purchasing consortium within Region
- Not a lot of press on reducing waste – no encouragement (tipping fees – does not address everything) true long term costs = barriers (not public or private incinerators = connected, short term economic fees/revenues = all connected, resource management = work where waste is generated
- Develop a proposal for Regional Waste Management that speaks to these themes from the Story of Place:
 - Eddying
 - Sourced from a pressing local need
 - Democratizing benefits
 - Scalable to address a larger world
- Incubator Indicators:
 - Extract value of materials at landfills
 - Conservation of waste – product design at place of origin
 - What could be waste
 - Brain Trust
 - Private business and education – group of people to develop solutions of waste management options
 - How do we find this – part of tipping fees to go back to brain trust at collection
 - Aggressive building codes – materials going into the building
 - Changing concept of tipping fees
 - Regional and State strategies (E-scrap, DEC)
 - State wide increase in tipping fees – need funding pool
 - Incentives
 - Refunds – manufacturer responsible for funding of recycling efforts on their products – added into price of product (supply and demand)
 - Health issues of our materials
 - Processes/integration of strategies
 - Innovation center to have global implications
 - Develop solutions for commodity stream
 - Funding through surcharge on tipping fees
 - Organic processing (Bio Managements)
 - By-processing
 - Reduce land applied waste
 - Manure

- Majority – Municipal Solid Waste
 - Eco Park (Monroe County) how to make this work in other counties of the Region
 - Put on consumer – ‘waste is money’ concept now ‘waste is bad’ (financial benefits – who tells the concept, overall issues to be thought about)
 - True cost of waste, articulate
 - Alternatives
 - Waste as a resource to become a new product
 - New economic models for development of waste management as income

Place Sourced Indicators: End State

- Rate in which landfills are being filled – reduction in tons/year – reduction in landfill permits
- Decrease amount of waste being generated at the source
- Increase of recycle percentage in Regional manufacturing companies
- Percentage of recyclable waste versus landfill waste increase (recyclables actually being recycled/reused)
- Taking credit for recyclables when it is really waste – Monitor
- Total waste reduction
- Patents

Indicators

- Reduction in landfill inputs
- Increase of recycled content in locally manufactured products – increase in local manufacturing (ers)
- Reduction in total waste concentrated
- Increase of recycling efficiency
- Increase in patents related to products and material flows
- Reduction of bio by-products land-applied

General Discussion

- Up cycling – best use principles and highest uses
- Nutrients in the area going where they need to go – flow management
- Managing organic waste = energy recovery (not ending their life cycle at the landfills)
- Organics making energy/power (electricity)
- Toxins with organics
- Mixing of materials
- ‘Single stream recycling’ – hybrid products
- Design for ease of recycling/reuse
- Reframing of economic baseline – support role of recycling system (education)
- Changing manufacturing process – reconstruct, recycle
- Buy-back program? Evolution of products is possible
- More companies responsible for waste recycling

Guiding Principles (Stimulus to Creativity)

- Waste = Resource
- Waste generation not driven by economics (all costs realized)

- Easier way to recover waste
- Life cycle
- Carrying capacity of land known/acknowledged – kept below level
- Balance economic impact with desire to allow import of waste; replace viable industry
- Reduce = Priority
- Growing and expanding businesses here (organic growth)
- Addressing toxicity level for general health issues
- Society understands the meaning of ‘waste’
- Increase personal responsibility in what comes into and out of the home
- Transform material flow
- Highest and best uses of products – ‘up-cycling’
- Nutrient flow-manage the cycle
- Materials not mixed so as to make it difficult to break down – ‘cradle to cradle’
- Reframe economic model to better deal with various roles of recycling
- Change in manufacturing process to allow for better deconstruction and recycling – make them responsible for product life cycle (cost benefit has to work)

Subject Area Lead Contact Information

- If you have specific questions for the technical lead for Materials and Waste Management, please contact:

Mark Lichtenstein, Syracuse COE
mlichtenstein@syracusecoe.org

Next Steps

- Next Stakeholder meeting is January 17th (Thursday) – it will be an all day workshop with all 6 stakeholder groups coming together during portions of the day, and breaking out into the specific groups at other times. Location TBD. Likely timeframe will be 9am-4pm. More details forthcoming.
- Email with draft indicators summarized and potential evaluation criteria outlined expected to be sent week of Dec. 17th for your review and comment.

Story of Place Framework and Exercise

- See power point presentation from November 14th.
- Sustainability Definition:
 - ***Sustainability*** involves three interrelated components: environment, economy and society.
These pillars are linked – the stability of one reinforces the strength of the other two. Sustainability planning for a community, local government or region integrates the three pillars of sustainability through collaborative work within a framework that supports long-term considerations, fosters innovation, and results in a healthy, safe and affordable place to live, work and play for all residents.
- 5 Capitals:
 - Natural, Social, Human, Built/manufactured, and Financial Capital
- Regional Themes/Goals:
 - Improve accessibility, connectivity and mobility
 - Preserve, protect and improve natural resources
 - air quality
 - water quality
 - prime farmland
 - forests
 - open space

- Maintain, protect and improve the functionality and disaster resiliency of existing infrastructure systems and acknowledge the links between systems
 - transportation
 - water
 - energy
 - communication
 - solid waste
- Improve public health
- Respect local planning efforts and retain individual community character
- Build partnerships between local governments, the private sector, regional institutions and the public

***Additions to Themes/Goals:**

- Private Sector
- Overall diversity in businesses (large – small)
- Climate change
- Productive farmland (in addition to Prime Farmland) ‘Prime and Productive Farmland’
- Improving natural resources
- Self-organizing development

Story of Place

Joel Glanzberg from Regenesys presented the draft Story of Place for the Finger Lakes Region. He noted that the story is generated from several sources: extensive historical research, dozens of phone interviews with a variety of people from the Finger Lakes area, several site visits and targeted input from the consultant team. The following is a summary of this presentation.

General Comments on why we look at the Story of Place:

- Places have reoccurring patterns (socially, economically, culturally) – and identifying these patterns is helpful to knowing who we are as a region
- Seeing region as a whole helps to develop unique attributes and find our natural strengths – something to build from

- Finger Lakes Observations are as follows:
- Watersheds – natural boundaries (Lake Ontario, Finger Lakes, Great Lakes) are different than political boundaries.
- Lake Ontario is unique versus the other Great Lakes
 - Lower water level due to Niagara Falls
 - All Great Lakes drain into Lake Ontario
- Shale and limestone help geological elements for our Region – prime farmland
- Glacier movements created Lake Ontario and land carved by 5,000 ft of ice
- Great Lakes Plain – how things moved
 - Rail and vehicle routes (straight through mountains) = roadway across the state
 - Animal trails
 - A place where people and products grew and adapted – enrichments
- Eco-Region – plants and animals (low lands)

- Region is like an eddy – or a wetland in a watershed - place where things filter in, take root, adapt, and transform before being release back out
- UN/FAO soil map of the US – our Region (-1) very good soil, rich soils – all due to climate and water, first large open space accessible to people, crops, and animals, also is a good source of agriculture
- Native trees – black spruce, burnt oak, white cedar, eastern white pine, chestnut – mild soil climate – good
- ‘People of the Longhouse’ settlers in NY
- Gateway to mid-west
- In-between waterways
- Many people and industries populated our Region – people, towns/villages, agriculture, industries
- Connections – built NY as a port and NYC as an international port
- Eric Canal built on top of Mohawk Trail – Civil Engineering was developed and learned in England – developed technologies for future uses
- Brought art and education to the region
- Flour city – produced grain (wheat) – water power source
- First industrial city to be fed by water access/connections
- Pioneer in agriculture
- Religious movements – Spiritualism, 7th Day Baptist, Mormon, Methodists (Shakers, Quakers) taught morals, circuit riders to churches
- Birth of democracy – formed the ‘Great Law of Peace’, Peace Makers
- 5 Nations of the Iroquois – lead to our Constitution (Franklin and Jefferson both learned and used the system)
- Large movements happened here – Women’s Rights, Abolition, etc.
- Industries – Seneca Falls – technology developed for pumps – water source – pump capital of the World – Fire Engines
- Wegman’s, Kodak, Jell-o, Bausch & Lomb, Gannett, Western Union, Xerox, French’s, Champion, Genesee Brewing Company
 - Wegman’s – local foods, informative about food, community ties
 - Kodak – film, digital cameras
 - Xerox – printers
 - Champion – first hooded sweatshirt, reversible t-shirt, mesh fabric
 - Genesee Brewing Company – wheat industry , Whiskey Rebellion
 - Bausch & Lomb - contacts
- Many of the companies here acted as that eddy – they took ideas, developed them further, than sent them out to the country/world as products.
- Discussion:
 - How would this way of understanding the region change how you talk about and work on your subject area?
 - If you were to make this change, what new possibilities show up?
- Reflections/Feedback:
 - Look at the future versus living in the past
 - How we can change and move forward
 - Future orientated – flexibility ,changes, adaption

- How do we promote tourism in our Region to people who are visiting or just passing through our airports?
- More viable – how to improve
- Involvement in community connections
- Major ‘booms’ that has influenced our Region:
 - New industries
 - Corporations – Kodak and Xerox
 - Not creating jobs, but creating a learning environment
 - Entrepreneurial infrastructure
 - How to measure success in our Region
 - Extend over national boundary
 - Government limitations – ‘home rule’ asset versus liability – lending and stand polices are an issues – ‘home runs’
- Economic infrastructure – how to use our resources (people)
- Collective identity – changing culture, how to not have State affect ideas
- Incubator Indicators: (Consider **Laboratory** instead of Incubators – incubator used in other efforts and may have a negative connotation)
 - Mash-ups: new ideas, collaboration (people in businesses and how to implement changes)
 - Compelling needs – bring innovation development to it
 - More homegrown funding
 - How does it make us feel – own rules, not being told how and what we can spend money on
 - Equitable
 - Direct connections – global economy critical to our future, lending change to facilitate transporting goods
 - Local solutions – building linkages (benefits?)
 - Understanding investments – communities
 - Regional integration – equal opportunities
 - Lowering poverty – reduce everywhere, policies
 - Better ways of governing – resources, policies, incentives
 - Uplifting whole community attitudes, education, creativity
 - Investing in all 5 types of capital
 - Move to a more strategic state and creative with projects and actions
 - Reaction to strategic thinking
 - Creating opportunities – disasters to opportunities
 - Patterns
 - Maintaining capital for areas around the Region
 - Need for Regional identity – branding
 - Think more about the 5 capitals, not just the money aspect
 - Venture capital – businesses exceeding means for the area and how it moves – measurements of success
 - Where and how people live
 - What about the Lake?

Indicators

- Reduction in poverty and its concentration
- Investing in all 5 Capitals

Guiding Principles

- Equitable benefit
- Connection to community (people/land)
- Valuing diversity for resiliency (no hedging)
- Diversity of function connection and opportunity oriented towards vibrant and authentic regional identity
- Enables the fine grain that supports human scale and interaction
- Recognize flow to build local capacity in order to sustain life, process inputs, and re-emphasize integrity of place

*General Discussion:

- Equitable through the communities
- Millenniums more urban shifts in views
- Connection to community and nature
- Demographics of the US – diversity
- Evaluation of diversity – cultural, social, etc (5 Capitals)
- Resiliency – flexibility
- Diversity of connections
- Restoring populations
- Good urbanism – environmental
- Preservationist
- Eco-systems
- Diversity versus hedging – make sure we are creating synergy
- Places of personal values – make people want to stay
- Fine graining – human scale and interactions
- Taking advantage of local goods – how to transport within Region
- Import substitution – making local connections
- How to build on assets
- Diffused populations
- Multiplier affect
- Effectiveness of transportation

Subject Area Lead Contact Information

- If you have specific questions for the technical lead for Transportation, Land Use, and Livability, please contact:

Wendy Salvati, Wendel-AE
wsalvati@wd-ae.com

Next Steps

- Next Stakeholder meeting is January 17th (Thursday) – it will be an all day workshop with all 6 stakeholder groups coming together during portions of the day, and breaking out into the specific groups at other times. Location TBD. Likely timeframe will be 9am-4pm. More details forthcoming.
- Email with draft indicators summarized and potential evaluation criteria outlined expected to be sent week of Dec. 17th for your review and comment.
- Public meeting early January. Help get people excited and involved by encouraging them to attend the public meeting. Check the website www.sustainable-fingerlakes.org for more information on dates and locations in the coming weeks.

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

Welcome & Introductions

- Consultant team members – C&S (Tim Hughes, John Camp, & Aileen Maguire), Regenesis (Joel Glanzberg & Ben Haggard), TYLI (Tara Boggio & Sarah Yap), Erin Henry (Harvard Business School)

Story of Place Framework and Exercise

- See power point presentation from November 13th.
- Sustainability Definition:
 - **Sustainability** involves three interrelated components: environment, economy and society.
These pillars are linked – the stability of one reinforces the strength of the other two. Sustainability planning for a community, local government or region integrates the three pillars of sustainability through collaborative work within a framework that supports long-term considerations, fosters innovation, and results in a healthy, safe and affordable place to live, work and play for all residents.
- 5 Capitals:
 - Natural, Social, Human, Built/manufactured, and Financial Capital
- Regional Themes/Goals:
 - Improve accessibility, connectivity and mobility
 - Preserve, protect and improve natural resources
 - air quality
 - water quality
 - prime farmland
 - forests
 - open space

- Maintain, protect and improve the functionality and disaster resiliency of existing infrastructure systems and acknowledge the links between systems
 - transportation
 - water
 - energy
 - communication
 - solid waste
- Improve public health
- Respect local planning efforts and retain individual community character
- Build partnerships between local governments, the private sector, regional institutions and the public

***Additions to Themes/Goals:**

- Greenhouse gas emissions and climate change
- How does this bring the Region together? More now as separate pieces versus one common goal

Story of Place

Joel Glanzberg from Regenesys presented the draft Story of Place for the Finger Lakes Region. He noted that the story is generated from several sources: extensive historical research, dozens of phone interviews with a variety of people from the Finger Lakes area, several site visits and targeted input from the consultant team. The following is a summary of this presentation.

General Comments on why we look at the Story of Place:

- Places have reoccurring patterns (socially, economically, culturally) – and identifying these patterns is helpful to knowing who we are as a region
- Seeing region as a whole helps to develop unique attributes and find our natural strengths – something to build from

- Finger Lakes Observations are as follows:
- Watersheds – natural boundaries (Lake Ontario, Finger Lakes, Great Lakes) are different than political boundaries.
- Lake Ontario is unique versus the other Great Lakes
 - Lower water level due to Niagara Falls
 - All Great Lakes drain into Lake Ontario
- Shale and limestone help geological elements for our Region – prime farmland
- Glacier movements created Lake Ontario and land carved by 5,000 ft of ice
- Great Lakes Plain – how things moved
 - Rail and vehicle routes (straight through mountains) = roadway across the state
 - Animal trails
 - A place where people and products grew and adapted – enrichments
- Eco-Region – plants and animals (low lands)
- Region is like an eddy – or a wetland in a watershed - place where things filter in, take root, adapt, and transform before being release back out

- UN/FAO soil map of the US – our Region (-1) very good soil, rich soils – all due to climate and water, first large open space accessible to people, crops, and animals, also is a good source of agriculture
- Native trees – black spruce, burnt oak, white cedar, eastern white pine, chestnut – mild soil climate – good
- ‘People of the Longhouse’ settlers in NY
- Gateway to mid-west
- In-between waterways
- Many people and industries populated our Region – people, towns/villages, agriculture, industries
- Connections – built NY as a port and NYC as an international port
- Erie Canal built on top of Mohawk Trail – Civil Engineering was developed and learned in England – developed technologies for future uses
- Brought art and education to the region
- Flour city – produced grain (wheat) – water power source
- First industrial city to be fed by water access/connections
- Pioneer in agriculture
- Religious movements – Spiritualism, 7th Day Baptist, Mormon, Methodists (Shakers, Quakers) taught morals, circuit riders to churches
- Birth of democracy – formed the ‘Great Law of Peace’, Peace Makers
- 5 Nations of the Iroquois – lead to our Constitution (Franklin and Jefferson both learned and used the system)
- Large movements happened here – Women’s Rights, Abolition, etc.
- Industries – Seneca Falls – technology developed for pumps – water source – pump capital of the World – Fire Engines
- Wegman’s, Kodak, Jell-o, Bausch & Lomb, Gannett, Western Union, Xerox, French’s, Champion, Genesee Brewing Company
 - Wegman’s – local foods, informative about food, community ties
 - Kodak – film, digital cameras
 - Xerox – printers
 - Champion – first hooded sweatshirt, reversible t-shirt, mesh fabric
 - Genesee Brewing Company – wheat industry , Whiskey Rebellion
 - Bausch & Lomb - contacts
- Many of the companies here acted as that eddy – they took ideas, developed them further, than sent them out to the country/world as products.
- Discussion:
 - How would this way of understanding the region change how you talk about and work on your subject area?
 - If you were to make this change, what new possibilities show up?
- Reflections/Feedback:
 - Freshwater sources = Natural resources = Energy (prototypes) = Thinking of the future
 - Big manufacturer in the Region for the US – encourage growth in companies, treasure education, innovation, capitalization, setting goals, ideas on a large scale. Largest water providers – how to think long term to defer from water shortages. Best preserver of water (water treatment)

- Farmland and development – common ground/elements – physical and natural development of the area/environment of the area has created a path from history to help us grow in the future (resources – historical perspective) Pesticides not to be in our water shed
 - Not just about data – identifying who we are – are willing to provide leadership
 - Relationship with rural areas does not exist. Build relationship through natural resources – help people understand, be a forum for the Region, find a common ground
 - Vibrant area – High Tech (University of Rochester stepped forward as a leader)
 - Where in the community should we find a leader?
 - Wire Grand
 - Stop bad talking Kodak, focus on growth and new companies
 - Disconnects with the public
 - Cultural – wine and breweries
 - Economy – high taxes
 - Different way to irrigate/fertilize farmland.
 - Understanding – bring people together (appreciation, culture, life styles). Defines who we are.
 - Appreciation – stewardship
 - People are here for a reason
 - Women in innovation
 - Farmers are well educated
 - Specialties taught within the Region
 - No longer a dying town – tell a new story
 - Organize a community leadership
 - Peace Maker – integrity and how to work together
- Incubator Indicators:
 - Growth opportunity, expertise, strengths of natural resources, passions – what direction should we pursue in the Region?
 - Sustainable technologies – hydro power
 - Promote dairy – nutrients, super foods – valuable opportunities
 - Optics, machines – broad based
 - Medical technology
 - Takes time to develop an idea – faster processes, this needs to change – more collaboration to move things forward
 - Materialize to real life ideas/products – dairy wastes
 - Water, dairy, food processing – need to do things right
 - Can't count on large industries – diversity
 - Don't recreate a base

Place Sourced Indicators: End State

- World leader in green technologies
- Nutrients/waste into energy
- People coming to use
- Scale – not trying to be like San Francisco – stay as a small city – maintain appropriate scale despite success
- What is necessary to be a good innovator in the 21st century – innovation infrastructure
- Culture change

- Government
- People who are not afraid of change
- Communication
- Percent growth tied to emerging areas
- Unemployment rate below national average
- Household income
- Policy changes – adoption
- Sourcing Region for water sustainability leader
- Number of patents
- No generation gaps – cross generational participation
- Recognition of success and authenticity
- Cross-socio economics
- Known for great connection to environment and water
- New creation

Indicators

- Percent growth tied to emerging technologies
- Google water system and Rochester comes up in search
- Unemployment consistently below national average
- New policy that reflects change in intent
- Number of patents

*General Discussion:

- Graduation rates
- Quality of life
- National stories/news
- Local restaurants that sell/serve local products (ambiguous of local goods – celebrate)
- Robust exports
- Meet and exceed water standards – all bodies of water
- Story of Place – Finger Lakes Museum
- Everyone knows what water shed they live in

Guiding Principles

- Waste becomes source
- Improve all 5 Capitals (Natural, Social, Human, Built/Manufactured, Financial)
- Maintain scale
- Fair distribution of costs and benefits
- Partnership
- Development towards essence

*General Discussion:

- Elimination of inconsistencies
- Principles of nature

- Waste becomes source
- Need of general public input
- Need to keep in mind – environment, social – need to be inter-related (Improve all 5 Capitals)
- Distribution of cost – equal (benefits)
- Maintain scale
- Partnership
- Education
- Sustainable development (development towards essence)

Introductions and Opening Remarks

- Consultant team members – C&S (Tim Hughes, Kim Fabend, John Camp, & Aileen Maguire), edr (Andy Obernesser, Jane Rice, & Charlie Greene), Developmental Economics Group (Carol Sanford), Syracuse Center of Excellence (Mark Lichtenstein & Brenda Griffin), Wendel (Wendy Salvati & Ellen Parker), Regenesys (Joel Glanzberg & Ben Haggard), TYLI (Tara Boggio, James Burton, & Sarah Yap), Erin Henry (Harvard Business School)

Opening Exercise: Discussion about how the Story of Place (SoP) has influenced your work or how you do things since we last met.

Group comments:

Comment 1: All over Chile, I saw signs of innovation. I saw that was not unique here was innovation. Every region you go to, you see this. We're not unique. The story of place didn't touch on the equity issues-race or class issues.

Response 1: There were three big points. Carol said this the other day, anywhere where you have people concentrating, you'll have people innovating. It's a universal human phenomenon. The thing is, how does THIS place do it? The second thing is are we missing important elements? The answer is yes. The first go though of SoP is a sketch. We can explore how we can expand this. Equity issues were not built into this. This is one of them and there are probably others. We can bring in some of the things in. You are a great mix of urban and rural. How do we bring in those new discoveries into the strategies? Innovation doesn't have to be high tech. Innovation is just doing what we do, just better or different

Comment 2: I was thinking about perspective, based on where you live and socioeconomic status. When you travel and see the division, your perspective will change based on your resources. We need to address the distribution of resources.

Response 2: We need to think about distribution of resources based on the SoP. One thing we heard is really bringing things back to sustainability. Things were in one area. Or profit was really the focus, like innovation is focused on profit. What about the social? What about the environmental? Someone said he didn't want to participate because he didn't think this was about sustainability anymore. This is sustainability, not economic development. It's not just the story of place, how do we tie the economic, environmental and social and not give priority to one or another? NYSERDA's process has been a top down generic approach where it looks at certain things that they believe impact sustainability. The Story of Place is bottom up, discovery process. We've been working on weaving them together.

- **Story of Place** – Joel Glanzberg provided an abbreviated version of the Story of Place since there were some stakeholders who were absent at the last meeting. We've been developing a draft of the beliefs, philosophies and principles of this place, which we're calling Story of Place. When you're trying to think about where you're going as a community, you need the objectives and goals. You put a strategy together to pursue the goal. Then you have to design how you're going to get there with projects. Then, you need an action plan for those projects. Then you need to audit those actions through indicators to validate the thinking. Finally, you want to evaluate and ask if you created the value you intended. Did you maintain the integrity of the beliefs, philosophies and principles?

- Straw Dog Strategies – For each subject area, a “straw dog strategy” was put out to the group based on some of the feedback from the first 2 meetings. After they were presented, people were separated into groups to discuss the strategy, and supporting goal. However, they were not allowed to be in their natural stakeholder group. Instead, to comment on a goal and strategy for another subject area, giving it a unique perspective. The groups were asked to consider the following:

1. How do we make sure it creates benefit throughout the region and reflect the uniqueness of this region as reflected in the SoP?
2. We’d like the strategies to impact all subject areas, so benefit through the system as a whole.
3. Can we think about the strategy so that it strengthens all 5 capitals (human, ecological, fixed/built, financial, social)?

The groups then separated by their actual stakeholder group that they primarily associate themselves with and they took the comments from the morning and continued to work with them. The findings and outcomes on these combined sessions are provided below. There are several concepts (goals, strategies) that come out in the various sessions. We are documenting them all here, but please note that they will be paired down in some cases, and prioritized over the next month.

Breakout Sessions Summary

Water Management:

In General: Increase water quality (for both surface and ground water), decrease the destructive potential of run-off especially in extreme events.

Concept: Continuous renewal of a robust and healthy hydrological system (for humans and nature).

Strategy: Reduce built infrastructure costs (construction, maintenance) through rewarding ecosystem services (tax valuation or credits, utilities, etc.)

The session began with a review of the discussion held by the morning group. The “straw dog” goal was discussed and refined. An additional goal was suggested. The previously identified indicators were then evaluated as to their applicability in measuring progress toward the goals. Targets for the indicators were then discussed.

“Straw dog” goal: Improve water quality (both surface and groundwater) and decrease the destructive potential of runoff, especially in extreme events.

Concepts that seemed to be missing from “straw dog” goal:

1. Improve the reliability and availability of water
2. Improve/protect the water environment (ecology, biology)
3. Promote and make people aware of the value of water
 - a. Recognize and promote the value of our (natural) freshwater reservoirs
4. Preserve and protect the water environment
 - a. Address invasive species

Revised goal:

Improve and protect the water environment with respect to quality, quantity, and availability. Promote and understand the value of our water reservoirs, watercourse, and built infrastructure. Maximize the social, economic, and ecological potential of our water resources toward equitable sharing of their benefits for both the short and long terms.

“Straw dog” strategy: reduce grey infrastructure costs (construction, maintenance) through rewarding ecosystem services (tax valuation or credits, utilities, etc. and the use of green infrastructure

Revised strategy:

Reduce grey infrastructure costs (construction, maintenance) through rewarding ecosystem services such as tax valuation or credits, stormwater utilities, and the use of green infrastructure.

Additional Strategy:

Collaborate regionally through the standardization of water resource management practices across villages, cities, towns and counties. Water resource management strategies should consider all water-related strengths, weaknesses, opportunities, and threats. Water resource management strategies should also consider their relationship to each of the tenets of sustainability.

Initiatives / Projects:

1. Re-conceive wastewater from a water “waste” to a water “source”. Water effluent from treatment facilities could be as clean as, or cleaner than, water in the environment.
2. Agricultural BMPs and streambank restoration to improve water quality.
3. Consumer-friendly systems for capturing, storing, using, and re-using water on site.
4. Education, rewards, and promotion of stewardship.
5. Extract energy from water already in use.

Challenges:

1. Home rule and a lack of regional cooperation. This makes the establishment of a credit system difficult.
2. Assuring that the implementers of improvements will receive a payback / benefit for their efforts (equitable sharing of costs and benefits).
3. Water is cheap and easy right now.
4. Lack of education of users, stakeholders, and beneficiaries.

Indicators:

It was generally agreed that the previously identified indicators should show progress toward the newly identified goals. It was agreed that one indicator should be modified- Old indicator – Percentage of Impaired Waters with TMDL Requirements

New Indicator - **Percentage of Impaired Waters with TMDL Requirements Removed From the 303-d List**

Targets:

1. Water use by Category

- a. 2020-decrease by 5%
 - b. 2035-decrease by 15%
 - c. 2050-decrease by 20%
 2. Total number of impaired waters
 - a. 2020-decrease by 2%
 - b. 2035-decrease by 10%
 - c. 2050-decrease by 20%
 3. Percentage of Beach Water Quality Samples Exceeding State Thresholds
 - a. 2020-decrease by 10%
 - b. 2035-decrease by 25%
 - c. 2050-decrease by 40%
 4. Percentage of Impaired Waters with TMDL Requirements Removed From the 303-d List
 - a. 2020- 2%
 - b. 2035- 5%
 - c. 2050- 10%
 5. Concentrations of Pollutants in the Finger Lakes
 - a. 2020-50% of state-mandated maximums
 - b. 2035-40% of state-mandated maximums
 - c. 2050-25% of state-mandated maximums
-

Agriculture & Forestry:

In General: Increase the viability and ecological contribution of Ag and Forestry, decrease waste and dependence on outside inputs.

Concept: Diversify yields in order to make land-based ventures increasingly economically attractive.

Strategy: Biological energy production (for farms, forests, communities) through initiatives like Plug and Play systems, regional facilities, or power purchase agreements.

Summary of morning and afternoon breakout sessions:

- Morning session included an initial discussion as to the “cross-pollination” of stakeholder groups, which was eventually understood through discussion of the value of ideas from outside of our topic area. Afternoon session included an initial discussion of agriculture and forestry indicators.
 - Morning discussion:

The “straw dog” strategy discussed is: To increase the viability and ecological contribution of farms and forests while decreasing waste and dependence on outside inputs.
 - Stakeholders connected the “straw dog” strategy to several other topic areas:
 1. Energy production
 2. Climate change adaptation via increased self-sufficiency and the potential for additional redundancy and resiliency of the energy supply
 3. Economic development via research & development opportunities
 4. Water quality improvements via decreased nonpoint-source pollution

5. Increased livability of communities via reduced energy costs and the potential to support nodal development
 6. Increased viability of agricultural sector via product diversity (e.g. adding biomass for energy production as a marketable crop)
 7. Increased educational opportunities for technical workforce
- Regarding the questions provided for the exercise:
 8. Stakeholders upgraded the strategy by identifying the need for a *scalable* plug-and-play technology to convert/extract power from farm biomass.
 9. Identified three restraints: *absence of scalable technology* (or lack of knowledge, if it exists); *financial restraints* (e.g. the cost is just too high); *risk* (e.g. the lack of guarantees from utility companies that all power produced on the farm would be purchased means that farmers don't know whether or not it's worth the cost of installing on farm electrical generating technology)
 - Afternoon discussion:
 - Discussion started on the issue of diversity in agriculture. Two restraints were raised: the specificity of capital-intensive equipment impacting the farmer's nimbleness to adjust to market changes and the difficulty of managing diverse production. Four strategies were raised in response to these restraints:
 - ✓ Develop models for managing diversity at different operation sizes (i.e. small, medium, and large farms)
 - ✓ Extend growing season and growing opportunities (e.g. hoop houses, vertical farms)
 - ✓ Create market synergies/connections between consumers looking for niche products and the producers that could supply them
 - ✓ Reduce risk for innovation and diversification
 - Discussion moved to the issue of farm land conversion to non-farm use. First restraint mentioned(of many) to decreasing loss of quality farm land was that subdivision standards do not account for agricultural infrastructure, quality of land, etc. leaving the decision makers without adequate information. One strategy developed in response:
 - Align land use regulations with the functional requirements of farms
 - Discussion regarding general viability of agricultural sector focused initially on bringing new producers into the market (including but not limited to younger and/or first generation farmers). Primary restraints include price of farmland and equipment and lack of knowledge of agricultural career opportunities, and difficulty for first generation farmers to "do without" during the years before a new farm becomes profitable. One strategy developed in response:
 - ✓ Align an educational network for direct and specific educational opportunities (e.g. internships within university system; tax credits for farms w/ interns; opportunities for lenders and interns to engage one another)
 - Agricultural viability was also discussed in terms of lack of necessary market responses and relationships between buyers and sellers. This is not just a matter of increasing direct sales, but also increasing sales through intermediaries (e.g. stores, wholesalers, restaurants). One multi-faceted strategy developed in response:
 - ✓ Create market and efficient network for distribution of agricultural products, generation and distribution of energy, generation of ecological services
 - ✓ Adjustment to indicators
 - Biodiversity of bird species:

- Two of the four indicator species were changed to attempt to control for variables arising from the fact that all of the previous four indicator species were birds that migrated out of the region for the winter. Two migratory bird species were replaced by resident bird species to reduce the potential for adverse impacts at overwintering locations that might result in decreased presence of the migratory bird species in Finger Lakes forests. The two Species removed were the Veery, and the Scarlet Tanager, replaced by the Red-Shouldered Hawk and the Northern Goshawk. The new list of the four indicator species is as follows:
 - ✓ Northern Goshawk
 - ✓ Red-shouldered Hawk
 - ✓ Ovenbird
 - ✓ Black-and-white Warbler
- Also, we recently obtained access to this information in a spatial format which allows for a more beneficial analysis. For this reason, instead of individual survey block presence counts for each of the indicator bird species we can now measure the more meaningful number of blocks where at least one of the indicator species was reported. This changes the baseline value to: 297 blocks containing at least one of the four indicator species during the most recent Breeding Bird Atlas Survey (2000-2005).
 - Wildfire occurrences:
 - ✓ This fifth indicator was added after data was received from the NYSDEC and NYS Office of Fire Prevention and Control. The data reports the number of wildfires reported from 2006-2011. The baseline value is 3,885 reported wildfires.
 - Direct sales:
 - ✓ The indicator value representing direct sales of agricultural products has been changed from an absolute dollar value (\$9.52) to reflect the proportion of at-home food expenditures dedicated to direct sale products (0.49% in 2010). The targets have been adjusted accordingly. This change was made to avoid the projection of absolute monetary values into the future.
- Adjustment to goal(s)
 - Goal as provided to stakeholders:
 - Increase the viability and the ecological contribution of the agricultural and forestry sectors, while decreasing waste and dependency on external inputs.
 - This goal was slightly amended to include “Increase the viability, *accessibility*, and ecological contribution...” to reflect the importance of creating more economic opportunity within rural and urban agricultural settings, as well as creating greater opportunity for disadvantaged consumers to purchase fresh, high-quality foods.
- Summary of strategies suggested by stakeholders (from all three working group meetings)
 - Create/increase opportunities for some sort of ecosystem services credit trading system.
 - Strengthen programming for producing, marketing, and exporting specialty products.
 - Establish a beginner farming program.
 - Increase public awareness regarding economic and/or career opportunities in agriculture and forestry.
 - For large farms, strengthen the labor force by educating workers and making the guest worker program more efficient.
 - Support the special logistical needs of small and medium-sized operations in moving their products to market.
 - Improve processing capabilities.
 - Find opportunities for import substitution.

- Examine opportunities to change tax code regarding inherited agricultural operations and forested land.
- Support purchase of development right programs and the farmland preservation program.
- Increase opportunities for the on-farm production of renewable energy.
- Develop models for managing diversity at different operation sizes (i.e. small, medium, and large farms).
- Extend growing season and growing opportunities (e.g. hoop houses, vertical farms (defined above)).
- Create market synergies/connections between consumers looking for niche products and the producers that could supply them.
- Reduce risk for innovation and diversification.
- Align (land use) regulations with the functional requirements of farm and forest landscapes.
- Align an educational network for direct and specific educational opportunities (e.g. internships within university system; tax credits for farms w/ interns; opportunities for lenders and interns to engage one another; system of funneling ag project resources similar to IDA system)
- Create market and efficient network for distribution of agricultural products, generation and distribution of energy, generation of ecological services
- Create a regional food product identity a la Tuscany.

Transportation (focus):

The transportation/land use afternoon session began with introductions of the consultant team leads from Wendel and C&S and of each stakeholder (approximately 15) in attendance. The session was structured to cover thoughts on the morning, discuss and further refine straw goal and strategy from the morning, brainstorm additional strategies and begin establishing targets for the indicators. The following is a summary of topics discussed during the afternoon session:

- Straw goal/strategy:
 - Goal: Increase development or re-development around existing infrastructure, decrease dependence on automobiles and fossil fuels for transportation.
 - Concept: Stimulate nodal development
 - Strategy: Make existing but underutilized assets affordable enough to attract new energy and investment
- Discussion points on straw goal/strategy:
 - Goal – should read ‘...dependence on automobiles and/or fossil fuels...’ since improvement could be made staying in automobile but choosing alternative fuels
 - This is a good concept but some REDC projects go against this goal – the Stamp Project for example – how are we going to make sure there is consistency?
 - Should be a focus on maximizing all existing assets not just underutilized
 - How are the nodes going to be established?
 - Existing transportation corridors
 - Established places
- Other strategies
 - Establish connections between nodes
 - Encourage & support development of infrastructure for alternative fuel vehicles
 - Create regional land use and zoning regulations/models
 - Protect & preserve environmental assets
 - Ensure social justice

- Incentivize redevelopment/redesign – capture externalities
- Educate & promote existing sustainable services & programs
- Leverage technology to promote transit and create a more flexible system
- Consider aging of population and needs that will come from that
- Develop safe routes to school
- Develop car sharing or peer to peer programs
- Incorporate complete street designs
- Encourage & promote consolidated freight movement
- Consolidate government/municipalities – waste management, maintenance, etc – lots of overlap or inefficiencies in services
- Develop & promote recreational tourism – bike/hike trails
- Shorten commute times – incentivize living where you work
- Use public/private partnerships to provide transit options – vanpooling, carpooling, etc
- Stakeholders weren't aware of ROCeasyride program – need to advertize and promote

After this general discussion, the group broke out to discuss land use/livability and transportation separately. Below are topics from the transportation discussion (approximately 7 participants):

- We began by trying to focus on what strategies discussed with the larger group were the most important:
 - Incorporating complete street design elements in all design projects
 - Market & promote alternative fuels, modes of transportation and services
 - Establish a car sharing program
 - Make connections to close the bike/ped infrastructure gaps both on- and off-road (completing trails, bike routes/lanes, sidewalks, etc)
 - Make alternative fuel/vehicle options more affordable
- It was noted that the region should continue to apply pressure for continued funding for projects that promote alternative modes and fuels to ensure the funding is available
- There was a discussion on the indicators – especially the one that reports on the number of miles of roadways and bridges in 100-year flood zones. It was noted that while this information is useful, it's not a useful indicator of change. The climate change adaptation indicator that considers “reduction in # of residents put at risk from loss of critical infrastructure for more than one day” would capture the change in vulnerability of the transportation systems.
 - It was agreed upon that this would be removed as an indicator
 - Another indicator was proposed: miles of roadway – this would provide information on sprawl b/c if we were trying to use existing assets, there would be no additional roadways
- Targets:
 - Total % of people commuting via walking, biking, transit & carpooling – consultant team lead noted the following: 2010 national averages – 2010 walking, biking, transit and carpool share is 19%; the target for the capital region is to reduce drive alone share by 25% by 2030; and central region is to increase walking, biking, transit and carpool share by 20% by 2030. The group thought this seems aggressive and there were some comments that getting people out of their cars was impossible – the working group was comfortable with an **increase of 5% walking, biking, transit and carpool commuters by 2050.**

- 2010 baseline: 15%
- 2020: 1% increase to 16%
- 2035: 3% increase to 18%
- 2050: 5% increase to 20%
- VMT per capita – team lead noted in the capital region and the central region are noted as being a 20% reduction by 2030. This seems aggressive – the working group was comfortable with a **25% reduction in vehicle miles traveled per capita by 2050.**
 - 2010 baseline: 9,742
 - 2020: 5% decrease to 9,255
 - 2035: 15% decrease to 8,280
 - 2050: 25% decrease to 7,310
- Transportation energy consumption per capita - It was noted by the working group that the transportation energy consumption reduction would be greater than the VMT per capita since this measure would take into account not only a shift in modes but a shift to alternative fuel vehicles. The working group was comfortable with a **40% reduction in transportation energy consumption per capita by 2050.**
 - 2010 baseline: 73 MMBtu/635 gal gas/capita
 - 2020: 10% decrease to 66/572
 - 2035: 25% decrease to 55/476
 - 2050: 40% decrease to 44/381
- % income spent on transportation - While noting it was an aggressive goal, the working group was comfortable with targeting what the H&T index notes as affordable transportation costs by 2050 (15% of the median household income). Therefore, the target is a **10.5% reduction in transportation costs by 2050.**
 - 2010 baseline: 25.5%
 - 2020: 3.5% decrease to 22%
 - 2035: 7% decrease to 18.5%
 - 2050: 10.5% decrease to 15%
- Miles of roads/number of bridges within flood zones (100 year) – this indicator was removed
- Freight tonnage moved by truck and rail – the team lead noted that the GTC's Freight/Goods Movement study indicated forecasts for freight movement by mode through 2035. It was noted that the truck share would increase to 82% and rail would decrease to 11%. The short- and mid-term targets for this plan would be to maintain the existing split between truck and rail which would mean that a shift would begin immediately through to 2035 then the region would actually begin to see a decrease in the truck share and increase in the rail share from that point forward. Therefore, the target is a **2% reduction in tonnage moved by truck and a 2% increase moved by rail by 2050.**
 - 2010 baseline: truck 80% - rail 12%
 - 2020: maintain baseline split, truck 80% - rail 12%
 - 2035: maintain baseline split, truck 80% - rail 12%
 - 2050: 2% reduction in truck share and 2% increase in rail share, truck 78% - rail 14%

Land Use/Livable Cities:

In General: Increase development or re-development around existing infrastructure, decrease dependence on automobiles and fossil fuels for transportation.

Concept: Stimulate nodal development.

Strategy: Make existing but underutilized assets (e.g. along Erie Canal corridor, urban brownfields) affordable enough to attract new energy and investment.

Morning Session (scrambled group of about 17 people for combined input on land use, livability and transportation) – discussion of issues and opportunities using straw strategy as a starting point.

- Add “built and ecological” to statement before the word “assets” to recognize that assets include buildings and infrastructure, as well as natural resources.
- In the general statement, it should read “and/or” fossil fuels, as new vehicles currently exist, and more are being developed, that do not rely on the use of fossil fuels.
- The strategy is too narrow; we need to think beyond the cities and canal corridor; focus on small villages and hamlets that already exist not only along the canal but throughout the region.
- What about public transportation – need more and improved public transport options to enable people to get out of their cars.
- Incentivize redevelopment and reuse; having people closer together keeps dollars in communities.
- There is a need to engage underutilized assets, and in doing so, we must consider the differences between the needs of urban and rural communities.
- Need for more mixed use development; there are barriers to funding for mixed use projects (federal lending standards).
- Reuse existing structural assets (buildings and infrastructure) to address strategic needs of communities.
- Existing buildings represent a very valuable asset that should be better utilized: historic buildings are better built and more attractive than much new construction, especially for commercial properties.
- Bio-materials development is another underutilized asset. (e.g. use of lake weeds as bio-mass to generate energy).
- Use agricultural lands as a source for economic development, tying rural and urban areas together.
- Agricultural lands are a source of inputs to advanced technologies (e.g., ethanol, sweet water chemical, biomass crops, etc.)
- Must consider food deserts, which exist in both urban and rural areas.
- “Green the rustbelt” – reuse brownfields, which can be used for ecology and agriculture.

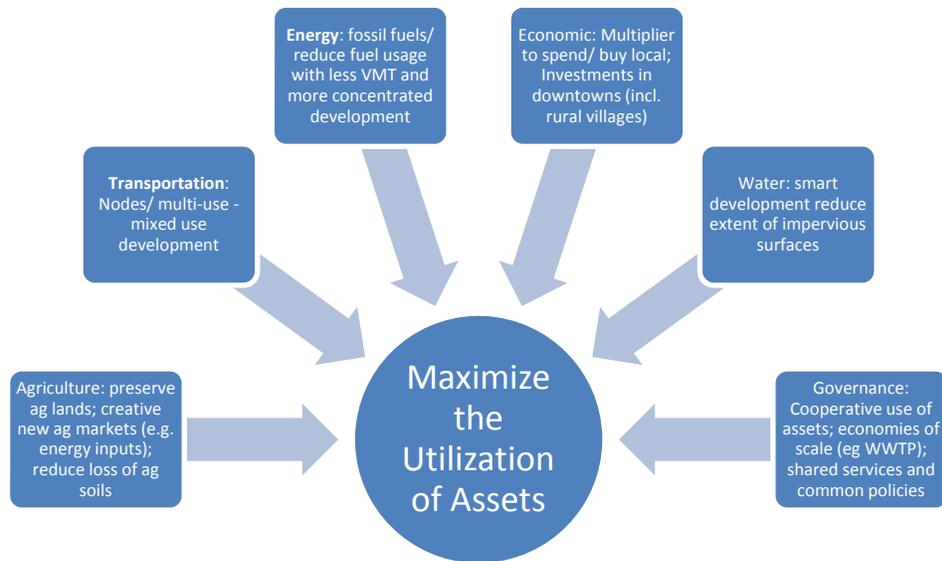

- Need to integrate ecology, an understanding of environmental protection and ecological design into design standards and practices.
- There is a need to revamp the entrenched system that is embedded on capital and quick returns on investment.
- Need to build relationships and a stronger understanding of sustainability to change established systems and practices (e.g., county sewer and water districts, major highway extensions, etc.) that support sprawl.
- Local zoning should support nodal development (model legislation; incentivize good zoning).
- Need strong leaders and leadership in order to get things accomplished.
- Need to increase awareness of sustainability; it must become embedded in the local culture.
- Utilize the power of the academic community in the region to achieve sustainability goals.
- Need to “brand” sustainability in the region.
- Need cooperative utilization of assets.
- Coordinate with REDC actions – filter/translate Regional Sustainability Plan back into REDC efforts.
- Create a regional entity to “marry” the REDC and FLRSP together (incentivize cooperation – how?)
- Need to better capture externalities/value capture – ex. Disincentives to abandon properties (penalties for abandonment; old big box); reward good actions.
- Need for regional tax base sharing to break away from the perceived need to continue development in rural areas to boost local tax revenues.
- Promote the region as a region and work together to achieve sustainable improvements (there is currently too much fragmentation).
- Home rule makes regional activity a challenge; it creates restraints that result in fragmentation. Need incentives to get beyond this (such as good zoning), but this requires strong leadership.
- Integrate land use issue to integrate social issues.
- Institutionalize regional cooperation – take advantage of REDC, not perfect but it’s what we have.

- Institutionalize efforts now to capture and hold what is achieved through this process before the Governor is gone and things change.
- Use Napa Valley/San Francisco model as a vision or guide for this region.
- Buy local.
- The current economic development system is about winners and losers, which makes intermunicipal cooperation more challenging. It should not be about distributing monies or creating winner and losers – there should be regional benefits.
- Must embed sustainability into the local culture so that the value becomes inherent in the system.

System Integration with Other Subject Areas (based on discussion of issues and opportunities):

Finger Lakes Regional Sustainability Plan
Funded by: NYSERDA – Cleaner, Greener Communities Program

Afternoon Session Input (Land Use/ Livability Stakeholders – about 10 people)

Discussion of issues, building off of what was offered in the morning session, with focus on land use and livability – the following was offered:

- Maximize existing assets and resources (infrastructure) – build on what we have rather than continuing to sprawl and expand.
- Develop transit-related /communication interconnections between nodes – make connections between existing places where appropriate.
- Encourage and develop alternative modes of transport – get people out of their cars.
- Revise zoning and land use policies to encourage and support adaptive reuse and redevelopment – existing policies and practices support sprawl and don't allow for mixed use development.
- Protect and preserve social and environmental assets – related to quality of life and environmental protection; recognition of the importance of these things to vital communities.
- Capture ecological components and functions of land use – need to bring ecology and environmentalism into the discussion and lens of focus.
- Practice social equity – it's not just about improving cities or affluent areas.
- Consider how the build environment and natural environment co-exist as a part of development.
- Promote policies to incentivize better land use – need to find ways to change what we build and the way we build.
- Capture externalities – increase costs of unsustainable development; reward good development (incentives).
- Promote common land use policies and regulations (model zoning) for all communities – need for better coordination and common planning across municipal boundaries to achieve more sustainable outcomes and development (need to come together rather than stay more fragmented).

- Encourage mixed use development (zoning and local land use policies should support this to improve density and diversity in developed places).
- Need education to assist people “to live locally” – help people understand the importance of sustainability.
- Need zoning to support needs of elderly and lower income – “mixing” and decentralizing.
- Need government consolidation – helps reduce redundancy and costs.
- Nodal development leverages existing investments and makes investments sustainable.
- Think of nodes as multi-use – focus on strengthening existing centers.
- Underutilized resources – creative look (example of how the nutrient-rich nuisance weeds in the Honeoye Lake could be used as a source of bio-fuel).
- Challenge home rule – how to coordinate, incentivize change, and build the relationships necessary to bring about different thinking to achieve more sustainable outcomes.
- Challenge – farm lands often leased – makes them a more fragile resource.
- Holistic approach to problem solving – using all areas of expertise to address issues and achieve sustainability; we are in a region with great resources.
- Governance – regional sewer, regional water, Genesee expressway, etc. encourages sprawl – these are entrenched systems.
- Livable communities – services, schools and safety are three factors that attract people to neighborhoods. Improve the core to build and retain population.
- Crime prevention through environmental design.
- Scale travel to needs (car sharing, etc.).
- Rural solutions will be different from urban ones: for example, mass transit is not sustainable in very rural settings, but alternatives are needed in rural areas also.
- Complete street improvements to accommodate all uses and modes; create vital neighborhoods.
- Focus on nodes with development concentrated in these areas.
- Incentives to draw residents to centers rather than sprawl – how to make the centers more livable and sustainable to retain and attract population.
- Improved education and good schools keep people in urban areas.
- Mandate (require) intermunicipal cooperation and interaction (shared policies).

Goal for Land Use and Livability:

Maximize existing assets (buildings and infrastructure) and concentrate development and redevelopment in established places and population centers (utilizing transportation corridors as one criterion for evaluation).

Strategies - after a discussion of the issues and opportunities, the information gathered was consolidated into some central strategies or themes.

- Establish common land use policies and regulations (model land use ordinances) to encourage and achieve redevelopment, adaptive reuse and mixed use development.
-
-

- Establish policies to address social equity and improve services, schools and safety in population centers and established places in an effort to retain and increase population and improve quality of life.
- Promote government consolidation and intermunicipal collaboration and cooperation.

Targets – the selected indicators were discussed with the group and realistic targets were evaluated based on short term, midterm and long term horizons.

- Per Capital Land Consumption – need to look at trends to see how land consumption has changed over the past decades. Ideal is to increase population to decrease ratio of land consumption. When looking out to the future, consider the potential impacts of having access to a large supply of fresh water (Lake Ontario) and how that may affect population growth in the region. What would it take to reduce land consumption (bring down by 0.01 = .23 ac (based on population only).
2020 = status quo (0.25 ac)
2035 = 0.2425 (3% decrease) 0.0075 reduction in acreage
2050 = 0.24 (5% decrease) 0.0125 reduction in acreage
- Residents in population centers – need to look at trends back to 1970 and factor in the average household size. Again, for future, take into consideration potential impact of access to fresh water supply.
2020 = status quo (36% population in centers)
2035 = 5% increase (~ 38% in centers) +/- 26,000 (increase to +/-463,000 persons)
2050 = 10% increase (~46% in centers)
- Deconcentration of Poverty – currently 13.2 % of region, with 23.2% in centers and 8.1% outside centers, which means 60% of poverty is located in centers. Decreasing overall rate doesn't necessarily address goal of deconcentration. Don't want to decrease the rate in the centers by increasing poverty outside centers (redistributing poverty). Target, therefore, is to maintain the status quo outside the centers (8.1%) while decreasing the poverty rate in the centers.
2020 = status quo (23.2% in centers)
2035 = 3% reduction (~20%)
2050 = 5% reduction (~18%)

Energy:

In General: Discussions included establishing goals for increasing diversified energy production from renewable sources, while decreasing overall consumption, with a specific focus on the advantage of a regional micro-grid.

- One of the stakeholders pointed out that he would rather see a successful regional plan for developing an abundance of clean, renewable, competitively priced energy that would lure new businesses and responsible growth, which may actually increase overall consumption.

Concept: Locally usable energy

Strategy: Micro-grid technology that integrates the advantages of independent local or regional production and distribution with the storage and capacity large enough to serve the region.

Current Regional Energy Generation Resources:

- Nuclear
- Hydro-power (National Grid, Municipal Power Corporations)
- Waste energy plan (Riga, Parrington)
- Land fill methane capture
- Ethanol
- Farms – manure
- Natural gas

Localized energy generation and distribution

- Could act independently when the 'grid' goes out (stand alone)
- Could serve to back feed adjacent communities or regions from excess generation

Micro-grid can be a part of Smart-grid

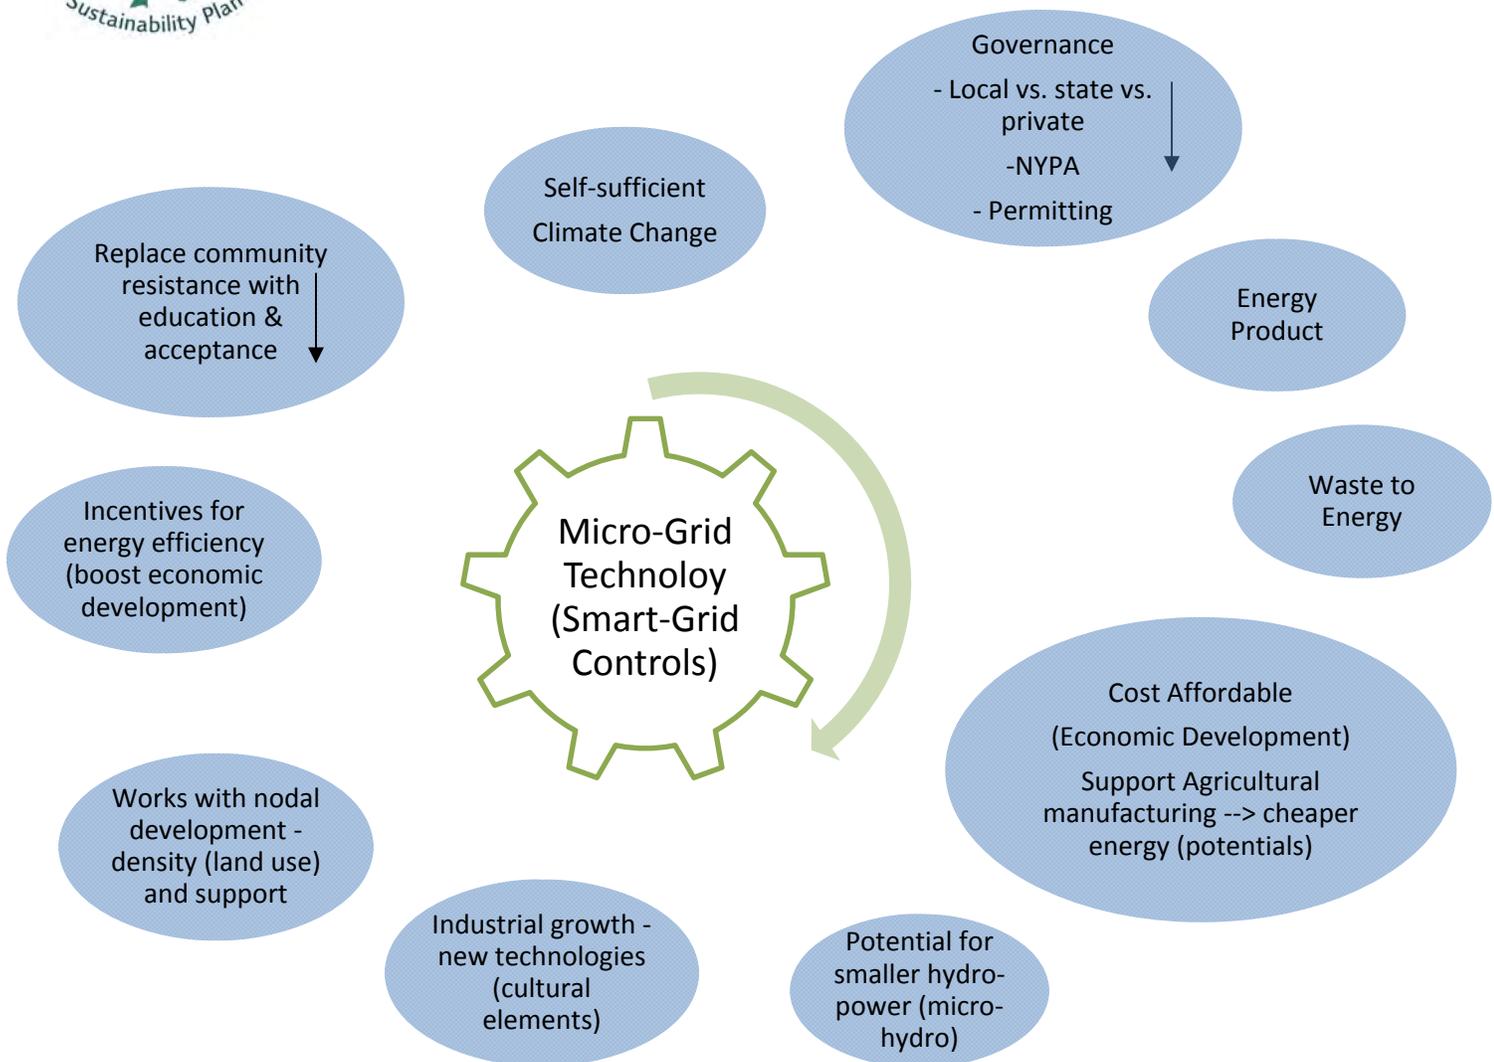

- Multiple micro-grids
- Switches

Discussion:

- Think about gas, not just electricity
 - Natural gas is abundant in our region, and competitively priced as compared to many other fuel sources Getting away from fossil fuel consumption
- Transitioning
 - Production
 - Transmission (renewable sources)
 - End-users
- NY Climate Action Plan 2009 (DEC & NYSERDA) already in place, with Albany and Syracuse regions being studied

Strategy Concepts:

- Production goals for renewable and local energy generation
- Incentives for increasing renewable and reducing fossil fuel consumption
- Resilience self-reliance, generation \geq consumption
- Distributed energy, getting excess power generation into the grid or other means of measurement & storage
- Reduction of Green House Gas Emission
- Documentation of alternative/renewable energies

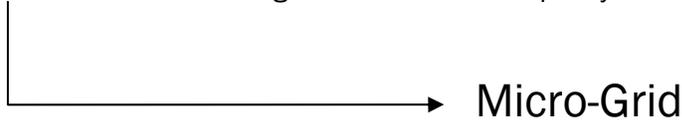

Task:

- Looking at the goals & strategies given from the morning exercise, further develop how the strategy can be used, create new strategies, and look at how they affect the other subject areas and their impact on the 5 Capitals.
- Assign targets for each Indicator.
 - Grid infrastructure fragile:
 - o snow storms
 - o ice storms
 - o rural areas

→ Affect the grid
 - Micro-grid: could be a portion of a larger, smart-grid, neighborhoods, level of a household, generation is captured, measured, and distributed. (net-metering)

Strategy: Micro-grid technology that integrates the advantages of independent local production and distribution with the storage and distribution capacity of a large grid.

Using micro-grid technology, all subject areas and 5 capitals need to be filtered through a lens so that we are capturing all aspects of how a micro-grid can be beneficial to our Region.

Subject Areas

Water: Energy from distribution centers at water sources → micro-turbines
Will eventually go back into the grid
Biological waste products

Agriculture & Forestry: Effluent > water quality

Economic Development: low cost energy → business/reliability
Carbon Credits (tax/trading)
Return on Investments

Materials: Organic material re-uses

Land Use & Transportation: Convert brownfields into PV Power fields

Climate Change Adaptation: Provides areas of refuge

5 Capitals

Human: Education, Accountability

Ecological: Generation of renewable energies within the Region/Community

Financial: Accountability

Fixed/Built: Generating power off of an existing water source, roof tops (solar panels), etc.

Social: Community micro-grid, coming together

Obstacles

- Public Policy
- Community Resistance
- Funding

- Power Transport
- Jurisdiction/Dependencies

After looking through the lenses and discovering more about micro-grid technology, more **strategies** will be filtered through this exercise.

Materials Management:

In General: Increase the recovery and re-use of all materials that are currently going into the waste stream, decrease the generation of waste in the first place.

Concept: Discover, realize, and recover the value in all elements of the waste stream.

Strategy: Regional method for brokering materials: “Garbage Craigslist”

Group Make-up

- Nine participants all who have some connection to the materials & waste sector, including the facilitator and assistant (who both were active participants)
- Sectors represented included: Two university/college based staff members, one labor/small business rep., one manufacturer/start-up, two statewide non-profit technical assistance organizations (not based in the Finger Lakes), three local non-profit/community based-organizations

General Discussion

SWOT:

Discussion mostly focused on other goals and strategies (beyond the *Straw Dog*), and while challenges (Threats) were identified, the focus was mostly on Opportunities and Strengths. Very little discussion surrounded Weaknesses (SWOT).

Straw Dog:

General discussion surrounded the *Straw Dog* (portrayed immediately below), with four resulting conclusions: 1) The “In General” and “Concept” statements seemed to resonate; 2) but, there was one addition as noted to the “Concept” statement (in brackets); 3) the “Strategy” statement was a bit small as a presentation of a strategy that could have far-reaching, regional implications—it is a good idea, but not one of the highest-level strategies that should be deployed; and 4) it is critical to get away from concepts such as “trash,” “waste,” and “garbage” in the plan, thus the change in the strategy statement to “materials” (in brackets).

A new treatment of the first two components of the initial *Straw Dog* is noted below the original (Revised Overall Goal Statement).

Straw Dog

In General:

- Increase recovery and reuse of all materials currently in waste stream
- Decrease generation of waste in the first place

Concept:

- Discover, realize, and recover the value [*highest and best use*] in all elements of the materials stream

Strategy:

- Regional method for brokering materials (e.g. “Garbage [*Materials*] Craigslist”)

Revised Overall Goal Statements (based on *Straw Dog*)

- Decrease generation of waste in the first place
- Maximize reuse, recycling, and composting of materials currently in waste stream
- Discover, realize, and recover the value (highest and best use) in all elements of the materials stream

System Integration:

Addition dialogue about goals, strategies, and even projects/programs, inherently brought in components/interests of other subject areas—the nature of materials (waste) management is one of system integration. Integration and impact of/on other subject areas serves as the foundation of the sustainable approach to materials management recommended for the Finger Lakes Region. For instance, by way of example, it could be argued that the landfills in the region impact all the other subject areas.

Other Issues:

We need to be sure everyone understands our (and NYSEDA’s) broadened definition of “waste” to include not just Municipal Solid Waste, but also other materials such as Agriculture and Biosolids, Construction and Demolition Debris, Non-hazardous Industrial Waste, and Tires. It was also discussed that Industrial Hazardous Waste should also be included in the region’s planning initiative.

All are issues discussed are noted below under “Goals.”

Subject Area Goals

- A critical component of a broader concept/goal statement is that the region should not simply base its strategy/project delineation process focused on present challenges/problems (which may, or may not exist; or, could be debated ad nauseam); but rather, project out to the future what problems, challenges, threats, and more importantly, opportunities await that need a solid foundation developed today.

- Focus on the important theme of “non-product output” as a way to articulate what “waste” really means—it adds the economic imperative to how the region approaches materials management.
- Base strategy and project decisions on data (data-driven decision making)—and if the data does not exist, expend resources to acquire it.
- Target items in the waste stream using a “highest and best use” approach to solutions with the following priority as a guide: 1) Source reduction of non-product output, 2) Reuse of materials, and 3) Recycling and composting solutions.
- Don’t ignore the 800-pound Gorilla in the room—the existing landfills and huge amount of waste imported into the region—focus on big reductions in waste disposed at those landfills.
- Strive to “normalize size” in manufacturing/business as it relates to materials management and innovation.
- Focus efforts on what is not being done appropriately and what can be done better (e.g., biosolid management).
- Focus efforts on “big ticket” items in the waste stream (e.g., organics, composting).

Strategies and Projects

Strategies:

- Understand the categories of waste (materials)—e.g., through a regional waste characterization effort
- Consider the following criteria when making decisions about specific materials management options:
 - Number/quantity in stream (volume/weight)—target major components
 - Identify items to be managed differently based on toxicity—reduce high-toxicity items
 - Look at cost of alternative management options considering externality costs and benefits (which need to be articulated)—strive for lower-cost options
 - Identify “easy” solutions based on some type of risk assessment—defer to options that can be done quickly and with reduced effort
 - Consider market/alternative solution availability/development—focus on those items with existing markets first, then—or at the same time—develop local markets for other logical materials
 - Target things not currently managed well—reduce/recycle problem materials and/or eliminate problematic management modes
 - Strive for local based solutions—use regional materials to invest in “green jobs” in the region
- In conjunction with the landfill operators, develop new business models that move away from disposal in its purest sense
- Regarding incoming waste:
 - Better characterize what is coming into region
 - Define highest and best use for the major components of this waste stream
 - Work to extract highest value of this material (which is not necessarily landfilling)
 - Potentially work with state regulators to limit material coming into the region using strategies such as: “We won’t take anything from anywhere not already reaching a 40% diversion/recycling rate”
- Develop a debris management plan for extreme weather events, such as storing bulky wood instead of chipping to improve chip quality
- Develop materials management strategies that increase diversion goals at each “touch-point” of the waste/materials (such as at the place of generation, waste truck, transfer facilities, and

disposal locations)—e.g., offer “service opportunity analysis” technical assistance services to optimize reduction of “non-product output”

- Prepare for inevitability of single-stream programs throughout region, including how to best utilize the new Monroe County single-stream MRF to: Improve material quality, level the playing field, decide what is the best method for curbside (e.g., system improvements), and identify and target differences in what is collected and how it’s collected
- Develop incentive programs—e.g., take back/deposit programs
- Address net-metering as it is a challenge and particularly limiting in rural areas (this relates to digestion, energy production, and distributed energy)
- Develop a new system to capture pre-consumer organics (e.g., vegetable and fruit waste at point of processing), then expand this system—once proven—to post-consumer organics (e.g., food waste)
- Encourage carbon credit policies (at the state level)
- Address low tipping fees (that currently do not include all externality costs) as they are a disincentive to sustainable approaches to materials/waste management
- Develop integrated communication, outreach, and education strategy that looks beyond email, websites, and electronic social networking (while all are good to deploy), and recognizes that large segments of society don’t have access to these means of communication
- Develop local innovative approaches to: 1) Reduced packaging techniques, and 2) new sustainable materials for packaging, using already existing local resources such as existing manufacturers, new private sector interests, and existing academic resources (e.g., at RIT’s Golisano Institute)
- Develop metrics and education strategies to define and articulate the true value of materials
- Biosolids are currently being land applied and overburdening water and land resources—move toward composting and digestion solutions

Projects:

There was limited discussion around specific projects, but a few did come up:

- Need seed money for education about pre- and post-consumer organics management programs
- Address challenges with funding more digesters
- Provide resources and programs to better train operators/owners regarding digester operation and maintenance

Targets

Discussion started on potential targets and surrounded three concepts that need to be developed further:

- Potentially look at a per year reduction in waste production, measured in a percentage—say, 10% a year—using the 2010 waste generation tonnage number as a baseline
- Develop per commodity reduction (decreasing) and recycling (increasing) numbers
- Calculate and strive for a per person per year (per capita) reduction—say, from the national average of 4.3 to 3.3

Economic Development:

In General: Increase investment into “Innovation Acceleration,” decrease disinvestment (such as “brain drain,” poverty, and abandoned infrastructure.)

Concept: Invest in utilizing and strengthening the core genius of this place.

Strategy: An Innovation Consortium (drawn from business, academia, government, and the NGO community) that convenes multiple stakeholders to find and address regional challenges that have potential for global enterprise opportunities, and then support business ventures to carry them out.

Context: Economic development is best understood as the means of wealth-creation for all entities in a system. We are working in the Finger Lakes Economic Development Working group to tease out the best paths for this capacity to produce increasing wealth and long-term health for all institutions, agencies, businesses, communities and families, as well as individuals. Our experience is that this is more likely when communities draw on and advance themselves from that which makes them unique and distinctive. That uniqueness serves as a source of development that adds value and is able to grow the community coffers as a result. This is contrasted to regions that have less success by chasing trends which anyone can take on, such as technologies that are not unique to the region. This is also contrasted to working on local needs but without a mind to the scalability of it for unique offerings beyond the region that are only likely to be really innovative. These two contrasts are the shortfall producer for most regions in their economic planning. They become a commodity as a result.

The economic development top priorities will be selected in terms of their ability to develop means to innovate, generating ideas that contribute and serve the growth of the region, implement them such that they have long-term viability, scalability and spread-ability, and develop ways to sustain that through time as a foundation. Understanding and using the Story Of Place™ has proven effective in regions in Texas, Oregon, British Columbia, Mexico and many other places. It will be a guiding light in our Sustainability Planning in the Finger Lakes Region.

What makes The Finger Lakes Unique and Distinctive?

The story is more complex, but we are anchoring on three concepts that have proven to be repeatedly powerful for Finger Lakes throughout its history in terms of business development, job creation and talent development and attraction and ability to create global demand for products.

The first is that ideas that start **from local needs but have global application** has been the most successful. For example:

- Kodak, Jell-o, Bausch & Lomb, Gannett, Western Union, Xerox, French’s, Champion, Genesee
- Brewing Company
- Kodak – film, digital cameras
- Xerox – printers
- Champion – first hooded sweatshirt, reversible t-shirt, mesh fabric
- Genesee Brewing Company – wheat industry, Whiskey Rebellion
- Bausch & Lomb – contacts that came from understanding lens.

Many of the companies here acted as an eddy in a fast moving world, taking ideas, developing them in very new ways. They were seen only as local solutions but later advanced and sent out to the country/world as products that were valued and adopted on a large scale. Often these were new technologies in the industry and using materials in very unique ways.

This second distinctiveness in the Finger Lakes Region was the ability to take the original need and innovate in ways that are very practical and solve local problems immediately. But repeatedly innovation is introduced in a way that the benefits can be “Democraticized” (made applicable on a grand scale)

The third distinctiveness is in the ability to spread the seed idea, just like Jonnie Appleseed, in a way that its value is seen across a broad landscape of regions. It is easily adopted outside the region, bringing wealth back to the region from national and global adoption of technologies that grew out of local needs, were innovative and were applicable to a variety of situations with the same or related needs.

These three unique criteria are how we are evaluating projects and funding application, believing it has the best chance of creating wealth from the funds invested in economic development. Further, since we will be working on many projects related to sustainability and climate mitigation that will meet this criteria, local problems and needs where innovation is needed, the plan for economic development will pull these needs over into the economic development strategy and find project there to advance that will simultaneously improve sustainability (e.g. food safety and security, climate mitigation technologies) and are tackled from the criteria that is unique to the Finger Lakes based on the story of place.

General Input:

When looking at the characteristics that make Finger Lakes unique, the following ideas were generated collectively as strategic places to grow the wealth of the region.

- Custodian of Economic Development should have comprehensible understanding of this distinctness in all subject areas and the five capitals on every project; make it a process that is imbedded
- Connect to local land use plan so decisions are made at local level-while embedding sustainability more deeply, especially on implementation ideas; so Story of Place is further refined as well.
- Example of a strategy: *Waterways like San Antonio River Walk-have transportation, economic and tourist activities tied to our unique story of place and other subjects (transit, education on our uniqueness). We need this nature of thinking. We would use sustainability lens so energy is rethought which was not done in San Antonio.
- Blend in international organizations that are national and global, e.g., Boy Scouts
- *Social attention of children and youth. Institutions feel like fortresses. Bridge between business and students as seed for investing in innovation on our uniqueness
- Globalization of our innovation-aware of size, many sizes so more resilient. Diversity of size, mix of people and perspective in economic activity
- Measure growth by diversity and not just consumption
- Reducing footprint across all subject areas. Sustainability is good for business. Metrics-ROI. E.g., Issue of clean water and costing fees; devise systems that demonstrate
- *Transparent and democratizing-need to show capital benefit of all projects to communities, plus share our innovation process with others. Claim it so we can own it.
- Value our goods correctly so value flows back. E.g., water

- *Build an accounting system to recover and invest in value “appreciation” of natural resources. Start with national businesses locally. Traveling road show with Consortium on what we discover (innovation need).
- Regional building of business capability to work sustainability with stakeholders broadly (fragmented examples now)
- *Food strategy that brings stronger safety security, uniqueness, sustainable and linked to other 5 areas. Building financial incentives (local where can make sense). Regional food strategy with cross stakeholder process
- Investment isn’t just financial
- Branding/marketing of the region

Shared Strategy discussions across from other groups and advanced by ED as well

- Scaling of biomass-want to serve all size farms
- System to recover and invest in values and appreciate natural resources
- No regional communication/approach for land use, transportation, ED, etc. Need to tap into current efforts
- Goal: It’s a challenge to move from a focus on community or county to the region. Want to keep the individuality, while moving the regional economy forward
- Sustainability isn’t just an add on-it’s core to ED project

Prioritized Strategies

Strategies narrowed from above dialogue

I. Strategy One

Initial

↑ Investment in innovation acceleration

↓disinvestment (people infrastructure)

Invest in utilizing and strengthening the genius of place (embedded in all three strategies)

Strategy One:

Innovation consortium convenes diverse stakeholders-Find and address regional challenges with potential for global enterprise opportunities.

Create an entity (convening authority) that will seek out developing best practices in sustainability and incorporate local views/context in order to ensure the 5 capitals are considered in RED-C proposals

II. Strategy Two

↑ investment (energy) in the 5 capitals (human, social, ecological, fixed and financial)

innovation (entrepreneurship and intrapreneurship) acceleration

↓disinvestment (people infrastructure-including poverty; atmosphere where all people can contribute; diversity of opportunity; history embedded in cultural; service, income opportunity and need disparity)

Innovation consortium convenes diverse stakeholders-Find and address regional challenges with potential for global enterprise opportunities.

Increase regional sourcing of foods from within the region, leading to economic growth and energy reduction and energy development

III. Strategy Three

Create a climate of entrepreneurial energy that fosters a transformational regional brand and identity that leverages the strengths of the regions' five capital assets (human, ecological, financial, social and fixed/built).

IV. Strategies Four:

Middle skills:

Over the last couple of generations, we have devalued middle skills. When we say stop, we need to change the way we talk about those jobs and how we view those apprenticeships. We need to tie them into this continuum in the eddy. Advanced manufactures would love to get someone from agriculture who can fix something. We need to replace the message that everyone's going to college.

To enhance Economic Development from a sustainability lens, I didn't hear anything about environmental or health. I would emphasize the equity piece

Built in apprenticeship. We need to replace that from previous dying business.

V. Strategy Five:

Science, Technology and Manufacturing Park

- Looking for mega sites. The site is to be a green site. It's utilizing the area well. We minimizing the wetlands impact. It's aimed at developing the creative class. There's going to create 10,000 jobs and a 3x with suppliers, so 30,000 jobs. The regional supply chain effect is multiple county wide. Mega sites want to locate next to R&D sites. The project will be able to capture the next generation of manufacturing job. They're high skill, high education. We have the educational institutions so we can train them. We can build on the success on the old manufacturing to the new manufacturing. We need to stop thinking in municipal silos. We need to see the benefits throughout the region and western New York.
- The plant needs some type of certification by a third party. Also, leveraging out to supply chain. Those people need to have some type of certification too.

VI. Strategy Six:

FL Business Accelerator Cooperative

- This is a plan is to create a hub and node of incubators, focused on a new incubator. It's combining with the tech incubator and RIT incubator. Then reaching out beyond to create nodes in the counties for people who don't want to come to Rochester or have a hard time getting here. We'll provide them with mentoring and capital. So, not just incubate and provide capital. My potential for democratization would be that the nodes would reach out to the disadvantaged areas. The rural counties could tap into resources they don't have connection to now. Then we teach other states and regions to do that.

VII. Strategy Seven:

GIS (Goliano Institute of Sustainability)

- The project was to create a new part of the Sustainability Institute. GIS is working on a food processing cluster. One effort is they trying to provide new technology to reduce waste streams in the cluster. They're trying to help all elements of the industry. There are a couple of partners involved. The point is GIS is very diverse in their capacities. They

need equipment to build capacities into the infrastructure and the business community. We have an innovation environment at RIT. When you're designing new businesses, we need middle skills. The local educational facilities can help. Water was touched on. This region has water. Other regions in the country don't.

Indicators

(All indicators are additions to the December document. No time periods were associated with these indicators.)

1. # of out of state visitors
2. ↑ of mixed used development
3. ↓ of vacant... [The group that suggested this indicator will refine and contact Carol.]
4. ↑ business attraction and retention
5. ↑ talent attraction and retention
6. ↑ in home grown businesses
7. ↑ in projects that meet sustainability criteria that will be developed by the proposed Innovation Consortium
8. Charitable donations
9. Happiness index
10. ↑ in high school graduation
11. ↑ movement into Finger Lakes zip codes
12. ↑ capital investment
13. ↓ of empty Main St. store fronts and open space
14. Net advocate score
15. Tourism spending
16. Age distribution of workforce
17. Money spent on infrastructure
18. How connected to place
19. Main St. viability
20. Average disposable income
21. Number receiving social services
22. Number of technical programs available
23. Business with 10 or more employees
24. Acres farmed by types of crops and end use of land
25. Businesses located where infrastructure exists
26. Funding trends for small businesses
27. Water quality (ISO measurement-net zero)
28. Number of flood events
29. Visitor or tourism dollars and origins
30. Water quality
31. Philanthropic giving
32. Quality of education
33. Investment in research
34. Amount of Venture capital
35. Successful commercialization of technologies and associated jobs
36. Improvement in water quality
37. Cost avoidance to companies when given technology
38. Trained workforce availability for diverse opportunities
39. New mechanisms for training and educating
40. Certification for projects
41. Required certifications of suppliers
42. Number of technologies reviews

43. Number of associated employment growth
44. Address GHGE (greenhouse gas) at scopes 1-3 and their mitigation

Overall Indicator thought: So a major indicator will be how well the projects from the other working groups are framed in terms of these following criteria.

1. Are the projects being focused on local needs that have largest applicability beyond the Finger Lakes?
2. Are the projects innovative taken on, and converted into economic development potential, not just reducing the harm that will come from the problem? Can the challenges be converted, directly and literally, into business ventures that solve the problem at the same time they generate economic development opportunity. E.g. See Sarah's example attached. All projects in other working groups should be tackled this way and will therefore be Story of Place indicators. Every working group should pursue this route and the economic working group should scour all the other plans for such opportunities. This is the heart of the distinctiveness of the region that can be leveraged even as we design and implement this plan. (This is the highest leverage place for high-level returns to the region.
3. Do they have a component in each venture that tracks the spread of the idea into other regions as part of business and economic development plans?

Indicators that had priority for the group:

1. Number of businesses that focus on the problems found in the planning process in the other working groups and start initiatives to tackle them. New business ventures that target those directions
2. Training that is aimed at business development ideas in #2 indicator, those that are focused on the problems and needs identified in the plan's working groups, rather than just new projects which are not seen as tackling those specific problems (a past huge success rate for Finger Lakes to innovate on it on problems)
3. Successful commercialization of technologies for problems specifically designated in this plan, globalization of the offerings and growing jobs association with those specific projects as they scale to bigger regions, nationally and globally.

TARGETS (where to focus) – specific targets were not established in this group however they will be developed based on the overall discussion and shared with the group for feedback.

- Increased tourism
- Private sector growth against sustainability measure
- Increase in eco energy parks based on symbiotic relationships of businesses within the park
- Number of new businesses (that survived over 5 years)
- Increase in capturing graduates
- Pride/happiness with region
- Move from corporate city to entrepreneurial, risk taking city
- Decrease of the number of poverty
- Improved racial poverty level
- Increase wage earning equality and availability of training in pockets of distressed areas
- Increase in job shadowing

- Diversity in education levels and programs
- Balancing between mandates and opportunities to customize based on unique needs
- Disaster protection for key infrastructure
- Consideration for infrastructure investments when looking at lake levels
- Keep infrastructure aligned with capacity/planning
- Protect our natural resources?
- Increase education rating and levels (nationally and internationally)

Last Thoughts/ Q&A

- Project Recommendation List → how the money will be spent
 - Focus on goals and strategies
 - Specific projects will be in an appendix
 - Can they be incorporated into document?
 - No, NYSERDA has requested that strategies in the main document be broad strategies and specific projects be documented in the appendix.
 - Strategy but no project, what happens
 - Make note, will be part on Plan
 - Ownership, measurements, goals → responsibility of Project Owner
 - Fate of indicators?
 - Submitted Place-Sourced Indicators
 - NYSERDA required indicators stay
 - Strategy for each indicator – working on progressing indicators and goals
 - More strategies by March
 - Indicators may be modified per strategy, data, etc.
 - Education – has it been addressed?
 - Came up briefly in Economic Development group discussion
 - Where does this belong? Which subject area → should be part of Livable Communities and Agriculture and Forestry
 - Quality of Urban schools
 - Poverty
 - Increase graduation rates
 - Economic Development → Institutions
 - Strategy for K-12 education
 - Inner-city schools
 - Affordability of housing and school systems
 - Integration of ideas
 - Future funding
 - Public meeting summaries on website
-

Next Steps

- **STRATEGIES:** Strategies are being captured from the online form and will continue to be captured. The deadline for strategies to be submitted for inclusion of this draft plan is March 4th. However, draft strategies will be put in front of the public for review in late February and therefore if you want the strategy included in that exercise, where it can be advanced/modified/endorsed, then you need to submit the strategy by February 8th. The Genesee/ Finger Lakes Regional Planning Council will likely continue to collect strategies even after this report is finalized so it can be updated over time.
- **PUBLIC MEETINGS:** A second round of public meetings will be held the last week of February. Fliers will be available on the website the week of Feb. 4th.
- **STAKEHOLDER MEETING:** There will be a fourth meeting of the stakeholder groups (as a group) in March (either the 12th or 13th) to comment on the ranking of strategies, wording, etc. These will be sent out to the groups IN ADVANCE of the meeting so that you have time to review them and bring comments and questions to the meeting.

Finger Lakes Regional Sustainability Plan

Stakeholder Meeting #3

January 17, 2013

FUNDED BY: NYSERDA – CLEANER, GREENER COMMUNITIES PROGRAM

Story of Place

Rationale:

Communities that maintain their vitality, their ability to attract investment and resources and are able to evolve through time, have three things in common:

1. They know who they are – their uniqueness
2. They develop a narrative to convey who they uniquely are
3. They embed this narrative and uniqueness into everything they do

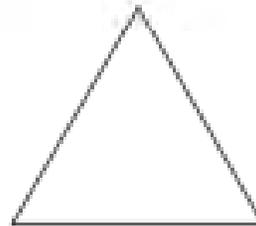

**Story of Place presentation can be found
under stakeholder meeting #2 minutes - we
are not reissuing here due to size**

“DEMOCRATIZING”

MAKING PARTICIPATION
IN THE BENEFITS OF
SOCIETY AVAILABLE TO
ALL

“EDDYING”

A PLACE WHERE
COLLECTING, SETTLING,
NURTURING, AND ENRICHING
CAN OCCUR

“INNOVATING”

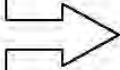

FINDING SOLUTIONS FOR
LOCAL PROBLEMS THAT ARE
RELEVANT FOR A LARGER
WORLD

BELIEF
PHILOSOPHY
PRINCIPLES

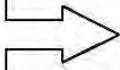

STORY OF PLACE

CONCEPT

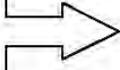

OBJECTIVES/GOALS

STRATEGY

WHAT TO PUT IN PLACE TO PURSUE GOAL

DESIGN

PROJECTS

ACTION

ACTIONS/TACTICS/TEST DESIGN

AUDIT

INDICATORS OF PROGRESS/VALIDATE THINKING

EVALUATE

DID WE CREATE INTENDED VALUE?

“Straw Dog” Strategies

Economic Development

In General: Increase investment into “Innovation Acceleration,” decrease disinvestment (such as “brain drain,” poverty, and abandoned infrastructure.)

Concept: Invest in utilizing and strengthening the core genius of this place.

Strategy: An Innovation Consortium (drawn from business, academia, government, and the NGO community) that convenes multiple stakeholders to find and address regional challenges that have potential for global enterprise opportunities, and then support business ventures to carry them out.

“Straw Dog” Strategies

Energy

In General: Increase diversified energy production from renewable sources, decrease overall consumption.

Concept: Locally usable local energy.

Strategy: Micro-grid technologies that integrate the advantages of independent local production and distribution systems with the storage and distribution capacity of a large grid.

“Straw Dog” Strategies

Water

In General: Increase water quality (for both surface and ground water), decrease the destructive potential of run-off especially in extreme events

Concept: Continuous renewal of a robust and healthy hydrological system (for humans and nature).

Strategy: Reduce built infrastructure costs (construction, maintenance) through rewarding ecosystem services (tax valuation or credits, utilities, etc.)

“Straw Dog” Strategies

Land Use, Livable Cities, and Transportation

In General: Increase development or re-development around existing infrastructure, decrease dependence on automobiles and fossil fuels for transportation.

Concept: Stimulate nodal development.

Strategy: Make existing but underutilized assets (e.g. along Erie Canal corridor, urban brownfields) affordable enough to attract new energy and investment.

“Straw Dog” Strategies

Agriculture and Forestry

In General: Increase the viability and ecological contribution of Ag and Forestry, decrease waste and dependence on outside inputs.

Concept: Diversify yields in order to make land-based ventures increasingly economically attractive.

Strategy: Biological energy production (for farms, forests, communities) through initiatives like Plug and Play systems, regional facilities, or power purchase agreements.

“Straw Dog” Strategies

Waste Management

In General: Increase the recovery and re-use of all materials that are currently going into the waste stream, decrease the generation of waste in the first place.

Concept: Discover, realize, and recover the value in all elements of the waste stream.

Strategy: Regional method for brokering materials:
“Garbage Craigslist”

“Straw Dog” Strategies

Climate Change

In General: Increase resiliency, redundancy, and adaptability, decrease infrastructure vulnerabilities.

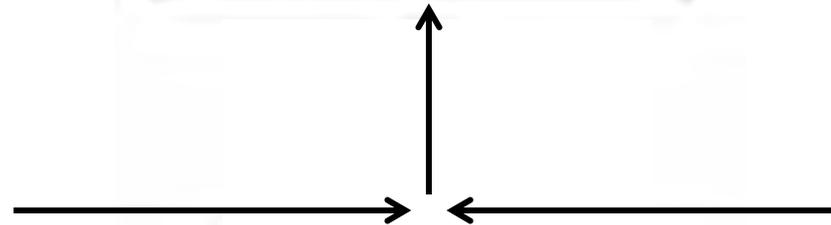

Concept: Semi-independent but mutually reinforcing networks (for energy, food, water, and other critical needs).

Strategy: Self-Sufficient Community Disaster Refuge Centers

Law of Three

1. Use the criteria to enrich or upgrade this strategy

3. What is the most creative initiative that we could take with regard to addressing this restraint?

2. What is the restraint (in the sense of what we need to be creative about) that keeps this from happening?

Exercise

- 1.** Select from all the indicators that have been developed for this plan, and identify a set that you believe this strategy will positively affect.
- 2.** Help us understand why this strategy will affect each of these indicators, and how.
- 3.** Are there obvious voids in terms of the indicators that we should be tracking?
- 4.** For each indicator, what should the target be, and what are the short and mi-term milestones moving toward that target?

Energy

Subject Area Goal

Increase the generation and distribution of regional renewable energies while using energy efficient and alternative energy resources, along with conservation methods, to decrease the reliance on fossil fuels and non-renewable outside energy sources and to become a self-sustainable region.

Opportunities

- Various renewable/alternative energy sources that reduce dependence on fossil fuels
- Focus on sustainable demand/consumption, not just replacing fossil fuels with other sources
- Economic development—R&D, manufacturing, operations, etc. for renewable/alternative sources
- Reduced environmental impacts—cleaner air, cleaner water
- Waste-to-energy research and development (landfills, farms, etc.)
- Mutually beneficial relationship with other subject areas

Challenges

- Balancing renewable/alternative sources with environmental/ecological impact
- Consensus between municipalities, organizations, and the public
- Securing sufficient public and private investment
- Developing incentives (financial and otherwise) for voluntary guidelines and programs
- Achieving a viable cost/benefit ratio for new energy sources
- Visual and landscape blight of different energy installations
- Developing effective public policies
- Developing technology for energy storage and distribution
- Resistance to change
- Need for reliable, technology-neutral education resources to combat misinformation

Variables

- Success of other subject areas
- Unstable energy markets
- Public perception/acceptance of various energy sources and techniques
- Success of research and development efforts

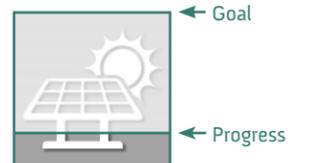

Indicators and Targets

| Indicators | Baseline Value (2010) | Short-Term Target* (2020) | Mid-Term Target* (2035) | Long-Term Target* (2050) |
|--|---|---|---|---|
| Regional energy consumption per capita | 186 MMBtu | 20% reduction | 35% reduction | 50% reduction |
| Total installed renewable energy capacity | 3,495,768 MMBtu (9% of region's total demand) | 20% of region's total demand provided by renewable energy | 35% of region's total demand provided by renewable energy | 50% of region's total demand provided by renewable energy |
| Regional energy self-reliance (% generated within the region) | 59% | 65% | 75% | 85% |
| Regional energy generation per capita | 19.6 MMBtu | 21.62 MMBtu | 24.86 MMBtu | 28.17 MMBtu |
| Availability, accessibility, affordability of renewable energy | Data not available** | N/A | N/A | N/A |
| Energy efficiency | Data not available** | N/A | N/A | N/A |

*All % reductions or increases are related to the 2010 baseline values, not the previous target.

** Baseline data currently not available. It is recommended that in the short-term, a method to collect this data be developed.

Achievement to Date

Energy

Subject Area Goal

Increase the generation and distribution of regional renewable energies while using energy efficient and alternative energy resources, along with conservation methods, to decrease the reliance on fossil fuels and non-renewable outside energy sources and to become a self-sustainable region.

Priority Broad Strategies

Connection with criteria
 ● Strong ● Moderate ○ Marginal

| | Evaluation Criteria | | | | | |
|--|--|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|
| | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility |
| Broad Strategy—Develop local and regional policies and plans that accommodate incentives and educational programs to promote energy conservation and efficiency | ● | ● | ● | ● | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Promote and incentivize energy auditing/measurement and verification, commissioning, and the implementation of energy conservation and efficiency measures (e.g., lighting, motor, service hot water heating, and HVAC controls). Develop and promote the adoption of local codes and policies that exceed the minimum requirements of the NYS Energy Conservation Construction Code. Educate and promote energy conservation and efficiency measures to municipalities, businesses and residents highlighting the benefits of simple measures (i.e. maximize the use of daylight, use of occupancy sensors, installation of energy efficient lighting and adjusting temperature controls). Support research and development, deployment of pilot projects to validate technology and eventual commercialization of net-zero energy technologies. Promote the use of alternate transportation. Promote the awareness of alternative fuels and technology. Utilize green infrastructure and ecosystem services to reduce energy demand. Collaborate with colleges and universities to establish a household energy audit clearinghouse. | Representative Projects <ul style="list-style-type: none"> Golisano Institute for Sustainability at RIT—funding to enable the equipment of research labs to support research and development that embodies the principles of sustainability in product development (REDC Plan) New York State Pollution Prevention Institute at RIT—a resource that enables companies to reduce chemical use, increase the efficient use of raw materials, energy and water and reduce emissions and waste generation. (REDC Plan) The FLREDC will continue to support, monitor and promote projects that improve energy efficiency. (REDC Plan) | | | | | |
| Broad Strategy—Develop, produce, and employ alternative energy (bio-energy, waste to energy, etc.) | ● | ● | ● | ● | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Use of food waste (ag, processed, etc.) to produce energy. Bio-gas powered fuel cell and hydrogen development research and implementation. Increase availability and geographic coverage of alternative public fueling stations using electricity, hydrogen, bio-fuel, CNG, ethanol, LNG, or propane. Support research and development, deployment of pilot projects to validate technology and eventual commercialization of new alternative energy technology. Educate the public and municipal officials on the benefits of alternative energy generation and address the potential negative impacts. Encourage municipalities and local districts to conduct an inventory of potential alternative energy production. Conduct farm energy audits. | Representative Projects <ul style="list-style-type: none"> Seneca AgBio Green Energy Park – funding to expand this innovative program for agricultural and renewable energy production. The facility process grape agricultural waste and produces grape seed oil and biodiesel. (REDC Plan) Epiphergy. | | | | | |
| Broad Strategy—Upgrade the existing conventional energy production and distribution in an a sustainable way | ● | ● | ● | ● | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Upgrade the transmission infrastructure to reduce distribution loss. Increase the use of demand response program to better manage supply and consumption. Promote distributed generation. | Representative Projects | | | | | |
| Broad Strategy—Develop, produce and employ renewable energy (wind, hydroelectric, solar, and geothermal) | ● | ● | ● | ● | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Develop and promote the adoption of local policies that accommodate the development of on-site and community renewable energy generation Explore and develop innovative funding and financing options for the development of renewable energy production. Research the potential for and promote the use of public-private partnerships and/or purchase power agreements to encourage the development of renewable energy generation. Support research and development, deployment of pilot projects to validate technology and eventual commercialization of new renewable energy technology. Educate the public and municipal officials on the benefits of renewable energy generation and address the potential negative impacts. | Representative Projects <ul style="list-style-type: none"> Innovacracy—innovative crowd source funding model to support early stage technology development and commercialization. (REDC Plan) New Town Energy Independence—develop large scale solar projects within new communities for energy self-sufficiency. Livonia Energy Park—creation of municipal park with renewable energy production capacity going back to community grid. | | | | | |
| Broad Strategy—Develop and implement micro-grid technologies that integrate the advantages of independent local production and distribution systems with the storage and distribution capacity of a large grid | ● | ● | ● | ○ | ○ | ○ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Support research and development, deployment of pilot projects to validate technology and eventual commercialization. Explore and develop innovative approaches to address microgrid financing, ownership and service models. | Representative Projects <ul style="list-style-type: none"> Wayne Industrial Sustainability Project (WISP) | | | | | |

Transportation

Subject Area Goal

Provide an equitable transportation system that ensures safety, maximizes efficiency, addresses disaster resiliency, provides mode choice and reduces dependence on fossil fuels.

Opportunities

- GHG emission reduction
- Improved public health through active transportation
- Outreach/promotion of available programs and services
- Increased resilience for individuals/households when multiple modes are viable for their daily needs
- Expand on recent momentum in expanding bicycle infrastructure
- Human-scaled design supports local/small businesses
- Educating policy makers and the public about transportation-land use connection

Challenges

- Access to funding
- Minimal congestion discourages alternative modes
- Land use policies that promote auto-oriented, single-use development
- Struggling urban areas discourage people from locating in walkable/bikeable neighborhoods
- Current lack of critical mass to support transit modes beyond bus service
- Negative perception of public transit

Variables

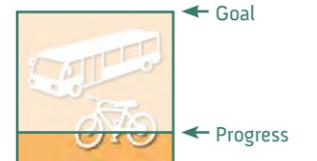

- Availability of federal and state funding
- Fuel costs

Indicators and Targets

| Indicators | Baseline Value (2010) | Short-Term Target* (2020) | Mid-Term Target* (2035) | Long-Term Target* (2050) |
|---|--|--|--|--|
| Total percentage of people commuting via walking, biking, transit, and carpooling | 15% | 16% | 18% | 20% |
| Vehicle miles travelled per capita | 9,472 miles | 1% reduction | 3% reduction | 5% reduction |
| Transportation energy consumption per capita | 73 MMBtu | 10% reduction | 25% reduction | 40% reduction |
| % income spent on transportation | 25% | 3% reduction | 7% reduction | 10% reduction |
| Freight tonnage moved | | | | |
| <ul style="list-style-type: none"> • Percent by truck • Percent by rail | <ul style="list-style-type: none"> • 80% • 12% | <ul style="list-style-type: none"> • no change • no change | <ul style="list-style-type: none"> • no change • no change | <ul style="list-style-type: none"> • 78% • 14% |

*All % reductions or increases are related to the 2010 baseline values, not the previous target.

Achievement to Date

Transportation

Subject Area Goal

Provide an equitable transportation system that ensures safety, maximizes efficiency, addresses disaster resiliency, provides mode choice and reduces dependence on fossil fuels.

Priority Broad Strategies

Connection with criteria
 ● Strong ● Moderate ○ Marginal

| | Evaluation Criteria | | | | | |
|--|--|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|
| | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility |
| Broad Strategy—Provide for and promote alternative modes of transportation | ● | ● | ● | ◐ | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Enhance and expand bicycle and pedestrian infrastructure to close gaps and create connections between destinations. Assess and, as necessary, adjust public transportation services to accommodate needs, demand and market potential. Collaborate with large employers, agencies, and municipalities to promote Transportation Demand Management (TDM) strategies including emphasizing the environmental and health benefits of active transportation. Promote and implement Safe Routes to School (SRTS) programs. Evaluate the feasibility of broad car-sharing and bike-sharing programs. Evaluate the feasibility for Bus Rapid Transit (BRT), light rail or fixed transit service serving major employers/destinations. | Representative Projects <ul style="list-style-type: none"> GTC Regional Trails Initiative update. Establish a Center City Circulator Service (Rochester) to serve daily commuters, visitors & tourists (GTC LRTP 2035). Construct the Rochester Intermodal Station for interregional rail & bus services at the site of the current Amtrak station (GTC LRTP 2035). Develop and implement and marketing and promotional campaign for the Greater Rochester Regional Commuter Choice Program (roceasyride.org). Continue to conduct Active Transportation Summits to educate about & encourage active transportation options. | | | | | |
| Broad Strategy—Promote nodal development | ● | ● | ● | ◐ | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Develop and implement a transportation technical assistance program to inform local planning and zoning boards about the need to support development that fully considers and integrates transportation needs (e.g., transit supportive, cluster). Develop incentives to promote nodal development in existing population and employment centers Identify and implement demonstration projects that address concerns and perceived negative aspects of nodal development. | Representative Projects <ul style="list-style-type: none"> Support Main Street revitalization projects that will emphasize local community engagement within their business attraction & revitalization efforts as well promoting nodal development (G/FLRPC Comprehensive Economic Development Strategy. (CEDS), REDC Strategic Plan) Keuka Lake Waterfront project—consists of a mixed-use redevelopment of a 14.7-acre brownfield site at the north end of Keuka Lake & adjacent to historic Penn Yan. (REDC Strategic Plan) | | | | | |
| Broad Strategy—Leverage transportation system assets to encourage economic development and enhance natural features | ◐ | ◐ | ● | ◐ | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Educate the public and key stakeholders in the region about the importance of freight transportation Develop efficient connections between modes of freight transportation (intermodal rail-truck transfer facility and new/improved rail access points) Preserve and improve access to the freight transportation system for existing and emerging industries Develop and promote recreational and cultural tourism projects Establish/maintain wildlife crossing where transportation and habitat corridors intersect Where transportation networks cross hydrologic networks, establish/maintain natural conveyance for aquatic life | Representative Projects <ul style="list-style-type: none"> Extend Erie Canalway Trail for 30 miles between towns of Lyons & Port Byron through the Montezuma National Wildlife Refuge. (REDC Strategic Plan) Construct a recreation trail that highlights the natural resources of Canandaigua Lake & will include access points, signage and waterway connections. (REDC Strategic Plan) Lyons Freight Village/Industrial Park—multi-modal, multi-business facility that will allow regional businesses to utilize the most cost effective transportation option for importing or exporting. (G/FLRPC CEDS, GTC Freight & Goods Movement Study) Determine feasibility of improvements noted in Seneca Army Depot Industrial Rail Facility Concept Plan. (G/FLRPC CEDS, GTC Freight & Goods Movement Study) Rebuild & repair Rochester & Southern Railroad rail line between Dansville & Mt. Morris to improve access to and encourage development of Dansville Properties. (G/FLRPC CEDS) | | | | | |
| Broad Strategy—Maintain and improve the functionality, safety and efficiency of the existing transportation infrastructure | ◐ | ◐ | ● | ◐ | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Continue investment policies that prioritize preservation and maintenance projects. Advance access management as part of rehabilitation and reconstruction projects, where appropriate. Identify and implement Circulation, Access & Parking (CAP) or Complete Streets recommendations, where appropriate. Improve the functionality of intersections and interchanges to increase safety, reduce delay and improve mobility. Identify and implement Transportation System Management and Operations (TSMO) projects in the areas of technology, coordination and demand. | Representative Projects <ul style="list-style-type: none"> Replace the Portage Bridge on Norfolk Southern's Southern Tier rail line to eliminate a major weight & speed restriction. (GTC LRTP 2035, GTC Freight & Goods Movement Study, REDC Strategic Plan) Construct an interchange at Kendrick Road as part of the I-390 Southern Corridor Project to reduce delays/emissions & serve the expansion of the area. (GTC LRTP 2035, REDC Strategic Plan) NYS Route 96 Corridor, Victor, Ontario County—link traffic signals on the Route 96 corridor with the Regional Traffic Operations Center (RTOC) through fiber optic & wireless means. (GTC LRTP 2035) Technology Initiatives Driving Excellence (TIDE) for Regional Transit Service—continue the implementation of TIDE to improve operational efficiency & customer service. (GTC LRTP 2035) | | | | | |
| Broad Strategy—Promote the development and adoption of alternative fuels and power sources | ◐ | ◐ | ● | ◐ | ◐ | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Promote the research and development of advanced technology vehicles (e.g., electric hybrid, fuel cell, etc.). Encourage the development of publicly accessible alternative fuel and charging stations including truck stop electrification facilities. Encourage alternative fuel fleet vehicles (public and private fleets). Explore and develop financing options to make alternative fuel/vehicles more affordable and incentivize their use. Promote the awareness of alternative fuels and technology. | Representative Projects <ul style="list-style-type: none"> Install alternative fuel charging stations at service areas along the Thruway Bio-gas powered fuel cell and hydrogen development research | | | | | |

Land Use and Livable Communities

Subject Area Goal

Increase the sustainability and livability of the Finger Lakes region by revitalizing the region's traditional centers, concentrating development in areas with existing infrastructure and services, and protecting undeveloped lands from urban encroachment.

Opportunities

- Protection of farmland and rural/scenic character
- Revitalization of cities, villages, and rural hamlets
- Cost savings on infrastructure and service delivery
- Reverse disinvestment in existing neighborhoods, infrastructure
- Pendulum beginning to swing back to desire for authentic, close-knit, walkable communities
- Human-scaled design supports local/small businesses, diversity of housing and cultural amenities, transportation options
- More equitable/efficient/sustainable tax structures
- Educating policy makers and the public about transportation-land use connection

Challenges

- Home rule limits effectiveness of regional planning
- Inefficient land use pattern results in high energy consumption and high cost of maintaining infrastructure/services
- Land use policies that promote auto-oriented, single-use development
- Competing priorities of adjacent communities
- Struggling urban areas discourage people from locating in walkable/bikeable neighborhoods
- Access to funding for comprehensive plans, zoning codes, design standards, etc.
- Conventional development costs are largely externalized and thus overlooked in favor of short-term benefits
- Development pressure threatens long-term viability of farms needed for sustainable food system

Variables

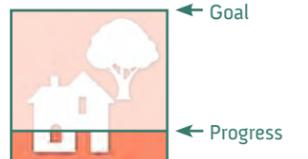

- Fuel costs
- Land values based on evolving housing demand and tax structures
- State/federal funding dedicated to local/regional planning initiatives

Indicators and Targets

| Indicators | Baseline Value (2010) | Short-Term Target* (2020) | Mid-Term Target* (2035) | Long-Term Target* (2050) |
|---|-----------------------|---------------------------|-------------------------|--------------------------|
| Per capita land consumption | 0.25 acres | no change | 3% reduction | 5% reduction |
| Rate of poverty in population centers | 22% | No change | 3% reduction | 5% reduction |
| Proportion of residents living in existing population centers | 36% | No change | 38% | 40% |

*All % reductions or increases are related to the 2010 baseline values, not the previous target.

Achievement to Date

Land Use and Livable Communities

Subject Area Goal
 Increase the sustainability and livability of the Finger Lakes region by revitalizing the region's traditional centers, concentrating development in areas with existing infrastructure and services, and protecting undeveloped lands from urban encroachment.

Priority Broad Strategies, continued

Connection with criteria
 ● Strong ● Moderate ○ Marginal

| | | Evaluation Criteria | | | | | |
|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|
| | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility |
| Broad Strategy Create healthy, safe and sustainable communities | | ● | ● | ● | ◐ | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Increase the number of communities with new/updated comprehensive plans and zoning that incorporate climate change considerations and sustainability. Create municipal sustainability offices at local and/or county level to provide stewardship over this Plan. Use local academic institutions to raise public awareness of the value and importance of sustainability. Invest in projects with green infrastructure to promote habitat restoration, improve water quality and reduce erosion. Develop a comprehensive system of sidewalk and trail networks and traffic calming measures linking major destinations and prioritizing human activity over traffic. Encourage creative strategies, such as farmers' markets and small local markets, to provide access to affordable, healthy foods. Dedicate public safety resources to promote safe neighborhoods. Use STAR Community Rating System to set a clear path and measure progress toward sustainability goals. Train local boards and officials in site plan and regulatory reviews that promote more sustainable site design and development. | Representative Projects <ul style="list-style-type: none"> FoodLink Food Hub—increased capacity in food processing, storage and distribution to improve regional food supply to institutions and local corner stores. (REDC Plan) Rochester Public Market—enhancements to the public market, strengthens ties to region's farmers, increases access to healthy foods for City residents. (REDC Plan) Lyons to Port Byron Canalway Trail—extend Erie Canalway Trail along a 30-mile segment between Lyons and Port Byron, improving continuity of the trail system. (REDC Plan) | | | | | | |
| Broad Strategy Revitalize existing centers and prioritize the value of placemaking | | ◐ | ◐ | ● | ◐ | ○ | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Adopt zoning regulations and design standards to support infill development and create better places. Encourage the adaptive reuse And/or historic preservation of existing buildings. Improve access to credit and capital in support of redevelopment of centers. Encourage location of core institutions (schools, post offices, municipal buildings) in centers. Take advantage of State brownfield programs to remediate brownfields. Encourage "buy-local" campaigns to help support local businesses. Adopt a 'fix it first' policy for infrastructure investment. Consider public sector land banking, demolitions, land assembly and 485b tax incentives to lower private sector costs of redevelopment. Invest in improvements to the public realm (streetscapes, plazas, parks) in strategic areas to promote private sector investment. Invest in the development, promotion and preservation of cultural, artistic and historic assets. | Representative Projects <ul style="list-style-type: none"> Midtown Redevelopment and Tower—mixed, office, residential, hotel and retail space. Includes reestablishing the traditional street grid and the adaptive reuse of the Midtown Tower as a cornerstone of downtown revitalization. (REDC Plan) Penn Yan / Keuka Lake Waterfront Development—mixed-use redevelopment of former brownfield into 170,000 square feet of retail, office, restaurant, residential and hotel uses at the northern end of Keuka Lake, adjacent to the historic village of Penn Yan (REDC Plan) Finger Lakes Museum—redevelopment of a former elementary school in Branchport and construction of additional facilities to establish a destination museum focusing on the environmental and cultural story of the Finger Lakes region. (REDC Plan) I-Square—redevelopment of vacant and under-utilized lands in Irondequoit into a mixed use "town center" development. (REDC Plan) | | | | | | |

Land Use and Livable Communities

Subject Area Goal
 Increase the sustainability and livability of the Finger Lakes region by revitalizing the region's traditional centers, concentrating development in areas with existing infrastructure and services, and protecting undeveloped lands from urban encroachment.

| | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility |
| Broad Strategy Support and preserve rural centers (hamlets and villages) and the character of rural areas | ● | ◐ | ● | ◐ | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Implement land use tools such as purchase of development rights (PDR) transfer of development rights (TDR), conservation easements and other incentives to preserve agricultural lands, open spaces corridors, cultural and historic assets and natural features. Educate the public about the ecological and economic value of natural systems for sustainability and resiliency. Inventory lands and parcels of significant ecological and/or scenic value (hillsides, forested lands, shorelines), and prioritize and coordinate with local land conservancies to protect highest value lands. Educate policy makers about true fiscal costs of development, including operations and maintenance. | Representative Projects <ul style="list-style-type: none"> Canandaigua Lake Water Trail—recreational trail to highlight the natural resources of Canandaigua Lake and promote active living. (REDC Plan). Promotion and protection of Canandaigua Lake—watershed improvements, such as new wetlands, stormwater management techniques and measures to control stream bank erosion to protect rural resources. Watershed education programs and a Watershed Program Manager Position were also funded. (Funded through CFA 2011) Strategy of a Sustainable Keuka Lake—updates to the Keuka Lake Watershed Land Use Planning Guide to develop model land use regulations, training and public outreach; creation of a water quality internship program; mapping of important resources and an agricultural assessment. (Funded through CFA 2011) | | | | | |
| Broad Strategy Encourage diversity of our communities to bring about a greater mixture of uses, people, ages and incomes | ◐ | ◐ | ● | ◐ | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Update municipal Comprehensive Plans, adopt flexible zoning regulations and encourage “Universal Design” to accommodate mixed uses, affordable housing, seniors and youth programs to encourage diversity. Eliminate funding and regulatory barriers that constrain the ability to do mixed use development. Develop specific vision plans for community centers, focused on good urban design and access to parks, transportation choices, cultural assets, jobs and services to develop “complete communities”. Work with non-profit housing organizations to provide programs, such as home repair assistance, tool libraries, housing education and energy-efficiency programs to enable lower-income homeowners to stay in their homes and maintain them in good condition. Support programs, such as home-care, respite care and assistance with home modifications, that facilitate aging in place. Invest in strong local school systems to attract and retain young families. | Representative Projects <ul style="list-style-type: none"> College Town Development Project—redevelopment of 16 acres in the City of Rochester as a gateway to the University of Rochester and the city. The mixed-use, walkable neighborhood will incorporate affordable housing, mixed use buildings (retail with residential above), flexible zoning, and urban design principles. (REDC Plan) Senior and affordable housing projects—(27 projects funded throughout the region through 2011 CFA). | | | | | |
| Broad Strategy Encourage regional cooperation and coordination (Governance Broad Strategy) | ◐ | ◐ | ● | ◐ | ◐ | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Incorporate major findings and recommendations from the Regional Sustainability Plan into decision-making on the part of the Regional Economic Development Council. Regional authorities (e.g., county sewer districts) should adopt policies where decision-making incorporates sustainability considerations, and not just revenue generation. Encourage cooperation and better coordination of planning and zoning across municipal boundaries to achieve consistent development patterns. | Representative Projects <ul style="list-style-type: none"> Finger Lakes Regional Sustainability Plan—revisions and continued implementation of the Regional Sustainability Plan (REDC Plan). | | | | | |

Materials and Waste Management

Subject Area Goal

Decrease the generation of waste, increase the recovery and reuse of materials currently in the discard stream, manage materials using a highest-and-best-use framework, and create economic opportunities and improved environmental stewardship as a result.

Opportunities

- Shift perception from “waste management” to “sustainable materials management”
- Energy production for small scale operations and the larger grid
- Product packaging advancements
- Increased composting, both large and small scale
- Change perception of waste to recognize various reuse and recycle outcomes
- Collaboration with agricultural and industrial operations

Challenges

- Reduce the lifecycle impacts across the materials supply chain
- Lack of local or regional waste tracking systems
- Prioritizing investment in reduction, reuse, recycling and composting over disposal
- Mitigating impacts of imported waste
- Inspiring sustainable choices—greatest impacts come from collective decisions of households

Variables

- Fluctuating levels of imported waste
- Technologic advances for reuse/recycle/disposal of materials
- Transportation/fuel costs

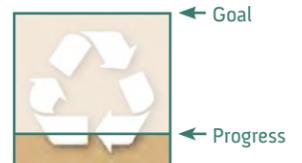

Indicators and Targets

| Indicators | Baseline Value (2010) | Short-Term Target* (2020) | Mid-Term Target* (2035) | Long-Term Target* (2050) |
|--|-----------------------|--|--|--|
| Total solid waste generated per capita | 6.95 tons | 15% reduction | 25% reduction | 35% reduction |
| Solid waste diverted (i.e., not landfilled or exported) per capita | Data not available** | 35% reduction of total solid waste generated | 50% reduction of total solid waste generated | 55% reduction of total solid waste generated |

*All % reductions or increases are related to the 2010 baseline values, not the previous target.

** Baseline data currently not available. It is recommended that in the short-term, a method to collect this data be developed.

| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Develop metrics and education strategies to define and articulate the true value of materials. Educate the public, government, businesses, and institutions regarding waste management regulations, requirements, and cost, and the benefits of sustainable materials management. Leverage, support and promote regional organizations that provide research and education in efficient materials use, reduction of waste and energy efficiency. | Representative Projects <ul style="list-style-type: none"> Material generation and disposal reporting system for non-residential sectors—web-based software system for non-residential waste generators to report data on materials they generate and dispose of off-site. (CNY Regional Sustainability Plan) Pre- and post-consumer organics management education programs—programs for both public and businesses sectors to learn about proper organic waste management practices. | | | | | | |
| Broad Strategy Expand reuse to include construction and demolition (C&D) debris and building development opportunities, such as deconstruction and demolition | | ● | ● | ● | ● | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Increase construction and demolition (C&D) recycling operations. Encourage building deconstruction and subsequent material reuse and recycling, as opposed to building demolition. | Representative Projects | | | | | | |

Water Management

Subject Area Goal

Improve and protect the water environment with respect to quality, quantity, and availability; promote and understand the value of our water reservoirs, watercourses, and built infrastructure; maximize the social, economic, and ecological potential of our water resources toward equitable sharing of their benefits for both the short and long terms.

Opportunities

- Maximizing water's benefits in a way that ensures its preservation
- Preserving natural state of wetlands and other waterbodies mitigates storm impacts
- Deepen the knowledge of Region's water resources
- Equitable distribution of costs and benefits of water resources
- Rewarding developers for enhanced designs that mitigate impacts
- Increase in tourism with increased quality of waterbodies
- Greater municipal cooperation
- Mitigating impacts of natural gas drilling and other resource extraction efforts
- Balancing water needs of agricultural operations with minimizing residential development in rural areas
- Cheap and ample resource can be taken for granted

Challenges

- Mitigating impacts and removal of invasive species
- Poorly-designed development and agricultural operations that increase runoff and pollutants in waterbodies
- Watershed boundaries and river/stream corridors rarely coincide with political boundaries (home rule)

Variables

- Erratic weather as it relates to replenishing waterbodies and water table
- Competing interests in St. Lawrence Seaway
- Highly-mobile society constantly threatens to introduce new invasive species
- Market forces for other resources (i.e. natural gas) impact demand for and quality of water
- Changing pollutants challenge capabilities of water treatment facilities

Indicators and Targets

| Indicators | Baseline Value (2010) | Short-Term Target* (2020) | Mid-Term Target* (2035) | Long-Term Target* (2050) |
|---|---|---|---|---|
| Water demand per capita (per 1,000 people) | 0.866 Mgal/day | no change | 10% decrease | 15% decrease |
| Total number of impaired waters | 49 impaired waters | 2% decrease | 10% decrease | 20% decrease |
| % of beach WQ samples exceeding state thresholds | 17% | 15% | 13% | 10% |
| Number of impaired waters with established TMDL requirements | 49 | 48 | 47 | 45 |
| Concentrations of pollutants in the Finger Lakes <ul style="list-style-type: none"> • Total phosphates • Total nitrogen | <ul style="list-style-type: none"> • Phosphates: 90% • Nitrogen: 4% | 50% of state-mandated maximums at each lake | 40% of state-mandated maximums at each lake | 25% of state-mandated maximums at each lake |

Economic Development

Subject Area Goal

Transform the economic landscape through embedding the region's uniqueness (the Story of Place), the Five Capitals*, and resiliency into all policy and investment decisions.

*Human, Social, Natural, Built/Manufactured, Financial

Opportunities

- Embed the Story of Place into the region's decision-making framework
- Strong relationships between communities and colleges/universities
- Build on momentum established by REDC plans to promote regional thinking
- Build economic foundation on unique attributes rather than economic trends
- Develop local solutions that will benefit places beyond our boundaries
- Wealth of educational institutions serve as incubators of ideas/innovation
- Highly-skilled labor force

Challenges

- Need cautious approach to "hot sectors" and economic trends
- Moving beyond conventional models based exclusively on financial bottom line
- Current economic climate often leads to short-sighted policies and solutions
- Continuing to transition from a small number of large manufacturing firms to multiple small-scale businesses
- Concentration of poverty and continued disinvestment in urban areas
- Extremely mobile society results in high competition with other regions, states, and countries

Variables

- Trendy sectors at the national / global scale
- Unstable financial sector and access to capital
- State government and state economy-related impacts

Indicators and Targets

Support the efforts of regional partners in identifying and securing funding for tourism promotion. | Representative Projects <ul style="list-style-type: none"> Value-Added, Direct-to-Market Grants Program—provide funding that enables farms to build new structures, buy equipment, renovate buildings, and access working capital (REDC Plan). Little Theatre Renovation—improvements that will preserve the theater as premier venue for independent/foreign films (REDC Plan). Finger Lakes Boating Museum—waterfront improvements and construction of Museum and Visitors Center on Seneca Lake in Geneva (REDC Plan). | | | | | | |

Climate Change Adaptation

Subject Area Goal

Improve performance and resiliency of community assets (buildings and infrastructure systems, natural systems, and agriculture and business systems) under normal and extreme conditions.

Opportunities

- More dynamic community centers and other local assets
- Ample intellectual, social, financial, natural, and economic resources
- Stronger relationships and networks resulting from community investment and resiliency pursuits
- Using educational institutions for research/education related to improved systems
- Re-purposing historic buildings to increase density and improve service delivery
- Leveraging assets and sharing resources across municipal borders

Challenges

- Improving resiliency of food supply
- Continued debate over causes of and responses to climate change
- Funding sources for infrastructure and systems investments
- Supplying services and resources in an emergency to rural areas
- Home rule creates inefficiencies and logistical challenges for inter-municipal coordination

Variables

- Potential increase in extreme weather events
- Food supply affected by variable temperatures, drought, and extreme weather events
- Available resources and capacity of local governments

Indicators and Targets

| Indicators | Baseline Value (2010) | Short-Term Target* (2020) | Mid-Term Target* (2035) | Long-Term Target* (2050) |

| | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility |
| Broad Strategy Enhance mutual aid and support among neighboring communities, counties, and regions to share, develop, and create capabilities, resources, and special assets. | | ● | ● | ● | ● | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Develop research, education, training, and continuing education to solve local problems Develop processes to identify and share critical resources (e.g., listing of willing and trained medical personal, strategic location of special response equipment for easy deployment). | Representative Projects | | | | | | |
| Broad Strategy Upgrade existing assets (buildings and critical infrastructure, farms, fields, and forests, businesses) to better withstand extreme conditions. | | ● | ● | ● | ● | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Develop research, training and deployment of multiple strategies (“hardening” as well as “softening”/ breakaway/crumple zones) to upgrade existing assets. Develop research, development and evaluation of innovative approaches to regenerate natural systems to improve the performance of built systems (e.g., wetlands as buffer zones during flooding). Upgrade existing facilities (e.g., buildings, industrial facilities) to reduce resource use (i.e., energy, waste, materials, etc.). | Representative Projects <ul style="list-style-type: none"> Wayne County Comprehensive Shoreline Management Program Green Genesee Roadmap | | | | | | |
| Broad Strategy Create self-sufficient “places of refuge” in each community/neighborhood for critical resources, shelter and aid under normal and extreme conditions. | | ● | ● | ● | ● | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Focus on on-site critical services that include energy production, water and wastewater (sewage) treatment, and solid waste treatment/processing (especially organic waste), as well as food, medical and emergency services. Enhance “places of refuge” in local historical/cultural centers to help preserve the sense of place for each community - and give these centers a new lease on life. Link on-site services to the regional centralized systems (e.g., electricity grid) to offset community/ municipal costs, and provide new sources of revenue. Provide medical service, education/training, and other services in these “places of refuge” for day-to-day activities. | Representative Projects | | | | | | |
| Broad Strategy Create localized networks for critical services (e.g., local food sources, micro-grids for energy, water, sewage, solid waste treatment, district heating, etc.) to complement existing centralized systems (at a larger scale than the “places of refuge”). | | ● | ● | ● | ◐ | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Create/deploy localized networks in rural as well as urban and suburban settlements, using local inputs (e.g., manure from farms). Develop and approve options for “islanding” these networks under extreme conditions to protect lives and livelihoods. Develop market and financial mechanisms to use localized networks as a new revenue source for participants/providers (e.g., farmers). | Representative Projects | | | | | | |

Connection with criteria
 ● Strong ◐ Moderate ○ Marginal

Agriculture

Subject Area Goal

Increase the viability, accessibility, and ecological contribution of farms, while decreasing waste and dependence on external inputs.

Opportunities

- Stronger connections with urban markets
- Mostly family-owned farms—better suited to sustainable models
- Environmental protection through farmland design and practice
- Rise of local farmers markets
- Slow food / locavore / organic movements
- Strategic land use policies and programs

Challenges

- Rising costs
- Rapidly-evolving technologies
- Development pressure (slow-paced sprawl)
- Aging farm owners
- Succession planning
- Public perception and nuisances

Variables

- Availability of capital
- Quality workforce
- Consumption patterns and consumer tastes
- National / global markets
- Erratic weather

Indicators and Targets

| Indicators | Baseline Value (2010) | Short-Term Target (2020) | Mid-Term Target (2035) | Long-Term Target (2050) |
|--|-----------------------|--------------------------|------------------------|-------------------------|
| Acres of agricultural land in non-agricultural use | 155,968 acres | no change | no change | no change |
| Direct farm sales per capita (as a percent of at home food expenditures) | 0.49% | 2% | 5% | 10% |
| Use of external inputs | 10.7% | 10.1% | 8.9% | 7.8% |
| Diversity of production (Shannon's Diversity Index) | 6.97 | 7.00 | 7.00 | 7.00 |

Evaluation Criteria

| | Evaluation Criteria | | | | | |
|--|---|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|
| | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility |
| Broad Strategy—Support the continued development of an efficient and productive regional food system. | ● | ● | ● | ● | ● | ● |
| <p>Representative Sub-Strategies / Project Ideas</p> <ul style="list-style-type: none"> Support the expansion of regional processing and distribution facilities, and/or other facilities that add value to regional food products. Increase food security for individuals and households at risk of hunger. Increase regional farms' sales to regional institutional buyers. Increase regional farms' direct sales to consumers. Support the development and/or expansion of multi-farm networks of community-supported agricultural operations. | <p>Representative Projects</p> <ul style="list-style-type: none"> Headwaters Food Hub—processing and logistics facility will be built in the Wayne County Industrial Sustainability Park to support the regional food system by managing supply chain logistics, aggregation, distribution, and sales of local, sustainable, source-identified foods from a network of partner farms, including their own, and from local food producers. Finger Lakes Food Processing Cluster Initiative—leveraging the Jobs and Innovation Accelerator Grant from US Economic Development Agency and SBA and NYS to support this coordinated initiative that provides assistance, training, and collaborative partnerships. Project is underway. Regional Multi-Farm CSA Development—development and promotion of CSA-consumer website. | | | | | |
| Broad Strategy—Increase adoption of distributed bio-energy production technologies to increase production of renewable energy from farm and forest products and product waste. | ● | ● | ● | ● | ● | ● |
| <p>Representative Sub-Strategies / Project Ideas</p> <ul style="list-style-type: none"> Advance the availability and affordability of scalable plug-and-play bio-energy production systems, and provide standards for selling excess power into the grid. Assist farm operators in analyzing energy demand, as well as opportunities for efficiency and potential energy production. Establish local policy frameworks and incentives for community-scale bio-energy generation/distribution. Develop purchase agreements for the sale of bio-energy produced by the agricultural and forestry sectors to the power grid. | <p>Representative Projects</p> <ul style="list-style-type: none"> Farm Energy Sustainability Plans—energy analysts and farm service providers review loads, timing, motor efficiencies, lighting and fuel use to find demand efficiencies. Plans may also review potential for on-site renewable energy production, including biogas, wind, solar, and biofuels. Seneca AgBio Green Energy Park—Agricultural and Renewable Energy Program with projects including grape waste processing, grapeseed oil production, and biodiesel production. Project currently delayed. | | | | | |
| Broad Strategy—Reduce the conversion of quality farmland. | ● | ● | ● | ● | ● | ● |
| <p>Representative Sub-Strategies / Project Ideas</p> <ul style="list-style-type: none"> Align local land use regulations with the functional and financial needs of farms. Support the creation and implementation of municipal farmland protection plans. Improve regulatory context for the purchase, lease, and/or transfer of development rights. Increase use of under-utilized grasslands for livestock production. Expand or create opportunities to engage existing and new farmers in succession planning efforts. | <p>Representative Projects</p> | | | | | |
| Broad Strategy—Support farm-scale diversity of product types, both in-season and across seasons, and support the establishment and growth of a diversity of operations with regard to size, market, and operation type. | ● | ○ | ● | ● | ● | ○ |
| <p>Representative Sub-Strategies / Project Ideas</p> <ul style="list-style-type: none"> Develop models to assist in the management of farm-scale diversity for small and medium-sized operations. Strengthen opportunities for producing, marketing, and exporting specialty agricultural products. Support the development of environmental markets and incentives that are aligned with both the functional and financial needs of farms. Research carbon sequestration potential of regional agricultural sector in advance of potential establishment of credit trading markets. Research water quality improvement potential of regional agricultural sector in advance of potential establishment of credit trading markets. | <p>Representative Projects</p> <ul style="list-style-type: none"> Upstate Growers and Packers Cooperative Local Produce Initiative—NYFVI Grant helped form partnership which allowed local produce cooperative to sell products in large grocery chains nearby. Larry's Custom Meats Processing Plant Expansion—NYFVI grant helped fund plant for local livestock processing, and led to nearly five-fold increase in plant capacity. Finger Lakes Small Business Expansion Fund—Creation of a \$1.15 million investment pool targeting seven companies in identified key industries (including the Once Again Nut Butter processing facility) geographically distributed throughout region. | | | | | |
| Broad Strategy—Educate the non-farming community about the economic, environmental, and social impact that the agricultural sector has on the region. | ○ | ○ | ● | ● | ● | ● |
| <p>Representative Sub-Strategies / Project Ideas</p> <ul style="list-style-type: none"> Align a network for direct and specific educational opportunities, where new farmers have access to experienced producers, lenders, employers, etc. Support efforts to document the economic impact of agriculture and forestry throughout the region. Expand access to service programs specifically oriented toward small farms. Create or expand opportunities to build a regional food “identity” focused on the Finger Lakes region. Facilitate relationships between the agricultural and arts communities (e.g. craftspeople, literary, visual arts, etc.) to incorporate food-related issues in their work. | <p>Representative Projects</p> <ul style="list-style-type: none"> Conference Sessions—continue efforts to educate economic development stakeholders on agricultural issues through sessions at the Local Government Workshop. Agricultural Events—support regional agricultural initiatives such as the Wyoming County Dairy Institute, Agri-Palooza, and Celebrate-Ag (taken from G/FLRPC's 2012 CEDS). Dairy Profit Teams—NYFVI grant helped fund pilot program where dairy farmers get one-on-one attention with a group of industry consultants in all different areas to help efficiently and cooperatively offer solutions tailored to individual issues. Livingston County Annual Decision-Makers' Tour of Agriculture—Increasing exposure between planning/zoning commissioners and farm operators. | | | | | |

Subject Area Goal
 Increase the viability, accessibility, and ecological contribution of farms, while decreasing waste and dependence on external inputs.

Forestry

Subject Area Goal

Increase the viability, accessibility, and ecological contribution of forests, while decreasing waste and dependence on external inputs.

Opportunities

- Preservation of region's historic character
- Environmental protection through forest land design and practice
- Alternative energy sources
- Strategic land use policies & programs

Challenges

- Rising costs
- Limitations of government structures to adequately protect forests
- Development pressure
- Lack of public understanding of value

Variables

- Availability of capital
- National / global markets
- Erratic weather

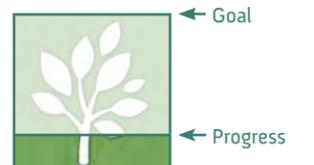

Indicators and Targets

| Indicators | Baseline Value (2010) | Short-Term Target* (2020) | Mid-Term Target* (2035) | Long-Term Target* (2050) |
|---|---|---------------------------|-------------------------|--------------------------|
| Ratio of percent of forests by tree size class <ul style="list-style-type: none"> • Small • Medium • Large | <ul style="list-style-type: none"> • 16% • 21% • 63% | No change | No change | No change |
| Amount of biomass in live trees | 60,937,524 short tons | 5% increase | 10% increase | 15% increase |
| Number of forest interior indicator bird species (survey blocks containing at least three indicator species) | 21 survey blocks | 49 survey blocks | 144 survey blocks | 240 survey blocks |
| Invasive Species Index (custom index tracking three species: European woodwasp, hemlock woolly adelgid, and emerald ash borer) | 8.5 | no change | 6.5 | 4 |
| Wildfire occurrences | 3,885 wildfires | 5% reduction | 10% reduction | 15% reduction |

*All % reductions or increases are related to the 2010 baseline values, not the previous target.

Achievement to Date

Forestry

Subject Area Goal
 Increase the viability, accessibility, and ecological contribution of forests, while decreasing waste and dependence on external inputs.

Priority Broad Strategies

| | | Evaluation Criteria | | | | | |
|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|
| | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility |
| Broad Strategy Support efforts to increase equitable forest recreation opportunities and urban forestry/green infrastructure initiatives. | | ● | ● | ● | ● | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Advance the availability and affordability of scalable plug-and-play bio-energy production systems, and provide standards for selling excess power into the grid. Establish local policy incentives for community-scale bio-energy generation and distribution. Develop purchase agreements for the sale of bio-energy produced by the agricultural and forestry sectors to the power grid. | Representative Projects <ul style="list-style-type: none"> Encourage networking opportunities for community tree boards. Encourage use and sharing of a standardized community tree inventory database. | | | | | | |
| Broad Strategy Support watershed, riparian, shoreline, and habitat protection and restoration efforts to increase resiliency and diversity of the native species ecosystem and delicate watersheds. | | ◐ | ◐ | ● | ● | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Encourage stronger landscape connectivity and forest management rehabilitation practices that can support adaptation and increase resiliency of individual species and nature systems at the landscape level (2500 acre units). In partnership with Finger Lakes Partnership for Regional Invasive Species Management (FL-PRSIM), continue to support programs at all levels of government to combat invasive pests and diseases, like the Emerald Ash Borer. Provide near-term funding for NYSDEC Forest Resource Assessment and Wildlife Action Plans to practice adaptive management for climate adaptation and target early responses to major stressors on forest related to climate change. Encourage farmers to participate in NY CREP and similar programs to receive compensation for protecting/restoring natural features | Representative Projects <ul style="list-style-type: none"> New York Green's "Green Genesee Road Map" pilot project—replicate for other counties throughout region | | | | | | |
| Broad Strategy Educate the general public, landowners/industry professionals, and decision-makers regarding the relationships between watershed land uses, forest management, water quality protection and rural economic viability, and forest-related sustainability issues. | | ● | ◐ | ● | ● | ◐ | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Increase consideration of environmental issues at all levels of economic decision-making. Phase out subsidies for development patterns and production methods that are environmentally harmful/socially inequitable in favor of supporting systems and policies that internalize environmental and social costs and reward responsible growth. Increase the use of silvicultural BMPs through direct financial incentives to landowners. Support retention and recruitment of sustainable timber harvesters. | Representative Projects <ul style="list-style-type: none"> Continue to support and encourage participation by County SWCDs in NYSDEC/NRCS Environmental Quality Incentives Program (EQIP) Forestry initiative. | | | | | | |
| Broad Strategy Encourage the valuation of ecological services provided by regional forest resources. | | ● | ◐ | ● | ◐ | ◐ | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Encourage forestry carbon offset programs, (with minimal transaction and compliance costs) with eligible activities including avoided clearing, sustainable forest management, and reforestation. Expand and refine standardized methods of quantifying carbon flow in and out of forest resource carbon pools (living biomass, dead wood, soils, and harvested products) to allow for expanded, meaningful participation in carbon offset markets. | Representative Projects <ul style="list-style-type: none"> New York Green's "Green Genesee Road Map" pilot project- replicate for other counties throughout region. | | | | | | |

Finger Lakes Regional Sustainability Plan

Funded by NYSERDA - Cleaner, Greener Communities Program

Overall Public Meeting #1 - Meeting Minutes & Presentation

Finger Lakes Regional Sustainability Plan

Public Meeting #1 January 2013

FUNDED BY: NYSERDA – CLEANER, GREENER COMMUNITIES PROGRAM

Agenda

- 1. Welcome and Opening Remarks**
- 2. Introduction to the project**
- 3. Themes and Goals**
- 4. Story of place**
- 5. Sustainability Indicators**
- 6. Next steps**
- 7. Q&A**

PROJECT INTRODUCTION

Project Introduction

Background: Cleaner-Greener Communities Program:

- Announced by Governor Cuomo in his 2011 State of the State Address
- CGC supports the creation/implementation of regional sustainability plans
- Two phase program:
 - Phase I: Regional Sustainability Planning Grants (\$10 million)
 - Phase II: Regional Sustainability Plan Implementation Grants (\$90 million)
- Phase I is currently underway in all regions and Phase II is expected to launch later in 2013, the timing is still under review

Climate Change Commitment:

“reduce greenhouse gas emissions to 80% below 1990 levels by 2050”

Project Introduction

Sustainability Plan Scope (Phase 1):

- Baseline assessment of the region including Green House Gas (GHG) Inventory for the Region
- Incorporation of existing local planning efforts
- Long-term and short-term sustainability goals
- Climate change adaptation
- Identification of necessary actions
- Implementation strategy
- Stakeholder involvement

Project Introduction

Phase II:

- Launches in 2013
- Three annual rounds of ~\$30 million
- Will fund projects that
 - Reduce GHG emissions
 - Support the achievement of the region's sustainability goals as identified in their plans
 - Are not eligible for current NYSERDA offerings
 - Prioritized through the regional sustainability plan

Project Introduction

Things to Remember:

- The plan is not a bid for Phase II funds
- Unique opportunity
- Looking for a truly comprehensive planning process
- Must be realistically implementable
- Alignment with Regional Economic Development Plan
- This is your plan

Project Introduction

Finger Lakes Region:

- Monroe
- Orleans
- Genesee
- Wyoming
- Livingston
- Ontario
- Yates
- Seneca
- Wayne

Stakeholder Groups

Agriculture & Forestry

Economic Development

Energy

Materials & Waste Management

Transportation, Land Use, & Livable Communities

Water Management

Stakeholder Group Roles

- Provided input into indicators and identifying data sources (Meeting 1 – October 2012)
- Discussion of targets (Meeting 2 – November 2012)
- Implementation of strategies (Meeting 3 – January 2013)
- Review draft report (January-February 2013)

All meeting information from Meetings 1 & 2 can be found on the website listed below under the appropriate Stakeholder Group

<http://sustainable-fingerlakes.org/>

Project Introduction

Schedule:

| TASK | 2012 | | | 2013 | | |
|---------------------------------------|---------|----------|----------|---------|----------|-------|
| | October | November | December | January | February | March |
| Baseline Assessment | | | | | | |
| Stakeholder Meeting #1 | X | | | | | |
| Sustainability Indicators / Inventory | | | | | | |
| Target Establishment | | | | | | |
| Stakeholder Meeting #2 | | X | | | | |
| Public Meeting #1 | | | | X | | |
| Implementation Strategy | | | | | | |
| Stakeholder Meeting #3 | | | | X | | |
| Public Meeting #2 | | | | | X | |
| Draft Sustainability Plan | | | | | | |
| Final Sustainability Plan | | | | | | |

PROJECT THEMES & GOALS

Sustainability Definition

Sustainability *involves three interrelated components: environment, economy and society.*

These pillars are linked – the stability of one reinforces the strength of the other two. Sustainability planning for a community, local government or region integrates the three pillars of sustainability through collaborative work within a framework that supports long-term considerations, fosters innovation, and results in a healthy, safe and affordable place to live, work and play for all residents.

Project Themes/Goals

- Improve accessibility, connectivity and mobility
- Preserve, protect and improve natural resources and their connections
 - ✓ air quality
 - ✓ water quality
 - ✓ prime / productive farmland
 - ✓ forests
 - ✓ open space
 - ✓ environmentally sensitive areas
- Maintain, protect and improve the functionality and disaster resiliency of existing infrastructure systems and acknowledge the links between systems
 - ✓ transportation
 - ✓ water
 - ✓ energy
 - ✓ communication
 - ✓ solid waste

Project Themes/Goals

- Improve public health and quality of life
- Respect local planning efforts and retain individual community character
- Build partnerships between local governments, the private sector, regional institutions and the public
- Build sustainability capacity and understanding through outreach and education
- Improve climate adaptation

STORY OF PLACE

Story of Place

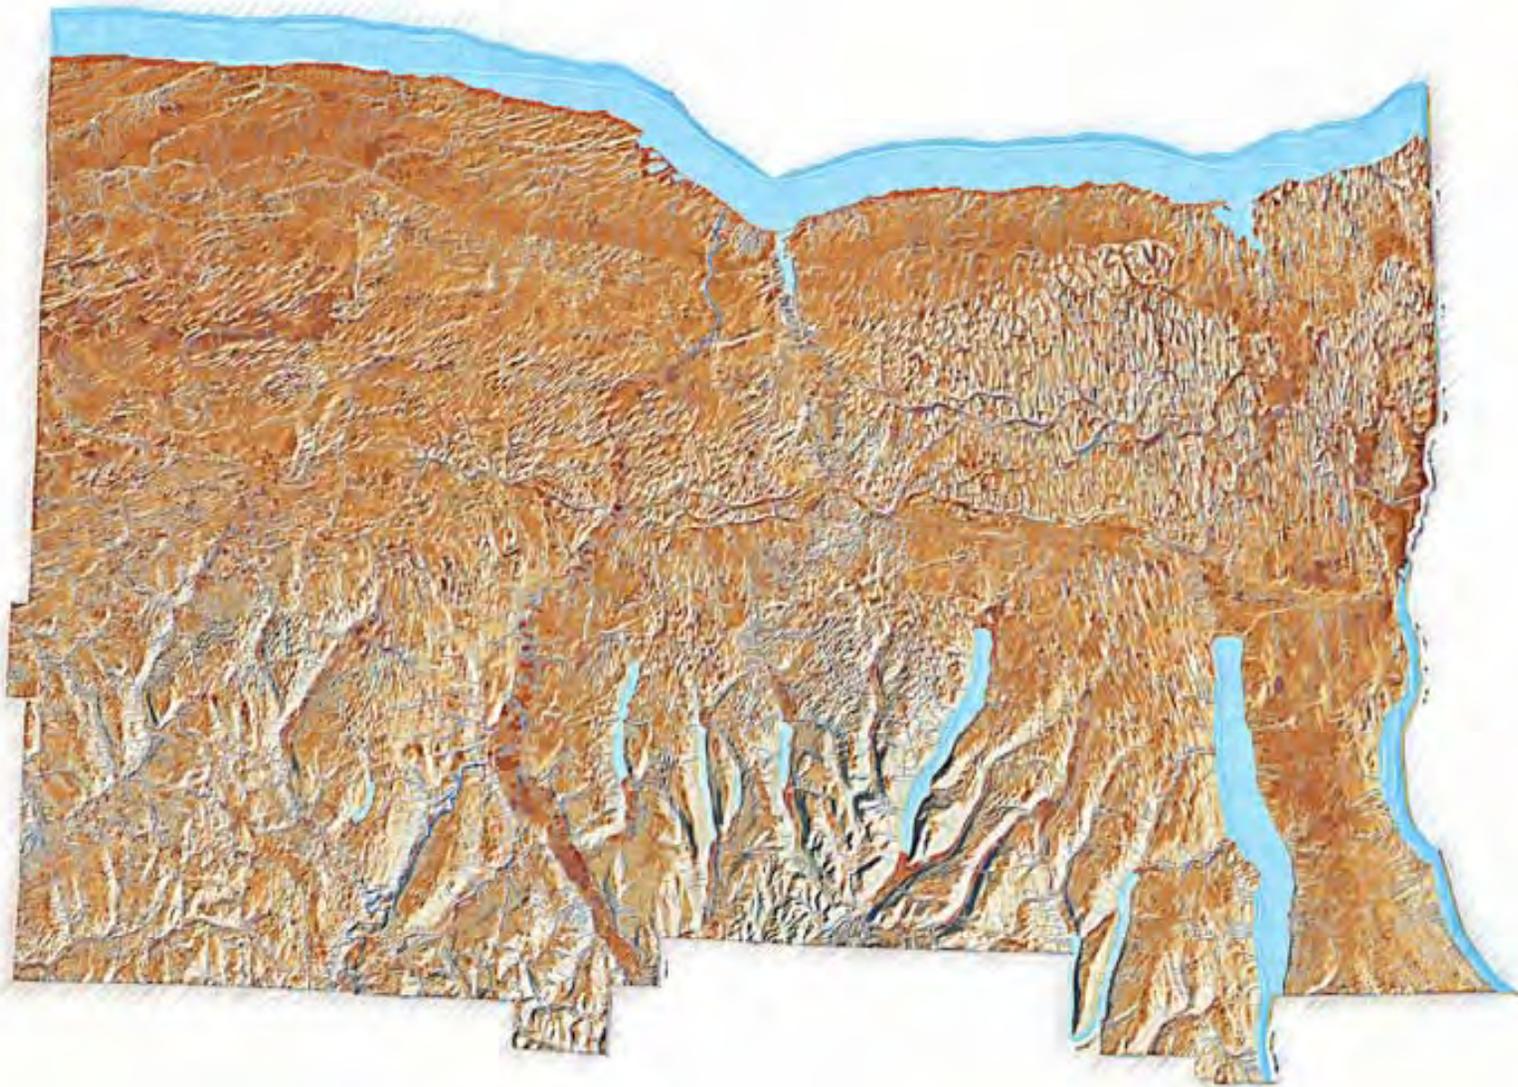

Rationale:

Communities that maintain their vitality, their ability to attract investment and resources and are able to evolve through time, have three things in common:

1. They know who they are – their uniqueness
2. They develop a narrative to convey who they uniquely are
3. They embed this narrative and uniqueness into everything they do

The Tree of Peace

Copyright (c) 1991, by JOHN KAHIONHES FADDEN

We the People
Amich

Declaration of Sentiments

"We hold these truths to be self-evident, that all men and women are created equal..."

WOMEN'S RIGHTS

The equality of Haudenosaunee women was assured from the formation of the Confederacy. The first person to accept the Peacemaker's message was a woman, *Jikonhsaseh*. She secured the rights, responsibilities, and roles Haudenosaunee women continue to enjoy. Matrilineal heritage in Haudenosaunee society, where clan and nation are inherited through mothers, establishes great respect for women's contributions to society.

The freedom of Haudenosaunee women and the power they wielded in their political life influenced the women's suffrage movement through leaders such as Elizabeth Cady Stanton, Matilda Joslyn Gage, and Lucretia Mott. Their personal relationships with people from the Haudenosaunee nation were a great inspiration to them in their suffrage campaign.

A BALANCE OF POWER

Haudenosaunee women and men have complementary roles. By sharing and checking one another's responsibilities, the clan mother and the chief achieve a balance of power. Through their entwined civil roles, they work to preserve peace for the clan, the nation, and ultimately for the Confederacy of the Six Nations.

SUSTAINABILITY INDICATORS

Sustainability Indicators

Indicators

2 sets

- NYSERDA
- Place-Sourced

Criteria

- Informs policy or investment
- Data availability
- Ability to replicate/ trend over time
- Three Pillars: Environment/Economy/Society

Ranking

- Took all indicators provided by NYSERDA for consideration and those generated by stakeholders
- Put through evaluation criteria to arrive at recommended indicators

Sustainability Indicators

Agriculture & Forestry

| NYSERDA | PLACE-SOURCED |
|--|--|
| Acres of agricultural land in non-agricultural use | Direct farm sales per capita |
| | Use of external inputs |
| | Diversity of production (Shannon's Diversity Index) |
| | Ration of percent of forests by tree size class |
| | Amount of biomass in live trees |
| | Biodiversity of bird species: Number of survey blocks where bird species were observed |
| | Invasive Species Index |
| | Number of forest fires |

Sustainability Indicators

Economic Development

Welcome & Introductions

- Consultant team members – C&S (Aileen Maguire & Kevin Kelley), Regenesis (Ben Haggard)

Story of Place Framework and Exercise

- See power point presentation from November 14th.
- Sustainability Definition:
 - **Sustainability** involves three interrelated components: environment, economy and society.
These pillars are linked – the stability of one reinforces the strength of the other two. Sustainability planning for a community, local government or region integrates the three pillars of sustainability through collaborative work within a framework that supports long-term considerations, fosters innovation, and results in a healthy, safe and affordable place to live, work and play for all residents.

- 5 Capitals:
 - Natural, Social, Human, Built/manufactured, and Financial Capital
- Regional Themes/Goals:
 - Improve accessibility, connectivity and mobility
 - Preserve, protect and improve natural resources
 - air quality
 - water quality
 - prime farmland
 - forests
 - open space
 - Maintain, protect and improve the functionality and disaster resiliency of existing infrastructure systems and acknowledge the links between systems
 - transportation
 - water
 - energy
 - communication
 - solid waste
 - Improve public health
 - Respect local planning efforts and retain individual community character
 - Build partnerships between local governments, the private sector, regional institutions and the public
 - Build sustainability capacity and understanding through outreach and education

Story of Place

Joel Glanzberg from Regenesys presented the draft Story of Place for the Finger Lakes Region. He noted that the story is generated from several sources: extensive historical research, dozens of phone interviews with a variety of people from the Finger Lakes area, several site visits and targeted input from the consultant team. The following is a summary of this presentation.

General Comments on why we look at the Story of Place:

- Places have reoccurring patterns (socially, economically, culturally) – and identifying these patterns is helpful to knowing who we are as a region
- Seeing region as a whole helps to develop unique attributes and find our natural strengths – something to build from
- Finger Lakes Observations are as follows:
- Watersheds – natural boundaries (Lake Ontario, Finger Lakes, Great Lakes) are different than political boundaries.
- Lake Ontario is unique versus the other Great Lakes
 - Lower water level due to Niagara Falls
 - All Great Lakes drain into Lake Ontario
- Shale and limestone help geological elements for our Region – prime farmland
- Glacier movements created Lake Ontario and land carved by 5,000 ft of ice
- Great Lakes Plain – how things moved
 - Rail and vehicle routes (straight through mountains) = roadway across the state
 - Animal trails
 - A place where people and products grew and adapted – enrichments
- Eco-Region – plants and animals (low lands)

- Region is like an eddy – or a wetland in a watershed - place where things filter in, take root, adapt, and transform before being release back out
- UN/FAO soil map of the US – our Region (-1) very good soil, rich soils – all due to climate and water, first large open space accessible to people, crops, and animals, also is a good source of agriculture
- Native trees – black spruce, burnt oak, white cedar, eastern white pine, chestnut – mild soil climate – good
- ‘People of the Longhouse’ settlers in NY
- Gateway to mid-west
- In-between waterways
- Many people and industries populated our Region – people, towns/villages, agriculture, industries
- Connections – built NY as a port and NYC as an international port
- Eric Canal built on top of Mohawk Trail – Civil Engineering was developed and learned in England – developed technologies for future uses
- Brought art and education to the region
- Flour city – produced grain (wheat) – water power source
- First industrial city to be fed by water access/connections
- Pioneer in agriculture
- Religious movements – Spiritualism, 7th Day Baptist, Mormon, Methodists (Shakers, Quakers) taught morals, circuit riders to churches
- Birth of democracy – formed the ‘Great Law of Peace’, Peace Makers
- 5 Nations of the Iroquois – lead to our Constitution (Franklin and Jefferson both learned and used the system)
- Large movements happened here – Women’s Rights, Abolition, etc.
- Industries – Seneca Falls – technology developed for pumps – water source – pump capital of the World – Fire Engines
- Wegman’s, Kodak, Jell-o, Bausch & Lomb, Gannett, Western Union, Xerox, French’s, Champion, Genesee Brewing Company
 - Wegman’s – local foods, informative about food, community ties
 - Kodak – film, digital cameras
 - Xerox – printers
 - Champion – first hooded sweatshirt, reversible t-shirt, mesh fabric
 - Genesee Brewing Company – wheat industry , Whiskey Rebellion
 - Bausch & Lomb - contacts
- Many of the companies here acted as that eddy – they took ideas, developed them further, than sent them out to the country/world as products.

Story of Place – Reflections

- Have seen when the region was really great, but it’s not great anymore → some companies have made the mistake of “resting on their laurels”
- Even though Kodak has declined, many successful start-ups have emerged from their workforce → businesses, institutions, systems, etc. can become unsustainable at a certain scale
- Hope found in our highly educated workforce that is known for innovation
- When 1st digital camera was delivered to the Pentagon, Kodak received many accolades, including endorsement by the Air Force as the first place they turn whenever looking at new imaging technology → later Kodak struggled with how to advance that technology → failed to democratize it the way they did the first film-based cameras
- The historic expansion of European influence in the region has permanently changed the ecology of North America (land ownership and management practices changed), as is the

case whenever a new people group arrives in a new land → even the earliest Native Americans changed the landscape

How can we use the Story of Place to impact our businesses, organizations, or communities, especially with respect to sustainability?

- Viewed as a natural unit
 - Inconsistent with planning unit
 - Greater focus on rural/agriculture rather than corporate innovation
- Concern about extraction – based industry
 - Also opposite movement (i.e. landfill)
- Agriculture, tourism, higher education should be focus
- Collaboration among higher education (RIT, CU)
 - Agriculture innovation, energy innovation
- Geothermal opportunities
- Concentration of wealth around threatening issues and opportunities – potential exploitation
- Upstate different than NYC/downstate – greater collaboration, sharing of ideas – less competitive
 - More stable than other regions (i.e. Sunbelt)
- Small-sale businesses more apt to collaborate (i.e. B&B's, wineries)
- Develop new products from waste
 - Nexus of farming and education
- Impediments: financing, advancing ideas, start-ups, etc.
- Need for carbon budget/monetization of hydro carbon
- Workforce issues: adjusting education expectations/opportunities, training
- Concerns that urban areas are driving process
- Transporting people to/thru the region using alt. energy or alt. modes – still need to preserve practicality of goods movement locally.

Other Comments

- Ensure that members of the US Green Building Council are involved
- Concerned that Stakeholder Meetings are not open to the public

Next Steps

The next steps are to begin developing targets for the indicators chosen to advance, and strategies for helping move toward the targets. The public will be kept informed through documents being available on the website, and a second public meeting in late February.

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

 - Champion – first hooded sweatshirt, reversible t-shirt, mesh fabric
 - Genesee Brewing Company – wheat industry , Whiskey Rebellion
 - Bausch & Lomb - contacts
- Many of the companies here acted as that eddy – they took ideas, developed them further, than sent them out to the country/world as products.

Story of Place – Reflections

- ‘Triad’ Exercise
 - Holland Land Office – Batavia, NY
 - Focuses on implementation
 - History of success
 - Helps think more regionally
 - *How do we market it to the public?*
 - No set plan, only strategies
 - Get people on board w/the SOP – tell the same story; starts conversations
 - Consideration of everyone’s values (each county) = Branding
 - *Scale (how to relate)*
 - Concentration and distribution
 - Urban centers (geology)
 - Regional contributions
 - Needs
 - Un-built Infrastructure
 - Competition (innovation)
 - Places play vital roles within the region
- Indicators (measurable)
 - Place sourced indicators (on region in NY doing NYSERDA and place sourced indicators)
 - All available on the website
 - All indicators have data available
 - Measure over time to see if we are closer to reaching our Sustainability Plan/Goal

Question/Answer

- Who are part of the Stakeholder Groups? What are they?
 - Agencies, organizations, businesses, institutions, government, etc.
 - 6 Groups
- Schedule
 - 2 months left
 - What happens after March?
 - Story of Place within Communities
 - Phase II funding source
 - What the Regions makes of it – Implementation
- Importance of sharing the Story of Place (SOP)?
 - Meaningful way to brand Region
 - Energize and bring communities/people together
- Role of Plan in schools?
 - Has come up in Stakeholders Meetings
 - Is it critical in moving forward in the Region/State?
 - Make part of the Plan – Children’s Involvement
- Genesee County Comprehensive/Strategic Plan
 - In place for 15 years
 - Public forum – show people how the Plan works, who is involved, etc.
 - Possibly include SOP
 - Collaboration?

Next Steps

The next steps are to begin developing targets for the indicators chosen to advance, and strategies for helping move toward the targets. The public will be kept informed through documents being available on the website, and a second public meeting in late February.

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

 - Xerox – printers
 - Champion – first hooded sweatshirt, reversible t-shirt, mesh fabric
 - Genesee Brewing Company – wheat industry , Whiskey Rebellion
 - Bausch & Lomb - contacts
- Many of the companies here acted as that eddy – they took ideas, developed them further, than sent them out to the country/world as products.

Story of Place – Reflections

- Capture story of governance
- Educate people on Sustainability
- Eddying - -> compact communities vs. sprawl
- Social and cultural aspects of Sustainability
- Cities divorced from socials, intellectual, economics, inputs and outputs
- Automobiles now a hindrance, 100 years ago were innovations
 - Social problem
 - Global warming
- Ways to counteract
- General Motors – Eddying concept
- Surface subway approach?
- Environmental impacts
 - Invasive species in danger
 - Waterway connections – tracking in invasive exotic species and interrupt natural species
 - Swallow-wart – Charlotte area
- More precipitation – longer growing season, less snow, extreme weather constraints
- Active transportation
 - Different kinds of energy
 - Agriculture will change
 - More bike lanes, more pedestrians
 - Climate change – more urban changes
 - Sewer overflow into Great Lakes
- 2/3 largest food producers – most fresh water
 - Area can support ‘high tech’
 - Pay attention and protect resources
 - Innovation

Question /Answer/Final Thoughts

- Renewable fuel capacity – collection
 - Seneca AG Bio
 - Capturing data on renewable energies and power generation
 - Get public involved? New media?
 - Need for education
- Collect baseline data, funding for people to create, public to create projects to fit into Plan, public involvement to further strategies (measurable progress)
- What is the vision of Sustainability? What is it? How was it developed and by who?
 - Stakeholder group
 - Public outreach – feedback
 - Consortium – representatives from all 9 counties
 - Further discussion after meeting – Aileen and Tara
- How did we get to 80%?
 - Statewide number, goal for all of New York State
 - 1990-2050 – state determined and was given to us.
 - Everyone moving to reduce GHGE
- Water management indicators – assumption we don't have water quality issues
 - Water withdrawal provisions from our Region
 - Can over time, will they be taken away?
 - Energy consumption: making/creating clean water (Water protection policies)
- Prioritize strategies – importance's
- Connectivity outside of the Region
- How to spend the \$100 million (\$90 million over 3 years for all of NYS)
 - Identify alternative funding sources
 - Seed money
 - Prioritize (solve problems)
 - Keep moving forward

Next Steps

The next steps are to begin developing targets for the indicators chosen to advance, and strategies for helping move toward the targets. The public will be kept informed through documents being available on the website, and a second public meeting in late February.

It was my intention that these minutes reflect the general discussion during the meeting. Please contact me regarding any additions, deletions or changes to these minutes.

Finger Lakes Regional Sustainability Plan

Funded by NYSERDA - Cleaner, Greener Communities Program

Overall Public Meeting #2 - Meeting Minutes & Presentation

Agriculture

Subject Area Goal

Increase the viability, accessibility, and ecological contribution of farms, while decreasing waste and dependence on external inputs.

Opportunities

- Stronger connections with urban markets
- Mostly family-owned farms—better suited to sustainable models
- Environmental protection through farmland design and practice
- Rise of local farmers markets
- Slow food / locavore / organic movements
- Strategic land use policies and programs

Challenges

- Rising costs
- Rapidly-evolving technologies
- Development pressure (slow-paced sprawl)
- Aging farm owners
- Succession planning
- Public perception and nuisances

Variables

- Availability of capital
- Quality workforce
- Consumption patterns and consumer tastes
- National / global markets
- Erratic weather

Comments (place sticky notes below)

Agriculture

Subject Area Goal
 Increase the viability, accessibility, and ecological contribution of farms, while decreasing waste and dependence on external inputs.

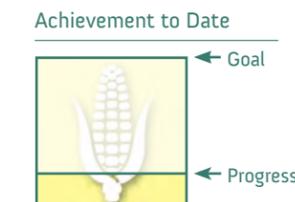

Connection with criteria
 ● Strong ● Moderate ○ Marginal

| | | Evaluation Criteria | | | | | |
|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|
| | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility |
| Broad Strategy Support the development of an efficient and productive regional food system. | | ● | ● | ● | ● | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Support the expansion of regional processing and distribution facilities Increase regional farms' sales to regional institutional buyers. Increase regional farms' direct sales to consumers. | Representative Projects <ul style="list-style-type: none"> Headwaters food hub Finger Lakes food processing cluster initiative Muller Quaker Yogurt plant Rochester Public Market planned expansion Corn stalk nitrogen testing pilot project | | | | | | |
| Broad Strategy Educate the non-farming community about the economic, environmental, and social impact that the agricultural sector has on the region. | | ◐ | ◐ | ● | ● | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Support efforts to document the economic impact of agriculture and forestry throughout the region. Expand access to service programs specifically oriented toward small farms. Create or expand opportunities to build a regional food "identity" focused on the Finger Lakes region. | Representative Projects <ul style="list-style-type: none"> Conference Sessions Agricultural Events Dairy Profit Teams | | | | | | |
| Broad Strategy Increase adoption of distributed bio-energy production technologies to increase production of renewable energy from farm and forest products. | | ● | ● | ● | ● | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Advance the availability and affordability of scalable plug-and-play bio-energy production systems, and provide standards for selling excess power into the grid. Establish local policy incentives for community-scale bio-energy generation and distribution. Develop purchase agreements for the sale of bio-energy produced by the agricultural and forestry sectors to the power grid. | Representative Projects <ul style="list-style-type: none"> Farm Energy Sustainability Plans Seneca AgBio Green Energy Park | | | | | | |
| Broad Strategy Support farm-scale diversity of product types, both in-season and across seasons, and support the establishment and growth of a diversity of operations with regard to size, market, and operation type. | | ● | ◐ | ● | ● | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Strengthen opportunities for producing, marketing, and exporting specialty agricultural products. Research carbon sequestration potential of regional agricultural sector in advance of potential establishment of credit trading markets. | Representative Projects <ul style="list-style-type: none"> Upstate Growers and Packers Cooperative Local Produce Initiative Larry's Custom Meats Processing Plant Expansion Finger Lakes Small Business Expansion Fund | | | | | | |
| Broad Strategy Reduce the conversion of quality farmland. | | ● | ● | ● | ● | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Align local land use regulations with the functional and financial needs of farms. Improve regulatory context for the purchase, lease, and/or transfer of development rights. Facilitate farmer-landowner "matching". | Representative Projects | | | | | | |

NYSERDA Indicators and Targets

| NYSERDA Indicators | Baseline Value (2010) | Short-Term Target (2020) | Mid-Term Target (2035) | Long-Term Target (2050) |
|--|---|---|---|---|
| <ul style="list-style-type: none"> Acres of agricultural land in non-agricultural use | <ul style="list-style-type: none"> 155,968 acres | <ul style="list-style-type: none"> no change | <ul style="list-style-type: none"> no change | <ul style="list-style-type: none"> no change |

Climate Change

Subject Area Goal

Improve performance and resiliency of community assets (buildings and infrastructure systems, natural systems, and agriculture and business systems) under normal and extreme conditions.

Opportunities

- More dynamic community centers and other local assets
- Ample intellectual, social, financial, natural, and economic resources
- Stronger relationships and networks resulting from community investment and resiliency pursuits
- Using educational institutions for research/education related to improved systems
- Re-purposing historic buildings to increase density and improve service delivery
- Leveraging assets and sharing resources across municipal borders

Challenges

- Improving resiliency of food supply
- Continued debate over causes of and responses to climate change
- Funding sources for infrastructure and systems investments
- Supplying services and resources in an emergency to rural areas
- Home rule creates inefficiencies and logistical challenges for inter-municipal coordination

Variables

- Potential increase in extreme weather events
- Food supply affected by variable temperatures, drought, and extreme weather events
- Available resources and capacity of local governments

Comments (place sticky notes below)

Climate Change

Subject Area Goal

Improve performance and resiliency of community assets (buildings and infrastructure systems, natural systems, and agriculture and business systems) under normal and extreme conditions.

Connection with criteria
 ● Strong ● Moderate ○ Marginal

| | | Evaluation Criteria | | | | | |
|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|
| | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility |
| Broad Strategy Create self-sufficient “places of refuge” in each community/neighborhood for critical resources, shelter and aid under normal and extreme conditions. | | ● | ● | ● | ● | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Enhance “places of refuge” in local historical/cultural centers to help preserve the sense of place for each community Provide medical service, education/training, and other services in these “places of refuge” for day-to-day activities | Representative Projects <ul style="list-style-type: none"> Coordinate research and development on emergency power alternatives Provide emergency power to healthcare/elderly facilities Provide emergency power to water and wastewater pumps | | | | | | |
| Broad Strategy Create localized networks for critical services (e.g., local food sources, micro-grids for energy, water, sewage, solid waste treatment, district heating, etc.) to complement existing centralized systems (at a larger scale than the “places of refuge”). | | ● | ● | ● | ◐ | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Create/deploy localized networks in rural as well as urban and suburban settlements, using local inputs (e.g., manure from farms). Develop and approve options for “islanding” these networks under extreme conditions to protect lives and livelihoods. | Representative Projects <ul style="list-style-type: none"> Coordinate research, development and commercialization of small-scale energy generation facilities (e.g., 2-4 farms) Coordinate car/ride share programs within and between communities | | | | | | |
| Broad Strategy Enhance mutual aid and support among neighboring communities, counties, and regions to share, develop, and create capabilities, resources, and special assets. | | ● | ● | ● | ● | ● | ● |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Develop research, education, training, and continuing education to solve local problems Develop processes to identify and share critical resources (e.g., listing of willing and trained medical personal, strategic location of special response equipment for easy deployment). | Representative Projects <ul style="list-style-type: none"> Create processes and information for shared medical personnel in emergencies Create processes and information for distribution of food, supplies, and medicine during emergencies | | | | | | |
| Broad Strategy Upgrade existing assets (buildings and critical infrastructure, farms, fields, and forests, businesses) to better withstand extreme conditions. | | ● | ● | ● | ● | ● | ◐ |
| Representative Sub-Strategies / Project Ideas <ul style="list-style-type: none"> Develop research, training and deployment of multiple strategies to upgrade existing assets. Develop research, development and evaluation of innovative approaches to regenerate natural systems (e.g., wetlands as buffer zones during flooding) | Representative Projects <ul style="list-style-type: none"> Coordinate research, development and deployment of new stream stabilization and hillside erosion control approaches Assess options for the relocation of vulnerable community assets and analyze impacts | | | | | | |

Economic Development

Subject Area Goal

Transform the economic landscape through embedding the region's uniqueness (the Story of Place), the Five Capitals, and resiliency into all policy and investment decisions.

Opportunities

- Embed the Story of Place into the region's decision-making framework
- Strong town-gown relationships
- Build on momentum established by REDC plans to promote regional thinking
- Build economic foundation on unique attributes rather than economic trends
- Develop local solutions that will benefit places beyond our boundaries
- Wealth of educational institutions serve as incubators of ideas/innovation
- Highly-skilled labor force

Challenges

- Need cautious approach to "hot sectors" and economic trends
- Moving beyond conventional models based exclusively on financial bottom line
- Current economic climate often leads to short-sighted policies and solutions
- Continuing to weather the transition from the "big 3" to fine-grained, small-scale businesses
- Concentration of poverty and continued disinvestment in urban areas
- Extremely mobile society results in high competition with other regions, states, and countries

Variables

- Trendy sectors at the national / global scale
- Unstable financial sector and access to capital
- State government and state economy-related impacts

Comments (place sticky notes below)

Economic Development

Achievement to Date

Energy

Subject Area Goal

Increase the generation and distribution of regional renewable energies while using energy efficient and alternative energy resources, along with conservation methods, to decrease the reliance on fossil fuels and outside energy sources and to become a self-sustainable region.

Opportunities

- Various renewable/alternative energy sources that reduce dependence on fossil fuels
- Focus on sustainable demand/consumption, not just replacing fossil fuels with other sources
- Economic development—R&D, manufacturing, operations, etc. for renewable/alternative sources
- Reduced environmental impacts—cleaner air, cleaner water
- Waste-to-energy research and development (landfills, farms, etc.)
- Mutually beneficial relationship with other subject areas

Challenges

- Balancing renewable/alternative sources with environmental/ecological impact
- Consensus between municipalities, organizations, and the public
- Securing sufficient public and private investment
- Developing incentives (financial and otherwise) for voluntary guidelines and programs
- Achieving a viable cost/benefit ratio for new energy sources
- Visual and landscape blight of different energy installations
- Developing effective public policies
- Developing technology for energy storage and distribution
- Resistance to change
- Need for reliable, technology-neutral education resources to combat misinformation

Variables

- Success of other subject areas
- Unstable energy markets
- Public perception/acceptance of various energy sources and techniques
- Success of research and development efforts

Comments (place sticky notes below)

Forestry

Subject Area Goal

Increase the viability, accessibility, and ecological contribution of forests, while decreasing waste and dependence on external inputs.

Opportunities

- Preservation of region's historic character
- Environmental protection through forest land design and practice
- Alternative energy sources
- Strategic land use policies & programs

Challenges

- Rising costs
- Limitations of government structures to adequately protect forests
- Development pressure (slow-paced sprawl)
- Lack of public understanding of value

Variables

- Availability of capital
- National / global markets
- Erratic weather

Land Use and Livability

Subject Area Goal

Increase the sustainability and livability of the Finger Lakes region by revitalizing the region's traditional centers, concentrating development in areas with existing infrastructure and services, and protecting undeveloped lands from urban encroachment.

Opportunities

- Protection of farmland and rural/scenic character
- Revitalization of cities, villages, and rural hamlets
- Cost savings on infrastructure and service delivery
- Reverse disinvestment in existing neighborhoods, infrastructure
- Pendulum beginning to swing back to desire for authentic, close-knit, walkable communities
- Human-scaled design supports local/small businesses, diversity of housing and cultural amenities, transportation options
- More equitable/efficient/sustainable tax structures
- Educating policy makers and the public about transportation-land use connection

Challenges

- Home rule limits effectiveness of regional planning
- Inefficient land use pattern results in high energy consumption and high cost of maintaining infrastructure/services
- Land use policies that promote auto-oriented, single-use development
- Competing priorities of adjacent communities
- Struggling urban areas discourage people from locating in walkable/bikeable neighborhoods
- Access to funding for comprehensive plans, zoning codes, design standards, etc.
- Conventional development costs are largely externalized and thus overlooked in favor of short-term benefits
- Development pressure threatens long-term viability of farms needed for sustainable food system

Variables

- Fuel costs
- Land values based on evolving housing demand and tax structures
- State/federal funding dedicated to local/regional planning initiatives

Achievement to Date

Transportation

Subject Area Goal

Provide an equitable transportation system that maximizes efficiency, addresses disaster resiliency, provides mode choice and reduces dependence on fossil fuels.

Opportunities

- GHG emission reduction
- Improved public health through active transportation
- Outreach/promotion of available programs and services
- Increased resilience for individuals/households when multiple modes are viable for their daily needs
- Expand on recent momentum in expanding bicycle infrastructure
- Human-scaled design supports local/small businesses
- Educating policy makers and the public about transportation - land use connection

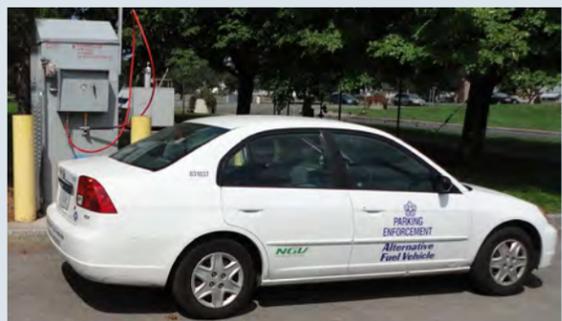

Challenges

- Minimal congestion discourages alternative modes
- Land use policies that promote auto-oriented, single-use development
- Struggling urban areas discourage people from locating in walkable/bikeable neighborhoods
- Access to funding for sustainable transportation projects
- Current lack of critical mass to support transit modes beyond bus service
- Negative perception of public transit

Variables

- Fuel costs
- Availability of federal and state funding

Comments (place sticky notes below)

Materials and Waste Management

Subject Area Goal

Decrease the generation of waste, increase the recovery and reuse of materials currently in the discard stream, manage materials using a highest-and-best-use framework, and create economic opportunities and improved environmental stewardship as a result.

Opportunities

- Shift perception from “waste management” to “sustainable materials management”
- Energy production for small scale operations and the larger grid
- Product packaging advancements
- Increased composting, both large and small scale
- Change perception of waste to recognize various reuse and recycle outcomes
- Collaboration with agricultural and industrial operations

Challenges

- Reduce the lifecycle impacts across the materials supply chain
- Lack of local or regional waste tracking systems
- Prioritizing investment in reduction, reuse, recycling and composting over disposal
- Mitigating impacts of imported waste
- Inspiring sustainable choices - greatest impacts come from collective decisions of households

Variables

- Fluctuating levels of imported waste
- Technologic advances for reuse/recycle/disposal of materials
- Transportation/fuel costs

Comments (place sticky notes below)

Water Management

Subject Area Goal

Improve and protect the water environment with respect to quality, quantity, and availability; promote and understand the value of our water reservoirs, watercourses, and built infrastructure; maximize the social, economic, and ecological potential of our water resources toward equitable sharing of their benefits for both the short and long terms.

Opportunities

- Maximizing water's benefits in a way that ensures its preservation
- Preserving natural state of wetlands and other waterbodies mitigates storm impacts
- Deepen the knowledge of Region's water resources
- Equitable distribution of costs and benefits of water resources
- Rewarding developers for enhanced designs that mitigate impacts
- Increase in tourism with increased quality of waterbodies
- Greater municipal cooperation
- Mitigating impacts of natural gas drilling and other resource extraction efforts
- Balancing water needs of agricultural operations with minimizing residential development in rural areas
- Cheap and ample resource can be taken for granted

Challenges

- Mitigating impacts and removal of invasive species
- Poorly-designed development and agricultural operations that increase runoff and pollutants in waterbodies
- Watershed boundaries and river/stream corridors rarely coincide with political boundaries (home rule)

Variables

- Erratic weather as it relates to replenishing waterbodies and water table
- Competing interests in St. Lawrence Seaway
- Highly-mobile society constantly threatens to introduce new invasive species
- Market forces for other resources (i.e. natural gas) impact demand for and quality of water
- Changing pollutants challenge capabilities of water treatment facilities

Comments (place sticky notes below)

Water Management

Subject Area Goal

Improve and protect the water environment with respect to quality, quantity, and availability; promote and understand the value of our water reservoirs, watercourses, and built infrastructure; maximize the social, economic, and ecological potential of our water resources toward equitable sharing of their benefits for both the short and long terms.

General Introduction

The last rounds of Public Meetings for the Finger Lakes Regional Sustainability Plan were held in Lyons, NY on Monday February 25th, Batavia, NY on Tuesday February 26th, and Rochester, NY on Thursday February 27th. There was a great turn out with many comments based on the information provided by each subject area on broad strategies, summary/overviews, and ongoing projects within the Region. In total about 80 people attended the meetings – between the 3 nights.

Below are the comments, by Subject Area, from all three public meetings:

Agriculture

- Promote agricultural learning in public schools – school gardens, study of local eco systems, and cultural richness of the farmer – to bring young people to the profession.

- More CA's/organic bio-dynamic focused look to bioneers organization for guidance also promo to urban farming.
- More urban farming especially in 'food deserts'
- Stop sprawl. No more tax breaks for sprawl.
- Challenge: provide tax incentives to small scale/family owned farms.
- Small scale local food processing.
- Keep products local – less travel.
- Change codes at all levels so that food can be grown everywhere for personal consumption and for sale.
- Provide free soil testing for residents
- Stop requiring raised beds in the City.
- Decentralize food production so that small urban plots on under used land become food forests for the neighborhood.
- Plant edible landscape plants instead of plants with no food value.
- Opportunities – Access: What about needs of underserved economically disadvantaged and connections to stated opportunities.
- Need to balance agriculture with the negative effects it can have on water quality. Needs to be a balance. Agriculture should not be exempt from land use regulations intended to improve water quality.
- Is there an organic slaughter-house in the Region? If not, one should be located in a central place that is easily accessible by the Regions farmers.
- Campaign to get Wegmans/Tops/other grocery stores to stock more locally made food products.
- If there is true global warming, we will become the center of agriculture.
- We also need to think differently about species of plants.
- More convenient CSA pickup locations.
- Access to urban farming and connect with local schools.
- Encourage more farms to table restaurants. (example: Tap + Table)
- Test and rate crops (especially organic) for toxic residues, nerve poisons, and endocrine disruptors.
- Challenges: aging farm owners.
- Program to create legacy of farming so that farms will not fall out of production. Survey of farmers ages and generations.
- Connect with families/organizations that would take over operations and maintain character of operation.
- Create transition.
- Create projects to determine areas of Region with poor access to quality food.
- Use information to create strategies to locate farmer markets and determine where better food/access is headed.
- Tax incentives – 'no' taxes unless land is sold when assessment applied.
- An ecological framework that is connected including farmland, wetlands, streams, corridors is the foundation necessary for any other strategy to truly be sustainable. If this is not developed and preserved, all other strategies are not actually sustainable.
- Deteriorating roads and bridges prevent access to markets.
- Higher transportation costs due to less heavy weight permit roads.
- Support decision maker's tour and work of Genesee County Chamber of Agriculture Committee.
- Project: Food Incubator/Accelerator – developing concept in Batavia. Value distribution processing packaging at Harvestee Ave Industrial Centre.

- Consider TDR banks. Improve NYS process of purchase development rights.
- Youth – 4H, FFA
- Wayne County has Merrill farm and potential to make biogas power near the Butler Area. The digester can serve the agriculture and food waste.
- Support transfer of development rights purchase of development rights. Identify discreet funding streams for conservation easements.
- Where are the small towns-rural details from a cooperative extension in our back yards?
- Educate in local penny savers with a weekly topic.
- Improve technology to capture energy
- Strategy:
 - Roadway Green Space – Between Macedon and Palmyra along Rt. 31, there is a $\frac{3}{4}$ mile stretch of green space between the road and the canal that averages 180' in width. Along this stretch there is a path neat the canal and overhead power lines. At a minimum of 100' width, 9 acres are easily available for agriculture. If necessary, ample water is available on site. The only other accommodation needed is access for some fishing and parking for up to 6 vehicles. This location is very close to active farming. Currently the space is grass that requires periodic mowing.
- Any shifts in climate will most significantly shift agriculture. Educating the farmer on how to successfully implement, re mediate or circumvent "new" farming situations should be a lead strategy. New crops, changes in technique, and prevention are of utmost important.
- Also as climate changes slowly so does the movement of the people and the amount of food source required. From your agricultural outline it appears static.
- Throughout, the emphasis should be on **an individual/family's self sustaining plans** and education for all types of farmers.
- *Designations of land areas that circumvent Home Rule should not be decided by the group nor should they be funded as such.*

Climate Change Adaptation

- More education – some people are still not convinced that it exists.
- Reverse 6 month research and go back to heirloom based food stuffs (seeds) to tolerate climate viability and emphasize diversity of growing stock.
- Universities can also create programs to train work force and help generate local jobs. Go beyond research and education.
- Have local universities develop climate change modeling coursework/programs as well as resilient design research and learning programs.
- TV picture of someone washing car with a pail of water and sponge.
- Ban fracking in NYS. How can this initiative be going on at the same time that fracking is being considered? It doesn't even make sense to be considering fracking – the environment and the economy both suffer in the long term whenever it is allowed.
- Improve sources of emergency power. Make them accessible to communities to use in major emergencies.
- Improve power and transportation realizing that monster storms are becoming more common and must be provided for in advance.
- There is much science based research that remains to be done, some of which has only just begun to address hydraulic fracking, including, heath issues and environmental issues such as water quality and quantity. Do not rush to fracking. Do not lift ban until more debate and science is available and thoroughly vetted and having received public and stakeholder input.

- Fracking distracts policy makers from allocating resources towards greener energy options and the technology and job creation associated with it.
- Home rule promotes unique protectiveness of areas, history, and public safety and what that municipality's and its comprehensive plan deems unique and should not be usurped.
- Preserve and protect forest lands.
- Home rule is the last right of protection for a citizen. It should not be considered a challenge.
- Variable: Industrialization due to drilling/mining gas or other resources.
- CO² is in our volcano eruptions.
- The science is not settled. Wasting billions of dollars on 'unreliable' (what the government calls 'renewable' like wind and solar is 'a cul-de-sac' that will take us nowhere. (See www.energypresentation.info/) Industrial wind massive tower heights and sprawling footprints is the worst waste of money and cause of habitat fragmentation and sprawl there is.
- Continue to fund agriculture research to improve/reduce negative impacts of growing food and fiber to climate.
- Lyons Village streets in two areas get flooded – needs GIGP grants to build rain gardens. Storm water management using green technology. Big shale along line roads to allow infiltration of water to the ground.
- Planning for crops, etc. need to consider for warmer temperatures.
- Medical Reserve Corp (MRC)
- The focus of this section was mainly on **EXTREME** climate change; more focus should be given to natural shifts.
- Again, education of the masses as to what to have, what to do and what is available is based on their community. Communities cannot "take care" of all; education of self sustenance and preparedness is key for emergency situations.
- **Historic building should not be dual purposed without the input from the Federal, NYS and local levels of government.**
- Sharing among and between communities should only be with the agreement of these communities and not left to this board nor the plan to decide. Will this become a legal document and what are the ramifications?

Economic Development

- Increase interest and investment by more of citizenship for creative input regarding challenges and processes for solution.
- Brownfield redevelopment.
- Downtown/compact mixed use development.
- Bring education about permaculture (design science) into all levels of education.
- Fund free training on regenerative design, edible landscaping, home steadying, which will lead to more small food related businesses.
- Stop giving tax breaks (comida) to projects not adding jobs.
- Government entities should enter into agreements so they won't compete in degrading standards for construction/development. Establish median standards.
- Develop and/or improve train transport within the region for tourism.
- Institutionalize sustainability in economic development by establishing a standing local body charged with reviewing economic development plans from a sustainability perspective. Each proposal should include a brief analysis by this body.

- Funding center needs extremely high priority. The community is sick of technology talent and needs to be culturalized, both from universities and people who leave careers at the 'Big 3'.
- Support efforts of FAME (Finger Lakes Advanced Manufacturer Enterprises) to increase the pipeline of young people interested and trained in manufacturing.
- Require class breaks.
- Require a better system of checks and balances.
- Accountability first then funding.
- SEQR should not be completed by IDA's.
- Collaboration better higher education and business is key.
- Address invasive species in water and impact on tourism.
- People/society (Human (individual) and Social (community) Capital.
- Place/Environment (Natural and Built (Infrastructure) Capital.
- Economy (Financial Capital)
- Not all economics are good.
- Add: Transportation to invest in critical infrastructure to foster economic expansion.
- Project: City of Batavia – Vibrant Batavia Community Network – based on positive story telling of place. City Community Improvement Plan.
- Project: City of Batavia BOA (Batavia Opportunity Area)
- Cooperative Sourcing and procurement – emphasis on local procurement.
- Lyons – Canal Park: Develop small hydropower system to power lights at the existing Canal Park – Solar powered kiosks is convey. 'Peppermint' Capital of NY. Increase summer visitors to come to Lyons – see green technology and history of village.
- Agencies and organization already in place – let's make connections instead of new creativity. Identify these across the spectrum of a project.
- Attracting businesses should be based on cost effective savings for the businesses, employers and employees.
- IDA's should have more stringent enforceable requirements when promising public funds or abatement of taxes. There should be timetables with limits as well as measurable outcomes for employment and especially mandated claw backs.

Energy

- Develop this state as a green state and example for NE States.
- Stop fracking increase true return on investment and true cost of alternative/renewable vs. hydrocarbon/traditional fuel/energy sources.
- Ban fracking in NYS.
- Change code so that anyone can install solar and wind without worry about whether it meets the architectural review board's idea of beauty.
- Support the development of a new locally owned energy cooperative that generated energy through personal solar panels and wind. So homeowner's pays for electricity and utility installs and maintains the panels at no cost to building owners.
- Subsidize solar panels to reduce pay off time.
- Municipal LED lighting replacement programs.
- No fracking – environmental impacts.
- Only true renewable – they must prove productivity, efficiency, maximize energy variables while minimizing impact. Should focus on individual energy independence. Cost efficient.

- Do not upgrade the transformers just for renewable headed to NYC while ignoring cheap hydro from Canada. Transmission cost from NYC should not be impacted upon our area/Region.
- Energy storage abandoned mines create sealed pressure chambers. Use an intermediate power source (solar, wind) to run air pumps to increase pressure when needed. Use stored pressure to run generators.
- Business, hospitals, colleges should either install solar or pay more for energy.
- Environmental impact of upgrading to more energy efficient technologies needs to be considered. For example, what happens to the florescent light that is still usable but that has been replaced by a CFL or LED? Large scale upgrade projects must be creating waste. What happens to that waste? Isn't it sometimes better to use a product to the end of its productive life and then replace it?
- Encourage increase in solar and wind power opportunities. Provide incentives to install and maintain these systems. If additional power is generated from local efforts use it to lower our energy bills – not sent the power to NYC at a reduced rate for them.
- Instead of a perpetual indecision in gas drilling by HVITF, end the process, ban the technology and then put resources and efforts to renewable.
- More use of geothermal by making incentives to private and commercial operations.
- Affordable green housing initiatives.
- Senior housing modifications.
- Help municipalities and businesses achieve higher levels of energy conservation by indentifying buildings at the highest level. Qualifications for LEED standings – perhaps grants and funding for the differences between n good energy connections and LEED standings.
- Cost of service to rural business needs if farms require more electric capacity – no build plan in place.
- Industrial wind power is the biggest scam to ever come down the pike. It is not economically, environmentally, or scientifically sound energy policy. It has exorbitant costs for negligible benefits. The only thing reliably generated by industrial wind is complete and utter civil discard. (Read: [The Wind Farm Scam](http://energyrepresentatin.info/), See: <http://energyrepresentatin.info/>)
- Beware of anything to do with the 'grid' especially smart meters. Especially of National Grid – a British company.
- Install solar panel farms for village and town near the treatment plant. Become energy independent by productivity equal amounts of KWH as the town of Lyons consumes.
- Canal Locks uses microhydro. Reinstall small turbine. LED – lights on Canal Park.
- Increase tourism with Green Tours.
- Concern over smart meters – 'Big Brother', hacking.
- Concern over wind generation impacts.
- Support capturing locally generated b=power, not wind energy, and being able to utilize it in case of energy. Regional Self-reliance.
- Promote energy efficiency and conservation.
- Promote access to energy sources for residents.
- Energy is a priority subject area.
- Preference for hydro-electric.
- Do not promote wind generation.
- Renewables (Wind) = unreliable.
- Need to understand new technology and benefits with nuclear power (small and mid-scale – modular/mini-nuclear 'incapable of melt down')

- Need to overcome negative perception of nuclear power – educate.
- Need R & D on Modular/mini-nuclear power plant.
- Strongly support renewable energy, cleaner air and water, discourage landfills – too many in area.
- Encourage municipal/public/private working together.
- Ban hydro-fracking to protect our water, environment for tourism.
- Develop public education.
- Issue of saved energy produced by wind and solar.
- Grid issues very important.
- Consider Lake Champlain and Hudson River – Power express – hydro-electric power from Quebec. To benefit Mid-Hudson and other Regions.
- Wayne County model (WISP) active in Town of Ontario (CED's)
- All energy forms should be evaluated on a continuum to their renewable qualities in comparison to their capacity to produce usable energy when needed. Many current renewables have a dirty side requiring backup or are not cost effectively deliverable. Some take up too much agricultural land and companies are placing **other use stipulations** on these lands! Some are being placed and promoted where there are no real source of energy but enough money is made from subsidies to compensate the company financially.
- The State should realign their facilitation of the transportation or deliverability of this energy. Technology cannot deliver land intensive energy to distant areas of high populations via transmissions without loss calculated by *said* distance. Hydro via cable from Canada should not be excluded but directly compared to other forms.
- **Rolling brown outs and blackout** should be examined and planned for by each community. These have become a reality for many other countries and states as one relies on the current status of renewable deliverability. Community planning should exist before proceeding!
- Transmission upgrades for bottlenecked energy should not be paid for by the locality providing it but by the people receiving it; unless they are one in the same. Example- Western NY more than met their renewable requirement with Hydro; yet we have to pay for upgrades to deliver wind energy to NYC. Western NY may, on a good day, generate 20% of capacity *at most at any given time; while 9% is bottlenecked and the rest is hampered or lost due to distance of deliverability. Wasted energy is not clean energy. Renewable resources at this time should be generated at the local level for the local level. AND individual/family energy self sufficiency should be promoted. Knowledge is power!!*

Forestry

- Speed up processes for research on invasive species eradication and implement widely so we have healthy forests left. Somebody in a place of power read Secret Life of Plants and Secrets of the Soil. And anything written by Philip Calahan.
- For every tree knocked down for development, the developer should have to plant another.
- Challenge: Develop land use standards for trees and approving any new permits for development.
- Land Use Policy is not up to this committee – it is a municipal decision – home rule.
- Stop destroying mountain tops. Mandatory path to forests for wind farms placed where there is no wind to where energy is bottle necked.
- Challenge: keeping large scale industrialized operations in appropriate Regions only.
- Place environment first.

- Opportunity: Re-learn the corrected structure of the forest.
 - Support the work of local permaculturalists to teach more people about edible forest gardening (i.e. fund classes that are free to the community)
www.barefootpermaculture.com
 - What are the opportunities to address challenges in terms of stakeholder partnerships between academic institutions (including faculty students) and needs EOP, capital, and markets?
 - Have individual credit not titles.
 - There are billions of mature trees, forests, wood lots that need thinning due to over growing – this product is going for waste.
 - Ecological frameworks and networks – pilot project here in Genesee County. Mapping of natural resources and corridors – dropping to municipal level to incorporate into Comprehensive Plan and zoning incorporated energy consumption and generation.
 - Wood is the best renewable we have plenty of.
 - Many business opportunities – large and small.
 - Basic to forestry – lots of acres taxed to provide education = loss of forest to productive acres. Change tax strategies.
 - Best Management Practices (BMP)
 - Critical for our area – so much need for youth, public, landowners, and education.
 - Climate change impact on species and educating the public should be key. Giving financial CREDIT for sustaining a forest should be considered.
 - Giving out pine trees to plant should be expanded to important species and their impacts on the eco system.
 - Disease and species management should be available for all.
-

Land Use and Livability

- Increase active transportation opportunities in communities.
- Identify important view shed that the community believes should be preserved.
- Implement strategies to preserve important view sheds.
- Develop opportunities for people to appreciate view sheds.
- Increase emphasis and accessibility of public transport.
- Green infrastructure municipal code education.
- Subsurface construction as escalating percent of all new projects.
- Bury all electric lines.
- Unaccountable authorities (i.e. Monroe County Water Authority) extending infrastructure into rural areas, leading to continued sprawl.
- Significant state investment in projects that contradict ‘smart growth’ principles (i.e. STAMP in the Town of Alabama)
- The word ‘encourage’ is too vague and squish for strategies
- Change how city and town planning is done so that new buildings cannot be considered until there is some very low (5%) vacancy rate in the Region.
- Change city and town codes so that truly sustainable living is possible even if conventional ideas of beauty are not upheld (i.e. solar panels and wind turbines, gardens and fences should be easy to put anywhere).
- Challenge: No home rule – there are no unique needs economically, economically, and socially.

- Opportunities: human scale design. Include social dynamic of extended families and multi-generation households.
- Accessory units and mother-in-law options need to be addressed in land use planning, zoning, etc.
- Brownfield planning and development.
- Downtown/Main Street projects.
- Updates to Comprehensive Plans to incorporate Sustainability
- Mixed use.
- Can we get planning to go beyond each town border?
- Challenge: Home rule is not a challenge. It is a citizen's last defense of protection and for their environment.
- Rural Area Strategy: Why discourage sewer lines? It would provide for cleaner waste treatments.
- Cooperation: Educational programs in schools and volunteer programs.
- Land use changes and decreased cannot be determined by this group – it requires SEQR and municipalities.
- Create a region-wide tax on development of previously undeveloped land with 2 goals: discourage development on virgin land and provide revenue to subsidize inner-city brownfield re-development.
- Let market determine land use – not agricultural markets political hammer.
- Unfortunately, for all of residents, walk able communities were lost when Wal-Mart and Home Depot came to town and build outside of our cities. Changing back could be next to impossible – like closing the barn door after the horses are already out. Home rule/town's zoning laws should be respected.
- Property tax cost deterrent to land in agriculture. Farm producers taxed off their land. Equity in property tax to use of services.
- Base problem – taxes. NYS highest taxes in US. Suggestion: 10-20-30 year contract with NO taxes on active farm land with provision that if land will cost seller 1 ½ times sale price (outside of agriculture) this could provide the viewpoint to green areas.
- Develop a robust home modification program to support aging in place to pressure neighborhoods and meet customer desires.
- Offer affordable and infill green housing programs.
- Public Health: understandably/truly of health issues and their relationship to the natural and built environment in terms of water agriculture access and transportation access.
- Take a drive around Wayne County, how sad the deterioration of hamlets and small villages but need for grass roofs accepting restoration – where is the money and facilitation for this. Transportation such a problem. Any models (nationwide) to use as a reference?
- Traveling farmer markets – only 5 in Wayne County.
- Change town codes that have a minimum lot size.
- Collegetown is too car-centric.
- Brownfield before Greenfield. We have a lot of brownfields and vacancies.
- No more demolition.
- Stop development as if exists. Keep land wild/healthy. If develop, make it green/earth friendly. Use progressive in design development programs at centers so people get out and experience natural world and then value natural world.
- STAMP should be located at the large vacant lots at Eastman Business Park.
- Less surface parking. Less parking in general, let people walk.

- Stop building exurbs when we have room for new housing.
- Sprawl in the name of economic develop is ironic.
- Preservation and brownfields.
- In the past, more people tried to remain stationary when the housing taxes were lower for the family that did not move; the valuation was not reassessed until one moved therefore rewarded staying in a community! Learn from History.
- **Land use and Home Rule should not be realigned or usurped via this plan.** Communities are unique as are their needs. The plan should provide a potential for sharing surplus and modeling examples of successes; not interfere.

Material Management

- Create more recycling/household hazard waste collection facilities.
 - Need city drop off center for ecopark. Monroe County ecopark is too hard to get to without a car.
 - Develop centers with newest technologies to process waste and recycled materials and someone look into the conversion of landfill waste into fuel through plasma gasification (it is being used in the Armed Forces).
 - Add Styrofoam to curbside service.
 - Some good talk of composting on TV – need more.
 - Ban plastic bags.
 - Educate about proper Monroe County recycling procedures.
 - Large covered bins needed.
 - Recycling is not optional but required: enforce our laws here.
 - Educate the population better.
 - Force recyclers who throw out their own efforts.
 - Reduce the price of repurposed products.
 - Challenge: Fully define toxic waste as based on all a products elements.
 - Make it more economically attractive for businesses to use recycled items. Sometimes they now cost more than new items.
 - Encourage people to do things that save energy and recycle materials.
 - Go Green reports on Home Composting.
 - Reports on cost savings of air drying clothes rather than always using the dryer. Tie to savings for people.
 - Require restaurants (both local and fastfood), grocery stores, and any other business in the food industry to compost food waste. Make it a law and enforce it.
 - Monitor dangerous or questionable wastes.
 - Instead of funding giant pieces of diesel equipment, fund home composting and education public on how. This is at the very least meant to refer to how 'yard waste' are handled (i.e. leaves)
 - Legislate reusable, minimal, and/or compostable packaging for all products including fast foods.
 - Project: RIT Sustainable package project concept.
 - Village produce compost using thesis study – it will reduce hourly cost and make recyclable product.
 - Landfill vs. incinerators has the technology evolved?
-
- Address environmental justice issues associated with the impacts of waste.

- Against rail infrastructure to support waste management – negative impacts associated with transportation of waste and permanency of site.
- Greater value associated with reuse/recycling of materials rather than landfill waste.
- Promote reducing/eliminating organics in landfills.
- Establish representative projects for show and tell money or negotiation opportunities.
- Rail siding can promote importing need rules.
- Educate, demonstrate, and establish a position 'cabinet' in local government and local stakeholder education.
- ARC with their 'work groups'.
- Rails to landfills perpetuate permanent landfill infrastructure – very bad idea. Stop burying and burning recyclables. Prohibit organics from entering landfills and generating methane.
- 6,095 tons of solid waste per capita??? Where is this number coming from? What does it include? Industry waste as well?
- Reuse/Recycle/Compost should be a broad educational strategy. If an area recycles more, it should be compensated accordingly instead of "fined/taxed/fee'd" all the time. Intermittent positive reinforcement works wonders.

Transportation

- Convert to mass transit with pricing incentives, taxes, tax rebates, anything and make city more human model track. Make buses super efficient in operation. Develop technology and infrastructure for bio-diesel. More trains/buses for commercial and travel less trucks.
 - Pedestrian safety. Encourage light reflective sidewalks.
 - More RTS express buses.
 - More E/W, N/S routes.
 - Shuttles between dense walkable areas.
 - Stop building new roads. Stop widening roads to add car lanes.
 - Flip flop street parking and bike lanes. Get bikes out of the door zone. Green lanes.
 - Sharrows go in the middle of the lane, not against the curb.
 - Commuter rail – ER/Fairport/City
 - Bike infrastructure is too dicey. Municipalities need to work together.
 - RTS bus routes are redundant and semi-functional. Hard to read schedule and routs. Impossible if a tourist.
 - Safety – safe neighborhoods.
 - Sheriff and surveillance cameras.
 - More car and bike sharing programs (i.e. expand zipcar around city)
 - Easier and more accessible bus schedules.
 - Pedestrian safety.
 - If you build it, they will come. Good bike/pedestrian infrastructure creates critical mass. Don't wait for the mass to build.
 - Increase pedestrian marking, signals near expressway exits.
 - Plow Lehigh Valley trail in winter for RIT students.
 - Buffer bike lanes when possible. All in the door zone.
 - Encourage employers to provide racks, lockers, showers.
-
- Funding for biking and walking needs to happen.
 - RGRTA needs to become user friendly and an option – think Jazz Festival Transportation.

Finger Lakes Regional Sustainability Plan
Funded by: NYSDERDA – Cleaner, Greener Communities Program

- It's 2013 and this community is spending \$100 million on an expressway interchange – this says a lot about community priorities.
- Misplaced priorities.
- NYSDERDA Indicators and Targets: figures are way too low. Try 2010 – 15%, 2020 – 25%, and 2035 – 50% and larger reduction in vehicular mile. We need to get much more serious about light rail transit – offering excellent alternatives to auto dependencies.
- The Kendrick/390 project is not really sustainable in the long term. The more car-centric infrastructure we build, the more we drive. Many UR and RIT cyclists will be discouraged to ride because of high speed traffic. Protected bike lanes must be a part of this project. How many cyclists do you see on West and East Henrietta Roads around 390? Kendrick is currently a safe haven for bike commuters crossing 390. Consider traffic calming and cycle tracks.
- Cars, congestion, land use policies are not getting people out of cars. Bus service from Monroe/Ontario not an option due to limited service in spite of going to a major employment center/universities.
- Where are the commuter services?
- Last week the D&C had 20 pages of information on cars. Locals are addicted to their cars. How do we change this behavior? How to impact individuals to lower carbon footprint besides fuel costs? Congestion and land use policies aren't making the connection. What are local policy makers doing on a regional level to work together to increase stream-lining and increasing connectivity of multi-modal transportation options? How is this being addressed with major employment centers and destinations?
- Challenge: Safety in public transportation.
- Opportunity: Develop more connection centers (Park & Ride) and transit to industrial center regions.
- Provide bus shelters for ride sharers at all thruway and interstate exits and entrances.
- Monorail over light rail. Build out from highest use ways as conspicuous demo role models.
- Promote human powered transportation by developing trails, paths, bike lanes, and sidewalks that connect communities for shorter distances.
- How do local municipalities overcome the 'NIMBY' concerns that trail projects, especially rail to trail projects will cause crime or other issues in their neighborhoods?
- Studies demonstrate that the reality is very different, crime and property values, but too often the fears remain.
- Need to invest in multi-modal solutions through greater federal funding in the TIP.
- Struggling Urban Areas: so many of Rochester's neighborhoods would be excellent location choices for walkable/bicycleable lifestyles if it weren't for the increasable concentrated poverty and depressing decrepit conditions. It would be great to see social sustainability considered in this study.
- Social sustainability meaning to threat and value that poor and indigent in our community as we would aim to respect our natural resource sustainability within social sustainability is an incomplete visual and goal.
- Local – Genesee County cost per road is over \$5/ride if all costs are considered.
- Repair roads and bridges of state. Reduce high weight vehicles on county and town roads. Keep heavy weight vehicles on state routes. Invest in crumbling infrastructure. Food moves by trucks.
- Wyoming County – The Silver Lake Trail Council has been trying to get a bike path added around the small lake for years. Roads have been re-paved but paths were not added. Red

tape with NYS bureaucracies have kept plan locked up in planning and I hasn't happened. The plan is already drawn up and would go around Silver Lake and ultimately connect to Letchworth State Park (just a couple miles away).

- Drain canal extra early and deeper the canal (maintain proper depth) and use it as an economic asset to move goods, as well as for recreation. Could tie rail service to canal. Electrified railways utilize a power caddy for sustainability of infinite travel without stopping. Could be used for small vehicles with limited horsepower at low voltage and current, using ramps to link to surface roads. Need stainless steel spikes and corrosion resistant plates (power caddy).
- Project: Batavia Opportunity Area brownfield trails, greener paths.
- Multi-modal improvements to the city infrastructure.
- Do not promote 'high speed' rail.
- Heavy import of waste impacts roads.
- Heavy transport of water/fresh or contaminated negatively impacts roads.
- Winter and salt/sand do enough damage.
- Stop/ban hydro-fracking.
- I do not see a strategy for disaster resiliency. Living through the NYC Blackout of the mid 1960's, I know that public transit was not a solution; walking was dangerous and difficult *in the dark*.
- Mass transit – on where did the trolley go to?
- While biking and walking are your focus; improving safety and lighting should precede this. No one will venture out on foot where there is a serious threat for personal safety.

Water Management

- TV photo of a little water in a bowl then fingers or spatula wish around before rinse.
- Water conservation programs enforced in all arenas.
- No fracking.
- Water recycling technology and implementation.
- Challenge: developing public increase in water is perceived as an unlimited resource but is a major economic development resource.
- Address invasive species in Lakes.
- Support center for environmental incentive creation of a 'Genesee Riverkeeper' as a means of (1) promoting community knowledge of an involvement in the River, shore lines, Ontario and Finger Lakes; (2) monitoring the quality of regional water bodies; (3) coordinating the efforts of numerous organizations with interests in this arena; and (4) attractive local and national funding via the "Riverkeepers' brand.
- Mitigate fracking impact on ground water.
- Require testing by the company prior to fracking and constant monitoring.
- Not self mandatory.
- Encourage public agencies to manage water with drawls to avoid adverse impacts to aquatic resources, such as fish and mussels.
- Challenges: Increase support for organic farming. These people are local experts and eager to contribute to quality of life in Region while growing local, sustainable food. Already doing water quality protection.
- Challenge: Maintain data base of water quality to identify potential contamination issues.
- Outlaw the metering of grass and non-edible landscaping.

- Outlaw the use of all lawn chemical applications.
- Who determines equitable distribution? Costs? Policies? Who balances needs of agriculture vs. cities? Who has the hammer?
- Equitable? Why it's our natural regional, ours to use and achieve maximum economic gain from. CAFO regulations on dairies – improve greatly, water quality – strategy in place now – not a challenge.
- Big increase in educational efforts.
- Boost education efforts that shows/demonstrates how valuable our water resources are – lack of understand in this tremendous local area vs world issues.
- Canals very important resources – develop with green technology – mini-hydro power, solar panels.
- Against fracking and potential impacts of water quality.
- Important for Region to maintain water quality.
- Strategy: Improve water quality and promote multi-municipal water front lot sewer lines.
- Project: 4-Bay sewerline in NE Wayne County.
- Protection of groundwater and smaller waterways; all waterways and all NYS residents are equally important. Protection from fracking, water usage for fracking in this State and others especially on protected land, disturbances of waterways for large land intensive projects, pollution in all forms including use of brine on roads and use of contaminated land for roadways (This should also be placed under waste management.) Mitigation should not be only financial compensation.
- Suggested Strategy edits in red:
 - **Preserve existing ecosystem services and** Promote green infrastructure to reduce reliance on grey infrastructure
 - Encourage net zero pervious surfaces
 - Preserve open space
 - Provide financial incentives to increase green infrastructure or reduce the amount of stormwater runoff
 - **Create a regional aquatic invasive species prevention/monitoring and response**
 - **Streambank remediation and buffering**
 - **Implement agricultural best management practices for water quality**
 - **Implement road ditch and highway maintenance best management practices for water quality**
 - **Increase water use efficiency**
 - **Decrease water waste/loss in water transport systems**
 - **Promotion and public education targeting water re-use and reducing overall water use**
 - **Re-conceive wastewater from a water “waste” to a water “source”**
 - **Implement best management practices to improve the water use efficiency of crop irrigation and landscaping practices**

General/Story of Place Comments

- Missing collective overview documents.
- Apply for grants in each category on one form.

- Glossary of terms: REDC, 5 Capitals, Hot Sectors, Big 3, USGS, Placemaking, PDR & TDR, GHG

Finger Lakes Regional Sustainability Plan
Funded by: NYSERDA – Cleaner, Greener Communities Program

- Projects and education aimed at recommending improvements to local laws.
- Overarching strategy – Seven Generation Sustainability.
- *I do have concern as to the integrity of the municipal comprehensive plans, Home Rule and how each municipality is participating in this plan and will be impacted by this plan.*
- The municipalities were invited to one joint meeting on February 21. Did they give written comments or were they also give removable/reusable sticky notes as the public?
- Did they view the same outline as the title suggests they did not- "Public Meeting Boards"?
- How will you include municipalities and the public in the finalization of the draft?
- Who will develop the timetable and implementation?
- Will the municipalities and public have input into the final form and legal substance;**as well as THE PLAN being required to complete a SEQR such that the appropriate State Agencies can weigh in, as well as local governments and the public/ratepayer who are ultimately funding this.**

APPENDIX B2: TIER II GHG INVENTORY

NYSERDA

Cleaner Greener Communities / Climate Smart Communities Regional Level GHG Reporting Template

Instructions

Please use this template to report summary regional GHG inventories to NYSERDA as part of your final deliverables for the regional GHG inventory. Fill it out and rename the sheet "**REDC_NAME.CGIC Final GHG Inventory.2010.xlsx**".

In this template there are two tabs, "Emissions by Source" and the "Roll Up Report". Emissions by Source shows all direct and indirect emissions sources considered by the GHG Working Group for inclusion in the inventory, and the Roll Up Report reflects the consensus decision for which sources are to be included when totaling the regions GHG inventory into a single number. The final submission should have the two tabs for the REDC in total, and two additional tabs for each county separately. For county tab names, please rename "REDC" to the name of the county.

We understand each region will have its own custom way of managing data and calculations so please cut and paste summary results from your own data sheets into this template. Although you may create dynamic links to this template from your analysis sheets when filling it out, please submit this template without these links.

Protocol Compliance Statements. In the REDC level tabs only, please fill in Columns P through R, and indicate if your methods adhered to methods in Column O that summarize NY GHG Working Group consensus decisions with "Rec" standing for the recommended methods and "Alt" standing for an acceptable alternative methods. It is not required that all methods adhere to the recommended or alternate methods, but please indicate any deviations, justifications, findings, or recommendations you have for additional methods to consider. It may help you to select Columns O-P and choose the "wrap text" format to help you read the methods.

Please Fill in the Summary Table on the Cover Sheet tab to the right at the conclusion of filling out these data sheets. You may dynamically link these numbers to the other sheets in this template.

Color Coding- in general a Green cell requires a value or entry, a white cell is optional.

| | |

| Summary of Protocol Decisions for Required Tier II Source (Green Box Sources) "Rec" - recommended, "Alt" means acceptable alternative | Adherence | |
| | Yes | No |
| | | Brief Description of Method and Issues: |
| (Rec) - Utility Supplied Data, (Alt 1) - extrapolation from partial set, (Alt 2) EIA allocation based HDD and Housing Unit Size | X | Actual electricity sales data is provided for National Grid, NYSEG, RG&E and municipal utilities. |
| (Rec) - Utility Supplied Data, (Alt 1) - extrapolation from partial set, (Alt 2) EIA allocation based HDD and Housing Unit Siz | X | Recommended method used |
| (Rec) Allocated EIA SEDS residential state consumption to counties based on Home Heating Fuel, HDD, and Housing Unit Siz | X | Recommended method used |
| (Rec) Allocated EIA SEDS residential state consumption to counties based on Home Heating Fuel, HDD, and Housing Unit Siz | X | Recommended method used |
| (Rec) Allocated EIA SEDS residential state consumption to counties based on Home Heating Fuel, HDD, and Housing Unit Siz | X | Recommended method used |
| (Rec) - Utility Supplied Data, (Alt 1) - extrapolation from partial set, (Alt 2) EIA allocation based on Fuel Oil Recommended method. | X | Actual electricity sales data is provided for National Grid, NYSEG, RG&E and municipal utilities. |
| (Rec) - Utility Supplied Data, (Alt 1) - extrapolation from partial set, (Alt 2) EIA allocation based on Fuel Oil Recommended metho | X | Recommended method used |
| (Rec) Allocated EIA SEDS commercial state consumption to counties based on Home Heating Fuel, HDD, employment and Commercial Square Footage. (Alt Allocation based on Home Heating, HDD, and Employment only. | X | Recommended method used |
| (Rec) Allocated EIA SEDS commercial state consumption to counties based on Home Heating Fuel, HDD, employment and Commercial Square Footage. (Alt Allocation based on Home Heating, HDD, and Employment only. | X | Recommended method used: includes all Fuel Oil |
| (Rec) Allocated EIA SEDS commercial state consumption to counties based on Home Heating Fuel, HDD, employment and Commercial Square Footage. (Alt Allocation based on Home Heating, HDD, and Employment only. | X | All fuel oil included in Row 24 totals |
| (Rec) Allocated EIA SEDS commercial state consumption to counties based on Home Heating Fuel, HDD, employment and Commercial Square Footage. (Alt Allocation based on Home Heating, HDD, and Employment only. | X | Recommended method used |
| (Rec) Allocated EIA SEDS commercial state consumption to counties based on Home Heating Fuel, HDD, employment and Commercial Square Footage. (Alt Allocation based on Home Heating, HDD, and Employment only. | X | Recommended method used |
| (Rec) - Utility Supplied Data, (Alt 1) - extrapolation from partial set, (Alt 2) allocate SEDS EIA data based allocated by industrial employment | X | Actual electricity sales data is provided for National Grid, NYSEG, RG&E and municipal utilities. |
| (Rec) - Pie Slice Method. (1) Allocate directly all Title 5 / MMR reporting industrial facilities to the counties / municipalities. (2) compute total statewide industrial fuel use for all Title 5 / EPA MMR reporting facilities and subtract that from the EIA SEDS reported fuel use for the industrial sector (3) allocate the balance from step 2 to counties by industrial employment for manufacturing. The balance is assumed to represent smaller industry that does not report under Title 5 regulations. | X | Direct energy use as reported for Title 5 industrial facilities only, additional allocation based on statewide emissions by industrial employees is not representative of the region, therefore not included |
| (Rec) - Pie Slice Method. (1) Allocate directly all Title 5 / MMR reporting industrial facilities to the counties / municipalities. | (Rec) - Direct Allocation from Title 5, MMR, or EIA 923 Database. All Grid Connected Power Generators with Nameplate capacity of 1 MW or greater shall be reported. For overlap, prioritize EIA 923 Database. | X | EIA 923 database used |
| (Rec) - Direct Allocation from Title 5, MMR, or EIA 923 Database. All Grid Connected Power Generators with Nameplate capacity of 1 MW or greater shall be reported. For overlap, prioritize EIA 923 Database. | X | EIA 923 database used |
| (Rec) - Direct Allocation from Title 5, MMR, or EIA 923 Database. All Grid Connected Power Generators with Nameplate capacity of 1 MW or greater shall be reported. For overlap, prioritize EIA 923 Database. | X | EIA 923 database used |
| (Rec) - Direct Allocation from Title 5, MMR, or EIA 923 Database. All Grid Connected Power Generators with Nameplate capacity of 1 MW or greater shall be reported. Wood CO2 emissions reported optionally as biogenic CO2, CH4 and N2 Emissions required to be reported to Scope 1 | X | EIA 923 database used: none to report |
| (Rec) - Direct Allocation from Title 5, MMR, or EIA 923 Database. All Grid Connected Power Generators with Nameplate capacity of 1 MW or greater shall be reported. MSW CO2 emissions split as 44% reported as Scope 1 as part of non-biogenic (plastics etc), and 56% can be reported as option biogenic based data for 2005 on http://www.eia.gov/cneaf/solar.renewables/page/mswaste/msw_report.html . All CH4 and N2O shall be reported under required Scope 1. | X | EIA 923 database used |
| (Rec) - Acquire utility specific estimate of T/D (in %) and apply that to all consumption (res/commercial/industrial). Report emissions as Scope 2 using region EGRID emission factors consistent with all Scope 2 calculations. (Alt) use a statewide average T/D loss of 5.28% as documented by EPA's EGRID reporting for New York. | X | Alternative method used as stated |
| (Rec) - Acquire utility specific estimate of T/D (in %), compute as percentage of total residential/commercial/industrial/energy generation. Report as Scope 1 CH4 emissions. (Alt) use a statewide average of 1.8% as documented by National Grid in 2010 PSC Reporting. | X | Alternative method used as stated |
| (Rec) - acquire utility specific estimate and report as SF6. (Alt) Apportion NYSERDA 2009 Emission Inventory Total for the state to counties based ration of EIA reported total electricity demand to computed regional or county demand for all sectors. | X | Based on conversations with P Groth and J Yeinger, used national 2010 emission inventory total (alternative method) |
| | X | Nothing to report |
| (Rec) Direct Allocation from from EPA MMR only. Small Sources to not to be included at this time. | X | Nothing to report |
| | X | Nothing to report |
| (Rec) Use EPA 2009 Draft Guidance method. Allocate national per/capita emissions to counties based on population. Methods include mobile refrigeration | X | Recommended method used |

| | | |
|--|-------------|---|
| (Rec) Use MPO-provided VMT data local to your region, supplemented by DOT provided data (on Wiggle). Use regional-specific data on fleet profile and national fleet fuel economy data (on Wiggle) to estimate county-level GHG emissions. (Alt) Use EPA MOVES GHG module customized for your region- appropriate if you are running this model. Assume on-road fuel is 10% ethanol and report this fraction as Optional biogenic emissions. | X | Recommended method used |
| (Rec) Use MPO-provided VMT data local to your region, supplemented by DOT provided data (on Wiggle). Use regional-specific data on fleet profile and national fleet fuel economy data (on Wiggle) to estimate county-level GHG emissions. (Alt) Use EPA MOVES GHG module customized for your region- appropriate if you are running this model. Assume on-road fuel is 10% ethanol and report this fraction as Optional biogenic emissions on the ethanol line item. | X | Recommended method used |
| Optional- Include regional E-85 consumption if you have it, and debit against your gasoline estimate create using VMT. Allocate 15% as gasoline to be reported ; Scope 1, and 85% as ethanol to be reported as optional biogenic. | X | Not available |
| Optional- Include regional biodiesel consumption if you have it, and debit against your diesel estimate create using VMT. Because biodiesel blends change, allocate option biogenic component on this line item only, and retain the diesel fraction on the diesel line item. | X | Not available |
| Today this will be zero, but as NYSERDA pushes to electrify on-road transportation we will want to report here, debiting against electricity consumption in the other sectors as appropriate. | X | Not available |
| Freight and Passenger. (Rec) Use direct provider fuel consumption data allocated spatially to location of routes (Alt) Use Nysdera 2002 estimates of Diesel consumption by county directly. | X | Alternative method used |
| Passenger and Commuter (Rec) Use direct provider electricity consumption data allocated spatially to location of routes (Alt) None identified. | X | Recommended method used Nothing to report |
| Rec - USE NYSDEC 2007 data from the state emission inventory for the small and pleasure craft categories reported by county (data on Wiggle). For commercial distillate and bunkers, No consensus method identified- please document methods used. | X X X | Recreational boating included in non-road data using NONROAD modeling CO2 emissions calculated by multiplying EPA estimated annual SO2 emission rate by ratio of CO2 to SO2 emissions for applicable fuel. |
| Optional Scope 1- Estimate Landing and Take off Cycle emissions using a dispersion model such as EDMS, or with related data from the NYSDEC for the 2007 state emission inventory. Optional Scope 3, use FAA statistics on departure miles from regional airport, allocate jet fuel use to it, then allocate to counties by fraction of population served | X | Scope 1 option, using EDMS. Totals are also included in GHG Inventory reporting as part of Sustainability Plan |
| Rec - USE NYSDEC 2007 NONROAD data from the state emission inventory (data on Wiggle) for all categories except small marine. | X | Recommended Method used as stated, but includes recreational marine |
| This is fugitive CH4 emissions from landfills. There are two required Scopes. Scope 1 - Estimate of actual emissions in regional boundary. (rec) use MMR or Title 5 (annual landfill reporting) data directly for facilities (data on Wiggle). For recently closed landfills or for areas without reported data, use a First Order Decay model to estimate emissions. Scope 3- emissions footprint attributed to current waste generation regardless of where it is treated. (rec) Estimate county level MSW and C/D waste generation and apply a representative FOD model with prevailing CH4 captures rates forward-casted 50 years to estimate the footprint. Rec - for any MSW incinerated that does not generate grid connected power, compute emissions. MSW CO2 emissions split. 44% shall be reported as Scope 1 a part of non-biogenic (plastics etc), and 56% can be reported as option biogenic based data for 2005 on http://www.eia.gov/cneaf/solar.renewables/page/mswaste/msw_report.html . All CH4 and N2O shall be reported under required Scope 1 | X X | Scope 1 reported as actual 2010 waste facility emissions reported (EPA MRR). Scope 3 calculated and reported as recommended, assuming an average 75% methane capture rate None Reported |
| Determine population covered by WWTPs. (Rec)- Use the ICLEI Local Government Operations Protocol and apply to all facilities in the region. (Alt) use methods as described in the EPA 2009 Draft GHG guidance to translate populations served into emissions using default data. Determine population covered by Septic Systems, and apply the default emissions / capita as described in the ICLEI Local Government Operations Protocol. | X | Based on conversations with P. Groth and J. Yeinger, used State Inventory Tool and regional population, allocated to county by population |
| (Rec) Methods as described in the EPA 2009 guidance and executed in the EPA's State Inventory Tool. Use locally resolved fertilizer, crop, and livestock population from either the 2007 Ag census or the US NASS system to get county-level data and make calculations for each county. | X X | Recommended method used Recommended method used None reported |
| Optional Source and Sink. Use methods described in the EPA 2009 Guidance. Use local forest inventory data, or use the US Forest Services online inventory tool for forests. For carbon stock factors use the National Council for Air and Stream Improvement's Carbon On-Line Estimator. (NCASI 2008) Use the | X | As stated Baseline Total calculated using method recommended and reported for information, change is not reported or relevant to WG discussions |
| Sum Totals in columns for all EXCEPT ANY FORESTRY SINKS. Totals in the Scope 1 column can be a considered a physical roll up of emissions that occur i boundary, and is analogous to reporting that is done for state and federal GHG inventories, and for air quality management. | | |
| Value above MINUS and reported optional forestry sinks. | | |

REDC GHG Emissions Roll Up Report

Year: 2010

(all emissions in Column D, when summed will equal the total County or REDC protocol compliant GHG emissions estimate)

REDC / County Name **Finger Lakes**

Color Code

REQUIRED for the Roll Up Report, though some data may be zero, N/A, or considered to small to count
Report NO Data in cell

Notes:

1. CO2e calculated based on allocation of EIA 2010 Residential Energy use in New York*, using fuel type emission factors from EPA's Mandatory Reporting Rule(MRR)**

*http://www.eia.gov/state/seds/sep_sum/html/pdf/sum_btu_com.pdf

**Federal Register / Vol. 74, No. 209 / Friday, October 30, 2009 / Rules and Regulations, Table C-1 and Table C-2, <http://epa.gov/climatechange/emissions/downloads09/GHG-MRR-FinalRule.pdf>

2. New York State, regional and county residential energy totals allocated based on 2007 - 2010 ACS data for type of residence and heating fuel type, 2010 US Census data used for total occupied units, and HDD determined based on NOAA New York State climate divisions. fuel use by structure size determined though EPA study provided to GHG Inventory Protocol group.

3. CO2 from Wood products are considered a source of biogenic emissions, not to be included in GHG emission totals

GHG Emissions from Natural Gas Use Transmission and Distribution Losses¹

| | % T&D Loss | Total Natural Gas (mcf) | CH4 Losses in mcf | CH4 Losses in lbs | Total CO2e |
|-----------------------------------|-------------|-------------------------|-------------------|-------------------|----------------|
| Natural Gas T&D Losses | 1.8% | 45,042,256.11 | 810,761 | 36,322,075 | 345,984 |
| Genesee | 1.8% | 1,838,708.48 | 33,097 | 1,482,734.52 | 14,124 |
| Livingston | 1.8% | 1,594,009.33 | 28,692 | 1,285,409.13 | 12,244 |
| Monroe | 1.8% | 32,394,057.24 | 583,093 | 26,122,567.76 | 248,829 |

Notes

- CO₂e calculated based on regional Title V Air Quality Permitting energy data provided to the CGC GHG Protocol Working Group from the NYSDEC (August 2012), using fuel type emission factors from EPA's Mandatory Reporting Rule(MRR)*
*Federal Register / Vol. 74, No. 209 / Friday, October 30, 2009 / Rules and Regulations, Table C-1 and Table C-2, <http://epa.gov/climatechange/emissions/downloads09/GHG-MRR-FinalRule.pdf>
- New York State, regional and county actual energy totals reported for all Title V sources within the area. Electricity generation and landfill emissions were excluded as they are calculated and counted separately in waste and electric consumption and generation
- CO₂ from Wood products are considered a source of biogenic emissions, not to be included in GHG emission totals
- Renewable sources highlighted in green
- MSW(Municipal Solid Waste) emissions are included in waste calculations

GHG Emissions from Natural Gas Use Transmission and Distribution Losses¹

| | | | CH ₄ | CH ₄ Losses in | Total CO ₂ e |
|-----------------------------------|-------------|-------------------------|-----------------|---------------------------|-------------------------|
| | % T&D Loss | Total Natural Gas (mcf) | Losses in mcf | lbs | |
| Natural Gas T&D Losses | 1.8% | 5,145,798.98 | 92,624 | 4,149,572.30 | 39,527 |

| Yates | 1.8% | - | - | - | - |

Notes

1. CO₂e from T&D losses calculated based on ratio of estimated % fuel loss and total industrial natural gas use within the region.

Supporting data and calculations are provided in the following E&E Excel Workbook:

File Name:

FL Industrial Emissions 1-4-13.xlsx

Date:

1/4/2013

Industrial GHG Emissions

2010 Emissions reported as part of EPA MRR Program

| Region | Source | Process | CO2e (Metric Tons) | | | | | | | Total CO2e |
|-----------------------|--------------------------|------------------|--------------------------------|-----|-----|-----|------|------|--|---------------|
| | | | Emissions by Type ¹ | | | | | | | |
| | | | CO2 | CH4 | N2O | CF4 | C2F6 | CHF3 | | |
| New York State | | | | | | | | | | |
| Finger Lakes | | | | | | | | | | 37,292 |
| Genesee County | None | | | | | | | | | |
| Livingston County | None | | | | | | | | | |
| Monroe County | None | | | | | | | | | |
| Ontario County | GUARDIAN INDUSTRIES CORP | Glass Production | X | X | X | | | | | 37,292 |
| Orleans County | None | | | | | | | | | |
| Seneca County | None | | | | | | | | | |
| Wayne County | None | | | | | | | | | |
| Wyoming County | None | | | | | | | | | |
| Yates County | None | | | | | | | | | |

Notes:

1. Emissions from industrial uses and general combustion are not reported separately by type, only total CO2e is reported separately.

Ozone Depleting Substance Substitution Emissions

| Region | Population | HFC Emissions |
|-----------------------|-------------------|--------------------------|
| | | Total CO2e (Metric Tons) |
| New York State | 19,378,102 | 4,436,697 |
| Finger Lakes | 1,217,156 | 278,672.93 |
| Genesee County | 60,079 | 13,755.34 |
| Livingston County | 65,393 | 14,972.00 |
| Monroe County | 744,344 | 170,420.65 |
| Ontario County | 107,931 | 24,711.25 |
| Orleans County | 42,883 | 9,818.24 |
| Seneca County | 35,251 | 8,070.86 |
| Wayne County | 93,772 | 21,469.49 |
| Wyoming County | 42,155 | 9,651.56 |
| Yates County | 25,348 | 5,803.53 |

Notes:

1. Emissions from HFC use estimated based on 2010 population ratio and 2007 Reported Statewide HFC emissions (New York State Greenhouse Gas Emissions Inventory)

Supporting data and calculations are provided in the following E&E Excel Workbook:

File Name:

FL Industrial Sources11_10_12.xlsx

Date:

11/10/2012

Table 1
Greenhouse Gas Emission Inventory Summary
Transportation: On-Road Vehicles
Finger Lakes New York Region

| County | Annual Vehicle Miles Travelled ¹ (VMT) | Annual GHG Emissions ² (metric tons CO ₂ e/yr) | | | |
|------------------------------|---|--|------------------|-----------------|------------------|
| | | CO ₂ | N ₂ O | CH ₄ | Total |
| Genesee | 1,097,199,275 | 530,382 | 1,329 | 455 | 532,166 |
| Livingston | 786,257,742 | 386,095 | 967 | 331 | 387,393 |
| Monroe | 6,486,644,052 | 2,832,972 | 7,095 | 2,432 | 2,842,498 |
| Ontario | 1,424,348,585 | 658,566 | 1,616 | 565 | 660,747 |
| Orleans | 298,777,408 | 138,335 | 347 | 119 | 138,800 |
| Seneca | 461,842,036 | 218,810 | 548 | 188 | 219,546 |
| Wayne | 744,612,295 | 311,467 | 780 | 268 | 312,515 |
| Wyoming | 359,002,158 | 162,186 | 406 | 139 | 162,731 |
| Yates | 198,538,063 | 98,299 | 246 | 84 | 98,630 |
| Finger Lakes NY Total | 11,857,221,614 | 5,337,111 | 13,334 | 4,580 | 5,355,025 |

Notes:

1. VMT data for each county provided by NYSDOT.
2. NYSDOT regional-specific data on fleet profile and national fleet fuel economy data to estimate county-level GHG emissions.

| Emission Type | Fuel Type | Finger Lakes NY Annual GHG Emissions ² (metric tons CO ₂ e/yr) |
|---------------|-----------------------|--|
| Non-Biogenic | Gasoline ¹ | 4,273,549 |
| | Diesel | 771,313 |
| | Total | 5,044,862 |
| Biogenic | Ethanol ¹ | 310,163 |
| TOTAL | | 5,355,025 |

Notes:

1. Non-biogenic Portion of Gasoline E-10. Biogenic portion is not included in GHG totals per NYSGHG Protocol
2. NYSDOT regional-specific data on fleet profile and national fleet fuel economy data to estimate GHG emissions. The distribution of GHG emissions for the components of gasoline E-10 (i.e., gasoline and ethanol) is based on a fraction of 90% gasoline and 10% ethanol.

| County | Annual Fuel Consumption (MMBtu/yr) | | |
|------------------------------|------------------------------------|-------------------|-------------------|
| | Gasoline (E-10) | Diesel | Total |
| Genesee | 6,125,147 | 1,366,032 | 7,491,180 |
| Livingston | 4,407,479 | 1,043,088 | 5,450,567 |
| Monroe | 35,371,200 | 4,780,696 | 40,151,896 |
| Ontario | 7,877,822 | 1,438,072 | 9,315,893 |
| Orleans | 1,658,969 | 298,095 | 1,957,064 |
| Seneca | 2,575,910 | 517,143 | 3,093,053 |
| Wayne | 4,055,928 | 442,298 | 4,498,226 |
| Wyoming | 1,997,798 | 360,648 | 2,358,446 |
| Yates | 1,102,252 | 284,413 | 1,386,665 |
| Finger Lakes NY Total | 65,172,504 | 10,530,485 | 75,702,989 |

Notes:

and national fleet fuel economy data.

| Ethanol ¹ | 9,500 | 5 | 3 | 9,508 |
| Diesel | 22,148 | 55 | 19 | 22,222 |
| Yates | 98,299 | 246 | 84 | 98,630 |
| Gasoline | 72,022 | 191 | 65 | 72,278 |
| Ethanol ¹ | 5,241 | 3 | 2 | 5,246 |
| Diesel | 21,035 | 53 | 18 | 21,106 |

Notes:

1. Non-biogenic Portion of Gasoline E-10. Biogenic portion is not included in GHG totals per NYSGHG Protocol

2. NYSDOT regional-specific data on fleet profile and national fleet fuel economy data to estimate GHG emissions. The distribution of GHG emissions for the components of gasoline E-10 (i.e., gasoline and ethanol) is based on a fraction of 90% gasoline and 10% ethanol.

Table 1
GHG Emission Summary
Transportation: Railroads
Finger Lakes New York Region

| County | Annual Diesel Consumption ¹ (gal/yr) | Annual diesel Consumption (MMBtu/yr) | Direct GHG Emissions from Diesel Train Engine Systems ² (metric tons CO ₂ e/yr) | | | |
|------------------------------|--|---|--|------------------|-----------------|----------------|
| | | | CO ₂ | N ₂ O | CH ₄ | Total |
| Genesee | 2,684,250 | 370,427 | 27,397 | 69 | 23 | 27,489 |
| Livingston | 263,433 | 36,354 | 2,689 | 7 | 2 | 2,698 |
| Monroe | 3,715,410 | 512,727 | 37,921 | 95 | 32 | 38,049 |
| Ontario | 101,171 | 13,962 | 1,033 | 3 | 0.9 | 1,036 |
| Orleans | 17,965 | 2,479 | 183 | 0.5 | 0.2 | 184 |
| Seneca | 58,215 | 8,034 | 594 | 1 | 0.5 | 596 |
| Wayne | 2,742,210 | 378,425 | 27,988 | 70 | 24 | 28,083 |
| Wyoming | 611,480 | 84,384 | 6,260 | 16 | 5 | 6,281 |
| Yates | 106,382 | 14,681 | 1,086 | 3 | 0.9 | 1,089 |
| Finger Lakes NY Total | 10,300,516 | 1,421,471 | 105,151 | 264 | 90 | 105,505 |

Notes:

1. Diesel consumption based on NYSERDA Study of diesel consumption by rail systems in New York State in 2002. Fuel consumption data allocated spatially to counties by location of rail lines.
2. GHG emissions calculated by applying EPA emission factors to diesel consumption.

| County | Annual Coal Consumption ¹ (short tons/yr) | Annual Coal Consumption ¹ (MMBTu/yr) | Direct GHG Emissions from Coal Train Systems ² (metric tons CO ₂ e/yr) | | | |
|------------------------------|---|--|---|------------------|-----------------|----------|
| | | | CO ₂ | N ₂ O | CH ₄ | Total |
| Wyoming | 11 | 280 | 7 | 0.02 | 0.006 | 7 |
| Finger Lakes NY Total | 11 | 280 | 7 | 0.02 | 0.006 | 7 |

Notes:

1. Coal consumption estimated from train system use.
2. GHG emissions calculated by applying EPA emission factors to coal consumption.

| County | GHG Emissions from All Train Systems (metric tons CO ₂ e/yr) | | | |
|------------------------------|--|------------------|-----------------|----------------|
| | CO ₂ | N ₂ O | CH ₄ | Total |
| Genesee | 27,397 | 69 | 23 | 27,489 |
| Livingston | 2,689 | 7 | 2 | 2,698 |

¹Descriptive Data of Municipal Wastewater Treatment Plants in New York State, NYSDEC, January 2004

²State and Regional Totals calculated using the EPA State Inventory Tool, Wastewater module, for Municipal wastewater only, using NYS defaults, 2010 population from 2010 US Census.

³State and Regional totals reported as calculated by using the EPA State Inventory Tool--may not be exact sum of other rows due to rounding.

⁴County totals calculated based on ratio of 2004 County wastewater volumes and EPA State Inventory Tool results for the region. Significant figures of SIT (million MT, to 100ths) do not provide totals for the smaller population numbers.

Supporting data and calculations are provided in the following E&E Excel Workbook:

Notes

1. The animal and farm number data is from 2007 USDA Agricultural Census.
- 2.CO2e calculation is based on the animal number and the factors from 2010 USEPA Draft Regional Greenhouse Gas Inventory Guidance.

Agricultural Soils Emissions

| | Cropland Harvested (acres) ¹ | CO ₂ e (Metric Tons) ² | | | |
|-----------------------|---|--|-----------------|------------------|-------------------------|
| | | CO ₂ | CH ₄ | N ₂ O | Total CO ₂ e |
| New York State | | | | | |
| Finger Lakes | 1,012,623 | | | 61,934 | 61,934 |
| Genesee | 132,333 | | | 8,082 | 8,082 |
| Livingston | 146,753 | | | 8,966 | 8,966 |
| Monroe | 93,282 | | | 5,697 | 5,697 |
| Ontario | 137,752 | | | 8,421 | 8,421 |
| Orleans | 91,599 | | | 5,616 | 5,616 |
| Seneca | 92,783 | | | 5,712 | 5,712 |
| Wayne | 103,564 | | | 6,333 | 6,333 |
| Wyoming | 142,442 | | | 8,699 | 8,699 |
| Yates | 72,115 | | | 4,407 | 4,407 |

Notes

1. The cropland harvested data for synthetic fertilizer calculation is from 2007 US Agricultural Census. Assumed most of fertilizer are used on harvested cropland.

2. CO₂e calculation is from organic fertilizer N₂O emission with data sources from NYSDEC7/23/2012 and synthetic fertilizer N₂O emission with data sources from 2007 US Agricultural Census and EPA Commercial Fertilizer Purchased (http://water.epa.gov/scitech/swguidance/standards/criteria/nutrients/dataset_commercial.cfm).

Carbon Sequestration in Forests

| | Forest Land (Acres) ¹ | Forest Land (km ²) | Total Carbon Sequestration (metric tons C) ² | Total Carbon Sequestration (metric tons CO ₂) |
|-----------------------|-------------------------------------|-----------------------------------|---|---|
| New York State | | | | |
| Finger Lakes | 1,050,475 | 4,251 | 47,169,176 | 173,110,876 |
| Genesee | 107,901 | 437 | 5,046,674 | 18,521,295 |
| Livingston | 132,965 | 538 | 6,043,567 | 22,179,890 |
| Monroe | 116,967 | 473 | 5,313,551 | 19,500,731 |
| Ontario | 187,560 | 759 | 8,099,906 | 29,726,656 |
| Orleans | 62,351 | 252 | 2,816,615 | 10,336,977 |
| Seneca | 50,653 | 205 | 2,104,790 | 7,724,579 |
| Wayne | 136,240 | 551 | 5,512,768 | 20,231,860 |
| Wyoming | 157,285 | 637 | 7,889,264 | 28,953,598 |
| Yates | 98,553 | 399 | 4,342,041 | 15,935,289 |

Notes

1. The forest land data is from Forest Inventory Data Online (FIDO) FIA Standard Reports, New York Current Area, 2010.
2. The total carbon sequestration is calculated based on the carbon stock factor from COLE 1605 (b) Report for New York, July 24, 2012 and the forest land.

Carbon Sequestration in Urban Forests

| | Urban Land Area (km ²) ¹ | Tree Canopy Cover (%) ² | Total Carbon Sequestration (metric tons C) ³ | Total Carbon Sequestration (metric tons CO ₂) |
|-----------------------|--|---------------------------------------|---|---|
| New York State | | | | |
| Finger Lakes | 1,079 | | 68,447 | 251,202 |
| Genesee | 35 | 23% | 1,759 | 6,456 |
| Livingston | 48 | 23% | 2,463 | 9,040 |
| Monroe | 741 | 31% | 50,341 | 184,750 |
| Ontario | 83 | 15% | 2,823 | 10,361 |
| Orleans | 31 | 30% | 2,092 | 7,679 |
| Seneca | 23 | 25% | 1,309 | 4,805 |
| Wayne | 78 | 30% | 5,223 | 19,169 |
| Wyoming | 33 | 29% | 2,173 | 7,974 |
| Yates | 7 | 18% | 264 | 969 |

Notes

1. The urban land area data is from 2000 US Census.
2. The tree canopy cover percentage data is from provided by Eric J. Greenfield, US Department of Agriculture Forest Service, Syracuse, NY on August 1, 2012.
3. The total carbon sequestration is calculated based on the urban land area, tree canopy coverage and the national average net sequestration rate.

| | | |
|--|---|---|
| (Rec) - Direct Allocation from Title 5, MMR, or EIA 923 Database. All Grid Connected Power Generators with Nameplate capacity of 1 MW or greater shall be reported. For overlap, prioritize EIA 923 Database. | X | EIA 923 database used |
| (Rec) - Direct Allocation from Title 5, MMR, or EIA 923 Database. All Grid Connected Power Generators with Nameplate capacity of 1 MW or greater shall be reported. For overlap, prioritize EIA 923 Database. | X | EIA 923 database used |
| (Rec) - Direct Allocation from Title 5, MMR, or EIA 923 Database. All Grid Connected Power Generators with Nameplate capacity of 1 MW or greater shall be reported. For overlap, prioritize EIA 923 Database. | X | EIA 923 database used |
| (Rec) - Direct Allocation from Title 5, MMR, or EIA 923 Database. All Grid Connected Power Generators with Nameplate capacity of 1 MW or greater shall be reported. Wood CO2 emissions reported optionally as biogenic CO2, Ch4 and N2 Emissions required to be reported to Scope 1 | X | EIA 923 database used: none to report |
| (Rec) - Direct Allocation from Title 5, MMR, or EIA 923 Database. All Grid Connected Power Generators with Nameplate capacity of 1 MW or greater shall be reported. MSW CO2 emissions split as 44% reported as Scope 1 as part of non-biogenic (plastics etc), and 56% can be reported as option biogenic based data for 2005 on http://www.eia.gov/cneaf/solar.renewables/page/mswaste/msw_report.html . All Ch4 and N2O shall be reported under required Scope 1. | X | EIA 923 database used |
| (Rec) - Acquire utility specific estimate of T/D (in %) and apply that to all consumption (res/commercial/industrial). Report emissions as Scope 2 using regional EGRID emission factors consistent with all Scope 2 calculations. (Alt) use a statewide average T/D loss of 5.28% as documented by EPA's EGRID reporting for New York. | X | Alternative method as stated |
| (Rec) - Acquire utility specific estimate of T/D (in %), compute as percentage of total residential/commercial/industrial/energy generation. Report as Scope 1 CH4 emissions. (Alt) use a statewide average of 1.8% as documented by National Grid in 2010 PSC Reporting. | | Alternative method as stated |
| (Rec) - acquire utility specific estimate and report as SF6. (Alt) Apportion NYSERDA 2009 Emission Inventory Total for the state to counties based ration of EIA reported total electricity demand to computed regional or county demand for all sectors. | X | Based on conversations with P Groth and J Yeinger, used national 2010 emission inventory total (alternative method) |
| | X | Nothing to report |
| (Rec) Direct Allocation from from EPA MMR only. Small Sources to not to be included at this time. | X | Nothing to report |
| | X | As stated |
| | X | Nothing to report |
| (Rec) Use EPA 2009 Draft Guidance method. Allocate national per/capita emissions to counties based on population. Methods include mobile refrigeration | X | As stated |
| (Rec) Use MPO-provided VMT data local to your region, supplemented by DOT provided data (on Wiggio). Use regional-specific data on fleet profile and national fleet fuel economy data (on Wiggio) to estimate county-level GHG emissions. (Alt) Use EPA MOVES GHG module customized for your region-appropriate if you are running this model. Assume on-road fuel is 10% ethanol and report this fraction as Optional biogenic emissions. | X | As stated |
| (Rec) Use MPO-provided VMT data local to your region, supplemented by DOT provided data (on Wiggio). Use regional-specific data on fleet profile and national fleet fuel economy data (on Wiggio) to estimate county-level GHG emissions. (Alt) Use EPA MOVES GHG module customized for your region-appropriate if you are running this model. Assume on-road fuel is 10% ethanol and report this fraction as Optional biogenic emissions on the ethanol line item. | X | As stated |
| Optional- Include regional E-85 consumption if you have it, and debit against your gasoline estimate create using VMT. Allocate 15% as gasoline to be reported as Scope 1, and 85% as ethanol to be reported as optional biogenic. | X | Not available |
| Optional- Include regional biodiesel consumption if you have it, and debit against your diesel estimate create using VMT. Because biodiesel blends change, allocate option biogenic component on this line item only, and retain the diesel fraction on the diesel line item. | X | Not available |
| Today this will be zero, but as NYSERDA pushes to electrify on-road transportation we will want to report here, debiting against electricity consumption in the other sectors as appropriate. | X | Not available |
| Freight and Passenger. (Rec) Use direct provider fuel consumption data allocated spatially to location of routes (Alt) Use Nyserda 2002 estimates of Diesel consumption by county directly. | X | As stated |
| Passenger and Commuter (Rec) Use direct provider electricity consumption data allocated spatially to location of routes (Alt) None identified. | X | As stated Nothing to report |

| | | |
|--|------------------|--|
| Rec - USE NYSDEC 2007 data from the state emission inventory for the small and pleasure craft categories reported by county (data on Wiggio). For commercial distillate and bunkers, No consensus method identified- please document methods used. | X X X | As stated, except recreational boating included in non-road data As stated, except recreational boating included in non-road data As stated, except recreational boating included in non-road data |
| Optional Scope 1- Estimate Landing and Take off Cycle emissions using a dispersion model such as EDMS, or with related data from the NYSDEC for the 2007 state emission inventory. Optional Scope 3, use FAA statistics on departure miles from regional airport, allocate jet fuel use to it, then allocate to counties by fraction of population served | X | Scope 1 option, using EDMS. Totals are also included in GHG Inventory reporting as part of Sustainability Plan |
| Rec - USE NYSDEC 2007 NONROAD data from the state emission inventory (data on Wiggio) for all categories except small marine. | X | As stated, but includes recreational marine |
| This is fugitive CH4 emissions from landfills. There are two required Scopes. Scope 1 - Estimate of actual emissions in regional boundary. (rec) use MMR or Title 5 (annual landfill reporting) data directly for facilities (data on Wiggio). For recently closed landfills or for areas without reported data, use a First Order Decay model to estimate emissions. Scope 3- emissions footprint attributed to current waste generation regardless of where it is treated. (rec) Estimate county level MSW and C/D waste generation and apply a representative FOD model with prevailing CH4 captures rates forward-casted 50 years to estimate the footprint. | X | Scope 1 reported as actual 2010 waste facility emissions reported (EPA MRR). Scope 3 calculated and reported as stated |
| Rec - for any MSW incinerated that does not generate grid connected power, compute emissions. MSW CO2 emissions split. 44% shall be reported as Scope 1 as part of non-biogenic (plastics etc), and 56% can be reported as option biogenic based data for 2005 on http://www.eia.gov/cneaf/solar.renewables/page/mswaste/msw_report.html . All Ch4 and N2O shall be reported under required Scope 1 | X | None Reported |
| Determine population covered by WWTPs. (Rec)- Use the ICLEI Local Government Operations Protocol and apply to all facilities in the region. (Alt) use methods as described in the EPA 2009 Draft GHG guidance to translate populations served into emissions using default data. Determine population covered by Septic Systems, and apply the default emissions / capita as described in the ICLEI Local Government Operations Protocol. | X | Based on conversations with P. Groth and J. Yeinger, used State Inventory Tool and regional population, allocated to county by population |
| (Rec) Methods as described in the EPA 2009 guidance and executed in the EPA's State Inventory Tool. Use locally resolved fertilizer, crop, and livestock population from either the 2007 Ag census or the US NASS system to get county-level data and make calculations for each county. | X X X X | As stated As stated As stated None reported |
| Optional Source and Sink. Use methods described in the EPA 2009 Guidance. Use local forest inventory data, or use the US Forest Services online inventory tool for forests. For carbon stock factors use the National Council for Air and Stream Improvement's Carbon On-Line Estimator. (NCASI 2008) Use the | X | As stated |
| | X | Total reported for information, change is not relevant to WG discussions |

Sum Totals in columns for all EXCEPT ANY FORESTRY SINKS. Totals in the Scope 1 column can be a considered a physical roll up of emissions that occur in boundary, and is analogous to reporting that is done for state and federal GHG inventories, and for air quality management.

Value above MINUS and reported optional forestry sinks.

REDC GHG Emissions Roll Up Report

Year: 2010

(all emissions in Column D, when summed will equal the total County or REDC protocol compliant GHG emissions estimate)

REDC / County Name **Finger Lakes**

Color Code

REQUIRED for the Roll Up Report, though some data may be zero, N/A, or considered to small to count
 Report NO Data in cell

| DRAFT Roll Up Report CGC. Emissions in MTCDE | | CO2e | CO2 | CH4 | N2O | PFC | HFC | SF6 |
|--|--|-------------------|------------------|----------------|----------|----------------|---------------|--------|

APPENDIX C: INDICATOR EVALUATION

Energy Indicators

ENERGY
POTENTIAL INDICATORS

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|--|---|--|---|---|--|
| Regional energy usage per capita (MMBtu) | NYSERDA Required Indicator 1A: Encompasses all of the energy consumption within the region on a scale that is relatable. | Calculations should include all sources of energy consumption (fuel combustion, electricity, renewable, etc.) | Types of energy consumed and broken down by use category, County and type. | Data provided through NYSEDA, Public Utilities and the GHG Analysis provided by Ecology & Environment, Inc. | As alternative energy sources grow in the region, methods for gathering this data as a portion of the overall energy usage per capita will be valuable as a measurement of success region. |
| Renewable Energy - Total installed renewable energy capacity | Understanding of the willingness of the population to adopt newer, cleaner, renewable/alternative sources of energy generation. | Sum of all available renewable energy sources, based on availability not consumption | Collect data from all available renewable energy generators and users to determine total available. | Power companies - wind farms, reverse metering customers, farm bureau, local municipal assessors | No solar, bio-gas, and ethanol data gathered. Users not selling back to the grid (self sufficient) should be included. |
| Governance - Energy Policy - Percent of regional population living in areas with local energy codes exceeding state requirements, and/or regulations for benchmarking and retrofitting private buildings | Provides a view to the influence of local building and energy codes on energy consumption | Total regional population living in areas with local energy codes above state requirements / total population of region | Track adoption of local energy policy with exceeding requirements within the region. | None at this point. | If it occurs, someone will have to monitor consumption based on higher standards. |
| Energy Efficiency | Reduce energy consumption utilization in heating, cooling, lighting (interior and exterior) and water distribution for all public and private sector energy consumers. | Determine the construction date of buildings and determine the Energy Conservation Construction Code they were constructed/renovated under | Oil, propane, fossil fuel, and natural gas data in addition to electric consumption data | Energy code, number of buildings at net-zero/neutral from a carbon footprint point of view, reduction in the amount of energy necessary to condition spaces, increase in simple energy controls, and changes in operational procedures. | No data currently available across the region for the long range effectiveness of energy efficiency programs & methods of reaching target savings |
| Greater Regional Energy Self-Reliance | Evaluate and Plan for greater Energy Self-Reliance during Natural and Other Disasters | Available methods and percentages of energy entering within the Region from all energy sources. | Identification of all sources of energy entering the Region and its method of distribution (can it be isolated) | Historical records of transformational interruptions. (1966 Blizzard, Ice Storms) | |
| Regional energy generation per capita (MMBtu) | Encompasses all of the energy generation within a region on a scale that is relatable. | Calculations should include all sources of energy generation (fuel combustion, electricity, renewable, etc.) | Types of energy being generated. | Data provided through NYSEDA, did not include all sources | Data should be verified to determine it includes all energy providers and is broken down to the region only. Should include all alternate/renewable fuel sources. |
| Renewable Energy - availability/accessibility/affordability | Measure the ease of access the region has to avail itself of alternate energy sources at affordable price points. | Track the sources of alternate energy, the ease of obtaining the energy across the region, the cost of the alternate energy on the open market | Tracking sales of consumer choices in energy sources, Geothermal units installed in conditioned spaces, purchase of alternate energy electric, alternate fuel for heating | No known tracking source for purchase of alternate fuels. No regional collection of data for purchase of alternate electrical power. | Tracking availability/reliability of alternate fuel and energy sources should be monitored. |
| Energy Conservation | Review public policies on energy efficiency of public controlled energy consumption in uses not regulated under the NYS Energy Conservation Code. Review energy efficiencies of private industrial processes that are not regulated under the NYS ECCC. | Track policies and practices and determine if policies and practices are utilizing best practices to reduce energy consumption. | Energy consumption data from energy consumers both public and private for energy consumption that is not regulated under the NYS Energy Conservation Construction Code | Power usage for street lighting, traffic safety lighting, sports venues, public landscaping and art illumination should be available | There does not appear to be data collected broken down by energy usage for regulated and non-regulated sources of consumption |

ENERGY
NYSERDA Indicator Evaluation

| Indicator | Evaluation Criteria (Weight) | | | | Summary Score | General Notes |
|--|--------------------------------------|--|----------------------------------|-----------------------|---------------|---|
| | Consistent with NYSERDA Guidance (3) | Consistent with Regional Performance Measure (1) | Favored by Stakeholder Group (2) | Data Availability (2) | | |
| Regional energy usage per capita (MMBtu) | 8 | 3 | 5 | 4 | 45 | Data received through NYSERDA |
| Renewable Energy - Total installed renewable energy capacity | 6 | 3 | 5 | 4 | 39 | Data provided on consumption, need additional data on installed/available |
| Energy Efficiency | 5 | 2 | 4 | 1 | 27 | information received for Residential, Commercial, and Industrial uses. Industrial not broken down by common measurement. |
| Governance - Energy Policy - Percent of regional population living in areas with local energy codes exceeding state requirements, and/or regulations for benchmarking and retrofitting private buildings | 6 | 2 | 2 | 1 | 26 | Not monitored and no baseline has been established. |
| Greater Regional Energy Self-Reliance | 4 | 2 | 5 | 0 | 24 | Do you have to sell to the grid all the time? Are there regulations on distribution/contracts that will prohibit self-reliance? |
| Regional energy generation per capita (MMBtu) | 4 | 2 | 4 | 4 | 30 | Data received through NYSERDA |
| Renewable Energy - availability/accessibility/affordability | 4 | 2 | 4 | 1 | 24 | Data required to create base-line |
| Energy Conservation | 0 | 2 | 2 | 1 | 8 | Data required to create base-line |

ENERGY
Place-Sourced Indicator Evaluation

| Indicator | Enrichment of 5 Capitals: | | | | | Evaluation Criteria | | | | | | General Notes |
|--|---------------------------|-------------------------|--------|-------|-----------|---------------------|------------|--------------------------------|--|------------------------------------|------------------|---|
| | Natural | Built / Manufactured | Social | Human | Financial | Diversity | Resiliency | Life cycle cost and benefit | Ability to leverage Story of Place - Innovation "Accelerator" | Favored by Stakeholder Group | Summary Score | |
| Regional energy usage per capita (MMBtu) | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 5 | 15 | |
| Renewable Energy - Total installed renewable energy capacity | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 5 | 15 | |
| Governance - Energy Policy - Percent of regional population living in areas with local energy codes exceeding state requirements, and/or regulations for benchmarking and retrofitting private buildings | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 3 | 13 | Maintaining 'home rule' has strong impact from Stakeholders. |
| Energy Efficiency | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 4 | 14 | |
| Greater Regional Energy Self-Reliance | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 3 | 13 | Potential on practicality needs to be measured in greater detail. |
| Regional energy generation per capita (MMBtu) | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 3 | 13 | |
| Renewable Energy - availability/accessibility/affordability | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 4 | 14 | Questions were raised about methods to track this information |
| Energy Conservation | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 2 | 12 | What can the public entities do to go above code or conserve in non-regulated areas and what is available to entice non-public entities to conserve in non-regulated areas? |

ENERGY

Recommended INDICATORS

| NYSERDA Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
|--|--|---|---|-----------------------------------|---|
| Regional energy usage per capita (MMBTu) | Encompasses all of the energy consumption within the region on a scale that is reliable. | Calculations should include all sources of energy consumption (fuel combustion, electricity, renewable, etc.) | Types of energy consumed, broken down by use category and energy type. | 31.36 mmBTU/person | The data is the result of the energy usage within the region divided by the 2010 population, as reported in the E&E report. |
| Renewable Energy - Total installed renewable energy capacity | Understanding of the willingness of the population to adopt newer, cleaner, renewable/alternative sources of energy generation. | Sum of all available energy sources, based on availability, not consumption. | Collect data | 3,495,768 mmBTU across the region | Includes hydro, wind and landfill gas; Missing solar, bio-gas, and ethanol data. |
| Governance - Energy Policy - Percent of regional population living in areas with local energy codes exceeding state requirements, and/or regulations for benchmarking and retrofitting private buildings | Reduce energy consumption utilization in heating, cooling, lighting (interior and exterior) and water distribution for all public and private sector energy consumers. | Track Local Building, Energy, Fire, etc Codes | Oil, propane, fossil fuel, and natural gas data | 0% | Although there are some communities that have pledged to participate in the Energy Smart Communities program thru the NYS DEC, none of the communities within the region have adopted policies or local laws that exceed the minimum requirements of the 2010 Energy Conservation Code within the region. |
| Place-Sourced Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
| Greater Regional Energy Self-Reliance | Evaluate and Plan for greater Energy Self-Reliance during Natural and Other Disasters | Available methods and percentages of energy entering within the Region from all energy sources. | Identification of all sources of energy entering the Region and its method of distribution (can it be isolated) | Data currently unavailable | This might include working farms who generate enough energy to be self sufficient, and any other entities who generate energy that is equal to or greater than that which they consume |
| Regional energy generation per capita (MMBTu) | Encompasses all of the energy generation within a region on a scale that is reliable | Calculations should include all sources of energy generation (fuel combustion, electricity, renewable, etc.) | | 19.6 mmBTU per capita | This is for electrical generation only. Additional data required to include all renewable/alternate energy sources |
| Renewable Energy - availability/accessibility/affordability | Understanding of the willingness of the population to adopt newer, cleaner, renewable/alternative sources of energy generation. | Track increases or decreases in consumption | Tracking sales for consumer choices in energy sources, Geothermal units installed in conditioned spaces, and population increase over a period of time | Data currently unavailable | Base-line data not collected at this point in time |
| Energy Efficiency | Provides a view to the influence of local building and energy codes on energy consumption | Difference in energy consumption of residential and non-residential buildings that exceed minimum state energy code standards relative to buildings that only meet minimum energy code standards. | Track new construction for residential and non-residential buildings. Develop data on annual energy consumption rates based on per capita for residential square footage and non-residential square footage for new construction. | Data currently unavailable | Track properties that have been constructed to above the minimum Energy Code and track the energy consumption over time. |

Transportation Indicators

**TRANSPORTATION
POTENTIAL INDICATORS**

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|--|--|--|--|--|--|
| Total percentage of people commuting via walking, biking, transit and carpooling | Provides a view to access to alternative modes of transportation | % of workers commuting by mode = # of workers traveling by mode in region / total # of workers in region x 100 | Total # of workers in region # of workers commuting by mode | ACS/census by county | ACS 3-year estimate data from 2009-2011 provides drive alone, carpool and transit shares and total workers for each of the 9 counties, also noted as recommended indicator by PTNY |
| Vehicle miles traveled per capita | Provides a view to automobile usage in a region | VMT / total population | VMT & total population | GTS, NYSDOT, GHG inventory | |
| Greenhouse Gas Emissions by source | Reduction of transportation specific GHG emissions | GHG emissions in CO2e per source / total pop | total GHG emissions by source | Tier II GHG inventory | |
| Travel time to work | Tracks trends in travel commute times, reflecting the economic and social impacts of delays resulting from congestion | average commute times throughout region for all modes | average commute times throughout region for all modes | ACS/census by county | ACS 3-year estimate data from 2009-2011 provides mean travel time to work in minutes for each of the 9 counties |
| Fuel consumption per capita | Mobile energy combustion can be significant at a regional level - this indicator provides insight into transport activity and the associated energy use | Total trans fuel consumption (MMBTU) / total population | Trans fuel consumption & total population | GHG inventory | |
| % income spent on transportation | Affordability of transportation choices | None | min, average and max % of income spent on transportation by county | breakdown of H+T index http://htaindex.cnt.org | |
| Housing+Transportation Index | Transportation and housing affordability | None | H+T Affordability Index - Center for Neighborhood Technology | http://htaindex.cnt.org | |
| # of households with vehicles | The number of households that report having a vehicle kept at the home, available for use, expressed as a percentage of all households. | # of households with a vehicle / # of total households X 100 | # of households with vehicle & # of households | ACS/census by county | |
| Average airfares | The average airfare paid by passengers for a one-way domestic trip. | average airfares for one-way domestic trip | one-way domestic trips | USDOT for regional airports | |
| Number of alternative fuel registered vehicles | Provides a view to fuel efficiency in transport | None | # of registered alternative fuel vehicles | NYSDMV/NYS DOT | |
| Accessibility - Percentage of population within X miles of transit | Provides a view to the need for automobiles | Urban/suburban: Pop within 0.5 miles / total pop Park & Ride: Pop within 5 miles / total pop Inter-city: Pop within 30 miles / total pop | population distribution, location of transit routes/facilities, bus & ferry routes | NYSDOT, Transit authorities | |
| Transit Ridership | Provides insight into the level of mass transit use | None | # of annual riders | Transit authority | |
| Gaps in core multi-use trails network | Gaps in trails compared to full build out plan (36 miles short) | None | length of miles completed (Core Multi-Use Trails Network) | Rochester TMA - full build out is 260 miles (needs approximately 36 miles to be complete) | |
| % roads rated poor | The condition of the pavement on roads, expressed as a percentage of miles rated "poor" in the NYS Department of Transportation's rating system. | None | NYSDOT/GTC ratings | GTC notes data is available for about 80% of roads traveled in region | |
| Annual gasoline sales per county | Annual gasoline sales in thousand gallons | sum of estimated annual gas sales per county | gas sales per county | NYSERDA patterns & trends: 1990-2010 Appendix C | |
| Travel time index | Tracks trends in travel commute times, reflecting the economic and social impacts of delays resulting from congestion | None | travel time index | Rochester TMA - GTC available now (GTC may have data for all routes in region soon with new travel time program) | |
| # of public transit trips per resident | The number of public transit trips expressed as a rate per resident. A public transit trip is defined as a one-way ride on a bus or Lift Line service that accommodates residents with disabilities. | # of one-way transit trips / total pop | # of transit trips & total pop | RGRTA | |
| Personal injury crashes | The number of reported motor vehicle crashes causing personal injuries, expressed as a rate per 10,000 residents. A personal injury crash is defined as a crash resulting in injury to a motorist, bicyclist and/or pedestrian; this does not include fatal injuries. | None | # of injury crashes | NYSDMV - Accident Location Information System | |
| Crash fatalities | The number of fatalities caused by motor vehicle crashes, expressed as a rate per 10,000 residents. Fatalities include any deaths of motorists, bicyclists or pedestrians that occur within 30 days following injury in a motor vehicle accident. GTC measurement is a 3-year rolling average of the # of accidents that result in a fatality. | None | # of crashes resulting in fatality (if consistent with GTC calculation - 3-year rolling average) | NYSDMV - Accident Location Information System | |
| Alcohol-related crashes | The number of alcohol-related motor vehicle crashes resulting in fatalities or personal injuries, expressed as a rate per 10,000 residents. This includes all police-reported crashes in which the driver was found to have blood alcohol content higher than .08. | None | # of alcohol-related crashes | NYSDMV | |
| Miles of trails | Provides a view to the need for automobiles and diversity of transportation options | None | miles of existing trails | Rochester TMA - GTCs Regional Trails Initiative Phases 1 & 2 for TMA and non TMA | |

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|--|---|---|--|---|---|
| Transit Score | Identifies those locations that have the conditions to support transit (enabling the identification of locations for potential future transit) and those locations that do not have the conditions to support transit (enabling the identification of locations with transit and the land use changes necessary to make that transit more successful) | 0.41(pop per acre) + 0.09 (jobs per acre) + 0.74 (0 car households per acre) Low: <0.6 Marginal: 0.6-1.0 Medium: 1.01-2.50 Medium-high: 2.51-7.50 High: >7.50 | density of population, density of employment, 0 car households | Census, NYS DOL | |
| Number of alternative fuel stations | Provides a view to fuel efficiency in transport | None | # of alt fuel stations | http://www.afdc.energy.gov/locator/stations/#results?utf8=%E2%9C%93&location=rochester%2C+ny&filtered=true&fuel=all&owner=all&payment=all&ev_level1=true&ev_level2=true&ev_dc_fast=true&radius_miles=5 | |
| Miles of transit routes | Provides a view to the need for automobiles | None | miles of transit routes across region | Transit authority | |
| Change in number of miles of multi-use trails, sidewalks, and bike boulevards | Provides a view of the diversity of transportation options | None | miles of new bike/pedestrian infrastructure | municipalities | Recommended by PTNY |
| Annual municipal or per capita expenditures on bicycling and pedestrian infrastructure | Provides a view of the diversity of transportation options | None or amount of expenditures / total population | \$ spent by municipality on bike/pedestrian infrastructure | municipalities | Recommended by PTNY |
| Connectivity and/or accessibility index for walking, cycling and public transit | Provides a view of the diversity of transportation options | Variety of different potential ways to calculate. http://reconnectingamerica.org/assets/Uploads/TRB2004-001550.pdf | varies | varies | Document referenced by PTNY appears to be more applicable to neighborhoods or urban areas, may not be appropriate for rural areas |
| Miles of roads/number of bridges within flood zones (100 year) | Indicates vulnerability in transportation infrastructure | Graphical representation by County with total number of Principal Arterials in 100-year flood zones noted | GIS shapefiles of 100-year flood zones and roadway classifications | FEMA, counties, NYSDOT | Flood zone data not available for Orleans, Seneca, Wyoming and Yates |
| Federal-aid highways in TMA with Complete Sidewalks | Represents those roadways to which FHWA funds can be programmed for their report or maintenance that have sidewalks on both sides of the street with no gaps | None | GTC Inventory | GTC conducted an inventory of over 1,000 miles of federal-aid roads inn TMA | |

TRANSPORTATION
NYSERDA Indicator Evaluation

| Indicator | Evaluation Criteria (Weight) | | | | | General Notes |
|--|---|--|-------------------------------------|-----------------------|------------------|---------------|
| | Consistent with NYSERDA Guidance (3) | Consistent with Regional Performance Measure (1) | Favored by Stakeholder Group (2) | Data Availability (2) | Summary Score | |
| Total percentage of people commuting via walking, biking, transit and carpooling | 8 | 3 | 4 | 3 | 41 | |
| Vehicle miles traveled per capita | 8 | 3 | 4 | 3 | 41 | |
| Housing+Transportation Index | 7 | 1 | 4 | 3 | 36 | |
| Greenhouse Gas Emissions by source | 6 | 3 | 3 | 4 | 35 | |
| Fuel consumption per capita | 6 | 1 | 5 | 3 | 35 | |
| Travel time to work | 6 | 3 | 3 | 3 | 33 | |
| Number of alternative fuel registered vehicles | 7 | 1 | 3 | 1 | 30 | |
| Accessibility - Percentage of population within X miles of transit | 6 | 1 | 4 | 0 | 27 | |
| Transit Ridership | 6 | 1 | 3 | 1 | 27 | |
| % income spent on transportation | 2 | 3 | 4 | 3 | 23 | |
| Transit Score | 6 | 1 | 1 | 0 | 21 | |
| Miles of roads/number of bridges within flood zones (100 year) | 2 | 1 | 2 | 3 | 17 | |

TRANSPORTATION
Recommended INDICATORS

| NYSERDA Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
|--|---|--|---|---|---|
| Total percentage of people commuting via walking, biking, transit and carpooling | Provides a view to access to alternative modes of transportation | % of workers commuting by mode = # of workers traveling by mode in region / total # of workers in region x 100 | Total # of workers in region # of workers commuting by mode | 15% | from ACS 5-year estimates (2006-2010) |
| Vehicle miles traveled per capita | Provides a view to automobile usage in a region | Annual VMT / total population | Annual VMT & total population | 9,742 | from GHG inventory |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| Place-Sourced Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
| Transportation energy consumption per capita | Mobile energy combustion can be significant at a regional level - this indicator provides insight into transport activity and the associated energy use | Annual total trans energy consumption (MMBtu) / total population Conversion from MMBtu to gallons of gasoline | Annual trans energy consumption & total population Conversion factor from MMBtu to gallons of gasoline | 73 MMBtu/capita 635 gal gas/capita | from GHG Inventory - annual MMBtu for each transportation mode by county MMBtu conversion factory from MIT Units & Conversions Fact Sheet |
| % income spent on transportation | Affordability of transportation choices | Population based weighted average % income spent on transportation = [(average median household income by county (S) / average amount of money spent on transportation (S)) * county population] / total regional population | Average median household income by county , Average amount spent on transportation by county, county population data | 25.5% | Does not include data from Wyoming and Yates Counties - amount spent on transportation not available in these counties Median household income from ACS, amount spent on transportation from H&T Index |
| Miles of roads/number of bridges within flood zones (100 year) | Indicates vulnerability in transportation infrastructure | Graphical representation by County with total number of Principal Arterials and bridges in 100-year flood zones noted | GIS shapefiles of 100-year flood zones, roadway classifications and bridges | Principal Arterials = 33.54 mi Bridges = 439 | Does not include miles of roads in Orleans, Seneca, Wyoming & Yates counties since the 100-year flood maps were not available |
| Freight tonnage moved by truck and rail | Measures shifts in the amount of freight moved by truck and rail | None | IHS/Global Transearch Database via NYSDOT | Truck = 203,052,000 Rail = 31,294,000 | As noted in <i>Transportation Strategies for Freight/Goods Movement in the Genesee-Finger Lakes Region - Regional Freight and Economic Profile</i> , Genesee Transportation Council, Table 4, Page 3-65. |

Land Use Indicators

**LAND USE
POTENTIAL INDICATORS**

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|---|--|---|---|--|---|
| 3A. Land-use Patterns – Per capita land consumption | Assessment of land consumption | Total amount of land developed divided by population of the region | Total acres of land developed from MRLC National Land Cover Database / population | Need MRLC national database | NYSERDA Required indicator |
| 3B. Percentage of redevelopment: vacant buildings and sites | Measures redevelopment/ reuse of vacant buildings and sites | Sq. ft. renovation and acres redeveloped divided by total sq. ft. and total acres developed | Building permit data for renovations by all municipalities; total acreage of land that is redeveloped | Building permit data from individual communities; data may not be readily available | Need to determine new build vs. redevelopment, which may be difficult. Information on individual parcels or properties may be problematic, as opposed to square footage data. Not necessarily a good measure of total development. |
| 3I. Acres protected through DEC and other public, non-profit and private protected lands | Land preservation | Acres purchased or protected by public, non profit or private entity | acreage data for protected/preserved lands | Through NYSDEC, Finger Lakes Land Trust, NYS Agriculture and Markets, CUGIR (Cornell University) and other land conservancy agencies and organizations | Assumes there is an inventory of purchasers which needs to be compiled from many sources |
| 3C1. Land-use Patterns – Percentage of jobs and housing occurring inside municipal centers | Measures concentration of population in "location-efficient" areas (easier to minimize commutes / VMT) | Total jobs in municipal centers divided by total jobs; Total population in centers divided by total population | Jobs and population data | U.S. Census and Dept. of Labor | Need to compile population by "centers." Job data will be difficult to sub-allocate below regional level |
| 8A. Number of Climate Smart Communities within region & Number of certified Climate Smart Communities | Measures programmatic involvement in the region | Number of Climate Smart Communities and number of certified Climate Smart Communities | Listing of Climate Smart and Certified Climate Smart communities | NYSDEC | Indicator would be easy to measure, but communities that sign up for this program may not all be actively participating |
| 3F. % living within a 1/4 mile of a park | quality of life | GIS analysis | Data on park locations and population | U.S. Census for population; GTC, GFLRPC or RPS data | Not necessarily a good measure of sustainability as compared to other indicators |
| 3J. Land use patterns: housing mix | Shows housing mix for region | Number of housing units of each type divided by the total number of units | housing data by type (single, double, apartments, etc.) | U.S. Census | Not sure what this really tells us with respect to achieving sustainability. |
| 3C2. Percentage of housing units located within cities and villages that are affordable to low-moderate income households | Similar to 3C1, but includes measure of affordability | % of units affordable to low to mod income HHs in centers divided by total housing supply, by tenure (renter/owner) | Owner occupied affordable housing units and renter occupied affordable housing units | HUD database | Not available for more rural counties. Need to determine "centers" |
| 3D. Housing density (for urban, suburban, and rural) | Provides view of housing density | Number of units divided by square miles of land area (by urban, suburban and rural) | Square miles of land area and total number of units | U.S. Census | Need to define urban vs. suburban vs. rural and do separate calculations; What would be measured here may be more easily measured by looking at the proportion of residents living in population centers |
| 3E. Land-use Patterns – Sprawl-entropy Index | Provides a view to the extent of sprawl | Shannon Index (see Indicator Memo) | Square miles of land area, number of units by urban, suburban and rural by census tract | U.S. Census | Need to define urban vs. suburban vs. rural and do separate calculations for each (NYSERDA suggests by census tract level which would be labor intensive). Non-intuitive measure |
| Deconcentration of Poverty | Measures the reduction in the concentration of poverty in the region | Poverty rate by geography | Census data for poverty levels | U.S. Census | Addresses most of the five capitals; good indicator of community prosperity. Need to decide whether to look at poverty rate by % of households, by individuals, etc. and how to format and index the measure |
| Proportion of residents living in existing population centers | Measures population density relative to land consumption | Population in centers divided by total population | population data by centers | U.S. Census | Variation of NYSERDA indicator 3.E; easier measure of smart growth (sprawl entropy) with respect to reducing infrastructure investments for new development/redevelopment, etc. |
| Age Distribution | Measures the retention of young people in communities | Age distribution by geography | Census data- age of population | U.S. Census | Must decide how to break out by age group, such as under 25, over 65, etc. (how do you make this a metric; need to decide how to format and index this measure). Good indicator of vibrancy and diversity of local economy for job availability and ability to attract and retain younger people (creative potential) |
| Number of communities with Comprehensive Plans less than 5 years old | Current plans that likely measure sustainability | Number of plans available | availability and date of most recent comprehensive | Counties, GFLRPC and individual municipalities | Labor intensive; would have to contact planning agencies and local municipalities. Likely good indicator of municipal commitment to sustainability and for local adoption of improved zoning or other regulations for smart growth |
| Regional Cooperation | Measure of municipal collaboration throughout the region | Number of communities with intermunicipal agreements | intermunicipal agreements/shared services agreements | Information from individual municipalities | Labor intensive; would need to gather data from individual communities and agreements may differ from place to place. Not all may be oriented for sustainability. |
| Historic Preservation | Measuring adaptive reuse and preservation of existing building stock | Number of projects completed | Data on protected and restored historic structures | Individual municipalities | Likely difficult to measure |

SUBJECT AREA
NYSERDA Indicator Evaluation

| Indicator | Evaluation Criteria (Weight) | | | | Summary Score | General Notes |
|--|--------------------------------------|--|----------------------------------|-----------------------|---------------|--|
| | Consistent with NYSERDA Guidance (3) | Consistent with Regional Performance Measure (1) | Favored by Stakeholder Group (2) | Data Availability (2) | | |
| 3A. Land-use Patterns – Per capita land consumption | 8 | 2 | 5 | 3 | 42 | NYSERDA Required indicator |
| 8A.Number of Climate Smart Communities within region & Number of certified Climate Smart Communities | 6 | 1 | 2 | 3 | 29 | Indicator would be easy to measure, but communities that sign up for this program may not all be actively participating |
| 3C1.Land-use Patterns – Percentage of jobs and housing occurring inside municipal centers | 6 | 2 | 3 | 1 | 28 | Need to compile population by "centers." Job data will be difficult to sub-allocate below regional level |
| 3I.Acres protected through DEC and other public, non-profit and private protected lands | 5 | 2 | 2 | 3 | 27 | Assumes there is an inventory of purchasers which needs to be compiled from many sources |
| 3B.Percentage of redevelopment: vacant buildings and sites | 6 | 2 | 3 | 0 | 26 | Need to determine new build vs. redevelopment, which may be difficult. Information on individual parcels or properties being developed or redeveloped may be problematic, as opposed to square footage data for existing buildings. Not necessarily a good measure of total development. |
| 3J.Land use patterns: housing mix | 5 | 1 | 2 | 3 | 26 | Not sure what this really tells us with respect to achieving sustainability. |
| 3C2.Percentage of housing units located within cities and villages that are affordable to low-moderate income households | 5 | 2 | 1 | 2 | 23 | Not available for more rural counties. Need to determine "centers" |
| 3D.Housing density (for urban, suburban, and rural) | 5 | 2 | 2 | 1 | 23 | Need to define urban vs. suburban vs. rural and do separate calculations. What would be measured here may be more easily measured by looking at the proportion of residents living in population centers |
| 3E.Land-use Patterns – Sprawl-entropy Index | 5 | 2 | 2 | 1 | 23 | Need to define urban vs. suburban vs. rural and do separate calculations for each (NYSERDA suggests by census tract level which would be labor intensive). Non-intuitive measure |
| 3F.% living within a 1/4 mile of a park | 5 | 3 | 2 | 0 | 22 | Not necessarily a good measure of sustainability as compared to other indicators |
| Deconcentration of Poverty | | | | | 0 | |
| Proportion of residents living in existing population | | | | | 0 | |
| Age Distribution | | | | | 0 | |
| Number of communities with Comprehensive Plans less | | | | | 0 | |
| Regional Cooperation | | | | | 0 | |
| Historic Preservation | | | | | 0 | |

| 3E. Land-use Patterns – Sprawl-entropy Index | | | | | | | | | | | | 0 | |
| Proportion of residents living in existing population centers | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 5 | 15 | Variation of NYSEDA indicator 3.E; easier measure of smart growth (sprawl entropy) with respect to reducing infrastructure investments for new development/redevelopment, etc. | |
| Deconcentration of Poverty | 0 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 5 | 13 | Addresses most of the five capitals; good indicator of community prosperity. Need to decide whether to look at poverty rate by % of households, by individuals, etc. and how to format and index the measure | |
| Number of communities with Comprehensive Plans less than 5 years old | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 2 | 12 | Labor intensive; would have to contact planning agencies and local municipalities. Likely good indicator of municipal commitment to sustainability and for local adoption of improved zoning or other regulations for smart growth | |
| Age Distribution | 0 | 0 | 1 | 1 | 1 | 1 | 1 | 0 | 2 | 4 | 11 | Must decide how to break out by age group, such as under 25, over 65, etc. (how do you make this a metric; need to decide how to format and index this measure). Good indicator of vibrancy and diversity of local economy for job availability and ability to attract and retain younger people (creative potential) | |
| Regional Cooperation | 1 | 1 | 1 | 0 | 1 | 0 | 1 | 1 | 1 | 3 | 10 | Labor intensive; would need to gather data from individual communities and agreements may differ from place to place. Not all may be oriented for sustainability. | |
| Historic Preservation | 0 | 1 | 1 | 0 | 1 | 1 | 0 | 1 | 2 | 2 | 9 | Likely difficult to measure | |

LAND USE
Recommended INDICATORS

| NYSERDA Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
|---|--|--|---|------------------------------|---|
| 3A. Land-use Patterns – Per capita land consumption | Assessment of land consumption | Total amount of land developed divided by population of the region | Total acres of land developed from MRLC National Land Cover Database / population | 9.9% | NYSERDA required. The total acres of developed land on map included "developed open space". Developed open space is defined to include areas with a mixture of some structures and impervious surfaces (less than 20% of total cover) and mostly vegetation in the form of lawn grasses. These areas most commonly include large lot residential, parks, golf courses, etc. They are areas that have been impacted by development or cleared and replanted in some manner. |
| Place-Sourced Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
| Rate of Poverty | Measures the reduction in the concentration of poverty in the region | Poverty rate by geography | Census data for poverty levels | 13.2% | Addresses most of the five capitals; good indicator of community prosperity. Looked at poverty rate by % of individuals by place. Comparison is between places (developed centers) and surrounding area. Based on the percentage of persons with income in the past 12 months below the poverty level. Data derived from the American Community Survey 5-year estimates (2007 - 2011). Population centers include cities, villages and places that are well defined in geographic layout, include a mix of uses (commercial and civic mixed with residential), and have distinct edges. |
| Proportion of residents living in existing population centers | Measures population density relative to land consumption | Population in centers divided by total population | Census data for population centers | 35.9% | Variation of NYSERDA indicator 3.E; easier measure of smart growth (sprawl entropy) with respect to reducing infrastructure investments for new development/redevelopment, etc. Uses the same definition of places used for poverty indicator. List of places will be included in appendix. Population based on American Community Survey 5-year estimate (2007 - 2011). |

Materials/Waste Management Indicators

**MATERIALS AND WASTE MANAGEMENT
POTENTIAL INDICATORS**

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|--|---|---|---|--|---|
| Total regional and per capita solid waste generated per year | This indicator provides an overall view of the region's (and "extra"-region's) contribution to waste, including municipal solid waste (MSW), industrial, construction and demolition, and bio-solid waste. | MSW + Industrial + C&D + Bio Solids + Hazardous) per municipality in region per year [Solid waste generated per capita = total regional solid waste generated per year / regional population] [Note: Important to include waste coming into the region]; Similar calculation needs to be developed for per capita | Total MSW, industrial solid waste, C&D, bio-solids, and hazardous waste generated and imported per year; Population of region | Data is available, but needs to be gathered and summarized | This is a critical, baseline data need that will need to be developed with thoughtful analysis, using best-practices from other communities that have developed a sound methodology for capturing the measure of waste generated at the source. Again, it needs to be noted that for this indicator and others below, the amount of waste entering the region from other regions has to be a major factor of consideration. |
| Total reduction in materials usage | This indicator provides a view of the reduction of material before it enters the waste stream to be managed. | Establish a baseline regional waste generation number as noted above [including waste coming into the region]; Monitor number for period of time tracking and subtracting materials reused, recycled, composted, and disposed | Total MSW, industrial solid waste, C&D, bio-solids, and hazardous waste generated and imported per year; Total regional solid waste that is reused, recycled, composted (diverted), and disposed per year; Population of region | Data is available, but needs to be gathered and summarized | It is important to note that this number needs to capture materials reduced through measures such as policy initiatives (source reduction, product stewardship, etc.), materials reused in unique manners (such as through a shadow economy), and items recycled and reused--all based on the agreed upon baseline waste generation number. |
| Total regional solid waste diverted after reduction (not landfilled, incinerated, or exported) per year / population of region | This indicator provides a view to the effectiveness of recycling and sustainable discard management initiatives. | Total regional solid waste diverted (not landfilled, incinerated, or exported) per year / population of region [important to calculate a diversion per capita] | Total regional solid waste generated and imported per year; Total regional solid waste that is diverted per year (including diverted out of the region); Population of region | Data is available, but needs to be gathered and summarized | See notes for indicator directly above. |
| Total waste by category | This indicator provides the ability to look at each component of the waste/discard stream and develop sustainable strategies for each category/commodity. | MSW + Industrial + C&D + Bio Solids + Hazardous) per municipality in region per year; Include waste coming into the region; [Solid waste generated per capita = total regional solid waste generated per year / regional population] -- Broken down into at least 12 categorical types | Total MSW, industrial solid waste, C&D, bio-solids, and hazardous waste generated and imported per year by categorical type include waste coming into the region | Data availability is unknown | A good starting point is the recognized, general 12-categories of waste, but a thorough waste characterization study diving into subcategories of commodities will be essential. |
| Cost of waste management method per metric ton of waste | This indicator provides an opportunity to evaluate the cost-benefit of various solid waste management options. | Need to develop | Need to develop, but will include not only actual costs, but an evaluation of externality and projected future costs and benefits | Data availability is unknown | A difficult part of this task will be to capture externality costs (e.g., landfill post-closure and maintenance, sewage treatment plant upgrades due to landfill leachate management, public health implications and costs of waste disposal facilities). |
| Increase in recycling efficiency | This indicator provides the ability to look at specific materials handling processes at the source of generation/processing to further identify "lean" solutions to maximize recycling efficiency. | Need to develop | Need to develop (will be difficult to acquire) | Data availability is unknown | This will be unique indicator for the Finger Lakes Region if adopted. |
| Percentage of recycled content in locally manufactured products | This indicator provides a view to the effectiveness of local manufacturers/manufacturing in material reuse, is a measure of economic development, and helps reframe the regional economic baseline (supporting role of recycling infrastructure/systems). | Need to develop (but very difficult to do) | Not readily available, and difficult to acquire | Data availability is unknown | This is a cutting-edge concept for the Finger Lakes Region to consider. It would be an indicator not likely to be considered by other regions, but that does not imply it is not important. |
| Rate in which landfills are being filled | This indicator provides a view to the need for more effective recycling and solid waste management options. | Will need to establish a baseline; this calculation is related to a number of other indicator calculations noted above | Data from other indicators above; baseline data (baseline year) needs to be established | Data availability is unknown | This is essential to know, as it also implies a concern about future disposal capacity and development plans. |
| Number of patents related to sustainable products and material flows | This indicator provides a view about how the recycling loop is being closed regionally, and is a measure of local economic development. | Need to develop | Need to identify data sources | Data availability is unknown | Another very unique indicator for the Finger Lakes Region to consider--not widely considered. |
| Total amount of bio byproducts land applied | This indicator provides a mechanism to track sustainable solutions to one of the largest components of the waste stream (i.e., sludges), and to track nutrient flow (optimizing the capture of nutrients). | Bio solids per municipality in region per year land applied | Total bio solids generated per year; total bio solids land applied per year | Data is available, but needs to be gathered and summarized | This is important for this region due to the large number of organics/bio solids disposed in the region. |
| Total transport and disposal (T&D) costs per year | This indicator provides a view of the amount of waste materials exported that could be sustainably managed locally. | Need to develop | Very difficult to acquire | Data availability is unknown | Again, externality costs will need to be included, but that is a very difficult task. |

MATERIALS AND WASTE MANAGEMENT
NYSERDA Indicator Evaluation

| Indicator | Evaluation Criteria (Weight) | | | | | General Notes |
|---|--------------------------------------|--|----------------------------------|-----------------------|---------------|---------------|
| | Consistent with NYSERDA Guidance (3) | Consistent with Regional Performance Measure (1) | Favored by Stakeholder Group (2) | Data Availability (2) | Summary Score | |
| Total solid waste generated per capita | 6 | 3 | 5 | 1 | 33 | |
| Total reduction in materials usage | 6 | 0 | 5 | 1 | 30 | |
| Total waste by category | 6 | 0 | 4 | 0 | 26 | |
| Total regional solid waste diverted (not landfilled, incinerated, or exported) per year | 4 | 0 | 5 | 1 | 24 | |
| Cost of waste management method per metric ton of waste | 5 | 0 | 4 | 0 | 23 | |
| Increase in recycling efficiency | 0 | 0 | 4 | 0 | 8 | |
| Percentage of recycled content in locally manufactured products | 0 | 0 | 4 | 0 | 8 | |
| Rate in which landfills are being filled | 0 | 0 | 4 | 0 | 8 | |
| Number of patents related to sustainable products and material flows | 0 | 0 | 3 | 0 | 6 | |
| Total amount of bio byproducts land applied | 0 | 0 | 3 | 1 | 8 | |
| Total transport and disposal (T&D) costs per year | 0 | 0 | 3 | 0 | 6 | |

MATERIALS AND WASTE MANAGEMENT
Place-Sourced Indicator Evaluation

| Indicator | Evaluation Criteria | | | | | | | | | | Summary Score | General Notes | |
|---|-----------------------------------|---|----------------------------------|---------------------------------|-------------------------------------|-----------|------------|-----------------------------|---|------------------------------|---------------|---------------|---|
| | Enrichment of 5 Capitals: Natural | Enrichment of 5 Capitals: Built /Manufactured | Enrichment of 5 Capitals: Social | Enrichment of 5 Capitals: Human | Enrichment of 5 Capitals: Financial | Diversity | Resiliency | Life cycle cost and benefit | Region's ability to leverage its unique Story of Place - Innovation "Accelerator" | Favored by Stakeholder Group | | | |
| Total reduction in materials usage | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 5 | 15 | Because it is a solution-based approach, it received "enrichment of capital" scores.; recommended NYSERDA indicator |
| Total regional solid waste diverted (not landfilled, incinerated, or exported) per year | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 5 | 15 | Because it is a solution-based approach, it received "enrichment of capital" scores. |
| Increase in recycling efficiency | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 4 | 14 | Because it is a solution-based approach, it received "enrichment of capital" scores. |
| Percentage of recycled content in locally manufactured products | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 4 | 14 | Because it is a solution-based approach, it received "enrichment of capital" scores. |
| Number of patents related to sustainable products and material flows | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 | 3 | 13 | Because it is a solution-based approach, it received "enrichment of capital" scores. |
| Total amount of bio byproducts land applied | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 0 | 3 | 11 | Because it is a solution-based approach, it received "enrichment of capital" scores. |
| Total solid waste generated per capita | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 5 | 5 | Because it is not a solution-based indicator, it did not receive "enrichment of capital" scores; recommended NYSERDA indicator. |
| Total waste by category | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 4 | 4 | Because it is not a solution-based indicator, it did not receive "enrichment of capital" scores; recommended NYSERDA indicator. |
| Cost of waste management method per metric ton of waste | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 4 | 4 | Because it is not a solution-based indicator, it did not receive "enrichment of capital" scores. |
| Rate in which landfills are being filled | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 4 | 4 | Because it is not a solution-based indicator, it did not receive "enrichment of capital" scores. |
| Total transport and disposal (T&D) costs per year | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 3 | 3 | Because it is not a solution-based indicator, it did not receive "enrichment of capital" scores. |

MATERIALS AND WASTE MANAGEMENT
Recommended INDICATORS

| NYSERDA Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
|--|---|--|--|---|---|
| Total regional and per capita solid waste generated per year | This indicator provides an overall view of the region's (and "extra"-region's) contribution to waste, including municipal solid waste (MSW), industrial, construction and demolition, and bio-solid waste. It is listed as a NYSERDA indicator because it is directly related to 4A Common Indicator. | MSW + Industrial Non-Hazardous + C&D + Bio Solids) per municipality in region per year [solid waste generated per capita = total regional solid waste generated per year / regional population] [Note: Important to include waste coming into the region] | Total MSW, industrial non-hazardous solid waste, C&D, bio-solids, and tires generated and imported per year; Population of region. Sources: County and regional solid waste management authorities (planning units); NYS DEC | Municipal Solid Waste : 5,392,001 tons Non-hazardous Industrial Waste : 217,688 tons Waste Generated: 1,088,442 to 2,809,957 tons Biosolids (Sewage Sludge): 22,214 tons Generated: 13,378 tons Total Solid Waste Received by Landfills in the Finger Lakes Region: 5,064,414.34 tons | The baseline values here have been calculated using an "industry-standard" approach. This is a critical data need that will have to be further developed to include some non-hazardous industrial/commercial waste that may be unique to the Region and discern how much waste entering Region disposal facilities (i.e., landfills) is coming from outside the region. An intensive effort with the support of the State of New York will need to ensue to secure information from private landfills regarding an accurate accounting of incoming waste from outside the region. Last, there are other wastes for which baseline values might have to be developed depending on whether they become target items for planning purposes. These include but are not limited to: Carcasses, Manure and other Agricultural Waste; Regulated Medical Waste; and Industrial Hazardous Waste. |
| Total reduction in materials usage | This indicator provides a view of the reduction of material before it enters the waste stream to be managed. It is listed as a NYSERDA indicator because it is directly related to 4B Common Indicator. | Establish a baseline regional waste generation number as noted above [including waste coming into the region]; Monitor number for period of time tracking and subtracting materials reduced from disposal or from the need for recycling and composting | 2010 Baseline Data Value of total MSW, industrial non-hazardous solid waste, C&D, bio-solids, and tires generated and imported per year; Starting in a target year (i.e., 2013), identify total regional solid waste that is reduced per year; Need population of region and accurate reduction numbers from planning units. Sources: County and regional solid waste management authorities (planning units); NYS DEC | Municipal Solid Waste : 5,392,001 tons Non-hazardous Industrial Waste : 217,688 tons Waste Generated: 1,088,442 to 2,809,957 tons Biosolids (Sewage Sludge): 22,214 tons Generated: 13,378 tons Total Solid Waste Received by Landfills in the Finger Lakes Region: 5,064,414.34 tons | Baseline values have been established as noted above (tons of waste generation in the region, etc.), but it is important to note that the reduction numbers/values for this indicator need to capture materials reduced through measures such as policy initiatives (source reduction, product stewardship, etc.), and materials reused in unique manners (such as through a shadow economy)—all based on an agreed upon and accurate baseline waste generation numbers as noted above, and yet to be created regional data calculations and capture mechanisms focused on quantifying the amount of reduction in the baseline waste generation values. |
| Total waste by category | This indicator provides the ability to look at each component of the waste/discard stream and develop sustainable strategies for each category/commodity. It is listed as a NYSERDA indicator because it is directly related to 4A and 4B Common Indicators. | MSW + Industrial + C&D + Bio Solids + Hazardous) per municipality in region per year; Include waste coming into the region; [Solid waste generated per capita = total regional solid waste generated per year / regional population] -- Broken down into at least 12 categorical types | Total MSW, industrial non-hazardous solid waste, C&D, bio-solids, and tires generated and imported per year by categorical type Include waste coming into the region. Sources: County and regional solid waste management authorities (planning units); NYS DEC | <i>Baseline values for this indicator are calculated using the projected total tons of waste generated.</i> MSW (5,392,001 total tons projected as generated in 2010) -- Paper 1,758,332 tons (32.61%), Metal 371,509 (6.89%), Plastics 757,576 (14.05%), Glass 236,170 (4.38%), Organics 1,222,906 (22.68%), Textiles 279,306 (5.18%), Wood 188,181 (3.49%), Miscellaneous (household hazardous waste, some C&D, electronics, durables, etc.) 578,562 (10.73%) [These numbers derived from local data provided by Finger Lakes Region planning units to the NYS DEC]; Industrial Non-Hazardous Wastes -- 217,688 tons ; C&D Debris -- 1,088,442 to 2,809,957 tons ; Bio-solids -- 22,214 tons; Tires -- 13,378 tons | A thorough waste characterization study diving into subcategories of commodities will be essential for future planning purposes. In addition, when baseline data is developed as noted above for materials coming into regional landfills from outside the Finger Lakes Region, that data set will need to be broken down by category similar to those noted in the baseline value description here. |
| Place-Sourced Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
| Total regional solid waste diverted after reduction (not landfilled, incinerated, or exported) per year / population of region | This indicator provides a view to the effectiveness of recycling and sustainable discard management initiatives. It is listed as a NYSERDA indicator because it is directly related to 4B Common Indicator. | Total regional solid waste diverted (not landfilled, incinerated, or exported) per year / population of region [important to calculate a diversion per capita] | Total regional solid waste generated and imported per year; Total regional solid waste that is diverted per year (including diverted out of the region); Population of region. Sources: County and regional solid waste management authorities (planning units); NYS DEC. | Baseline Value Based on 2010 Population: 1,217,156; recovered materials: 197,938.87 tons; Projected 2010 Regional Municipal Solid Waste Generated in the Region: 5,392,001 tons; Estimated 2008 Non-hazardous Industrial Waste Generated: 217,688 tons; Estimated 2008 C&D Waste Generated: 1,088,442 to 2,809,957 tons; Estimated 2008 Biosolids (Sewage Sludge) Generated: 22,214 tons; Estimated 2008 Tires Generated: 13,378 tons ; Total Solid Waste Received by Landfills in the Finger Lakes Region (2008): 5,064,414.34 tons; MSW Materials Recycled in Region (2008): 197,930 tons (from data provided by planning units in the Finger Lakes Region to the NYS DEC.) | It is important to note that the baseline value also needs to capture materials reduced through measures such as policy initiatives (source reduction, product stewardship, etc.), materials reused in unique manners (such as through a shadow economy), and items recycled and reused—all based on the agreed upon baseline waste generation number. It is recommended that 2013 be the base year to collect data on reduction, reuse, composting and recycling, using the 2008/2010 baseline numbers as a starting point. |

Water Management Indicators

**WATER MANAGEMENT
POTENTIAL INDICATORS**

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|--|---|---|---|--|--|
| Total Number of Impaired Waters | the number waters that do not support appropriate uses and that may require development of a Total Maximum Daily Load (TMDL) | Σ bodies of water in region listed in part 1 and 2 of NYDEC Section 303(d) | Total number of impaired waters | NYSDEC - http://www.dec.ny.gov/chemical/31290.html | Modifications of this indicator seemed to be favored by the group |
| % of beach WQ samples exceeding state thresholds | tracks the overall quality of water at several beaches | None required. | statistics of water quality samples at select beaches | % of WQ samples at beaches exceeding standards http://www.nrdc.org/water/oceans/ttw/ny.asp http://www.actrochester.org/Charts/DataView.aspx?id=6&indicator=106&chart=6.2.2 | This measure tracks information that is easy to understand. Beaches with available data: Ontario Beach, Durand Beach, Sodus Point Bayside. - Improves 3 of 5 Capitals: Natural, Social, Human - Regional Goals: improves accessibility and connectivity, improve public health, maintain protect improve water quality, brings region together (shared recreation) |
| Percentage of impaired waters with TMDL requirements | Characterizes the status of the 303(d) list | $(\# \text{ water bodies in region for which a TMDL is developed}) / (\Sigma \text{ bodies of water in region listed in part 1 and 2 of NYDEC Section 303(d)})$ | 1. number of water bodies with TMDL requirements 2. Total number of impaired waters | 1. # TMDLs http://www.dec.ny.gov/docs/water_pdf/303dlistpropfn12012.pdf 2. All Impaired Waters - NYDEC http://www.dec.ny.gov/chemical/31290.html | This measure is thought to be a better indicator than the number of waterbodies on the list as it considers the DEC's rate of progress in developing TMDLs |
| Water demand per capita, by sector (Total Withdrawals Fresh, Public Supply Fresh, Domestic from Public Supply, Irrigation Total Fresh) | provides a breakdown of water usage with respect to the population as well as each sector of use. | $(\Sigma \text{ Water demands by sector per county}) / (\text{total population of region})$ | 1. Category of water use in the region region 2. Population of region | 1. USGS Water Use County Data – http://water.usgs.gov/watuse/data/2005/index.html 2. U.S. Census Bureau – Census – http://quickfacts.census.gov/qfd/states/36000.html | These sectors were selected to indicate the general characteristics of water use. Several other individual sectors should be tracked |
| Concentrations of pollutants in the Finger Lakes - Total Phosphates, Total Nitrogen | Directly tracks the quality of water in many of the most visible bodies of water in the region. | Averages of pollutant levels at surface and lake bottom for Honeoye, Canandaigua, Kueka, Seneca, and Cayuga lakes | Measurements of water quality in the Finger Lakes from the work of John Halfman of Hobart/William Smith | John Halfman studies - http://people.hws.edu/halfman/FL-Lim/FL-Limnology.htm | Other pollutant levels could be tracked. From 2005 to 2012, this data has been collected every year. It is unclear how long this data collection will be continued. Consideration by the FLSIP may assist with continuation of these efforts. |
| Energy use by water and sewer utilities per million gallons supplied or treated | This indicator is correlated to water usage. | $(\Sigma \text{ Energy use by water and sewer utilities}) / (\Sigma \text{ million gallons supplied or treated})$ | Public water and wastewater treatment facilities in region | Descriptive Data of Municipal Wastewater Treatment Plants in New York State http://www.dec.ny.gov/docs/water_pdf/descdata2004.pdf | The stakeholders group suggested that this indicator be tracked toward energy efficiency |
| Ratio of water withdrawn to renewable supply | examines the regional water balance – measure of renewable water supply versus consumption. | Renewable water supply – total water consumption | 1. Total renewable water supply 2. Total water consumed | 1. USGS Water Use - http://water.usgs.gov/watuse/misc/consuse-renewable.html 2. USGS Water Use - http://water.usgs.gov/watuse/data/2005/index.html | |
| Percentage of Impaired water sources | Surface and ground waters that are negatively impacted by pollution | $(\# \text{ water bodies with identified impairments}) / (\# \text{ water bodies assessed})$ | list water quality assessments | NYSDEC - WI/PWL (GIS) http://www.dec.ny.gov/chemical/36744.html | This measure is thought to be a better indicator than the number of waterbodies on the list as it considers the DEC's rate of progress in developing this list |
| Infrastructure reliability and efficiency | quantifies the proportion of water that is produced but not delivered due to of leaks, broken infiltration and inflow, or otherwise inefficient infrastructure. | $\text{Total end user water consumption} / \text{total water withdrawn from environment}$ | 1. Total water withdrawn 2. Total water delivered to consumer | 1. Utility data, NYDEC 2. USGS Water Use - http://water.usgs.gov/watuse/data/2005/index.html | |
| Number of Sanitary and Combined Sewer Overflows | Annual number of sanitary and combined sewer overflows reported - provides an indication of point source pollution | None required. | Number of Sanitary and Combined Sewer Overflows | Data availability unknown - Local reporting or annual DEC reporting data | This is a valuable indicator, but data collection may require substantial effort. For communities under a DEC consent order, data may be available. Discuss potential data availability with stakeholders. |
| Total area under conservation agreement per watershed unit-area | provides an overall view of watershed conservation efforts. | $\text{Acres of land under conservation agreement} / \text{total acres of land within a watershed} \times 100$ | 1. Total area under conservation agreement in a watershed region 2. Total area within a regional watershed | (both) NYDEC regional offices | |
| Stream buffer width | A wider vegetated stream buffer suggests a healthier, better protected stream | $(\text{average buffer width per stream}) / (\Sigma \text{ stream length})$ | 1. Average buffer width 2. Total stream length | Data availability unknown | |
| Number of watershed management plans in region | provides an indication as to the level of interest in protecting water quality | None required. | list of watershed management plans prepared for the region | Data availability unknown | - Improves 1 of 5 Capitals: Natural - Regional Goals: improve public health, maintain protect improve water quality, brings region together (shared regulation) |
| Miles of water bodies on the Waterbody Inventory/Priority Waterbodies List | The Waterbody Inventory/Priority Waterbodies List is a statewide inventory (database) of New York State waterbodies which characterizes water quality, the degree to which water uses are supported, progress toward the identification of water quality problems and sources, and activities to restore and protect each individual waterbody. | $\Sigma \# \text{ miles of listed waterbodies in the Genesee River and the Oswego River/Finger Lakes drainage basins}$ | total number of miles of listed waterbodies | NYSDEC - http://www.dec.ny.gov/chemical/36730.html | This indicator gives more detailed information than the 303(d) list. This calculation will be a bit cumbersome due to the arrangement of data on the website. |
| Percentage of impervious coverage in the Finger Lakes and Genesee River watersheds | Impervious coverage has been directly linked to water quality, particularly when coverages approach 10% in a watershed. | $(\Sigma \text{ impervious area in watershed}) / (\text{total watershed area})$ | 1. impervious area in watershed 2. total watershed area | none at applicable scale | If the applicable data were readily available, this would be an important indicator. |

WATER MANAGEMENT
NYSERDA Indicator Evaluation

| Indicator | Evaluation Criteria (Weight) | | | | | General Notes |
|--|--------------------------------------|--|----------------------------------|-----------------------|---------------|---------------|
| | Consistent with NYSERDA Guidance (3) | Consistent with Regional Performance Measure (1) | Favored by Stakeholder Group (2) | Data Availability (2) | Summary Score | |
| Water demand per capita, by sector (Total Withdrawals Fresh, Public Supply Fresh, Domestic from Public Supply, Irrigation Total Fresh) | 6 | 1 | 5 | 3 | 35 | |
| Total Number of Impaired Waters | 6 | 3 | 3 | 3 | 33 | |
| Ratio of water withdrawn to renewable supply | 5 | 1 | 4 | 3 | 30 | |
| Energy use by water and sewer utilities per million gallons supplied or treated | 5 | 1 | 4 | 1 | 26 | |
| Number of Sanitary and Combined Sewer Overflows | 6 | 1 | 3 | 0 | 25 | |
| Number of Impaired Waters with Established TMDL Requirements Removed From the program | 2 | 2 | 5 | 3 | 24 | |
| Infrastructure reliability and efficiency | 5 | 1 | 3 | 1 | 24 | |
| % of beach WQ samples exceeding state thresholds | 1 | 3 | 5 | 3 | 22 | |
| Total area under conservation agreement per watershed unit-area | 5 | 1 | 3 | 0 | 22 | |
| Concentrations of pollutants in the Finger Lakes - Total Phosphates, Total Nitrogen | 1 | 2 | 5 | 3 | 21 | |
| Miles of water bodies on the Waterbody Inventory/Priority Waterbodies List | 2 | 2 | 2 | 3 | 18 | |
| Percentage of Impaired water sources | 1 | 2 | 3 | 3 | 17 | |
| Stream buffer width | 0 | 1 | 4 | 0 | 9 | |
| Number of watershed management plans in region | 0 | 1 | 4 | 0 | 9 | |
| Percentage of impervious coverage in the Finger Lakes and Genesee River watersheds | 0 | 1 | 3 | 1 | 9 | |

WATER MANAGEMENT
Recommended INDICATORS

| NYSDERDA Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
|--|--|---|---|---------------------------------|--|
| Water demand per capita, by sector (Total Withdrawals Fresh, Public Supply Fresh, Domestic from Public Supply, Irrigation Total Fresh) | provides a breakdown of water usage with respect to the population as well as each sector of use. | $(\sum \text{Water demands by sector per county}) / (\text{total population of region})$ | 1. Category of water use in the region: USGS Water Use County Data – http://water.usgs.gov/watuse/data/2005/index.html 2. Total Population of Region: U.S. Census Bureau – http://quickfacts.census.gov/qfd/states/36000.html | | (Mgal/day per 1000 people) The baseline data presented is from 2005. 2010 data is not yet published. |
| Total withdrawals, fresh, in Mgal/d per 1000 people | | | see above | 0.677 | |
| Public Supply, total withdrawals, fresh, in Mgal/d per 1000 people | | | see above | 0.097 | |
| Domestic, deliveries from Public Supply, in Mgal/d per 1000 people | | | see above | 0.084 | |
| Irrigation, total withdrawals, fresh, in Mgal/d per 1000 people | | | see above | 0.008 | |
| Total Number of Impaired Waters | the number waters that do not support appropriate uses and that may require development of a Total Maximum Daily Load (TMDL) | \sum bodies of water in region listed in part 1 and 2 of NYDEC Section 303(d) | Total Number of Impaired Waters NYDEC - http://www.dec.ny.gov/chemical/31290.html | 49 | |
| Place-Sourced Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
| % of beach WQ samples exceeding state thresholds | tracks the overall quality of water at several beaches | None required. | % of WQ samples at beaches exceeding standards http://www.nrdc.org/water/oceans/tw/ny.asp http://www.actrochester.org/Charts/DataView.aspx?id=6&indicator=106&chart=6.2.2 | 17% | 2011 data |
| Percentage of impaired waters with TMDL requirements | Characterizes the status of the 303(d) list | $(\# \text{ water bodies in region for which a TMDL is developed}) / (\sum \text{ 2 bodies of water in region listed in part 1 and 2 of NYDEC Section 303(d)})$ | 1. # TMDLs http://www.dec.ny.gov/docs/water_pdf/303dlistropfni2012.pdf 2. All Impaired Waters - NYDEC http://www.dec.ny.gov/chemical/31290.html | 6% | This measure is thought to be a better indicator than the number of waterbodies on the list as it considers the DEC's rate of progress in developing TMDLs |
| Concentrations of pollutants in the Finger Lakes - Total Phosphates, Total Nitrogen | Directly tracks the quality of water in many of the most visible bodies of water in the region. | Averages of pollutant levels at surface and lake bottom for Honeoye, Canandaigua, Kueka, Seneca, and Cayuga lakes | Measurements of water quality in the Finger Lakes from the work of John Halfman of Hobart/William Smith http://people.hws.edu/halfman/FL-Lim/FL-Limnology.htm | TP = 13.5 µg/L TN = 0.4 mg/L | These statistics are the averages of pollutant concentrations at the surface and lake bottoms for Honeoye, Canandaigua, Kueka, and Seneca Lakes. |

Economic Development Indicators

**ECONOMIC DEVELOPMENT
POTENTIAL INDICATORS**

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|--|---|---|--|--|--|
| Housing + Transportation Index : Transportation/Housing affordability | NYSERDA required indicator 6A: Percentage of household income spent on housing and transportation | Household income spent on Housing and Transportation divided by total household income | H+T Affordability Index | Center for Neighborhood Technology (http://htaindex.cnt.org/) | |
| Jobs created by sector | NYSERDA common indicator 6B: Increase or decrease in nonfarm jobs by sector over a one month period not seasonally adjusted | Jobs Created = Σ Jobs created by county = Change in total private sector jobs + Change in total government sector jobs + Change in farm jobs | Change in total jobs | Bureau of Labor Statistics and NYS Labor Department (updated quarterly) | FL REDC & ACT Rochester indicator: The growth or decline in total jobs, shown as a percentage gain or loss from the previous year. |
| Unemployment rate | NYSERDA common indicator 6C: Unemployment rate by county; Unemployment rates are a relatively timely indicator of current local economic conditions, particularly recent changes in the employment landscape that reflect the overall health of the economy. | Unemployment Rate = (Unemployed Workers / Total Labor Force) * 100 | Unemployment rate by county | Bureau of Labor Statistics and NYS Labor Department (updated quarterly) | Data updated every year for large communities, less frequently for smaller |
| Average weekly wages by county | NYSERDA common indicator 6D: Average weekly wages by County | Total quarterly wages by county divided by the average 3 month county employment levels divided by 13 (weeks in a quarter) | Average Annual Weekly Wages by County | Quarterly Census of Employment and Wages (http://www.bls.gov/cew/) http://data.bls.gov/pdq/querytool.jsp?survey=en In the query window, select: New York State – County X – Total, all industries – Total covered – Average Weekly Wage. | Data adjusted to 2012 dollars |
| Acreage of farms | NYSERDA common indicator 6E: Area of land used for growing crops and rearing animals, typically under control of one owner or manager. | Sum of acreage of land used for farming and livestock | Area of land used for growing crops and rearing animals, typically under control of one owner or manager. | NYS Office of the State Comptroller (see 2010 report) http://www.osc.state.ny.us/reports/other/agriculture21-2010.pdf | Updated infrequently |
| Production of farms | NYSERDA common indicator 6E: Cash receipts by county from farm marketings | Sum of cash receipts from Farm production | Cash receipts by county from farm marketings | USDA National Agricultural Statistics Service Annual Statistical Bulletin http://www.nass.usda.gov/Statistics_by_State/New_York/Publications/Annual_Statistical_Bulletin/2011/2011%20page90%20-%20Cash%20Receipts%20County%20Estimates.pdf | |
| Annual Revenue from local businesses | NYSERDA secondary indicator 6F: Revenue generated from businesses with headquarters and/or primary locations in the Region. The Business Alliance for Local Living Economies has proposed a methodology for defining local (http://www.livingeconomies.org/local-first-defining-local). | Regional retail sales at specialty stores – Regional retail sales at specialty chain merchants = Regional retail sales remaining to local independent merchants | Revenue generated from businesses with headquarters and/or primary locations in the Region. | Previous studies have used sources such as Claritas and analysis of public filings and trade journals. | |
| Relationship of wages to changes in employment | NYSERDA secondary indicator 6G: Types of jobs/wage earning opportunities being created in the Region. | Percentage change in weekly wages by sector annually.;Percentage change in employment by sector | Percentage change in weekly wages by sector.; Percentage change in employment by sector. | Department of Labor Sector/Wage Data | |
| Number of farmers markets | NYSERDA secondary indicator 6H: Number of seasonal farmers markets within the region | Sum of regional farmers markets | Number of farmers markets | GIS as available from Counties and NYS (farmers market layers); general farmers market listings | |
| Total number of visitors and regional tourism dollars spent | NYSERDA secondary indicator 6I: Number of visitors to the region; NYSERDA secondary indicator 6I: Amount | Sum of total visitors to the region and sum of total dollars spent by those visitors | Total visitors to region; Total dollars spent by visitors to region | NYS Department of Economic Development, County Tourism Departments | |
| Jobs and housing balance | NYSERDA secondary indicator 6J: Measures the ratio of jobs to housing in the Region | Jobs and Housing Balance = Number of jobs in the region / number of housing units in the region. | Number of jobs; Number of Housing Units | US Census Bureau - Economic Census and Annual Economic Surveys; NYS Department of Economic | |
| GINI Index | NYSERDA secondary indicator 6K: Measures the distribution of income within a region | | GINI Index (at County and regional scale) | 2010 Census; 2006-2010 American Community Survey | |
| Investment in infrastructure (transportation, drinking water and wastewater facilities, stormwater, and energy) | NYSERDA secondary indicator 6L: Track resources dedicated to improving aging infrastructure | Annual capital expenditures into the various forms of infrastructure listed for the region | Total Investment Dollars - by infrastructure/subject area | GFLRPC; Town, village, city, and county planning and transportation departments; NYSERDA; Capital District Transportation Committee (CDTC) and Capital District Transportation Authority (CDTA); TriState Transportation Campaign | |
| Economic Activity: Gross Regional Product | NYSERDA secondary indicator 6M: Market value of final goods and services produced within the region | Total market value of all final goods and services within the region annually | GRP, with breakdown by largest sectors, (potentially including biotech, IT, manufacturing or other REDC target industries) | US Department of Commerce, Bureau of Economic Analysis; NYS Economic Development Council; or IMPLAN (\$350 cost per County for data) | |
| Tax Policy and Incentives – Percent of municipalities with tax policies and incentives to encourage development in municipal centers | NYSERDA secondary indicator 8D: Percent of municipalities with tax policies and incentives to encourage development in municipal centers | Total number of region's municipalities with tax policies and incentives / total number of region's municipalities | Total Number of region's municipalities with tax policies and incentives | Gather from individual municipalities | |
| Net advocate score | FL REDC indicator: Derived from a survey conducted on behalf of Wegmans Food Markets in which individuals where asked: "how likely would you be to recommend your community to friends, family or co-workers?" | | Survey | FLREDC | |
| Annual growth in total employment | FL REDC indicator: Total year-over-year net employment growth | Change in employment compared to previous year's employment level | Total year-over-year net employment growth | Economic Modeling Specialists Inc. (EMSI) RBA & GRE | |
| New business establishments as a share of established firms | FL REDC indicator: New establishments as a share of established firms | Number of new business establishments divided by the total number of business establishments | New establishments as a share of established firms | Economic Modeling Specialists Inc. (EMSI) RBA & GRE | |
| Formation and expansion of minority- and women-owned business establishments (W/MBE) | FL REDC indicator: Formation and expansion of minority- and women-owned business establishments (W/MBE) | Number of new minority and women-owned businesses compared to previous period's number of minority and women-owned businesses | Formation and expansion of minority- and women-owned business establishments (W/MBE) | National EstablishmentTime-Series (NETS) database. RBA & GRE | |
| Share lacking health insurance coverage | FL REDC indicator: Percent of the population not covered by health insurance | Number of residents lacking health insurance coverage divided by total number of residents | Percent of the population not covered by health insurance | U.S. Bureau of the Census FLHSA | |

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|---|--|---|---|---|--|
| Earnings per job | FL RECD indicator | Total wages for the region divided by the average employment for the period | Earnings per Job | Economic Modeling Specialists Inc. (EMSI) RBA & GRE | |
| Participation in culture/recreation | FL RECD indicator: Number of patrons/visitors to cultural and recreational institutions | Sum of patrons/visitors to cultural and recreational institutions | FL RECD indicator: Number of patrons/visitors to cultural and recreational institutions | Finger Lakes Tourism | |
| Age-Sex-Race Adjusted Medicare Spending Per Beneficiary | FL RECD indicator: Medicare spending per beneficiary adjusted to Age-Sex-Race | Total amount of spending for each category being tracked divided by the number of beneficiaries in that category | Medicare spending per beneficiary adjusted to Age-Sex-Race | FLHSA | |
| Commercial Insurance: Per member per month outpatient cost | Outpatient cost per commercially insured per month | Total commercial insurance outpatient costs per month divided by the number of commercially insured plan participants | Medicare spending per beneficiary adjusted to Age-Sex-Race | Dartmouth Atlas for Health Care and the Milliman Inc. report to the Institute for Healthcare Improvement FLHSA | |
| Age distribution of workers | ACT Rochester indicator: The change, expressed as a percentage, of the number of people in selected age groups within the resident working-age population. | Number of workers in each age group divided by the total number of workers in the region * 100 compared to previous period | Employment data including ages | Bureau of Labor Statistics and NYS Labor Department (updated quarterly) | |
| Maintaining our Main Streets | | | | | |
| Measure disposable income | The amount of money that households have available for spending and saving after income taxes have been accounted for. | Total income minus all income taxes | Total income and total income taxation | IRS, NYS Department of Labor and NYS Department of Taxation | |
| Number of people receiving social services | Total number of people receiving public assistance in the region | Total number of people receiving public assistance in the region | Total number of people receiving public assistance in the region | NYS Department of Social Services | |
| Job training programs | Number of job training programs in the region | Number of job training programs in the region | Number of job training programs in the region | | |
| Number of firms and employees (types of businesses) – 10+ employees – impact on region based on employment (net formation and survival) | Measure of new, small business creation and survival | Number of small businesses with 10+ employees in the region along with the sum of their total employment, wages and regional domestic product produced compared to the total region wages and regional domestic product | Number of small businesses with 10+ employees in the region along with the sum of their total employment, wages and regional domestic product produced compared to the total region wages and regional domestic product | | |
| Business locations where infrastructure already exists | Indication of smart growth practices - is business being clustered around existing infrastructure or is sprawl taking place? | Parameters would need to be defined | Business locations, definition of acceptable proximity to existing infrastructure, definition of what infrastructure applies (transportation, utilities, existing expansion capacity, agricultural, etc.) | Would appear to require a lot of primary data gathering | |
| Measure of diversity | Measure of the diversity of businesses, products and services offered in the region | | listing of all unique businesses, products and services throughout the region | Would appear to require a lot of primary data gathering | My recollection is that this measure is intended to indicate how economically diverse and resilient the region is, in contrast to the all eggs in one basket situation of a few, very large regional employers (a.k.a Kodak) |
| Number of vocational graduates | Measure of workforce pursuing vocational employment | Total of all regional vocational program graduates, comparison to previous years to determine if interest is increasing or decreasing | Vocational graduation rates | Vocational schools/program providers | |
| STEM programs – partnership with industries | Measure of how effectively STEM program are being integrated and leveraged with local industries | Number of regional STEM programs that partner with local industries | Number of regional STEM programs that partner with local industries | STEM program providers, educational institutions | |
| Funding opportunities | | | | | |
| Track number of flood events – loss of property value | Measure of impact of climate change on loss of property value | Total property damage claims resulting from regional flood events | Total property damage claims resulting from regional flood events | Insurers | |
| Where visitors are coming from | Indication of the geographic draw of our region relating to tourism and recreation | List of places of origin of visitors to the region | List of places of origin of visitors to the region | Tourism, convention and visitors bureaus. May require additional data collection | |
| Infrastructure development vs. re-development funding – land use, planning, ROI | Funding spent on reconstruction and revitalization of existing infrastructure vs new infrastructure - sprawl indicator | Total funding spent on reconstruction or revitalization of existing infrastructure compared to that spent on new infrastructure | Total funding spent on reconstruction or revitalization of existing infrastructure compared to that spent on new infrastructure | State and local governments and authorities capital infrastructure spending | |
| Investment in research | Measure of investment in research and innovation in the region | Sum of government, institutional and private investment in research and development in the region | Sum of government, institutional and private investment in research and development in the region | Government and institutions. Private data may be more difficult to collect | |
| Venture capital investment | Measure of new venture capital in the Region | Total venture capital investment in the region | Total venture capital investment in the region | National Venture Capital Association | |
| Change in Number of Business Establishments by sector | The change in the number of business establishments by sector, shown as a percentage gain or loss. | Current number of businesses by sector minus number of businesses by sector in previous period divided by total number of businesses by sector in previous period x100 | Number of businesses by sector in current period and previous period(s) | | |
| Average salary by sector | Salaries are a gauge of overall economic health and a measure of the degree to which employees are sharing in the prosperity of a community or specific economic sector. They also indicate the vitality of specific sectors and the demand for workers in those sectors | Total payroll by sector divided by total employment in sector. Comparisons may be made between sectors and between time periods to determine trends and more desirable sectors, etc. | Total payroll by sector, employment by sector in current period and previous period(s) | Quarterly Census of Employment and Wages (http://www.bls.gov/cew/) http://data.bls.gov/pdq/querytool.jsp?survey=en | Data have been converted to 2010 dollars. |
| Change in Average Salary since 2000 | ACT Rochester indicator: The cumulative percentage change in average salary since 2000 - measure of the change in wealth generation | Current average salaries minus 2000 salaries divided by 2000 salaries (adjusted for inflation) | Current average salaries, average salaries in 2000 | Quarterly Census of Employment and Wages (http://www.bls.gov/cew/) http://data.bls.gov/pdq/querytool.jsp?survey=en | Data have been converted to 2010 dollars. |
| Employment-to-Population Ratio | ACT Rochester indicator: Measure of the employment rate of the regional working-age population | The number of employed people living in our region divided by the population of 16- to 64-year-olds | Number of employed people in the region, population of working-age residents | Census and American Community Survey | |
| Spending for County Government | ACT Rochester indicator: Measure of the cost of government | The annual per-capita spending for county government, adjusted for inflation. | Annual spending of county governments, population of counties | Census and county governments | Data are presented in constant 2010 dollars. New York State excludes New York City |
| Spending for Local Government | ACT Rochester indicator: Measure of the cost of government | The annual per-capita spending for cities, towns, and villages within a county, adjusted for inflation | Annual spending of city, town and village governments; population | Census and local governments | Data are presented in constant 2010 dollars. New York State excludes New York City |

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|---|---|---|---|-----------------------------------|--|
| Spending for School Districts | ACT Rochester indicator: Measure of the cost of education | The annual per-capita spending for local public education within a county, adjusted for inflation | Total annual spending for public education by county. | Educational institutions, NYS SED | Data are presented in constant 2010 dollars. New York State excludes New York City |
| Science and Engineering Research | ACT Rochester indicator: The amount of federal, state and local grant money spent on research and development by academic institutions in the region | | | | Figures were inflation-adjusted to 2010 dollars. Not all institutions report research and development expenditures. Institutions included in data for the region are University of Rochester, Rochester Institute of Technology, SUNY College at Geneseo, SUNY College at Brockport and Hobart and William Smith Colleges. |
| Residential Building Permits | ACT Rochester indicator: Measure of Housing growth | The number of residential building permits issued, expressed as a rate per 1,000 residents. This includes permits for new construction of residences, including mobile homes. | Number of residential building permits issued; population | Local governments; census | County data are from the Genesee/Finger Lakes Regional Planning Council, based on their annual survey of municipalities. State data are from the U.S. Department of Housing and Urban Development, and national data are from the U.S. Census Bureau. |
| Average wages in region over time by county | Includes working with existing and emerging industries, entrepreneurs and educators to accelerate business growth and employment across key sectors that support regional sustainability goals. It supports growth of both urban industry and rural businesses. | | | | |
| Successful commercialization of technologies and associated jobs | | Measure of the number of new technologies that reach commercialization and number of new jobs associated with it. | | | |
| Trained workforce available for diverse employment opportunities | | | | | |
| New mechanisms for training in education | | | | | |
| Internal guidelines, certifications and aspirations meets or exceeds 3rd party standards and intentions | | | | | |
| Supply chain leads in sustainability and ties into education system which meets or exceeds 3rd party standards and intentions | | | | | |

ECONOMIC DEVELOPMENT
NYSERDA Indicator Evaluation

| Indicator | Evaluation Criteria (Weight) | | | | | General Notes |
|--|--------------------------------------|--|----------------------------------|-----------------------|---------------|---------------|
| | Consistent with NYSERDA Guidance (3) | Consistent with Regional Performance Measure (1) | Favored by Stakeholder Group (2) | Data Availability (2) | Summary Score | |

ECONOMIC DEVELOPMENT
Recommended INDICATORS

| NYSERDA Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
|--|---|---|---|---|--|
| Housing + Transportation Index : Transportation/Housing affordability | NYSERDA required indicator 6A: Percentage of household income spent on housing and transportation | Weighted Average of H+T Index (from Center for Neighborhood Technology), by County | H+T Affordability Index/Center for Neighborhood Technology (http://htaindex.cnt.org/) | 52.07% | No data available for Wyoming or Yates County |
| Jobs created by sector | NYSERDA common indicator 6B: Increase or decrease in by sector over a one year period | Jobs Created = Σ Jobs created by county = Change in total private sector jobs + Change in total government sector jobs + Change in farm jobs+ Unclassified | Change in total jobs/Bureau of Labor Statistics and NYS Labor Department (updated quarterly) | Government: 90,180 Private: 436,199 Agriculture: 6,122 Unclassified: 496 | Includes Federal, State, and Local jobs - Baseline Data is 2010 total jobs by sector Includes all private sector jobs except Agriculture and Unclassified Includes Forestry |
| Place-Sourced Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
| Successful commercialization of technologies and associated jobs | Measure of the number of new technologies that reach commercialization and number of new jobs associated with it. | Sum of new technologies that reach commercialization and jobs associated | Technologies reaching commercialization, jobs associated/source unknown at this time | Currently Unavailable | This does not appear to be something currently tracked and would likely involve primary data collection and setting up mechanisms to track this in the future. This is considered a valuable indicator and it is recommended that it be collected in the future. |
| Venture capital investment | Measure of new venture capital in the Region | Sum of VC investments by county per year | Venture Capital Investment by county across the region, rolled up to one annual number for the region./PriceWaterhouse Coopers Money Tree https://www.pwcmoneytree.com/MTPublic/ns/nv.jsp?page=region&region=1201 | Currently unavailable at the county or regional level. | Data does not appear to be available on a county by county basis or for our defined region. The smallest scale tracked and reported is for Upstate NY region which is everything in NYS excluding NYC. This is considered a valuable indicator and it is recommended that it be collected in the future. |
| Jobs created in the following sectors: Food Manufacturing/Alternative Energy/Materials Science | Variant of NYSEDA common indicator 6B: Increase or decrease in jobs by select sectors over a one year period: Food Manufacturing Alternative Energy Related Industry Materials Science | Sum of jobs created in Food Manufacturing Sum of jobs created in Alternative Energy Sum of jobs created in Materials Science all compared to previous period | Number of jobs in each of three segments: Food Manufacturing/Alternative Energy/Materials Science/subset of data currently tracked and reported by Labor Department | 6,972 | Food Manufacturing includes Dept. of Labor categories "Food Manufacturing" and "Beverage Tobacco Product Manufacturing". Alternative energy and materials science data is not currently tracked and reported in this manner. May need to drill-down into existing data sources to see if we may be able to capture this and/or institute mechanisms to track this in the future. This is considered a valuable indicator and it is recommended that it be collected in the future. |

Agriculture & Forestry Indicators

**AGRICULTURE
POTENTIAL INDICATORS**

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|--|--|---|--|--|---|
| 1. Direct farm sales per capita | Reflects the market for direct farm sales within each county. Direct farm sales are generally more profitable for the producer, can greatly reduce transportation-borne emissions related to food consumption, and improve residents' access to fresh food. | Total value of farm sales direct to consumers (including sales from roadside stands, farmers markets, pick-your-own, door-to-door, etc., but not sales of craft items or processed products, such as jellies, sausages, and hams) divided by the number of residents of the county. | USDA Food Atlas' Local Foods data | http://www.ers.usda.gov/data-products/food-environment-atlas.aspx | This indicator combines the purpose/intent of several NYSERDA and Place-Sourced indicators related to farmers' markets, CSAs, etc. |
| 2. Number of community food-producing gardens in municipal centers | This indicator tracks the capacity and infrastructure of municipal/urban centers in the Region to produce food. Suburban and rural areas where the need for community gardens is significantly less due to larger parcel sizes are excluded. | Total count of community food-producing gardens in municipal centers. | Community food-producing gardens | | See Indicator #1- it is anticipated that these venues would be counted via direct sales per capita. |
| 3. Acres of agricultural land in non-agricultural use | Agricultural lands zoned for other use (see General Notes- measured differently, this indicator also describes economic accessibility of quality farmland) | Geospatial overlay of soil capability classes vs. developed areas (per NASS CropScape data); sum of high-value ag land within X-mile buffer of low-intensity developed areas | NASS CropScape Cropland Data Layer; NRCS Soil Survey | http://nassgeodata.gmu.edu/CropScape/ ; http://websoilsurvey.nrcs.usda.gov/app/HomePage.htm | Zoning districts are not a good measure for agricultural use- data is incomplete and not suited for land use classification. Calculation proposed here is a more accurate measure, will allow for greater number of measurements through time, and will better support discussions of economic accessibility of quality farmland and vulnerability of conversion. |
| 4. Acreage of preserved farmland, farmland with permanent USDA easement and Purchased Development Rights (PDR) for priority properties in the Region. | This is a measure of the region's capacity to provide secure food production. It includes farmland that is formally protected/preserved in perpetuity using fee-simple acquisition, conservation easements transfer of development rights programs, or other similar initiatives. | Total acreage of PDRs and farmland preserved in perpetuity. | Acres of farmland preserved; PDR acres; USDA permanent easements | County assessor parcel data, aggregated for the region; American Farmland Trust; WNY Land Conservancy; Finger Lakes Land Trust; counties with PDR programs; NRCS | Program enrollment may be an appropriate strategy to achieve goals, but it is not a direct measure of sustainable practices. |
| 5. Acres of agricultural land enrolled in NYS Soil & Water Conservation Committee's Agricultural Environmental Management Program (AEM) and Acres of Certified, Managed Forestland | With the assistance of AEM Certified planners, these farms have developed science-based Comprehensive Nutrient Management Plans to control runoff, conserve soil and recycle nutrients. | Sum of acres enrolled in programs | Soil & Water Conservation Districts, FSC | http://www.fsc.org/certification.4.htm each county SWCD | Program enrollment may be an appropriate strategy to achieve goals, but it is not a direct measure of sustainable practices. |
| 6. Agricultural crop damage from flooding | This indicator tracks the impacts of climate change on the agricultural sector of the Region | Sum of damaged crop volumes | National Weather Service | http://www.nws.noaa.gov/om/hazstats/state11.pdf | Similar to indicator 7 (below), county-level data availability unknown. This data point is not tracked by NASS or ERS, but may be available through crop insurance payouts regulated by NYS Ag & Markets. |
| 7. Agricultural economic loss attributable to temperature and drought stress, and flooding | This indicator tracks the impacts of climate change on the agricultural sector of the Region | Sum of economic losses (\$) | Agricultural economic loss | www.agriculture.ny.gov [?] | Similar to indicator 6 (above), county-level data availability unknown. This data point is not tracked by NASS or ERS, but may be available through crop insurance payouts regulated by NYS Ag & Markets. |
| 8. Number of farmers markets | This provides insight into market access for local food products. | Sum of farmers markets | USDA Food Atlas' Local Foods data | http://www.ers.usda.gov/data-products/food-environment-atlas.aspx | This indicator is a subset of indicator #1 which focuses on regional use and consumption of FL produced products. |
| 9. Acres of cropland using soil conserving and organic matter building practices such as crop rotations, cover crops, residue management. | This indicator looks at opportunities to increase land productivity including protection from degradation. Carbon sequestration may be increased through increased use of crop rotations, cover crops, residue management, improved management of manures and other organic materials. This will result in soil conservation benefits as well. | Sum of acres under cultivation using soil conserving and organic matter building practices. | NRCS | NRCS program enrollment [?] | County-level data availability unknown. May be tracked by NYS office of NRCS. Program enrollment may not be a good measurement, however. |
| 10. Net increase in highly erodible cropland planted to perennial vegetation. | This indicator looks at opportunities to increase land productivity including protection from degradation. | Net increase in sum of "helclass" vs. perennial plantings (per NASS CropScape data) via geospatial overlay | Highly erodible cropland ("helclass"); NASS CropScape Data Layer | STATSGO/SSURGO databases; http://nassgeodata.gmu.edu/CropScape/ | |
| 11. Number of CSAs within the region | This indicator looks at opportunities to generate profitable (i.e. sustainable) economic activity at the regional level. | Sum of CSAs | USDA Food Atlas' Local Foods data | http://www.ers.usda.gov/data-products/food-environment-atlas.aspx | This indicator is a subset of indicator #1 which focuses on regional use and consumption of FL produced products. |
| 12. Number of urban farms and value of products | This indicator looks at opportunities to generate profitable (i.e. sustainable) economic activity at the regional level. | Sum of urban farms | NASS, NYS Ag & Mkts | [?] | This indicator is a subset of indicator #1 which focuses on regional use and consumption of FL produced products. |
| 13. Methane generation and combustion | This indicator looks at economic opportunities to generate methane from manure, food waste, and woody biomass. | Methane generation and combustion | NYSERDA, EIA | [?] | Assumed to be covered in Tier I/II GHG inventories |
| 14. Use of external inputs | Describes the use of chemical fertilizer and manure purchased for agricultural operations. | % of total operational expenses dedicated to chemical and fertilizer purchases; country-level estimates of N,P,K applied per year (1987-2002) | USDA Ag Census, 1997-2007; Ruddy (2006) study | http://quickstats.nass.usda.gov/ ; http://pubs.usgs.gov/sir/2006/5012/ | The link between N,P,K applications and water quality is very strong. Due to the abundance and quality of water resources in the Finger Lakes region, this measure may be of greater importance than the score suggests. |

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|--|---|---|--|--|--|
| 15. Number of farms, acres, parcels within agricultural districts. | This indicator offers information regarding areas protected from development. | Sum of farms, acres, and parcels in agricultural districts | County assessors' rolls | County assessor parcel data | |
| 16. Acreage of farms | Area of land used for growing crops, rearing animals | Sum of NASS CropScape crop areas | NASS CropScape Cropland Data Layer | http://nassgeodata.gmu.edu/CropScape/ | On its own, this indicator doesn't measure the sustainability of individual operations or the agricultural sector in aggregate. However, it is valuable to include this data in other indicators (e.g. acres of ag land in non-ag use, diversity of production). |
| 17. Production (\$) of farms | Cash receipts by county | Crop totals- sales (\$) per county | USDA Ag Census, 1997-2007 | http://quickstats.nass.usda.gov/ | Production value does not measure sustainability (e.g. recent dramatic rise in corn prices does not indicate whether corn farming is more or less economically, environmentally, or socially sustainable, and has opposite impacts on producers vs. consumers). The diversity indicator (below) would still incorporate a measure of production, and would do so in a manner more consistent with the FLSP definition of sustainability. |
| 18. Acreage of high-value ag land | High-value farmland as defined by NRCS | Sum of acreage of higher-value mineral soil groups? | NRCS Soil Survey | http://websol survey.nrcs.usda.gov/app/HomePage.htm | In and of itself, this indicator will not change much over time (mineral soil types do not fluctuate). However, the process of locating high-value ag land is incorporated into the indicator of acres of ag land in non-ag use (above). |
| 19. Diversity of production | Reflects the productivity and resiliency of agricultural sector | Shannon's diversity index = $-\sum P_i \cdot \ln(P_i)$. This index is the sum of the products of relative proportion of each crop harvested within the county times the natural log of each proportion. May be normalized or indexed to 1. | USDA Ag Census, 1997-2007 | http://quickstats.nass.usda.gov/ | This indicator reflects both economic and environmental sustainability issues, and incorporates a measure of best management practices within the agricultural sector. Rotations and cover crops are accommodated in this indicator- cover crops such as winter wheat, rye, etc. are counted in the crop harvest data. |
| 20. Change in agricultural sector jobs | This indicator provides a macro level view to economic development and represents economic growth. | Sum of agricultural employment per year | NYS Bureau of Labor Statistics | http://www.labor.ny.gov/stats/fin/default.asp | Regional-level data readily available through BLS. County-level data availability unknown. This indicator does not measure the sustainability of the agricultural sector. |
| 21. No net loss of agricultural land (net gain?) | Describes the conversion of agricultural land for other purposes | Sum of acres dedicated to agricultural production | NASS CropScape Cropland Data Layer | http://nassgeodata.gmu.edu/CropScape/ | See indicator #3- provides a clearer measure of land conversion. |
| 22. Inputs go down while soil health goes up | Reflects the general aim of decreasing potential nonpoint source pollutants while increasing the quality of the soil resource | [?] | | unavailable | Data is not available to measure this indicator as it is presented here; can be adjusted to reflect the use of inputs, but soil health is not measured on a regional basis |
| 23. Increased number of food crops and farmers markets | Measures the diversity of regional production, potential for direct sales, and regional residents' access to fresh food | Sum of food crops; sum of farmers markets | USDA Ag Census, 1997-2007; USDA Food Atlas' Local Foods data | http://quickstats.nass.usda.gov/ ; http://www.ers.usda.gov/data-products/food-environment-atlas.aspx | As presented, units of analysis are too dissimilar- should be separated into two indicators. See indicator #19 regarding diversity of production. Several indicators can be combined re: farmers' markets and other direct-marketing opportunities for regional producers. |
| 24. Increase in viability of farms | Measures the potential for new farmers to enter the marketplace, and for existing farmers to remain in the marketplace | [?] | Operation-level data | not available | Viability measurement requires operation-scale data to be collected and aggregated; unsure whether or not regional data would provide a reliable and meaningful measurement of actual operational viability |
| 25. Increase in urban farms and gardens | Describes potential food access for traditionally vulnerable populations | Sum of urban farms; sum of urban gardens | USDA Ag Census, 1997-2007; USDA Food Atlas' Local Foods data | http://quickstats.nass.usda.gov/ ; http://www.ers.usda.gov/data-products/food-environment-atlas.aspx | See indicator #1. |

AGRICULTURE
NYSERDA Indicator Evaluation

| Indicator | Evaluation Criteria (Weight) | | | | | General Notes |
|--|--------------------------------------|--|----------------------------------|-----------------------|---------------|--|
| | Consistent with NYSERDA Guidance (3) | Consistent with Regional Performance Measure (1) | Favored by Stakeholder Group (2) | Data Availability (2) | Summary Score | |
| 20. Change in agricultural sector jobs | 6 | 2 | 5 | 3 | 36 | Not a reliable measure of sustainability per se |
| 16. Acreage of farms | 6 | 1 | 5 | 3 | 35 | Will be discussed in narrative form in the introductory narrative |
| 17. Production (\$) of farms | 6 | 1 | 5 | 3 | 35 | Partially counted in "direct farm sales" indicator; otherwise, not a reliable measure of sustainability per se |
| 1. Direct farm sales per capita | 5 | 1 | 5 | 3 | 32 | Combines the purpose of several place-sourced indicators |
| 3. Acres of agricultural land in non-agricultural use | 5 | 1 | 5 | 3 | 32 | This NYSERDA indicator also addresses concerns raised by stakeholders |
| 8. Number of farmers markets | 5 | 1 | 5 | 3 | 32 | Counted indirectly in "direct farm sales" indicator |
| 18. Acreage of high-value ag land | 5 | 1 | 5 | 3 | 32 | Counted directly in "acres of ag land in non-ag use" indicator |
| 10. Net increase in highly erodible cropland planted to perennial vegetation. | 5 | 1 | 4 | 3 | 30 | Perennial vegetation will be directly counted in "diversity of production" indicator, and its importance can be discussed specifically in narrative |
| 11. Number of CSAs within the region | 5 | 1 | 4 | 3 | 30 | Counted indirectly in "direct farm sales" indicator |
| 4. Acreage of preserved farmland, farmland with permanent USDA easement and Purchased Development Rights (PDR) for priority properties in the Region. | 5 | 1 | 4 | 1 | 26 | The underlying issue is accommodated in "acres of ag land in non-ag use" indicator |
| 9. Acres of cropland using soil conserving and organic matter building practices such as crop rotations, cover crops, residue management. | 5 | 1 | 4 | 1 | 26 | Cover crops and rotations will be discussed in "diversity of production" indicator |
| 12. Number of urban farms and value of products | 5 | 1 | 4 | 1 | 26 | Counted indirectly in "direct farm sales" indicator |
| 13. Methane generation and combustion | 5 | 1 | 4 | 1 | 26 | Assumed to be covered elsewhere in report |
| 15. Number of farms, acres, parcels within agricultural districts. | 5 | 1 | 4 | 1 | 26 | Number of farms counted directly in "diversity of production" indicator |
| 14. Use of external inputs | 2 | 2 | 5 | 3 | 24 | Specifically addresses water quality, a key Story of Place component |
| 5. Acres of agricultural land enrolled in NYS Soil & Water Conservation Committee's Agricultural Environmental Management Program (AEM) and Acres of Certified, Managed Forestland | 5 | 1 | 2 | 1 | 22 | Not a reliable measure of sustainability per se |
| 2. Number of community food-producing gardens in municipal centers | 5 | 1 | 2 | 0 | 20 | Likely to be counted indirectly by "direct farm sales" indicator; otherwise, neglects too many areas outside of urban centers |
| 6. Agricultural crop damage from flooding | 5 | 1 | 2 | 0 | 20 | Assumed to be referenced in Climate Change Adaptation section of report |
| 7. Agricultural economic loss attributable to temperature and drought stress, and flooding | 5 | 1 | 2 | 0 | 20 | Assumed to be referenced in Climate Change Adaptation section of report |
| 21. No net loss of agricultural land (net gain?) | 1 | 1 | 5 | 3 | 20 | Counted directly in "acres of ag land in non-ag use" indicator |
| 23. Increased number of food crops and farmers markets | 1 | 1 | 5 | 3 | 20 | Counted directly in "diversity of production" indicator |
| 25. Increase in urban farms and gardens | 1 | 1 | 5 | 3 | 20 | Likely to be counted indirectly by "direct farm sales" indicator |
| 19. Diversity of production | 0 | 2 | 5 | 3 | 18 | Agricultural diversity is another element of the Story of Place- we expect to find a higher degree of diversity here than elsewhere |
| 22. Inputs go down while soil health goes up | 2 | 1 | 5 | 0 | 17 | Counted indirectly in "use of external inputs" indicator; can't describe soil health on a regional basis very efficiently |
| 24. Increase in viability of farms | 0 | 1 | 5 | 1 | 13 | Difficulty operationalizing viability per se on a regional, sector-wide basis; resiliency (a component of viability) can be described through other indicators |

AGRICULTURE
Place-Sourced Indicator Evaluation

| Indicator | Evaluation Criteria | | | | | | | | | | | General Notes | | |
|--|---------------------------|----------------------|--------|-------|-----------|-----------|------------|-----------------------------|---|------------------------------|---------------|---------------|--|--|
| | Enrichment of 5 Capitals: | | | | | Diversity | Resiliency | Life cycle cost and benefit | Ability to leverage Story of Place - Innovation "Accelerator" | Favored by Stakeholder Group | Summary Score | | | |
| | Natural | Built / Manufactured | Social | Human | Financial | | | | | | | | | |
| 1. Direct farm sales per capita | 1 | | 1 | 1 | 1 | 1 | 1 | | | | 5 | 11 | Combines the purpose of several place-sourced indicators | |
| 2. Number of community food-producing gardens in municipal centers | 1 | | 1 | | 1 | 1 | 1 | | | | | 5 | 10 | Likely to be counted indirectly by "direct farm sales" indicator; otherwise, neglects too many areas outside of urban centers |
| 3. Acres of agricultural land in non-agricultural use | 1 | | 1 | | 1 | | 1 | 1 | 1 | 1 | | 5 | 11 | This NYSERDA indicator also addresses concerns raised by stakeholders |
| 14. Use of external inputs | 1 | | | | 1 | | 1 | 1 | 1 | 1 | | 5 | 10 | Specifically addresses water quality, a key Story of Place component |
| 19. Diversity of production | 1 | | | | 1 | 1 | 1 | | | 1 | | 5 | 10 | Agricultural diversity is another element of the Story of Place- we expect to find a higher degree of diversity here than elsewhere |
| 25. Increase in urban farms and gardens | 1 | | 1 | | 1 | 1 | 1 | | | | | 5 | 10 | Likely to be counted indirectly by "direct farm sales" indicator |
| 8. Number of farmers markets | | | 1 | | 1 | 1 | 1 | | | | | 5 | 9 | Counted indirectly in "direct farm sales" indicator |
| 4. Acreage of preserved farmland, farmland with permanent USDA easement and Purchased Development Rights (PDR) for priority properties in the Region. | 1 | | | | 1 | | 1 | 1 | 1 | | | 4 | 8 | |
| 11. Number of CSAs within the region | | | 1 | | 1 | 1 | 1 | | | | | 4 | 8 | The underlying issue is accommodated in "acres of ag land in non-ag use" indicator |
| 22. Inputs go down while soil health goes up | 1 | | | | | | 1 | 1 | 1 | | | 5 | 8 | Counted indirectly in "use of external inputs" indicator; can't describe soil health on a regional basis very efficiently |
| 23. Increased number of food crops and farmers markets | | | | | 1 | 1 | 1 | | | | | 5 | 8 | Counted directly in "diversity of production" indicator |
| 24. Increase in viability of farms | | | | | 1 | | 1 | 1 | 1 | | | 5 | 8 | Difficulty operationalizing viability per se on a regional, sector-wide basis; resiliency (a component of viability) can be described through other indicators |
| 9. Acres of cropland using soil conserving and organic matter building practices such as crop rotations, cover crops, residue management. | 1 | | | | | | 1 | 1 | | | | 4 | 7 | Cover crops and rotations will be discussed in "diversity of production" indicator |
| 12. Number of urban farms and value of products | | | | | 1 | 1 | 1 | | | | | 4 | 7 | Counted indirectly in "direct farm sales" indicator |
| 15. Number of farms, acres, parcels within agricultural districts. | 1 | | | | 1 | | 1 | | | | | 4 | 7 | Number of farms counted directly in "diversity of production" indicator |
| 16. Acreage of farms | 1 | | | | | | 1 | | | | | 5 | 7 | Will be discussed in narrative form in the introductory narrative |
| 20. Change in agricultural sector jobs | | | | 1 | 1 | | | | | | | 5 | 7 | Not a reliable measure of sustainability per se |
| 21. No net loss of agricultural land (net gain?) | 1 | | | | | | 1 | | | | | 5 | 7 | Counted directly in "acres of ag land in non-ag use" indicator |
| 10. Net increase in highly erodible cropland planted to perennial vegetation. | 1 | | | | | | 1 | | | | | 4 | 6 | Perennial vegetation will be directly counted in "diversity of production" indicator, and its importance can be discussed specifically in narrative |
| 13. Methane generation and combustion | 1 | | | | | | | 1 | | | | 4 | 6 | Assumed to be covered elsewhere in report |
| 17. Production (\$) of farms | | | | | 1 | | | | | | | 5 | 6 | Partially counted in "direct farm sales" indicator; otherwise, not a reliable measure of sustainability per se |
| 18. Acreage of high-value ag land | 1 | | | | | | | | | | | 5 | 6 | Counted directly in "acres of ag land in non-ag use" indicator |
| 6. Agricultural crop damage from flooding | 1 | | | | 1 | | 1 | | | | | 2 | 5 | Assumed to be referenced elsewhere in report |
| 7. Agricultural economic loss attributable to | 1 | | | | 1 | | 1 | | | | | 2 | 5 | Assumed to be referenced elsewhere in report |
| 5. Acres of agricultural land enrolled in NYS Soil & Water Conservation Committee's Agricultural Environmental Management Program (AEM) and Acres of Certified, Managed Forestland | 1 | | | | | | 1 | | | | | 2 | 4 | Not a reliable measure of sustainability per se |

AGRICULTURE

Recommended INDICATORS

| NYSERDA Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
|--|---|---|--|------------------------------|--|
| Acres of agricultural land in non-agricultural use | Identifies the acreage of high-quality agricultural soils used for non-agricultural purposes. | Sum of acreage in NRCS Soil Capability Classes I and II that overlap acreage of areas classified as "developed" by the USDA | NASS Cropland Data Layer; NRCS Soil Survey | 155,968 | Scores well by both NYSERDA and Place-Sourced criteria. Accommodates much of the stakeholder commentary regarding both loss (or potential gain) of ag land and the quality/suitability of land for agriculture. Identifies the consumption of quality farmland, and can also identify the farmland that is at risk in the future. Longitudinal data is currently available, and is expected to be available in the long term. |
| Place-Sourced Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
| Direct farm sales per capita | Reflects the market for direct farm sales within each county. Direct farm sales are generally more profitable for the producer, can greatly reduce transportation-borne emissions related to food consumption, and improve residents' access to fresh food. | Total value of farm sales direct to consumers (including sales from roadside stands, farmers markets, pick-your-own, door-to-door, etc., but not sales of craft items or processed products, such as jellies, sausages, and hams) divided by the number of residents of the county. | USDA Food Atlas' Local Foods data: http://www.ers.usda.gov/data-products/food-environment-atlas.aspx | \$9.52 | This measure leverages several Place-Sourced indicators, as well as at least one NYSERDA Secondary Indicator. |
| Use of external inputs | Describes the use of chemical fertilizer and manure purchased for agricultural operations. | % of total operational expenses dedicated to chemical and fertilizer purchases; country-level estimates of N,P,K applied per year (1987-2002) | USDA Ag Census, 1997-2007; Ruddy (2006) study: http://quickstats.nass.usda.gov/ ; http://pubs.usgs.gov/sir/2006/5012/ | 10.7% | The use of external inputs bears directly on the quality of the region's surface waters, which is one of the principal issues arising from the Story of Place initiative. The cost of external inputs is the closest recent measure available to describe existing conditions on a regional level; the values published in Ruddy (2006) are more direct but not as recent, so they will be referenced in the back-up material. Acreage receiving fertilizer or manure may be available through USDA/NASS Special Tabulation, and we are inquiring with the USDA regarding that data. |
| Diversity of production | Reflects the productivity and resiliency of agricultural sector | Shannon's diversity index = $-\sum P_i \cdot \ln(P_i)$. This index is the sum of the products of relative proportion of each agricultural commodity within the region times the natural log of each proportion. | USDA Ag Census, 1997-2007 | 6.97 | Shannon's index is commonly used to describe ecological diversity, and has been cited in the literature of agricultural economics as a reliable measure of agricultural diversity as well. Because of the various ways agricultural production is measured (e.g. acres of cropland, head of cattle, etc.), this index may be adapted to describe the diversity of producers (i.e. farm operators) as opposed to production (i.e. crops). |

**FORESTRY
POTENTIAL INDICATORS**

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|---|--|---|---|---|--|
| 1. Ratio of percent of forest by tree diameter class (small, medium, large) | Reflects the growth stages of forests in region, which contribute to different types of habitat | Area and percentage of forests in region, by county, in each age size class as a ratio of total forest area expressed as a ratio % large : %medium : %small | Forest Area by size-class: USFS FIA Standard Report number 2.4 | http://apps.fs.fed.us/fido/ | This indicator measures the proportion of forest habitat types at differing growth stages. Forest areas at different diameter-classes provide differing habitat quality in terms of supporting increased biodiversity. US Forest Service Forest Inventory and Analysis (FIA) estimates of forest size class proportions are the best available data source to infer the proportions of forest land growth stages that is readily available and collected regularly. Working alongside the bird species diversity indicator, this measure helps to quantify forest habitat quality and diversity, as a component of environmental sustainability. |
| 2. Acres protected through NYSDEC and other public, non-profit and private protected lands. | Acreage of land that is owned by agencies or permanently protected under conservation easements by NYS agencies or other other organizations/institutions. | Acreage protected annually through local, regional not-for-profits (such as Finger Lankes Land Trust) or state-owned forested lands & conservation easements, state parks, conservation easements and other public, non-profit, and private protected lands. | Forested land purchased or protected by NYSDEC or OPHRP; forested land protected under conservation easemtn or owned by FLLT; forested land owned or protected by NYC DEP; farmland protected by PDR. | http://gis.ny.gov/index.cfm ; http://gis.ny.gov/gisdata/inventories/member.cfm?organizationID=529 ; http://gis.ny.gov/gisdata/inventories/member.cfm?organizationID=588 ; www.filt.org ; tspies@dep.nyc.gov ; http://www.agriculture.ny.gov/AP/agservices/agricultural-districts.html ; http://cugir.mannlib.cornell.edu/index.jsp | This indicator would inform the potential increase in level of protected forested land but will not be informative regarding the quality of forestlands in the Finger Lakes region. |
| 3. Invasive Species Index | Reflects the level of risk to forest resources of potential damage from disease, pests, or other invasive species | Sum of index values for each species in region Index Value for a species = 1 + .5 x (the number of counties where it is present in the region, other than the first county) Example: Species A is present in 4 counties Species A index value = 1 + (.5x3) = 2.5 | New York Invasive Species Clearinghouse (NYIS) | http://www.nyis.info/index.php | This indicator reflects sustainability of forest resources by quantifying biological threats to the ecosystem. The observation data is updated regularly, and since it is an area of great concern (with large risks like the Emerald Ash Borer), it can be expected to be a strong and reliable data source. The index was created to allow for one number to represent both the presence of a species within the region, and how widespread it is. |
| 4. Amount of biomass in live trees | Measures the amount of carbon stored in the forested areas of the region Goal: Increase biomass amount | tons of biomass in live trees on forestland | USFS FIA Standard Reports numbers 10.1 | http://apps.fs.fed.us/fido/ | This indicator quantifies the greenhouse gas capturing potential of the region's forest resources. Some methods for estimating the total carbon contained in forests. However, the literature states that, at this time, it is a very new science and the estimates are often contradictory and are, thus, deemed unreliable. As an approximation of carbon storage amounts, live tree biomass is used as the more biomass contained in the regions forests will mean that more carbon is stored since carbon is a large component of that biomass by weight. |
| 5. Number of bird species | Reflects the extent of forested habitats | Number of survey blocks where four high-quality forest habitat indicator species were observed during the most recent NYS Breeding Bird Atlas Survey period (2000-2005) as reported in the NYNHP Nature Explorer database | New York State Breeding Bird Atlas 2000-2005 | http://www.dec.ny.gov/animals/7312.html http://www.dec.ny.gov/natureexplorer/app/location/county | This indicator reflects environmental sustainability issues, as it is an index for how diverse and healthy the ecosystems which serve as bird habitat are. It is not tracked yearly, however the third study is planned to be undertaken in the next decade, which will allow for comparison. |
| 6. Wildfire Occurrences | Measures the level of fire threat to regional forests | Number of wildfire occurrences in Region in past 5 years | Wildfire Occurrence Data | Available from DEC Division of Lands and Forests | We may be able to get this data, and may not. If it is available, the indicator could be used as a measure of abiotic threat to forest resources. |

FORESTRY
NYSERDA Indicator Evaluation

| Indicator | Evaluation Criteria (Weight) | | | | | General Notes |
|---|--------------------------------------|--|----------------------------------|-----------------------|---------------|---|
| | Consistent with NYSERDA Guidance (3) | Consistent with Regional Performance Measure (1) | Favored by Stakeholder Group (2) | Data Availability (2) | Summary Score | |
| 2. Acres protected through NYSDEC and other public, non-profit and private protected lands. | 5 | 1 | 2 | 1 | 22 | Not a preferred indicator because data that is available is unreliable/incomplete. Does not measure the quality of forest resources |
| 1. Ratio of percent of forest by tree diameter class (small, medium, large) | 0 | 1 | 2 | 3 | 11 | Contributes to quantifying sustainability by measuring habitat diversity |
| 3. Invasive Species Index | 0 | 1 | 2 | 3 | 11 | Contributes to quantifying sustainability by measuring biological threats to forest resources |
| 4. Amount of biomass in live trees | 0 | 1 | 2 | 3 | 11 | Contributes to quantifying sustainability by indirectly measuring carbon sequestration of forest resources |
| 5. Number of bird species | 0 | 1 | 2 | 3 | 11 | Contributes to quantifying sustainability by measuring biodiversity of forests |
| 6. Wildfire Occurrences | 0 | 1 | 2 | 1 | 7 | Contributes to quantifying sustainability by measuring a non-biological stress to forests. At this time we do not have the data, however it may be available. If we are able to obtain it, it will be a recommended indicator |

FORESTRY
Place-Sourced Indicator Evaluation

| Indicator | Evaluation Criteria | | | | | | | | | | Summary Score | General Notes | |
|---|-----------------------------------|---|----------------------------------|---------------------------------|-------------------------------------|-----------|------------|-----------------------------|---|------------------------------|---------------|---------------|---|
| | Enrichment of 5 Capitals: Natural | Enrichment of 5 Capitals: Built /Manufactured | Enrichment of 5 Capitals: Social | Enrichment of 5 Capitals: Human | Enrichment of 5 Capitals: Financial | Diversity | Resiliency | Life cycle cost and benefit | Region's ability to leverage its unique Story of Place - Innovation "Accelerator" | Favored by Stakeholder Group | | | |
| 1. Ratio of percent of forest by tree diameter class (small, medium, large) | 1 | | 1 | | | 1 | 1 | | | | | 4 | Contributes to quantifying sustainability by measuring habitat diversity |
| 2. Acres protected through NYSDEC and other public, non-profit and private protected lands. | 1 | | 1 | | | 1 | 1 | | | | | 4 | Not a preferred indicator because data that is available is unreliable/incomplete. Does not measure the quality of forest resources |
| 4. Amount of biomass in live trees | 1 | | 1 | | | 1 | 1 | | | | | 4 | Contributes to quantifying sustainability by indirectly measuring carbon sequestration of forest resources |
| 5. Number of bird species | 1 | | 1 | | | 1 | 1 | | | | | 4 | Contributes to quantifying sustainability by measuring biodiversity of forests |
| 3. Invasive Species Index | 1 | | 1 | | | | 1 | | | | | 3 | Contributes to quantifying sustainability by measuring measuring biological threats to forest resources |
| 6. Wildfire Occurrences | 1 | | 1 | | | | 1 | | | | | 3 | Contributes to quantifying sustainability by measuring a non-biological stress to forests. At this time we do not have the data, however it may be available. If we are able to obtain it, it will be a recommended indicator |

FORESTRY

Recommended INDICATORS

| NYSERDA Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
|---|---|---|--|----------------------------------|---|
| Place-Sourced Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
| Ratio of percent of forests by tree size class (small, medium, large) | Reflects the growth stages of forests in region, which contribute to different types of habitat | Area and percentage of forests in region, by county, in each age size class as a ratio of total forest area expressed as a ratio % large : %medium : %small | Forest Area by size-class: USFS FIA Standard Report number 2.4 | 63% large; 21% medium; 16% small | This indicator measures the proportion of forest habitat types at differing growth stages. Forest areas at different diameter-classes provide differing habitat quality in terms of supporting increased biodiversity. US Forest Service Forest Inventory and Analysis (FIA) estimates of forest size class proportions are the best available data source to infer the proportions of forest land growth stages that is readily available and collected regularly. Working alongside the bird species diversity indicator, this measure helps to quantify forest habitat quality and diversity, as a component of environmental sustainability. Forestry Stakeholders were not present at Working Group Meeting #2, therefore the indicators were not discussed. |
| Amount of biomass in live trees | Measures the amount of carbon stored in the forested areas of the region | tons of biomass in live trees on forestland | USFS FIA Standard Report numbers 10.1 (biomass in live trees) | 60,937,524 Short tons of biomass | This indicator quantifies the greenhouse gas capturing potential of the region's forest resources. Some methods for estimating the total carbon contained in forests. However, the literature states that, at this time, it is a very new science and the estimates are often contradictory and are, thus, deemed unreliable. As an approximation of carbon storage amounts, live-tree biomass is used as the more biomass contained in the regions forests will mean that more carbon is stored since carbon is a large component of that biomass by weight. Forestry Stakeholders were not present at Working Group Meeting #2, therefore the indicators were not discussed. |
| Number of bird species | Reflects the extent of forested habitats | Number of survey blocks where four high-quality forest habitat indicator species were observed during the most recent NYS Breeding Bird Atlas Survey period (2000-2005) as reported in the NYNHP Nature Explorer database | New York State Breeding Bird Atlas 2000-2005 | 54-289-428-358 | This indicator reflects environmental sustainability issues, as it is an index for how diverse and healthy the ecosystems which serve as bird habitat are. The Breeding Bird Atlas is not tracked yearly, however the study is planned to be repeated in the next decade, which will allow for comparison. Forestry Stakeholders were not present at Working Group Meeting #2, therefore the indicators were not discussed. |
| Invasive Species Index | Reflects the level of risk to forest resources of potential damage from disease, pests, or other invasive species | Sum of index values for each species in region Index Value for a species = 1 + .5 x (the number of counties where it is present in the region, other than the first county) Example: Species A is present in 4 counties Species A index value = 1 + (.5x3) = 2.5 | New York Invasive Species Clearinghouse (NYS) | Index Value of 8.5 | This indicator reflects sustainability of forest resources by quantifying biological threats to the ecosystem. The observation data is updated regularly, and since it is an area of great concern (with large risks like the Emerald Ash Borer), it can be expected to be a strong and reliable data source. The index was created to allow for one number to represent both the presence of a species within the region, and how widespread it is. Forestry Stakeholders were not present at Working Group Meeting #2, therefore the indicators were not discussed. |

Climate Change Adaptation Indicators

**ADAPTATION
POTENTIAL INDICATORS**

| Indicator | Description | Calculation | Data Required | Data Availability | General Notes |
|--|---|--|--|---|--------------------------------------|
| Reduction in number of reported customers with power outages | Indicates trend in effectiveness of adaptation/resiliency activities | (Previous Year reported customer power outages) - (Current Year reported customer power outages) | FEMA reporting | FEMA, regional utilities | NYSERDA ClimAID |
| Reduction in energy expenditures (by sector and fuel type) | Indicates trend in effectiveness of adaptation/resiliency activities | (Previous Year Energy Expenditures) - (Current Year energy expenditures) | US Census, local utilities | Regional utilities | NYSERDA ClimAID |
| Increase in total cash receipts for crops and livestock | Indicates trend in effectiveness of adaptation/resiliency activities | (Current Year Agricultural Receipts) - (Previous Year Agricultural Receipts) | NYS Department of Agriculture | Required reporting at State level | NYSERDA ClimAID |
| Reduction in highway infrastructure landslide repair | Indicates trend in effectiveness of adaptation/resiliency activities | (Previous Year Landslide Highway Repair Costs) - (Current Year Landslide Highway Repair Costs) | County level - Multi-Hazard Mitigation Plans | Town/village/municipality reporting | Yates County Hazard Mitigation Plan |
| Reduction in Total Debris (in tons) per hurricane | Indicates trend in effectiveness of adaptation/resiliency activities | (Previous Year Hurricane Debris) - (Current Year Hurricane Debris) | County level - Multi-Hazard Mitigation Plans | Town/village/municipality reporting | NYS Hazard Mitigation Plan |
| Reduction in landslide incidences | Indicates trend in effectiveness of adaptation/resiliency activities | (Previous Year Landslide Incidences) - (Current Year Landslide Incidences) | County level - Multi-Hazard Mitigation Plans | Town/village/municipality reporting | Yates County Hazard Mitigation Plan |
| Reduction in Storm damage assessment | Indicates trend in effectiveness of adaptation/resiliency activities | (Previous Year Storm Damage) - (Current Year Storm Damage) | County level - Multi-Hazard Mitigation Plans | Required reporting at town/village/municipality level | Monroe County Hazard Mitigation Plan |
| Reduction on Repetitive Loss Properties from Floods, Hurricanes, Earthquakes | Indicates trend in effectiveness of adaptation/resiliency activities | (Previous Year Repetitive Losses) - (Current Year Repetitive Losses) | NYS Hazard Mitigation Plan, Office of Emergency Management | Required reporting at State level | NYS Hazard Mitigation Plan |
| System Average Interruption Frequency Index | Represents current vulnerability of electricity users to disruptions | (Total number of customer interruptions)/(total number of customers served) | Customer interruptions, total customers | Regional utilities | Not required Primary Indicator |
| Flood zones - economic value of property vulnerable to floods/storm surges | Potential economic impact of damage from climate change | Economic value of property in affected region | FEMA flood Insurance Rate Maps, with assessed value of property | Town/village assessor, federal | Not required Primary Indicator |
| Reduction in Miles of transport routes, electric circuits, rail and other critical infrastructure threatened by floods/sea level rise in next 50/100 years | Insight into potential vulnerabilities of infrastructure | Proximity analysis using GIS data, with risk review | NY State GIS maps, flood probability maps | NY State | Not required Primary Indicator |
| Discussion of climate change and adaptation in Hazard Mitigation Plans | Indicates awareness of climate change in hazard risk analysis | No calculation needed; NYSEDA Indicator 7C, p. 15 | County level - Multi-Hazard Mitigation Plans | 0 out of 9 plans (Note: No information on Ontario County Plan) | Not required Primary Indicator |
| Flood zones - communities participating in NFIP Community Rating System | Voluntary incentive program, demonstrates awareness of risk | No calculation needed | FEMA reporting | | Not required Primary Indicator |
| Reduction in Number of Sanitary and Combined Sewer Overflows | Impacts of climate change - increased precipitation | No calculation needed | Local reporting or annual DEC reporting | By municipality, region, state | Not required Primary Indicator |
| Reduction in Agricultural economic losses attributable to temperature, drought, flooding | Indicates vulnerability of agriculture sector to climate change impacts | Summation of agriculture economic losses as covered by agriculture insurance (losses due to temp+drought+flooding) | Total annual agriculture economic loss as covered by agriculture insurance programs | NYS Dept of Agriculture & Markets, USDA National Agriculture Statistics | Secondary Indicator |
| Percentage of regional water supply governed by "rule curves" (where rule curves are graphs of water levels used to regulate water level to manage demand for navigation levels, reliable water supply, and critical habitats) | Indicates vulnerability of transportation, health and livability, and ecosystems health to climate change impacts | (Number of waterways governed by rule curves)/total water supply sources | Inventory of water supply sources, specific waterways governed by rules curves | NYS Dept of environ Conservation, NY State Thruway Authority Canal Corporation | Secondary Indicator |
| Reduction in Number of people living in floodplains | Indicates vulnerability of current population | Census estimate of population in floodplains | US Census (detailed), USGS land-use data, FEMA floodplains, Estimate of future flood ranges | | Secondary Indicator |
| Reduction in Insurance premium rates or Number of flood insurance claims | Indication of existing vulnerability | No calculation needed | NY Property Insurance Underwriting Association | | Secondary Indicator |
| Increase in Number of cooling center and ozone action programs | Provision of regional services for vulnerable populations | No calculation needed | Number of public regional centers to provide refuge during heat waves; existence of program to alert residents to high ozone levels | Possibly at village/town level | Secondary Indicator |
| Increased Proportion of land conserved to total land | Indicates vulnerability of an area to climate change impacts | (Area of conserved land)/total land | NYS Dept of Environ Conserv, NYS Office of Parks Recreation, and Historic Preservation, local assessors office for "conserved land" area | Village/town/city, county, state | Variant of Secondary indicator |
| Reduction in # of residents put at risk from loss of at least one critical infrastructure services for more than 1 day per year | Measure of improved resiliency from extreme events | (Previous year number of incidents or expenditures)- (Current year number of incidents or expenditures) | Electricity grid reliability (SAIFI and CAIDI), Water mains breaks, Transportation (highway emergency repairs, flight delays, ice jam incidents) | Utility (electricity, water) required reporting; county or region transportation expenditures | Variant of Secondary indicator |

ADAPTATION
NYSERDA Indicator Evaluation

| Indicator | Evaluation Criteria (Weight) | | | | | General Notes |
|--|--------------------------------------|--|----------------------------------|-----------------------|---------------|---------------|
| | Consistent with NYSERDA Guidance (3) | Consistent with Regional Performance Measure (1) | Favored by Stakeholder Group (2) | Data Availability (2) | Summary Score | |
| Reduction in number of reported customers with power outages | 0 | 2 | 5 | 3 | 18 | |
| Reduction in energy expenditures (by sector and fuel type) | 0 | 2 | 5 | 2 | 16 | |
| Increase in total cash receipts for crops and livestock | 0 | 2 | 5 | 3 | 18 | |
| Reduction in highway infrastructure landslide repair | 0 | 2 | 2 | 1 | 8 | |
| Reduction in Total Debris (in tons) per hurricane | 0 | 2 | 2 | 1 | 8 | |
| Reduction in landslide incidences | 0 | 2 | 2 | 1 | 8 | |
| Reduction in Storm damage assessment | 0 | 2 | 2 | 3 | 12 | |
| Reduction on Repetitive Loss Properties from Floods, Hurricanes, Earthquakes | 0 | 2 | 2 | 3 | 12 | |
| System Average Interruption Frequency Index | 6 | 1 | 5 | 3 | 35 | |
| Flood zones- economic value of property vulnerable to floods/storm surges | 6 | 1 | 2 | 3 | 29 | |
| Reduction in Miles of transport routes, electric circuits, rail and other critical infrastructure threatened by floods/sea level rise in next 50/100 years | 6 | 1 | 2 | 3 | 29 | |
| Discussion of climate change and adaptation in Hazard Mitigation Plans | 6 | 1 | 4 | 3 | 33 | |
| Flood zones - communities participating in NFIP Community Rating System | 6 | 1 | 2 | 3 | 29 | |
| Reduction in Number of Sanitary and Combined Sewer Overflows | 6 | 1 | 3 | 3 | 31 | |
| Reduction in Agricultural economic losses attributable to temperature, drought, flooding | 5 | 1 | 5 | 3 | 32 | |
| Percentage of regional water supply governed by "rule curves" (where rule curves are graphs of water levels used to regulate water level to manage demand for navigation levels, reliable water supply, and critical habitats) | 5 | 1 | 2 | 3 | 26 | |
| Reduction in Number of people living in floodplains | 5 | 1 | 2 | 3 | 26 | |
| Reduction in Insurance premium rates or Number of flood insurance claims | 5 | 1 | 2 | 3 | 26 | |
| Increase in Number of cooling center and ozone action programs | 5 | 1 | 2 | 3 | 26 | |
| Increased Proportion of land conserved to total land | 1 | 1 | 5 | 3 | 20 | |
| Reduction in # of residents put at risk from loss of at least one critical infrastructure services for more than 1 day per year | | | | | 0 | |

ADAPTATION

Place-Sourced Indicator Evaluation

| Indicator | Evaluation Criteria | | | | | | | | | | Summary Score | General Notes | | |
|--|-----------------------------------|---|----------------------------------|---------------------------------|-------------------------------------|-----------|------------|-----------------------------|---|------------------------------|---------------|---------------|----|--|
| | Enrichment of 5 Capitals: Natural | Enrichment of 5 Capitals: Built /Manufactured | Enrichment of 5 Capitals: Social | Enrichment of 5 Capitals: Human | Enrichment of 5 Capitals: Financial | Diversity | Resiliency | Life cycle cost and benefit | Region's ability to leverage its unique Story of Place - Innovation "Accelerator" | Favored by Stakeholder Group | | | | |

ADAPTATION

Recommended INDICATORS

| NYSERDA Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
|---|--|--|---|--|--|
| Discussion of climate change and adaptation in Hazard Mitigation Plans | Indicates awareness of climate change in hazard risk analysis | No calculation needed; NYSERDA Indicator 7C, p. 15 | County level - Multi-Hazard Mitigation Plans | 0 out of 9 plans (Note: No information on Ontario County Plan) | |
| Place-Sourced Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
| Reduction in Agricultural economic losses attributable to temperature, drought, flooding | Indicates vulnerability of agriculture sector to climate change impacts | Annualized Loss % = (Damage Totals (Crops)/Years) / Total State Cash Receipts (Crops) | Total annual agriculture economic loss as covered by agriculture insurance programs | Currently not available at county/regional level | Each farm reports data on direct losses or a loss factor to the state. The finer grained information isn't readily available from NY State Agriculture Dept. or USDA, but should be requested to make a baseline from each county, and aggregated to a regional indicator. |
| | Example: Agriculture losses From hail (2007) by county | Annualized Loss % = (Damage Totals (Crops)/Years) / Total State Cash Receipts (Crops) | NY State Hazard Mitigation Plan, Table 3-41; \$1.1 M USD | | |
| | Example: NY State payments for Supplemental and Ad Hoc Disaster Assistance | x = Percentage of Supplemental and Adhoc Disaster Assistance / Net Farm Income | USDA Economic Research Services; 1) Farm Income and Wealth 2) Percentage of Supplemental and Adhoc Disaster Assistance, http://www.ers.usda.gov/data-products/farm-income-and-wealth-statistics.aspx#27428 ; \$3.4 M, 15% of farm net income | | |
| Reduction in # of residents put at risk from loss of at least one critical infrastructure services for more than 1 day per year | Number of residents experiencing loss of electricity, water and/or transportation services (as calculated from: 1) Electricity grid reliability (SAIFI and CAIDI), 2) Water mains breaks, 3) Transportation emergency repairs/incidents) | SAIFI (System Average Interruption Frequency Index)= (total number of customer interruptions/total number of customers served) | | Currently not available at county/regional level | Currently only tracked at state level, each utility has individual reporting. Typically reported to Public Service Commission (PDC). Should be collected at county level - potential data sources: Electric - http://nyssmartgrid.com/wp-content/uploads/2012/09/reliability-study.pdf Water - e.g. Monroe County (http://www.mcwa.com/AboutMCWA/HowWeMeasureUp.aspx); Should add #customers without water service; should add duration of water service interruption Transportation - e.g. Yates County Hazard Mitigation Plan, Section 5, p. 23, Table 5-14 (http://www.yatescounty.org/upload/12/4148.pdf) and GTC TransAlert notices; Should be collected at town/county level; should add #residents affected; should add duration of transportation service interruption |
| | | CAIDI (Customer Average Interruption Duration Index) = (sum of all customer interruption durations/total number of customer interruptions) | | | |
| | | Water main breaks per 100 miles of piping | | | |
| | | Estimated highway infrastructure and landslide repair (total road miles, est road miles in steep areas, estimated per mile repair) | | | |

APPENDIX D: BASELINE ASSESSMENT DOCUMENTATION

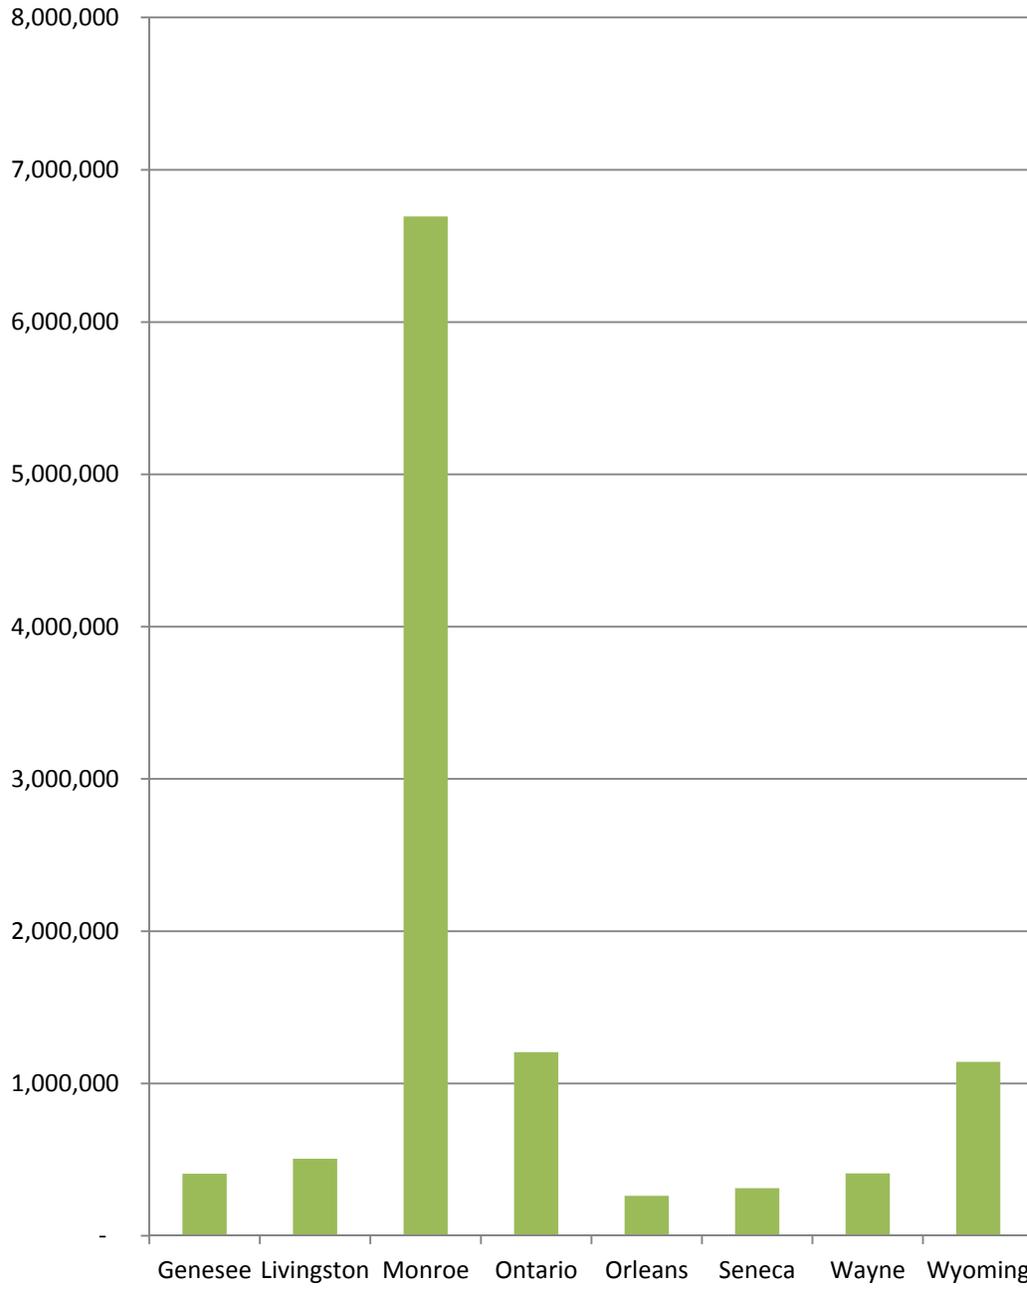

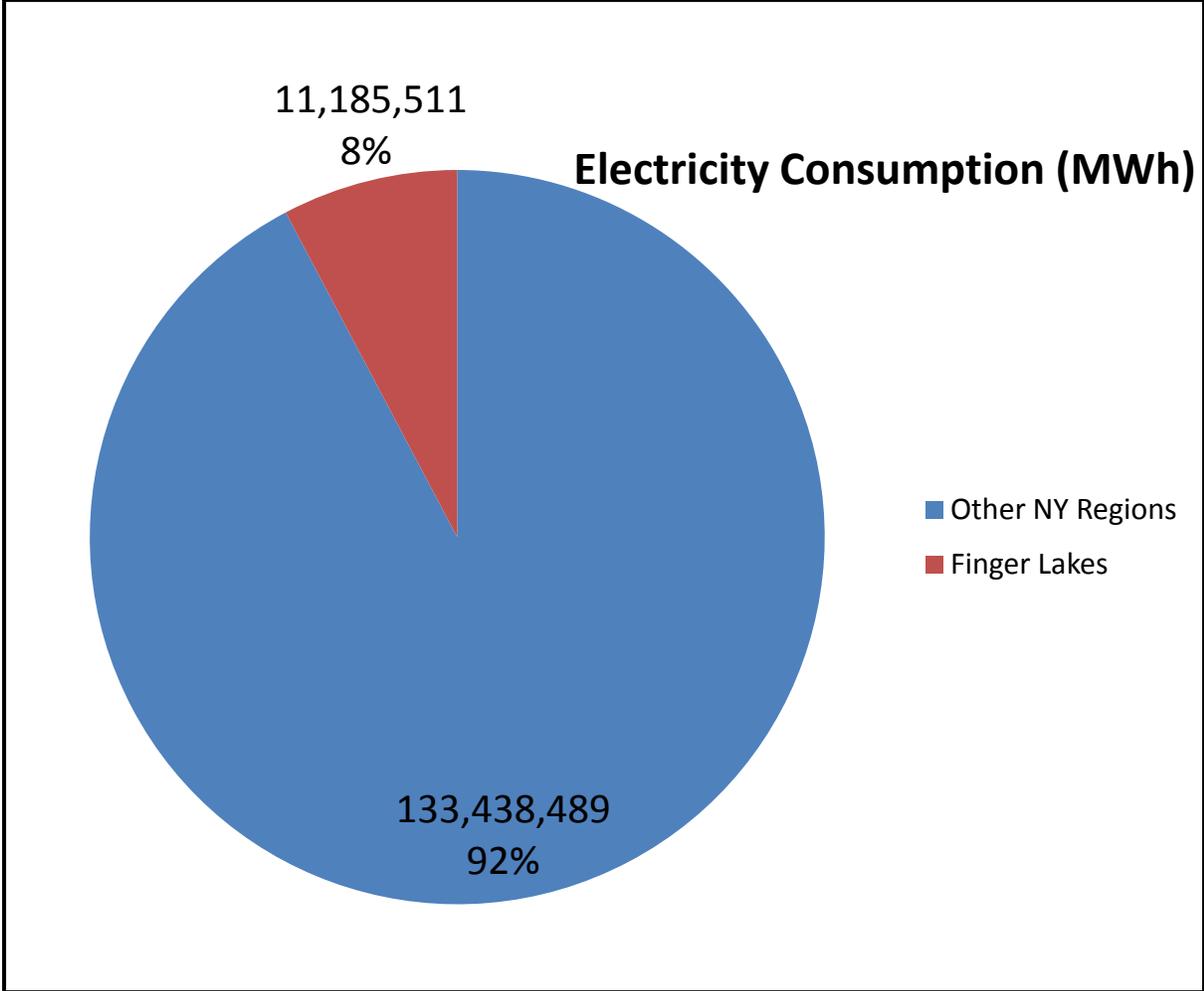

Energy Baseline

| Population* | | % of State | % of Region |
|-----------------------|-------------------|-------------------|--------------------|
| New York State | 19,378,102 | | |
| Finger Lakes | 1,217,156 | 6.28% | |
| Genesee | 60,079 | 0.31% | 4.94% |
| Livingston | 65,393 | 0.34% | 5.37% |
| Monroe | 744,344 | 3.84% | 61.15% |
| Ontario | 107,931 | 0.56% | 8.87% |
| Orleans | 42,883 | 0.22% | 3.52% |
| Seneca | 35,251 | 0.18% | 2.90% |
| Wayne | 93,772 | 0.48% | 7.70% |
| Wyoming | 42,155 | 0.22% | 3.46% |
| Yates | 25,348 | 0.13% | 2.08% |

*US Census 2010

Electricity Consumption (MWh)

Electricity Consumption Vs. Generation

| | |
|---|-------------------|
| Total kwh consumption estimate for Finger Lakes in 2010: | 11,185,511 |
| Total kwh consumption + Grid Loss estimate for Finger Lakes in 2010: | 11,836,507 |
| Total kwh generated in Finger Lakes in 2010: | 7,001,975 |
| Total estimated kwh imported into Finger Lakes in 2010: | 4,834,532 |

Electricity Consumption and Customers

| | | Volume energy sales 2010 (kwh) | | | | | # of customers 2010 |

B08301: MEANS OF TRANSPORTATION TO WORK - Universe: Workers 16 years and over
2006-2010 American Community Survey 5-Year Estimates

As per step by step instructions noted in Common sustainability Indicator Document (page 6)
1-year or 3-year estimate not available for all 9 counties

B08301: MEANS OF TRANSPORTATION TO WORK - Universe: Workers 16 years and over
 2006-2010 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, for 2010, the 2010 Census provides the official counts of the population and housing units for the nation, states, counties, cities and towns. For 2006 to 2009, the Population Estimates Program provides intercensal estimates of the population for the nation, states, and counties.

| Walked | 3,962,070 | +/-17,751 |
| Other means | 1,215,986 | +/-13,285 |
| Worked at home | 5,759,724 | +/-19,688 |

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Workers include members of the Armed Forces and civilians who were at work last week.

While the 2006-2010 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2006-2010 American Community Survey

Explanation of Symbols:

1. An "" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An "" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An "" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS

estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Workers include members of the Armed Forces and civilians who were at work last week.

While the 2006-2010 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2006-2010 American Community Survey

Explanation of Symbols:

1. An "" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An "" entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An "" following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An "" following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An "" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An "" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An "" entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

2A Required Indicator - Transportation
Annual Vehicle Miles Traveled per Capita

From GHG Inventory:

| | |
|---------------------|----------------------------|

Median household income from 2008-2010 ACS 3-year Estimate

* in past 12-months (2008-2010 ACS 3-year Estimate)

Average Annual Transportation Costs from H&T Index website

H&T Index info - concern with this dataset is the lack of regional household income data

<http://htaindex.cnt.org>

Calculated by Census group blocks

Subset of data provided as part of the H&T Affordability Index

Start with any county in the find box at the top to narrow down region

Select Transportation Costs % of Income

In the pull down menu to the right, select Summary Table of Statistics

Choose each County in the Region pull down menu

2009 ACS is main dataset

B19013: MEDIAN HOUSEHOLD INCOME IN THE PAST 12 MONTHS (IN 2010 INFLATION-ADJUSTED DOLLARS) - Universe: Households
2008-2010 American Community Survey 3-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, for 2010, the 2010 Census provides the official counts of the population and housing units for the nation, states, counties, cities and towns. For 2008 to 2009, the Population Estimates Program provides intercensal estimates of the population for the nation, states, and counties.

| | Genesee County, New | | Livingston County, New | | Monroe County, New | | Ontario County, New | | Orleans County, New | | Seneca County, New | | Wayne County, New | | Wyoming County, New | | Yates County, New | |
|--|---------------------|-----------------|------------------------|-----------------|--------------------|-----------------|---------------------|-----------------|---------------------|-----------------|--------------------|-----------------|-------------------|-----------------|---------------------|-----------------|-------------------|-----------------|
| | Estimate | Margin of Error | Estimate | Margin of Error | Estimate | Margin of Error | Estimate | Margin of Error | Estimate | Margin of Error | Estimate | Margin of Error | Estimate | Margin of Error | Estimate | Margin of Error | Estimate | Margin of Error |
| Median household income in the past 12 | 50,372 | +/-2,009 | 52,263 | +/-1,938 | 50,868 | +/-618 | 56,390 | +/-2,072 | 47,488 | +/-3,585 | 47,092 | +/-2,430 | 52,307 | +/-1,730 | 48,549 | +/-2,725 | 46,509 | +/-4,528 |

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The methodology for calculating median income and median earnings changed between 2008 and 2009. Medians over \$75,000 were most likely affected. The underlying income and earning distribution now uses \$2,500 increments up to \$250,000 for households, non-family households, families, and individuals and employs a linear interpolation method for median calculations. Before 2009 the highest income category was \$200,000 for households, families and non-family households (\$100,000 for individuals) and

portions of the income and earnings distribution contained intervals wider than \$2,500. Those cases used a Pareto Interpolation Method.

While the 2008-2010 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An "" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An "X" entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An "L" following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An "U" following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An "" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An "C" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An "N" entry in the estimate and margin of error columns indicates that

data for this geographic area cannot be displayed because the number of sample cases is too small.

8. An "(X)" means that the estimate is not applicable or not available.

Place-Sourced Indicator
Freight tonnage - Truck vs Rail

NOTE: Centers were defined as all cities and villages, and certain Census Defined Places (CDPs) Included CDPs have a well defined geographic layout, a mix of land uses (commercial and civic mixed with residential), and distinct edges.

Materials/Waste Management Baseline

MATERIALS AND WASTE MANAGEMENT
Recommended INDICATORS

| NYSERDA Indicators | Description | Calculation | Data Required/Source | Baseline Value (2010) | General Notes |
|---|--|---|---|--|--|
| Total regional solid waste generated per year | This indicator provides an overall view of the region's contribution to waste, including municipal solid waste (MSW), industrial, construction and demolition, and bio solid waste. It is listed as a NYSERDA indicator because it is directly related to 4A Common Indicator. | MSW + Industrial Non-Hazardous + C&D + Bio Solids per municipality in region per year [solid waste generated per capita = total regional solid waste generated per year / regional population] [Note: Important to eventually include waste coming into the region] | Total MSW, industrial non-hazardous solid waste, C&D, bio solids, and tires generated and imported per year; Population of region. Sources: County and regional solid waste management authorities (planning units); NYS DEC | Total Estimated Solid Waste Generated Within Region: ~8,455,238 tons. Broken down into categories (tons): MSW 5,392,542 (Paper 1,758,332, Metal 371,509, Plastics 757,576, Glass 236,170, Organics 1,222,906, Textiles 279,306, Wood 188,181, Miscellaneous 578,562), Industrial Non-Hazardous Wastes 217,688, C&D Debris 2,809,957, Bio solids 22,214, Tires 13,378 | The baseline values here have been calculated using an "industry-standard" approach (see associated supporting documentation). This is a critical data need that will have to be further developed to include some non-hazardous industrial/commercial waste that may be unique to the region. Eventually there will be a need to discern how much waste entering the region's disposal facilities (i.e., landfills) is coming from outside the region. An intensive effort with the support of the State of New York will need to ensue to secure information from private landfills regarding an accurate accounting of incoming waste from outside the region. Last, there are other wastes for which baseline values might have to be developed depending on whether they become target items for planning purposes. These include but are not limited to: Carcasses, Manure and other Agricultural Waste; Regulated Medical Waste; and Industrial Hazardous Waste. A thorough waste characterization study diving into subcategories of commodities will be essential for future planning purposes. In addition, when baseline data is developed as noted above for materials coming into regional landfills from outside the Finger Lakes Region, that data set will need to be broken down by category similar to those noted in the baseline value description here. This indicator provides the ability to look at each component of the waste/discard stream and develop |
| Total regional solid waste diverted (not landfilled, incinerated, or exported) per year | This indicator provides a view to the effectiveness of reduction, recycling and sustainable discard management initiatives. It is listed as a NYSERDA indicator because it is directly related to 4B Common Indicator. | Total regional solid waste diverted (not landfilled, incinerated, or exported) per year / population of region [important to calculate a diversion per capita] | Total regional solid waste generated and imported per year; Total regional solid waste that is diverted per year (including diverted out of the region); Population of region. Sources: County and regional solid waste management authorities (planning units); NYS DEC. | MSW Materials Recycled in Region (2008): 197,930 tons | It is important to note two things: 1) the baseline value noted is the only available baseline information about materials diverted (in this case, MSW through recycling data captured in the region) and as such, baseline data is needed for materials reduced, reused, recycled and/or composted for other materials in addition to MSW (such as bio solids, tires, etc.), and 2) as noted earlier, baseline data for MSW is needed for amounts reduced, reused, and composted. There is a need to capture materials reduced through measures such as policy initiatives (source reduction, product stewardship, etc.), materials reused in unique manners (such as through a shadow economy), and items recycled and reused—all based on the agreed upon baseline waste generation number. It is recommended that 2013 be the base year to collect data on reduction, reuse, composting and recycling, using the 2008 baseline number (the best available) as a starting point. |

**Finger Lakes Sustainability Plan: Materials and Waste Management –
Baseline Data Calculations Supporting Documentation**

NYSERDA Indicators:

1. Total Regional and Per Capita Solid Waste Generated Per Year

Total Estimated Solid Waste Generated Within Region:

8,455,238 tons

This number is a total of all the numbers listed below not including the number for *Total Solid Waste Landfilled in the Finger Lakes Region* (as explained below). It is the higher-end of the estimate using the bigger of the two *C&D Waste* numbers below.

Projected 2010 Regional Municipal Solid Waste Generated:

5,392,001 tons

2010 regional population of 1,217,156 multiplied by the national average MSW generation rate of 4.43 pounds per person per day equaling 5,392,001 tons of total municipal solid waste generated in the region.

- Population data is per the US Census and is detailed for each of the nine counties in the attached Excel spreadsheet.
- MSW generation rate is sourced from the US EPA at www.epa.gov/epawaste/nonhaz/municipal/index.htm (attached), which is the recognized industry-standard source for per capita waste generation data.
- MSW does not include other components of the waste stream, as noted below.

Estimated 2008 Non-hazardous Industrial Waste Generated:

217,688 tons

- This is based on a 0.98 pounds per person per day estimated statewide average calculated from NYS DEC statewide 2008 total of 3.5 million tons from data closest to 2010 base year.
- This NYS DEC data is developed from information provided by "planning units" (county/municipal governments, solid waste authorities, solid waste disposal facilities, etc. from across the state, including the Finger Lakes Region, and is captured in the State's *Beyond Waste* solid waste management plan and associated appendices (all attached).
- Calculations were derived from data starting on page 115 of the aforementioned plan.

Estimated 2008 C&D Waste Generated:

1,088,442 to 2,809,957 tons

- This is based on a 4.9 to 12.65 pounds per person per day estimated statewide average calculated from NYS DEC statewide 2008 range from 17.5 to 45 million total tons from data closest to 2010 base year.
- This NYS DEC data is developed from information provided by "planning units" (county/municipal governments, solid waste authorities, solid waste disposal facilities, etc. from across the state, including the Finger Lakes Region, and is captured in the State's *Beyond Waste* solid waste management plan and associated appendices (all attached).
- Calculations were derived from data starting on page 106 of the aforementioned plan.

Estimated 2008 Biosolids (Sewage Sludge) Generated:

22,214 tons

- This is based on a 0.1 pounds per person per day estimated statewide average calculated from NYS DEC statewide 2008 total 353,000 total dry tons from data closest to 2010 base year.
- This NYS DEC data is developed from information provided by "planning units" (county/municipal governments, solid waste authorities, solid waste disposal facilities, etc. from across the state, including the Finger Lakes Region, and is captured in the State's *Beyond Waste* solid waste management plan and associated appendices (all attached).
- Calculations were derived from data starting on page 102 of the aforementioned plan.

Estimated 2008 Tires Generated:

13,378 tons

- This is based on a 0.06 pounds per person per day estimated statewide average calculated from NYS DEC statewide 2006 total of 200,000 tons from data closest to 2010 base year.
- This NYS DEC data is developed from information provided by "planning units" (county/municipal governments, solid waste authorities, solid waste disposal facilities, etc. from across the state, including the Finger Lakes Region, and is captured in the State's *Beyond Waste* solid waste management plan and associated appendices (all attached).
- Calculations were derived from data starting on page 105 of the aforementioned plan.

Total Solid Waste Received by Landfills in the Finger Lakes Region:

5,064,414.34 tons

- This NYS DEC data is developed from information provided by landfills in the Finger Lakes Region (see attached breakdown in Excel spreadsheet).
- This number includes waste landfilled that was both generated within the region, and imported into the region. More detailed analysis needs to take place to better quantify the source of landfilled material.

Place Sourced Indicators:

2. *Total Regional Solid Waste Diverted after Reduction (not Landfilled, Incinerated, or Exported) per Year / Population of Region*

- See calculation description for indicator one above.
- **MSW Materials Recycled in Region (2008):** 197,930 tons is derived from data provided by planning units in the Finger Lakes Region to the NYS DEC as captured in its *Beyond Waste* plan (attached), and detailed in the attached Excel spreadsheet.

Note: Please see attached data compilation on a county-by-county basis for the region. The same formulas and calculation protocol were used to complete this county-level data set.

Municipal Solid Waste

Municipal Solid Waste (MSW)—more commonly known as trash or garbage—consists of everyday items we use and then throw away, such as product packaging, grass clippings, furniture, clothing, bottles, food scraps, newspapers, appliances, paint, and batteries. This comes from our homes, schools, hospitals, and businesses.

Each year EPA produces a [report on MSW generation, recycling, and disposal](#).

In 2010, Americans generated about 250 million tons of trash and recycled and composted over 85 million tons of this material, equivalent to a 34.1 percent recycling rate. On average, we recycled and composted 1.51 pounds of our individual waste generation of 4.43 pounds per person per day (Figure 1 and Figure 2).

EPA encourages practices that reduce the amount of waste needing to be disposed of, such as waste prevention, recycling, and composting.

Source

[reduction](#), or waste prevention, is designing products to reduce the amount of waste that will later need to be thrown away and also to make the resulting waste less toxic.

[Recycling](#) is the recovery of useful materials, such as paper, glass, plastic, and metals, from the trash to use to make new products, reducing the amount of new raw materials needed.

Composting

involves collecting organic waste, such as food scraps and yard trimmings, and storing it under conditions designed to help it break down naturally. This resulting compost can then be used as a natural fertilizer.

In 2010,

Figure 2. MSW Recycling Rates, 1960-2010

* Does not include combustion (with energy recovery).

** Mechanical papers include directories, newspaper inserts, and some advertisement and direct mail printing.

[+ View information in text format](#)

[+ View enlarged image](#)

newspaper/mechanical papers recovery was about 72 percent (7 million tons), and about 58 percent of yard trimmings were recovered (Figure 3). Total MSW generation in 2010 was 250 million tons. Organic materials continue to be the largest component of MSW. Paper and paperboard account for 29 percent and yard trimmings and food scraps account for another 27 percent. Plastics comprise 12 percent; metals make up 9 percent; and rubber, leather, and textiles account for 8 percent. Wood follows at around 6 percent and glass at 5 percent. Other miscellaneous wastes make up approximately 3 percent of the MSW generated in 2010 (Figure 4).

This section describes the requirements for disposal and combustion of Municipal Solid Waste:

Landfills are engineered areas where waste is placed into the land. Landfills usually have liner systems and other safeguards to prevent polluting the groundwater.

[Energy Recovery from Waste](#) is the conversion of non-recyclable waste materials into useable heat, electricity, or fuel. [Share](#)

[Combustion](#) of MSW is done to reduce the amount of landfill space needed.

[Transfer Stations](#) are facilities where municipal solid waste is unloaded from collection vehicles and briefly held while it is reloaded onto larger, long-distance transport vehicles for shipment to landfills or other treatment or disposal facilities.

Resource Conservation

Recycling and composting prevented 85.1 million tons of material away from being disposed of 2010, up from 15 million tons in 1980. This prevented the release of approximately 186 million metric tons of carbon dioxide equivalent into the air in 2010—equivalent to taking 36 million cars off the road for a year. Learn more about how [common wastes and materials](#), including food and yard wastes, paper, metals, and electronics, contribute to MSW generation and how they can be recycled.

Water Management Baseline

Water Use by Category in the Finger Lakes Region: USGS Water Use County Data

DATA SOURCE: <http://water.usgs.gov/watuse/data/2005/index.html>

This chart is a modified version of the USGS' "Water Use County Data". This chart displays only the counties in the region and only the data used for the selected indicators. Other calculations have been added to the chart. The upper chart contains selected portion of the raw USGS data. The the lower chart contains the calculated values for the indicators.

| STATE | STATEFIPS | COUNTYFIPS | FIPS | Total population of county, in thousands | Public Supply, total withdrawals, fresh, in Mgal/d | Domestic, deliveries from Public Supply, in Mgal/d | Irrigation, total withdrawals, fresh, in Mgal/d | Total withdrawals, fresh, in Mgal/d | |

% of Beach WQ Samples Exceeding State Thresholds

<http://www.nrdc.org/water/oceans/ttw/ny.asp#>

This indicator is a reporting of the data collected by the NRDC. The data within the region is averaged.

DATA YEAR 2011

| BEACH | COUNTY | MONITORING FREQUENCY (per week) | TOTAL SAMPLES REPORTED | PERCENTAGE of SAMPLES EXCEEDING STATE THRESHOLDS | # DAYS WITH NOTIFICATIONS |
|---------------------|--------|---------------------------------|------------------------|--|---------------------------|
| Hamlin | Monroe | 1 | 94 | 18% | 3 |
| Ontario | Monroe | 7 | 270 | 30% | 38 |
| Durand | Monroe | 7 | 84 | 20% | 28 |
| Sodus Point Bayside | Wayne | 0.5 | 7 | 0% | 0 |

| | |
|----------------|------------|
| AVERAGE | 17% |
|----------------|------------|

Reported Sources of Beachwater Contamination
(number of closing/advisory days; includes reported sources of advisories and closures that were issued for non-contamination-related reasons, if any)

- 1,612 (88%) stormwater runoff
- 294 (16%) sewage spills/leaks
- 159 (9%) unknown contamination sources
- 33 (2%) other contamination sources
- 15 (1%) wildlife

Totals exceed total days and 100% because more than one contamination source was reported for some events.

Number of Impaired Waters with Established TMDL Requirements Removed From the Program
<http://www.dec.ny.gov/chemical/23835.html>

This indicator is calculated by identifying the number of waterbodies for which the TMDL requirements have been removed since the baseline conditions was established.

TMDLs Established in the Study Area

| | Watercourse | County | Pollutant | Year Implemented |
|---|--------------------------------|---------|------------|------------------|
| 1 | Blind Sodus Bay | Wayne | Phosphorus | 2007 |
| 2 | Buck, Long and Cranberry Ponds | Monroe | Phosphorus | 2010 |
| 3 | Silver lake | Wyoming | Phosphorus | 2010 |
| 4 | Lake Ontario | | PCBs | 2011 |
| 5 | Port Bay | Wayne | PCBs | 2011 |

| | |
|---|--|
| 3 | Number of waterbodies with established TMDLS at baseline |
|---|--|

Concentrations of Pollutants in the Finger Lakes

<http://people.hws.edu/halfman/FL-Lim/FL-Limnology.htm>

The reported statistics are the averages of total Phosphate and Total Nitrate concentrations at the surface and lake bottoms for Honeoye, Canandaigua, Kueka, Seneca, and Cayuga Lakes. Because each lake is influenced by watersheds in more than one county, this data should not be considered at the county level.

2010 Average Values ($\pm 1\sigma$)

| | Honeoye | | Canandaigua | | Keuka | | Seneca | | Cayuga | | Owasco | | Skaneateles | | Otisco | |

(P) = Preliminary

Employment information--by place of work--is based on quarterly reports from employers covered under New York State's Unemployment Insurance Law. Data by industry (using the new NAICS classification system) include employment; total annual and average weekly wages; and, the number of establishments. Data are available for New York State, metropolitan areas, and counties (State law prohibits us from disclosing information that would reveal the identity of individual employers). Data are available about six months following the end of the reported quarter--they are less current than non-farm employment estimates.

Agriculture & Forestry Baseline

Finger Lakes Sustainability Plan: *Agricultural and Forestry Indicators*

Context and background

The agricultural and forestry sectors within the Finger Lakes region are critically important sources of economic development and ecological services. Their influence on the region is immediately apparent: the appearance of both working and undeveloped lands (including some 1,518,285 acres of agricultural land and 1,095,243 acres of forest) defines the visual character of the region; the large expanses they occupy contribute to the rural social dynamic; their products are ingrained in the daily lives of residents. Beyond their contribution to the regional character, these two sectors are also essential components of long-term environmental, economic, and social sustainability. From carbon capture, to water quality, biodiversity, and employment, agriculture and forestry bring substantial advantages to the region as it seeks to maximize opportunity and equity while safeguarding its natural resources.

Among those advantages are the breadth and depth of both sectors. Agricultural producers range from large to small operations, growing a wide variety of products for both local consumption and export. While fewer forestry operations exist in the region, the extent of the forest resource is substantial. From grapes and milk to lumber and firewood, their traditional products are staples of the regional economy, and their niche products show promise for continued growth. These producers have a history of adapting to the conditions they face, whether that means matching crop types to soil types or responding to short- and long-term changes in the marketplace. The qualities of diversity and adaptability can only serve to strengthen future efforts toward greater resilience in the face of climate change.

One example of that adaptation is evident in the shift toward a food system that values locally-produced, high-quality foods, fibers, and feed. Renewed attention toward locally-sourced products is creating new opportunities for development while strengthening economic and social connections in both rural and urban communities. Agricultural and forestry operations are increasingly viewed as producing value beyond their respective end products; they are stewards of the land, air, and water, and lynchpins of the regional identity.

Although these sectors may be well-positioned to help the region achieve a sustainable future, they are not without their risks and vulnerabilities. Industry consolidation has created an atmosphere of instability, especially for smaller operations struggling to make ends meet. Uncertainty about the future of the sector continues to prevent new operators from entering the market, and contributes to the conversion of land as aging operators make their exit from it. Although the potential for large new markets, e.g. carbon or pollutant trading, could represent immense opportunity for both the agricultural and forestry sectors, their development has been sluggish at best.

As the public dialogue surrounding climate change and community resilience continues, several indicators within these two sectors will help to indicate regional progress toward sustainable outcomes. This baseline assessment examines the most recent data available to describe the state of agriculture and forestry through the lens of eight such indicators. These indicators were selected from a range of potential measures according to a series of criteria influenced by agency goals and regional priorities. Each indicator shares three basic characteristics: an ability to inform policy and investment; a reliance on existing and publicly available data; and a high degree of replicability, so that trends can be assessed on an ongoing basis.

Agricultural indicators

Selection

The selection of agricultural indicators began with consultation between the project team, regional stakeholders, and national experts in the field of sustainable agricultural development. Conversations and meetings with stakeholder groups reflected their vision of a sustainable agricultural sector, based on the following principles:

- Regionally-produced food takes priority;
- Self-reliant land-based enterprises should be supported;
- Restorative and regenerative practices should be encouraged;
- Biodiversity provided by small and medium sized farms should be valued and fostered;
- Responsible farm stewardship should be encouraged;
- Local agricultural needs and resources should be synchronized; and
- Community identity should be reinforced.

Several organizations and individual professionals in the agricultural sector were also consulted throughout this process, and their input provided valuable insight into the current and future states of agriculture and sustainability. These include, but are not limited to, the following:

- The Sustainable Agriculture Research and Education (SARE) program, a decentralized competitive grant-making and educational program supported by the U.S. Department of Agriculture's National Institute of Food and Agriculture. SARE invests in research and education with the aim of achieving agricultural innovations that improve profitability, stewardship, and quality of life. Representatives of SARE's Northeast region were consulted for this research.
- ATTRA, the National Sustainable Agriculture Information Service. ATTRA is managed by the National Center for Appropriate Technology (NCAT), and funded primarily through a cooperative agreement with the United States Department of Agriculture's Rural Business-Cooperative Service. ATTRA provides technical assistance to agricultural producers, extension services, and others involved in sustainable agriculture.
- Dr. David Wolfe of Cornell University's Department of Horticulture, and Dr. Jeffrey Midler, a Visiting Fellow at the Department of Natural Resources. Dr. Wolfe, the Chair of the Climate Change Focus Group at the Atkinson Center for a Sustainable Future and a professor of plant and soil ecology, led the agriculture and ecosystems sections of the ClimAID report recently released by the New York State Energy Research and Development Authority (NYSERDA).
- Kate Mendenhall and Elizabeth Henderson of the Northeast Organic Farming Association of New York (NOFA-NY). NOFA-NY represents the interests of consumers, gardeners, and farmers working toward a sustainable food system throughout the region, focusing on both the ecological and economic viability of the system.
- Gary Burley, co-owner with his wife Betty, of East Hill Farm in Warsaw, Wyoming County, New York. The Burley family milk and graze over 700 dairy cows on a 1,600 acre farm, of which over 1,200 acres is managed as pasture.
- Marilyn Wyman, Agroforestry Program Coordinator and Extension Educator, Cornell Cooperative Extension, Greene County.

The assistance of these regional experts and the input provided by the stakeholder groups was instrumental in sifting through various potential indicators, both those provided by NYSERDA guidance documents and those that were created throughout the planning process. The selected indicators described below examine the protection or conversion of agricultural land, the development of the local food system, the use of agricultural inputs, and the diversity of agricultural production.

Indicator analysis and baseline conditions

Ag1: Acres of High-Quality Agricultural Land in Non-Agricultural Use

This indicator describes the state of agriculture throughout each of the nine counties in terms of the amount of high-quality agricultural land that is dedicated to non-agricultural purposes. The conversion of this land for non-agricultural uses (e.g. residential, commercial, or industrial development) poses several threats to the sustainability of the agricultural sector and to the region as a whole. These threats include, but are not limited to, the following:

- Decreased supply of agricultural land increases the price of the remaining land, which often prevents new farmers from entering the marketplace. Land conversion can also prevent existing operations from growing, as agricultural land becomes either economically inaccessible (i.e. too expensive) or geographically inaccessible (i.e. too far away from existing farms).
- Decreased supply of agricultural land also harms the long-term viability of the businesses that support agricultural operations (e.g. equipment supply and repair, seed sales, distribution networks, large animal veterinary services), as well as those that are supported by it (e.g. yogurt production, agritourism). In many cases, this cycle reinforces itself; fewer farms require fewer services, and as service availability decreases so too does the viability of the remaining agricultural operations.
- Encroachment of non-agricultural uses into primarily agricultural areas can result in land use conflicts, particularly in areas located outside of Agricultural Districts (which provide greater legal protection of agricultural practices).
- Most conversion of agricultural land will increase impervious land cover; the greater the intensity of conversion (e.g. farmland to strip mall), the greater the increase. Increased impervious cover results in several negative impacts to both the quality and quantity of stormwater runoff.

The analysis of land conversion consists of a spatial comparison between moderate- to high-quality agricultural soils and intensely developed land. The USDA Natural Resource Conservation Service (NRCS) describes the productive capacity of soil types through its Land Capability Classification system, which features eight classes as described below¹:

- *Class I* soils have slight limitations that restrict their use.
- *Class II* soils have moderate limitations that reduce the choice of plants or require moderate conservation practices.
- *Class III* soils have severe limitations that reduce the choice of plants or require special conservation practices, or both.
- *Class IV* soils have very severe limitations that restrict the choice of plants or require very careful management, or both.
- *Class V* soils have little or no hazard of erosion but have other limitations, impractical to remove, that limit their use mainly to pasture, range, forestland, or wildlife food and cover.
- *Class VI* soils have severe limitations that make them generally unsuited to cultivation and that limit their use mainly to pasture, range, forestland, or wildlife food and cover.

¹ U.S. Department of Agriculture, Natural Resources Conservation Service (USDA NRCS). 2012. National Soil Survey Handbook, Title 430-VI. Available at: <http://soils.usda.gov/technical/handbook/>. Accessed November, 2012.

- *Class VII* soils have very severe limitations that make them unsuited to cultivation and that restrict their use mainly to grazing, forestland, or wildlife.
- *Class VIII* soils and miscellaneous areas have limitations that preclude their use for commercial plant production and limit their use to recreation, wildlife, or water supply or for esthetic purposes.

For the purposes of this analysis, Class I and II soils are assumed to represent high-quality agricultural land, as these two classes feature the least restrictive growing environment². Non-agricultural uses are represented by areas of low, medium, and high development intensity as determined by the USDA CropScape Cropland Data Layer (CDL)³. The CDL is a remotely sensed aerial image of all vegetated and developed land, and is available for each year between 1997 and 2011.

Calculation:

(Class I soils [ac] + Class II soils [ac]) – (Low-intensity developed land [ac] + Medium-intensity developed land [ac] + High-intensity developed land [ac])

| Required Data | Definition | Dataset Reference |
|--------------------------------------|---|--|
| Land Capability Classes (geospatial) | Location of Land Capability Classes I and II, as defined by USDA soil survey | USDA Web Soil Survey: http://websoilsurvey.nrcs.usda.gov/app/HomePage.htm |
| Developed land (geospatial) | Location of low-intensity, medium-intensity, and high-intensity development, as defined by USDA Cropland Data Layer | USDA CropScape: http://nassgeodata.gmu.edu/CropScape/ |

Additional comments:

As a measure of agricultural soil suitability, Land Capability Classification was chosen instead of the more common Farmland Classification (e.g. prime farmland, prime if drained, soils of statewide importance, etc.). This is primarily due to the exclusion of developed land within the Farmland Classification system. As defined in the USDA NRCS soil survey handbook, “prime farmland is designated independently of current land use, but it cannot be areas of water or urban or built-up land as defined for the National Resource Inventories.”⁴ In contrast, the Land Capability Classification does consider the agricultural suitability of much of the developed lands in the region (though generally not those located in the densest of urban core areas).

² It is noted that other state or local agencies may consider Classes I through IV as “high-quality”, as is done within the SEQR Environmental Assessment Form. Classes I and II are chosen here so as to highlight soil types with only slight or moderate limitations for crop or practice selection, as opposed to severe limitations.

³ USDA National Agricultural Statistics Service (USDA NASS). 2012. Cropland Data Layer. Available at: <http://nassgeodata.gmu.edu/CropScape/>. Accessed November, 2012.

⁴ USDA NRCS (2012), Part 622.04.

Although the Land Capability Classification of a given soil type is unlikely to change, the data available through the CDL would reflect development patterns on an annual basis, allowing for a reliable measure of land use conversion over time.

Baseline condition:

As shown in Agricultural Map 1, much of the soil throughout the Study Area falls within Land Capability Class I or Class II. Class I and Class II soils account for 1,350,102 total acres throughout the nine-county region. This total represents 44% of the land mass across the region.

Agricultural Map 2 illustrates the location of developed lands. Developed land, which includes land developed for roadways and similar infrastructure, accounts for 290,751 acres (9%) of the region's land mass.

By overlaying high-quality agricultural soils with developed land uses, the overlap will demonstrate where those soils have been converted for development since their Land Capability Class was designated⁵. Agricultural Map 3 shows these areas in red. Unsurprisingly, this phenomenon has occurred largely in urban fringe areas, throughout the suburbs and exurbs of the region's cities and villages. As of 2011, 155,968 acres of high-quality agricultural soils have been converted into non-agricultural use. This amount represents 5% of the region's total land mass.

This analysis illustrates the phenomenon commonly known as urban or suburban sprawl; more importantly, when viewed in light of the region's stagnant or declining population from 1997-2011, it illustrates an even more threatening condition: *sprawl without growth*⁶. Further underscoring that point, this analysis actually under-represents the total amount of land conversion that has taken place by limiting the examination to that of only high-quality agricultural land, as opposed to all "greenfield" development.

However, the simplified arithmetic of examining the total amount of developed land over time masks the critically important issue of the quality of the land that is being converted. The analysis presented here acknowledges that the soil types with the fewest restrictions for the purposes of agricultural management are the region's most important agricultural resource. As these acres are consumed by development, agricultural operations are effectively squeezed into a land resource of declining quality.

As agricultural operations look to maintain or increase their production for the sake of growth or mere survival, the use of marginal or otherwise restricted agricultural soils may require a greater reliance on external inputs such as chemicals and fertilizer (see indicator AG-3). Such a shift may also threaten the traditionally diverse production that is a hallmark of this region's agricultural sector, as the limitations of available soils diminish the yield potential for various crop types (see indicator AG-4). In addition, declining availability of high-quality agricultural land may also result in an increase in the price of the remaining marginal land, creating a situation in which producers' most important resource becomes simultaneously more expensive and less productive. In sum, the loss of high-quality agricultural soils poses myriad systemic and potentially permanent threats to the viability of the regional agricultural sector as a whole.

⁵ The Land Capability Classes was published by the USDA in 1961 (see USDA NRCS [2012], Exhibit 622-2). Of the nine counties examined here, six were classified in this system between 1968 and 1978. The vintage of Livingston, Ontario, and Yates Counties' current soil surveys is not clear; for this analysis, they are assumed to have been performed within this same ten year period.

Ag2: Direct Farm Sales Per Capita

This indicator provides a reliable measure of the access that regional residents have to high-quality, locally-sourced agricultural products, and the degree to which regional producers are connecting directly with their consumers. Direct farm marketing accounts for the distribution of agricultural products through farmers' markets, community-supported agricultural (CSA) operations, pick-your-own operations, roadside stands, and similar venues. For the purpose of sustainability planning, the prevalence and use of such venues provides a variety of benefits to both agricultural producers and the community at large^{7,8}:

- Direct farm sales can provide a profitable outlet for agricultural producers, which supports the viability of both individual operations and the sector as a whole.
- Direct marketing can decrease transportation-borne greenhouse gas emissions associated with the shipment of agricultural products, since direct sale outlets are generally located closer to the producer.
- Although each direct marketing venue is different, they are generally dominated by fresh vegetables, fruits, and nuts; combined with their growing representation in urban centers and areas close to urban centers, these venues can increase access to healthy food for traditionally underserved populations.

Throughout the stakeholder engagement process, much discussion was focused on the number of farmers' markets, CSAs, and community food gardens within the region as potential indicators of healthy food access and agricultural economic development. The measurement of direct farm sales per capita is intended to aggregate these constituent measures into a more comprehensive indicator, one that accounts not only for the *presence* of such outlets but also the *consumption* of direct-marketed products. It recognizes that the support of local food producers requires a financial commitment from local residents to incorporate their goods into monthly, weekly, or daily food purchases.

Calculation:

Total value of farm sales direct to consumers (including sales from roadside stands, farmers markets, pick-your-own, door-to-door, etc., but not sales of craft items or processed products) [\$] ÷ total population

| Required Data | Definition | Dataset Reference |
|---------------------------------|---|--|
| Value of direct sales | Total value of farm sales direct to consumers (including sales from roadside stands, farmers markets, pick-your-own, door-to-door, etc., but not sales of craft items or processed products, such as jellies, sausages, and hams) divided by the number of residents of the county. | USDA Economic Research Service (ERS) Food Environment Atlas: http://www.ers.usda.gov/data-products/food-environment-atlas.aspx |
| Countywide population estimates | Number of residents per county | USDA Economic Research Service (ERS) Food Environment Atlas: http://www.ers.usda.gov/data-products/food-environment-atlas.aspx |

⁸ Low, Sarah, and Stephen Vogel. 2011. Direct and Intermediated Marketing of Local Foods in the United States. U.S. Department of Agriculture, Economic Research Service. Economic Research Report Number 128; November, 2011.

Additional comments:

The most recent publicly available data by which to measure direct farm sales is the USDA's 2007 Census of Agriculture. Considering the growth of local food systems in recent years, this resource is somewhat dated. It does provide a valuable baseline condition, however, and updated data will become available as the results of the 2012 Census of Agriculture are published in the coming years.

In the meantime, it is worthwhile to consider the increase in farmers' markets throughout the region, which have grown from 51 in 2009 to 59 in 2012 (see Figure 1, below)⁹.

Figure 1, Number of farmers' markets

| County | 2007 | | 2012 | |
|-----------------------|--------------------|---|--------------------|---|
| | # Farmers' Markets | # Farmers' Markets per 1,000 population | # Farmers' Markets | # Farmers' Markets per 1,000 population |
| Genesee | 3 | 0.05 | 3 | 0.05 |
| Livingston | 5 | 0.08 | 7 | 0.11 |
| Monroe | 18 | 0.02 | 22 | 0.03 |
| Ontario | 7 | 0.07 | 9 | 0.08 |
| Orleans | 2 | 0.05 | 2 | 0.05 |
| Seneca | 4 | 0.12 | 4 | 0.11 |
| Wayne | 7 | 0.08 | 4 | 0.04 |
| Wyoming | 3 | 0.07 | 3 | 0.07 |
| Yates | 2 | 0.08 | 5 | 0.20 |
| <i>Regional total</i> | <i>51</i> | <i>0.62</i> | <i>59</i> | <i>0.74</i> |

Source: USDA ERS (2012)

Baseline condition:

The market for direct farm sales throughout the study area appears to be robust relative to that of the state as a whole. As shown in Figure 2, the total value of direct farm sales throughout the region was \$11,328,000 in 2007, resulting in direct sales per capita of \$9.52. In and of itself, this metric does not appear to reflect much support for direct sales opportunities in the region. However, when the data are disaggregated by county and compared to statewide levels, much more support becomes evident.

⁹ USDA Economic Research Service (ERS). 2012. Food Environment Atlas. Available at: <http://www.ers.usda.gov/data-products/food-environment-atlas.aspx>. Accessed October, 2012.

Figure 2, Direct Farm Sales per capita

| County | Population Estimate, 2007 | Value of Direct Farm Sales, 2007 | Direct Farm Sales per capita, 2007 |
|-----------------------|---------------------------|----------------------------------|------------------------------------|
| Genesee | 58,159 | \$535,000 | \$9.20 |
| Livingston | 63,123 | \$641,000 | \$10.15 |
| Monroe | 730,629 | \$2,640,000 | \$3.61 |
| Ontario | 103,834 | \$2,136,000 | \$20.57 |
| Orleans | 42,370 | \$1,294,000 | \$30.54 |
| Seneca | 34,276 | \$535,000 | \$15.61 |
| Wayne | 91,529 | \$1,945,000 | \$21.25 |
| Wyoming | 41,841 | \$525,000 | \$12.55 |
| Yates | 24,535 | \$1,077,000 | \$43.90 |
| <i>Regional total</i> | <i>1,190,296</i> | <i>\$11,328,000</i> | <i>\$9.52</i> |
| Statewide total | 19,422,777 | \$76,449,000 | \$3.94 |

Source: USDA ERS (2012)

The residents of Monroe County consumed the greatest amount of direct farm sales by value, but the least amount per capita. The \$3.61 worth of direct farm sales per capita in Monroe County (the only county in the region purchasing less through direct sale than the statewide average of \$3.94) should represent a “floor” relative to future measurements. Considering its outsized population and greater diversity of potential food sales venues as compared to the rest of the region, the per capita measure may never grow to reach the level of the smaller, less diverse counties. However, given the increasing number of farmers’ markets in Monroe County, as well as the growth of the Rochester Public Market and the number of CSAs that serve the city, this number is poised to grow.

On the opposite end of the spectrum, Yates County is also an outlier. While it has the least number of residents, those residents consumed the greatest value of direct sale products per capita by far. In 2007, each resident of Yates County purchased an average of \$43.90 worth of agricultural products directly from farmers. This is more than twice the per capita sales found in Wayne, Ontario, Seneca, and Wyoming Counties, more than four times those found in Livingston and Genesee Counties, and more than twelve times the level of Monroe County. The proliferation of CSAs operating in Yates County has likely contributed to the high level of per capita sales; in 2007, Yates County featured 16 CSAs, more than any other county in the region¹⁰.

The regional and countywide data both provide insight into the depth of their respective markets for direct-sale agricultural products. The statewide data, though it may be skewed by the inclusion of larger downstate populations, is nonetheless a valuable marker by which to judge direct sales and local food consumption in the region. Further examination of similarly sized and populated regions throughout the state and elsewhere would provide apt comparisons as well.

¹⁰ USDA ERS (2012).

Ag3: Use of External Inputs

Although the majority of residents may not be aware, the use of external agricultural inputs, including pesticides and fertilizer, is of primary importance to both the financial and ecological sustainability of their region. External inputs have a substantial impact on the viability of conventional agricultural operations, the yield, production cost, and price of agricultural products, and the health of farm workers and consumers. Perhaps most notably, external inputs also influence the quality of the water supply, one of the principal economic drivers (and a defining characteristic) of the nine-county region.

The use of external inputs can be measured from several different perspectives, including input expenditures, acreage treated, and volume applied. Regardless of the approach, the measurement of inputs is inherently complex and nuanced, and no single measurement can capture the entire essence of the issue. For example, the volume of fertilizer (both chemical and manure) applied within a given watershed has perhaps the greatest overall impact on the nutrient loading of that area's surface water; however, the actual extent of nutrient loading is influenced by several circumstantial factors, including but not limited to:

- Type of fertilizer- Fertilizer types differ in the amount of Nitrogen (N), Phosphorous (P), and Potassium (K) they contain. Manure from cows differs from that of sheep; liquid differs from solid; and commercial fertilizers differ from manure fertilizers (and from one another).
- Method of fertilizer application- Several different methods can influence the amount of nutrients that are either consumed by their target plants or are lost to surface runoff. Techniques such as slurry spreading, foliar application, or injection can influence the amount of nutrient that is absorbed by the soil or target plant, and can also influence erodibility and other measures of soil health.
- Season of fertilizer application- Winter spreading, in particular, can increase nutrient loads due to the inability of frozen soil to effectively absorb nutrients. Seasonal weather plays a factor throughout the year, in that the presence and intensity of rainfall or snow melt can increase (or decrease) the amount of nutrients lost to runoff, and can impact operators' decisions on application techniques.

In light of these circumstantial factors, volume of application alone is not a reliable measure of the use of external inputs and their effect on regional sustainability. When paired with such information as surface water nutrient load, it may become a stronger measure of agricultural sustainability. However, even such an analysis as that would only quantify the impact of fertilizers (as opposed to pesticides), and may conflate agricultural input application with industrial, commercial, or residential sources¹¹.

Like application volume, the number of treated acres provides a second informative, though incomplete, measure to this effect. Most of the same circumstantial factors hidden in application volume also influence application area as a measure of input use and impact. Several others specifically related to characteristics of the landform also come into play, including but not limited to slope, distance to receiving waters, and soil physical characteristics. Nonetheless, it is a reliable measure of the extent to which agricultural producers are applying external inputs to the land resource.

¹¹ In addition, comprehensive county-level data regarding input application volume and nutrient load sources is scarce. One notable exception is the USGS's 2006 publication "County-Level Estimates of Nutrient Inputs to the Land Surface of the Conterminous United States, 1982-2001", by Barbara Ruddy, David Lorenz, and David Mueller. The authors of this study estimate countywide N and P inputs by both farm and non-farm sources over a 20-year period, and distinguish between the nutrients as they result from fertilizer application in general, manure application specifically, and atmospheric deposition.

A third perspective is that of regional expenditures dedicated to chemicals and fertilizer. This indicator attempts to account for both the environmental and economic impacts of external inputs. If viewed as a surrogate measure of input application volumes, it may show increasing, decreasing, or steady use of fertilizer and chemicals. However, the dollar value of input expenditures over time, as a stand-alone metric outside of the context of all other expenditures, could internalize price fluctuation as a result of inflation, therefore limiting its utility as an analog of input application volume.

For the purposes of this analysis, this potential distortion is mitigated by examining input expenditures relative to total operational expenditures. Such a context assumes that inflationary impacts are spread more or less equally among expenditure types, and would not be reflected disproportionately in the price of fertilizer and chemicals. An examination of sector-specific input expenditures relative to other expenditures can help describe regional operators' reliance on pesticides and fertilizers, as well as their vulnerability to non-inflationary price increases, both of which are informative with regard to the long-term resilience of the sector.

Calculation:

(Agricultural chemical expenditures + agricultural fertilizer expenditures) / Total agricultural operation expenditures

| Required Data | Definition | Dataset Reference |
|----------------------------------|--|--|
| Value of input expenditures (\$) | Total amount spent on pesticide and fertilizer inputs by agricultural operations within the region | USDA 2007 Census of Agriculture: http://quickstats.nass.usda.gov/ |
| Value of total expenditures | Total amount spent on all other expenditure types by agricultural operations within the region | USDA 2007 Census of Agriculture: http://quickstats.nass.usda.gov/ |

Additional comments:

Though useful for the purposes of this study, the measurement of input expenditures relative to total expenditures is not without its limitations. For example, the aggregated value described in the Baseline Assessment (10.7%) obscures potential differences between input types, including differences in the level of expenditure per type, or the impact of each constituent input on agricultural yields, environmental health, or public health. Disaggregated data (presented below) may mitigate the former, but does not adequately address the latter. In addition, it should be noted that production costs can vary substantially from one year to the next, and that input usage during a given Census of Agriculture year may reflect outlier values. Acknowledging that a single indicator cannot represent the full scope of external input use and all of its impacts on agricultural sustainability, this measurement is best supplemented by an examination of multiple types of data over time.

As with other indicators dependent on the 2007 Census of Agriculture, the data supporting this indicator is the most recent available, although not necessarily reflective of current conditions. The 2012 Census of Agriculture will collect and publish similar data in the near future.

Baseline condition:

Agricultural operations throughout the study area logged \$956,396,000 in total expenditures in 2007. This total includes \$44,452,000 spent on fungicide, herbicide, insecticide, and other chemicals and \$58,329,000 spent on fertilizers, including manure, liming agents, soil conditioners, and other commercial fertilizers. As shown in Figure 3, chemical and fertilizer expenditures combined to account for 10.7% of all agricultural expenditures in that year.

^{a, b, c} See 2007 Expenditure table, above

^d 1997 Agricultural Census does not disaggregate Agricultural Services expenditures

These five-year snapshots should be viewed with regard to general long-term trends, both locally and throughout the surrounding area. For example, inputs accounted for 6.8% of total statewide agricultural expenditures in 1969, and slightly more than 8% in 1974¹³. One notable shift that could influence this measurement in the long-term is the growing number of mixed crop and animal operations. Though it was historically much more common, the practice of mixed operations began to decline throughout the country

¹³ USDA. 1977. 1974 Census of Agriculture. Available at: <http://usda.mannlib.cornell.edu/usda/AgCensusImages/1974/01/32/1974-01-32.pdf>. Accessed December, 2012. [Note: Definition and measurement of "chemicals" changes between Census reports.]

as operations became more specialized¹⁴. The introduction of innovative cropping systems could also reduce input requirements, as certain types and periods of rotation have been shown to require fewer synthetic fertilizer and herbicide¹⁵. If recent trends throughout the sector take hold and the adoption of such innovative practices increases, dependence on external inputs could decrease, which could be reflected in a lower input expenditures as a proportion of total production expenditures.

As discussed previously, the measurement of input expenditures should also be viewed in light of the number of acres treated with chemicals and fertilizer. This secondary measure provides further context to describe the use of external inputs in spatial terms. Figure 6 shows acreage of agricultural land per county from 1997-2007, with a sum total of 1,518,285 acres across the region during the most recent Census of Agriculture. Figures 7-9 show the percent of each county's agricultural land that was treated with chemicals and fertilizers during those years¹⁶.

| <i>Regional Total</i> | 7% | 40% | 20% | 1% | 2% |

* Regional fertilizer totals for the 1997 Census of Agriculture do not distinguish manure vs. commercial fertilizers, and the total values available from the NASS may not accurately reflect the percent of agricultural land treated with fertilizer.

Ag4: Diversity of production

In terms of agriculture, the Finger Lakes region may be most notable for several signature products, particularly grapes, apples, and dairy products; however, the diversity of the regional agricultural sector goes far beyond these three. Finger Lakes crop operations grow a wide assortment of field crops, vegetables, fruit, and nuts, and animal operations include a variety of dairy and beef cattle, poultry, and specialty animals. The diversity of agricultural production throughout this nine-county region is a reflection of its unique place in the history of agricultural development throughout the nation. Various agricultural products and systems have been brought into the region and further developed to suit the particular needs or characteristics of the regional ecosystem or marketplace, only to have been exported across the country and beyond.

There are a number of potential approaches to the measurement of the diversity of agricultural production. Each must confront the difficulties that arise from the comparison of inherently dissimilar products (e.g. dairy cows vs. broccoli). Therefore, much like the discussion of external inputs, any examination of agricultural diversity must take various indicators into account. Area of production, production volume, and number of operators per product are all valuable measurements for this indicator. For the purposes of this discussion, most of the focus will be given to the latter.

In an effort to distill the diversity of the regional agricultural sector into a single value, this analysis incorporates the Shannon diversity index^{19,20}. The Shannon index is commonly applied to analyses of biodiversity due to its ability to account for both the presence and relative abundance of a given subject. In most cases of biodiversity research, acreage is used as the unit of analysis; in such cases, highly diverse ecosystems are generally defined as those with the most even distribution of the greatest abundance of species types.

The Shannon index has been used to describe agricultural diversity throughout academic research, although its application has been chiefly focused on crop diversity alone, and most often employs acreage as the unit of analysis²¹. As it is used here, the index measures the diversity of *operation types*, which include both crop and animal operations. The use of operation types as the unit of analysis, as opposed to acreage or production volumes, is intended to mitigate a number of conceptual and operational hurdles, as well as data limitations, including the following:

- Although crop operations may be most suitably described by their respective acres of production or harvest volume, and animal operations by the size of their inventories, the number of operations featuring a given product type is the lowest common denominator by which *all* agricultural operations can be compared.
- The use of operation types mitigates inter-regional differences with regard to production area and production volume, as well as the potential for outliers in production volume from one year to the next. For example, one area of the region may have soil types that produce greater yields of tomatoes per acre, or a seasonal blight could wipe out half of the region's crop in a given year. By measuring operation types, as opposed to production area or production volume, all of the tomato producers are still counted equally in the measure of production diversity.

¹⁹ Spellerberg, I.F., and P.J. Fedor. 2003. A Tribute to Claude Shannon (1916-2001) and a Plea for More Rigorous Use of Species Richness, Species Diversity and the 'Shannon-Wiener' Index. *Global Ecology & Biogeography* (2003) 12; 177-179.

²⁰ Hendrickson, J.R., et. al. 2008. Environment and Integrated Agricultural Systems. *Renewable Agriculture and Food Systems*: 23(4); 304-313.

²¹ Reidsma, P., and F. Ewert. 2008. Regional Farm Diversity Can Reduce Vulnerability of Food Production to Climate Change. *Ecology & Society*: 13(1).

- For the sake of confidentiality, the USDA may not publish the production area and/or production volume of a given specialty product if the number of product operations does not meet certain thresholds. For example, if there are only two emu operations within a county, Census of Agriculture statistics will acknowledge the presence of two operations, but will not divulge the number of acres operated by those two farms or the number of emus raised.

As with all other indicators and their respective caveats, it is acknowledged that the full diversity of agricultural production cannot be described solely in terms of the number of producers growing or raising each product type. There are a number of limitations to this approach that may be mitigated or controlled via other indicators or methods of operationalizing variables. These include, but are not limited to, the following:

- Specialization at the operational level can be masked as individual operations are aggregated. For example, a four-crop operation that is dominated by a single crop yet also grows three specialty crops in very small amounts will be reported as four operation types. While this may represent a certain bias, it does account for the potential of integrated agricultural systems (as opposed to strict monoculture), and minimizes a similar bias that would otherwise be committed by over-representing acreage used for rotated crops.
- The number of operations featuring a given crop or animal does not necessarily correspond to that product's production area, volume, or inventory. For example, the number of equine (horse, donkey, etc.) operations in the region is very high as compared to other animal types; however, the number of equine animals is very low.

This measurement of agricultural diversity examines all vegetable, fruit, tree nut, and field crop operations, in addition to all livestock, poultry, and specialty animal operations. With few exceptions, all product types are reported individually; that is, to minimize bias, few types are combined as aggregates of more than one individual type²². In total, roughly 100 different operation types are present within the region.

Calculation:

$$H = -\sum_{i=1}^n [P_i * \text{LN}(P_i)]$$

Where:

- H = Shannon's index of diversity
- $-\sum_{i=1}^n$ = the negative sum of all individual calculations
- P_i = the proportion of the i th operation type relative to the total number of operations
- LN = natural log

²² For this reason, this analysis does not examine horticultural production, which is generally a very small portion of agricultural production on the whole. As a group, horticultural products are frequently reported as grouped totals, e.g. "bedding products", or "short-term woody crops".

| Required Data | Definition | Dataset Reference |
|---|--|--|
| Total number of agricultural operations | Total number of crop and animal operations with sales | USDA 2007 Census of Agriculture: http://quickstats.nass.usda.gov/ |
| Operation types | For each crop type grown and each animal type raised throughout the region, the number of operations featuring that crop or animal | USDA 2007 Census of Agriculture: http://quickstats.nass.usda.gov/ |

Additional comments:

A given Shannon index value is not in comparison to any other value (e.g. 1, 10, etc.). A value of zero would represent absolute specialization, wherein every agricultural operation would grow or raise a single product (e.g. wheat). As the index value grows, the diversity of operation types increases. There is no “ceiling” to the index, because the number of operations and the number of products is (theoretically) boundless. Other indices can be calculated to provide a more intuitively scaled comparison, and may be informative in their own way²³. For the sake of the comparison of two or more Shannon values, other similar or dissimilar regions may be analyzed.

In addition, the diversity of operation sizes is not discussed within the context of this indicator. This issue is of particular importance in examining the ability of smaller producers to compete in the marketplace, the viability of family farms, the adoption of agricultural technologies, and several other issues that are of great importance to the sustainability of the sector.

Baseline condition:

Shannon's index value for the diversity of operations by product type measured 6.97 in 2007, as compared to 6.72 in 2002 (see Figure 10, below). Part of this modest increase is the product of an increasing number of operations. The number of operations selling crops increased from 3,657 in 2002 to 3,928 in 2007. Likewise, the number of operations selling animal products increased from 2,651 to 2,749²⁴. The number of operations per product type is identified in Figure 11, below.

²³ The Herfindahl index, though not as commonly used in biodiversity-related studies, may be especially useful for the study of agricultural market concentrations. See, for example, the California Energy Commission's July 2012 report, "Vulnerability and Adaptation to Climate Change in California Agriculture".

²⁴ As stated previously, some degree of overlap naturally occurs between these two categories. Operations featuring both crops and animals are reported in both subtotals.

Figure 10, Shannon's diversity index by product type

| | Shannon's diversity index | |
|-----------------------------|---------------------------|------|
| | 2002 | 2007 |
| All agricultural operations | 6.72 | 6.97 |
| Crop operations | 6.16 | 6.17 |
| Animal operations | 2.98 | 3.51 |

Regional and on-farm production diversity has been shown to maintain the economic health of the sector and its flexibility in the face of shifting markets, and to support the viability of individual operations^{25,26,27}. By measuring the diversity of production types, and eventually expanding such an analysis to examine diversity by acreage, production volume, or inventories, the Finger Lakes region can quantify a core strength of one of its primary sectors.

By contrast, many other regions throughout the country are likely to exhibit much less diversity. For the sake of comparison, the nine-county region surrounding DesMoines, Iowa, has a substantially less diverse agricultural sector, dominated by a smaller number of operation types²⁸. In 2007, the 4,644 crop operations in that region grew a total of 68 crop types. Of those operations, 66% grew hay, 66% grew corn for grain, and 59% grew soybeans. In the same year, the 3,928 crop operations in the Finger Lakes region grew a total of 90 crop types. Of those, 78% grew hay. However, only 36% grew corn for grain, and no other crop was grown by more than 28% of operators. These comparative differences are clearly expressed in Shannon's index: the index value of crop producers by product for the Finger Lakes region in 2007 was 6.17; the same measure for the DesMoine region was 1.82.

²⁷ Wetterich, F. Biological Diversity of Livestock and Crops: Useful Classification and Appropriate Agri-Environmental Indicators. Paper presented to the OECD Expert Meeting on Agri-Biodiversity Indicators. Zurich, Switzerland. November 5-8, 2001.

²⁸ Although any number of comparison regions would be appropriate, this region (composed of Clarke, Dallas, Jasper, Lucas, Madison, Marion, Monroe, Polk, and Warren Counties) was chosen due to the similar population size of the central city (DesMoines) to Rochester.

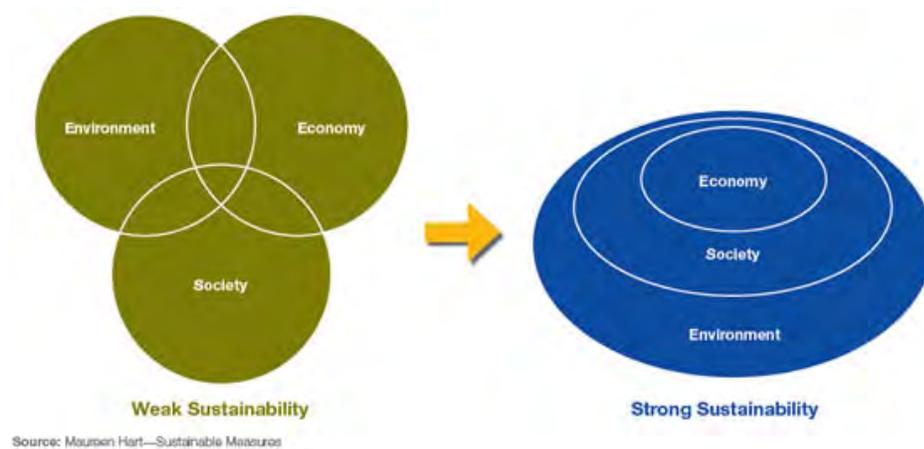

Forestry indicators

Selection

Although not covered by NYSEDA guidance documents, the forestry sector is well ahead of many others in terms of sustainable practices and planning. The development of forestry indicators for this planning initiative was influenced by the work and guidance of the U.S. Forest Service and its international partners in the Montreal Process Working Group, the New York State Department of Environmental Conservation (NYSDEC), and Audobon New York.

The work of the Montreal Process Working Group reflects the understanding that the environmental realm is the foundation of “strong sustainability”, because the environment provides natural goods and services that cannot be obtained through any other means. This principle tenet of this vision of sustainability is that the human economy cannot exist without human society, and that human society in turn cannot exist without the environment, which provides the basic necessities of life (namely air, water, food, energy, and raw materials). The Montreal Process Working Group’s concept of strong sustainability is depicted in Figure 12, below.

Figure 12, Weak and strong sustainability

The forestry sector currently faces many pressing issues: the loss of ecosystem services; loss of working forests; the maintenance of forest health and vitality; increasing demands for woody biomass to produce bioenergy; climate change adaptation, etc. These issues have strongly interconnected and interdependent economic, social, and environmental linkages. Solutions will require dialog among a broader set of interests, and this activity needs to occur not just within forests, but across landscapes that include towns and farms as well.

The Montreal Process Working Group (which includes forestry representatives from the United States, Argentina, Australia, Canada, Chile, China, Japan, Korea, Mexico, New Zealand, the Russian Federation, and Uruguay) has developed criteria by which the conservation and sustainable management of temperate and boreal forests may be measured. The Montreal Process Criteria and Indicators (“Montreal C&I”) are used to monitor and assess national trends in forest conditions and forest management, and provide information essential to the formulation of policies that promote sustainable forest management. Its comprehensive and hierarchical structure constitutes a reference resource for forests in the United States that is unparalleled in terms of its breadth and accessibility.

In addition to the Montreal C&I, the development of indicators for the Finger Lakes forestry sector relied upon the NYSDEC's *Forest Resource Assessment and Strategy, 2010-2015*. With the aid of these resources, the following guiding principles were used to guide the selection of appropriate measures:

- Biological diversity should be maintained;
- The productive capacity of forest ecosystems should be maintained;
- Forest ecosystem health and vitality should be maintained;
- Soil and water resources should be conserved;
- The contribution of forest ecosystems to the global carbon cycle should be maintained;
- The multiple long-term socioeconomic benefits of forest ecosystems should be maintained and enhanced; and
- The legal, institutional, and economic framework of forest conservation and sustainable maintenance should be supported.

The perspective of the following regional and national experts in forest health and sustainability were also instrumental throughout this process:

- Dr. Guy Robertson, U.S. Forest Service (USFS) National Sustainability Program Lead
- Brad Smith, USFS Associate National Program Manager, Forest Inventory & Analysis
- Roger D. Ottmar, Pacific Wildland Fire Sciences Laboratory, USFS Pacific Northwest Research Station
- Sherri Wormstead, Sustainability & Planning Coordinator, USFS Northeastern Area State & Private Forestry
- Charles (Hobie) Perry, Research Soil Scientist, USFS Northern Research Station
- Gloria Van Duyne, Bruce Williamson and Nick Conrad of NYSDEC
- Dr. Graham Cox, Forest and Open Space Program Coordinator, Audubon New York
- Dr. Peter Smallidge, Senior Extension Associate, Cornell University Department of Natural Resources

Indicator analysis and baseline conditions

F1: Percentage of Forest Acreage by Diversity Class Ratio

This indicator provides insight into the overall value of forestry in each of the nine counties. At the most basic level, understanding the sustainability of a sector or industry requires a grasp of the basic resource underpinning it. For the forestry sector, this translates to measuring how much forestland there is in the region in total, and its variation in tree growth stage. Forest stands with trees at varying growth stages provide different economic, ecological, and social benefits, uses, and drawbacks, and thus, are of different value. These benefits and drawbacks include, but are not limited to:

- Diversity of wildlife habitat by providing differing amounts and types of food and cover (nesting, travel, escape, etc.);
- Economic benefits including lumber and fuel; and
- Aesthetic and spiritual benefits for residents and visitors.

The analysis of Forest Acreage by Tree Size Class utilizes a classification breakdown defined by the U.S. Forest Service Forest Inventory and Analysis²⁹. These four classes included in this inventory are described below:

- *Small Diameter Forestlands* are forest stands stocked with at least 10% of their capacity for live trees where more than 50% of the trees are saplings (live trees 1-4.9 inches in diameter at breast height)
- *Medium Diameter Forestlands* are forest stands stocked with at least 10% of their capacity for live trees where more than 50% of the trees are poletimber (live trees at least 5 inches in diameter at breast height, but smaller than sawtimber)
- *Large Diameter Forestlands* are forest stands stocked with at least 10% of their capacity for live trees where more than 50% of the trees are sawtimber (live trees at least 11 inches in diameter at breast height for hardwoods and at least 9 inches in diameter for softwoods)
- *Nonstocked Forestlands* are forestlands designated with forestry as their primary land use but are stocked with less than 10% of their capacity for live trees.

Calculation:

To calculate this indicator, the most recent (2011) estimates of acreage of forestland broken down by tree-size class (the first three classes described above) were gathered for each of the nine counties in the region. These area estimates were then converted to percentages of the total acreage in all three classes. These three percentages are then expressed as a ratio.

²⁹ USFS Forest Service Forest Inventory and Analysis National Program (USFS FIA). 2012. Standard Reports: Area Reports. Available at: <http://apps.fs.fed.us/fido/>. Accessed November, 2012.

| Required Data | Definition | Dataset Reference |
|--|---|---|
| Acres of forest land in each county by tree-size class | US Forest Service estimates of forestland acreage occupied by trees classified by trunk diameter (small, medium, and large) | http://apps.fs.fed.us/fido/standardrpt.html Standard Report number 2.4 |

Additional Comments:

Although the main indicator that is reported here is the estimated ratio of tree size diversity, another important measure that can be derived from this dataset is the total acreage of forestland in the region (see Figure 13). Tracking that measure also speaks to the sustainability of forestry in that, at a more basic level than size class diversity, the simple amount of forested acres in the region has a direct effect on its viability, both ecologically and economically. There are multiple data sources that can be utilized to track this statistic. The reason the data from the U.S. Forest Service Forest Inventory and Analysis was chosen is that their forestry acreage estimates are broken down by size class, which was needed for this indicator. However, for the purposes of simply tracking the total acreage of forested area, two other dataset choices are available: the USGS National Land Cover Dataset³⁰, and the USDA Cropland Data Layer³¹. Both are publicly available remote sensing datasets that can be processed using geographic information systems (GIS) software to classify land cover types and derive acreage estimates. Due to methodological differences, the total forested acreage statistics from the three data sources will not be exactly the same, and therefore their measurements should not be compared for purposes such as this analysis. When utilizing one of these sources to make acreage estimates, comparisons over time should only be made with measurements taken from the same source.

For the purposes of this analysis, nonstocked forestlands were excluded because the data is not available in all areas of the region. Therefore, percentages of forestland as reported are estimated percentages of total forest land populated with at least 10% stocking of live trees instead of percentages of total land categorized in the Forestry land use category.

³⁰ USGS Multi-Resolution Land Characteristics Consortium (MRLC). 2006. National Land Cover Dataset. Available at: http://www.mrlc.gov/nlcd06_data.php. Accessed December, 2012.

³¹ USDA National Agricultural Statistics Service (USDA NASS). 2012. Cropland Data Layer. Available at: <http://nassgeodata.gmu.edu/CropScape/>. Accessed November, 2012.

The following definitions are used throughout the analysis of this indicator³²:

- Basal area: Cross-sectional area of a tree stem measured 4.5 feet above ground level. Usually reported per acre of land.
- Stocking: A relative percentage measure of the degree of occupancy of land by trees, measured by basal area of trees per acre of land. In the Eastern United States, 100% is equivalent to seventy-five square feet of basal area per acre for trees at least 5 inches in diameter at breast height.
- Diameter at breast height (d.b.h.): A standard measure of tree size, measured as the diameter of a standing tree outside its bark at 4.5 feet above ground level.

Baseline Condition:

As shown in Figure 13, the diversity of forest habitat types in the Finger Lakes region is skewed toward tree stands dominated by large diameter, and therefore older trees. The acreage of large-diameter forest stands is estimated to be three times higher than medium-diameter acreage and four times larger than the amount of small-diameter acres (63% large, 21% medium, and 16% small). This uneven proportion is one result of the non-sustainable forest management practice of high grading.

Figure 13, Estimate of Acres of Trees on Forest land by Size Class, 2011

| County | Large Diameter Acres | Medium Diameter Acres | Small Diameter Acres | Non-stocked Forestland Acres | Forest Land Total Acres |
|------------|----------------------|-----------------------|----------------------|------------------------------|-------------------------|

F2: Amount of Biomass in Live Trees on Forestlands

Tracking the estimated amount of tree biomass over time will identify how much the region's forests are contributing to the mitigation of greenhouse-gas-induced climate change. This indicator measures one of the greatest benefits associated with forests in the Finger Lakes region by quantifying one of its primary ecosystem services- its ability to capture and store atmospheric carbon³³. It also provides one measure by which to estimate the potential of regional forest resources to provide a source of fuel³⁴.

Calculation:

To calculate this indicator, the most recent (2011) estimates of dry weight in short tons of biomass in live trees on forestlands were gathered for each of the nine counties in the region³⁵. These area estimates were then added together to get an estimate of biomass dry-weight in the region. This sum is reported as the indicator.

| Required Data | Definition | Dataset Reference |
|-------------------------------------|---|--|
| Short tons of biomass in live trees | US Forest Service Estimates of dry weight in short tons of live trees on forest land per county | http://apps.fs.fed.us/fido/standardrpt.html Standard Report number 10.1 |

Additional Comments:

Multiple methods exist for estimating the total carbon contained in forests. However, at this time, it is a very new science and the estimates are often contradictory, and are thus deemed unreliable³⁶. As an approximation of carbon storage amounts, live tree biomass is used.

³³ Gorte, R.W. 2009. Carbon Sequestration in Forests. Congressional Research Service report 7-5700: RL31432. August 6, 2009.

³⁴ Cook, J. and J. Beyea. 2000. Bioenergy in the United States: Progress and Possibilities. Biomass and Bioenergy 18(2000): 441-455.

³⁶ Ingerson, A. and W. Loya. 2008. Measuring Forest Carbon: Strengths and Weaknesses of Available Tools. Science and Policy Brief. Washington, D.C. The Wilderness Society.

Baseline Condition:

As shown in Figure 14, the USFS estimates that in 2011 there were more than sixty million tons of biomass in the forests of the Finger Lakes region. Ontario County had the most with over eleven million tons, while Orleans County had the least with less than three million. Every ton of tree biomass represents hundreds of pounds of carbon that have been captured from the atmosphere and are, thus, not contributing to climate change as greenhouse gas.

Figure 14, Estimated Volume of Biomass in Trees, 2011

| County | Short tons of dry-weight biomass in live trees larger than 1 inch in diameter at breast height |
|-----------------------|--|
| Genesee | 5,270,724 |
| Livingston | 9,029,347 |
| Monroe | 6,184,679 |
| Ontario | 11,591,094 |
| Orleans | 2,919,078 |
| Seneca | 3,256,303 |
| Wayne | 8,319,484 |
| Wyoming | 9,375,560 |
| Yates | 4,991,255 |
| <i>Regional Total</i> | <i>60,937,524</i> |

F3: Number of Breeding Bird Species

One of the important aspects of sustainability involving forests is the diversity of wildlife species living in the region. This indicator quantifies the state of health of forests in the Finger Lakes Finger Lakes region by quantifying biodiversity in the forest habitat. A region with healthy and diverse habitats that supports many different species is more sustainable and resilient in that it is less vulnerable to a harmful invasive species threat. Also, a forest that is home to a variety of species provides greater economic, ecological, and social benefits.

It is difficult to find reliable data on the presence and diversity of populations of most wildlife species. The one source in New York State that is standardized in its measurement and repeated for tracking over time is the New York State Breeding Bird Atlas³⁷. Therefore, as a surrogate for overall forest wildlife biodiversity, this indicator tracks the spread of breeding bird species that indicate the presence of high-quality forest interior habitats that are likely to serve as habitats for a diverse plant and animal community.

Calculation:

To calculate this indicator, the most recent (2000-2005) Breeding Bird Atlas statewide survey results were gathered for each of the nine counties. Four species of birds were selected as indicator species for high-quality forest interior habitat. These four species were selected based on criteria including ease of identification (to minimize error on the part of the survey volunteers), and the degree to which their presence in a survey block would indicate the presence of high quality forest interior habitat type. For each species, the number of survey blocks³⁸ they were observed in during the Breeding Bird Atlas Survey was recorded. These counts serve as the indicator value.

| Required Data | Definition | Dataset Reference |
|---|---|---|
| Breeding Bird Species Observed Distribution | Number of survey blocks where four high-quality forest habitat indicator species were observed during the most recent NYS Breeding Bird Atlas Survey period (2000-2005) as reported in the NYNHP Nature Explorer database | http://www.dec.ny.gov/natureexplorer/app/location/county |

³⁷ New York State Department of Environmental Conservation. 2007. New York State Breeding Bird Atlas 2000 [Internet]. Release 1.0. Albany (New York): Available at <http://www.dec.ny.gov/animals/7312.html>.

³⁸ The Breeding Bird Atlas is a survey conducted by volunteers using uniform size survey blocks. The entire state is covered by 5-kilometer-square blocks. These blocks serve as the unit of reporting for the survey. Each block is reported with a list (and count) of which breeding bird species were observed by the volunteers inside it during the survey.

Additional Comments:

The next New York State Breeding Bird Atlas survey is scheduled to begin in 2020. This will allow for the region to track its biodiversity progress and begin measuring the effectiveness of the strategies in this plan.

Another source considered for measuring biodiversity was the New York Natural Heritage Program's database³⁹ of significant natural communities and plant and animal community locations. These sources track the location of high-quality examples of natural communities throughout the state, and known locations of rare species respectively. While these certainly are important sources of information regarding biodiversity, they do not present a complete picture. These databases only track species and communities deemed to be either rare or exceptional examples. They are not meant to be an exhaustive survey of all species or communities present. For this reason, they are not appropriate for measuring regional species diversity.

While the Breeding Bird Atlas is a better source for measuring diversity, it is not a perfect one. Even though it is an attempt to document all species, instead of just the rare examples, it is a survey conducted by volunteers. Furthermore, it only measures diversity of bird species by presence or absence, not actual numbers of individuals observed. However, at this time, it is the most reliable and robust surrogate data source for measuring forest habitat quality in the region.

Baseline Condition:

As shown in Figure 15, the Black-and-white warbler, Ovenbird, Scarlet Tanager, and Veery were observed in 54, 289, 428, and 358 survey blocks respectively. These numbers serve as an index for the amount of high-quality forest interior habitat in the region. As these measurements are taken over time when the Bird Atlas Survey is repeated over time, the change in amount of quality forest habitat amount can be tracked over time.

³⁹ New York State Department of Environmental Conservation. 2012. New York Natural Heritage Program NY Nature Explorer Database. Available at <http://www.dec.ny.gov/animals/29338.html> Accessed December, 2012

Figure 15: Distribution of Four Selected Forest-Interior-Habitat-Indicator Species Observed in the New York State Breeding Bird Atlas Survey, 2000-2005

| Indicator Species | Number of Survey Blocks Where Observed |
|---|--|
| Black-and-white Warbler (<i>Mniotilta varia</i>) | 54 |
| Ovenbird (<i>Seiurus aurocapilla</i>) | 289 |
| Scarlet Tanager (<i>Piranga olivacea</i>) | 428 |
| Veery (<i>Catharus fuscescens</i>) | 358 |

F4: Invasive Species Index

This indicator reflects sustainability of forest resources by quantifying biological threats to the ecosystem. The observation data is updated regularly, and since it is an area of great concern (with large risks like the Emerald Ash Borer), it can be expected to be a strong and reliable measure of forest sustainability. An index was created for this indicator so as to measure both the presence and distribution of invasive species infestation in the region's forests. The New York Invasive Species (NYIS) Clearinghouse tracks the spread of multiple types of invasive species through the state.

One choice for the indicator would be to report the number of tracked species present in the region. Though this indicator choice would be simple, it would be misleading. Many of the species tracked are aquatic or otherwise not applicable to forestry. Just simply reporting the number of species in the region which are a threat to forests would be more precise. However, this indicator choice neglects the measurement of how widespread these species are in the region, a critically important detail. In order to quantify how many applicable invasive species are in the region, and how serious the infestations are with a single numerical measure, it was necessary to design an index. This index evaluates each invasive species present in the region individually. The index values for each species present is finally added together to give the regional index value.

Calculation:

Utilizing the maps of current known species ranges on the NYIS Clearinghouse website⁴⁰, the first step in calculating this indicator is to determine how many of the invasive species threatening forests are present in the area. Next, each of these species will get scored individually. For each species present, the number of counties in the region where it is known to be present is determined. Using this information, an index score ranging from one to five is assigned using the following formula:

$$\text{Index Score} = 1 + ([\text{number of counties in the region in which it is present} - 1] \times 0.5)$$

This formula is used to calculate an index score for each species present. Finally, all of the scores are added together to determine the overall regional index value.

Example:

Species X and Species Y are the only two invasive species in the region. Species X is only in one county, while Species Y is in five counties.

⁴⁰ Cornell University. 2012. New York Invasive Species Clearinghouse. Available at <http://www.nyis.info/index.php>. Accessed December, 2012.

$$\text{Species X Index Value} = 1 + (1-1)*(0.5) = 1 + 0 = 1$$

$$\text{Species Y Index Value} = 1 + (4)*(0.5) = 1+2 = 3$$

$$\text{Regional Invasive Species Index Value} = 1 + 3$$

$$\text{Regional Invasive Species Index Value} = 4$$

The index was designed to quantify presence and spread differently. As described above, the first county in which a species is present adds 1 to its index score. Each additional county adds 0.5. This difference is meant to reflect the fact the introduction of a new foreign species threatening forests is arguably more of a problem than the spread of an existing problem species to an additional county within the region. On the other hand, eradicating a species completely from the region, however unlikely, would be more of an accomplishment than just removing it from a single county. The bottom line is that, judging from the point of view of a nine-county region, the mere presence of an invasive species into the region is a very large issue. Once present, though the extent of its distribution is important, much of the damage is already done with the initial introduction. The difference between the weights used in the index formula attempt to reflect this variation.

| Required Data | Definition | Dataset Reference |
|---|---|--|
| Number of invasive insect and parasite species present in region, and their range | Range of Priority Species tracked by the New York Invasive Species Clearinghouse which are a threat to forest resources | USDA and DEC Species Range Maps found at: http://www.nyis.info/index.php |

Additional Comments:

It is acknowledged that not all invasive species pose equivalent threat levels to regional forest resources. The vast difference between various potential impacts is mitigated to some degree by virtue of the selectivity inherent in the NYIS Clearinghouse data source. The Clearinghouse distinguishes between species of high potential threat and those that are merely foreign competitors, such as Norway maple.

Even still, some degree of generalization is required in an effort to achieve a single numeric values by which to describe both the presence and distribution of threatening invasive species on the whole. The nature of the invasive species threat is such that we cannot foresee which species

might possibly be introduced into the region, or how problematic they might be. For this reason, any measure must be general and flexible, even if somewhat simplified.

Baseline Condition:

The Regional Index value of 8.5 reflects the presence of three tracked species that exhibit known threats to forest resources (see Figure 16). European Woodwasp (*Sirex noctillo F.*) is present in all nine counties, Hemlock Woolly Adelgid (*Adelges tsugae*) is present in three, and Emerald Ash Borer (*Agilus planipennis*) or EAB is present in two. EAB is the most problematic of these three. According to the NYIS Clearinghouse, "Slowing [EAB's] spread is imperative."⁴¹ New York State has instituted a quarantine on ash products to attempt to limit their spread and mitigate potential catastrophic damage to the state's high number of ash trees.

Figure 16, Invasive Species Index Values, 2012

| County | Emerald Ash Borer | European Woodwasp | Hemlock Woolly Adelgid |
|---|-------------------|-------------------|------------------------|
| Genesee | | Yes | |
| Livingston | Yes | Yes | |
| Monroe | Yes | Yes | Yes |
| Ontario | | Yes | |
| Orleans | | Yes | |
| Seneca | | Yes | Yes |
| Wayne | | Yes | |
| Wyoming | | Yes | |
| Yates | | Yes | Yes |
| <i>Regional Index Value (subtotals)</i> | <i>1.5</i> | <i>5</i> | <i>2</i> |
| <i>Total Regional Index Value</i> | <i>8.5</i> | | |

There are a few invasive species in New York that have not, as of yet, spread to the Finger Lakes region. A clear example is Asian Longhorned Beetle (*Anoplophora glabripennis*), which has been found in areas of New York City and Long Island. An important goal for the region will be to try and keep its index value from rising, in part by doing all it can to avoid the spread of existing invasives in the region, and keeping others like the Asian Longhorned beetle out.

⁴¹Cornell University. 2012. EAB Home Page. New York Invasive Species Clearinghouse. Accessed December 5, 2012. Available at <http://www.nyis.info/index.php?action=eab>

| Security Delay | 233 | 0.02% | 9,420 | 0.05% |
| National Aviation System Delay | 172,401 | 16.07% | 9,473,105 | 55.26% |
| Extreme Weather | 13,481 | 1.26% | 972,710 | 5.67% |
| Total Operations | 1,072,689 | 100.00% | 17,141,647 | 100.00% |

A flight is considered delayed when it arrived 15 or more minutes than the schedule (see definitions in [Frequently Asked Questions](#)). Delayed minutes are calculated for delayed flights only. Data presented summarizes arriving flights only. When multiple causes are assigned to one delayed flight, each cause is prorated based on delayed minutes it is responsible for. The displayed numbers are rounded and may not add up to the total.

Appendices

Part 3—Recommended Strategies and Projects

Projects included in the appendices or within the content of this report are meant to provide examples of potential ways to address the strategies identified in the report and were submitted to the planning consortiums as part of the public outreach efforts by the consortium. These projects are in no way prioritized or guaranteed to receive funding through Phase II Implementation Funding of the Cleaner, Greener Communities Program. Projects not listed in the appendices section or content of the plan will have equal opportunity to submit an application for funding through Phase II. Regardless of being listed in the plan, a Consolidated Funding Application must be submitted in order to be considered for funding in Phase II. All projects must address the qualifications and eligibility requirements as listed in the Cleaner, Greener Communities Phase II solicitation notice.

APPENDIX E: EVALUATION PROCESS

EVALUATION PROCESS

For representation in matrix format, the following symbols were used to conduct a qualitative assessment of all Broad Strategies and Specific Projects. This will give the highest ranking to those ideas with the most positive characteristics:

| | |
|---|---|
|  | positive impact or high feasibility/ low cost/ high GHG reduction potential |
|  | neutral or no impact or medium feasibility/ cost/ GHG reduction potential |
|  | negative impact or low feasibility/ high cost/ low GHG reduction potential |

EVALUATION CRITERIA

- **Benefits multiple subject areas**
 1. Energy
 2. Transportation
 3. Land Use & Livable Communities
 4. Materials/Waste Management
 5. Water Management
 6. Economic Development
 7. Agriculture & Forestry
 8. Climate Change Adaptation
 9. Governance
 10. GHG Emissions - GHG reduction potential

| | |
|---|-----------------------------|
|  | Benefits 7-10 subject areas |
|  | Benefits 4-6 subject areas |
|  | Benefits 1-3 subject areas |

- **Benefits multiple Capitals**

1. Human – public health/quality of life
2. Social – education/arts/culture
3. Natural
4. Built/Manufactured - infrastructure
5. Financial

| | |
|---|---|
|  | Benefits all 5 Capitals |
|  | Benefits 3-4 Capitals |
|  | Benefits 0-2 Capitals or diminishes any one Capital |

- **Benefits multiple communities** – directly benefits or has potential to be replicated in communities in more than one county within the region or beyond the region/across REDC boundaries

1. Genesee
2. Livingston
3. Monroe
4. Ontario
5. Orleans
6. Seneca
7. Wayne
8. Wyoming
9. Yates

| | |
|---|--|
|  | Benefits communities in 4 or more counties or provides benefits beyond the region/across REDC boundaries |
|  | Benefits communities in 2 to 3 counties |
|  | Benefits communities in only 1 county |

- **Implementation feasibility** – include consideration of timeframe, availability of technology and support/partnerships

| | |
|---|---|
|  | Short implementation timeframe (0-9 yrs); technology currently available and in use; established support network |
|  | Implementation timeframe (10-19 yrs); technology in R&D phase; support framework currently being developed but not formalized |
|  | Long implementation timeframe (20+ yrs); technology currently unavailable; no established support framework or partnerships |

- **Consistent with planning efforts** – consistent with or identified in regional and local planning efforts

| | |
|--|---|
|  | Consistent with 2 or more regional or local planning efforts/plans |
|  | Consistent with 1 regional or local planning effort/plan |
|  | Conflicts with a goal or strategy in a regional or local planning effort/plan |

- **Financial feasibility** – consideration of order of magnitude and life cycle costs, potential to leverage other resources, consideration of immediacy of benefit

| | |
|---|--|
|  | Low/medium order of magnitude and life cycle cost; High potential to leverage other funding sources – list; significant benefit early in strategy/project life cycle |
|  | High order of magnitude and life cycle costs but high potential to leverage other funding sources – list; Low/medium order of magnitude and life cycle costs but low potential to leverage other funding sources Benefits are distributed evenly across the life of strategy/project |
|  | High order of magnitude and life cycle cost; low potential to leverage other funding sources; benefit is delayed or ramps up over life of strategy/project |

APPENDIX F: SUBJECT AREA STRATEGIES

Energy Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|---|----------------------|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy, etc.) | | | | | | | | | | ● | ● | ● | ● | ● | ◐ | Subject Areas Benefited: All; Capitals Benefited: All; Potentially benefits all communities; Short implementation timeframe, technology currently available and in use, established support network; Consistent with Planning Efforts: Yes Financial Feasibility: high order of magnitude cost with high potential to leverage other funding sources |
| | Develop Greater Market Use & Interest in Bio-Fuels | | All | X | X | X | GFLRPC | | Bio-Fuel Production Tax Credit; Heavy Duty Alternative Fuel and Advanced Vehicle Purchase Vouchers; Bio-Fuel Station Initiative Program; Alternative Fuel Vehicle Program; Alternative Fuel Tax Incentive & rate Reduction | | | | | | | |
| | Promote rewards & incentives for generating and using Bio-Fuels | | All 9 Counties | X | X | X | NYS Dept of Taxation and Finance; NYSED; NYSED; NYSED; | | | | | | | | | |
| | Increase availability and geographic coverage of alternative public fueling stations using Electricity, Hydrogen, Bio-Fuel, CNG, Ethanol, LNG or Propane | | All | X | X | X | NYS Dept of Taxation and Finance; NYSED; | | | | | | | | | Communities with active fueling stations as of February 2013 include: East Rochester, Canandaigua, Webster, Rochester, Macedon, West Seneca, Pittsford, Spencerport, Fairport, Rush, Geneva, Penn Yan. |
| | Move towards a transportation system that does not use fossil fuels | | All | | | X | | Protection of health, environment and quality of life. | | | | | | | | |
| | Identify funding for and encourage implementation of projects that use food waste to produce energy | | | | | | | | | | | | | | | |
| | Support research and development, deployment of pilot projects to validate technology and eventual commercialization of new alternative energy technology | | | | | | | | | | | | | | | |
| | Educate the public and municipal officials on the benefits of renewable energy generation and address the potential negative impacts | | All | X | X | X | REDC | | | | | | | | | |
| | Develop and promote the adoption of local policies that accommodate the development of on-site and community alternative and renewable energy generation | | All | X | X | X | NYS Public Service Commission | | | | | | | | | |
| | Encourage counties, municipalities and local districts to conduct an inventory of potential alternative and renewable production and prioritize projects for implementation | | All | X | X | X | | | | | | | | | | |

Energy Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|--|--|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Rural College Bio-Energy Hubs | Provide grants to study the feasibility of creating energy hubs at local colleges. Sources of energy could include manure wastes, bio-wastes and other waste or organic materials. The primary use of electrical energy and thermal energy would be for the colleges. Excess electrical energy could be sold to the utility. Thermal energy would be used as the colleges. Research into the use of bio-energy could enhance classes. Renewable energy options for the colleges could also be reviewed for feasibility. This is a strategy that applies to at least two sectors - Colleges - Educational and Agricultural - Farms. | All | X | | | Local colleges could be the lead. Tie in with research projects and student projects. | Farms would get rid of manure wastes; generate thermal and electrical energy with bio-gas burning; provide energy to colleges; provide hands on working projects for college research and students; return fertilizer fluid to farms for their use; decide on share of utility savings that can be shared with farmers. | | | | | | | | |
| | Vitale 'Sustainable' Park - Alternative Energy Additions - Study Phase | Funding for consulting services to study the feasibility of alternative energy additions at Vitale Park in the Town of Livonia. This project could serve as a model for other municipalities interesting in curbing energy costs, reducing their carbon footprint, and having clean energy solutions at municipal parks, which will help inspire residents to make similar choices at the residential and business levels. Money is needed to fund a study to look at the options for adding alternative energy generators at this location including wind (given it's at the north end of a lake with brisk breezes), solar, and other methods that would be viable for producing energy that would be utilized to light and power the park uses. The feasibility study needs to identify how the project would be funded, implemented and maintained. | Livingston but replicatable | X | | | | | | | | | | | | |
| | Vitale 'Sustainable' Park - Alternative Energy Additions - Implementation Phase | Seed funding for implementation of alternative energy additions at Vitale Park in the Town of Livonia. This project could serve as a model for other municipalities interesting in curbing energy costs, reducing their carbon footprint, and having clean energy solutions at municipal parks, which will help inspire residents to make similar choices at the residential and business levels. Money is needed to assist with establishing alternative energy generators at this location including wind (given it's at the north end of a lake with brisk breezes), solar, and other methods that would be viable for producing energy that would be utilized to light and power the park uses. | Livingston but replicatable | X | | | | | | | | | | | | |
| Promote energy conservation and efficiency by developing educational programs, increasing participation in available state and federal incentive programs, and by adopting local and regional policies | | | All | X | X | X | NYSERDA, NYS DEC, US DOE, US EPA | Energy Smart Programs, Energy Efficiency Conservation Block Grant, Climate Smart Communities, Energy Star Programs | ● | ● | ● | ● | ● | ● | | Subject Areas Benefited: All; Capitals Benefited: All; Potentially benefits all communities; Short implementation timeframe, technology currently available and in use, established support network; Consistent with Planning Efforts: Yes Financial Feasibility: low order of magnitude |
| | Promote and incentivize energy auditing/measurements and verification, commissioning, and the implementation of energy conservation and efficiency measures (i.e. lighting, motor, service hot water heating, and HVAC controls) | | All 9 Counties | X | X | X | NYSERDA | | NYSERDA Existing Facilities Program | | | | | | | |
| | Educate and promote energy conservation and efficiency measures to municipalities, businesses, and residents highlighting the benefits of simple measures (i.e. maximize the use of daylight, use of occupancy sensors, installation of energy efficient lighting, and adjusting temperature controls) | | All | X | X | X | Lighting Research Center, NYSEERDA | | RPI Daylight Dividends, New York State Pollution Prevention Institute at RIT, Golisano Institute for Sustainability at RIT | | | | | | | |
| | Develop and promote the adoption of local codes and policies that exceed the minimum requirements of the NYS Energy Conservation Construction Code | | All | X | X | X | NYS Energy Conservation Construction Code | Reduce GHG and pollutants and protect health, environment and quality of life. | | | | | | | | |

Energy Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|---|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|---|--|---|---|---|---|---|---|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Support research and development, deployment of pilot projects to validate technology and eventual commercialization of Net-Zero energy technologies. | | All | X | X | X | US DOE | | National Renewable Energy Laboratory, New York State Pollution Prevention Institute at RIT, Golisano Institute for Sustainability at RIT | | | | | | | |
| | Net Zero Energy Housing Development | Brownfield’s represent parcels of land in communities that can be cleaned and developed as Green development projects to assure the future users highest level of health and environmental benefits. Under NY State Brownfield program, tax credit incentive provides some financial reward for taking the risk. Since energy costs are of concern to occupants, this issue can be addressed by designing-developing a Green community that generates as much energy as it consumes. There is no such housing development known to be in New York State. It could attract more economic growth if the local communities and County agencies supported the Developer who is willing to invest in cleaning and development of Brownfield sites. | Monroe and others | X | | | County Economic Development Agency | This strategy relates a project (Lotus Green) under development in the Village of Churchville NY where a 4 acre parcel is to be developed into 30+ units Green housing development with Net-Zero homes. The property values on adjacent area to existing Brownfield’s would increase and new tax revenues will be generated by converting the land to beneficial use. Demonstration of Green technology with net-zero housing developments would enhance adaptation of better home building technologies in our area and offer Healthy living Green housing options to seniors who need to control the expenses of owning a residence. Rochester Finger Lakes Region needs to be known as Green Innovation Center and such a project would enhance the image and improve tourism to our area to see such unique developments. | | | | | | | | |
| | Municipal energy policies/plan | Develop municipal energy policies that deal with all potential municipal energy development and intergrateable with comp plan and implementable through municipal land use regulation and control and development. | All | X | | | Regional, county and municipal entities. | Position municipalities to strategically deal with energy sources and adapt to changing technology. | Municipal energy policies/plans. | | | | | | | |
| Upgrade the existing conventional energy production and distribution system in a sustainable way | | | | | | | | | |  |  |  |  |  |  | Subject Areas Benefited: Energy, Land Use, Materials & Waste Management, Economic Development, Climate Change, Governance, GHG Emissions, Agriculture & Forestry; Capitals Benefited: All; Potentially benefits all communities; Short implementation timeframe, technology currently available and in use, established support network; Consistent with Planning Efforts: Yes Financial Feasibility: low order of magnitude cost |
| | Replace inefficient lighting with modern, energy-efficient lighting | | All | X | X | X | NYSERDA Rebates | | | | | | | | | |
| | Pursue Net-Zero Energy Technologies | | All | | X | X | US DOE | | National Renewable Energy Laboratory | | | | | | | |
| | Obtain full compliance with the minimum requirements of the NYS Energy Conservation Construction Code | | All | X | X | X | NYS DCEA, NYSEDA | | | | | | | | | |
| | Study ways to reduce public and private outdoor illumination | | All | X | | | | | | | | | | | | |
| | Retrofit existing public and private buildings with more efficient thermal envelopes | | All | X | X | X | | | | | | | | | | |
| | Study ways to and then overcome capture energy usage and distribution losses | | All | X | | | | | | | | | | | | |
| | Upgrade the transmission infrastructure to reduce distribution loss | | All | X | X | X | NYS Public Service Commission | | | | | | | | | |

Energy Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|----------------|---|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|-------|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Increase the use of demand response program to better manage supply and consumption | | All | X | X | X | NYS Public Service Commission | | | | | | | | | |
| | Promote distributed generation | | All | X | X | X | NYS Public Service Commission | | | | | | | | | |
| | Energy Reduction with LED Lighting | Replace 105 metal halide high bay lights with energy efficient LED light fixtures in the production area. | Livingston | X | | | | | | | | | | | | |
| | High Efficiency Strategy for Ski Resorts | Replace high energy snow guns with high efficient snow guns or fans. Implement smart valves to increase efficiency of existing snow guns/fans. Snow making automation. Replace inefficient lighting with high efficiency lighting. Water reservoir on top of hill. VFDs for pumps. | Ontario | X | | | | | | | | | | | | |
| | Increase energy efficiency in buildings. | County-based clean energy outreach to facilitate the number of buildings with energy-efficiency retrofits, onsite renewable energy, and CHP; as well as vehicle upgrades for economic development that reduce GHG emissions. As much as \$100MM is potentially available in the total mix of: federal grants, production/investment tax credits, incentives; state grants, incentives and financing (NYSERDA, NYPA, EFC, NY ISO, ESD); utility (RG&E, NSEG, National grid, national Fuel, municipal utilities), incentives and economic development. These funds leverage private investment and provide ongoing energy cost savings. For an example using \$10MM: assuming the incentive is 25% of project cost, it could spur a so much as \$400MM annual investment, with \$300MM from the private sector; assuming the project has a simple payback of 5 years, this investment generates \$80MM in reduced energy costs or new generation each and every year for the life of the project. So year 2 would see \$160MM in energy savings from year 1 and year 2 projects, year 3 would see \$240MM in energy savings from years 1, 2, and 3 projects, etc. County-based outreach can include a number of elements to spur higher clean energy investment: one stop shop website of all Federal, State, and Utility incentives across program administrators such as GreenMonore.org, | All | X | X | X | County IDAs, County Administration, Blue Springs Energy provides these services today to counties and IDAs. | Greater efficiency reducing GHG. Leading with economic development to reduce GHG creates a larger pool of support across the political spectrum. Although a high percentage of people and business owners identify themselves as "green", a low single-digit percentage utilize NYSEDA, utility, and Federal incentive programs. Also, less than single-digit today have onsite generation, and single-digit percentage of electric purchases use green energy via RECs. | | | | | | | | |
| | Incentivize Net Zero Energy buildings that will produce all the energy they need. | Improve minimum standards for building energy efficiency. Reward/rebate insulation and conservation efforts and create more local jobs to accomplish the work. | All | | | X | | Reduce GHG and pollutants and protect health, environment and quality of life. | | | | | | | | |
| | Local Public Works Energy Use Reduction | Each County Planning Department will distribute a questionnaire to each local Department of Public Works to request summaries of the total energy used by category by each month. Separate by (at least) the following categories: truck/vehicle fuel used, electrical energy used, heating fuel and natural gas and propane. County to summarize the data and then it should be summarized by the entire region and state. Opportunities to reduce energy use shall then be reviewed such as switching vehicles to natural gas, improving lighting, furnace and motor efficiencies, or building insulation. In addition to traditional energy conservation improvements, options to share vehicles, staff or building should be evaluated. The options of renewable energy sources at the DPW locations should be considered. | All | X | | | County Planning Departments | Increase awareness of energy use patterns by the local DPWs; increase potential of sharing services and equipment to reduce overall energy use; increase the potential of the DPWs to purchase (together) newer vehicles that can use alternative fuels; review options for installation of on-site renewable energies at the DPW locations. | | | | | | | | |
| | Regional Sustainability | Overseeing revisions to, implementation of, and evaluation of Regional Sustainability Plan. | All | X | X | X | Regional | Relevancy of the Regional Sustainability Plan, implementation of the Regional Sustainability Plan, monitoring and evaluation of the Regional Sustainability Plan, and integration with regional plans, studies, strategies and implementation. Adjusting to federal, state, regional and local policies. | Regional Sustainability Plan | | | | | | | |

Energy Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|--|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Energy Development Strategy for the Town of Avon | In 2005, the Town of Avon purchased and began renovating a historic building, known as the Opera House Block, in the Village of Avon for location of town offices. The Town Board made the important decision to support the village core and renovate an existing building rather than convert valuable farmland to a non-farm use. The goal of the project was to renovate the building in a way that preserves historic and community character and is energy efficient. As of 2013, the Town Board has renovated most of the building with the exception of the third floor, which was the original Opera House. For energy efficiency, a geothermal heating and cooling system was successfully installed. We estimate the yearly savings of the geothermal system vs. a more convention system is \$8,000 - \$10,000 per year. The Town would like to continue renovating the building and restore the Opera House floor for historic and cultural enrichment. The Town would also like to continue to incorporate energy efficient measures into the renovation process and have this project serve as a community model of how energy efficiency can be achieved in historic | Livingston | Yes | | | Town of Avon | Generate green energy to take advantage of net metering to reduce energy costs to constituents with a goal of energy independence. | | | | | | | | |
| | Energy Storage for Peak Demand Reduction | Utility companies charge commercial customers and other large electricity users demand charges for periods when they use the most energy throughout the billing period. These "demand charges" significantly increase the cost of electricity, and are often 30% to 70% of a customer's electricity bills. A system consisting of energy monitoring, energy storage and power electronics can be deployed to store energy when costs are low and release this energy during periods of high demand, thereby significantly reducing demand charges. The system can also be utilized as emergency backup power for critical loads in the event of a grid outage. System costs are driven largely by the size and chemistry of the energy storage technology. These costs can be significantly reduced through a NYSERDA PON similar to the CHP Acceleration Program (PON 2568) recently released where customers are pre-approved and awarded funding on a per kW basis for reducing base load. A similar funding structure could be implemented based on demonstrated demand reduction (kW) or the size of the energy storage system (kWh) given a minimum utilization percentage. | All | Yes | | | Arista Power, NYSERDA | Reduced electricity costs for large commercial and industrial customers. Reduced peak demand burden for utilities and NYISO. These systems can also be utilized for demand response programs without the need for load shedding, making DR enrollment transparent to the customer. The system can also be utilized as emergency backup power for critical loads in the event of a grid outage. These are green systems from the standpoint that they will reduce the carbon footprint of customers who implement them and also reduce GHG emissions for the utilities as they will be able to reduce overall power generation. | | | | | | | | |
| | Farm Energy Sustainability Plans | Individual Farm Energy Analysis, including review of loads, timing, motor efficiencies, lighting and fuel uses. Review of potential energy sources such as bio-gas, wind, solar and other renewable should be included. Creation of a realistic plan is the goal. Present worth calculations of potential savings will help farmers identify which ones should be prioritized. | All | X | | | County Planning Departments for oversight with NYSERDA | Engagement of farmers in the study will make them more likely to implement changes; identification of possible improvements; reduction in energy use; identification of possible farm equipment to switch to natural gas; identification of opportunities to share equipment and vehicles. | | | | | | | | |
| Develop, produce, and employ renewable energy (wind, hydroelectric, solar, and geothermal) | | Fossil fuels are expected to continue to play a significant role as a reliable energy source in the Finger Lakes region, due to its abundance and reasonable cost, relative to other energy sources | | | | | | | | ● | ● | ● | ● | ● | ◐ | Subject Areas Benefited: All; Capitals Benefited: All; Potentially benefits all communities; Short implementation timeframe, technology currently available and in use, established support network; Consistent with Planning Efforts: Yes Financial Feasibility: high order of magnitude cost with high potential to leverage other funding sources |
| | Reduce the reliance and use of fossil fuels | | All | X | X | X | | | | | | | | | | |
| | Develop storage and capture mediums for renewable energy | | All | X | X | X | NYS Public Service Commission | Net Metering Law | | | | | | | | |
| | Increase the use of wind power | | All | X | X | X | NYS PSC, IRS (Federal Tax Credit) NYS Dept of Taxation (NYS Tax Credit) | See Notes | | | | | | | | There are currently 12 incentive or rebate programs offered for the Finger Lakes region for installing various types of solar or wind systems |
| | Seek broader access to hydroelectric power | | All | X | X | X | NYPA, NYS PSC, IRS (Federal Tax Credit) NYS Dept of Taxation (NYS Tax Credit) | | | | | | | | | |
| | Increase the use of solar power | | All | X | X | X | NYPA, NYS PSC, IRS (Federal Tax Credit) NYS Dept of Taxation (NYS Tax Credit) | See Notes | | | | | | | | There are currently 12 incentive or rebate programs offered for the Finger Lakes region for installing various types of solar or wind systems |
| | Increase the use of geothermal power | | All | X | X | X | Geothermal Exchange Organization, American Groundwater Trust | ARRA | | | | | | | | |

Energy Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|----------------|---|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|-------|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Develop and promote the adoption of local policies that accommodate the development of on-site and community renewable energy generation | | All | X | X | X | NYS Public Service Commission | | | | | | | | | |
| | Explore and develop innovative funding and financing options for the development of renewable energy production | | All | X | X | X | REDC | | | | | | | | | |
| | Research the potential for and promote the use of public-private partnerships and/or purchase power agreements to encourage the development of renewable energy generation | | All | X | X | X | REDC | | | | | | | | | |
| | Increase availability and geographic coverage of alternative public fueling stations using Electricity, Hydrogen, Bio-Fuel, CNG, Ethanol, LNG or Propane | | All | X | X | X | | Seneca Ag-bio Green Energy Park | | | | | | | | |
| | Support research and development, deployment of pilot projects to validate technology and eventual commercialization of new renewable energy technology (i.e. on-site anaerobic digester system or mid-scale wind projects) | | All | X | X | X | REDC | | | | | | | | | |
| | Educate the public and municipal officials on the benefits of renewable energy generation and address the potential negative impacts | | All | X | X | X | REDC | | | | | | | | | |
| | Encourage counties, municipalities and local districts to conduct an inventory of potential alternative and renewable production and prioritize projects for implementation | | All | X | X | X | | | | | | | | | | |
| | Increase the use of wind power | Paradigm exists of POWER being massive, able to power entire communities, etc. This strategy involves the design/purchase/placement of small (500 watt scalable to 5 Kilowatt) systems placed on private residences to supplement existing grid provided electricity. The components necessary are currently available in the marketplace. A system is estimated to have a UMC of approximately \$2000 (2010 price list). Price includes all components necessary including grid tie inverter. The wind power would b provided by a VAWT mounted to the users roof similar to attic vent turbines that are commonplace and commercially available, wildlife safe, noiseless and barely noticeable ascetically. | All | X | X | X | Energy? | Low cost electricity, less green house gases, employment. | | | | | | | | |
| | Regional Renewable Energy Generation Inventory | Have all municipalities and subdivisions (fire, school districts, etc.) conduct a renewable energy generation inventory that details potential for wind, solar, biomass or other electricity production opportunities. The goal would be to create a list of potential projects, including information on costs and MW production, which could then apply for partial funding from NYSERDA. Municipalities could use the NYSERDA subsidy to assist in financing PPAs that make the use of renewable cost competitive. NYSERDA would also be asked to fund creation of the inventory as a potential Phase 2 project under the Sustainability Plan. | All | X | X | X | Individual Counties | | | | | | | | | |
| | Regional Household Energy Audit Clearinghouse | Working in conjunction with local colleges and universities, the Region could establish a Household Energy Audit Clearinghouse where engineering students could either conduct themselves or verify energy audits conducted by vendors. The clearinghouse would provide homeowners with assurance that energy efficiency projects they are considering would actually provide the benefits and payback being sold. Consumers could then purchase products and services with their chosen vendor confident that the are making a financially sound decision. The benefits of the program would be reduced home energy use and economic development from the increase in the number of projects completed. | All | X | X | X | Individual Counties | | | | | | | | | |
| | Bio-gas Powered Fuel Cell and Hydrogen Development Research and Implementation | The Golisano Institute for Sustainability is interested in pursuing research where bio-gas from landfills and anaerobic digesters is used to power stationary fuel cells. The fuel cells would produce electricity and hydrogen from a sustainable feedstock fuel. The long-term potential exists to create hydrogen depots that could provide fuel for commercial fueling stations to sell to consumers driving hydrogen vehicles. The long term benefits from the project include greatly reduced GHG emissions from hydrogen vehicles, increased renewable electricity production, reduced VMT from the shipping of petroleum fuels and enhanced local job creation from establishment of a regional hydrogen distribution network. | All | X | X | X | Individual Counties | | | | | | | | | |

Energy Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | Notes | | | |
|----------------|--|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-------|-----------------------|--|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | | Financial Feasibility | | |
| | Community Based Incentive Solarization Program | Create community based (county) solarization programs that will create renewed focus to implementing PV Solar technology through Solarization Marketing program that will assist interested consumers through organizing public information sessions, no charge siting assessments, bulk pricing arrangements with regionally based certified installers, and additional limited time program based incentive rebate of \$1,000-2,000 per site. The incentive funding can be allocated to the IDA for distribution on a first come first serve basis. Recommend conducting the program twice a year with each county IDA as this will provide the periodic visibility and create continued interest that is time sensitive. Example: In addition to the federal and NYSERDA based credits, and additional incentive of \$1-2k will promote those considering solar PV to make a commitment. It has been demonstrated that once a community is participating in the program additional installations will result above the incentive threshold. Recommended each county select 1-2 suppliers based on competitive bidding to the program, having a number of installations all in same area and relative know time frame will allow the venders to provide bulk based pricing that a resident may not typically see if the program did not exist. The programs previously done in Madison County are a good example of how well | All | Yes | | | County IDA's and regional based certified NYSERDA Solar PV installers | Accelerate PV Solar installations through creating periodic incentive based initiative allowing focused marketing efforts to combine with a package of educational information, competitive bulk pricing of turnkey systems, and efficient installations. Contribute to increase solar PV in counties/regions/NYS; provide additional jobs for installations; increased and accelerated contribution to reduction of green house gases (GHG) | Solarize Madison County http://www.solarizemadison.com/solar-program.html | | | | | | | | | |
| | Energy Efficiency and Renewable Energy | Many communities in the Finger Lakes Region are located near bodies of water. Wherever there is an elevation gradient in a stream, river or canal, it is possible to generate electricity through micro hydropower. Electricity is generated using the natural flow of water, a turbine and a generator. Scottsville, NY used to generate hydropower at neighboring Oatka Creek. The hydropower provided the electricity needed to run lumber mills years ago, a very important historical facet of the community. Scottsville could use this fantastic water power resource to create micro hydropower again. There is a pavilion in Canawaugus Park in Scottsville that could be totally powered through natural renewable energy (micro hydropower and solar energy - recently the Village applied for a grant for a PV solar system to supply electricity to municipal building and parks). Energy efficient LED lights could replace current park lighting. The Village also has a lab maintenance building, part of the sewage treatment (which will soon be closed) that they would like to power with renewable energy. | Monroe | Yes | | | Village of Scottsville | Electricity cost savings for a community, funds that are saved could be used on other important community projects. The Village could use this as a great educational opportunity, a way to show residents, school groups, and special interest groups that it is possible to generate electricity without using fossil fuels and forms of energy that pollute our earth. The Village could also explain its modern day and historic connection to micro hydropower generation and share this with the community and tourists. There could be signage throughout the | | | | | | | | | | |
| | Energy Generation Using Hydropower | Many communities in the Finger Lakes Region are located near bodies of water. Wherever there is an elevation gradient in a stream, river or canal, it is possible to generate electricity through micro hydropower. Electricity is generated using the natural flow of water, a turbine and a generator. Medina would like to generate electricity through micro hydropower focusing on the area where Oak Orchard Creek crosses the Erie Canal to the north of the Village. This is the former site of a flour mill. The energy produced through this process could power Medina's Canal Basin Park. The park could be powered entirely through renewable energy - solar energy (Medina has applied for a PV solar system to supply electricity to municipal buildings) and a micro hydropower. Educational materials - signs describing and depicting how the park is powered could be on display. Tours could be given to school groups, interested tourists and residents describing how the park is powered sustainably. | Orleans | Yes | | | Village of Medina, Civil or Environmental Engineer, Contractor | Electricity cost savings for community, funds that are saved can be used on other important community projects. The community could have a park that is powered by renewable forms of energy. This could be a great educational tool for residents, school groups and special interest groups. The park could be a great attraction for tourists since it is already in a wonderful, picturesque location along the Erie Canal. Carbon footprint can be reduced in the community, through the use of natural renewable energy. | | | | | | | | | | |
| | New Town Energy Independence | Riverton and Canada were both planned as self-sufficient new towns. Failure of region to grow as projected limited their growth development and prevented several of the common/independent facilities/institutions. This would use open land for large scale solar farm to supply low cost green energy to community residents and industry. | Monroe, Wayne | | | | Towns, Utility Companies, Community Associations | Green energy production. Strengthen new town - self sufficiency philosophy. Inducement for new residential and business development | Original Federal New Town Development Plans | | | | | | | | | |
| | Accelerate local production of energy from agricultural waste. | The proposed strategy is focused on filling research gaps and creating the incentives needed to strengthen the value proposition of technologies like anaerobic digestion to local landowners. The following tactics would support the achievement of this strategy: Complete longer term study on waste profiles that are best suited for the use of anaerobic digestion, biomass conversion, biodiesel production, etc.; Complete cost-benefit analysis of the technologies mentioned above; Develop decision-making and technical assistance tools that can engage landowners; Create infrastructure for enabling farmers to sell waste energy to the grid; Use tax and other vehicles to incent local energy production | All | Yes | | | Regional economic development agency via partnership with university, county government, and NYSERDA | Regional economic development agency via partnership with university, county government, and NYSERDA | | | | | | | | | | |
| | Energy Generation Using Hydropower | Many communities in the Finger Lakes Region are located near bodies of water. Wherever there is an elevation gradient in a stream, river, or canal, it is possible to generate electricity through micro hydropower. Electricity is generated using the natural flow of water, a turbine, and a generator. Lyons, NY used to have hydropower generation at the Erie Canal locks. Lyons would like to look into re-implementing micro hydropower in the lock system of the Canal. The energy produced through this process could power the nearby Lyons Canal Park. Energy efficient LED lights could replace current park lighting; the park could be powered entirely through renewable energy - solar energy (Lyons has applied for a grant for a PV solar system to supply electricity to municipal buildings) and micro hydropower. Educational materials - signs describing and depicting how the park is powered could be on display. Tours could be given to school groups, interested tourists, and residents describing how the park is powered sustainably. | Wayne | X | | | Village and Town of Lyons, Civil or Environmental Engineer, Contractor | Electricity cost savings for a community, funds that are saved could be used on other important community projects. The community could have a park that is powered by renewable forms of energy. This could be used as a great educational tool for residents, school groups, and special interest groups. The park could be a great attraction for tourists, since it is already in a wonderful, picturesque location along the Erie Canal. The carbon footprint of the community could be reduced, through the use of natural renewable energy. | | | | | | | | | | |

Energy Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|--|--|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Develop and implement micro-grid technology that integrates the advantages of independent local production and distribution systems with the storage and distribution capacity of a large grid | | | | | | | | | | ● | ● | ● | ○ | ○ | ○ | Subject Areas Benefited: All; Capitals Benefited: All; Potentially benefits all communities; Long implementation timeframe, technology currently undeveloped; Financial Feasibility: high order of magnitude cost with low potential to leverage other funding sources |
| | Local Energy | Regionalize control of energy generation and distribution | All | | X | X | | | | | | | | | | The advancement of a Micro-Grid could benefit a group as small as a cul-de-sac, or as large as a village. |
| | Community self-reliance | Community self-reliance (regional or multiple micro-grids) | All | | X | X | | | | | | | | | | There is an existing project in NYS to study elements of Smart Grid technology, which may lead to development of Micro-Grid strategies going forward |
| | Support research and development deployment of pilot projects to validate technology and eventual commercialization | | All | X | X | X | | | | | | | | | | |
| | Explore and develop innovative approaches to address micro-grid financing, ownership, and service models | | All | X | X | X | | | | | | | | | | |
| | Support sustainable cooperative business construction that reduces the dependency on traditional imported energy sources | Support development of micro-grids, defined here as 'a group of businesses in a symbiotic relationship using renewable energy and/or creating energy with micro turbines from natural gas or wind or shared thermal, that can operate off the grid for extended periods of time.' | Wayne | X | | | Wayne County IDA, Private Industry, NYSEDC, EDA, NYSERDA | Reduced dependence on imported energy, more efficient use of onsite energy lowering operating expenses for the company. | CEDS, Wayne EDC Strategic Plan, Wayne Industrial Sustainability Project (WISP) | | | | | | | |

Transportation Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|---|---|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Provide for and promote alternative modes of transportation | | also noted in GTC LRTP - the expansion of the bicycle, pedestrian, and public transportation network is warranted to expand travel choices | All | | | | | Reduce VMT, health benefits | ● | ● | ● | ◐ | ● | ◐ | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, agriculture & forestry, climate change adaptation, GHG emissions Capitals Benefited: all Communities Benefited: all including other regions Planning Efforts: GTC LRTP 2035, REDC Strategic Plan |
| | Integrate the regional commuter choice program with the statewide 511NY program | from GTC LRTP - since roceasyride.org and 511NY share common goals, integrating them will increase traveler benefits by providing a one-stop-shop for residents to obtain information | All | x | | | | | | | | | | | |
| | Improve the diversity & safety of connections between community destinations | Improve the diversity & safety of connections between community destinations | All | | | | | Improve accesibility, connectivity & safety | | | | | | | |
| | Develop safe routes to school, especially in urban areas | Develop safe routes to school, especially in urban areas | All | x | | | | | | | | | | | |
| | Develop car sharing program | Develop car sharing program – to accommodate both urban and rural areas | All | x | | | | | | | | | | | |
| | Work with large employers, agencies, facilities, municipalities, etc to promote transportation demand management strategies | Work with large employers, agencies, facilities, municipalities, etc to promote transportation demand management strategies | All | x | | | | | | | | | | | |
| | Evaluate potential for BRT, light rail or fixed transit service serving major employers/destinations | | All | x | | | | | | | | | | | |
| | Expand network of car-free cycleways | | All | x | | | Local universities, school districts, Social and for-profit businesses | Increasing active transporation and ultralight electric vehicle use Creating and educating and enlightened workforce of sustainability workers and citizen scientists. Increasing tourism. Creating a model program particularly well-suited for our region, but adaptable nationally, helping establish a new image for 21st century sustainable innovation. Economic Development. | | | | | | | |
| | Subsidize Car Sharing Programs | Government could subsidize car sharing progrmas like ZipCar so that those programs would be available to many more people. | All | x | | | | Increasing the number of people who could access car sharing programs would hopefully have several benefits. It would encourage more people to consider completely getting rid of a car, or at least downsizing from a two car household to a one car household. some poeple have short commuts and could walk or bike regularly, but may need a car now and then. If they could know that they would have access to a car when needed then they may get rid of car. If they do not have a car then we save energy and resources that would have gone into making that car. Also, if they do not have a car then they are more likely for any given trip to walk, bike, or take public transportation. This would help to reduc congestion and wear and tear on roads. It may even turn out that the subsidy invested would end up saving money in the long-run in reduced road maintenance. | | | | | | | |
| | Enhance & expand mobility & access for bicyclists | from GTC LRTP - Bicycle needs are often paired with pedestrian needs but they are different - need to improve conditions that facilitate bicycling as an active transportation mode | All | x | | | | | | | | | | | |
| | Enhance & expand connectivity & access for pedestrians | from GTC LRTP - Need to enhance & expand connectivity & access for pedestrians in regional & sub-regional urban cores, mature suburbs, rural centers, employment centers, local retail & higher education places - however all places will benefit from improved pedestrian facilities | All | x | | | | | | | | | | | |
| | Close the gaps in existing bike/ped infrastructure on- and off-road | Close the gaps in existing bike/ped infrastructure on- and off-road | All | x | | | | | | | | | | | |
| | Develop ped/bike master plans | Develop ped/bike master plans | All | x | | | | | | | | | | | |
| | Implement bike sharing program | Implement bike sharing program | All | x | | | | | | | | | | | |
| | Bicycle sharing program for downtown Rochester | Bicycle sharing program for downtown Rochester | Monroe | x | | | RGRTA | Less congestion in downtown Rochester, improve air quality, health benefits | | | | | | | |
| | Institute a regional ADA-compliant retrofit program | From GTC LRTP - Institute a regional program to prioritize the retrofit and/or new installation of ADA-compliant treatments | All | x | | | | | | | | | | | |
| | Implement recommendations from the Regional Trails Initiative | From GTC LRTP - Expand the amount of & increase the connectivity of multi-use trails in the Region as per the Regional Trails Initiative | All | x | | | | | | | | | | | |
| | Increase bike parking | From GTC LRTP - Increase the amount of bike parking at key locations in the regional & sub-regional urban cores, employment centers, retail and higher education places | All | x | | | | | | | | | | | |
| | Evaluate the feasibility of and implement car & bike sharing programs | From GTC LRTP - Institute car & bike sharing programs to expand access to automobiles & bicycles without requiring ownership | All | x | | | | | | | | | | | |
| | Increase frequency of existing public transportation service | From GTC LRTP - Increase frequency of existing public transportation service in the regional & sub-regional urban cores, mature suburbs, employment centers, medical/health institutions, higher education institutions and the airports | All | x | | | | | | | | | | | from GTC LRTP |
| | Add new public transportation services | From GTC LRTP - Increase service to employment centers and medical/health places - expansion should be tied to investments from those entities that will gain from additional service | All | x | | | | | | | | | | | from GTC LRTP |
| | Consolidate or reorganize rural transit systems to be most effective and efficient | Consolidate or reorganize rural transit systems to be most effective and efficient | All | x | | | | | | | | | | | |

Transportation Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes | |
|------------------------------|--|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|-------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | | |
| | Encourage and/or develop partnerships to provide different public transportation options (vanpool, shuttles, etc) | Look for and encourage partnerships among private organization or between private/public agencies to provide different public transportation options – vanpools, shuttles, etc | All | x | | | | | | | | | | | | |
| | Continue to leverage advances in technology to make public transportation desirable | Continue to leverage advances in technology to make public transportation desirable | All | x | | | | | | | | | | | | |
| | Establish more regional park and rides | | All | x | | | | | | | | | | | | |
| | Regularly assess public transportation services | From GTC LRTP - Regularly assess and, as necessary, adjust existing public transportation services based on current & projected needs, demands and market potential | All | x | | | | | | | | | | | | |
| | Improve bike accomodations on fixed route buses | From GTC LRTP - Install racks for bikes on public transportation buses | All | x | | | | | | | | | | | | |
| | Create a mobility management program | From GTC LRTP - Design & implement a mobility management program that coordinates existing & future services of public, not-for-profit and private transportation providers | All | x | | | | | | | | | | | | |
| | Construct satellite transit stations | From GTC LRTP - Construct satellite transit stations in the City of Rochester and assess their feasibility in mature and recent/emerging suburbs | Monroe, all | x | | | | | | | | | | | | |
| | Improve bike/ped access focusing on existing or future nodes | Encourage pedestrians and bicycle use through developing friendly environments in nodes, improving pedestrian and bicycle access on local streets (complete streets is only one option), providing guidelines which assist local government officials to audit and improve the accessibility of and funding opportunities for their pedestrian and cyclist infrastructure | All | x | | | | | | | | | | | | |
| | Emphasize the benefits of cycling and pedestrian programs for health and environmental benefits in an effort to better coordinate program and funding arrangements. | | All | x | | | | | | | | | | | | |
| | Reduce direct & indirect energy usage | From GTC LRTP - Providing opportunities to reduce the amount of energy consumed in the use & construction of transportation facilities & services can reduce dependence on foreign oil & decrease harmful fossil fuel & GHG emissions | All | x | | | | | | | | | | | | from GTC LRTP |
| | Promote alternative transportation choices | This strategy addresses the promotion of transportation choices in the region to increase awareness of the availability and benefits of alternatives to travel via the single occupancy vehicle. This would include the development of a marketing campaign via both traditional and emerging (e.g., social) media that would emphasize the ability for travelers to improve the environment and save money by replacing single occupancy vehicle trips by using public transit, carpooling, bicycling, and walking and provide information on how to obtain information on each of them. This strategy will advance efforts currently underway and anticipated to be implemented in the region per the Long Range Transportation Plan for the Genesee-Finger Lakes Region 2035, some of which are being or will be advanced through conceptual planning in the current and future Unified Planning Work Programs of GTC. | All | x | | | NYSDOT, NYSTA, local transportation/highway/public works dept, RGRTA, GTC, non-for-profit transportation providers, public interest/advocacy groups | Maximize the use of existing alternatives to the single-occupancy vehicle – namely, public transportation services, multi-use trails and dedicated bicycle space, ROCEASYRIDE.org, 511NY – as well as the future ones included in the GTC LRTP 2035 (Expanding the multi-use trails and improved connectivity between them;Increasing the availability of sidewalks along federal-aid highways;Promoting safe routes to school programs;Increasing the amount of bicycle parking at key locations;Insuring that all fixed-route buses can accommodate bicycles;Opening of the Renaissance Square Downtown Transit Center;Design and implementation of a regional mobility management program that will coordinate the services of public, not-for-profit, and private transportation providers;Increased frequency of fixed-route public transportation services;Construction of satellite transit stations; and Instituting car sharing and bike sharing programs) This strategy is integral to meeting the targets for all of the non-freight transportation indicators. Increasing awareness through active marketing and promotion may lead to significant increases in some of the non-single occupancy vehicle alternatives by users | | | | | | | | |
| Promote livability corridors | | | All | | | | | Use of existing infrastructure, reduce VMT & GHG emissions, improve affordability, access & connectivity | ● | ● | ● | ◐ | ● | ◐ | | Subject Areas Benefited: all Capitals Benefited: all Communities Benefited: all including other regions Planning Efforts: REDC Strategic Plan, G/FLRPC Comp Econ Dev Strategy |
| | Shorten commute times – encourage living closer to work somehow | | All | x | | | | | | | | | | | | |
| | Support land use-transportation planning through education | From GTC LRTP - Support development that more fully considers & integrates transportation needs by creating & providing associated information materials for local planning & zoning boards | All | x | | | | | | | | | | | | |
| | Construct multi-modal facilities at key locations | | All | | x | | | | | | | | | | | |
| | Maximize the opportunity to increase residential, employment, retail, community, and entertainment activity, around key population nodes | | All | x | | | | | | | | | | | | |
| | Prioritize initiatives to focus development on existing regional population nodes and population and employment corridors, thereby developing an opportunity to increase travel demand in non-peak directions and times, allow greater use of existing resources and capacity on the bus system, perhaps move to other means of rapid transit, and make walking and biking more feasible | | All | x | | | | | | | | | | | | |
| | Develop incentives to encourage nodal development | Develop programs that increase mixed-use development, as contextually and economically appropriate in nodes and connective corridors, and where possible identify public transport requirements and funding support as part of development applications | All | x | | | | | | | | | | | | |
| | Identify and implement demonstration projects that fully consider and integrate transportation needs | Encourage demonstration projects that actively address communities' concerns and the perceived negative impacts of increased residential densities | All | x | | | | | | | | | | | | |
| | Treat rural towns/communities like campuses for public transportation concerns | | All | x | | | | | | | | | | | | |

Transportation Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|--|--|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Invest in Community & Industrial Development & Infrastructure | From FLREDC Strategic Plan | All | x | | | | | | | | | | | |
| Leverage transportation system assets to encourage economic development | | | All | | | | | | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: human, built/manufactured, financial Communities Benefited: all including other regions Planning Efforts: GTC LRTP 2035, REDC Strategic Plan, GTC Freight Goods & Movement Study, G/FLRPC Comp Econ Dev Strategy |
| | Multi-modal/cultural tourism infrastructure development | Support building upon the existing cultural & ecological resources & multi-modal networks to develop the Region into a cultural tourism destination - link the historic, ecological & social resources of the Region | All | x | | | All levels of government | Economic development, potential reduced GHG emissions through increased use of hiking/biking trails, use of existing infrastructure | | | | | | | |
| | Educate the public & key stakeholders on the importance of freight transportation | | All | x | | | | | | | | | | | |
| | Develop or promote existing recreational tourism projects within the region (biking, hiking, watersports, etc) | | All | x | | | | | | | | | | | |
| | Develop/implement policies & infrastructure to encourage rail vs truck freight | | All | x | | | | | | | | | | | |
| | Develop a regional rail system - light & commuter rail | | All | | | | | | | | | | | | |
| | Implement VMT tolls on the Thruway | VMT tolls instead of existing Thruway tolls to encourage alternative modes and rail freight | All | x | | | | | | | | | | | |
| | Encourage buying local to reduce VMT and energy consumption due to freight | Encourage buying local to reduce VMT and energy consumption due to freight | All | x | | | | | | | | | | | |
| | Encourage consolidated freight planning to maximize efficiency and promote rail | Encourage consolidated freight planning to maximize efficiency and promote rail | All | x | | | | | | | | | | | |
| | Encourage the expansion of freight rail infrastructure to effect modal change | Encourage the expansion of freight rail infrastructure to effect modal change | All | x | | | | | | | | | | | |
| | Expand connectivity & access for freight | From GTC LRTP - Connectivity & access for freight is identified as a primary economic need for the region now and in the future | All | x | | | | | | | | | | | from GTC LRTP |
| | Construct rail sidings to major regional landfills | From Freight & Goods Movement Report - Construct rail sidings to major regional landfills to facilitate the shift of inbound municipal solid waste from truck to rail | All | x | | | Rail operators, landfill operators, NYSDOT | Encourage freight via rail, economic development | | | | | | | |
| | Consider an intermodal transfer facility | From Freight & Goods Movement Report - Identify the appropriate location(s) for a regional-scale rail/highway intermodal transfer facility & identify potential customers to justify private rail investment in new intermodal rail service to the Region | All | | | x | Rail agencies/companies, NYSDOT, USDOT | Encourage freight via rail, economic development | | | | | | | |
| | Identify locations for access to regional short line railroads | From Freight & Goods Movement Report - Identify possible locations for local businesses to access regional short line railroads at small cross dock & transload facilities throughout the region | All | | x | | GTC, NYSDOT, IDAs, rail agencies/companies | Encourage freight via rail, economic development | | | | | | | |
| | Improve overhead clearance restrictions & sidings on RSR line | From Freight & Goods Movement Report - Improve overhead clearance restrictions & sidings on RSR line to allow for improved connections to Rochester & Monroe County from NSs Southern Tier line | Monroe, all | | x | | NYSDOT, rail agencies/companies | Encourage freight via rail, economic development | | | | | | | |

Transportation Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes | |
|--|--|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|-------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | | |
| | Preserve rights-of-way as noted in the Regional Right-of-Way Preservation Study | From Freight & Goods Movement Report - Take action to preserve rights-of-way on other lines identified in the Regional Right-of-Way Preservation Study, with higher priority given to lines on which potential new customers have been identified (6 noted in plan) | All | | x | | GTC, NYSDOT, rail agencies/companies, IDAs, local governments | Encourage freight via rail, economic development | | | | | | | | |
| | Improve interchanges of rail cars between rail operators | From Freight & Goods Movement Report - Improve the efficiency & lower costs associated with interchanges of rail cars between rail operators | All | | x | | Rail agencies/companies | Encourage freight via rail, more efficient connections, resiliency & capacity of rail system, economic development | | | | | | | | |
| | Facilitate trade with Canada via rail | From Freight & Goods Movement Report - Explore options to move freight across the border by non-highway modes, including roll-on/roll-off highway trailer-on-flatcar rail shuttle service | All | | | x | | Encourage freight via rail, economic development | | | | | | | | |
| | Utilize and build upon the existing rail system | Utilize and build upon the existing rail system including the shortline rail system, to improve efficiency of product movement and lower GHG emissions. | All | x | | | | | | | | | | | | |
| | Establish/maintain wildlife crossings where transportation corridors cross habitat corridors to improve ecological connectivity within the region | Reduce negative impact of transportation networks where they intersect natural systems | All | x | | | | | | | | | | | | |
| | Where transportation networks cross hydrologic networks, account for floodplains and natural conveyance that allow passage for aquatic life, mainain stream and floodplan capacity, and riparian corridors | Reduce negative impact of transportation networks where they intersect natural systems | All | x | | | | | | | | | | | | |
| Maintain and improve the functionality, safety and efficiency of the existing transportation infrastructure | | from GTC LRTP | All | | | | | | ◐ | ◐ | ● | ◐ | ● | ● | ◐ | Subject Areas Benefited: energy, transportation, land use & livable communities, GHG emissions Capitals Benefited: human, built/manufactured, financial Communities Benefited: all including other regions Planning Efforts: GTC LRTP 2035, REDC Strategic Plan |
| | Increase transportation system efficiency & operations | Encourage & promote TSMO projects and consolidation of municipal services such as waste collection | All | x | | | | Reduce GHG emissions, improve air quality & safety | | | | | | | | |
| | Improve or install wayfinding signage in business, cultural, and other unique districts as well as interregional travel facilities | From GTC LRTP - Providing information at key points is an important element in providing access to specific locations and can reduce delay and visitor angst | All | x | | | | | | | | | | | | |
| | Continuously identify ways to increase & improve real-time travel information | from GTC LRTP - improved information on travel choices will lead to better decisions for all modes, and the means for doing so will continuously change | All | x | | | | | | | | | | | | |
| | Continue conducting programs and training to improve incident response, management and clearance times | from GTC LRTP - programs like the NYSDOT Highway Emergency Local Patrol (HELP) decrease delay and increase safety on roadways | All | x | | | | | | | | | | | | |
| | Institute informational programs to reduce distracted driving | from GTC LRTP - distracted driving is a major safety hazard and the problem will only increase without the development and implementation of educational and enforcement programs to reduce distracted driving | All | x | | | | | | | | | | | | |
| | Continue to fund and promote the Regional Traffic Operations Center and promote interagency collaboration & coordination in progressing regional concepts of transportation operations | from GTC LRTP - to take full advantage of the capabilities of the RTOC and other regional concepts of transportation operations adequate number of trained personnel and interoperability are important | Monroe | x | | | | | | | | | | | | |
| | Upgrade or install regional communications infrastructure for greater integration of transportation agency operations | from GTC LRTP - as new capabilities become available existing and expanded communications devices connecting instrumentation and TSMO staff will be implemented | All | x | | | | | | | | | | | | |
| | Develop integrated/coordinated interchange & arterial signal timing systems & plans | from GTC LRTP - optimizing signal timings along and between major corridors improves efficient, leading to reduced delay and vehicle emissions | All | x | | | | | | | | | | | | |
| | Identify & implement circulation, access & parking studies or complete streets recommendations, where appropriate | from GTC LRTP - the CAP plans have integrated transportation and land use planning and include recommendations that should be advanced as part of reconstruction and rehabilitation projects in the region | All | x | | | | | | | | | | | | |
| | Operational improvements of interchanges/intersections | From GTC LRTP - Improve the function of interchanges on major highways & intersections throughout the region through improved design that increases safety, reduces delay & improves mobility | All | x | | | | | | | | | | | | |
| | Advance access management recommendations as part of rehab & recon projects, where appropriate | From GTC LRTP - proactively managing access from highways to adjacent land can improve efficiency and reduce crashes, mitigating recurring and non-recurring incident delay without requiring physical expansion of infrastructure | All | x | | | | | | | | | | | | |

Transportation Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes | |
|---|--|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|-------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | | |
| | Consolidate municipal services to reduce VMT | Encourage consolidate municipal services (like waste collection, plowing, etc) to reduce vehicle miles traveled, especially for heavy vehicles | All | x | | | | | | | | | | | | |
| | Green technologies in transportation projects | From GTC LRTP - Increase the use of recycled materials & incorporate green technologies in the rehab & recon of highways & bridges | All | x | | | | | | | | | | | | |
| | Analyze where people live vs work and/or use mobile phone data for transit planning | | All | x | | | | | | | | | | | | |
| | Strengthen transportation infrastructure through preservation & maintenance of the existing system | From FLREDC Strategic Plan | All | x | | | | | | | | | | | | |
| | Implement transportation system management & operations (TSMO) recommendations | From GTC LRTP - Maximize the effectiveness and improve the safety of the existing transportation system through TSMO recommendations as noted in the GTC LRTP 2035 | All | x | | | | | | | | | | | | |
| | Preserve existing rights-of-way for future transportation uses | From GTC LRTP - when portions of existing linear rights-of-way are used for non-transportation uses, it is very challenging and expensive to reestablish or create a new corridor | All | x | | | | | | | | | | | | |
| | Improve the functionality of waterways for boating through dredging | | All | x | | | | | | | | | | | | |
| | Implementing transportation infrastructure resiliency measures | This strategy addresses the vulnerability of critical surface transportation infrastructure to natural and man-made hazards, including the anticipated weather-related impacts of climate change on the regional transportation system. Regional emergency response plans designate floods, ice events, and snowstorms as major areas of concern. Each of these hazards has unique impacts on infrastructure and community transportation needs, particularly in the aftermath of a major event. This strategy will advance efforts to plan, build, and manage transportation infrastructure elements that have greater resiliency not only to recurring hazards like ice storms and floods, but also to severe weather events, such as extreme heat and heavy precipitation, that may occur with greater frequency as a result of gradual, long-term shifts in climate patterns. | All | x | | | NYSDOT, NYS Police, NYSTA, local transportation/highway/public works dept, RGRTA, county emergency management agencies, county sheriff dept, local fire/emergency dept | This strategy will improve the safety, reliability, and sustainability of the regional transportation system by identifying and assessing critical transportation infrastructure vulnerabilities: result in actionable information that can be used by agencies and organizations to remedy infrastructure vulnerabilities and better manage and operate their facilities, which will safeguard lives and property in the event of a hazard event: identify potential capital and programmatic actions that can mitigate both the short-term, severe impacts of hazard events and the long-term, incremental impacts resulting from climate change: facilitate efficient investments of public and private financial resources by reducing the expenses incurred by communities, businesses, and individuals during both short-term hazard event response and long-term recovery activities: reduce costs associated with disaster response and recovery operations: maximizes the return on investment (ROI) of public transportation funds by fostering projects that are not exposed to hazards or are better able to withstand hazard events should they occur: advance sustainability initiatives in the region by identifying ways to protect and | | | | | | | | Noted in GTC Diversion Route Planning Initiative and forthcoming Regional Critical Transportation Infrastructure Vulnerability Assessment |
| Promote the development and adoption of alternative fuels and power sources | | also noted in GTC LRTP | All | | | | | Reduce GHG emissions, improve air quality | ● | ● | ● | ● | ● | ● | | Subject Areas Benefited: energy, transportation, land use & livable communities, GHG emissions Capitals Benefited: human, natural, built/manufactured, financial Communities Benefited: all including other regions Planning Efforts: GTC LRTP 2035 |
| | Install alternative fuel infrastructure | | All | x | | | | | | | | | | | | |
| | Promote R&D, deployment of pilot projects to validate technology and eventual commercialization of advanced technology vehicles (e.g., electric hybrid, fuel cell, etc.) | | All | x | | | | | | | | | | | | |
| | Continue to encourage alternative fuel fleet vehicles (private or government owned) | | All | x | | | | | | | | | | | | |
| | Find ways to make alternative fuels/vehicles more affordable | | All | x | | | | | | | | | | | | |
| | Install infrastructure to support compressed natural gas (CNG) fueling | | All | x | | | Municipalities, refuse companies, food & beverage processors, large dairy farmers | Lower GHG emissions, more affordable (33-55% less than gas), domestically (and potentially locally) produced | | | | | | | | |
| | Install alternative fuel vehicle infrastructure for fleets | from GTC LRTP - develop stations to dispense alternative fuels and charging stations | All | x | | | | | | | | | | | | |
| | Encourage alternative fuel vehicles for fleets | from GTC LRTP - incentivize the replacement of gasoline and diesel vehicles with those that are more energy efficient and environmentally friendly | All | x | | | | | | | | | | | | |
| | Incentivize alternative modes & fuel vehicles by designating preferred parking in public parking facilities for alternative fuel vehicles, carpools, etc | | All | x | | | | | | | | | | | | |
| | Promote the awareness of alternative fuel technology and encourage their adoption in public and private fleets | | All | x | | | | | | | | | | | | |
| | Reduce direct & indirect energy usage | From GTC LRTP - Providing opportunities to reduce the amount of energy consumed in the use & construction of transportation facilities & services can reduce dependence on foreign oil & decrease harmful fossil fuel & GHG emissions | All | x | | | | | | | | | | | | from GTC LRTP |

Transportation Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|---|---|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|-------|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Building a sustainable transportation system: enhancing the use of AFVs in Upstate New York | This strategy is based upon the premise that we can change our communities for the better through cooperation and voluntary partnerships, working to reduce our reliance on imported oil and improve air quality. Through this strategy, public/private partnerships will be developed to promote alternative fuels and vehicles, fuel blends, fuel economy, hybrid vehicles, and idle reduction. The main focus of the strategy is to establish funding aimed at incentivizing purchases and use of AFVs and their supporting infrastructure in the region. In addition, education and promotional material will be developed and distributed. This strategy has been successfully implemented in other parts of the country and our organization in particular has experience delivering such programs regionally. | All | x | | | Genesee Region Clean Communities | Increased use of AFVs and development of supporting infrastructure will lead to new jobs, better air quality, less reliance on petroleum, and – perhaps most importantly – bring us closer to the “tipping point” along the technology penetration curve whereby a vibrant AFV transportation system can be self-sustaining. | | | | | | | |
| Explore enhanced parking management options | | from GTC LRTP - more efficient parking options could reduce VMT/GHG emissions | All | | | | | | | | | | | | |
| | Implement an electronic parking guidance system for Downtown Rochester | from GTC LRTP - erect dynamic messaging signs and develop an application for smart phones and in-vehicle communication technologies to provide information on the availability of parking spots and where alternatives exist | Monroe | | x | | | | | | | | | | |
| | Encourage flexibility in local government parking policy | | All | x | | | | | | | | | | | |
| Transportation System without Fossil Fuels | Move towards a transportation system that does not use fossil fuels. | | All | | | x | | Protection of health, environment & quality of life | | | | | | | |

Land Use Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|--|---|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Create healthy, safe and sustainable communities | | Promote the development of healthy, safe and vibrant communities that have access to a full range of opportunities and services. | All | X | | | | Achievement of healthy, safe, sustainable communities where people have access to healthy foods, active living, cleaner water and cultural and social amenities. | ● | ● | ● | ◐ | ● | ◐ | This strategy benefits energy, transportation, land use and livability, materials/waste management, water management, economic development, agriculture and forestry, climate change, governance and GHG emissions. This strategy also benefits all five capitals and has the potential to benefit multiple communities. It can be applied in communities and in every county in the region, and has benefits that extend beyond the region. Implementation hinges on changing practices and processes and, therefore, there is the potential to accomplish it in a relatively short term. This strategy is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects), but it would reduce life cycle costs over the long term. It also has high potential to leverage other funding sources, including public sector monies. It was ranked a 3 for financial feasibility because the return on investment can be significant. |
| | Encourage the use of development practices, and invest in projects and green infrastructure that enhance water access, retain and improve water quality, and increase water safety to improve the quality of water resources and reduce erosion | Water quality and access to clean and safe waters is a priority for improving the quality and health of communities. Most water quality impacts are directly related to land use activities and development. | All | X | | | | | | | | | | | |
| | Increase the number of communities with current Comprehensive Plans that promote sustainability | Communities should adopt or update comprehensive plans to establish clear and innovative vision, policies, recommendations and strategies for sustainable land use and management. | All | X | | | | | | | | | | | |
| | Create a municipal sustainability office or a dedicated function for all counties or larger communities to provide cooperative stewardship of the Finger Lakes Regional Sustainability Plan. | To ensure that the Finger Lakes Regional Sustainability Plan is implemented, evaluated and updated on a regular basis it is important to have a designated entity to oversee and promote this effort. This can be accomplished either through the establishment of a municipal sustainability office or as a function of regional government. | All | X | | | | | | | | | | | |
| | Greenfield development should be sustainable | Greenfield development will continue to occur, particularly in rural areas, adjacent to centers. Such development should be undertaken in a sustainable manner that preserves open space resources, uses green infrastructure, and follows other sustainable principles. | All | X | | | | | | | | | | | |
| | Support the development of inter-connected road and off-road trails that link the historic, ecological and social resources | Having connected resources provides wide reaching benefits to communities and enables residents and visitors easier access to cultural and natural resources in support of healthier living (recreational opportunities) as well as tourism and economic development. | All | X | X | | | | | | | | | | |
| | Incorporate climate change considerations into comprehensive plans and zoning | Develop comprehensive plans to address climate change; analyze the built environment and identify ways in which municipalities, companies and residents can adjust or modify it in preparation for climate change. Enable municipalities to modify land use laws to incorporate climate change criteria for new development. | All | X | | | | | | | | | | | |
| | Support tourism infrastructure development (economic development) | Support building upon the existing cultural and ecological resources and multi-modal networks to develop the region into a cultural tourism destination spot. | All | | X | | | | | | | | | | |
| | Encourage use of STAR Community Rating System | Promote the use of the STAR Community Rating System, which is designed to help local governments assess how sustainable they already are, set a clear path to a sustainable future and measure progress toward sustainability goals. This system is flexible enough to accommodate communities of all sizes at various levels of involvement. The STAR Community Rating System offers recognition and certification. | All | X | | | | | | | | | | | |
| | Design communities to support active living | Communities should be designed to support the ability to walk to places (active living) and have mixed uses and a concentration of services in centers (re-establish traditional development patterns and neighborhood environments that don't depend on cars). | All | X | | | | | | | | | | | |
| | Ensure access to affordable, healthy foods | One important factor for creating quality communities and improving public health is access and availability of affordable, healthy foods. There are neighborhoods and centers where such access is not readily available. | All | X | | | | | | | | | | | |
| | Promote increased investment and social networks to improve the quality and safety of our neighborhoods | This strategy is tied to the need to make neighborhoods and centers better quality, safer places to live. Establishing this as a priority for increased investment and promoting this effort through social networking would help to turn things around. | All | X | | | | | | | | | | | |
| | Improve local educational systems | Improving school systems and educational services increases the quality and capacity of underperforming school districts, both urban and rural, and help rebuild population. | All | X | | | | | | | | | | | |
| | Dedicate public safety resources to promote safe neighborhoods | Community leaders need to consider policies and programs aimed at creating safer living environments and improving public safety. | All | X | | | | | | | | | | | |
| | Incorporate traffic calming measures in areas where there is a high density of activity | Pedestrians should have a safe and comfortable environment within centers with roadways that accommodate higher volumes of traffic, which may travel at higher speeds, to promote walking and streetside activity, particularly in areas with schools, parks, shopping districts, etc. | All | X | | | | | | | | | | | |
| | Use education and public outreach to raise awareness about sustainability | There are a wealth of academic institutions in the region that can be capitalized on to raise public awareness through ongoing education, public discussion and debate on the value and importance of sustainability for the future of the region's built environment and to embed sustainability into the local culture. | All | X | | | | | | | | | | | |
| | Use ecological frameworks as a basis for land use planning | Develop an ecological framework to identify preferred areas for development, working lands, ecological networks and landscape linkages. Integrate this information into local comprehensive plans to facilitate sustainable growth at a community level. | All | X | | | | | | | | | | | |

Land Use Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|---|---|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|----------------------|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Train local boards and officials in site plan and regulatory review that promotes more sustainable site design and development | Local land use decisions impact long term development patterns throughout the region. Local boards and other officials who are responsible for these decisions need a better understanding of sustainable land use to protect important natural resources, protect community character, improve quality of life and locate development in appropriate locations. | All | X | | | | | | | | | | | |
| Revitalize existing centers and prioritize the value of place making | | Concentrate residential, employment, retail, community, and entertainment activity in areas with existing infrastructure to control sprawl and revitalize communities suffering from disinvestment. | All | X | | | Increased investment, decreased sprawl, stronger local economies, greater diversity, transportation efficient development, reduced energy use, protection of agricultural and forest lands and other natural resources and greater concentration of population in centers. | ● | ◐ | ● | ◐ | ● | ◐ | | This strategy benefits transportation, land use and livability, materials/waste management, economic development, climate change, governance and GHG emissions. This strategy also benefits all five capitals, except natural, and has the potential to benefit multiple communities. It can be applied in every center in the region (and every county), and has benefits that extend beyond the region. Implementation may take more than nine years as development patterns in communities change more slowly and this is a continuous and ongoing process. Furthermore, existing governance structures tend to constrain the ability for communities to implement revitalization efforts. This strategy is consistent with multiple regional and local planning efforts, including the Regional Economic Development Plan, the GTC Long Range Transportation Plan and local comprehensive plans. It has higher order of magnitude costs (capital projects), but it would reduce life cycle costs over the long term. It also has high potential to leverage other funding sources, including public sector monies. |
| | Prioritize the value of placemaking to enhance quality of life and create vital communities | Placemaking fosters active, engaged relationships between citizens and the spaces that they inhabit, the landscapes of their communities, that creates a sense of communal stewardship and connection. It establishes a sense of place that hold deep and long lasting meaning to those who live, work and visit these places. | All | | X | | | | | | | | | | |
| | Create and recreate traditional neighborhoods | Revitalization efforts must recognize the need to create and recreate traditional neighborhoods (places) that provide a sense of identity and offer a mix of uses (quality of life factors). | All | X | | | | | | | | | | | |
| | Take streetscaping beyond the public right of way | Recognize that surrounding neighborhoods are an extension of the public space and design streetscaping and traffic calming projects within this context. Such efforts should help improve the local context, not just improve the ability to move people. | All | | X | | | | | | | | | | |
| | Discourage development in areas without infrastructure and support services to strengthen local economies | The expansion of infrastructure into undeveloped areas increases a system of services that requires maintenance and expenditures and promotes inefficient and unsustainable patterns of development (sprawl). | All | X | | | | | | | | | | | |
| | Invest in improvements to the public realm to promote private sector investment | Invest in improvements to the public realm (streetscapes, plazas, parks) in strategic areas (e.g., Main Streets) to promote private sector investment. | All | X | | | | | | | | | | | |
| | Facilitate and incentivize adaptive reuse of historic buildings and underutilized lands in traditional centers | There are many buildings that have potential for reuse, but developing green fields is cheaper and easier. Need to develop mechanisms to incentivize redevelopment of existing structures and investment in traditional areas of development. | All | X | | | | | | | | | | | |
| | Facilitate and incentivize 'in-fill' development through zoning regulations and design standards | Redevelopment in existing centers should be focused on vacant, underutilized parcels to fill in developed areas and keep development concentrated in these areas (which reduces costs, helps control sprawl and is more sustainable). | All | X | | | | | | | | | | | |
| | Revitalize City of Rochester residential neighborhoods | Increase density in 36 residential neighborhoods in the City of Rochester through infill, renovation of derelict housing and repair of unoccupied homes using sustainable construction and design standards. Deconcentrate poverty by welcoming all incomes. | Monroe | | X | | | | | | | | | | |
| | Increase economic opportunities for all residents | There will not be revitalization of centers if poverty remains overconcentrated in these areas. There is a need for more opportunities for jobs, education and other necessities to allow residents to prosper. | All | | X | | | | | | | | | | |
| | Invest in the development, promotion and preservation of cultural, artistic and historic assets | Cultural, artistic and historic assets are part of the fabric and character of communities centers and are important in maintaining the value and quality of life in this places. | All | X | | | | | | | | | | | |
| | Invest in community, industrial development, and infrastructure to reinforce the identity, sense of place and character of the area through downtown redevelopment, adaptive reuse of existing buildings and infrastructure, and historic preservation. | Building on existing assets (buildings, infrastructure, etc.), results in stronger centers through the recognition of community identity and character. | All | X | | | | | | | | | | | |
| | Improve access to credit and capital for revitalization and reinvestment to enable businesses to locate or expand in the region, particularly in centers where infrastructure exists to support such development. | Mechanisms and incentives are needed enable businesses to locate or expand in the region, with emphasis on areas where infrastructure exists to support such development. Consider public sector land banking, demolitions, land assembly, and real property tax incentives. | All | X | | | | | | | | | | | |
| | Practice efficient Regional Land Use Planning to discourage sprawl without population growth | Reform the inefficient way land is developed and steer development to already developed areas with existing infrastructure; avoid overdevelopment and sprawl without growth. Preserve community character in urban, suburban and rural areas. | All | X | | | | | | | | | | | |

Land Use Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|--|--|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|----------------------|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Use context-sensitive design to enhance the character of the surrounding community and provide better accommodations for non-vehicular traffic | As part of focusing development in centers, improve the design and use of local streets for walking and biking (sidewalks, bike lanes, transit stops, etc.) to integrate the roadway into the context of the surrounding neighborhood and encourage people to get out of their cars. | All | | X | | | | | | | | | | |
| | Improve core institutions in centers to build and retain population | To create livable communities, services, schools and safety are three factors that must be acknowledged and improved in order to attract people back to centers. | All | X | | | | | | | | | | | |
| | Take advantage of state programs to remediate and promote the adaptive reuse of brownfields | Reuse brownfield properties in developed places as a means of reinvesting in underutilized and abandoned areas, and consider use for agriculture (which provides inputs for advanced technologies). | All | X | | | | | | | | | | | |
| | Develop incentive structures that encourage development in centers and developed areas | Need to promote and incentivize development and redevelopment in existing centers and developed places, and discourage development on rural and agricultural lands. Keeping development and people closer to centers helps to capture investment and keep dollars in communities. | All | X | | | | | | | | | | | |
| | Encourage 'buy local' campaigns | It is important to support local businesses to help keep existing commercial centers vital. | All | X | | | | | | | | | | | |
| | Promote new job creation within existing centers | Develop programs to promote new job creation within existing centers where there is ample access to existing residential development and a supply of labor (reduces VMT, etc.). | All | X | | | | | | | | | | | |
| | Adopt a "fix it first" policy for infrastructure investment | Infrastructure investment should prioritize spending on improving and enhancing existing assets, and using available capacity in developed areas, rather than funding the extension of new services that support sprawl. | All | X | | | | | | | | | | | |
| Support and preserve rural centers and the character of rural areas | | Public infrastructure, particularly sanitary sewer service, should be focused in centers to protect rural character and preserve farmland assets. Development and redevelopment should be focused in and around centers where services exist or can be readily extended rather than extending service into undeveloped areas. | All | X | | | Lower land consumption and preservation of agricultural and forestry resources, preservation of open space and natural resources, protection of habitats and scenic resources, water quality, lower capital and operating costs for infrastructure, economic development (finger lakes tourism), protection of rural character, and resiliency and reduced public risk from natural disasters (flooding, slope failure, etc.). | ● | ◐ | ● | ◐ | ● | ◐ | | This strategy benefits land use and livability, water management, economic development, agriculture and forestry, climate change, governance and GHG emissions. This strategy also benefits the human, natural and financial capitals and has the potential to benefit multiple communities. It can be applied in every county in the region, because all have rural areas to protect; benefits extend beyond the region. Implementation can be achieved faster than the revitalization of centers because it tends to have lower capital costs. However, existing governance structures tend to constrain the ability for communities to protect rural centers and character because there is pressure to grow. This strategy is consistent with multiple regional and local planning efforts, including the Regional Economic Development Plan, the GTC Long Range Transportation Plan and local farmland protection and watershed plans. Some of the implementation strategies may be expensive (land acquisition). It should reduce life cycle costs over the long term. The return on investment can be significant. |
| | Promote the conservation of undeveloped lands, habitats and scenic resources | Land development practices need to recognize the resource value and importance of open lands as habitat and community assets. Focusing new development in centers and existing areas of development helps protect rural lands and landscapes, important natural resources and community character, as well as control the costs of infrastructure investment. | All | X | | | | | | | | | | | |
| | Utilize land use tools to preserve agricultural lands and open space | Promotion, training, implementation of land use tools such as purchase of development rights, transfer of development rights, conservation easements and incentive zoning to preserve agricultural lands and open space in perpetuity. | All | X | | | | | | | | | | | |
| | Inventory lands and parcels of significant ecological and/or scenic value to protect highest value land | Inventoried important resources within a municipality provides the community with a better understanding of existing assets in order to balance development with environmental protection. | All | X | | | | | | | | | | | |
| | Educate policy makers about true fiscal costs of development, including operations and maintenance | Policy makers often do not understand the fiscal costs associated with development. It is important to consider not only the capital costs of installing additional infrastructure, but on-going operations and maintenance costs, including future repair or replacement costs when the systems reach the end of their expected life cycle. | All | X | | | | | | | | | | | |
| | Provide disincentives and increase the costs of unsustainable development, and reward (provide incentives for) good development. | Because it often costs more to develop in centers (or in the right place), communities need to provide incentives for good design and development and disincentives for developing green lands. | All | X | | | | | | | | | | | |
| | Recognize the value of natural systems and resources | Recognize that natural systems and resources are regionally significant assets worthy of protection and conservation when making land use decisions. | All | X | | | | | | | | | | | |
| | Support and encourage educational programs that integrate an understanding of ecology and environmental stewardship | There is a need to develop and expand educational programs that integrate an understanding of ecology and environmental stewardship into planning and design knowledge and practices. In doing so, it will result in better, more sustainable development in the right places. | All | X | | | | | | | | | | | |

Land Use Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|--|--|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|---|---|---|---|---|---|--|-------|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Protect and preserve agriculture as a means of protecting rural character | Recognize the value of agriculture and agricultural lands for community character, preservation of resources and economic sustainability. Farmland generates more tax revenue than it demands in services. | All | X | | | | | | | | | | | |
| | Protect natural systems, such as wetlands, stream banks and floodplains, for resiliency | Wetlands, streambanks, flood plains and other such natural resources provide important habitat and natural protection from storm events. These areas should remain free of development to reduce long term costs (maintain resiliency and reduce public risk). | All | X | | | | | | | | | | | |
| | Revise local zoning and subdivision standards to achieve more sustainable design and protect important resources and assets. | Revising local standards for parking, setbacks, minimum lot size and other requirements achieves more sustainable design. Creative subdivision design standards should also be adopted to protect important resources and assets. | All | X | | | | | | | | | | | |
| Encourage diversity of our communities to bring about a greater mixture of uses, people, ages and incomes | | Strong communities are comprised of a mixture of cultures, assets, land uses and people of all ages and incomes. Such diversity can result in more prosperous, sustainable neighborhoods and centers that offer better quality of life and resiliency. | All | X | | | Better quality of life, reduction of poverty, enriched housing choice including affordable housing opportunities, supports aging in place, promotes mixed use communities that are more likely to be walkable, strengthens neighborhoods and revitalizes local economies, builds resilient communities. |  |  |  |  |  |  | This strategy benefits transportation, land use and livability, economic development, climate change, governance and GHG emissions. This strategy also benefits the human, social and built capitals and has the potential to benefit multiple communities. It can be applied in every community (and every county) in the region, and benefits can extend beyond the region. Implementation could take longer because of potential resistance to change in terms of how we develop our communities, although more diverse communities are more resilient. Existing governance structures tend to constrain the ability for communities to be more diverse. This strategy tends not to be directly addressed in regional and local plans. Financial feasibility is hard to determine, as it is hard to predict what costs might be (every community is different and the range of activities needed to implement this strategy varies). There are areas where it is easier to achieve diversity than others. | |
| | Adopt flexible zoning that allows for mixed use development | Encourage local governments to adopt more flexible zoning that allows for mixed use development at appropriate locations to improve and enhance neighborhood and community diversity and vitality. | All | X | | | | | | | | | | | |
| | Support programs that facilitate aging in place | The needs of seniors, including housing availability and support services, need to be recognized to enable them to remain in their communities and maintain quality of life. | All | X | | | | | | | | | | | |
| | Eliminate funding and regulatory barriers to bring about more mixed use development | Existing policies and regulations constrain the ability and flexibility required to undertake mixed use development. | All | X | | | | | | | | | | | |
| | Invest in strong local school systems to attract and retain young families | Young families are more likely to locate in areas with better quality education systems. | All | | X | | | | | | | | | | |
| | Enrich living environments by increasing access to affordable housing and mixed income units | The utilization of zoning provisions and other mechanisms and policies that support housing choices and improve access to affordable and senior housing, such and apartment, accessory units and other creative options, promote community strength and diversity. | All | X | | | | | | | | | | | |
| | Increase the number of communities with current Comprehensive Plans that promote sustainability | Communities should adopt or update comprehensive plans to establish clear and innovative vision, policies, recommendations and strategies for sustainable land use and management. | All | X | | | | | | | | | | | |
| | Develop specific vision plans for community centers (urban design) | Create or update community comprehensive plans to include vision planning for core areas to establish what form the physical/built environment should take, identify sites for future development and redevelopment, identify development and economic strategies, identify strategies for a sustainable public realm, represent a regulating plan for revised zoning codes (form based codes), be the basis for a community marketing plan, and show where new housing and mixed use development should be located to achieve a more walkable community center. This would enable more predictable designs for potential investment opportunities. | All | X | | | | | | | | | | | |
| | Provide assistance to lower income homeowners to enable them to stay in place | Work with non-profit housing organizations to provide programs, such as home repair assistance, tool libraries, housing education and energy efficiency programs, to enable lower income homeowners to stay in their homes and maintain them in good condition. | All | X | | | | | | | | | | | |
| | Encourage a broader mix of housing types and price ranges | Residential development should offer a mix of housing options to accommodate the needs of all residents and help to create diverse neighborhoods. | All | | X | | | | | | | | | | |
| | Encourage "fine grain" development, at a human scale | This is about creating neighborhoods and vital communities with a mix of uses that avoids 'superblocks,' and large single-use developments. | All | X | | | | | | | | | | | |
| | Incorporate quality of life factors into land use decisions | Land use decisions and development should "build communities" rather than separate uses and support sprawl. Residential development should have access to parks, transportation choices, cultural assets, jobs and services that are typically available in centers. | All | X | X | X | | | | | | | | | |
| | Adopt and amend local regulatory policies, practices and processes to achieve sustainable design and development | Local regulatory policies, practices and processes should be flexible and allow for mixed use, diversity and placemaking. Codes should reflect community goals and promote sustainability, equity and innovation. | All | X | | | | | | | | | | | |

Materials Waste Management Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|--|---|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Reduce the amount of solid waste generated in the region. | | | All | X | | | Primarily overseen by county-level waste management agencies, but all waste generators will have a role. | Decrease in public health risks; decrease in GHG emissions; decrease in leachate and thus water quality issues | ● | ● | ● | ● | ◐ | ◐ | Subject Areas Benefited: Energy, Land Use, Materials/Waste Management, Water Management, Climate Change Adaptation, GHG Emissions Capitals Benefited: Human, Natural, Built/Manufactured, Financial Communities Benefited: All Implementation Feasibility: Short implementation timeframe, technology currently available and in use, established support network Consistent with Planning Efforts: Yes Financial Feasibility: |
| | Target incoming waste for reduction at the sources, and new management methods at the disposal locations (landfills in the Finger Lakes) | Better characterize what is coming into region. Define highest and best use for the major components of this waste stream. Work to extract highest value of this material (which is not necessarily landfilling). Potentially work with state regulators to limit material coming into the region using strategies such as: "We won't take anything from anywhere not already reaching a 40% diversion/recycling rate." | All | X | | | County governments; NYS | | | | | | | | |
| | Develop local innovative approaches to: 1) reduce packaging, 2) incorporate sustainable materials in packaging, and 3) develop reusable packaging | Use already established local materials expertise, purchasing power, and legislative initiatives, including local resources such as existing manufacturers, new private sector interests, and existing academic resources (e.g., at RIT's Golisano Institute). | All | | X | | A number of regional organizations | | | | | | | | |
| | Develop innovative approaches to source reduction policy incentives | Successful implementation of this strategy requires strong government leadership to create educational material and policies that encourage businesses and residents to reduce their waste generation. This strategy supports the development and expansion of waste management/recycling businesses. | | | | | | | | | | | | | |
| | Explore feasibility of banning disposal of food scraps and yard trimmings | | All | X | | | Led by local governments | | | | | | | | |
| | Add Zero Waste Programs as part of new state Climate Action Plan | | All | X | | | Led by local governments | | | | | | | | |
| Increase the percentage of materials reused (upcycled), recycled, and composted within the region. | | | All | X | | | Organizations at all levels | Decrease in GHG emissions; decrease in materials generated and then landfilled; materials will enter local supply-chain enhancing economic development | ● | ◐ | ● | ● | ◐ | ● | Subject Areas Benefited: Land use, Materials/Waste Management, Economic Development, Climate Change Adaptation, GHG Emissions Capitals Benefited: Social, Natural, Built/Infrastructure, Finance Communities Benefited: All Implementation Feasibility: Short implementation timeframe, technology currently available and in use, support network established Consistent with Planning Efforts: Yes Financial Feasibility: Yes |
| | Develop local markets for recyclables | This provides regional self reliance, provides longer term solutions, and adds to the local economy | All | X | | | Led by local governments and economic development agencies; NYS | | | | | | | | |
| | Explore feasibility of halting all increases in capacity at state's largest landfills | | All | X | | | Led by local governments | | | | | | | | |
| | Require local solid waste planning units to prepare plans that increase waste reduction and diversion and decrease disposal | Must decrease disposal by 50% by 2015, 75% by 2020 | All | X | | | NYSDEC | | | | | | | | |
| | Develop a new system to capture pre-consumer organics, then expand this system - once proven - to post-consumer organics | e.g., vegetable and fruit waste at point of processing (pre-consumer organics); food waste (post-consumer organics) | All | | X | | Led by local governments and large institutions | | | | | | | | |
| | Develop innovative approaches to material diversion policy incentives | There are a host of innovative diversion initiatives for discarded materials that can be deployed particularly in the area of source reduction | All | X | | | | | | | | | | | |
| | Further support and develop existing recycling infrastructure | Such as Monroe County single-stream MRF and other recycling infrastructure | All | X | | | Local governments | | | | | | | | |
| | Encourage on-site/backyard composting program | Provide training on proper installation and management | All | X | | | Led by local governments | | | | | | | | |
| | Provide on-site digestion vessels | At the region's colleges, schools, hospitals, nursing homes, manufacturing plants and other facilities with cafeterias | All | X | | | Local governments working with NYS | | | | | | | | |
| | Move toward composting, digestion, and appropriate land-application solutions for bio solids and other organic waste | Land application of bio solids are causing serious problems in various locations across the region--a new management regime needs to be developed | All | X | | | Led by local governments | | | | | | | | |

Materials Waste Management Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|---|--|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Reuse efforts should include the development and enhancement of materials exchange programs | That includes waste materials exchange program to facilitate use of waste materials as inputs | All | X | | | Led by local governments | | | | | | | | |
| | Encourage building deconstruction and subsequent material reuse and recycling, as opposed to building demolition. | | All | X | | | Led by local governments | | | | | | | | |
| | Cultivate Industry Partnerships with Wastewater Treatment Plants to Stabilize System Capacity | The proposed strategy is focused on treating publically-owned wastewater treatment plants and their upstream users as a single system that can be optimized to meet future demands. The following tactics would support the achievement of this strategy: Identify WWTPs that operate at or near capacity for a single water quality parameter; Develop projections of industry growth in 5-10 years upstream of these plants; Target individual companies in growing sectors for pollution prevention/water conservation projects that address the parameters identified above. Key metrics might include the following: % of WWTP that operate with ≥ x% of excess capacity relative to specific set of parameters (e.g. BOD) | All | X | | | Agencies that provide technical assistance services focused on the environment/water. | Eases the burden on aging infrastructure for wastewater treatment; Reduces the need for and urgency of capital investment in additional infrastructure; in the near term, reduces energy costs at WWTPs; Reduces cost associated with discharge to individual companies; Promotes the development of best practice that can be transferred across industry sectors; Applies the proven framework of watershed management to a smaller scale system; Enhances communication across stakeholder groups (currently connected only by regulatory constructs | | | | | | | |
| | Increase efficiency of landfill gas capture/conversion to energy | Improve waste to energy management and conversion through introduction of new technologies and research | All | X | | | Local governments and technical assistance providers | | | | | | | | |
| | Expand reuse to include construction and demolition (C&D) debris and building development opportunities, such as deconstruction and demolition | Increase C&D recycling operations; Create more aggressive building codes encouraging use of recycled materials, reuse, and deconstruction; Develop a debris management plan for extreme weather events | All | X | | | Local governments and technical assistance providers, stakeholders | | | | | | | | |
| Address financial barriers through new revenue and business models | E.g., incentives, appropriate user fees, etc. | Goal is to make sustainable materials management a viable option from a financial standpoint vs. waste disposal models. | All | | X | | Local governments working with academic institutions and others. | Creates business opportunities utilizing local materials to enhance local economy. | ● | ● | ● | ◐ | ◐ | ◐ | Subject Areas Benefited: Energy, Land Use, Materials/Waste Management, Water Management, Climate Change Adaptation, GHG Emissions, Economic Development Capitals Benefited: Human, Social, Natural, Built/Infrastructure, Financial Communities Benefited: All Implementation Feasibility: Implementation timeframe, support network being developed but not formalized Consistent with Planning Efforts: Yes Financial Feasibility: |
| | Develop incentive programs to encourage materials use/reuse vs. disposal | For instance, take back/deposit programs | All | X | | | Local governments working with NYS | | | | | | | | |
| | Manufacturers responsible for funding of recycling efforts on their products (product stewardship) | | All | | X | | Local governments working with NYS | | | | | | | | |
| | Develop "green fee" system | Would provide reliable source of revenue to help fund materials programs - reduce disincentive | All | | X | | Local governments | | | | | | | | |
| | Encourage carbon credit policies | Focus on highest and best use of materials from a standpoint of carbon reduction | All | | X | | Local governments working with NYS | | | | | | | | |
| | Address low tipping fees | Tipping fees currently do not include all externality costs (thus, they are a disincentive to sustainable approaches to materials/waste management) | All | X | | | Local governments working with NYS | | | | | | | | |

Materials Waste Management Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes | |
|---|---|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | | |
| | Taxes on packages that are not reusable, recyclable, or compostable | | All | X | | | Local governments working with NYS | | | | | | | | | |
| | Institute more Pay-as-You-Throw programs and every-other-week trash pickup | Would generate revenue, encourage source reduction, and build efficiencies into infrastructure | All | X | | | Local governments | | | | | | | | | |
| | Address net-metering as it is a challenge and particularly limiting in rural areas | This relates to digestion, energy production, and distributed energy | All | | X | | Local governments working with NYS | | | | | | | | | |
| | Develop financing opportunities for pilot projects that validate new waste reduction and diversion technology and the benefits of implementation. | | All | X | | | Local governments, academic institutions, other technical assistance providers | | | | | | | | | |
| Promote comprehensive sustainable materials management education, awareness, and research services | | | All | X | | | Local governments | Decrease in solid waste generated and landfilled; increase in recycling, composting, and reuse programs; producer and consumer responsible for appropriate materials management | | | | | | | Subject Areas Benefited: Materials/Waste Management, Climate Change Adaptation, GHG Emissions, Economic Development Capitals Benefited: Social, Natural Communities Benefited: All Implementation Feasibility: Short implementation timeframe, established support network Consistent with Planning Efforts: Yes Financial Feasibility: | |
| | Educate the public, government, businesses, and institutions regarding waste management regulations and requirements, and the cost of waste management, as well as the benefits of sustainable materials management and how to effectively reduce, reuse, and recycle | | All | X | | | Local governments working with academic institutions and others. | | | | | | | | | |
| | Develop metrics and education strategies to define and articulate the true value of materials | | All | X | | | Local governments working with academic institutions and others. | | | | | | | | | |
| | Utilize the expansion of SMM markets and initiatives to create collaborative services and economic development opportunities | Developing local markets requires a working partnership between the county departments responsible for solid waste management and local economic development agencies. | All | X | | | | | | | | | | | | |
| | Provide service opportunity analysis assistance for institutions and businesses | Provide intensive consulting services to organizations to help reduce waste throughout process steps in the organization | All | | X | | Local governments, academic institutions, other technical assistance providers | | | | | | | | | |
| | Hold a series of sustainable economic development workshops | Educate around highest and best use dictum | All | X | | | Local governments working with academic institutions and others. | | | | | | | | | |
| | Leverage, support and promote regional organizations that provide research and education in efficient materials use, reduction of waste and energy efficiency | including FAME, MACNY and P2I. | All | X | | | Local governments, academic institutions, other technical assistance providers | | | | | | | | | |
| | Develop new, creative outreach approaches | Which: 1) looks beyond email, websites, and electronic social networking (while all are good to deploy), and 2) recognizes that large segments of society don't have access to these means of communication | All | X | | | Local governments | | | | | | | | | |
| | Bring waste haulers and transporters under jurisdiction of DEC through licensing, requiring reporting of all waste and recyclable collections and disposal, and providing for oversight and compliance | | All | X | | | NYSDEC and local governments | | | | | | | | | |
| | Develop and Implement Model for Brokering Materials Regionally | The proposed strategy is focused on filling research gaps and creating the incentives needed to strengthen the value proposition of technologies like anaerobic digestion to local landowners. The following tactics would support the achievement of this strategy: Complete longer term study on waste profiles that are best suited for the use of anaerobic digestion, biomass conversion, biodiesel production, etc.; Complete cost-benefit analysis of the technologies mentioned above; Develop decision-making and technical assistance tools that can engage landowners; Create infrastructure for enabling farmers to sell waste energy to the grid; Use tax and other vehicles to incent local energy production | All | X | | | Regional economic development agency via partnership with university, county government and NYSERDA | Mitigates emerging regional concern regarding the overuse of land application; Supports the local energy economy and promotes energy independence; Results in direct cost savings for landowners; Reduces GHG emissions derived from energy production from fossil fuels; May accelerate green technology development (strengthens market demand) | | | | | | | | |

Materials Waste Management Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|----------------|---|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|-------|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Promote Mainstreaming Efforts for Innovative Waste Treatment (such as Vermiculture) | Sewage sludge is often trucked long distances for disposal. This costs the community a great deal of money uses natural resources (gas to fuel hauling truck), and creates air pollution. Vermiculture (also called vermicomposting) is an innovative technique that can be used to solve this waste disposal issue. In vermiculture the sludge needs to first be dewatered, then this material is fed to worms (this can be done in a trench system). The worms convert the dry sludge into worm castings, which is great, odorless fertilizer, which can actually be sold. This process reduces pollution, saves money (by reducing transport distances for sludge disposal), and turns the sludge into something useful. Project: The Village of Lyons currently has sludge from their wastewater treatment plant trucked to Canandaigua, NY, approximately 25 miles away, where if a vermicomposting system was developed at a Village owned site near the existing plant then money and natural resources could be saved. | Wayne | X | | | Village and Town of Lyons, Civil or Environmental Engineer, Contractor | Cost savings for a community, funds that are saved can be used on other important community projects. Reduction in use of fossil fuels (reduced hauling distance). Decrease in air pollution through minimizing sludge hauling distance. Positive environmental impact by converting sludge (a pollutant) into a fertilizer that can be used in agriculture. It is important to reduce carbon footprint to reduce global warming and climate change. The vermicomposting project would enable a community (in this case Lyons) to make a significant reduction in their carbon footprint by modifying the distance of hauling operations. | | | | | | | |
| | Accelerate local production of energy from agricultural waste. | The proposed strategy is focused on filling research gaps and creating the incentives needed to strengthen the value proposition of technologies like anaerobic digestion to local landowners. The following tactics would support the achievement of this strategy: Complete longer term study on waste profiles that are best suited for the use of anaerobic digestion, biomass conversion, biodiesel production, etc.; Complete cost-benefit analysis of the technologies mentioned above; Develop decision-making and technical assistance tools that can engage landowners; Create infrastructure for enabling farmers to sell waste energy to the grid; Use tax and other vehicles to incent local energy production | All 9 | X | | | Regional economic development agency via partnership with university, county government, and NYSERDA | Regional economic development agency via partnership with university, county government, and NYSERDA | | | | | | | |

Water Management Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|--|---|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Inventory, monitor and educate to create a better understanding of the region's water resources. | | Promote a better understanding of the balance of the region's "water system". In this context, the water system includes inputs from precipitation and watercourse flow. Outputs include withdrawals for human use and different aspects of the hydrologic cycle, including watercourse flow. | All | | | x | All levels of local government | Increases the chances that future efforts to enhance the quality of the water environment will be successful | | | | | | | This broad strategy should benefit 5 subject areas: Energy, Water Management, Agriculture & Forestry, Climate Change Adaption, and GHG Emissions; all feasibility capitals. Implementation will be straight forward, but will require diligent follow-through. The Financial Feasibility is scored high. This strategy will not be particularly expensive, but will require consistency in approach. |
| | Track USGS-compiled and published "Water Use County Data" | Track and record trends in this published data. Promote understanding of the inputs and withdrawals to/from regional water bodies and groundwater. This will help to better understand the functions of the region's water process which will allow the region to anticipate and react to stresses on the system. | All | | | x | All levels of local government | | | | | | | | |
| | Create a repository of rainfall/runoff data and models | A thorough collection of hydrologic and hydraulic models created and managed in a consistent manner will help in the understanding of the region's water system. Rainfall runoff models are created as part of development projects, municipal master planning, academic studies, canal authority management procedures, and other efforts. Some municipalities have been successful in creating, assembling, and managing master hydrologic models based on calculations paid for by project applications. | All | | | x | | | | | | | | | |
| | Invasive Species Monitoring | Create a regional aquatic invasive species prevention/monitoring program | All | | | | | | | | | | | | |
| | Develop natural resource inventories | Develop natural resource inventories to identify high priority water and natural resources and prioritize protection and restoration projects | All | | | | | | | | | | | | |
| Promote regional standardization of regulations and management | | Collaborate regionally through the standardization of water resource management practices across villages, cities, towns and counties. Water resource management strategies should consider all water-related strengths, weaknesses, opportunities, and threats. Water resource management strategies should also consider their relationship to each of the tenets of sustainability. | All | | | x | All levels of local government | Better alignment of regulations in problem areas. Increased awareness and cooperation. | | | | | | | This broad strategy should benefit 5 subject areas: Energy, Water Management, Agriculture & Forestry, Climate Change Adaption, and GHG Emissions; all feasibility capitals. Implementation will be challenging, particularly because of strong 'home rule'. The Financial Feasibility is scored high. This strategy will cost more political capital than financial capital. |
| | Promote Community Vision Planning | Concentrate future growth in existing centers and protect open space. Creating or updating community comprehensive plans including a Vision Plan (master plan) that would guide future development for its center including the use of innovative land use tools (transfer of development rights and form based codes), be the basis for a community marketing plan and economic development plan, and make the expectations more predictable for potential developers. | All | | | x | All levels of local government | | | | | | | | |
| | Establish the Genesee River Institute | The Finger Lakes Regional Sustainability Plan Consortium would convene a group representing agencies, universities, and organizations that are involved in water quality management, floodplain management, emergency mitigation, recreation, public education and economic development with an interest in the Genesee River Watershed. This group would be charged with founding the Genesee River Institute, modeled in part on the Finger Lakes Institute in Geneva, NY. The Institute's mission would be to collaborate on watershed research and programs; share program, policy education and outreach materials with institute members; and apply for Great Lakes (and other) grant funding. | All | | | x | | | | | | | | | |
| | Continue to support the development, update and implementation of watershed management plans | As watershed management plans are developed and adopted, follow through with the implementation of the initiatives described therein. | All | | x | | All levels of local government | | | | | | | | |
| | Provide training and technical resources to support local government in the implementation of land use regulations to support water resources and mitigate flooding | Identify and provide resources to implement land use tools and regulations such as conservation easements, purchase of development rights, riparian buffer ordinances, etc | All | x | | | All levels of local government | | | | | | | | |
| Preserve existing ecosystem services and promote green infrastructure to reduce reliance on grey infrastructure | | Reduce grey infrastructure costs (construction, maintenance) through rewarding ecosystem services such as tax valuation or credits, stormwater utilities, and the use of green infrastructure. | All | | x | | All levels of local government | Improved surface water quality, reduced O&M costs for utilities, reduction of flashy hydrograph peaks | | | | | | | This broad strategy should benefit 5 subject areas: Energy, Water Management, Agriculture & Forestry, Climate Change Adaption, and GHG Emissions; all feasibility capitals. Implementation is feasible, but will take time and will come with acceptance of the idea. The Financial Feasibility receives an average score because under the current system, the installer may not directly receive the benefits. |
| | Encourage Net Zero Pervious Surfaces | Aim for net zero change to pervious surfaces. Any new development that adds pavement should be offset by restoring paved land to pervious/green space. | All | | x | | All levels of local government | | | | | | | | |
| | Preserve Open Space | Promotion, training, and assistance with implementation of land use tools such as purchase of development rights, transfer of development rights, conservation easements and incentive zoning to preserve agricultural lands and open space in perpetuity | All | | x | | All levels of local government | | | | | | | | |
| | Provide Financial Incentives | Increase the number of municipalities offering financial incentive to increase green infrastructure or reduce the amount of Stormwater runoff leaving a property. Examples of incentive could include (but would not be limited to) such things as tax credit, reduced Stormwater permit and other fees based on reduction of impervious surfaces, etc. | All | | x | | All levels of local government | | | | | | | | |

Water Management Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|--|--|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Improve Onsite Wastewater Treatment Systems | Onsite Wastewater Treatment Systems (OWTSs) are a significant source of nutrients and bacteria to surface water in the Finger Lakes Region. The nutrients contribute to algal blooms in the regions ponds, bays and lakes; swimmers can experience negative health impacts from bacteria associated with some algal blooms and the waste water. OWTSs are emblematic of two very natural human behaviors: "out of sight, out of mind" and "why should I bother with this if my neighbors aren't bothering?" While routine OWTS maintenance is affordable, it is usually deferred until the situation and no longer be ignored and the only options are very costly. The Departments of Health in Finger Lakes Region counties could develop a method of obtaining permit origination and renewal fees for OTWSs that would be put in a reserve fund for education and outreach efforts and income-eligible grants for maintenance and replacement. | All | | x | | Counties | | | | | | | | |
| | Explore use of natural systems for wastewater treatment | Support research institutions in the research and development and implementation of pilot projects to validate effectiveness | All | | x | | Research institutions | | | | | | | | |
| | Support Invasive Species Management Program | Coordinate with the NYS Partnership for Regional Invasive Species Management Finger Lakes Chapter to develop invasive species management goals and priorities in the region | All | | | x | All levels of local government | | | | | | | | |
| | Promote the implementation of best management practices | Promote the implementation of agricultural and transportation best management practices to improve water quality | All | | x | | All levels of local government | | | | | | | | |
| | Implement stream and riparian restoration projects | Implement stream and riparian restoration projects identified in watershed management plans. | All | | x | | All levels of local government | | | | | | | | |
| | Explore incentive and permitting programs as funding sources | Explore incentive and permitting programs as potential avenues to fund improvement projects (i.e. carbon crediting, TMDL or habitat mitigation banking) | All | x | | | All levels of local government | | | | | | | | |
| | Implement the recommendations of the Great Lakes Compact (VB 7) | Implementation of Great Lakes Compact - Sustainable Flows in Lake Ontario (BV7) – http://www.nature.org/ourinitiatives/regions/northamerica/areas/greatlakes/policy/plan-bv7.xml . The International Joint Commission (IJC) has proposed a new plan to balance the needs of people and nature, a plan that benefits hydropower, shipping, hunting and fishing, recreational boating, and shoreline property, while focusing on the health of the Lake Ontario – St. Lawrence ecosystem as a whole. | All | | x | | All levels of local government | | | | | | | | |
| Through water conservation, ensure adequate timing and flow of water in streams, rivers, lakes and aquifers for sustainable use for people, industry, energy and nature | | Treating wastewater and potable water requires large amounts of energy. Moving water can provide energy. Make the relationship of energy and water more beneficial to the region. | All | | | x | All levels of local government, utility providers | Reduction in GHG emissions. Reduction in water treatment costs. | | | | | | | This broad strategy should benefit 5 subject areas: Energy, Water Management, Agriculture & Forestry, Climate Change Adaption, and GHG Emissions; Benefits social, natural, built and financial capitals. Implementation is feasible, but will take time and will come with the availability of funding. The Financial Feasibility receives a low score because under the current climate, it is assumed that securign funding will be difficult. |
| | Encourage and support organizations that can improve water-related energy practices. | Leverage, support and promote regional organizations that provide research and education in efficient materials use, reduction of waste and energy efficiency, including FAME, MACNY and P21. Develop financing opportunities for pilot projects that validate new technology and the benefits of implementation. | All | x | | | All levels of local government, utility providers | | | | | | | | |
| | Decrease energy usage by water-related utilities. | Reduce the water/energy nexus by reducing the amount of grid delivered energy needed to manage water. Water treatment is extremely energy-intensive. New and improving technologies all for nearly constant opportunities to improve efficiency. Close monitoring and continual evaluation of equipment and practices will identify the best opportunities for upgrades. | All | | | x | All levels of local government, utility providers | | | | | | | | |
| | Generate renewable energy from used water. | Moving water contains energy. In many cases, moving water contains more energy than is needed to transport it to its destination. Micro-turbine and other energy-capture technologies have developed to the point where small-scale applications might provide a desirable benefit/cost ratio. Increase the percent of renewable energy generated from used water, including stormwater. | All | | | x | All levels of local government, utility providers | | | | | | | | |
| | Promote and educate businesses and residents on water reuse and reducing water use | | All | x | | | All levels of local government, utility providers | | | | | | | | |
| | Educate and promote the implementation of best management practices to improve water efficiency of crop irrigation and landscaping practices | | All | x | | | | | | | | | | | |
| Maintain and improve the functionality and efficiency of the water supply and wastewater infrastructure systems | | | All | x | | | Authorities/agencies/government entities responsible for maintenance of infrastructure | | | | | | | | This broad strategy benefit 3 subject areas: Energy, Water Management and Economic Development; Benefits social, natural, built and financial capitals. Technology for implementation is available. Consistent with REDC Plan to maintain and improve infrastructure. Potential to leverage other funding sources |

Water Management Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|----------------|--|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|-------|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Decrease water loss in water supply infrastructure systems | Implement improvements in infrastructure systems to reduce water loss in transport | All | x | | | Authorities/agencies/ government entities responsible for maintenance of infrastructure | | | | | | | | |
| | Develop, implement and update asset management programs | Begin to establish data bases of water-related infrastructure and other assets. Asses the condition of these assets and their primary components. Prepare a plan for their management, maintenance, and replacement. | All | | | x | All levels of government | Develop, implement and update asset management program to more effectively and efficiently manage assets and infrastructure. | | | | | | | |
| | Cultivate Industry Partnerships with wastewater treatment plants | Explore the possibility of forming public/private partnerships to manage this infrastructure | All | x | | | Authorities/agencies/ government entities responsible for maintenance of infrastructure | | | | | | | | |

Economic Development Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes | |
|---|--|----------------------|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | | |
| Embed the framework of this Plan into all planning, execution and measurement activities throughout the region | | | All | X | X | X | REDC & Regional Planning & Municipal Entities | Unique branding and alignment, focused investment, competitive advantage | ● | ● | ● | ● | ○ | ● | This strategy is a new concept that emerged during this planning effort, therefore is not contained within any existing planning documents. Executed properly, has potential to benefit across subject areas, the region and all 5 capitals, is readily implementable and financially feasible. | |
| | Expand the representation at all regional and municipal planning entities to include expertise from all 5 capitals | | All | | | | | | | | | | | | | |
| | Incorporate FLRSP measurement matrices into the tracking and reporting of all investments | | All | | | | | | | | | | | | | |
| | Develop project evaluation forms that contain the complete project criteria recommended in the FLRSP for use on all projects applying for economic development support and funding | | All | | | | | | | | | | | | | |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 Capitals (Financial, Human, Social, Natural & Built) and have broad commercialization potential. | | | All | X | X | X | REDC, Economic Development Entities | Leveraging region's unique capabilities, innovation pipeline | ● | ● | ● | ● | ● | ◐ | This strategy was taken from the REDC Plan and expanded to incorporate the 5 capitals while focused to encourage the development of an economy founded on the uniqueness of the place, rather than chasing generic strategies | |
| | Network, collaborate and promote regional organizations that encourage and support entrepreneurship, technology transfer and small business - align their criteria & priorities with the Finger Lakes Regional Sustainability Plan | | All | | | | | | | | | | | | | |
| | Identify and support innovation throughout the regional nutrition supply and processing chain | | All | | | | | | | | | | | | | |
| | Support innovation in alternative, renewable and distributed energy and its enabling infrastructure | | All | | | | | | | | | | | | | |
| | Develop funding center to identify and connect emerging innovations with financial resources (seed, grants, venture capital, etc.) | | All | | | | | | | | | | | | | |
| | Increase collaboration between educational institutions and existing businesses to support innovation of products & services aligned with the Finger Lakes Regional Sustainability Plan | | All | | | | | | | | | | | | | |
| | Expand access to seed, early-stage, venture, and public/private capital. | | All | | | | | | | | | | | | | |
| | | | All | | | | | | | | | | | | | |
| Invest in critical infrastructure to foster economic expansion and advance sustainable initiatives (access, function, resiliency) | | | All | X | X | X | REDC & Regional Planning & Municipal Entities | Incorporation of sustainable goals into infrastructure investment, strategic support of economic vitality & community benefit | ● | ◐ | ● | ● | ● | ◐ | Need to remain mindful to avoid sacrificing natural capital in the pursuit of the other capitals. Current funding model for infrastructure is challenged to provide for these needs. This strategy exists in the REDC plan but was refined to address access, function and resilience. | |
| | Develop regional condition, capacity and vulnerability assessments and inventories for all critical infrastructure | | All | | | | | | | | | | | | | |
| | Accelerate the development and adoption of independent, local networks of critical infrastructure (communications, energy, water, wastewater, micro-grid, etc.) | | All | | | | | | | | | | | | | |
| | Invest in ecological resource-related projects that enhance ecological systems, improve water access, retain water quality, and increase water safety. | | All | | | | | | | | | | | | | |
| | Invest in key projects that will address transportation system barriers to growth and strengthen transportation infrastructure through systemic analysis. | | All | | | | | | | | | | | | | |
| Expand and align training and education initiatives to target strategic sectors and meet the needs of existing and emerging industries. | | | All | X | X | X | Educational providers and business leaders | Reduction of unemployment while filling local hiring needs | ◐ | ◐ | ● | ● | ● | ◐ | This strategy has the potential to benefit Energy, Land Use & Livable Communities, Transportation, Economic Development and GHG Reduction. Benefits all capitals with the exception of Natural Capital explicitly. | |
| | Connect private industry with the educational system to stimulate early awareness and interest in manufacturing career opportunities and align programs to deliver qualified candidates | | All | | | | | | | | | | | | | |
| | Develop education and re-training networks to enable displaced or under-employed workers to fill strategic regional employment needs. | | All | | | | | | | | | | | | | |
| | Foster closer cooperation among the region's companies and institutions of higher education to accelerate technology transfer and align workforce training programs with the skill sets required by the sector. | | All | | | | | | | | | | | | | |
| Protect, enrich and market the unique natural, cultural, agricultural, and destination assets of the region. | | | All | X | X | X | Ecological, economic development, tourism and cultural institutions | Preservation of the core assets of the region, preservation of the free services that the ecological elements provide, natural beauty and quality of life, economic attraction | ◐ | ◐ | ● | ● | ● | ● | Benefits Land Use & Livable Communities, Water Management, Economic Development, Ag & Forestry, & GHG Reduction. Benefits Human, Natural and Financial Capitals. | |
| | Support the efforts of regional partners in identifying and securing funding for tourism promotion | | All | | | | | | | | | | | | | |
| | Recreation and Water Quality Special Projects Fund | | All | | | | | | | | | | | | | |

Economic Development Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|--|---|----------------------|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Develop, network, and promote the region's growing wine, culinary, agricultural, and food micro-enterprises. | | All | | | | | | | | | | | | |
| | Strengthen and support the development of the Finger Lakes' diverse water resources and recreational tourism opportunities, allowing greater access and promoting year-round use. | | All | | | | | | | | | | | | |
| | Build on a positive destination image by leveraging partnerships and promotions of the region's high profile events, and healthcare and educational assets for business development, expansion, and retention. | | All | | | | | | | | | | | | |
| Leverage the Story of Place™ to build community capacity, align and focus business development and branding | | | All | X | X | X | Economic planning entities, educational and cultural institutions | Restore a strong sense of place to the region, align, reconnect and engage citizens, brand the region, provide strategic focus | ● | ● | ● | ◐ | ○ | ● | This strategy has the potential to benefit widely across all subject areas, all capitals and all areas of the region. It is very feasible to implement financially, although cultural changes will be necessary. This concept was newly introduced during the planning process therefore it is not contained within existing regional plans. |
| | Promote "storytelling" events (through museums, schools, local media, professional associations, and other venues) that invites local people to share and deepen their understanding of what makes this region distinctive. | | All | | | | | | | | | | | | |
| | Use the Story of Place™ process initiated by this report to inform branding efforts for the region. | | All | | | | | | | | | | | | |
| | Set up a Sustainability Advisory/Resource Group to help businesses, NGO's, research groups, governments, and others to use what has been learned from this sustainability planning exercise to develop more successful and sustainable proposals. | | All | | | | | | | | | | | | |
| | Enlist regional universities to design sustainability curricula that develop higher order systemic thinking skills for use in workforce training, K-12 education, and other venues. | | All | | | | | | | | | | | | |

Climate Change Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|--|---|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Enhance mutual aid and support among neighboring communities, counties, and regions to share, develop, and create capabilities, resources, and special assets. | | Designed to mitigate risks and respond during and after extreme events. This strategy will include research, education, training, and continuing education, as well as a process to identify and share critical resources (e.g., listing of willing and trained medical personal, strategic location of special response equipment for easy deployment). | All | X | | | | improve disaster resiliency, reduce community costs (e.g., municipal budget) for disaster mitigation, preparation and response, save lives and protect livelihoods, provide economic opportunity | ● | ● | ● | ● | ● | ● | 1. Benefits all subject area, since each subject area relies upon local capacity and capabilities, and advancements in these capabilities can be used more broadly. 2. Benefits all 5 capitals; 3. Benefits all communities; 4. Feasible to initiate implementation immediately; 5. Consistent with Hazard Mitigation Plans for each county and New York State; 6. Unknown total cost (potentially high) but high potential to leverage other funding sources. |
| | Develop research, education, training, and continuing education to solve local problems. | | All | | | | | | | | | | | | |
| | Develop processes to identify and share critical resources (e.g., listing of willing and trained medical personal, strategic location of special response equipment for easy deployment). | | All | | | | | | | | | | | | |
| Upgrade existing assets and modify municipal and business practices to better withstand extreme conditions. | | | All | X | | | | economic development, improve disaster resiliency, reduce community costs (from mitigation rather than repair), saves lives and livelihoods | ● | ● | ● | ● | ● | ◐ | 1. Benefits all subject area, since each subject area relies upon local capacity and capabilities, and advancements in these capabilities can be used more broadly. 2. Benefits all 5 capitals; 3. Benefits all communities; 4. Feasible to initiate implementation immediately; 5. Consistent with Hazard Mitigation Plans for each county and New York State; 6. Unknown total cost (potentially high) but high potential to leverage other funding sources. |
| | Develop research, training and deployment of multiple strategies ("hardening" as well as "softening"/breakaway/crumple zones) to upgrade existing assets. | | All | | | | | | | | | | | | |
| | Develop research, development and evaluation of innovative approaches to regenerate natural systems to improve the performance of built systems (e.g., restore wetlands as buffer zones during flooding). | | All | | | | | | | | | | | | |
| | Upgrade existing facilities (e.g., buildings, industrial facilities) to reduce resource use (e.g., energy, waste, materials, etc.) | | All | | | | | | | | | | | | |
| | Upgrade county E911 communication systems to ensure proper public safety response | | All | | | | | | | | | | | | |
| | Focus on on-site critical services that include energy production, water and wastewater (sewage) treatment, and solid waste treatment/processing (especially organic waste), as well as food, medical and emergency services. | | All | | | | | | | | | | | | |
| Create self-sufficient "places of refuge" in each community/ neighborhood for critical resources, shelter and aid under normal and extreme conditions. | | The critical services may include energy production, water and wastewater (sewage) treatment, and solid waste treatment/processing (especially organic waste), as well as food, medical and emergency services (maybe also education/cultural). | All | X | | | | If the critical services are provided under normal conditions, they can offset community/municipal costs and/or be sources of revenue, and these on-site services can save lives during extreme conditions. If these "places of refuge" are local historical/cultural centers, this strategy may also help preserve the sense of place for each community - and give these centers a new lease on life. | ● | ● | ● | ● | ● | ◐ | 1. Benefits all subject area, since developments for these "places of refuge" directly relates to each subject area, and can be used more broadly. 2. Benefits all 5 capitals; 3. Benefits all communities; 4. Feasible to initiate implementation immediately; 5. Consistent with Hazard Mitigation Plans for each county and New York State; 6. Unknown total cost (potentially high) but high potential to leverage other funding sources. |
| | Enhance "places of refuge" in local historical/cultural centers to help preserve the sense of place for each community - and give these centers a new lease on life. | | All | | | | | | | | | | | | |
| | Link on-site services to the regional centralized systems (e.g., electricity grid) to offset community/municipal costs, and provide new sources of revenue. | | All | | | | | | | | | | | | |
| | Provide medical service, education/training, and other services in these "places of refuge" for day-to-day activities | | All | | | | | | | | | | | | |
| | Focus on on-site critical services that include energy production, water and wastewater (sewage) treatment, and solid waste treatment/processing (especially organic waste), as well as food, medical and emergency services | | All | | | | | | | | | | | | |
| | Enhance "places of refuge" in local historical/cultural centers to help preserve the sense of place for each community - and give these centers a new lease on life. | | All | | | | | | | | | | | | |
| | Link on-site services to the regional centralized systems (e.g., electricity grid) to offset community/municipal costs, and provide new sources of revenue. | | All | | | | | | | | | | | | |
| Provide medical service, education/training, and other services in these "places of refuge" for day-to-day activities | | All | | | | | | | | | | | | | |

Climate Change Strategies

| | | | | | | | | | | | | | | | |
|---|---|--|------------|----------|--|--|--|--|--|--|--|--|--|--|---|
| <p>Create localized networks for critical services (e.g., local food sources, micro-grids for energy, water, sewage, solid waste treatment, district heating, etc.) to complement existing centralized systems (at a larger scale than the "places of refuge").</p> | | <p>These localized networks can be created/deployed in rural as well as urban and suburban settlements .</p> | <p>All</p> | <p>X</p> | | | | <p>improve disaster resiliency, provide new revenue sources and reduce environmental impacts</p> |  |  |  |  |  |  | <p>1. Benefits all subject area, since localized networks directly relates to each subject area, and can be used more broadly. 2. Benefits all 5 capitals; 3. Benefits all communities; 4. Feasible to initiate implementation immediately; 5. Consistent with Hazard Mitigation Plans for each county and New York State; 6. Unknown total cost (potentially high) but high potential to leverage other funding sources.</p> |
| | <p>Create/deploy localized networks in rural as well as urban and suburban settlements, using local inputs (e.g., manure from farms).</p> | | <p>All</p> | | | | | | | | | | | | |
| | <p>Develop and approve options for "islanding" these networks under extreme conditions to protect lives and livelihoods.</p> | | <p>All</p> | | | | | | | | | | | | |
| | <p>Develop market and financial mechanisms to use localized networks as a new revenue source for participants/providers (e.g., farmers)</p> | | <p>All</p> | | | | | | | | | | | | |

Governance Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|---|--|---|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Promote the development of local and regional sustainability initiatives to serve as a dynamic means of supporting the goals of the Regional Sustainability Plan across all Subject Areas | | The Finger Lakes Regional Sustainability Plan is intended as a means for improving the economic and environmental health, and quality of life of the region to achieve a more sustainable future. By embedding the Plan into the culture and gaining the support of local and regional officials, communities can establish the framework necessary to guide future planning and investment-related decisions aimed at sustainability. Additionally, the promotion and support of training programs for local officials is a means of providing a greater understanding of the importance of sustainability and increasing awareness of the adverse impacts of increasing greenhouse gas emissions. This can result in the development and updating of comprehensive plans and other long range planning documents that incorporate land use policies and other measures that promote sustainability. | All | X | | | NYSERDA, G/FLRPC, REDC, GTC, County Planning Departments, etc. | Improve regional planning and local efforts and decision making; cost reductions and government efficiency; resiliency, flexibility and ability to adapt to change; environmental protection; economic development | ● | ● | ● | ● | ◐ | ● | This strategy has the potential to bring about measures and initiatives to benefit all subject areas. This strategy can also benefit all five capitals and multiple communities. It can be applied in communities and in every county in the region, and has benefits that extend beyond the region. Implementation could be achieved in less than 10 years as the notions and benefits of sustainability become more embedded in local governance structures. This strategy is consistent with regional planning, although not specifically mentioned. It could have low to medium order of magnitude costs and result in significant financial benefits. |
| | Increase participation in the Climate Smart Communities program | This program is a means of establishing a state and local partnership to enable communities to reduce greenhouse gas emissions, save taxpayer dollars and advance sustainable community goals for health and safety, economic vitality, energy independence and quality of life. | All | X | | | | | | | | | | | |
| | Incorporate sustainability measures into local and regional level planning documents, such as comprehensive plans, stormwater management plans, farmland and agricultural protection plans, watershed management plans, Comprehensive Economic Development Strategy (CEDS), etc. | Local planning is the foundation for land use and infrastructure investment decisions. Comprehensive plans and other long range planning documents provide vision and guidance for local officials and include recommendations and implementation strategies that can help drive decision making processes. Communities are encouraged to prepare and/or update their plans to incorporate policies and measures that support and promote sustainability to ensure an improved future for their communities. | All | X | X | | | | | | | | | | |
| | Create municipal sustainability office at local and/or county level to provide stewardship over this plan. | To help local officials and the public understand and embrace the benefits of sustainability, and to make sustainability and the Finger Lakes Regional Sustainability Plan a mainstay in the region, it is important to provide proper tools and resources. Having regional or local entities to assist with this effort is one way to ensure success. Sustainability offices could function as a specialized element of local government to carry out the mission of the sustainability plan and help communities gain the knowledge and information required to develop better plans and make better decisions for their future. | All | X | X | | | | | | | | | | |
| | Provide training and technical resources to municipal officials and local boards to promote more sustainable policies and decision making. | | All | X | X | | | | | | | | | | |

Governance Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|---|---|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Encourage regional cooperation and coordination | | Municipal cooperation and intermunicipal planning, particularly between towns and villages, can result in better decision making, cost savings and consistent land use policies that can impact all subject areas and capitals. | All | X | | | DOS, NYSEDA, GTC, G/FLRPC, County Planning Departments | Better coordination of regional planning efforts, cost reduction and government efficiency, resiliency, flexibility and ability to adapt to change, shared services, economic development | ● | ● | ● | ◐ | ◐ | ● | This strategy benefits land use and livability, materials/waste management, water management, economic development, and governance. This strategy also benefits all five capitals and has the potential to benefit multiple communities. It can be applied in communities and in every county in the region, and has benefits that extend beyond the region. Implementation may take more than nine years because governance structures make it difficult for communities to cooperate across municipal boundaries. This strategy is consistent with regional planning, although not specifically mentioned. It can have significant and immediate financial benefits and the return on investment can be significant. |
| | Evaluate the potential for regional revenue sharing | Utilize revenue sharing as a means of regional planning to steer development to the right places and defuse issues with home rule. | All | X | | | | | | | | | | | |
| | Encourage greater coordination between the Regional Economic Development Council and the Finger Lakes Regional Sustainability Plan | The regional sustainability plans should be acknowledged and incorporated into the decision making of the FLREDC. Future economic development decisions must take into consideration the importance of developing the region in a sustainable manner. | All | X | | | | | | | | | | | |
| | Incorporate sustainable approaches and policies into government systems to promote a stronger understanding of sustainability and bring about change to established systems | To achieve true sustainability, there is a need to promote change in established regional systems that support sprawl (e.g., county sewer districts). The incorporation of sustainable practices and policies will lead to better development, reduce infrastructure costs and investments, allow for better economic development and improve quality of life. Continuing unsustainable practices will only further disadvantage communities, constrain spending, adversely impact natural resources and use land in an impractical fashion. | All | X | X | | | | | | | | | | |
| | Build intermunicipal relationships focused on mutual and sustainable improvements | Encourage municipal collaboration and relationship building to achieve consistent and sustainable land use planning across community boundaries that recognizes the intangible benefits gained from social, human, built and natural capitals. Its not just about return on investment (financial capital). The pressure to capture individual municipal revenue results in competition among communities and overdevelopment. | All | X | X | | | | | | | | | | |
| | Fund development of local sustainability plans | Communities, institutions and businesses should be provided funding incentives to prepare their own plans to implement regional sustainability strategies on a local basis. | All | X | X | | | | | | | | | | |
| | Encourage intermunicipal shared services agreements | Communities should evaluate opportunities to share and combine services through intermunicipal agreements to reduce costs (including conducting feasibility studies). | All | X | X | | | | | | | | | | |

Agriculture Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|---|--|----------------------|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Support the continued development of an efficient and productive regional food system. | | | All | x | | | | Increases exposure of regional food producers, processors, distributors, retailers, and customers to one another; increases the circulation of capital within the region; improves public health and food security; decreases vulnerability to external market forces. | ● | ● | ● | ● | ● | ● | <p>This strategy is recommended to begin immediately due to current needs and is expected to continue improving over the long-term.</p> <p>Subject Areas: Energy, Transportation, Land Use, Materials/Waste, Water, Economic Development, Ag/Forestry, Climate Change, Governance, GHG Emissions</p> <p>Capitals: Human, Social, Natural, Built/Manufactured, Financial</p> <p>Communities: Genesee, Livingston, Monroe, Ontario, Orleans, Seneca, Wayne, Wyoming, Yates</p> <p>Implementation Feasibility: Network either in place or emerging; several projects currently underway</p> <p>Planning efforts: FLREDC, G/FLRPC CEDS, AFT-NY, regional hazard mitigation plans</p> <p>Financial Feasibility: Low to medium life cycle cost; high potential to leverage USDA, NYS Ag & Markets, and local institutional funding; significant benefit early in strategy life cycle</p> |
| | Processing & Distribution: Support the development of a regional system that expands processing and distribution opportunities, and/or adding value to regional food products. | | All | x | | | | | | | | | | | |
| | Food Security: Increase food security for individuals and households at risk of hunger. | | All | x | | | | | | | | | | | |
| | Farm to Institution: Increase regional farms' sales to regional institutions (e.g. schools, hospitals) | | All | x | | | | | | | | | | | |
| | CSA Support: Support the development and/or expansion of multi-farm networks of Community-Supported Agricultural operations. | | All | x | | | | | | | | | | | |
| | Urban Agriculture: Support the development of urban agricultural projects in the City of Rochester. | | Monroe | x | | | | | | | | | | | |
| | Farm to Table: Increase regional farms' direct sales to consumers. | | All | | x | | | | | | | | | | |
| Increase adoption of distributed bio-energy production technologies to increase production of renewable energy from farm and forest products and product waste. | | | All | x | | | | Increases energy production; reduces dependency on centralized grid; potential revenue source for producers; reduces GHG emissions through reduction of fossil fuel use. | ● | ● | ● | ● | ● | ● | <p>This strategy is recommended to begin in the near-term because of current deficiencies in the existing bioenergy production and is expected to continue for the long-term growth opportunity for the sector.</p> <p>Subject areas: Energy, Transportation, Land Use, Materials/Waste, Water, Economic Development, Ag/Forestry, Climate Change, Governance, GHG Emissions</p> <p>Capitals: Human, Social, Natural, Built/Manufactured, Financial</p> <p>Communities: Genesee, Livingston, Monroe, Ontario, Orleans, Seneca, Wayne, Wyoming, Yates</p> <p>Implementation Feasibility: Some technologies currently available and in use, with some degree of regional support network; others in R&D phase</p> <p>Planning efforts: FLREDC, G/FLRPC CEDS, NYS Climate Action Council</p> <p>Financial Feasibility: Start-up costs range from low to high order of magnitude; high potential to leverage EPA, USDA, NYSERDA, NY Ag & Markets, NYS ESD funding; significant benefits early in the strategy life cycle</p> |
| | Plug and Play: Advance the availability and affordability of scalable plug-and-play bio-energy production systems, and provide standards for selling excess power into the grid. | | All | x | | | | | | | | | | | |

Agriculture Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|---|---|----------------------|---------------------------------------|---------------------------------|-----------------------|-----------------------|---|----------------------|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Purchase Agreements: Develop purchase agreements for the sale of bio-energy produced by the agricultural and forestry sectors to the power grid. | | All | x | | | | | | | | | | | |
| | Farm Energy Planning: Assist farm operators in analyzing energy demand, as well as opportunities for efficiency and potential energy production capacity. | | All | x | | | | | | | | | | | |
| | Community Generation & Distribution: Establish local policy framework and incentives for community-scale bio-energy generation and distribution | | All | x | | | | | | | | | | | |
| | Energy Research: Complete longer term study on waste profiles that are best suited for the use of anaerobic digestion, biomass conversion, biodiesel production, etc.; complete cost-benefit analysis of the technologies mentioned above; develop decision-making and technical assistance tools that can engage landowners; . | | All | x | | | | | | | | | | | |
| | Commercialization Partners: Improve partnerships between the agricultural sector and educational, financial, and economic development institutions to commercialize sustainable technologies | | All | x | | | | | | | | | | | |
| Reduce the conversion of quality farmland. | | | All | x | | | Maintains carbon sequestration capacity; reduces impairment of water quality; maintains sector-wide economy; maintains community character and regional identity. | ● | ● | ● | ● | ● | ● | ◐ | <p>This strategy is recommended for short, mid, and long-term action because it represents both an immediate need and a continual state.</p> <p>Subject Areas: Transportation, Land Use, Economic Development, Ag/Forestry, Climate Change, Governance</p> <p>Capitals: Human, Social, Natural, Built/Manufactured, Financial</p> <p>Communities: Genesee, Livingston, Monroe, Ontario, Orleans, Seneca, Wayne, Wyoming, Yates</p> <p>Implementation Feasibility: Most support network either in place or emerging; regulatory support not as strong as in previous years, but network and institutional knowledge remains</p> <p>Planning efforts: FLREDC, G/FLRPC CEDS, NYS Climate Action Council, regional hazard mitigation plans</p> <p>Financial Feasibility: Low order of magnitude costs; limited potential to leverage other potential funding sources at present; benefit is delayed or ramps up over life of strategy</p> |
| | Land Use Regulations: Align local land use regulations with the functional and financial needs of farms | | All | | x | | | | | | | | | | |
| | Farmland Protection Plans: Support the creation and implementation of municipal farmland protection plans. | | All | x | | | | | | | | | | | |
| | Development Rights: Improve regulatory context for the purchase, lease, and/or transfer of development rights, and promote and implement conservation easements and incentive zoning. | | All | x | | | | | | | | | | | |
| | Grassland Utilization: Increase use of underutilized grasslands for livestock production. | | All | x | | | | | | | | | | | |
| | Land Access: Facilitate farmer-landowner "matching". | | All | x | | | | | | | | | | | |
| | Succession Planning: Expand or create opportunities to engage existing and new farmers in succession planning efforts. | | All | x | | | | | | | | | | | |

Agriculture Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|--|--|----------------------|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Support farm-scale diversity of product types, both in-season and across seasons, and support the establishment and growth of a diversity of operations with regard to size, market, and operation type. | | | All | x | | | | Increases both operational and sector resilience; increases economic opportunities for growers, distributors, and retailers; increases access for underserved populations; increases market for regionally-sourced products. | ● | ◐ | ● | ● | ● | ◐ | <p>This strategy is recommended for short, mid, and long-term action due to the nature of the strategy. Certain aspects of sector-scale diversity (e.g. the support of small and mid-sized operations) represent an immediate need; others (e.g. farm-scale diversity and specialty products) are not immediately pressing but would benefit the long-term resilience of the sector.</p> <p>Subject Areas: Energy, Transportation, Land Use, Materials/Waste, Water, Economic Development, Ag/Forestry, Climate Change, Governance, GHG Emissions</p> <p>Capitals: Human, Social, Natural, Financial</p> <p>Communities: Genesee, Livingston, Monroe, Ontario, Orleans, Seneca, Wayne, Wyoming, Yates</p> <p>Implementation Feasibility: Network either in place or emerging</p> <p>Planning efforts: FLREDC, G/FLRPC CEDS, NYS Climate Action Council</p> <p>Financial Feasibility: Primarily low to moderate order of magnitude costs for most substrategies; unknown potential for leveraging outside funding sources; benefits distributed evenly across the strategy life cycle</p> |
| | Diversity Management Models: Develop models to assist in the management of farm-scale diversity for small and medium-sized operations. | | All | | x | | | | | | | | | | |
| | Specialty Products: Strengthen opportunities for producing, marketing, and exporting specialty agricultural products. | | All | | x | | | | | | | | | | |
| | Environmental Markets & Incentives: Support the development of environmental markets and incentives that are aligned with both the functional and financial needs of farms | | All | | x | | | | | | | | | | |
| | Carbon Sequestration: Research carbon sequestration potential of regional agricultural sector in advance of potential establishment of credit trading markets. | | All | x | | | | | | | | | | | |
| | Water Quality: Research water quality improvement potential of regional agricultural sector in advance of potential establishment of credit trading markets | | All | x | | | | | | | | | | | |
| Educate the non-farming community about the economic, environmental, and social impact that the agricultural sector has on the region. | | | All | x | | | | Improves the public discourse regarding the future of farming; educates non-farmers about the long-term consequences of land use decisions; increases the viability of new operations. | ◐ | ◐ | ● | ● | ● | ● | <p>This strategy is recommended to begin in the near-term with expectations that improvements in the public's knowledge of the sector may decrease long-term needs for outreach.</p> <p>Subject Areas: Land Use, Economic Development, Ag/Forestry, Governance</p> <p>Capitals: Human, Social, Natural, Financial</p> <p>Communities: Genesee, Livingston, Monroe, Ontario, Orleans, Seneca, Wayne, Wyoming, Yates</p> <p>Implementation Feasibility: Network either in place or emerging; several projects currently underway</p> <p>Planning efforts: FLREDC, G/FLRPC CEDS, AFT-NY</p> <p>Financial Feasibility: Low life cycle cost; high potential to leverage other USDA, SBA, DOL, NYS ESD, NYS Ag & Markets funding</p> |
| | New Farmer Networking: Align a network for direct and specific educational opportunities, where new farmers have access to experienced producers, lenders, employers, etc. | | All | x | | | | | | | | | | | |
| | Training Program: Establish a new farmer training program, similar to NOFA-NY's Beginning Farmer, Apprentice, and Mentorship programs. | | All | x | | | | | | | | | | | |

Agriculture Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|---|--|----------------------|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|---|---|---|---|---|---|---|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Economic Impact: Support efforts to document the economic impact of agriculture and forestry throughout the region. | | All | x | | | | | | | | | | | |
| | Small-Farm Services: Expand access to service programs specifically oriented toward small farms. | | All | x | | | | | | | | | | | |
| | Regional Food Identity: Create or expand opportunities to build a regional food "identity" focused on the Finger Lakes region. | | All | | x | | | | | | | | | | |
| | Agriculture and the Arts: Facilitate direct relationships between the agricultural and arts communities (e.g. craftspeople, literary, visual arts, etc.) to incorporate food-related issues in their work. | | All | | x | | | | | | | | | | |
| Align workforce development efforts with sector needs. | | | All | x | | | Supports economic sustainability of the entire agricultural sector; creates employment opportunities; increases diversity of farm sizes. |  |  |  |  |  |  |  | <p>This strategy is recommended to be implemented within the near-term because workforce development should represent continual improvement in the quality and size of the available workforce. It should be noted that while the size of the required workforce over the long-term is uncertain, the quality of available workers should continue to increase.</p> <p>Subject Areas: Land Use, Economic Development, Ag/Forestry, Governance</p> <p>Capitals: Human, Social, Financial</p> <p>Communities: Genesee, Livingston, Monroe, Ontario, Orleans, Seneca, Wayne, Wyoming, Yates</p> <p>Implementation Feasibility: Network either in place or emerging</p> <p>Planning efforts: FLREDC, G/FLRPC CEDS</p> <p>Financial Feasibility: Unknown order of magnitude costs; moderate potential to leverage USDA or DOL funding; significant benefit early in the strategy cycle</p> |
| | New Farmer Attraction: Facilitate the entry of new farmers into the marketplace. | | All | x | | | | | | | | | | | |
| | Business Retention: Support the development of Agribusiness Retention, Expansion, and Attraction plans at the local, county, and regional level. | | All | x | | | | | | | | | | | |
| | Guest Workers: Improve the federal Guest Worker program. | | All | | x | | | | | | | | | | |

Forestry Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|---|--|----------------------|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Support efforts to increase equitable forest recreation opportunities and urban forestry/green infrastructure initiatives. | | | All | x | | | | Increases access to recreation, Reduces environmental impact of stormwater and wastewater, Expands access to quality urban forest resources | ● | ● | ● | ● | ● | ◐ | Subject Areas: Energy, Economic Development, Water, Ag/Forestry, Climate Change, GHG Emissions Capitals: Human, Natural, Social, Built, Financial Communities: All Counties Implementation Feasibility: Technology in Use Planning Efforts: NYSDEC Forest Resources Assessment and Strategy, and general consensus of advantages of green infrastructure/ recreation Financial Feasibility: Established funding sources for green infrastructure, less for forest recreation access |
| | Urban forestry networking: Encourage networking opportunities for community tree boards. | | All | x | | | | | | | | | | | |
| | Promote community adoption of the four standards to become a Tree City USA | | All | x | | | | | | | | | | | |
| | Standardized urban forestry data: Encourage use and sharing of a standardized community tree inventory database. | | All | | x | | | | | | | | | | |
| Support watershed, riparian, shoreline, and habitat protection and restoration efforts to increase resiliency and diversity of the native species ecosystems, delicate watersheds, and critical habitats. | | | All | x | | | | Preserves environmentally fragile areas, Helps protect against drinkign water pollution, Strengthens forest ecosystem against threats | ◐ | ◐ | ● | ● | ● | ● | Subject Areas: Water, Ag/Forestry, Climate Change, GHG Emissions Capitals: Human, Natural, Built, Financial Communities: All Counties Implementation Feasibility: Technology in Use Planning Efforts: NYSDEC Forest Resources Assessment and Strategy, and general consensus of advantages of green infrastructure/ recreation Financial Feasibility: Established funding sources |
| | Connectivity: Encourage stronger landscape connectivity and forest management rehabilitation practices that can support adaptation and increase resilience of individual species and nature systems at the landscape level (2500 acre units). | | All | | x | | | | | | | | | | |
| | Biological threats: Continue to support programs at all levels of government to combat invasive pests and diseases, like the Emerald Ash Borer. | | All | x | | | | | | | | | | | |
| | Fund Action Plans: Provide near-term funding for NYSDEC Forest Resource Assessment and Wildlife Action Plans to practice adaptive management for climate adaptation and target early responses to major stressors on forest related to climate change. | | All | x | | | | | | | | | | | |
| | Non-biological threats: Support and improve wildfire management services. | | All | x | | | | | | | | | | | |
| | Provide assistance for rural fire departments to make application to programs such as Federal Excess Personal Property program to obtain better equipment and training to reduce the occurrence of wildfires | | All | x | | | | | | | | | | | |

Forestry Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|---|--|--|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Encourage landowners to participate in NY CREP and similar programs to receive compensation for protecting/restoring natural features | | All | x | | | | | | | | | | | |
| | Water resource management: Promote consolidation of water resource management agencies from county and municipal into watershed units of governance, funded by water purveyors. | | All | | x | | | | | | | | | | |
| | Plant trees: Plant many, many more trees to absorb GHG, create oxygen, create habitat, and help moderate windsotrms, erosion and increasing temperatures. | | All | x | x | x | | | | | | | | | |
| Educate the general public, landowners/industry professionals, and decision-makers regarding the relationships between watershed land uses, forest management, water quality protection and rural economic viability, and forest sustainability issues. | | | All | x | | | | Increases awareness of the value of forest resources and interconnectivity of the environment; Reduces environmental impact of unsustainable forest management and silviculture; Helps cultivate an ethic of value for forest resources among citizens | ● | ◐ | ● | ● | ◐ | ◐ | Subject Areas: Energy, Transportation, Land Use, Materials/Waste, Water, Economic Development, Ag/Forestry, Climate Change, GHG Emissions Capitals: Human, Natural, Built, Financial Communities: All Counties Implementation Feasibility: Established support network of agencies/organizations offering information regarding sustainable practices Planning Efforts: NYSDEC Forest Resource Assessment and Strategy Financial Feasibility: High Start-up investment, but could lead to benefit in near term after education of issues begins |
| | Best Management Practices: Increase the use of silvicultural BMPs through direct financial incentives to landowners | | All | x | | | | | | | | | | | |
| | Continue to support and encourage participation by SWCD in the NYSDEC/NRCS EQIP Forestry Initiative | | All | x | | | | | | | | | | | |
| | Support and partner with advocacy organizations that provide outreach and education on forest and land management issues | e.g., The Nature Conservancy Central & Western NY, Rochester Regional Group of the Sierra Club | All | x | | | | | | | | | | | |
| | Support the Profession: Support retention and recruitment of sustainable timber harvesters | | All | | x | | | | | | | | | | |
| | Fund tuition and re-imbusement of two days of missed work so that loggers in the Region can attend two logger training courses: Game of Logging 1 and Forest Ecology and Silviculture. | | All | | x | | | | | | | | | | |
| | Environmental Awareness: Increase consideration of environmental issues at all levels of economic decision-making | | All | x | | | | | | | | | | | |
| | Smart Growth and Sustainable Development: Phase out subsidies for development patterns and production methods that are environmentally harmful and socially inequitable in favor of supporting systems and policies. | | All | | x | | | | | | | | | | |

Forestry Strategies

| Broad Strategy | Sub-Strategy/Project Idea | Strategy Description | Strategy Applies to which County(ies) | Relative Time Frame of Strategy | | | Agency, Company, Organization Responsible for Strategy | Anticipated Benefits | Evaluation Criteria | | | | | | Notes |
|--|---|----------------------|---------------------------------------|---------------------------------|-----------------------|-----------------------|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Encourage the valuation of ecological services provided by regional forest resources. | | | All | x | | | | Provides compensation for environmental benefits to owners of forest resources; Has potential to reduce GHG emissions | ● | ◐ | ● | ◐ | ◐ | ◐ | <p>Subject Areas: Energy, Transportation, Land Use, Materials/Waste, Water, Economic Development, Ag/Forestry, Climate Change, GHG Emissions</p> <p>Capitals: Human, Natural, Built, Financial</p> <p>Communities: All Counties</p> <p>Implementation Feasibility: Techniques not in use in region in this specific way, but could be adapted from other environmental markets such as wetland mitigation</p> <p>Planning Efforts: NYSDEC Forest Resource Assessment and Strategy</p> <p>Financial Feasibility: High Start-up investment</p> |
| | Forestry Carbon Offset Program: Encourage forestry carbon offset programs (with minimal transaction and compliance costs), with eligible activities including avoided clearing, sustainable management, and reforestation | | All | x | | | | | | | | | | | |
| | Encourage landowner participation in the NYS Real Property Tax Law 480-a Program and advocate for changes to forestry tax laws to encourage stewardship | | All | x | | | | | | | | | | | |
| | Carbon Measurement: Expand and refine standardized methods of quantifying carbon flow in and out of forest resource carbon pools (living biomass, dead wood, soils, and harvested products) to allow for expanded, meaningful participation in carbon offset markets. | | All | x | | | | | | | | | | | |
| Forestry Product Markets: Support policies that increase availability, diversity, and economic viability of markets for sustainable regional forest products and services. | | | All | x | | | | Provides incentive for sustainable and high quality timber production; Contributes to economic development in rural areas; reduces environmental harm of unsustainable forest management methods | ◐ | ◐ | ● | ◐ | ◐ | ◐ | <p>Subject Areas: Energy, Economic Development, Water, Ag/Forestry, Climate Change, GHG Emissions</p> <p>Capitals: Human, Natural, Financial</p> <p>Communities: All Counties</p> <p>Implementation Feasibility: Established support network of agencies/organizations, but could organize together for more effectiveness</p> <p>Planning Efforts: NYSDEC Forest Resource Assessment and Strategy</p> <p>Financial Feasibility: High Start-up investment, but could show benefit as soon as employment benefits are seen</p> |
| | Lumber Mill Certification: Provide local training to develop lumber grading cooperatives so that local lumber mills are able to obtain certification that their products are Grade 2 or better, which allows local lumber to be utilized in compliance with the NYS Building Code, modeled after Local-Use Dimension Lumber Grading program in Wisconsin. This would provide a market for, and encourage production of high quality timber. | | All | x | | | | | | | | | | | |
| | Forestry Revenue Re-investment: Dedicate regional revenue streams from sustainably harvested forest products back into programs supporting forest protection and sustainable management within the region. | | All | | x | | | | | | | | | | |
| | Equitable economic opportunity: Provide equitable economic opportunity in the regional forestry sector. | | All | | x | | | | | | | | | | |

APPENDIX G: SUBJECT AREA SPECIFIC PROJECTS

Energy Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|--|---|--------------------------------------|---|----------------------|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Develop and implement micro-grid technology that integrates the advantages of independent local production and distribution systems with the storage and distribution capacity of a large grid. | Wayne EDC Strategic Plan, Wayne Industrial Sustainability Project (WISP) | A county initiative designed to promote sustainable economic growth through utilization of renewable energy resources like wind, geothermal, solar voltaic, etc.through innovation and improved efficiencies | Wayne | Wyane County | X | | ● | ● | ● | ● | ● | ● | Subject Areas Benefitted: Reducing our regional dependence on traditional energy sources impacts all subject areas of sustainability in a positive and collaborative way. Capitals Benefitted: The 5 capitals of sustainability are all enriched by reducing our dependence on traditional (fossil) fuels. Communities Benefitted: All communiteis within a region benefit directly or indirectly from reducing our dependence on traditional (fossil) fuels |
| Develop local and regional policies and plans that accommodate incentives and educational programs to promote energy conservation and efficiency. | Energy Star Programs | A government-backed program helping businesses and individuals protect the environment through superior energy efficiency. | All 9 Counties | NYSERDA, NYS DEC, US DOE, US EPA | X | | ● | ● | ● | ● | ● | ● | Subject Areas Benefitted: Energy Conservation impacts all subject areas of sustainability in a positive and collaborative way. Capitals Benefitted: The 5 capitals of sustainability are all enriched by Energy Conservation; Communities Benefitted: All communiteis within a region benefit directly or indirectly from Energy Conservation |
| Develop local and regional policies and plans that accommodate incentives and educational programs to promote energy conservation and efficiency. | Climate Smart Communities | A state-local partnership designed to advance community goals for health and safety, economic vitality, energy independence and quality of life. | All 9 Counties | NYSERDA, NYS DEC, US DOE, US EPA | X | | ● | ● | ● | ● | ● | ● | Subject Areas Benefitted: Energy Conservation impacts all subject areas of sustainability in a positive and collaborative way. Capitals Benefitted: The 5 capitals of sustainability are all enriched by Energy Conservation; Communities Benefitted: All communiteis within a region benefit directly or indirectly from Energy Conservation |
| Develop local and regional policies and plans that accommodate incentives and educational programs to promote energy conservation and efficiency. | EDGE Program | The replacement for the Energy Smart Communities program is designed to bring community resources together in an effort to increase economic and environmental sustainability | All 9 Counties | NYSERDA, NYS DEC, US DOE, US EPA | X | | ● | ● | ● | ● | ● | ● | Subject Areas Benefitted: Energy Conservation impacts all subject areas of sustainability in a positive and collaborative way. Capitals Benefitted: The 5 capitals of sustainability are all enriched by Energy Conservation; Communities Benefitted: All communiteis within a region benefit directly or indirectly from Energy Conservation |
| Develop local and regional policies and plans that accommodate incentives and educational programs to promote energy conservation and efficiency. | Energy Efficiency Conservation Block Grant | A US Dept of Energy grant program intended to assist U.S. cities, counties, states, territories, and Indian tribes to develop, promote, implement, and manage energy efficiency and conservation projects and programs | All 9 Counties | NYSERDA, NYS DEC, US DOE, US EPA | X | | ● | ● | ● | ● | ● | ● | Subject Areas Benefitted: Energy Conservation impacts all subject areas of sustainability in a positive and collaborative way. Capitals Benefitted: The 5 capitals of sustainability are all enriched by Energy Conservation; Communities Benefitted: All communiteis within a region benefit directly or indirectly from Energy Conservation |
| Develop local and regional policies and plans that accommodate incentives and educational programs to promote energy conservation and efficiency. | NYSERDA Existing Facilities Program | Custom incentives for larger-scale electric, natural gas, energy storage, demand response and other projects | All 9 Counties | NYSERDA | X | | ● | ● | ● | ● | ● | ● | Subject Areas Benefitted: Energy Conservation impacts all subject areas of sustainability in a positive and collaborative way. Capitals Benefitted: The 5 capitals of sustainability are all enriched by Energy Conservation; Communities Benefitted: All communiteis within a region benefit directly or indirectly from Energy Conservation |
| Develop local and regional policies and plans that accommodate incentives and educational programs to promote energy conservation and efficiency. | RPI Daylight Dividends | Established to build market demand for daylighting as a means of improving indoor environmental quality; to overcome technological barriers to effectively reap the energy savings of daylight | All 9 Counties | Lighting Research Center, NYSERDA | X | | ● | ● | ● | ● | ● | ● | Subject Areas Benefitted: Energy Conservation impacts all subject areas of sustainability in a positive and collaborative way. Capitals Benefitted: The 5 capitals of sustainability are all enriched by Energy Conservation; Communities Benefitted: All communiteis within a region benefit directly or indirectly from Energy Conservation |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy). | Compressed Matural Gas, One Source | Conversion of gasoline & diesel vehicles to run on CNG. This is an REDC Transformative Priority Project. | All 9 Counties | One Source | X | | ● | ● | ● | ● | ● | ● | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. Low/medium order of magnitude and life cycle cost with significant benefit early in life cycle. |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy). | Mill Seat Lanfill | Expansion of existing methane fueled power plant to power a new 130 acre development. This is an REDC Additional Priority Project. | Monroe & surrounding Counties | Mill Seat Waste to Energy | X | | ● | ● | ● | ● | ● | ● | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. Low/medium order of magnitude and life cycle cost with significant benefit early in life cycle. |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy). | Seneca AgBio Green Energy Park | Creation of a cluster of companies that convert agricultural byproducts and other waste into bio-fuels and bio-materials. This is an REDC Transformative Priority Project. | All 9 Counties | Seneca Bio-Energy; Akron Ag Products; Novera Feeds; Upstate Oil Recyclers | X | | ● | ● | ● | ● | ● | ● | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. Low/medium order of magnitude and life cycle cost with significant benefit early in life cycle. |
| Develop, produce, and employ renewable energy (wind, hydroelectric, solar, and geothermal). | Renewable Energy Generation Inventory | Regional municipalities and subdivisions (fire, school districts, etc.) conduct a renewable energy generation inventory that details potential for wind, solar, biomass or other electricity production opportunities with the goal to create a list of potential projects, including information on costs and MW production. | | | | | ● | ● | ● | ● | ● | ● | Subject Areas benefited: Energy, Transportation, Materials/Waste Management, Water Management, Economic Development, Agriculture & Forestry, Climate Change Adaptation, Governance, GHG Emissions. Benefits all Capitals. Benefits multiple communities. Short implementation timeframe with technology available. Consistent with local planning efforts, low/medium order of magnitude and life cycle cost. |
| Upgrade the existing conventional energy production and distribution in a sustainable way. | Eastman Business Park | Development of new energy storage technologies. This is an REDC Additional Priority Project. | All 9 Counties | NOHMs Technologies | X | | ● | ● | ● | ● | ● | ● | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. Low/medium order of magnitude and life cycle cost with significant benefit early in life cycle. |
| Upgrade the existing conventional energy production and distribution in a sustainable way. | Eastman Business Park | Production of materials used for energy storage devices. This is an REDC Additional Priority Project. | All 9 Counties | Graphene Devices | X | | ● | ● | ● | ● | ● | ● | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. Low/medium order of magnitude and life cycle cost with significant benefit early in life cycle. |
| Develop local and regional policies and plans that accommodate incentives and educational programs to promote energy conservation and efficiency. | Net Metering Law | A NYS law which permits eligible customer-generators to designate net metering credits from equipment located on property which they own or lease to any other meter | All 9 Counties | NYS Public Service Commission | X | | ● | ● | ● | ● | ● | ◐ | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. High order of magnitude and life cycle cost but high potential to leverage other funding sources. Benefits distributed evenly across life cycle. |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy). | Alternative Fuel Vehicle Tax Incentive & Rate Reduction | Sales and use tax exemption for operating a motor vehicle engine uwing E85, compressed natural gas or hydrogen fuel. | All 9 Counties | NYS Dept. of Taxation and Finance, NYSERDA | X | | ● | ● | ● | ● | ● | ◐ | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. High order of magnitude and life cycle cost but high potential to leverage other funding sources. Benefits distributed evenly across life cycle. |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy). | Bio-Fuel Production Tax Credit | A state tax credit for the production of bui-diesel or ethanol fuel made avaialble for sale in NYS | All 9 Counties | GFLRPC | X | | ● | ● | ● | ● | ● | ◐ | Subject Areas Benefitted: Responsible Alternative Energy impacts all subject areas of sustainability in a positive and collaborative way. Capitals Benefitted: The 5 capitals of sustainability are all enriched by Alternative Energy. Communities Benefitted: All communiteis within a region can benefit from Alternative Energy |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy). | Bio-Fuel Station Ininitive Program | Intended to increase the number of retail E85 and B20 Biodiesel service stations selling these fuels to the general public in New York State through a comprehensive approach | All 9 Counties | NYS Dept. of Taxation and Finance, NYSERDA | X | | ● | ● | ● | ● | ● | ● | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. Low/medium order of magnitude and life cycle cost with significant benefit early in life cycle. |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy). | Epiphergy | Conversion of expired, leftover or non-consumable food products into Bio-Fuel | Monroe & surrounding Counties | Epifergy | X | | ● | ● | ● | ● | ● | ● | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. Low/medium order of magnitude and life cycle cost with significant benefit early in life cycle. |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy). | Heavy Duty Alternative Fuel and Advanced Vehicle Purchase Vouchers | An incentives for alternative fuel trucks, buses and diesel emission controls. | All 9 Counties | NYS Dept. of Taxation and Finance, NYSERDA | X | | ● | ● | ● | ● | ● | ◐ | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. High order of magnitude and life cycle cost but high potential to leverage other funding sources. Benefits distributed evenly across life cycle. |

Energy Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|---|---|--------------------------------------|--|----------------------|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy). | Sweetwater Energy | Conversion of crops and wood waste (cellulosic material) to create Bio-Fuels and Feedstock | All 9 Counties | Sweetwater Energy | X | | ● | ● | ● | ● | ● | ● | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. Low/medium order of magnitude and life cycle cost with significant benefit early in life cycle. |
| Develop, produce, and employ renewable energy (wind, hydroelectric, solar, and geothermal). | ARRA | The American Reinvestment & Recovery Act, which has funded over \$58B in energy related programs & projects since 2009 | All 9 Counties | Geothermal Exchange Organization, American Groundwater Trust | X | | ● | ● | ● | ● | ● | ◐ | Benefits all Subject Areas, all Capitals, and Multiple Communities. Short implementation timeframe with technology available and support network established. Generally consistent with other planning efforts. High order of magnitude and life cycle cost but high potential to leverage other funding sources. Benefits distributed evenly across life cycle. |
| Develop, produce, and employ renewable energy (wind, hydroelectric, solar, and geothermal). | National Renewable Energy Laboratory | The only federal laboratory dedicated to the research, development, commercialization and deployment of renewable energy and energy efficiency | All 9 Counties | US DOE | X | | ◐ | ● | ● | ● | ● | ● | Subject Areas Benefitted: Energy Efficiency impacts all subject areas of sustainability in a positive and collaborative way. Capitals Benefitted: The 5 capitals of sustainability are all enriched by Energy Efficiency Communities Benefitted: All communities within a region benefit from Energy Efficiency |
| Develop local and regional policies and plans that accommodate incentives and educational programs to promote energy conservation and efficiency. | Acceleration of Renewable Energy Technology Adoption | NYS P2I research and development project for using agriculture and food waste in the production of methane (anaerobic digestion), ethanol (fermentation) or biodiesel (transesterification). | | | | | ◐ | ◐ | ● | ● | ● | ◐ | Subject Areas benefited: Energy, Materials/Waste Management, Economic Development, Agriculture & Forestry, Climate Change Adaptation, GHG Emissions. Capitals benefited: Natural, Built, Financial. Benefits multiple communities. Short implementation timeframe with technology in development. Consistent with planning efforts. High order of magnitude life cycle cost but high potential to leverage other funding sources. |
| Develop local and regional policies and plans that accommodate incentives and educational programs to promote energy conservation and efficiency. | Finger Lakes Food Cluster Energy Integration Challenge | NYS P2I research and education initiative to holistically and systemically evaluate the best options for reducing the energy demand of food processors while evaluating alternative energy production, closed-loop and integrated energy systems. | | | | | ◐ | ◐ | ● | ● | ● | ◐ | Subject Areas benefited: Energy, Materials/Waste Management, Economic Development, Agriculture & Forestry, Climate Change Adaptation, GHG Emissions. Capitals benefited: Natural, Built, Financial. Benefits multiple communities. Short implementation timeframe with technology in development. Consistent with planning efforts. High order of magnitude life cycle cost but high potential to leverage other funding sources. |
| Develop local and regional policies and plans that accommodate incentives and educational programs to promote energy conservation and efficiency. | Genesee Community Digester Project | Planning and engineering analysis for the development of a large digester, or multiple digesters, that would accept animal waste from multiple farms while combining it with the waste from local yogurt, cheese and food manufactures as well as other food waste from the region. (Genesee County Comprehensive Plan) | | | | | ◐ | ◐ | ● | ● | ● | ◐ | Subject Areas benefited: Energy, Materials/Waste Management, Economic Development, Agriculture & Forestry, Climate Change Adaptation, GHG Emissions. Capitals benefited: Natural, Built, Financial. Benefits multiple communities. Short implementation timeframe with technology in development. Consistent with planning efforts. High order of magnitude life cycle cost but high potential to leverage other funding sources. |
| Develop, produce, and employ renewable energy (wind, hydroelectric, solar, and geothermal). | Livonia Library Green Elements | The Town of Livonia has a desire to expand the public library to accommodate the growing need for community educational space, improved accessibility for the community, and improved energy efficiency in municipal space. This project is a request to assist with adding energy efficient elements to the design and construction of the library space, providing long term energy cost savings, and providing a reduction in the Town’s carbon footprint. | | | | | ◐ | ● | ○ | ● | ● | ● | Subject Areas benefited: Energy, Economic Development, Climate Change Adaptation, and Governance. Benefits all Capitals. Benefits only Livonia and surroundings. Short implementation timeframe, consistent with local planning efforts, and low/medium order of magnitude and life cycle cost. |
| Develop, produce, and employ renewable energy (wind, hydroelectric, solar, and geothermal). | Municipal Energy Park - Livonia, NY - Study Phase | The Town of Livonia has a desire to study the feasibility of creating a municipally-owned and operated energy park. This park could be established at an existing municipally-owned parcel, potentially on school property, or on a parcel of land to be acquired. The energy park could include the following: Sustainable energy production such as geothermal, solar, wind could be incorporated. The energy created would be harnessed and put back into a community grid for residential, municipal and business use, reducing energy ; Educational elements – kiosks throughout park showing technology being utilized, school programs based on tracking the energy produced/used by community and how that impacts the Green House Gas emissions of the town/county/region; Community garden that allows membership, community involvement, organic farming practices, etc. | | | | | ◐ | ● | ○ | ● | ● | ● | Subject Areas benefited: Energy, Economic Development, Climate Change Adaptation, and Governance. Benefits all Capitals. Benefits only Livonia and surroundings. Short implementation timeframe, consistent with local planning efforts, and low/medium order of magnitude and life cycle cost. |
| Develop, produce, and employ renewable energy (wind, hydroelectric, solar, and geothermal). | Municipal Energy Park - Livonia, NY- Implementation Phase | The Town of Livonia has a desire to create a municipally-owned and operated energy park. This park could be established at an existing municipally-owned parcel, potentially on school property, or on a parcel of land to be acquired. The energy park could include the following: Sustainable energy production such as geothermal, solar, wind could be incorporated. The energy created would be harnessed and put back into a community grid for residential, municipal and business use, reducing energy ; Educational elements – kiosks throughout park showing technology being utilized, school programs based on tracking the energy produced/used by community and how that impacts the Green House Gas emissions of the town/county/region; Community garden that allows membership, community involvement, organic farming practices, etc. This project would look to fund elements of the project that the previous feasibility plan identifies as requiring seed money. Livonia’s Energy Park could serve as a pilot project for other communities within the region, by providing “lessons learned”, information on start up and operation costs, and how the park is being integrated into the educational community. | | | | | ◐ | ● | ○ | ● | ● | ● | Subject Areas benefited: Energy, Economic Development, Climate Change Adaptation, and Governance. Benefits all Capitals. Benefits only Livonia and surroundings. Short implementation timeframe, consistent with local planning efforts, and low/medium order of magnitude and life cycle cost. |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy). | Regional Household Energy Audit Clearinghouse | Partnership with academic institutions to have engineering students conduct or verify energy audits and provide homeowners with a list of recommended energy efficiency projects. | | | | | ◐ | ◐ | ● | ● | ○ | ● | Subject Areas benefited: Energy, Economic Development, Climate Change Adaptation, GHG Emissions. Capitals benefited: Human, Natural, Built, Financial. Benefits multiple communities, short implementation timeframe with technology available. Unknown alignment with other planning efforts. Low/medium order of magnitude life cycle cost. |
| Develop, produce, and employ alternative energy (bio-energy, waste to energy). | Genesee County Airport Terminal/ Hangar Replacement Project | Replacement of facilities to relocate them out of the primary surface and address poor energy performance. Facilities will be designed meet a LEED Silver standard. (Genesee County Comprehensive Plan, FAA Airport Improvement Program) | | | | | ◐ | ◐ | ○ | ● | ● | ◐ | Subject Areas benefited: Energy, Transportation, Economic Development, Climate Change Adaptation, GHG Emissions. Capitals benefited: Natural, Built, Financial. Benefits only Genesee County. Consistent with local planning efforts. High order of magnitude cost. |
| Develop, produce, and employ renewable energy (wind, hydroelectric, solar, and geothermal). | Batavia Community Hydroelectric Microgrid | Provide renewable electricity to fire department and ice arena, creating a self-sufficient “place of refuge.” | | | | | ◐ | ● | ○ | ● | ◐ | ◐ | Subject Areas benefited: Energy, Land Use & Livable Communities, Economic Development, Climate Change Adaptation, GHG Emissions. Benefits all Capitals. Benefits only Batavia and surroundings. Short implementation timeframe with technology available. Consistent with local planning efforts. High order of magnitude and life cycle costs but high potential to leverage other funding sources. |
| Develop, produce, and employ renewable energy (wind, hydroelectric, solar, and geothermal). | Emerson St. Landfill Solar Power Purchase Agreement Project | Investigate the requirements for siting a large (2 MW) solar PV generating facility on a parcel within the City of Rochester’s former Emerson St. Landfill. Upon completion, the City of Rochester would enter into a power purchase agreement (PPA) with a private vendor for the purchase of the power generated by the system. | | | | | ◐ | ◐ | ○ | ● | ● | ◐ | Subject Areas benefited: Energy, Land Use & Livable Communities, Economic Development, Climate Change Adaptation, GHG Emissions. Capitals benefited: Human, Natural, Built, Financial. Benefits only City of Rochester. Short implementation timeframe with technology available. Consistent with local planning efforts. High order of magnitude and life cycle cost but high potential to leverage other funding sources. |

Transportation Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|--|---|--|---|--------------------------------|-----------------------|-----------------------|--------------|--|---|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Alternative modes | Continue to support the Active Transportation Summit | The Active Transportation Summit is an opportunity to educate, promote and encourage active transportation in the region | All | x | | | | | | | | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: all Communities Benefited: all |
| Alternative modes | Increase marketing & promotion for reeasyride.org | Maximize the use of existing alternatives to the single-occupancy vehicle - educate the public on the Greater Rochester Regional Commuter Choice Program - roceasyride.org | All | x | | | | | | GTC LRTP | | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, GHG emissions Capitals Benefited: all Communities Benefited: all including other regions |
| Alternative modes | Update GTC Regional Trails Initiative | Last updated was conducted in 2004 - this document focuses on filling gaps and increasing connections to the core trails in the region | All | x | | | | | | GTC LRTP | | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, GHG emissions Capitals Benefited: all Communities Benefited: all including other regions |
| Livability corridors | Support Main Street revitalization projects | Support Main Street revitalization projects that will emphasize local community engagement within their business attraction & revitalization efforts as well promoting center-based development | All | x | | | | Noted in 2012 Comprehensive Econ Dev Strategy, FLREDC Strategic Plan | Emphasize local community engagement within their business attraction & revitalization efforts as well promoting center-based development | Noted in 2012 Comprehensive Econ Dev Strategy, FLREDC Strategic Plan | | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, water management, economic development, agricultural & forestry, GHG emissions Capitals Benefited: all Communities Benefited: all |
| Alternative modes/economic asset | Lyons to Port Byron Canalway Trail | Extend Erie Canalway Trail for 30-miles between towns of Lyons & Port Byron through the Montezuma National Wildlife Refuge | Wayne | x | | | | | close a gap in the trail system, better connections, economic development | | | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: all Communities Benefited: Wayne County, other regions |
| Alternative modes/economic asset | Canandaigua Lake Water Trail | Construct a recreation trail that highlights the natural resources of Canandaigua Lake & will include access points, signage and waterway connections | Ontario | x | | | | | close a gap in the trail system, better connections, economic development | | | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: all Communities Benefited: Ontario & Yates County |
| Alternative modes | Silver Lake Trail | Add a bike path around Silver Lake in Wyoming Co and connect to Letchworth State Park | Wyoming, Livingston, all | x | | | | | close a gap in the trail system, better connections, economic development | | | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: human, natural, financial Communities Benefited: all |
| Alternative modes | Complete a Finger Lakes Regional trail & greenway system of interconnected multi-use trails as a component of a statewide trail network | Complete a Finger Lakes Regional trail & greenway system of interconnected multi-use trails as a component of a statewide trail network | All | | | x | | | | | | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: human, social, natural, financial Communities Benefited: all including other regions |
| Existing system | Replace the Portage Bridge on NS's Southern Tier rail line | Replace the Portage Bridge on NS's Southern Tier rail line to eliminate a major weight & speed restriction | Wyoming, Livingston, all | x | | | \$39M | Noted in Freight & Goods Movement plan | Rail agencies/companies, NYSDOT, USDOT | Encourage freight via rail, economic development | TIGER III grant application/Freight & Goods Movement plan, GTC LRTP 2035, FLREDC Strategic Plan | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: all Communities Benefited: all |
| Leverage assets/economic development | Lyons Freight Village | Multi-modal, multi-business facility that will allow regional businesses to utilize the most cost effective transportation option for importing or exporting product - truck, shortline rail, Class 1 rail or canal barge. | Wayne, Monroe, Ontario, Seneca, yates, Cayuga, Oswego | x | | | \$7-18M | Noted in 2012 Comprehensive Econ Dev Strategy | Finger Lakes Rail, Norfolk Southern, CSX, Port of Oswego, Wayne, Ontario, Seneca IDAs, TFC, ESD, Canal Corp, NYSDOT, Federal Transportation | Reduced GHG, improved transportation efficiencies, multi-modal project, reduced transportation-related energy costs, regional business impact. | CEDS, Freight & Goods Movement Study, also noted in 2012 Comprehensive Econ Dev Strategy | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: all Communities Benefited: all |
| Livability corridors/alternative modes | Construct the Rochester Intermodal Station | Construct the Rochester Intermodal Station for interregional rail & bus services at the site of the current Amtrak station | Monroe | x | | | \$25M | Noted in GTC LRTP 2035 | RGRTA | Improved mobility, connections, VMT/GHG emissions | | ● | ● | ● | ● | ● | ● | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: all Communities Benefited: all |

Transportation Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|--------------------------------------|--|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|-------------------------------------|--|--|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Leverage assets/economic development | Rebuild & repair Rochester & Southern Railroad line to Dansville Properties (between Dansville & Mt. Morris) | This project includes improvements to track, grade crossings, and bridges that are necessary to keep existing operations going and to allow for business and job growth. | Livingston | x | | | \$2.5M | Noted in 2012 Comprehensive Econ Dev Strategy - preliminary engineering cost estimates prepared by Rochester-Southern Railroad | NYS, Livingston County Industrial Development Agency, EDA, rail agencies/companies | Sustaining existing jobs and creating new job growth opportunities in the Dansville area, using freight trains over trucking is more environmentally friendly b/c it reduces greenhouse gas emissions and fewer trucks on the road helps to reduce costs associated with road and bridge maintenance and repair | Noted in 2012 Comprehensive Econ Dev Strategy, Freight & Goods Movement Study | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: human, natural, built/manufactured, financial Communities Benefited: all |
| Alternative modes | Establish a Center City Circulator Service | Establish a Center City Circulator Service to serve daily commuters, visitors and tourists | Monroe | x | | | \$1.5-1.7M per bus, \$2-3M annually | Noted in GTC L RTP 2035 | RGRTA | Improved mobility, connections, VMT/GHG emissions | | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, GHG emissions Capitals Benefited: all Communities Benefited: Monroe County |
| Educate/market/promote | | Determine costs associated with transportation system per capita | All | x | | | | | | | | | | | | | | Subject Areas Benefited: n/a Capitals Benefited: n/a Communities Benefited: all |
| Alternative modes | Downtown Peoplemover | Reserved right-of-way connecting new MCC Campus and new downtown transit terminal and/or midtown plaza redevelopment area with spur to new train station. Initially green walkway, eventually becoming route for people mover or trolley. Include solar heating. | Monroe | | x | | | | RGRTA, City of Rochester, Monroe County | Year-round, climate controlled access linking new transit terminal with primary destinations and reserved parking around downtown. Quicker and more energy efficient than transferring modes. Encourages common patronage. New residential/business clusters around nodes. | Any of the mass-transit, multi-made transportation studies in the last 20 years and individual project plans for transit, terminal, midtown, MCC Campus and rail station. | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, GHG emissions Capitals Benefited: all Communities Benefited: Monroe County |
| Existing system | Install AVL & weather information instrumentation on public fleets to maximize routing & serve as real-time sensors | The data provided from AVL technology installed on publically-owned vehicles such as snow plows and refuse trucks allows operating agencies to optimize routing of these vehicles | All | x | | | | | | | GTC L RTP | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, materials/waste management, GHG emissions Capitals Benefited: human, natural, built/manufactured Communities Benefited: all |
| Existing system | Install relevant pedestrian ITS instrumentation at identified intersections & crossings to reduce vehicle/pedestrian crashes | Installation of pedestrian countdown signals, audible/tactile devices, and similar ITS elements can improve pedestrian safety and accessibility | All | x | | | | | | | GTC L RTP | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, GHG emissions Capitals Benefited: human, natural, built/manufactured Communities Benefited: all |
| Existing system | Continue the implementation of & expand Technology Initiatives Driving Excellence (TIDE) for RTS | TIDE is a comprehensive Advanced Public Transportation Systems suite that improves operational efficiency and customer service. The benefits from TIDE are critical to attracting choice riders and reducing delay on the highway/bridge network | All | x | | | | | | | GTC L RTP | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, GHG emissions Capitals Benefited: human, natural, built/manufactured Communities Benefited: all |
| Existing system | Introduce transit signal priority on heavily traveled RTS routes | Transit signal priority allows buses to signal their arrival at an intersection and receive a green light (when operationally allowed) to continue through | All | x | | | | | | | GTC L RTP | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, GHG emissions Capitals Benefited: human, natural, built/manufactured Communities Benefited: all |
| Leverage assets/economic development | Integrated Plan for Low-carbon transportation and economic development | Develop a multi-pronged initiative with several other parties to create a model program for culture- and economic transformation directed toward carbon-reducing economic development | All | x | | | | | Local universities, school districts, Social and for-profit businesses | Increasing active transportation and ultralight electric vehicle use Creating and educating and enlightened workforce of sustainability workers and citizen scientists. Increasing tourism. Creating a model program particularly well-suited for our region, but adaptable nationally, helping establish a new image for 21st century sustainable innovation. Economic Development. | RIT/Rochester Cycling Alliance | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: human, social, natural, financial Communities Benefited: all |

Transportation Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---------------------------------------|---|---|--------------------------------------|--------------------------------|-----------------------|-----------------------|---|---|---|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Leverage assests/economic development | Orleans Co rail infrastructure expansion/development | Orleans Co rail infrastructure expansion/development | Orleans, all | x | | | \$2.5M | Noted in 2012 Comprehensive Econ Dev Strategy | Orleans County IDA, NYS, Local and federal agencies | Encourage freight via rail, economic development | Noted in 2012 Comprehensive Econ Dev Strategy | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: human, natural, built/manufactured, financial Communities Benefited: all |
| Leverage assests/economic development | Elmwood Avenue Railroad Siding | Elmwood Avenue Railroad Siding | Yates, all | x | | | \$1.15M | Noted in 2012 Comprehensive Econ Dev Strategy | Village of Penn Yan | More efficient freight movement | | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: human, natural, built/manufactured, financial Communities Benefited: all |
| Livibility corridors | Keuka Waterfront Development | Consists of a mixed-use redevelopment of a 14.7 acre brownfield site at the north end of Keuka Lake & adjacent to historic Penn Yan | Yates | x | | | | | | | | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: all Communities Benefited: Yates County |
| Alternative fuels | Install alternative fuel charging stations along the Thruway | Existing Thruway service areas are ideal locations to install public charging stations for alternative vehicles | All | x | | | | | | | | | | | | | | Subject Areas Benefited: energy, transportation, economic development, GHG emissions Capitals Benefited: human, natural, built/manufactured, financial Communities Benefited: all including other regions |
| Existing system | Reconstruct the eastern portion of the Inner Loop as an at-grade boulevard "Inner Loop East Transformation Project" | Reconstructing the eastern portion of the Inner Loop would allow for bicycling and walking and improve the overall contribution of the roadway to community character | Monroe | | x | | \$21.5M | Noted in GTC L RTP 2035 | GTC, NYSDOT, City of Rochester | Economic development, encourage walking/biking, more sense of community | Noted in GTC L RTP 2036, also noted in FLREDCS Strategic Plan | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: all Communities Benefited: Monroe County |
| Leverage assests/economic development | Support the establishment of high-speed rail service on Empire Corridor | Support efforts to establish high-speed passenger rail service on the Empire Corridor | Monroe, Wayne | | x | | | | NYSDOT | Improved mobility, connections, VMT/GHG emissions | | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: all Communities Benefited: all |
| Leverage assests/economic development | Preserve right-of-way along NSs Corning Secondary Line between Geneva & Lyons | NS has suspended service on this line but reactivating this line would provide direct linkage from Geneva to Lyons | | x | | | | | GTC, NYSDOT, IDAs, rail agencies/companies | Encourage freight via rail, economic development | Noted in Freight & Goods Movement plan | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: human, natural, built/manufactured, financial Communities Benefited: all |
| Leverage assests/economic development | Determine feasibility of improvements noted in Seneca Army Depot Industrial Rail Facility Concept Plan | Determine feasibility of improvements noted in Seneca Army Depot Industrial Rail Facility Concept Plan | Seneca, all | | x | | \$12M - Cost for concept plan improvements = \$800k + | Noted in Freight & Goods Movement plan, Seneca Army Depot Industrial Rail Facility Concept Plan | Seneca County IDA, NYSDOT, rail agencies/companies | Encourage freight via rail, economic development | Noted in Freight & Goods Movement plan, 2012 Comprehensive Econ Dev Strategy | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: human, natural, built/manufactured, financial Communities Benefited: all |
| Leverage assests/economic development | Revitalize Port of Rochester "Port of Rochester Public Marina & Mixed-use Development" | Continue to advance plans documented in the 2006 Port Master Plan and 2008 Marina Development Feasibility Study | All | | x | | \$89-133M total project private investment | Noted in 2012 Comprehensive Econ Dev Strategy | City of Rochester | Encourage freight movement other than truck, economic development | Noted in 2012 Comprehensive Econ Dev Strategy - Initial design, permitting and DEIs have been completed and some funding has been secured for redevelopment, also noted in the FLREDC Strategic Plan | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: human, natural, built/manufactured, financial Communities Benefited: all |
| Leverage assests/economic development | Industrial Road-Town of Ontario, Beh to Lincoln | Develop access road to industrial land north of Route 104 and the Ontario Midland Railroad between Lincoln Rd & Dean Parkway in Ontario | Wayne, all | x | | | \$5M | Noted in 2012 Comprehensive Econ Dev Strategy | Wayne Co IDA, Town of Ontario | Encourage freight via rail, economic development | Noted in 2012 Comprehensive Econ Dev Strategy | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: has benefits to different capitals but includes the construction of new infrastructure Communities Benefited: all |
| Leverage assests/economic development | Wyoming County Rail Initiative | Construct a rail spur into the site of the Hillcrest Industries site | Wyoming, all | x | | | \$1.5M | Noted in 2012 Comprehensive Econ Dev Strategy | Wyoming Co IDA | More efficient freight movement | | | | | | | | Subject Areas Benefited: energy, transportation, land use & livable communities, economic development, GHG emissions Capitals Benefited: has benefits to different capitals but includes the construction of new infrastructure Communities Benefited: all |

Transportation Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|-------------------|--|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|--------------|--------------------------------------|--|----------------------|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Alternative fuels | Bio gas powered vehicles from landfill waste | A growing RNG industry today has the capabilities to economically convert digester and landfill biogas into vehicle fuel. There are currently 10 RNG projects operating in the U.S., all generating this clean, green fuel from an otherwise wasted resource. | All | | x | | | | | | | | | | | | | Subject Areas Benefited: energy, transportation, materials/waste management, economic development, GHG emissions Capitals Benefited: human, natural, financial Communities Benefited: all including other regions |
| Alternative fuels | Bio-gas Powered Fuel Cell & Hydrogen Development Research | The Golisano Institute for Sustainability is interested in pursuing research where bio-gas from landfills and anaerobic digesters is used to power stationary fuel cells. The fuel cells would produce electricity and hydrogen from a sustainable feedstock fuel. The long-term potential exists to create hydrogen depots that could provide fuel for commercial fueling stations to sell to consumers driving hydrogen vehicles. | All | | x | | | | The long term benefits from the project include greatly reduced GHG emissions from hydrogen vehicles, increased renewable electricity production, reduced VMT from the shipping of petroleum fuels and enhanced local job creation from establishment of a regional hydrogen distribution network. | | | | | | | | | Subject Areas Benefited: energy, transportation, materials/waste management, economic development, GHG emissions Capitals Benefited: human, natural, financial Communities Benefited: all including other regions |
| Alternative modes | Address the capital backlog at NYS Parks & Historic Sites | Progress projects that could provide critical safety & health benefits, environmental benefits and enhance the visitor experience | | x | | | | | | | | | | | | | | Subject Areas Benefited: transportation Capitals Benefited: human, social, natural Communities Benefited: all |
| Alternative fuels | Increase the number of truck stop electrification (TSE) facilities | from GTC LRTP - expanding the number of facilities that provide TSE options can have significant benefits such as improved air quality, reduced fuel usage and decreased maintenance costs | All | x | | | | | Lower transportation energy costs, reduction in GHG emissions | GTC LRTP | | | | | | | | Subject Areas Benefited: energy, transportation, GHG emissions Capitals Benefited: human, natural, built/manufactured, financial Communities Benefited: all |
| Existing system | NYS Route 96 Corridor – Victor, Ontario County | Link traffic signals on the Route 96 corridor with the Regional Traffic Operations Center (RTOC) through fiber optic and wireless means | Ontario | x | | | | | | | GTC LRTP | | | | | | | Subject Areas Benefited: energy, transportation, GHG emissions Capitals Benefited: while improved mobility can cause less emissions, this project encourages sprawl and vehicle based infrastructure Communities Benefited: Ontario County |
| Alternative fuels | Track-mounted electric vehicle system | Establishment of a lightweight vehicle system that will utilize abandoned rail lines by allowing specialized vehicles to access the lines that are equipped with guide wheels for the rail lines as well as regular wheels for street access. The cars would be able to lift their wheels off of the ground in order to align the vehicles on the rail line and then be able to lower their wheels to drive in areas where rail access was not present. The vehicles would be powered by electricity while on the rail line. | All | | | x | | | Lower transportation energy costs, reduction in GHG emissions | | | | | | | | | Subject Areas Benefited: energy, transportation, GHG emissions Capitals Benefited: human, natural, built/manufactured Communities Benefited: all including other regions |

Land Use Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|--|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|----------------|--------------------------------------|--|----------------------|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Create healthy, safe and sustainable communities | Lyons to Port Byron Canalway Trail | This project will extend the Erie Canalway Trail along a 30-mile segment between the towns of Lyons and Port Byron. The gap passes through the Montezuma National Wildlife Refuge and will improve continuity of the system and enhance the visibility of, and stimulate use of, services in the communities along this stretch of the canal. | Wayne County | X | | | | | | | | | | | | | | REDC 5-Year Action Initiative. This project benefits transportation, land use and livability, economic development and GHG emissions. This project also benefits all five capitals and has the potential to benefit or be replicated in multiple communities. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects), but could have reduced life cycle costs over the long term. It also has potential to leverage other funding sources, including public sector monies. |
| Create healthy, safe and sustainable communities | Canandaigua Lake Water Trail | This project will consist of a recreational trail to highlight the natural resources of Canandaigua Lake, including boat launches and pull outs, interpretive signage and waterway connections to resources at the north and south ends of the lake. | Ontario County | | X | | | | Finger Lakes Land Trust, Canandaigua Lake Watershed Alliance, City of Canandaigua and Finger Lakes Visitors Connection | | | | | | | | | REDC 5-Year Action Initiative. This project benefits transportation, land use and livability, water management and economic development. This project also benefits all five capitals and has the potential to benefit Ontario and Yates County, at a minimum, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with regional and local planning efforts. It can have low to medium order of magnitude costs (including capital projects), with lower life cycle costs over the long term. It also has potential to leverage other funding sources, including public sector monies. |
| Create healthy, safe and sustainable communities | Rochester Public Market | Expansion of the City of Rochester's nationally-recognized public market as a destination, while strengthening its connections with the region's farmers and small businesses. | Monroe County | X | | | \$10 million | FLREDC | City of Rochester | | | | | | | | | REDC 5-Year Action Initiative. This project benefits land use and livability, economic development, governance and agriculture/forestry. This project also benefits four of the five capitals and has the potential to benefit several counties through sale of ag products from farms in the region, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This project is consistent with regional and local planning efforts. It has higher order of magnitude costs (including capital projects), but could reduce life cycle costs over the long term. It also has potential to leverage other funding sources, including public sector monies. |
| Revitalize existing centers and prioritize the value of placemaking | Finger Lakes Cultural and Natural History Museum | Conversion of a former elementary school into an institution that will offer educational, recreational and interpretive resources to tell the environmental and cultural story of the region and advance the Finger Lakes "brand" as a destination for visitors. | Yates County | X | | | \$58.3 Million | FLREDC | Finger Lakes Cultural and Natural History Museum, Empire State Development and State Parks | | | | | | | | | REDC Transformative Priority Project. This project benefits energy, land use and livability, materials/waste management and economic development. This project also benefits four of the five capitals and has the potential to benefit several counties. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects), but could reduce life cycle costs over the long term. It also has potential to leverage other funding sources, including public sector monies. |
| Create healthy, safe and sustainable communities | FoodLink Food Hub | This project allows FoodLink to increase the size and capacity of its food storage, processing and distribution facilities to accommodate increasing demand to supply food to hospitals, corner stores, schools and the emergency food network in the region. | All | X | | | | | | | | | | | | | | REDC Priority Project. This project benefits energy, land use and livability, economic development and agriculture/forestry. This project also benefits four of the five capitals and has the potential to benefit several counties and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects), but could reduce life cycle costs over the long term. It also has potential to leverage other funding sources, including public sector monies. |
| Revitalize existing centers and prioritize the value of placemaking | Regional Build-Out and Fiscal Analysis | Understanding of the extent of potential development and costs of such development will help to encourage more sustainable development practices. will help to encourage more sustainable development practices. | All | | X | | | | | | | | | | | | | This project benefits land use and livability, agriculture/forestry, governance and economic development. This project also benefits three of the five capitals and has the potential to benefit several counties, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with local planning efforts, although not specifically mentioned. It can have low to medium order of magnitude costs. |
| Create healthy, safe and sustainable communities | Finger Lakes Regional Green Products and Services Guide | Will help homeowners choose sustainable strategies for restoring and rehabilitating their homes and serve as a tool for preserving historical details to ensure that an older house can continue to provide safe, affordable shelter and meet current building performance standards without adversely compromising the integrity of the structure. The sustainable products and services accumulated for this manual can also serve as a compendium of smart, sustainable choices to improve the region's business marketability and economic development while providing conscientious customers a "green" resource. | All | X | | | | | | | | | | | | | | This project benefits energy, land use and livability, governance and economic development. This project also benefits three of the five capitals and has the potential to benefit several counties, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with local planning efforts, although not specifically mentioned. It can have low to medium order of magnitude costs. It also has potential to leverage other funding sources. |
| Create healthy, safe and sustainable communities | Establish USGBC certified green schools | Employ Green School Fellows who will select up to four school districts, or 60 schools, to become USGBC certified Green Schools. Selected schools would be engaged in energy efficiency efforts, waste reduction and recovery, clean air initiatives, water conservation, transportation efficiencies, and other "green" efforts such as gardening and natural habitat restoration. | All | X | | | | | | | | | | | | | | This project benefits energy, land use and livability, materials/waste management, water management, climate change adaptation and GHG emissions. This project also benefits three of the five capitals and has the potential to benefit several counties, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with local planning efforts, although not specifically mentioned. It can have low to medium order of magnitude costs. |
| Create healthy, safe and sustainable communities | Community green living demonstration facility and curriculum development | Develop a "living classroom" within the community that can serve K-12 students with hands on exposure to various sustainable living elements at work at a residence/business. Provide funding for curriculum development as well as site improvements that match the proposed lessons. Examples would be windmills, solar panels, rainwater collection systems, home gardens, etc. Students can do lessons on-site, and follow up with classroom activities that analyze the positive impacts of the facility on the carbon footprint, on energy costs, and on disaster resiliency. | All | X | | | | | | | | | | | | | | This project benefits energy, land use and livability, materials/waste management, water management, climate change adaptation and GHG emissions. This project also benefits four of the five capitals and has the potential to benefit several counties, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with local planning efforts, although not specifically mentioned. It can have low to medium order of magnitude costs. |

Land Use Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|---|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|--------------|--------------------------------------|---|----------------------|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Support and preserve rural areas and the character of rural areas | Promotion and Protection of Canandaigua Lake | This project will promote tourism and recreation, protect the lake as a drinking water source, create wetlands, manage stormwater in Sucker Brook subwatershed, stabilize eroding road banks and streams, value and identify ways to protect the high rate of return that natural capital provides to the economy, and enhance watershed educational programs. | Ontario County | X | | | \$680,000 | FLREDC | Department of State | | | | | | | | | This project benefits land use and livability, water management, governance and economic development. This project also benefits four of the five capitals and has the potential to benefit the 2 to 3 counties in the vicinity of the lake, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with local and state planning efforts. It can have low to medium order of magnitude costs (including capital projects), with lower life cycle costs over the long term. It also has potential to leverage other funding sources. |
| Support and preserve rural areas and the character of rural areas | Strategy for a Sustainable Keuka Lake | To advance the Keuka Lake Watershed Land use Planning Guide by development resources for municipalities, including model laws, land use training and public outreach, the creation of a water quality internship program; watershed, zoning, infrastructure and watershed mapping, and an agricultural assessment. | Ontario, Yates and Wayne County | X | | | \$268,500 | FLREDC | Department of State | | | | | | | | | This project benefits land use and livability, water management, governance, economic development and agriculture/forestry. This project also benefits four of the five capitals and has the potential to benefit the 3 counties in the vicinity of the lake, and could be replicated in other areas. Implementation could be accomplished in less than 10 years. This strategy is consistent with local and state planning efforts. It can have low to medium order of magnitude costs. |
| Revitalize existing centers and prioritize the value of placemaking | Finger Lakes Education, Arts & Community Council | Give communities across the region a venue to inform, support and reinforce each other's educational programs and opportunities, arts and cultural resources and activities, and help to reduce disparities experienced from birth through old age | All | X | | | | | | | | | | | | | | This project benefits land use and livability, governance and economic development. This project also benefits three of the five capitals and has the potential to benefit all counties in the region. Implementation could be accomplished in less than 10 years. It is consistent with local planning efforts, although not specifically mentioned. It can have low order of magnitude costs. |
| Revitalize existing centers and prioritize the value of placemaking | Village of Spencerport Heritage Trail and Park | This project expands on numerous improvements that have been made along the canal in Spencerport over the in the last fifteen years, including new docks, a promenade, and a canalside Visitor Center with restrooms, showers, a library, and local information for canal tourists to help expand our canalside area for public enjoyment. | Monroe County | | X | | | | | | | | | | | | | This project benefits transportation, land use and livability and economic development. This project also benefits three of the five capitals and has the potential to benefit more than one county along the canal, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with regional and local planning efforts. It can have low to medium order of magnitude costs (including capital projects). It also has potential to leverage other funding sources. |
| Encourage diversity of our communities | College Town Development Project | Completion of a mixed-use development located adjacent to the University of Rochester campus. | Monroe County | X | | | \$90 million | FLREDC | Empire State Development, University of Rochester | | | | | | | | | REDC Transformative Priority Project. This project benefits energy, transportation, land use and livability and economic development. This project also benefits three of the capitals and has the potential to benefit Monroe County. Initial implementation could be accomplished in less than 10 years, although full implementation could take longer. This strategy is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects). |
| Revitalize existing centers and prioritize the value of placemaking | Downtown Warsaw Revitalization | This project will improve commercial and residential mixed-use buildings in the Town of Warsaw, including rehabilitation of 12 buildings consisting of 15 residential and 19 commercial units. | Wyoming County | X | | | | FLREDC | Village of Warsaw | | | | | | | | | This project benefits energy, land use and livability, materials/waste management and economic development. This project also benefits three of the five capitals and has the potential to benefit Wyoming County. and could be replicated. Implementation could be accomplished in less than 10 years. It is consistent with regional and local planning efforts. It can have medium to high order of magnitude costs, with potential to leverage other funding. |
| Revitalize existing centers and prioritize the value of placemaking | Albion - Main Street 2011 | This project includes streetscaping enhancements and rehabilitation of thirteen building with 12 commercial and four residential units on a three-block section of North Main Street and East Bank Street in downtown Albion. | Orleans County | X | | | | FLREDC | Village of Albion | | | | | | | | | This project benefits energy, land use and livability, materials/waste management and economic development. This project also benefits three of the five capitals and has the potential to benefit Orleans County. and could be replicated. Implementation could be accomplished in less than 10 years. It is consistent with regional and local planning efforts. It can have medium to high order of magnitude costs, with potential to leverage other funding. |
| Revitalize existing centers and prioritize the value of placemaking | Geneseo Downtown Revitalization Program | This project includes streetscape enhancements and the renovation of 9 buildings in its designated National Landmark Downtown, including the vacant and historic Riviera Theater, and interior renovations to 10 commercial and 11 residential units.. | Genesee County | X | | | | FLREDC | Village of Geneseo | | | | | | | | | This project benefits energy, land use and livability, materials/waste management and economic development. This project also benefits three of the five capitals and has the potential to benefit Genesee County. and could be replicated. Implementation could be accomplished in less than 10 years. It is consistent with regional and local planning efforts. It can have medium to high order of magnitude costs, with potential to leverage other funding. |
| Revitalize existing centers and prioritize the value of placemaking | Downtown East Rochester Revitalization Initiative | This project focuses on the rehabilitation of 29 commercial and 37 residential units in mixed-use buildings in the business district of the village along Main Street and West Commercial Street. | Monroe County | X | | | | FLREDC | Village of East Rochester | | | | | | | | | This project benefits energy, land use and livability, materials/waste management and economic development. This project also benefits three of the five capitals and has the potential to benefit Monroe County. and could be replicated. Implementation could be accomplished in less than 10 years. It is consistent with regional and local planning efforts. It can have medium to high order of magnitude costs, with potential to leverage other funding. |
| Revitalize existing centers and prioritize the value of placemaking | Downtown Batavia Revitalization Program | This project will improve commercial and residential mixed-use buildings in the City of Batavia, including the rehabilitation of 20 buildings consisting of 20 commercial and 10 residential units and enhancement of streetscapes. | Genesee County | X | | | | FLREDC | City of Batavia | | | | | | | | | This project benefits energy, land use and livability, materials/waste management and economic development. This project also benefits three of the five capitals and has the potential to benefit Genesee County. and could be replicated. Implementation could be accomplished in less than 10 years. It is consistent with regional and local planning efforts. It can have medium to high order of magnitude costs, with potential to leverage other funding. |

Land Use Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes | |
|---|--|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|--------------|--------------------------------------|---|----------------------|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|-------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | | |
| Revitalize existing centers and prioritize the value of placemaking | Eastman Business Park (REDC Plan) | Eastman Business Park (EBP) occupies approximately 1,200 acres in the City of Rochester and Monroe County. As Eastman Kodak emerges from bankruptcy the sustainability of EBP as a national center of manufacturing and commerce hinges on the continued operation of the unique utility infrastructure present (railroad, dedicated power generation, water and wastewater processing and treatment facilities), the creation economic conditions needed to both attract and retain tenants and buyers, and successful transition of environmental obligations and permitting requirements. Identification and resolution of issues that may be barriers to the EBP's sustainability and viability is essential. Reinvestment in the comprehensive existing available utility infrastructure and redevelopment of the industrial and commercial land within EBP is needed to ensure that one of the nation's premier industrial redevelopment sites achieves its potential to attractive to high tech and manufacturing companies. | Monroe | | X | | | | Monroe County | | | | ● | ● | ○ | ● | ● | ● | REDC Transformative Priority Project. This project benefits energy, transportation land use and livability, and economic development. This project also benefits four of the five capitals and has the potential to benefit Monroe County. Progress toward implementation could be accomplished in a relatively short term (less than 10 years); full implementation could take longer. This strategy is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects). It also has potential to leverage other funding sources and significant benefits early in the project life cycle. |
| Revitalize existing centers and prioritize the value of placemaking | Village of Avon Downtown Revitalization Project | This project involves renovations to seven buildings in downtown Avon, including interior and exterior improvements, to five commercial and seven residential units and streetscaping enhancements. | Livingston County | X | | | \$500,000 | FLREDC | DHCR | | | | ● | ● | ○ | ● | ● | ● | This project benefits energy, land use and livability, materials/waste management and economic development. This project also benefits three of the five capitals and has the potential to benefit Livingston County. Implementation could be accomplished in less than 10 years. It is consistent with regional and local planning efforts. It can have medium order of magnitude costs, with potential to leverage other funding. |
| Create healthy, safe and sustainable communities | Access improvements to Seneca Lake | Design and construction of shoreline improvements along the Seneca Lake waterfront, a multi-use trail from Castle Creek to Lakefront Beach, boat launch jetty improvements, and a raised planter roundabout with multi-use paths to connect to the Finger Lakes Boating Museum. | Ontario County | X | | | \$625,000 | FLREDC | City of Geneva | | | | ○ | ● | ○ | ● | ● | ● | This project benefits transportation, land use and livability and economic development. This project also benefits four of the five capitals and has the potential to benefit Ontario County. Implementation could be accomplished in less than 10 years. It is consistent with regional and local planning efforts. It can have medium order of magnitude costs, with potential to leverage other funding. |
| Revitalize existing centers and prioritize the value of placemaking | Penn Yan / Keuka Lake Waterfront Development | This project includes mixed use brownfield redevelopment to create approximately 170,000 square feet of retail, office, restaurant, residential and hotel development at the north end of Keuka Lake, adjacent to the historic Penn Yan community. | Yates County | | X | | | FLREDC | NY Department of State | | | | ● | ● | ○ | ● | ● | ● | REDC Priority Project. This project benefits energy, transportation, land use and livability and economic development. This project also benefits three of the five capitals and has the potential to benefit Yates County. Initial implementation could be accomplished in less than 10 years, although full implementation could take longer. This strategy is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects). It also has potential to leverage other funding sources, including public sector monies. |
| Create healthy, safe and sustainable communities | Town of Odgen Heritage Trail and Park | This project involves the construction a 1,600-foot extension of the Heritage Trail from Spencerport and the development of a canalside park (the first park in Odgen), including benches shaded picnic tables and grills, visitor parking and an 80-foot dock for boaters. Future plans include the construction of pavilions, and a lodge with a fireplace and restrooms. | Monroe County | X | | | | | | | | | ○ | ● | ● | ● | ● | ● | This project benefits transportation, land use and livability and economic development. This project also benefits three of the five capitals and has the potential to benefit more than one county along the canal, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with regional and local planning efforts. It can have low to medium order of magnitude costs (including capital projects). It also has potential to leverage other funding sources. |
| Revitalize existing centers and prioritize the value of placemaking | Former Vacuum Oil Refinery Brownfield Clean-up and Redevelopment | The City is completing a land use and environmental planning process on the west side of the river between the Ford Street Bridge and the Riverview Student Housing Project. This property represents a substantial economic and community development opportunity. The clean-up and redevelopment of the long underutilized 28 acre site, just south of downtown is on the river across from UR. The Vacuum Oil Site is the center of a 150 acre BOA and stretches over a mile of underdeveloped waterfront. The City plans to proceed with several implementation actions in 2013. The BOA process is identifying viable opportunities for waterfront public access, recreation and open space; private mixed use and commercial redevelopment; and transportation improvements. | Monroe | | X | | | | City of Rochester | | | | ● | ● | ○ | ● | ● | ● | This project benefits transportation, land use and livability, water management and economic development. This project also benefits four of the five capitals and has the potential to benefit Monroe County. Initial implementation could be accomplished in less than 10 years, although full implementation could take longer. It is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects). It also has potential to leverage other funding sources, including public sector monies. |
| Revitalize existing centers and prioritize the value of placemaking | GardenAerial Eco-district | The GardenAerial project will transform the High Falls neighborhood into an eco-district. Greening the district will include landscaping the middle gorge area with native flora; a 'bridge of flowers' across the Genesee River on the Pont de Rennes pedestrian bridge; extending the existing trail; and building a new pedestrian bridge/public park overlooking High Falls. Public education, community engagement and enhanced stewardship of the Genesee River corridor are also proposed. | Monroe | | X | | | | Friends of the Garden Aerial | | | | ● | ● | ○ | ● | ● | ● | This project benefits transportation, land use and livability, water management and economic development. This project also benefits four of the five capitals and has the potential to benefit Monroe County. Initial implementation could be accomplished in less than 10 years, although full implementation could take longer. It is consistent with local planning efforts. It can have higher order of magnitude costs (including capital projects). It also has potential to leverage other funding sources, including public sector monies. |
| Revitalize existing centers and prioritize the value of placemaking | Smart Genesee Zoning Reform Pilot Project | This pilot project would fund comprehensive planning and the development of form-based land use regulation codes for communities that might experience development pressure as a result of the Western New York Science Technology and Advanced Manufacturing Park. The new codes would incorporate Smart Growth principles into local land use regulations and would streamline and simplify the development process while promoting mixed-use, walkable neighborhoods, farmland protection, and environmental sustainability. The project would serve as a model for other communities that do not have professional planning staff and would build knowledge and expertise in the region regarding this innovative approach to land use regulation. (Genesee County Comprehensive Plan) | Genesee | X | | | | | Genesee County | | | | ● | ● | ○ | ● | ● | ● | This project benefits land use and livability, agriculture/forestry, governance and economic development. This project also benefits four of the five capitals and has the potential to benefit Genesee County. Implementation could be accomplished in a relatively short term (less than 10 years). It is consistent with the Genesee County Smart Growth Plan. It can have low to medium order of magnitude costs. |

Land Use Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|---|---|--------------------------------------|--------------------------------|-----------------------|-----------------------|---------------|--------------------------------------|---|----------------------|--|------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Revitalize existing centers and prioritize the value of placemaking | Midtown Town and Redevelopment . | Redevelopment of land into seven parcels creating an urban street grid pattern, and adaptive reuse of the Midtown Tower, to create a focal point for downtown revitalization and accommodate approximately one million square feet of office, residential, hotel and retail space. | Monroe County | X | | | \$54 million | FLREDC | City of Rochester and Empire State Development | | | | | | | | | REDC Transformative Priority Project. This project benefits energy, transportation, land use and livability, governance and economic development. This project also benefits three of the five capitals and has the potential to benefit Monroe County. Initial implementation could be accomplished in a relatively short term (less than 10 years) as it is a priority project that is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects), but could reduce life cycle costs over the long term. It also has potential to leverage other funding sources, including both public and private sector monies. |
| Revitalize existing centers and prioritize the value of placemaking | Finger Lakes Boating Museum | This project proposes a new museum and visitor's center on the north end of Seneca Lake in Geneva that will house the extensive collection of boats, artifacts and archival material related to the Finger Lakes boating industry. | Ontario County | | X | | | | | | | | | | | | | REDC Priority Project. This project benefits land use and livability and economic development. This project also benefits three of the five capitals and has the potential to benefit Seneca and Ontario Counties, possibly more. Implementation could be accomplished in a relatively short term (less than 10 years) as it is a priority project that is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects). |
| Revitalize existing centers and prioritize the value of placemaking | Infrastructure assessment | Provides an understanding of infrastructure capacity and vulnerability and assists with planning for future growth and development | All | X | | | | | | | | | | | | | | This project benefits transportation, land use and livability, water management and economic development. This project also benefits four of the five capitals and has the potential to benefit multiple counties. Implementation could be accomplished in less than 10 years. It is consistent with regional and local planning efforts. It can have medium to high order of magnitude costs, with potential to leverage other funding. |
| Revitalize existing centers and prioritize the value of placemaking | Irondequoit Mall Redevelopment | Redevelopment of a former mall as a mixed use development. | Monroe County | X | | | | FLREDC | | | | | | | | | | REDC 5-Year Action Initiative. This project benefits energy, land use and livability, materials/waste management and economic development. This project also benefits three of the five capitals and has the potential to benefit Monroe County, and could be replicated. Implementation could be accomplished in less than 10 years. It is consistent with regional and local planning efforts. It can have medium to high order of magnitude costs, with potential to leverage other funding. |
| Revitalize existing centers and prioritize the value of placemaking | Seneca Falls Central Business District Revitalization Program | This project will rehabilitate six buildings with 9 residential and 7 residential units, and streetscape enhancements. | Seneca County | X | | | \$2.8 million | FLREDC | DHCR, DOT and private | | | | | | | | | This project benefits energy, land use and livability, materials/waste management and economic development. This project also benefits three of the five capitals and has the potential to benefit Seneca County. Implementation could be accomplished in less than 10 years, and could be replicated. It is consistent with regional and local planning efforts. It can have medium to high order of magnitude costs, with potential to leverage other funding. |
| Create healthy, safe and sustainable communities | Seneca Falls Canal Harbor Improvement Project | Boater amenities and canal-side improvements | Seneca County | X | | | \$300,000 | FLREDC | Canal Corporation | | | | | | | | | This project benefits land use and livability and economic development. This project also benefits three of the five capitals and has the potential to benefit Seneca County. Implementation could be accomplished in less than 10 years. It is consistent with regional and local planning efforts. It can have medium to high order of magnitude costs. |
| Revitalize existing centers and prioritize the value of placemaking | Canandaigua Lakefront Redevelopment | This project will develop 33.5 acres of land adjacent to Kershaw Park on the north end of Canandaigua Lake for mixed use. | Ontario County | | X | | | | | | | | | | | | | REDC 5-Year Action Initiative. This project benefits transportation, land use and livability, and economic development. This project also benefits three of the five capitals and has the potential to benefit Ontario County, and could be replicated. Implementation could be accomplished in less than 10 years. It is consistent with regional and local planning efforts. It can have medium to high order of magnitude costs, with potential to leverage other funding. |
| Revitalize existing centers and prioritize the value of placemaking | I-Square | This project entails the creation of 92,000 square feet of urban style town square development in the Town of Irondequoit that will revitalize 2.5 acres of empty storefronts, vacant office space and rundown business district that will include new retail, restaurants and professional space, with state of the art infrastructure and eco-friendly amenities. | Monroe County | | X | | | | EFC | | | | | | | | | REDC Priority Project. This project benefits energy, transportation, land use and livability, water management, governance and economic development. This project also benefits four of the five capitals and has the potential to benefit Monroe County. Implementation could be accomplished in a relatively short term (less than 10 years) as it is a priority project that is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects), but could reduce life cycle costs over the long term. It also has potential to leverage other funding sources, including public sector monies. |
| Revitalize existing centers and prioritize the value of placemaking | Port of Rochester Public Marina and Mixed Use Development | A two-phased project to redevelop the Port of Rochester area to enhance public waterfront recreational facilities and support private mixed use development. | Monroe County | | X | | \$30 million | FLREDC | City of Rochester | | | | | | | | | REDC 5-Year Action Initiative. This project benefits land use and livability, water management and economic development. This project also benefits four of the five capitals and has the potential to benefit Monroe County. Initial implementation could be accomplished in less than 10 years, although full implementation could take longer. It is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects). It also has potential to leverage other funding sources, including public sector monies. |
| Support and preserve rural areas and the character of rural areas | Seneca Art and Cultural Center at Ganondagan | This project involves the development of a new facility at the Ganondagan State Historic Site that will include education, exhibit, archival and guest services space for year-round visitation. | Seneca County | | X | | | FLREDC | NYS Parks | | | | | | | | | REDC 5-Year Action Initiative. This project benefits land use and livability and economic development. This project also benefits four of the five capitals and has the potential to benefit Seneca County. Initial implementation could be accomplished in less than 10 years, although full implementation could take longer. It is consistent with regional and local planning efforts. It can have higher order of magnitude costs (including capital projects). It also has potential to leverage other funding sources, including public sector monies. |

Materials Waste Management Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|---|---|--------------------------------------|--------------------------------|-----------------------|-----------------------|--------------------------------------|--------------------------------------|---|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|

| Increase the percentage of materials recycled, composted, and reused within the region. | Revised curbside pick-up program | Provide proper bins for recyclable and compostable materials, increasing efficiency in vehicle fleet. | All | X | | | Unknown | Unknown | Local/NYS | Increased diversion, public education, energy efficient | NA | | | | | Unknown | | Subject Areas Benefited: Energy, Transportation, Materials/Waste Management, Economic Development, Agriculture & Forestry, GHG Emissions Capitals Benefited: Human, Built/Infrastructure, Financial Communities Benefited: All, and surrounding regions Implementation Feasibility: Consistent with Planning Efforts: Unknown Financial Feasibility: |
| Promote education, awareness, and research services | Pre- and Post-Consumer Organics Management Education Programs | Need seed money for education programing, in which the public and businesses would learn about how to properly manage organic waste. | All | X | | | Unknown | Unknown | Local governments | Public education, increased diversion | NA | | | | | Unknown | | Subject Areas Benefited: Materials/Waste Management, Economic Development Capitals Benefited: Human, Social Communities Benefited: All, and surrounding regions Implementation Feasibility: Consistent with Planning Efforts: Unknown Financial Feasibility: |
| Promote education, awareness, and research services | Material Generation and Disposal Reporting System for Non-Residential Sectors | Web-based software system for non-residential waste generators to report data on materials they generate and dispose of off-site. Future waste material reduction and reuse programs such as industrial ecology programs that use one company's waste materials as another company's feedstock. (From CNY Regional Plan) | All | X | | | Unknown | Unknown | Local governments | Waste monitoring, potential for fees as income source and incentive for businesses to reduce and divert waste | NA | | | | | Unknown | | Subject Areas Benefited: Materials/Waste Management, Governance, GHG Emissions Capitals Benefited: Human, Financial Communities Benefited: all Implementation Feasibility: Consistent with Planning Efforts: Unknown Financial Feasibility: |
| Increase the percentage of materials recycled, composted, and reused within the region. | Limit Your Waste Challenge | Advertise a challenge within the community that limits families to one trash bag a week. Encourage them to limit their waste by using recyclable materials, composting and decreasing overconsumption. | All | X | | | Unknown | Unknown | Local governments | Reduced and Diverted household waste, public education | NA | | | | | Unknown | | Subject Areas Benefited: Materials/Waste Management Capitals Benefited: Human, Social Communities Benefited: All Implementation Feasibility: Consistent with Planning Efforts: Unknown Financial Feasibility: |
| Increase the percentage of materials reused, recycled, and composted within the region. | I-Square Community Self-Reliant Waste Management | I-Square is a sustainable multi-use redevelopment project in the Center of the Town of Irondequoit. The project will incorporate energy conservation, solar power, green infrastructure and possibly and electric vehicle charging station. This suggested strategy will enable I- Square owners to address a critical trait of sustainability;the reduction, reuse and recycling of waste generated on site. The material conservation program will provide enterprises and residents with the opportunity to design, own and manage their own material (waste) stream from the point of generation and share in the cost savings and revenue derived from marketing their own recycled materials. For example food waste may be composted on site with the end product being used in organic rooftop gardens, generating fresh produce to be used by the resturants located in the redevelopment. Fat, oil and grease from the resturants may be converted to bio-fuel on site. Businesses would jointly market recycled white office paper and plastics directly to end markets rather than working through traditional waste management companies. Materials from the demoliiton of current structures will be recycled or possibly even reused in the reconstructed enterprises. | Monroe | X | | | \$50,000-\$100,000 | | I-Square/Larsen Engineers | Model Community Material Management for other developers and communities. Contributes to overall sustainability of the Finger Lakes Region. Reduced landfilling of waste. Reduced carbon footprint from transportation of waste to landfills and reduced us of gas. Operational and Maintenance cost savings to site owern, businesses and residents. Revenue opportunities fo rdevelopment owner and I-Square Enterprises. Possible material remanufacturing. Contributes to growth of green collar jobs in the growing regional recycling and material remanufacturing industry. | I-Square Redevelopment Plan / Town Approved | | | | | Unknown | | Subject Areas Benefited: Materials/Waste Management, Energy, Economic Development, Land Use/Livability Capitals Benefited: Natural, Built/Manufactured Communities Benefited: Monroe Count Implementation Feasibility: Consistent with Planning Efforts: Unknown Financial Feasibility: |
| Increase the percentage of materials reused, recycled, and composted within the region. | Sustainable Rochester 20/20 | Fully revitalizing City of Rochester's 36 residential neighborhoods; maximizing densities with new house projects replacing empty lots; maximizing densities with renovation to existing abandoned and derelict houses; applying sustainable construction and design standards comprehensively to all projects; maximizing densities, quality of life and sustainable practices by repairing and rehabilitating existing unoccupied houses; deconcentrating poverty by ewelcomng new residents across a broad diverse socio-economical range | Monroe | X | | | Less than the cost of not doing this | Common Sense | | Sustainable Rochester 20/20 (now only a vision plan and dream) could become a project for profit entity, however such a project would ?? Input and support from everyon; huge increase in tax revenues for oru city; walkable, bicycle able, neighborhood desire, diverse, vibrant; will allow much ?? segment of society/community to live more sustainably; less auto dependence; smaller footprint | | | | | | Unknown | | Subject Areas Benefited: Materials/Waste Management, Energy, GHG Emissions, Economic Development Capitals Benefited: Human/Built infrastructure Communities Benefited: Town of Irondequoit Implementation Feasibility: Consistent with Planning Efforts: Unknown Financial Feasibility: |

Materials Waste Management Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | Notes | |
|---|---|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|--------------|--|---|---|---|---|---|---|---|----------------------------------|---|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | | Financial Feasibility |
| Reduce the amount of solid waste generated in the region. | Solid Waste Generation Reduction Assistance for Finger Lakes Businesses | <p>The New York State Pollution Prevention Institute (NYSP2I) will provide sustainable production assistance, green product and process development assistance, and sustainable supply chain assistance to companies across the Finger Lakes region to reduce environmental footprint, manufacturing costs and increase process efficiencies.</p> <p>Solid waste reduction can be addressed at many stages of a product's lifecycle, in the product design phase, through selection of packaging materials, and in the production process to name a few. NYSP2I is positioned to help reduce the amount of solid waste entering landfills by assisting Finger Lakes businesses through three existing programs: Direct Client Assistance (sustainable production assistance), the Green Technology Accelerator Center (new product and process development assistance), and Sustainable Supply Chain & Technology Program (assistance with sustainability practices and certification attainment).</p> | All | X | | | \$550,000 | Estimated per NYSP2I! Typical cost per project type. | NYSP2I | Increased profitability of businesses in the region, Increased employment, Energy use reduction, Reduction in waste to landfill | Y – This project would be a targeted expansion of the three existing programs listed above. |  |  |  |  | Unknown |  | <p>Subject Areas Benefited: Materials/Waste Management, Energy, GHG Emissions, Economic Development</p> <p>Capitals Benefited: Human, Built infrastructure</p> <p>Communities Benefited: All</p> <p>Implementation Feasibility: Consistent with Planning Efforts: Unknown</p> <p>Financial Feasibility:</p> |

Water Management Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|--|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|--------------|---|---|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Inventory, monitor and educate to create a better understanding of the region's water resources. | Wayne County Comprehensive Shoreline Management Project | Elevation site assessment and risk analysis of built environment and development of cost estimates for repairing and relocating facilities. Will serve as the basis to modify comprehensive plans | Wayne | x | | | \$300,000 | Grant submission - Great Lakes Restoration Initiative | Wayne County | Plan for climate change, improve water management, provide technical resources to local gov't to | | ● | ● | ◐ | ● | ● | ● | Benefits following subject areas: Transportation, Land Use & Livability, Water Management, Economic Development, Climate Change Adaptation, Governance; Benefits the following Capitals: Human, Social, Natural, Built and Financial; Ability to be replicated in communities in multiple regions; consistent with Great Lakes Restoration Initiative and Wayne County All Hazard Multi-jurisdictional Mitigation Plan |
| Inventory, monitor and educate to create a better understanding of the region's water resources. | Green Genesee Roadmap | Support the development of an interconnected, functional ecosystem by conducting an inventory and providing a science-based, community-based tool to optimize land use by understanding ecosystem components, environmental services, and functions, as well as goals for preservation, restoration, and enhancement of the ecological networks. | Genesee | x | | | | | Genesee County | Provide technical resource for land, water resource, transportation, agriculture, forestry and climate change adaptation planning | | ● | ● | ● | ● | ● | ◐ | Benefits following subject areas: Transportation, Land Use & Livability, Water Management, Economic Development, Climate Change Adaptation, Governance; Benefits the following Capitals: Human, Social, Natural, Built and Financial; Ability to be replicated in communities in multiple regions; consistent with Genesee County Hazard Mitigation Plan |
| Promote Regional Standardization of Regulations and Management | Promotion And Protection Of Canadaigua Lake | Promote tourism and recreation and protect the lake as a drinking water supply, create wetlands, manage stormwater in Canadaigua Lake's Sucker Brook subwatershed, stabilize eroding road banks and stream in South Bristol, Naples, Italy and Gorham, enhance watershed educational programs, and support a Watershed Program Manager position (REDC 2012). | Ontario, Yates, Wayne | x | | | \$ 340,000 | CFA award | City of Canadaigua Lake Watershed Council | Promote consistency in regulations, increase awareness, education | | ◐ | ● | ● | ◐ | ● | ◐ | Benefits the following subject areas: Land Use and Livable Communities, Water Management, Economic Development. Benefits the following capitals: Human, Social, Built, Financial. Benefits Canadaigua Lake and areas both surrounding and downstream (Ontario, Yates, Wayne Seneca counties). Consistent with local and regional planning efforts. |
| Promote Regional Standardization of Regulations and Management | Preparation Of A Strategy For A Sustainable Kueka Lake | Advance the Kueka Lake Watershed Land Use Planning Guide by developing resources for municipalities, including model laws, land use training and public outreach; creation of a water quality internship program; watershed, zoning, infrastructure and watershed mapping; an agricultural assessment; and will update the Planning Guide for the Kueka Lake Land UseLeadership Alliance (REDC 2012, Yates County Hazard Mitigation Plan). | Yates, Stueben | x | | | \$ 134,600 | CFA award | Town of Wayne | Promote consistency in regulations, increase awareness, education | | ◐ | ● | ● | ◐ | ● | ◐ | Benefits the following subject areas: Land Use and Livable Communities, Water Management, Economic Development. Benefits the following capitals: Human, Social, Built, Financial. Benefits Canadaigua Lake and areas both surrounding and downstream (Ontario, Yates, Wayne Seneca counties). Consistent with local and regional planning efforts. |
| Promote Regional Standardization of Regulations and Management | Develop Wayne County Drinking Water Plan | In collaboration with Wayne County Water and Sewer Authority (WCW&SA), develop a long term plan for providing clean drinking water. Providing clean drinking water is one of the primary existing goals of the WCW&SA, and part of their overall mission and long-term planning (Wayne County Hazard Mitigation Plan). | Wayne | | x | | | | Wayne County | Improve disaster resilience, promote better water service. | | ◐ | ● | ○ | ● | ● | ● | Benefits the following subject areas: Land Use and Livable Communities, Water Management, Economic Development. Benefits the following capitals: Human, Social, Natural, Built, Financial. Benefits Wayne County. Consistent with local planning efforts. |
| Promote Regional Standardization of Regulations and Management | Establish a Transfer of Development Rights Program | Establish a method to transfer development rights from floodplain areas into designated receiving areas. A Transfer of Development Rights Program allows the buying and selling of a property's development rights on a voluntary, market-driven basis, providing local government with the ability to transfer development rights will offer more balanced planning with nearby towns (Wayne County Hazard Mitigation Plan). | Wayne | | x | | | | Wayne County | Reduce development pressure in floodplains. Provide a benefit to landowners both inside and outside of floodplains. | | ◐ | ● | ○ | ● | ● | ● | Benefits the following subject areas: Land Use and Livable Communities, Water Management, Economic Development. Benefits the following capitals: Human, Social, Natural, Built, Financial. Benefits Wayne County. Consistent with local planning efforts. |
| Maintain and improve the functionality and efficiency of the water supply and wastewater infrastructure systems | Town Of Canadaigua Sewer District Improvements | Formation of a 213.5 ac Sanitary Sewer district with 3900 lineal feet of 10" diameter sewer, 3500 lineal feet of 8" diameter sewer, and 24 manholes and appurtenances. Project is along Purdy Road, Mobile Road and SR 332. Conveyances will connect to existing Town of Farmington WWTP (REDC 2012). | Ontario | x | | | \$ 600,000 | CFA award | Town of Canadaigua | Reduction in number of on-site systems and associated pollutant loading. | | ◐ | ● | ◐ | ● | ◐ | ◐ | Benefits the following subject areas: Land Use and Livable Communities, Water Management, Economic Development. Benefits the following capitals: Human, Social, Built, Natural, Financial. Benefits the Town of Canadaigua and areas downstream (Ontario, Seneca counties). Consistent with local planning efforts. |
| Maintain and improve the functionality and efficiency of the water supply and wastewater infrastructure systems | Village Of Naples Sewer Feasibility Study | Evaluation of installation of conveyance system throughout the Main Street area. Sewage would be conveyed to the Ghazlitt 1852 Vineyards Sewage Treatment Plant (REDC 2012). | Ontario | x | | | \$ 30,000 | CFA award | Village of Naples | Potential reduction in number of on-site systems and associated pollutant loading. | | ◐ | ● | ◐ | ● | ◐ | ◐ | Benefits the following subject areas: Land Use and Livable Communities, Water Management, Economic Development. Benefits the following capitals: Human, Social, Natural, Built, Financial. Benefits the Village of Naples and areas downstream (Ontario, Seneca counties). Consistent with local planning efforts. |
| Maintain and improve the functionality and efficiency of the water supply and wastewater infrastructure systems | Genesee Street Water Transmission Main Replacement Project | Replace 5,000 lineal feet of cast iron water supply pipe that serves the entire Village of Clyde (REDC 2012). | Wayne | x | | | \$ 600,000 | CFA award | Village of Clyde | Reductions in unaccounted-for water. Improvements in service. | | ◐ | ● | ○ | ● | ◐ | ● | Benefits the following subject areas: Energy, Land Use and Livable Communities, Water Management, Economic Development, GHG Emissions. Benefits the following capitals: Human, Social, Natural, Built, Financial. Benefits the Village of Clyde and its water source (Wayne County). Consistent with local planning efforts. |

Water Management Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|---|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|--------------|--|---|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Maintain and improve the functionality and efficiency of the water supply and wastewater infrastructure systems | Wayne County Water & Sewer Authority Engineering Study | Complete an engineering report to evaluate upgrades to the existing waste water treatment plant in Wayne County (REDC 2012). | Wayne | x | | | \$ 30,000 | CFA award | Wayne County Water & Sewer Authority | Potential decrease in energy usage. | | | | | | | | Benefits the following subject areas: Energy, Land Use and Livable Communities, Water Management, Economic Development, GHG Emissions. Benefits the following capitals: Human, Social, Natural, Built, Financial. Benefits the Village of Perry and areas downstream (Wyoming, Genesee, Monroe Counties). Consistent with local planning efforts. |
| Maintain and improve the functionality and efficiency of the water supply and wastewater infrastructure systems | Village of Arcade Sewer Repair Engineering Study | Complete an engineering report to evaluate inflow and infiltration in the existing sewer system in the Village of Arcade (REDC 2012). | Wayne | x | | | \$ 30,000 | CFA award | Wayne County Water & Sewer Authority | Potential reduction of sewer overflows. Potential decrease in energy usage. | | | | | | | | Benefits the following subject areas: Energy, Land Use and Livable Communities, Water Management, Economic Development, GHG Emissions. Benefits the following capitals: Human, Social, Natural, Built, Financial. Benefits the Village of Perry and areas downstream (Wyoming, Genesee, Monroe Counties). Consistent with local planning efforts. |
| Maintain and improve the functionality and efficiency of the water supply and wastewater infrastructure systems | Village of Perry Stormwater Drainage Project | Construct new storm sewers and catch basins in the Village of Perry (REDC 2012). | Wyoming | x | | | \$ 600,000 | CFA award | Village of Perry | Reduction in flooding, and associated erosion. | | | | | | | | Benefits the following subject areas: Land Use and Livable Communities, Water Management, Economic Development. Benefits the following capitals: Human, Social, Natural, Built, Financial. Benefits the Village of Perry and areas downstream (Wyoming, Genesee, Monroe Counties). Consistent with local planning efforts. |
| Maintain and improve the functionality and efficiency of the water supply and wastewater infrastructure systems | Town of Jerusalem Wastewater Engineering Study and Waterfront Development | Complete an engineering study to evaluate the need for public sewers in the Hamlet of Branchport and the surrounding area in the Town of Jerusalem. Prepare a waterfront revitalization strategy for the town's Kueka Lake and Sugar Creek waterfront areas (REDC 2012). | Yates | x | | | \$ 57,500 | CFA award | Town of Jerusalem | Potential reduction in number of on-site systems and associated pollutant loading. | | | | | | | | Benefits the following subject areas: Energy, Land Use and Livable Communities, Water Management, Economic Development, GHG Emissions. Benefits the following capitals: Human, Social, Natrua, Built, Financial. Benefits the Town of Jerusalem and areas downstream (Wyoming, Genesee, Monroe Counties). Consistent with local planning efforts. |
| Promote Regional Standardization of Regulations and Management | Set up a Countywide Drainage District in Orleans County. | Establish a county-wide drainage district in Orleans County. This will provide the County with a means to plan, manage, and maintain drainage infrastructure through a system that generates funds based on contributing stormwater runoff (Orleans County Hazard Mitigation Plan). | Orleans | | x | | | | Orleans County | Provide regulatory means to fund and provide operation and maintenance of stormwater infrastructure. | | | | | | | | Benefits the following subject areas: Land Use and Livable Communities, Water Management, Economic Development. Benefits the following capitals: Human, Social, Natural, Built, Financial. Benefits Orleans County. Consistent with local planning efforts. |
| Maintain and improve the functionality and efficiency of the water supply and wastewater infrastructure systems | Village of Macedon Wastewater Treatment Plant Study | Complete an engineering report to evaluate upgrades to the existing treatment plant in the Village of Macedon (REDC 2012). | Wayne | x | | | \$ 30,000 | CFA award | Village of Macedon | Potential decrease in energy usage. | | | | | | | | Benefits the following subject areas: Land Use and Livable Communities, Water Management, Economic Development. Benefits the following capitals: Human, Social, Natural, Built, Financial. Benefits the Village of Macedon and areas downstream (Wayne County). Consistent with local planning efforts. |
| | Improve streams and hillside runoff along South Lake Road and Canandaigua Lake (Yates County) | Multiple sites and projects have been identified on South Lake Rd where erosion and bank restoration, and improved drainage are required to mitigate flooding in steep slope areas. The Town of Middlesex has completed an engineering study that identifies areas of concern, proposed improvements and estimated costs (Yates County Hazard Mitigation Plan). | Yates | x | | | | \$1M to \$2M (Yates County Hazard Mitigation Plan) | Town of Middlesex | Reduce erosion damage occurring along Seneca Lake Shore. | | | | | | | | Benefits the following subject areas: Land Use and Livable Communities, Water Management. Benefits the following capitals: Human, Social, Natural, Built. Benefits Yates County and all counties affected by Seneca Lake (Ontario, Seneca). Consistent with local planning efforts. |
| Preserve existing ecosystem services and promote green infrastructure to reduce reliance on grey infrastructure | Rochester Museum and Science Center (RMSC) Green Innovations | Create a single high profile and accessible location where developers, municipal planners, and the general public can see several different green infrastructure practices in action and be educated in their function and implementation. | Monroe | x | | | \$525,000 | CFA Application based on concept design | RMSC, Water Education Collaborative, Monroe County Stormwater Coalition | Education and validity of a variety of green infrastructure projects for commercial application | | | | | | | | Benefits following subject areas: Land Use & Livability, Water Management, Economic Development, Climate Change Adaptation, Governance; Benefits the following Capitals: Human, Social, Natural, Built and Financial; Ability to be replicated in communities in multiple regions |
| Conserve water and leverage its value in energy production | Williamson WWTP Solar Panels and Improvements | Project components include: A 60 kw solar (photovoltaic) array producing as much as 80,000 of kWh each year resulting in a savings of over \$8000.00 per year, 1200 square feet of green roof reducing stormwater runoff, demand for heating and cooling and extending the life of the roof membrane, and the installation of an belowground storage tank and yard hydrant which will recycle rainwater for non-potable uses such as equipment cleaning and irrigation | Wayne | x | | | \$700,000 | CFA Award | Town of Williamson | Reducing energy costs, reducing quantity of runoff, improving quality of runoff. Improvement of plant process | | | | | | | | Benefits following subject areas: Land Use & Livability, Water Management, Economic Development, Climate Change Adaptation, Governance; Benefits the following Capitals: Human, Social, Natural, Built and Financial; Ability to be replicated in communities in multiple regions |

Economic Development Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|---|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|----------------|--------------------------------------|---|---|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Embed the framework of this Plan into all planning, execution and measurement activities throughout the region | Regional Sustainable Innovation Fund | Provide funding to catalyze the deployment of new, innovative, sustainable technologies and products which are designed and manufactured by New York State companies | All | Y | | | \$5 Million | Proposed by Submitter | P21/GIS NYSEDA | - Electric (kW) demand reduction - Impacts to infrastructure reliability and resilience - Deployment of NYS-based alternative, clean, and energy efficiency technologies which support regional economic growth and development - Financial mechanism to support long-term sustainment of manufacturers in the State | Finger Lakes Food Processing Cluster Initiative (FLFPCI) | ● | ◐ | ● | ● | ◐ | ● | Potential to benefit all capitals but Social |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | Integrating the Sustainable Production and Innovation Entrepreneurial Ecosystem of the Region | "connect the dots" between existing funding initiatives so that unseen opportunities can materialize for the benefit of the regional and state economy | All | Y | | | \$625,000 | Proposed by Submitter | P21/GIS NYSEDA | - Stakeholder engagement - Financial risk management/mitigation - Fostering greater accountability, transparency, and collaboration - Efficient use of regional resources for sustainable innovation, deployment, and entrepreneurship - Connecting entrepreneurs with viable opportunities for growing early-stage companies focused on sustainable production, products, innovation, and manufacturing - Enabling the regional transition to an advanced and sustainable manufacturing economy | - NY-BEST - Clean Energy Incubator - NYSEDA Entrepreneur-in-Residence Program - NYSEDA Proof-of-Concept Center | ● | ◐ | ● | ● | ◐ | ● | Potential to benefit all capitals but Social |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | Finger Lakes Business Accelerator Cooperative | Taken from REDC's 2012 Strategic Plan Progress Report - Create an interconnected network of business support services and incubation facilities that spans all nine counties of the region. The initiative will support the creation and growth of early-stage companies | All | | | | \$18.5 Million | REDC Strategic Plan 2012 Update | HighTech Rochester | | | ● | ◐ | ● | ● | ● | ◐ | Identified by REDC as a Transformative Priority Project. Note: Project cost identified as \$35 Million in initial REDC Strategic Plan Potential to benefit all capitals but Social |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | PathStone Finger Lakes Enterprise Fund | Taken from REDC's 2012 Strategic Plan Progress Report - Create a revolving loan fund that is designed to address the specific needs of community-based micro and small business ventures. | All | | | | \$4.2 Million | REDC Strategic Plan 2012 Update | PathStone Corporation | | | ◐ | ◐ | ● | ● | ● | ● | Identified by REDC as a Transformative Priority Project. Potential to benefit all capitals but not expressly natural |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | Regional Internal Harvesting and Economic Gardening | Taken from REDC's 2012 Strategic Plan Progress Report - Focuses on working with existing growth-oriented companies to help them expand | All | | | | \$2 Million | REDC Strategic Plan | Greater Rochester Enterprise | | | ◐ | ◐ | ● | ● | ● | ● | Identified by REDC as a Priority Project. Potential to benefit all capitals not expressly Natural & Social |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | Finger Lakes Health Collaborative | Taken from REDC's 2012 Strategic Plan Progress Report | All | | | | \$3 Million | REDC Strategic Plan | RBA & FLHSA | | | ○ | ◐ | ● | ● | ● | ● | Identified by REDC as a Priority Project. Benefits Land Use and Livable Communities and Economic Development subject areas. Benefits Economic, Human and Social capital |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | Golisano Institute for Sustainability at RIT | Taken from REDC's 2012 Strategic Plan Progress Report | Monroe | | | | \$107 Million | REDC Strategic Plan | RIT | | | ● | ● | ◐ | ◐ | ● | ◐ | Identified by REDC as a Transformative Priority Project. Primarily benefits Monroe County (potential to benefit others) |
| Protect, enrich and market the unique natural, cultural, agricultural, and destination assets of the region. | Finger Lakes Museum | Taken from REDC's 2012 Strategic Plan Progress Report | Yates w/ Satellites | | | | \$58.3 Million | REDC Strategic Plan | The Finger Lakes Cultural and Natural History Museum | | | ◐ | ● | ◐ | ● | ● | ◐ | Identified by REDC as a Priority Project. Benefits Land Use and Livable Communities, Water Management, Ag & Forestry and Economic Development subject areas. |

Economic Development Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |

| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | Seneca AgBio Green Energy Park | Taken from REDC's 2012 Strategic Plan Progress Report - Develop an innovative program for agricultural processing and renewable energy production. Expand businesses and innovation | Seneca | | | | \$8 Million | REDC Strategic Plan 2012 Update | Seneca BioEnergy | | | ● | ◐ | ○ | ● | ● | ◐ | Identified by REDC as a Transformative Priority Project. Note: Project cost identified as \$16 Million in initial REDC Strategic Plan. Benefits all capitals but Social. Primarily benefits Seneca County |
| Expand and align training and education initiatives to target strategic sectors and meet the needs of existing and emerging industries. | Multiple Pathways to Middle Skills Jobs | Taken from REDC's 2012 Strategic Plan Progress Report | All | | | | \$4.9 Million | REDC Strategic Plan 2012 Update | MCC | | | ○ | ◐ | ● | ● | ● | ◐ | Identified by REDC as a Transformative Priority Project. Benefits Land Use and Livability, Economic Development. Benefits all capitals except Natural |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | Eastman Business Park | Taken from REDC's 2012 Strategic Plan Progress Report | Monroe | | | | \$579 Million | REDC Strategic Plan | US Renewables Group | | | ◐ | ○ | ◐ | ● | ● | ◐ | Identified by REDC as a Transformative Priority Project. Benefits Land Use and Livability, Economic Development. Benefits all capitals except Natural |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | Finger Lakes Small Business Expansion Fund | Taken from REDC's 2012 Strategic Plan Progress Report | All | | | | \$9.2 Million | REDC Strategic Plan 2012 Update | FLREDC | | | ○ | ○ | ● | ● | ● | ◐ | Identified by REDC as a Transformative Priority Project. Benefits Land Use and Livability, Economic Development, Transportation. Benefits Financial and Human Capital |
| Protect, enrich and market the unique natural, cultural, agricultural, and destination assets of the region. | Value Added Direct to Market Grants Program | Taken from REDC's 2012 Strategic Plan Progress Report - Provide funding that enables farms to build new structures, buy equipment, renovate buildings, and access working capital | All | | | | | REDC Strategic Plan 2012 Update | Farm Credit East | | | ○ | ◐ | ● | ● | ◐ | ◐ | Identified by REDC as a Priority Project. Benefits Land Use and Livability, Economic Development, Ag & Forestry. May not address Natural capital and Social capital |
| Invest in critical infrastructure to foster economic expansion and advance sustainable initiatives (access, function, resiliency) | Rochester Midtown Redevelopment and Tower | Taken from REDC's 2012 Strategic Plan Progress Report - Redevelopment of the Midtown parcel into a mixed-use area designed to attract a critical mass of residents, commercial activity, and amenities that will contribute to a vibrant work-life environment | Monroe | | | | \$54.2 Million | REDC Strategic Plan 2012 Update | City of Rochester Christa/Morgan Management | | | ◐ | ◐ | ○ | ◐ | ● | ◐ | Identified by REDC as a Transformative Priority Project. Note: Project cost identified as \$73.5 Million in initial REDC Strategic Plan. Benefits Land Use and Livability, Economic Development, Energy, Transportation, GHG Reduction. Benefits Built, Financial and Human Capital. |
| Invest in critical infrastructure to foster economic expansion and advance sustainable initiatives (access, function, resiliency) | CollegeTown | Taken from REDC's 2012 Strategic Plan Progress Report - Comprehensive plan to redevelop approximately 16 acres of University of Rochester-owned property in the City of Rochester and transform it into a vibrant neighborhood that will serve as a gateway to the City and the University | Monroe | | | | \$90 Million | REDC Strategic Plan 2012 Update | College Town Rochester, LLC | | | ◐ | ◐ | ○ | ● | ◐ | ◐ | Identified by REDC as a Transformative Priority Project. Benefits Land Use and Livability, Economic Development, Energy, Transportation, GHG Reduction. Benefits all capitals except Natural. Primarily benefits Rochester/Monroe County |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | Finger Lakes Clinical Quality Improvement Initiative | Taken from REDC's 2012 Strategic Plan Progress Report - Seek to achieve savings in healthcare costs by addressing unwarranted clinical variation, redundant tests, unproven treatments, and identifying alternatives to high-cost drugs and devices. | All | | | | \$11 Million | REDC Strategic Plan 2012 Update | Regional Health Care Alliance | | | ○ | ◐ | ◐ | ● | ◐ | ◐ | Identified by REDC as a Transformative Priority Project & 5-Year Pipeline Initiative. Benefits Land Use and Livable Communities and Economic Development. Benefits Financial, Social and Human capitals. Most communities would benefit |
| Invest in critical infrastructure to foster economic expansion and advance sustainable initiatives (access, function, resiliency) | Portageville Freight Rail Bridge Replacement Project | Taken from REDC's 2012 Strategic Plan Progress Report | Livingston | | | | \$68.5 Million | REDC Strategic Plan 2012 Update | | | | ◐ | ○ | ◐ | ● | ◐ | ◐ | Identified by REDC as a 5-Year Pipeline Initiative. Benefits Energy, Transportation, Land Use and Livable Communities, Economic Development and GHG Reductions. Benefits Built, Financial & Human capitals. Primarily benefits Livingston County (potential for collateral benefit to surrounding counties). |
| Invest in critical infrastructure to foster economic expansion and advance sustainable initiatives (access, function, resiliency) | I-Square | Taken from REDC's 2012 Strategic Plan Progress Report - create an urbanstyle town square in the Town of Irondequoit, converting vacant buildings and housing into a mixed-use cultural district | Monroe | | | | | REDC Strategic Plan 2012 Update | | | | ○ | ◐ | ○ | ● | ◐ | ◐ | Identified by REDC as a Priority Project. Benefits Land Use and Livability, Economic Development. May not address Natural capital. Primarily benefits Irondequoit/Monroe County |
| Protect, enrich and market the unique natural, cultural, agricultural, and destination assets of the region. | Finger Lakes Regional Milk Production Growth Incentive Program | Taken from REDC's 2012 Strategic Plan Progress Report - Strengthen rural communities and help local dairy farmers meet the milk demands of the state's rapidly growing yogurt manufacturing sector | All | | | | \$4 Million | REDC Strategic Plan 2012 Update | Farm Credit East | | | ○ | ◐ | ○ | ● | ◐ | ◐ | Identified by REDC as a Priority Project. Benefits Economic Development and Ag & Forestry. Benefits Financial, Built and Human capitals. Primarily benefits Genesee County (potential to benefit others). |

Economic Development Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|---|---|--------------------------------------|--------------------------------|-----------------------|-----------------------|----------------|--------------------------------------|---|----------------------|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | The NewYork Battery and Energy StorageTechnology Consortium (NY-BEST) | Taken from REDC's 2012 Strategic Plan Progress Report | Monroe | | | | \$20.5 Million | REDC Strategic Plan | NY-BEST | | | | | | | | | Identified by REDC as a Priority Project. Benefits Economic Development, Energy. Benefits Financial, Built and Human capital. Primarily benefits Rochester/Monroe County (potential to benefit surrounding counties) |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | University of Rochester Health Sciences Center for Computational Innovation | Taken from REDC's 2012 Strategic Plan Progress Report | Monroe | | | | \$100 Million | REDC Strategic Plan | U of R | | | | | | | | | Identified by REDC as a Priority Project. Benefits Economic Development, Land Use and Livability. Benefits Financial, Built, Human and Social capitals. Primarily benefits Rochester/Monroe County (potential to benefit more) |
| Protect, enrich and market the unique natural, cultural, agricultural, and destination assets of the region. | Little Theatre Renovation | Taken from REDC's 2012 Strategic Plan Progress Report | Monroe | | | | | REDC Strategic Plan 2012 Update | | | | | | | | | | Identified by REDC as a Priority Project. Benefits Land Use and Livability, Economic Development. Benefits Built, Financial, Human and Social Capitals. Primarily benefits Rochester/Monroe County |
| Protect, enrich and market the unique natural, cultural, agricultural, and destination assets of the region. | Geva Theatre | Taken from REDC's 2012 Strategic Plan Progress Report | Monroe | | | | | REDC Strategic Plan 2012 Update | | | | | | | | | | Identified by REDC as a Priority Project. Benefits Land Use and Livability, Economic Development. Benefits Built, Financial, Human and Social Capitals. Primarily benefits Rochester/Monroe County |
| Protect, enrich and market the unique natural, cultural, agricultural, and destination assets of the region. | Finger Lakes Boating Museum | Taken from REDC's 2012 Strategic Plan Progress Report | Seneca | | | | | REDC Strategic Plan 2012 Update | | | | | | | | | | Identified by REDC as a Priority Project. Benefits Land Use and Livability, Economic Development, Water Management. Benefits all capitals but Natural. Benefits Primarily Seneca County (potential to benefit surrounding counties) |
| Expand and align training and education initiatives to target strategic sectors and meet the needs of existing and emerging industries. | Finger Lakes Regional Center for Advanced Optics Manufacturing | Taken from REDC's 2012 Strategic Plan Progress Report | Monroe | | | | | REDC Strategic Plan 2012 Update | U of R | | | | | | | | | Identified by REDC as a 5-Year Pipeline Initiative. Benefits Economic Development, Land Use and Livability. Benefits Built, Financial & Human capitals. Primarily benefits Rochester/Monroe County |
| Protect, enrich and market the unique natural, cultural, agricultural, and destination assets of the region. | 2013 LPGA & PGA Championships | Taken from REDC's 2012 Strategic Plan Progress Report | Monroe | | | | | REDC Strategic Plan 2012 Update | | | | | | | | | | Identified by REDC as a Priority Project & 5-Year Pipeline Initiative. Benefits Land Use and Livable Communities, Economic Development. Benefits Financial, Social and Human capital. Primarily benefits Monroe County |
| Identify, recruit and support entrepreneurial enterprises that have the potential to innovate consistent with the Story of Place, add value to all 5 capitals and have broad commercialization potential. | Science Technology and Advanced Manufacturing Park (STAMP) | Taken from REDC's 2012 Strategic Plan Progress Report - A 1,243 acre site in Genesee County that will serve to attract the next generation of nano-technology companies (semiconductor and solar), bio-manufacturing, and advanced manufacturing to the state, create a high tech corridor spanning upstate, and drive significant regional economic growth | Genesee | | | | \$250 Million | REDC Strategic Plan 2012 Update | Genesee Gateway Local Development Corp | | | | | | | | | Identified by REDC as a Tranformative Priority Project. Benefits Economic Development. Benefits Built, Human and Financial Capital. Primarily benefits Genesee County with collateral benefit to surrounding counties. |

There was not sufficient information available to evaluate the following Projects. To provide a partial evaluation, each Project is sorted according to the evaluation of its associated Broad Strategy.

| | Finger Lakes Regional Sustainable Packaging Project | Taken from REDC's 2012 Strategic Plan Progress Report | | | | | | | | | | | | | | | | |
| | Buffalo East Technology Park | Taken from G/FLRPC's 2012 Comprehensive Economic Development Strategy (CEDS) | Genesee | | | | \$12.0 Million+ | CEDS | GCEDC/GGLDC | | | | | | | | | |
| | The Upstate Med-Tech Project: Develop a Regional Med-Tech Business Park (34 acres) and Commercialization Center (Accelerator facility) | Taken from G/FLRPC's 2012 CEDS | Genesee | | | | Park: \$1.5-2.0M, Commercialization Center: \$7-\$8 Million | CEDS | GCEDC/GGLDC | | | | | | | | | |
| | Entrepreneurship Venture Capital | Taken from G/FLRPC's 2012 CEDS | Livingston | | | | \$500,000 | CEDS | Livingston County IDA | | | | | | | | | |
| | Hydrogen Economy | Taken from G/FLRPC's 2012 CEDS | Monroe | | | | \$10,000,000 + | CEDS | Monroe County, City of Rochester | | | | | | | | | |
| | The Entrepreneurs Network | Taken from G/FLRPC's 2012 CEDS | Monroe | | | | \$300,000 | CEDS | Monroe County Department of Planning and Development | | | | | | | | | |
| | Eastman Business Park Upgrades | Taken from G/FLRPC's 2012 CEDS | Monroe | | | | \$13,000,000+ | CEDS | Monroe County, City of Rochester | | | | | | | | | |
| | Cornell Agriculture and Food Technology Park Finger Lakes Food Innovation Center | Taken from G/FLRPC's 2012 CEDS | Ontario | | | | \$7,000,000 | CEDS | Ontario County OED/IDA | | | | | | | | | |
| | Smart System Technology and Commercialization Center (STC) | Taken from G/FLRPC's 2012 CEDS | Ontario | | | | \$6,400,000 | CEDS | Ontario County OED/IDA | | | | | | | | | |
| | Small Business Assistance | Taken from G/FLRPC's 2012 CEDS | Seneca | | | | \$1,000,000 | CEDS | Seneca County Workforce Development | | | | | | | | | |
| | Alternative Energy Initiatives- Wind-tamer turbines/bioenergy manure digester processing | Taken from G/FLRPC's 2012 CEDS | Wyoming | | | | \$4.5 Million | CEDS | Wyoming County Business Center | | | | | | | | | |
| | Develop Lower Cost of Power Solution(s): Cogeneration, Alternative Energy to lower power costs businesses | Taken from G/FLRPC's 2012 CEDS | Genesee | | | | \$1 Million | CEDS | GCEDC/GGLDC | | | | | | | | | |
| | Mill Seat Landfill Bioreactor | Taken from G/FLRPC's 2012 CEDS | Monroe | | | | \$12,000,000 | CEDS | Monroe County DES | | | | | | | | | |
| | Ontario County Alternative Energy Park Infrastructure | Taken from G/FLRPC's 2012 CEDS | Ontario | | | | \$1,500,000 | CEDS | Ontario County OED/IDA | | | | | | | | | |
| | Wayne Industrial Sustainability Park and pod infrastructure improvements—Ontario pod/Northeast Quadrant pod/Silver Hill Technology Pod | Taken from G/FLRPC's 2012 CEDS | Wayne | | | | \$7.10 Million | CEDS | Wayne County IDA | | | | | | | | | |
| | Increase economic viability and growth of the Finger Lakes Food Processing Cluster by improving environmental, energy and economic practices of these businesses | Invest in sustainable innovation of the regional food processing processes | All | | | | | | Organizations that provide environmental technical assistance services, especially those focus on process improvement/green engineering, NYS21, academic institutions | | | | | | | | | |
| Invest in critical infrastructure to foster economic expansion and advance sustainable initiatives (access, function, resiliency) | | | | | | | | | | | | ● | ◐ | ● | ● | ● | ● | ◐ |
| | Genesee Valley Agribusiness Park (202 acres) | Taken from G/FLRPC's 2012 CEDS | Genesee | | | | \$10 Million | CEDS | GCEDC/GGLDC | | | | | | | | | |
| | Re-development of the Batavia/Downtown Corridor | Taken from G/FLRPC's 2012 CEDS | Genesee | | | | \$5.0 Million | CEDS | GCEDC/GGLDC | | | | | | | | | |
| | Assist Community Development via Main Street Projects, Housing issues and Quality of Life | Taken from G/FLRPC's 2012 CEDS | Genesee | | | | \$3 Million | CEDS | GCEDC/GGLDC | | | | | | | | | |
| | Multi-Tenant building at Dansville Industrial Park | Taken from G/FLRPC's 2012 CEDS | Livingston | | | | \$2 million | CEDS | Livingston County IDA | | | | | | | | | |
| | Photech Site | Taken from G/FLRPC's 2012 CEDS | Monroe | | | | \$10-\$20 million | CEDS | City of Rochester | | | | | | | | | |
| | Vacuum Oil Site | Taken from G/FLRPC's 2012 CEDS | Monroe | | | | \$10-\$20 million | CEDS | City of Rochester | | | | | | | | | |
| | Albion Business Park Development | Taken from G/FLRPC's 2012 CEDS | Orleans | | | | \$500,000 | CEDS | County of Orleans IDA | | | | | | | | | |
| | Keppler Site Shovel Ready | Taken from G/FLRPC's 2012 CEDS | Orleans | | | | \$1,025,000 | CEDS | County of Orleans IDA | | | | | | | | | |
| | Medina Park Spec Building | Taken from G/FLRPC's 2012 CEDS | Orleans | | | | \$3,000,000 | CEDS | County of Orleans IDA | | | | | | | | | |
| | Medina Park Shovel Ready | Taken from G/FLRPC's 2012 CEDS | Orleans | | | | \$690,000 | CEDS | County of Orleans IDA | | | | | | | | | |

Economic Development Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |

| | Demolition of derelict and unneeded buildings and facilities at the Seneca Army Depot | Taken from G/FLRPC's 2012 CEDS | Seneca | | | | \$5.5 Million | CEDS | Seneca County IDA | | | | | | | | | |
| | Improve Downtowns | Taken from G/FLRPC's 2012 CEDS | Wayne | | | | \$240,000 start up program | CEDS | TBD | | | | | | | | | |
| | Redevelopment of A&A Facility in Perry | Taken from G/FLRPC's 2012 CEDS | Wyoming | | | | \$2 million | CEDS | Wyoming County Business Center | | | | | | | | | |
| | Perry Business and Technology Park | Taken from G/FLRPC's 2012 CEDS | Wyoming | | | | \$2.2 Million | CEDS | Wyoming County Business Center | | | | | | | | | |
| | Digital Infrastructure andTransportation Asset Inventory | Taken from REDC's 2012 Strategic Plan Progress Report | | | | | | | | | | | | | | | | |
| | Rebuild and Repair of Rail line to Dansville Properties | Taken from G/FLRPC's 2012 CEDS | Livingston | | | | \$2.5 million | CEDS | Livingston County IDA/G&W RR | | | | | | | | | |
| | Completion of Infrastructure at Crossroads Commerce Park, Avon | Taken from G/FLRPC's 2012 CEDS | Livingston | | | | \$1 million | CEDS | Livingston County IDA | | | | | | | | | |
| | Rochester District Heating Cooperative System Improvements | Taken from G/FLRPC's 2012 CEDS | Monroe | | | | \$12,400,000 | CEDS | Monroe County, City of Rochester | | | | | | | | | |
| | Emerson Street landfill area | Taken from G/FLRPC's 2012 CEDS | Monroe | | | | TBD | CEDS | City of Rochester | | | | | | | | | |
| | Fiber Optic Ring | Taken from G/FLRPC's 2012 CEDS | Ontario | | | | | CEDS | Ontario County | | | | | | | | | |
| | Orleans Fiber Optic Pipe | Taken from G/FLRPC's 2012 CEDS | Orleans | | | | \$500,000 | CEDS | County of Orleans IDA | | | | | | | | | |
| | Rail Infrastructure Expansion/Development | Taken from G/FLRPC's 2012 CEDS | Orleans | | | | \$2.5 Million | CEDS | County of Orleans IDA | | | | | | | | | |
| | Electrical Upgrade – Seneca Army Depot | Taken from G/FLRPC's 2012 CEDS | Seneca | | | | \$8.0 Million | CEDS | Seneca County IDA | | | | | | | | | |
| | Infrastructure Improvements at the Seneca Army Depot – water, sewer, roads, rail and drainage | Taken from G/FLRPC's 2012 CEDS | Seneca | | | | \$12 Million | CEDS | Seneca County IDA | | | | | | | | | |
| | Route 318 Sewer Expansion/Upgrades to Connections | Taken from G/FLRPC's 2012 CEDS | Seneca | | | | \$4.50 | CEDS | Seneca County | | | | | | | | | |
| | Industrial Road-Town of Ontario in its entirety, Beh to Lincoln | Taken from G/FLRPC's 2012 CEDS | Wayne | | | | \$5 Million | CEDS | Wayne County IDA; Town of Ontario | | | | | | | | | |
| | Water/sewer Improvements Town of Wolcott/Village of Red Creek | Taken from G/FLRPC's 2012 CEDS | Wayne | | | | TBD | CEDS | Wayne County | | | | | | | | | |
| | Bridge Improvements | Taken from G/FLRPC's 2012 CEDS | Wayne | | | | TBD | CEDS | New York State DOT | | | | | | | | | |
| | Lyons Industrial Park Development (highway, rail, possible water access) Multi modal transportation and logistics site | Taken from G/FLRPC's 2012 CEDS | Wayne | | | | \$7-\$18 million | CEDS | Wayne County IDA; Town of Lyons | | | | | | | | | |
| | Fiber Optic Infrastructure (last mile) | Taken from G/FLRPC's 2012 CEDS | Wayne | | | | \$2 Million | CEDS | Wayne County | | | | | | | | | |
| | Wyoming County Rail Initiative | Taken from G/FLRPC's 2012 CEDS | Wyoming | | | | \$1.5 Million | CEDS | Wyoming County IDA | | | | | | | | | |
| | Installation of Fiber Optic Cable into and throughout Yates County | Taken from G/FLRPC's 2012 CEDS | Yates | | | | \$2,200,000 | CEDS | Yates County Government & Finger Lakes EDC | | | | | | | | | |
| | Dundee Waste Water Treatment Plant Upgrades | Taken from G/FLRPC's 2012 CEDS | Yates | | | | \$2,000,000 | CEDS | Finger Lakes EDC, Village of Dundee | | | | | | | | | |
| | Route 14 Eastern Corridor Water District | Taken from G/FLRPC's 2012 CEDS | Yates | | | | \$15,700,000 | CEDS | Finger Lakes EDC, Yates County, Town of Torrey, Town of Milo, and Penn Yan Village | | | | | | | | | |
| | Keuka Park Water District Water Main Replacement | Taken from G/FLRPC's 2012 CEDS | Yates | | | | \$1,875,000 | CEDS | Town of Jerusalem | | | | | | | | | |
| | Keuka Street Water and Sewer Replacements | Taken from G/FLRPC's 2012 CEDS | Yates | | | | \$1,700,000 | CEDS | Penn Yan Village | | | | | | | | | |
| | Elmwood Avenue Railroad Siding | Taken from G/FLRPC's 2012 CEDS | Yates | | | | \$1,150,000 | CEDS | Penn Yan Village | | | | | | | | | |
| | Branchport/West Bluff Drive Sewer District , Jerusalem | Taken from G/FLRPC's 2012 CEDS | Yates | | | | \$7,175,000 | CEDS | Finger Lakes EDC | | | | | | | | | |
| | Torrey Water District #1 , Torrey | Taken from G/FLRPC's 2012 CEDS | Yates | | | | \$4,000,000 | CEDS | Finger Lakes EDC | | | | | | | | | |
| | Downtown Revitalization | Taken from G/FLRPC's 2012 CEDS | Livingston | | | | \$100,000 | CEDS | Livingston County Development Corporation | | | | | | | | | |
| | Buy Local Campaign | Taken from G/FLRPC's 2012 CEDS | Livingston | | | | \$100,000 | CEDS | Livingston County Development Corporation | | | | | | | | | |
| | PORT of Rochester | Taken from G/FLRPC's 2012 CEDS | Monroe | | | | \$146 Million | CEDS | City of Rochester | | | | | | | | | |

Economic Development Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|---|---|--------------------------------------|--------------------------------|-----------------------|-----------------------|-------------------|---|---|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|-------|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Sustainability Plan Implementation Grant Program | Provide funds (perhaps with match) for government and industry that prepares plans to implement priority projects. | All | | | | \$10 Million/yr | Recommended by submitter based on Average 20 projects per year at average cost of \$500,000 per project | NYSERDA, Regional NFP, Supplement for existing state grants through CFA | 1) Shares responsibility for achieving regional strategies with local governments and industry; 2) provides incentive to do plans; 3) provides start-up money for projects with longer term payoffs; 4) expands number of recipients of other applicable state and federal grant programs. | | | | | | | | |
| | Regional Sustainability Project | Fund would provide short term "gap financing" money for these projects, with original amount, plus modest interest repaid with reimbursement. | All | | | | | | Government or NFP, IDAs, Enterprise Funds | Allows interested governments, corporations, individuals lacking upfront costs to bridge funding gap until sustainability project funds are awarded or until cost savings repay loans. | | | | | | | | |
| | Sustainable Communities and Sustainable Industries Planning Incentives Program | Communities, insitutions, and businesses would receive incentives to prepare their own plans to implement regional strategies on local, individualized basis. Region would provide some % of cost as incentive to prepare stategic plans. Plans would cover similar topics as regional plans and select implementation strategies from recommendations in the regional plan that were appropriate based upon type, location, size, and resources. | All | | | | \$1 Million/yr | Recommended by Submitter | | | | | | | | | | |
| | Rochester & Southern Railroad (RSR) Rehabilitation Project Between Dansville and Mt. Morris | Rehabilitation of section of rail infrastructure critical to the ongoing operations and anticipated future expansion | | | | | \$2.54M estimated | Preliminary engineering cost estimates prepared by the RSR Agency: Livingston County IDA | | 1. Keep LMC in operation, 2. Provide opportunity for LMC to expand operations 3. May provide opportunities to attract new customers; 4. Using freight trains over trucking is more environmentally friendly and ; 5. Fewer trucks on the road, helping to reduce costs associated with road and bridge maintenance and repair. | | | | | | | | |
| Expand and align training and education initiatives to target strategic sectors and meet the needs of existing and emerging industries. | | | | | | | | | | | | ◐ | ◐ | ● | ● | ● | ● | |
| | NewYork State Pollution Prevention Institute at RIT | Taken from REDC's 2012 Strategic Plan Progress Report | Monroe | | | | | | | | | | | | | | | |
| | Finger Lakes Community College Viticulture and WineTechnology Facility | Taken from REDC's 2012 Strategic Plan Progress Report | Ontario | | | | | | | | | | | | | | | |
| | Entrepreneurship Training | Taken from G/FLRPC's 2012 CEDS | Livingston | | | | \$20,000 | CEDS | Livingston County IDA | | | | | | | | | |
| Protect, enrich and market the unique natural, cultural, agricultural, and destination assets of the region. | | | | | | | | | | | | ◐ | ◐ | ● | ● | ● | ● | |
| | Muller Quaker | Taken from REDC's 2012 Strategic Plan Progress Report | Genesee | | | | | | | | | | | | | | | |
| | Veterans Memorial Cemetery | Taken from G/FLRPC's 2012 CEDS | Seneca | | | | \$3,170,000 | CEDS | Seneca County | | | | | | | | | |
| | Waterfront Redevelopment Infrastructure Improvements | Taken from G/FLRPC's 2012 CEDS | Yates | | | | \$2,500,000 | CEDS | Finger Lakes EDC, Yates County, Penn Yan, Milo | | | | | | | | | |
| | PathThrough History Initiative | Taken from REDC's 2012 Strategic Plan Progress Report | All | | | | | | | | | | | | | | | |
| | Genesee Country Village and Museum | Taken from REDC's 2012 Strategic Plan Progress Report | Monroe | | | | | | | | | | | | | | | |
| | Seneca Park Zoo | Taken from REDC's 2012 Strategic Plan Progress Report | Monroe | | | | | | | | | | | | | | | |
| | Seneca Arts and Cultural Center at Ganondagan State Historic Site | Taken from REDC's 2012 Strategic Plan Progress Report | Ontario | | | | | | | | | | | | | | | |
| | Sonnenberg Gardens & Mansion State Historic Park | Taken from REDC's 2012 Strategic Plan Progress Report | Ontario | | | | | | | | | | | | | | | |
| | Letchworth State Park Signage | Taken from REDC's 2012 Strategic Plan Progress Report | Livingston | | | | | | | | | | | | | | | |

Economic Development Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|----------------|--|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|----------------|---|---|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|-------|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| | Recreation and Water Quality Special Projects Fund | Assist in funding research and management programs for water recreation and water quality in the Finger Lakes. Need coordinated, ongoing and dependable program to avoid future resource degradation. | All | | | | \$500,000/yr | Recommended by submitter based on existing programs | FL-LOWPA, Center for Environmental Initiatives (CET) | 1) Ongoing source of funding for research and projects relating to water quality; 2) maintaining regional lakes and rivers for recreation; 3) local improvement in Regional Sustainability Plan implementation related to water, recreation, land use and tourism | | | | | | | | |
| | Sustainability Heritage Program | Provide funds for identification, interpretation and restoration of places/structures prominent to the history and growth of the region that contributed to on exhibited sustainable practices. Could be hyro facilities, windmills, irrigation, nursery/seed industry, technology research, energy savings/pollution reduction industries, etc. | All | | | | \$1 Million/yr | Recommended by submitter based on Funding for other hisotric preservation and tourism promotion programs. | Landmark society, museum, regional tourism offices | 1) Reinforces perception of importance of sustainability; 2) recognizes local history and individual/industry contribution; 3) provides additional funding for historic preservation; 4) enhances tourism: Regional Sustainability Tral | | | | | | | | |

Climate Change Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|---|--|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|--------------|---|---|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Upgrade existing assets | Wayne County Comprehensive Shoreline Management Project | Elevation site assessment and risk analysis of built environment and development of cost estimates for repairing and relocating facilities. Will serve as the basis to modify comprehensive plans | Wayne | X | | | \$300,000 | Grant submission - Great Lakes Restoration Initiative | Wayne County | Plan for climate change, improve water management, provide technical resources to local gov't to | | ● | ● | ◐ | ● | ● | ● | Benefits following subject areas: Transportation, Land Use & Livability, Water Management, Economic Development, Climate Change Adaptation, Governance; Benefits the following Capitals: Human, Social, Natural, Built and Financial; Ability to be replicated in communities in multiple regions; consistent with Great Lakes Restoration Initiative and Wayne County All Hazard Multi-jurisdictional Mitigation Plan |
| Upgrade existing assets | Green Genesee Roadmap | Support the development of an interconnected, functional ecosystem by conducting an inventory and providing a science-based, community-based tool to optimize land use by understanding ecosystem components, environmental services, and functions, as well as goals for preservation, restoration, and enhancement of the ecological networks. | Genesee | X | | | unknown | N/A | Genesee County | Provide technical resource for land, water resource, transportation, agriculture, forestry and climate change adaptation planning | | ● | ● | ● | ● | ● | ◐ | Benefits following subject areas: Transportation, Land Use & Livability, Water Management, Economic Development, Climate Change Adaptation, Governance; Benefits the following Capitals: Human, Social, Natural, Built and Financial; Ability to be replicated in communities in multiple regions; consistent with Genesee County Hazard Mitigation Plan |
| Enhance mutual aid and support among neighboring communities, counties, and regions | Finger Lakes Climate Change Adaptation Leadership and Resilience Council | Provide a 12-month process that aligns regional stakeholders and yields a pragmatic and defined outcome for continuing research, education, and training on climate change adaptation. | All | X | | | \$150K | NYSERDA Regional Greenhouse Gas Initiative | NYSERDA | Will result in a comprehensive "Climate Adaptation and Resilience Operating Plan" which the region will use to prepare for the future taking into consideration Climate Adaptation requirements of the region; will bring together regional stakeholders so that clear strategies, goals, and processes can be put into place which will enhance mutual aid and support among neighboring communities, counties, and regions to share, develop, and create capabilities, resources, and special assets toward Climate Adaptation requirements; will reduce the future risk of the region regarding responding to emergency events and/or longer-term shifts in the natural and social environment as impacted by Climate Change; will align its efforts with other mutual activities within the region | | ● | ● | ● | ● | ○ | ● | Benefits all subject areas; Benefits all Capitals; Ability to be replicated in communities in multiple regions |
| Upgrade existing assets | Plan Bv7 | A sustainable approach to water level regulation in Lake Ontario and the St. Lawrence River that will take steps to restore the shoreline habitats of the lake and river. | Orleans, Monroe, Wayne | | X | | unknown | N/A | | | | ◐ | ◐ | ◐ | ● | ◐ | ◐ | Benefits following subject areas: Land Use & Livability, Water Management, Economic Development, Climate Change Adaptation, Governance; Benefits the following Capitals: Human, Natural, Built and Financial; benefits multiple communities in Orleans, Monroe, and Wayne Counties |
| Create self-sufficient "places of refuge" | Batavia Community Hydroelectric Microgrid | Provide renewable electricity to fire department and ice arena, creating a self-sufficient "place of refuge". | Genesee | | X | | unknown | N/A | City of Batavia | Potential to have both municipal facilities' electricity needs fully self-sustaining on renewable electricity generated from the Tonawanda Creek, enhance the economic viability of the ice arena, and the potential to create a self-sufficient "place of refuge" as the ice arena's occupancy is 480 people | | ◐ | ● | ○ | ◐ | ◐ | ◐ | Benefits following subject areas: Energy, Water Management, Economic Development, Climate Change Adaptation; Benefits the following Capitals: Human, Social, Natural, Built and Financial; consistent with Genesee County Comprehensive Plan |
| Enhance mutual aid and support among neighboring communities, counties, and regions | Resilient Communications and Emergency Response | Use Eco-IT and renewable energy systems tied to back-up power generation. | All | X | | | \$2.5M | NYSERDA | NYSERDA | Tangible electric (kW) demand reduction, electricity (kWh) savings; Tangible electric and operating cost savings; Quantifiable impacts to infrastructure reliability and resilience; Deployment of NYS-based alternative, clean, and energy efficiency technologies which support regional economic growth and development | | ○ | ◐ | ● | ◐ | ○ | ◐ | Benefits following subject areas: Energy, Climate Change Adaptation, Governance; Benefits the following Capitals: Human, Built and Financial; Ability to be replicated in communities in multiple regions |

Governance Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|--|--|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|--------------|--------------------------------------|---|----------------------|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| GOVERNANCE - Encourage regional cooperation and coordination | Finger Lakes Regional Sustainability Plan | Undertake revisions to, and implement the recommendations, of the Finger Lakes Regional Sustainability plan on an ongoing basis. | All | X | | | | | NYSERDA, GTC, REDC, G/FLRPC | | | ● | ● | ● | ● | ● | ● | This project benefits all subject areas and all five capitals. It has the potential to benefit all counties, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with regional and local planning efforts. It can have low to medium order of magnitude costs (including capital projects), with lower life cycle costs over the long term. It also has potential to leverage other funding sources. |
| GOVERNANCE - Encourage regional cooperation and coordination | Finger Lakes Climate Change Adaptation Leadership and Resilience Council | This project is aimed at aligning regional leadership and resources toward research, education and training to solve local problems; and develop processes to identify and share critical resources. | All | X | | | | | NYSERDA | | | ● | ● | ● | ● | ◐ | ● | This project benefits all subject areas and all five capitals. It has the potential to benefit all counties, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with regional and local planning effort, but not specifically mentioned. It can have low to medium order of magnitude costs, with lower life cycle costs over the long term. It also has potential to leverage other funding sources. |
| GOVERNANCE - Promote the development of local and regional sustainability initiatives to serve as a dynamic means of supporting the goals of the Regional Sustainability Plan across all subject areas | Town of Perry Comprehensive Planning Approach | In conjunction with the development of a Comprehensive Plan, the Town of Perry plans to develop an integrated Farmland Protection Plan and Energy Policy. The intent is to combine the inventory of existing conditions and assets to provide efficiency and ensure consistency across the three documents. By developing the three documents concurrently, the recommendations of the Farmland Protection Plan and Energy Policy can be incorporated into the Comprehensive Plan including strategies to protect agriculture (i.e. zoning districts, conservation easements, purchase of development rights) and support an energy policy (i.e. changes in Energy Conservation Code, NYS adoption of the Green LEED bill, adoption of the Green Construction Code of NYS, and the NYS Climate Smart Communities program). | All | X | | | | | Wyoming County, Town of Perry | | | ◐ | ◐ | ○ | ● | ◐ | ● | This strategy benefits energy, land use and livability, economic development, agriculture/forestry and governance. This project also benefits four of the five capitals and has the potential to benefit Wyoming County, and could be replicated in other areas. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with local planning efforts. It can have low to medium order of magnitude costs, with lower life cycle costs over the long term. It also has potential to leverage other funding sources. |
| GOVERNANCE - Promote the development of local and regional sustainability initiatives to serve as a dynamic means of supporting the goals of the Regional Sustainability Plan across all subject areas | Wayne County Lakeshore Management Project | This project will utilize LIDaR imaging and GIS analysis to identify areas most at risk of severe weather events. It will allow for the creation of climate adaptation plans and enable municipalities to modify land use laws to incorporate climate change criteria for new development. | Wayne County | X | | | | | Wayne County | | | ◐ | ◐ | ○ | ● | ◐ | ● | This project benefits land use and livability, water management, climate change and governance. This project also benefits four of the five capitals and has the potential to benefit Wayne County, but could be replicated in other lakeshore counties. Implementation could be accomplished in a relatively short term (less than 10 years). This strategy is consistent with local planning efforts. It can have low to medium order of magnitude costs, with lower life cycle costs over the long term. It also has potential to leverage other funding sources. |

Agriculture Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|----------------------------|---|---|--------------------------------------|--------------------------------|-----------------------|-----------------------|---|--|---|--|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|---|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with planning Efforts | Financial Feasibility | |
| Holistic Food System | Headwater Food Hub | The Headwater Food Hub will support the regional food system by managing supply chain logistics, aggregation, distribution, and sales of local, sustainable, source-identified foods from a network of partner farms, including their own, and from local food producers. | All | x | | | \$1,035,000 | Project manager's construction estimates | Headwater Foods | The Headwater Food Hub will support the viability of small to mid-sized farms by working in partnership with farmers to connect the region's agricultural products to the substantial market that exists locally and across the northeast. The operation of this carbon-neutral food processing facility is expected to create 15 new jobs. | Headwater Food Hub | ● | ● | ● | ● | ● | ● | <p>Subject Areas: Economic Development, Transportation, Energy, Land Use, Waste, Ag/Forestry, Climate Change, GHG Emissions</p> <p>Capitals: Human, Social, Natural, Built, Financial</p> <p>Communities: Many counties will benefit from the agricultural market and food system advantages produced by the Food Hub</p> <p>Implementation Feasibility: Established support network in food hub partners</p> <p>Planning Efforts: Consistent with overall goals of many ag-related plans in region at state and local level</p> <p>Financial Feasibility: Existing Project</p> |
| Bio-energy Production | Seneca AgBio Green Energy Park | Agricultural and Renewable Energy Program with projects including grape waste processing, grapeseed oil production, and biodiesel production. Project currently delayed. | Seneca | x | | | \$8,000,000 | FLREDC 2012 Progress Report | Seneca BioEnergy | Four companies within the Seneca AgBio Green Energy Park are investing \$8 million for redevelopment of site infrastructure, equipment purchases, pilot scale technology development, agricultural contracts fulfillment, and commercial operations of their green energy and environmental technologies for biodiesel and biomaterials production and biomass processing. | Seneca BioEnergy | ● | ● | ● | ● | ● | ● | <p>Subject Areas: Ag/Forestry, Energy, Waste, Economic Development, Transportation, Climate Change, GHG</p> <p>Capitals: Human, Social, Natural, Financial, Built</p> <p>Communities: All counties could receive direct or indirect benefits</p> <p>Implementation Feasibility: Existing Project</p> <p>Planning Efforts: Called for in FLREDC Economic Development Plan as a Priority Project, consistent with goals of many regional documents</p> <p>Financial Feasibility: Existing Project</p> |
| Outreach and Communication | Annual Decision-Maker's Tour of Agriculture in Livingston County | Local planning and zoning officials earn educational credits for participating in an annual tour of agriculture within Livingston County. | Livingston | x | | | | | Livingston County Planning Department | The goal of the annual tour is to educate decision-makers and leaders in Livingston County as to the community benefits and challenges of the local agricultural sector and enhance the community connections between decision-makers and farm operators. | Livingston County Planning Department | ◐ | ◐ | ● | ● | ● | ● | <p>Subject Areas: Ag/Forestry, Economic Development, Land Use, Governance</p> <p>Capitals: Natural, Built, Social, Human</p> <p>Communities: All communities can benefit</p> <p>Implementation Feasibility: techniques already in use</p> <p>Planning Efforts: Consistent with overall planning goals of many plans</p> <p>Financial Feasibility: Existing Project</p> |
| Holistic Food System | Finger Lakes Food Processing Cluster Initiative | Leveraging the Jobs and Innovation Accelerator Grant from US Economic Development Agency and SBA and NYS to support this coordinated initiative that provides assistance, training, and collaborative partnerships. Project is underway. | All | x | | | Undetermined (\$1.9 million in funding dedicated to date) | FLREDC 2012 Progress Report | RIT, Monroe and Genesee Community Colleges, others | The Food Processing Cluster Initiative aims to implement sustainable manufacturing process technologies to minimize environmental impacts and open market opportunities. | Partnership between educational institutions and private sector | ◐ | ◐ | ● | ● | ● | ● | <p>Subject Areas: Economic Development, Ag/Forestry, Climate change, GHG</p> <p>Capitals: Human, Social, Financial</p> <p>Communities: Many counties will benefit from this project</p> <p>Implementation Feasibility: Project is underway</p> <p>Planning Efforts: Consistent with multiple economic development plans</p> <p>Financial Feasibility: Existing Project</p> |
| Workforce Development | Finger Lakes Community College Viticulture and Wine Technology Facility | Helping to meet demands for skilled workers in region's vineyards. \$3.3 million included in state budget to construct classroom, lab, teaching winery facilities. Construction Underway anticipated completion fall 2013. | All | x | | | \$3,300,000 | FLREDC 2012 Progress Report | Finger Lakes Community College | The Finger Lakes Community College (FLCC) Viticulture and Wine Technology Facility will help meet the urgent and growing demands for skilled workers by the region's vineyards. | | ◐ | ◐ | ● | ● | ● | ● | <p>Subject Areas: Economic Development, Ag/Forestry, Land Use, Waste, Energy</p> <p>Capitals: Human, Financial, Built</p> <p>Communities: All counties could see direct or indirect benefits from this investment</p> <p>Implementation Feasibility: Existing Project</p> <p>Planning Efforts: Called for by FLREDC and consistent with goals of other regional planning documents</p> <p>Financial Feasibility: Existing Project</p> |

Agriculture Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |

| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Outreach and Communication | Agricultural Events | Support regional agricultural initiatives such as the Wyoming County Dairy Institute, Agri-Palooza, and Celebrate-Ag (taken from G/FLRPC's 2012 CEDS) | All | x | | | Undetermined | | G/FLRPC | Makes funding available for assorted agricultural ventures addressing a variety of specific issues | G/FLRPC | | | | | | | <p>Subject Areas: Economic Development, Ag/Forestry, Land Use/Livable Communities, Materials/Waste Management</p> <p>Capitals: Social, Human, Natural, Financial</p> <p>Communities: All communities have potential of benefit if they have or start one of these initiatives</p> <p>Implementation Feasibility: Support networks already in place for existing events</p> <p>Planning Efforts: Consistent with G/FLRPC 2012 CEDS</p> <p>Financial Feasibility: Established sources for existing initiatives,</p> |
| Holistic Food System | Finger Lakes Enterprise Fund (PathStone) | Loans with flexible terms to support main street businesses and value added agriculture | All | x | | | \$4,175,000 | FLREDC 2012 Progress Report | PathStone Corporation | PathStone will invest a total of \$3.3 million over a three-year period and is committed to providing at least 33 percent of total support from the fund to minority-and women-owned businesses. PathStone estimates that this activity will create and retain 284 jobs. | PathStone Corporation | | | | | | | <p>Subject Areas: Economic Development, Ag/Forestry, Land Use, Transportation</p> <p>Capitals: Social, Human, Built, Financial</p> <p>Communities: All counties could see direct or indirect benefits</p> <p>Implementation Feasibility: Existing Project</p> <p>Planning Efforts: Consistent with goals of REDC, which reflect many regional planning documents</p> <p>Financial Feasibility: Existing Project</p> |
| Holistic Food System | Foodlink Food Hub Expansion | Funding to expand facilities | All | x | | | Undetermined | FLREDC 2012 Progress Report | Foodlink | This project allows FoodLink to increase the size and capacity of its food storage, processing, and distribution facilities to accommodate increasing demand to supply food to hospitals, schools, corner stores, and the emergency food network in the Finger Lakes region. | Foodlink regional food bank | | | | | | | <p>Subject Areas: Ag/Forestry, Economic Development, Transportation, Energy</p> <p>Capitals: Social, Human, Natural, Built</p> <p>Communities: All communities could benefit directly or indirectly from this investment</p> <p>Implementation Feasibility: Existing Project</p> <p>Planning Efforts: Called for in FLREDC Economic Development Plan and Consistent with overall goals of many regional planning documents</p> <p>Financial Feasibility: Existing Project</p> |
| Outreach and Communication | Dairy Profit Teams | NYFVI grant helped fund pilot program where dairy farmers get one-on-one attention with a group of industry consultants in all different areas to help efficiently and cooperatively offer solutions tailored to individual issues | All | x | | | Undetermined | | NYFVI | Allows farmer to access many sources of information regarding profitability and sustainability in one sitting, increasing efficiency | New York Farm Viability Institute's funded projects | | | | | | | <p>Subject Areas: Economic Development, Ag/Forestry, Transportation, Climate Change, GHG, Energy</p> <p>Capitals: Natural, Human, Social</p> <p>Communities: All counties could potentially benefit from this type of investment, directly or indirectly</p> <p>Implementation Feasibility: Existing Project</p> <p>Planning Efforts: Consistent with goals of NYFVI and overall goals of other regional documents</p> <p>Financial Feasibility: Existing Project</p> |
| Holistic Food System | Precision Feeding Initiative | NYFVI grant helped fund pilot project involving measurement and analysis of fertilizer inputs to find inefficiencies | All | x | | | Undetermined | | NYFVI | Reduces feed waste and unnecessary environmental harm from maure nutrient runoff | New York Farm Viability Institute's funded projects | | | | | | | <p>Subject Areas: Economic Development, Ag/Forestry, Transportation, Climate Change, GHG, Energy</p> <p>Capitals: Natural, Human,</p> <p>Communities: All counties could potentially benefit from this type of investment, directly or indirectly</p> <p>Implementation Feasibility: Existing Project</p> <p>Planning Efforts: Consistent with goals of NYFVI and overall goals of other regional documents</p> <p>Financial Feasibility: Existing Project</p> |

Agriculture Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|----------------------------|--|---|--------------------------------------|--------------------------------|-----------------------|-----------------------|---|--------------------------------------|--|---|---|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Holistic Food System | Rochester Public Market Planned Expansion | \$10 Million planned expansion | Monroe | x | | | \$10,000,000 | FLREDC 2012 Progress Report | City of Rochester | The City of Rochester has recently completed a master plan for the expansion of its nationally-recognized Public Market. The \$10 million in enhancements will further develop this unique asset as a destination, while strengthening its connections with the region's farmers and small businesses. | Rochester Public Market | | | | | | | <p>Subject Areas: Ag/Forestry, Economic Development, Land Use, Climate Change,</p> <p>Capitals: Natural, Human, Built, Financial</p> <p>Communities: All Counties have the potential ot benefit directly or indirectly</p> <p>Implementation Feasibility: Existing Project</p> <p>Planning Efforts: Called for in FLREDC Plan and consistent with goals of many regional planning documents</p> <p>Financial Feasibility: Existing Project</p> |
| Bio-energy Production | Farm Energy Sustainability Plans | Energy analysts and farm service providers review loads, timing, motor efficiencies, lighting and fuel use to find demand efficiencies. Plans may also review potential for on-site renewable energy production, including biogas, wind, solar, and biofuels. | All | x | | | | | Private consultants, USDA/NRCS Technical Service Providers, Utility services | Increase farm energy efficiency, decrease overall farm energy demand, and increase on-site power generation. | Existing efforts on behalf of consultants, service providers, and utilities | | | | | | | <p>Subject Areas: Waste, Economic Development, Ag/Forestry, Energy</p> <p>Capitals: Natural, Human, Built</p> <p>Communities: All counties could benefit from these plans</p> <p>Implementation Feasibility: Established support network</p> <p>Planning Efforts: Consistent with overall planning goals of REDC, which reflect many regional planning documents</p> <p>Financial Feasibility: Low Start-up cost</p> |
| Outreach and Communication | Conference Sessions | Continue efforts to educate economic development stakeholders on agricultural issues through sessions at the Local Government Workshop | All | x | | | Undetermined | | G/FLRPC | Increases awareness of agricultural issues among local government decision-makers | G/FLRPC | | | | | | | <p>Subject Areas: Ag/Forestry, Economic Development, Governance</p> <p>Capitals: Natural, Built, Social, Human</p> <p>Communities: All communities can benefit</p> <p>Implementation Feasibility: techniques already in use</p> <p>Planning Efforts: Consistent with overall planning goals of many plans</p> <p>Financial Feasibility: low initial cost, could see benefits starting after first workshop</p> |
| Holistic Food System | Finger Lakes Regional Milk Production Growth Incentive Program | Project will help local farmers meet growing milk demands of yogurt sector by addressing capital needs of dairy operations looking to expand | Genesee | x | | | Undetermined (\$5 million in pending funding) | FLREDC 2012 Progress Report | Farm Credit East | This program will strengthen rural communities and help local dairy farmers meet the milk demands of the state's rapidly growing yogurt manufacturing sector – two new plants in Genesee County alone will double the region's milk processing capacity. | Farm Credit East | | | | | | | <p>Subject Areas: Ag/Forestry, Economic Development</p> <p>Capitals: Financial, Built, Human</p> <p>Communities: Protential for direct/indirect benefits in all counties</p> <p>Implementation Feasibility: Exisitng project</p> <p>Planning Efforts: Called for by FLREDC and consistent with multiple regional documents</p> <p>Financial Feasibility: Existing project</p> |
| Holistic Food System | Value Added Direct to Market Grants Program | Pending funding, project will assist estimated 40 farms pursue value added/direct to market strategies. Provides funding for farmers to build new structures, buy equipment, renovate buildings, and access working capital. | All | x | | | Undetermined | FLREDC 2012 Progress Report | Farm Credit East | The Value Added Direct to Market Grants Program will provide funding that enables farms to build new structures, buy equipment, renovate buildings, and access working capital. Pending funding approval, the project will assist an estimated 40 farms to pursue value-added or direct-to-market strategies. | Farm Credit East | | | | | | | <p>Subject Areas: Ag/Forestry, Economic Development, Land Use</p> <p>Capitals: Financial, Built, Human</p> <p>Communities: All communities could see direct/indirect benefits</p> <p>Implementation Feasibility: Existing Project</p> <p>Planning Efforts: Called for by FLREDC and many regional agricultural development documents</p> <p>Financial Feasibility: Existing Project</p> |

Agriculture Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|----------------------------|---|--|--------------------------------------|--------------------------------|-----------------------|-----------------------|---------------|--------------------------------------|---|--|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Holistic Food System | Muller Quaker Yogurt Plant | New large yogurt plant in Genesee County supported by \$13 Million in State Tax Credits. | Genesee | x | | | \$208,000,000 | FLREDC 2012 Progress Report | PepsiCo / Theo Muller Group | Muller Quaker is a joint venture between PepsiCo and the Theo Muller Group to create one of the country's largest yogurt manufacturing plants in Genesee County. At full build-out, the project will create 800 jobs. | PepsiCo and Theo Muller Group | | | | | | | <p>Subject Areas: Ag/Forestry, Economic Development</p> <p>Capitals: Built, Financial, Human</p> <p>Communities: All communities could benefit directly or indirectly from the jobs and new demand created by the new plant</p> <p>Implementation Feasibility: Existing Project</p> <p>Planning Efforts: Called for in FLREDC Economic Development Plan and consistent with overall goals of many regional planning documents</p> <p>Financial Feasibility: Existing Project</p> |
| Commercialization Partners | Finger Lakes Regional Sustainable Packaging Project | Project working with companies on sustainable packaging at RIT. CFA submitted in 2012 | All | x | | | Undetermined | FLREDC 2012 Progress Report | RIT Finger Lakes Sustainable Packaging Project | RIT's Finger Lakes Regional Sustainable Packaging Project will establish the region as an innovator and leader in the rapidly growing field of sustainable packaging. This project will open up new markets for the food processors in the region. | RIT | | | | | | | <p>Subject Areas: Ag/Forestry, Economic Development, Materials/Waste, Energy</p> <p>Capitals: Human, Financial, Natural, Social</p> <p>Communities: All communities could see direct or indirect benefits</p> <p>Implementation Feasibility: Existing Project</p> <p>Planning Efforts: Consistent with FLREDC Economic Development plan and consistent with other regional documents</p> <p>Financial Feasibility: Existing Project</p> |
| Sector-scale diversity | Finger Lakes Small Business Expansion Fund | Creation of a \$1.15 million investment pool targeting seven companies in identified key industries (including the Once Again Nut Butter processing facility) geographically distributed throughout region | All | x | | | \$3,500,000 | FLREDC 2012 Progress Report | Once Again Nut Butter | This project will enable the Once Again Nut Butter company to acquire 10 acres of land in downtown Nunda and build a 40,000 square foot, high-speed automated peanut butter processing facility. | | | | | | | | <p>Subject Areas: Ag/Forestry, Economic Development</p> <p>Capitals: Human, Natural, Financial</p> <p>Communities: All Counties could see direct/indirect benefits of these investments</p> <p>Implementation Feasibility: Existing Project</p> <p>Planning Efforts: Called for in FLREDC Economic Development Plan and consistent with overall goals of many regional planning documents</p> <p>Financial Feasibility: Existing Project</p> |

Forestry Projects

| Broad Strategy | Representative Specific Project | Project Description | Project Applies to which County(ies) | Relative Time Frame of Project | | | Project Cost | Costs Source (how was it determined) | Agency, Company, Organization Responsible for Project | Anticipated Benefits | If Existing Project, what is it related to or derived from | Evaluation Criteria | | | | | | Notes |
|--|--|---|--------------------------------------|--------------------------------|-----------------------|-----------------------|--------------|---|--|---|--|---------------------------------|----------------------------|-------------------------------|----------------------------|----------------------------------|-----------------------|--|
| | | | | Short term (0 - 5 yrs) | Mid-term (6 - 10 yrs) | Long term (11-15 yrs) | | | | | | Benefits Multiple Subject Areas | Benefits Multiple Capitals | Benefits Multiple Communities | Implementation Feasibility | Consistent with Planning Efforts | Financial Feasibility | |
| Outreach and Education | EQIP Program | Continue to support participation in NYSDEC Environmental Quality Incentives Program (EQIP) Forestry Initiative | All | x | | | Undetermined | | NYSDEC/NRCS in conjunction with County Soil and Water Conservation Districts | Encourage action by landowners to combat pressing environmental issues on forestland through direct funding, and encourage development of forest stewardship plans (required for application into program) | Existing NYSDEC/NRCS Partnership | | | | | | | <p>Subject Areas: Energy, Water, Ag/Forestry, Climate Change, GHG Emissions</p> <p>Capitals: Human, Natural, Social, Financial</p> <p>Communities: All Counties</p> <p>Implementation Feasibility: Program already exists</p> <p>Planning Efforts: NYSDEC Forest Resources Assessment and Strategy, and general consensus of advantages of sustainable forest management</p> <p>Financial Feasibility: Established funding currently</p> |
| Ecological Services Valuation | Finger Lakes Green Network Initiative (modeled after Green Genesee Road Map pilot project) | This effort includes community workshops, planning sessions and development of a publicly-accessible database to support current and future sustainable land use decisions along with implementation of priority strategies at the municipal level. Intent is to replicate existing Genesee County project to other counties. | All | x | | | \$2,500,000 | Project manager's estimate | New York Green | Re-establishment, rehabilitation, and protection of forest habitat, including blocks and connecting corridors, would lead to more mature forests, increased biodiversity of wildlife and bird species, and increased biomass in live trees. Active adaptive management of ecological networks would also result in reduced invasive species on the landscape. | New York Green's "Green Genesee Road Map" project | | | | | | | <p>Subject Areas: Energy, Transportation, Land Use, Water, Economic Development, Ag/Forestry, Climate Change, Governance</p> <p>Capitals: Human, Natural, Social, Built, Financial</p> <p>Communities: All Counties</p> <p>Implementation Feasibility: Pilot program in existence</p> <p>Planning Efforts: Consistent with overall goals of many plans in region at state and local level</p> <p>Financial Feasibility: Pilot project underway, long-term funding availability unknown</p> |
| Inventory, monitor and educate to create a better understanding of the region's water resources. | Wayne County Comprehensive Shoreline Management Project | Elevation site assessment and risk analysis of built environment and development of cost estimates for repairing and relocating facilities. Will serve as the basis to modify comprehensive plans | Wayne | x | | | \$300,000 | Grant submission - Great Lakes Restoration Initiative | Wayne County | Plan for climate change, improve water management, provide technical resources to local gov't to | | | | | | | | <p>Benefits following subject areas: Transportation, Land Use & Livability, Water Management, Economic Development, Climate Change Adaptation, Governance;</p> <p>Benefits the following Capitals: Human, Social, Natural, Built and Financial; Ability to be replicated in communities in multiple regions; consistent with Great Lakes Restoration Initiative and Wayne County All Hazard Multi-jurisdictional Mitigation Plan</p> |
